

HB 2628 - DIGEST

(SEE ALSO PROPOSED 1ST SUB)

Requires the department to identify no less than three engineered model bank stabilization methods among which riparian landowners may choose from in order to protect their property from flood damage. Each model bank stabilization method must provide for adequate protection of fish life while providing for the protection of riparian property from flood water.

Requires each model bank stabilization method identified by the department to include general engineering and design criteria as to its proper use.
