Area 1. (Restrictions) The use or application of the amine, sodium salt or solubilized acid formulations of 2,4-D, 2,4,5-T and M.C.P. is permitted; Provided, That the low volatile ester formulations may also be applied from November 1 to March 15 of the following year.

Ground applications shall be made with a minimum of 8 gallons of water per acre and ground equipment must be equipped with nozzles having a minimum orifice diameter of 0.031 inches. Pressure for ground rigs must not exceed 35 pounds per square inch at the nozzles.

Aircraft applications shall be made with a minimum of 3 gallons of water per acre and aircraft must be equipped with nozzles having minimum orifice diameter of 0.125 inches, with core plates removed, and directed downward or backward 90 degrees or more from the direction of flight.

Spraying of herbicides permitted as set forth in this order by ground or aerial equipment shall not be allowed when the prevailing wind velocity is over 7 miles per hour in any direction. The foregoing wind conditions under which spraying is allowed shall be uneffective if other weather conditions are such that damage could result to adjacent and nearby towns, susceptible crops and plantings through physical drift or volatilization, even though wind velocity is within the limits allowable for spraying.

I hereby certify that the foregoing is a true and correct copy of the order promulgated by the Department of Agriculture.
