- WAC 388-106-1620 What methodology does the department use to determine statewide or county specific nursing home comparable home and community-based long-term services availability? The department uses the following methodology to determine the statewide or county specific nursing home comparable home and community-based long-term services availability.
- (1) The department selects a recent, one-year time period from which to use MDS assessment data.
- (2) The "typical RUG-III ADL score" is determined as follows. From the MDS data, two activity of daily living (ADL) RUG-III score values are calculated: (1) the mean RUG-III ADL score, rounded to the nearest whole number, and (2) the modal RUG-III ADL score that occurs most commonly in the nursing home population in the selected time period. The "typical RUG-III ADL score" is the lower of the mean and modal values.
- (3) Using the most recent month that both payment and assessment data are considered to be complete, persons receiving medicaid paid in-home personal care or community residential services are identified, and the MDS-equivalent ADL score from each home and community-based client's current CARE assessment is constructed.
- (4) Using data from the month selected in subsection (3), count the number of in-home personal care clients being served by either the aging and long-term support or developmental disabilities administrations who have an MDS-equivalent score at or above the typical RUG-III ADL nursing home score that was calculated in subsection (2).
- (5) Using data from the month selected in subsection (3), calculate the proportion of medicaid-paid community residential clients with an MDS-equivalent score that is at or above the typical RUG-III ADL nursing home score calculated in subsection (2).
- (a) When determining county level measures of nursing home comparable home and community based capacity, the statewide average for medicaid paid community residential clients is used.
- (6) Calculate the overall statewide licensed capacity of community residential facilities.
- (7) The proportion calculated in subsection (5) and the community residential capacity determined in subsection (6) are multiplied to estimate the community residential capacity that is nursing home comparable.
- (8) Add the numbers calculated in subsections (4) and (7) to determine the total countable nursing-home-comparable home and community-based long-term capacity to be used in reporting to the department of health the availability of other services in the community as required in RCW 70.38.115.
