READOPTING SECTION (Readopting WSR 89-24-090, filed 12/6/89, effective 1/6/90)

WAC 16-752-300 ESTABLISHING QUARANTINE. Yellow nutsedge (*Cyperus esculentus* L.) is a herbaceous perennial that is one of the most serious noxious weeds of agronomic crops. It propagates by seed, rhizomes, bulbs, and nutlets. Soil containing nutlets is the primary mode of spread in cultivated land. It is highly invasive and its unchecked spread would entail great economic loss to the agricultural industries of the state. It is a class B noxious weed designated for control in Cowlitz County (WAC 16-750-011(27)). Yellow nutsedge has infested two dredging spoil sites at the Port of Kalama in Kalama, Washington. Movement of material from these sites has initiated additional infestations. RCW 17.10.210 provides that either the director or the county noxious weed control board or a weed district may issue an order for quarantine and restriction or denial of access to land determined to be so seriously infested that control measures cannot be undertaken without quarantine of the land. The director has determined:

- (1) That the identified sites are so seriously infested as to require quarantine; and
- (2) That the movement of contaminated materials from these sites presents an immediate threat of infestation to the rest of the county agricultural and nonagricultural areas; and
- (3) That the restriction of such spread is critical to control efforts.
