

WAC 504-49-400 What constitutes manufactured in Washington? The energy program must, in consultation with the department of commerce, establish a list of equipment that is eligible for the bonus rates described in this chapter.

(1) In order for a solar module, or a wind turbine or tower, to qualify as manufactured in Washington state, the manufactured component must meet the following definitions:

(a) "Solar module" means the smallest nondivisible, self-contained physical structure housing interconnected photovoltaic cells and providing a single direct current electrical output. The lamination of the modules must occur in Washington state;

(b) "Wind turbine" refers to a device that converts the wind's kinetic energy into electrical energy and "tower" refers to the supporting structure.

(2) Is combining products considered to be manufacturing? When determining whether a solar module, or a wind turbine or tower, are manufactured in Washington, the energy program considers various factors to determine if a manufacturer combining various items into a single package is engaged in a manufacturing activity. Any one of the following factors is not considered conclusive evidence of a manufacturing activity:

(a) The ingredients are purchased from various suppliers;

(b) The manufacturer combining the ingredients attaches his or her own label to the resulting product;

(c) The ingredients are purchased in bulk and broken down to smaller sizes;

(d) The combined product is marketed at a substantially different value from the selling price of the individual components; and

(e) The manufacturer combining the items does not sell the individual items except within the package.
