

WAC 296-307-46030 Control liquid spray over an open surface cleaning or degreasing tank. The employer must control the spray to the greatest extent feasible by:

- (1) Enclosing the spraying operation as completely as possible;
- (2) Using mechanical ventilation to provide enough inward air velocity to prevent the spray from leaving the vapor area.

Note: Mechanical baffles may be used to help prevent the discharge of spray.

Reference: Spray painting operations are covered in Spray-finishing operations, WAC 296-62-11019.
