- WAC 296-806-30006 Make sure belt or rope drives meet these requirements. (1) You must use an idler when your machine uses a quarter-twist belt that can run in either direction.
- (2) You must make sure, when it is necessary to apply dressing to moving belts or ropes, that you apply the dressing at a point where the belts or ropes leave the pulley.
- (3) You must make sure that a belt shifted by hand is **not** fastened with metal or other material that creates a hazard.
- (4) You must make sure a bearing support that is next to a friction clutch or cutoff coupling has self-lubricating bearings that do not need frequent attention.
- (5) You must use a substantial belt perch, such as a bracket or roller, when it is not practical to use a loose pulley or idler to keep idle belts away from shafts.
