NEW SECTION

WAC 16-462-060 CERTIFIED GRAPE NURSERY STOCK--ASEPTIC SHOOT TIP PROPAGATION. "Aseptic shoot tip propagation" means aseptically removing a vegetative shoot tip from growth arising from dormant cuttings, or from green growth (softwood) during the growing season, from Washington State University foundation plants and subsequently aseptically transferring these shoot tips to a suitable vessel containing an appropriate culture media. Plants derived from these shoot tips (first generation), when maintained under greenhouse conditions, may serve as a source of softwood cuttings (second generation), which may be used to establish a registered grape mother block suitable for the production of Washington certified grape nursery stock when managed in accordance with all other provisions of WAC 16-462-010 through 16-462-055 inclusive. First generation plants produced from original foundation material, those derived from aseptic shoot tip culture and maintained under greenhouse conditions, as well as second generation plants which will constitute the registered grape mother blocks, are all subject to Washington state department of agriculture inspection.
