WAC 284-74-010 1983 Annuity tables. The purpose of this section is to recognize new mortality tables, the 1983 table "a" and the 1983 GAM table, for use in determining the minimum standard of valuation for annuity and pure endowment contracts, except as otherwise provided in WAC 284-74-020.

- (1) The 1983 table "a" mortality table, which was developed by the society of actuaries committee to recommend a new mortality basis for individual annuity valuation and adopted as a recognized mortality table for annuities in June 1982 by the National Association of Insurance Commissioners (NAIC), and which is set forth in NAIC Proceedings, 1982 Vol. II, p. 454, is recognized and approved as an individual annuity mortality table for valuation and, at the option of the company, may be used for determining the minimum standard of valuation for any individual annuity or pure endowment contract issued on or after July 10, 1982.
- (2) The 1983 table "a" referred to in subsection (1) of this section is to be used for determining the minimum standard of valuation for any individual annuity or pure endowment contract issued on or after January 1, 1988.
- (3) The 1983 GAM mortality table, which was developed by the society of actuaries committee on annuities and adopted as a recognized mortality table for annuities in December 1983 by the NAIC, and which is set forth in NAIC Proceedings, 1984 Vol. I, pp. 414-415, and the 1983 table "a" mortality table referred to in subsection (1) of this section, are

recognized and approved as group annuity mortality tables for valuation and, at the option of the company, either table may be used for purposes of valuation for any annuity or pure endowment purchased on or after July 10, 1982, under a group annuity or pure endowment contract.

(4) The 1983 GAM table referred to in subsection (3) of this section is to be used for determining the minimum standard of valuation for any annuity or pure endowment purchased on or after January 1, 1988 under a group annuity or pure endowment contract.

[Statutory Authority: RCW 48.02.060. 98-05-069 (Matter No. R 97-5), § 284-74-010, filed 2/17/98, effective 3/20/98; 87-05-046 (Order R 87-3), § 284-74-010, filed 2/18/87.]

#### WAC 284-74-020 Annuity 2000 and 1994 GAR

**tables.** The purpose of this section is to recognize the following mortality tables for use in determining the minimum standard of valuation for annuity and pure endowment contracts: The annuity 2000 mortality table, and the 1994 group annuity reserving (1994 GAR) table.

- (1) This section does not apply to an individual annuity or pure endowment contract, if the contract is based on life contingencies and is issued to fund periodic benefits arising from:
- (a) Settlements of various forms of claims pertaining to court settlements or out of court settlements from tort actions;
- (b) Settlements involving similar actions such as worker's compensation claims; or
- (c) Settlements of long term disability claims where a temporary or life annuity has been used in lieu of continuing disability payments.
- (2) The annuity 2000 mortality table, which was developed by the society of actuaries committee on life insurance research and adopted as a recognized mortality table for annuities in December 1996 by the National Association of Insurance Commissioners (NAIC), and which is set forth in *Transactions, Society of Actuaries*, Vol. XLVII (1995), p. 240, is recognized and approved as an individual annuity mortality table for valuation and shall be used for determining the minimum standard of valuation for any individual annuity or pure endowment contract issued on or after April 1, 1998. At the option of the company, the annuity 2000 mortality table may be used for determining the minimum standard of valuation for any individual annuity or pure endowment contract issued on or after January 1, 1998.
- (3) The 1994 GAR table, which was developed by the society of actuaries group annuity valuation table task force and adopted as a recognized mortality table for annuities in December 1996 by the NAIC, and which is set forth in *Transactions, Society of Actuaries*, Vol. XLVII (1995), pp. 866 and 867, is recognized and approved as a group annuity mortality table for valuation and shall be used for determining the minimum standard of valuation for any annuity or pure endow-

(3/1/12) [Ch. 284-74 WAC—p. 1]

ment purchased on or after April 1, 1998, under a group annuity or pure endowment contract. At the option of the company, the 1994 GAR table may be used for determining the minimum standard of valuation for any annuity or pure endowment purchased on or after January 1, 1998, under a group annuity or pure endowment contract.

(4) In using the 1994 GAR table, the mortality rate for a person age x in year (1994 + n) is calculated as follows:

$$q_x^{1994+n} = q_x^{1994} (1 - AA_x)^n$$

where the  $q_x^{1994}$  and  $AA_x$ s are as specified in the 1994 GAR table.

[Statutory Authority: RCW 48.02.060. 98-05-069 (Matter No. R 97-5), § 284-74-020, filed 2/17/98, effective 3/20/98.]

# WAC 284-74-100 Smoker/nonsmoker mortality tables. The purpose of this section is to permit the use of mortality tables approved by the National Association of Insurance Commissioners (NAIC) that reflect differences in mortality between smokers and nonsmokers in determining minimum reserve liabilities, minimum cash surrender values and amounts of paid-up nonforfeiture benefits for plans of insurance with separate premium rates for smokers and nonsmokers.

- (1) As used in this section, the following definitions apply:
- (a) "1980 CSO table, with or without ten-year select mortality factors," means that mortality table consisting of separate rates of mortality for male and female lives, developed by the society of actuaries committee to recommend new mortality tables for valuation of standard individual ordinary life insurance, incorporated in the 1980 NAIC amendments to the model standard valuation law and standard nonforfeiture law for life insurance and referred to in those models as the commissioners 1980 standard ordinary mortality table, with or without ten-year select mortality factors and set forth in Transactions, Society of Actuaries, Vol. XXXIII (1981), pp. 617 and 618, and referred to as commissioners 1980 standard ordinary mortality table (1980 CSO). The same select factors will be used for both smokers and nonsmokers tables. These select factors are set forth in Transactions, Society of Actuaries, Vol. XXXIII (1981), p. 669, and referred to therein as selection factors for alternate method of determining life insurance reserves and deficiency reserve requirements (1980 CSO with ten-year select mortality factors).
- (b) "1980 CET table" means that mortality table consisting of separate rates of mortality for male and female lives, developed by the society of actuaries committee to recommend new mortality tables for valuation of standard individual ordinary life insurance, incorporated in the 1980 NAIC amendments to the standard model nonforfeiture law for life insurance and referred to in those models as the commissioners 1980 extended term insurance table, and set forth in *Transactions, Society of Actuaries*, Vol. XXXIII (1981), pp. 617 and 619, and referred to as commissioners 1980 extended term insurance mortality table (1980 CET).
- (c) "1958 CSO table" means that mortality table developed by the society of actuaries special committee on new mortality tables, incorporated in the NAIC model standard

- nonforfeiture law for life insurance and referred to in that model as the commissioners 1958 standard ordinary mortality table, and set forth in *Proceedings of the National Association of Insurance Commissioners*, 1959, Vol. I, p. 195 (also see 1960, Vol. I, p. 211, and 1978, Vol. I, p. 537) and referred to as commissioners 1958 standard ordinary mortality table (1958 CSO).
- (d) "1958 CET table" means that mortality table developed by the society of actuaries special committee on new mortality tables, incorporated in the NAIC model standard nonforfeiture law for life insurance and referred to in that model as the commissioners 1958 extended term insurance table, and set forth in *Proceedings of the National Association of Insurance Commissioners*, 1959, Vol. I, p. 196, and referred to as commissioners 1958 extended term insurance mortality table (1958 CET).
- (e) The phrase "smoker and nonsmoker mortality tables" refers to the mortality tables with separate rates of mortality for smokers and nonsmokers derived from the tables defined in (a) through (d) of this subsection which were developed by the society of actuaries task force on smoker/nonsmoker mortality and the California insurance department staff and recommended by the NAIC technical staff actuarial group, and are published in *Proceedings, National Association of Insurance Commissioners*, 1984, Vol. I, pp. 402-413.
- (f) The phrase "composite mortality tables" refers to the mortality tables defined in (a) through (d) of this subsection as they were originally published with rates of mortality that do not distinguish between smokers and nonsmokers.
- (2) For any policy of insurance delivered or issued for delivery in this state after the effective date of this section and before January 1, 1989, at the option of the company and subject to the conditions stated in subsection (4) of this section:
- (a) The 1958 CSO smoker and nonsmoker mortality tables may be substituted for the 1958 CSO table; and
- (b) The 1958 CET smoker and nonsmoker mortality tables may be substituted for the 1958 CET table for use in determining minimum reserve liabilities and minimum cash surrender values and amounts of paid-up nonforfeiture benefits.

Provided that for any category of insurance issued on female lives with minimum reserve liabilities and minimum cash surrender values and amounts of paid-up nonforfeiture benefits determined using the 1958 CSO or 1958 CET smoker and nonsmoker mortality tables, such minimum values may be calculated according to an age not more than six years younger than the actual age of the insured.

Provided further that the substitution of the 1958 CSO or 1958 CET smoker and nonsmoker mortality tables is available only if made for each policy of insurance on a policy form delivered or issued for delivery on or after the effective date of this section and before a date not later than January 1, 1989.

- (3) For any policy of insurance delivered or issued for delivery in this state after the effective date of this regulation, at the option of the company and subject to the conditions stated in subsection (4) of this section:
- (a) The 1980 CSO smoker and nonsmoker mortality tables, with or without ten-year select mortality factors, may be substituted for the 1980 CSO table, with or without ten-year select mortality factors; and

[Ch. 284-74 WAC—p. 2] (3/1/12)

- (b) The 1980 CET smoker and nonsmoker mortality tables may be substituted for the 1980 CET table for use in determining minimum reserve liabilities and minimum cash surrender values and amounts of paid-up nonforfeiture benefits
- (4) Conditions. For each plan of insurance with separate rates for smokers and nonsmokers an insurer may:
- (a) Use composite mortality tables to determine minimum reserve liabilities, minimum cash surrender values and amounts of paid-up nonforfeiture benefits;
- (b) Use smoker and nonsmoker mortality tables to determine the valuation net premiums and additional minimum reserves, if any, required by RCW 48.74.070 and use composite mortality tables to determine the basic minimum reserves, minimum cash surrender values and amounts of paid-up nonforfeiture benefits; or
- (c) Use smoker and nonsmoker mortality tables to determine minimum reserve liabilities, minimum cash surrender values and amounts of paid-up nonforfeiture benefits.
- (5) For purposes of determining nonforfeiture values and reserves, this section applies to all individual life insurance policies as defined in RCW 48.11.020 which are issued or delivered in this state after December 31, 1986. For purposes of RCW 48.74.070 (Minimum reserve if gross premium less than valuation net premium), this section applies to all individual life insurance policies as defined in RCW 48.11.020 which are issued or delivered in this state after December 31, 1985.

[Statutory Authority: RCW 48.02.060. 87-05-046 (Order R 87-3), § 284-74-100, filed 2/18/87.]

WAC 284-74-200 Gender blended mortality tables for certain life insurance policies. The purpose of this section is to permit individual, franchise and group permanent (cash value) life insurance policies and pension plans funded in whole or in part by life insurance to provide the same cash values and paid-up nonforfeiture benefits to both men and women. No change in minimum valuation standards is implied by this section. However, if the gender blended smoker and nonsmoker mortality tables are used to determine cash surrender values and paid-up nonforfeiture benefits then pursuant to WAC 284-74-100 (4)(c) the smoker and nonsmoker mortality tables shall be used to determine minimum reserve liabilities.

- (1) As used in this section, the following definitions apply:
- (a) "1980 CSO table, with or without ten-year select mortality factors," means that mortality table, consisting of separate rates of mortality for male and female lives, developed by the society of actuaries committee to recommend new mortality tables for valuation of standard ordinary life insurance incorporated in the 1980 National Association of Insurance Commissioners (NAIC) amendments to the model standard valuation law and standard nonforfeiture law for life insurance and referred to in those models as the Commissioner's 1980 Standard Ordinary Mortality Table, with or without ten-year select mortality factors and set forth in Transactions, Society of Actuaries, Vol. XXXIII (1981), pp. 617 and 618, and referred to as the Commissioner's 1980 Standard Ordinary Mortality Table (1980 CSO).

- (b) "1980 CSO table (M), with or without ten-year select mortality factors," means that mortality table consisting of the rates of mortality for male lives from the 1980 CSO table, with or without ten-year select mortality factors.
- (c) "1980 CSO table (F), with or without ten-year select mortality factors," means that mortality table consisting of the rates of mortality for female lives from the 1980 CSO table, with or without ten-year select mortality factors.
- (d) The "ten-year select mortality factors" referred to in (a), (b), and (c) of this subsection are those set forth in Transactions, Society of Actuaries, Vol. XXXIII (1981), p. 669, and referred to therein as selection factors for alternate method of determining life insurance reserves and deficiency reserve requirements (1980 CSO with ten-year select mortality factors).
- (e) "1980 CET table" means that mortality table consisting of separate rates of mortality for male and female lives developed by the society of actuaries committee to recommend new mortality tables for valuation of standard individual ordinary life insurance, incorporated in the 1980 NAIC amendments to the standard model nonforfeiture law for life insurance and referred to in those models as the Commissioner's 1980 Extended Term Insurance Table, and set forth in Transactions, Society of Actuaries, Vol. XXXIII (1981), pp. 617 and 619, and referred to therein as the Commissioner's 1980 Extended Term Insurance Mortality Table (1980 CET).
- (f) "1980 CET table (M)" means that mortality table consisting of the rates of mortality for male lives from the 1980 CET table.
- (g) "1980 CET table (F)" means that mortality table consisting of the rates of mortality for female lives from the 1980 CET table.
- (h) As used in this section, "1980 CSO and 1980 CET Smoker and Nonsmoker Mortality Tables" means the mortality tables with separate rates of mortality for smokers and nonsmokers which is found in NAIC Proceedings, 1984, Vol. I, pp. 406-413 and which is derived from the 1980 CSO and 1980 CET Mortality Tables.
- (2) For any policy of insurance on the life of either a male or female insured delivered or issued for delivery in this state after the operative date of chapter 48.76 RCW for that policy form, for use in determining minimum cash surrender values and minimum amounts and minimum periods of paidup nonforfeiture benefits:
- (a) A mortality table which is a blend of the 1980 CSO table (M) and the 1980 CSO table (F) with or without tenyear select mortality factors may at the option of the company be substituted for the 1980 CSO table, with or without tenyear select mortality factors.
- (b) A mortality table which is of the same blend as used in (a) of this subsection but applied to form a blend of the 1980 CET table (M) and the 1980 CET table (F) may at the option of the company be substituted for the 1980 CET table.
- (c) The following tables, which are set forth in NAIC Proceedings, 1984, Vol. I, pp. 396-400, will be considered as the basis for acceptable tables:
- (i) 100% male 0% female for tables to be designated as the "1980 CSO-A" and "1980 CET-A" tables.
- (ii) 80% male 20% female for tables to be designated as the "1980 CSO-B" and "1980 CET-B" tables.

(3/1/12) [Ch. 284-74 WAC—p. 3]

- (iii) 60% male 40% female for tables to be designated as the "1980 CSO-C" and "1980 CET-C" tables.
- (iv) 50% male 50% female for tables to be designated as the "1980 CSO-D" and "1980 CET-D" tables.
- (v) 40% male 60% female for tables to be designated as the "1980 CSO-E" and "1980 CET-E" tables.
- (vi) 20% male 80% female for tables to be designated as the "1980 CSO-F" and "1980 CET-F" tables.
- (vii) 0% male 100% female for tables to be designated as the "1980 CSO-G" and "1980 CET-G" tables.
- (3) Tables 1980 CSO-A, 1980 CET-A, 1980 CSO-G and 1980 CET-G are not to be used with respect to policies issued on or after the effective date of this regulation, except where the proportion of persons insured is anticipated to be ninety percent or more of one sex or the other or except for certain policies converted from group insurance. Such group conversions issued on or after the effective date of this regulation must use mortality tables based on the blend of lives by sex expected for such policies if such group conversions are considered as extensions of the Norris decision or other federal law. This consideration has not been clearly defined by court or legislative action in all jurisdictions as of the date of promulgation of these sections.
- (4) Notwithstanding any other provision of this rule, an insurer shall not use these blended tables unless the Norris decision or other federal law is known to apply to the policies involved, or unless there exists a bona fide concern on the part of the insurer that the Norris decision or other federal law might reasonably be construed to apply by a court having jurisdiction.
- (5) It shall not be a violation of RCW 48.30.300 for an insurer to issue the same kind of policy of life insurance on both a sex distinct and sex neutral basis.
- (6) In determining minimum cash surrender values and amounts of paid-up nonforfeiture benefits for any policy of insurance on the life of either a male or female insured on a form of insurance with separate rates for smokers and non-smokers delivered or issued for delivery in this state after the operative date of chapter 48.76 RCW for that policy form, in addition to the mortality tables that may be used according to subsection (2) of this section:
- (a) A mortality table which is a blend of the male and female rates of mortality according to the 1980 CSO Smoker Mortality Table, in the case of lives classified as smokers, or the 1980 CSO Nonsmoker Mortality Table, in the case of lives classified as nonsmokers, with or without ten-year select mortality factors, may at the option of the company be substituted for the 1980 CSO table, with or without ten-year select mortality factors; and
- (b) A mortality table which is of the same blend as used in (a) of this subsection but applied to form a blend of the male and female rates of mortality according to the corresponding 1980 CET Smoker Mortality Table or 1980 CET Nonsmoker Mortality Table may at the option of the company be substituted for the 1980 CET table.

The following blended mortality tables found in NAIC Proceedings, 1981, Vol. I, pp. 406-413 and NAIC Proceedings, 1987, Vol. I, 521-530, will be considered acceptable:

SA: 100% Male 0% Female smoker tables designated as "1980 CSO-SA" and "1980 CET-SA" tables.

- SB: 80% Male 20% Female smoker tables designated as "1980 CSO-SB" and "1980 CET-SB" tables.
- SC: 60% Male 40% Female smoker tables designated as "1980 CSO-SC" and "1980 CET-SC" tables.
- SD: 50% Male 50% Female smoker tables designated as "1980 CSO-SD" and "1980 CET-SD" tables.
- SE: 40% Male 60% Female smoker tables designated as "1980 CSO-SE" and "1980 CET-SE" tables.
- SF: 20% Male 80% Female smoker tables designated as "1980 CSO-SF" and "1980 CET-SF" tables.
- SG: 0% Male 100% Female smoker tables designated as "1980 CSO-SG" and "1980 CET-SG" tables.
- NA: 100% Male 0% Female nonsmoker tables designated as "1980 CSO-NA" and "1980 CET-NA" tables.
- NB: 80% Male 20% Female nonsmoker tables designated as "1980 CSO-NB" and "1980 CET-NB" tables.
- NC: 60% Male 40% Female nonsmoker tables designated as "1980 CSO-NC" and "1980 CET-NC" tables.
- ND: 50% Male 50% Female nonsmoker tables designated as "1980 CSO-ND" and "1980 CET-ND" tables.
- NE: 40% Male 60% Female nonsmoker tables designated as "1980 CSO-NE" and "1980 CET-NE" tables.
- NF: 20% Male 80% Female nonsmoker tables designated as "1980 CSO-NF" and "1980 CET-NF" tables.
- NG: 0% Male 100% Female nonsmoker tables designated as "1980 CSO-NG" and "1980 CET-NG" tables.

Tables SA, SG, NA, and NG are not acceptable as blended tables unless the proportion of persons insured is anticipated to be 90% or more of one sex or the other.

(7) The effective date of this rule is February 29, 1987, and is intended to comply with the Norris decision and other federal law. It is recognized that the insurance commissioner has approved Norris-type tables prior to this effective date on an individual basis. Tables so approved are hereby deemed to be in compliance with this regulation.

[Statutory Authority: RCW 48.02.060. 89-03-031 (Order R 89-1), § 284-74-200, filed 1/11/89; 88-04-054 (Order R 88-1), § 284-74-200, filed 1/29/88, effective 2/29/88.]

- **WAC 284-74-300 Purpose.** (1) The purpose of this regulation, WAC 284-74-300 through 284-74-380 is to provide:
- (a) Tables of select mortality factors and rules for their use;
- (b) Rules concerning a minimum standard for the valuation of plans with nonlevel premiums or benefits; and
- (c) Rules concerning a minimum standard for the valuation of plans with secondary guarantees.
- (2) The method for calculating reserves defined in this regulation will constitute the commissioner's reserve valuation method for policies to which this regulation is applicable.

[Statutory Authority: RCW 48.02.060, 48.74.030, 48.74.040, 48.74.070, and 48.74.080. 00-07-069, § 284-74-300, filed 3/13/00, effective 4/13/00.]

[Ch. 284-74 WAC—p. 4] (3/1/12)

**WAC 284-74-310 Authority.** This regulation is issued under the authority of RCW 48.02.060(3), 48.12.030(3), 48.74.040(1), 48.74.080 and 48.74.030 (1)(a)(iii).

[Statutory Authority: RCW 48.02.060, 48.74.030, 48.74.040, 48.74.070, and 48.74.080. 00-07-069, § 284-74-310, filed 3/13/00, effective 4/13/00.]

- WAC 284-74-320 Applicability. This regulation shall apply to all life insurance policies, with or without nonforfeiture values, issued on or after the operative date of this regulation, subject to the following exceptions and conditions.
- (1)(a) This regulation shall not apply to any individual life insurance policy issued on or after the operative date of this regulation if the policy is issued in accordance with and as a result of the exercise of a reentry provision contained in the original life insurance policy of the same or greater face amount, issued before the operative date of this regulation, that guarantees the premium rates of the new policy. This regulation also shall not apply to subsequent policies issued as a result of the exercise of such a provision, or a derivation of the provision, in the new policy.
- (b) This regulation shall not apply to any universal life insurance policy that meets all the following requirements:
- (i) The secondary guarantee period, if any, is five years or less;
- (ii) The specified premium for the secondary guarantee period is not less than the net level reserve premium for the secondary guarantee period based on the 1980 CSO valuation tables as defined in WAC 284-74-330(6) and the applicable valuation interest rate; and
- (iii) The initial surrender charge is not less than one hundred percent of the first year annualized specified premium for the secondary guarantee period.
- (c) This regulation shall not apply to any variable life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts.
- (d) This regulation shall not apply to any variable universal life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts.
- (e) This regulation shall not apply to a group life insurance certificate unless the certificate provides for a stated or implied schedule of maximum gross premiums required in order to continue coverage in force for a period in excess of one year.
- (2)(a) Calculation of the minimum valuation standard for policies with gross premiums subject to a nonlevel guaranteed maximum or with benefits subject to a nonlevel guaranteed minimum (other than universal life policies), or both, shall be in accordance with the provisions of WAC 284-74-350.
- (b) Calculation of the minimum valuation standard for flexible premium and fixed premium universal life insurance policies, that contain provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period, shall be in accordance with the provisions of WAC 284-74-360.

[Statutory Authority: RCW 48.02.060, 48.74.030, 48.74.040, 48.74.070, and 48.74.080. 00-07-069, § 284-74-320, filed 3/13/00, effective 4/13/00.]

WAC 284-74-330 Definitions. For purposes of this regulation:

- (1) "Basic reserves" means reserves calculated in accordance with RCW 48.74.040(1).
- (2) "Contract segmentation method" means the method of dividing the period from issue to mandatory expiration of a policy into successive segments, with the length of each segment being defined as the period from the end of the prior segment (from policy inception, for the first segment) to the end of the latest policy year as determined below. All calculations are made using the 1980 CSO valuation tables, as defined in subsection (6) of this section (or any other valuation mortality table adopted by the National Association of Insurance Commissioners (NAIC) after the operative date of this regulation and promulgated by regulation by the commissioner for this purpose), and, if elected for the plan, the optional minimum mortality standard for deficiency reserves stipulated in WAC 284-74-340(2).

The length of a particular contract segment shall be set equal to the minimum of the value t for which  $G_t$  is greater than  $R_t$  (if  $G_t$  never exceeds  $R_t$  the segment length is deemed to be the number of years from the beginning of the segment to the mandatory expiration date of the policy), where  $G_t$  and  $R_t$  are defined as follows:

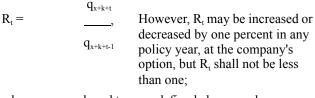

$$G_{t} = \frac{GP_{x+k+t}}{GP_{x+k+t-1}}$$
where:
$$x = \text{ original issue age;}$$

$$k = \text{ the number of years from the date of issue to the beginning of the segment;}$$

$$t = 1, 2, ...; t \text{ is reset to 1 at the beginning of each segment;}}$$

$$GP_{x+k+t-1} = Guaranteed maximum gross premium per thousand of face amount for year to of the segment, ignoring policy fees only if level for the premium paying period of the policy.}$$

$$Q_{x+k+t} = However R may be increased or the property of the property of the policy.$$

where: 
$$q_{x+k+t-1}$$
 =  $x$ ,  $k$  and  $t$  are as defined above, and = valuation mortality rate for deficiency reserves in policy year  $k+t$  but using the mortality of WAC 284-74-340 (2)(b) if WAC 284-74-340 (2)(c) is elected for deficiency reserves.

However, if  $GP_{x+k+t}$  is greater than 0 and  $GP_{x+k+t-1}$  is equal to 0,  $G_t$  shall be deemed to be 1000. If  $GP_{x+k+t}$  and  $GP_{x+k+t-1}$  are both equal to 0,  $G_t$  shall be deemed to be 0.

- (3) "Deficiency reserves" means the excess, if greater than zero, of
- (a) Minimum reserves calculated in accordance with RCW 48.74.070 over
  - (b) Basic reserves.

[Ch. 284-74 WAC—p. 5]

- (4) "Guaranteed maximum gross premiums" means the premiums guaranteed and determined at issue that the actual gross premiums under a policy of life insurance cannot exceed.
- (5) "Maximum valuation interest rates" means the interest rates defined in RCW 48.74.030(3) that are to be used in determining the minimum standard for the valuation of life insurance policies.
- (6) "1980 CSO valuation tables" means the commissioners 1980 standard ordinary mortality table (1980 CSO table) without ten-year select mortality factors, incorporated into the 1980 amendments to the NAIC model standard valuation law, and variations of the 1980 CSO table approved by the NAIC, such as the smoker and nonsmoker versions approved in December 1983.
- (7) "Scheduled gross premium" means the smallest illustrated gross premium at issue for other than universal life insurance policies. For universal life insurance policies, scheduled gross premium means the smallest specified premium described in WAC 284-74-360 (1)(c), if any, or else the minimum premium described in WAC 284-74-360 (1)(d).
- (8)(a) "Segmented reserves" means reserves, calculated using segments produced by the contract segmentation method, equal to the present value of all future guaranteed benefits less the present value of all future net premiums to the mandatory expiration of a policy, where the net premiums within each segment are a uniform percentage of the respective guaranteed maximum gross premiums within the segment. The uniform percentage for each segment is such that, at the beginning of the segment, the present value of the net premiums within the segment equals:
- (i) The present value of the death benefits within the segment, plus
- (ii) The present value of any unusual guaranteed cash value (see WAC 284-74-350(4)) occurring at the end of the segment, less
- (iii) Any unusual guaranteed cash value occurring at the start of the segment, plus
- (iv) For the first segment only, the excess of the item (A) over item (B), as follows:
- (A) A net level annual premium equal to the present value, at the date of issue, of the benefits provided for in the first segment after the first policy year, divided by the present value, at the date of issue, of an annuity of one per year payable on the first and each subsequent anniversary within the first segment on which a premium falls due. However, the net level annual premium on the nineteen-year premium whole life plan of insurance of the same renewal year equivalent level amount at an age one year higher than the age at issue of the policy.
- (B) A net one year term premium for the benefits provided for in the first policy year.
- (b) The length of each segment is determined by the contract segmentation method, as defined in this section.
- (c) The interest rates used in the present value calculations for any policy may not exceed the maximum valuation interest rate, determined with a guarantee duration equal to the sum of the lengths of all segments of the policy.
- (d) For both basic reserves and deficiency reserves computed by the segmented method, present values shall include

- future benefits and net premiums in the current segment and in all subsequent segments.
- (9) "Tabular cost of insurance" means the net single premium at the beginning of a policy year for one-year term insurance in the amount of the guaranteed death benefit in that policy year.
- (10) "Ten-year select mortality factors" means the select factors adopted with the 1980 amendments to the NAIC standard valuation law.
- (11)(a) "Unitary reserves" means the present value of all future guaranteed benefits less the present value of all future modified net premiums, where:
- (i) Guaranteed benefits and modified net premiums are considered to the mandatory expiration of the policy; and
- (ii) Modified net premiums are a uniform percentage of the respective guaranteed maximum gross premiums, where the uniform percentage is such that, at issue, the present value of the net premiums equals the present value of all death benefits and pure endowments, plus the excess of item (A) over item (B), as follows:
- (A) A net level annual premium equal to the present value, at the date of issue, of the benefits provided for after the first policy year, divided by the present value, at the date of issue, of an annuity of one per year payable on the first and each subsequent anniversary of the policy on which a premium falls due. However, the net level annual premium shall not exceed the net level annual premium on the nineteen-year premium whole life plan of insurance of the same renewal year equivalent level amount at an age one year higher than the age at issue of the policy.
- (B) A net one year term premium for the benefits provided for in the first policy year.
- (b) The interest rates used in the present value calculations for any policy may not exceed the maximum valuation interest rate, determined with a guarantee duration equal to the length from issue to the mandatory expiration of the policy.
- (12) "Universal life insurance policy" means any individual life insurance policy under the provisions of which separately identified interest credits (other than in connection with dividend accumulations, premium deposit funds, or other supplementary accounts) and mortality or expense charges are made to the policy.

[Statutory Authority: RCW 48.02.060, 48.74.030, 48.74.040, 48.74.070, and 48.74.080. 00-07-069, § 284-74-330, filed 3/13/00, effective 4/13/00.]

- WAC 284-74-340 General calculation requirements for basic reserves and premium deficiency reserves. (1) At the election of the company for any one or more specified plans of life insurance, the minimum valuation standard of mortality under RCW 48.74.030(1) for basic reserves may be calculated using the 1980 CSO mortality table with select mortality factors (or any other valuation mortality table adopted by the NAIC after the operative date of this regulation and promulgated by regulation by the commissioner for this purpose). If select mortality factors are elected, they may be:
- (a) The ten-year select mortality factors incorporated into the 1980 amendments to the NAIC standard valuation law:
  - (b) The select mortality factors in WAC 284-74-380; or

[Ch. 284-74 WAC—p. 6] (3/1/12)

- (c) Any other table of select mortality factors adopted by the NAIC after the operative date of this regulation and promulgated by regulation by the commissioner for the purpose of calculating basic reserves.
- (2) Deficiency reserves, if any, are calculated under RCW 48.74.070 for each policy as the excess, if greater than zero, of the quantity A over the basic reserve. The quantity A is obtained by recalculating the basic reserve for the policy using the minimum valuation standards of mortality under RCW 48.74.030(1) and rate of interest under RCW 48.74.030 (3), and replacing the net premium by the actual gross premium in each contract year the actual gross premiums shall be the maximum gross premiums guaranteed on the valuation date.

The quantity A and the corresponding net premiums used in the determination of quantity A shall be based upon the minimum valuation standard of mortality under subsection (1) of this section for basic reserves: Provided, That at the election of the company for any one or more specified plans of life insurance, the quantity A and the corresponding net premiums used in the determination of the quantity A may be based upon the 1980 CSO mortality table with select mortality factors (or any other valuation mortality table adopted by the NAIC after the operative date of this regulation and promulgated by regulation by the commissioner). If select mortality factors are elected, they may be:

- (a) The ten-year select mortality factors incorporated into the 1980 amendments to the NAIC standard valuation law;
  - (b) The select mortality factors in WAC 284-74-380;
- (c) Subject to the conditions in subsection (3) of this section, X percent of the select mortality factors in WAC 284-74-380; or
- (d) Any other table of select mortality factors adopted by the NAIC after the operative date of this regulation and promulgated by regulation by the commissioner for the purpose of calculating deficiency reserves.
- (3) If X percent of the select mortality factors in WAC 284-74-380 is elected under subsection (2)(c) of this section, then that election is subject to the following conditions:
- (a) X may vary by policy year, policy form, underwriting classification, issue age, or any other policy factor expected to affect mortality experience;
- (b) Using the valuation interest rate for basic reserves, subparagraph (i) is greater than or equal to subparagraph (ii);
- (i) The actuarial present value of future death benefits, calculated using the mortality rates resulting from the application of X;
- (ii) The actuarial present value of future death benefits, calculated using anticipated mortality experience without recognition of mortality improvement beyond the valuation date:
- (c) The mortality rates resulting from the application of X are at least as great as anticipated mortality experience, without recognition of mortality improvement beyond the valuation date, in each of the first five years after the valuation date;
- (d) The appointed actuary shall increase X at any valuation date where it is necessary to continue to meet all the requirements of this subsection (3);

- (e) The appointed actuary may decrease X at any valuation date as long as it continues to meet all the requirements of this subsection (3);
- (f) The appointed actuary shall specifically take into account the adverse effect on expected mortality and lapsation of any anticipated or actual increase in gross premiums; and
- (g) If X is less than one hundred percent at any duration for any policy, the following requirements shall be met:
- (i) The appointed actuary shall annually prepare an actuarial opinion and memorandum in conformance with the requirements of WAC 284-07-380 through 284-07-400;
- (ii) The appointed actuary shall disclose in the regulatory asset adequacy issues summary the impact of insufficiency of assets to support the payment of benefits and expenses and the establishment of statutory reserves during one or more interim periods; and
- (iii) The appointed actuary shall annually opine for all policies subject to this regulation as to whether the mortality rates resulting from the application of X meet the requirements of this subsection (3). This opinion shall be included with or attached to the company's annual statement, and shall disclose the lowest X factor used for any policy on the valuation date. This opinion shall be supported by an actuarial report, subject to appropriate actuarial standards of practice promulgated by the Actuarial Standards Board of the American Academy of Actuaries. The X factors shall reflect anticipated future mortality, without recognition of mortality improvement beyond the valuation date, taking into account relevant emerging experience.
- (4) This subsection applies to both basic reserves and deficiency reserves. Any set of select mortality factors may be used only for the first segment. However, if the first segment is less than ten years, the appropriate ten-year select mortality factors incorporated into the 1980 amendments to the NAIC standard valuation law may be used thereafter through the tenth policy year from the date of issue.
- (5) In determining basic reserves or deficiency reserves, guaranteed maximum gross premiums without policy fees may be used where the calculation involves the guaranteed maximum gross premium but only if the policy fee is specified in the policy and is a level dollar amount for the entire premium paying period of the policy. In determining deficiency reserves, policy fees may be included in guaranteed maximum gross premiums, even if not included in the actual calculation of basic reserves.
- (6) Reserves for policies under which the insurer has changed its guarantees after issue with respect to gross premiums, benefits, charges, or credits, with the new guarantees effective for more than one year after the date of the change, shall be the greatest of the following:
  - (a) Reserves calculated ignoring the change;
- (b) Reserves assuming the guarantee was made at issue; and
- (c) Reserves assuming that the policy was issued on the date of the guarantee.
- (7) The commissioner may require that the company document the extent of the adequacy of reserves for specified blocks, including, but not limited to, policies issued prior to the operative date of this regulation. This documentation may include a demonstration of the extent to which aggregation

(3/1/12) [Ch. 284-74 WAC—p. 7]

with other nonspecified blocks of business is relied upon in the formation of the appointed actuary opinion pursuant to and consistent with the requirements of WAC 284-07-380 and 284-07-400.

[Statutory Authority: RCW 48.02.060, 48.74.030, 48.74.080 and 48.74.070. 12-06-027 (Matter No. R 2011-29), § 284-74-340, filed 3/1/12, effective 4/1/12. Statutory Authority: RCW 48.02.060, 48.74.030, 48.74.040, 48.74.070, and 48.74.080. 00-07-069, § 284-74-340, filed 3/13/00, effective 4/13/00.]

WAC 284-74-350 Calculation of minimum valuation standard for policies with nonlevel guaranteed maximum gross premiums or nonlevel guaranteed minimum benefits (other than universal life policies). (1) Basic reserves shall be calculated as the greater of the segmented reserves and the unitary reserves. Both the segmented reserves and the unitary reserves for any policy shall use the same valuation mortality table and select mortality factors. At the option of the insurer, in calculating segmented reserves and net premiums, either of the adjustments described in (a) or (b) of this subsection may be made:

- (a) Treat the unitary reserve, if greater than zero, applicable at the end of each segment as a pure endowment; and subtract the unitary reserve, if greater than zero, applicable at the beginning of each segment from the present value of guaranteed life insurance and endowment benefits for each segment.
- (b) Treat the guaranteed cash surrender value, if greater than zero, applicable at the end of each segment as a pure endowment; and subtract the guaranteed cash surrender value, if greater than zero, applicable at the beginning of each segment from the present value of guaranteed life insurance and endowment benefits for each segment.
- (2)(a) The deficiency reserve at any duration shall be calculated:
- (i) On a unitary basis if the corresponding basic reserve determined by subsection (1) of this section is unitary;
- (ii) On a segmented basis if the corresponding basic reserve determined by subsection (1) of this section is segmented or
- (iii) On the segmented basis if the corresponding basic reserve determined by subsection (1) of this section is equal to both the segmented reserve and the unitary reserve.
- (b) This subsection shall apply to any policy for which the guaranteed maximum gross premium or actual gross premium at any duration is less than the corresponding modified net premium calculated by the method used in determining the basic reserves, but using the minimum valuation standards of mortality (specified in WAC 284-074-340(2)) and rate of interest.
- (c) Deficiency reserves, if any, shall be calculated for each policy as the excess if greater than zero, for the current and all remaining periods, of the quantity A over the basic reserve, where A is obtained as indicated in WAC 284-74-340(2).
- (d) For deficiency reserves determined on a segmented basis, the quantity A is determined using segment lengths equal to those determined for segmented basic reserves.
- (3) Basic reserves may not be less than the tabular cost of insurance for the balance of the policy year, if mean reserves are used. Basic reserves may not be less than the tabular cost of insurance for the balance of the current modal period or to

the paid-to-date, if later, but not beyond the next policy anniversary, if midterminal reserves are used. The tabular cost of insurance shall use the same valuation mortality table and interest rates as those used for the calculation of the segmented reserves. However, if select mortality factors are used, they shall be the ten-year select mortality factors incorporated into the 1980 amendments to the NAIC standard valuation law. In no case may total reserves (including basic reserves, deficiency reserves and any reserves held for supplemental benefits that would expire upon contract termination) be less than the amount that the policy owner would receive (including the cash surrender value of the supplemental benefits, if any, referred to above), exclusive of any deduction for policy loans, upon termination of the policy.

- (4)(a) For any policy with an unusual pattern of guaranteed cash surrender values, the reserves actually held prior to the first unusual guaranteed cash surrender value shall not be less than the reserves calculated by treating the first unusual guaranteed cash surrender value as a pure endowment and treating the policy as an n year policy providing term insurance plus a pure endowment equal to the unusual cash surrender value, where n is the number of years from the date of issue to the date the unusual cash surrender value is scheduled.
- (b) The reserves actually held subsequent to any unusual guaranteed cash surrender value shall not be less than the reserves calculated by treating the policy as an n year policy providing term insurance plus a pure endowment equal to the next unusual guaranteed cash surrender value, and treating any unusual guaranteed cash surrender value at the end of the prior segment as a net single premium, where:
- (i) n is the number of years from the date of the last unusual guaranteed cash surrender value prior to the valuation date to the earlier of:
- (A) The date of the next unusual guaranteed cash surrender value, if any, that is scheduled after the valuation date; or
  - (B) The mandatory expiration date of the policy; and
- (ii) The net premium for a given year during the n year period is equal to the product of the net to gross ratio and the respective gross premium; and
- (iii) The net to gross ratio is equal to item (A) divided by item (B) as follows:
- (A) The present value, at the beginning of the n year period, of death benefits payable during the n year period plus the present value, at the beginning of the n year period, of the next unusual guaranteed cash surrender value, if any, minus the amount of the last unusual guaranteed cash surrender value, if any, scheduled at the beginning of the n year period.
- (B) The present value, at the beginning of the n year period, of the scheduled gross premiums payable during the n year period.
- (c) For purposes of this subsection, a policy is considered to have an unusual pattern of guaranteed cash surrender values if any future guaranteed cash surrender value exceeds the prior year's guaranteed cash surrender value by more than the sum of:
- (i) One hundred ten percent of the scheduled gross premium for that year;
- (ii) One hundred ten percent of one year's accrued interest on the sum of the prior year's guaranteed cash surrender

[Ch. 284-74 WAC—p. 8] (3/1/12)

- value and the scheduled gross premium using the nonforfeiture interest rate used for calculating policy guaranteed cash surrender values; and
- (iii) Five percent of the first policy year surrender charge, if any.
- (5) At the option of the company, the following approach for reserves on yearly renewal term reinsurance may be used:
- (a) Calculate the valuation net premium for each future policy year as the tabular cost of insurance for that future year.
- (b) Basic reserves shall never be less than the tabular cost of insurance for the appropriate period, as defined in subsection (3) of this section.
- (c) For each policy year, calculate the excess, if greater than zero, of the valuation net premium over the respective guaranteed maximum gross premium.
- (d) Deficiency reserves shall never be less than the sum of the present values, at the date of valuation, of the excesses determined in accordance with (c) of this subsection.
- (e) For purposes of this subsection, the calculations use the maximum valuation interest rate and the 1980 CSO mortality table with or without ten-year select mortality factors, or any other table adopted after the operative date of this regulation by the NAIC and promulgated by regulation by the commissioner for this purpose.
- (f) A reinsurance agreement shall be considered yearly renewable term reinsurance for purposes of this subsection if only the mortality risk is reinsured.
- (g) If the assuming company chooses this optional exemption, the ceding company's reinsurance reserve credit shall be limited to the amount of reserve held by the assuming company for the affected policies.
- (6) At the option of the company, the following approach for reserves for attained-age-based yearly renewable term life insurance policies may be used:
- (a) Calculate the valuation net premium for each future policy year as the tabular cost of insurance for that future year.
- (b) Basic reserves shall never be less than the tabular cost of insurance for the appropriate period, as defined in subsection (3) of this section.
- (c) For each policy year, calculate the excess, if greater than zero, of the valuation net premium over the respective guaranteed maximum gross premium.
- (d) Deficiency reserves shall never be less than the sum of the present values, at the date of valuation, of the excesses determined in accordance with (c) of this subsection.
- (e) For purposes of this subsection, the calculations use the maximum valuation interest rate and the 1980 CSO mortality tables with or without ten-year select mortality factors, or any other table adopted after the operative date of this regulation by the NAIC and promulgated by regulation by the commissioner for this purpose.
- (f) A policy shall be considered an attained-age-based yearly renewable term life insurance policy for purposes of this subsection if:
- (i) The premium rates (on both the initial current premium scale and the guaranteed maximum premium scale) are based upon the attained age of the insured such that the rate for any given policy at a given attained age of the insured is independent of the year the policy was issued; and

- (ii) The premium rates (on both the initial current premium scale and the guaranteed maximum premium scale) are the same as the premium rates for policies covering all insureds of the same sex, risk class, plan of insurance and attained age.
- (g) For policies that become attained-age-based yearly renewable term policies after an initial period of coverage, the approach of this subsection may be used after the initial period if:
- (i) The initial period is constant for all insureds of the same sex, risk class and plan of insurance; or
- (ii) The initial period runs to a common attained age for all insureds of the same sex, risk class and plan of insurance; and
- (iii) After the initial period of coverage, the policy meets the conditions of (f) of this subsection.
- (h) If this election is made, this approach shall be applied in determining reserves for all attained-age-based yearly renewable term life insurance policies issued on or after the operative date of this regulation.
- (7) Unitary basic reserves and unitary deficiency reserves need not be calculated for a policy if the following conditions are met:
- (a) The policy consists of a series of n-year periods, including the first period and all renewal periods, where n is the same for each period, except that for the final renewal period, n may be truncated or extended to reach the expiry age: Provided, That this final renewal period is less than ten years and less than twice the size of the earlier n-year periods, and for each period, the premium rates on both the initial current premium scale and the guaranteed maximum premium scale are level;
- (b) The guaranteed maximum gross premiums in all nyear periods are not less than the corresponding net premiums based upon the 1980 CSO mortality table with or without the ten-year select mortality factors; and
  - (c) There are no cash surrender values in any policy year.
- (8) Unitary basic reserves and unitary deficiency reserves need not be calculated for a policy if the following conditions are met, based upon the initial current premium scale at issue:
  - (a) At issue, the insured is age twenty-four or younger;
- (b) Until the insured reaches the end of the juvenile period, which shall occur at or before age twenty-five, the gross premiums and death benefits are level, and there are no cash surrender values; and
- (c) After the end of the juvenile period, gross premiums are level for the remainder of the premium paying period, and death benefits are level for the remainder of the life of the policy.

[Statutory Authority: RCW 48.02.060, 48.74.030, 48.74.040, 48.74.070, and 48.74.080. 00-07-069, § 284-74-350, filed 3/13/00, effective 4/13/00.]

- WAC 284-74-360 Calculation of minimum valuation standard for flexible premium and fixed premium universal life insurance policies that contain provisions resulting in the ability of a policy owner to keep a policy in force over a secondary guarantee period. (1)(a) Policies with a secondary guarantee include:
- (i) A policy with a guarantee that the policy will remain in force at the original schedule of benefits over a specified

(3/1/12) [Ch. 284-74 WAC—p. 9]

period of time, subject only to the payment of specified premiums:

- (ii) A policy in which the minimum premium at any duration is less than the corresponding one year valuation premium, calculated using the maximum valuation interest rate and the 1980 CSO mortality tables with or without tenyear select mortality factors, or any other table adopted after the operative date of this regulation by the NAIC and promulgated by regulation by the commissioner for this purpose; or
- (iii) A policy with any combination of (a)(i) and (ii) of this subsection.
- (b) A secondary guarantee period is the period for which the policy is guaranteed to remain in force subject only to a secondary guarantee. When a policy contains more than one secondary guarantee, the minimum reserve shall be the greatest of the respective minimum reserves at that valuation date of each unexpired secondary guarantee, ignoring all other secondary guarantees. Secondary guarantees that are unilaterally changed by the insurer after issue shall be considered to have been made at issue. Reserves described in subsections (2) and (3) of this section shall be recalculated from issue to reflect these changes.
- (c) Specified premiums mean the premiums specified by the insurer, the payment of which guarantees that the policy will remain in force at the original schedule of benefits, but which otherwise would be insufficient to keep the policy in force in the absence of the guarantee if maximum mortality and expense charges and minimum interest credits were made and any applicable surrender charges were assessed.
- (d) For purposes of this section, the minimum premium for any policy year is the premium that, when paid into a policy with a zero account value at the beginning of the policy year, produces a zero account value at the end of the policy year. The minimum premium calculation shall use the policy cost factors (including mortality charges, loads and expense charges) and the interest crediting rate, which are all guaranteed at issue.
- (e) The one-year valuation premium means the net one-year premium based upon the original schedule of benefits for a given policy year. The one-year valuation premiums for all policy years are calculated at issue. The select mortality factors defined in WAC 284-74-340 (2)(b), (c) and (d) may not be used to calculate the one-year valuation premiums.
- (f) The one-year valuation premium should reflect the frequency of fund processing, as well as the distribution of deaths assumption employed in the calculation of the monthly mortality charges to the fund.
- (2) Basic reserves for the secondary guarantees shall be the segmented reserves for the secondary guarantee period. In

- calculating the segments and the segmented reserves, the gross premiums shall be set equal to the specified premiums, if any, or otherwise to the minimum premiums, that keep the policy in force and the segments will be determined according to the contract segmentation method as defined in WAC 284-74-330(2).
- (3) Deficiency reserves, if any, for the secondary guarantees shall be calculated for the secondary guarantee period in the same manner as described in WAC 284-74-350(2) with gross premiums set equal to the specified premiums, if any, or otherwise to the minimum premiums that keep the policy in force.
- (4) The minimum reserves during the secondary guarantee period are the greater of:
- (a) The basic reserves for the secondary guarantee plus the deficiency reserve, if any, for the secondary guarantees; or
- (b) The minimum reserves required by other statutory provisions, rules or regulations governing universal life plans.

[Statutory Authority: RCW 48.02.060, 48.74.030, 48.74.040, 48.74.070, and 48.74.080. 00-07-069, § 284-74-360, filed 3/13/00, effective 4/13/00.]

WAC 284-74-370 Operative date. On or after the effective date of this regulation, the company to whose policies this regulation applies may elect January 1, 2000, as its operative date. If the company makes no such election, this regulation shall become operative on its effective date.

[Statutory Authority: RCW 48.02.060, 48.74.030, 48.74.040, 48.74.070, and 48.74.080. 00-07-069, § 284-74-370, filed 3/13/00, effective 4/13/00.]

WAC 284-74-380 Select mortality factors. This section contains the tables of select mortality factors to which WAC 284-74-340 (1)(b), (2)(b) and (c) refer. The factors in this section are percentages to be applied to the 1980 CSO valuation tables.

The six tables of select mortality factors contained herein include:

- (1) Male composite;
- (2) Male nonsmoker;
- (3) Male smoker;
- (4) Female composite;
- (5) Female nonsmoker; and
- (6) Female smoker.

The same factors apply to both age last birthday and age nearest birthday mortality tables.

(1) The select mortality factors for male composite are as shown in the table below:

							]	Male Co	omposit	e - Sele	ect Morta	ality Fa	ctors							
Issue									_	Durat	tion	-								
Age	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

[Ch. 284-74 WAC—p. 16] (3/1/12)

[Statutory Authority: RCW 48.02.060, 48.74.030, 48.74.040, 48.74.070, and 48.74.080. 00-07-069, § 284-74-380, filed 3/13/00, effective 4/13/00.]

WAC 284-74-400 Purpose. The purpose of this regulation, WAC 284-74-400 through 284-74-460, is to recognize and prescribe the use of the 2001 commissioners standard ordinary (CSO) mortality table in compliance with RCW 48.74.030 (1)(a)(iii), 48.76.050 (4)(h)(vi), and WAC 284-74-340 (1) and (2).

[Statutory Authority: RCW 48.02.060, 48.74.030, and 48.76.050. 04-04-070 (Matter No. R 2003-02), § 284-74-400, filed 2/2/04, effective 3/4/04.]

- WAC 284-74-410 Definitions. (1) "2001 CSO mortality table" means that mortality table, consisting of separate rates of mortality for male and female lives, adopted by the National Association of Insurance Commissioners (NAIC) in December of 2002. The 2001 CSO mortality table is included in the *Proceedings of the NAIC (2nd Quarter 2002)*. Unless the context indicates otherwise, the "2001 CSO mortality table" includes both the ultimate form and the select and ultimate form of that table and includes both the smoker and nonsmoker mortality tables and the composite mortality tables. It also includes both the age-nearest-birthday and agelast-birthday bases of the mortality tables.
- (2) "2001 CSO mortality table (F)" means that mortality table consisting of the rates of mortality for female lives from the 2001 CSO mortality table.
- (3) "2001 CSO mortality table (M)" means that mortality table consisting of the rates of mortality for male lives from the 2001 CSO mortality table.
- (4) "Composite mortality tables" means mortality tables with rates of mortality that do not distinguish between smokers and nonsmokers.
- (5) "Smoker and nonsmoker mortality tables" means mortality tables with separate rates of mortality for smokers and nonsmokers.

[Statutory Authority: RCW 48.02.060, 48.74.030, and 48.76.050. 04-04-070 (Matter No. R 2003-02), § 284-74-410, filed 2/2/04, effective 3/4/04.]

- WAC 284-74-420 2001 CSO mortality table. (1) The 2001 commissioners standard ordinary (CSO) mortality table may be used as allowed in RCW 48.74.030 (1)(a)(iii), 48.76.-050 (4)(h)(vi), and WAC 284-74-340 (1) and (2), subject to the conditions in this regulation.
- (2) An insurer may elect to use the 2001 CSO mortality table as the minimum standard for policies issued on or after January 1, 2004, until January 1, 2009. This table may be used for any one or more specified plans of insurance subject to the conditions in this regulation. If the insurer elects to use the 2001 CSO mortality table, it must do so for both valuation and nonforfeiture purposes.
- (3) An insurer must use the 2001 CSO mortality table as the minimum standard for policies issued on or after January 1, 2009.

[Statutory Authority: RCW 48.02.060, 48.74.030, and 48.76.050. 04-04-070 (Matter No. R 2003-02), § 284-74-420, filed 2/2/04, effective 3/4/04.]

**WAC 284-74-430 Conditions.** (1) For each plan of insurance with separate rates for smokers and nonsmokers an insurer may use:

- (a) Composite mortality tables to determine minimum reserve liabilities and minimum cash surrender values and amounts of paid-up nonforfeiture benefits;
- (b) Smoker and nonsmoker mortality tables to determine the valuation net premiums and additional minimum reserves, if any, required by RCW 48.74.070 and use composite mortality tables to determine the basic minimum reserves, minimum cash surrender values and amounts of paid-up nonforfeiture benefits; or
- (c) Smoker and nonsmoker mortality to determine minimum reserve liabilities and minimum cash surrender values and amounts of paid-up nonforfeiture benefits.
- (2) The composite mortality tables must be used for plans of insurance without separate rates for smokers and nonsmokers.
- (3) The insurer for each plan of insurance may use the 2001 CSO mortality table in its ultimate or select and ultimate form to determine minimum reserve liabilities and minimum cash surrender values and amounts of paid-up nonforfeiture benefits. This is subject to the restrictions of WAC 284-74-440 and 284-74-300 through 284-74-380 regarding the use of the select and ultimate form.
- (4) When the 2001 CSO mortality table is the minimum reserve standard for any plan for an insurer, the actuarial opinion in the annual statement filed with the commissioner must be based on an asset adequacy analysis as specified in WAC 284-07-380. The commissioner may exempt an insurer from this requirement if it only does business in Washington.

[Statutory Authority: RCW 48.02.060, 48.74.030, and 48.76.050. 04-04-070 (Matter No. R 2003-02), § 284-74-430, filed 2/2/04, effective 3/4/04.]

- WAC 284-74-440 Applicability to WAC 284-74-300 through 284-74-380. (1) The 2001 CSO mortality table may be used in applying WAC 284-74-300 through 284-74-380 in the following manner, subject to the transition dates for use of the 2001 CSO mortality table in WAC 284-74-420 of this regulation (unless otherwise noted, the references in this section are to WAC 284-74-300 through 284-74-380):
- (a) WAC 284-74-320 (1)(b)(ii): The net level reserve premium is based on the ultimate mortality rates in the 2001 CSO mortality table.
- (b) WAC 284-74-330(2): All calculations are made using the 2001 CSO mortality rate, and, if elected, the optional minimum mortality standard for deficiency reserves stipulated in (d) of this subsection. The value of " $q_{x+k+t-1}$ " is the valuation mortality rate for deficiency reserves in policy year k+t, but using the unmodified select mortality rates if modified select mortality rates are used in the computation of deficiency reserves.
- (c) WAC 284-74-340(1): The 2001 CSO mortality table is the minimum standard for basic reserves.
- (d) WAC 284-74-340(2): The 2001 CSO mortality table is the minimum standard for deficiency reserves. If select mortality rates are used, they may be multiplied by X percent for durations in the first segment, subject to the conditions specified in WAC 284-74-340 (3)(a) through (i). In demonstrating compliance with those conditions, the demonstrations may not combine the results of tests that utilize the 1980 CSO mortality table with those tests that utilize the 2001 CSO mortality table, unless the combination is explicitly

(3/1/12) [Ch. 284-74 WAC—p. 17]

required by regulation or necessary to be in compliance with relevant actuarial standards of practice.

- (e) WAC 284-74-350(3): The valuation mortality table used in determining the tabular cost of insurance is the ultimate mortality rates in the 2001 CSO mortality table.
- (f) WAC 284-74-350 (5)(e): The calculations specified in WAC 284-74-350(5) must use the ultimate mortality rates in the 2001 CSO mortality table.
- (g) WAC 284-74-350 (6)(e): The calculations specified in WAC 284-74-350(6) must use the ultimate mortality rates in the 2001 CSO mortality table.
- (h) WAC 284-74-350 (7)(b): The calculations specified in WAC 284-74-350(7) must use the ultimate mortality rates in the 2001 CSO mortality table.
- (i) WAC 284-74-360 (1)(a)(ii): The one-year valuation premium must be calculated using the ultimate mortality rates in the 2001 CSO mortality table.
- (2) Nothing in this section expands the applicability of WAC 284-74-300 through 284-74-380 to include life insurance policies exempted under WAC 284-74-320(1).

[Statutory Authority: RCW 48.02.060, 48.74.030, and 48.76.050. 04-04-070 (Matter No. R 2003-02), § 284-74-440, filed 2/2/04, effective 3/4/04.]

- WAC 284-74-450 Gender blended tables. (1) On or after January 1, 2004, an insurer may substitute a blended mortality table for the 2001 CSO mortality table for any ordinary life insurance policy delivered or issued for delivery in this state. The ordinary life policy must have (a) utilized the same premium rates and charges for male and female lives and (b) been issued in circumstances where applicable law does not permit distinctions on the basis of gender. The substituted table may blend the 2001 CSO mortality table (M) and the 2001 CSO mortality table (F) for use in determining minimum cash surrender values and amounts of paid-up nonforfeiture benefits. The table may be used for any one or more specified plans of insurance subject to the conditions in this regulation. No change in minimum valuation standards is implied by this subsection.
- (2) The insurer may choose from among the blended tables developed by the American Academy of Actuaries CSO task force and adopted by the NAIC in December of 2002. The mortality table chosen must be based on the blend of lives by gender expected for the policies to be issued. The 2001 CSO mortality table (M) and 2001 CSO mortality table (F) may only be used where the proportion of individuals insured is anticipated to be ninety percent or more of one gender or the other.
- (3) An insurer shall not use gender blended mortality tables unless:
- (a) The Norris decision (Arizona Governing Committee v. Norris, 463 U.S. 1073, 103 S. Ct. 3492, 77 1. Ed 2d 1236 (1983)) or other federal law is known to apply to the policies involved; or
- (b) The insurer has a bona fide concern that the Norris decision or other federal law might reasonably be construed to apply by a court having jurisdiction.
- (4) It is not a violation of RCW 48.30.300 for an insurer to issue the same kind of policy of life insurance on both a gender distinct and gender neutral basis.

[Statutory Authority: RCW 48.02.060, 48.74.030, and 48.76.050. 04-04-070 (Matter No. R 2003-02), § 284-74-450, filed 2/2/04, effective 3/4/04.]

**WAC 284-74-460 Effective date.** The effective date of this regulation is January 1, 2004.

[Statutory Authority: RCW 48.02.060, 48.74.030, and 48.76.050. 04-04-070 (Matter No. R 2003-02), § 284-74-460, filed 2/2/04, effective 3/4/04.]

WAC 284-74-470 Purpose. The purpose of these rules, WAC 284-74-470 through 284-74-510, is to recognize, permit and prescribe the use of mortality tables that reflect differences in mortality between preferred and standard lives in determining minimum reserve liabilities in accordance with RCW 48.74.030 (1)(a)(iii), and WAC 284-74-340 (1) and (2).

[Statutory Authority: RCW 48.02.060, 48.74.030 (1)(b), and 48.02.160(1). 11-15-084 (Matter No. R 2011-03), § 284-74-470, filed 7/20/11, effective 9/1/11.]

WAC 284-74-480 Definitions. (1) "2001 CSO mortality table" means that mortality table, consisting of separate rates of mortality for male and female lives, developed by the American Academy of Actuaries CSO task force from the Valuation Basic Mortality Table developed by the society of actuaries individual life insurance valuation mortality task force, and adopted by the National Association of Insurance Commissioners (NAIC) in December of 2002. The 2001 CSO mortality table is included in the *Proceedings of the* NAIC (2nd Quarter 2002) and supplemented by the 2001 CSO preferred class structure mortality table defined in subsection (2) of this section. Unless the context indicates otherwise, the 2001 CSO mortality table includes both the ultimate form and the select and ultimate form of that table and includes both the smoker and nonsmoker mortality tables and the composite mortality tables. It also includes both the agenearest-birthday and age-last-birthday bases of the mortality tables. Mortality tables in the 2001 CSO mortality table include the following:

- (a) "2001 CSO mortality table (F)" means that mortality table consisting of the rates of mortality for female lives from the 2001 CSO mortality table.
- (b) "2001 CSO mortality table (M)" means that mortality table consisting of the rates of mortality for male lives from the 2001 CSO mortality table.
- (c) "Composite mortality tables" means mortality tables with rates of mortality that do not distinguish between smokers and nonsmokers.
- (d) "Smoker and nonsmoker mortality tables" means mortality tables with separate rates of mortality for smokers and nonsmokers.
- (2) "2001 CSO preferred class structure mortality table" means mortality tables with separate rates of mortality for super preferred nonsmokers, preferred nonsmokers, residual standard nonsmokers, preferred smokers, and residual standard smoker splits of the 2001 CSO nonsmoker and smoker tables, as adopted by the NAIC at the September, 2006 national meeting and published in the *NAIC Proceedings* (3rd Quarter 2006). Unless the context indicates otherwise, the 2001 CSO preferred class structure mortality table includes both the ultimate form of that table and the select and ultimate form of that table. It includes both the smoker and nonsmoker mortality tables. It includes both the male and female mortality tables and the gender composite mortality

[Ch. 284-74 WAC—p. 18] (3/1/12)

tables. It also includes both the age-nearest-birthday and agelast-birthday bases of the mortality table.

(3) "Statistical agent" means an entity with proven systems for protecting the confidentiality of individual insured and insurer information; demonstrated resources for and history of ongoing electronic communications and data transfer ensuring data integrity with insurers, which are its members or subscribers; and a history of and means for aggregation of data and accurate promulgation of the experience modifications in a timely manner.

[Statutory Authority: RCW 48.02.060, 48.74.030 (1)(b), and 48.02.160(1). 11-15-084 (Matter No. R 2011-03), § 284-74-480, filed 7/20/11, effective 9/1/11.]

WAC 284-74-490 2001 CSO preferred class structure table. (1) At the election of the company, for each calendar year of issue, for any one or more specific plans of insurance and subject to satisfying the conditions stated in this regulation, the 2001 CSO preferred class structure mortality table may be substituted in place of the 2001 CSO smoker or nonsmoker mortality table as the minimum valuation standard for policies issued on or after January 1, 2007.

- (2) For policies issued on or after January 1, 2004, and prior to January 1, 2007, these tables may be substituted with the consent of the commissioner and subject to the conditions of WAC 284-74-500. In determining such consent, the commissioner may rely on the consent of the commissioner of the company's state of domicile. No such election shall be made until the company demonstrates at least twenty percent of the business to be valued on this table is in one or more of the preferred classes.
- (3) A table from the 2001 CSO preferred class structure mortality table used in place of a 2001 CSO mortality table, pursuant to the requirements of this rule, will be treated as part of the 2001 CSO mortality table only for purposes of reserve valuation pursuant to the requirements of these rules, WAC 284-74-400 through 284-74-460.

[Statutory Authority: RCW 48.02.060, 48.74.030 (1)(b), and 48.02.160(1). 11-15-084 (Matter No. R 2011-03), § 284-74-490, filed 7/20/11, effective 9/1/11.]

WAC 284-74-500 Conditions. (1) For each plan of insurance with separate rates for preferred and standard non-smoker lives, an insurer may use the super preferred non-smoker, preferred nonsmoker, and residual standard non-smoker tables to substitute for the nonsmoker mortality table found in the 2001 CSO mortality table to determine minimum reserves. At the time of election and annually thereafter, except for business valued under the residual standard nonsmoker table, the appointed actuary shall certify that:

- (a) The present value of death benefits over the next ten years after the valuation date, using the anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class, is less than the present value of death benefits using the valuation basic table corresponding to the valuation table being used for that class.
- (b) The present value of death benefits over the future life of the contracts, using anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class, is less than the present value of

death benefits using the valuation basic table corresponding to the valuation table being used for that class.

- (2) For each plan of insurance with separate rates for preferred and standard smoker lives, an insurer may use the preferred smoker and residual standard smoker tables to substitute for the smoker mortality table found in the 2001 CSO mortality table to determine minimum reserves. At the time of election and annually thereafter, for business valued under the preferred smoker table, the appointed actuary shall certify that:
- (a) The present value of death benefits over the next ten years after the valuation date, using the anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class, is less than the present value of death benefits using the preferred smoker valuation basic table corresponding to the valuation table being used for that class.
- (b) The present value of death benefits over the future life of the contracts, using anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class, is less than the present value of death benefits using the preferred smoker valuation basic table.
- (3) Unless exempted by the commissioner, every authorized insurer using the 2001 CSO preferred class structure table must annually file with the commissioner, with the NAIC, or with a statistical agent designated by the NAIC and acceptable to the commissioner, statistical reports showing mortality and such other information as the commissioner may deem necessary or expedient for the administration of the provisions of this regulation. The form of the reports must be established by the commissioner or the commissioner may require the use of a form established by the NAIC or by a statistical agent designated by the NAIC and acceptable to the commissioner.
- (4) The use of the 2001 CSO preferred class structure table for the valuation of policies issued prior to January 1, 2007, must not be permitted in any statutory financial statement in which a company reports, with respect to any policy or portion of a policy coinsured, either of the following:
- (a) In cases where the mode of payment of the reinsurance premium is less frequent than the mode of payment of the policy premium, a reserve credit that exceeds, by more than the amount specified in this subsection as Y, the gross reserve calculated before reinsurance. Y is the amount of the gross reinsurance premium that:
- (i) Provides coverage for the period from the next policy premium due date to the earlier of the end of the policy year and the next reinsurance premium due date; and
- (ii) Would be refunded to the ceding entity upon the termination of the policy.
- (b) In cases where the mode of payment of the reinsurance premium is more frequent than the mode of payment of the policy premium, a reserve credit that is less than the gross reserve, calculated before reinsurance, by an amount that is less than the amount specified in this subsection as Z. Z is the amount of the gross reinsurance premium that the ceding entity would need to pay the assuming company to provide reinsurance coverage from the period of the next reinsurance premium due date to the next policy premium due date minus

(3/1/12) [Ch. 284-74 WAC—p. 19]

any liability established for the proportionate amount not remitted to the reinsurer.

- (c) For purposes of this condition, the reserve:
- (i) For the mean reserve method must be defined as the mean reserve minus the deferred premium asset; and
- (ii) For the midterminal reserve method must include the unearned premium reserve. A company may estimate and adjust its accounting on an aggregate basis in order to meet the conditions to use the 2001 CSO preferred class structure table.
