**WAC 388-828-9700 How does the residential algorithm use your assessed support needs scores to determine your residential service level of support?** (1) The residential algorithm uses your assessed support needs scores (as defined in WAC 388-828-9550 through 388-828-9690) to answer questions in a decision tree.

(2) The decision tree path determines your residential service level of support (WAC 388-828-9540).

(3) The decision tree is separated into the following three steps:

(a) Step 1 determines whether your residential support needs scores meet the criteria for less than daily support or the criteria for community protection.

Step 1 – Level Identification

(c) Step 3 determines whether your residential support needs scores meet the criteria for intermittent support.

Step 3 – Level Identification

Start

Protective Supervision Support Needs score greater than 3?

— Yes →

Protective Supervision Support Needs = 4?

— No → Level 4

No ↓

Total Critical Support time greater than 6 hrs?

— Yes →

No ↓

Behavior, Medical or Seizure Support Needs = High?

— Yes →

No ↓

Toileting Support Needs Score less than 7?

— No →

Yes ↓

Nighttime Support Needs/Frequency = Less than daily

— No →

Yes ↓

Level 3A

Protective Supervision Support Needs = 4? — Yes ↓

Nighttime Assistance/ Frequency = Less than daily?

— No →

Nighttime Assistance/ Daily Support time score = less than 30 minutes?

— No → Level 4

— Yes →

Yes ↓

Toileting Support Needs score less than 7?

— No →

Yes ↓

Behavior, Medical or Seizure Support Needs = High?

— Yes → Level 4

No ↓

Level 3B
