CODE REVISER'S OFFICE
DOCKET # 74 FILE # 12

I, Joe Dwyer, Director of Agriculture, State of Washington, after public notice and hearing held at Yakima, Washington on May 13, 1960, by virtue of authority vested in me under Chapter 61, Session Laws of 1951, as amended by Chapter 261, Session Laws of 1953, Revised Code of Washington Chapter 17.20, do hereby amend Order No. 786 to read as follows:

Regulation 1. Area Under Order

All counties of the State of Washington, excluding therefrom those areas not under State jurisdiction.

Regulation 2.

The use or application of the following listed chemicals or chemically treated materials, or any formulation thereof on blossoming alfalfa and clover crops is prohibited in the area under order (Regulation 1). Blossoming period of alfalfa or clover in a given field is whenever there are 2 or more blooms per square yard on the average. For the purpose of this regulation, a bloom is defined as any clover head or alfalfa raceme containing one or more open flowers.

|-------------------------------|---------------|----------------------------------|
| a. Aldrin | f. Dimethoate | k. Malathion (dust formulations) |
| b. BHC (Benzene Hexachloride) | g. EPN | l. Metacide |
| c. Chlordane | h. Guthion | m. Methyl Parathion |
| d. Chlorthion | i. Heptachlor | n. Parathion |
| e. Diazinon | j. Lindane | |

Regulation 3.

The use or application of the following listed chemicals or chemically treated materials or any formulation thereof on blossoming alfalfa and clover crops is restricted to applications only within the period beginning at 2 hours prior to sunset and ending at 2 1/2 hours after sunrise the following morning. Blossoming period of alfalfa or clover in a given field is whenever there are two or more blooms per square yard on the average.

- | | | |
|--------------------------------------|---|--------------------------|
| a. DDT | h. Endrin (emulsifiable formulation applied as a spray) | n. Phosdrin |
| b. Delnav | i. Ethion | o. Phosphamidon |
| c. Demeton (Systox) | j. Methoxychlor | p. Phostex |
| d. Dibrom | k. Methyl Trithion | q. TDE (Rhothane or DDD) |
| e. Di-Syston (granular formulations) | l. Perthane | r. TEPP |
| f. DN-111 | m. Phorate (Thimet) | s. Thiodan |
| g. Dylox | | t. Toxaphene |
| | | u. Trithion |

Regulation 4.

The use or application of the chemical known as malathion is emulsifiable or liquid formulations and wettable powder formulations applied as sprays on blossoming alfalfa or clover crops is restricted to applications only within the period beginning at 2 hours prior to sunset and ending at midnight of the same day. Blossoming period of alfalfa or clover in a given field is whenever there are two or more blooms per square yard on the average.

Regulation 5.

The use or application of the chemicals known as dieldrin and sevin in either spray or dust formulations on blossoming alfalfa, clover and mint crops, is

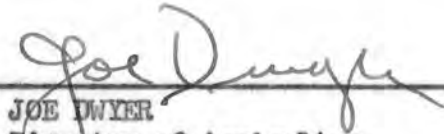

prohibited in all counties of the State of Washington. The use of dusts or sprays of dieldrin or sevin on these crops will only be permissible if applied not less than 7 days before there are two or more blooms per square yard on the average in a given field.

Regulation 6.

The use or application of the chemicals known as parathion, metacide and methyl parathion on blossoming mint crops in dust formulations is prohibited. The use of emulsifiable or liquid formulations of parathion, metacide and methyl parathion will only be permissible on blossoming mint crops if application is made within the period beginning at 2 hours prior to sunset and ending at 2 1/2 hours after sunrise, if the mint field is located within one (1) air mile of a registered bee apiary except that the time of application is not restricted when the general temperature in the area is less than 60°F.

For purpose of this order the time of sunrise and sunset will be that of official sunshine tables, U. S. Weather Bureau, Yakima, Washington.

The regulations contained in this will be effective until December 31, 1960.
