- WAC 296-150V-1120 What are the standards for wall and cabinet protection? The bottom and sides of combustible cabinets over cooking appliances or tops including a space of 6 inches from the edge of the burners must be protected with at least 5/16 inch sheetrock with a 25 flame-spread. This material must be behind deep-fat fryers, grills, ranges, and other cooking appliances. It must extend 6 inches beyond the edge of the appliance and range hood.
- (1) Range hoods for commercial equipment must meet the requirements of the mechanical code such as fire suppression, etc.
- (2) Range hoods for noncommercial equipment may be of a residential type.
- $(\bar{3})$ The hood must be centered over and at least as wide as the top of the cooking appliance.

[Statutory Authority: Chapter 43.22 RCW. WSR 99-18-069, \$296-150V-1120, filed 8/31/99, effective 10/1/99.]
