

WAC 388-828-5080 How does DDD determine your adjusted protective supervision acuity score? DDD determines your adjusted protective supervision acuity score by applying the following age-based score adjustments to your level of monitoring score for question number one in WAC 388-828-5060:

If you are:	Then your age-based score adjustment is:
18 years or older	Score is equal to your level of monitoring score
16-17 years of age	Subtract 2 from your level of monitoring score
12-15 years of age	Subtract 3 from your level of monitoring score
8-11 years of age	Subtract 4 from your level of monitoring score
5-7 years of age	Subtract 5 from your level of monitoring score
0-4 years of age	Subtract 6 from your level of monitoring score
If your adjusted level of monitoring score is a negative number, your adjusted protective supervision acuity score is zero.	

Example: If you are fifteen years old and "close proximity, (e.g., 1-2 hours, structured)" is identified as your level of monitoring score, your adjusted protective supervision acuity score is: Your close proximity score of four minus age-based score adjustment of three. For age twelve through fifteen, this equals an adjusted protective supervision score of one.
