(e) Maintenance and decontamination activities. In clean up of leaks or spills, maintenance or repair operations on contaminated systems or equipment, or any operations involving work in an area where direct contact with carcinogens could result, each authorized employee entering the area shall:

(i) Be provided with and required to wear, clean, impervious garments, including gloves, boots and continuous-air supplied hood in accordance with ~~((chapter 296-24 WAC, the general safety and health standards))~~ WAC 296-800-160, and respiratory protective equipment required by this chapter 296-62 WAC;

(ii) Be decontaminated before removing the protective garments and hood;

(iii) Be required to shower upon removing the protective garments and hood.

(f) Laboratory activities. The requirements of this subdivision shall apply to research and quality control activities involving the use of carcinogens listed in WAC 296-62-07302.

(i) Mechanical pipetting aids shall be used for all pipetting procedures.

(ii) Experiments, procedures and equipment which could produce aerosols shall be confined to laboratory-type hoods or glove boxes.

(iii) Surfaces on which carcinogens are handled shall be protected from contamination.

(iv) Contaminated wastes and animal carcasses shall be collected in impervious containers which are closed and decontaminated prior to removal from the work area. Such wastes and carcasses shall be incinerated in such a manner that no carcinogenic products are released.

(v) All other forms of listed carcinogens shall be inactivated prior to disposal.

(vi) Laboratory vacuum systems shall be protected with high efficiency scrubbers or with disposable absolute filters.

(vii) Employees engaged in animal support activities shall be:

(A) Provided with, and required to wear, a complete protective clothing change, clean each day, including coveralls or pants and shirt, foot covers, head covers, gloves, and appropriate respiratory protective equipment or devices; and

(B) Prior to each exit from a regulated area, employees shall be required to remove and leave protective clothing and equipment at the point of exit and at the last exit of the day, to place used clothing and equipment in impervious containers at the point of exit for purposes of decontamination or disposal. The contents of such impervious containers shall be identified as required under WAC 296-62-07310 (2), (3) and (4).

(C) Required to wash hands, forearms, face and neck upon each exit from the regulated area close to the point of exit, and before engaging in other activities; and

(D) Required to shower after the last exit of the day.

(viii) Employees, other than those engaged only in animal support activities, each day shall be:

(A) Provided with and required to wear a clean change of appropriate laboratory clothing, such as a solid front gown, surgical scrub suit, or fully buttoned laboratory coat.

(B) Prior to each exit from a regulated area, employees shall be required to remove and leave protective clothing and equipment at the point of exit and at the last exit of the day, to place used clothing and equipment in impervious containers at the point of exit for purposes of decontamination or disposal. The contents of such impervious containers shall be identified as required under WAC 296-62-07310 (2), (3) and (4).

(C) Required to wash hands, forearms, face and neck upon each exit from the regulated area close to the point of exit, and before engaging in other activities.

(ix) Air pressure in laboratory areas and animal rooms where carcinogens are handled and bioassay studies are performed shall be negative in relation to the pressure in surrounding areas. Exhaust air shall not be discharged to regulated areas, nonregulated areas or the external environment unless decontaminated.

(x) There shall be no connection between regulated areas and any other areas through the ventilation system.

(xi) A current inventory of the carcinogens shall be maintained.

(xii) Ventilated apparatus such as laboratory-type hoods, shall be tested at least semi-annually or immediately after ventilation modification or maintenance operations, by personnel fully qualified to certify correct containment and operation.

AMENDATORY SECTION (Amending WSR 99-10-071, filed 5/4/99, effective 9/1/99)

WAC 296-62-07308 General regulated area requirements. (1) Respirator program. The employer must implement a respiratory protection program as required in chapter 296-62 WAC, Part E (except WAC 296-62-07130 (1) and (5) and 296-62-07131).

(2) Emergencies. In an emergency, immediate measures including, but not limited to, the requirements of (a), (b), (c), (d) and (e) of this subsection shall be implemented.

(a) The potentially affected area shall be evacuated as soon as the emergency has been determined.

(b) Hazardous conditions created by the emergency shall be eliminated and the potentially affected area shall be decontaminated prior to the resumption of normal operations.

(c) Special medical surveillance by a physician shall be instituted within twenty-four hours for employees present in the potentially affected area at the time of the emergency. A report of the medical surveillance and any treatment shall be included in the incident report, in accordance with WAC 296-62-07312(2).

(d) Where an employee has a known contact with a listed carcinogen, such employee shall be required to shower as soon as possible, unless contraindicated by physical injuries.

(e) An incident report on the emergency shall be reported as provided in WAC 296-62-07312(2).

(3) Hygiene facilities and practices.

(a) Storage or consumption of food, storage or use of containers of beverages, storage or application of cosmetics,

smoking, storage of smoking materials, tobacco products or other products for chewing, or the chewing of such products, are prohibited in regulated areas.

(b) Where employees are required by this section to wash, washing facilities shall be provided in accordance with WAC ((296-24-12009, of the general safety and health standards)) 296-800-230.

(c) Where employees are required by this section to shower, shower facilities shall be provided.

(i) One shower shall be provided for each ten employees of each sex, or numerical fraction thereof, who are required to shower during the same shift.

(ii) Body soap or other appropriate cleansing agents convenient to the showers shall be provided as specified in WAC 296-24-12009, of the general safety and health standards.

(iii) Showers shall be provided with hot and cold water feeding a common discharge line.

(iv) Employees who use showers shall be provided with individual clean towels.

(d) Where employees wear protective clothing and equipment, clean change rooms shall be provided and shall be equipped with storage facilities for street clothes and separate storage facilities for the protective clothing for the number of such employees required to change clothes.

(e) Where toilets are in regulated areas, such toilets shall be in a separate room.

(4) Contamination control.

(a) Regulated areas, except for outdoor systems, shall be maintained under pressure negative with respect to nonregulated areas. Local exhaust ventilation may be used to satisfy this requirement. Clean makeup air in equal volume shall replace air removed.

(b) Any equipment, material, or other item taken into or removed from a regulated area shall be done so in a manner that does not cause contamination in nonregulated areas or the external environment.

(c) Decontamination procedures shall be established and implemented to remove carcinogens from the surfaces of materials, equipment and the decontamination facility.

(d) Dry sweeping and dry mopping are prohibited.

AMENDATORY SECTION (Amending WSR 99-10-071, filed 5/4/99, effective 9/1/99)

WAC 296-62-07336 Acrylonitrile. (1) Scope and application.

(a) This section applies to all occupational exposure to acrylonitrile (AN), Chemical Abstracts Service Registry No. 000107131, except as provided in (b) and (c) of this subsection.

(b) This section does not apply to exposures which result solely from the processing, use, and handling of the following materials:

(i) ABS resins, SAN resins, nitrile barrier resins, solid nitrile elastomers, and acrylic and modacrylic fibers, when these listed materials are in the form of finished polymers, and products fabricated from such finished polymers;

(ii) Materials made from and/or containing AN for which objective data is reasonably relied upon to demonstrate that the material is not capable of releasing AN in airborne.

concentrations in excess of 1 ppm as an eight-hour time-weighted average, under the expected conditions of processing, use, and handling which will cause the greatest possible release; and

(iii) Solid materials made from and/or containing AN which will not be heated above 170°F during handling, use, or processing.

(c) An employer relying upon exemption under (1)(b)(ii) shall maintain records of the objective data supporting that exemption, and of the basis of the employer's reliance on the data as provided in subsection (17) of this section.

(2) Definitions, as applicable to this section:

(a) "Acrylonitrile" or "AN" - acrylonitrile monomer, chemical formula $\text{CH}_2=\text{CHCN}$.

(b) "Action level" - a concentration of AN of 1 ppm as an eight-hour time-weighted average.

(c) "Authorized person" - any person specifically authorized by the employer whose duties require the person to enter a regulated area, or any person entering such an area as a designated representative of employees for the purpose of exercising the opportunity to observe monitoring procedures under subsection (18) of this section.

(d) "Decontamination" means treatment of materials and surfaces by water washdown, ventilation, or other means, to assure that the materials will not expose employees to airborne concentrations of AN above 1 ppm as an eight-hour time-weighted average.

(e) "Director" - the director of labor and industries, or his authorized representative.

(f) "Emergency" - any occurrence such as, but not limited to, equipment failure, rupture of containers, or failure of control equipment, which is likely to, or does, result in unexpected exposure to AN in excess of the ceiling limit.

(g) "Liquid AN" means AN monomer in liquid form, and liquid or semiliquid polymer intermediates, including slurries, suspensions, emulsions, and solutions, produced during the polymerization of AN.

(h) "Polyacrylonitrile" or "PAN" - polyacrylonitrile homopolymers or copolymers, except for materials as exempted under subsection (1)(b) of this section.

(3) Permissible exposure limits.

(a) Inhalation.

(i) Time-weighted average limit (TWA). The employer shall assure that no employee is exposed to an airborne concentration of acrylonitrile in excess of two parts acrylonitrile per million parts of air (2 ppm), as an eight-hour time-weighted average.

(ii) Ceiling limit. The employer shall assure that no employee is exposed to an airborne concentration of acrylonitrile in excess of 10 ppm as averaged over any fifteen-minute period during the working day.

(b) Dermal and eye exposure. The employer shall assure that no employee is exposed to skin contact or eye contact with liquid AN or PAN.

(4) Notification of use and emergencies.

(a) Use. Within ten days of the effective date of this standard, or within fifteen days following the introduction of AN into the workplace, every employer shall report, unless he has done so pursuant to the emergency temporary standard, the

following information to the director for each such workplace:

(i) The address and location of each workplace in which AN is present;

(ii) A brief description of each process of operation which may result in employee exposure to AN;

(iii) The number of employees engaged in each process or operation who may be exposed to AN and an estimate of the frequency and degree of exposure that occurs; and

(iv) A brief description of the employer's safety and health program as it relates to limitation of employee exposure to AN. Whenever there has been a significant change in the information required by this subsection, the employer shall promptly amend such information previously provided to the director.

(b) Emergencies and remedial action. Emergencies, and the facts obtainable at that time, shall be reported within 24 hours of the initial occurrence to the director. Upon request of the director, the employer shall submit additional information in writing relevant to the nature and extent of employee exposures and measures taken to prevent future emergencies of a similar nature.

(5) Exposure monitoring.

(a) General.

(i) Determinations of airborne exposure levels shall be made from air samples that are representative of each employee's exposure to AN over an eight-hour period.

(ii) For the purposes of this section, employee exposure is that which would occur if the employee were not using a respirator.

(b) Initial monitoring. Each employer who has a place of employment in which AN is present shall monitor each such workplace and work operation to accurately determine the airborne concentrations of AN to which employees may be exposed. Such monitoring may be done on a representative basis, provided that the employer can demonstrate that the determinations are representative of employee exposures.

(c) Frequency.

(i) If the monitoring required by this section reveals employee exposure to be below the action level, the employer may discontinue monitoring for that employee. The employer shall continue these quarterly measurements until at least two consecutive measurements taken at least seven days apart, are below the action level, and thereafter the employer may discontinue monitoring for that employee.

(ii) If the monitoring required by this section reveals employee exposure to be at or above the action level but below the permissible exposure limits, the employer shall repeat such monitoring for each such employee at least quarterly.

(iii) If the monitoring required by this section reveals employee exposure to be in excess of the permissible exposure limits, the employer shall repeat these determinations for each such employee at least monthly. The employer shall continue these monthly measurements until at least two consecutive measurements, taken at least seven days apart, are below the permissible exposure limits, and thereafter the employer shall monitor at least quarterly.

(d) Additional monitoring. Whenever there has been a production, process, control or personnel change which may

result in new or additional exposure to AN, or whenever the employer has any other reason to suspect a change which may result in new or additional exposures to AN, additional monitoring which complies with this subsection shall be conducted.

(e) Employee notification.

(i) Within five working days after the receipt of monitoring results, the employer shall notify each employee in writing of the results which represent that employee's exposure.

(ii) Whenever the results indicate that the representative employee exposure exceeds the permissible exposure limits, the employer shall include in the written notice a statement that the permissible exposure limits were exceeded and a description of the corrective action being taken to reduce exposure to or below the permissible exposure limits.

(f) Accuracy of measurement. The method of measurement of employee exposures shall be accurate, to a confidence level of 95 percent, to within plus or minus 25 percent for concentrations of AN at or above the permissible exposure limits, and plus or minus 35 percent for concentrations of AN between the action level and the permissible exposure limits.

(g) Weekly survey of operations involving liquid AN. In addition to monitoring of employee exposures to AN as otherwise required by this subsection, the employer shall survey areas of operations involving liquid AN at least weekly to detect points where AN liquid or vapor are being released into the workplace. The survey shall employ an infra-red gas analyzer calibrated for AN, a multipoint gas chromatographic monitor, or comparable system for detection of AN. A listing of levels detected and areas of AN release, as determined from the survey, shall be posted prominently in the workplace, and shall remain posted until the next survey is completed.

(6) Regulated areas.

(a) The employer shall establish regulated areas where AN concentrations are in excess of the permissible exposure limits.

(b) Regulated areas shall be demarcated and segregated from the rest of the workplace, in any manner that minimizes the number of persons who will be exposed to AN.

(c) Access to regulated areas shall be limited to authorized persons or to persons otherwise authorized by the act or regulations issued pursuant thereto.

(d) The employer shall assure that in the regulated area, food or beverages are not present or consumed, smoking products are not present or used, and cosmetics are not applied, (except that these activities may be conducted in the lunchrooms, change rooms and showers required under subsections (13)(a)-(13)(c) of this section.

(7) Methods of compliance.

(a) Engineering and work practice controls.

(i) The employer shall institute engineering or work practice controls to reduce and maintain employee exposures to AN, to or below the permissible exposure limits, except to the extent that the employer establishes that such controls are not feasible.

(ii) Wherever the engineering and work practice controls which can be instituted are not sufficient to reduce employee exposures to or below the permissible exposure limits, the

employer shall nonetheless use them to reduce exposures to the lowest levels achievable by these controls and shall supplement them by the use of respiratory protection which complies with the requirements of subsection (8) of this section.

(b) Compliance program.

(i) The employer shall establish and implement a written program to reduce employee exposures to or below the permissible exposure limits solely by means of engineering and work practice controls, as required by subsection (7)(a) of this section.

(ii) Written plans for these compliance programs shall include at least the following:

(A) A description of each operation or process resulting in employee exposure to AN above the permissible exposure limits;

(B) Engineering plans and other studies used to determine the controls for each process;

(C) A report of the technology considered in meeting the permissible exposure limits;

(D) A detailed schedule for the implementation of engineering or work practice controls; and

(E) Other relevant information.

(iii) The employer shall complete the steps set forth in the compliance program by the dates in the schedule.

(iv) Written plans for such a program shall be submitted upon request to the director, and shall be available at the worksite for examination and copying by the director, or any affected employee or representative.

(v) The plans required by this subsection shall be revised and updated at least every six months to reflect the current status of the program.

(8) Respiratory protection.

(a) General. For employees who use respirators required by this section, the employer must provide respirators that comply with the requirements of this subsection. Respirators must be used during:

(i) Periods necessary to install or implement feasible engineering and work-practice controls;

(ii) Work operations, such as maintenance and repair activities or reactor cleaning, for which the employer establishes that engineering and work-practice controls are not feasible;

(iii) Work operations for which feasible engineering and work-practice controls are not yet sufficient to reduce employee exposure to or below the permissible exposure limits;

(iv) In emergencies.

(b) Respirator program.

The employer must implement a respiratory protection program in accordance with chapter 296-62 WAC, Part E (except WAC 296-62-07130(1) and 296-62-07150 through 296-62-07156).

(c) Respirator selection. The employer must select the appropriate respirator from Table I of this subsection.

TABLE I
RESPIRATORY PROTECTION FOR ACRYLONITRILE (AN)

Concentration of AN or Condition of Use		Respirator Type	
(a)	Less than or equal to 25 x permissible exposure limits.	(i)	Any Type C supplied air respirator.
(b)	Less than or equal to 100 x permissible exposure limits.	(i)	Any supplied air respirator with full facepiece; or
		(ii)	Any self-contained breathing apparatus with full facepiece.
(c)	Less than or equal to 250 x permissible exposure limits	(i)	Supplied air respirator in positive pressure mode with full facepiece, helmet, hood, or suit.
(d)	Greater than 250 x permissible exposure limits.	(i)	Supplied air respirator with full facepiece and an auxiliary self-contained air supply, operated in pressure demand mode; or
		(ii)	Open circuit self-contained breathing apparatus with full facepiece in positive pressure mode.
(e)	Emergency entry into unknown concentration or firefighting	(i)	Any self-contained breathing apparatus with full facepiece in positive pressure mode.
(f)	Escape.	(i)	Any organic vapor gas mask; or
		(ii)	Any self-contained breathing.

(9) Emergency situations.

(a) Written plans.

(i) A written plan for emergency situations shall be developed for each workplace where AN is present. Appropriate portions of the plan shall be implemented in the event of an emergency.

(ii) The plan shall specifically provide that employees engaged in correcting emergency conditions shall be equipped as required in subsection (8) of this section until the emergency is abated.

(b) Alerting employees.

(i) Where there is the possibility of employee exposure to AN in excess of the ceiling limit due to the occurrence of an emergency, a general alarm shall be installed and maintained to promptly alert employees of such occurrences.

(ii) Employees not engaged in correcting the emergency shall be evacuated from the area and shall not be permitted to return until the emergency is abated.

(10) Protective clothing and equipment.

(a) Provision and use. Where eye or skin contact with liquid AN or PAN may occur, the employer shall provide at no cost to the employee, and assure that employees wear, appropriate protective clothing or other equipment in accordance with WAC ((296-24-07501 and 296-24-07801)) 296-

800-160 to protect any area of the body which may come in contact with liquid AN or PAN.

(b) Cleaning and replacement.

(i) The employer shall clean, launder, maintain, or replace protective clothing and equipment required by this subsection, as needed to maintain their effectiveness. In addition, the employer shall provide clean protective clothing and equipment at least weekly to each affected employee.

(ii) The employer shall assure that impermeable protective clothing which contacts or is likely to have contacted liquid AN shall be decontaminated before being removed by the employee.

(iii) The employer shall assure that AN- or PAN-contaminated protective clothing and equipment is placed and stored in closable containers which prevent dispersion of the AN or PAN outside the container.

(iv) The employer shall assure that an employee whose nonimpermeable clothing becomes wetted with liquid AN shall immediately remove that clothing and proceed to shower. The clothing shall be decontaminated before it is removed from the regulated area.

(v) The employer shall assure that no employee removes AN-or PAN-contaminated protective equipment or clothing from the change room, except for those employees authorized to do so for the purpose of laundering, maintenance, or disposal.

(vi) The employer shall inform any person who launders or cleans AN-or PAN-contaminated protective clothing or equipment of the potentially harmful effects of exposure to AN.

(vii) The employer shall assure that containers of contaminated protective clothing and equipment which are to be removed from the workplace for any reason are labeled in accordance with subsection (16)(c)(ii) of this section, and that such labels remain affixed when such containers leave the employer's workplace.

(11) Housekeeping.

(a) All surfaces shall be maintained free of accumulations of liquid AN and of PAN.

(b) For operations involving liquid AN, the employer shall institute a program for detecting leaks and spills of liquid AN, including regular visual inspections.

(c) Where spills of liquid AN are detected, the employer shall assure that surfaces contacted by the liquid AN are decontaminated. Employees not engaged in decontamination activities shall leave the area of the spill, and shall not be permitted in the area until decontamination is completed.

(d) Liquids. Where AN is present in a liquid form, or as a resultant vapor, all containers or vessels containing AN shall be enclosed to the maximum extent feasible and tightly covered when not in use, with adequate provision made to avoid any resulting potential explosion hazard.

(e) Surfaces.

(i) Dry sweeping and the use of compressed air for the cleaning of floors and other surfaces where AN and PAN are found is prohibited.

(ii) Where vacuuming methods are selected, either portable units or a permanent system may be used.

(A) If a portable unit is selected, the exhaust shall be attached to the general workplace exhaust ventilation system

PERMANENT

or collected within the vacuum unit, equipped with high efficiency filters or other appropriate means of contaminant removal, so that AN is not reintroduced into the workplace air; and

(B) Portable vacuum units used to collect AN may not be used for other cleaning purposes and shall be labeled as prescribed by subsection (16)(c)(ii) of this section.

(iii) Cleaning of floors and other contaminated surfaces may not be performed by washing down with a hose, unless a fine spray has first been laid down.

(12) Waste disposal. AN and PAN waste, scrap, debris, bags, containers or equipment, shall be disposed of in sealed bags or other closed containers which prevent dispersion of AN outside the container, and labeled as prescribed in subsection (16)(c)(ii) of this section.

(13) Hygiene facilities and practices. Where employees are exposed to airborne concentrations of AN above the permissible exposure limits, or where employees are required to wear protective clothing or equipment pursuant to subsection (11) of this section, or where otherwise found to be appropriate, the facilities required by WAC 296-24-12009 and 296-800-230 shall be provided by the employer for the use of those employees, and the employer shall assure that the employees use the facilities provided. In addition, the following facilities or requirements are mandated.

(a) Change rooms. The employer shall provide clean change rooms in accordance with WAC 296-24-12011.

(b) Showers.

(i) The employer shall provide shower facilities in accordance with WAC 296-24-12009(3).

(ii) In addition, the employer shall also assure that employees exposed to liquid AN and PAN shower at the end of the work shift.

(iii) The employer shall assure that, in the event of skin or eye exposure to liquid AN, the affected employee shall shower immediately to minimize the danger of skin absorption.

(c) Lunchrooms.

(i) Whenever food or beverages are consumed in the workplace, the employer shall provide lunchroom facilities which have a temperature controlled, positive pressure, filtered air supply, and which are readily accessible to employees exposed to AN above the permissible exposure limits.

(ii) In addition, the employer shall also assure that employees exposed to AN above the permissible exposure limits wash their hands and face prior to eating.

(14) Medical surveillance.

(a) General.

(i) The employer shall institute a program of medical surveillance for each employee who is or will be exposed to AN above the action level. The employer shall provide each such employee with an opportunity for medical examinations and tests in accordance with this subsection.

(ii) The employer shall assure that all medical examinations and procedures are performed by or under the supervision of a licensed physician, and shall be provided without cost to the employee.

(b) Initial examinations. At the time of initial assignment, or upon institution of the medical surveillance program, the employer shall provide each affected employee an

opportunity for a medical examination, including at least the following elements:

(i) A work history and medical history with special attention to skin, respiratory, and gastrointestinal systems, and those non-specific symptoms, such as headache, nausea, vomiting, dizziness, weakness, or other central nervous system dysfunctions that may be associated with acute or chronic exposure to AN.

(ii) A physical examination giving particular attention to central nervous system, gastrointestinal system, respiratory system, skin and thyroid.

(iii) A 14" x 17" posteroanterior chest x-ray.

(iv) Further tests of the intestinal tract, including fecal occult blood screening, and proctosigmoidoscopy, for all workers 40 years of age or older, and for any other affected employees for whom, in the opinion of the physician, such testing is appropriate.

(c) Periodic examinations.

(i) The employer shall provide examinations specified in this subsection at least annually for all employees specified in subsection (14)(a) of this section.

(ii) If an employee has not had the examinations prescribed in subsection (14)(b) of this section within six months of termination of employment, the employer shall make such examination available to the employee upon such termination.

(d) Additional examinations. If the employee for any reason develops signs or symptoms commonly associated with exposure to AN, the employer shall provide appropriate examination and emergency medical treatment.

(e) Information provided to the physician. The employer shall provide the following information to the examining physician:

(i) A copy of this standard and its appendices;

(ii) A description of the affected employee's duties as they relate to the employee's exposure;

(iii) The employee's representative exposure level;

(iv) The employee's anticipated or estimated exposure level (for preplacement examinations or in cases of exposure due to an emergency);

(v) A description of any personal protective equipment used or to be used; and

(vi) Information from previous medical examinations of the affected employee, which is not otherwise available to the examining physician.

(f) Physician's written opinion.

(i) The employer shall obtain a written opinion from the examining physician which shall include:

(A) The results of the medical examination and test performed;

(B) The physician's opinion as to whether the employee has any detected medical condition which would place the employee at an increased risk of material impairment of the employee's health from exposure to AN;

(C) Any recommended limitations upon the employee's exposure to AN or upon the use of protective clothing and equipment such as respirators; and

(D) A statement that the employee has been informed by the physician of the results of the medical examination and

any medical conditions which require further examination or treatment.

(ii) The employer shall instruct the physician not to reveal in the written opinion specific findings or diagnoses unrelated to occupational exposure to AN.

(iii) The employer shall provide a copy of the written opinion to the affected employee.

(15) Employee information and training.

(a) Training program.

(i) The employer shall institute a training program for all employees where there is occupational exposure to AN and shall assure their participation in the training program.

(ii) The training program shall be provided at the time of initial assignment, or upon institution of the training program, and at least annually thereafter, and the employer shall assure that each employee is informed of the following:

(A) The information contained in Appendices A, B and C;

(B) The quantity, location, manner of use, release or storage of AN and the specific nature of operations which could result in exposure to AN, as well as any necessary protective steps;

(C) The purpose, proper use, and limitations of respirators and protective clothing;

(D) The purpose and a description of the medical surveillance program required by subsection (14) of this section;

(E) The emergency procedures developed, as required by subsection (9) of this section; and

(F) The engineering and work practice controls, their function and the employee's relationship thereto; and

(G) A review of this standard.

(b) Access to training materials.

(i) The employer shall make a copy of this standard and its appendices readily available to all affected employees.

(ii) The employer shall provide, upon request, all materials relating to the employee information and training program to the director.

(16) Signs and labels.

(a) General.

(i) The employer may use labels or signs required by other statutes, regulations, or ordinances in addition to, or in combination with, signs and labels required by this subsection.

(ii) The employer shall assure that no statement appears on or near any sign or label, required by this subsection, which contradicts or detracts from such effects of the required sign or label.

(b) Signs.

(i) The employer shall post signs to clearly indicate all workplaces where AN concentrations exceed the permissible exposure limits. The signs shall bear the following legend:

DANGER
ACRYLONITRILE (AN)
CANCER HAZARD
AUTHORIZED PERSONNEL ONLY
RESPIRATORS REQUIRED

(ii) The employer shall assure that signs required by this subsection are illuminated and cleaned as necessary so that the legend is readily visible.

(c) Labels.

(i) The employer shall assure that precautionary labels are affixed to all containers of AN, and to containers of PAN and products fabricated from PAN, except for those materials for which objective data is provided as to the conditions specified in subsection (1)(b) of this section. The employer shall assure that the labels remain affixed when the AN or PAN are sold, distributed or otherwise leave the employer's workplace.

(ii) The employer shall assure that the precautionary labels required by this subsection are readily visible and legible. The labels shall bear the following legend:

DANGER
CONTAINS ACRYLONITRILE (AN)
CANCER HAZARD

(17) Recordkeeping.

(a) Objective data for exempted operations.

(i) Where the processing, use, and handling of products fabricated from PAN are exempted pursuant to subsection (1)(b) of this section, the employer shall establish and maintain an accurate record of objective data reasonably relied upon in support of the exemption.

(ii) This record shall include the following information:

(A) The relevant condition in subsection (1)(b) upon which exemption is based;

(B) The source of the objective data;

(C) The testing protocol, results of testing, and/or analysis of the material for the release of AN;

(D) A description of the operation exempted and how the data supports the exemption; and

(E) Other data relevant to the operations, materials, and processing covered by the exemption.

(iii) The employer shall maintain this record for the duration of the employer's reliance upon such objective data.

(b) Exposure monitoring.

(i) The employer shall establish and maintain an accurate record of all monitoring required by subsection (5) of this section.

(ii) This record shall include:

(A) The dates, number, duration, and results of each of the samples taken, including a description of the sampling procedure used to determine representative employee exposure;

(B) A description of the sampling and analytical methods used and the data relied upon to establish that the methods used meet the accuracy and precision requirements of subsection (5)(f) of this section;

(C) Type of respiratory protective devices worn, if any; and

(D) Name, social security number and job classification of the employee monitored and of all other employees whose exposure the measurement is intended to represent.

(iii) The employer shall maintain this record for at least 40 years or the duration of employment plus 20 years, whichever is longer.

(c) Medical surveillance.

(i) The employer shall establish and maintain an accurate record for each employee subject to medical surveillance as required by subsection (14) of this section.

(ii) This record shall include:

(A) A copy of the physicians' written opinions;

(B) Any employee medical complaints related to exposure to AN;

(C) A copy of the information provided to the physician as required by subsection (14)(f) of this section; and

(D) A copy of the employee's medical and work history.

(iii) The employer shall assure that this record be maintained for at least forty years or for the duration of employment plus twenty years, whichever is longer.

(d) Availability.

(i) The employer shall assure that all records required to be maintained by this section be made available upon request to the director for examination and copying.

(ii) Records required by subdivisions (a) through (c) of this subsection shall be provided upon request to employees, designated representatives, and the assistant director in accordance with WAC 296-62-05201 through 296-62-05209 and 296-62-05213 through 296-62-05217. Records required by subdivision (a) of this section shall be provided in the same manner as exposure monitoring records.

(iii) The employer shall assure that employee medical records required to be maintained by this section, be made available, upon request, for examination and copying, to the affected employee or former employee, or to a physician designated by the affected employee, former employee, or designated representative.

(e) Transfer of records.

(i) Whenever the employer ceases to do business, the successor employer shall receive and retain all records required to be maintained by this section.

(ii) Whenever the employer ceases to do business and there is no successor employer to receive and retain the records for the prescribed period, these records shall be transmitted to the director.

(iii) At the expiration of the retention period for the records required to be maintained pursuant to this section, the employer shall transmit these records to the director.

(iv) The employer shall also comply with any additional requirements involving transfer of records set forth in WAC 296-62-05215.

(18) Observation of monitoring.

(a) Employee observation. The employer shall provide affected employees, or their designated representatives, an opportunity to observe any monitoring of employee exposure to AN conducted pursuant to subsection (5) of this section.

(b) Observation procedures.

(i) Whenever observation of the monitoring of employee exposure to AN requires entry into an area where the use of protective clothing or equipment is required, the employer shall provide the observer with personal protective clothing or equipment required to be worn by employees working in the area, assure the use of such clothing and equipment, and require the observer to comply with all other applicable safety and health procedures.

(ii) Without interfering with the monitoring, observers shall be entitled:

(A) To receive an explanation of the measurement procedures;

(B) To observe all steps related to the measurement of airborne concentrations of AN performed at the place of exposure; and

(C) To record the results obtained.

(19) Appendices. The information contained in the appendices is not intended, by itself, to create any additional obligation not otherwise imposed, or to detract from any obligation.

AMENDATORY SECTION (Amending Order 88-04, filed 5/11/88)

WAC 296-62-07338 Appendix B—Substance technical guidelines for acrylonitrile. (1) Physical and chemical data.

(a) Substance identification:

(i) Synonyms: AN; VCN; vinyl cyanide; propenenitrile; cyanoethylene; Acrylon; Carbacryl; Fumigrain; Ventox.

(ii) Formula: $\text{CH}_2=\text{CHCN}$.

(iii) Molecular weight: 53.1.

(b) Physical data:

(i) Boiling point (760 mm Hg): 77.3°C (171°F);

(ii) Specific gravity (water=1): 0.81 (at 20°C or 68°F);

(iii) Vapor density (air=1 at boiling point of acrylonitrile): 1.83;

(iv) Melting point: -83°C (-117°F);

(v) Vapor pressure (@20°F): 83 mm Hg;

(vi) Solubility in water, percent by weight @20°C (68°F): 7.35;

(vii) Evaporation rate (Butyl Acetate=1): 4.54; and

(viii) Appearance and odor: Colorless to pale yellow liquid with a pungent odor at concentrations above the permissible exposure level. Any detectable odor of acrylonitrile may indicate overexposure.

(2) Fire, explosion, and reactivity hazard data.

(a) Fire:

(i) Flash point: -1°C (30°F) (closed cup).

(ii) Autoignition temperature: 481°C (898°F).

(iii) Flammable limits air, percent by volume: Lower: 3, Upper: 17.

(iv) Extinguishing media: Alcohol foam, carbon dioxide, and dry chemical.

(v) Special fire-fighting procedures: Do not use a solid stream of water, since the stream will scatter and spread the fire. Use water to cool containers exposed to a fire.

(vi) Unusual fire and explosion hazards: Acrylonitrile is a flammable liquid. Its vapors can easily form explosive mix-

tures with air. All ignition sources must be controlled where acrylonitrile is handled, used, or stored in a manner that could create a potential fire or explosion hazard. Acrylonitrile vapors are heavier than air and may travel along the ground and be ignited by open flames or sparks at locations remote from the site at which acrylonitrile is being handled.

(vii) For purposes of compliance with the requirements of WAC ((296-24-330)) 296-800-300, acrylonitrile is classified as a class IB flammable liquid. For example, 7,500 ppm, approximately one-fourth of the lower flammable limit, would be considered to pose a potential fire and explosion hazard.

(viii) For purposes of compliance with WAC 296-24-59207, acrylonitrile is classified as a Class B fire hazard.

(ix) For purpose of compliance with WAC 296-24-95613, locations classified as hazardous due to the presence of acrylonitrile shall be Class I, Group D.

(b) Reactivity:

(i) Conditions contributing to instability: Acrylonitrile will polymerize when hot, and the additional heat liberated by the polymerization may cause containers to explode. Pure AN may self-polymerize, with a rapid build-up of pressure, resulting in an explosion hazard. Inhibitors are added to the commercial product to prevent self-polymerization.

(ii) Incompatibilities: Contact with strong oxidizers (especially bromine) and strong bases may cause fires and explosions. Contact with copper, copper alloys, ammonia, and amines may start serious decomposition.

(iii) Hazardous decomposition products: Toxic gases and vapors (such as hydrogen cyanide, oxides of nitrogen, and carbon monoxide) may be released in a fire involving acrylonitrile and certain polymers made from acrylonitrile.

(iv) Special precautions: Liquid acrylonitrile will attack some forms of plastics, rubbers, and coatings.

(3) Spill, leak, and disposal procedures.

(a) If acrylonitrile is spilled or leaked, the following steps should be taken:

(i) Remove all ignition sources.

(ii) The area should be evacuated at once and re-entered only after the area has been thoroughly ventilated and washed down with water.

(iii) If liquid acrylonitrile or polymer intermediate, collect for reclamation or absorb in paper, vermiculite, dry sand, earth, or similar material, or wash down with water into process sewer system.

(b) Persons not wearing protective equipment should be restricted from areas of spills or leaks until clean-up has been completed.

(c) Waste disposal methods: Waste materials shall be disposed of in a manner that is not hazardous to employees or to the general population. Spills of acrylonitrile and flushing of such spills shall be channeled for appropriate treatment or collection for disposal. They shall not be channeled directly into the sanitary sewer system. In selecting the method of waste disposal, applicable local, state, and federal regulations should be consulted.

(4) Monitoring and measurement procedures.

(a) Exposure above the permissible exposure limit:

(i) Eight-hour exposure evaluation: Measurements taken for the purpose of determining employee exposure under this

section are best taken so that the average eight-hour exposure may be determined from a single eight-hour sample or two four-hour samples. Air samples should be taken in the employee's breathing zone (air that would most nearly represent that inhaled by the employee).

(ii) Ceiling evaluation: Measurements taken for the purpose of determining employee exposure under this section must be taken during periods of maximum expected airborne concentrations of acrylonitrile in the employee's breathing zone. A minimum of three measurements should be taken on one work shift. The average of all measurements taken is an estimate of the employee's ceiling exposure.

(iii) Monitoring techniques: The sampling and analysis under this section may be performed by collecting the acrylonitrile vapor on charcoal adsorption tubes or other composition adsorption tubes, with subsequent chemical analysis. Sampling and analysis may also be performed by instruments such as real-time continuous monitoring systems, portable direct-reading instruments, or passive dosimeters. Analysis of resultant samples should be by gas chromatograph.

(iv) Appendix D lists methods of sampling and analysis which have been tested by NIOSH and OSHA for use with acrylonitrile. NIOSH and OSHA have validated modifications of NIOSH Method S-156 (see Appendix D) under laboratory conditions for concentrations below 1 ppm. The employer has the obligation of selecting a monitoring method which meets the accuracy and precision requirements of the standard under his/her unique field conditions. The standard requires that methods of monitoring must be accurate, to a 95-percent confidence level, to ± 35 -percent for concentrations of AN at or above 2 ppm, and to ± 50 -percent for concentrations below 2 ppm. In addition to the methods described in Appendix D, there are numerous other methods available for monitoring for AN in the workplace. Details on these other methods have been submitted by various companies to the rulemaking record, and are available at the OSHA Docket Office.

(b) Since many of the duties relating to employee exposure are dependent on the results of monitoring and measuring procedures, employers shall assure that the evaluation of employee exposures is performed by a competent industrial hygienist or other technically qualified person.

(5) Protective clothing.

(a) Employees shall be provided with and required to wear appropriate protective clothing to prevent any possibility of skin contact with liquid AN. Because acrylonitrile is absorbed through the skin, it is important to prevent skin contact with liquid AN. Protective clothing shall include impermeable coveralls or similar full-body work clothing, gloves, head-coverings, as appropriate to protect areas of the body which may come in contact with liquid AN.

(b) Employers should ascertain that the protective garments are impermeable to acrylonitrile. Nonimpermeable clothing and shoes should not be allowed to become contaminated with liquid AN. If permeable clothing does become contaminated, it should be promptly removed, placed in a regulated area for removal of the AN, and not worn again until the AN is removed. If leather footwear or other leather garments become wet from acrylonitrile, they should be

replaced and not worn again, due to the ability of leather to absorb acrylonitrile and hold it against the skin. Since there is no pain associated with the blistering which may result from skin contact with liquid AN, it is essential that the employee be informed of this hazard so that he or she can be protected.

(c) Any protective clothing which has developed leaks or is otherwise found to be defective shall be repaired or replaced. Clean protective clothing shall be provided to the employee as necessary to assure its protectiveness. Whenever impervious clothing becomes wet with liquid AN, it shall be washed down with water before being removed by the employee. Employees are also required to wear splash-proof safety goggles where there is any possibility of acrylonitrile contacting the eyes.

(6) Housekeeping and hygiene facilities. For purposes of complying with WAC 296-24-120, 296-800-220 and 296-800-230, the following items should be emphasized:

(a) The workplace should be kept clean, orderly, and in a sanitary condition. The employer is required to institute a leak and spill detection program for operations involving liquid AN in order to detect sources of fugitive AN emissions.

(b) Dry sweeping and the use of compressed air is unsafe for the cleaning of floors and other surfaces where liquid AN may be found.

(c) Adequate washing facilities with hot and cold water are to be provided, and maintained in a sanitary condition. Suitable cleansing agents are also to be provided to assure the effective removal of acrylonitrile from the skin.

(d) Change or dressing rooms with individual clothes storage facilities must be provided to prevent the contamination of street clothes with acrylonitrile. Because of the hazardous nature of acrylonitrile, contaminated protective clothing should be placed in a regulated area designated by the employer for removal of the AN before the clothing is laundered or disposed of.

(7) Miscellaneous precautions.

(a) Store acrylonitrile in tightly-closed containers in a cool, well-ventilated area and take necessary precautions to avoid any explosion hazard.

(b) High exposures to acrylonitrile can occur when transferring the liquid from one container to another.

(c) Nonsparking tools must be used to open and close metal acrylonitrile containers. These containers must be effectively grounded and bonded prior to pouring.

(d) Never store uninhibited acrylonitrile.

(e) Acrylonitrile vapors are not inhibited.

They may form polymers and clog vents of storage tanks.

(f) Use of supplied-air suits or other impervious coverings may be necessary to prevent skin contact with and provide respiratory protection from acrylonitrile where the concentration of acrylonitrile is unknown or is above the ceiling limit. Supplied-air suits should be selected, used, and maintained under the immediate supervision of persons knowledgeable in the limitations and potential life-endangering characteristics of supplied-air suits.

(g) Employers shall advise employees of all areas and operations where exposure to acrylonitrile could occur.

(8) Common operations. Common operations in which exposure to acrylonitrile is likely to occur include the following: Manufacture of the acrylonitrile monomer; synthesis of

acrylic fibers, ABS, SAN, and nitrile barrier plastics and resins, nitrile rubber, surface coatings, specialty chemicals; use as a chemical intermediate; use as a fumigant; and in the cyanoethylation of cotton.

AMENDATORY SECTION (Amending WSR 99-10-071, filed 5/4/99, effective 9/1/99)

WAC 296-62-07342 1,2-Dibromo-3-chloropropane.

(1) Scope and application.

(a) This section applies to occupational exposure to 1,2-dibromo-3-chloropropane (DBCP).

(b) This section does not apply to:

(i) Exposure to DBCP which results solely from the application and use of DBCP as a pesticide; or

(ii) The storage, transportation, distribution or sale of DBCP in intact containers sealed in such a manner as to prevent exposure to DBCP vapors or liquids, except for the requirements of subsections (11), (16) and (17) of this section.

(2) Definitions applicable to this section:

(a) "Authorized person" - any person specifically authorized by the employer and whose duties require the person to be present in areas where DBCP is present; and any person entering this area as a designated representative of employees exercising an opportunity to observe employee exposure monitoring.

(b) "DBCP" - 1,2-dibromo-3-chloropropane, Chemical Abstracts Service Registry Number 96-12-8, and includes all forms of DBCP.

(c) "Director" - the director of labor and industries, or his authorized representative.

(d) "Emergency" - any occurrence such as, but not limited to equipment failure, rupture of containers, or failure of control equipment which may, or does, result in unexpected release of DBCP.

(3) Permissible exposure limits.

(a) Inhalation.

(i) Time-weighted average limit (TWA). The employer shall assure that no employee is exposed to an airborne concentration in excess of 1 part DBCP per billion part of air (ppb) as an eight-hour time-weighted average.

(ii) Ceiling limit. The employer shall assure that no employee is exposed to an airborne concentration in excess of 5 parts DBCP per billion parts of air (ppb) as averaged over any 15 minutes during the working day.

(b) Dermal and eye exposure. The employer shall assure that no employee is exposed to eye or skin contact with DBCP.

(4) Notification of use. Within ten days of the effective date of this section or within ten days following the introduction of DBCP into the workplace, every employer who has a workplace where DBCP is present shall report the following information to the director for each such workplace:

(a) The address and location of each workplace in which DBCP is present;

(b) A brief description of each process or operation which may result in employee exposure to DBCP;

(c) The number of employees engaged in each process or operation who may be exposed to DBCP and an estimate of the frequency and degree of exposure that occurs;

(d) A brief description of the employer's safety and health program as it relates to limitation of employee exposure to DBCP.

(5) Regulated areas. The employer shall establish, within each place of employment, regulated areas wherever DBCP concentrations are in excess of the permissible exposure limit.

(a) The employer shall limit access to regulated areas to authorized persons.

(b) All employees entering or working in a regulated area shall wear respiratory protection in accordance with Table I.

(6) Exposure monitoring.

(a) General. Determinations of airborne exposure levels shall be made from air samples that are representative of each employee's exposure to DBCP over an eight-hour period. (For the purposes of this section, employee exposure is that exposure which would occur if the employee were not using a respirator.)

(b) Initial. Each employer who has a place of employment in which DBCP is present shall monitor each workplace and work operation to accurately determine the airborne concentrations of DBCP to which employees may be exposed.

(c) Frequency.

(i) If the monitoring required by this section reveals employee exposures to be below the permissible exposure limits, the employer shall repeat these determinations at least quarterly.

(ii) If the monitoring required by this section reveals employee exposure to be in excess of the permissible exposure limits, the employer shall repeat these determinations for each such employee at least monthly. The employer shall continue these monthly determinations until at least two consecutive measurements, taken at least seven days apart, are below the permissible exposure limit, thereafter the employer shall monitor at least quarterly.

(d) Additional. Whenever there has been a production process, control or personnel change which may result in any new or additional exposure to DBCP, or whenever the employer has any other reason to suspect a change which may result in new or additional exposure to DBCP, additional monitoring which complies with subsection (6) shall be conducted.

(e) Employee notification.

(i) Within five working days after the receipt of monitoring results, the employer shall notify each employee in writing of results which represent the employee's exposure.

(ii) Whenever the results indicate that employee exposure exceeds the permissible exposure limit, the employer shall include in the written notice a statement that the permissible exposure limit was exceeded and a description of the corrective action being taken to reduce exposure to or below the permissible exposure limits.

(f) Accuracy of measurement. The method of measurement shall be accurate, to a confidence level of 95 percent, to within plus or minus 25 percent for concentrations of DBCP at or above the permissible exposure limits.

(7) Methods of compliance.

(a) Priority of compliance methods. The employer shall institute engineering and work practice controls to reduce and maintain employee exposures to DBCP at or below the permissible exposure limit, except to the extent that the employer establishes that such controls are not feasible. Where feasible engineering and work practice controls are not sufficient to reduce employee exposures to within the permissible exposure limit, the employer shall nonetheless use them to reduce exposures to the lowest level achievable by these controls, and shall supplement them by use of respiratory protection.

(b) Compliance program.

(i) The employer shall establish and implement a written program to reduce employee exposure to DBCP to or below the permissible exposure limit solely by means of engineering and work practice controls as required by this section.

(ii) The written program shall include a detailed schedule for development and implementation of the engineering and work practice controls. These plans shall be revised at least every six months to reflect the current status of the program.

(iii) Written plans for these compliance programs shall be submitted upon request to the director, and shall be available at the worksite for examination and copying by the director, and any affected employee or designated representative of employees.

(iv) The employer shall institute and maintain at least the controls described in his most recent written compliance program.

(8) Respiratory protection.

(a) General. For employees who are required to use respirators under this section, the employer must provide respirators that comply with the requirements of this subsection. Respirators must be used during:

(i) Period necessary to install or implement feasible engineering and work-practice controls;

(ii) Maintenance and repair activities for which engineering and work-practice controls are not feasible;

(iii) Work operations for which feasible engineering and work-practice controls are not yet sufficient to reduce employee exposure to or below the permissible exposure limit;

(iv) Emergencies.

(b) The employer must establish, implement, and maintain a respiratory protection program as required by chapter 296-62 WAC, Part E (except WAC 296-62-07130(1) and 296-62-07150 through 296-62-07156).

(c) Respirator selection. The employer must select the appropriate respirator from Table I of this subsection.

TABLE I
RESPIRATORY PROTECTION FOR DBCP

Concentration Not Greater Than	Respirator Type
(a) 10 ppb:	(i) Any supplied-air respirator. (ii) Any self-contained breathing apparatus.
(b) 50 ppb:	(i) Any supplied-air respirator with full facepiece, helmet or hood. (ii) Any self-contained breathing apparatus with full facepiece.
(c) 250 ppb:	(i) A Type C supplied-air respirator operated in pressure-demand or other positive pressure or continuous flow mode.
(d) 500 ppb:	(i) A Type C supplied-air respirator with full facepiece operated in pressure-demand mode with full facepiece.
(e) Greater than 500 ppb or entry into unknown concentrations:	(i) A combination respirator which includes a Type C supplied-air respirator with full facepiece operated in pressure-demand mode and an auxiliary self-contained breathing apparatus. (ii) A self-contained breathing apparatus with full facepiece operated in pressure-demand mode.
(f) Firefighting:	(i) A self-contained breathing apparatus with full facepiece operated in pressure-demand mode.

- (9) Reserved.
- (10) Emergency situations.
- (a) Written plans.

(i) A written plan for emergency situations shall be developed for each workplace in which DBCP is present.

(ii) Appropriate portions of the plan shall be implemented in the event of an emergency.

(b) Employees engaged in correcting conditions shall be equipped as required in subsection (11) of this section until the emergency is abated.

(c) Evacuation. Employees not engaged in correcting the emergency shall be removed and restricted from the area and normal operations in the affected area shall not be resumed until the emergency is abated.

(d) Alerting employees. Where there is a possibility of employee exposure to DBCP due to the occurrence of an

emergency, a general alarm shall be installed and maintained to promptly alert employees of such occurrences.

(e) Medical surveillance. For any employee exposed to DBCP in an emergency situation, the employer shall provide medical surveillance in accordance with subsection (14) of this section.

(f) Exposure monitoring.

(i) Following an emergency, the employer shall conduct monitoring which complies with subsection (6) of this section.

(ii) In workplaces not normally subject to periodic monitoring, the employer may terminate monitoring when two consecutive measurements indicate exposures below the permissible exposure limit.

(11) Protective clothing and equipment.

(a) Provision and use. Where eye or skin contact with liquid or solid DBCP may occur, employers shall provide at no cost to the employee, and assure that employees wear impermeable protective clothing and equipment in accordance with WAC ((~~296-24-07501 and 296-24-07801~~) 296-800-160) to protect the area of the body which may come in contact with DBCP.

(b) Cleaning and replacement.

(i) The employer shall clean, launder, maintain, or replace protective clothing and equipment required by this subsection to maintain their effectiveness. In addition, the employer shall provide clean protective clothing and equipment at least daily to each affected employee.

(ii) Removal and storage.

(A) The employer shall assure that employees remove DBCP contaminated work clothing only in change rooms provided in accordance with subsection (13) of this section.

(B) The employer shall assure that employees promptly remove any protective clothing and equipment which becomes contaminated with DBCP-containing liquids and solids. This clothing shall not be reworn until the DBCP has been removed from the clothing or equipment.

(C) The employer shall assure that no employee takes DBCP contaminated protective devices and work clothing out of the change room, except those employees authorized to do so for the purpose of laundering, maintenance, or disposal.

(iii) The employer shall assure that DBCP-contaminated protective work clothing and equipment is placed and stored in closed containers which prevent dispersion of DBCP outside the container.

(iv) The employer shall inform any person who launders or cleans DBCP-contaminated protective clothing or equipment of the potentially harmful effects of exposure to DBCP.

(v) The employer shall assure that the containers of contaminated protective clothing and equipment which are to be removed from the workplace for any reason are labeled in accordance with subsection (16)(c) of this section.

(vi) The employer shall prohibit the removal of DBCP from protective clothing and equipment by blowing or shaking.

(12) Housekeeping.

(a) Surfaces.

(i) All surfaces shall be maintained free of accumulations of DBCP.

PERMANENT

(ii) Dry sweeping and the use of air for the cleaning of floors and other surfaces where DBCP dust or liquids are found is prohibited.

(iii) Where vacuuming methods are selected, either portable units or a permanent system may be used.

(A) If a portable unit is selected, the exhaust shall be attached to the general workplace exhaust ventilation system or collected within the vacuum unit, equipped with high efficiency filters or other appropriate means of contaminant removal, so that DBCP is not reintroduced into the workplace air; and

(B) Portable vacuum units used to collect DBCP may not be used for other cleaning purposes and shall be labeled as prescribed by subsection (16)(c) of this section.

(iv) Cleaning of floors and other contaminated surfaces may not be performed by washing down with a hose, unless a fine spray has first been laid down.

(b) Liquids. Where DBCP is present in a liquid form, or as a resultant vapor, all containers or vessels containing DBCP shall be enclosed to the maximum extent feasible and tightly covered when not in use.

(c) Waste disposal. DBCP waste, scrap, debris, bags, containers or equipment, shall be disposed in sealed bags or other closed containers which prevent dispersion of DBCP outside the container.

(13) Hygiene facilities and practices.

(a) Change rooms. The employer shall provide clean change rooms equipped with storage facilities for street clothes and separate storage facilities for protective clothing and equipment whenever employees are required to wear protective clothing and equipment in accordance with subsections (8), (9) and (11) of this section.

(b) Showers.

(i) The employer shall assure that employees working in the regulated area shower at the end of the work shift.

(ii) The employer shall assure that employees whose skin becomes contaminated with DBCP-containing liquids or solids immediately wash or shower to remove any DBCP from the skin.

(iii) The employer shall provide shower facilities in accordance with WAC 296-24-12009 (3)(c).

(c) Lunchrooms. The employer shall provide lunchroom facilities which have a temperature controlled, positive pressure, filtered air supply, and which are readily accessible to employees working in regulated areas.

(d) Lavatories.

(i) The employer shall assure that employees working in the regulated area remove protective clothing and wash their hands and face prior to eating.

(ii) The employer shall provide a sufficient number of lavatory facilities which comply with WAC ((296-24-12009 (1) and (2))) 296-800-230.

(e) Prohibition of activities in regulated areas. The employer shall assure that, in regulated areas, food or beverages are not present or consumed, smoking products and implements are not present or used, and cosmetics are not present or applied.

(14) Medical surveillance.

(a) General. The employer shall institute a program of medical surveillance for each employee who is or will be

exposed, without regard to the use of respirators, to DBCP. The employer shall provide each such employee with an opportunity for medical examinations and tests in accordance with this subsection. All medical examinations and procedures shall be performed by or under the supervision of a licensed physician, and shall be provided without cost to the employee.

(b) Frequency and content. At the time of initial assignment, annually thereafter, and whenever exposure to DBCP occurs, the employer shall provide a medical examination for employees who work in regulated areas, which includes at least the following:

(i) A complete medical and occupational history with emphasis on reproductive history.

(ii) A complete physical examination with emphasis on the genito-urinary tract, testicle size, and body habitus including the following tests:

(A) Sperm count;

(B) Complete urinalysis (U/A);

(C) Complete blood count; and

(D) Thyroid profile.

(iii) A serum specimen shall be obtained and the following determinations made by radioimmunoassay techniques utilizing National Institutes of Health (NIH) specific antigen or one of equivalent sensitivity:

(A) Serum multiphasic analysis (SMA 12);

(B) Serum follicle stimulating hormone (FSH);

(C) Serum luteinizing hormone (LH); and

(D) Serum estrogen (females).

(iv) Any other tests deemed appropriate by the examining physician.

(c) Additional examinations. If the employee for any reason develops signs or symptoms commonly associated with exposure to DBCP, the employer shall provide the employee with a medical examination which shall include those elements considered appropriate by the examining physician.

(d) Information provided to the physician. The employer shall provide the following information to the examining physician:

(i) A copy of this standard and its appendices;

(ii) A description of the affected employee's duties as they relate to the employee's exposure;

(iii) The level of DBCP to which the employee is exposed; and

(iv) A description of any personal protective equipment used or to be used.

(e) Physician's written opinion.

(i) For each examination under this section, the employer shall obtain and provide the employee with a written opinion from the examining physician which shall include:

(A) The results of the medical tests performed;

(B) The physician's opinion as to whether the employee has any detected medical condition which would place the employee at an increased risk of material impairment of health from exposure to DBCP;

(C) Any recommended limitations upon the employee's exposure to DBCP or upon the use of protective clothing and equipment such as respirators; and

(D) A statement that the employee was informed by the physician of the results of the medical examination, and any

medical conditions which require further examination or treatment.

(ii) The employer shall instruct the physician not to reveal in the written opinion specific findings or diagnoses unrelated to occupational exposure to DBCP.

(iii) The employer shall provide a copy of the written opinion to the affected employee.

(f) Emergency situations. If the employee is exposed to DBCP in an emergency situation, the employer shall provide the employee with a sperm count test as soon as practicable, or, if the employee is unable to produce a semen specimen, the hormone tests contained in subsection (14)(b) of this section. The employer shall provide these same tests three months later.

(15) Employee information and training.

(a) Training program.

(i) Within thirty days of the effective date of this standard, the employer shall institute a training program for all employees who may be exposed to DBCP and shall assure their participation in such training program.

(ii) The employer shall assure that each employee is informed of the following:

(A) The information contained in Appendices A, B and C;

(B) The quantity, location, manner of use, release or storage of DBCP and the specific nature of operations which could result in exposure to DBCP as well as any necessary protective steps;

(C) The purpose, proper use, limitations, and other training requirements covering respiratory protection as required in chapter 296-62 WAC, Part E;

(D) The purpose and description of the medical surveillance program required by subsection (14) of this section; and

(E) A review of this standard.

(b) Access to training materials.

(i) The employer shall make a copy of this standard and its appendices readily available to all affected employees.

(ii) The employer shall provide, upon request, all materials relating to the employee information and training program to the director.

(16) Signs and labels.

(a) General.

(i) The employer may use labels or signs required by other statutes, regulations, or ordinances in addition to or in combination with, signs and labels required by this subsection.

(ii) The employer shall assure that no statement appears on or near any sign or label required by this subsection which contradicts or detracts from the required sign or label.

(b) Signs.

(i) The employer shall post signs to clearly indicate all work areas where DBCP may be present. These signs shall bear the legend:

DANGER

1,2-Dibromo-3-chloropropane

(Insert appropriate trade or common names)

CANCER HAZARD

AUTHORIZED PERSONNEL ONLY

(ii) Where airborne concentrations of DBCP exceed the permissible exposure limits, the signs shall bear the additional legend:

RESPIRATOR REQUIRED

(c) Labels.

(i) The employer shall assure that precautionary labels are affixed to all containers of DBCP and of products containing DBCP, and that the labels remain affixed when the DBCP or products containing DBCP are sold, distributed, or otherwise leave the employer's workplace. Where DBCP or products containing DBCP are sold, distributed or otherwise leave the employer's workplace bearing appropriate labels required by EPA under the regulations in 40 CFR Part 162, the labels required by this subsection need not be affixed.

(ii) The employer shall assure that the precautionary labels required by this subsection are readily visible and legible. The labels shall bear the following legend:

DANGER

1,2-Dibromo-3-chloropropane

CANCER HAZARD

(17) Recordkeeping.

(a) Exposure monitoring.

(i) The employer shall establish and maintain an accurate record of all monitoring required by subsection (6) of this section.

(ii) This record shall include:

(A) The dates, number, duration and results of each of the samples taken, including a description of the sampling procedure used to determine representative employee exposure;

(B) A description of the sampling and analytical methods used;

(C) Type of respiratory worn, if any; and

(D) Name, Social Security number, and job classification of the employee monitored and of all other employees whose exposure the measurement is intended to represent.

(iii) The employer shall maintain this record for at least forty years or the duration of employment plus twenty years, whichever is longer.

(b) Medical surveillance.

(i) The employer shall establish and maintain an accurate record for each employee subject to medical surveillance required by subsection (14) of this section.

(ii) This record shall include:

(A) The name and Social Security number of the employee;

(B) A copy of the physician's written opinion;

(C) Any employee medical complaints related to exposure to DBCP;

(D) A copy of the information provided the physician as required by subsection (14)(c) of this section; and

(E) A copy of the employee's medical and work history.

(iii) The employer shall maintain this record for at least forty years or the duration of employment plus twenty years, whichever is longer.

(c) Availability.

(i) The employer shall assure that all records required to be maintained by this section be made available upon request to the director for examination and copying.

(ii) Employee exposure monitoring records and employee medical records required by this subsection shall be provided upon request to employees' designated representatives and the assistant director in accordance with WAC 296-62-05201 through 296-62-05209; and 296-62-05213 through 296-62-05217.

(d) Transfer of records.

(i) If the employer ceases to do business, the successor employer shall receive and retain all records required to be maintained by this section for the prescribed period.

(ii) If the employer ceases to do business and there is no successor employer to receive and retain the records for the prescribed period, the employer shall transmit these records by mail to the director.

(iii) At the expiration of the retention period for the records required to be maintained under this section, the employer shall transmit these records by mail to the director.

(iv) The employer shall also comply with any additional requirements involving transfer of records set forth in WAC 296-62-05215.

(18) Observation of monitoring.

(a) Employee observation. The employer shall provide affected employees, or their designated representatives, an opportunity to observe any monitoring of employee exposure to DBCP conducted under subsection (6) of this section.

(b) Observation procedures.

(i) Whenever observation of the measuring or monitoring of employee exposure to DBCP requires entry into an area where the use of protective clothing or equipment is required, the employer shall provide the observer with personal protective clothing or equipment required to be worn by employees working in the area, assure the use of such clothing and equipment, and require the observer to comply with all other applicable safety and health procedures.

(ii) Without interfering with the monitoring or measurement, observers shall be entitled to:

(A) Receive an explanation of the measurement procedures;

(B) Observe all steps related to the measurement of airborne concentrations of DBCP performed at the place of exposure; and

(C) Record the results obtained.

(19) Appendices. The information contained in the appendices is not intended, by itself, to create any additional obligations not otherwise imposed or to detract from any existing obligation.

AMENDATORY SECTION (Amending WSR 99-17-094, filed 8/17/99, effective 12/1/99)

WAC 296-62-07347 Inorganic arsenic. (1) Scope and application. This section applies to all occupational exposures to inorganic arsenic except that this section does not

apply to employee exposures in agriculture or resulting from pesticide application, the treatment of wood with preservatives or the utilization of arsenically preserved wood.

(2) Definitions.

(a) "Action level" - a concentration of inorganic arsenic of 5 micrograms per cubic meter of air ($5 \mu\text{g}/\text{m}^3$) averaged over any eight-hour period.

(b) "Authorized person" - any person specifically authorized by the employer whose duties require the person to enter a regulated area, or any person entering such an area as a designated representative of employees for the purpose of exercising the right to observe monitoring and measuring procedures under subsection (5) of this section.

(c) "Director" - the director of the department of labor and industries, or his/her designated representative.

(d) "Inorganic arsenic" - copper aceto-arsenite and all inorganic compounds containing arsenic except arsine, measured as arsenic (As).

(3) Permissible exposure limit. The employer shall assure that no employee is exposed to inorganic arsenic at concentrations greater than 10 micrograms per cubic meter of air ($10 \mu\text{g}/\text{m}^3$), averaged over any eight-hour period.

(4) Notification of use.

(a) Within sixty days after the introduction of inorganic arsenic into the workplace, every employer who is required to establish a regulated area in his/her workplaces shall report in writing to the department of labor and industries for each such workplace:

(i) The address of each such workplace;

(ii) The approximate number of employees who will be working in regulated areas; and

(iii) A brief summary of the operations creating the exposure and the actions which the employer intends to take to reduce exposures.

(b) Whenever there has been a significant change in the information required by subsection (4)(a) of this section, the employer shall report the changes in writing within sixty days to the department of labor and industries.

(5) Exposure monitoring.

(a) General.

(i) Determinations of airborne exposure levels shall be made from air samples that are representative of each employee's exposure to inorganic arsenic over an eight-hour period.

(ii) For the purposes of this section, employee exposure is that exposure which would occur if the employee were not using a respirator.

(iii) The employer shall collect full shift (for at least seven continuous hours) personal samples including at least one sample for each shift for each job classification in each work area.

(b) Initial monitoring. Each employer who has a workplace or work operation covered by this standard shall monitor each such workplace and work operation to accurately determine the airborne concentration of inorganic arsenic to which employees may be exposed.

(c) Frequency.

(i) If the initial monitoring reveals employee exposure to be below the action level the measurements need not be

repeated except as otherwise provided in subsection (5)(d) of this section.

(ii) If the initial monitoring, required by this section, or subsequent monitoring reveals employee exposure to be above the permissible exposure limit, the employer shall repeat monitoring at least quarterly.

(iii) If the initial monitoring, required by this section, or subsequent monitoring reveals employee exposure to be above the action level and below the permissible exposure limit the employee shall repeat monitoring at least every six months.

(iv) The employer shall continue monitoring at the required frequency until at least two consecutive measurements, taken at least seven days apart, are below the action level at which time the employer may discontinue monitoring for that employee until such time as any of the events in subsection (5)(d) of this section occur.

(d) Additional monitoring. Whenever there has been a production, process, control or personal change which may result in new or additional exposure to inorganic arsenic, or whenever the employer has any other reason to suspect a change which may result in new or additional exposures to inorganic arsenic, additional monitoring which complies with subsection (5) of this section shall be conducted.

(e) Employee notification.

(i) Within five working days after the receipt of monitoring results, the employer shall notify each employee in writing of the results which represent that employee's exposures.

(ii) Whenever the results indicate that the representative employee exposure exceeds the permissible exposure limit, the employer shall include in the written notice a statement that the permissible exposure limit was exceeded and a description of the corrective action taken to reduce exposure to or below the permissible exposure limit.

(f) Accuracy of measurement.

(i) The employer shall use a method of monitoring and measurement which has an accuracy (with a confidence level of 95 percent) of not less than plus or minus 25 percent for concentrations of inorganic arsenic greater than or equal to 10 $\mu\text{g}/\text{m}^3$.

(ii) The employer shall use a method of monitoring and measurement which has an accuracy (with confidence level of 95 percent) of not less than plus or minus 35 percent for concentrations of inorganic arsenic greater than 5 $\mu\text{g}/\text{m}^3$ but less than 10 $\mu\text{g}/\text{m}^3$.

(6) Regulated area.

(a) Establishment. The employer shall establish regulated areas where worker exposures to inorganic arsenic, without regard to the use of respirators, are in excess of the permissible limit.

(b) Demarcation. Regulated areas shall be demarcated and segregated from the rest of the workplace in any manner that minimizes the number of persons who will be exposed to inorganic arsenic.

(c) Access. Access to regulated areas shall be limited to authorized persons or to persons otherwise authorized by the Act or regulations issued pursuant thereto to enter such areas.

(d) Provision of respirators. All persons entering a regulated area shall be supplied with a respirator, selected in accordance with subsection (8)(c) of this section.

(e) Prohibited activities. The employer shall assure that in regulated areas, food or beverages are not consumed, smoking products, chewing tobacco and gum are not used and cosmetics are not applied, except that these activities may be conducted in the lunchrooms, change rooms and showers required under subsection (12) of this section. Drinking water may be consumed in the regulated area.

(7) Methods of compliance.

(a) Controls.

(i) The employer shall institute engineering and work practice controls to reduce exposures to or below the permissible exposure limit, except to the extent that the employer can establish that such controls are not feasible.

(ii) Where engineering and work practice controls are not sufficient to reduce exposures to or below the permissible exposure limit, they shall nonetheless be used to reduce exposures to the lowest levels achievable by these controls and shall be supplemented by the use of respirators in accordance with subsection (8) of this section and other necessary personal protective equipment. Employee rotation is not required as a control strategy before respiratory protection is instituted.

(b) Compliance program.

(i) The employer shall establish and implement a written program to reduce exposures to or below the permissible exposure limit by means of engineering and work practice controls.

(ii) Written plans for these compliance programs shall include at least the following:

(A) A description of each operation in which inorganic arsenic is emitted; e.g., machinery used, material processed, controls in place, crew size, operating procedures and maintenance practices;

(B) Engineering plans and studies used to determine methods selected for controlling exposure to inorganic arsenic;

(C) A report of the technology considered in meeting the permissible exposure limit;

(D) Monitoring data;

(E) A detailed schedule for implementation of the engineering controls and work practices that cannot be implemented immediately and for the adaption and implementation of any additional engineering and work practices necessary to meet the permissible exposure limit;

(F) Whenever the employer will not achieve the permissible exposure limit with engineering controls and work practices, the employer shall include in the compliance plan an analysis of the effectiveness of the various controls, shall install engineering controls and institute work practices on the quickest schedule feasible, and shall include in the compliance plan and implement a program to minimize the discomfort and maximize the effectiveness of respirator use; and

(G) Other relevant information.

(iii) Written plans for such a program shall be submitted upon request to the director, and shall be available at the worksite for examination and copying by the director, any affected employee or authorized employee representatives.

(iv) The plans required by this subsection shall be revised and updated at least every six months to reflect the current status of the program.

(8) Respiratory protection.

(a) General. For employees who use respirators required by this section, the employer must provide respirators that comply with the requirements of this subsection. Respirators must be used during:

(i) Period necessary to install or implement feasible engineering or work-practice controls;

(ii) Work operations, such as maintenance and repair activities, in which the employer establishes that engineering and work-practice controls are not feasible;

(iii) Work operations for which engineering work-practice controls are not yet sufficient to reduce employee exposures to or below the permissible exposure limit;

(iv) Emergencies.

(b) Respirator program.

(i) The employer must establish, implement, and maintain a respiratory protection program as required by chapter 296-62 WAC, Part E (except WAC 296-62-07130(1) and 296-62-07150 through 296-62-07156).

(ii) If an employee exhibits breathing difficulty during fit testing or respirator use, they must be examined by a physician trained in pulmonary medicine to determine whether they can use a respirator while performing the required duty.

(c) Respirator selection.

(i) The employer must use Table I of this section to select the appropriate respirator or combination of respirators for inorganic arsenic compounds without significant vapor pressure, and Table II of this section to select the appropriate respirator or combination of respirators for inorganic arsenic compounds that have significant vapor pressure.

(ii) Where employee exposures exceed the permissible exposure limit for inorganic arsenic and also exceed the relevant limit for other gases (for example, sulfur dioxide), any air-purifying respirator provided to the employee as specified by this section must have a combination high-efficiency filter with an appropriate gas sorbent. (See footnote in Table I)

(iii) Employees required to use respirators may choose, and the employer must provide, a powered air-purifying respirator if it will provide proper protection. In addition, the employer must provide a combination dust and acid-gas respirator to employees who are exposed to gases over the relevant exposure limits.

TABLE I

RESPIRATORY PROTECTION FOR INORGANIC ARSENIC PARTICULATE EXCEPT FOR THOSE WITH SIGNIFICANT VAPOR PRESSURE

Concentration of Inorganic Arsenic (as As) or Condition of Use	Required Respirator
(i) Unknown or greater or lesser than 20,000 $\mu\text{g}/\text{m}^3$ (20 mg/m^3) firefighting.	(A) Any full facepiece self-contained or breathing apparatus operated in positive pressure mode.

Concentration of Inorganic Arsenic (as As) or Condition of Use	Required Respirator
(ii) Not greater than 20,000 $\mu\text{g}/\text{m}^3$ (20 mg/m^3)	(A) Supplied air respirator with full facepiece, hood, or helmet or suit and operated in positive pressure mode.
(iii) Not greater than 10,000 $\mu\text{g}/\text{m}^3$ (10 mg/m^3)	(A) Powered air-purifying respirators in all inlet face coverings with high-efficiency filters. ¹ (B) Half-mask supplied air respirators operated in positive pressure mode.
(iv) Not greater than 500 $\mu\text{g}/\text{m}^3$	(A) Full facepiece air-purifying respirator equipped with high-efficiency filter. ¹ (B) Any full facepiece supplied air respirator. (C) Any full facepiece self-contained breathing apparatus.
(v) Not greater than 100 $\mu\text{g}/\text{m}^3$	(A) Half-mask air-purifying respirator equipped with high-efficiency filter. ¹ (B) Any half-mask supplied air respirator.

¹High-efficiency filter-99.97 pct efficiency against 0.3 micrometer monodisperse diethyl-hexyl phthalate (DOP) particles.

TABLE II

RESPIRATORY PROTECTION FOR INORGANIC ARSENICALS (SUCH AS ARSENIC TRICHLORIDE² AND ARSENIC PHOSPHIDE) WITH SIGNIFICANT VAPOR PRESSURE

Concentration of Inorganic Arsenic (as As) or Condition of Use	Required Respirator
(i) Unknown or greater or lesser than 20,000 $\mu\text{g}/\text{m}^3$ (20 mg/m^3) or firefighting.	(A) Any full facepiece contained breathing apparatus operated in positive pressure mode.

PERMANENT

Concentration of Inorganic Arsenic (as As) or Condition of Use

Concentration of Inorganic Arsenic (as As) or Condition of Use	Required Respirator
(ii) Not greater than 20,000 $\mu\text{g}/\text{m}^3$ (20 mg/m^3)	(A) Supplied air respirator with full facepiece hood, or helmet or suit and operated in positive pressure mode.
(iii) Not greater than 10,000 $\mu\text{g}/\text{m}^3$ (10 mg/m^3)	(A) Half-mask ² supplied air respirator operated in positive pressure mode.
(iv) Not greater than 500 $\mu\text{g}/\text{m}^3$	(A) Front or back mounted gas mask equipped with high-efficiency filter ¹ and acid gas canister.
	(B) Any full facepiece supplied air respirator.
	(C) Any full facepiece self-contained breathing apparatus.
(v) Not greater than 100 $\mu\text{g}/\text{m}^3$	(A) Half-mask ² air-purifying respirator equipped with high-efficiency filter ¹ and acid gas cartridge.
	(B) Any half-mask supplied air respirator.

¹High efficiency filter-99.97 pct efficiency against 0.3 micrometer monodisperse diethyl-hexyl phthalate (DOP) particles.

²Half-mask respirators shall not be used for protection against arsenic trichloride, as it is rapidly absorbed through the skin.

(9) **Reserved.**

(10) Protective work clothing and equipment.

(a) Provision and use. Where the possibility of skin or eye irritation from inorganic arsenic exists, and for all workers working in regulated areas, the employer shall provide at no cost to the employee and assure that employees use appropriate and clean protective work clothing and equipment such as, but not limited to:

- (i) Coveralls or similar full-body work clothing;
- (ii) Gloves, and shoes or coverlets;
- (iii) Face shields or vented goggles when necessary to prevent eye irritation, which comply with the requirements of WAC ((296-24-07801 (1)-(6))) 296-800-160.
- (iv) Impervious clothing for employees subject to exposure to arsenic trichloride.

(b) Cleaning and replacement.

(i) The employer shall provide the protective clothing required in subsection (10)(a) of this section in a freshly laundered and dry condition at least weekly, and daily if the employee works in areas where exposures are over 100

$\mu\text{g}/\text{m}^3$ of inorganic arsenic or in areas where more frequent washing is needed to prevent skin irritation.

(ii) The employer shall clean, launder, or dispose of protective clothing required by subsection (10)(a) of this section.

(iii) The employer shall repair or replace the protective clothing and equipment as needed to maintain their effectiveness.

(iv) The employer shall assure that all protective clothing is removed at the completion of a work shift only in change rooms prescribed in subsection (13)(a) of this section.

(v) The employer shall assure that contaminated protective clothing which is to be cleaned, laundered, or disposed of, is placed in a closed container in the change-room which prevents dispersion of inorganic arsenic outside the container.

(vi) The employer shall inform in writing any person who cleans or launders clothing required by this section, of the potentially harmful effects including the carcinogenic effects of exposure to inorganic arsenic.

(vii) The employer shall assure that the containers of contaminated protective clothing and equipment in the workplace or which are to be removed from the workplace are labeled as follows:

Caution: Clothing contaminated with inorganic arsenic; do not remove dust by blowing or shaking. Dispose of inorganic arsenic contaminated wash water in accordance with applicable local, state, or federal regulations.

(viii) The employer shall prohibit the removal of inorganic arsenic from protective clothing or equipment by blowing or shaking.

(11) Housekeeping.

(a) Surfaces. All surfaces shall be maintained as free as practicable of accumulations of inorganic arsenic.

(b) Cleaning floors. Floors and other accessible surfaces contaminated with inorganic arsenic may not be cleaned by the use of compressed air, and shoveling and brushing may be used only where vacuuming or other relevant methods have been tried and found not to be effective.

(c) Vacuuming. Where vacuuming methods are selected, the vacuums shall be used and emptied in a manner to minimize the reentry of inorganic arsenic into the workplace.

(d) Housekeeping plan. A written housekeeping and maintenance plan shall be kept which shall list appropriate frequencies for carrying out housekeeping operations, and for cleaning and maintaining dust collection equipment. The plan shall be available for inspection by the director.

(e) Maintenance of equipment. Periodic cleaning of dust collection and ventilation equipment and checks of their effectiveness shall be carried out to maintain the effectiveness of the system and a notation kept of the last check of effectiveness and cleaning or maintenance.

(12) **Reserved.**

(13) Hygiene facilities and practices.

(a) Change rooms. The employer shall provide for employees working in regulated areas or subject to the possibility of skin or eye irritation from inorganic arsenic, clean change rooms equipped with storage facilities for street

PERMANENT

clothes and separate storage facilities for protective clothing and equipment in accordance with WAC 296-24-12011.

(b) Showers.

(i) The employer shall assure that employees working in regulated areas or subject to the possibility of skin or eye irritation from inorganic arsenic shower at the end of the work shift.

(ii) The employer shall provide shower facilities in accordance with WAC 296-24-12009(3).

(c) Lunchrooms.

(i) The employer shall provide for employees working in regulated areas, lunchroom facilities which have a temperature controlled, positive pressure, filtered air supply, and which are readily accessible to employees working in regulated areas.

(ii) The employer shall assure that employees working in the regulated area or subject to the possibility of skin or eye irritation from exposure to inorganic arsenic wash their hands and face prior to eating.

(d) Lavatories. The employer shall provide lavatory facilities which comply with WAC ((296-24-12009(1) and (2)) 296-800-230.

(e) Vacuuming clothes. The employer shall provide facilities for employees working in areas where exposure, without regard to the use of respirators, exceeds 100 $\mu\text{g}/\text{m}^3$ to vacuum their protective clothing and clean or change shoes worn in such areas before entering change rooms, lunchrooms or shower rooms required by subsection (10) of this section and shall assure that such employees use such facilities.

(f) Avoidance of skin irritation. The employer shall assure that no employee is exposed to skin or eye contact with arsenic trichloride, or to skin or eye contact with liquid or particulate inorganic arsenic which is likely to cause skin or eye irritation.

(14) Medical surveillance.

(a) General.

(i) Employees covered. The employer shall institute a medical surveillance program for the following employees:

(A) All employees who are or will be exposed above the action level, without regard to the use of respirators, at least thirty days per year; and

(B) All employees who have been exposed above the action level, without regard to respirator use, for thirty days or more per year for a total of ten years or more of combined employment with the employer or predecessor employers prior to or after the effective date of this standard. The determination of exposures prior to the effective date of this standard shall be based upon prior exposure records, comparison with the first measurements taken after the effective date of this standard, or comparison with records of exposures in areas with similar processes, extent of engineering controls utilized and materials used by that employer.

(ii) Examination by physician. The employer shall assure that all medical examinations and procedures are performed by or under the supervision of a licensed physician, and shall be provided without cost to the employee, without loss of pay and at a reasonable time and place.

(b) Initial examinations. For employees initially covered by the medical provisions of this section, or thereafter at the time of initial assignment to an area where the employee is likely to be exposed over the action level at least thirty days per year, the employer shall provide each affected employee an opportunity for a medical examination, including at least the following elements:

(i) A work history and a medical history which shall include a smoking history and the presence and degree of respiratory symptoms such as breathlessness, cough, sputum production and wheezing.

(ii) A medical examination which shall include at least the following:

(A) A 14" by 17" posterior-anterior chest x-ray and International Labor Office UICC/Cincinnati (ILO U/C) rating;

(B) A nasal and skin examination; and

(C) Other examinations which the physician believes appropriate because of the employees exposure to inorganic arsenic or because of required respirator use.

(c) Periodic examinations.

(i) The employer shall provide the examinations specified in subsection (14)(b)(i) and (ii)(A), (B) and (C) of this section at least annually for covered employees who are under forty-five years of age with fewer than ten years of exposure over the action level without regard to respirator use.

(ii) The employer shall provide the examinations specified in subsection (14)(b)(i) and (ii)(B) and (C) of this section at least semi-annually, and the x-ray requirements specified in subsection (14)(b)(ii)(A) of this section at least annually, for other covered employees.

(iii) Whenever a covered employee has not taken the examinations specified in subsection (14)(b)(i) and (ii)(B) and (C) of this section within six months preceding the termination of employment, the employer shall provide such examinations to the employee upon termination of employment.

(d) Additional examinations. If the employee for any reason develops signs or symptoms commonly associated with exposure to inorganic arsenic the employer shall provide an appropriate examination and emergency medical treatment.

(e) Information provided to the physician. The employer shall provide the following information to the examining physician:

(i) A copy of this standard and its appendices;

(ii) A description of the affected employee's duties as they relate to the employee's exposure;

(iii) The employee's representative exposure level or anticipated exposure level;

(iv) A description of any personal protective equipment used or to be used; and

(v) Information from previous medical examinations of the affected employee which is not readily available to the examining physician.

(f) Physician's written opinion.

(i) The employer shall obtain a written opinion from the examining physician which shall include:

(A) The results of the medical examination and tests performed;

(B) The physician's opinion as to whether the employee has any detected medical conditions which would place the employee at increased risk of material impairment of the employee's health from exposure to inorganic arsenic;

(C) Any recommended limitations upon the employee's exposure to inorganic arsenic or upon the use of protective clothing or equipment such as respirators; and

(D) A statement that the employee has been informed by the physician of the results of the medical examination and any medical conditions which require further examination or treatment.

(ii) The employer shall instruct the physician not to reveal in the written opinion specific findings or diagnoses unrelated to occupational exposure.

(iii) The employer shall provide a copy of the written opinion to the affected employee.

(15) Employee information and training.

(a) Training program.

(i) The employer shall institute a training program for all employees who are subject to exposure to inorganic arsenic above the action level without regard to respirator use, or for whom there is the possibility of skin or eye irritation from inorganic arsenic. The employer shall assure that those employees participate in the training program.

(ii) The training program shall be provided for employees covered by this provision, at the time of initial assignment for those subsequently covered by this provision, and shall be repeated at least quarterly for employees who have optional use of respirators and at least annually for other covered employees thereafter, and the employer shall assure that each employee is informed of the following:

(A) The information contained in Appendix A;

(B) The quantity, location, manner of use, storage, sources of exposure, and the specific nature of operations which could result in exposure to inorganic arsenic as well as any necessary protective steps;

(C) The purpose, proper use, and limitation of respirators;

(D) The purpose and a description of medical surveillance program as required by subsection (14) of this section;

(E) The engineering controls and work practices associated with the employee's job assignment; and

(F) A review of this standard.

(b) Access to training materials.

(i) The employer shall make readily available to all affected employees a copy of this standard and its appendices.

(ii) The employer shall provide, upon request, all materials relating to the employee information and training program to the director.

(16) Signs and labels.

(a) General.

(i) The employer may use labels or signs required by other statutes, regulations, or ordinances in addition to, or in combination with, signs and labels required by this subsection.

(ii) The employer shall assure that no statement appears on or near any sign or label required by this subsection which

contradicts or detracts from the meaning of the required sign or label.

(b) Signs.

(i) The employer shall post signs demarcating regulated areas bearing the legend:

DANGER
INORGANIC ARSENIC
CANCER HAZARD
AUTHORIZED PERSONNEL ONLY
NO SMOKING OR EATING
RESPIRATOR REQUIRED

(ii) The employer shall assure that signs required by this subsection are illuminated and cleaned as necessary so that the legend is readily visible.

(c) Labels. The employer shall apply precautionary labels to all shipping and storage containers of inorganic arsenic, and to all products containing inorganic arsenic except when the inorganic arsenic in the product is bound in such a manner so as to make unlikely the possibility of airborne exposure to inorganic arsenic. (Possible examples of products not requiring labels are semiconductors, light emitting diodes and glass.) The label shall bear the following legend:

DANGER
CONTAINS INORGANIC ARSENIC
CANCER HAZARD
HARMFUL IF INHALED OR
SWALLOWED
USE ONLY WITH ADEQUATE
VENTILATION
OR RESPIRATORY PROTECTION

(17) Recordkeeping.

(a) Exposure monitoring.

(i) The employer shall establish and maintain an accurate record of all monitoring required by subsection (5) of this section.

(ii) This record shall include:

(A) The date(s), number, duration location, and results of each of the samples taken, including a description of the sampling procedure used to determine representative employee exposure where applicable;

(B) A description of the sampling and analytical methods used and evidence of their accuracy;

(C) The purpose, proper use, limitations, and other training requirements covering respiratory protection as required in chapter 296-62 WAC, Part E;

(D) Name, Social Security number, and job classification of the employees monitored and of all other employees whose exposure the measurement is intended to represent; and

(E) The environmental variables that could affect the measurement of the employee's exposure.

(iii) The employer shall maintain these monitoring records for at least forty years or for the duration of employment plus twenty years, whichever is longer.

(b) Medical surveillance.

(i) The employer shall establish and maintain an accurate record for each employee subject to medical surveillance as required by subsection (14) of this section.

(ii) This record shall include:

(A) The name, Social Security number, and description of duties of the employee;

(B) A copy of the physician's written opinions;

(C) Results of any exposure monitoring done for that employee and the representative exposure levels supplied to the physician; and

(D) Any employee medical complaints related to exposure to inorganic arsenic.

(iii) The employer shall in addition keep, or assure that the examining physician keeps, the following medical records:

(A) A copy of the medical examination results including medical and work history required under subsection (14) of this section;

(B) A description of the laboratory procedures and a copy of any standards or guidelines used to interpret the test results or references to that information;

(C) The initial x-ray;

(D) The x-rays for the most recent five years; and

(E) Any x-rays with a demonstrated abnormality and all subsequent x-rays.

(iv) The employer shall maintain or assure that the physician maintains those medical records for at least forty years, or for the duration of employment, plus twenty years, whichever is longer.

(c) Availability.

(i) The employer shall make available upon request all records required to be maintained by subsection (17) of this section to the director for examination and copying.

(ii) Records required by this subsection shall be provided upon request to employees, designated representatives, and the assistant director in accordance with WAC 296-62-05201 through 296-62-05209 and 296-62-05213 through 296-62-05217.

(iii) The employer shall make available upon request an employee's medical records and exposure records representative of that employee's exposure required to be maintained by subsection (17) of this section to the affected employee or former employee or to a physician designated by the affected employee or former employee.

(d) Transfer of records.

(i) Whenever the employer ceases to do business, the successor employer shall receive and retain all records required to be maintained by this section.

(ii) Whenever the employer ceases to do business and there is no successor employer to receive and retain the records required to be maintained by this section for the prescribed period, these records shall be transmitted to the director.

(iii) At the expiration of the retention period for the records required to be maintained by this section, the employer shall notify the director at least three months prior

to the disposal of such records and shall transmit those records to the director if he requests them within that period.

(iv) The employer shall also comply with any additional requirements involving transfer of records set forth in WAC 296-62-05215.

(18) Observation of monitoring.

(a) Employee observation. The employer shall provide affected employees or their designated representatives an opportunity to observe any monitoring of employee exposure to inorganic arsenic conducted pursuant to subsection (5) of this section.

(b) Observation procedures.

(i) Whenever observation of the monitoring of employee exposure to inorganic arsenic requires entry into an area where the use of respirators, protective clothing, or equipment is required, the employer shall provide the observer with and assure the use of such respirators, clothing, and such equipment, and shall require the observer to comply with all other applicable safety and health procedures.

(ii) Without interfering with the monitoring, observers shall be entitled to:

(A) Receive an explanation of the measurement procedures;

(B) Observe all steps related to the monitoring of inorganic arsenic performed at the place of exposure; and

(C) Record the results obtained or receive copies of the results when returned by the laboratory.

(19) Appendices. The information contained in the appendices to this section is not intended by itself, to create any additional obligations not otherwise imposed by this standard nor detract from any existing obligation.

AMENDATORY SECTION (Amending WSR 99-10-071, filed 5/4/99, effective 9/1/99)

WAC 296-62-07367 Respiratory protection and personal protective equipment. (1) General. For employees who use respirators required by this section, the employer must provide respirators that comply with the requirements of WAC 296-62-07355 through 296-62-07389. Respirators must be used during:

(a) Periods necessary to install or implement feasible engineering and work-practice controls;

(b) Work operations, such as maintenance and repair activities, vessel cleaning, or other activities, for which engineering and work-practice controls are not feasible;

(c) Work operations for which feasible engineering and work-practice controls are not yet sufficient to reduce employee exposure to or below the TWA or excursion limit;

(d) Emergencies.

(2) Respirator program. The employer must establish, implement, and maintain a respiratory protection program as required in chapter 296-62 WAC, Part E (except WAC 296-62-07130(1) and 296-62-07150 through 296-62-07156).

(3) Respirator selection. The employer must select the appropriate respirator from Table 1 of this section.

**Table 1.—Minimum Requirements
for Respiratory Protection for Airborne EtO**

Condition of use or concentration of airborne EtO (ppm)	Minimum required respirator
Equal to or less than 50	(a) Full facepiece respirator with EtO approved canister, front- or back-mounted.
Equal to or less than 2,000	(a) Positive-pressure supplied air respirator, equipped with full facepiece, hood or helmet, or (b) Continuous-flow supplied air respirator (positive pressure) equipped with hood, helmet or suit.
Concentration above 2,000 or unknown concentration (such as in emergencies)	(a) Positive-pressure self-contained breathing apparatus (SCBA), equipped with full facepiece, or (b) Positive-pressure full facepiece supplied air respirator equipped with an auxiliary positive-pressure self-contained breathing apparatus.
Firefighting	(a) Positive pressure self-contained breathing apparatus equipped with full facepiece.
Escape	(a) Any respirator described above.

Note: Respirators approved for use in higher concentrations are permitted to be used in lower concentrations.

(4) Protective clothing and equipment. Where employees could have eye or skin contact with EtO or EtO solutions, the employer must select and provide, at no cost to the employee, appropriate protective clothing or other equipment in accordance with ((chapter 296-24 WAC, Part A-2)) WAC 296-800-160, and to protect any area of the body that may come in contact with liquid EtO or EtO in solution, and must ensure that the employee wears the protective clothing and equipment provided.

AMENDATORY SECTION (Amending Order 88-25, filed 11/14/88)

WAC 296-62-07373 Communication of EtO hazards to employees. (1) Signs and labels.

(a) The employer shall post and maintain legible signs demarcating regulated areas and entrances or accessways to regulated areas that bear the following legend:

DANGER
ETHYLENE OXIDE
CANCER HAZARD AND REPRODUCTIVE HAZARD
AUTHORIZED PERSONNEL ONLY
RESPIRATORS AND PROTECTIVE CLOTHING MAY BE REQUIRED
TO BE WORN IN THIS AREA

(b) The employer shall ensure that precautionary labels are affixed to all containers of EtO whose contents are capable of causing employee exposure at or above the action level or whose contents may reasonably be foreseen to cause employee exposure above the excursion limit, and that the labels remain affixed when the containers of EtO leave the workplace. For the purpose of this subsection, reaction vessels, storage tanks, and pipes or piping systems are not considered to be containers. The labels shall comply with the requirements of WAC ((296-62-05411)) 296-800-170 of WISHA's chemical hazard communication standard, and shall include the following legend:

(i)

DANGER
CONTAINS ETHYLENE OXIDE
CANCER HAZARD AND REPRODUCTIVE HAZARD; and

(ii) A warning statement against breathing airborne concentrations of EtO.

(c) The labeling requirements under WAC 296-62-07355 through 296-62-07389 do not apply where EtO is used as a pesticide, as such term is defined in the Federal Insecticide, Fungicide, and Rodenticide Act (7 U.S.C. 136 et seq.), when it is labeled pursuant to that act and regulations issued under that act by the Environmental Protection Agency.

(2) Material safety data sheets. Employers who are manufacturers or importers of EtO shall comply with the requirements regarding development of material safety data sheets as specified in WAC 296-62-05413 of the hazard communication standard.

(3) Information and training.

(a) The employer shall provide employees who are potentially exposed to EtO at or above the action level or above the excursion limit with information and training on EtO at the time of initial assignment and at least annually thereafter.

(b) Employees shall be informed of the following:

(i) The requirements of WAC 296-62-07353 through 296-62-07389 with an explanation of its contents, including Appendices A and B;

(ii) Any operations in their work area where EtO is present;

(iii) The location and availability of the written EtO final rule; and

(iv) The medical surveillance program required by WAC 296-62-07371 with an explanation of the information in Appendix C.

(c) Employee training shall include at least:

(i) Methods and observations that may be used to detect the presence or release of EtO in the work area (such as mon-

PERMANENT

itoring conducted by the employer, continuous monitoring devices, etc.);

(ii) The physical and health hazards of EtO;

(iii) The measures employees can take to protect themselves from hazards associated with EtO exposure, including specific procedures the employer has implemented to protect employees from exposure to EtO, such as work practices, emergency procedures, and personal protective equipment to be used; and

(iv) The details of the hazard communication program developed by the employer, including an explanation of the labeling system and how employees can obtain and use the appropriate hazard information.

AMENDATORY SECTION (Amending Order 91-07, filed 11/22/91, effective 12/24/91)

WAC 296-62-07385 Appendix B—Substance technical guidelines for ethylene oxide (nonmandatory). (1) Physical and chemical data:

(a) Substance identification:

(i) Synonyms: Dihydrooxirene, dimethylene oxide, EO, 1,2-epoxyethane, EtO, ETO, oxacyclopropane, oxane, oxidoethane, alpha/beta-oxidoethane, oxiran, oxirane.

(ii) Formula: (C₂H₄O).

(iii) Molecular weight: 44.06.

(b) Physical data:

(i) Boiling point (760 mm Hg): 10.70°C (51.3°F);

(ii) Specific gravity (water= 1): 0.87 (at 20°C or 68°F);

(iii) Vapor density (air= 1): 1.49;

(iv) Vapor pressure (at 20°C): 1,095 mm Hg;

(v) Solubility in water: Complete;

(vi) Appearance and odor: Colorless liquid; gas at temperature above 10.7°F or 51.3°C with ether-like odor above 700 ppm.

(2) Fire, explosion, and reactivity hazard data:

(a) Fire:

(i) Flash point; Less than 0°F (open cup);

(ii) Stability: Decomposes violently at temperatures above 800°F;

(iii) Flammable limits in air, percent by volume: Lower: 3, Upper: 100;

(iv) Extinguishing media: Carbon dioxide for small fires, polymer or alcohol foams for large fires;

(v) Special fire fighting procedures: Dilution of ethylene oxide with 23 volumes of water renders it nonflammable;

(vi) Unusual fire and explosion hazards: Vapors of EtO will burn without the presence of air or other oxidizers. EtO vapors are heavier than air and may travel along the ground and be ignited by open flames or sparks at locations remote from the site at which EtO is being used.

(vii) For purposes of compliance with the requirements of WAC 296-24-330, EtO is classified as a flammable gas. For example, 7,500 ppm, approximately one-fourth of the lower flammable limit, would be considered to pose a potential fire and explosion hazard.

(viii) For purposes of compliance with WAC 296-24-585, EtO is classified as a Class B fire hazard.

(ix) For purpose of compliance with chapter 296-24 WAC Part L, and WAC 296-800-280, locations classified as hazardous due to the presence of EtO shall be Class I.

(b) Reactivity:

(i) Conditions contributing to instability: EtO will polymerize violently if contaminated with aqueous alkalis, amines, mineral acids, metal chlorides, or metal oxides. Violent decomposition will also occur at temperatures above 800°F;

(ii) Incompatibilities: Alkalines and acids;

(iii) Hazardous decomposition products: Carbon monoxide and carbon dioxide.

(3) Spill, leak, and disposal procedures:

(a) If EtO is spilled or leaked, the following steps should be taken:

(i) Remove all ignition sources.

(ii) The area should be evacuated at once and re-entered only after the area has been thoroughly ventilated and washed down with water.

(b) Persons not wearing appropriate protective equipment should be restricted from areas of spills or leaks until cleanup has been completed.

(c) Waste disposal method: Waste material should be disposed of in a manner that is not hazardous to employees or to the general population. In selecting the method of waste disposal, applicable local, state, and federal regulations should be consulted.

(4) Monitoring and measurement procedures:

(a) Exposure above the permissible exposure limit:

(i) Eight-hour exposure evaluation: Measurements taken for the purpose of determining employee exposure under this section are best taken with consecutive samples covering the full shift. Air samples should be taken in the employee's breathing zone (air that would most nearly represent that inhaled by the employee.)

(ii) Monitoring techniques: The sampling and analysis under this section may be performed by collection of the EtO vapor on charcoal adsorption tubes or other composition adsorption tubes, with subsequent chemical analysis. Sampling and analysis may also be performed by instruments such as real time continuous monitoring systems, portable direct reading instruments, or passive dosimeters as long as measurements taken using these methods accurately evaluate the concentration of EtO in employees' breathing zones.

(iii) Appendix D describes the validated method of sampling and analysis which has been tested by OSHA for use with EtO. Other available methods are also described in Appendix D. The employer has the obligation of selecting a monitoring method which meets the accuracy and precision requirements of the standard under his/her unique field conditions. The standard requires that the method of monitoring should be accurate, to a 95 percent confidence level, to plus or minus 25 percent for concentrations of EtO at 1 ppm, and to plus or minus 35 percent for concentrations at 0.5 ppm. In addition to the method described in Appendix D, there are numerous other methods available for monitoring for EtO in the workplace. Details on these other methods have been submitted by various companies to the rulemaking record, and are available at the OSHA Docket Office.

(b) Since many of the duties relating to employee exposure are dependent on the results of measurement procedures, employers should assure that the evaluation of employee exposures is performed by a technically qualified person.

(5) Protective clothing and equipment:

(a) Employees should be provided with and be required to wear appropriate protective clothing wherever there is significant potential for skin contact with liquid EtO or EtO-containing solutions. Protective clothing shall include impermeable coveralls or similar full-body work clothing, gloves, and head coverings, as appropriate to protect areas of the body which may come in contact with liquid EtO or EtO-containing solutions.

(b) Employers should ascertain that the protective garments are impermeable to EtO. Permeable clothing, including items made of rubber, and leather shoes should not be allowed to become contaminated with liquid EtO. If permeable clothing does become contaminated, it should be immediately removed, while the employer is under an emergency deluge shower. If leather footwear or other leather garments become wet from EtO they should be discarded and not be worn again, because leather absorbs EtO and holds it against the skin.

(c) Any protective clothing that has been damaged or is otherwise found to be defective should be repaired or replaced. Clean protective clothing should be provided to the employee as necessary to assure employee protection. Whenever impermeable clothing becomes wet with liquid EtO, it should be washed down with water before being removed by the employee. Employees are also required to wear splash-proof safety goggles where there is any possibility of EtO contacting the eyes.

(6) Miscellaneous precautions:

(a) Store EtO in tightly closed containers in a cool, well-ventilated area and take all necessary precautions to avoid any explosion hazard.

(b) Nonsparking tools must be used to open and close metal containers. These containers must be effectively grounded and bonded.

(c) Do not incinerate EtO cartridges, tanks or other containers.

(d) Employers should advise employees of all areas and operations where exposure to EtO occurs.

(7) Common operations:

Common operations in which exposure to EtO is likely to occur include the following: (a) Manufacture of EtO, (b) surfactants, (c) ethanolamines, (d) glycol ethers, (e) specialty chemicals, and (f) use as a sterilant in the hospital, health product and spice industries.

AMENDATORY SECTION (Amending Order 94-16, filed 9/30/94, effective 11/20/94)

WAC 296-62-07417 Protective work clothing and equipment. (1) Provision and use. If an employee is exposed to airborne cadmium above the PEL or where skin or eye irritation is associated with cadmium exposure at any level, the employer shall provide at no cost to the employee, and assure that the employee uses, appropriate protective work clothing and equipment that prevents contamination of the employee

and the employee's garments. Protective work clothing and equipment includes, but is not limited to:

(a) Coveralls or similar full-body work clothing;

(b) Gloves, head coverings, and boots or foot coverings; and

(c) Face shields, vented goggles, or other appropriate protective equipment that complies with (~~chapter 296-24 WAC, Part A-2~~) WAC 296-800-160.

(2) Removal and storage.

(a) The employer shall assure that employees remove all protective clothing and equipment contaminated with cadmium at the completion of the work shift and do so only in change rooms provided in accordance with WAC 296-62-07419(1).

(b) The employer shall assure that no employee takes cadmium-contaminated protective clothing or equipment from the workplace, except for employees authorized to do so for purposes of laundering, cleaning, maintaining, or disposing of cadmium contaminated protective clothing and equipment at an appropriate location or facility away from the workplace.

(c) The employer shall assure that contaminated protective clothing and equipment, when removed for laundering, cleaning, maintenance, or disposal, is placed and stored in sealed, impermeable bags or other closed, impermeable containers that are designed to prevent dispersion of cadmium dust.

(d) The employer shall assure that bags or containers of contaminated protective clothing and equipment that are to be taken out of the change rooms or the workplace for laundering, cleaning, maintenance, or disposal shall bear labels in accordance with WAC 296-62-07425(3).

(3) Cleaning, replacement, and disposal.

(a) The employer shall provide the protective clothing and equipment required by subsection (1) of this section in a clean and dry condition as often as necessary to maintain its effectiveness, but in any event at least weekly. The employer is responsible for cleaning and laundering the protective clothing and equipment required by this paragraph to maintain its effectiveness and is also responsible for disposing of such clothing and equipment.

(b) The employer also is responsible for repairing or replacing required protective clothing and equipment as needed to maintain its effectiveness. When rips or tears are detected while an employee is working they shall be immediately mended, or the worksuit shall be immediately replaced.

(c) The employer shall prohibit the removal of cadmium from protective clothing and equipment by blowing, shaking, or any other means that disperses cadmium into the air.

(d) The employer shall assure that any laundering of contaminated clothing or cleaning of contaminated equipment in the workplace is done in a manner that prevents the release of airborne cadmium in excess of the permissible exposure limit prescribed in WAC 296-62-07405.

(e) The employer shall inform any person who launders or cleans protective clothing or equipment contaminated with cadmium of the potentially harmful effects of exposure to cadmium and that the clothing and equipment should be laundered or cleaned in a manner to effectively prevent the release of airborne cadmium in excess of the PEL.

AMENDATORY SECTION (Amending Order 93-01, filed 3/13/93, effective 4/27/93)

WAC 296-62-07419 Hygiene areas and practices. (1) General. For employees whose airborne exposure to cadmium is above the PEL, the employer shall provide clean change rooms, handwashing facilities, showers, and lunchroom facilities that comply with WAC 296-24-120 and 296-800-230.

(2) Change rooms. The employer shall assure that change rooms are equipped with separate storage facilities for street clothes and for protective clothing and equipment, which are designed to prevent dispersion of cadmium and contamination of the employee's street clothes.

(3) Showers and handwashing facilities.

(a) The employer shall assure that employees who are exposed to cadmium above the PEL shower during the end of the work shift.

(b) The employer shall assure that employees whose airborne exposure to cadmium is above the PEL wash their hands and faces prior to eating, drinking, smoking, chewing tobacco or gum, or applying cosmetics.

(4) Lunchroom facilities.

(a) The employer shall assure that the lunchroom facilities are readily accessible to employees, that tables for eating are maintained free of cadmium, and that no employee in a lunchroom facility is exposed at any time to cadmium at or above a concentration of 2.5 µg/m³.

(b) The employer shall assure that employees do not enter lunchroom facilities with protective work clothing or equipment unless surface cadmium has been removed from the clothing and equipment by HEPA vacuuming or some other method that removes cadmium dust without dispersing it.

AMENDATORY SECTION (Amending WSR 99-10-071, filed 5/4/99, effective 9/1/99)

WAC 296-62-07425 Communication of cadmium hazards to employees. (1) General. In communications concerning cadmium hazards, employers shall comply with the requirements of WISHA's Chemical Hazard Communication Standard, (~~chapter 296-62 WAC, Part C~~) WAC 296-800-170, including but not limited to the requirements concerning warning signs and labels, material safety data sheets (MSDS), and employee information and training. In addition, employers shall comply with the following requirements:

(2) Warning signs.

(a) Warning signs shall be provided and displayed in regulated areas. In addition, warning signs shall be posted at all approaches to regulated areas so that an employee may read the signs and take necessary protective steps before entering the area.

(b) Warning signs required by (a) of this subsection shall bear the following information:

DANGER CADMIUM CANCER HAZARD CAN CAUSE LUNG AND KIDNEY DISEASE AUTHORIZED PERSONNEL ONLY RESPIRATORS REQUIRED IN THIS AREA

(c) The employer shall assure that signs required by this subsection are illuminated, cleaned, and maintained as necessary so that the legend is readily visible.

(3) Warning labels.

(a) Shipping and storage containers containing cadmium, cadmium compounds, or cadmium contaminated clothing, equipment, waste, scrap, or debris shall bear appropriate warning labels, as specified in (b) of this subsection.

(b) The warning labels shall include at least the following information:

DANGER CONTAINS CADMIUM CANCER HAZARD AVOID CREATING DUST CAN CAUSE LUNG AND KIDNEY DISEASE

(c) Where feasible, installed cadmium products shall have a visible label or other indication that cadmium is present.

(4) Employee information and training.

(a) The employer shall institute a training program for all employees who are potentially exposed to cadmium, assure employee participation in the program, and maintain a record of the contents of such program.

(b) Training shall be provided prior to or at the time of initial assignment to a job involving potential exposure to cadmium and at least annually thereafter.

(c) The employer shall make the training program understandable to the employee and shall assure that each employee is informed of the following:

(i) The health hazards associated with cadmium exposure, with special attention to the information incorporated in WAC 296-62-07441, Appendix A;

(ii) The quantity, location, manner of use, release, and storage of cadmium in the workplace and the specific nature of operations that could result in exposure to cadmium, especially exposures above the PEL;

(iii) The engineering controls and work practices associated with the employee's job assignment;

(iv) The measures employees can take to protect themselves from exposure to cadmium, including modification of such habits as smoking and personal hygiene, and specific procedures the employer has implemented to protect employees from exposure to cadmium such as appropriate work practices, emergency procedures, and the provision of personal protective equipment;

(v) The purpose, proper selection, fitting, proper use, and limitations of protective clothing;

(vi) The purpose and a description of the medical surveillance program required by WAC 296-62-07423;

(vii) The contents of this section and its appendices;

(viii) The employee's rights of access to records under WAC 296-62-05213 and 296-800-170; and

(ix) The purpose, proper use, limitations, and other training requirements for respiratory protection as required in chapter 296-62 WAC, Part E.

(d) Additional access to information and training program and materials.

PERMANENT

(i) The employer shall make a copy of this section and its appendices readily available without cost to all affected employees and shall provide a copy if requested.

(ii) The employer shall provide to the director, upon request, all materials relating to the employee information and the training program.

AMENDATORY SECTION (Amending WSR 99-10-071, filed 5/4/99, effective 9/1/99)

WAC 296-62-07460 Butadiene. (1) Scope and application.

(a) This section applies to all occupational exposures to 1,3-Butadiene (BD), Chemical Abstracts Service Registry No. 106-99-0, except as provided in (b) of this subsection.

(b)(i) Except for the recordkeeping provisions in subsection (13)(a) of this section, this section does not apply to the processing, use, or handling of products containing BD or to other work operations and streams in which BD is present where objective data are reasonably relied upon that demonstrate the work operation or the product or the group of products or operations to which it belongs may not reasonably be foreseen to release BD in airborne concentrations at or above the action level or in excess of the STEL under the expected conditions of processing, use, or handling that will cause the greatest possible release or in any plausible accident.

(ii) This section also does not apply to work operations, products or streams where the only exposure to BD is from liquid mixtures containing 0.1% or less of BD by volume or the vapors released from such liquids, unless objective data become available that show that airborne concentrations generated by such mixtures can exceed the action level or STEL under reasonably predictable conditions of processing, use or handling that will cause the greatest possible release.

(iii) Except for labeling requirements and requirements for emergency response, this section does not apply to the storage, transportation, distribution or sale of BD or liquid mixtures in intact containers or in transportation pipelines sealed in such a manner as to fully contain BD vapors or liquids.

(c) Where products or processes containing BD are exempted under (b) of this subsection, the employer shall maintain records of the objective data supporting that exemption and the basis for the employer's reliance on the data, as provided in subsection (13)(a) of this section.

(2) Definitions: For the purpose of this section, the following definitions shall apply:

"Action level" means a concentration of airborne BD of 0.5 ppm calculated as an 8-hour time-weighted average.

"Director" means the director of the department of labor and industries, or authorized representatives.

"Authorized person" means any person specifically designated by the employer, whose duties require entrance into a regulated area, or a person entering such an area as a designated representative of employees to exercise the right to observe monitoring and measuring procedures under subsection (4)(h) of this section, or a person designated under the WISH Act or regulations issued under the WISH Act to enter a regulated area.

"1,3-Butadiene" means an organic compound with chemical formula $\text{CH}_2=\text{CH}-\text{CH}=\text{CH}_2$ that has a molecular weight of approximately 54.15 gm/mole.

"Business day" means any Monday through Friday, except those days designated as federal, state, local or company specific holidays.

"Complete blood count (CBC)" means laboratory tests performed on whole blood specimens and includes the following: White blood cell count (WBC), hematocrit (Hct), red blood cell count (RBC), hemoglobin (Hgb), differential count of white blood cells, red blood cell morphology, red blood cell indices, and platelet count.

"Day" means any part of a calendar day.

"Emergency situation" means any occurrence such as, but not limited to, equipment failure, rupture of containers, or failure of control equipment that may or does result in an uncontrolled significant release of BD.

"Employee exposure" means exposure of a worker to airborne concentrations of BD which would occur if the employee were not using respiratory protective equipment.

"Objective data" means monitoring data, or mathematical modelling or calculations based on composition, chemical and physical properties of a material, stream or product.

"Permissible exposure limits (PELs)" means either the 8-hour time-weighted average (8-hr TWA) exposure or the short-term exposure limit (STEL).

"Physician or other licensed health care professional" is an individual whose legally permitted scope of practice (i.e., license, registration, or certification) allows him or her to independently provide or be delegated the responsibility to provide one or more of the specific health care services required by (k) of this subsection.

"Regulated area" means any area where airborne concentrations of BD exceed or can reasonably be expected to exceed the 8-hour time-weighted average (8-hr TWA) exposure of 1 ppm or the short-term exposure limit (STEL) of 5 ppm for 15 minutes.

"This section" means this 1,3-butadiene standard.

(3) Permissible exposure limits (PELs).

(a) Time-weighted average (TWA) limit. The employer shall ensure that no employee is exposed to an airborne concentration of BD in excess of one part BD per million parts of air (ppm) measured as an eight (8)-hour time-weighted average.

(b) Short-term exposure limit (STEL). The employer shall ensure that no employee is exposed to an airborne concentration of BD in excess of five parts of BD per million parts of air (5 ppm) as determined over a sampling period of fifteen minutes.

(4) Exposure monitoring.

(a) General.

(i) Determinations of employee exposure shall be made from breathing zone air samples that are representative of the 8-hour TWA and 15-minute short-term exposures of each employee.

(ii) Representative 8-hour TWA employee exposure shall be determined on the basis of one or more samples representing full-shift exposure for each shift and for each job classification in each work area.

(iii) Representative 15-minute short-term employee exposures shall be determined on the basis of one or more samples representing 15-minute exposures associated with operations that are most likely to produce exposures above the STEL for each shift and for each job classification in each work area.

(iv) Except for the initial monitoring required under (b) of this subsection, where the employer can document that exposure levels are equivalent for similar operations on different work shifts, the employer need only determine representative employee exposure for that operation from the shift during which the highest exposure is expected.

(b) Initial monitoring.

(i) Each employer who has a workplace or work operation covered by this section, shall perform initial monitoring to determine accurately the airborne concentrations of BD to which employees may be exposed, or shall rely on objective data pursuant to subsection (1)(b)(i) of this section to fulfill this requirement.

(ii) Where the employer has monitored within two years prior to the effective date of this section and the monitoring satisfies all other requirements of this section, the employer may rely on such earlier monitoring results to satisfy the requirements of (b)(i) of this subsection, provided that the conditions under which the initial monitoring was conducted have not changed in a manner that may result in new or additional exposures.

(c) Periodic monitoring and its frequency.

(i) If the initial monitoring required by (b) of this subsection reveals employee exposure to be at or above the action level but at or below both the 8-hour TWA limit and the STEL, the employer shall repeat the representative monitoring required by (a) of this subsection every twelve months.

(ii) If the initial monitoring required by (b) of this subsection reveals employee exposure to be above the 8-hour TWA limit, the employer shall repeat the representative monitoring required by (a)(ii) of this subsection at least every three months until the employer has collected two samples per quarter (each at least 7 days apart) within a two-year period, after which such monitoring must occur at least every six months.

(iii) If the initial monitoring required by (b) of this subsection reveals employee exposure to be above the STEL, the employer shall repeat the representative monitoring required by (a)(iii) of this subsection at least every three months until the employer has collected two samples per quarter (each at least 7 days apart) within a two-year period, after which such monitoring must occur at least every six months.

(iv) The employer may alter the monitoring schedule from every six months to annually for any required representative monitoring for which two consecutive measurements taken at least 7 days apart indicate that employee exposure has decreased to or below the 8-hour TWA, but is at or above the action level.

(d) Termination of monitoring.

(i) If the initial monitoring required by (b) of this subsection reveals employee exposure to be below the action level and at or below the STEL, the employer may discontinue the monitoring for employees whose exposures are represented by the initial monitoring.

(ii) If the periodic monitoring required by (c) of this subsection reveals that employee exposures, as indicated by at least two consecutive measurements taken at least 7 days apart, are below the action level and at or below the STEL, the employer may discontinue the monitoring for those employees who are represented by such monitoring.

(e) Additional monitoring.

(i) The employer shall institute the exposure monitoring required under subsection (4) of this section whenever there has been a change in the production, process, control equipment, personnel or work practices that may result in new or additional exposures to BD or when the employer has any reason to suspect that a change may result in new or additional exposures.

(ii) Whenever spills, leaks, ruptures or other breakdowns occur that may lead to employee exposure above the 8-hr TWA limit or above the STEL, the employer shall monitor (using leak source, such as direct reading instruments, area or personal monitoring), after the cleanup of the spill or repair of the leak, rupture or other breakdown, to ensure that exposures have returned to the level that existed prior to the incident.

(f) Accuracy of monitoring.

Monitoring shall be accurate, at a confidence level of 95 percent, to within plus or minus 25 percent for airborne concentrations of BD at or above the 1 ppm TWA limit and to within plus or minus 35 percent for airborne concentrations of BD at or above the action level of 0.5 ppm and below the 1 ppm TWA limit.

(g) Employee notification of monitoring results.

(i) The employer shall, within 5 business days after the receipt of the results of any monitoring performed under this section, notify the affected employees of these results in writing either individually or by posting of results in an appropriate location that is accessible to affected employees.

(ii) The employer shall, within 15 business days after receipt of any monitoring performed under this section indicating the 8-hour TWA or STEL has been exceeded, provide the affected employees, in writing, with information on the corrective action being taken by the employer to reduce employee exposure to or below the 8-hour TWA or STEL and the schedule for completion of this action.

(h) Observation of monitoring.

(i) Employee observation. The employer shall provide affected employees or their designated representatives an opportunity to observe any monitoring of employee exposure to BD conducted in accordance with this section.

(ii) Observation procedures. When observation of the monitoring of employee exposure to BD requires entry into an area where the use of protective clothing or equipment is required, the employer shall provide the observer at no cost with protective clothing and equipment, and shall ensure that the observer uses this equipment and complies with all other applicable safety and health procedures.

(5) Regulated areas.

(a) The employer shall establish a regulated area whenever occupational exposures to airborne concentrations of BD exceed or can reasonably be expected to exceed the permissible exposure limits, either the 8-hr TWA or the STEL.

(b) Access to regulated areas shall be limited to authorized persons.

(c) Regulated areas shall be demarcated from the rest of the workplace in any manner that minimizes the number of employees exposed to BD within the regulated area.

(d) An employer at a multiemployer worksite who establishes a regulated area shall communicate the access restrictions and locations of these areas to other employers with work operations at that worksite whose employees may have access to these areas.

(6) Methods of compliance.

(a) Engineering controls and work practices.

(i) The employer shall institute engineering controls and work practices to reduce and maintain employee exposure to or below the PELs, except to the extent that the employer can establish that these controls are not feasible or where subsection (8)(a)(i) of this section applies.

(ii) Wherever the feasible engineering controls and work practices which can be instituted are not sufficient to reduce employee exposure to or below the 8-hour TWA or STEL, the employer shall use them to reduce employee exposure to the lowest levels achievable by these controls and shall supplement them by the use of respiratory protection that complies with the requirements of subsection (8) of this section.

(b) Compliance plan.

(i) Where any exposures are over the PELs, the employer shall establish and implement a written plan to reduce employee exposure to or below the PELs primarily by means of engineering and work practice controls, as required by (a) of this subsection, and by the use of respiratory protection where required or permitted under this section. No compliance plan is required if all exposures are under the PELs.

(ii) The written compliance plan shall include a schedule for the development and implementation of the engineering controls and work practice controls including periodic leak detection surveys.

(iii) Copies of the compliance plan required in (b) of this subsection shall be furnished upon request for examination and copying to the director, affected employees and designated employee representatives. Such plans shall be reviewed at least every 12 months, and shall be updated as necessary to reflect significant changes in the status of the employer's compliance program.

(iv) The employer shall not implement a schedule of employee rotation as a means of compliance with the PELs.

(7) Exposure goal program.

(a) For those operations and job classifications where employee exposures are greater than the action level, in addition to compliance with the PELs, the employer shall have an exposure goal program that is intended to limit employee exposures to below the action level during normal operations.

(b) Written plans for the exposure goal program shall be furnished upon request for examination and copying to the director, affected employees and designated employee representatives.

(c) Such plans shall be updated as necessary to reflect significant changes in the status of the exposure goal program.

(d) Respirator use is not required in the exposure goal program.

(e) The exposure goal program shall include the following items unless the employer can demonstrate that the item is not feasible, will have no significant effect in reducing employee exposures, or is not necessary to achieve exposures below the action level:

(i) A leak prevention, detection, and repair program.

(ii) A program for maintaining the effectiveness of local exhaust ventilation systems.

(iii) The use of pump exposure control technology such as, but not limited to, mechanical double-sealed or seal-less pumps.

(iv) Gauging devices designed to limit employee exposure, such as magnetic gauges on rail cars.

(v) Unloading devices designed to limit employee exposure, such as a vapor return system.

(vi) A program to maintain BD concentration below the action level in control rooms by use of engineering controls.

(8) Respiratory protection.

(a) General. For employees who use respirators required by this section, the employer must provide respirators that comply with the requirements of this subsection. Respirators must be used during:

(i) Periods necessary to install or implement feasible engineering and work-practice controls;

(ii) Nonroutine work operations that are performed infrequently and for which exposures are limited in duration;

(iii) Work operations for which feasible engineering controls and work-practice controls are not yet sufficient to reduce employee exposures to or below the PELs;

(iv) Emergencies.

(b) Respirator program.

(i) The employer must implement a respiratory protection program as required by chapter 296-62 WAC, Part E (except WAC 296-62-07130(1), 296-62-07131 (4)(b)(i) and (ii), and 296-62-07150 through 296-62-07156).

(ii) If air-purifying respirators are used, the employer must replace the air-purifying filter elements according to the replacement schedule set for the class of respirators listed in Table 1 of this section, and at the beginning of each work shift.

(iii) Instead of using the replacement schedule listed in Table 1 of this section, the employer may replace cartridges or canisters at 90% of their expiration service life, provided the employer:

(A) Demonstrates that employees will be adequately protected by this procedure;

(B) Uses BD breakthrough data for this purpose that have been derived from tests conducted under worst-case conditions of humidity, temperature, and air-flow rate through the filter element, and the employer also describes the data supporting the cartridge- or canister-change schedule, as well as the basis for using the data in the employer's respirator program.

(iv) A label must be attached to each filter element to indicate the date and time it is first installed on the respirator.

(v) If NIOSH approves an end-of-service-life indicator (ESLI) for an air-purifying filter element, the element may be used until the ESLI shows no further useful service life or until the element is replaced at the beginning of the next work shift, whichever occurs first.

(vi) Regardless of the air-purifying element used, if an employee detects the odor of BD, the employer must replace the air-purifying element immediately.

(c) Respirator selection.

(i) The employer must select appropriate respirators from Table 1 of this section.

Table 1. - Minimum Requirements for Respiratory Protection for Airborne BD

Concentration of Airborne BD (ppm) or condition of use	Minimum required respirator
Less than or equal to 5 ppm (5 times PEL)	(a) Air-purifying half mask or full facepiece respirator equipped with approved BD or organic vapor cartridges or canisters. Cartridges or canisters shall be replaced every 4 hours.
Less than or equal to 10 ppm (10 times PEL)	(a) Air-purifying half mask or full facepiece respirator equipped with approved BD or organic vapor cartridges or canisters. Cartridges or canisters shall be replaced every 3 hours.
Less than or equal to 25 ppm (25 times PEL)	(a) Air-purifying full facepiece respirator equipped with approved BD or organic vapor cartridges or canisters. Cartridges or canisters shall be replaced every 2 hours. (b) Any powered air-purifying respirator equipped with approved BD or organic vapor cartridges. PAPR cartridges shall be replaced every 2 hours. (c) Continuous flow supplied air respirator equipped with a hood or helmet.
Less than or equal to 50 ppm (50 times PEL)	(a) Air-purifying full facepiece respirator equipped with approved BD or organic vapor cartridges or canisters. Cartridges or canisters shall be replaced every 1 hour.

Concentration of Airborne BD (ppm) or condition of use	Minimum required respirator
Less than or equal to 1,000 ppm (1,000 times PEL)	(b) Powered air purifying respirator equipped with a tight-fitting facepiece and an approved BD or organic vapor cartridges. PAPR cartridges shall be replaced every 1 hour. (a) Supplied air respirator equipped with a half mask or full facepiece and operated in a pressure demand or other positive pressure mode.
Greater than 1,000 ppm	(a) Self-contained breathing unknown concentration, or apparatus equipped with a fire fighting full facepiece and operated in a pressure demand or other positive pressure mode. (b) Any supplied air respirator equipped with a full facepiece and operated in a pressure demand or other positive pressure mode in combination with an auxiliary self-contained breathing apparatus operated in a pressure demand or other positive pressure mode.
Escape from IDLH Conditions	(a) Any positive pressure self-contained breathing apparatus with an appropriate service life. (b) Any air-purifying full facepiece respirator equipped with a front or back mounted BD or organic vapor canister.

Notes: Respirators approved for use in higher concentrations are permitted to be used in lower concentrations. Full facepiece is required when eye irritation is anticipated.

(ii) Air-purifying respirators must have filter elements certified by NIOSH for organic vapor or BD.

(iii) When an employee whose job requires the use of a respirator cannot use a negative-pressure respirator, the employer must provide the employee with a respirator that has less breathing resistance than the negative-pressure respirator, such as a powered air-purifying respirator or supplied-air respirator, when the employee is able to use it and if it provides the employee adequate protection.

PERMANENT

(9) Protective clothing and equipment. Where appropriate to prevent eye contact and limit dermal exposure to BD, the employer shall provide protective clothing and equipment at no cost to the employee and shall ensure its use. Eye and face protection shall meet the requirements of WAC ((296-24-078)) 296-800-160.

(10) Emergency situations. Written plan. A written plan for emergency situations shall be developed, or an existing plan shall be modified, to contain the applicable elements specified in WAC 296-24-567, Employee emergency plans and fire prevention plans, and in WAC 296-62-3112, hazardous waste operations and emergency responses, for each workplace where there is a possibility of an emergency.

(11) Medical screening and surveillance.

(a) Employees covered. The employer shall institute a medical screening and surveillance program as specified in this subsection for:

(i) Each employee with exposure to BD at concentrations at or above the action level on 30 or more days or for employees who have or may have exposure to BD at or above the PELs on 10 or more days a year;

(ii) Employers (including successor owners) shall continue to provide medical screening and surveillance for employees, even after transfer to a non-BD exposed job and regardless of when the employee is transferred, whose work histories suggest exposure to BD:

(A) At or above the PELs on 30 or more days a year for 10 or more years;

(B) At or above the action level on 60 or more days a year for 10 or more years; or

(C) Above 10 ppm on 30 or more days in any past year; and

(iii) Each employee exposed to BD following an emergency situation.

(b) Program administration.

(i) The employer shall ensure that the health questionnaire, physical examination and medical procedures are provided without cost to the employee, without loss of pay, and at a reasonable time and place.

(ii) Physical examinations, health questionnaires, and medical procedures shall be performed or administered by a physician or other licensed health care professional.

(iii) Laboratory tests shall be conducted by an accredited laboratory.

(c) Frequency of medical screening activities. The employer shall make medical screening available on the following schedule:

(i) For each employee covered under (a)(i) and (ii) of this subsection, a health questionnaire and complete blood count (CBC) with differential and platelet count every year, and a physical examination as specified below:

(A) An initial physical examination that meets the requirements of this rule, if twelve months or more have elapsed since the last physical examination conducted as part of a medical screening program for BD exposure;

(B) Before assumption of duties by the employee in a job with BD exposure;

(C) Every 3 years after the initial physical examination;

(D) At the discretion of the physician or other licensed health care professional reviewing the annual health questionnaire and CBC;

(E) At the time of employee reassignment to an area where exposure to BD is below the action level, if the employee's past exposure history does not meet the criteria of (a)(ii) of this subsection for continued coverage in the screening and surveillance program, and if twelve months or more have elapsed since the last physical examination; and

(F) At termination of employment if twelve months or more have elapsed since the last physical examination.

(ii) Following an emergency situation, medical screening shall be conducted as quickly as possible, but not later than 48 hours after the exposure.

(iii) For each employee who must wear a respirator, physical ability to perform the work and use the respirator must be determined as required by WAC 296-62-071.

(d) Content of medical screening.

(i) Medical screening for employees covered by (a)(i) and (ii) of this subsection shall include:

(A) A baseline health questionnaire that includes a comprehensive occupational and health history and is updated annually. Particular emphasis shall be placed on the hematopoietic and reticuloendothelial systems, including exposure to chemicals, in addition to BD, that may have an adverse effect on these systems, the presence of signs and symptoms that might be related to disorders of these systems, and any other information determined by the examining physician or other licensed health care professional to be necessary to evaluate whether the employee is at increased risk of material impairment of health from BD exposure. Health questionnaires shall consist of the sample forms in Appendix C to this section, or be equivalent to those samples;

(B) A complete physical examination, with special emphasis on the liver, spleen, lymph nodes, and skin;

(C) A CBC; and

(D) Any other test which the examining physician or other licensed health care professional deems necessary to evaluate whether the employee may be at increased risk from exposure to BD.

(ii) Medical screening for employees exposed to BD in an emergency situation shall focus on the acute effects of BD exposure and at a minimum include: A CBC within 48 hours of the exposure and then monthly for three months; and a physical examination if the employee reports irritation of the eyes, nose, throat, lungs, or skin, blurred vision, coughing, drowsiness, nausea, or headache. Continued employee participation in the medical screening and surveillance program, beyond these minimum requirements, shall be at the discretion of the physician or other licensed health care professional.

(e) Additional medical evaluations and referrals.

(i) Where the results of medical screening indicate abnormalities of the hematopoietic or reticuloendothelial systems, for which a nonoccupational cause is not readily apparent, the examining physician or other licensed health care professional shall refer the employee to an appropriate specialist for further evaluation and shall make available to the specialist the results of the medical screening.

(ii) The specialist to whom the employee is referred under this subsection shall determine the appropriate content for the medical evaluation, e.g., examinations, diagnostic tests and procedures, etc.

(f) Information provided to the physician or other licensed health care professional. The employer shall provide the following information to the examining physician or other licensed health care professional involved in the evaluation:

(i) A copy of this section including its appendices;
 (ii) A description of the affected employee's duties as they relate to the employee's BD exposure;

(iii) The employee's actual or representative BD exposure level during employment tenure, including exposure incurred in an emergency situation;

(iv) A description of pertinent personal protective equipment used or to be used; and

(v) Information, when available, from previous employment-related medical evaluations of the affected employee which is not otherwise available to the physician or other licensed health care professional or the specialist.

(g) The written medical opinion.

(i) For each medical evaluation required by this section, the employer shall ensure that the physician or other licensed health care professional produces a written opinion and provides a copy to the employer and the employee within 15 business days of the evaluation. The written opinion shall be limited to the following information:

(A) The occupationally pertinent results of the medical evaluation;

(B) A medical opinion concerning whether the employee has any detected medical conditions which would place the employee's health at increased risk of material impairment from exposure to BD;

(C) Any recommended limitations upon the employee's exposure to BD; and

(D) A statement that the employee has been informed of the results of the medical evaluation and any medical conditions resulting from BD exposure that require further explanation or treatment.

(ii) The written medical opinion provided to the employer shall not reveal specific records, findings, and diagnoses that have no bearing on the employee's ability to work with BD.

Note: This provision does not negate the ethical obligation of the physician or other licensed health care professional to transmit any other adverse findings directly to the employee.

(h) Medical surveillance.

(i) The employer shall ensure that information obtained from the medical screening program activities is aggregated (with all personal identifiers removed) and periodically reviewed, to ascertain whether the health of the employee population of that employer is adversely affected by exposure to BD.

(ii) Information learned from medical surveillance activities must be disseminated to covered employees, as defined in (a) of this subsection, in a manner that ensures the confidentiality of individual medical information.

(12) Communication of BD hazards to employees.

(a) Hazard communication. The employer shall communicate the hazards associated with BD exposure in accordance with the requirements of the chemical hazard communication standard, WAC ((296-62-054)) 296-800-170.

(b) Employee information and training.

(i) The employer shall provide all employees exposed to BD with information and training in accordance with the requirements of the chemical hazard communication standard, WAC ((296-62-054)) 296-800-170.

(ii) The employer shall institute a training program for all employees who are potentially exposed to BD at or above the action level or the STEL, ensure employee participation in the program and maintain a record of the contents of such program.

(iii) Training shall be provided prior to or at the time of initial assignment to a job potentially involving exposure to BD at or above the action level or STEL and at least annually thereafter.

(iv) The training program shall be conducted in a manner that the employee is able to understand. The employer shall ensure that each employee exposed to BD over the action level or STEL is informed of the following:

(A) The health hazards associated with BD exposure, and the purpose and a description of the medical screening and surveillance program required by this section;

(B) The quantity, location, manner of use, release, and storage of BD and the specific operations that could result in exposure to BD, especially exposures above the PEL or STEL;

(C) The engineering controls and work practices associated with the employee's job assignment, and emergency procedures and personal protective equipment;

(D) The measures employees can take to protect themselves from exposure to BD;

(E) The contents of this standard and its appendices; and

(F) The right of each employee exposed to BD at or above the action level or STEL to obtain:

(I) Medical examinations as required by subsection (10) of this section at no cost to the employee;

(II) The employee's medical records required to be maintained by subsection (13)(c) of this section; and

(III) All air monitoring results representing the employee's exposure to BD and required to be kept by subsection (13)(b) of this section.

(c) Access to information and training materials.

(i) The employer shall make a copy of this standard and its appendices readily available without cost to all affected employees and their designated representatives and shall provide a copy if requested.

(ii) The employer shall provide to the director, or the designated employee representatives, upon request, all materials relating to the employee information and the training program.

(13) Recordkeeping.

(a) Objective data for exemption from initial monitoring.

(i) Where the processing, use, or handling of products or streams made from or containing BD are exempted from other requirements of this section under subsection (1)(b) of this section, or where objective data have been relied on in lieu of initial monitoring under subsection (4)(b)(ii) of this

section, the employer shall establish and maintain a record of the objective data reasonably relied upon in support of the exemption.

(ii) This record shall include at least the following information:

(A) The product or activity qualifying for exemption;

(B) The source of the objective data;

(C) The testing protocol, results of testing, and analysis of the material for the release of BD;

(D) A description of the operation exempted and how the data support the exemption; and

(E) Other data relevant to the operations, materials, processing, or employee exposures covered by the exemption.

(iii) The employer shall maintain this record for the duration of the employer's reliance upon such objective data.

(b) Exposure measurements.

(i) The employer shall establish and maintain an accurate record of all measurements taken to monitor employee exposure to BD as prescribed in subsection (4) of this section.

(ii) The record shall include at least the following information:

(A) The date of measurement;

(B) The operation involving exposure to BD which is being monitored;

(C) Sampling and analytical methods used and evidence of their accuracy;

(D) Number, duration, and results of samples taken;

(E) Type of protective devices worn, if any;

(F) Name, Social Security number and exposure of the employees whose exposures are represented; and

(G) The written corrective action and the schedule for completion of this action required by subsection (4)(g)(ii) of this section.

(iii) The employer shall maintain this record for at least 30 years in accordance with WAC 296-62-052.

(c) Medical screening and surveillance.

(i) The employer shall establish and maintain an accurate record for each employee subject to medical screening and surveillance under this section.

(ii) The record shall include at least the following information:

(A) The name and Social Security number of the employee;

(B) Physician's or other licensed health care professional's written opinions as described in subsection (11) (e) of this section;

(C) A copy of the information provided to the physician or other licensed health care professional as required by subsection (11)(e) of this section.

(iii) Medical screening and surveillance records shall be maintained for each employee for the duration of employment plus 30 years, in accordance with WAC 296-62-052.

(d) Availability.

(i) The employer, upon written request, shall make all records required to be maintained by this section available for examination and copying to the director.

(ii) Access to records required to be maintained by (a) and (b) of this subsection shall be granted in accordance with WAC 296-62-05209.

(e) Transfer of records.

(i) Whenever the employer ceases to do business, the employer shall transfer records required by this section to the successor employer. The successor employer shall receive and maintain these records. If there is no successor employer, the employer shall notify the director, at least three months prior to disposal, and transmit them to the director if requested by the director within that period.

(ii) The employer shall transfer medical and exposure records as set forth in WAC 296-62-05215.

(14) Dates.

(a) Effective date. This section shall become effective (day, month), 1997.

(b) Start-up dates.

(i) The initial monitoring required under subsection (4)(b) of this section shall be completed immediately or within sixty days of the introduction of BD into the workplace.

(ii) The requirements of subsections (3) through (13) of this section, including feasible work practice controls but not including engineering controls specified in subsection (6)(a) of this section, shall be complied with immediately.

(iii) Engineering controls specified by subsection (6)(a) of this section shall be implemented by February 4, 1999, and the exposure goal program specified in subsection (7) of this section shall be implemented by February 4, 2000.

(15) Appendices.

Appendices A, B, C, D, and F to this section are informational and are not intended to create any additional obligations not otherwise imposed or to detract from any existing obligations.

Appendix A. Substance Safety Data Sheet For 1,3-Butadiene (Non-Mandatory)

(1) Substance Identification.

(a) Substance: 1,3-Butadiene ($\text{CH}_2=\text{CH}-\text{CH}=\text{CH}_2$).

(b) Synonyms: 1,3-Butadiene (BD); butadiene; biethylene; bi-vinyl; divinyl; butadiene-1,3; buta-1,3-diene; erythrene; NCI-C50602; CAS-106-99-0.

(c) BD can be found as a gas or liquid.

(d) BD is used in production of styrene-butadiene rubber and polybutadiene rubber for the tire industry. Other uses include copolymer latexes for carpet backing and paper coating, as well as resins and polymers for pipes and automobile and appliance parts. It is also used as an intermediate in the production of such chemicals as fungicides.

(e) Appearance and odor: BD is a colorless, non-corrosive, flammable gas with a mild aromatic odor at standard ambient temperature and pressure.

(f) Permissible exposure: Exposure may not exceed 1 part BD per million parts of air averaged over the 8-hour workday, nor may short-term exposure exceed 5 parts of BD per million parts of air averaged over any 15-minute period in the 8-hour workday.

(2) Health Hazard Data.

(a) BD can affect the body if the gas is inhaled or if the liquid form, which is very cold (cryogenic), comes in contact with the eyes or skin.

(b) Effects of overexposure: Breathing very high levels of BD for a short time can cause central nervous system effects, blurred vision, nausea, fatigue, headache, decreased

blood pressure and pulse rate, and unconsciousness. There are no recorded cases of accidental exposures at high levels that have caused death in humans, but this could occur. Breathing lower levels of BD may cause irritation of the eyes, nose, and throat. Skin contact with liquefied BD can cause irritation and frostbite.

(c) Long-term (chronic) exposure: BD has been found to be a potent carcinogen in rodents, inducing neoplastic lesions at multiple target sites in mice and rats. A recent study of BD-exposed workers showed that exposed workers have an increased risk of developing leukemia. The risk of leukemia increases with increased exposure to BD. OSHA has concluded that there is strong evidence that workplace exposure to BD poses an increased risk of death from cancers of the lymphohematopoietic system.

(d) Reporting signs and symptoms: You should inform your supervisor if you develop any of these signs or symptoms and suspect that they are caused by exposure to BD.

(3) Emergency First Aid Procedures.

In the event of an emergency, follow the emergency plan and procedures designated for your work area. If you have been trained in first aid procedures, provide the necessary first aid measures. If necessary, call for additional assistance from co-workers and emergency medical personnel.

(a) Eye and Skin Exposures: If there is a potential that liquefied BD can come in contact with eye or skin, face shields and skin protective equipment must be provided and used. If liquefied BD comes in contact with the eye, immediately flush the eyes with large amounts of water, occasionally lifting the lower and the upper lids. Flush repeatedly. Get medical attention immediately. Contact lenses should not be worn when working with this chemical. In the event of skin contact, which can cause frostbite, remove any contaminated clothing and flush the affected area repeatedly with large amounts of tepid water.

(b) Breathing: If a person breathes in large amounts of BD, move the exposed person to fresh air at once. If breathing has stopped, begin cardiopulmonary resuscitation (CPR) if you have been trained in this procedure. Keep the affected person warm and at rest. Get medical attention immediately.

(c) Rescue: Move the affected person from the hazardous exposure. If the exposed person has been overcome, call for help and begin emergency rescue procedures. Use extreme caution so that you do not become a casualty. Understand the plant's emergency rescue procedures and know the locations of rescue equipment before the need arises.

(4) Respirators and Protective Clothing.

(a) Respirators: Good industrial hygiene practices recommend that engineering and work practice controls be used to reduce environmental concentrations to the permissible exposure level. However, there are some exceptions where respirators may be used to control exposure. Respirators may be used when engineering and work practice controls are not technically feasible, when such controls are in the process of being installed, or when these controls fail and need to be supplemented or during brief, non-routine, intermittent exposure. Respirators may also be used in situations involving non-routine work operations which are performed infrequently and in which exposures are limited in duration, and in emergency situations. In some instances cartridge respirator

use is allowed, but only with strict time constraints. For example, at exposure below 5 ppm BD, a cartridge (or canister) respirator, either full or half face, may be used, but the cartridge must be replaced at least every 4 hours, and it must be replaced every 3 hours when the exposure is between 5 and 10 ppm.

If the use of respirators is necessary, the only respirators permitted are those that have been approved by the National Institute for Occupational Safety and Health (NIOSH). In addition to respirator selection, a complete respiratory protection program must be instituted which includes regular training, maintenance, fit testing, inspection, cleaning, and evaluation of respirators. If you can smell BD while wearing a respirator, proceed immediately to fresh air, and change cartridge (or canister) before re-entering an area where there is BD exposure. If you experience difficulty in breathing while wearing a respirator, tell your supervisor.

(b) Protective Clothing: Employees should be provided with and required to use impervious clothing, gloves, face shields (eight-inch minimum), and other appropriate protective clothing necessary to prevent the skin from becoming frozen by contact with liquefied BD (or a vessel containing liquid BD).

Employees should be provided with and required to use splash-proof safety goggles where liquefied BD may contact the eyes.

(5) Precautions for Safe Use, Handling, and Storage.

(a) Fire and Explosion Hazards: BD is a flammable gas and can easily form explosive mixtures in air. It has a lower explosive limit of 2%, and an upper explosive limit of 11.5%. It has an autoignition temperature of 420 deg. C (788 deg. F). Its vapor is heavier than air (vapor density, 1.9) and may travel a considerable distance to a source of ignition and flash back. Usually it contains inhibitors to prevent self-polymerization (which is accompanied by evolution of heat) and to prevent formation of explosive peroxides. At elevated temperatures, such as in fire conditions, polymerization may take place. If the polymerization takes place in a container, there is a possibility of violent rupture of the container.

(b) Hazard: Slightly toxic. Slight respiratory irritant. Direct contact of liquefied BD on skin may cause freeze burns and frostbite.

(c) Storage: Protect against physical damage to BD containers. Outside or detached storage of BD containers is preferred. Inside storage should be in a cool, dry, well-ventilated, noncombustible location, away from all possible sources of ignition. Store cylinders vertically and do not stack. Do not store with oxidizing material.

(d) Usual Shipping Containers: Liquefied BD is contained in steel pressure apparatus.

(e) Electrical Equipment: Electrical installations in Class I hazardous locations, as defined in Article 500 of the National Electrical Code, should be in accordance with Article 501 of the Code. If explosion-proof electrical equipment is necessary, it shall be suitable for use in Group B. Group D equipment may be used if such equipment is isolated in accordance with Section 501-5(a) by sealing all conduit 1/2-inch size or larger. See Venting of Deflagrations (NFPA No. 68, 1994), National Electrical Code (NFPA No. 70, 1996), Static Electricity (NFPA No. 77, 1993), Lightning Protection

Systems (NFPA No. 780, 1995), and Fire Hazard Properties of Flammable Liquids, Gases and Volatile Solids (NFPA No. 325, 1994).

(f) Fire Fighting: Stop flow of gas. Use water to keep fire-exposed containers cool. Fire extinguishers and quick drenching facilities must be readily available, and you should know where they are and how to operate them.

(g) Spill and Leak: Persons not wearing protective equipment and clothing should be restricted from areas of spills or leaks until clean-up has been completed. If BD is spilled or leaked, the following steps should be taken:

(i) Eliminate all ignition sources.

(ii) Ventilate area of spill or leak.

(iii) If in liquid form, for small quantities, allow to evaporate in a safe manner.

(iv) Stop or control the leak if this can be done without risk. If source of leak is a cylinder and the leak cannot be stopped in place, remove the leaking cylinder to a safe place and repair the leak or allow the cylinder to empty.

(h) Disposal: This substance, when discarded or disposed of, is a hazardous waste according to Federal regulations (40 CFR part 261). It is listed as hazardous waste number D001 due to its ignitability. The transportation, storage, treatment, and disposal of this waste material must be conducted in compliance with 40 CFR parts 262, 263, 264, 268 and 270. Disposal can occur only in properly permitted facilities. Check state and local regulation of any additional requirements as these may be more restrictive than federal laws and regulation.

(i) You should not keep food, beverages, or smoking materials in areas where there is BD exposure, nor should you eat or drink in such areas.

(j) Ask your supervisor where BD is used in your work area and ask for any additional plant safety and health rules.

(6) Medical Requirements.

Your employer is required to offer you the opportunity to participate in a medical screening and surveillance program if you are exposed to BD at concentrations exceeding the action level (0.5 ppm BD as an 8-hour TWA) on 30 days or more a year, or at or above the 8-hr TWA (1 ppm) or STEL (5 ppm for 15 minutes) on 10 days or more a year. Exposure for any part of a day counts. If you have had exposure to BD in the past, but have been transferred to another job, you may still be eligible to participate in the medical screening and surveillance program.

The WISHA rule specifies the past exposures that would qualify you for participation in the program. These past exposure are work histories that suggest the following:

(a) That you have been exposed at or above the PELs on 30 days a year for 10 or more years;

(b) That you have been exposed at or above the action level on 60 days a year for 10 or more years; or

(c) That you have been exposed above 10 ppm on 30 days in any past year.

Additionally, if you are exposed to BD in an emergency situation, you are eligible for a medical examination within 48 hours. The basic medical screening program includes a health questionnaire, physical examination, and blood test. These medical evaluations must be offered to you at a reasonable time and place, and without cost or loss of pay.

(7) Observation of Monitoring.

Your employer is required to perform measurements that are representative of your exposure to BD and you or your designated representative are entitled to observe the monitoring procedure. You are entitled to observe the steps taken in the measurement procedure, and to record the results obtained. When the monitoring procedure is taking place in an area where respirators or personal protective clothing and equipment are required to be worn, you or your representative must also be provided with, and must wear, the protective clothing and equipment.

(8) Access to Information.

(a) Each year, your employer is required to inform you of the information contained in this appendix. In addition, your employer must instruct you in the proper work practices for using BD, emergency procedures, and the correct use of protective equipment.

(b) Your employer is required to determine whether you are being exposed to BD. You or your representative has the right to observe employee measurements and to record the results obtained. Your employer is required to inform you of your exposure. If your employer determines that you are being overexposed, he or she is required to inform you of the actions which are being taken to reduce your exposure to within permissible exposure limits and of the schedule to implement these actions.

(c) Your employer is required to keep records of your exposures and medical examinations. These records must be kept by the employer for at least thirty (30) years.

(d) Your employer is required to release your exposure and medical records to you or your representative upon your request.

Appendix B. Substance Technical Guidelines for 1,3-Butadiene (Non-Mandatory)

(1) Physical and Chemical Data.

(a) Substance identification:

(i) Synonyms: 1,3-Butadiene (BD); butadiene; biethylene; divinyl; divinyl; butadiene-1,3; buta-1,3-diene; erythrene; NCI-C50620; CAS-106-99-0.

(ii) Formula: $(CH_2)=CH-CH=CH_2$.

(iii) Molecular weight: 54.1.

(b) Physical data:

(i) Boiling point (760 mm Hg): -4.7 deg. C (23.5 deg. F).

(ii) Specific gravity (water=1): 0.62 at 20 deg. C (68 deg. F).

(iii) Vapor density (air=1 at boiling point of BD): 1.87.

(iv) Vapor pressure at 20 deg. C (68 deg. F): 910 mm Hg.

(v) Solubility in water, g/100 g water at 20 deg. C (68 deg. F): 0.05.

(vi) Appearance and odor: Colorless, flammable gas with a mildly aromatic odor. Liquefied BD is a colorless liquid with a mildly aromatic odor.

(2) Fire, Explosion, and Reactivity Hazard Data.

(a) Fire:

(i) Flash point: -76 deg. C (-105 deg. F) for take out; liquefied BD; Not applicable to BD gas.

(ii) Stability: A stabilizer is added to the monomer to inhibit formation of polymer during storage. Forms explosive peroxides in air in absence of inhibitor.

(iii) Flammable limits in air, percent by volume: Lower: 2.0; Upper: 11.5.

(iv) Extinguishing media: Carbon dioxide for small fires, polymer or alcohol foams for large fires.

(v) Special fire fighting procedures: Fight fire from protected location or maximum possible distance. Stop flow of gas before extinguishing fire. Use water spray to keep fire-exposed cylinders cool.

(vi) Unusual fire and explosion hazards: BD vapors are heavier than air and may travel to a source of ignition and flash back. Closed containers may rupture violently when heated.

(vii) For purposes of compliance with the requirements of WAC 296-24-330, BD is classified as a flammable gas. For example, 7,500 ppm, approximately one-fourth of the lower flammable limit, would be considered to pose a potential fire and explosion hazard.

(viii) For purposes of compliance with WAC 296-24-585, BD is classified as a Class B fire hazard.

(ix) For purposes of compliance with WAC 296-24-956 and 296-800-280, locations classified as hazardous due to the presence of BD shall be Class I.

(b) Reactivity:

(i) Conditions contributing to instability: Heat. Peroxides are formed when inhibitor concentration is not maintained at proper level. At elevated temperatures, such as in fire conditions, polymerization may take place.

(ii) Incompatibilities: Contact with strong oxidizing agents may cause fires and explosions. The contacting of crude BD (not BD monomer) with copper and copper alloys may cause formations of explosive copper compounds.

(iii) Hazardous decomposition products: Toxic gases (such as carbon monoxide) may be released in a fire involving BD.

(iv) Special precautions: BD will attack some forms of plastics, rubber, and coatings. BD in storage should be checked for proper inhibitor content, for self-polymerization, and for formation of peroxides when in contact with air and iron. Piping carrying BD may become plugged by formation of rubbery polymer.

(c) Warning Properties:

(i) Odor Threshold: An odor threshold of 0.45 ppm has been reported in The American Industrial Hygiene Association (AIHA) Report, Odor Thresholds for Chemicals with Established Occupational Health Standards. (Ex. 32-28C).

(ii) Eye Irritation Level: Workers exposed to vapors of BD (concentration or purity unspecified) have complained of irritation of eyes, nasal passages, throat, and lungs. Dogs and

rabbits exposed experimentally to as much as 6700 ppm for 7 1/2 hours a day for 8 months have developed no histologically demonstrable abnormality of the eyes.

(iii) Evaluation of Warning Properties: Since the mean odor threshold is about half of the 1 ppm PEL, and more than 10-fold below the 5 ppm STEL, most wearers of air purifying respirators should still be able to detect breakthrough before a significant overexposure to BD occurs.

(3) Spill, Leak, and Disposal Procedures.

(a) Persons not wearing protective equipment and clothing should be restricted from areas of spills or leaks until cleanup has been completed. If BD is spilled or leaked, the following steps should be taken:

(i) Eliminate all ignition sources.

(ii) Ventilate areas of spill or leak.

(iii) If in liquid form, for small quantities, allow to evaporate in a safe manner.

(iv) Stop or control the leak if this can be done without risk. If source of leak is a cylinder and the leak cannot be stopped in place, remove the leaking cylinder to a safe place and repair the leak or allow the cylinder to empty.

(b) Disposal: This substance, when discarded or disposed of, is a hazardous waste according to Federal regulations (40 CFR part 261). It is listed by the EPA as hazardous waste number D001 due to its ignitability. The transportation, storage, treatment, and disposal of this waste material must be conducted in compliance with 40 CFR parts 262, 263, 264, 268 and 270. Disposal can occur only in properly permitted facilities. Check state and local regulations for any additional requirements because these may be more restrictive than federal laws and regulations.

(4) Monitoring and Measurement Procedures.

(a) Exposure above the Permissible Exposure Limit (8-hr TWA) or Short-Term Exposure Limit (STEL):

(i) 8-hr TWA exposure evaluation: Measurements taken for the purpose of determining employee exposure under this standard are best taken with consecutive samples covering the full shift. Air samples must be taken in the employee's breathing zone (air that would most nearly represent that inhaled by the employee).

(ii) STEL exposure evaluation: Measurements must represent 15 minute exposures associated with operations most likely to exceed the STEL in each job and on each shift.

(iii) Monitoring frequencies: Table 1 gives various exposure scenarios and their required monitoring frequencies, as required by the final standard for occupational exposure to butadiene.

Table 1. — Five Exposure Scenarios and Their Associated Monitoring Frequencies

Action Level	8-hr TWA	STEL	Required Monitoring Activity
—*	—	—	No 8-hr TWA or STEL monitoring required.
+*	—	—	No STEL monitoring required. Monitor 8-hr TWA annually.
+	—	—	No STEL monitoring required. Periodic monitoring 8-hr TWA, in accordance with (4)(c)(iii).**

PERMANENT

Action Level	8-hr TWA	STEL	Required Monitoring Activity
+	+	+	Periodic monitoring 8-hr TWA, in accordance with (4)(c)(iii)**. Periodic monitoring STEL in accordance with (4)(c)(iii).
+	—	+	Periodic monitoring STEL, in accordance with (4)(c)(iii). Monitor 8-hr TWA annually.

Footnote (*) Exposure Scenario, Limit Exceeded: += Yes, - = No.

Footnote (**) The employer may decrease the frequency of exposure monitoring to annually when at least 2 consecutive measurements taken at least 7 days apart show exposures to be below the 8-hr TWA, but at or above the action level.

(iv) Monitoring techniques: Appendix D describes the validated method of sampling and analysis which has been tested by OSHA for use with BD. The employer has the obligation of selecting a monitoring method which meets the accuracy and precision requirements of the standard under his or her unique field conditions. The standard requires that the method of monitoring must be accurate, to a 95 percent confidence level, to plus or minus 25 percent for concentrations of BD at or above 1 ppm, and to plus or minus 35 percent for concentrations below 1 ppm.

(5) Personal Protective Equipment.

(a) Employees should be provided with and required to use impervious clothing, gloves, face shields (eight-inch minimum), and other appropriate protective clothing necessary to prevent the skin from becoming frozen from contact with liquid BD.

(b) Any clothing which becomes wet with liquid BD should be removed immediately and not re-worn until the butadiene has evaporated.

(c) Employees should be provided with and required to use splash proof safety goggles where liquid BD may contact the eyes.

(6) Housekeeping and Hygiene Facilities.

For purposes of complying with WAC 296-24-120 (~~(Part B-1 Sanitation)~~), 296-800-220 and 296-800-230, the following items should be emphasized:

(a) The workplace should be kept clean, orderly, and in a sanitary condition.

(b) Adequate washing facilities with hot and cold water are to be provided and maintained in a sanitary condition.

(7) Additional Precautions.

(a) Store BD in tightly closed containers in a cool, well-ventilated area and take all necessary precautions to avoid any explosion hazard.

(b) Nonsparking tools must be used to open and close metal containers. These containers must be effectively grounded.

(c) Do not incinerate BD cartridges, tanks or other containers.

(d) Employers must advise employees of all areas and operations where exposure to BD might occur.

Appendix C. Medical Screening and Surveillance for 1,3-Butadiene (Nonmandatory)

(1) Basis for Medical Screening and Surveillance Requirements.

(a) Route of Entry Inhalation.

(b) Toxicology.

Inhalation of BD has been linked to an increased risk of cancer, damage to the reproductive organs, and fetotoxicity.

Butadiene can be converted via oxidation to epoxybutene and diepoxybutane, two genotoxic metabolites that may play a role in the expression of BD's toxic effects. BD has been tested for carcinogenicity in mice and rats. Both species responded to BD exposure by developing cancer at multiple primary organ sites. Early deaths in mice were caused by malignant lymphomas, primarily lymphocytic type, originating in the thymus.

Mice exposed to BD have developed ovarian or testicular atrophy. Sperm head morphology tests also revealed abnormal sperm in mice exposed to BD; lethal mutations were found in a dominant lethal test. In light of these results in animals, the possibility that BD may adversely affect the reproductive systems of male and female workers must be considered.

Additionally, anemia has been observed in animals exposed to butadiene. In some cases, this anemia appeared to be a primary response to exposure; in other cases, it may have been secondary to a neoplastic response.

(c) Epidemiology.

Epidemiologic evidence demonstrates that BD exposure poses an increased risk of leukemia. Mild alterations of hematologic parameters have also been observed in synthetic rubber workers exposed to BD.

(2) Potential Adverse Health Effects.

(a) Acute.

Skin contact with liquid BD causes characteristic burns or frostbite. BD in gaseous form can irritate the eyes, nasal passages, throat, and lungs. Blurred vision, coughing, and drowsiness may also occur. Effects are mild at 2,000 ppm and pronounced at 8,000 ppm for exposures occurring over the full workshift.

At very high concentrations in air, BD is an anesthetic, causing narcosis, respiratory paralysis, unconsciousness, and death. Such concentrations are unlikely, however, except in an extreme emergency because BD poses an explosion hazard at these levels.

(b) Chronic.

The principal adverse health effects of concern are BD-induced lymphoma, leukemia and potential reproductive toxicity. Anemia and other changes in the peripheral blood cells may be indicators of excessive exposure to BD.

(c) Reproductive.

Workers may be concerned about the possibility that their BD exposure may be affecting their ability to procreate a healthy child. For workers with high exposures to BD, especially those who have experienced difficulties in conceiving, miscarriages, or stillbirths, appropriate medical and laboratory evaluation of fertility may be necessary to determine if

PERMANENT

BD is having any adverse effect on the reproductive system or on the health of the fetus.

(3) Medical Screening Components At-A-Glance.

(a) Health Questionnaire.

The most important goal of the health questionnaire is to elicit information from the worker regarding potential signs or symptoms generally related to leukemia or other blood abnormalities. Therefore, physicians or other licensed health care professionals should be aware of the presenting symptoms and signs of lymphohematopoietic disorders and cancers, as well as the procedures necessary to confirm or exclude such diagnoses. Additionally, the health questionnaire will assist with the identification of workers at greatest risk of developing leukemia or adverse reproductive effects from their exposures to BD.

Workers with a history of reproductive difficulties or a personal or family history of immune deficiency syndromes, blood dyscrasias, lymphoma, or leukemia, and those who are or have been exposed to medicinal drugs or chemicals known to affect the hematopoietic or lymphatic systems may be at higher risk from their exposure to BD. After the initial administration, the health questionnaire must be updated annually.

(b) Complete Blood Count (CBC).

The medical screening and surveillance program requires an annual CBC, with differential and platelet count, to be provided for each employee with BD exposure. This test is to be performed on a blood sample obtained by phlebotomy of the venous system or, if technically feasible, from a fingerstick sample of capillary blood. The sample is to be analyzed by an accredited laboratory.

Abnormalities in a CBC may be due to a number of different etiologies. The concern for workers exposed to BD includes, but is not limited to, timely identification of lymphohematopoietic cancers, such as leukemia and non-Hodgkin's lymphoma. Abnormalities of portions of the CBC are identified by comparing an individual's results to those of an established range of normal values for males and females. A substantial change in any individual employee's CBC may also be viewed as "abnormal" for that individual even if all measurements fall within the population-based range of normal values. It is suggested that a flowsheet for laboratory values be included in each employee's medical record so that comparisons and trends in annual CBCs can be easily made.

A determination of the clinical significance of an abnormal CBC shall be the responsibility of the examining physician, other licensed health care professional, or medical specialist to whom the employee is referred. Ideally, an abnormal CBC should be compared to previous CBC measurements for the same employee, when available. Clinical common sense may dictate that a CBC value that is very slightly outside the normal range does not warrant medical concern. A CBC abnormality may also be the result of a temporary physical stressor, such as a transient viral illness, blood donation, or menorrhagia, or laboratory error. In these cases, the CBC should be repeated in a timely fashion, i.e., within 6 weeks, to verify that return to the normal range has occurred. A clinically significant abnormal CBC should result in removal of the employee from further exposure to BD. Trans-

fer of the employee to other work duties in a BD-free environment would be the preferred recommendation.

(c) Physical Examination.

The medical screening and surveillance program requires an initial physical examination for workers exposed to BD; this examination is repeated once every three years. The initial physical examination should assess each worker's baseline general health and rule out clinical signs of medical conditions that may be caused by or aggravated by occupational BD exposure. The physical examination should be directed at identification of signs of lymphohematopoietic disorders, including lymph node enlargement, splenomegaly, and hepatomegaly.

Repeated physical examinations should update objective clinical findings that could be indicative of interim development of a lymphohematopoietic disorder, such as lymphoma, leukemia, or other blood abnormality. Physical examinations may also be provided on an as needed basis in order to follow up on a positive answer on the health questionnaire, or in response to an abnormal CBC. Physical examination of workers who will no longer be working in jobs with BD exposure are intended to rule out lymphohematopoietic disorders.

The need for physical examinations for workers concerned about adverse reproductive effects from their exposure to BD should be identified by the physician or other licensed health care professional and provided accordingly. For these workers, such consultations and examinations may relate to developmental toxicity and reproductive capacity.

Physical examination of workers acutely exposed to significant levels of BD should be especially directed at the respiratory system, eyes, sinuses, skin, nervous system, and any region associated with particular complaints. If the worker has received a severe acute exposure, hospitalization may be required to assure proper medical management. Since this type of exposure may place workers at greater risk of blood abnormalities, a CBC must be obtained within 48 hours and repeated at one, two, and three months.

Appendix D: Sampling and Analytical Method for 1,3-Butadiene (Non-Mandatory)

OSHA Method No.: 56.

Matrix: Air.

Target concentration: 1 ppm (2.21 mg/m³).

Procedure: Air samples are collected by drawing known volumes of air through sampling tubes containing charcoal adsorbent which has been coated with 4-tert-butylcatechol. The samples are desorbed with carbon disulfide and then analyzed by gas chromatography using a flame ionization detector.

Recommended sampling rate and air volume: 0.05 L/min and 3 L.

Detection limit of the overall procedure: 90 ppb (200 ug/m³) (based on 3 L air volume).

Reliable quantitation limit: 155 ppb (343 ug/m³) (based on 3 L air volume).

Standard error of estimate at the target concentration: 6.5%.

Special requirements: The sampling tubes must be coated with 4-tert-butylcatechol. Collected samples should be stored in a freezer.

Status of method: A sampling and analytical method has been subjected to the established evaluation procedures of the Organic Methods Evaluation Branch, OSHA Analytical Laboratory, Salt Lake City, Utah 84165.

(1) Background.

This work was undertaken to develop a sampling and analytical procedure for BD at 1 ppm. The current method recommended by OSHA for collecting BD uses activated coconut shell charcoal as the sampling medium (Ref. 5.2). This method was found to be inadequate for use at low BD levels because of sample instability.

The stability of samples has been significantly improved through the use of a specially cleaned charcoal which is coated with 4-tert-butylcatechol (TBC). TBC is a polymerization inhibitor for BD (Ref. 5.3).

(a) Toxic effects.

Symptoms of human exposure to BD include irritation of the eyes, nose and throat. It can also cause coughing, drowsiness and fatigue. Dermatitis and frostbite can result from skin exposure to liquid BD. (Ref. 5.1)

NIOSH recommends that BD be handled in the workplace as a potential occupational carcinogen. This recommendation is based on two inhalation studies that resulted in cancers at multiple sites in rats and in mice. BD has also demonstrated mutagenic activity in the presence of a liver microsomal activating system. It has also been reported to have adverse reproductive effects. (Ref. 5.1)

(b) Potential workplace exposure.

About 90% of the annual production of BD is used to manufacture styrene-butadiene rubber and Polybutadiene rubber. Other uses include: Polychloroprene rubber, acrylonitrile butadiene-styrene resins, nylon intermediates, styrene-butadiene latexes, butadiene polymers, thermoplastic elastomers, nitrile resins, methyl methacrylate-butadiene styrene resins and chemical intermediates. (Ref. 5.1)

(c) Physical properties (Ref. 5.1).

CAS No.: 106-99-0

Molecular weight: 54.1

Appearance: Colorless gas

Boiling point: -4.41 deg. C (760 mm Hg)

Freezing point: -108.9 deg. C

Vapor pressure: 2 atm (a) 15.3 deg. C; 5 atm (a) 47 deg.

C

Explosive limits: 2 to 11.5% (by volume in air)

Odor threshold: 0.45 ppm

Structural formula: H(2)C:CHCH:CH(2)

Synonyms: BD; biethylene; bivinyl; butadiene; divinyl; buta-1,3-diene; alpha-gamma-butadiene; erythrene; NCI-C50602; pyrrolylene; vinylethylene.

(d) Limit defining parameters.

The analyte air concentrations listed throughout this method are based on an air volume of 3 L and a desorption volume of 1 mL. Air concentrations listed in ppm are referenced to 25 deg. C and 760 mm Hg.

(e) Detection limit of the analytical procedure.

The detection limit of the analytical procedure was 304 pg per injection. This was the amount of BD which gave a response relative to the interferences present in a standard.

(f) Detection limit of the overall procedure.

The detection limit of the overall procedure was 0.60 ug per sample (90 ppb or 200 ug/m(3)). This amount was determined graphically. It was the amount of analyte which, when spiked on the sampling device, would allow recovery approximately equal to the detection limit of the analytical procedure.

(g) Reliable quantitation limit.

The reliable quantitation limit was 1.03 ug per sample (155 ppb or 343 ug/m(3)). This was the smallest amount of analyte which could be quantitated within the limits of a recovery of at least 75% and a precision (+/- 1.96 SD) of +/- 25% or better.

(h) Sensitivity.(1)

Footnote (1) The reliable quantitation limit and detection limits reported in the method are based upon optimization of the instrument for the smallest possible amount of analyte. When the target concentration of an analyte is exceptionally higher than these limits, they may not be attainable at the routine operation parameters.

The sensitivity of the analytical procedure over a concentration range representing 0.6 to 2 times the target concentration, based on the recommended air volume, was 387 area units per ug/mL. This value was determined from the slope of the calibration curve. The sensitivity may vary with the particular instrument used in the analysis.

(i) Recovery.

The recovery of BD from samples used in storage tests remained above 77% when the samples were stored at ambient temperature and above 94% when the samples were stored at refrigerated temperature. These values were determined from regression lines which were calculated from the storage data. The recovery of the analyte from the collection device must be at least 75% following storage.

(j) Precision (analytical method only).

The pooled coefficient of variation obtained from replicate determinations of analytical standards over the range of 0.6 to 2 times the target concentration was 0.011.

(k) Precision (overall procedure).

The precision at the 95% confidence level for the refrigerated temperature storage test was +/- 12.7%. This value includes an additional +/- 5% for sampling error. The overall procedure must provide results at the target concentrations that are +/- 25% at the 95% confidence level.

(l) Reproducibility.

Samples collected from a controlled test atmosphere and a draft copy of this procedure were given to a chemist unassociated with this evaluation. The average recovery was 97.2% and the standard deviation was 6.2%.

(2) Sampling procedure.

(a) Apparatus. Samples are collected by use of a personal sampling pump that can be calibrated to within +/- 5% of the recommended 0.05 L/min sampling rate with the sampling tube in line.

(b) Samples are collected with laboratory prepared sampling tubes. The sampling tube is constructed of silane-treated glass and is about 5-cm long. The ID is 4 mm and the

OD is 6 mm. One end of the tube is tapered so that a glass wool end plug will hold the contents of the tube in place during sampling. The opening in the tapered end of the sampling tube is at least one-half the ID of the tube (2 mm). The other end of the sampling tube is open to its full 4-mm ID to facilitate packing of the tube. Both ends of the tube are fire-polished for safety. The tube is packed with 2 sections of pre-treated charcoal which has been coated with TBC. The tube is packed with a 50-mg backup section, located nearest the tapered end, and with a 100-mg sampling section of charcoal. The two sections of coated adsorbent are separated and retained with small plugs of silanized glass wool. Following packing, the sampling tubes are sealed with two 7/32 inch OD plastic end caps. Instructions for the pretreatment and coating of the charcoal are presented in Section 4.1 of this method.

(c) Reagents.

None required.

(d) Technique.

(i) Properly label the sampling tube before sampling and then remove the plastic end caps.

(ii) Attach the sampling tube to the pump using a section of flexible plastic tubing such that the larger front section of the sampling tube is exposed directly to the atmosphere. Do not place any tubing ahead of the sampling tube. The sampling tube should be attached in the worker's breathing zone in a vertical manner such that it does not impede work performance.

(iii) After sampling for the appropriate time, remove the sampling tube from the pump and then seal the tube with plastic end caps. Wrap the tube lengthwise.

(iv) Include at least one blank for each sampling set. The blank should be handled in the same manner as the samples with the exception that air is not drawn through it.

(v) List any potential interferences on the sample data sheet.

(vi) The samples require no special shipping precautions under normal conditions. The samples should be refrigerated if they are to be exposed to higher than normal ambient temperatures. If the samples are to be stored before they are shipped to the laboratory, they should be kept in a freezer. The samples should be placed in a freezer upon receipt at the laboratory.

(e) Breakthrough.

(Breakthrough was defined as the relative amount of analyte found on the backup section of the tube in relation to the total amount of analyte collected on the sampling tube. Five-percent breakthrough occurred after sampling a test atmosphere containing 2.0 ppm BD for 90 min. at 0.05 L/min. At the end of this time 4.5 L of air had been sampled and 20.1 ug of the analyte was collected. The relative humidity of the sampled air was 80% at 23 deg. C.)

Breakthrough studies have shown that the recommended sampling procedure can be used at air concentrations higher than the target concentration. The sampling time, however, should be reduced to 45 min. if both the expected BD level and the relative humidity of the sampled air are high.

(f) Desorption efficiency.

The average desorption efficiency for BD from TBC coated charcoal over the range from 0.6 to 2 times the target

concentration was 96.4%. The efficiency was essentially constant over the range studied.

(g) Recommended air volume and sampling rate.

(h) The recommended air volume is 3 L.

(i) The recommended sampling rate is 0.05 L/min. for 1 hour.

(j) Interferences.

There are no known interferences to the sampling method.

(k) Safety precautions.

(i) Attach the sampling equipment to the worker in such a manner that it will not interfere with work performance or safety.

(ii) Follow all safety practices that apply to the work area being sampled.

(3) Analytical procedure.

(a) Apparatus.

(i) A gas chromatograph (GC), equipped with a flame ionization detector (FID).(2)

Footnote (2) A Hewlett-Packard Model 5840A GC was used for this evaluation. Injections were performed using a Hewlett-Packard Model 7671A automatic sampler.

(ii) A GC column capable of resolving the analytes from any interference.(3)

Footnote (3) A 20-ft x 1/8-inch OD stainless steel GC column containing 20% FFAP on 80/100 mesh Chromabsorb W-AW-DMCS was used for this evaluation.

(iii) Vials, glass 2-mL with Teflon-lined caps.

(iv) Disposable Pasteur-type pipets, volumetric flasks, pipets and syringes for preparing samples and standards, making dilutions and performing injections.

(b) Reagents.

(i) Carbon disulfide.(4)

Footnote (4) Fisher Scientific Company A.C.S. Reagent Grade solvent was used in this evaluation.

The benzene contaminant that was present in the carbon disulfide was used as an internal standard (ISTD) in this evaluation.

(ii) Nitrogen, hydrogen and air, GC grade.

(iii) BD of known high purity.(5)

Footnote (5) Matheson Gas Products, CP Grade 1,3-butadiene was used in this study.

(c) Standard preparation.

(i) Prepare standards by diluting known volumes of BD gas with carbon disulfide. This can be accomplished by injecting the appropriate volume of BD into the headspace above the 1-mL of carbon disulfide contained in sealed 2-mL vial. Shake the vial after the needle is removed from the septum.(6)

Footnote (6) A standard containing 7.71 ug/mL (at ambient temperature and pressure) was prepared by diluting 4 uL of the gas with 1-mL of carbon disulfide.

(ii) The mass of BD gas used to prepare standards can be determined by use of the following equations:

$$MV = (760/BP)(273+t)/(273)(22.41)$$

Where:

MV = ambient molar volume

BP = ambient barometric pressure

T = ambient temperature

ug/uL = 54.09/MV

ug/standard = (ug/uL)(uL) BD used to prepare the standard

(d) Sample preparation.

(i) Transfer the 100-mg section of the sampling tube to a 2-mL vial. Place the 50-mg section in a separate vial. If the glass wool plugs contain a significant amount of charcoal, place them with the appropriate sampling tube section.

(ii) Add 1-mL of carbon disulfide to each vial.

(iii) Seal the vials with Teflon-lined caps and then allow them to desorb for one hour. Shake the vials by hand vigorously several times during the desorption period.

(iv) If it is not possible to analyze the samples within 4 hours, separate the carbon disulfide from the charcoal, using a disposable Pasteur-type pipet, following the one hour. This separation will improve the stability of desorbed samples.

(v) Save the used sampling tubes to be cleaned and repacked with fresh adsorbent.

(e) Analysis.

(i) GC Conditions.

Column temperature: 95 deg. C

Injector temperature: 180 deg. C

Detector temperature: 275 deg. C

Carrier gas flow rate: 30 mL/min.

Injection volume: 0.80 uL

GC column: 20-ft x 1/8-in OD stainless steel GC column containing 20%

FFAP on 80/100 Chromabsorb W-AW-DMCS.

(ii) Chromatogram. See Section 4.2.

(iii) Use a suitable method, such as electronic or peak heights, to measure detector response.

(iv) Prepare a calibration curve using several standard solutions of different concentrations. Prepare the calibration curve daily. Program the integrator to report the results in ug/mL.

(v) Bracket sample concentrations with standards.

(f) Interferences (analytical).

(i) Any compound with the same general retention time as the analyte and which also gives a detector response is a potential interference. Possible interferences should be reported by the industrial hygienist to the laboratory with submitted samples.

(ii) GC parameters (temperature, column, etc.) may be changed to circumvent interferences.

(iii) A useful means of structure designation is GC/MS. It is recommended that this procedure be used to confirm samples whenever possible.

(g) Calculations.

(i) Results are obtained by use of calibration curves. Calibration curves are prepared by plotting detector response against concentration for each standard. The best line through the data points is determined by curve fitting.

(ii) The concentration, in ug/mL, for a particular sample is determined by comparing its detector response to the calibration curve. If any analyte is found on the backup section, this amount is added to the amount found on the front section. Blank corrections should be performed before adding the results together.

(iii) The BD air concentration can be expressed using the following equation:

$$\text{mg/m(3)} = (\text{A})(\text{B}) / (\text{C})(\text{D})$$

Where:

A = ug/mL from Section 3.7.2

B = volume

C = L of air sampled

D = efficiency

(iv) The following equation can be used to convert results in mg/m(3) to ppm:

$$\text{ppm} = (\text{mg/m(3)})(24.46)/54.09$$

Where:

mg/m(3) = result from Section 3.7.3.

24.46 = molar volume of an ideal gas at 760 mm Hg and 25 deg. C.

(h) Safety precautions (analytical).

(i) Avoid skin contact and inhalation of all chemicals.

(ii) Restrict the use of all chemicals to a fume hood whenever possible.

(iii) Wear safety glasses and a lab coat in all laboratory areas.

(4) Additional Information.

(a) A procedure to prepare specially cleaned charcoal coated with TBC.

(i) Apparatus.

(A) Magnetic stirrer and stir bar.

(B) Tube furnace capable of maintaining a temperature of 700 deg. C and equipped with a quartz tube that can hold 30 g of charcoal.(8)

Footnote (8) A Lindberg Type 55035 Tube furnace was used in this evaluation.

(C) A means to purge nitrogen gas through the charcoal inside the quartz tube.

(D) Water bath capable of maintaining a temperature of 60 deg. C.

(E) Miscellaneous laboratory equipment: One-liter vacuum flask, 1-L Erlenmeyer flask, 350-M1 Buchner funnel with a coarse fitted disc, 4-oz brown bottle, rubber stopper, Teflon tape etc.

(ii) Reagents.

(A) Phosphoric acid, 10% by weight, in water.(9)

Footnote (9) Baker Analyzed Reagent grade was diluted with water for use in this evaluation.

(B) 4-tert-Butylcatechol (TBC).(10)

Footnote (10) The Aldrich Chemical Company 99% grade was used in this evaluation.

(C) Specially cleaned coconut shell charcoal, 20/40 mesh.(11)

Footnote (11) Specially cleaned charcoal was obtained from Supelco, Inc. for use in this evaluation. The cleaning process used by Supelco is proprietary.

(D) Nitrogen gas, GC grade.

(iii) Procedure.

Weigh 30g of charcoal into a 500-mL Erlenmeyer flask. Add about 250 mL of 10% phosphoric acid to the flask and then swirl the mixture. Stir the mixture for 1 hour using a magnetic stirrer. Filter the mixture using a fitted Buchner funnel. Wash the charcoal several times with 250-mL portions of deionized water to remove all traces of the acid. Transfer the washed charcoal to the tube furnace quartz tube. Place the quartz tube in the furnace and then connect the nitrogen gas purge to the tube. Fire the charcoal to 700 deg. C. Maintain that temperature for at least 1 hour. After the

- gloves _____
- coveralls _____
- respirator _____
- dust mask _____
- safety glasses, goggles _____

Please circle your answer.

5. Does your protective clothing or equipment fit you properly? yes no
6. Have you ever made changes in your protective clothing or equipment to make it fit better? yes no
7. Have you been exposed to BD when you were not wearing protective clothing or equipment? yes no
8. Where do you eat, drink and/or smoke when you are at work? (Please check all that apply.)

- Cafeteria/restaurant/snack bar _____
- Break room/employee lounge _____
- Smoking lounge _____
- At my work station _____

Please circle your answer.

9. Have you been exposed to radiation (like x-rays or nuclear material) at the job you have now or at past jobs? yes no
10. Do you have any hobbies that expose you to dusts or chemicals (including paints, glues, etc.)? yes no
11. Do you have any second or side jobs? yes no
If yes, what are your duties there?

12. Were you in the military? yes no
If yes, what did you do in the military? _____

Family Health History

1. In the FAMILY MEMBER column, across from the disease name, write which family member, if any, had the disease.

DISEASE	FAMILY MEMBER
Cancer	
Lymphoma	
Sickle Cell Disease or Trait	
Immune Disease	
Leukemia	
Anemia	

2. Please fill in the following information about family health

Relative
Alive?

- Age at Death? _____

1,3-Butadiene (BD) Health Update Questionnaire

DIRECTIONS:

You have been asked to answer the questions on this form because you work with BD (butadiene). These questions are about your work, medical history, and health concerns. Please do your best to answer all of the questions. If you need help, please tell the doctor or health care professional who reviews this form.

This form is a confidential medical record. Only information directly related to your health and safety on the job may be given to your employer. Personal health information will not be given to anyone without your consent.

Date: _____

Name: _____ SSN _/ _/ _
Last First MI

Job Title: _____

Company's Name: _____

Supervisor's Name: _____

Supervisor's Phone No.: () _____

1. Please describe any NEW duties that you have at your job. _____

2. Please describe any additional job duties you have:

Please circle your answer.

3. Are you exposed to any other chemicals in your work since the last time you were evaluated for exposure to BD? yes no

If yes, please list what they are: _____

4. Does your personal protective equipment and clothing fit you properly? yes no

5. Have you made changes in this equipment or clothing to make it fit better? yes no

6. Have you been exposed to BD when you were not wearing protective clothing or equipment? yes no

7. Are you exposed to any NEW chemicals at home or while working on hobbies? yes no

If yes, please list what they are: _____

8. Since your last BD health evaluation, have you started working any new second or side jobs? yes no

PERMANENT

If yes, what are your duties there? _____

Personal Health History

- 1. What is your current weight? ____ pounds
- 2. Have you been diagnosed with any new medical conditions or illness since your last evaluation?
yes no

If yes, please tell what they are: _____

- 3. Since your last evaluation, have you been in the hospital for any illnesses, injuries, or surgery? yes no

If yes, please describe: _____

- 4. Do you have any of the following? Please place a check for all that apply to you.

- unexplained fever _____
- anemia ("low blood") _____
- HIV/AIDS _____
- weakness _____
- sickle cell _____

Signature

AMENDATORY SECTION (Amending WSR 99-10-071, filed 5/4/99, effective 9/1/99)

WAC 296-62-07470 Methylene chloride. This occupational health standard establishes requirements for employers to control occupational exposure to methylene chloride (MC). Employees exposed to MC are at increased risk of developing cancer, adverse effects on the heart, central nervous system and liver, and skin or eye irritation. Exposure may occur through inhalation, by absorption through the skin, or through contact with the skin. MC is a solvent which

PERMANENT

is used in many different types of work activities, such as paint stripping, polyurethane foam manufacturing, and cleaning and degreasing. Under the requirements of subsection (4) of this section, each covered employer must make an initial determination of each employee's exposure to MC. If the employer determines that employees are exposed below the action level, the only other provisions of this section that apply are that a record must be made of the determination, the employees must receive information and training under subsection (12) of this section and, where appropriate, employees must be protected from contact with liquid MC under subsection (8) of this section.

The provisions of the MC standard are as follows:

(1) **Scope and application.** This section applies to all occupational exposures to methylene chloride (MC), Chemical Abstracts Service Registry Number 75-09-2, in general industry, construction and shipyard employment.

(2) **Definitions.** For the purposes of this section, the following definitions shall apply:

"Action level" means a concentration of airborne MC of 12.5 parts per million (ppm) calculated as an eight (8)-hour time-weighted average (TWA).

"Authorized person" means any person specifically authorized by the employer and required by work duties to be present in regulated areas, or any person entering such an area as a designated representative of employees for the purpose of exercising the right to observe monitoring and measuring procedures under subsection (4) of this section, or any other person authorized by the WISH Act or regulations issued under the act.

"Director" means the director of the department of labor and industries, or designee.

"Emergency" means any occurrence, such as, but not limited to, equipment failure, rupture of containers, or failure of control equipment, which results, or is likely to result in an uncontrolled release of MC. If an incidental release of MC can be controlled by employees such as maintenance personnel at the time of release and in accordance with the leak/spill provisions required by subsection (6) of this section, it is not considered an emergency as defined by this standard.

"Employee exposure" means exposure to airborne MC which occurs or would occur if the employee were not using respiratory protection.

"Methylene chloride (MC)" means an organic compound with chemical formula, CH₂Cl₂. Its Chemical Abstracts Service Registry Number is 75-09-2. Its molecular weight is 84.9 g/mole.

"Physician or other licensed health care professional" is an individual whose legally permitted scope of practice (i.e., license, registration, or certification) allows him or her to independently provide or be delegated the responsibility to provide some or all of the health care services required by subsection (10) of this section.

"Regulated area" means an area, demarcated by the employer, where an employee's exposure to airborne concentrations of MC exceeds or can reasonably be expected to exceed either the 8-hour TWA PEL or the STEL.

"Symptom" means central nervous system effects such as headaches, disorientation, dizziness, fatigue, and decreased attention span; skin effects such as chapping,

erythema, cracked skin, or skin burns; and cardiac effects such as chest pain or shortness of breath.

"This section" means this methylene chloride standard.

(3) **Permissible exposure limits (PELs).**

(a) **Eight-hour time-weighted average (TWA) PEL.** The employer shall ensure that no employee is exposed to an airborne concentration of MC in excess of twenty-five parts of MC per million parts of air (25 ppm) as an 8-hour TWA.

(b) **Short-term exposure limit (STEL).** The employer shall ensure that no employee is exposed to an airborne concentration of MC in excess of one hundred and twenty-five parts of MC per million parts of air (125 ppm) as determined over a sampling period of fifteen minutes.

(4) **Exposure monitoring.**

(a) **Characterization of employee exposure.**

(i) Where MC is present in the workplace, the employer shall determine each employee's exposure by either:

(A) Taking a personal breathing zone air sample of each employee's exposure; or

(B) Taking personal breathing zone air samples that are representative of each employee's exposure.

(ii) **Representative samples.** The employer may consider personal breathing zone air samples to be representative of employee exposures when they are taken as follows:

(A) **8-hour TWA PEL.** The employer has taken one or more personal breathing zone air samples for at least one employee in each job classification in a work area during every work shift, and the employee sampled is expected to have the highest MC exposure.

(B) **Short-term exposure limits.** The employer has taken one or more personal breathing zone air samples which indicate the highest likely 15-minute exposures during such operations for at least one employee in each job classification in the work area during every work shift, and the employee sampled is expected to have the highest MC exposure.

(C) **Exception.** Personal breathing zone air samples taken during one work shift may be used to represent employee exposures on other work shifts where the employer can document that the tasks performed and conditions in the workplace are similar across shifts.

(iii) **Accuracy of monitoring.** The employer shall ensure that the methods used to perform exposure monitoring produce results that are accurate to a confidence level of 95 percent, and are:

(A) Within plus or minus 25 percent for airborne concentrations of MC above the 8-hour TWA PEL or the STEL; or

(B) Within plus or minus 35 percent for airborne concentrations of MC at or above the action level but at or below the 8-hour TWA PEL.

(b) **Initial determination.** Each employer whose employees are exposed to MC shall perform initial exposure monitoring to determine each affected employee's exposure, except under the following conditions:

(i) Where objective data demonstrate that MC cannot be released in the workplace in airborne concentrations at or above the action level or above the STEL. The objective data shall represent the highest MC exposures likely to occur under reasonably foreseeable conditions of processing, use, or handling. The employer shall document the objective data exemption as specified in subsection (13) of this section;

(ii) Where the employer has performed exposure monitoring within 12 months prior to December 1, and that exposure monitoring meets all other requirements of this section, and was conducted under conditions substantially equivalent to existing conditions; or

(iii) Where employees are exposed to MC on fewer than 30 days per year (e.g., on a construction site), and the employer has measurements by direct reading instruments which give immediate results (such as a detector tube) and which provide sufficient information regarding employee exposures to determine what control measures are necessary to reduce exposures to acceptable levels.

(c) Periodic monitoring. Where the initial determination shows employee exposures at or above the action level or above the STEL, the employer shall establish an exposure monitoring program for periodic monitoring of employee exposure to MC in accordance with Table 1:

Table 1

Six Initial Determination Exposure Scenarios and Their Associated Monitoring Frequencies

Exposure scenario	Required monitoring activity
Below the action level and at or below the STEL.	No 8-hour TWA or STEL monitoring required.
Below the action level and above the STEL.	No 8-hour TWA monitoring required; monitor STEL exposures every three months.
At or above the action level, at or below the TWA, and at or below the STEL.	Monitor 8-hour TWA exposures every six months.
At or above the action level, at or below the TWA, and above the STEL.	Monitor 8-hour TWA exposures every six months and monitor STEL exposures every three months.
Above the TWA and at or below the STEL.	Monitor 8-hour TWA exposures every three months. In addition, without regard to the last sentence of the note to subsection (3) of this section, the following employers must monitor STEL exposures every three months until either the date by which they must achieve the 8-hour TWAs PEL under subsection (3) of this section or the date by which they in fact achieve the 8-hour TWA PEL, whichever comes first: <ul style="list-style-type: none"> • Employers engaged in polyurethane foam manufacturing; • Foam fabrication; • Furniture refinishing;

Exposure scenario	Required monitoring activity
Above the TWA and above the STEL.	<ul style="list-style-type: none"> • General aviation aircraft stripping; • Product formulation; • Use of MC-based adhesives for boat building and repair; • Recreational vehicle manufacture, van conversion, or upholstery; and use of MC in construction work for restoration and preservation of buildings, painting and paint removal, cabinet making, or floor refinishing and resurfacing. <p>Monitor both 8-hour TWA exposures and STEL exposures every three months.</p>

(Note to subsection (3)(c) of this section: The employer may decrease the frequency of exposure monitoring to every six months when at least 2 consecutive measurements taken at least 7 days apart show exposures to be at or below the 8-hour TWA PEL. The employer may discontinue the periodic 8-hour TWA monitoring for employees where at least two consecutive measurements taken at least 7 days apart are below the action level. The employer may discontinue the periodic STEL monitoring for employees where at least two consecutive measurements taken at least 7 days apart are at or below the STEL.)

(d) Additional monitoring.

(i) The employer shall perform exposure monitoring when a change in workplace conditions indicates that employee exposure may have increased. Examples of situations that may require additional monitoring include changes in production, process, control equipment, or work practices, or a leak, rupture, or other breakdown.

(ii) Where exposure monitoring is performed due to a spill, leak, rupture or equipment breakdown, the employer shall clean up the MC and perform the appropriate repairs before monitoring.

(e) Employee notification of monitoring results.

(i) The employer shall, within 15 working days after the receipt of the results of any monitoring performed under this section, notify each affected employee of these results in writing, either individually or by posting of results in an appropriate location that is accessible to affected employees.

(ii) Whenever monitoring results indicate that employee exposure is above the 8-hour TWA PEL or the STEL, the employer shall describe in the written notification the corrective action being taken to reduce employee exposure to or below the 8-hour TWA PEL or STEL and the schedule for completion of this action.

(f) Observation of monitoring.

(i) Employee observation. The employer shall provide affected employees or their designated representatives an

PERMANENT

opportunity to observe any monitoring of employee exposure to MC conducted in accordance with this section.

(ii) Observation procedures. When observation of the monitoring of employee exposure to MC requires entry into an area where the use of protective clothing or equipment is required, the employer shall provide, at no cost to the observer(s), and the observer(s) shall be required to use such clothing and equipment and shall comply with all other applicable safety and health procedures.

(5) Regulated areas.

(a) The employer shall establish a regulated area whenever an employee's exposure to airborne concentrations of MC exceeds or can reasonably be expected to exceed either the 8-hour TWA PEL or the STEL.

(b) The employer shall limit access to regulated areas to authorized persons.

(c) The employer shall supply a respirator, selected in accordance with subsection (7)(c) of this section, to each person who enters a regulated area and shall require each affected employee to use that respirator whenever MC exposures are likely to exceed the 8-hour TWA PEL or STEL.

(Note to subsection (5)(c) of this section: An employer who has implemented all feasible engineering, work practice and administrative controls (as required in subsection (6) of this section), and who has established a regulated area (as required by subsection (5)(a) of this section) where MC exposure can be reliably predicted to exceed the 8-hour TWA PEL or the STEL only on certain days (for example, because of work or process schedule) would need to have affected employees use respirators in that regulated area only on those days.)

(d) The employer shall ensure that, within a regulated area, employees do not engage in nonwork activities which may increase dermal or oral MC exposure.

(e) The employer shall ensure that while employees are wearing respirators, they do not engage in activities (such as taking medication or chewing gum or tobacco) which interfere with respirator seal or performance.

(f) The employer shall demarcate regulated areas from the rest of the workplace in any manner that adequately establishes and alerts employees to the boundaries of the area and minimizes the number of authorized employees exposed to MC within the regulated area.

(g) An employer at a multi-employer worksite who establishes a regulated area shall communicate the access restrictions and locations of these areas to all other employers with work operations at that worksite.

(6) Methods of compliance.

(a) Engineering and work practice controls. The employer shall institute and maintain the effectiveness of engineering controls and work practices to reduce employee exposure to or below the PELs except to the extent that the employer can demonstrate that such controls are not feasible.

(b) Wherever the feasible engineering controls and work practices which can be instituted are not sufficient to reduce employee exposure to or below the 8-TWA PEL or STEL, the employer shall use them to reduce employee exposure to the lowest levels achievable by these controls and shall supplement them by the use of respiratory protection that complies with the requirements of subsection (7) of this section.

(c) Prohibition of rotation. The employer shall not implement a schedule of employee rotation as a means of compliance with the PELs.

(d) Leak and spill detection.

(i) The employer shall implement procedures to detect leaks of MC in the workplace. In work areas where spills may occur, the employer shall make provisions to contain any spills and to safely dispose of any MC-contaminated waste materials.

(ii) The employer shall ensure that all incidental leaks are repaired and that incidental spills are cleaned promptly by employees who use the appropriate personal protective equipment and are trained in proper methods of cleanup.

(Note to subsection (6)(d)(ii) of this section: See Appendix A of this section for examples of procedures that satisfy this requirement. Employers covered by this standard may also be subject to the hazardous waste and emergency response provisions contained in WAC 296-62-3112.)

(7) Respiratory protection.

(a) General requirements. For employees who use respirators required by this section, the employer must provide respirators that comply with the requirements of this subsection. Respirators must be used during:

(i) Periods when an employee's exposure to MC exceeds or can reasonably be expected to exceed the 8-hour TWA PEL or the STEL (for example, when an employee is using MC in a regulated area);

(ii) Periods necessary to install or implement feasible engineering and work-practice controls;

(iii) In a few work operations, such as some maintenance operations and repair activities, for which the employer demonstrates that engineering and work practice controls are infeasible;

(iv) Work operations for which feasible engineering and work practice controls are not sufficient to reduce exposures to or below the PELs;

(v) Emergencies.

(b) Respirator program.

(i) The employer must implement a respiratory protection program as required by chapter 296-62 WAC, Part E (except WAC 296-62-07130(1) and 296-62-07131 (4)(b)(i) and (ii)).

(ii) Employers who provide employees with gas masks with organic-vapor canisters for the purpose of emergency escape must replace the canisters after any emergency use and before the gas masks are returned to service.

(c) Respirator selection. The employer must select appropriate atmosphere-supplying respirators from Table 2 of this section.

Table 2.—Minimum Requirements for Respiratory Protection for Airborne Methylene Chloride

Methylene chloride airborne concentration (ppm) or condition of use	Minimum respirator required ¹
Up to 625 ppm (25 X PEL)	(1) Continuous flow supplied-air respirator, hood or helmet.

PERMANENT

PERMANENT

Methylene chloride air-borne concentration (ppm) or condition of use	Minimum respirator required ¹
Up to 1250 ppm (50 X 8 hr TWA PEL)	(1) Full facepiece supplied-air respirator operated in negative pressure (demand) mode. (2) Full facepiece self-contained breathing apparatus (SCBA) operated in negative pressure (demand) mode.
Up to 5000 ppm (200 X 8-TWA PEL)	(1) Continuous flow supplied-air respirator, full facepiece. (2) Pressure demand supplied-air respirator, full facepiece. (3) Positive pressure full facepiece SCBA.
Unknown concentration, or above 5000 ppm (Greater than 200 X 8-TWA PEL)	(1) Positive pressure full facepiece SCBA. (2) Full facepiece pressure demand supplied-air respirator with an auxiliary self-contained air supply.
Fire fighting	Positive pressure full facepiece SCBA.
Emergency escape	(1) Any continuous flow or pressure demand SCBA. (2) Gas mask with organic vapor canister.

¹ Respirators assigned for higher airborne concentrations may be used at lower concentrations.

(d) Medical evaluation. Before having an employee use a supplied-air respirator in the negative-pressure mode, or a gas mask with an organic-vapor canister for emergency escape, the employer must:

(i) Have a physician or other licensed health care professional (PLHCP) evaluate the employee's ability to use such respiratory protection;

(ii) Ensure that the PLHCP provides their findings in a written opinion to the employee and the employer.

Note: See WAC 296-62-07150 through 296-62-07156 for medical evaluation requirements for employees using respirators.

(8) Protective work clothing and equipment.

(a) Where needed to prevent MC-induced skin or eye irritation, the employer shall provide clean protective clothing and equipment which is resistant to MC, at no cost to the employee, and shall ensure that each affected employee uses it. Eye and face protection shall meet the requirements of WAC ((296-24-078)) 296-800-160, as applicable.

(b) The employer shall clean, launder, repair and replace all protective clothing and equipment required by this subsection as needed to maintain their effectiveness.

(c) The employer shall be responsible for the safe disposal of such clothing and equipment.

(Note to subsection (8)(c) of this section: See Appendix A for examples of disposal procedures that will satisfy this requirement.)

(9) Hygiene facilities.

(a) If it is reasonably foreseeable that employees' skin may contact solutions containing 0.1 percent or greater MC (for example, through splashes, spills or improper work practices), the employer shall provide conveniently located washing facilities capable of removing the MC, and shall ensure that affected employees use these facilities as needed.

(b) If it is reasonably foreseeable that an employee's eyes may contact solutions containing 0.1 percent or greater MC (for example through splashes, spills or improper work practices), the employer shall provide appropriate eyewash facilities within the immediate work area for emergency use, and shall ensure that affected employees use those facilities when necessary.

(10) Medical surveillance.

(a) Affected employees. The employer shall make medical surveillance available for employees who are or may be exposed to MC as follows:

(i) At or above the action level on 30 or more days per year, or above the 8-hour TWA PEL or the STEL on 10 or more days per year;

(ii) Above the 8-TWA PEL or STEL for any time period where an employee has been identified by a physician or other licensed health care professional as being at risk from cardiac disease or from some other serious MC-related health condition and such employee requests inclusion in the medical surveillance program;

(iii) During an emergency.

(b) Costs. The employer shall provide all required medical surveillance at no cost to affected employees, without loss of pay and at a reasonable time and place.

(c) Medical personnel. The employer shall ensure that all medical surveillance procedures are performed by a physician or other licensed health care professional, as defined in subsection (2) of this section.

(d) Frequency of medical surveillance. The employer shall make medical surveillance available to each affected employee as follows:

(i) Initial surveillance. The employer shall provide initial medical surveillance under the schedule provided by subsection (14)(b)(iii) of this section, or before the time of initial assignment of the employee, whichever is later. The employer need not provide the initial surveillance if medical records show that an affected employee has been provided with medical surveillance that complies with this section within 12 months before December 1.

(ii) Periodic medical surveillance. The employer shall update the medical and work history for each affected employee annually. The employer shall provide periodic physical examinations, including appropriate laboratory surveillance, as follows:

(A) For employees 45 years of age or older, within 12 months of the initial surveillance or any subsequent medical surveillance; and

(B) For employees younger than 45 years of age, within 36 months of the initial surveillance or any subsequent medical surveillance.

(iii) Termination of employment or reassignment. When an employee leaves the employer's workplace, or is re-assigned to an area where exposure to MC is consistently at or below the action level and STEL, medical surveillance shall be made available if six months or more have elapsed since the last medical surveillance.

(iv) Additional surveillance. The employer shall provide additional medical surveillance at frequencies other than those listed above when recommended in the written medical opinion. (For example, the physician or other licensed health care professional may determine an examination is warranted in less than 36 months for employees younger than 45 years of age based upon evaluation of the results of the annual medical and work history.)

(e) Content of medical surveillance.

(i) Medical and work history. The comprehensive medical and work history shall emphasize neurological symptoms, skin conditions, history of hematologic or liver disease, signs or symptoms suggestive of heart disease (angina, coronary artery disease), risk factors for cardiac disease, MC exposures, and work practices and personal protective equipment used during such exposures.

(Note to subsection (10)(e)(i) of this section: See Appendix B of this section for an example of a medical and work history format that would satisfy this requirement.)

(ii) Physical examination. Where physical examinations are provided as required above, the physician or other licensed health care professional shall accord particular attention to the lungs, cardiovascular system (including blood pressure and pulse), liver, nervous system, and skin. The physician or other licensed health care professional shall determine the extent and nature of the physical examination based on the health status of the employee and analysis of the medical and work history.

(iii) Laboratory surveillance. The physician or other licensed health care professional shall determine the extent of any required laboratory surveillance based on the employee's observed health status and the medical and work history.

(Note to subsection (10)(e)(iii) of this section: See Appendix B of this section for information regarding medical tests. Laboratory surveillance may include before-and after-shift carboxyhemoglobin determinations, resting ECG, hematocrit, liver function tests and cholesterol levels.)

(iv) Other information or reports. The medical surveillance shall also include any other information or reports the physician or other licensed health care professional determines are necessary to assess the employee's health in relation to MC exposure.

(f) Content of emergency medical surveillance. The employer shall ensure that medical surveillance made available when an employee has been exposed to MC in emergency situations includes, at a minimum:

(i) Appropriate emergency treatment and decontamination of the exposed employee;

(ii) Comprehensive physical examination with special emphasis on the nervous system, cardiovascular system, lungs, liver and skin, including blood pressure and pulse;

(iii) Updated medical and work history, as appropriate for the medical condition of the employee; and

(iv) Laboratory surveillance, as indicated by the employee's health status.

(Note to subsection (10)(f)(iv) of this section: See Appendix B for examples of tests which may be appropriate.)

(g) Additional examinations and referrals. Where the physician or other licensed health care professional determines it is necessary, the scope of the medical examination shall be expanded and the appropriate additional medical surveillance, such as referrals for consultation or examination, shall be provided.

(h) Information provided to the physician or other licensed health care professional. The employer shall provide the following information to a physician or other licensed health care professional who is involved in the diagnosis of MC-induced health effects:

(i) A copy of this section including its applicable appendices;

(ii) A description of the affected employee's past, current and anticipated future duties as they relate to the employee's MC exposure;

(iii) The employee's former or current exposure levels or, for employees not yet occupationally exposed to MC, the employee's anticipated exposure levels and the frequency and exposure levels anticipated to be associated with emergencies;

(iv) A description of any personal protective equipment, such as respirators, used or to be used; and

(v) Information from previous employment-related medical surveillance of the affected employee which is not otherwise available to the physician or other licensed health care professional.

(i) Written medical opinions.

(i) For each physical examination required by this section, the employer shall ensure that the physician or other licensed health care professional provides to the employer and to the affected employee a written opinion regarding the results of that examination within 15 days of completion of the evaluation of medical and laboratory findings, but not more than 30 days after the examination. The written medical opinion shall be limited to the following information:

(A) The physician's or other licensed health care professional's opinion concerning whether exposure to MC may contribute to or aggravate the employee's existing cardiac, hepatic, neurological (including stroke) or dermal disease or whether the employee has any other medical condition(s) that would place the employee's health at increased risk of material impairment from exposure to MC;

(B) Any recommended limitations upon the employee's exposure to MC, removal from MC exposure, or upon the employee's use of protective clothing or equipment and respirators;

(C) A statement that the employee has been informed by the physician or other licensed health care professional that MC is a potential occupational carcinogen, of risk factors for heart disease, and the potential for exacerbation of underlying heart disease by exposure to MC through its metabolism to carbon monoxide; and

(D) A statement that the employee has been informed by the physician or other licensed health care professional of the results of the medical examination and any medical condi-

tions resulting from MC exposure which require further explanation or treatment.

(ii) The employer shall instruct the physician or other licensed health care professional not to reveal to the employer, orally or in the written opinion, any specific records, findings, and diagnoses that have no bearing on occupational exposure to MC.

(Note to subsection (10)(h)(ii) of this section: The written medical opinion may also include information and opinions generated to comply with other OSHA health standards.)

(j) Medical presumption. For purposes of this subsection (10), the physician or other licensed health care professional shall presume, unless medical evidence indicates to the contrary, that a medical condition is unlikely to require medical removal from MC exposure if the employee is not exposed to MC above the 8-hour TWA PEL. If the physician or other licensed health care professional recommends removal for an employee exposed below the 8-hour TWA PEL, the physician or other licensed health care professional shall cite specific medical evidence, sufficient to rebut the presumption that exposure below the 8-hour TWA PEL is unlikely to require removal, to support the recommendation. If such evidence is cited by the physician or other licensed health care professional, the employer must remove the employee. If such evidence is not cited by the physician or other licensed health care professional, the employer is not required to remove the employee.

(k) Medical removal protection (MRP).

(i) Temporary medical removal and return of an employee.

(A) Except as provided in (j) of this subsection, when a medical determination recommends removal because the employee's exposure to MC may contribute to or aggravate the employee's existing cardiac, hepatic, neurological (including stroke), or skin disease, the employer must provide medical removal protection benefits to the employee and either:

(I) Transfer the employee to comparable work where methylene chloride exposure is below the action level; or

(II) Remove the employee from MC exposure.

(B) If comparable work is not available and the employer is able to demonstrate that removal and the costs of extending MRP benefits to an additional employee, considering feasibility in relation to the size of the employer's business and the other requirements of this standard, make further reliance on MRP an inappropriate remedy, the employer may retain the additional employee in the existing job until transfer or removal becomes appropriate, provided:

(I) The employer ensures that the employee receives additional medical surveillance, including a physical examination at least every 60 days until transfer or removal occurs; and

(II) The employer or PLHCP informs the employee of the risk to the employee's health from continued MC exposure.

(C) The employer shall maintain in effect any job-related protective measures or limitations, other than removal, for as long as a medical determination recommends them to be necessary.

(ii) End of MRP benefits and return of the employee to former job status.

(A) The employer may cease providing MRP benefits at the earliest of the following:

(I) Six months;

(II) Return of the employee to the employee's former job status following receipt of a medical determination concluding that the employee's exposure to MC no longer will aggravate any cardiac, hepatic, neurological (including stroke), or dermal disease;

(III) Receipt of a medical determination concluding that the employee can never return to MC exposure.

(B) For the purposes of this subsection (10), the requirement that an employer return an employee to the employee's former job status is not intended to expand upon or restrict any rights an employee has or would have had, absent temporary medical removal, to a specific job classification or position under the terms of a collective bargaining agreement.

(I) Medical removal protection benefits.

(i) For purposes of this subsection (10), the term medical removal protection benefits means that, for each removal, an employer must maintain for up to six months the earnings, seniority, and other employment rights and benefits of the employee as though the employee had not been removed from MC exposure or transferred to a comparable job.

(ii) During the period of time that an employee is removed from exposure to MC, the employer may condition the provision of medical removal protection benefits upon the employee's participation in follow-up medical surveillance made available pursuant to this section.

(iii) If a removed employee files a workers' compensation claim for a MC-related disability, the employer shall continue the MRP benefits required by this section until either the claim is resolved or the 6-month period for payment of MRP benefits has passed, whichever occurs first. To the extent the employee is entitled to indemnity payments for earnings lost during the period of removal, the employer's obligation to provide medical removal protection benefits to the employee shall be reduced by the amount of such indemnity payments.

(iv) The employer's obligation to provide medical removal protection benefits to a removed employee shall be reduced to the extent that the employee receives compensation for earnings lost during the period of removal from either a publicly or an employer-funded compensation program, or receives income from employment with another employer made possible by virtue of the employee's removal.

(m) Voluntary removal or restriction of an employee. Where an employer, although not required by this section to do so, removes an employee from exposure to MC or otherwise places any limitation on an employee due to the effects of MC exposure on the employee's medical condition, the employer shall provide medical removal protection benefits to the employee equal to those required by (l) of this subsection.

(n) Multiple health care professional review mechanism.

(i) If the employer selects the initial physician or licensed health care professional (PLHCP) to conduct any medical examination or consultation provided to an employee under (k) of this subsection, the employer shall

notify the employee of the right to seek a second medical opinion each time the employer provides the employee with a copy of the written opinion of that PLHCP.

(ii) If the employee does not agree with the opinion of the employer-selected PLHCP, notifies the employer of that fact, and takes steps to make an appointment with a second PLHCP within 15 days of receiving a copy of the written opinion of the initial PLHCP, the employer shall pay for the PLHCP chosen by the employee to perform at least the following:

(A) Review any findings, determinations or recommendations of the initial PLHCP; and

(B) Conduct such examinations, consultations, and laboratory tests as the PLHCP deems necessary to facilitate this review.

(iii) If the findings, determinations or recommendations of the second PLHCP differ from those of the initial PLHCP, then the employer and the employee shall instruct the two health care professionals to resolve the disagreement.

(iv) If the two health care professionals are unable to resolve their disagreement within 15 days, then those two health care professionals shall jointly designate a PLHCP who is a specialist in the field at issue. The employer shall pay for the specialist to perform at least the following:

(A) Review the findings, determinations, and recommendations of the first two PLHCPs; and

(B) Conduct such examinations, consultations, laboratory tests and discussions with the prior PLHCPs as the specialist deems necessary to resolve the disagreements of the prior health care professionals.

(v) The written opinion of the specialist shall be the definitive medical determination. The employer shall act consistent with the definitive medical determination, unless the employer and employee agree that the written opinion of one of the other two PLHCPs shall be the definitive medical determination.

(vi) The employer and the employee or authorized employee representative may agree upon the use of any expeditious alternate health care professional determination mechanism in lieu of the multiple health care professional review mechanism provided by this section so long as the alternate mechanism otherwise satisfies the requirements contained in this section.

(11) Hazard communication. The employer shall communicate the following hazards associated with MC on labels and in material safety data sheets in accordance with the requirements of the chemical hazard communication standard, WAC ((296-62-054)) 296-800-170: Cancer, cardiac effects (including elevation of carboxyhemoglobin), central nervous system effects, liver effects, and skin and eye irritation.

(12) Employee information and training.

(a) The employer shall provide information and training for each affected employee prior to or at the time of initial assignment to a job involving potential exposure to MC.

(b) The employer shall ensure that information and training is presented in a manner that is understandable to the employees.

(c) In addition to the information required under the chemical hazard communication standard at WAC ((296-62-054)) 296-800-170:

(i) The employer shall inform each affected employee of the requirements of this section and information available in its appendices, as well as how to access or obtain a copy of it in the workplace;

(ii) Wherever an employee's exposure to airborne concentrations of MC exceeds or can reasonably be expected to exceed the action level, the employer shall inform each affected employee of the quantity, location, manner of use, release, and storage of MC and the specific operations in the workplace that could result in exposure to MC, particularly noting where exposures may be above the 8-hour TWA PEL or STEL;

(d) The employer shall train each affected employee as required under the chemical hazard communication standard at WAC ((296-62-054)) 296-800-170, as appropriate.

(e) The employer shall re-train each affected employee as necessary to ensure that each employee exposed above the action level or the STEL maintains the requisite understanding of the principles of safe use and handling of MC in the workplace.

(f) Whenever there are workplace changes, such as modifications of tasks or procedures or the institution of new tasks or procedures, which increase employee exposure, and where those exposures exceed or can reasonably be expected to exceed the action level, the employer shall update the training as necessary to ensure that each affected employee has the requisite proficiency.

(g) An employer whose employees are exposed to MC at a multi-employer worksite shall notify the other employers with work operations at that site in accordance with the requirements of the chemical hazard communication standard, WAC ((296-62-054)) 296-800-170, as appropriate.

(h) The employer shall provide to the director, upon request, all available materials relating to employee information and training.

(13) Recordkeeping.

(a) Objective data.

(i) Where an employer seeks to demonstrate that initial monitoring is unnecessary through reasonable reliance on objective data showing that any materials in the workplace containing MC will not release MC at levels which exceed the action level or the STEL under foreseeable conditions of exposure, the employer shall establish and maintain an accurate record of the objective data relied upon in support of the exemption.

(ii) This record shall include at least the following information:

(A) The MC-containing material in question;

(B) The source of the objective data;

(C) The testing protocol, results of testing, and/or analysis of the material for the release of MC;

(D) A description of the operation exempted under subsection (4)(b)(i) of this section and how the data support the exemption; and

(E) Other data relevant to the operations, materials, processing, or employee exposures covered by the exemption.

(iii) The employer shall maintain this record for the duration of the employer's reliance upon such objective data.

(b) Exposure measurements.

(i) The employer shall establish and keep an accurate record of all measurements taken to monitor employee exposure to MC as prescribed in subsection (4) of this section.

(ii) Where the employer has 20 or more employees, this record shall include at least the following information:

(A) The date of measurement for each sample taken;

(B) The operation involving exposure to MC which is being monitored;

(C) Sampling and analytical methods used and evidence of their accuracy;

(D) Number, duration, and results of samples taken;

(E) Type of personal protective equipment, such as respiratory protective devices, worn, if any; and

(F) Name, Social Security number, job classification and exposure of all of the employees represented by monitoring, indicating which employees were actually monitored.

(iii) Where the employer has fewer than 20 employees, the record shall include at least the following information:

(A) The date of measurement for each sample taken;

(B) Number, duration, and results of samples taken; and

(C) Name, Social Security number, job classification and exposure of all of the employees represented by monitoring, indicating which employees were actually monitored.

(iv) The employer shall maintain this record for at least thirty (30) years, in accordance with WAC 296-62-052.

(c) Medical surveillance.

(i) The employer shall establish and maintain an accurate record for each employee subject to medical surveillance under subsection (10) of this section.

(ii) The record shall include at least the following information:

(A) The name, Social Security number and description of the duties of the employee;

(B) Written medical opinions; and

(C) Any employee medical conditions related to exposure to MC.

(iii) The employer shall ensure that this record is maintained for the duration of employment plus thirty (30) years, in accordance with WAC 296-62-052.

(d) Availability.

(i) The employer, upon written request, shall make all records required to be maintained by this section available to the director for examination and copying in accordance with WAC 296-62-052.

(Note to subsection (13)(d)(i) of this section: All records required to be maintained by this section may be kept in the most administratively convenient form (for example, electronic or computer records would satisfy this requirement).)

(ii) The employer, upon request, shall make any employee exposure and objective data records required by this section available for examination and copying by affected employees, former employees, and designated representatives in accordance with WAC 296-62-052.

(iii) The employer, upon request, shall make employee medical records required to be kept by this section available for examination and copying by the subject employee and by

anyone having the specific written consent of the subject employee in accordance with WAC 296-62-052.

(e) Transfer of records. The employer shall comply with the requirements concerning transfer of records set forth in WAC 296-62-05215.

(14) Dates.

(a) Engineering controls required under subsection (6)(a) of this section shall be implemented according to the following schedule:

(i) For employers with fewer than 20 employees, no later than April 10, 2000.

(ii) For employers with fewer than 150 employees engaged in foam fabrication; for employers with fewer than 50 employees engaged in furniture refinishing, general aviation aircraft stripping, and product formulation; for employers with fewer than 50 employees using MC-based adhesives for boat building and repair, recreational vehicle manufacture, van conversion, and upholstery; for employers with fewer than 50 employees using MC in construction work for restoration and preservation of buildings, painting and paint removal, cabinet making and/or floor refinishing and resurfacing, no later than April 10, 2000.

(iii) For employers engaged in polyurethane foam manufacturing with 20 or more employees, no later than October 10, 1999.

(b) Use of respiratory protection whenever an employee's exposure to MC exceeds or can reasonably be expected to exceed the 8-hour TWA PEL, in accordance with subsection (3)(a), (5)(c), (6)(a) and (7)(a) of this section, shall be implemented according to the following schedule:

(i) For employers with fewer than 150 employees engaged in foam fabrication; for employers with fewer than 50 employees engaged in furniture refinishing, general aviation aircraft stripping, and product formulation; for employers with fewer than 50 employees using MC-based adhesives for boat building and repair, recreational vehicle manufacture, van conversion, and upholstery; for employers with fewer than 50 employees using MC in construction work for restoration and preservation of buildings, painting and paint removal, cabinet making and/or floor refinishing and resurfacing, no later than April 10, 2000.

(ii) For employers engaged in polyurethane foam manufacturing with 20 or more employees, no later than October 10, 1999.

(c) Notification of corrective action under subsection (4)(e)(ii) of this section, no later than 90 days before the compliance date applicable to such corrective action.

(d) Transitional dates. The exposure limits for MC specified in WAC 296-62-07515 Table 1, shall remain in effect until the start-up dates for the exposure limits specified in subsection (14) of this section, or if the exposure limits in this section are stayed or vacated.

(e) Unless otherwise specified in this subsection (14), all other requirements of this section shall be complied with immediately.

(15) Appendices. The information contained in the appendices does not, by itself, create any additional obligations not otherwise imposed or detract from any existing obligation.

AMENDATORY SECTION (Amending WSR 97-18-062, filed 9/2/97, effective 12/1/97)

WAC 296-62-07473 Appendix A. Substance Safety Data Sheet and Technical Guidelines for Methylene Chloride

I. Substance Identification

A. Substance: Methylene chloride (CH₂Cl₂).

B. Synonyms: MC, Dichloromethane (DCM); Methylene dichloride; Methylene bichloride; Methane dichloride; CAS: 75-09-2; NCI-C50102.

C. Physical data:

1. Molecular weight: 84.9.

2. Boiling point (760 mm Hg): 39.8 deg.C (104 deg.F).

3. Specific gravity (water=1): 1.3.

4. Vapor density (air=1 at boiling point): 2.9.

5. Vapor pressure at 20 deg. C (68 deg. F): 350 mm Hg.

6. Solubility in water, g/100 g water at 20 deg. C (68 deg. F)=1.32.

7. Appearance and odor: colorless liquid with a chloroform-like odor.

D. Uses: MC is used as a solvent, especially where high volatility is required. It is a good solvent for oils, fats, waxes, resins, bitumen, rubber and cellulose acetate and is a useful paint stripper and degreaser. It is used in paint removers, in propellant mixtures for aerosol containers, as a solvent for plastics, as a degreasing agent, as an extracting agent in the pharmaceutical industry and as a blowing agent in polyurethane foams. Its solvent property is sometimes increased by mixing with methanol, petroleum naphtha or tetrachloroethylene.

E. Appearance and odor: MC is a clear colorless liquid with a chloroform-like odor. It is slightly soluble in water and completely miscible with most organic solvents.

F. Permissible exposure: Exposure may not exceed 25 parts MC per million parts of air (25 ppm) as an eight-hour time-weighted average (8-hour TWA PEL) or 125 parts of MC per million parts of air (125 ppm) averaged over a 15-minute period (STEL).

II. Health Hazard Data

A. MC can affect the body if it is inhaled or if the liquid comes in contact with the eyes or skin. It can also affect the body if it is swallowed.

B. Effects of overexposure:

1. Short-term Exposure: MC is an anesthetic. Inhaling the vapor may cause mental confusion, light-headedness, nausea, vomiting, and headache. Continued exposure may cause increased light-headedness, staggering, unconsciousness, and even death. High vapor concentrations may also cause irritation of the eyes and respiratory tract. Exposure to MC may make the symptoms of angina (chest pains) worse. Skin exposure to liquid MC may cause irritation. If liquid MC remains on the skin, it may cause skin burns. Splashes of the liquid into the eyes may cause irritation.

2. Long-term (chronic) exposure: The best evidence that MC causes cancer is from laboratory studies in which rats, mice and hamsters inhaled MC 6 hours per day, 5 days per week for 2 years. MC exposure produced lung and liver tumors in mice and mammary tumors in rats. No carcinogenic effects of MC were found in hamsters. There are also some human epidemiological studies which show an associa-

tion between occupational exposure to MC and increases in biliary (bile duct) cancer and a type of brain cancer. Other epidemiological studies have not observed a relationship between MC exposure and cancer. WISHA interprets these results to mean that there is suggestive (but not absolute) evidence that MC is a human carcinogen.

C. Reporting signs and symptoms: You should inform your employer if you develop any signs or symptoms and suspect that they are caused by exposure to MC.

D. Warning Properties:

1. Odor Threshold: Different authors have reported varying odor thresholds for MC. Kirk-Othmer and Sax both reported 25 to 50 ppm; Summer and May both reported 150 ppm; Spector reports 320 ppm. Patty, however, states that since one can become adapted to the odor, MC should not be considered to have adequate warning properties.

2. Eye Irritation Level: Kirk-Othmer reports that "MC vapor is seriously damaging to the eyes." Sax agrees with Kirk-Othmer's statement. The ACGIH Documentation of TLVs states that irritation of the eyes has been observed in workers exposed to concentrations up to 5000 ppm.

3. Evaluation of Warning Properties: Since a wide range of MC odor thresholds are reported (25-320 ppm), and human adaptation to the odor occurs, MC is considered to be a material with poor warning properties.

III. Emergency First Aid Procedures

In the event of emergency, institute first aid procedures and send for first aid or medical assistance.

A. Eye and Skin Exposures: If there is a potential for liquid MC to come in contact with eye or skin, face shields and skin protective equipment must be provided and used. If liquid MC comes in contact with the eye, get medical attention. Contact lenses should not be worn when working with this chemical.

B. Breathing: If a person breathes in large amounts of MC, move the exposed person to fresh air at once. If breathing has stopped, perform cardiopulmonary resuscitation. Keep the affected person warm and at rest. Get medical attention as soon as possible.

C. Rescue: Move the affected person from the hazardous exposure immediately. If the exposed person has been overcome, notify someone else and put into effect the established emergency rescue procedures. Understand the facility's emergency rescue procedures and know the locations of rescue equipment before the need arises. Do not become a casualty yourself.

IV. Respirators, Protective Clothing, and Eye Protection

A. Respirators: Good industrial hygiene practices recommend that engineering controls be used to reduce environmental concentrations to the permissible exposure level. However, there are some exceptions where respirators may be used to control exposure. Respirators may be used when engineering and work practice controls are not feasible, when such controls are in the process of being installed, or when these controls fail and need to be supplemented. Respirators may also be used for operations which require entry into tanks or closed vessels, and in emergency situations. If the use of respirators is necessary, the only respirators permitted are those that have been approved by the National Institute for Occupational Safety and Health (NIOSH). Supplied-air

PERMANENT

respirators are required because air-purifying respirators do not provide adequate respiratory protection against MC. In addition to respirator selection, a complete written respiratory protection program should be instituted which includes regular training, maintenance, inspection, cleaning, and evaluation. If you can smell MC while wearing a respirator, proceed immediately to fresh air. If you experience difficulty in breathing while wearing a respirator, tell your employer.

B. Protective Clothing: Employees must be provided with and required to use impervious clothing, gloves, face shields (eight-inch minimum), and other appropriate protective clothing necessary to prevent repeated or prolonged skin contact with liquid MC or contact with vessels containing liquid MC. Any clothing which becomes wet with liquid MC should be removed immediately and not reworn until the employer has ensured that the protective clothing is fit for reuse. Contaminated protective clothing should be placed in a regulated area designated by the employer for removal of MC before the clothing is laundered or disposed of. Clothing and equipment should remain in the regulated area until all of the MC contamination has evaporated; clothing and equipment should then be laundered or disposed of as appropriate.

C. Eye Protection: Employees should be provided with and required to use splash-proof safety goggles where liquid MC may contact the eyes.

V. Housekeeping and Hygiene Facilities

For purposes of complying with WAC 296-24-120, 296-800-220 and 296-800-230, the following items should be emphasized:

A. The workplace should be kept clean, orderly, and in a sanitary condition. The employer should institute a leak and spill detection program for operations involving liquid MC in order to detect sources of fugitive MC emissions.

B. Emergency drench showers and eyewash facilities are recommended. These should be maintained in a sanitary condition. Suitable cleansing agents should also be provided to assure the effective removal of MC from the skin.

C. Because of the hazardous nature of MC, contaminated protective clothing should be placed in a regulated area designated by the employer for removal of MC before the clothing is laundered or disposed of.

VI. Precautions for Safe Use, Handling, and Storage

A. Fire and Explosion Hazards: MC has no flash point in a conventional closed tester, but it forms flammable vapor-air mixtures at approximately 100 deg.C (212 deg.F), or higher. It has a lower explosion limit of 12%, and an upper explosion limit of 19% in air. It has an autoignition temperature of 556.1 deg.C (1033 deg.F), and a boiling point of 39.8 deg.C (104 deg.F). It is heavier than water with a specific gravity of 1.3. It is slightly soluble in water.

B. Reactivity Hazards: Conditions contributing to the instability of MC are heat and moisture. Contact with strong oxidizers, caustics, and chemically active metals such as aluminum or magnesium powder, sodium and potassium may cause fires and explosions. Special precautions: Liquid MC will attack some forms of plastics, rubber, and coatings.

C. Toxicity: Liquid MC is painful and irritating if splashed in the eyes or if confined on the skin by gloves, clothing, or shoes. Vapors in high concentrations may cause

narcosis and death. Prolonged exposure to vapors may cause cancer or exacerbate cardiac disease.

D. Storage: Protect against physical damage. Because of its corrosive properties, and its high vapor pressure, MC should be stored in plain, galvanized or lead lined, mild steel containers in a cool, dry, well ventilated area away from direct sunlight, heat source and acute fire hazards.

E. Piping Material: All piping and valves at the loading or unloading station should be of material that is resistant to MC and should be carefully inspected prior to connection to the transport vehicle and periodically during the operation.

F. Usual Shipping Containers: Glass bottles, 5- and 55-gallon steel drums, tank cars, and tank trucks.

Note: This section addresses MC exposure in marine terminal and longshore employment only where leaking or broken packages allow MC exposure that is not addressed through compliance with WAC 296-56.

G. Electrical Equipment: Electrical installations in Class I hazardous locations as defined in Article 500 of the National Electrical Code, should be installed according to Article 501 of the code; and electrical equipment should be suitable for use in atmospheres containing MC vapors. See Flammable and Combustible Liquids Code (NFPA No. 325M), Chemical Safety Data Sheet SD-86 (Manufacturing Chemists' Association, Inc.).

H. Fire Fighting: When involved in fire, MC emits highly toxic and irritating fumes such as phosgene, hydrogen chloride and carbon monoxide. Wear breathing apparatus and use water spray to keep fire-exposed containers cool. Water spray may be used to flush spills away from exposures. Extinguishing media are dry chemical, carbon dioxide, foam. For purposes of compliance with WAC 296-24-956, locations classified as hazardous due to the presence of MC shall be Class I.

I. Spills and Leaks: Persons not wearing protective equipment and clothing should be restricted from areas of spills or leaks until cleanup has been completed. If MC has spilled or leaked, the following steps should be taken:

1. Remove all ignition sources.
2. Ventilate area of spill or leak.
3. Collect for reclamation or absorb in vermiculite, dry sand, earth, or a similar material.

J. Methods of Waste Disposal: Small spills should be absorbed onto sand and taken to a safe area for atmospheric evaporation. Incineration is the preferred method for disposal of large quantities by mixing with a combustible solvent and spraying into an incinerator equipped with acid scrubbers to remove hydrogen chloride gases formed. Complete combustion will convert carbon monoxide to carbon dioxide. Care should be taken for the presence of phosgene.

K. You should not keep food, beverage, or smoking materials, or eat or smoke in regulated areas where MC concentrations are above the permissible exposure limits.

L. Portable heating units should not be used in confined areas where MC is used.

M. Ask your supervisor where MC is used in your work area and for any additional plant safety and health rules.

VII. Medical Requirements

Your employer is required to offer you the opportunity to participate in a medical surveillance program if you are

exposed to MC at concentrations at or above the action level (12.5 ppm 8-hour TWA) for more than 30 days a year or at concentrations exceeding the PELs (25 ppm 8-hour TWA or 125 ppm 15-minute STEL) for more than 10 days a year. If you are exposed to MC at concentrations over either of the PELs, your employer will also be required to have a physician or other licensed health care professional ensure that you are able to wear the respirator that you are assigned. Your employer must provide all medical examinations relating to your MC exposure at a reasonable time and place and at no cost to you.

VIII. Monitoring and Measurement Procedures

A. Exposure above the Permissible Exposure Limit:

1. Eight-hour exposure evaluation: Measurements taken for the purpose of determining employee exposure under this section are best taken with consecutive samples covering the full shift. Air samples must be taken in the employee's breathing zone.

2. Monitoring techniques: The sampling and analysis under this section may be performed by collection of the MC vapor on two charcoal adsorption tubes in series or other composition adsorption tubes, with subsequent chemical analysis. Sampling and analysis may also be performed by instruments such as real-time continuous monitoring systems, portable direct reading instruments, or passive dosimeters as long as measurements taken using these methods accurately evaluate the concentration of MC in employees' breathing zones. OSHA method 80 is an example of a validated method of sampling and analysis of MC. Copies of this method are available from OSHA or can be downloaded from the Internet at <http://www.osha.gov>. The employer has the obligation of selecting a monitoring method which meets the accuracy and precision requirements of the standard under his or her unique field conditions. The standard requires that the method of monitoring must be accurate, to a 95 percent confidence level, to plus or minus 25 percent for concentrations of MC at or above 25 ppm, and to plus or minus 35 percent for concentrations at or below 25 ppm. In addition to OSHA method 80, there are numerous other methods available for monitoring for MC in the workplace.

B. Since many of the duties relating to employee exposure are dependent on the results of measurement procedures, employers must assure that the evaluation of employee exposure is performed by a technically qualified person.

IX. Observation of Monitoring

Your employer is required to perform measurements that are representative of your exposure to MC and you or your designated representative are entitled to observe the monitoring procedure. You are entitled to observe the steps taken in the measurement procedure, and to record the results obtained. When the monitoring procedure is taking place in an area where respirators or personal protective clothing and equipment are required to be worn, you or your representative must also be provided with, and must wear, protective clothing and equipment.

Access To Information

A. Your employer is required to inform you of the information contained in this Appendix. In addition, your employer must instruct you in the proper work practices for using MC, emergency procedures, and the correct use of protective equipment.

B. Your employer is required to determine whether you are being exposed to MC. You or your representative has the right to observe employee measurements and to record the results obtained. Your employer is required to inform you of your exposure. If your employer determines that you are being over exposed, he or she is required to inform you of the actions which are being taken to reduce your exposure to within permissible exposure limits.

C. Your employer is required to keep records of your exposures and medical examinations. These records must be kept by the employer for at least thirty (30) years.

D. Your employer is required to release your exposure and medical records to you or your representative upon your request.

E. Your employer is required to provide labels and material safety data sheets (MSDS) for all materials, mixtures or solutions composed of greater than 0.1 percent MC. An example of a label that would satisfy these requirements would be:

**Danger Contains Methylene Chloride
Potential Cancer Hazard**

**May worsen heart disease because methylene chloride is converted to carbon monoxide in the body.
May cause dizziness, headache, irritation of the throat and lungs, loss of consciousness and death at high concentrations (for example, if used in a poorly ventilated room).**

Avoid Skin Contact. Contact with liquid causes skin and eye irritation.

X. Common Operations and Controls

The following list includes some common operations in which exposure to MC may occur and control methods which may be effective in each case:

Operations	Controls
Use as solvent in paint and varnish removers cold cleaning and ultrasonic cleaning, and as a solvent in furniture stripping.	General dilution ventilation; local; manufacture of aerosols; cold cleaning exhaust ventilation; personal protective equipment; substitution.
Use as solvent in vapor degreasing.	Process enclosure; local exhaust ventilation; chilling coils; substitution.
Use as a secondary refrigerant in air scientific testing.	General dilution ventilation; local conditioning and exhaust ventilation; personal protective equipment.

PERMANENT

AMENDATORY SECTION (Amending Order 81-19, filed 7/27/81)

WAC 296-62-07519 Thiram. (1) Scope and application. This section applies to occupational exposure to thiram (tetramethylthiuram disulfide), in addition to those requirements listed in WAC 296-62-07515. Nothing in this section shall preclude the application of other appropriate standards and regulations to minimize worker exposure to thiram.

(2) Definitions. The following definitions are applicable to this section:

(a) Clean - the absence of dirt or materials which may be harmful to a worker's health.

(b) Large seedlings - those seedlings of such size, either by length or breadth, that it is difficult to avoid contact of the thiram treated plant with the mouth or face during planting operations.

(3) General requirements.

(a) Workers should not be allowed to work more than five days in any seven day period with or around the application of thiram or thiram treated seedlings.

(b) Washing and worker hygiene.

(i) Workers shall wash their hands prior to eating or smoking at the close of work.

(ii) Warm (at least 85°F, 29.4°C) wash water and single use hand wiping materials shall be provided for washing.

(iii) The warm water and hand wiping materials shall be at fixed work locations or at the planting unit.

(iv) Where warm water is not available within 15 minutes travel time, nonalcoholic based waterless hand cleaner shall be provided.

(v) Every planter or nursery worker shall be advised to bathe or shower daily.

(vi) The inside of worker carrying vehicles shall be washed or vacuumed and wiped down at least weekly during the period of thiram use.

(c) Personal protective measures.

(i) Clothing shall be worn by workers to reduce skin contact with thiram to the legs, arms and torso.

(ii) For those workers who have thiram skin irritations, exposed areas of the body shall be protected by a suitable barrier cream.

(iii) Clothing worn by workers shall be washed or changed at least every other day.

(iv) Only impervious gloves may be worn by workers.

(v) Workers hands should be clean of thiram before placing them into gloves.

(vi) Thiram applicators shall be provided with and use respiratory protection in accordance with WAC 296-62-071, disposable coveralls or rubber slickers or other impervious clothing, rubberized boots, head covers and rubberized gloves.

(vii) Nursery workers, other than applicators, who are likely to be exposed to thiram shall be provided with and use disposable coveralls or rubber slickers or other impervious clothing, impervious footwear and gloves, and head covers in accordance with WAC ((296-24-075)) 296-800-160, unless showers have been provided and are used.

(viii) Eye protection according to WAC ((296-24-078)) 296-800-160, shall be provided and worn by workers who

may be exposed to splashes of thiram during spraying, plug bundling, belt line grading and plugging or other operations.

(ix) Item (viii) of this subdivision need not be complied with where pressurized emergency eye wash fountains are within 10 seconds travel time of the work location. (Approved respirator - see WAC 296-62-071.)

(x) A dust mask shall be worn, when planting large seedlings, to avoid mouth and face contact with the thiram treated plant unless equally effective measures or planting practices have been established.

(d) Food handling.

(i) Food snacks, beverages, smoking materials, or any other item which is consumed shall not be stored or consumed in the packing area of the nursery.

(ii) Worker carrying vehicles shall have a clean area for carrying lunches.

(iii) The clean area of the vehicle shall be elevated from the floor and not used to carry other than food or other consumable items.

(iv) The carrying of lunches, food or other consumable items in tree planting bags is prohibited.

(v) Care shall be taken to insure that worker exposure to thiram spray, including downwind driftings, is minimized or eliminated.

(vi) When bags that contained thiram or thiram treated seedlings are burned, prevent worker exposure to the smoke.

(e) Thiram use and handling.

(i) Thiram treated seedlings shall be allowed to dry or stabilize prior to packing.

(ii) Seedlings shall be kept moist during packing and whenever possible during planting operations.

(iii) Floors, where thiram is used, shall not be dry swept but instead vacuumed, washed or otherwise cleaned at least daily.

(iv) Silica chips used to cover thiram treated seedling plugs shall be removed at the nursery.

(f) Training.

(i) Each worker engaged in operations where exposure to thiram may occur shall be provided training on the hazards of thiram, as well as the necessary precautions for its safe use and handling.

(ii) The training shall include instruction in:

(A) The nature of the health hazard(s) from exposure to thiram including specifically the potential for alcohol intolerance, drug interaction, and skin irritation;

(B) The specific nature of operations which could result in exposure to thiram and the necessary protective steps;

(C) The purpose for, proper use, and limitations of protective devices including respirators and clothing;

(D) The necessity for and requirements of good personal hygiene; and

(E) A review of the thiram rules at the worker's first training and indoctrination, and annually thereafter.

(4) Effective date. This standard shall become effective 30 days after being filed with the code reviser.

AMENDATORY SECTION (Amending WSR 99-10-071, filed 5/4/99, effective 9/1/99)

WAC 296-62-07521 Lead. (1) Scope and application.

(a) This section applies to all occupational exposure to lead, except as provided in subdivision (1)(b).

(b) This section does not apply to the construction industry or to agricultural operations covered by chapter 296-306 WAC.

(2) Definitions as applicable to this part.

(a) "Action level" - employee exposure, without regard to the use of respirators, to an airborne concentration of lead of thirty micrograms per cubic meter of air ($30 \mu\text{g}/\text{m}^3$) averaged over an eight-hour period.

(b) "Director" - the director of the department of labor and industries.

(c) "Lead" - metallic lead, all inorganic lead compounds, and organic lead soaps. Excluded from this definition are all other organic lead compounds.

(3) General requirements.

(a) Employers will assess the hazards of lead in the workplace and provide information to the employees about the hazards of the lead exposures to which they may be exposed.

(b) Information provided shall include:

(i) Exposure monitoring (including employee notification);

(ii) Written compliance programs;

(iii) Respiratory protection programs;

(iv) Personnel protective equipment and housekeeping;

(v) Medical surveillance and examinations;

(vi) Training requirements;

(vii) Recordkeeping requirements.

(4) Permissible exposure limit (PEL).

(a) The employer shall assure that no employee is exposed to lead at concentrations greater than fifty micrograms per cubic meter of air ($50 \mu\text{g}/\text{m}^3$) averaged over an eight-hour period.

(b) If an employee is exposed to lead for more than eight hours in any work day, the permissible exposure limit, as a time weighted average (TWA) for that day, shall be reduced according to the following formula:

$$\text{Maximum permissible limit (in } \mu\text{g}/\text{m}^3) = 400 \div \text{hours worked in the day.}$$

(c) When respirators are used to supplement engineering and work practice controls to comply with the PEL and all the requirements of subsection (7) have been met, employee exposure, for the purpose of determining whether the employer has complied with the PEL, may be considered to be at the level provided by the protection factor of the respirator for those periods the respirator is worn. Those periods may be averaged with exposure levels during periods when respirators are not worn to determine the employee's daily TWA exposure.

(5) Exposure monitoring.

(a) General.

(i) For the purposes of subsection (5), employee exposure is that exposure which would occur if the employee were not using a respirator.

(ii) With the exception of monitoring under subdivision (5)(c), the employer shall collect full shift (for at least seven continuous hours) personal samples including at least one

sample for each shift for each job classification in each work area.

(iii) Full shift personal samples shall be representative of the monitored employee's regular, daily exposure to lead.

(b) Initial determination. Each employer who has a workplace or work operation covered by this standard shall determine if any employee may be exposed to lead at or above the action level.

(c) Basis of initial determination.

(i) The employer shall monitor employee exposures and shall base initial determinations on the employee exposure monitoring results and any of the following, relevant considerations:

(A) Any information, observations, or calculations which would indicate employee exposure to lead;

(B) Any previous measurements of airborne lead; and

(C) Any employee complaints of symptoms which may be attributable to exposure to lead.

(ii) Monitoring for the initial determination may be limited to a representative sample of the exposed employees who the employer reasonably believes are exposed to the greatest airborne concentrations of lead in the workplace.

(iii) Measurements of airborne lead made in the preceding twelve months may be used to satisfy the requirement to monitor under item (5)(c)(i) if the sampling and analytical methods used meet the accuracy and confidence levels of subdivision (5)(i) of this section.

(d) Positive initial determination and initial monitoring.

(i) Where a determination conducted under subdivision (5)(b) and (5)(c) of this section shows the possibility of any employee exposure at or above the action level, the employer shall conduct monitoring which is representative of the exposure for each employee in the workplace who is exposed to lead.

(ii) Measurements of airborne lead made in the preceding twelve months may be used to satisfy this requirement if the sampling and analytical methods used meet the accuracy and confidence levels of subdivision (5)(i) of this section.

(e) Negative initial determination. Where a determination, conducted under subdivisions (5)(b) and (5)(c) of this section is made that no employee is exposed to airborne concentrations of lead at or above the action level, the employer shall make a written record of such determination. The record shall include at least the information specified in subdivision (5)(c) of this section and shall also include the date of determination, location within the worksite, and the name and social security number of each employee monitored.

(f) Frequency.

(i) If the initial monitoring reveals employee exposure to be below the action level the measurements need not be repeated except as otherwise provided in subdivision (5)(g) of this section.

(ii) If the initial determination or subsequent monitoring reveals employee exposure to be at or above the action level but below the permissible exposure limit the employer shall repeat monitoring in accordance with this subsection at least every six months. The employer shall continue monitoring at the required frequency until at least two consecutive measurements, taken at least seven days apart, are below the action level at which time the employer may discontinue

monitoring for that employee except as otherwise provided in subdivision (5)(g) of this section.

(iii) If the initial monitoring reveals that employee exposure is above the permissible exposure limit the employer shall repeat monitoring quarterly. The employer shall continue monitoring at the required frequency until at least two consecutive measurements, taken at least seven days apart, are below the PEL but at or above the action level at which time the employer shall repeat monitoring for that employee at the frequency specified in item (5)(f)(ii), except as otherwise provided in subdivision (5)(g) of this section.

(g) Additional monitoring. Whenever there has been a production, process, control or personnel change which may result in new or additional exposure to lead, or whenever the employer has any other reason to suspect a change which may result in new or additional exposures to lead, additional monitoring in accordance with this subsection shall be conducted.

(h) Employee notification.

(i) Within five working days after the receipt of monitoring results, the employer shall notify each employee in writing of the results which represent that employee's exposure.

(ii) Whenever the results indicate that the representative employee exposure, without regard to respirators, exceeds the permissible exposure limit, the employer shall include in the written notice a statement that the permissible exposure limit was exceeded and a description of the corrective action taken or to be taken to reduce exposure to or below the permissible exposure limit.

(i) Accuracy of measurement. The employer shall use a method of monitoring and analysis which has an accuracy (to a confidence level of ninety-five percent) of not less than plus or minus twenty percent for airborne concentrations of lead equal to or greater than 30 µg/m³.

(6) Methods of compliance.

(a) Engineering and work practice controls.

(i) Where any employee is exposed to lead above the permissible exposure limit for more than thirty days per year, the employer shall implement engineering and work practice controls (including administrative controls) to reduce and maintain employee exposure to lead in accordance with the implementation schedule in Table I below, except to the extent that the employer can demonstrate that such controls are not feasible. Wherever the engineering and work practice controls which can be instituted are not sufficient to reduce employee exposure to or below the permissible exposure limit, the employer shall nonetheless use them to reduce exposures to the lowest feasible level and shall supplement them by the use of respiratory protection which complies with the requirements of subsection (7) of this section.

(ii) Where any employee is exposed to lead above the permissible exposure limit, but for thirty days or less per year, the employer shall implement engineering controls to reduce exposures to 200 µg/m³, but thereafter may implement any combination of engineering, work practice (including administrative controls), and respiratory controls to reduce and maintain employee exposure to lead to or below 50 µg/m³.

TABLE I

Industry	Compliance dates: ¹ (50 µg/m ³)
Lead chemicals, secondary copper smelting.	July 19, 1996
Nonferrous foundries	July 19, 1996. ²
Brass and bronze ingot manufacture.	6 years. ³

¹ Calculated by counting from the date the stay on implementation of subsection (6)(a) was lifted by the U.S. Court of Appeals for the District of Columbia, the number of years specified in the 1978 lead standard and subsequent amendments for compliance with the PEL of 50 µg/m³ for exposure to airborne concentrations of lead levels for the particular industry.

² Large nonferrous foundries (20 or more employees) are required to achieve the PEL of 50 µg/m³ by means of engineering and work practice controls. Small nonferrous foundries (fewer than 20 employees) are required to achieve an 8-hour TWA of 75 µg/m³ by such controls.

³ Expressed as the number of years from the date on which the Court lifts the stay on the implementation of subsection (6)(a) for this industry for employers to achieve a lead in air concentration of 75 µg/m³. Compliance with subsection (6) in this industry is determined by a compliance directive that incorporates elements from the settlement agreement between OSHA and representatives of the industry.

(b) Respiratory protection. Where engineering and work practice controls do not reduce employee exposure to or below the 50 µg/m³ permissible exposure limit, the employer shall supplement these controls with respirators in accordance with subsection (7).

(c) Compliance program.

(i) Each employer shall establish and implement a written compliance program to reduce exposures to or below the permissible exposure limit, and interim levels if applicable, solely by means of engineering and work practice controls in accordance with the implementation schedule in subdivision (6)(a).

(ii) Written plans for these compliance programs shall include at least the following:

(A) A description of each operation in which lead is emitted; e.g., machinery used, material processed, controls in place, crew size, employee job responsibilities, operating procedures and maintenance practices;

(B) A description of the specific means that will be employed to achieve compliance, including engineering plans and studies used to determine methods selected for controlling exposure to lead;

(C) A report of the technology considered in meeting the permissible exposure limit;

(D) Air monitoring data which documents the source of lead emissions;

(E) A detailed schedule for implementation of the program, including documentation such as copies of purchase orders for equipment, construction contracts, etc.;

(F) A work practice program which includes items required under subsections (8), (9) and (10) of this regulation;

(G) An administrative control schedule required by subdivision (6)(f), if applicable; and

(H) Other relevant information.

(iii) Written programs shall be submitted upon request to the director, and shall be available at the worksite for exami-

PERMANENT

nation and copying by the director, any affected employee or authorized employee representatives.

(iv) Written programs shall be revised and updated at least every six months to reflect the current status of the program.

(d) Mechanical ventilation.

(i) When ventilation is used to control exposure, measurements which demonstrate the effectiveness of the system in controlling exposure, such as capture velocity, duct velocity, or static pressure shall be made at least every three months. Measurements of the system's effectiveness in controlling exposure shall be made within five days of any change in production, process, or control which might result in a change in employee exposure to lead.

(ii) Recirculation of air. If air from exhaust ventilation is recirculated into the workplace, the employer shall assure that (A) the system has a high efficiency filter with reliable back-up filter; and (B) controls to monitor the concentration of lead in the return air and to bypass the recirculation system automatically if it fails are installed, operating, and maintained.

(e) Administrative controls. If administrative controls are used as a means of reducing employees TWA exposure to lead, the employer shall establish and implement a job rotation schedule which includes:

(i) Name or identification number of each affected employee;

(ii) Duration and exposure levels at each job or work station where each affected employee is located; and

(iii) Any other information which may be useful in assessing the reliability of administrative controls to reduce exposure to lead.

(7) Respiratory protection.

(a) General. For employees who use respirators required by this section, the employer must provide respirators that comply with the requirements of this subsection. Respirators must be used during:

(i) Period necessary to install or implement engineering or work-practice controls;

(ii) Work operations for which engineering and work-practice controls are not sufficient to reduce exposures to or below the permissible exposure limit;

(iii) Periods when an employee requests a respirator.

(b) Respirator program.

(i) The employer must implement a respiratory protection program as required by chapter 296-62 WAC, Part E (except WAC 296-62-07130(1) and 296-62-07150 through 296-62-07156).

(ii) If an employee has breathing difficulty during fit testing or respirator use, the employer must provide the employee with a medical examination as required by subsection (11)(c)(ii)(C) of this section to determine whether or not the employee can use a respirator while performing the required duty.

(c) Respirator selection.

(i) The employer must select the appropriate respirator or combination of respirators from Table II of this section.

(ii) The employer must provide a powered air-purifying respirator instead of the respirator specified in Table II of this section when an employee chooses to use this type of respira-

tor and that such a respirator provides adequate protection to the employee.

TABLE II
RESPIRATORY PROTECTION FOR LEAD AEROSOLS

Airborne Concentration of Lead or Condition of Use	Required Respirator ¹
Not in excess of 0.5 mg/m ³ (10X PEL).	Half-mask, air-purifying respirator equipped with high efficiency filters. ^{2,3}
Not in excess of 2.5 mg/m ³ (50X PEL).	Full facepiece, air-purifying respirator with high efficiency filters. ³
Not in excess of 50 mg/m ³ (1000X PEL).	(1) Any powered, air-purifying respirator with high efficiency filters ³ ; or (2) Half-mask supplied-air respirator operated in positive-pressure mode. ²
Not in excess of 100 mg/m ³ (2000X PEL).	Supplied-air respirators with full facepiece, hood, helmet, or suit, operated in positive pressure mode.
Greater than 100 mg/m ³ , unknown concentration or fire fighting.	Full facepiece, self-contained breathing apparatus operated in positive-pressure mode.

Note: ¹ Respirators specified for high concentrations can be used at lower concentrations of lead.

² Full facepiece is required if the lead aerosols cause eye or skin irritation at the use concentrations.

³ A high efficiency particulate filter means 99.97 percent efficient against 0.3 micron size particles.

(8) Protective work clothing and equipment.

(a) Provision and use. If an employee is exposed to lead above the PEL, without regard to the use of respirators or where the possibility of skin or eye irritation exists, the employer shall provide at no cost to the employee and assure that the employee uses appropriate protective work clothing and equipment such as, but not limited to:

(i) Coveralls or similar full-body work clothing;

(ii) Gloves, hats, and shoes or disposable shoe coverlets;

and

(iii) Face shields, vented goggles, or other appropriate protective equipment which complies with WAC ((296-24-078)) 296-800-160.

(b) Cleaning and replacement.

(i) The employer shall provide the protective clothing required in subdivision (8)(a) of this section in a clean and dry condition at least weekly, and daily to employees whose exposure levels without regard to a respirator are over 200 µg/m³ of lead as an eight-hour TWA.

(ii) The employer shall provide for the cleaning, laundering, or disposal of protective clothing and equipment required by subdivision (8)(a) of this section.

(iii) The employer shall repair or replace required protective clothing and equipment as needed to maintain their effectiveness.

(iv) The employer shall assure that all protective clothing is removed at the completion of a work shift only in change rooms provided for that purpose as prescribed in subdivision (10)(b) of this section.

PERMANENT

(v) The employer shall assure that contaminated protective clothing which is to be cleaned, laundered, or disposed of, is placed in a closed container in the change-room which prevents dispersion of lead outside the container.

(vi) The employer shall inform in writing any person who cleans or launders protective clothing or equipment of the potentially harmful effects of exposure to lead.

(vii) The employer shall assure that the containers of contaminated protective clothing and equipment required by subdivision (8)(b)(v) are labeled as follows:

CAUTION: CLOTHING CONTAMINATED WITH LEAD.
DO NOT REMOVE DUST BY BLOWING OR SHAKING.
DISPOSE OF LEAD CONTAMINATED WASH WATER IN ACCORDANCE WITH APPLICABLE LOCAL, STATE, OR FEDERAL REGULATIONS.

(viii) The employer shall prohibit the removal of lead from protective clothing or equipment by blowing, shaking, or any other means which disperses lead into the air.

(9) Housekeeping.

(a) Surfaces. All surfaces shall be maintained as free as practicable of accumulations of lead.

(b) Cleaning floors.

(i) Floors and other surfaces where lead accumulates may not be cleaned by the use of compressed air.

(ii) Shoveling, dry or wet sweeping, and brushing may be used only where vacuuming or other equally effective methods have been tried and found not to be effective.

(c) Vacuuming. Where vacuuming methods are selected, the vacuums shall be used and emptied in a manner which minimizes the reentry of lead into the workplace.

(10) Hygiene facilities and practices.

(a) The employer shall assure that in areas where employees are exposed to lead above the PEL, without regard to the use of respirators, food or beverage is not present or consumed, tobacco products are not present or used, and cosmetics are not applied, except in change rooms, lunchrooms, and showers required under subdivision (10)(b) through (10)(d) of this section.

(b) Change rooms.

(i) The employer shall provide clean change rooms for employees who work in areas where their airborne exposure to lead is above the PEL, without regard to the use of respirators.

(ii) The employer shall assure that change rooms are equipped with separate storage facilities for protective work clothing and equipment and for street clothes which prevent cross-contamination.

(c) Showers.

(i) The employer shall assure that employees who work in areas where their airborne exposure to lead is above the PEL, without regard to the use of respirators, shower at the end of the work shift.

(ii) The employer shall provide shower facilities in accordance with WAC 296-24-12009.

(iii) The employer shall assure that employees who are required to shower pursuant to item (10)(c)(i) do not leave the workplace wearing any clothing or equipment worn during the work shift.

(d) Lunchrooms.

(i) The employer shall provide lunchroom facilities for employees who work in areas where their airborne exposure to lead is above the PEL, without regard to the use of respirators.

(ii) The employer shall assure that lunchroom facilities have a temperature controlled, positive pressure, filtered air supply, and are readily accessible to employees.

(iii) The employer shall assure that employees who work in areas where their airborne exposure to lead is above the PEL without regard to the use of a respirator wash their hands and face prior to eating, drinking, smoking or applying cosmetics.

(iv) The employer shall assure that employees do not enter lunchroom facilities with protective work clothing or equipment unless surface lead dust has been removed by vacuuming, downdraft booth, or other cleaning method.

(e) Lavatories. The employer shall provide an adequate number of lavatory facilities which comply with WAC ((296-24-12009 (1) and (2))) 296-800-230.

(11) Medical surveillance.

(a) General.

(i) The employer shall institute a medical surveillance program for all employees who are or may be exposed above the action level for more than thirty days per year.

(ii) The employer shall assure that all medical examinations and procedures are performed by or under the supervision of a licensed physician.

(iii) The employer shall provide the required medical surveillance including multiple physician review under item (11)(c)(iii) without cost to employees and at a reasonable time and place.

(b) Biological monitoring.

(i) Blood lead and ZPP level sampling and analysis. The employer shall make available biological monitoring in the form of blood sampling and analysis for lead and zinc protoporphyrin levels to each employee covered under item (11)(a)(i) of this section on the following schedule:

(A) At least every six months to each employee covered under item (11)(a)(i) of this section;

(B) At least every two months for each employee whose last blood sampling and analysis indicated a blood lead level at or above 40 µg/100 g of whole blood. This frequency shall continue until two consecutive blood samples and analyses indicate a blood lead level below 40 µg/100 g of whole blood; and

(C) At least monthly during the removal period of each employee removed from exposure to lead due to an elevated blood lead level.

(ii) Follow-up blood sampling tests. Whenever the results of a blood lead level test indicate that an employee's blood lead level exceeds the numerical criterion for medical removal under item (12)(a)(i)(A), the employer shall provide a second (follow-up) blood sampling test within two weeks after the employer receives the results of the first blood sampling test.

(iii) Accuracy of blood lead level sampling and analysis. Blood lead level sampling and analysis provided pursuant to this section shall have an accuracy (to a confidence level of ninety-five percent) within plus or minus fifteen percent or 6

µg/100 ml, whichever is greater, and shall be conducted by a laboratory licensed by the Center for Disease Control (CDC), United States Department of Health, Education and Welfare or which has received a satisfactory grade in blood lead proficiency testing from CDC in the prior twelve months.

(iv) Employee notification. Within five working days after the receipt of biological monitoring results, the employer shall notify in writing each employee whose blood lead level exceeds 40 µg/100 g: (A) of that employee's blood lead level and (B) that the standard requires temporary medical removal with medical removal protection benefits when an employee's blood lead level exceeds the numerical criterion for medical removal under item (12)(a)(i) of this section.

(c) Medical examinations and consultations.

(i) Frequency. The employer shall make available medical examinations and consultations to each employee covered under item (11)(a)(i) of this section on the following schedule:

(A) At least annually for each employee for whom a blood sampling test conducted at any time during the preceding twelve months indicated a blood lead level at or above 40 µg/100 g;

(B) Prior to assignment for each employee being assigned for the first time to an area in which airborne concentrations of lead are at or above the action level;

(C) As soon as possible, upon notification by an employee either that the employee has developed signs or symptoms commonly associated with lead intoxication, that the employee desires medical advice concerning the effects of current or past exposure to lead on the employee's ability to procreate a healthy child, or that the employee has demonstrated difficulty in breathing during a respirator fitting test or during use; and

(D) As medically appropriate for each employee either removed from exposure to lead due to a risk of sustaining material impairment to health, or otherwise limited pursuant to a final medical determination.

(ii) Content. Medical examinations made available pursuant to subitems (11)(c)(i)(A) through (B) of this section shall include the following elements:

(A) A detailed work history and a medical history, with particular attention to past lead exposure (occupational and nonoccupational), personal habits (smoking, hygiene), and past gastrointestinal, hematologic, renal, cardiovascular, reproductive and neurological problems;

(B) A thorough physical examination, with particular attention to teeth, gums, hematologic, gastrointestinal, renal, cardiovascular, and neurological systems. Pulmonary status should be evaluated if respiratory protection will be used;

(C) A blood pressure measurement;

(D) A blood sample and analysis which determines:

(I) Blood lead level;

(II) Hemoglobin and hematocrit determinations, red cell indices, and examination of peripheral smear morphology;

(III) Zinc protoporphyrin;

(IV) Blood urea nitrogen; and

(V) Serum creatinine;

(E) A routine urinalysis with microscopic examination;

and

(F) Any laboratory or other test which the examining physician deems necessary by sound medical practice.

The content of medical examinations made available pursuant to subitems (11)(c)(i)(C) through (D) of this section shall be determined by an examining physician and, if requested by an employee, shall include pregnancy testing or laboratory evaluation of male fertility.

(iii) Multiple physician review mechanism.

(A) If the employer selects the initial physician who conducts any medical examination or consultation provided to an employee under this section, the employee may designate a second physician:

(I) To review any findings, determinations or recommendations of the initial physician; and

(II) To conduct such examinations, consultations, and laboratory tests as the second physician deems necessary to facilitate this review.

(B) The employer shall promptly notify an employee of the right to seek a second medical opinion after each occasion that an initial physician conducts a medical examination or consultation pursuant to this section. The employer may condition its participation in, and payment for, the multiple physician review mechanism upon the employee doing the following within fifteen days after receipt of the foregoing notification, or receipt of the initial physician's written opinion, whichever is later:

(I) The employee informing the employer that he or she intends to seek a second medical opinion, and

(II) The employee initiating steps to make an appointment with a second physician.

(C) If the findings, determinations or recommendations of the second physician differ from those of the initial physician, then the employer and the employee shall assure that efforts are made for the two physicians to resolve any disagreement.

(D) If the two physicians have been unable to quickly resolve their disagreement, then the employer and the employee through their respective physicians shall designate a third physician:

(I) To review any findings, determinations or recommendations of the prior physicians; and

(II) To conduct such examinations, consultations, laboratory tests and discussions with the prior physicians as the third physician deems necessary to resolve the disagreement of the prior physicians.

(E) The employer shall act consistent with the findings, determinations and recommendations of the third physician, unless the employer and the employee reach an agreement which is otherwise consistent with the recommendations of at least one of the three physicians.

(iv) Information provided to examining and consulting physicians.

(A) The employer shall provide an initial physician conducting a medical examination or consultation under this section with the following information:

(I) A copy of this regulation for lead including all appendices;

(II) A description of the affected employee's duties as they relate to the employee's exposure;

(III) The employee's exposure level or anticipated exposure level to lead and to any other toxic substance (if applicable);

(IV) A description of any personal protective equipment used or to be used;

(V) Prior blood lead determinations; and

(VI) All prior written medical opinions concerning the employee in the employer's possession or control.

(B) The employer shall provide the foregoing information to a second or third physician conducting a medical examination or consultation under this section upon request either by the second or third physician, or by the employee.

(v) Written medical opinions.

(A) The employer shall obtain and furnish the employee with a copy of a written medical opinion from each examining or consulting physician which contains the following information:

(I) The physician's opinion as to whether the employee has any detected medical condition which would place the employee at increased risk of material impairment of the employee's health from exposure to lead;

(II) Any recommended special protective measures to be provided to the employee, or limitations to be placed upon the employee's exposure to lead;

(III) Any recommended limitation upon the employee's use of respirators, including a determination of whether the employee can wear a powered air purifying respirator if a physician determines that the employee cannot wear a negative pressure respirator; and

(IV) The results of the blood lead determinations.

(B) The employer shall instruct each examining and consulting physician to:

(I) Not reveal either in the written opinion, or in any other means of communication with the employer, findings, including laboratory results, or diagnoses unrelated to an employee's occupational exposure to lead; and

(II) Advise the employee of any medical condition, occupational or nonoccupational, which dictates further medical examination or treatment.

(vi) Alternate physician determination mechanisms. The employer and an employee or authorized employee representative may agree upon the use of any expeditious alternate physician determination mechanism in lieu of the multiple physician review mechanism provided by this subsection so long as the alternate mechanism otherwise satisfies the requirements contained in this subsection.

(d) Chelation.

(i) The employer shall assure that any person whom he retains, employs, supervises or controls does not engage in prophylactic chelation of any employee at any time.

(ii) If therapeutic or diagnostic chelation is to be performed by any person in item (11)(d)(i), the employer shall assure that it be done under the supervision of a licensed physician in a clinical setting with thorough and appropriate medical monitoring and that the employee is notified in writing prior to its occurrence.

(12) Medical removal protection.

(a) Temporary medical removal and return of an employee.

(i) Temporary removal due to elevated blood lead levels.

(A) The employer shall remove an employee from work having an exposure to lead at or above the action level on each occasion that a periodic and a follow-up blood sampling test conducted pursuant to this section indicate that the employee's blood lead level is at or above 60 $\mu\text{g}/100\text{ g}$ of whole blood; and

(B) The employer shall remove an employee from work having an exposure to lead at or above the action level on each occasion that the average of the last three blood sampling tests conducted pursuant to this section (or the average of all blood sampling tests conducted over the previous six months, whichever is longer) indicates that the employee's blood lead level is at or above 50 $\mu\text{g}/100\text{ g}$ of whole blood; provided, however, that an employee need not be removed if the last blood sampling test indicates a blood lead level at or below 40 $\mu\text{g}/100\text{ g}$ of whole blood.

(ii) Temporary removal due to a final medical determination.

(A) The employer shall remove an employee from work having an exposure to lead at or above the action level on each occasion that a final medical determination results in a medical finding, determination, or opinion that the employee has a detected medical condition which places the employee at increased risk of material impairment to health from exposure to lead.

(B) For the purposes of this section, the phrase "final medical determination" shall mean the outcome of the multiple physician review mechanism or alternate medical determination mechanism used pursuant to the medical surveillance provisions of this section.

(C) Where a final medical determination results in any recommended special protective measures for an employee, or limitations on an employee's exposure to lead, the employer shall implement and act consistent with the recommendation.

(iii) Return of the employee to former job status.

(A) The employer shall return an employee to his or her former job status:

(I) For an employee removed due to a blood lead level at or above 60 $\mu\text{g}/100\text{ g}$, or due to an average blood lead level at or above 50 $\mu\text{g}/100\text{ g}$, when two consecutive blood sampling tests indicate that the employee's blood lead level is at or below 40 $\mu\text{g}/100\text{ g}$ of whole blood;

(II) For an employee removed due to a final medical determination, when a subsequent final medical determination results in a medical finding, determination, or opinion that the employee no longer has a detected medical condition which places the employee at increased risk of material impairment to health from exposure to lead.

(B) For the purposes of this section, the requirement that an employer return an employee to his or her former job status is not intended to expand upon or restrict any rights an employee has or would have had, absent temporary medical removal, to a specific job classification or position under the terms of a collective bargaining agreement.

(iv) Removal of other employee special protective measure or limitations. The employer shall remove any limitations placed on an employee or end any special protective measures provided to an employee pursuant to a final medi-

cal determination when a subsequent final medical determination indicates that the limitations or special protective measures are no longer necessary.

(v) Employer options pending a final medical determination. Where the multiple physician review mechanism, or alternate medical determination mechanism used pursuant to the medical surveillance provisions of this section, has not yet resulted in a final medical determination with respect to an employee, the employer shall act as follows:

(A) Removal. The employer may remove the employee from exposure to lead, provide special protective measures to the employee, or place limitations upon the employee, consistent with the medical findings, determinations, or recommendations of any of the physicians who have reviewed the employee's health status.

(B) Return. The employer may return the employee to his or her former job status, end any special protective measures provided to the employee, and remove any limitations placed upon the employee, consistent with the medical findings, determinations, or recommendations of any of the physicians who have reviewed the employee's health status, with two exceptions. If:

(I) The initial removal, special protection, or limitation of the employee resulted from a final medical determination which differed from the findings, determinations, or recommendations of the initial physician; or

(II) The employee has been on removal status for the preceding eighteen months due to an elevated blood lead level, then the employer shall await a final medical determination.

(b) Medical removal protection benefits.

(i) Provision of medical removal protection benefits. The employer shall provide to an employee up to eighteen months of medical removal protection benefits on each occasion that an employee is removed from exposure to lead or otherwise limited pursuant to this section.

(ii) Definition of medical removal protection benefits. For the purposes of this section, the requirement that an employer provide medical removal protection benefits means that the employer shall maintain the earnings, seniority and other employment rights and benefits of an employee as though the employee had not been removed from normal exposure to lead or otherwise limited.

(iii) Follow-up medical surveillance during the period of employee removal or limitation. During the period of time that an employee is removed from normal exposure to lead or otherwise limited, the employer may condition the provision of medical removal protection benefits upon the employee's participation in follow-up medical surveillance made available pursuant to this section.

(iv) Workers' compensation claims. If a removed employee files a claim for workers' compensation payments for a lead-related disability, then the employer shall continue to provide medical removal protection benefits pending disposition of the claim. To the extent that an award is made to the employee for earnings lost during the period of removal, the employer's medical removal protection obligation shall be reduced by such amount. The employer shall receive no credit for workers' compensation payments received by the employee for treatment related expenses.

(v) Other credits. The employer's obligation to provide medical removal protection benefits to a removed employee shall be reduced to the extent that the employee receives compensation for earnings lost during the period of removal either from a publicly or employer-funded compensation program, or receives income from employment with another employer made possible by virtue of the employee's removal.

(vi) Employees whose blood lead levels do not adequately decline within eighteen months of removal. The employer shall take the following measures with respect to any employee removed from exposure to lead due to an elevated blood lead level whose blood lead level has not declined within the past eighteen months of removal so that the employee has been returned to his or her former job status:

(A) The employer shall make available to the employee a medical examination pursuant to this section to obtain a final medical determination with respect to the employee;

(B) The employer shall assure that the final medical determination obtained indicates whether or not the employee may be returned to his or her former job status, and if not, what steps should be taken to protect the employee's health;

(C) Where the final medical determination has not yet been obtained, or once obtained indicates that the employee may not yet be returned to his or her former job status, the employer shall continue to provide medical removal protection benefits to the employee until either the employee is returned to former job status, or a final medical determination is made that the employee is incapable of ever safely returning to his or her former job status.

(D) Where the employer acts pursuant to a final medical determination which permits the return of the employee to his or her former job status despite what would otherwise be an unacceptable blood lead level, later questions concerning removing the employee again shall be decided by a final medical determination. The employer need not automatically remove such an employee pursuant to the blood lead level removal criteria provided by this section.

(vii) Voluntary removal or restriction of an employee. Where an employer, although not required by this section to do so, removes an employee from exposure to lead or otherwise places limitations on an employee due to the effects of lead exposure on the employee's medical condition, the employer shall provide medical removal protection benefits to the employee equal to that required by item (12)(b)(i) of this section.

(13) Employee information and training.

(a) Training program.

(i) Each employer who has a workplace in which there is a potential exposure to airborne lead at any level shall inform employees of the content of Appendices A and B of this regulation.

(ii) The employer shall institute a training program for and assure the participation of all employees who are subject to exposure to lead at or above the action level or for whom the possibility of skin or eye irritation exists.

(iii) The employer shall provide initial training by one hundred eighty days from the effective date for those employees covered by item (13)(a)(ii) on the standard's effective date.

tive date and prior to the time of initial job assignment for those employees subsequently covered by this subsection.

(iv) The training program shall be repeated at least annually for each employee.

(v) The employer shall assure that each employee is informed of the following:

(A) The content of this standard and its appendices;

(B) The specific nature of the operations which could result in exposure to lead above the action level;

(C) The purpose, proper use, limitations, and other training requirements for respiratory protection as required by chapter 296-62 WAC, Part E;

(D) The purpose and a description of the medical surveillance program, and the medical removal protection program including information concerning the adverse health effects associated with excessive exposure to lead (with particular attention to the adverse reproductive effects on both males and females);

(E) The engineering controls and work practices associated with the employee's job assignment;

(F) The contents of any compliance plan in effect; and

(G) Instructions to employees that chelating agents should not routinely be used to remove lead from their bodies and should not be used at all except under the direction of a licensed physician.

(b) Access to information and training materials.

(i) The employer shall make readily available to all affected employees a copy of this standard and its appendices.

(ii) The employer shall provide, upon request, all materials relating to the employee information and training program to the director.

(iii) In addition to the information required by item (13)(a)(v), the employer shall include as part of the training program, and shall distribute to employees, any materials pertaining to the Occupational Safety and Health Act, the regulations issued pursuant to the act, and this lead standard, which are made available to the employer by the director.

(14) Signs.

(a) General.

(i) The employer may use signs required by other statutes, regulations or ordinances in addition to, or in combination with, signs required by this subsection.

(ii) The employer shall assure that no statement appears on or near any sign required by this subsection which contradicts or detracts from the meaning of the required sign.

(b) Signs.

(i) The employer shall post the following warning signs in each work area where the PEL is exceeded:

WARNING
LEAD WORK AREA
POISON
NO SMOKING OR EATING

(ii) The employer shall assure that signs required by this subsection are illuminated and cleaned as necessary so that the legend is readily visible.

(15) Recordkeeping.

(a) Exposure monitoring.

(i) The employer shall establish and maintain an accurate record of all monitoring required in subsection (5) of this section.

(ii) This record shall include:

(A) The date(s), number, duration, location and results of each of the samples taken, including a description of the sampling procedure used to determine representative employee exposure where applicable;

(B) A description of the sampling and analytical methods used and evidence of their accuracy;

(C) The type of respiratory protective devices worn, if any;

(D) Name, social security number, and job classification of the employee monitored and of all other employees whose exposure the measurement is intended to represent; and

(E) The environmental variables that could affect the measurement of employee exposure.

(iii) The employer shall maintain these monitoring records for at least forty years or for the duration of employment plus twenty years, whichever is longer.

(b) Medical surveillance.

(i) The employer shall establish and maintain an accurate record for each employee subject to medical surveillance as required by subsection (11) of this section.

(ii) This record shall include:

(A) The name, social security number, and description of the duties of the employee;

(B) A copy of the physician's written opinions;

(C) Results of any airborne exposure monitoring done for that employee and the representative exposure levels supplied to the physician; and

(D) Any employee medical complaints related to exposure to lead.

(iii) The employer shall keep, or assure that the examining physician keeps, the following medical records:

(A) A copy of the medical examination results including medical and work history required under subsection (11) of this section;

(B) A description of the laboratory procedures and a copy of any standards or guidelines used to interpret the test results or references to that information; and

(C) A copy of the results of biological monitoring.

(iv) The employer shall maintain or assure that the physician maintains those medical records for at least forty years, or for the duration of employment plus twenty years, whichever is longer.

(c) Medical removals.

(i) The employer shall establish and maintain an accurate record for each employee removed from current exposure to lead pursuant to subsection (12) of this section.

(ii) Each record shall include:

(A) The name and social security number of the employee;

(B) The date on each occasion that the employee was removed from current exposure to lead as well as the corresponding date on which the employee was returned to his or her former job status;

(C) A brief explanation of how each removal was or is being accomplished; and

(D) A statement with respect to each removal indicating whether or not the reason for the removal was an elevated blood lead level.

(iii) The employer shall maintain each medical removal record for at least the duration of an employee's employment.

(d) Availability.

(i) The employer shall make available upon request all records required to be maintained by subsection (15) of this section to the director for examination and copying.

(ii) Environmental monitoring, medical removal, and medical records required by this subsection shall be provided upon request to employees, designated representatives, and the assistant director in accordance with WAC 296-62-05201 through 296-62-05209 and 296-62-05213 through 296-62-05217. Medical removal records shall be provided in the same manner as environmental monitoring records.

(iii) Upon request, the employer shall make an employee's medical records required to be maintained by this section available to the affected employee or former employee or to a physician or other individual designated by such affected employee or former employees for examination and copying.

(e) Transfer of records.

(i) Whenever the employer ceases to do business, the successor employer shall receive and retain all records required to be maintained by subsection (15) of this section.

(ii) Whenever the employer ceases to do business and there is no successor employer to receive and retain the records required to be maintained by this section for the prescribed period, these records shall be transmitted to the director.

(iii) At the expiration of the retention period for the records required to be maintained by this section, the employer shall notify the director at least three months prior to the disposal of such records and shall transmit those records to the director if requested within the period.

(iv) The employer shall also comply with any additional requirements involving transfer of records set forth in WAC 296-62-05215.

(16) Observation of monitoring.

(a) Employee observation. The employer shall provide affected employees or their designated representatives an opportunity to observe any monitoring of employee exposure to lead conducted pursuant to subsection (5) of this section.

(b) Observation procedures.

(i) Whenever observation of the monitoring of employee exposure to lead requires entry into an area where the use of respirators, protective clothing or equipment is required, the employer shall provide the observer with and assure the use of such respirators, clothing and such equipment, and shall require the observer to comply with all other applicable safety and health procedures.

(ii) Without interfering with the monitoring, observers shall be entitled to:

(A) Receive an explanation of the measurement procedures;

(B) Observe all steps related to the monitoring of lead performed at the place of exposure; and

(C) Record the results obtained or receive copies of the results when returned by the laboratory.

(17) Appendices. The information contained in the appendices to this section is not intended by itself, to create any additional obligations not otherwise imposed by this standard nor detract from any existing obligation.

(a) Appendix A. Substance Data Sheet for Occupational Exposure to Lead.

(i) Substance identification.

(A) Substance. Pure lead (Pb) is a heavy metal at room temperature and pressure and is a basic chemical element. It can combine with various other substances to form numerous lead compounds.

(B) Compounds covered by the standard. The word "lead" when used in this standard means elemental lead, all inorganic lead compounds (except those which are not biologically available due to either solubility or specific chemical interaction), and a class of organic lead compounds called lead soaps. This standard does not apply to other organic lead compounds.

(C) Uses. Exposure to lead occurs in at least 120 different occupations, including primary and secondary lead smelting, lead storage battery manufacturing, lead pigment manufacturing and use, solder manufacturing and use, shipbuilding and ship repairing, auto manufacturing, and printing.

(D) Permissible exposure. The Permissible Exposure Limit (PEL) set by the standard is 50 micrograms of lead per cubic meter of air ($50 \mu\text{g}/\text{m}^3$), averaged over an eight-hour work day.

(E) Action level. The standard establishes an action level of 30 micrograms per cubic meter of air ($30 \mu\text{g}/\text{m}^3$) time weighted average, based on an eight-hour work day. The action level initiates several requirements of the standard, such as exposure monitoring, medical surveillance, and training and education.

(ii) Health hazard data.

(A) Ways in which lead enters your body.

(I) When absorbed into your body in certain doses lead is a toxic substance. The object of the lead standard is to prevent absorption of harmful quantities of lead. The standard is intended to protect you not only from the immediate toxic effects of lead, but also from the serious toxic effects that may not become apparent until years of exposure have passed.

(II) Lead can be absorbed into your body by inhalation (breathing) and ingestion (eating). Lead (except for certain organic lead compounds not covered by the standard, such as tetraethyl lead) is not absorbed through your skin. When lead is scattered in the air as a dust, fume or mist, it can be inhaled and absorbed through your lungs and upper respiratory tract. Inhalation of airborne lead is generally the most important source of occupational lead absorption. You can also absorb lead through your digestive system if lead gets into your mouth and is swallowed. If you handle food, cigarettes, chewing tobacco, or make-up which have lead on them or handle them with hands contaminated with lead, this will contribute to ingestion.

(III) A significant portion of the lead that you inhale or ingest gets into your blood stream. Once in your blood stream lead is circulated throughout your body and stored in various organs and body tissues. Some of this lead is quickly filtered

out of your body and excreted, but some remains in your blood and other tissue. As exposure to lead continues, the amount stored in your body will increase if you are absorbing more lead than your body is excreting. Even though you may not be aware of any immediate symptoms of disease, this lead stored in your tissues can be slowly causing irreversible damage, first to individual cells, then to your organs and whole body systems.

(B) Effects of overexposure to lead.

(I) Short-term (acute) overexposure. Lead is a potent, systemic poison that serves no known useful function once absorbed by your body. Taken in large enough doses, lead can kill you in a matter of days. A condition affecting the brain called acute encephalopathy may arise which develops quickly to seizures, coma, and death from cardiorespiratory arrest. A short-term dose of lead can lead to acute encephalopathy. Short-term occupational exposures of this magnitude are highly unusual, but not impossible. Similar forms of encephalopathy may, however arise from extended, chronic exposure to lower doses of lead. There is no sharp dividing line between rapidly developing acute effects of lead, and chronic effects which take longer to acquire. Lead adversely affects numerous body systems, and causes forms of health impairment and disease which arise after periods of exposure as short as days or as long as several years.

(II) Long-term (chronic) overexposure.

a) Chronic overexposure to lead may result in severe damage to your blood-forming, nervous, urinary and reproductive systems. Some common symptoms of chronic overexposure include loss of appetite, metallic taste in the mouth, anxiety, constipation, nausea, pallor, excessive tiredness, weakness, insomnia, headache, nervous irritability, muscle and joint pain or soreness, fine tremors, numbness, dizziness, hyperactivity and colic. In lead colic there may be severe abdominal pain.

b) Damage to the central nervous system in general and the brain (encephalopathy) in particular is one of the most severe forms of lead poisoning. The most severe, often fatal, form of encephalopathy may be preceded by vomiting, a feeling of dullness progressing to drowsiness and stupor, poor memory, restlessness, irritability, tremor, and convulsions. It may arise suddenly with the onset of seizures, followed by coma, and death. There is a tendency for muscular weakness to develop at the same time. This weakness may progress to paralysis often observed as a characteristic "wrist drop" or "foot drop" and is a manifestation of a disease to the nervous system called peripheral neuropathy.

c) Chronic overexposure to lead also results in kidney disease with few, if any, symptoms appearing until extensive and most likely permanent kidney damage has occurred. Routine laboratory tests reveal the presence of this kidney disease only after about two-thirds of kidney function is lost. When overt symptoms of urinary dysfunction arise, it is often too late to correct or prevent worsening conditions, and progression of kidney dialysis or death is possible.

d) Chronic overexposure to lead impairs the reproductive systems of both men and women. Overexposure to lead may result in decreased sex drive, impotence and sterility in men. Lead can alter the structure of sperm cells raising the risk of birth defects. There is evidence of miscarriage and

stillbirth in women whose husbands were exposed to lead or who were exposed to lead themselves. Lead exposure also may result in decreased fertility, and abnormal menstrual cycles in women. The course of pregnancy may be adversely affected by exposure to lead since lead crosses the placental barrier and poses risks to developing fetuses. Children born of parents either one of whom were exposed to excess lead levels are more likely to have birth defects, mental retardation, behavioral disorders or die during the first year of childhood.

e) Overexposure to lead also disrupts the blood-forming system resulting in decreased hemoglobin (the substance in the blood that carries oxygen to the cells) and ultimately anemia. Anemia is characterized by weakness, pallor and fatigability as a result of decreased oxygen carrying capacity in the blood.

(III) Health protection goals of the standard.

a) Prevention of adverse health effects for most workers from exposure to lead throughout a working lifetime requires that worker blood lead (PbB) levels be maintained at or below forty micrograms per one hundred grams of whole blood (40 $\mu\text{g}/100\text{g}$). The blood lead levels of workers (both male and female workers) who intend to have children should be maintained below 30 $\mu\text{g}/100\text{g}$ to minimize adverse reproductive health effects to the parents and to the developing fetus.

b) The measurement of your blood lead level is the most useful indicator of the amount of lead absorbed by your body. Blood lead levels (PbB) are most often reported in units of milligrams (mg) or micrograms (μg) of lead (1 mg=1000 μg) per 100 grams (100g), 100 milliliters (100 ml) or deciliter (dl) of blood. These three units are essentially the same. Sometimes PbB's are expressed in the form of mg% or $\mu\text{g}\%$. This is a shorthand notation for 100g, 100ml, or dl.

c) PbB measurements show the amount of lead circulating in your blood stream, but do not give any information about the amount of lead stored in your various tissues. PbB measurements merely show current absorption of lead, not the effect that lead is having on your body or the effects that past lead exposure may have already caused. Past research into lead-related diseases, however, has focused heavily on associations between PbBs and various diseases. As a result, your PbB is an important indicator of the likelihood that you will gradually acquire a lead-related health impairment or disease.

d) Once your blood lead level climbs above 40 $\mu\text{g}/100\text{g}$, your risk of disease increases. There is a wide variability of individual response to lead, thus it is difficult to say that a particular PbB in a given person will cause a particular effect. Studies have associated fatal encephalopathy with PbBs as low as 150 $\mu\text{g}/100\text{g}$. Other studies have shown other forms of disease in some workers with PbBs well below 80 $\mu\text{g}/100\text{g}$. Your PbB is a crucial indicator of the risks to your health, but one other factor is extremely important. This factor is the length of time you have had elevated PbBs. The longer you have an elevated PbB, the greater the risk that large quantities of lead are being gradually stored in your organs and tissues (body burden). The greater your overall body burden, the greater the chances of substantial permanent damage.

e) The best way to prevent all forms of lead-related impairments and diseases—both short-term and long-term—is to maintain your PbB below 40 $\mu\text{g}/100\text{g}$. The provisions of the standard are designed with this end in mind. Your employer has prime responsibility to assure that the provisions of the standard are complied with both by the company and by individual workers. You as a worker, however, also have a responsibility to assist your employer in complying with the standard. You can play a key role in protecting your own health by learning about the lead hazards and their control, learning what the standard requires, following the standard where it governs your own action, and seeing that your employer complies with the provisions governing his actions.

(IV) Reporting signs and symptoms of health problems. You should immediately notify your employer if you develop signs or symptoms associated with lead poisoning or if you desire medical advice concerning the effects of current or past exposure to lead on your ability to have a healthy child. You should also notify your employer if you have difficulty breathing during a respirator fit test or while wearing a respirator. In each of these cases your employer must make available to you appropriate medical examinations or consultations. These must be provided at no cost to you and at a reasonable time and place.

(b) Appendix B. Employee Standard Summary. This appendix summarizes key provisions of the standard that you as a worker should become familiar with. The appendix discusses the entire standard.

(i) Permissible exposure limit (PEL). The standard sets a permissible exposure limit (PEL) of fifty micrograms of lead per cubic meter of air ($50 \mu\text{g}/\text{m}^3$), averaged over an eight-hour workday. This is the highest level of lead in air to which you may be permissibly exposed over an eight-hour workday. Since it is an eight-hour average it permits short exposures above the PEL so long as for each eight-hour workday your average exposure does not exceed the PEL.

(ii) Exposure monitoring.

(A) If lead is present in the work place where you work in any quantity, your employer is required to make an initial determination of whether the action level is exceeded for any employee. The initial determination must include instrument monitoring of the air for the presence of lead and must cover the exposure of a representative number of employees who are reasonably believed to have the highest exposure levels. If your employer has conducted appropriate air sampling for lead in the past year he may use these results. If there have been any employee complaints of symptoms which may be attributable to exposure to lead or if there is any other information or observations which would indicate employee exposure to lead, this must also be considered as part of the initial determination. If this initial determination shows that a reasonable possibility exists that any employee may be exposed, without regard to respirators, over the action level ($30 \mu\text{g}/\text{m}^3$) your employer must set up an air monitoring program to determine the exposure level of every employee exposed to lead at your work place.

(B) In carrying out this air monitoring program, your employer is not required to monitor the exposure of every employee, but he or she must monitor a representative num-

ber of employees and job types. Enough sampling must be done to enable each employee's exposure level to be reasonably represented by at least one full shift (at least seven hours) air sample. In addition, these air samples must be taken under conditions which represent each employee's regular, daily exposure to lead.

(C) If you are exposed to lead and air sampling is performed, your employer is required to quickly notify you in writing of air monitoring results which represent your exposure. If the results indicate your exposure exceeds the PEL (without regard to your use of respirators), then your employer must also notify you of this in writing, and provide you with a description of the corrective action that will be taken to reduce your exposure.

(D) Your exposure must be rechecked by monitoring every six months if your exposure is over the action level but below the PEL. Air monitoring must be repeated every three months if you are exposed over the PEL. Your employer may discontinue monitoring for you if two consecutive measurements, taken at least two weeks apart, are below the action level. However, whenever there is a production, process, control, or personnel change at your work place which may result in new or additional exposure to lead, or whenever there is any other reason to suspect a change which may result in new or additional exposure to lead, your employer must perform additional monitoring.

(iii) Methods of compliance. Your employer is required to assure that no employee is exposed to lead in excess of the PEL. The standard establishes a priority of methods to be used to meet the PEL.

(iv) Respiratory protection.

(A) Your employer is required to provide and assure your use of respirators when your exposure to lead is not controlled below the PEL by other means. The employer must pay the cost of the respirator. Whenever you request one, your employer is also required to provide you a respirator even if your air exposure level does not exceed the PEL. You might desire a respirator when, for example, you have received medical advice that your lead absorption should be decreased. Or, you may intend to have children in the near future, and want to reduce the level of lead in your body to minimize adverse reproductive effects. While respirators are the least satisfactory means of controlling your exposure, they are capable of providing significant protection if properly chosen, fitted, worn, cleaned, maintained, and replaced when they stop providing adequate protection.

(B) Your employer is required to select respirators from the seven types listed in Table II of the respiratory protection section of this standard (see subsection (7)(c) of this section). Any respirator chosen must be certified by the National Institute for Occupational Safety and Health (NIOSH) under the provisions of 42 CFR part 84. This respirator selection table will enable your employer to choose a type of respirator which will give you a proper amount of protection based on your airborne lead exposure. Your employer may select a type of respirator that provides greater protection than that required by the standard; that is, one recommended for a higher concentration of lead than is present in your work place. For example, a powered air purifying respirator (PAPR) is much more protective than a typical negative-pres-

sure respirator, and may also be more comfortable to wear. A PAPR has a filter, cartridge or canister to clean the air, and a power source which continuously blows filtered air into your breathing zone. Your employer might make a PAPR available to you to ease the burden of having to wear a respirator for long periods of time. The standard provides that you can obtain a PAPR upon request.

(C) Your employer must also start a respiratory protection program. This program must include written procedures for the proper selection, use, cleaning, storage, and maintenance of respirators.

(D) Your employer must assure that your respirator facepiece fits properly. Proper fit of a respirator facepiece is critical to your protection against air borne lead. Obtaining a proper fit on each employee may require your employer to make available several different types of respirator masks. To ensure that your respirator fits properly and that facepiece leakage is minimal, your employer must give you either a qualitative or quantitative fit test as required in chapter 296-62 WAC, Part E.

(E) You must also receive from your employer proper training in the use of respirators. Your employer is required to teach you how to wear a respirator, to know why it is needed, and to understand its limitations.

(F) The standard provides that if your respirator uses filter elements, you must be given an opportunity to change the filter elements whenever an increase in breathing resistance is detected. You also must be permitted to periodically leave your work area to wash your face and respirator facepiece whenever necessary to prevent skin irritation. If you ever have difficulty breathing during a fit test or while using a respirator, your employer must make a medical examination available to you to determine whether you can safely wear a respirator. The result of this examination may be to give you a positive pressure respirator (which reduces breathing resistance) or to provide alternative means of protection.

(v) Protective work clothing and equipment. If you are exposed to lead above the PEL, or if you are exposed to lead compounds such as lead arsenate or lead azide which can cause skin and eye irritation, your employer must provide you with protective work clothing and equipment appropriate for the hazard. If work clothing is provided, it must be provided in a clean and dry condition at least weekly, and daily if your airborne exposure to lead is greater than 200 $\mu\text{g}/\text{m}^3$. Appropriate protective work clothing and equipment can include coveralls or similar full-body work clothing, gloves, hats, shoes or disposable shoe coverlets, and face shields or vented goggles. Your employer is required to provide all such equipment at no cost to you. He or she is responsible for providing repairs and replacement as necessary and also is responsible for the cleaning, laundering or disposal of protective clothing and equipment. Contaminated work clothing or equipment must be removed in change rooms and not worn home or you will extend your exposure and expose your family since lead from your clothing can accumulate in your house, car, etc. Contaminated clothing which is to be cleaned, laundered or disposed of must be placed in closed containers in the change room. At no time may lead be removed from

protective clothing or equipment by any means which disperses lead into the work room air.

(vi) Housekeeping. Your employer must establish a housekeeping program sufficient to maintain all surfaces as free as practicable of accumulations of lead dust. Vacuuming is the preferred method of meeting this requirement, and the use of compressed air to clean floors and other surfaces is absolutely prohibited. Dry or wet sweeping, shoveling, or brushing may not be used except where vacuuming or other equally effective methods have been tried and do not work. Vacuums must be used and emptied in a manner which minimizes the reentry of lead into the work place.

(vii) Hygiene facilities and practices.

(A) The standard requires that change rooms, showers and filtered air lunchrooms be constructed and made available to workers exposed to lead above the PEL. When the PEL is exceeded, the employer must assure that food and beverage is not present or consumed, tobacco products are not present or used, and cosmetics are not applied, except in these facilities. Change rooms, showers and lunchrooms, must be used by workers exposed in excess of the PEL. After showering, no clothing or equipment worn during the shift may be worn home and this includes shoes and underwear. Your own clothing worn during the shift should be carried home and cleaned carefully so that it does not contaminate your home. Lunchrooms may not be entered with protective clothing or equipment unless surface dust has been removed by vacuuming, downdraft booth or other cleaning methods. Finally, workers exposed above the PEL must wash both their hands and faces prior to eating, drinking, smoking or applying cosmetics.

(B) All of the facilities and hygiene practices just discussed are essential to minimize additional sources of lead absorption from inhalation or ingestion of lead that may accumulate on you, your clothes or your possessions. Strict compliance with these provisions can virtually eliminate several sources of lead exposure which significantly contribute to excessive lead absorption.

(viii) Medical surveillance.

(A) The medical surveillance program is part of the standard's comprehensive approach to the prevention of lead-related disease. Its purpose is to supplement the main thrust of the standard which is aimed at minimizing airborne concentrations of lead and sources of ingestion. Only medical surveillance can determine if the other provisions of the standard have effectively protected you as an individual. Compliance with the standard's provision will protect most workers from the adverse effects of lead exposure, but may not be satisfactory to protect individual workers (I) who have high body burdens of lead acquired over past years, (II) who have additional uncontrolled sources of nonoccupational lead exposure, (III) who exhibit unusual variations in lead absorption rates, or (IV) who have specific nonwork related medical conditions which could be aggravated by lead exposure (e.g., renal disease, anemia). In addition, control systems may fail, or hygiene and respirator programs may be inadequate. Periodic medical surveillance of individual workers will help detect those failures. Medical surveillance will also be important to protect your reproductive ability - regardless of whether you are a man or a woman.

(B) All medical surveillance required by the standard must be performed by or under the supervision of a licensed physician. The employer must provide required medical surveillance without cost to employees and at a reasonable time and place. The standard's medical surveillance program has two parts - periodic biological monitoring, and medical examinations.

(C) Your employer's obligation to offer medical surveillance is triggered by the results of the air monitoring program. Medical surveillance must be made available to all employees who are exposed in excess of the action level for more than 30 days a year. The initial phase of the medical surveillance program, which included blood lead level tests and medical examinations, must be completed for all covered employees no later than 180 days from the effective date of this standard. Priority within this first round of medical surveillance must be given to employees whom the employer believes to be at greatest risk from continued exposure (for example, those with the longest prior exposure to lead, or those with the highest current exposure). Thereafter, the employer must periodically make medical surveillance - both biological monitoring and medical examinations - available to all covered employees.

(D) Biological monitoring under the standard consists of blood lead level (PbB) and zinc protoporphyrin tests at least every six months after the initial PbB test. A zinc protoporphyrin (ZPP) test is a very useful blood test which measures an effect of lead on your body. If a worker's PbB exceeds 40 $\mu\text{g}/100\text{g}$, the monitoring frequency must be increased from every six months to at least every two months and not reduced until two consecutive PbBs indicate a blood lead level below 40 $\mu\text{g}/100\text{g}$. Each time your PbB is determined to be over 40 $\mu\text{g}/100\text{g}$, your employer must notify you of this in writing within five working days of the receipt of the test results. The employer must also inform you that the standard requires temporary medical removal with economic protection when your PbB exceeds certain criteria (see Discussion of Medical Removal Protection - subsection (12)). During the first year of the standard, this removal criterion is 80 $\mu\text{g}/100\text{g}$. Anytime your PbB exceeds 80 $\mu\text{g}/100\text{g}$ your employer must make available to you a prompt follow-up PbB test to ascertain your PbB. If the two tests both exceed 80 $\mu\text{g}/100\text{g}$ and you are temporarily removed, then your employer must make successive PbB tests available to you on a monthly basis during the period of your removal.

(E) Medical examinations beyond the initial one must be made available on an annual basis if your blood lead levels exceeds 40 $\mu\text{g}/100\text{g}$ at any time during the preceding year. The initial examination will provide information to establish a baseline to which subsequent data can be compared. An initial medical examination must also be made available (prior to assignment) for each employee being assigned for the first time to an area where the airborne concentration of lead equals or exceeds the action level. In addition, a medical examination or consultation must be made available as soon as possible if you notify your employer that you are experiencing signs or symptoms commonly associated with lead poisoning or that you have difficulty breathing while wearing a respirator or during a respirator fit test. You must also be

provided a medical examination or consultation if you notify your employer that you desire medical advice concerning the effects of current or past exposure to lead on your ability to procreate a healthy child.

(F) Finally, appropriate follow-up medical examinations or consultations may also be provided for employees who have been temporarily removed from exposure under the medical removal protection provisions of the standard (see item (ix) below).

(G) The standard specifies the minimum content of pre-assignment and annual medical examinations. The content of other types of medical examinations and consultations is left up to the sound discretion of the examining physician. Pre-assignment and annual medical examinations must include (I) a detailed work history and medical history, (II) a thorough physical examination, and (III) a series of laboratory tests designed to check your blood chemistry and your kidney function. In addition, at any time upon your request, a laboratory evaluation of male fertility will be made (microscopic examination of a sperm sample), or a pregnancy test will be given.

(H) The standard does not require that you participate in any of the medical procedures, tests, etc., which your employer is required to make available to you. Medical surveillance can, however, play a very important role in protecting your health. You are strongly encouraged, therefore, to participate in a meaningful fashion. Generally, your employer will choose the physician who conducts medical surveillance under the lead standard - unless you and your employer can agree on the choice of a physician or physicians. Some companies and unions have agreed in advance, for example, to use certain independent medical laboratories or panels of physicians. Any of these arrangements are acceptable so long as required medical surveillance is made available to workers.

(I) The standard requires your employer to provide certain information to a physician to aid in his or her examination of you. This information includes (I) the standard and its appendices, (II) a description of your duties as they relate to lead exposure, (III) your exposure level, (IV) a description of personal protective equipment you wear, (V) prior blood level results, and (VI) prior written medical opinions concerning you that the employer has. After a medical examination or consultation the physician must prepare a written report which must contain (I) the physician's opinion as to whether you have any medical conditions which places you at increased risk of material impairment to health from exposure to lead, (II) any recommended special protective measures to be provided to you, (III) any blood lead level determinations, and (IV) any recommended limitation on your use of respirators. This last element must include a determination of whether you can wear a powered air purifying respirator (PAPR) if you are found unable to wear a negative pressure respirator.

(J) The medical surveillance program of the lead standard may at some point in time serve to notify certain workers that they have acquired a disease or other adverse medical condition as a result of occupational lead exposure. If this is true these workers might have legal rights to compensation from public agencies, their employers, firms that supply haz-

ardous products to their employers, or other persons. Some states have laws, including worker compensation laws, that disallow a worker to learn of a job-related health impairment to sue, unless the worker sues within a short period of time after learning of the impairment. (This period of time may be a matter of months or years.) An attorney can be consulted about these possibilities. It should be stressed that WISHA is in no way trying to either encourage or discourage claims or lawsuits. However, since results of the standard's medical surveillance program can significantly affect the legal remedies of a worker who has acquired a job-related disease or impairment, it is proper for WISHA to make you aware of this.

(K) The medical surveillance section of the standard also contains provisions dealing with chelation. Chelation is the use of certain drugs (administered in pill form or injected into the body) to reduce the amount of lead absorbed in body tissues. Experience accumulated by the medical and scientific communities has largely confirmed the effectiveness of this type of therapy for the treatment of very severe lead poisoning. On the other hand it has also been established that there can be a long list of extremely harmful side effects associated with the use of chelating agents. The medical community has balanced the advantages and disadvantages resulting from the use of chelating agents in various circumstances and has established when the use of these agents is acceptable. The standard includes these accepted limitations due to a history of abuse of chelation therapy by some lead companies. The most widely used chelating agents are calcium disodium EDTA, (Ca Na₂EDTA), Calcium Disodium Versenate (Versenate), and d-penicillamine (penicillamine or Cupramine).

(L) The standard prohibits "prophylactic chelation" of any employee by any person the employer retains, supervises or controls. "Prophylactic chelation" is the routine use of chelating or similarly acting drugs to prevent elevated blood levels in workers who are occupationally exposed to lead, or the use of these drugs to routinely lower blood lead levels to predesignated concentrations believed to be safe. It should be emphasized that where an employer takes a worker who has no symptoms of lead poisoning and has chelation carried out by a physician (either inside or outside of a hospital) solely to reduce the worker's blood lead level, that will generally be considered prophylactic chelation. The use of a hospital and a physician does not mean that prophylactic chelation is not being performed. Routine chelation to prevent increased or reduce current blood lead levels is unacceptable whatever the setting.

(M) The standard allows the use of "therapeutic" or "diagnostic" chelation if administered under the supervision of a licensed physician in a clinical setting with thorough and appropriate medical monitoring. Therapeutic chelation responds to severe lead poisoning where there are marked symptoms. Diagnostic chelation, involves giving a patient a dose of the drug then collecting all urine excreted for some period of time as an aid to the diagnosis of lead poisoning.

(N) In cases where the examining physician determines that chelation is appropriate, you must be notified in writing of this fact before such treatment. This will inform you of a

potentially harmful treatment, and allow you to obtain a second opinion.

(ix) Medical removal protection.

(A) Excessive lead absorption subjects you to increased risk of disease. Medical removal protection (MRP) is a means of protecting you when for whatever reasons, other methods, such as engineering controls, work practices, and respirators, have failed to provide the protection you need. MRP involves the temporary removal of a worker from his or her regular job to a place of significantly lower exposure without any loss of earnings, seniority, or other employment rights of benefits. The purpose of this program is to cease further lead absorption and allow your body to naturally excrete lead which has previously been absorbed. Temporary medical removal can result from an elevated blood lead level, or a medical opinion. Up to eighteen months of protection is provided as a result of either form of removal. The vast majority of removed workers, however, will return to their former jobs long before this eighteen month period expires. The standard contains special provisions to deal with the extraordinary but possible case where a long-term worker's blood lead level does not adequately decline during eighteen months of removal.

(B) During the first year of the standard, if your blood lead level is 80 µg/100g or above you must be removed from any exposure where your air lead level without a respirator would be 100 µg/m³ or above. If you are removed from your normal job you may not be returned until your blood lead level declines to at least 60 µg/100g. These criteria for removal and return will change according to the following schedule:

TABLE I

Effective Date	Removal Blood Level (µg/100g)	Air Lead (µg/m ³)	Return Blood Lead (µg/100g)
9/6/81	At or above 70	50 or above	At or below 50
9/6/82	At or above 60	30 or above	At or below 40
9/6/84	At or above 50 averaged over six months	30 or above	At or below 40

(C) You may also be removed from exposure even if your blood lead levels are below these criteria if a final medical determination indicates that you temporarily need reduced lead exposure for medical reasons. If the physician who is implementing your employer's medical program makes a final written opinion recommending your removal or other special protective measures, your employer must implement the physician's recommendation. If you are removed in this manner, you may only be returned when the physician indicates it is safe for you to do so.

(D) The standard does not give specific instructions dealing with what an employer must do with a removed worker. Your job assignment upon removal is a matter for you, your employer and your union (if any) to work out consistent with existing procedures for job assignments. Each removal must be accomplished in a manner consistent with existing collective bargaining relationships. Your employer is given broad discretion to implement temporary removals so long as no attempt is made to override existing agreements. Similarly, a

PERMANENT

removed worker is provided no right to veto an employer's choice which satisfies the standard.

(E) In most cases, employers will likely transfer removed employees to other jobs with sufficiently low lead exposure. Alternatively, a worker's hours may be reduced so that the time weighted average exposure is reduced, or he or she may be temporarily laid off if no other alternative is feasible.

(F) In all of these situations, MRP benefits must be provided during the period of removal - i.e., you continue to receive the same earnings, seniority, and other rights and benefits you would have had if you had not been removed. Earnings include more than just your base wage; it includes overtime, shift differentials, incentives, and other compensation you would have earned if you had not been removed. During the period of removal you must also be provided with appropriate follow-up medical surveillance. If you were removed because your blood lead level was too high, you must be provided with a monthly blood test. If a medical opinion caused your removal, you must be provided medical tests or examinations that the physician believes to be appropriate. If you do not participate in this follow-up medical surveillance, you may lose your eligibility for MRP benefits.

(G) When you are medically eligible to return to your former job, your employer must return you to your "former job status." This means that you are entitled to the position, wages, benefits, etc., you would have had if you had not been removed. If you would still be in your old job if no removal had occurred, that is where you go back. If not, you are returned consistent with whatever job assignment discretion your employer would have had if no removal had occurred. MRP only seeks to maintain your rights, not expand them or diminish them.

(H) If you are removed under MRP and you are also eligible for worker compensation or other compensation for lost wages, your employer's MRP benefits obligation is reduced by the amount that you actually receive from these other sources. This is also true if you obtain other employment during the time you are laid off with MRP benefits.

(I) The standard also covers situations where an employer voluntarily removes a worker from exposure to lead due to the effects of lead on the employee's medical condition, even though the standard does not require removal. In these situations MRP benefits must still be provided as though the standard required removal. Finally, it is important to note that in all cases where removal is required, respirators cannot be used as a substitute. Respirators may be used before removal becomes necessary, but not as an alternative to a transfer to a low exposure job, or to a lay-off with MRP benefits.

(x) Employee information and training.

(A) Your employer is required to provide an information and training program for all employees exposed to lead above the action level or who may suffer skin or eye irritation from lead. This program must inform these employees of the specific hazards associated with their work environment, protective measures which can be taken, the danger of lead to their bodies (including their reproductive systems), and their rights under the standard. In addition, your employer must make readily available to all employees, including those exposed

below the action level, a copy of the standard and its appendices and must distribute to all employees any materials provided to the employer under the Washington Industrial Safety and Health Act (WISHA).

(B) Your employer is required to complete this training for all employees by March 4, 1981. After this date, all new employees must be trained prior to initial assignment to areas where there is possibility of exposure over the action level. This training program must also be provided at least annually thereafter.

(xi) Signs. The standard requires that the following warning sign be posted in work areas where the exposure to lead exceeds the PEL:

WARNING
LEAD WORK AREA
NO SMOKING OR EATING

(xii) Recordkeeping.

(A) Your employer is required to keep all records of exposure monitoring for airborne lead. These records must include the name and job classification of employees measured, details of the sampling and analytic techniques, the results of this sampling and the type of respiratory protection being worn by the person sampled. Your employer is also required to keep all records of biological monitoring and medical examination results. These must include the names of the employees, the physician's written opinion and a copy of the results of the examination. All of the above kinds of records must be kept for 40 years, or for at least 20 years after your termination of employment, whichever is longer.

(B) Recordkeeping is also required if you are temporarily removed from your job under the MRP program. This record must include your name and social security number, the date of your removal and return, how the removal was or is being accomplished, and whether or not the reason for the removal was an elevated blood lead level. Your employer is required to keep each medical removal record only for as long as the duration of an employee's employment.

(C) The standard requires that if you request to see or copy environmental monitoring, blood lead level monitoring, or medical removal records, they must be made available to you or to a representative that you authorize. Your union also has access to these records. Medical records other than PbBs must also be provided to you upon request, to your physician or to any other person whom you may specifically designate. Your union does not have access to your personal medical records unless you authorize their access.

(xiii) Observations of monitoring. When air monitoring for lead is performed at your work place as required by this standard, your employer must allow you or someone you designate to act as an observer of the monitoring. Observers are entitled to an explanation of the measurement procedure, and to record the results obtained. Since results will not normally be available at the time of the monitoring, observers are entitled to record or receive the results of the monitoring when returned by the laboratory. Your employer is required to provide the observer with any personal protective devices required to be worn by employees working in the areas that is being monitored. The employer must require the observer to

PERMANENT

wear all such equipment and to comply with all other applicable safety and health procedures.

(xiv) Effective date. The standard's effective date is September 6, 1980, and the employer's obligation under the standard begin to come into effect as of that date. The standard was originally adopted as WAC 296-62-07349 and later recodified to WAC 296-62-07521.

(c) Appendix C. Medical Surveillance Guidelines.

(i) Introduction.

(A) The primary purpose of the Washington Industrial Safety and Health Act of 1973 is to assure, so far as possible, safe and healthful working conditions for every working man and woman. The occupational health standard for inorganic lead* was promulgated to protect workers exposed to inorganic lead including metallic lead, all inorganic lead compounds and organic lead soaps.

*The term inorganic lead used throughout the medical surveillance appendices is meant to be synonymous with the definition of lead set forth in the standard.

(B) Under this final standard in effect as of September 6, 1980, occupational exposure to inorganic lead is to be limited to 50 µg/m³ (micrograms per cubic meter) based on an eight-hour time-weighted average (TWA). This level of exposure eventually must be achieved through a combination of engineering, work practice and other administrative controls. Periods of time ranging from one to ten years are provided for different industries to implement these controls which are based on individual industry considerations. Until these controls are in place, respirators must be used to meet the 50 µg/m³ exposure limit.

(C) The standard also provides for a program of biological monitoring and medical surveillance for all employees exposed to levels of inorganic lead above the action level of 30 µg/m³ for more than thirty days per year.

(D) The purpose of this document is to outline the medical surveillance provisions of the standard for inorganic lead, and to provide further information to the physician regarding the examination and evaluation of workers exposed to inorganic lead.

(E) Item (ii) provides a detailed description of the monitoring procedure including the required frequency of blood testing for exposed workers, provisions for medical removal protection (MRP), the recommended right of the employee to a second medical opinion, and notification and recordkeeping requirements of the employer. A discussion of the requirements for respirator use and respirator monitoring and WISHA's position on prophylactic chelation therapy are also included in this section.

(F) Item (iii) discusses the toxic effects and clinical manifestations of lead poisoning and effects of lead intoxication on enzymatic pathways in heme synthesis. The adverse effects on both male and female reproductive capacity and on the fetus are also discussed.

(G) Item (iv) outlines the recommended medical evaluation of the worker exposed to inorganic lead including details of the medical history, physical examination, and recommended laboratory tests, which are based on the toxic effects of lead as discussed in item (ii).

(H) Item (v) provides detailed information concerning the laboratory tests available for the monitoring of exposed workers. Included also is a discussion of the relative value of each test and the limitations and precautions which are necessary in the interpretation of the laboratory results.

(I) Airborne levels to be achieved without reliance on respirator protection through a combination of engineering and work practice or other administrative controls are illustrated in the following table:

Industry	Permissible Lead Level/Compliance Date		
	200µg/m ³	100µg/m ³	50µg/m ³
Primary Lead Production	1973	06/29/84	06/29/91
Secondary Lead Production	1973	06/29/84	06/29/91
Lead Acid Battery Manufacturing	1973	06/29/83	06/29/91
Automobile Mfg./Solder, Grinding	1973	N/A	03/08/97
Electronics, Gray Iron Foundries, Ink Mfg., Paints and Coatings Mfg., Can Mfg., Wallpaper Mfg., and Printing.	1973	N/A	06/29/91
Lead Chemical Mfg., Non-ferrous Foundries, Leaded Steel Mfg., Battery Breaking in the Collection and Processing of Scrap (when not a part of secondary lead smelter) Secondary Copper Smelter, Brass and Bronze Ingot Production.	1973	N/A	N/A ^{1*}
All Other Industries	1973	N/A	09/08/92

* Feasibility of achieving the PEL by engineering and work practice controls for these industries has yet to be resolved in court, therefore no date has been scheduled.

(ii) Medical surveillance and monitoring requirements for workers exposed to inorganic lead.

(A) Under the occupational health standard for inorganic lead, a program of biological monitoring and medical surveillance is to be made available to all employees exposed to lead above the action level of 30 µg/m³ TWA for more than thirty days each year. This program consists of periodic blood sampling and medical evaluation to be performed on a schedule which is defined by previous laboratory results, worker complaints or concerns, and the clinical assessment of the examining physician.

(B) Under this program, the blood lead level of all employees who are exposed to lead above the action level of 30 µg/m³ is to be determined at least every six months. The frequency is increased to every two months for employees whose last blood lead level was between 40µg/100g whole blood and the level requiring employee medical removal to be discussed below. For employees who are removed from exposure to lead due to an elevated blood lead, a new blood lead level must be measured monthly. Zinc protoporphyrin (ZPP) measurement is required on each occasion that a blood lead level measurement is made.

(C) An annual medical examination and consultation performed under the guidelines discussed in item (iv) is to be

PERMANENT

made available to each employee for whom a blood test conducted at any time during the preceding twelve months indicated a blood lead level at or above 40µg/100g. Also, an examination is to be given to all employees prior to their assignment to an area in which airborne lead concentrations reach or exceed the action level. In addition, a medical examination must be provided as soon as possible after notification by an employee that the employee has developed signs or symptoms commonly associated with lead intoxication, that the employee desires medical advice regarding lead exposure and the ability to procreate a healthy child, or that the employee has demonstrated difficulty in breathing during a respirator fitting test or during respirator use. An examination is also to be made available to each employee removed from exposure to lead due to a risk of sustaining material impair-

ment to health, or otherwise limited or specially protected pursuant to medical recommendations.

(D) Results of biological monitoring or the recommendations of an examining physician may necessitate removal of an employee from further lead exposure pursuant to the standard's medical removal program (MRP). The object of the MRP program is to provide temporary medical removals to workers either with substantially elevated blood lead levels or otherwise at risk of sustaining material health impairment from continued substantial exposure to lead. The following guidelines which are summarized in Table 10 were created under the standard for the temporary removal of an exposed employee and his or her subsequent return to work in an exposure area.

TABLE 10
EFFECTIVE DATE

	Sept. 6, 1980	Sept. 6, 1981	Sept. 6, 1982	Sept. 6, 1983	Sept. 6, 1984
A. Blood lead level requiring employee medical removal (level must be confirmed with second follow-up blood lead level within two weeks of first report).	>80 µg/100g.	>70 µg/100g.	>60 µg/100g.	>60 µg/100g.	>60 µg/100g or average of last three blood samples or all blood samples over previous 6 months (whichever is over a longer time period) is 50 µg/100g. or greater unless last sample is 40 µg/100g or less.
B. Frequency which employees exposed is action level of lead (30 µg/m ³ TWA) must have blood lead level checked. (ZPP is also required in each occasion that a blood test is obtained):					
1. Last blood lead level less than 40 µg/100g	Every 6 months.	Every 6 months.	Every 6 months.	Every 6 months.	Every 6 months.
2. Last blood lead level between 40 µg/100g and level requiring medical removal (see A above)	Every 2 months.	Every 2 months.	Every 2 months.	Every 2 months.	Every 2 months.
3. Employees removed from exposure to lead because of an elevated blood lead level.	Every 1 month.	Every 1 month.	Every 1 month.	Every 1 month.	Every 1 month.
C. Permissible airborne exposure limit for workers removed from work due to an elevated blood lead level (without regard to respirator protection).	100 µg/m ³ 8 hr TWA	50 µg/m ³ 8 hr TWA	30 µg/m ³ 8 hr TWA	30 µg/m ³ 8 hr TWA	30 µg/m ³ 8 hr TWA
D. Blood lead level confirmed with a second blood analysis, at which employee may return to work. Permissible exposure without regard to respirator protection is listed by industry in Table 1.	60 µg/100g	50 µg/100g	40 µg/100g	40 µg/100g	40 µg/100g

Note: Where medical opinion indicates that an employee is at risk of material impairment from exposure to lead, the physician can remove an employee from exposure exceeding the action level (or less) or recommend special protective measures as deemed appropriate and necessary. Medical monitoring during the medical removal period can be more stringent than noted in the table above if the physician so specifies. Return to work or removal of limitations and special protections is permitted when the physician indicates that the worker is no longer at risk of material impairment.

PERMANENT

(E) Under the standard's ultimate worker removal criteria, a worker is to be removed from any work having any eight-hour TWA exposure to lead of $30 \mu\text{g}/\text{m}^3$ or more whenever either of the following circumstances apply. (I) a blood lead level of $60 \mu\text{g}/100\text{g}$ or greater is obtained and confirmed by a second follow-up blood lead level performed within two weeks after the employer receives the results of the first blood sample test, or (II) the average of the previous three blood lead determinations or the average of all blood lead determinations conducted during the previous six months, whichever encompasses the longest time period, equals or exceeds $50 \mu\text{g}/100\text{g}$, unless the last blood sample indicates a blood lead level at or below $40 \mu\text{g}/100\text{g}$, in which case the employee need not be removed. Medical removal is to continue until two consecutive blood lead levels are $40 \mu\text{g}/100\text{g}$ or less.

(F) During the first two years that the ultimate removal criteria are being phased in, the return criteria have been set to assure that a worker's blood lead level has substantially declined during the period of removal. From March 1, 1979, to March 1, 1980, the blood lead level requiring employee medical removal is $80 \mu\text{g}/100\text{g}$. Workers found to have a confirmed blood lead at this level or greater need only be removed from work having a daily eight hour TWA exposure to lead at or above $100 \mu\text{g}/\text{m}^3$. Workers so removed are to be returned to work when their blood lead levels are at or below $60 \mu\text{g}/100\text{g}$ of whole blood. From March 1, 1980, to March 1, 1981, the blood lead level requiring medical removal is $70 \mu\text{g}/100\text{g}$. During this period workers need only be removed from jobs having a daily eight hour TWA exposure to lead at or above $50 \mu\text{g}/\text{m}^3$ and are to be returned to work when a level of $50 \mu\text{g}/100\text{g}$ is achieved. Beginning March 1, 1981, return depends on the worker's blood lead level declining to $40 \mu\text{g}/100\text{g}$ of whole blood.

(G) As part of the standard, the employer is required to notify in writing each employee whose whole blood lead level exceeds $40 \mu\text{g}/100\text{g}$. In addition, each such employee is to be informed that the standard requires medical removal with MRP benefits, discussed below, when an employee's blood lead level exceeds the above defined limits.

(H) In addition to the above blood lead level criteria, temporary worker removal may also take place as a result of medical determinations and recommendations. Written medical opinions must be prepared after each examination pursuant to the standard. If the examining physician includes medical finding, determination or opinion that the employee has a medical condition which places the employee at increased risk of material health impairment from exposure to lead, then the employee must be removed from exposure to lead at or above the action level. Alternatively, if the examining physician recommends special protective measures for an employee (e.g., use of a powered air purifying respirator) or recommends limitations on an employee's exposure to lead, then the employer must implement these recommendations. Recommendations may be more stringent than the specific provisions of the standard. The examining physician, therefore, is given broad flexibility to tailor special protective procedures to the needs of individual employees. This flexibility

extends to the evaluation and management of pregnant workers and male and female workers who are planning to conceive children. Based on the history, physical examination, and laboratory studies, the physician might recommend special protective measures or medical removal for an employee who is pregnant or who is planning to conceive a child when, in the physician's judgment, continued exposure to lead at the current job would pose a significant risk. The return of the employee to his or her former job status, or the removal of special protections or limitations, depends upon the examining physician determining that the employee is no longer at increased risk of material impairment or that the special measures are no longer needed.

(I) During the period of any form of special protection or removal, the employer must maintain the worker's earnings, seniority, and other employment rights and benefits (as though the worker has not been removed) for a period of up to eighteen months. This economic protection will maximize meaningful worker participation in the medical surveillance program, and is appropriate as part of the employer's overall obligation to provide a safe and healthful work place. The provisions of MRP benefits during the employee's removal period may, however, be conditioned upon participation in medical surveillance.

(J) On rare occasions, an employee's blood lead level may not acceptably decline within eighteen months of removal. This situation will arise only in unusual circumstances, thus the standard relies on an individual medical examination to determine how to protect such an employee. This medical determination is to be based on both laboratory values, including lead levels, zinc protoporphyrin levels, blood counts, and other tests felt to be warranted, as well as the physician's judgment that any symptoms or findings on physical examination are a result of lead toxicity. The medical determination may be that the employee is incapable of ever safely returning to his or her former job status. The medical determination may provide additional removal time past eighteen months for some employees or specify special protective measures to be implemented.

(K) The lead standard provides for a multiple physician review in cases where the employee wishes a second opinion concerning potential lead poisoning or toxicity. If an employee wishes a second opinion, he or she can make an appointment with a physician of his or her choice. This second physician will review the findings, recommendations or determinations of the first physician and conduct any examinations, consultations or tests deemed necessary in an attempt to make a final medical determination. If the first and second physicians do not agree in their assessment they must try to resolve their differences. If they cannot reach an agreement then they must designate a third physician to resolve the dispute.

(L) The employer must provide examining and consulting physicians with the following specific information: A copy of the lead regulations and all appendices, a description of the employee's duties as related to exposure, the exposure level to lead and any other toxic substances (if applicable), a description of personal protective equipment used, blood lead levels, and all prior written medical opinions regarding the employee in the employer's possession or control. The

employer must also obtain from the physician and provide the employee with a written medical opinion containing blood lead levels, the physician's opinion as to whether the employee is at risk of material impairment to health, any recommended protective measures for the employee if further exposure is permitted, as well as any recommended limitations upon an employee's use of respirators.

(M) Employers must instruct each physician not to reveal to the employer in writing or in any other way his or her findings, laboratory results, or diagnoses which are felt to be unrelated to occupational lead exposure. They must also instruct each physician to advise the employee of any occupationally or nonoccupationally related medical condition requiring further treatment or evaluation.

(N) The standard provides for the use of respirators when engineering and other primary controls have not been fully implemented. However, the use of respirator protection shall not be used in lieu of temporary medical removal due to elevated blood lead levels or findings that an employee is at risk of material health impairment. This is based on the numerous inadequacies of respirators including skin rash where the facepiece makes contact with the skin, unacceptable stress to breathing in some workers with underlying cardiopulmonary impairment, difficulty in providing adequate fit, the tendency for respirators to create additional hazards by interfering with vision, hearing, and mobility, and the difficulties of assuring the maximum effectiveness of a complicated work practice program involving respirators. Respirators do, however, serve a useful function where engineering and work practice are inadequate by providing interim or short-term protection, provided they are properly selected for the environment in which the employee will be working, properly fitted to the employee, maintained and cleaned periodically, and worn by the employee when required.

(O) In its final standard on occupational exposure to inorganic lead, WISHA has prohibited prophylactic chelation. Diagnostic and therapeutic chelation are permitted only under the supervision of a licensed physician with appropriate medical monitoring in an acceptable clinical setting. The decision to initiate chelation therapy must be made on an individual basis and take into account the severity of symptoms felt to be a result of lead toxicity along with blood lead levels, ZPP levels and other laboratory tests as appropriate. EDTA and penicillamine, which are the primary chelating agents used in the therapy of occupational lead poisoning, have significant potential side effects and their use must be justified on the basis of expected benefits to the worker.

(P) Unless frank and severe symptoms are present, therapeutic chelation is not recommended given the opportunity to remove a worker from exposure and allow the body to naturally excrete accumulated lead. As a diagnostic aid, the chelation mobilization test using CA-EDTA has limited applicability. According to some investigators, the tests can differentiate between lead-induced and other nephropathies. The test may also provide an estimation of the mobile fraction of the total body lead burden.

(Q) Employers are required to assure that accurate records are maintained on exposure monitoring, medical surveillance, and medical removal for each employee. Exposure monitoring and medical surveillance records must be kept for

forty years or the duration of employment plus twenty years, whichever is longer, while medical removal records must be maintained for the duration of employment. All records required under the standard must be made available upon request to representatives of the director of the department of labor and industries. Employers must also make environmental and biological monitoring and medical removal records available to affected employees and to former employees or their authorized employee representatives. Employees or their specifically designated representatives have access to their entire medical surveillance records.

(R) In addition, the standard requires that the employer inform all workers exposed to lead at or above the action level of the provisions of the standard and all its appendices, the purpose and description of medical surveillance and provisions for medical removal protection if temporary removal is required. An understanding of the potential health effects of lead exposure by all exposed employees along with full understanding of their rights under the lead standard is essential for an effective monitoring program.

(iii) Adverse health effects of inorganic lead.

(A) Although the toxicity of lead has been known for 2,000 years, the knowledge of the complex relationship between lead exposure and human response is still being refined. Significant research into the toxic properties of lead continues throughout the world, and it should be anticipated that our understanding of thresholds of effects and margins of safety will be improved in future years. The provisions of the lead standard are founded on two prime medical judgments; first, the prevention of adverse health effects from exposure to lead throughout a working lifetime requires that worker blood lead levels be maintained at or below 40 $\mu\text{g}/100\text{g}$, and second, the blood lead levels of workers, male or female, who intend to parent in the near future should be maintained below 30 $\mu\text{g}/100\text{g}$ to minimize adverse reproduction health effects to the parent and developing fetus. The adverse effects of lead on reproduction are being actively researched and WISHA encourages the physician to remain abreast of recent developments in the area to best advise pregnant workers or workers planning to conceive children.

(B) The spectrum of health effects caused by lead exposure can be sub-divided into five developmental states; normal, physiological changes of uncertain significance, pathophysiological changes, overt symptoms (morbidity), and mortality. Within this process there are no sharp distinctions, but rather a continuum of effects. Boundaries between categories overlap due to the wide variation of individual responses and exposures in the working population. WISHA's development of the lead standard focused on pathophysiological changes as well as later stages of disease.

(I) Heme synthesis inhibition.

a) The earliest demonstrated effect of lead involves its ability to inhibit at least two enzymes of the heme synthesis pathway at very low blood levels. Inhibition of delta aminolevulinic acid dehydrase (ALA-D) which catalyzes the conversion of delta-aminolevulinic acid (ALA) to protoporphyrin is observed at a blood lead level below 20 $\mu\text{g}/100\text{g}$ whole blood. At a blood lead level of 40 $\mu\text{g}/100\text{g}$, more than twenty percent of the population would have seventy percent inhibition

of ALA-D. There is an exponential increase in ALA excretion at blood lead levels greater than 40 µg/100g.

b) Another enzyme, ferrochelatase, is also inhibited at low blood lead levels. Inhibition of ferrochelatase leads to increased free erythrocyte protoporphyrin (FEP) in the blood which can then bind to zinc to yield zinc protoporphyrin. At a blood lead level of 50µg/100g or greater, nearly 100 percent of the population will have an increase FEP. There is also an exponential relationship between blood lead levels greater than 40 µg/100g and the associated ZPP level, which has led to the development of the ZPP screening test for lead exposure.

c) While the significance of these effects is subject to debate, it is WISHA's position that these enzyme disturbances are early stages of a disease process which may eventually result in the clinical symptoms of lead poisoning. Whether or not the effects do progress to the later stages of clinical disease, disruption of these enzyme processes over a working lifetime is considered to be a material impairment of health.

d) One of the eventual results of lead-induced inhibition of enzymes in the heme synthesis pathway is anemia which can be asymptomatic if mild but associated with a wide array of symptoms including dizziness, fatigue, and tachycardia when more severe. Studies have indicated that lead levels as low as 50 µg/100g can be associated with a definite decreased hemoglobin, although most cases of lead-induced anemia, as well as shortened red-cell survival times, occur at lead levels exceeding 80 µg/100g. Inhibited hemoglobin synthesis is more common in chronic cases whereas shortened erythrocyte life span is more common in acute cases.

e) In lead-induced anemias, there is usually a reticulocytosis along with the presence of basophilic stippling, and ringed sideroblasts, although none of the above are pathognomonic for lead-induced anemia.

(II) Neurological effects.

a) Inorganic lead had been found to have toxic effects on both the central and peripheral nervous systems. The earliest stage of lead-induced central nervous system effects first manifest themselves in the form of behavioral disturbances and central nervous system symptoms including irritability, restlessness, insomnia and other sleep disturbances, fatigue, vertigo, headache, poor memory, tremor, depression, and apathy. With more severe exposure, symptoms can progress to drowsiness, stupor, hallucinations, delirium, convulsions and coma.

b) The most severe and acute form of lead poisoning which usually follows ingestion or inhalation of large amounts of lead is acute encephalopathy which may arise precipitously with the onset of intractable seizures, coma, cardiorespiratory arrest, and death within 48 hours.

c) While there is disagreement about what exposure levels are needed to produce the earliest symptoms, most experts agree that symptoms definitely can occur at blood lead levels of 60 µg/100g whole blood and therefore recommend a 40 µg/100g maximum. The central nervous system effects frequently are not reversible following discontinued exposure or chelation therapy and when improvement does occur, it is almost always only partial.

d) The peripheral neuropathy resulting from lead exposure characteristically involves only motor function with minimal sensory damage and has a marked predilection for the extensor muscles of the most active extremity. The peripheral neuropathy can occur with varying degrees of severity. The earliest and mildest form which can be detected in workers with blood lead levels as low as 50 µg/100g is manifested by slowing or motor nerve conduction velocity often without clinical symptoms. With progression of the neuropathy there is development of painless extensor muscle weakness usually involving the extensor muscles of the fingers and hand in the most active upper extremity, followed in severe cases by wrist drop, much less commonly, foot drop.

e) In addition to slowing of nerve conduction, electromyographical studies in patients with blood lead levels greater than 50 µg/100g have demonstrated a decrease in the number of acting motor unit potentials, an increase in the duration of motor unit potentials, and spontaneous pathological activity including fibrillations and fasciculation. Whether these effects occur at levels of 40 µg/100g is undetermined.

f) While the peripheral neuropathies can occasionally be reversed with therapy, again such recovery is not assured particularly in the more severe neuropathies and often improvement is only partial. The lack of reversibility is felt to be due in part to segmental demyelination.

(III) Gastrointestinal. Lead may also effect the gastrointestinal system producing abdominal colic or diffuse abdominal pain, constipation, obstipation, diarrhea, anorexia, nausea and vomiting. Lead colic rarely develops at blood lead levels below 80 µg/100g.

(IV) Renal.

a) Renal toxicity represents one of the most serious health effects of lead poisoning. In the early stages of disease nuclear inclusion bodies can frequently be identified in proximal renal tubular cells. Renal functions remain normal and the changes in this stage are probably reversible. With more advanced disease there is progressive interstitial fibrosis and impaired renal function. Eventually extensive interstitial fibrosis ensues with sclerotic glomeruli and dilated and atrophied proximal tubules; all represent end stage kidney disease. Azotemia can be progressive, eventually resulting in frank uremia necessitating dialysis. There is occasionally associated hypertension and hyperuricemia with or without gout.

b) Early kidney disease is difficult to detect. The urinalysis is normal in early lead nephropathy and the blood urea nitrogen and serum creatinine increase only when two-thirds of kidney function is lost. Measurement of creatinine clearance can often detect earlier disease as can other methods of measurement of glomerular filtration rate. An abnormal Ca-EDTA mobilization test has been used to differentiate between lead-induced and other nephropathies, but this procedure is not widely accepted. A form of Fanconi syndrome with aminoaciduria, glycosuria, and hyperphosphaturia indicating severe injury to the proximal renal tubules is occasionally seen in children.

(V) Reproductive effects.

a) Exposure to lead can have serious effects on reproductive function in both males and females. In male workers

exposed to lead there can be a decrease in sexual drive, impotence, decreased ability to produce healthy sperm, and sterility. Malformed sperm (teratospermia), decreased number of sperm (hypospermia), and sperm with decreased motility (asthenospermia) can occur. Teratospermia has been noted at mean blood lead levels of 53 µg/100g and hypospermia and asthenospermia at 41 µg/100g. Furthermore, there appears to be a dose-response relationship for teratospermia in lead exposed workers.

b) Women exposed to lead may experience menstrual disturbances including dysmenorrhea, menorrhagia and amenorrhea. Following exposure to lead, women have a higher frequency of sterility, premature births, spontaneous miscarriages, and stillbirths.

c) Germ cells can be affected by lead and cause genetic damage in the egg or sperm cells before conception and result in failure to implant, miscarriage, stillbirth, or birth defects.

d) Infants of mothers with lead poisoning have a higher mortality during the first year and suffer from lowered birth weights, slower growth, and nervous system disorders.

e) Lead can pass through the placental barrier and lead levels in the mother's blood are comparable to concentrations of lead in the umbilical cord at birth. Transplacental passage becomes detectable at 12-14 weeks of gestation and increases until birth.

f) There is little direct data on damage to the fetus from exposure to lead but it is generally assumed that the fetus and newborn would be at least as susceptible to neurological damage as young children. Blood lead levels of 50-60 µg/100g in children can cause significant neurobehavioral impairments, and there is evidence of hyperactivity at blood levels as low as 25 µg/100g. Given the overall body of literature concerning the adverse health effects of lead in children, WISHA feels that the blood lead level in children should be maintained below 30 µg/100g with a population mean of 15 µg/100g. Blood lead levels in the fetus and newborn likewise should not exceed 30 µg/100g.

g) Because of lead's ability to pass through the placental barrier and also because of the demonstrated adverse effects of lead on reproductive function in both males and females as well as the risk of genetic damage of lead on both the ovum and sperm, WISHA recommends a 30 µg/100g maximum permissible blood lead level in both males and females who wish to bear children.

(IV) Other toxic effects.

a) Debate and research continue on the effects of lead on the human body. Hypertension has frequently been noted in occupationally exposed individuals although it is difficult to assess whether this is due to lead's adverse effects on the kidneys or if some other mechanism is involved.

b) Vascular and electrocardiographic changes have been detected but have not been well characterized. Lead is thought to impair thyroid function and interfere with the pituitary-adrenal axis, but again these effects have not been well defined.

(iv) Medical evaluation.

(A) The most important principle in evaluating a worker for any occupational disease including lead poisoning is a high index of suspicion on the part of the examining physi-

cian. As discussed in Section (ii), lead can affect numerous organ systems and produce a wide array of signs and symptoms, most of which are nonspecific and subtle in nature at least in the early stages of disease. Unless serious concern for lead toxicity is present, many of the early clues to diagnosis may easily be overlooked.

(B) The crucial initial step in the medical evaluation is recognizing that a worker's employment can result in exposure to lead. The worker will frequently be able to define exposures to lead and lead-containing materials but often will not volunteer this information unless specifically asked. In other situations the worker may not know of any exposures to lead but the suspicion might be raised on the part of the physician because of the industry or occupation of the worker. Potential occupational exposure to lead and its compounds occur in at least 120 occupations, including lead smelting, the manufacture of lead storage batteries, the manufacture of lead pigments and products containing pigments, solder manufacture, shipbuilding and ship repair, auto manufacturing, construction, and painting.

(C) Once the possibility for lead exposure is raised, the focus can then be directed toward eliciting information from the medical history, physical exam, and finally from laboratory data to evaluate the worker for potential lead toxicity.

(D) A complete and detailed work history is important in the initial evaluation. A listing of all previous employment with information on work processes, exposure to fumes or dust, known exposures to lead or other toxic substances, respiratory protection used, and previous medical surveillance should all be included in the worker's record. Where exposure to lead is suspected, information concerning on-the-job personal hygiene, smoking or eating habits in work areas, laundry procedures, and use of any protective clothing or respiratory protection equipment should be noted. A complete work history is essential in the medical evaluation of a worker with suspected lead toxicity, especially when long-term effects such as neurotoxicity and nephrotoxicity are considered.

(E) The medical history is also of fundamental importance and should include a listing of all past and current medical conditions, current medications including proprietary drug intake, previous surgeries and hospitalizations, allergies, smoking history, alcohol consumption, and also non-occupational lead exposures such as hobbies (hunting, riflery). Also known childhood exposures should be elicited. Any previous history of hematological, neurological, gastrointestinal, renal, psychological, gynecological, genetic, or reproductive problems should be specifically noted.

(F) A careful and complete review of systems must be performed to assess both recognized complaints and subtle or slowly acquired symptoms which the worker might not appreciate as being significant. The review of symptoms should include the following:

General	- weight loss, fatigue, decreased appetite.
---------	---

PERMANENT

- Head, Eyes, Ears, Nose, Throat (HEENT)
- headaches, visual disturbance or decreased visual acuity, hearing deficits or tinnitus, pigmentation of the oral mucosa, or metallic taste in mouth.
- Cardiopulmonary
- shortness of breath, cough, chest pains, palpitations, or orthopnea.
- Gastrointestinal
- nausea, vomiting, heartburn, abdominal pain, constipation or diarrhea.
- Neurologic
- irritability, insomnia, weakness (fatigue), dizziness, loss of memory, confusion, hallucinations, incoordination, ataxia, decreased strength in hands or feet, disturbance in gait, difficulty in climbing stairs, or seizures.
- Hematologic
- pallor, easy fatigability, abnormal blood loss, melena.
- Reproductive (male or female and spouse where relevant)
- history of infertility, impotence, loss of libido, abnormal menstrual periods, history of miscarriages, stillbirths, or children with birth defects.
- Musculoskeletal
- muscle and joint pains.

(G) The physical examination should emphasize the neurological, gastrointestinal, and cardiovascular systems. The worker's weight and blood pressure should be recorded and the oral mucosa checked for pigmentation characteristic of a possible Burtonian or lead line on the gingiva. It should be noted, however, that the lead line may not be present even in severe lead poisoning if good oral hygiene is practiced.

(H) The presence of pallor on skin examination may indicate an anemia, which if severe might also be associated with a tachycardia. If an anemia is suspected, an active search for blood loss should be undertaken including potential blood loss through the gastrointestinal tract.

(I) A complete neurological examination should include an adequate mental status evaluation including a search for behavioral and psychological disturbances, memory testing, evaluation for irritability, insomnia, hallucinations, and mental clouding. Gait and coordination should be examined along with close observation for tremor. A detailed evaluation of peripheral nerve function including careful sensory and motor function testing is warranted. Strength testing particularly of extensor muscle groups of all extremities is of fundamental importance.

(J) Cranial nerve evaluation should also be included in the routine examination.

(K) The abdominal examination should include auscultation for bowel sounds and abnormal bruits and palpation for organomegaly, masses, and diffuse abdominal tenderness.

(L) Cardiovascular examination should evaluate possible early signs of congestive heart failure. Pulmonary status should be addressed particularly if respirator protection is contemplated.

(M) As part of the medical evaluation, the lead standard requires the following laboratory studies.

(I) Blood lead level.

(II) Hemoglobin and hematocrit determinations, red cell indices, and examination of the peripheral blood smear to evaluate red blood cell morphology.

(III) Blood urea nitrogen.

(IV) Serum creatinine.

(V) Routine urinalysis with microscopic examination.

(VI) A zinc protoporphyrin level.

(N) In addition to the above, the physician is authorized to order any further laboratory or other tests which he or she deems necessary in accordance with sound medical practice. The evaluation must also include pregnancy testing or laboratory evaluation of male fertility if requested by the employee.

(O) Additional tests which are probably not warranted on a routine basis but may be appropriate when blood lead and ZPP levels are equivocal include delta aminolevulinic acid and coproporphyrin concentrations in the urine, and dark-field illumination for detection of basophilic stippling in red blood cells.

(P) If an anemia is detected further studies including a careful examination of the peripheral smear, reticulocyte count, stool for occult blood, serum iron, total iron binding capacity, bilirubin, and, if appropriate vitamin B12 and folate may be of value in attempting to identify the cause of the anemia.

(Q) If a peripheral neuropathy is suspected, nerve conduction studies are warranted both for diagnosis and as a basis to monitor any therapy.

(R) If renal disease is questioned, a 24-hour urine collection for creatinine clearance, protein, and electrolytes may be indicated. Elevated uric acid levels may result from lead-induced renal disease and a serum uric acid level might be performed.

(S) An electrocardiogram and chest x-ray may be obtained as deemed appropriate.

(T) Sophisticated and highly specialized testing should not be done routinely and where indicated should be under the direction of a specialist.

(v) Laboratory evaluation.

(A) The blood level at present remains the single most important test to monitor lead exposure and is the test used in the medical surveillance program under the lead standard to guide employee medical removal. The ZPP has several advantages over the blood lead level. Because of its relatively recent development and the lack of extensive data concerning its interpretation, the ZPP currently remains an ancillary test.

(B) This section will discuss the blood lead level and ZPP in detail and will outline their relative advantages and disadvantages. Other blood tests currently available to evaluate lead exposure will also be reviewed.

(C) The blood lead level is a good index of current or recent lead absorption when there is no anemia present and when the worker has not taken any chelating agents. However, blood lead levels along with urinary lead levels do not necessarily indicate the total body burden of lead and are not adequate measures of past exposure. One reason for this is that lead has a high affinity for bone and up to 90 percent of the body's total lead is deposited there. A very important component of the total lead body burden is lead in soft tissue (liver, kidneys, and brain). This fraction of the lead body burden, the biologically active lead, is not entirely reflected by blood lead levels since it is a function of the dynamics of lead absorption, distribution, deposition in bone and excretion. Following discontinuation of exposure to lead, the excess body burden is only slowly mobilized from bone and other relatively stable stores and excreted. Consequently, a high blood lead level may only represent recent heavy exposure to lead without a significant total body excess and likewise a low blood lead level does not exclude an elevated total body burden of lead.

(D) Also due to its correlation with recent exposures, the blood lead level may vary considerably over short time intervals.

(E) To minimize laboratory error and erroneous results due to contamination, blood specimens must be carefully collected after thorough cleaning of the skin with appropriate methods using lead-free containers and analyzed by a reliable laboratory. Under the standard, samples must be analyzed in laboratories which are approved by the Center for Disease Control (CDC) or which have received satisfactory grades in proficiency testing by the CDC in the previous year. Analysis is to be made using atomic absorption spectrophotometry anodic stripping; voltammetry or any method which meets the accuracy requirements set forth by the standard.

(F) The determination of lead in urine is generally considered a less reliable monitoring technique than analysis of whole blood primarily due to individual variability in urinary excretion capacity as well as the technical difficulty of obtaining accurate 24 hour urine collections. In addition, workers with renal insufficiency, whether due to lead or some other cause, may have decreased lead clearance and consequently urine lead levels may underestimate the true lead burden. Therefore, urine lead levels should not be used as a routine test.

(G) The zinc protoporphyrin test, unlike the blood lead determination, measures an adverse metabolic effect of lead and as such is a better indicator of lead toxicity than the level of blood lead itself. The level of ZPP reflects lead absorption over the preceding three to four months, and therefore is a better indicator of lead body burden. The ZPP requires more time than the blood lead to read significantly elevated levels; the return to normal after discontinuing lead exposure is also slower. Furthermore, the ZPP test is simpler, faster, and less expensive to perform and no contamination is possible. Many investigators believe it is the most reliable means of monitoring chronic lead absorption.

(H) Zinc protoporphyrin results from the inhibition of the enzyme ferrochelatase which catalyzes the insertion of an iron molecule into the protoporphyrin molecule, which then becomes heme. If iron is not inserted into the molecule then

zinc, having a greater affinity for protoporphyrin, takes place in the iron, forming ZPP.

(I) An elevation in the level of circulating ZPP may occur at blood lead levels as low as 20-30 $\mu\text{g}/100\text{g}$ in some workers. Once the blood lead level has reached 40 $\mu\text{g}/100\text{g}$ there is more marked rise in the ZPP value from its normal range of less than 100 $\mu\text{g}/100\text{ml}$. Increases in blood lead levels beyond 40 $\mu\text{g}/100\text{g}$ are associated with exponential increases in ZPP.

(J) Whereas blood lead levels fluctuate over short time spans, ZPP levels remain relatively stable. ZPP is measured directly in red blood cells and is present for the cell's entire 120 day lifespan. Therefore, the ZPP level in blood reflects the average ZPP production over the previous three to four months and consequently the average lead exposure during that time interval.

(K) It is recommended that a hematocrit be determined whenever a confirmed ZPP of 50 $\mu\text{g}/100\text{ml}$ whole blood is obtained to rule out a significant underlying anemia. If the ZPP is in excess of 100 $\mu\text{g}/100\text{ml}$ and not associated with abnormal elevations in blood lead levels, the laboratory should be checked to be sure the blood leads were determined using atomic absorption spectrophotometry, anodic stripping voltammetry or any method which meets the accuracy requirements set forth by the standard, by a CDC approved laboratory which is experienced in lead level determinations. Repeat periodic blood lead studies should be obtained in all individuals with elevated ZPP levels to be certain that an associated elevated blood lead level has not been missed due to transient fluctuations in blood leads.

(L) ZPP has characteristic fluorescence spectrum with a peak at 594nm which is detectable with a hematofluorimeter. The hematofluorimeter is accurate and portable and can provide on-site, instantaneous results for workers who can be frequently tested via a finger prick.

(M) However, careful attention must be given to calibration and quality control procedures. Limited data on blood lead - ZPP correlations and the ZPP levels which are associated with the adverse health effects discussed in item (ii) are the major limitations of the test. Also it is difficult to correlate ZPP levels with environmental exposure and there is some variation of response with age and sex. Nevertheless, the ZPP promises to be an important diagnostic test for the early detection of lead toxicity and its value will increase as more data is collected regarding its relationship to other manifestations of lead poisoning.

(N) Levels of delta-aminolevulinic acid (ALA) in the urine are also used as a measure of lead exposure. Increasing concentrations of ALA are believed to result from the inhibition of the enzyme delta-aminolevulinic acid dehydrase (ALA-D). Although the test is relatively easy to perform, inexpensive, and rapid, the disadvantages include variability in results, the necessity to collect a complete 24 hour urine sample which has a specific gravity greater than 1.010, and also the fact that ALA decomposes in the presence of light.

(O) The pattern of porphyrin excretion in the urine can also be helpful in identifying lead intoxication. With lead poisoning, the urine concentrations of coproporphyrins I and II, porphobilinogen and uroporphyrin I rise. The most important

increase, however, is that of coproporphyrin III; levels may exceed 5,000 µg/l in the urine in lead poisoned individuals, but its correlation with blood lead levels and ZPP are not as good as those of ALA. Increases in urinary porphyrins are not diagnostic of lead toxicity and may be seen in porphyria, some liver diseases, and in patients with high reticulocyte counts.

(vi) Summary.

(A) The WISHA standard for inorganic lead places significant emphasis on the medical surveillance of all workers exposed to levels of inorganic lead above the action level of 30 µg/m³ TWA. The physician has a fundamental role in this surveillance program, and in the operation of the medical removal protection program.

(B) Even with adequate worker education on the adverse health effects of lead and appropriate training in work practices, personal hygiene and other control measures, the physician has a primary responsibility for evaluating potential lead toxicity in the worker. It is only through a careful and detailed medical and work history, a complete physical examination and appropriate laboratory testing that an accurate assessment can be made. Many of the adverse health effects of lead toxicity are either irreversible or only partially reversible and therefore early detection of disease is very important.

(C) This document outlines the medical monitoring program as defined by the occupational safety and health standard for inorganic lead. It reviews the adverse health effects of lead poisoning and describes the important elements of the history and physical examinations as they relate to these adverse effects.

(D) It is hoped that this review and discussion will give the physician a better understanding of the WISHA standard with the ultimate goal of protecting the health and well-being of the worker exposed to lead under his or her care.

(d) Appendix D. Recommendations to employers concerning high-risk tasks (nonmandatory).

The department advises employers that the following tasks have a high risk for lead overexposure (this list is not complete; other tasks also can result in lead over-exposure):

- Any open flame operation involving lead-containing solder in a manner producing molten solder, including the manufacture or repair of motor vehicle radiators;
- Sanding, cutting or grinding of lead-containing solder;
- Breaking, recycling or manufacture of lead-containing batteries;
- Casting objects using lead, brass, or lead-containing alloys;
- Where lead-containing coatings or paints are present:
 - abrasive blasting
 - welding
 - cutting
 - torch burning
 - manual demolition of structures
 - manual scraping
 - manual sanding
 - heat gun applications
 - power tool cleaning
 - rivet busting

- clean-up activities where dry expendable abrasives are used
- abrasive blasting enclosure movement and removal;
- Spray-painting with lead-containing paint;
- Using lead-containing mortar;
- Lead burning;
- Operation or cleaning of shooting facilities where lead bullets are used;
- Formulation or processing of lead-containing pigments or paints;
- Cutting, burning, or melting of lead-containing materials.

The department recommends that annual blood lead testing be offered to all employees potentially overexposed to lead, including those performing the tasks listed above, regardless of air lead levels. Research has shown that air lead levels often do not accurately predict workers' lead overexposure. The blood lead testing will provide the most information if performed during a period of peak lead exposure.

Employers should be aware that the United States Public Health Service has set a goal of eliminating occupational exposures which result in whole blood lead levels of 25 µg/dl or greater. This goal should guide whether employees' blood lead levels indicate lead overexposure.

If blood lead levels are elevated in an employee performing a task associated with lead overexposure, employers should assess the maintenance and effectiveness of exposure controls, hygiene facilities, respiratory protection program, the employee's work practices and personal hygiene, and the employee's respirator use, if any. If a deficiency exists in any of these areas, the employer should correct the problem.

AMENDATORY SECTION (Amending WSR 99-10-071, filed 5/4/99, effective 9/1/99)

WAC 296-62-07523 Benzene. (1) Scope and application.

(a) This section applies to all occupational exposures to benzene. Chemical Abstracts Service Registry No. 71-43-2, except as provided in (b) and (c) of this subsection.

(b) This section does not apply to:

(i) The storage, transportation, distribution, dispensing, sale or use of gasoline, motor fuels, or other fuels containing benzene subsequent to its final discharge from bulk wholesale storage facilities, except that operations where gasoline or motor fuels are dispensed for more than four hours per day in an indoor location are covered by this section.

(ii) Loading and unloading operations at bulk wholesale storage facilities which use vapor control systems for all loading and unloading operations, except for the provisions of WAC 296-62-054 and 296-800-170 as incorporated into this section and the emergency provisions of subsections (7) and (9)(d) of this section.

(iii) The storage, transportation, distribution, or sale of benzene or liquid mixtures containing more than 0.1 percent benzene in intact containers or in transportation pipelines while sealed in such a manner as to contain benzene vapors or liquid, except for the provisions of WAC 296-62-054 and

296-800-170 as incorporated into this section and the emergency provisions of subsections (7) and (9)(d) of this section.

(iv) Containers and pipelines carrying mixtures with less than 0.1 percent benzene and natural gas processing plants processing gas with less than 0.1 percent benzene.

(v) Work operations where the only exposure to benzene is from liquid mixtures containing 0.5 percent or less of benzene by volume, or the vapors released from such liquids until September 12, 1988; work operations where the only exposure to benzene is from liquid mixtures containing 0.3 percent or less of benzene by volume or the vapors released from such liquids from September 12, 1988, to September 12, 1989; and work operations where the only exposure to benzene is from liquid mixtures containing 0.1 percent or less of benzene by volume or the vapors released from such liquids after September 12, 1989; except that tire building machine operators using solvents with more than 0.1 percent benzene are covered by subsection (9) of this section.

(vi) Oil and gas drilling, production, and servicing operations.

(vii) Coke oven batteries.

(c) The cleaning and repair of barges and tankers which have contained benzene are excluded from subsection (6) of this section (Methods of compliance), subsection (5)(a) of this section (General), and subsection (5)(f) of this section (Accuracy of monitoring). Engineering and work practice controls shall be used to keep exposures below 10 ppm unless it is proven to be not feasible.

(2) Definitions.

(a) "Action level" means an airborne concentration of benzene of 0.5 ppm calculated as an 8-hour time-weighted average.

(b) "Authorized person" means any person specifically authorized by the employer whose duties require the person to enter a regulated area, or any person entering such an area as a designated representative of employees for the purpose of exercising the right to observe monitoring and measuring procedures under subsection (5) of this section, or any other person authorized by the Washington Industrial Safety and Health Act (WISHA) or regulations issued under WISHA.

(c) "Benzene" (C₆H₆) (CAS Registry No. 71-43-2) means liquefied or gaseous benzene. It includes benzene contained in liquid mixtures and the benzene vapors released by these liquids. It does not include trace amounts of unreacted benzene contained in solid materials.

(d) "Bulk wholesale storage facility" means a bulk terminal or bulk plant where fuel is stored prior to its delivery to wholesale customers.

(e) "Container" means any barrel, bottle, can, cylinder, drum, reaction vessel, storage tank, or the like, but does not include piping systems.

(f) "Day" means any part of a calendar day.

(g) "Director" means the director of the department of labor and industries, or his/her designated representative.

(h) "Emergency" means any occurrence such as, but not limited to, equipment failure, rupture of containers, or failure of control equipment which may or does result in an unexpected significant release of benzene.

(i) "Employee exposure" means exposure to airborne benzene which would occur if the employee were not using respiratory protective equipment.

(j) "Regulated area" means any area where airborne concentrations of benzene exceed or can reasonably be expected to exceed, the permissible exposure limits, either the 8-hour time-weighted average exposure of 1 ppm or the short-term exposure limit of 5 ppm for fifteen minutes.

(k) "Vapor control system" means any equipment used for containing the total vapors displaced during the loading of gasoline, motor fuel, or other fuel tank trucks and the displacing of these vapors through a vapor processing system or balancing the vapor with the storage tank. This equipment also includes systems containing the vapors displaced from the storage tank during the unloading of the tank truck which balance the vapors back to the tank truck.

(3) Permissible exposure limits (PELs).

(a) Time-weighted average limit (TWA). The employer shall assure that no employee is exposed to an airborne concentration of benzene in excess of one part of benzene per million parts of air (1 ppm) as an 8-hour time-weighted average.

(b) Short-term exposure limit (STEL). The employer shall assure that no employee is exposed to an airborne concentration of benzene in excess of 5 ppm as averaged over any fifteen minute period.

(4) Regulated areas.

(a) The employer shall establish a regulated area wherever the airborne concentration of benzene exceeds or can reasonably be expected to exceed the permissible exposure limits, either the 8-hour time-weighted average exposure of 1 ppm or the short-term exposure limit of 5 ppm for fifteen minutes.

(b) Access to regulated areas shall be limited to authorized persons.

(c) Regulated areas shall be determined from the rest of the workplace in any manner that minimizes the number of employees exposed to benzene within the regulated area.

(5) Exposure monitoring.

(a) General.

(i) Determinations of employee exposure shall be made from breathing zone air samples that are representative of each employee's average exposure to airborne benzene.

(ii) Representative 8-hour TWA employee exposures shall be determined on the basis of one sample or samples representing the full shift exposure for each job classification in each work area.

(iii) Determinations of compliance with the STEL shall be made from fifteen minute employee breathing zone samples measured at operations where there is reason to believe exposures are high, such as where tanks are opened, filled, unloaded, or gauged; where containers or process equipment are opened and where benzene is used for cleaning or as a solvent in an uncontrolled situation. The employer may use objective data, such as measurements from brief period measuring devices, to determine where STEL monitoring is needed.

(iv) Except for initial monitoring as required under (b) of this subsection, where the employer can document that one shift will consistently have higher employee exposures for an

operation, the employer shall only be required to determine representative employee exposure for that operation during the shift on which the highest exposure is expected.

(b) Initial monitoring.

(i) Each employer who has a place of employment covered under subsection (1)(a) of this section shall monitor each of these workplaces and work operations to determine accurately the airborne concentrations of benzene to which employees may be exposed.

(ii) The initial monitoring required under (b)(i) of this subsection shall be completed by sixty days after the effective date of this standard or within thirty days of the introduction of benzene into the workplace. Where the employer has monitored within one year prior to the effective date of this standard and the monitoring satisfies all other requirements of this section, the employer may rely on such earlier monitoring results to satisfy the requirements of (b)(i) of this subsection.

(c) Periodic monitoring and monitoring frequency.

(i) If the monitoring required by (b)(i) of this subsection reveals employee exposure at or above the action level but at or below the TWA, the employer shall repeat such monitoring for each such employee at least every year.

(ii) If the monitoring required by (b)(i) of this subsection reveals employee exposure above the TWA, the employer shall repeat such monitoring for each such employee at least every six months.

(iii) The employer may alter the monitoring schedule from every six months to annually for any employee for whom two consecutive measurements taken at least seven days apart indicate that the employee exposure has decreased to the TWA or below, but is at or above the action level.

(iv) Monitoring for the STEL shall be repeated as necessary to evaluate exposures of employees subject to short term exposures.

(d) Termination of monitoring.

(i) If the initial monitoring required by (b)(i) of this subsection reveals employee exposure to be below the action level the employer may discontinue the monitoring for that employee, except as otherwise required by (e) of this subsection.

(ii) If the periodic monitoring required by (c) of this subsection reveals that employee exposures, as indicated by at least two consecutive measurements taken at least seven days apart, are below the action level the employer may discontinue the monitoring for that employee, except as otherwise required by (e) of this subsection.

(e) Additional monitoring.

(i) The employer shall institute the exposure monitoring required under (b) and (c) of this subsection when there has been a change in the production, process, control equipment, personnel, or work practices which may result in new or additional exposures to benzene, or when the employer has any reason to suspect a change which may result in new or additional exposures.

(ii) Whenever spills, leaks, ruptures, or other breakdowns occur that may lead to employee exposure, the employer shall monitor (using area or personal sampling) after the cleanup of the spill or repair of the leak, rupture or

other breakdown to ensure that exposures have returned to the level that existed prior to the incident.

(f) Accuracy of monitoring. Monitoring shall be accurate, to a confidence level of ninety-five percent, to within plus or minus twenty-five percent for airborne concentrations of benzene.

(g) Employee notification of monitoring results.

(i) The employer shall, within fifteen working days after the receipt of the results of any monitoring performed under this standard, notify each employee of these results in writing either individually or by posting of results in an appropriate location that is accessible to affected employees.

(ii) Whenever the PELs are exceeded, the written notification required by (g)(i) of this subsection shall contain the corrective action being taken by the employer to reduce the employee exposure to or below the PEL, or shall refer to a document available to the employee which states the corrective actions to be taken.

(6) Methods of compliance.

(a) Engineering controls and work practices.

(i) The employer shall institute engineering controls and work practices to reduce and maintain employee exposure to benzene at or below the permissible exposure limits, except to the extent that the employer can establish that these controls are not feasible or where the provisions of (a)(iii) of this subsection or subsection (7)(a) of this section apply.

(ii) Wherever the feasible engineering controls and work practices which can be instituted are not sufficient to reduce employee exposure to or below the PELs, the employer shall use them to reduce employee exposure to the lowest levels achievable by these controls and shall supplement them by the use of respiratory protection which complies with the requirements of subsection (7) of this section.

(iii) Where the employer can document that benzene is used in a workplace less than a total of thirty days per year, the employer shall use engineering controls, work practice controls or respiratory protection or any combination of these controls to reduce employee exposure to benzene to or below the PELs, except that employers shall use engineering and work practice controls, if feasible, to reduce exposure to or below 10 ppm as an 8-hour TWA.

(b) Compliance program.

(i) When any exposures are over the PEL, the employer shall establish and implement a written program to reduce employee exposure to or below the PEL primarily by means of engineering and work practice controls, as required by (a) of this subsection.

(ii) The written program shall include a schedule for development and implementation of the engineering and work practice controls. These plans shall be reviewed and revised as appropriate based on the most recent exposure monitoring data, to reflect the current status of the program.

(iii) Written compliance programs shall be furnished upon request for examination and copying to the director, affected employees, and designated employee representatives.

(7) Respiratory protection.

(a) General. For employees who use respirators required by this section, the employer must provide respirators that

comply with the requirements of this subsection. Respirators must be used during:

- (i) Periods necessary to install or implement feasible engineering and work-practice controls;
 - (ii) Work operations for which the employer establishes that compliance with either the TWA or STEL through the use of engineering and work-practice controls is not feasible; for example some maintenance and repair activities, vessel cleaning, or other operations where engineering and work-practice controls are infeasible because exposures are intermittent and limited in duration;
 - (iii) Work operations for which feasible engineering and work-practice controls are not yet sufficient, or are not required under subsection (6)(a)(iii) of this section, to reduce exposure to or below the PELs;
 - (iv) Emergencies.
- (b) Respirator program.
- (i) The employer must implement a respiratory protection program as required by chapter 296-62 WAC, Part E (except WAC 296-62-07130(1), 296-62-07131 (4)(b)(i) and (ii), and 296-62-07150 through 296-62-07156).
- (ii) For air-purifying respirators, the employer must replace the air-purifying element at the expiration of its service life or at the beginning of each shift in which such elements are used, whichever comes first.
- (iii) If NIOSH certifies an air-purifying element with an end-of-service-life indicator for benzene, such an element may be used until the indicator shows no further useful life.
- (c) Respirator selection.
- (i) The employer must select the appropriate respirator from Table 1 of this section.
- (ii) Any employee who cannot use a negative-pressure respirator must be allowed to use a respirator with less breathing resistance, such as a powered air-purifying respirator or supplied-air respirator.

TABLE 1. - RESPIRATORY PROTECTION FOR BENZENE

Airborne concentration of benzene or condition of use	Respirator type
(a) Less than or equal to 10 ppm.	(1) Half-mask air-purifying respirator with organic vapor cartridge.
(b) Less than or equal to 50 ppm.	(1) Full facepiece respirator with organic vapor cartridges.
	(1) Full facepiece gas mask with chin style canister. ¹
(c) Less than or equal to 100 ppm.	(1) Full facepiece powered air-purifying respirator with organic vapor canister. ¹
(d) Less than or equal to 1,000 ppm.	(1) Supplied air respirator with full facepiece in positive-pressure mode.
(e) Greater than 1,000 ppm or unknown concentration.	(1) Self-contained breathing apparatus with full facepiece in positive-pressure mode.
	(2) Full facepiece positive-pressure supplied-air respirator with auxiliary self-contained air supply.

TABLE 1. - RESPIRATORY PROTECTION FOR BENZENE

Airborne concentration of benzene or condition of use	Respirator type
(f) Escape	(1) Any organic vapor gas mask; or
	(2) Any self-contained breathing apparatus with full facepiece.
(g) Firefighting	(1) Full facepiece self-contained breathing apparatus in positive pressure mode.

¹Canisters must have a minimum service life of four (4) hours when tested at 150 ppm benzene, at a flow rate of 64 LPM, 25° C, and 85% relative humidity for non-powered air purifying respirators. The flow rate shall be 115 LPM and 170 LPM respectively for tight fitting and loose fitting powered air-purifying respirators.

(8) Protective clothing and equipment. Personal protective clothing and equipment shall be worn where appropriate to prevent eye contact and limit dermal exposure to liquid benzene. Protective clothing and equipment shall be provided by the employer at no cost to the employee and the employer shall assure its use where appropriate. Eye and face protection shall meet the requirements of WAC ((296-24-07801) 296-800-160.

- (9) Medical surveillance.
- (a) General.

(i) The employer shall make available a medical surveillance program for employees who are or may be exposed to benzene at or above the action level thirty or more days per year; for employees who are or may be exposed to benzene at or above the PELs ten or more days per year; for employees who have been exposed to more than 10 ppm of benzene for thirty or more days in a year prior to the effective date of the standard when employed by their current employer; and for employees involved in the tire building operations called tire building machine operators, who use solvents containing greater than 0.1 percent benzene.

(ii) The employer shall assure that all medical examinations and procedures are performed by or under the supervision of a licensed physician and that all laboratory tests are conducted by an accredited laboratory.

(iii) The employer shall assure that persons other than licensed physicians who administer the pulmonary function testing required by this section shall complete a training course in spirometry sponsored by an appropriate governmental, academic, or professional institution.

(iv) The employer shall assure that all examinations and procedures are provided without cost to the employee and at a reasonable time and place.

- (b) Initial examination.

(i) Within sixty days of the effective date of this standard, or before the time of initial assignment, the employer shall provide each employee covered by (a)(i) of this subsection with a medical examination including the following elements:

- (A) A detailed occupational history which includes:
 - (I) Past work exposure to benzene or any other hematological toxins;

PERMANENT

(II) A family history of blood dyscrasias including hematological neoplasms;

(III) A history of blood dyscrasias including genetic hemoglobin abnormalities, bleeding abnormalities, abnormal function of formed blood elements;

(IV) A history of renal or liver dysfunction;

(V) A history of medicinal drugs routinely taken;

(VI) A history of previous exposure to ionizing radiation; and

(VII) Exposure to marrow toxins outside of the current work situation.

(B) A complete physical examination.

(C) Laboratory tests. A complete blood count including a leukocyte count with differential, a quantitative thrombocyte count, hematocrit, hemoglobin, erythrocyte count and erythrocyte indices (MCV, MCH, MCHC). The results of these tests shall be reviewed by the examining physician.

(D) Additional tests as necessary in the opinion of the examining physician, based on alterations to the components of the blood or other signs which may be related to benzene exposure.

(E) For all workers required to wear respirators for at least thirty days a year, the physical examination shall pay special attention to the cardiopulmonary system and shall include a pulmonary function test.

(i) No initial medical examination is required to satisfy the requirements of (b)(i) of this subsection if adequate records show that the employee has been examined in accordance with the procedures of (b)(i) of this subsection within the twelve months prior to the effective date of this standard.

(c) Periodic examinations.

(i) The employer shall provide each employee covered under (a)(i) of this subsection with a medical examination annually following the previous examination. These periodic examinations shall include at least the following elements:

(A) A brief history regarding any new exposure to potential marrow toxins, changes in medicinal drug use, and the appearance of physical signs relating to blood disorders;

(B) A complete blood count including a leukocyte count with differential, quantitative thrombocyte count, hemoglobin, hematocrit, erythrocyte count and erythrocyte indices (MCV, MCH, MCHC); and

(C) Appropriate additional tests as necessary, in the opinion of the examining physician, in consequence of alterations in the components of the blood or other signs which may be related to benzene exposure.

(ii) Where the employee develops signs and symptoms commonly associated with toxic exposure to benzene, the employer shall provide the employee with an additional medical examination which shall include those elements considered appropriate by the examining physician.

(iii) For persons required to use respirators for at least thirty days a year, a pulmonary function test shall be performed every three years. A specific evaluation of the cardiopulmonary system shall be made at the time of the pulmonary function test.

(d) Emergency examinations.

(i) In addition to the surveillance required by (a)(i) of this subsection, if an employee is exposed to benzene in an emergency situation, the employer shall have the employee

provide a urine sample at the end of the employee's shift and have a urinary phenol test performed on the sample within seventy-two hours. The urine specific gravity shall be corrected to 1.024.

(ii) If the result of the urinary phenol test is below 75 mg phenol/L of urine, no further testing is required.

(iii) If the result of the urinary phenol test is equal to or greater than 75 mg phenol/L of urine, the employer shall provide the employee with a complete blood count including an erythrocyte count, leukocyte count with differential and thrombocyte count at monthly intervals for a duration of three months following the emergency exposure.

(iv) If any of the conditions specified in (e)(i) of this subsection exists, then the further requirements of (e) of this subsection shall be met and the employer shall, in addition, provide the employees with periodic examinations if directed by the physician.

(e) Additional examinations and referrals.

(i) Where the results of the complete blood count required for the initial and periodic examinations indicate any of the following abnormal conditions exist, then the blood count shall be repeated within two weeks.

(A) The hemoglobin level or the hematocrit falls below the normal limit (outside the ninety-five percent confidence interval (C.I.)) as determined by the laboratory for the particular geographic area and/or these indices show a persistent downward trend from the individual's preexposure norms; provided these findings cannot be explained by other medical reasons.

(B) The thrombocyte (platelet) count varies more than twenty percent below the employee's most recent values or falls outside the normal limit (ninety-five percent C.I.) as determined by the laboratory.

(C) The leukocyte count is below 4,000 per mm³ or there is an abnormal differential count.

(ii) If the abnormality persists, the examining physician shall refer the employee to a hematologist or an internist for further evaluation unless the physician has good reason to believe such referral is unnecessary. (See Appendix C for examples of conditions where a referral may be unnecessary.)

(iii) The employer shall provide the hematologist or internist with the information required to be provided to the physician under this subsection and the medical record required to be maintained by subsection (11)(b)(ii) of this section.

(iv) The hematologist's or internist's evaluation shall include a determination as to the need for additional tests, and the employer shall assure that these tests are provided.

(f) Information provided to the physician. The employer shall provide the following information to the examining physician:

(i) A copy of this regulation and its appendices;

(ii) A description of the affected employee's duties as they relate to the employee's exposure;

(iii) The employee's actual or representative exposure level;

(iv) A description of any personal protective equipment used or to be used; and

(v) Information from previous employment-related medical examinations of the affected employee which is not otherwise available to the examining physician.

(g) Physician's written opinions.

(i) For each examination under this section, the employer shall obtain and provide the employee with a copy of the examining physician's written opinion within fifteen days of the examination. The written opinion shall be limited to the following information:

(A) The occupationally pertinent results of the medical examination and tests;

(B) The physician's opinion concerning whether the employee has any detected medical conditions which would place the employee's health at greater than normal risk of material impairment from exposure to benzene;

(C) The physician's recommended limitations upon the employee's exposure to benzene or upon the employee's use of protective clothing or equipment and respirators.

(D) A statement that the employee has been informed by the physician of the results of the medical examination and any medical conditions resulting from benzene exposure which require further explanation or treatment.

(ii) The written opinion obtained by the employer shall not reveal specific records, findings, and diagnoses that have no bearing on the employee's ability to work in a benzene-exposed workplace.

(h) Medical removal plan.

(i) When a physician makes a referral to a hematologist/internist as required under (e)(ii) of this subsection, the employee shall be removed from areas where exposures may exceed the action level until such time as the physician makes a determination under (h)(ii) of this subsection.

(ii) Following the examination and evaluation by the hematologist/internist, a decision to remove an employee from areas where benzene exposure is above the action level or to allow the employee to return to areas where benzene exposure is above the action level shall be made by the physician in consultation with the hematologist/internist. This decision shall be communicated in writing to the employer and employee. In the case of removal, the physician shall state the required probable duration of removal from occupational exposure to benzene above the action level and the requirements for future medical examinations to review the decision.

(iii) For any employee who is removed pursuant to (h)(ii) of this subsection, the employer shall provide a follow-up examination. The physician, in consultation with the hematologist/internist, shall make a decision within six months of the date the employee was removed as to whether the employee shall be returned to the usual job or whether the employee should be removed permanently.

(iv) Whenever an employee is temporarily removed from benzene exposure pursuant to (h)(i) or (ii) of this subsection, the employer shall transfer the employee to a comparable job for which the employee is qualified (or can be trained for in a short period) and where benzene exposures are as low as possible, but in no event higher than the action level. The employer shall maintain the employee's current wage rate, seniority, and other benefits. If there is no such job available, the employer shall provide medical removal pro-

tection benefits until such a job becomes available or for six months, whichever comes first.

(v) Whenever an employee is removed permanently from benzene exposure based on a physician's recommendation pursuant to (h)(iii) of this subsection, the employee shall be given the opportunity to transfer to another position which is available or later becomes available for which the employee is qualified (or can be trained for in a short period) and where benzene exposures are as low as possible but in no event higher than the action level. The employer shall assure that such employee suffers no reduction in current wage rate, seniority, or other benefits as a result of the transfer.

(i) Medical removal protection benefits.

(i) The employer shall provide to an employee six months of medical removal protection benefits immediately following each occasion an employee is removed from exposure to benzene because of hematological findings pursuant to (h)(i) and (ii) of this subsection, unless the employee has been transferred to a comparable job where benzene exposures are below the action level.

(ii) For the purposes of this section, the requirement that an employer provide medical removal protection benefits means that the employer shall maintain the current wage rate, seniority, and other benefits of an employee as though the employee had not been removed.

(iii) The employer's obligation to provide medical removal protection benefits to a removed employee shall be reduced to the extent that the employee receives compensation for earnings lost during the period of removal either from a publicly or employer-funded compensation program, or from employment with another employer made possible by virtue of the employee's removal.

(10) Communication of benzene hazards to employees.

(a) Signs and labels.

(i) The employer shall post signs at entrances to regulated areas. The signs shall bear the following legend:

DANGER
BENZENE
CANCER HAZARD
FLAMMABLE-NO SMOKING
AUTHORIZED PERSONNEL ONLY
RESPIRATOR REQUIRED

(ii) The employer shall ensure that labels or other appropriate forms of warning are provided for containers of benzene within the workplace. There is no requirement to label pipes. The labels shall comply with the requirements of WAC ((296-62-05411) 296-800-170 and in addition shall include the following legend:

DANGER
CONTAINS BENZENE
CANCER HAZARD

(b) Material safety data sheets.

(i) Employers shall obtain or develop, and shall provide access to their employees, to a material safety data sheet (MSDS) which addresses benzene and complies with WAC 296-62-054 and 296-800-170.

(ii) Employers who are manufacturers or importers shall:

PERMANENT

(A) Comply with subsection (1) of this section; and

(B) Comply with the requirement in WISHA's hazard communication standard, WAC 296-62-054 (Hazard communication purpose), that they deliver to downstream employers an MSDS which addresses benzene.

(c) Information and training.

(i) The employer shall provide employees with information and training at the time of their initial assignment to a work area where benzene is present. If exposures are above the action level, employees shall be provided with information and training at least annually thereafter.

(ii) The training program shall be in accordance with the requirements of WAC ((~~296-62-05415 (1) and (2)~~) 296-800-170), and shall include specific information on benzene for each category of information included in that section.

(iii) In addition to the information required under WAC ((~~296-62-054~~) 296-800-170), the employer shall:

(A) Provide employees with an explanation of the contents of this section, including Appendices A and B, and indicate to them where the standard is available; and

(B) Describe the medical surveillance program required under subsection (9) of this section, and explain the information contained in Appendix C.

(11) Recordkeeping.

(a) Exposure measurements.

(i) The employer shall establish and maintain an accurate record of all measurements required by subsection (5) of this section, in accordance with WAC 296-62-052.

(ii) This record shall include:

(A) The dates, number, duration, and results of each of the samples taken, including a description of the procedure used to determine representative employee exposures;

(B) A description of the sampling and analytical methods used;

(C) A description of the type of respiratory protective devices worn, if any; and

(D) The name, Social Security number, job classification, and exposure levels of the employee monitored and all other employees whose exposure the measurement is intended to represent.

(iii) The employer shall maintain this record for at least the duration of employment plus thirty years, in accordance with Part B, Access to records, WAC 296-62-052 through 296-62-05223.

(b) Medical surveillance.

(i) The employer shall establish and maintain an accurate record for each employee subject to medical surveillance required by subsection (9) of this section, in accordance with WAC 296-62-052.

(ii) This record shall include:

(A) The name and Social Security number of the employee;

(B) The employer's copy of the physician's written opinion on the initial, periodic, and special examinations, including results of medical examinations and all tests, opinions, and recommendations;

(C) Any employee medical complaints related to exposure to benzene;

(D) A copy of the information provided to the physician as required by subsection (9)(f)(ii) through (v) of this section; and

(E) A copy of the employee's medical and work history related to exposure to benzene or any other hematologic toxins.

(iii) The employer shall maintain this record for at least the duration of employment plus thirty years, in accordance with Part B, Access to records, WAC 296-62-052 through 296-62-05223.

(c) Availability.

(i) The employer shall assure that all records required to be maintained by this section shall be made available upon request to the director for examination and copying.

(ii) Employee exposure monitoring records required by this subsection shall be provided upon request for examination and copying to employees, employee representatives, and the director in accordance with WAC 296-62-05201 through 296-62-05209 and 296-62-05213 through 296-62-05217.

(iii) Employee medical records required by this subsection shall be provided upon request for examination and copying, to the subject employee, to anyone having the specific written consent of the subject employee, and to the director in accordance with WAC 296-62-052.

(d) Transfer of records.

(i) The employer shall comply with the requirements involving transfer of records set forth in WAC 296-62-05205.

(ii) If the employer ceases to do business and there is no successor employer to receive and retain the records for the prescribed period, the employer shall notify the director, at least three months prior to disposal, and transmit them to the director if required by the director within that period.

(12) Observation of monitoring.

(a) Employee observation. The employer shall provide affected employees, or their designated representatives, an opportunity to observe the measuring or monitoring of employee exposure to benzene conducted pursuant to subsection (5) of this section.

(b) Observation procedures. When observation of the measuring or monitoring of employee exposure to benzene requires entry into areas where the use of protective clothing and equipment or respirators is required, the employer shall provide the observer with personal protective clothing and equipment or respirators required to be worn by employees working in the area, assure the use of such clothing and equipment or respirators, and require the observer to comply with all other applicable safety and health procedures.

(13) Appendices. The information contained in WAC 296-62-07525, Appendices A, B, C, and D is not intended, by itself, to create any additional obligations not otherwise imposed or to detract from any existing obligations.

AMENDATORY SECTION (Amending WSR 99-10-071, filed 5/4/99, effective 9/1/99)

WAC 296-62-07540 Formaldehyde. (1) Scope and application. This standard applies to all occupational exposures to formaldehyde, i.e., from formaldehyde gas, its solutions, and materials that release formaldehyde.

(2) Definitions. For purposes of this standard, the following definitions shall apply:

(a) "Action level" means a concentration of 0.5 part formaldehyde per million parts of air (0.5 ppm) calculated as an 8-hour time-weighted average (TWA) concentration.

(b) "Approved" means approved by the director of the department of labor and industries or his/her authorized representative: Provided, however, That should a provision of this chapter state that approval by an agency or organization other than the department of labor and industries is required, such as Underwriters' Laboratories or the Mine Safety and Health Administration and the National Institute for Occupational Safety and Health, the provision of WAC ((296-24-006) 296-800-370 shall apply.

(c) "Authorized person" means any person required by work duties to be present in regulated work areas, or authorized to do so by the employer, by this section of the standard, or by the WISHA Act.

(d) "Director" means the director of the department of labor and industries, or his/her designated representative.

(e) "Emergency" is any occurrence, such as but not limited to equipment failure, rupture of containers, or failure of control equipment that results in an uncontrolled release of a significant amount of formaldehyde.

(f) "Employee exposure" means the exposure to airborne formaldehyde which would occur without corrections for protection provided by any respirator that is in use.

(g) "Formaldehyde" means the chemical substance, HCHO, Chemical Abstracts Service Registry No. 50-00-0.

(3) Permissible exposure limit (PEL).

(a) TWA: The employer shall assure that no employee is exposed to an airborne concentration of formaldehyde which exceeds 0.75 part formaldehyde per million parts of air as an 8-hour TWA.

(b) Short term exposure limit (STEL): The employer shall assure that no employee is exposed to an airborne concentration of formaldehyde which exceeds two parts formaldehyde per million parts of air (2 ppm) as a fifteen-minute STEL.

(4) Exposure monitoring.

(a) General.

(i) Each employer who has a workplace covered by this standard shall monitor employees to determine their exposure to formaldehyde.

(ii) Exception. Where the employer documents, using objective data, that the presence of formaldehyde or formaldehyde-releasing products in the workplace cannot result in airborne concentrations of formaldehyde that would cause any employee to be exposed at or above the action level or the STEL under foreseeable conditions of use, the employer will not be required to measure employee exposure to formaldehyde.

(iii) When an employee's exposure is determined from representative sampling, the measurements used shall be representative of the employee's full shift or short-term exposure to formaldehyde, as appropriate.

(iv) Representative samples for each job classification in each work area shall be taken for each shift unless the employer can document with objective data that exposure

levels for a given job classification are equivalent for different workshifts.

(b) Initial monitoring. The employer shall identify all employees who may be exposed at or above the action level or at or above the STEL and accurately determine the exposure of each employee so identified.

(i) Unless the employer chooses to measure the exposure of each employee potentially exposed to formaldehyde, the employer shall develop a representative sampling strategy and measure sufficient exposures within each job classification for each workshift to correctly characterize and not underestimate the exposure of any employee within each exposure group.

(ii) The initial monitoring process shall be repeated each time there is a change in production, equipment, process, personnel, or control measures which may result in new or additional exposure to formaldehyde.

(iii) If the employer receives reports or signs or symptoms of respiratory or dermal conditions associated with formaldehyde exposure, the employer shall promptly monitor the affected employee's exposure.

(c) Periodic monitoring.

(i) The employer shall periodically measure and accurately determine exposure to formaldehyde for employees shown by the initial monitoring to be exposed at or above the action level or at or above the STEL.

(ii) If the last monitoring results reveal employee exposure at or above the action level, the employer shall repeat monitoring of the employees at least every six months.

(iii) If the last monitoring results reveal employee exposure at or above the STEL, the employer shall repeat monitoring of the employees at least once a year under worst conditions.

(d) Termination of monitoring. The employer may discontinue periodic monitoring for employees if results from two consecutive sampling periods taken at least seven days apart show that employee exposure is below the action level and the STEL. The results must be statistically representative and consistent with the employer's knowledge of the job and work operation.

(e) Accuracy of monitoring. Monitoring shall be accurate, at the ninety-five percent confidence level, to within plus or minus twenty-five percent for airborne concentrations of formaldehyde at the TWA and the STEL and to within plus or minus thirty-five percent for airborne concentrations of formaldehyde at the action level.

(f) Employee notification of monitoring results. Within fifteen days of receiving the results of exposure monitoring conducted under this standard, the employer shall notify the affected employees of these results. Notification shall be in writing, either by distributing copies of the results to the employees or by posting the results. If the employee exposure is over either PEL, the employer shall develop and implement a written plan to reduce employee exposure to or below both PELs, and give written notice to employees. The written notice shall contain a description of the corrective action being taken by the employer to decrease exposure.

(g) Observation of monitoring.

(i) The employer shall provide affected employees or their designated representatives an opportunity to observe

any monitoring of employee exposure to formaldehyde required by this standard.

(ii) When observation of the monitoring of employee exposure to formaldehyde requires entry into an area where the use of protective clothing or equipment is required, the employer shall provide the clothing and equipment to the observer, require the observer to use such clothing and equipment, and assure that the observer complies with all other applicable safety and health procedures.

(5) Regulated areas.

(a) The employer shall establish regulated areas where the concentration of airborne formaldehyde exceeds either the TWA or the STEL and post all entrances and accessways with signs bearing the following information:

DANGER
FORMALDEHYDE
IRRITANT AND POTENTIAL CANCER HAZARD
AUTHORIZED PERSONNEL ONLY

(b) The employer shall limit access to regulated areas to authorized persons who have been trained to recognize the hazards of formaldehyde.

(c) An employer at a multi-employer worksite who establishes a regulated area shall communicate the access restrictions and locations of these areas to other employers with work operations at that worksite.

(6) Methods of compliance.

(a) Engineering controls and work practices. The employer shall institute engineering and work practice controls to reduce and maintain employee exposures to formaldehyde at or below the TWA and the STEL.

(b) Exception. Whenever the employer has established that feasible engineering and work practice controls cannot reduce employee exposure to or below either of the PELs, the employer shall apply these controls to reduce employee exposures to the extent feasible and shall supplement them with respirators which satisfy this standard.

(7) Respiratory protection.

(a) General. For employees who use respirators required by this section, the employer must provide respirators that comply with the requirements of this subsection. Respirators must be used during:

(i) Periods necessary to install or implement feasible engineering and work-practice controls;

(ii) Work operations, such as maintenance and repair activities or vessel cleaning, for which the employer establishes that engineering and work-practice controls are not feasible;

(iii) Work operations for which feasible engineering and work-practice controls are not yet sufficient to reduce exposure to or below the PELs;

(iv) Emergencies.

(b) Respirator program.

(i) The employer must implement a respiratory protection program as required by chapter 296-62 WAC, Part E (except WAC 296-62-07130(1), 296-62-07131 (4)(b)(i) and (ii), and 296-62-07150 through 296-62-07156).

(ii) If air-purifying chemical-cartridge respirators are used, the employer must:

(A) Replace the cartridge after three hours of use or at the end of the workshift, whichever occurs first, unless the cartridge contains a NIOSH-certified end-of-service-life indicator (ESLI) to show when breakthrough occurs.

(B) Unless the canister contains a NIOSH-certified ESLI to show when breakthrough occurs, replace canisters used in atmospheres up to 7.5 ppm (10 x PEL) every four hours and industrial-sized canisters used in atmospheres up to 75 ppm (100 x PEL) every two hours, or at the end of the workshift, whichever occurs first.

(c) Respirator selection.

(i) The employer must select appropriate respirators from Table 1 of this section.

TABLE 1
MINIMUM REQUIREMENTS FOR RESPIRATORY PROTECTION
AGAINST FORMALDEHYDE

Condition of use or formaldehyde concentration (ppm)	Minimum respirator required ¹
Up to 7.5 ppm (10 x PEL)	Full facepiece with cartridges or canisters specifically approved for protection against formaldehyde ² .
Up to 75 ppm (100 x PEL)	Full-face mask with chin style or chest or back mounted type industrial size canister specifically approved for protection against formaldehyde. Type C supplied-air respirator pressure demand or continuous flow type, with full facepiece, hood, or helmet.
Above 75 ppm or unknown (emergencies) (100 x PEL)	Self-contained breathing apparatus (SCBA) with positive-pressure full facepiece. Combination supplied-air, full facepiece positive-pressure respirator with auxiliary self-contained air supply.
Fire fighting	SCBA with positive-pressure in full facepiece.
Escape	SCBA in demand or pressure demand mode. Full-face mask with chin style or front or back mounted type industrial size canister specifically approved for protection against formaldehyde.

¹ Respirators specified for use at higher concentrations may be used at lower concentrations.

² A half-mask respirator with cartridges specifically approved for protection against formaldehyde can be substituted for the full facepiece respirator providing that effective gas-proof goggles are provided and used in combination with the half-mask respirator.

(ii) The employer must provide a powered air-purifying respirator adequate to protect against formaldehyde exposure to any employee who has difficulty using a negative-pressure respirator.

(8) Protective equipment and clothing. Employers shall comply with the provisions of WAC ((~~296-24-07501 and 296-24-07801~~) 296-800-160). When protective equipment or clothing is provided under these provisions, the employer

PERMANENT

shall provide these protective devices at no cost to the employee and assure that the employee wears them.

(a) Selection. The employer shall select protective clothing and equipment based upon the form of formaldehyde to be encountered, the conditions of use, and the hazard to be prevented.

(i) All contact of the eyes and skin with liquids containing one percent or more formaldehyde shall be prevented by the use of chemical protective clothing made of material impervious to formaldehyde and the use of other personal protective equipment, such as goggles and face shields, as appropriate to the operation.

(ii) Contact with irritating or sensitizing materials shall be prevented to the extent necessary to eliminate the hazard.

(iii) Where a face shield is worn, chemical safety goggles are also required if there is a danger of formaldehyde reaching the area of the eye.

(iv) Full body protection shall be worn for entry into areas where concentrations exceed 100 ppm and for emergency reentry into areas of unknown concentration.

(b) Maintenance of protective equipment and clothing.

(i) The employer shall assure that protective equipment and clothing that has become contaminated with formaldehyde is cleaned or laundered before its reuse.

(ii) When ventilating formaldehyde-contaminated clothing and equipment, the employer shall establish a storage area so that employee exposure is minimized. Containers for contaminated clothing and equipment and storage areas shall have labels and signs containing the following information:

DANGER

FORMALDEHYDE-CONTAMINATED (CLOTHING) EQUIPMENT
AVOID INHALATION AND SKIN CONTACT

(iii) The employer shall assure that only persons trained to recognize the hazards of formaldehyde remove the contaminated material from the storage area for purposes of cleaning, laundering, or disposal.

(iv) The employer shall assure that no employee takes home equipment or clothing that is contaminated with formaldehyde.

(v) The employer shall repair or replace all required protective clothing and equipment for each affected employee as necessary to assure its effectiveness.

(vi) The employer shall inform any person who launders, cleans, or repairs such clothing or equipment of formaldehyde's potentially harmful effects and of procedures to safely handle the clothing and equipment.

(9) Hygiene protection.

(a) The employer shall provide change rooms, as described in WAC 296-24-120 for employees who are required to change from work clothing into protective clothing to prevent skin contact with formaldehyde.

(b) If employees' skin may become splashed with solutions containing one percent or greater formaldehyde, for example because of equipment failure or improper work practices, the employer shall provide conveniently located quick drench showers and assure that affected employees use these facilities immediately.

(c) If there is any possibility that an employee's eyes may be splashed with solutions containing 0.1 percent or greater formaldehyde, the employer shall provide acceptable eye-wash facilities within the immediate work area for emergency use.

(10) Housekeeping. For operations involving formaldehyde liquids or gas, the employer shall conduct a program to detect leaks and spills, including regular visual inspections.

(a) Preventative maintenance of equipment, including surveys for leaks, shall be undertaken at regular intervals.

(b) In work areas where spillage may occur, the employer shall make provisions to contain the spill, to decontaminate the work area, and to dispose of the waste.

(c) The employer shall assure that all leaks are repaired and spills are cleaned promptly by employees wearing suitable protective equipment and trained in proper methods for cleanup and decontamination.

(d) Formaldehyde-contaminated waste and debris resulting from leaks or spills shall be placed for disposal in sealed containers bearing a label warning of formaldehyde's presence and of the hazards associated with formaldehyde.

(11) Emergencies. For each workplace where there is the possibility of an emergency involving formaldehyde, the employer shall assure appropriate procedures are adopted to minimize injury and loss of life. Appropriate procedures shall be implemented in the event of an emergency.

(12) Medical surveillance.

(a) Employees covered.

(i) The employer shall institute medical surveillance programs for all employees exposed to formaldehyde at concentrations at or exceeding the action level or exceeding the STEL.

(ii) The employer shall make medical surveillance available for employees who develop signs and symptoms of overexposure to formaldehyde and for all employees exposed to formaldehyde in emergencies. When determining whether an employee may be experiencing signs and symptoms of possible overexposure to formaldehyde, the employer may rely on the evidence that signs and symptoms associated with formaldehyde exposure will occur only in exceptional circumstances when airborne exposure is less than 0.1 ppm and when formaldehyde is present in materials in concentrations less than 0.1 percent.

(b) Examination by a physician. All medical procedures, including administration of medical disease questionnaires, shall be performed by or under the supervision of a licensed physician and shall be provided without cost to the employee, without loss of pay, and at a reasonable time and place.

(c) Medical disease questionnaire. The employer shall make the following medical surveillance available to employees prior to assignment to a job where formaldehyde exposure is at or above the action level or above the STEL and annually thereafter. The employer shall also make the following medical surveillance available promptly upon determining that an employee is experiencing signs and symptoms indicative of possible overexposure to formaldehyde.

(i) Administration of a medical disease questionnaire, such as in Appendix D, which is designed to elicit information on work history, smoking history, any evidence of eye,

nose, or throat irritation; chronic airway problems or hyperactive airway disease; allergic skin conditions or dermatitis; and upper or lower respiratory problems.

(ii) A determination by the physician, based on evaluation of the medical disease questionnaire, of whether a medical examination is necessary for employees not required to wear respirators to reduce exposure to formaldehyde.

(d) Medical examinations. Medical examinations shall be given to any employee who the physician feels, based on information in the medical disease questionnaire, may be at increased risk from exposure to formaldehyde and at the time of initial assignment and at least annually thereafter to all employees required to wear a respirator to reduce exposure to formaldehyde. The medical examination shall include:

(i) A physical examination with emphasis on evidence of irritation or sensitization of the skin and respiratory system, shortness of breath, or irritation of the eyes.

(ii) Laboratory examinations for respirator wearers consisting of baseline and annual pulmonary function tests. As a minimum, these tests shall consist of forced vital capacity (FVC), forced expiratory volume in one second (FEV1), and forced expiratory flow (FEF).

(iii) Any other test which the examining physician deems necessary to complete the written opinion.

(iv) Counseling of employees having medical conditions that would be directly or indirectly aggravated by exposure to formaldehyde on the increased risk of impairment of their health.

(e) Examinations for employees exposed in an emergency. The employer shall make medical examinations available as soon as possible to all employees who have been exposed to formaldehyde in an emergency.

(i) The examination shall include a medical and work history with emphasis on any evidence of upper or lower respiratory problems, allergic conditions, skin reaction or hypersensitivity, and any evidence of eye, nose, or throat irritation.

(ii) Other examinations shall consist of those elements considered appropriate by the examining physician.

(f) Information provided to the physician. The employer shall provide the following information to the examining physician:

(i) A copy of this standard and Appendices A, C, D, and E;

(ii) A description of the affected employee's job duties as they relate to the employee's exposure to formaldehyde;

(iii) The representative exposure level for the employee's job assignment;

(iv) Information concerning any personal protective equipment and respiratory protection used or to be used by the employee; and

(v) Information from previous medical examinations of the affected employee within the control of the employer.

(vi) In the event of a nonroutine examination because of an emergency, the employer shall provide to the physician as soon as possible: A description of how the emergency occurred and the exposure the victim may have received.

(g) Physician's written opinion.

(i) For each examination required under this standard, the employer shall obtain a written opinion from the examining physician. This written opinion shall contain the results of

the medical examination except that it shall not reveal specific findings or diagnoses unrelated to occupational exposure to formaldehyde. The written opinion shall include:

(A) The physician's opinion as to whether the employee has any medical condition that would place the employee at an increased risk of material impairment of health from exposure to formaldehyde;

(B) Any recommended limitations on the employee's exposure or changes in the use of personal protective equipment, including respirators;

(C) A statement that the employee has been informed by the physician of any medical conditions which would be aggravated by exposure to formaldehyde, whether these conditions may have resulted from past formaldehyde exposure or from exposure in an emergency, and whether there is a need for further examination or treatment.

(ii) The employer shall provide for retention of the results of the medical examination and tests conducted by the physician.

(iii) The employer shall provide a copy of the physician's written opinion to the affected employee within fifteen days of its receipt.

(h) Medical removal.

(i) The provisions of this subdivision apply when an employee reports significant irritation of the mucosa of the eyes or of the upper airways, respiratory sensitization, dermal irritation, or dermal sensitization attributed to workplace formaldehyde exposure. Medical removal provisions do not apply in case of dermal irritation or dermal sensitization when the product suspected of causing the dermal condition contains less than 0.05% formaldehyde.

(ii) An employee's report of signs or symptoms of possible overexposure to formaldehyde shall be evaluated by a physician selected by the employer pursuant to (c) of this subsection. If the physician determines that a medical examination is not necessary under (c)(ii) of this subsection, there shall be a two-week evaluation and remediation period to permit the employer to ascertain whether the signs or symptoms subside untreated or with the use of creams, gloves, first aid treatment, or personal protective equipment. Industrial hygiene measures that limit the employee's exposure to formaldehyde may also be implemented during this period. The employee shall be referred immediately to a physician prior to expiration of the two-week period if the signs or symptoms worsen. Earnings, seniority, and benefits may not be altered during the two-week period by virtue of the report.

(iii) If the signs or symptoms have not subsided or been remedied by the end of the two-week period, or earlier if signs or symptoms warrant, the employee shall be examined by a physician selected by the employer. The physician shall presume, absent contrary evidence, that observed dermal irritation or dermal sensitization are not attributable to formaldehyde when products to which the affected employee is exposed contain less than 0.1% formaldehyde.

(iv) Medical examinations shall be conducted in compliance with the requirements of (e)(i) and (ii) of this subsection. Additional guidelines for conducting medical exams are contained in WAC 296-62-07546, Appendix C.

(v) If the physician finds that significant irritation of the mucosa of the eyes or the upper airways, respiratory sensi-

zation, dermal irritation, or dermal sensitization result from workplace formaldehyde exposure and recommends restrictions or removal. The employer shall promptly comply with the restrictions or recommendations of removal. In the event of a recommendation of removal, the employer shall remove the affected employee from the current formaldehyde exposure and if possible, transfer the employee to work having no or significantly less exposure to formaldehyde.

(vi) When an employee is removed pursuant to item (v) of this subdivision, the employer shall transfer the employee to comparable work for which the employee is qualified or can be trained in a short period (up to six months), where the formaldehyde exposures are as low as possible, but not higher than the action level. The employer shall maintain the employee's current earnings, seniority, and other benefits. If there is no such work available, the employer shall maintain the employee's current earnings, seniority, and other benefits until such work becomes available, until the employee is determined to be unable to return to workplace formaldehyde exposure, until the employee is determined to be able to return to the original job status, or for six months, whichever comes first.

(vii) The employer shall arrange for a follow-up medical examination to take place within six months after the employee is removed pursuant to this subsection. This examination shall determine if the employee can return to the original job status, or if the removal is to be permanent. The physician shall make a decision within six months of the date the employee was removed as to whether the employee can be returned to the original job status, or if the removal is to be permanent.

(viii) An employer's obligation to provide earnings, seniority, and other benefits to a removed employee may be reduced to the extent that the employee receives compensation for earnings lost during the period of removal either from a publicly or employer-funded compensation program or from employment with another employer made possible by virtue of the employee's removal.

(ix) In making determinations of the formaldehyde content of materials under this subsection the employer may rely on objective data.

(i) Multiple physician review.

(i) After the employer selects the initial physician who conducts any medical examination or consultation to determine whether medical removal or restriction is appropriate, the employee may designate a second physician to review any findings, determinations, or recommendations of the initial physician and to conduct such examinations, consultations, and laboratory tests as the second physician deems necessary and appropriate to evaluate the effects of formaldehyde exposure and to facilitate this review.

(ii) The employer shall promptly notify an employee of the right to seek a second medical opinion after each occasion that an initial physician conducts a medical examination or consultation for the purpose of medical removal or restriction.

(iii) The employer may condition its participation in, and payment for, the multiple physician review mechanism upon the employee doing the following within fifteen days after receipt of the notification of the right to seek a second medi-

cal opinion, or receipt of the initial physician's written opinion, whichever is later:

(A) The employee informs the employer of the intention to seek a second medical opinion; and

(B) The employee initiates steps to make an appointment with a second physician.

(iv) If the findings, determinations, or recommendations of the second physician differ from those of the initial physician, then the employer and the employee shall assure that efforts are made for the two physicians to resolve the disagreement. If the two physicians are unable to quickly resolve their disagreement, then the employer and the employee through their respective physicians shall designate a third physician who shall be a specialist in the field at issue:

(A) To review the findings, determinations, or recommendations of the prior physicians; and

(B) To conduct such examinations, consultations, laboratory tests, and discussions with prior physicians as the third physician deems necessary to resolve the disagreement of the prior physicians.

(v) In the alternative, the employer and the employee or authorized employee representative may jointly designate such third physician.

(vi) The employer shall act consistent with the findings, determinations, and recommendations of the third physician, unless the employer and the employee reach an agreement which is otherwise consistent with the recommendations of at least one of the three physicians.

(13) Hazard communication.

(a) General. Notwithstanding any exemption granted in WAC ((~~296-62-05403-(6)(e))~~) 296-800-170 for wood products, each employer who has a workplace covered by this standard shall comply with the requirements of WAC ((~~296-62-05409 through 296-62-05419~~)) 296-800-170. The definitions of the chemical hazard communication standard shall apply under this standard.

(i) The following shall be subject to the hazard communication requirements of this section: Formaldehyde gas, all mixtures or solutions composed of greater than 0.1 percent formaldehyde, and materials capable of releasing formaldehyde into the air under reasonably foreseeable concentrations reaching or exceeding 0.1 ppm.

(ii) As a minimum, specific health hazards that the employer shall address are: Cancer, irritation and sensitization of the skin and respiratory system, eye and throat irritation, and acute toxicity.

(b) Manufacturers and importers who produce or import formaldehyde or formaldehyde-containing products shall provide downstream employers using or handling these products with an objective determination through the required labels and MSDSs if these items may constitute a health hazard within the meaning of WAC 296-62-05407 under normal conditions of use.

(c) Labels.

(i) The employer shall assure that hazard warning labels complying with the requirements of WAC ((~~296-62-05411~~)) 296-800-170 are affixed to all containers of materials listed in (a)(i) of this subsection, except to the extent that (a)(i) of this subsection is inconsistent with this item.

(ii) Information on labels. As a minimum, for all materials listed in (a)(i) of this subsection, capable of releasing formaldehyde at levels of 0.1 ppm to 0.5 ppm, labels shall identify that the product contains formaldehyde: List the name and address of the responsible party; and state that physical and health hazard information is readily available from the employer and from material safety data sheets.

(iii) For materials listed in (a)(i) of this subsection, capable of releasing formaldehyde at levels above 0.5 ppm, labels shall appropriately address all the hazards as defined in (~~Part C, WAC 296-62-054 through 296-62-05425~~) WAC 296-800-170, and Appendices A and B, including respiratory sensitization, and shall contain the words "Potential Cancer Hazard."

(iv) In making the determinations of anticipated levels of formaldehyde release, the employer may rely on objective data indicating the extent of potential formaldehyde release under reasonably foreseeable conditions of use.

(v) Substitute warning labels. The employer may use warning labels required by other statutes, regulations, or ordinances which impart the same information as the warning statements required by this subitem.

(d) Material safety data sheets.

(i) Any employer who uses formaldehyde-containing materials listed in (a)(i) of this subsection shall comply with the requirements of WAC ((~~296-62-05413~~) 296-800-170) with regard to the development and updating of material safety data sheets.

(ii) Manufacturers, importers, and distributors of formaldehyde containing materials listed in (a)(i) of this subsection shall assure that material safety data sheets and updated information are provided to all employers purchasing such materials at the time of the initial shipment and at the time of the first shipment after a material safety data sheet is updated.

(e) Written hazard communication program. The employer shall develop, implement, and maintain at the workplace, a written hazard communication program for formaldehyde exposures in the workplace, which at a minimum describes how the requirements specified in this section for labels and other forms of warning and material safety data sheets, and subsection (14) of this section for employee information and training, will be met. Employees in multi-employer workplaces shall comply with the requirements of WAC ((~~296-62-05409 (2)(b)~~) 296-800-170).

(14) Employee information and training.

(a) Participation. The employer shall assure that all employees who are assigned to workplaces where there is a health hazard from formaldehyde participate in a training program, except that where the employer can show, using objective data, that employees are not exposed to formaldehyde at or above 0.1 ppm, the employer is not required to provide training.

(b) Frequency. Employers shall provide such information and training to employees at the time of their initial assignment and whenever a new exposure to formaldehyde is introduced into their work area. The training shall be repeated at least annually.

(c) Training program. The training program shall be conducted in a manner which the employee is able to understand and shall include:

(i) A discussion of the contents of this regulation and the contents of the material safety data sheet;

(ii) The purpose for and a description of the medical surveillance program required by this standard, including:

(A) A description of the potential health hazards associated with exposure to formaldehyde and a description of the signs and symptoms of exposure to formaldehyde.

(B) Instructions to immediately report to the employer the development of any adverse signs or symptoms that the employee suspects is attributable to formaldehyde exposure.

(iii) Description of operations in the work area where formaldehyde is present and an explanation of the safe work practices appropriate for limiting exposure to formaldehyde in each job;

(iv) The purpose for, proper use of, and limitations of personal protective clothing;

(v) Instructions for the handling of spills, emergencies, and clean-up procedures;

(vi) An explanation of the importance of engineering and work practice controls for employee protection and any necessary instruction in the use of these controls;

(vii) A review of emergency procedures including the specific duties or assignments of each employee in the event of an emergency; and

(viii) The purpose, proper use, limitations, and other training requirements for respiratory protection as required by chapter 296-62 WAC, Part E.

(d) Access to training materials.

(i) The employer shall inform all affected employees of the location of written training materials and shall make these materials readily available, without cost, to the affected employees.

(ii) The employer shall provide, upon request, all training materials relating to the employee training program to the director of labor and industries, or his/her designated representative.

(15) Recordkeeping.

(a) Exposure measurements. The employer shall establish and maintain an accurate record of all measurements taken to monitor employee exposure to formaldehyde. This record shall include:

(i) The date of measurement;

(ii) The operation being monitored;

(iii) The methods of sampling and analysis and evidence of their accuracy and precision;

(iv) The number, durations, time, and results of samples taken;

(v) The types of protective devices worn; and

(vi) The names, job classifications, Social Security numbers, and exposure estimates of the employees whose exposures are represented by the actual monitoring results.

(b) Exposure determinations. Where the employer has determined that no monitoring is required under this standard, the employer shall maintain a record of the objective data relied upon to support the determination that no employee is exposed to formaldehyde at or above the action level.

(c) Medical surveillance. The employer shall establish and maintain an accurate record for each employee subject to

medical surveillance under this standard. This record shall include:

- (i) The name and Social Security number of the employee;
- (ii) The physician's written opinion;
- (iii) A list of any employee health complaints that may be related to exposure to formaldehyde; and
- (iv) A copy of the medical examination results, including medical disease questionnaires and results of any medical tests required by the standard or mandated by the examining physician.

(d) Record retention. The employer shall retain records required by this standard for at least the following periods:

- (i) Exposure records and determinations shall be kept for at least thirty years; and
 - (ii) Medical records shall be kept for the duration of employment plus thirty years.
- (e) Availability of records.
- (i) Upon request, the employer shall make all records maintained as a requirement of this standard available for examination and copying to the director of labor and industries, or his/her designated representative.

(ii) The employer shall make employee exposure records, including estimates made from representative monitoring and available upon request for examination and copying, to the subject employee, or former employee, and employee representatives in accordance with WAC 296-62-052 through 296-62-05209 and 296-62-05213 through 296-62-05217 and WAC 296-800-180.

(iii) Employee medical records required by this standard shall be provided upon request for examination and copying, to the subject employee, or former employee, or to anyone having the specific written consent of the subject employee or former employee in accordance with WAC 296-62-05201 through 296-62-05209, and 296-62-05213 through 296-62-05217.

AMENDATORY SECTION (Amending Order 92-15, filed 2/3/93, effective 3/15/93)

WAC 296-62-07601 Scope and application. (1) WAC 296-62-076 applies to all occupational exposures to MDA, Chemical Abstracts Service Registry No. 101-77-9, except as provided in subsections (2) through (7) of this section.

(2) Except as provided in subsection (8) of this section and WAC 296-62-07609(5), this section does not apply to the processing, use, and handling of products containing MDA where initial monitoring indicates that the product is not capable of releasing MDA in excess of the action level under the expected conditions of processing, use, and handling which will cause the greatest possible release; and where no "dermal exposure to MDA" can occur.

(3) Except as provided in subsection (8) of this section, WAC 296-62-076 does not apply to the processing, use, and handling of products containing MDA where objective data are reasonably relied upon which demonstrate the product is not capable of releasing MDA under the expected conditions of processing, use, and handling which will cause the greatest possible release; and where no "dermal exposure to MDA" can occur.

(4) WAC 296-62-076 does not apply to the storage, transportation, distribution, or sale of MDA in intact containers sealed in such a manner as to contain the MDA dusts, vapors, or liquids, except for the provisions of WAC 296-62-054 ((and)), 296-62-07607 and 296-800-170.

(5) WAC 296-62-076 does not apply to the construction industry as defined in WAC 296-155-012(6). (Exposure to MDA in the construction industry is covered by WAC 296-155-173.)

(6) Except as provided in subsection (8) of this section, WAC 296-62-076 does not apply to materials in any form which contain less than 0.1% MDA by weight or volume.

(7) Except as provided in subsection (8) of this section, WAC 296-62-076 does not apply to "finished articles containing MDA."

(8) Where products containing MDA are exempted under subsections (2) through (7) of this section, the employer shall maintain records of the initial monitoring results or objective data supporting that exemption and the basis for the employer's reliance on the data, as provided in the recordkeeping provision of WAC 296-62-07631.

AMENDATORY SECTION (Amending Order 94-16, filed 9/30/94, effective 11/20/94)

WAC 296-62-07617 Protective work clothing and equipment. (1) Provision and use. Where employees are subject to dermal exposure to MDA, where liquids containing MDA can be splashed into the eyes, or where airborne concentrations of MDA are in excess of the PEL, the employer shall provide, at no cost to the employee, and ensure that the employee uses, appropriate protective work clothing and equipment which prevent contact with MDA such as, but not limited to:

- (a) Aprons, coveralls, or other full-body work clothing;
- (b) Gloves, head coverings, and foot coverings; and
- (c) Face shields, chemical goggles; or

(d) Other appropriate protective equipment which comply with ((chapter 296-24 WAC, Part A-2)) WAC 296-800-160.

(2) Removal and storage.

(a) The employer shall ensure that, at the end of their work shift, employees remove MDA-contaminated protective work clothing and equipment that is not routinely removed throughout the day in change rooms provided in accordance with the provisions established for change rooms.

(b) The employer shall ensure that, during their work shift, employees remove all other MDA-contaminated protective work clothing or equipment before leaving a regulated area.

(c) The employer shall ensure that no employee takes MDA-contaminated work clothing or equipment out of the change room, except those employees authorized to do so for the purpose of laundering, maintenance, or disposal.

(d) MDA-contaminated work clothing or equipment shall be placed and stored in closed containers which prevent dispersion of the MDA outside the container.

(e) Containers of MDA-contaminated protective work clothing or equipment which are to be taken out of change

rooms or the workplace for cleaning, maintenance, or disposal shall bear labels warning of the hazards of MDA.

(3) Cleaning and replacement.

(a) The employer shall provide the employee with clean protective clothing and equipment. The employer shall ensure that protective work clothing or equipment required by this paragraph is cleaned, laundered, repaired, or replaced at intervals appropriate to maintain its effectiveness.

(b) The employer shall prohibit the removal of MDA from protective work clothing or equipment by blowing, shaking, or any methods which allow MDA to reenter the workplace.

(c) The employer shall ensure that laundering of MDA-contaminated clothing shall be done so as to prevent the release of MDA in the workplace.

(d) Any employer who gives MDA-contaminated clothing to another person for laundering shall inform such person of the requirement to prevent the release of MDA.

(e) The employer shall inform any person who launders or cleans protective clothing or equipment contaminated with MDA of the potentially harmful effects of exposure.

(f) MDA-contaminated clothing shall be transported in properly labeled, sealed, impermeable bags or containers.

AMENDATORY SECTION (Amending Order 92-15, filed 2/3/93, effective 3/15/93)

WAC 296-62-07621 Communication of hazards to employees. (1) Signs and labels.

(a) The employer shall post and maintain legible signs demarcating regulated areas and entrances or accessways to regulated areas that bear the following legend:

DANGER MDA MAY CAUSE CANCER LIVER TOXIN
 AUTHORIZED PERSONNEL ONLY
 RESPIRATORS AND PROTECTIVE CLOTHING
 MAY BE REQUIRED TO BE WORN IN THIS AREA

(b) The employer shall ensure that labels or other appropriate forms of warning are provided for containers of MDA within the workplace. The labels shall comply with the requirements of WAC ((296-62-0541+)) 296-800-170 and shall include the following legend:

(i) For pure MDA

DANGER CONTAINS MDA MAY CAUSE CANCER LIVER TOXIN

(ii) For mixtures containing MDA

DANGER CONTAINS MDA CONTAINS MATERIALS
 WHICH MAY CAUSE CANCER LIVER TOXIN

(2) Material safety data sheets (MSDS).

(a) Employers shall obtain or develop, and shall provide access to their employees, to a material safety data sheet (MSDS) for MDA. In meeting this obligation, employers shall make appropriate use of the information found in Appendices A and B.

(b) Employers who are manufacturers or importers shall:

(i) Comply with subdivision (1)(b) of this section as appropriate; and

(ii) Comply with the requirement in WISHA hazard communication standard, WAC 296-62-054, that they deliver to downstream employers an MSDS for MDA.

(3) Information and training.

(a) The employer shall provide employees with information and training on MDA, in accordance with WAC ((296-62-054 through 296-62-05415)) 296-800-170, at the time of initial assignment and at least annually thereafter.

(b) In addition to the information required under WAC ((296-62-054)) 296-800-170, the employer shall:

(i) Provide an explanation of the contents of WAC 296-62-076, including Appendices A and B, and indicate to employees where a copy of the standard is available;

(ii) Describe the medical surveillance program required under WAC 296-62-07625, and explain the information contained in Appendix C; and

(iii) Describe the medical removal provision required under WAC 296-62-07625.

(4) Access to training materials.

(a) The employer shall make readily available to all affected employees, without cost, all written materials relating to the employee training program, including a copy of this regulation.

(b) The employer shall provide to the director, upon request, all information and training materials relating to the employee information and training program.

AMENDATORY SECTION (Amending Order 92-15, filed 2/3/93, effective 3/15/93)

WAC 296-62-07631 Recordkeeping. (1) Monitoring data for exempted employers.

(a) Where as a result of the initial monitoring the processing, use, or handling of products made from or containing MDA are exempted from other requirements of this section under WAC 296-62-07601(2), the employer shall establish and maintain an accurate record of monitoring relied on in support of the exemption.

(b) This record shall include at least the following information:

(i) The product qualifying for exemption;

(ii) The source of the monitoring data (e.g., was monitoring performed by the employer or a private contractor);

(iii) The testing protocol, results of testing, and/or analysis of the material for the release of MDA;

(iv) A description of the operation exempted and how the data support the exemption (e.g., are the monitoring data representative of the conditions at the affected facility); and

(v) Other data relevant to the operations, materials, processing, or employee exposures covered by the exemption.

(c) The employer shall maintain this record for the duration of the employer's reliance upon such objective data.

(2) Objective data for exempted employers.

(a) Where the processing, use, or handling of products made from or containing MDA are exempted from other requirements of WAC 296-62-076 under WAC 296-62-07601, the employer shall establish and maintain an accurate

PERMANENT

record of objective data relied upon in support of the exemption.

(b) This record shall include at least the following information:

- (i) The product qualifying for exemption;
- (ii) The source of the objective data;
- (iii) The testing protocol, results of testing, and/or analysis of the material for the release of MDA;
- (iv) A description of the operation exempted and how the data support the exemption; and

(v) Other data relevant to the operations, materials, processing, or employee exposures covered by the exemption.

(c) The employer shall maintain this record for the duration of the employer's reliance upon such objective data.

(3) Exposure measurements.

(a) The employer shall establish and maintain an accurate record of all measurements required by WAC 296-62-07609, in accordance with Part B of this chapter.

(b) This record shall include:

(i) The dates, number, duration, and results of each of the samples taken, including a description of the procedure used to determine representative employee exposures;

(ii) Identification of the sampling and analytical methods used;

(iii) A description of the type of respiratory protective devices worn, if any; and

(iv) The name, Social Security number, job classification, and exposure levels of the employee monitored and all other employees whose exposure the measurement is intended to represent.

(c) The employer shall maintain this record for at least 30 years, in accordance with Part B of this chapter.

(4) Medical surveillance.

(a) The employer shall establish and maintain an accurate record for each employee subject to medical surveillance required by WAC 296-62-07625, 296-62-07627, and 296-62-07629, in accordance with Part B of this chapter.

(b) This record shall include:

(i) The name, Social Security number, and description of the duties of the employee;

(ii) The employer's copy of the physician's written opinion on the initial, periodic, and any special examinations, including results of medical examination and all tests, opinions, and recommendations;

(iii) Results of any airborne exposure monitoring done for that employee and the representative exposure levels supplied to the physician; and

(iv) Any employee medical complaints related to exposure to MDA.

(c) The employer shall keep, or assure that the examining physician keeps, the following medical records:

(i) A copy of this standard and its appendices, except that the employer may keep one copy of the standard and its appendices for all employees provided the employer references the standard and its appendices in the medical surveillance record of each employee;

(ii) A copy of the information provided to the physician as required by any sections in the regulatory text;

(iii) A description of the laboratory procedures and a copy of any standards or guidelines used to interpret the test results or references to the information;

(iv) A copy of the employee's medical and work history related to exposure to MDA.

(d) The employer shall maintain this record for at least the duration of employment plus 30 years, in accordance with Part B of this chapter.

(5) Medical removals.

(a) The employer shall establish and maintain an accurate record for each employee removed from current exposure to MDA pursuant to WAC 296-62-07625, 296-62-07627, and 296-62-07629.

(b) Each record shall include:

(i) The name and Social Security number of the employee;

(ii) The date of each occasion that the employee was removed from current exposure to MDA as well as the corresponding date on which the employee was returned to his or her former job status;

(iii) A brief explanation of how each removal was or is being accomplished; and

(iv) A statement with respect to each removal indicating the reason for the removal.

(c) The employer shall maintain each medical removal record for at least the duration of an employee's employment plus 30 years.

(6) Availability.

(a) The employer shall assure that records required to be maintained by WAC 296-62-076 shall be made available, upon request, to the director for examination and copying.

(b) Employee exposure monitoring records required by WAC 296-62-076 shall be provided upon request for examination and copying to employees, employee representatives, and the director in accordance with the applicable sections of WAC ((296-62-054)) 296-800-170.

(c) Employee medical records required by this section shall be provided upon request for examination and copying, to the subject employee, to anyone having the specific written consent of the subject employee, and to the director in accordance with Part B of this chapter.

(7) Transfer of records.

(a) The employer shall comply with the requirements involving transfer of records set forth in WAC 296-62-05215.

(b) If the employer ceases to do business and there is no successor employer to receive and retain the records for the prescribed period, the employer shall notify the director, at least 90 days prior to disposal, and transmit the records to the director if so requested by the director within that period.

AMENDATORY SECTION (Amending WSR 97-19-014, filed 9/5/97, effective 11/5/97)

WAC 296-62-07717 Protective work clothing and equipment. (1) Provision and use. If an employee is exposed to asbestos above the permissible exposure limits, or where the possibility of eye irritation exists, or for which a required negative exposure assessment is not produced and for any employee performing Class I operations, the employer shall provide at no cost to the employee and require that the

employee uses appropriate protective work clothing and equipment such as, but not limited to:

- (a) Coveralls or similar full-body work clothing;
- (b) Gloves, head coverings, and foot coverings; and
- (c) Face shields, vented goggles, or other appropriate protective equipment which complies with WAC ((296-24-07804)) 296-800-160.

(2) Removal and storage.

(a) The employer shall ensure that employees remove work clothing contaminated with asbestos only in change rooms provided in accordance with WAC 296-62-07719(1).

(b) The employer shall ensure that no employee takes contaminated work clothing out of the change room, except those employees authorized to do so for the purpose of laundering, maintenance, or disposal.

(c) Contaminated clothing. Contaminated clothing shall be transported in sealed impermeable bags, or other closed, impermeable containers, and be labeled in accordance with WAC 296-62-07721.

(d) Containers of contaminated protective devices or work clothing which are to be taken out of change rooms or the workplace for cleaning, maintenance, or disposal, shall bear labels in accordance with WAC 296-62-07721(6).

(3) Cleaning and replacement.

(a) The employer shall clean, launder, repair, or replace protective clothing and equipment required by this paragraph to maintain their effectiveness. The employer shall provide clean protective clothing and equipment at least weekly to each affected employee.

(b) The employer shall prohibit the removal of asbestos from protective clothing and equipment by blowing or shaking.

(c) Laundering of contaminated clothing shall be done so as to prevent the release of airborne fibers of asbestos in excess of the permissible exposure limits prescribed in WAC 296-62-07705.

(d) Any employer who gives contaminated clothing to another person for laundering shall inform such person of the requirement in (c) of this subsection to effectively prevent the release of airborne fibers of asbestos in excess of the permissible exposure limits.

(e) The employer shall inform any person who launders or cleans protective clothing or equipment contaminated with asbestos of the potentially harmful effects of exposure to asbestos.

(f) Contaminated clothing shall be transported in sealed impermeable bags, or other closed, impermeable containers, and labeled in accordance with WAC 296-62-07721.

(4) Inspection of protective clothing for construction and shipyard work.

(a) The competent person shall examine worksuits worn by employees at least once per workshift for rips or tears that may occur during performance of work.

(b) When rips or tears are detected while an employee is working, rips and tears shall be immediately mended, or the worksuit shall be immediately replaced.

AMENDATORY SECTION (Amending WSR 99-17-026, filed 8/10/99, effective 11/10/99)

WAC 296-62-07721 Communication of hazards to employees. (1) Communication of hazards to employees. General industry requirements.

(a) Introduction. This section applies to the communication of information concerning asbestos hazards in general industry. Asbestos exposure in industry occurs in a wide variety of industrial and commercial settings. Employees who manufacture asbestos-containing products may be exposed to asbestos fibers. Employees who repair and replace automotive brakes and clutches may be exposed to asbestos fibers. In addition, employees engaged in housekeeping activities in industrial facilities with asbestos product manufacturing operations, and in public and commercial buildings with installed asbestos-containing materials may be exposed to asbestos fibers. It should be noted that employees who perform housekeeping activities during and after construction activities are covered by asbestos construction work requirements in WAC 296-62-077. Housekeeping employees, regardless of industry designation, should know whether building components they maintain may expose them to asbestos. Building owners are often the only and/or best source of information concerning the presence of previously installed asbestos-containing building materials. Therefore they, along with employers of potentially exposed employees, are assigned specific information conveying and retention duties under this section.

(b) Installed asbestos-containing material. Employers and building owners are required to treat installed TSI and sprayed-on and troweled-on surfacing materials as ACM for the purposes of this standard. These materials are designated "presumed ACM or PACM," and are defined in WAC 296-62-07703. Asphalt and vinyl flooring installed no later than 1980 also must be treated as asbestos-containing. The employer or building owner may demonstrate that PACM and flooring materials do not contain asbestos by complying with WAC 296-62-07712 (10)(a)(ix).

(c) Duties of employers and building and facility owners.

(i) Building and facility owners must determine the presence, location, and quantity of ACM and/or PACM at the worksite. Employers and building and facility owners must exercise due diligence in complying with these requirements to inform employers and employees about the presence and location of ACM and PACM.

(ii) Before authorizing or allowing any construction, renovation, remodeling, maintenance, repair, or demolition project, an owner or owner's agent must perform, or cause to be performed, a good faith inspection to determine whether materials to be worked on or removed contain asbestos. The inspection must be documented by a written report maintained on file and made available upon request to the director.

(A) The good faith inspection must be conducted by an accredited inspector.

(B) Such good faith inspection is not required if the owner or owner's agent is reasonably certain that asbestos will not be disturbed by the project or the owner or owner's agent assumes that the suspect material contains asbestos and

handles the material in accordance with WAC 296-62-07701 through 296-62-07753.

(iii) The owner or owner's agent must provide, to all contractors submitting a bid to undertake any construction, renovation, remodeling, maintenance, repair, or demolition project, the written statement either of the reasonable certainty of nondisturbance of asbestos or of assumption of the presence of asbestos. Contractors must be provided with the written report before they apply or bid to work.

(iv) Any owner or owner's agent who fails to comply with (c)(ii) and (iii) of this subsection must be subject to a mandatory fine of not less than two hundred fifty dollars for each violation. Each day the violation continues must be considered a separate violation. In addition, any construction, renovation, remodeling, maintenance, repair, or demolition which was started without meeting the requirements of this section must be halted immediately and cannot be resumed before meeting such requirements.

(v) Building and facility owners must inform employers of employees, and employers must inform employees who will perform housekeeping activities in areas which contain ACM and/or PACM of the presence and location of ACM and/or PACM in such areas which may be contacted during such activities.

(vi) Upon written or oral request, building or facility owners must make a copy of the written report required in this section available to the department of labor and industries and the collective bargaining representatives or employee representatives of any employee who may be exposed to any asbestos or asbestos-containing materials. A copy of the written report must be posted conspicuously at the location where employees report to work.

(vii) Building and facility owners must maintain records of all information required to be provided according to this section and/or otherwise known to the building owner concerning the presence, location and quantity of ACM and PACM in the building/facility. Such records must be kept for the duration of ownership and must be transferred to successive owners.

(2) Communication of hazards to employees. Requirements for construction and shipyard employment activities.

(a) Introduction. This section applies to the communication of information concerning asbestos hazards in construction and shipyard employment activities. Most asbestos-related construction and shipyard activities involve previously installed building materials. Building/vessel owners often are the only and/or best sources of information concerning them. Therefore, they, along with employers of potentially exposed employees, are assigned specific information conveying and retention duties under this section. Installed Asbestos Containing Building/Vessel Material: Employers and building/vessel owners must identify TSI and sprayed or troweled on surfacing materials as asbestos-containing unless the employer, by complying with WAC 296-62-07721(3) determines it is not asbestos containing. Asphalt or vinyl flooring/decking material installed in buildings or vessels no later than 1980 must also be considered as asbestos containing unless the employer/owner, according to WAC 296-62-07712 (10)(a)(ix) determines it is not asbestos containing. If the employer or building/vessel owner has actual knowledge

or should have known, through the exercise of due diligence, that materials other than TSI and sprayed-on or troweled-on surfacing materials are asbestos containing, they must be treated as such. When communicating information to employees according to this standard, owners and employers must identify "PACM" as ACM. Additional requirements relating to communication of asbestos work on multi-employer worksites are set out in WAC 296-62-07706.

(b) Duties of building/vessel and facility owners.

(i) Before work subject to this section is begun, building/vessel and facility owners must identify the presence, location and quantity of ACM, and/or PACM at the worksite. All thermal system insulation and sprayed on or troweled on surfacing materials in buildings/vessels or substrates constructed no later than 1980 must be identified as PACM. In addition, resilient flooring/decking material installed no later than 1980 must also be identified as asbestos containing.

(ii) Before authorizing or allowing any construction, renovation, remodeling, maintenance, repair, or demolition project, a building/vessel and facility owner or owner's agent must perform, or cause to be performed, a good faith inspection to determine whether materials to be worked on or removed contain asbestos. The inspection must be documented by a written report maintained on file and made available upon request to the director.

(A) The good faith inspection must be conducted by an accredited inspector.

(B) Such good faith inspection is not required if the building/vessel and facility owner or owner's agent assumes that the suspect material contains asbestos and handles the material in accordance with WAC 296-62-07701 through 296-62-07753 or if the owner or the owner's agent is reasonably certain that asbestos will not be disturbed by the project.

(iii) The building/vessel and facility owner or owner's agent must provide, to all contractors submitting a bid to undertake any construction, renovation, remodeling, maintenance, repair, or demolition project, the written statement either of the reasonable certainty of nondisturbance of asbestos or of assumption of the presence of asbestos. Contractors must be provided the written report before they apply or bid on work.

(iv) Any building/vessel and facility owner or owners agent who fails to comply with WAC 296-62-07721 (2)(b)(ii) and (iii) must be subject to a mandatory fine of not less than two hundred fifty dollars for each violation. Each day the violation continues must be considered a separate violation. In addition, any construction, renovation, remodeling, maintenance, repair, or demolition which was started without meeting the requirements of this section must be halted immediately and cannot be resumed before meeting such requirements.

(v) Upon written or oral request, building/vessel and facility owner or owner's agent must make a copy of the written report required in this section available to the department of labor and industries and the collective bargaining representatives or employee representatives of any employee who may be exposed to any asbestos or asbestos-containing materials. A copy of the written report must be posted conspicuously at the location where employees report to work.

(vi) Building/vessel and facility owner or owner's agent must notify in writing the following persons of the presence, location and quantity of ACM or PACM, at worksites in their buildings/facilities/vessels.

(A) Prospective employers applying or bidding for work whose employees reasonably can be expected to work in or adjacent to areas containing such material;

(B) Employees of the owner who will work in or adjacent to areas containing such material;

(C) On multi-employer worksites, all employers of employees who will be performing work within or adjacent to areas containing such materials;

(D) Tenants who will occupy areas containing such materials.

(c) Duties of employers whose employees perform work subject to this standard in or adjacent to areas containing ACM and PACM. Building/vessel and facility owner or owner's agents whose employees perform such work must comply with these provisions to the extent applicable.

(i) Before work subject to this standard is begun, building/vessel and facility owner or owner's agents must determine the presence, location, and quantity of ACM and/or PACM at the worksite according to WAC 296-62-07721 (2)(b).

(ii) Before work under this standard is performed employers of employees who will perform such work must inform the following persons of the location and quantity of ACM and/or PACM present at the worksite and the precautions to be taken to insure that airborne asbestos is confined to the area.

(A) Owners of the building/vessel or facility;

(B) Employees who will perform such work and employers of employees who work and/or will be working in adjacent areas;

(iii) Upon written or oral request, a copy of the written report required in this section must be made available to the department of labor and industries and the collective bargaining representatives or employee representatives of any employee who may be exposed to any asbestos or asbestos-containing materials. A copy of the written report must be posted conspicuously at the location where employees report to work.

(iv) Within 10 days of the completion of such work, the employer whose employees have performed work subject to this standard, must inform the building/vessel or facility owner and employers of employees who will be working in the area of the current location and quantity of PACM and/or ACM remaining in the former regulated area and final monitoring results, if any.

(d) In addition to the above requirements, all employers who discover ACM and/or PACM on a worksite must convey information concerning the presence, location and quantity of such newly discovered ACM and/or PACM to the owner and to other employers of employees working at the worksite, within 24 hours of the discovery.

(e) No contractor may commence any construction, renovation, remodeling, maintenance, repair, or demolition project without receiving a copy of the written response or statement required by WAC 296-62-07721 (2)(b). Any contractor who begins any project without the copy of the written

report or statement will be subject to a mandatory fine of not less than two hundred fifty dollars per day. Each day the violation continues will be considered a separate violation.

(3) Criteria to rebut the designation of installed material as PACM.

(a) At any time, an employer and/or building/vessel owner may demonstrate, for purposes of this standard, that PACM does not contain asbestos. Building/vessel owners and/or employers are not required to communicate information about the presence of building material for which such a demonstration according to the requirements of (b) of this subsection has been made. However, in all such cases, the information, data and analysis supporting the determination that PACM does not contain asbestos, must be retained according to WAC 296-62-07727.

(b) An employer or owner may demonstrate that PACM does not contain asbestos by the following:

(i) Having a completed inspection conducted according to the requirements of AHERA (40 CFR Part 763, Subpart E) which demonstrates that the material is not ACM;

(ii) Performing tests of the material containing PACM which demonstrate that no asbestos is present in the material. Such tests must include analysis of bulk samples collected in the manner described in 40 CFR 763.86, Asbestos-containing materials in schools. The tests, evaluation and sample collection must be conducted by an accredited inspector. Analysis of samples must be performed by persons or laboratories with proficiency demonstrated by current successful participation in a nationally recognized testing program such as the National Voluntary Laboratory Accreditation Program (NVLAP) of the National Institute for Standards and Technology (NIST) or the Round Robin for bulk samples administered by the American Industrial Hygiene Association (AIHA), or an equivalent nationally recognized Round Robin testing program.

(4) At the entrance to mechanical rooms/areas in which employees reasonably can be expected to enter and which contain TSI or surfacing ACM and PACM, the building/vessel and facility owner or owner's agent must post signs which identify the material which is present, its location, and appropriate work practices which, if followed, will ensure that ACM and/or PACM will not be disturbed. The employer shall ensure, to the extent feasible, that employees who come in contact with these signs can comprehend them. Means to ensure employee comprehension may include the use of foreign languages, pictographs, graphics, and awareness training.

(5) Warning signs.

(a) Warning signs that demarcate the regulated area must be provided and displayed at each location where a regulated area is required. In addition, warning signs must be posted at all approaches to regulated areas and be posted at such a distance from such a location that an employee may read the signs and take necessary protective steps before entering the area marked by the signs.

(b) The warning signs required by (a) of this subsection must bear the following information:

DANGER
ASBESTOS
CANCER AND LUNG DISEASE HAZARD
AUTHORIZED PERSONNEL ONLY
RESPIRATORS AND PROTECTIVE CLOTHING ARE REQUIRED IN
THIS AREA

(c) The employer shall ensure that employees working in and contiguous to regulated areas comprehend the warning signs required to be posted by (a) of this subsection. Means to ensure employee comprehension may include the use of foreign languages, pictographs, and graphics.

(6) Warning labels.

(a) Warning labels must be affixed to all products containing asbestos including raw materials, mixtures, scrap, waste, debris, and other products containing asbestos fibers, and to their containers including waste containers. Installed asbestos products must contain a visible label, except where such a label would clearly not be feasible.

(b) Labels must be printed in large, bold letters on a contrasting background.

(c) The labels must comply with the requirements of WAC ((296-62-0541+)) 296-800-170, and must include the following information:

DANGER
CONTAINS ASBESTOS FIBERS
AVOID CREATING DUST
CANCER AND LUNG DISEASE HAZARD
AVOID BREATHING AIRBORNE ASBESTOS FIBERS

(7) The provisions for labels required by subsection (6)(a) of this section or for material safety data sheets required by subsection (8) of this section do not apply where:

(a) Asbestos fibers have been modified by a bonding agent, coating, binder, or other material, provided that the manufacturer can demonstrate that during any reasonably foreseeable use, handling, storage, disposal, processing, or transportation, no airborne concentrations of fibers of asbestos in excess of the excursion limit will be released; or

(b) Asbestos is present in a product in concentrations less than 1.0 percent by weight.

(8) Material safety data sheets. Employers who are manufacturers or importers of asbestos, or asbestos products must comply with the requirements regarding development of material safety data sheets as specified in WAC 296-62-05413, except as provided by subsection (7) of this section.

(9) When a building/vessel owner/or employer identifies previously installed PACM and/or ACM, labels or signs must be affixed or posted so that employees will be notified of what materials contain PACM and/or ACM. The employer must attach such labels in areas where they will clearly be noticed by employees who are likely to be exposed, such as at the entrance to mechanical rooms/areas. Signs required by subsection (5)(a) of this section may be posted in lieu of labels so long as they contain information required for labeling. The employer must ensure, to the extent feasible, that employees who come in contact with these signs can comprehend them. Means to ensure employee comprehension may

include the use of foreign languages, pictographs, graphics, and awareness training.

AMENDATORY SECTION (Amending WSR 99-10-071, filed 5/4/99, effective 9/1/99)

WAC 296-62-11021 Open surface tanks. (1) General.

(a) This section applies to all operations involving the immersion of materials in liquids, or in the vapors of such liquids, for the purpose of cleaning or altering the surface or adding to or imparting a finish thereto or changing the character of the materials, and their subsequent removal from the liquid or vapor, draining, and drying. These operations include washing, electroplating, anodizing, pickling, quenching, dyeing, dipping, tanning, dressing, bleaching, degreasing, alkaline cleaning, stripping, rinsing, digesting, and other similar operations.

(b) Except where specific construction specifications are prescribed in this section, hoods, ducts, elbows, fans, blowers, and all other exhaust system parts, components, and supports thereof shall be so constructed as to meet conditions of service and to facilitate maintenance and shall conform in construction to the specifications contained in American National Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems, Z9.2-1960.

(2) Classification of open-surface tank operations.

(a) Open-surface tank operations shall be classified into 16 classes, numbered A-1 to D-4, inclusive.

(b) Determination of class. Class is determined by two factors, hazard potential designated by a letter from A to D, inclusive, and rate of gas, vapor, or mist evolution designated by a number from 1 to 4, inclusive (for example, B.3).

(c) Hazard potential is an index, on a scale of from A to D, inclusive, of the severity of the hazard associated with the substance contained in the tank because of the toxic, flammable, or explosive nature of the vapor, gas, or mist produced therefrom. The toxic hazard is determined from the concentration, measured in parts by volume of a gas or vapor, per million parts by volume of contaminated air (ppm), or in milligrams of mist per cubic meter of air (mg/m³), below which ill effects are unlikely to occur to the exposed worker. The concentrations shall be those in WAC 296-62-075 through 296-62-07515.

(d) The relative fire or explosion hazard is measured in degrees Fahrenheit in terms of the closed-cup flash point of the substance in the tank. Detailed information on the prevention of fire hazards in dip tanks may be found in Dip Tanks Containing Flammable or Combustible Liquids, NFPA No. 34-1966, National Fire Protection Association. Where the tank contains a mixture of liquids, other than organic solvents, whose effects are additive, the hygienic standard of the most toxic component (for example, the one having the lowest ppm or mg/m³) shall be used, except where such substance constitutes an insignificantly small fraction of the mixture. For mixtures of organic solvents, their combined effect, rather than that of either individually, shall determine the hazard potential. In the absence of information to the contrary, the effects shall be considered as additive. If the sum of the ratios of the airborne concentration of that contaminant

exceeds unity, the toxic concentration shall be considered to have been exceeded. (See Note A of (2)(e) of this section.)

(e) Hazard potential shall be determined from Table 16, with the value indicating greater hazard being used. When the hazardous material may be either a vapor with a permissible exposure limit in ppm or a mist with a TLV in mg/m³, the TLV indicating the greater hazard shall be used (for example, A takes precedence over B or C; B over C; C over D).

Note A:

$$\frac{c_1}{PEL} + \frac{c_2}{PEL} + \frac{c_3}{PEL} + \dots + \frac{c_N}{PEL} > 1$$

where:

c = Concentration measured at the operation in ppm.

TABLE 16
DETERMINATION OF HAZARD POTENTIAL

Hazard potential	Toxicity Group		
	Gas or vapor (ppm)	Mist (mg/m ³)	Flash point (in degrees F.)
A	0 - 10	0 - 0.1
B	11 - 100	0.11 - 1.0	Under 100
C	101 - 500	1.1 - 10	100-200
D	Over 500	Over 10	Over 200

(f) Rate of gas, vapor, or mist evolution is a numerical index, on a scale of from 1 to 4, inclusive, both of the relative capacity of the tank to produce gas, vapor, or mist and of the relative energy with which it is projected or carried upwards from the tank. Rate is evaluated in terms of:

(i) The temperature of the liquid in the tank in degrees Fahrenheit;

(ii) The number of degrees Fahrenheit that this temperature is below the boiling point of the liquid in degrees Fahrenheit;

(iii) The relative evaporation of the liquid in still air at room temperature in an arbitrary scale—fast, medium, slow, or nil; and

(iv) The extent that the tank gases or produces mist in an arbitrary scale—high, medium, low, and nil. (See Table 17, Note 2.) Gassing depends upon electrochemical or mechanical processes, the effects of which have to be individually evaluated for each installation (see Table 17, Note 3).

(g) Rate of evolution shall be determined from Table 17. When evaporation and gassing yield different rates, the lowest numerical value shall be used.

TABLE 17
DETERMINATION OF RATE OF GAS, VAPOR, OR MIST EVOLUTION¹

Rate	Liquid temperature, °F	Degrees below boiling point		Relative Gassing ³
		Evaporation ²		
1	Over 200	0-20	Fast	High
2	150-200	21-50	Medium	Medium
3	94-149	51-100	Slow	Low
4	Under 94	Over 100	Nil	Nil

Note 1. In certain classes of equipment, specifically vapor degreasers, an internal condenser or vapor level thermostat is used to prevent the vapor from leaving the tank during normal operations. In such cases, rate of vapor evolution from the tank into the workroom is not dependent upon the factors listed in the table, but rather upon abnormalities of operating procedure, such as carry out of vapors from excessively fast action, dragout of liquid by entrainment in parts, contamination of solvent by water and other materials, or improper heat balance. When operating procedure is excellent, effective rate of evolution may be taken as 4. When operating procedures are average, the effective rate of evolution may be taken as 3. When operation is poor, a rate of 2 or 1 is indicated, depending upon observed conditions.

Note 2. Relative evaporation rate is determined according to the methods described by A. K. Doolittle in *Industrial and Engineering Chemistry*, vol. 27, p. 1169, (3) where time for 100—percent evaporation is as follows: Fast: 0-3 hours; Medium: 3-12 hours; Slow: 12-50 hours; Nil: more than 50 hours.

Note 3. Gassing means the formation by chemical or electrochemical action of minute bubbles of gas under the surface of the liquid in the tank and is generally limited to aqueous solutions.

(3) Ventilation. Where ventilation is used to control potential exposures to workers as defined in (2)(c) of this section, it shall be adequate to reduce the concentration of the air contaminant to the degree that a hazard to the worker does not exist. Methods of ventilation are discussed in *American National Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems*, Z9.2-1960.

(4) Control requirements.

(a) Control velocities shall conform to Table 18 in all cases where the flow of air past the breathing or working zone of the operator and into the hoods is undisturbed by local environmental conditions, such as open windows, wall fans, unit heaters, or moving machinery.

(b) All tanks exhausted by means of hoods which;

(i) Project over the entire tank;

(ii) Are fixed in position in such a location that the head of the workman, in all his normal operating positions while working at the tank, is in front of all hood openings; and

(iii) Are completely enclosed on at least two sides, shall be considered to be exhausted through an enclosing hood.

(iv) The quantity of air in cubic feet per minute necessary to be exhausted through an enclosing hood shall be not less than the product of the control velocity times the net area of all openings in the enclosure through which air can flow into the hood.

TABLE 18
CONTROL VELOCITIES IN FEET PER MINUTE (F.P.M.) FOR UNDISTURBED LOCATIONS

Class (See Subparagraph (2) and Tables 16 and 17)	Enclosing hood (See Subparagraph (4)(ii))		Lateral exhaust ¹ (See Subparagraph (4)(iii))	Canopy hood ² (See Subparagraph (4)(iv))	
	One open side	Two open sides		Three open sides	Four open sides
A-1 and A-2	100	150	150	Do not use	Do not use

PERMANENT

TABLE 18

CONTROL VELOCITIES IN FEET PER MINUTE (F.P.M.) FOR UNDISTURBED LOCATIONS

Class (See Sub-paragraph (2) and Tables 16 and 17)	Enclosing hood (See Subparagraph (4)(ii))		Lateral exhaust ¹ (See Subparagraph (4)(iii))	Canopy hood ² (See Subparagraph (4)(iv))	
	One open side	Two open sides		Three open sides	Four open sides
A-3 (Note ²),					
B-1, B-2, and C-1	75	100	100	125	175
B-3, C-2, and D-1 (Note ³)	65	90	75	100	150
A-4 (Note ²), C-3, and D-2 (Note ³)	50	75	50	75	125
B-4, C-4, D-3 (Note ³), and D-4	General room ventilation required.				

¹ See Table 19 for computation of ventilation rate.

² Do not use canopy hood for Hazard Potential A processes.

³ Where complete control of hot water is desired, design as next highest class.

(c) All tanks exhausted by means of hoods which do not project over the entire tank, and in which the direction of air movement into the hood or hoods is substantially horizontal, shall be considered to be laterally exhausted. The quantity of air in cubic feet per minute necessary to be laterally exhausted per square foot of tank area in order to maintain the required control velocity shall be determined from Table 19 for all variations in ratio of tank width (W) to tank length (L). The total quantity of air in cubic feet per minute required to be exhausted per tank shall be not less than the product of the area of tank surface times the cubic feet per minute per square foot of tank area, determined from Table 19.

(i) For lateral exhaust hoods over 42 inches wide, or where it is desirable to reduce the amount of air removed from the workroom, air supply slots or orifices shall be provided along the side or the center of the tank opposite from the exhaust slots. The design of such systems shall meet the following criteria:

(A) The supply air volume plus the entrained air shall not exceed 50 percent of the exhaust volume.

(B) The velocity of the supply airstream as it reaches the effective control area of the exhaust slot shall be less than the effective velocity over the exhaust slot area.

(C) The vertical height of the receiving exhaust hood, including any baffle, shall not be less than one-quarter the width of the tank.

(D) The supply airstream shall not be allowed to impinge on obstructions between it and the exhaust slot in such a man-

ner as to significantly interfere with the performance of the exhaust hood.

TABLE 19

MINIMUM VENTILATION RATE IN CUBIC FEET OF AIR PER MINUTE PER SQUARE FOOT OF TANK AREA FOR LATERAL EXHAUST

Required minimum control velocity, f.p.m. (from Table	C.f.m. per sq. ft. to maintain required minimum velocities at following ratios (tank width (W)/tank length (L)). ^{1 3}				
	0.0-0.09	0.1-0.24	0.25-0.49	0.5-0.99	1.0-2.0
Hood along one side or two parallel sides of tank when one hood is against a wall or baffle. ²					
Also for a manifold along tank centerline. ³					
50	50	60	75	90	100
75	75	90	110	130	150
100	100	125	150	175	200
150	150	190	225	260	300
Hood along one side or two parallel sides of free standing tank not against wall or baffle.					
50	75	90	100	110	125
75	110	130	150	170	190
100	150	175	200	225	250
150	225	260	300	340	375

¹ It is not practicable to ventilate across the long dimension of a tank whose ratio W/L exceeds 2.0.

It is understandable to do so when W/L exceeds 1.0. For circular tanks with lateral exhaust along up the circumference use W/L= 1.0 for over one-half the circumference use W/L= 0.5.

² Baffle is a vertical plate the same length as the tank, and with the top of the plate as high as the tank is wide. If the exhaust hood is on the side of a tank against a building wall or close to it, it is perfectly baffled.

³ Use W/L as tank width in computing when manifold is along centerline, or when hoods are used on two parallel sides of a tank.

Tank Width (W) means the effective width over which the hood must pull air to operate (for example, where the hood face is not back from the edge of the tank, this set back must be added in measuring tank width). The surface area of tanks can frequently be reduced and better control obtained (particularly on conveyORIZED systems) by using covers extending from the upper edges of the slots toward the center of the tank.

(E) Since most failure of push-pull systems result from excessive supply air volumes and pressures, methods of measuring and adjusting the supply air shall be provided. When satisfactory control has been achieved, the adjustable features of the hood shall be fixed so that they will not be altered.

(d) All tanks exhausted by means of hoods which project over the entire tank, and which do not conform to the definition of enclosing hoods, shall be considered to be overhead canopy hoods. The quantity of air in cubic feet per minute necessary to be exhausted through a canopy hood shall be not less than the product of the control velocity times the net area of all openings between the bottom edges of the hood and the top edges of the tank.

(e) The rate of vapor evolution (including steam or products of combustion) from the process shall be estimated. If the rate of vapor evolution is equal to or greater than 10 per-

PERMANENT

cent of the calculated exhaust volume required, the exhaust volume shall be increased in equal amount.

(5) Spray cleaning and degreasing. Wherever spraying or other mechanical means are used to disperse a liquid above an open-surface tank, control must be provided for the airborne spray. Such operations shall be enclosed as completely as possible. The inward air velocity into the enclosure shall be sufficient to prevent the discharge of spray into the workroom. Mechanical baffles may be used to help prevent the discharge of spray. Spray painting operations are covered in WAC 296-62-11019.

(6) Control means other than ventilation. Tank covers, foams, beads, chips, or other materials floating on the tank surface so as to confine gases, mists, or vapors to the area under the cover or to the foam, bead, or chip layer; or surface tension depressive agents added to the liquid in the tank to minimize mist formation, or any combination thereof, may all be used as gas, mist, or vapor control means for open-surface tank operations, provided that they effectively reduce the concentrations of hazardous materials in the vicinity of the worker below the limits set in accordance with (2) of this section.

(7) System design.

(a) The equipment for exhausting air shall have sufficient capacity to produce the flow of air required in each of the hoods and openings of the system.

(b) The capacity required in (7)(a) of this section shall be obtained when the airflow producing equipment is operating against the following pressure losses, the sum of which is the static pressure:

(i) Entrance losses into the hood.

(ii) Resistance to airflow in branch pipe including bends and transformations.

(iii) Entrance loss into the main pipe.

(iv) Resistance to airflow in main pipe including bends and transformations.

(v) Resistance of mechanical equipment; that is, filters, washers, condensers, absorbers, etc., plus their entrance and exit losses.

(vi) Resistance in outlet duct and discharge stack.

(c) Two or more operations shall not be connected to the same exhaust system where either one or the combination of the substances removed may constitute a fire, explosion, or chemical reaction hazard in the duct system. Traps or other devices shall be provided to insure that condensate in ducts does not drain back into any tank.

(d) The exhaust system, consisting of hoods, ducts, air mover, and discharge outlet shall be designed in accordance with American National Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems, Z9.2-1960, or the manual, Industrial Ventilation, published by the American Conference of Governmental Industrial Hygienists. Airflow and pressure loss data provided by the manufacturer of any air cleaning device shall be included in the design calculations.

(8) Operation.

(a) The required airflow shall be maintained at all times during which gas, mist, or vapor is emitted from the tank, and at all times the tank, the draining, or the drying area is in operation or use. When the system is first installed, the air-

flow from each hood shall be measured by means of a pitot traverse in the exhaust duct and corrective action taken if the flow is less than that required. When the proper flow is obtained, the hood static pressure shall be measured and recorded. At intervals of not more than 3 months operation, or after a prolonged shutdown period, the hoods and duct system shall be inspected for evidence of corrosion or damage. In any case where the airflow is found to be less than required, it shall be increased to the required value. (Information on airflow and static pressure measurement and calculations may be found in American National Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems, Z9.2-1960, or in the manual, Industrial Ventilation, published by the American Conference of Governmental Industrial Hygienists.)

(b) The exhaust system shall discharge to the outer air in such a manner that the possibility of its effluent entering any building is at a minimum. Recirculation shall only be through a device for contaminant removal which will prevent the creation of a health hazard in the room or area to which the air is recirculated.

(c) A volume of outside air in the range of 90 percent to 110 percent of the exhaust volume shall be provided to each room having exhaust hoods. The outside air supply shall enter the workroom in such a manner as not to be detrimental to any exhaust hood. The airflow of the makeup air system shall be measured on installation. Periodically, thereafter, the airflow should be remeasured, and corrective action shall be taken when the airflow is below that required. The makeup air shall be uncontaminated.

(9) Personal protection.

(a) All employees working in and around open surface tank operations must be instructed as to the hazards of their respective jobs, and in the personal protection and first aid procedures applicable to these hazards.

(b) All persons required to work in such a manner that their feet may become wet shall be provided with rubber or other impervious boots or shoes, rubbers, or wooden-soled shoes sufficient to keep feet dry.

(c) All persons required to handle work wet with a liquid other than water shall be provided with gloves impervious to such a liquid and of a length sufficient to prevent entrance of liquid into the tops of the gloves. The interior of gloves shall be kept free from corrosive or irritating contaminants.

(d) All persons required to work in such a manner that their clothing may become wet shall be provided with such aprons, coats, jackets, sleeves, or other garments made of rubber, or of other materials impervious to liquids other than water, as are required to keep their clothing dry. Aprons shall extend well below the top of boots to prevent liquid splashing into the boots. Provision of dry, clean, cotton clothing along with rubber shoes or short boots and an apron impervious to liquids other than water shall be considered a satisfactory substitute where small parts are cleaned, plated, or acid dipped in open tanks and rapid work is required.

(e) Whenever there is a danger of splashing, for example, when additions are made manually to the tanks, or when acids and chemicals are removed from the tanks, the employees so engaged shall be required to wear either tight-fitting

chemical goggles or an effective face shield. (See WAC ((296-24-078)) 296-800-160.)

(f) When, during emergencies as described in (11)(e) of this section, employees must be in areas where concentrations of air contaminants are greater than the limit set by (2)(c) of this section or oxygen concentrations are less than 19.5%, they must be required to wear respirators adequate to reduce their exposure to a level below these limits or that provide adequate oxygen. Such respirators must also be provided in marked, quickly accessible storage compartments built for the purpose, when there exists the possibility of accidental release of hazardous concentrations of air contaminants. Respirators must be certified by NIOSH under 42 CFR part 84 and used in accordance with the applicable provisions of chapter 296-62 WAC Part E.

(g) Near each tank containing a liquid which may burn, irritate, or otherwise be harmful to the skin if splashed upon the worker's body, there shall be a supply of clean cold water. The water pipe (carrying a pressure not exceeding 25 pounds) shall be provided with a quick opening valve and at least 48 inches of hose not smaller than three-fourths inch, so that no time may be lost in washing off liquids from the skin or clothing. Alternatively, deluge showers and eye flushes shall be provided in cases where harmful chemicals may be splashed on parts of the body.

(h) Operators with sores, burns, or other skin lesions requiring medical treatment shall not be allowed to work at their regular operations until so authorized by a physician. Any small skin abrasions, cuts, rash, or open sores which are found or reported shall be treated by a properly designated person so that chance of exposures to the chemicals are removed. Workers exposed to chromic acids shall have a periodic examination made of the nostrils and other parts of the body, to detect incipient ulceration.

(i) Sufficient washing facilities, including soap, individual towels, and hot water, shall be provided for all persons required to use or handle any liquids which may burn, irritate, or otherwise be harmful to the skin, on the basis of at least one basin (or its equivalent) with a hot water faucet for every 10 employees. (See WAC ((296-24-12009)) 296-800-230.)

(j) Locker space or equivalent clothing storage facilities shall be provided to prevent contamination of street clothing.

(k) First aid facilities specific to the hazards of the operations conducted shall be readily available.

(10) Special precautions for cyanide. Dikes or other arrangements shall be provided to prevent the possibility of intermixing of cyanide and acid in the event of tank rupture.

(11) Inspection, maintenance, and installation.

(a) Floors and platforms around tanks shall be prevented from becoming slippery both by original type of construction and by frequent flushing. They shall be firm, sound, and of the design and construction to minimize the possibility of tripping.

(b) Before cleaning the interior of any tank, the contents shall be drained off, and the cleanout doors shall be opened where provided. All pockets in tanks or pits, where it is possible for hazardous vapors to collect, shall be ventilated and cleared of such vapors.

(c) Tanks which have been drained to permit employees to enter for the purposes of cleaning, inspection, or maintenance

may contain atmospheres which are hazardous to life or health, through the presence of flammable or toxic air contaminants, or through the absence of sufficient oxygen. Before employees shall be permitted to enter any such tank, appropriate tests of the atmosphere shall be made to determine if the limits set by (2)(c) of this section are exceeded, or if the oxygen concentration is less than 19.5%.

(d) If the tests made in accordance with (11)(c) of this section indicate that the atmosphere in the tank is unsafe, before any employee is permitted to enter the tank, the tank shall be ventilated until the hazardous atmosphere is removed, and ventilation shall be continued so as to prevent the occurrence of a hazardous atmosphere as long as an employee is in the tank.

(e) If, in emergencies, such as rescue work, it is necessary to enter a tank which may contain a hazardous atmosphere, suitable respirators, such as self-contained breathing apparatus; hose mask with blower, if there is a possibility of oxygen deficiency; or a gas mask, selected and operated in accordance with (9)(f) of this section, shall be used. If a contaminant in the tank can cause dermatitis, or be absorbed through the skin, the employee entering the tank shall also wear protective clothing. At least one trained standby employee, with suitable respirator, shall be present in the nearest uncontaminated area. The standby employee must be able to communicate with the employee in the tank and be well able to haul him out of the tank with a lifeline if necessary.

(f) Maintenance work requiring welding or open flame, where toxic metal fumes such as cadmium, chromium, or lead may be evolved, shall be done only with sufficient local exhaust ventilation to prevent the creation of a health hazard, or be done with respirators selected and used in accordance with (9)(f) of this section. Welding, or the use of open flames near any solvent cleaning equipment shall be permitted only after such equipment has first been thoroughly cleared of solvents and vapors.

(12) Vapor degreasing tanks.

(a) In any vapor degreasing tank equipped with a condenser and vapor level thermostat, the condenser or thermostat shall keep the level of vapors below the top edge of the tank by a distance at least equal to one-half the tank width, or at least 36 inches, whichever is shorter.

(b) Where gas is used as a fuel for heating vapor degreasing tanks, the combustion chamber shall be of tight construction, except for such openings as the exhaust flue, and those that are necessary for supplying air for combustion. Flues shall be of corrosion-resistant construction and shall extend to the outer air. If mechanical exhaust is used on this flue, a draft diverter shall be used. Special precautions must be taken to prevent solvent fumes from entering the combustion air of this or any other heater when chlorinated or fluorinated hydrocarbon solvents (for example, trichloroethylene; Freon) are used.

(c) Heating elements shall be so designed and maintained that their surface temperature will not cause the solvent or mixture to decompose, break down, or be converted into an excessive quantity of vapor.

(d) Tanks or machines of more than 4 square feet of vapor area, used for solvent cleaning or vapor degreasing,

shall be equipped with suitable cleanout or sludge doors located near the bottom of each tank or still. These doors shall be so designed and gasketed that there will be no leakage of solvent when they are closed.

(13) Scope.

(a) This paragraph applies to all operations involving the immersion of materials in liquids, or in the vapors of such liquids, for the purpose of cleaning or altering their surfaces, or adding or imparting a finish thereto, or changing the character of the materials, and their subsequent removal from the liquids or vapors, draining, and drying. Such operations include washing, electroplating, anodizing, pickling, quenching, dyeing, dipping, tanning, dressing, bleaching, degreasing, alkaline cleaning, stripping, rinsing, digesting, and other similar operations, but do not include molten materials handling operations, or surface coating operations.

(b) "Molten materials handling operations" means all operations, other than welding, burning, and soldering operations, involving the use, melting, smelting, or pouring of metals, alloys, salts, or other similar substances in the molten state. Such operations also include heat treating baths, descaling baths, die casting stereotyping, galvanizing, tinning, and similar operations.

(c) "Surface coating operations" means all operations involving the application of protective, decorative, adhesive, or strengthening coating or impregnation to one or more surfaces, or into the interstices of any object or material, by means of spraying, spreading, flowing, brushing, roll coating, pouring, cementing, or similar means; and any subsequent draining or drying operations, excluding open-tank operations.

AMENDATORY SECTION (Amending Order 77-14, filed 7/25/77)

WAC 296-62-20013 Protective clothing and equipment. (1) Provision and Use. The employer shall provide and assure the use of appropriate protective clothing and equipment, such as but not limited to:

- (a) Flame resistant jacket and pants;
- (b) Flame resistant gloves;
- (c) Face shields or vented goggles which comply with WAC ((296-24-078)) 296-800-160;
- (d) Footwear providing insulation from hot surfaces;
- (e) Safety shoes which comply with WAC ((296-24-088)) 296-800-160; and
- (f) Protective helmets which comply with WAC ((296-24-084)) 296-800-160.

(2) Cleaning and Replacement.

(a) The employer shall provide the protective clothing required by subsection (1)(a) and (b) of this section in a clean and dry condition at least weekly.

(b) The employer shall clean, launder, or dispose of protective clothing required by subsections (1)(a) and (b) of this section.

(c) The employer shall repair or replace the protective clothing and equipment as needed to maintain their effectiveness.

(d) The employer shall assure that all protective clothing is removed at the completion of a work shift only in change rooms prescribed in WAC 296-62-20015.

(e) The employer shall assure that contaminated protective clothing which is to be cleaned, laundered, or disposed of, is placed in a closed container in the changeroom.

(f) The employer shall inform any person who cleans or launders protective clothing required by this section, of the potentially harmful effects of exposure to coke oven emissions.

AMENDATORY SECTION (Amending Order 77-14, filed 7/25/77)

WAC 296-62-20015 Hygiene facilities and practices.

(1) Change rooms. The employer shall provide clean change rooms equipped with storage facilities for street clothes and separate storage facilities for protective clothing and equipment whenever employees are required to wear protective clothing and equipment in accordance with WAC 296-62-20013.

(2) Showers.

(a) The employer shall assure that employees working in the regulated area shower at the end of the work shift.

(b) The employer shall provide shower facilities in accordance with WAC 296-24-12009.

(3) Lunchrooms. The employer shall provide lunchroom facilities which have a temperature controlled, positive pressure, filtered air supply, and which are readily accessible to employees working in the regulated area.

(4) Lavatories.

(a) The employer shall assure that employees working in the regulated area wash their hands and face prior to eating.

(b) The employer shall provide lavatory facilities in accordance with WAC ((296-24-12007)) 296-800-230.

(5) Prohibition of activities in the regulated area.

(a) The employer shall assure that in the regulated area, food or beverages are not present or consumed, smoking products are not present or used, and cosmetics are not applied, except, that these activities may be conducted in the lunchrooms, change rooms and showers required under subsection (1)-(3) of this section.

(b) Drinking water may be consumed in the regulated area.

AMENDATORY SECTION (Amending WSR 99-07-097, filed 3/23/99, effective 6/23/99)

WAC 296-62-30001 Scope and application. (1) Scope. This section covers employers who have employees who work in the following operations:

(a) Clean-up operations required by a governmental body, whether federal, state, local, or other involving hazardous substances that are conducted at uncontrolled hazardous waste sites (including, but not limited to, the EPA's National Priority Site List (NPL), state priority site lists, sites recommended for the EPA NPL, and initial investigations of government identified sites which are conducted before the presence or absence of hazardous substances has been ascertained);

(b) Corrective actions involving clean-up operations at sites covered by the Resource Conservation and Recovery Act of 1976 (RCRA) as amended (42 U.S.C. 6901 et seq.);

(c) Voluntary clean-up operations at sites recognized by federal, state, local, or other governmental bodies as uncontrolled hazardous waste sites;

(d) Operations involving hazardous wastes that are conducted at treatment, storage, and disposal (TSD) facilities regulated by 40 CFR Parts 264 and 265 under RCRA; or by agencies under agreement with U.S.E.P.A. to implement RCRA regulations.

(2) Application.

(a) All requirements of this chapter and chapters 296-24 ~~((and))~~, 296-155, and 296-800 WAC apply to hazardous waste operations whether covered by this part or not. If there is a conflict or overlap, the provision more protective of employee safety and health must apply.

(b) Hazardous substance clean-up operations within the scope of subsection (1)(a), (b), and (c) of this section must comply with all sections of WAC 296-62-410, Part R, Emergency response to hazardous substance release.

(c) Operations within the scope of subsection (1)(d) of this section must comply only with the requirements of WAC 296-62-3140 through 296-62-31430.

Notes and Exceptions:

(i) All provisions of WAC 296-62-3140 through 296-62-31430 cover any treatment, storage, or disposal (TSD) operation regulated by 40 CFR Parts 264 and 265 or by state law authorized under RCRA, and required to have a permit or interim status from EPA under 40 CFR 270.1 or from a state agency under RCRA.

(ii) Employers who are not required to have a permit or interim status because they are conditionally exempt small quantity generators under 40 CFR 261.5 or are generators who qualify under 40 CFR 262.34 for exemptions from regulation under 40 CFR Parts 264, 265, and 270 ("excepted employers") are not covered by WAC 296-62-31405 through 296-62-31445. Excepted employers who are required by the EPA or state agency to have their employees engage in emergency response or who direct their employees to engage in emergency response are covered by WAC 296-62-31450 through 296-62-31470 and cannot be exempted by WAC 296-62-31455. Excepted employers who are not required to have employees engage in emergency response, who direct their employees to evacuate in the case of such emergencies and who meet the requirements of WAC 296-62-31455 are exempt from the balance of WAC 296-62-31450 through 296-62-31470.

(iii) If an area is used primarily for treatment, storage or disposal, any emergency response operations in that area must comply with WAC 296-62-31410 through 296-62-31470. In other areas not used primarily for treatment, storage or disposal, any emergency response operations must comply with WAC 296-62-410, Part R, Emergency response to hazardous substance release. Compliance with the requirements of WAC 296-62-410, Part R, Emergency response to hazardous substance release must be deemed to be in compli-

ance with the requirements of WAC 296-62-31450 through 296-62-31470.

AMENDATORY SECTION (Amending WSR 99-07-097, filed 3/23/99, effective 6/23/99)

WAC 296-62-30230 Risk identification. Once the presence and concentrations of specific hazardous substances and health hazards have been established, the risks associated with these substances must be identified. Employees who will be working on the site must be informed of any risks that have been identified. In situations covered by ~~((chapter 296-62-WAC, Part C))~~ WAC 296-800-170, training required by those standards need not be duplicated.

Note: Risks to consider include, but are not limited to:

- (1) Exposures exceeding the permissible exposure limits and published exposure levels.
- (2) IDLH concentrations.
- (3) Potential skin absorption and irritation sources.
- (4) Potential eye irritation sources.
- (5) Explosion sensitivity and flammability ranges.
- (6) Oxygen deficiency.

AMENDATORY SECTION (Amending WSR 99-07-097, filed 3/23/99, effective 6/23/99)

WAC 296-62-30235 Employee notification. Any information concerning the chemical, physical, and toxicologic properties of each substance known or expected to be present on site that is available to the employer and relevant to the duties an employee is expected to perform must be made available to all employees prior to the commencement of their work activities. The employer may use information developed for the chemical hazard communication standard, ~~((chapter 296-62-WAC, Part C))~~ WAC 296-800-170, for this purpose.

AMENDATORY SECTION (Amending WSR 99-07-097, filed 3/23/99, effective 6/23/99)

WAC 296-62-30425 Training course content for 40 and 80 hour hazardous waste cleanup courses. As a minimum, the training course content for the 40 hour and 80 hour training program must include the following topics:

- (1) Overview of the applicable sections of Part P of chapter 296-62 WAC and the elements of an employer's effective occupational safety and health program.
- (2) Effect of chemical exposure to hazardous substances (i.e., toxicity, carcinogens, irritants, sensitizers, etc.).
- (3) Effects of biological and radiological exposures.
- (4) Fire and explosion hazards (i.e., flammable and combustible liquids, reactive materials).
- (5) General safety hazards, including electrical hazards, powered equipment hazards, walking-working surface hazards and those hazards associated with hot and cold temperature extremes.
- (6) Permit-required confined space, tank, and vault hazards and entry procedures.
- (7) Names of personnel and alternates, where appropriate, responsible for site safety and health at the site.

(8) Specific safety, health, and other hazards that are to be addressed at a site and in the site safety and health plan.

(9) Use of personal protective equipment and the implementation of the personal protective equipment program.

(10) Work practices that will minimize employee risk from site hazards.

(11) Safe use of engineering controls and equipment and any new relevant technology or procedure.

(12) Content of the medical surveillance program and requirements, including the recognition of signs and symptoms of overexposure to hazardous substances.

(13) The contents of an effective site safety and health plan.

(14) Use of monitoring equipment with "hands-on" experience and the implementation of the employee and site monitoring program.

(15) Implementation and use of the information program.

(16) Drum and container handling procedures and the elements of a spill containment program.

(17) Selection and use of material handling equipment.

(18) Methods for assessment of risk and handling of radioactive wastes.

(19) Methods for handling shock-sensitive wastes.

(20) Laboratory waste pack handling procedures.

(21) Container sampling procedures and safeguards.

(22) Safe preparation procedures for shipping and transport of containers.

(23) Decontamination program and procedures.

(24) Emergency response plan and procedures including first aid.

(25) Safe site illumination levels.

(26) Site sanitation procedures and equipment for employee needs.

(27) Review of the applicable appendices to Part P of chapter 296-62 WAC.

(28) Overview and explanation of WISHA's chemical hazard communication standard ((~~Part C of chapter 296-62~~) WAC 296-800-170).

(29) Sources of reference, additional information and efficient use of relevant manuals and hazard coding systems.

(30) Principles of toxicology and biological monitoring.

(31) Rights and responsibilities of employees and employers under WISHA and CERCLA.

(32) Hands-on field exercises and demonstrations.

AMENDATORY SECTION (Amending WSR 99-07-097, filed 3/23/99, effective 6/23/99)

WAC 296-62-30435 16-hour supplemental training for hazardous waste sites. As a minimum, employees who have received 24 hours of training for hazardous waste site operations must receive training in the following topics before they are allowed to work as general site workers or if they are required to wear respirators:

(1) Relevant chemical exposures to hazardous substances beyond that previously covered.

(2) Site hazards including fire and explosion, confined spaces, oxygen deficiency, electrical, powered equipment,

and walking-working surfaces beyond that previously covered.

(3) Names of personnel and alternates responsible for site safety and health at the site, where appropriate.

(4) Use of monitoring equipment and the implementation of the employee and the site monitoring program beyond that previously covered.

(5) Implementation and use of the informational program.

(6) Drum and container handling procedures and the elements of a spill containment program.

(7) Selection and use of material handling equipment.

(8) Methods for assessment of risk and handling of radioactive wastes.

(9) Methods for handling shock-sensitive wastes.

(10) Laboratory waste pack handling procedures.

(11) Container sampling procedures and safeguards.

(12) Safe preparation procedures for shipping and transport of containers.

(13) Decontamination program and procedures.

(14) Safety site illumination levels.

(15) Site sanitation procedures and equipment.

(16) Review of the applicable appendices to Part P of chapter 296-62 WAC.

(17) Overview and explanation of WISHA's Chemical hazard communication standard ((~~Part C of chapter 296-62~~) WAC 296-800-170).

(18) Sources of reference and additional information.

AMENDATORY SECTION (Amending WSR 99-07-097, filed 3/23/99, effective 6/23/99)

WAC 296-62-30605 Personal protective equipment selection. (1) Personal protective equipment (PPE) must be selected and used which will protect employees from the hazards and potential hazards they are likely to encounter as identified during the site characterization and analysis.

(2) Personal protective equipment selection must be based on an evaluation of the performance characteristics of the PPE relative to the requirements and limitations of the site, the task-specific conditions and duration, and the hazards and potential hazards identified at the site.

(3) Positive pressure self-contained breathing apparatus, or positive pressure air-line respirators equipped with an escape air supply must be used when chemical exposure levels present will create a substantial possibility of immediate death, immediate serious illness or injury, or impair the ability to escape.

(4) Totally encapsulating chemical protective suits (protection equivalent to Level A protection as recommended in Appendix B) must be used in conditions where skin absorption of a hazardous substance may result in a substantial possibility of immediate death, immediate serious illness or injury, or impair the ability to escape.

(5) The level of protection provided by PPE selection must be increased when additional information or site conditions indicate that increased protection is necessary to reduce employee exposures below permissible exposure limits and published exposure levels for hazardous substances and

health hazards. (See WAC 296-62-3170 - Appendix B for guidance on selecting PPE ensembles.)

Note: The level of employee protection provided may be decreased when additional information or site conditions show that decreased protection will not result in increased hazardous exposures to employees.

(6) Personal protective equipment must be selected and used to meet the requirements of ((~~chapter 296-24 WAC, Part A-2~~) WAC 296-800-160, and additional requirements specified in this part.

AMENDATORY SECTION (Amending WSR 99-07-097, filed 3/23/99, effective 6/23/99)

WAC 296-62-3090 General requirements for handling drums and containers. (1) Hazardous substances and contaminated soils, liquids, and other residues must be handled, transported, labeled, and disposed of in accordance with this section.

(2) Drums and containers used during the clean-up must meet the appropriate DOT, OSHA, WISHA, and EPA regulations for the wastes that they contain.

(3) When practical, drums and containers must be inspected and their integrity must be assured prior to being moved. Drums or containers that cannot be inspected before being moved because of storage conditions (i.e., buried beneath the earth, stacked behind other drums, stacked several tiers high in a pile, etc.) must be moved to an accessible location and inspected prior to further handling.

(4) Unlabeled drums and containers must be considered to contain hazardous substances and handled accordingly until the contents are positively identified and labeled.

(5) Site operations must be organized to minimize the amount of drum or container movement.

(6) Prior to movement of drums or containers, all employees exposed to the transfer operation must be warned of the potential hazards associated with the contents of the drums or containers.

(7) United States Department of Transportation specified salvage drums or containers and suitable quantities of proper absorbent must be kept available and used in areas where spills, leaks, or ruptures may occur.

(8) Where major spills may occur, a spill containment program, which is part of the employer's safety and health program required in WAC 296-62-3010, must be implemented to contain and isolate the entire volume of the hazardous substance being transferred.

(9) Drums and containers that cannot be moved without rupture, leakage, or spillage must be emptied into a sound container using a device classified for the material being transferred.

(10) A ground-penetrating system or other type of detection system or device must be used to estimate the location and depth of buried drums or containers.

(11) Soil or covering material must be removed with caution to prevent drum or container rupture.

(12) Fire extinguishing equipment meeting the requirements of ((~~Part G of chapter 296-24~~) WAC 296-800-300 must be on hand and ready for use to control incipient fires.

AMENDATORY SECTION (Amending WSR 99-07-097, filed 3/23/99, effective 6/23/99)

WAC 296-62-31410 Hazard communication program requirements under RCRA. The employer must implement a hazard communication program meeting the requirements of ((~~chapter 296-62 WAC, Part C~~) WAC 296-800-170, as part of the employer's safety and health program.

Note: The exemption for hazardous waste provided in WAC ((~~296-62-054~~) 296-800-170) is applicable to this section.

AMENDATORY SECTION (Amending WSR 99-07-097, filed 3/23/99, effective 6/23/99)

WAC 296-62-3195 Appendix E—Training curriculum guidelines. The following nonmandatory general criteria may be used for assistance in developing site-specific training curriculum used to meet the training requirements of WAC 296-62-3040 through 296-62-30465, 296-62-31435 through 296-62-31445, 296-62-31465, 296-62-4102 through 296-62-41021, and 296-62-41023.

These are generic guidelines and they are not presented as a complete training curriculum for any specific employer. Site-specific training programs must be developed on the basis of a needs assessment of the hazardous waste site, RCRA/TSD, or emergency response operation in accordance with this chapter (chapter 296-62 WAC, Part P and Part R).

The guidance set forth here presents a highly effective program that in the areas covered would meet or exceed the regulatory requirements. In addition, other approaches could meet the regulatory requirements.

Suggested general criteria:

Definitions:

"Competent" means possessing the skills, knowledge, experience, and judgment to perform assigned tasks or activities satisfactorily as determined by the employer.

"Demonstration" means the showing by actual use of equipment or procedures.

"Hands-on training" means training in a simulated work environment that permits each student to have experience performing tasks, making decisions, or using equipment appropriate to the job assignment for which the training is being conducted.

"Initial training" means training required prior to beginning work.

"Lecture" means an interactive discourse with a class lead by an instructor.

"Proficient" means meeting a stated level of achievement.

"Site-specific" means individual training directed to the operations of a specific job site.

"Training hours" means the number of hours devoted to lecture, learning activities, small group work sessions, demonstration, evaluations, or hands-on experience.

Suggested core criteria:

(1) Training facility. The training facility should have available sufficient resources, equipment, and site locations to perform concise and hands-on training when appropriate. Training facilities should have sufficient organization, sup-

port staff, and services to conduct training in each of the courses offered.

(2) Training director. Each training program should be under the direction of a training director who is responsible for the program. The training director should have a minimum of two years of employee education experience.

(3) Instructors. Instructors should be deemed competent on the basis of previous documented experience in their area of instruction, successful completion of a "train-the-trainer" program specific to the topics they will teach, and an evaluation of instructional competence by the training director.

(a) Instructors should be required to maintain professional competency by participating in continuing education or professional development programs or by successfully completing an annual refresher course and having an annual review by the training director.

(b) The annual review by the training director should include observation of an instructor's delivery, a review of those observations with the trainer, and an analysis of any instructor or class evaluations completed by the students during the previous year.

(4) Course materials. The training director should approve all course materials to be used by the training provider. Course materials should be reviewed and updated at least annually. Materials and equipment should be in good working order and maintained properly.

(a) All written and audio-visual materials in training curricula should be peer reviewed by technically competent outside reviewers or by a standing advisory committee.

(b) Reviewers should possess expertise in the following disciplines were applicable: Occupational health, industrial hygiene and safety, chemical/environmental engineering, employee education, or emergency response. One or more of the peer reviewers should be an employee experienced in the work activities to which the training is directed.

(5) Students. The program for accepting students should include:

(a) Assurance that the student is or will be involved in work where chemical exposures are likely and that the student possesses the skills necessary to perform the work.

(b) A policy on the necessary medical clearance.

(6) Ratios. Student-instructor ratios should not exceed thirty students per instructor. Hands-on activity requiring the use of personal protective equipment should have the following student-instructor ratios: For Level C or Level D personal protective equipment the ratio should be ten students per instructor. For Level A or Level B personal protective equipment the ratio should be five students per instructor.

(7) Proficiency assessment. Proficiency should be evaluated and documented by the use of a written assessment and a skill demonstration selected and developed by the training director and training staff. The assessment and demonstration should evaluate the knowledge and individual skills developed in the course of training. The level of minimum achievement necessary for proficiency must be specified in writing by the training director.

(a) If a written test is used, there should be a minimum of fifty questions. If a written test is used in combination with a skills demonstration, a minimum of twenty-five questions should be used. If a skills demonstration is used, the tasks

chosen and the means to rate successful completion should be fully documented by the training director.

(b) The content of the written test or of the skill demonstration must be relevant to the objectives of the course.

The written test and skill demonstration should be updated as necessary to reflect changes in the curriculum and any update should be approved by the training director.

(c) The proficiency assessment methods, regardless of the approach or combination of approaches used, should be justified, documented and approved by the training director.

(d) The proficiency of those taking the additional courses for supervisors should be evaluated and documented by using proficiency assessment methods acceptable to the training director. These proficiency assessment methods must reflect the additional responsibilities borne by supervisory personnel in hazardous waste operations or emergency response.

(8) Course certificate. Written documentation should be provided to each student who satisfactorily completes the training course. The documentation should include:

(a) Student's name.

(b) Course title.

(c) Course date.

(d) Statement that the student has successfully completed the course.

(e) Name and address of the training provider.

(f) An individual identification number for the certificate.

(g) List of the levels of personal protective equipment used by the student to complete the course.

(i) This documentation may include a certificate and an appropriate wallet-sized laminated card with a photograph of the student and the above information.

(ii) When such course certificate cards are used, the individual identification number for the training certificate should be shown on the card.

(9) Recordkeeping. Training providers should maintain records listing the dates courses were presented, the names of the individual course attendees, the names of those students successfully completing each course, and the number of training certificates issued to each successful student. These records should be maintained for a minimum of five years after the date an individual participated in a training program offered by the training provider. These records should be available and provided upon the student's request or as mandated by law.

(10) Program quality control. The training director should conduct or direct an annual written audit of the training program. Program modifications to address deficiencies, if any, should be documented, approved, and implemented by the training provider. The audit and the program modification documents should be maintained at the training facility.

Suggested Program Quality Control Criteria:

Factors listed here are suggested criteria for determining the quality and appropriateness of employee health and safety training for hazardous waste operations and emergency response.

(1) Training plan. Adequacy and appropriateness of the training program's curriculum development, instructor train-

ing, distribution of course materials, and direct student training should be considered, including:

- (a) The duration of training, course content, and course schedules/agendas;
 - (b) The different training requirements of the various target populations, as specified in the appropriate generic training curriculum;
 - (c) The process for the development of curriculum, which includes appropriate technical input, outside review, evaluation, program pretesting.
 - (d) The adequate and appropriate inclusion of hands-on, demonstration, and instruction methods;
 - (e) Adequate monitoring of student safety, progress, and performance during the training.
- (2) Program management, training director, staff, and consultants. Adequacy and appropriateness of staff performance and delivering an effective training program should be considered, including:
- (a) Demonstration of the training director's leadership in assuring quality of health and safety training;
 - (b) Demonstration of the competency of the staff to meet the demands of delivering high quality hazardous waste employee health and safety training;
 - (c) Organization charts establishing clear lines of authority;
 - (d) Clearly defined staff duties including the relationship of the training staff to the overall program;
 - (e) Evidence that the training organizational structure suits the needs of the training program;
 - (f) Appropriateness and adequacy of the training methods used by the instructors;
 - (g) Sufficiency of the time committed by the training director and staff to the training program;
 - (h) Adequacy of the ratio of training staff to students;
 - (i) Availability and commitment of the training program of adequate human and equipment resources in the areas of:
 - (i) Health effects;
 - (ii) Safety;
 - (iii) Personal protective equipment (PPE);
 - (iv) Operational procedures;
 - (v) Employee protection practices/procedures;
 - (j) Appropriateness of management controls;
 - (k) Adequacy of the organization and appropriate resources assigned to assure appropriate training;
 - (l) In the case of multiple-site training programs, adequacy of management of the satellite centers.
- (3) Training facilities and resources. Adequacy and appropriateness of the facilities and resources for supporting the training program should be considered, including:
- (a) Space and equipment to conduct the training;
 - (b) Facilities for representative hands-on training;
 - (c) In the case of multiple-site programs, equipment and facilities at the satellite centers;
 - (d) Adequacy and appropriateness of the quality control and evaluations program to account for instructor performance;
 - (e) Adequacy and appropriateness of the quality control and evaluation program to ensure appropriate course evaluation, feedback, updating, and corrective action;

(f) Adequacy and appropriateness of disciplines and expertise being used within the quality control and evaluation program;

(g) Adequacy and appropriateness of the role of student evaluations to provide feedback for training program improvement.

(4) Quality control and evaluation. Adequacy and appropriateness of quality control and evaluation plans for training programs should be considered, including:

(a) A balanced advisory committee and/or competent outside reviewers to give overall policy guidance;

(b) Clear and adequate definition of the composition and active programmatic role of the advisory committee or outside reviewers;

(c) Adequacy of the minutes or reports of the advisory committee or outside reviewers' meetings or written communication;

(d) Adequacy and appropriateness of the quality control and evaluations program to account for instructor performance;

(e) Adequacy and appropriateness of the quality control and evaluation program to ensure appropriate course evaluation, feedback, updating, and corrective action;

(f) Adequacy and appropriateness of disciplines and expertise being used within the quality control and evaluation program;

(g) Adequacy and appropriateness of the role of student evaluations to provide feedback for training program improvement.

(5) Students. Adequacy and appropriateness of the program for accepting students should be considered, including:

(a) Assurance that the student already possess the necessary skills for their job, including necessary documentation;

(b) Appropriateness of methods the program uses to ensure that recruits are capable of satisfactorily completing training;

(c) Review and compliance with any medical clearance policy.

(6) Institutional environment and administrative support. The adequacy and appropriateness of the institutional environment and administrative support system for the training program should be considered, including:

(a) Adequacy of the institutional commitment to the employee training program;

(b) Adequacy and appropriateness of the administrative structure and administrative support.

(7) Summary of evaluation questions. Key questions for evaluating the quality and appropriateness of an overall training program should include the following:

(a) Are the program objectives clearly stated?

(b) Is the program accomplishing its objectives?

(c) Are appropriate facilities and staff available?

(d) Is there an appropriate mix of classroom, demonstration, and hands-on training?

(e) Is the program providing quality employee health and safety training that fully meets the intent of regulatory requirements?

(f) What are the program's main strengths?

(g) What are the program's main weaknesses?

(h) What is recommended to improve the program?

- (i) Are instructors instructing according to their training outlines?
- (j) Is the evaluation tool current and appropriate for the program content?
- (k) Is the course material current and relevant to the target group?

Suggested Training Curriculum Guidelines:

The following training curriculum guidelines are for those operations specifically identified in this Part P, as requiring training. Issues such as qualifications of instructors, training certification, and similar criteria appropriate to all categories of operations addressed in this Part P, have been covered in the preceding section and are not readdressed in each of the generic guidelines. Basic core requirements for training programs that are addressed include: (1) *General hazardous waste operations*; (2) *RCRA operations—Treatment, storage, and disposal facilities*.

(1) General hazardous waste operations and site-specific training.

(a) Off-site training. Training course content for hazardous waste operations, required by WAC 296-62-3040 through 296-62-30465, should include the following topics or procedures:

- (i) Regulatory knowledge.
 - (A) A review of this Part P and the core elements of an occupational safety and health program.
 - (B) The content of a medical surveillance program as outlined in WAC 296-62-3050 through 296-62-30535.
 - (C) The content of an effective site safety and health plan consistent with the requirements of WAC 296-62-30135(2).
 - (D) Emergency response plan and procedures as outlined in WAC 296-24-567 and 296-62-3110 through 296-62-31110.
 - (E) Adequate illumination.
 - (F) Sanitation recommendation and equipment.
 - (G) Review and explanation of WISHA's hazard-communication standard (~~chapter 296-62 WAC, Part C~~) WAC 296-800-170, and chapter 296-24 WAC, Part A-4, safety procedures for the control of hazardous energy (lockout/tagout).
 - (H) Review of other applicable standards including but not limited to those in the construction standards, chapter 296-155 WAC.

(I) Rights and responsibilities of employers and employees under applicable WISHA/OSHA and department of ecology (DOE)/Environmental Protection Association (EPA) regulations and laws.

(ii) Technical knowledge.

(A) Type of potential exposures to chemical, biological, and radiological hazards; types of human responses to these hazards and recognition of those responses; principles of toxicology and information about acute and chronic hazards; health and safety considerations of new technology.

(B) Fundamentals of chemical hazards including but not limited to vapor pressure, boiling points, flash points, pH, other physical and chemical properties.

(C) Fire and explosion hazards of chemicals.

(D) General safety hazards such as but not limited to electrical hazards, powered equipment hazards, motor vehicle hazards, walking-working surface hazards, excavation

hazards, and hazards associated with working in hot and cold temperature extremes.

(E) Review and knowledge of confined space entry procedures in chapter 296-62 WAC, Part M.

(F) Work practices to minimize employee risk from site hazards.

(G) Safe use of engineering controls, equipment, and any new relevant safety technology or safety procedures.

(H) Review and demonstration of competency with air sampling and monitoring equipment that may be used in a site monitoring program.

(I) Container sampling procedures and safeguarding; general drum and container handling procedures including special requirement for laboratory waste packs, shock-sensitive wastes, and radioactive wastes.

(J) The elements of a spill control program.

(K) Proper use and limitations of material handling equipment.

(L) Procedures for safe and healthful preparation of containers for shipping and transport.

(M) Methods of communication including those used while wearing respiratory protection.

(iii) Technical skills.

(A) Selection, use maintenance, and limitations of personal protective equipment including the components and procedures for carrying out a respirator program to comply with chapter 296-62 WAC Part E, Respiratory Protection.

(B) Instruction in decontamination programs including personnel, equipment, and hardware; hands-on training including Levels A, B, and C ensembles and appropriate decontamination lines; field activities including the donning and doffing of protective equipment to a level commensurate with the employee's anticipated job function and responsibility and to the degree required by potential hazards.

(C) Sources for additional hazard information; exercises using relevant manuals and hazard coding systems.

(iv) Additional suggested items.

(A) A laminated, dated card or certificate with photo, denoting limitations and level of protection for which the employee is trained should be issued to those students successfully completing a course.

(B) Attendance should be required at all training modules, with successful completion of exercises and a final written or oral examination with at least fifty questions.

(C) A minimum of one-third of the program should be devoted to hands-on exercises.

(D) A curriculum should be established for the eight-hour refresher training required by WAC 296-62-30460, with delivery of such courses directed toward those areas of previous training that need improvement or reemphasis.

(E) A curriculum should be established for the required eight-hour training for supervisors. Demonstrated competency in the skills and knowledge provided in forty-hour and eighty-hour courses should be prerequisites for supervisor training.

(b) Refresher training. The eight-hour annual refresher training required in WAC 296-62-30460 should be conducted by qualified training providers. Refresher training should include at a minimum the following topics and procedures:

(i) Review of and retraining on relevant topics covered in the forty-hour and eighty-hour programs, as appropriate, using reports by the students on their work experiences.

(ii) Update on developments with respect to material covered in the forty-hour and eighty-hour courses.

(iii) Review of changes to pertinent provisions of DOE/EPA or WISHA/OSHA standards or laws.

(iv) Introduction of additional subject areas as appropriate.

(v) Hands-on review of new or altered PPE or decontamination equipment or procedures. Review of new developments in personal protective equipment.

(vi) Review of newly developed air and contaminant monitoring equipment.

(c) On-site training. The employer should provide employees engaged in hazardous waste site activities with information and training prior to initial assignment into their work area, as follows:

(i) The requirements of the hazard communication program including the location and availability of the written program, required lists of hazardous chemicals, and material safety data sheets.

(ii) Activities and locations in their work area where hazardous substance may be present.

(iii) Methods and observations that may be used to detect the presence or release of a hazardous chemical in the work area (such as monitoring conducted by the employer, continuous monitoring devices, visual appearances, or other evidence (sight, sound or smell)) of hazardous chemicals being released, and applicable alarms from monitoring devices that record chemical releases.

(iv) The physical and health hazards of substances known or potentially present in the work area.

(v) The measures employees can take to help protect themselves from worksite hazards, including specific procedures the employer has implemented.

(vi) An explanation of the labeling system and material safety data sheets and how employees can obtain and use appropriate hazard information.

(vii) The elements of the confined space program including special PPE, permits, monitoring requirements, communication procedures, emergency response, and applicable lockout procedures.

(d) The employer should provide hazardous waste employees with information and training and should provide a review and access to the site safety and health plan as follows:

(i) Names of personnel and alternate responsible for site safety and health.

(ii) Safety and health hazards present on the site.

(iii) Selection, use, maintenance, and limitations of personal protective equipment specific to the site.

(iv) Work practices by which the employee can minimize risks from hazards.

(v) Safe use of engineering controls and equipment available on site.

(vi) Safe decontamination procedures established to minimize employee contact with hazardous substances, including:

(A) Employee decontamination;

(B) Clothing decontamination; and

(C) Equipment decontamination.

(vii) Elements of the site emergency response plan, including:

(A) Preemergency planning.

(B) Personnel roles and lines of authority and communication.

(C) Emergency recognition and prevention.

(D) Safe distances and places of refuge.

(E) Site security and control.

(F) Evacuation routes and procedures.

(G) Decontamination procedures not covered by the site safety and health plan.

(H) Emergency medical treatment and first aid.

(I) Emergency equipment and procedures for handling emergency incidents.

(e) The employer should provide hazardous waste employees with information and training on personal protective equipment used at the site, such as the following:

(i) PPE to be used based upon known or anticipated site hazards.

(ii) PPE limitations of materials and construction; limitations during temperature extremes, heat stress, and other appropriate medical considerations; use and limitations of respirator equipment as well as documentation procedures as outlined in chapter 296-62 WAC, Part E, Respiratory Protection.

(iii) PPE inspection procedures prior to, during, and after use.

(iv) PPE donning and doffing procedures.

(v) PPE decontamination and disposal procedures.

(vi) PPE maintenance and storage.

(vii) Task duration as related to PPE limitations.

(f) The employer should instruct the employee about the site medical surveillance program relative to the particular site, including:

(i) Specific medical surveillance programs that have been adapted for the site.

(ii) Specific signs and symptoms related to exposure to hazardous materials on the site.

(iii) The frequency and extent of periodic medical examinations that will be used on the site.

(iv) Maintenance and availability of records.

(v) Personnel to be contacted and procedures to be followed when signs and symptoms of exposures are recognized.

(g) The employees will review and discuss the site safety and health plan as part of the training program. The location of the site safety and health plan and all written programs should be discussed with employees including a discussion of the mechanisms for access, review, and references described.

(2) RCRA operations training for treatment, storage and disposal facilities.

(a) As a minimum, the training course required in WAC 296-62-31435 through 296-62-31440 and 296-62-31465 should include the following topics:

(i) Review of the applicable parts of this Part P and the elements of the employer's occupational safety and health plan.

(ii) Review of relevant hazards such as, but not limited to, chemical, biological, and radiological exposures; fire and explosion hazards; thermal extremes; and physical hazards.

(iii) General safety hazards including those associated with electrical hazards, powered equipment hazards, lockout/tagout procedures, motor vehicle hazards and walking-working surface hazards.

(iv) Confined space hazards and procedures.

(v) Work practices to minimize employee risk from workplace hazards.

(vi) Emergency response plan and procedures including first aid meeting the requirements of WAC 296-62-31450.

(vii) A review of procedures to minimize exposure to hazardous waste and various type of waste streams, including the materials handling program and spill containment program.

(viii) A review of chemical hazard communication programs meeting the requirements of (~~chapter 296-62-WAC, Part C~~) WAC 296-800-170.

(ix) A review of medical surveillance programs meeting the requirements of WAC 296-62-3050 and 296-62-31415 including the recognition of signs and symptoms of overexposure to hazardous substance including known synergistic interactions.

(x) A review of decontamination programs and procedures meeting the requirements of WAC 296-62-3100 and 296-62-31420.

(xi) A review of an employer's requirements to implement a training program and its elements.

(xii) A review of the criteria and programs for proper selection and use of personal protective equipment, including respirators.

(xiii) A review of the applicable appendices to this Part P (Appendices A through E).

(xiv) Principles of toxicology and biological monitoring as they pertain to occupational health.

(xv) Rights and responsibilities of employees and employers under applicable WISHA/OSHA and DOE/EPA regulations and laws.

(xvi) Hands-on exercises and demonstrations of competency with equipment to illustrate the basic equipment principles that may be used during the performance of work duties, including the donning and doffing of PPE.

(xvii) Sources of reference, efficient use of relevant manuals, and knowledge of hazard coding systems to include information contained in hazardous waste manifests.

(xviii) At least eight hours of hands-on training.

(xix) Training in the job skills required for an employee's job function and responsibility before they are permitted to participate in or supervise field activities.

(b) The individual employer should provide hazardous waste employees with information and training prior to an employee's initial assignment into a work area. The training and information should cover the following topics:

(i) The emergency response plan and procedures including first aid.

(ii) A review of the employer's hazardous waste handling procedures including the materials handling program and elements of the spill containment program, location of spill

response kits or equipment, and the names of those trained to respond to releases.

(iii) The hazardous communication program meeting the requirements of (~~chapter 296-62-WAC, Part C~~) WAC 296-800-170.

(iv) A review of the employer's medical surveillance program including the recognition of signs and symptoms of exposure to relevant hazardous substance including known synergistic interactions.

(v) A review of the employer's decontamination program and procedures.

(vi) A review of the employer's training program and the parties responsible for that program.

(vii) A review of the employer's personal protective equipment program including the proper selection and use of PPE based upon specific site hazards.

(viii) All relevant site-specific procedures addressing potential safety and health hazards. This may include, as appropriate, biological and radiological exposures, fire and explosion hazards, thermal hazards, and physical hazards such as electrical hazards, powered equipment hazards, lockout/tagout hazards, motor vehicle hazards, and walking-working surface hazards.

(ix) Safe use of engineering controls and equipment on-site.

(x) Names of personnel and alternates responsible for safety and health.

AMENDATORY SECTION (Amending Order 90-10, filed 8/13/90, effective 9/24/90)

WAC 296-62-40003 Definitions applicable to all sections of this chapter. Unless the context indicates otherwise, words used in this chapter shall have the meaning given in this section.

(1) "Action level" means a concentration designated in WAC 296-62-075 for a specific substance, calculated as an 8-hour time-weighted average, which initiates certain required activities such as exposure monitoring and medical surveillance.

(2) "Carcinogen" (see "select carcinogen").

(3) "Chemical hygiene officer" means an employee who is designated by the employer, and who is qualified by training or experience, to provide technical guidance in the development and implementation of the provisions of the chemical hygiene plan. This definition is not intended to place limitations on the position description or job classification that the designated individual shall hold within the employer's organizational structure.

(4) "Chemical hygiene plan" means a written program developed and implemented by the employer which sets forth procedures, equipment, personal protective equipment, and work practices that are capable of protecting employees from the health hazards presented by hazardous chemicals used in that particular workplace and meets the requirements of WAC 296-62-40009.

(5) "Combustible liquid" means any liquid having a flashpoint at or above 100°F (37.8°C), but below 200°F (93.3°C), except any mixture having components with flashpoints

of 200°F (93.3°C), or higher, the total volume of which make up 99 percent or more of the total volume of the mixture.

(6) "Compressed gas" means:

(a) A gas or mixture of gases having, in a container, an absolute pressure exceeding 40 psi at 70°F (21.1°C); or

(b) A gas or mixture of gases having, in a container, an absolute pressure exceeding 104 psi at 130°F (54.4°C) regardless of the pressure at 70°F (21.1°C); or

(c) A liquid having a vapor pressure exceeding 40 psi at 100°F (37.8°C) as determined by ASTM D-323-72.

(7) "Designated area" means an area which may be used for work with "select carcinogens," reproductive toxins or substances which have a high degree of acute toxicity. A designated area may be the entire laboratory, an area of a laboratory or a device such as a laboratory hood.

(8) "Director" means the director of the department of labor and industries or his/her designee.

(9) "Emergency" means any occurrence such as, but not limited to, equipment failure, rupture of containers or failure of control equipment which results in an uncontrolled release of a hazardous chemical into the workplace.

(10) "Employee" means an individual employed in a laboratory workplace who may be exposed to hazardous chemicals in the course of his or her assignments.

(11) "Explosive" means a chemical that causes a sudden, almost instantaneous release of pressure, gas, and heat when subjected to sudden shock, pressure, or high temperature.

(12) "Flammable" means a chemical that falls into one of the following categories:

(a) "Aerosol, flammable" means an aerosol that, when tested by the method described in 16 C.F.R. 1500.45, yields a flame protection exceeding 18 inches at full valve opening, or a flashback (a flame extending back to the valve) at any degree of valve opening;

(b) "Gas, flammable" means:

(i) A gas that, at ambient temperature and pressure, forms a flammable mixture with air at a concentration of 13 percent by volume or less; or

(ii) A gas that, at ambient temperature and pressure, forms a range of flammable mixtures with air wider than 12 percent by volume, regardless of the lower limit.

(c) "Liquid, flammable" means any liquid having a flashpoint below 100°F (37.8°C), except any mixture having components with flashpoints of 100°F (37.8°C) or higher, the total of which make up 99 percent or more of the total volume of the mixture.

(d) "Solid, flammable" means a solid, other than a blasting agent or explosive as defined in WAC 296-52-417, that is liable to cause fire through friction, absorption of moisture, spontaneous chemical change, or retained heat from manufacturing or processing, or which can be ignited readily and when ignited burns so vigorously and persistently as to create a serious hazard. A chemical shall be considered to be a flammable solid if, when tested by the method described in 16 C.F.R. 1500.44, it ignites and burns with a self-sustained flame at a rate greater than one-tenth of an inch per second along its major axis.

(13) "Flashpoint" means the minimum temperature at which a liquid gives off a vapor in sufficient concentration to ignite when tested as follows:

(a) Tagliabue Closed Tester (see American National Standard Method of Test for Flash Point by Tag Closed Tester, Z11.24-1979 (ASTM D 56-79))-for liquids with a viscosity of less than 45 Saybolt Universal Seconds (SUS) at 100 deg.F (37.8°C), that do not contain suspended solids and do not have a tendency to form a surface film under test; or

(b) Pensky-Martens Closed Tester (see American National Standard Method of Test for Flash Point by Pensky-Martens Closed Tester, Z11.7-1979 (ASTM D 93-79))-for liquids with a viscosity equal to or greater than 45 SUS at 100 deg.F (37.8°C), or that contain suspended solids, or that have a tendency to form a surface film under test; or

(c) Setaflash Closed Tester (see American National Standard Method of Test for Flash Point by Setaflash Closed Tester (ASTM D 3278-78)).

Note: Organic peroxides, which undergo autoaccelerating thermal decomposition, are excluded from any of the flashpoint determination methods specified above.

(14) "Hazardous chemical" means a chemical for which there is statistically significant evidence based on at least one study conducted in accordance with established scientific principles that acute or chronic health effects may occur in exposed employees. The term "health hazard" includes chemicals which are carcinogens, toxic or highly toxic agents, reproductive toxins, irritants, corrosives, sensitizers, hepatotoxins, nephrotoxins, neurotoxins, agents which act on the hematopoietic systems, and agents which damage the lungs, skin, eyes, or mucous membranes.

Note: Appendices A and B of the Hazard Communication Standard (WAC ((296-62-054)) 296-800-170) provide further guidance in defining the scope of health hazards and determining whether or not a chemical is to be considered hazardous for purposes of this standard.

(15) "Laboratory" means a facility where the "laboratory use of hazardous chemicals" occurs. It is a workplace where relatively small quantities of hazardous chemicals are used on a nonproduction basis.

(16) "Laboratory scale" means work with substances in which the containers used for reactions, transfers, and other handling of substances are designed to be easily and safely manipulated by one person. "Laboratory scale" excludes those workplaces whose function is to produce commercial quantities of materials.

(17) "Laboratory-type hood" means a device located in a laboratory, enclosure on five sides with a moveable sash or fixed partial enclosed on the remaining side; constructed and maintained to draw air from the laboratory and to prevent or minimize the escape of air contaminants into the laboratory; and allows chemical manipulations to be conducted in the enclosure without insertion of any portion of the employee's body other than hands and arms.

Note: Walk-in hoods with adjustable sashes meet the above definition provided that the sashes are adjusted during use so that the airflow and the exhaust of air contaminants are not compromised and employees do not work inside the enclosure during the release of airborne hazardous chemicals.

(18) "Laboratory use of hazardous chemicals" means handling or use of such chemicals in which all of the following conditions are met:

(a) Chemical manipulations are carried out on a "laboratory scale";

(b) Multiple chemical procedures or chemicals are used;

(c) The procedures involved are not part of a production process, nor in any way simulate a production process; and

(d) "Protective laboratory practices and equipment" are available and in common use to minimize the potential for employee exposure to hazardous chemicals.

(19) "Medical consultation" means a consultation which takes place between an employee and a licensed physician for the purpose of determining what medical examinations or procedures, if any, are appropriate in cases where a significant exposure to a hazardous chemical may have taken place.

(20) "Organic peroxide" means an organic compound that contains the bivalent -O-O-structure and which may be considered to be a structural derivative of hydrogen peroxide where one or both of the hydrogen atoms has been replaced by an organic radical.

(21) "Oxidizer" means a chemical other than a blasting agent or explosive as defined in WAC 296-52-417, that initiates or promotes combustion in other materials, thereby causing fire either of itself or through the release of oxygen or other gases.

(22) "Physical hazard" means a chemical for which there is scientifically valid evidence that it is a combustible liquid, a compressed gas, explosive, flammable, an organic peroxide, an oxidizer, pyrophoric, unstable (reactive) or water-reactive.

(23) "Protective laboratory practices and equipment" means those laboratory procedures, practices, and equipment accepted by laboratory health and safety experts as effective, or that the employer can show to be effective, in minimizing the potential for employee exposure to hazardous chemicals.

(24) "Reproductive toxins" means chemicals which affect the reproductive capabilities including chromosomal damage (mutations) and effects on fetuses (teratogenesis).

(25) "Select carcinogen" means any substance which meets one of the following criteria:

(a) It is regulated by WISHA as a carcinogen; or

(b) It is listed under the category, "known to be carcinogens," in the Annual Report on Carcinogens published by the National Toxicology Program (NTP) (latest edition); or

(c) It is listed under Group I ("carcinogenic to humans") by the International Agency for Research on Cancer Monographs (IARC) (latest editions); or

(d) It is listed in either Group 2A or 2B by IARC or under the category, "reasonably anticipated to be carcinogens" by NTP, and causes statistically significant tumor incidence in experimental animals in accordance with any of the following criteria:

(i) After inhalation exposure of 6-7 hours per day, 5 days per week, for a significant portion of a lifetime to dosages of less than 10 mg/m³; or

(ii) After repeated skin application of less than 300 mg/kg of body weight per week; or

(iii) After oral dosages of less than 50 mg/kg of body weight per day.

(26) "Unstable (reactive)" means a chemical which is the pure state, or as produced or transported, will vigorously polymerize, decompose, condense, or will become self-reactive under conditions of shock, pressure, or temperature.

(27) "Water-reactive" means a chemical that reacts with water to release a gas that is either flammable or presents a health hazard.

AMENDATORY SECTION (Amending Order 94-07, filed 7/20/94, effective 9/20/94)

WAC 296-62-40015 Hazard identification. (1) With respect to labels and material safety data sheets:

(a) Employers shall ensure that labels on incoming containers of hazardous chemicals are not removed or defaced.

(b) Employers shall maintain any material safety data sheets that are received with incoming shipments of hazardous chemicals, and ensure that they are readily accessible to laboratory employees.

(2) The following provisions shall apply to chemical substances developed in the laboratory:

(a) If the composition of the chemical substance which is produced exclusively for the laboratory's use is known, the employer shall determine if it is a hazardous chemical as defined in the definition section, Part Q of this standard. If the chemical is determined to be hazardous, the employer shall provide appropriate training as required under WAC 296-62-40011.

(b) If the chemical produced is a byproduct whose composition is not known, the employer shall assume that the substance is hazardous and shall implement WAC 296-62-40009.

(c) If the chemical substance is produced for another user outside of the laboratory, the employer shall comply with the chemical hazard communication standard (WAC ((296-62-054)) 296-800-170) including the requirements for preparation of material safety data sheets and labeling.

AMENDATORY SECTION (Amending WSR 99-07-097, filed 3/23/99, effective 6/23/99)

WAC 296-62-41031 Personal protective equipment selection. (1) Personal protective equipment (PPE) must be selected and used which will protect employees from the hazards and potential hazards they are likely to encounter as identified during the site characterization and analysis.

(2) Personal protective equipment selection must be based on an evaluation of the performance characteristics of the PPE relative to the requirements and limitations of the site, the task-specific conditions and duration, and the hazards and potential hazards identified at the site.

(3) Positive pressure self-contained breathing apparatus, or positive pressure air-line respirators equipped with an escape air supply must be used when chemical exposure levels present will create a substantial possibility of immediate death, immediate serious illness or injury, or impair the ability to escape.

(4) Totally encapsulating chemical protective suits (protection equivalent to Level A protection as recommended in Appendix B) must be used in conditions where skin absorp-

tion of a hazardous substance may result in a substantial possibility of immediate death, immediate serious illness or injury, or impair the ability to escape.

(5) The level of protection provided by PPE selection must be increased when additional information or site conditions indicate that increased protection is necessary to reduce employee exposures below permissible exposure limits and published exposure levels for hazardous substances and health hazards. (See WAC 296-62-41082 - Appendix B for guidance on selecting PPE ensembles.)

Note: The level of employee protection provided may be decreased when additional information or site conditions show that decreased protection will not result in increased hazardous exposures to employees.

(6) Personal protective equipment must be selected and used to meet the requirements of ((chapter 296-24 WAC, Part A-2)) WAC 296-800-160, and additional requirements specified in this part.

AMENDATORY SECTION (Amending WSR 99-07-097, filed 3/23/99, effective 6/23/99)

WAC 296-62-41086 Appendix E—Training curriculum guidelines. The following nonmandatory general criteria may be used for assistance in developing training curriculum used to meet the training requirements of Part R.

These are generic guidelines and they are not presented as a complete training curriculum for any specific employer. Site-specific training programs must be developed on the basis of a needs assessment of the emergency response operation in accordance with this chapter (chapter 296-62 WAC, Part R).

The guidance set forth here presents a highly effective program that in the areas covered would meet or exceed the regulatory requirements. In addition, other approaches could meet the regulatory requirements.

Suggested general criteria:

Definitions:

Suggested core criteria:

"Competent" means possessing the skills, knowledge, experience, and judgment to perform assigned tasks or activities satisfactorily as determined by the employer.

"Demonstration" means the showing by actual use of equipment or procedures.

"Hands-on training" means training in a simulated work environment that permits each student to have experience performing tasks, making decisions, or using equipment appropriate to the job assignment for which the training is being conducted.

"Initial training" means training required before beginning work.

"Lecture" means an interactive discourse with a class lead by an instructor.

"Proficient" means meeting a stated level of achievement.

"Site-specific" means individual training directed to the operations of a specific job site.

"Training hours" means the number of hours devoted to lecture, learning activities, small group work sessions, demonstration, evaluations, or hands-on experience.

(1) Training facility. The training facility should have available sufficient resources, equipment, and site locations to perform concise and hands-on training when appropriate. Training facilities should have sufficient organization, support staff, and services to conduct training in each of the courses offered.

(2) Training director. Each training program should be under the direction of a training director who is responsible for the program. The training director should have a minimum of two years of employee education experience.

(3) Instructors. Instructors should be deemed competent on the basis of previous documented experience in their area of instruction, successful completion of a "train-the-trainer" program specific to the topics they will teach, and an evaluation of instructional competence by the training director.

(a) Instructors should be required to maintain professional competency by participating in continuing education or professional development programs or by successfully completing an annual refresher course and having an annual review by the training director.

(b) The annual review by the training director should include observation of an instructor's delivery, a review of those observations with the trainer, and an analysis of any instructor or class evaluations completed by the students during the previous year.

(4) Course materials. The training director should approve all course materials to be used by the training provider. Course materials should be reviewed and updated at least annually. Materials and equipment should be in good working order and maintained properly.

(a) All written and audio-visual materials in training curricula should be peer reviewed by technically competent outside reviewers or by a standing advisory committee.

(b) Reviewers should possess expertise in the following disciplines were applicable: Occupational health, industrial hygiene and safety, chemical/environmental engineering, employee education, or emergency response. One or more of the peer reviewers should be an employee experienced in the work activities to which the training is directed.

(5) Students. The program for accepting students should include:

(a) Assurance that the student is or will be involved in work where chemical exposures are likely and that the student possesses the skills necessary to perform the work.

(b) A policy on the necessary medical clearance.

(6) Ratios. Student-instructor ratios should not exceed thirty students per instructor. Hands-on activity requiring the use of personal protective equipment should have the following student-instructor ratios: For Level C or Level D personal protective equipment the ratio should be ten students per instructor. For Level A or Level B personal protective equipment the ratio should be five students per instructor.

(7) Proficiency assessment. Proficiency should be evaluated and documented by the use of a written assessment and a skill demonstration selected and developed by the training director and training staff. The assessment and demonstration should evaluate the knowledge and individual skills

developed in the course of training. The level of minimum achievement necessary for proficiency shall be specified in writing by the training director.

(a) If a written test is used, there should be a minimum of fifty questions. If a written test is used in combination with a skills demonstration, a minimum of twenty-five questions should be used. If a skills demonstration is used, the tasks chosen and the means to rate successful completion should be fully documented by the training director.

(b) The content of the written test or of the skill demonstration shall be relevant to the objectives of the course.

The written test and skill demonstration should be updated as necessary to reflect changes in the curriculum and any update should be approved by the training director.

(c) The proficiency assessment methods, regardless of the approach or combination of approaches used, should be justified, documented and approved by the training director.

(d) The proficiency of those taking the additional courses for supervisors should be evaluated and documented by using proficiency assessment methods acceptable to the training director. These proficiency assessment methods must reflect the additional responsibilities borne by supervisory personnel in hazardous waste operations or emergency response.

(8) Course certificate. Written documentation should be provided to each student who satisfactorily completes the training course. The documentation should include:

(a) Student's name.

(b) Course title.

(c) Course date.

(d) Statement that the student has successfully completed the course.

(e) Name and address of the training provider.

(f) An individual identification number for the certificate.

(g) List of the levels of personal protective equipment used by the student to complete the course.

(i) This documentation may include a certificate and an appropriate wallet-sized laminated card with a photograph of the student and the above information.

(ii) When such course certificate cards are used, the individual identification number for the training certificate should be shown on the card.

(9) Recordkeeping. Training providers should maintain records listing the dates courses were presented, the names of the individual course attendees, the names of those students successfully completing each course, and the number of training certificates issued to each successful student. These records should be maintained for a minimum of five years after the date an individual participated in a training program offered by the training provider. These records should be available and provided upon the student's request or as mandated by law.

(10) Program quality control. The training director should conduct or direct an annual written audit of the training program. Program modifications to address deficiencies, if any, should be documented, approved, and implemented by the training provider. The audit and the program modification documents should be maintained at the training facility.

Suggested Program Quality Control Criteria:

Factors listed here are suggested criteria for determining the quality and appropriateness of employee health and safety training for hazardous waste operations and emergency response.

(a) Training plan. Adequacy and appropriateness of the training program's curriculum development, instructor training, distribution of course materials, and direct student training should be considered, including:

(i) The duration of training, course content, and course schedules/agendas;

(ii) The different training requirements of the various target populations, as specified in the appropriate generic training curriculum;

(iii) The process for the development of curriculum, which includes appropriate technical input, outside review, evaluation, program pretesting.

(iv) The adequate and appropriate inclusion of hands-on, demonstration, and instruction methods;

(v) Adequate monitoring of student safety, progress, and performance during the training.

(b) Program management, training director, staff, and consultants. Adequacy and appropriateness of staff performance and delivering an effective training program should be considered, including:

(i) Demonstration of the training director's leadership in assuring quality of health and safety training;

(ii) Demonstration of the competency of the staff to meet the demands of delivering high quality hazardous waste employee health and safety training;

(iii) Organization charts establishing clear lines of authority;

(iv) Clearly defined staff duties including the relationship of the training staff to the overall program;

(v) Evidence that the training organizational structure suits the needs of the training program;

(vi) Appropriateness and adequacy of the training methods used by the instructors;

(vii) Sufficiency of the time committed by the training director and staff to the training program;

(viii) Adequacy of the ratio of training staff to students;

(ix) Availability and commitment of the training program of adequate human and equipment resources in the areas of:

(A) Health effects;

(B) Safety;

(C) Personal protective equipment (PPE);

(D) Operational procedures;

(E) Employee protection practices/procedures;

(x) Appropriateness of management controls;

(xi) Adequacy of the organization and appropriate resources assigned to assure appropriate training;

(xii) In the case of multiple-site training programs, adequacy of management of the satellite centers.

(c) Training facilities and resources. Adequacy and appropriateness of the facilities and resources for supporting the training program should be considered, including:

(i) Space and equipment to conduct the training;

(ii) Facilities for representative hands-on training;

(iii) In the case of multiple-site programs, equipment and facilities at the satellite centers;

(iv) Adequacy and appropriateness of the quality control and evaluations program to account for instructor performance;

(v) Adequacy and appropriateness of the quality control and evaluation program to ensure appropriate course evaluation, feedback, updating, and corrective action;

(vi) Adequacy and appropriateness of disciplines and expertise being used within the quality control and evaluation program;

(vii) Adequacy and appropriateness of the role of student evaluations to provide feedback for training program improvement.

(d) Quality control and evaluation. Adequacy and appropriateness of quality control and evaluation plans for training programs should be considered, including:

(i) A balanced advisory committee and/or competent outside reviewers to give overall policy guidance;

(ii) Clear and adequate definition of the composition and active programmatic role of the advisory committee or outside reviewers;

(iii) Adequacy of the minutes or reports of the advisory committee or outside reviewers' meetings or written communication;

(iv) Adequacy and appropriateness of the quality control and evaluations program to account for instructor performance;

(v) Adequacy and appropriateness of the quality control and evaluation program to ensure appropriate course evaluation, feedback, updating, and corrective action;

(vi) Adequacy and appropriateness of disciplines and expertise being used within the quality control and evaluation program;

(vii) Adequacy and appropriateness of the role of student evaluations to provide feedback for training program improvement.

(e) Students. Adequacy and appropriateness of the program for accepting students should be considered, including:

(i) Assurance that the student already possess the necessary skills for their job, including necessary documentation;

(ii) Appropriateness of methods the program uses to ensure that recruits are capable of satisfactorily completing training;

(iii) Review and compliance with any medical clearance policy.

(f) Institutional environment and administrative support. The adequacy and appropriateness of the institutional environment and administrative support system for the training program should be considered, including:

(i) Adequacy of the institutional commitment to the employee training program;

(ii) Adequacy and appropriateness of the administrative structure and administrative support.

(g) Summary of evaluation questions. Key questions for evaluating the quality and appropriateness of an overall training program should include the following:

(i) Are the program objectives clearly stated?

(ii) Is the program accomplishing its objectives?

(iii) Are appropriate facilities and staff available?

(iv) Is there an appropriate mix of classroom, demonstration, and hands-on training?

(v) Is the program providing quality employee health and safety training that fully meets the intent of regulatory requirements?

(vi) What are the program's main strengths?

(vii) What are the program's main weaknesses?

(viii) What is recommended to improve the program?

(ix) Are instructors instructing according to their training outlines?

(x) Is the evaluation tool current and appropriate for the program content?

(xi) Is the course material current and relevant to the target group?

Suggested Training Curriculum Guidelines:

The following training curriculum guidelines are for those operations specifically identified in this Part R as requiring training. Issues such as qualifications of instructors, training certification, and similar criteria appropriate to all categories of operations addressed in this Part R have been covered in the preceding section and are not addressed in each of the generic guidelines.

(h) Emergency response training.

(i) General considerations. Emergency response organizations are required to consider the topics listed in WAC 296-62-41020. Emergency response organizations may use some or all of the following topics to supplement those mandatory topics when developing their response training programs. Many of the topics would require an interaction between the response provider and the individuals responsible for the site where the response would be expected.

(A) Hazard recognition, including:

(I) Nature of hazardous substances present;

(II) Practical applications of hazard recognition, including presentations on biology, chemistry, and physics.

(B) Principles of toxicology, biological monitoring, and risk assessment.

(C) Safe work practices and general site safety.

(D) Engineering controls and hazardous waste operations.

(E) Site safety plans and standard operating procedures.

(F) Decontamination procedures and practices.

(G) Emergency procedures, first aid, and self-rescue.

(H) Safe use of field equipment.

(I) Storage, handling, use and transportation of hazardous substances.

(J) Use, care, and limitations of personal protective equipment.

(K) Safe sampling techniques.

(L) Rights and responsibilities of employees under WISHA and other related regulations and laws concerning right-to-know, safety and health, compensations and liability.

(M) Medical monitoring requirements.

(N) Community relations.

(ii) Suggested criteria for specific courses.

(A) First responder awareness level.

(I) Review of and demonstration of competency in performing the applicable skills of WAC 296-62-41010.

(II) Hands-on experience with the U.S. Department of Transportation's Emergency Response Guidebook (ERG) and familiarization with ((chapter 296-62 WAC, Part C))

WAC 296-800-170, the chemical hazard communication standard.

(III) Review of the principles and practices for analyzing an incident to determine both the hazardous substances present and the basic hazard and response information for each hazardous substance present.

(IV) Review of procedures for implementing actions consistent with the local emergency response plan, the organization's standard operating procedures, and the current edition of DOT's ERG including emergency notification procedures and follow-up communications.

(V) Review of the expected hazards including fire and explosions hazards, confined space hazards, electrical hazards, powered equipment hazards, motor vehicle hazards, and walking-working surface hazards.

(VI) Awareness and knowledge of the competencies for the First Responder at the Awareness Level covered in the National Fire Protection Association's Standard No. 472, Professional Competence of Responders to Hazardous Materials Incidents.

(B) First responder operations level.

(I) Review of and demonstration of competency in performing the applicable skills of WAC 296-62-41010.

(II) Hands-on experience with the U.S. Department of Transportation's Emergency Response Guidebook (ERG), manufacturer material safety data sheets, CHEMTREC/CANUTEC, shipper or manufacturer contacts, and other relevant sources of information addressing hazardous substance releases. Familiarization with (~~chapter 296-62 WAC, Part C~~) WAC 296-800-170, the chemical hazard communication standard.

(III) Review of the principles and practices for analyzing an incident to determine the hazardous substances present, the likely behavior of the hazardous substance and its container, the types of hazardous substance transportation containers and vehicles, the types and selection of the appropriate defensive strategy for containing the release.

(IV) Review of procedures for implementing continuing response actions consistent with the local emergency response plan, the organization's standard operating procedures, and the current edition of DOT's ERG including extended emergency notification procedures and follow-up communications.

(V) Review of the principles and practice for proper selection and use of personal protective equipment.

(VI) Review of the principles and practice of personnel and equipment decontamination.

(VII) Review of the expected hazards including fire and explosions hazards, confined space hazards, electrical hazards, powered equipment hazards, motor vehicle hazards, and walking-working surface hazards.

(VIII) Awareness and knowledge of the competencies for the First Responder at the Operations Level covered in the National Fire Protection Association's Standard No. 472, Professional Competence of Responders to Hazardous Materials Incidents.

(C) Hazardous materials technician.

(I) Review of and demonstration of competency in performing the applicable skills of WAC 296-62-41010.

(II) Hands-on experience with written and electronic information relative to response decision making including, but not limited to, the U.S. Department of Transportation's Emergency Response Guidebook (ERG), manufacturer material safety data sheets, CHEMTREC/CANUTEC, shipper or manufacturer contacts, computer data bases and response models, and other relevant sources of information addressing hazardous substance releases. Familiarization with (~~chapter 296-62 WAC, Part C~~) WAC 296-800-170, the chemical hazard communication standard.

(III) Review of the principles and practices for analyzing an incident to determine the hazardous substances present, their physical and chemical properties, the likely behavior of the hazardous substance and its container, the types of hazardous substance transportation containers and vehicles involved in the release, the appropriate strategy for approaching release sites and containing the release.

(IV) Review of procedures for implementing continuing response actions consistent with the local emergency response plan, the organization's standard operating procedures, and the current edition of DOT's ERG including extended emergency notification procedures and follow-up communications.

(V) Review of the principles and practice for proper selection and use of personal protective equipment.

(VI) Review of the principles and practices of establishing exposure zones, proper decontamination and medical surveillance stations and procedures.

(VII) Review of the expected hazards including fire and explosions hazards, confined space hazards, electrical hazards, powered equipment hazards, motor vehicle hazards, and walking-working surface hazards.

(VIII) Awareness and knowledge of the competencies for the Hazardous Materials Technician covered in the National Fire Protection Association's Standard No. 472, Professional Competence of Responders to Hazardous Materials Incidents.

(D) Hazardous materials specialist.

(I) Review of and demonstration of competency in performing the applicable skills of WAC 296-62-41010.

(II) Hands-on experience with retrieval and use of written and electronic information relative to response decision making including, but not limited to, the U.S. Department of Transportation's Emergency Response Guidebook (ERG), manufacturer material safety data sheets, CHEMTREC/CANUTEC, shipper or manufacturer contacts, computer data bases and response models, and other relevant sources of information addressing hazardous substance releases. Familiarization with (~~chapter 296-62 WAC, Part C~~) WAC 296-800-170, the chemical hazard communication standard.

(III) Review of the principles and practices for analyzing an incident to determine the hazardous substances present, their physical and chemical properties, and the likely behavior of the hazardous substance and its container, vessel, or vehicle.

(IV) Review of the principles and practices for identification of the types of hazardous substance transportation containers, vessels and vehicles involved in the release; selecting and using the various types of equipment available for plugging or patching transportation containers, vessels or vehi-

cles; organizing and directing the use of multiple teams of hazardous material technicians and selecting the appropriate strategy for approaching release sites and containing or stopping the release.

(V) Review of procedures for implementing continuing response actions consistent with the local emergency response plan, the organization's standard operating procedures, including knowledge of the available public and private response resources, establishment of an incident command post, direction of hazardous material technician teams, and extended emergency notification procedures and follow-up communications.

(VI) Review of the principles and practice for proper selection and use of personal protective equipment.

(VII) Review of the principles and practices of establishing exposure zones and proper decontamination, monitoring and medical surveillance stations and procedures.

(VIII) Review of the expected hazards including fire and explosions hazards, confined space hazards, electrical hazards, powered equipment hazards, motor vehicle hazards, and walking-working surface hazards.

(IX) Awareness and knowledge of the competencies for the Off-site Specialist Employee covered in the National Fire Protection Association's Standard No. 472, Professional Competence of Responders to Hazardous Materials Incidents.

(E) Incident commander.

The incident commander is the individual who, at any one time, is responsible for and in control of the response effort. This individual is the person responsible for the direction and coordination of the response effort. An incident commander's position should be occupied by the most senior, appropriately trained individual present at the response site. Yet, as necessary and appropriate by the level of response provided, the position may be occupied by many individuals during a particular response as the need for greater authority, responsibility, or training increases. It is possible for the first responder at the awareness level to assume the duties of incident commander until a more senior and appropriately trained individual arrives at the response site.

Therefore, any emergency responder expected to perform as an incident commander should be trained to fulfill the obligations of the position at the level of response they will be providing including the following:

(I) Ability to analyze a hazardous substance incident to determine the magnitude of the response problem.

(II) Ability to plan and implement an appropriate response plan within the capabilities of available personnel and equipment.

(III) Ability to implement a response to favorably change the outcome of the incident in a manner consistent with the local emergency response plan and the organization's standard operating procedures.

(IV) Ability to evaluate the progress of the emergency response to ensure that the response objectives are being met safely, effectively, and efficiently.

(V) Ability to adjust the response plan to the conditions of the response and to notify higher levels of response when required by the changes to the response plan.

REPEALER

The following sections of the Washington Administrative Code are repealed:

WAC 296-62-09003	Lighting and illumination.
WAC 296-62-12000	Environmental tobacco smoke in office work environments—Scope and application.
WAC 296-62-12003	Definitions.
WAC 296-62-12005	Controls for environmental tobacco smoke.
WAC 296-62-12009	Appendix—Smoking cessation program information—Nonmandatory.

AMENDATORY SECTION (Amending WSR 98-02-029, filed 12/31/97, effective 1/31/98)

WAC 296-63-009 Exemption requests. (1) Employers who do not have hazardous chemicals at their workplace may submit a written request for exemption to the department. Submission of an exemption request does not relieve an employer of his/her obligation to pay the fee assessment until such time as the request is approved. Employers granted exemptions will be removed from the listing of employers to be assessed a fee beginning with the current billing period.

(2) Exemptions shall only be considered for an employer's entire workplace consisting of all activities reported to the department under the same employer identification number.

(3) Each request for exemption must contain the following information:

(a) Firm name and employer identification number;

(b) Complete mailing address;

(c) Complete location (such as street) address;

(d) A certified statement in the form required by RCW 9A.72.085 that a hazardous chemical survey of the employer's premises has been completed by a qualified person, the identity and qualifications of the person completing the survey, and that no hazardous chemicals as defined by WAC ((296-62-054 through 296-62-05427)) 296-800-170 are present at the workplace.

(4) The department may schedule an on-site inspection to determine the validity of the exemption request.

(5) The employer shall provide to the department within five working days of receiving a request from the department, any additional information identified by the department as necessary for evaluating the exemption request.

(6) Exemption requests shall be mailed to:

Right to Know Program
Department of Labor and Industries
P.O. Box 44620
Olympia, Washington 98504-4620

PERMANENT

AMENDATORY SECTION (Amending Order 93-06, filed 10/20/93, effective 12/1/93)

WAC 296-67-005 Definitions. "Atmospheric tank" means a storage tank which has been designed to operate at pressures from atmospheric through 0.5 p.s.i.g. (pounds per square inch gauge, 3.45 Kpa).

"Boiling point" means the boiling point of a liquid at a pressure of 14.7 pounds per square inch absolute (p.s.i.a.) (760 mm.). For the purposes of this part, where an accurate boiling point is unavailable for the material in question, or for mixtures which do not have a constant boiling point, the 10 percent point of a distillation performed in accordance with the Standard Method of Test for Distillation of Petroleum Products, ASTM D-86-62, may be used as the boiling point of the liquid.

"Catastrophic release" means a major uncontrolled emission, fire, or explosion, involving one or more highly hazardous chemicals, that presents serious danger to employees in the workplace.

"Facility" means the buildings, containers, or equipment which contain a process.

"Highly hazardous chemical" means a substance possessing toxic, reactive, flammable, or explosive properties and specified by WAC 296-67-001 (2)(a).

"Hot work" means work involving electric or gas welding, cutting, brazing, or similar flame or spark-producing operations.

"Normally unoccupied remote facility" means a facility which is operated, maintained, or serviced by employees who visit the facility only periodically to check its operation and to perform necessary operating or maintenance tasks. No employees are permanently stationed at the facility. Facilities meeting this definition are not contiguous with, and must be geographically remote from all other buildings, processes, or persons.

"Process" means any activity involving a highly hazardous chemical including any use, storage, manufacturing, handling, or the on-site movement of such chemicals, or combination of these activities. For purposes of this definition, any group of vessels which are interconnected and separate vessels which are located such that a highly hazardous chemical could be involved in a potential release shall be considered a single process.

"Replacement in kind" means a replacement which satisfies the design specification.

"Trade secret" means any confidential formula, pattern, process, device, information, or compilation of information that is used in an employer's business, and that gives the employer an opportunity to obtain an advantage over competitors who do not know or use it. Chapter 296-62 WAC, Part ((€)) B-1, sets out the criteria to be used in evaluating trade secrets.

AMENDATORY SECTION (Amending Order 92-06, filed 8/10/92, effective 9/10/92)

WAC 296-67-053 Emergency planning and response. The employer shall establish and implement an emergency action plan for the entire plant in accordance with the provisions of WAC 296-24-567. In addition, the emergency action plan shall include procedures for handling small releases. Employers covered under this standard may also be subject to the hazardous waste and emergency response provisions contained in ((chapter 296-62 WAC, Part P)) WAC 296-800-170.

AMENDATORY SECTION (Amending Order 92-06, filed 8/10/92, effective 9/10/92)

WAC 296-67-061 Trade secrets. (1) Employers shall make all information necessary to comply with the section available to those persons responsible for compiling the process safety information (required by WAC 296-67-013), those assisting in the development of the process hazard analysis (required by WAC 296-67-017), those responsible for developing the operating procedures (required by WAC 296-67-021), and those involved in incident investigations (required by WAC 296-67-049), emergency planning and response (WAC 296-67-053) and compliance audits (WAC 296-67-057) without regard to possible trade secret status of such information.

(2) Nothing in this section shall preclude the employer from requiring the persons to whom the information is made available under WAC 296-67-061 to enter into confidentiality agreements not to disclose the information as set forth in WAC ((296-62-054)) 296-62-053.

(3) Subject to the rules and procedures set forth in WAC ((296-62-05417 (1) through (14))) 296-62-053, employees and their designated representatives shall have access to trade secret information contained within the process hazard analysis and other documents required to be developed by this standard.

AMENDATORY SECTION (Amending Order 93-06, filed 10/20/93, effective 12/1/93)

WAC 296-67-291 Appendix C—Compliance guidelines and recommendations for process safety management (nonmandatory). This appendix serves as a nonmandatory guideline to assist employers and employees in complying with the requirements of this section, as well as provides other helpful recommendations and information. Examples presented in this appendix are not the only means of achieving the performance goals in the standard. This appendix neither adds nor detracts from the requirements of the standard.

(1) Introduction to process safety management. The major objective of process safety management of highly hazardous chemicals is to prevent unwanted releases of hazardous chemicals especially into locations which could expose employees and others to serious hazards. An effective process safety management program requires a systematic approach to evaluating the whole process. Using this approach the process design, process technology, operational and maintenance activities and procedures, nonroutine activities and procedures, emergency preparedness plans and procedures, training programs, and other elements which impact the process are all considered in the evaluation. The various lines of defense that have been incorporated into the design

and operation of the process to prevent or mitigate the release of hazardous chemicals need to be evaluated and strengthened to assure their effectiveness at each level. Process safety management is the proactive identification, evaluation and mitigation or prevention of chemical releases that could occur as a result of failures in process, procedures, or equipment. The process safety management standard targets highly hazardous chemicals that have the potential to cause a catastrophic incident. This standard as a whole is to aid employers in their efforts to prevent or mitigate episodic chemical releases that could lead to a catastrophe in the workplace and possibly to the surrounding community. To control these types of hazards, employers need to develop the necessary expertise, experiences, judgment, and proactive initiative within their workforce to properly implement and maintain an effective process safety management program as envisioned in the WISHA standard. This WISHA standard is required by the Clean Air Act amendments as is the Environmental Protection Agency's Risk Management Plan. Employers, who merge the two sets of requirements into their process safety management program, will better assure full compliance with each as well as enhancing their relationship with the local community. While WISHA believes process safety management will have a positive effect on the safety of employees in workplaces and also offers other potential benefits to employers (increased productivity), smaller businesses which may have limited resources available to them at this time, might consider alternative avenues of decreasing the risks associated with highly hazardous chemicals at their workplaces. One method which might be considered is the reduction in the inventory of the highly hazardous chemical. This reduction in inventory will result in a reduction of the risk or potential for a catastrophic incident. Also, employers including small employers may be able to establish more efficient inventory control by reducing the quantities of highly hazardous chemicals on site below the established threshold quantities. This reduction can be accomplished by ordering smaller shipments and maintaining the minimum inventory necessary for efficient and safe operation. When reduced inventory is not feasible, then the employer might consider dispersing inventory to several locations on site. Dispersing storage into locations where a release in one location will not cause a release in another location is a practical method to also reduce the risk or potential for catastrophic incidents.

(2) Employee involvement in process safety management. Section 304 of the Clean Air Act amendments states that employers are to consult with their employees and their representatives regarding the employers efforts in the development and implementation of the process safety management program elements and hazard assessments. Section 304 also requires employers to train and educate their employees and to inform affected employees of the findings from incident investigations required by the process safety management program. Many employers, under their safety and health programs, have already established means and methods to keep employees and their representatives informed about relevant safety and health issues and employers may be able to adapt these practices and procedures to meet their obligations under this standard. Employers who have not implemented an occupational safety and health program may

wish to form a safety and health committee of employees and management representatives to help the employer meet the obligations specified by this standard. These committees can become a significant ally in helping the employer to implement and maintain an effective process safety management program for all employees.

(3) Process safety information. Complete and accurate written information concerning process chemicals, process technology, and process equipment is essential to an effective process safety management program and to a process hazards analysis. The compiled information will be a necessary resource to a variety of users including the team that will perform the process hazards analysis as required under WAC 296-67-017; those developing the training programs and the operating procedures; contractors whose employees will be working with the process; those conducting the prestart-up reviews; local emergency preparedness planners; and incurrence and enforcement officials. The information to be compiled about the chemicals, including process intermediates, needs to be comprehensive enough for an accurate assessment of the fire and explosion characteristics, reactivity hazards, the safety and health hazards to workers, and the corrosion and erosion effects on the process equipment and monitoring tools. Current material safety data sheet (MSDS) information can be used to help meet this requirement which must be supplemented with process chemistry information including runaway reaction and over pressure hazards if applicable. Process technology information will be a part of the process safety information package and it is expected that it will include diagrams of the type shown in WAC 296-67-289, Appendix B of this part as well as employer established criteria for maximum inventory levels for process chemicals; limits beyond which would be considered upset conditions; and a qualitative estimate of the consequences or results of deviation that could occur if operating beyond the established process limits. Employers are encouraged to use diagrams which will help users understand the process. A block flow diagram is used to show the major process equipment and interconnecting process flow lines and show flow rates, stream composition, temperatures, and pressures when necessary for clarity. The block flow diagram is a simplified diagram. Process flow diagrams are more complex and will show all main flow streams including valves to enhance the understanding of the process, as well as pressures and temperatures on all feed and product lines within all major vessels, in and out of headers and heat exchangers, and points of pressure and temperature control. Also, materials of construction information, pump capacities and pressure heads, compressor horsepower and vessel design pressures and temperatures are shown when necessary for clarity. In addition, major components of control loops are usually shown along with key utilities on process flow diagrams. Piping and instrument diagrams (P&IDs) may be the more appropriate type of diagrams to show some of the above details and to display the information for the piping designer and engineering staff. The P&IDs are to be used to describe the relationships between equipment and instrumentation as well as other relevant information that will enhance clarity. Computer software programs which do P&IDs or other diagrams useful to the information package, may be used to help meet

this requirement. The information pertaining to process equipment design must be documented. In other words, what were the codes and standards relied on to establish good engineering practice. These codes and standards are published by such organizations as the American Society of Mechanical Engineers, American Petroleum Institute, American National Standards Institute, National Fire Protection Association, American Society for Testing and Materials, National Board of Boiler and Pressure Vessel Inspectors, National Association of Corrosion Engineers, American Society of Exchange Manufacturers Association, and model building code groups. In addition, various engineering societies issue technical reports which impact process design. For example, the American Institute of Chemical Engineers has published technical reports on topics such as two phase flow for venting devices. This type of technically recognized report would constitute good engineering practice. For existing equipment designed and constructed many years ago in accordance with the codes and standards available at that time and no longer in general use today, the employer must document which codes and standards were used and that the design and construction along with the testing, inspection and operation are still suitable for the intended use. Where the process technology requires a design which departs from the applicable codes and standards, the employer must document that the design and construction is suitable for the intended purpose.

(4) Process hazard analysis. A process hazard analysis (PHA), sometimes called a process hazard evaluation, is one of the most important elements of the process safety management program. A PHA is an organized and systematic effort to identify and analyze the significance of potential hazards associated with the processing or handling of highly hazardous chemicals. A PHA provides information which will assist employers and employees in making decisions for improving safety and reducing the consequences of unwanted or unplanned releases of hazardous chemicals. A PHA is directed toward analyzing potential causes and consequences of fires, explosions, releases of toxic or flammable chemicals and major spills of hazardous chemicals. The PHA focuses on equipment, instrumentation, utilities, human actions (routine and nonroutine), and external factors that might impact the process. These considerations assist in determining the hazards and potential failure points or failure modes in a process. The selection of a PHA methodology or technique will be influenced by many factors including the amount of existing knowledge about the process. Is it a process that has been operated for a long period of time with little or no innovation and extensive experience has been generated with its use? Or, is it a new process or one which has been changed frequently by the inclusion of innovative features? Also, the size and complexity of the process will influence the decision as to the appropriate PHA methodology to use. All PHA methodologies are subject to certain limitations. For example, the checklist methodology works well when the process is very stable and no changes are made, but it is not as effective when the process has undergone extensive change. The checklist may miss the most recent changes and consequently the changes would not be evaluated. Another limitation to be considered concerns the assumptions made by the team or analyst. The PHA is dependent on good judgment and the

assumptions made during the study need to be documented and understood by the team and reviewer and kept for a future PHA. The team conducting the PHA need to understand the methodology that is going to be used. A PHA team can vary in size from two people to a number of people with varied operational and technical backgrounds. Some team members may only be a part of the team for a limited time. The team leader needs to be fully knowledgeable in the proper implementation of the PHA methodology that is to be used and should be impartial in the evaluation. The other full or part time team members need to provide the team with expertise in areas such as process technology, process design, operating procedures and practices, including how the work is actually performed, alarms, emergency procedures, instrumentation, maintenance procedures, both routine and non-routine tasks, including how the tasks are authorized, procurement of parts and supplies, safety and health, and any other relevant subject as the need dictates. At least one team member must be familiar with the process. The ideal team will have an intimate knowledge of the standards, codes, specifications and regulations applicable to the process being studied. The selected team members need to be compatible and the team leader needs to be able to manage the team, and the PHA study. The team needs to be able to work together while benefiting from the expertise of others on the team or outside the team, to resolve issues, and to forge a consensus on the findings of the study and recommendations. The application of a PHA to a process may involve the use of different methodologies for various parts of the process. For example, a process involving a series of unit operations of varying sizes, complexities, and ages may use different methodologies and team members for each operation. Then the conclusions can be integrated into one final study and evaluation. A more specific example is the use of a checklist PHA for a standard boiler or heat exchanger and the use of a hazard and operability PHA for the overall process. Also, for batch type processes like custom batch operations, a generic PHA of a representative batch may be used where there are only small changes of monomer or other ingredient ratios and the chemistry is documented for the full range and ratio of batch ingredients. Another process that might consider using a generic type of PHA is a gas plant. Often these plants are simply moved from site to site and therefore, a generic PHA may be used for these movable plants. Also, when an employer has several similar size gas plants and no sour gas is being processed at the site, then a generic PHA is feasible as long as the variations of the individual sites are accounted for in the PHA. Finally, when an employer has a large continuous process which has several control rooms for different portions of the process such as for a distillation tower and a blending operation, the employer may wish to do each segment separately and then integrate the final results. Additionally, small businesses which are covered by this rule, will often have processes that have less storage volume, less capacity, and less complicated than processes at a large facility. Therefore, WISHA would anticipate that the less complex methodologies would be used to meet the process hazard analysis criteria in the standard. These process hazard analyses can be done in less time and with a few people being involved. A less complex process generally means that less data, P&IDs,

and process information is needed to perform a process hazard analysis. Many small businesses have processes that are not unique, such as cold storage lockers or water treatment facilities. Where employer associations have a number of members with such facilities, a generic PHA, evolved from a checklist or what-if questions, could be developed and used by each employer effectively to reflect his/her particular process; this would simplify compliance for them. When the employer has a number of processes which require a PHA, the employer must set up a priority system of which PHAs to conduct first. A preliminary or gross hazard analysis may be useful in prioritizing the processes that the employer has determined are subject to coverage by the process safety management standard. Consideration should first be given to those processes with the potential of adversely affecting the largest number of employees. This prioritizing should consider the potential severity of a chemical release, the number of potentially affected employees, the operating history of the process such as the frequency of chemical releases, the age of the process and any other relevant factors. These factors would suggest a ranking order and would suggest either using a weighing factor system or a systematic ranking method. The use of a preliminary hazard analysis would assist an employer in determining which process should be of the highest priority and thereby the employer would obtain the greatest improvement in safety at the facility. Detailed guidance on the content and application of process hazard analysis methodologies is available from the American Institute of Chemical Engineers' Center for Chemical Process Safety (see WAC 296-67-293, Appendix D).

(5) Operating procedures and practices. Operating procedures describe tasks to be performed, data to be recorded, operating conditions to be maintained, samples to be collected, and safety and health precautions to be taken. The procedures need to be technically accurate, understandable to employees, and revised periodically to ensure that they reflect current operations. The process safety information package is to be used as a resource to better assure that the operating procedures and practices are consistent with the known hazards of the chemicals in the process and that the operating parameters are accurate. Operating procedures should be reviewed by engineering staff and operating personnel to ensure that they are accurate and provide practical instructions on how to actually carry out job duties safely. Operating procedures will include specific instructions or details on what steps are to be taken or followed in carrying out the stated procedures. These operating instructions for each procedure should include the applicable safety precautions and should contain appropriate information on safety implications. For example, the operating procedures addressing operating parameters will contain operating instructions about pressure limits, temperature ranges, flow rates, what to do when an upset condition occurs, what alarms and instruments are pertinent if an upset condition occurs, and other subjects. Another example of using operating instructions to properly implement operating procedures is in starting up or shutting down the process. In these cases, different parameters will be required from those of normal operation. These operating instructions need to clearly indicate the distinctions between startup and normal operations such as the appropri-

ate allowances for heating up a unit to reach the normal operating parameters. Also the operating instructions need to describe the proper method for increasing the temperature of the unit until the normal operating temperature parameters are achieved. Computerized process control systems add complexity to operating instructions. These operating instructions need to describe the logic of the software as well as the relationship between the equipment and the control system; otherwise, it may not be apparent to the operator. Operating procedures and instructions are important for training operating personnel. The operating procedures are often viewed as the standard operating practices (SOPs) for operations. Control room personnel and operating staff, in general, need to have a full understanding of operating procedures. If workers are not fluent in English then procedures and instructions need to be prepared in a second language understood by the workers. In addition, operating procedures need to be changed when there is a change in the process as a result of the management of change procedures. The consequences of operating procedure changes need to be fully evaluated and the information conveyed to the personnel. For example, mechanical changes to the process made by the maintenance department (like changing a valve from steel to brass or other subtle changes) need to be evaluated to determine if operating procedures and practices also need to be changed. All management of change actions must be coordinated and integrated with current operating procedures and operating personnel must be oriented to the changes in procedures before the change is made. When the process is shut down in order to make a change, then the operating procedures must be updated before startup of the process. Training in how to handle upset conditions must be accomplished as well as what operating personnel are to do in emergencies such as when a pump seal fails or a pipeline ruptures. Communication between operating personnel and workers performing work within the process area, such as nonroutine tasks, also must be maintained. The hazards of the tasks are to be conveyed to operating personnel in accordance with established procedures and to those performing the actual tasks. When the work is completed, operating personnel should be informed to provide closure on the job.

(6) Employee training. All employees, including maintenance and contractor employees, involved with highly hazardous chemicals need to fully understand the safety and health hazards of the chemicals and processes they work with for the protection of themselves, their fellow employees and the citizens of nearby communities. Training conducted in compliance with WAC ((296-62-054)) 296-800-170, ((the)) chemical hazard communication program standard, will help employees to be more knowledgeable about the chemicals they work with as well as familiarize them with reading and understanding MSDS. However, additional training in subjects such as operating procedures and safety work practices, emergency evacuation and response, safety procedures, routine and nonroutine work authorization activities, and other areas pertinent to process safety and health will need to be covered by an employer's training program. In establishing their training programs, employers must clearly define the employees to be trained and what subjects are to be covered in their training. Employers in setting up their training pro-

gram will need to clearly establish the goals and objectives they wish to achieve with the training that they provide to their employees. The learning goals or objectives should be written in clear measurable terms before the training begins. These goals and objectives need to be tailored to each of the specific training modules or segments. Employers should describe the important actions and conditions under which the employee will demonstrate competence or knowledge as well as what is acceptable performance. Hands-on-training where employees are able to use their senses beyond listening, will enhance learning. For example, operating personnel, who will work in a control room or at control panels, would benefit by being trained at a simulated control panel or panels. Upset conditions of various types could be displayed on the simulator, and then the employee could go through the proper operating procedures to bring the simulator panel back to the normal operating parameters. A training environment could be created to help the trainee feel the full reality of the situation but, of course, under controlled conditions. This realistic type of training can be very effective in teaching employees correct procedures while allowing them to also see the consequences of what might happen if they do not follow established operating procedures. Other training techniques using videos or on-the-job training can also be very effective for teaching other job tasks, duties, or other important information. An effective training program will allow the employee to fully participate in the training process and to practice their skill or knowledge. Employers need to periodically evaluate their training programs to see if the necessary skills, knowledge, and routines are being properly understood and implemented by their trained employees. The means or methods for evaluating the training should be developed along with the training program goals and objectives. Training program evaluation will help employers to determine the amount of training their employees understood, and whether the desired results were obtained. If, after the evaluation, it appears that the trained employees are not at the level of knowledge and skill that was expected, the employer will need to revise the training program, provide retraining, or provide more frequent refresher training sessions until the deficiency is resolved. Those who conducted the training and those who received the training should also be consulted as to how best to improve the training process. If there is a language barrier, the language known to the trainees should be used to reinforce the training messages and information. Careful consideration must be given to assure that employees including maintenance and contract employees receive current and updated training. For example, if changes are made to a process, impacted employees must be trained in the changes and understand the effects of the changes on their job tasks (e.g., any new operating procedures pertinent to their tasks). Additionally, as already discussed the evaluation of the employee's absorption of training will certainly influence the need for training.

(7) Contractors. Employers who use contractors to perform work in and around processes that involve highly hazardous chemicals, will need to establish a screening process so that they hire and use contractors who accomplish the desired job tasks without compromising the safety and health of employees at a facility. For contractors, whose safety per-

formance on the job is not known to the hiring employer, the employer will need to obtain information on injury and illness rates and experience and should obtain contractor references. Additionally, the employer must assure that the contractor has the appropriate job skills, knowledge and certifications (such as for pressure vessel welders). Contractor work methods and experiences should be evaluated. For example, does the contractor conducting demolition work swing loads over operating processes or does the contractor avoid such hazards? Maintaining a site injury and illness log for contractors is another method employers must use to track and maintain current knowledge of work activities involving contract employees working on or adjacent to covered processes. Injury and illness logs of both the employer's employees and contract employees allow an employer to have full knowledge of process injury and illness experience. This log will also contain information which will be of use to those auditing process safety management compliance and those involved in incident investigations. Contract employees must perform their work safely. Considering that contractors often perform very specialized and potentially hazardous tasks such as confined space entry activities and nonroutine repair activities it is quite important that their activities be controlled while they are working on or near a covered process. A permit system or work authorization system for these activities would also be helpful to all affected employers. The use of a work authorization system keeps an employer informed of contract employee activities, and as a benefit the employer will have better coordination and more management control over the work being performed in the process area. A well run and well maintained process where employee safety is fully recognized will benefit all of those who work in the facility whether they be contract employees or employees of the owner.

(8) Prestartup safety. For new processes, the employer will find a PHA helpful in improving the design and construction of the process from a reliability and quality point of view. The safe operation of the new process will be enhanced by making use of the PHA recommendations before final installations are completed. P&IDs are to be completed along with having the operating procedures in place and the operating staff trained to run the process before startup. The initial startup procedures and normal operating procedures need to be fully evaluated as part of the prestartup review to assure a safe transfer into the normal operating mode for meeting the process parameters. For existing processes that have been shutdown for turnaround, or modification, etc., the employer must assure that any changes other than "replacement in kind" made to the process during shutdown go through the management of change procedures. P&IDs will need to be updated as necessary, as well as operating procedures and instructions. If the changes made to the process during shutdown are significant and impact the training program, then operating personnel as well as employees engaged in routine and nonroutine work in the process area may need some refresher or additional training in light of the changes. Any incident investigation recommendations, compliance audits or PHA recommendations need to be reviewed as well to see what impacts they may have on the process before beginning the startup.

(9) Mechanical integrity. Employers will need to review their maintenance programs and schedules to see if there are areas where "breakdown" maintenance is used rather than an ongoing mechanical integrity program. Equipment used to process, store, or handle highly hazardous chemicals needs to be designed, constructed, installed, and maintained to minimize the risk of releases of such chemicals. This requires that a mechanical integrity program be in place to assure the continued integrity of process equipment. Elements of a mechanical integrity program include the identification and categorization of equipment and instrumentation, inspections and tests, testing and inspection frequencies, development of maintenance procedures, training of maintenance personnel, the establishment of criteria for acceptable test results, documentation of test and inspection results, and documentation of manufacturer recommendations as to meantime to failure for equipment and instrumentation. The first line of defense an employer has available is to operate and maintain the process as designed, and to keep the chemicals contained. This line of defense is backed up by the next line of defense which is the controlled release of chemicals through venting to scrubbers or flares, or to surge or overflow tanks which are designed to receive such chemicals, etc. These lines of defense are the primary lines of defense or means to prevent unwanted releases. The secondary lines of defense would include fixed fire protection systems like sprinklers, water spray, or deluge systems, monitor guns, etc., dikes, designed drainage systems, and other systems which would control or mitigate hazardous chemicals once an unwanted release occurs. These primary and secondary lines of defense are what the mechanical integrity program needs to protect and strengthen these primary and secondary lines of defenses where appropriate. The first step of an effective mechanical integrity program is to compile and categorize a list of process equipment and instrumentation for inclusion in the program. This list would include pressure vessels, storage tanks, process piping, relief and vent systems, fire protection system components, emergency shutdown systems, and alarms and interlocks and pumps. For the categorization of instrumentation and the listed equipment the employer would prioritize which pieces of equipment require closer scrutiny than others. Meantime to failure of various instrumentation and equipment parts would be known from the manufacturer's data or the employer's experience with the parts, which would then influence the inspection and testing frequency and associated procedures. Also, applicable codes and standards such as the National Board Inspection Code, or those from the American Society for Testing and Material, American Petroleum Institute, National Fire Protection Association, American National Standards Institute, American Society of Mechanical Engineers, and other groups, provide information to help establish an effective testing and inspection frequency, as well as appropriate methodologies. The applicable codes and standards provide criteria for external inspections for such items as foundation and supports, anchor bolts, concrete or steel supports, guy wires, nozzles and sprinklers, pipe hangers, grounding connections, protective coatings and insulation, and external metal surfaces of piping and vessels, etc. These codes and standards also provide information on methodologies for internal inspection, and a frequency for-

mula based on the corrosion rate of the materials of construction. Also, erosion both internal and external needs to be considered along with corrosion effects for piping and valves. Where the corrosion rate is not known, a maximum inspection frequency is recommended, and methods of developing the corrosion rate are available in the codes. Internal inspections need to cover items such as vessel shell, bottom and head; metallic linings; nonmetallic linings; thickness measurements for vessels and piping; inspection for erosion, corrosion, cracking and bulges; internal equipment like trays, baffles, sensors, and screens for erosion, corrosion or cracking and other deficiencies. Some of these inspections may be performed by state or local government inspectors under state and local statutes. However, each employer needs to develop procedures to ensure that tests and inspections are conducted properly and that consistency is maintained even where different employees may be involved. Appropriate training is to be provided to maintenance personnel to ensure that they understand the preventive maintenance program procedures, safe practices, and the proper use and application of special equipment or unique tools that may be required. This training is part of the overall training program called for in the standard. A quality assurance system is needed to help ensure that the proper materials of construction are used, that fabrication and inspection procedures are proper, and that installation procedures recognize field installation concerns. The quality assurance program is an essential part of the mechanical integrity program and will help to maintain the primary and secondary lines of defense that have been designed into the process to prevent unwanted chemical releases or those which control or mitigate a release. "As built" drawings, together with certifications of coded vessels and other equipment, and materials of construction need to be verified and retained in the quality assurance documentation. Equipment installation jobs need to be properly inspected in the field for use of proper materials and procedures and to assure that qualified craftsmen are used to do the job. The use of appropriate gaskets, packing, bolts, valves, lubricants, and welding rods need to be verified in the field. Also procedures for installation of safety devices need to be verified, such as the torque on the bolts on ruptured disc installations, uniform torque on flange bolts, proper installation of pump seals, etc. If the quality of parts is a problem, it may be appropriate to conduct audits of the equipment supplier's facilities to better assure proper purchases of required equipment which is suitable for its intended service. Any changes in equipment that may become necessary will need to go through the management of change procedures.

(10) Nonroutine work authorizations. Nonroutine work which is conducted in process areas needs to be controlled by the employer in a consistent manner. The hazards identified involving the work that is to be accomplished must be communicated to those doing the work, but also to those operating personnel whose work could affect the safety of the process. A work authorization notice or permit must have a procedure that describes the steps the maintenance supervisor, contractor representative or other person needs to follow to obtain the necessary clearance to get the job started. The work authorization procedures need to reference and coordinate, as applicable, lockout/tagout procedures, line breaking

procedures, confined space entry procedures and hot work authorizations. This procedure also needs to provide clear steps to follow once the job is completed in order to provide closure for those that need to know the job is now completed and equipment can be returned to normal.

(11) Managing change. To properly manage changes to process chemicals, technology, equipment and facilities, one must define what is meant by change. In this process safety management standard, change includes all modifications to equipment, procedures, raw materials and processing conditions other than "replacement in kind." These changes need to be properly managed by identifying and reviewing them prior to implementation of the change. For example, the operating procedures contain the operating parameters (pressure limits, temperature ranges, flow rates, etc.) and the importance of operating within these limits. While the operator must have the flexibility to maintain safe operation within the established parameters, any operation outside of these parameters requires review and approval by a written management of change procedure. Management of change covers such as changes in process technology and changes to equipment and instrumentation. Changes in process technology can result from changes in production rates, raw materials, experimentation, equipment unavailability, new equipment, new product development, change in catalyst and changes in operating conditions to improve yield or quality. Equipment changes include among others change in materials of construction, equipment specifications, piping prearrangements, experimental equipment, computer program revisions and changes in alarms and interlocks. Employers need to establish means and methods to detect both technical changes and mechanical changes. Temporary changes have caused a number of catastrophes over the years, and employers need to establish ways to detect temporary changes as well as those that are permanent. It is important that a time limit for temporary changes be established and monitored since, without control, these changes may tend to become permanent. Temporary changes are subject to the management of change provisions. In addition, the management of change procedures are used to insure that the equipment and procedures are returned to their original or designed conditions at the end of the temporary change. Proper documentation and review of these changes is invaluable in assuring that the safety and health considerations are being incorporated into the operating procedures and the process. Employers may wish to develop a form or clearance sheet to facilitate the processing of changes through the management of change procedures. A typical change form may include a description and the purpose of the change, the technical basis for the change, safety and health considerations, documentation of changes for the operating procedures, maintenance procedures, inspection and testing, P&IDs, electrical classification, training and communications, prestartup inspection, duration if a temporary change, approvals and authorization. Where the impact of the change is minor and well understood, a check list reviewed by an authorized person with proper communication to others who are affected may be sufficient. However, for a more complex or significant design change, a hazard evaluation procedure with approvals by operations, maintenance, and safety departments may be appropriate. Changes in documents such

as P&IDs, raw materials, operating procedures, mechanical integrity programs, electrical classifications, etc., need to be noted so that these revisions can be made permanent when the drawings and procedure manuals are updated. Copies of process changes need to be kept in an accessible location to ensure that design changes are available to operating personnel as well as to PHA team members when a PHA is being done or one is being updated.

(12) Investigation of incidents. Incident investigation is the process of identifying the underlying causes of incidents and implementing steps to prevent similar events from occurring. The intent of an incident investigation is for employers to learn from past experiences and thus avoid repeating past mistakes. The incidents for which WISHA expects employers to become aware and to investigate are the types of events which result in or could reasonably have resulted in a catastrophic release. Some of the events are sometimes referred to as "near misses," meaning that a serious consequence did not occur, but could have. Employers need to develop in-house capability to investigate incidents that occur in their facilities. A team needs to be assembled by the employer and trained in the techniques of investigation including how to conduct interviews of witnesses, needed documentation and report writing. A multidisciplinary team is better able to gather the facts of the event and to analyze them and develop plausible scenarios as to what happened, and why. Team members should be selected on the basis of their training, knowledge and ability to contribute to a team effort to fully investigate the incident. Employees in the process area where the incident occurred should be consulted, interviewed, or made a member of the team. Their knowledge of the events form a significant set of facts about the incident which occurred. The report, its findings and recommendations are to be shared with those who can benefit from the information. The cooperation of employees is essential to an effective incident investigation. The focus of the investigation should be to obtain facts, and not to place blame. The team and the investigation process should clearly deal with all involved individuals in a fair, open, and consistent manner.

(13) Emergency preparedness. Each employer must address what actions employees are to take when there is an unwanted release of highly hazardous chemicals. Emergency preparedness or the employer's tertiary (third) lines of defense are those that will be relied on along with the secondary lines of defense when the primary lines of defense which are used to prevent an unwanted release fail to stop the release. Employers will need to decide if they want employees to handle and stop small or minor incidental releases. Whether they wish to mobilize the available resources at the plant and have them brought to bear on a more significant release. Or whether employers want their employees to evacuate the danger area and promptly escape to a preplanned safe zone area, and allow the local community emergency response organizations to handle the release. Or whether the employer wants to use some combination of these actions. Employers will need to select how many different emergency preparedness or tertiary lines of defense they plan to have and then develop the necessary plans and procedures, and appropriately train employees in their emergency duties and responsibilities and then implement these lines of defense.

Employers at a minimum must have an emergency action plan which will facilitate the prompt evacuation of employees due to an unwanted release of a highly hazardous chemical. This means that the employer will have a plan that will be activated by an alarm system to alert employees when to evacuate and, that employees who are physically impaired, will have the necessary support and assistance to get them to the safe zone as well. The intent of these requirements is to alert and move employees to a safe zone quickly. Delaying alarms or confusing alarms are to be avoided. The use of process control centers or similar process buildings in the process area as safe areas is discouraged. Recent catastrophes have shown that a large life loss has occurred in these structures because of where they have been sited and because they are not necessarily designed to withstand over-pressures from shockwaves resulting from explosions in the process area. Unwanted incidental releases of highly hazardous chemicals in the process area must be addressed by the employer as to what actions employees are to take. If the employer wants employees to evacuate the area, then the emergency action plan will be activated. For outdoor processes where wind direction is important for selecting the safe route to a refuge area, the employer should place a wind direction indicator such as a wind sock or pennant at the highest point that can be seen throughout the process area. Employees can move in the direction of cross wind to upwind to gain safe access to the refuge area by knowing the wind direction. If the employer wants specific employees in the release area to control or stop the minor emergency or incidental release, these actions must be planned for in advance and procedures developed and implemented. Preplanning for handling incidental releases for minor emergencies in the process area needs to be done, appropriate equipment for the hazards must be provided, and training conducted for those employees who will perform the emergency work before they respond to handle an actual release. The employer's training program, including the hazard communication standard training is to address the training needs for employees who are expected to handle incidental or minor releases. Preplanning for releases that are more serious than incidental releases is another important line of defense to be used by the employer. When a serious release of a highly hazardous chemical occurs, the employer through preplanning will have determined in advance what actions employees are to take. The evacuation of the immediate release area and other areas as necessary would be accomplished under the emergency action plan. If the employer wishes to use plant personnel such as a fire brigade, spill control team, a hazardous materials team, or use employees to render aid to those in the immediate release area and control or mitigate the incident, these actions are covered by WAC 296-62-300, the hazardous waste operations and emergency response (HAZWOPER) standard. If outside assistance is necessary, such as through mutual aid agreements between employers or local government emergency response organizations, these emergency responders are also covered by HAZWOPER. The safety and health protections required for emergency responders are the responsibility of their employers and of the on-scene incident commander. Responders may be working under very hazardous conditions and therefore the objective is to have them competently led by an on-

scene incident commander and the commander's staff, properly equipped to do their assigned work safely, and fully trained to carry out their duties safely before they respond to an emergency. Drills, training exercises, or simulations with the local community emergency response planners and responder organizations is one means to obtain better preparedness. This close cooperation and coordination between plant and local community emergency preparedness managers will also aid the employer in complying with the Environmental Protection Agency's risk management plan criteria. One effective way for medium to large facilities to enhance coordination and communication during emergencies for on plant operations and with local community organizations is for employers to establish and equip an emergency control center. The emergency control center would be sited in a safe zone area so that it could be occupied throughout the duration of an emergency. The center would serve as the major communication link between the on-scene incident commander and plant or corporate management as well as with the local community officials. The communication equipment in the emergency control center should include a network to receive and transmit information by telephone, radio, or other means. It is important to have a backup communication network in case of power failure or one communication means fails. The center should also be equipped with the plant layout and community maps, utility drawings including fire water, emergency lighting, appropriate reference materials such as a government agency notification list, company personnel phone list, SARA Title III reports and material safety data sheets, emergency plans and procedures manual, a listing with the location of emergency response equipment, mutual aid information, and access to meteorological or weather condition data and any dispersion modeling data.

(14) Compliance audits. Employers need to select a trained individual or assemble a trained team of people to audit the process safety management system and program. A small process or plant may need only one knowledgeable person to conduct an audit. The audit is to include an evaluation of the design and effectiveness of the process safety management system and a field inspection of the safety and health conditions and practices to verify that the employer's systems are effectively implemented. The audit should be conducted or led by a person knowledgeable in audit techniques and who is impartial towards the facility or area being audited. The essential elements of an audit program include planning, staffing, conducting the audit, evaluation and corrective action, follow-up and documentation. Planning in advance is essential to the success of the auditing process. Each employer needs to establish the format, staffing, scheduling, and verification methods prior to conducting the audit. The format should be designed to provide the lead auditor with a procedure or checklist which details the requirements of each section of the standard. The names of the audit team members should be listed as part of the format as well. The checklist, if properly designed, could serve as the verification sheet which provides the auditor with the necessary information to expedite the review and assure that no requirements of the standard are omitted. This verification sheet format could also identify those elements that will require evaluation or a response to correct deficiencies. This sheet could also be used

for developing the follow-up and documentation requirements. The selection of effective audit team members is critical to the success of the program. Team members should be chosen for their experience, knowledge, and training and should be familiar with the processes and with auditing techniques, practices, and procedures. The size of the team will vary depending on the size and complexity of the process under consideration. For a large, complex, highly instrumented plant, it may be desirable to have team members with expertise in process engineering and design, process chemistry, instrumentation and computer controls, electrical hazards and classifications, safety and health disciplines, maintenance, emergency preparedness, warehousing or shipping, and process safety auditing. The team may use part-time members to provide for the depth of expertise required as well as for what is actually done or followed, compared to what is written. An effective audit includes a review of the relevant documentation and process safety information, inspection of the physical facilities, and interviews with all levels of plant personnel. Utilizing the audit procedure and checklist developed in the preplanning stage, the audit team can systematically analyze compliance with the provisions of the standard and any other corporate policies that are relevant. For example, the audit team will review all aspects of the training program as part of the overall audit. The team will review the written training program for adequacy of content, frequency of training, effectiveness of training in terms of its goals and objectives as well as to how it fits into meeting the standard's requirements, documentation, etc. Through interviews, the team can determine the employee's knowledge and awareness of the safety procedures, duties, rules, emergency response assignments, etc. During the inspection, the team can observe actual practices such as safety and health policies, procedures, and work authorization practices. This approach enables the team to identify deficiencies and determine where corrective actions or improvements are necessary. An audit is a technique used to gather sufficient facts and information, including statistical information, to verify compliance with standards. Auditors should select as part of their preplanning a sample size sufficient to give a degree of confidence that the audit reflects the level of compliance with the standard. The audit team, through this systematic analysis, should document areas which require corrective action as well as those areas where the process safety management system is effective and working in an effective manner. This provides a record of the audit procedures and findings, and serves as a baseline of operation data for future audits. It will assist future auditors in determining changes or trends from previous audits. Corrective action is one of the most important parts of the audit. It includes not only addressing the identified deficiencies, but also planning, followup, and documentation. The corrective action process normally begins with a management review of the audit findings. The purpose of this review is to determine what actions are appropriate, and to establish priorities, timetables, resource allocations, and requirements and responsibilities. In some cases, corrective action may involve a simple change in procedure or minor maintenance effort to remedy the concern. Management of change procedures need to be used, as appropriate, even for what may seem to be a minor change. Many of the

deficiencies can be acted on promptly, while some may require engineering studies or indepth review of actual procedures and practices. There may be instances where no action is necessary and this is a valid response to an audit finding. All actions taken, including an explanation where no action is taken on a finding, needs to be documented as to what was done and why. It is important to assure that each deficiency identified is addressed, the corrective action to be taken noted, and the audit person or team responsible be properly documented by the employer. To control the corrective action process, the employer should consider the use of a tracking system. This tracking system might include periodic status reports shared with affected levels of management, specific reports such as completion of an engineering study, and a final implementation report to provide closure for audit findings that have been through management of change, if appropriate, and then shared with affected employees and management. This type of tracking system provides the employer with the status of the corrective action. It also provides the documentation required to verify that appropriate corrective actions were taken on deficiencies identified in the audit.

AMENDATORY SECTION (Amending Order 81-21, filed 8/27/81)

WAC 296-78-500 Foreword. (1) General requirements. The chapter 296-78 WAC shall apply to and include safety requirements for all installations where the primary manufacturing of wood building products takes place. The installations may be a permanent fixed establishment or a portable operation. These operations shall include but are not limited to log and lumber handling, sawing, trimming and planing, plywood or veneer manufacturing, canting operations, waste or residual handling, operation of dry kilns, finishing, shipping, storage, yard and yard equipment, and for power tools and affiliated equipment used in connection with such operation. WAC 296-78-450 shall apply to shake and shingle manufacturing. The provisions of WAC 296-78-500 through 296-78-84011 are also applicable in shake and shingle manufacturing except in instances of conflict with the requirements of WAC 296-78-705. (Rev. 1-28-76.)

(2) This standard shall augment the Washington state general safety and health standards, general occupational health standards, electrical workers safety rules, and any other standards which are applicable to all industries governed by chapter 80, Laws of 1973, Washington Industrial Safety and Health Act. In the event of any conflict between any portion of this chapter and any portion of any of the general application standards, the provisions of this chapter 296-78 WAC, shall apply.

(3) In exceptional cases where compliance with specific provisions of this chapter can only be accomplished to the serious detriment and disadvantage of an operation, variance from the requirement may be permitted by the director of the department of labor and industries after receipt of application for variance which meets the requirements of (~~WAC 296-24-010, general safety and health standards~~) chapter 296-350 WAC.

(4) No safety program will run itself. To be successful, the wholehearted interest of the employees' group (labor

unions) and management must not only be behind the program, but the fact must also be readily apparent to all.

AMENDATORY SECTION (Amending Order 94-16, filed 9/30/94, effective 11/20/94)

WAC 296-78-515 Management's responsibility. (1) It shall be the responsibility of management to establish, supervise, and enforce, in a manner which is effective in practice:

- (a) A safe and healthful working environment.
- (b) An accident prevention program as required by these standards.
- (c) Training programs to improve the skill and competency of all employees in the field of occupational safety and health. Such training shall include the on-the-job instructions on the safe use of powered materials handling equipment, machine tool operations, use of toxic materials and operation of utility systems prior to assignments to jobs involving such exposures.

(2) The employer shall develop and maintain a chemical hazard communication program as required by ~~((chapter 296-62 WAC, Part C))~~ WAC 296-800-170, which will provide information to all employees relative to hazardous chemicals or substances to which they are exposed, or may become exposed, in the course of their employment.

(3) Management shall not assign mechanics, millwrights, or other persons to work on equipment by themselves when there is a probability that the person could fall from elevated work locations or equipment or that a person could be pinned down by heavy parts or equipment so that they could not call for or obtain assistance if the need arises.

Note: This subsection does not apply to operators of motor vehicles, watchperson or certain other jobs which, by their nature, are singular employee assignments. However, a definite procedure for checking the welfare of all employees during their working hours shall be instituted and all employees so advised.

(4) After the emergency actions following accidents that cause serious injuries that have immediate symptoms, a preliminary investigation of the cause of the accident shall be conducted. The investigation shall be conducted by a person designated by the employer, the immediate supervisor of the injured employee, witnesses, employee representative if available and any other person with the special expertise required to evaluate the facts relating to the cause of the accident. The findings of the investigation shall be documented by the employer for reference at any following formal investigation.

(5) Reporting of fatality or multiple hospitalization incidents.

(a) Within eight hours after the fatality or probable fatality of any employee from a work-related incident or the inpatient hospitalization of two or more employees as a result of a work-related incident, the employer of any employees so affected shall report the fatality/multiple hospitalization by telephone or in person, to the nearest office of the department or by using the OSHA toll-free central telephone number, 1-800-321-6742.

(i) This requirement applies to each such fatality or hospitalization of two or more employees which occurs within thirty days of the incident.

(ii) Exception: If any employer does not learn of a reportable incident at the time it occurs and the incident would otherwise be reportable under this subsection, the employer shall make a report within eight hours of the time the incident is reported to any agent or employee of the employer.

(iii) Each report required by this subsection shall relate the following information: Establishment name, location of the incident, time of the incident, number of fatalities or hospitalized employees, contact person, phone number, and a brief description of the incident.

(b) Equipment involved in an incident resulting in an immediate or probable fatality or in the in-patient hospitalization of two or more employees, shall not be moved, until a representative of the department investigates the incident and releases such equipment, except where removal is essential to prevent further incident. Where necessary to remove the victim, such equipment may be moved only to the extent of making possible such removal.

(c) Upon arrival of a department investigator, employer shall assign to assist the investigator, the immediate supervisor and all employees who were witnesses to the incident, or whoever the investigator deems necessary to complete the investigation.

(6) A system for maintaining records of occupational injuries and illnesses as prescribed by chapter 296-27 WAC.

Note: Recordable cases include:

- (a) Every occupational death.
- (b) Every industrial illness.
- (c) Every occupational injury that involves one of the following:
 - (i) Unconsciousness.
 - (ii) Inability to perform all phases of regular job.
 - (iii) Inability to work full time on regular job.
 - (iv) Temporary assignment to another job.
 - (v) Medical treatment beyond first aid.

All employers with eleven or more employees shall record occupational injury and illness information on forms OSHA 101 - supplementary record occupational injuries and illnesses and OSHA 200 - log and summary. Forms other than OSHA 101 may be substituted for the supplementary record of occupational injuries and illnesses if they contain the same items.

AMENDATORY SECTION (Amending WSR 00-01-038, filed 12/7/99, effective 2/1/00)

WAC 296-78-540 First-aid training and certification.

The employer must ensure that first-aid trained personnel are available to help employees who are injured or who become acutely ill on the job. The employer must meet this requirement by maintaining first-aid trained staff on the job site. The employer must ensure that:

(1) Each person in charge of employees has first-aid training; or another person with first-aid training is present or available to the employees. Such training must be successfully completed every two years as required in ~~((chapter 296-24 WAC, Part A-1))~~ WAC 296-800-150;

(2) Documentation of first-aid training is kept as required in (~~chapter 296-24 WAC, Part A-1~~) WAC 296-800-150;

(3) Emergency telephone numbers are adequately posted;

(4) First-aid training includes the core elements contained in (~~chapter 296-24 WAC, Part A-1~~) WAC 296-800-150.

AMENDATORY SECTION (Amending WSR 00-01-038, filed 12/7/99, effective 2/1/00)

WAC 296-78-545 First-aid supplies. The first-aid kits and supplies requirements of (~~the general safety and health standards, chapter 296-24 WAC, Part A-1~~) WAC 296-800-150 apply within the scope of chapter 296-78 WAC.

AMENDATORY SECTION (Amending Order 89-03, filed 5/15/89, effective 6/30/89)

WAC 296-78-56501 Log dumps and ponds. (1) Log dumps, booms, ponds or storage areas, if used at night, shall be illuminated in accordance with the requirements of WAC (~~296-62-09003, general occupational health standards~~) 296-800-210, safety and health core rules.

(2) A log dump shall be constructed at each log pond or decking ground. Log trucks shall not be unloaded by use of peavies or by hand.

(a) The roadbed shall be of hard packed gravel, heavy planking or equivalent material and shall be maintained at all times. Roadbeds at log dumps shall be of width and evenness to insure safe operation of equipment.

(b) A mechanical unloading device shall be provided and used for unloading logs. Log unloading areas shall be arranged and maintained to provide a safe working area.

(c) Signs prohibiting unauthorized foot or vehicle traffic in log unloading and storage areas shall be posted.

(d) At no time shall one person be permitted to work alone on a log dump, a booming or rafting grounds, or a log pond.

(3) Water log dumps. Ungrounded electrically powered hoists using handheld remote control in grounded locations, such as log dumps or mill log lifts, shall be actuated by circuits operating at less than 50 volts to ground.

(4)(a) A brow log, skid timbers or the equivalent shall be installed on all log dumps.

(b) Where logs are unloaded onto skids, sufficient space shall be provided between the top of the skids and the ground to accommodate the body of a person.

(c) All truck dumps shall be built with not more than six inches variation of level from side to side.

(5)(a) All truck log dumps shall be equipped with a positive safeguard to prevent logs from leaving the load on the side opposite the brow log. Jill pokes shall not be used on truck log dumps.

(b) Unloading lines shall be attached and tightened or other positive safeguard in place before binder chains are released at any log dump.

(c) Stakes and chocks which trip shall be constructed in such manner that the tripping mechanism that releases the

stake or chocks is activated at the opposite side of the load being tripped.

(d) Binders shall be released only from the side on which the unloader operates, except when released by remote control devices or except when person making release is protected by racks or stanchions or other equivalent means.

(e) Loads on which a binder is fouled by the unloading machine shall have an extra binder or metal band of equal strength placed around the load, or the load shall be otherwise secured so that the fouled binder can be safely removed.

(f) Unloading lines, crotch lines, or equally effective means shall be arranged and used in a manner to minimize the possibility of any log swinging or rolling back.

(6)(a) In unloading operations, the operator of unloading machine shall have an unobstructed view of the vehicle and the logs being unloaded.

(b) Unloading lines shall be arranged so that it is not necessary for the employees to attach them from the pond or dump site of the load except when entire loads are lifted from the log-transporting vehicle.

(7) All log dumps shall be kept reasonably free of bark and other debris.

(8) Employees shall remain in the clear until all moving equipment has come to a complete stop.

(9) Artificial log ponds subject to unhealthy stagnation shall be drained, cleansed, and water changed at least once every six months.

(10) All employees whose regular work requires walking on logs shall wear spiked or caked shoes, except when working in snow.

(11) Employees working on, over or along water, where the danger of drowning exists, shall be provided with and shall wear approved personal flotation devices.

(a) Employees are not considered exposed to the danger of drowning:

(i) When working behind standard height and strength guardrails;

(ii) When working inside operating cabs or stations which eliminate the possibility of accidentally falling into the water;

(iii) When wearing approved safety belts with lifeline attached so as to preclude the possibility of falling into the water;

(iv) When water depth is known to be chest-deep or less.

(b) Prior to and after each use, personal floating devices shall be inspected for defects which would reduce their designed effectiveness. Defective personal flotation devices shall not be used.

(c) To meet the approved criteria required by this subsection (11), a personal flotation device shall be approved by the United States Coast Guard as a Type I PFD, Type II PFD, Type III PFD, or Type V PFD, or their equivalent, pursuant to 46 CFR 160 (Coast Guard lifesaving equipment specifications) and 33 CFR 175.23 (Coast Guard table of devices equivalent to personal flotation devices). Ski belt or inflatable type personal flotation devices are specifically prohibited.

(12)(a) Wooden pike poles shall be of continuous, straight grained No. 1 material. Defective poles, blunt or dull pikes shall not be used.

(b) Aluminum or other metal poles shall not be used where hazard of coming in contact with live electric wires exists.

(13)(a) Walkways and floats shall be provided and security anchored to provide safe passage for workers.

(b) Permanent cable swifters shall be so arranged that it will not be necessary to roll boom sticks in order to attach or detach them.

(c) Inspection of cable or dogging lines shall be made as necessary to determine when repair or removal from service is necessary.

(14)(a) Decks of floats or other walkways shall be kept above the waterline at all times and shall be capable of supporting four times the load to be imposed.

(b) Floating donkeys or other power-driven machinery used on booms shall be placed on a raft or float with enough buoyancy to keep the deck above water.

(15)(a) All regular boom sticks and foot logs shall be reasonably straight, have all protruding knots and bark removed, and shall be capable of supporting above the waterline at either end, any necessary weight of workers and equipment.

(b) Stiff booms shall be two float logs wide secured by boom chains or other connecting devices, and of a width adequate for the working needs. Walking surfaces shall be free of loose material and maintained in good repair.

(c) Boom sticks shall be fastened together with crossies or couplings.

AMENDATORY SECTION (Amending Order 94-16, filed 9/30/94, effective 11/20/94)

WAC 296-78-670 Glue machines. (1) Personal protective equipment as required by the (~~general safety and health standard, chapter 296-24 WAC, Part A-2~~) safety and health core rules, WAC 296-800-160, and the general occupational health standard, WAC 296-62-11021, and proper washing facilities with noncaustic soap and sterilizers, shall be provided for all employees handling glue. Rubber gloves and other personal equipment must be sterilized when transferred from one person to another.

(2) Glue spreaders shall be enclosed on the in-running side, leaving only sufficient space to insert the stock.

(3) All glue spreaders shall be equipped with a panic bar or equivalent type device that can be reached from either the infeed or outfeed side of the spreader to shut-off the power in an emergency situation. Such device shall be installed on existing glue spreaders no later than April 1, 1982, and be standard equipment on any glue spreader purchased after January 1, 1982.

(4) All glue mixing and handling rooms where located above work areas shall have water tight floors.

(5) All glue rooms shall be provided with ventilation in accordance with WAC 296-62-110 through 296-62-11013, of the general occupational health standard.

AMENDATORY SECTION (Amending Order 81-21, filed 8/27/81)

WAC 296-78-71001 General. (1) Construction when not specifically covered in these standards shall be governed by such other standards adopted by the department of labor and industries as may apply.

(2) All buildings, docks, tramways, walkways, log dumps and other structures shall be so designed, constructed, and maintained as to provide a safety factor of four. This means that all members shall be capable of supporting four times the maximum load to be imposed. This provision refers to buildings, docks and so forth designed and constructed subsequent to the effective date of these standards and also refers in all cases where either complete or major changes or repairs are made to such buildings, docks, tramways, walkways, log dumps and other structures.

(3) Basements on ground floors under mills shall be evenly surfaced, free from unnecessary obstructions and debris, and provided with lighting facilities in compliance with the requirements of the (~~general occupational health standards~~) safety and health core rules, WAC ((296-62-09003) 296-800-210.

(4) All engines, motors, transmission machinery or operating equipment installed in mill basements or ground floors shall be equipped with standard safeguards for the protection of workers.

(5) Hazard marking. Physical hazard marking shall be as specified in WAC 296-24-135 through 296-24-13503 of the general safety and health standards.

(6) Flooring of buildings, ramps and walkways not subject to supporting motive equipment shall be of not less than two-inch wood planking or material of equivalent structural strength.

(7) Flooring of buildings, ramps, docks, trestles and other structure required to support motive equipment shall be of not less than full two and one-half inch wood planing or material of equivalent structural strength. However, where flooring is covered by steel floor plates, two inch wood planking or material of equivalent structural strength may be used.

(8) Walkways, docks, and platforms.
(a) Walkways, docks and platforms shall be constructed and maintained in accordance with the requirements of (~~the general safety and health standards,~~) WAC 296-24-735 through 296-24-75011 and WAC 296-800-270.

(b) Maintenance. Walkways shall be evenly floored and kept in good repair.

(c) Where elevated platforms are used they shall be equipped with stairways or ladders in accordance with (~~the general safety and health standards,~~) WAC 296-24-765 through 296-24-81013, and WAC 296-800-250 and 296-800-290.

AMENDATORY SECTION (Amending WSR 96-17-056, filed 8/20/96, effective 10/15/96)

WAC 296-78-71003 Floor and wall openings. (1) All floor and wall openings either temporary or permanent, shall be protected as required by (~~the general safety and health~~

PERMANENT

standards,)) WAC 296-24-750 through 296-24-75011 and WAC 296-800-260.

(2) The area under floor openings shall, where practical, be fenced off. When this is not practical, the areas shall be plainly marked with yellow lines and telltails shall be installed to hang within five and one-half feet of the ground or floor level.

(3) Where floor openings are used to drop materials from one level to another, audible warning systems shall be installed and used to indicate to employees on the lower level that material is to be dropped.

AMENDATORY SECTION (Amending Order 81-21, filed 8/27/81)

WAC 296-78-71009 Stairways and ladders. (1) Stairways shall be used in preference over ladders wherever possible. Stairways or ladders, whichever is used, shall be constructed and maintained in accordance with the provisions of ~~((the general safety and health standard,))~~ WAC 296-24-75009 through 296-24-81013, and WAC 296-800-250 and 296-800-290.

(2) Doors shall not open directly on a flight of stairs.

(3) Permanent ladders shall be fastened securely at both top and bottom.

(4) Portable ladders shall not be used upon footing other than suitable type.

(5) Hooks or other means of securing portable ladders when in use, shall be provided.

(6) Portable ladders shall not be used for oiling machinery which is in motion.

AMENDATORY SECTION (Amending Order 81-21, filed 8/27/81)

WAC 296-78-71011 Egress and exit. (1) In all enclosed buildings, means of egress shall be provided in accordance with the provisions of ~~((the general safety and health standard,))~~ WAC 296-24-550 through 296-24-56531 and WAC 296-800-310.

(2) All swinging doors shall be provided with windows, the bottom of which shall be not more than forty-eight inches above the floor. One window shall be provided for each section of double swinging doors. All such windows shall be of shatter proof or safety glass unless otherwise protected against breakage.

(3) Outside exits shall open outward. Where sliding doors are used as exits, an inner door not less than two feet six inches by six feet shall be cut inside each of the main doors and arranged to open outward.

(4) At least two fire escapes or substantial outside stairways, shall be provided for mill buildings where the floor level is more than eight feet above the ground.

(a) Buildings over one hundred fifty feet in length shall have at least one additional fire escape or substantial outside stairway for each additional one hundred fifty feet of length or fraction thereof.

(b) Passageways to fire escapes or outside stairways shall be marked and kept free of obstructions at all times.

(c) Fire protection. The requirements of WAC 296-24-585 through 296-24-62003 of the general safety and health standard, and WAC 296-800-300 of the safety and health core rules, shall be complied with in providing the necessary fire protection for sawmills.

(d) Fire drills shall be held at least quarterly and shall be documented.

(5) Where a doorway opens upon a roadway, railroad track, or upon a tramway or dock over which vehicles travel, a barricade or other safeguard and a warning sign shall be placed to prevent workers from stepping directly into moving traffic.

(6) Tramways and trestles shall be substantially supported by piling or framed bent construction which shall be frequently inspected and maintained in good repair at all times. Tramways or trestles used both for vehicular and pedestrian traffic shall have a walkway with standard hand rail at the outer edge and shear timber on the inner edge, and shall provide three feet clearance to vehicles. When walkways cross over other thoroughfares, they shall be solidly fenced at the outer edge to a height of 42 inches over such thoroughfares.

(7) Where tramways and trestles are built over railroads they shall have a vertical clearance of twenty-two feet above the top of the rails. When constructed over carrier docks or roads, they shall have a vertical clearance of not less than six feet above the drivers foot rest on the carrier, and in no event shall this clearance be less than twelve feet from the surface of the lower roadway or dock.

(8) Walkways (either temporary or permanent) shall be not less than twenty-four inches wide and two inches thick, nominal size, securely fastened at each end. When such walkways are used on an incline the angle shall not be greater than twenty degrees from horizontal.

(9) Walkways from the shore or dock to floats or barges shall be securely fastened at the shore end only and clear space provided for the other end to adjust itself to the height of the water.

(10) Cleats of one by four inch material shall be fastened securely across walkways at uniform intervals of eighteen inches whenever the grade is sufficient to create a slipping hazard.

AMENDATORY SECTION (Amending WSR 96-17-056, filed 8/20/96, effective 10/15/96)

WAC 296-78-71015 Tanks and chemicals. (1) All open vats and tanks into which workers may fall shall be guarded with standard railings or screen guards in all cases where such guarding is possible with regard to practical operation.

(2) Foundations of elevated tanks shall be accessible for inspections. When the tank platform is more than five feet above the ground a stairway or ladder shall be permanently attached.

(3) Every open tank over five feet in height shall be equipped with fixed standard ladders both inside and out, extending from the bottom to the rim of the tank arranged to be accessible to each other, so far as local conditions permit.

(4) The use of chemicals for treating of lumber for prevention of sap stain or mold or as preservatives, shall conform to the requirements of WAC 296-62-11021, open surface tanks.

(a) Storage, handling, and use of chemicals. Threshold limits. Employees shall not be exposed to airborne concentration of toxic dusts, vapors, mists or gases that exceed the threshold limit values set forth in chapter 296-24 WAC, Part A-2, general safety and health standards, and chapter 296-62 WAC, Part E, general occupational health standards.

(b) Protective equipment. The use of chemicals shall be controlled so as to protect employees from harmful exposure to toxic materials. Where necessary, employees shall be provided with and required to wear such protective equipment as will afford adequate protection against harmful exposure as required by chapter 296-24 WAC, Part A-2, general safety and health standards, and chapter 296-62 WAC, Part E, general occupational health standards.

(5)(a) Means shall be provided and used to collect any excess of chemicals used in treating lumber so as to protect workers from accidental contact with harmful concentrations of toxic chemicals or fumes.

(b) Dip tanks containing flammable or combustible liquids shall be constructed, maintained and used in accordance with WAC 296-24-405 of the general safety and health standards.

(c) An evacuation plan shall be developed and implemented for all employees working in the vicinity of dip tanks using flammable and/or combustible liquids. A copy of the plan shall be available at the establishment for inspection at all times. Every employee shall be made aware of the evacuation plan and know what to do in the event of an emergency and be evacuated in accordance with the plan. The plan shall be reviewed with employees at least quarterly and documented.

(d) When automatic foam, automatic carbon dioxide or automatic dry chemical extinguishing systems are used, an alarm device shall be activated to alert employees in the dip tank area before and during the activation of the system. The following combinations of extinguishment systems when used in conjunction with the evacuation plan as stated above will be acceptable in lieu of bottom drains:

(i) A dip tank cover with an automatic foam extinguishing system under the cover, or an automatic carbon dioxide system, or an automatic dry chemical extinguishing system, or an automatic water spray extinguishing system;

(ii) An automatic dry chemical extinguishing system with an automatic carbon dioxide system or a second automatic dry chemical extinguishing system or an automatic foam extinguishing system;

(iii) An automatic carbon dioxide system with a second automatic carbon dioxide system or an automatic foam extinguishing system.

(e) The automatic water spray extinguishing systems, automatic foam extinguishing systems, and dip tank covers shall conform with the requirements of WAC 296-24-405. The automatic carbon dioxide systems and dry chemical extinguishing system shall conform with the requirements of WAC 296-24-615 and 296-24-620.

(6) Where workers are engaged in the treating of lumber with chemicals or are required to handle lumber or other materials so treated, the workers shall be provided with, at no cost to the worker, and required to use such protective equipment as will provide complete protection against contact with toxic chemicals or fumes therefrom.

(7) Sanitation requirements. The requirements of WAC ~~((296-24-120 through 296-24-13013 of the general safety and health standards))~~ 296-800-220 and 296-800-230 (safety and health core rules), shall govern sanitation practices.

(8) The sides of steam vats and soaking pits unless otherwise guarded shall extend forty-two inches above the floor level. The floor adjacent thereto shall be of nonslip construction.

(9) Large steam vats or soaking pits, divided into sections, shall be provided with substantial walkways between each section, each walkway to be provided with standard railings which may be removable if necessary.

(10) Covers shall be removed only from that portion of the steaming vats on which workers are working and a portable railing shall be placed at this point to protect the operators.

(11) Workers shall not ride or step on logs in steam vats.

AMENDATORY SECTION (Amending WSR 96-17-056, filed 8/20/96, effective 10/15/96)

WAC 296-78-71017 Dry kilns. (1) Dry kilns shall be so constructed upon solid foundations that tracks will not sag. Dry kilns shall be provided with suitable walkways. Each kiln shall have doors that operate from the inside and be provided with escape doors of adequate height and width to accommodate an average size man, that also operates from the inside, and shall be located in or near the main door. Escape doors shall swing in the direction of exit. Kiln doors and door carriers shall be fitted with safety devices to prevent the doors or carriers from falling.

(2) Ladders. A fixed ladder, in accordance with the requirements of WAC 296-24-810 through 296-24-81013 of the general safety and health standards and WAC 296-800-290 of the safety and health core rules, or other means shall be provided to permit access to the roof. Where controls and machinery are mounted on the roof, a permanent stairway with standard handrail shall be installed in accordance with the requirements of WAC ~~((296-24-765 through 296-24-76523 of the general safety and health standards))~~ 296-800-290.

(3) A heated room shall be provided for the use of the kiln operator in inclement weather. He should remain in such room for at least ten minutes after leaving a hot kiln before going to cold outside air.

(4) Where operating pits are used, they shall be well ventilated, drained and lighted. Substantial gratings shall be installed at the kiln floor line. Steam lines shall be provided with insulation wherever exposed to contact by employees. Fans shall be enclosed by standard safeguards.

(5) Mechanical equipment. All belts, pulleys, blowers, and other exposed moving equipment used in or about kilns shall be guarded in accordance with the requirements of

WAC 296-24-205 through 296-24-20533 of the general safety and health standards.

AMENDATORY SECTION (Amending WSR 99-10-071, filed 5/4/99, effective 9/1/99)

WAC 296-78-71019 Exhaust systems. (1) Air requirements in buildings, where persons are habitually employed, shall meet the requirements of the general occupational health standard, WAC 296-62-100 through 296-62-11013.

(2) Where the natural ventilation is not sufficient to remove dust, fumes or vapors that create or constitute a hazard, additional means of removal shall be provided.

(3) All mills containing one or more machines whose operations create dust, shavings, chips or slivers during a period of time equal to or greater than one-fourth of the working day or shift, shall be equipped with a collecting system either continuous or automatic in action and of sufficient strength and capacity to thoroughly remove such refuse from the points of operation of the machines and the work areas.

(4) Each woodworking machine that creates dust, shavings, chips, or slivers shall be equipped with an exhaust or conveyor system located and adjusted to remove the maximum amount of refuse from the point of operation and immediate vicinity.

(5) Blower, collecting and exhaust systems shall be designed, constructed and maintained in accordance with American National Standards Z33.1 - 1961 (for the installation of blower and exhaust systems for dust, stock and vapor removal or conveying) and Z12.2 - 1962 (R1969) (code for the prevention of dust explosions in woodworking and wood flour manufacturing plants).

(6) Fans used for ventilating shall be of ample capacity, as evidenced by the performance schedules of the manufacturers, and shall be guarded when exposed to contact. Hoods, dust conveyors, dust collectors and other accessory equipment shall be large enough to insure free intake and discharge.

(7) The outlet or discharge of all ventilating equipment shall be so arranged that at no time will the dust, vapors, gases or other air borne impurities discharged, create or constitute a hazard.

(8) Where a hood is used to form a part or all of the guard required on a given machine, it shall be constructed of not less than ten U.S. gauge sheet metal, or if of cast iron it shall be not less than three-sixteenths inches in thickness.

(9) All exhaust pipes shall be of such construction and internal dimensions as to minimize the possibility of clogging. They shall be readily accessible for cleaning.

(10) All exhaust pipes shall empty into settling or dust chambers which shall effectively prevent the dust or refuse from entering any work area. Such settling or dust chambers shall be so designed and operated as to reduce to a minimum the danger of fire or dust explosions.

(11) In lieu of a general ventilating system, exhaust or blower units may be installed on the dust or fume producing machine, provided the required protection is secured thereby.

(12) When proper ventilation is not provided, and temporary hazardous conditions are therefore encountered, the employer shall furnish approved respiratory and visual equip-

ment: Provided, however, That the exposure to such hazard shall not be for more than two hours duration. Protective measures and equipment shall meet the requirements of the general occupational health standard, chapter 296-62 WAC, Part E (~~and the requirements of the general safety and health standard, WAC 296-24-081 through 296-24-08113~~).

(13) Provisions for the daily removal of refuse shall be made in all operations not required to have an exhaust system, or having refuse too heavy, or bulky, or otherwise unsuitable to be handled by an exhaust system.

AMENDATORY SECTION (Amending Order 82-22, filed 6/11/82)

WAC 296-78-71023 Lighting. The lighting and illumination requirements of (~~the general occupational health standards, WAC 296-62-09003~~) the safety and health core rules, WAC 296-800-210, shall apply.

AMENDATORY SECTION (Amending Order 91-07, filed 11/22/91, effective 12/24/91)

WAC 296-78-730 Electrical service and equipment. (1) Electrical service and equipment shall be constructed, maintained, inspected and operated according to chapter 296-24 WAC, General safety and health standards, Part L, and WAC 296-800-280 of the safety and health core rules.

(2) Repairs. Electrical repairs shall be made only by authorized and qualified personnel.

(3) Identification. Marks of identification on electrical equipment shall be clearly visible.

(4) Protective equipment. Rubber protective equipment shall be provided as required by WAC 296-24-092(1) of the general safety and health standard.

(5) Open switches. Before working on electrical equipment, switches shall be open and shall be locked out.

(6) Concealed conductors. Where electrical conductors are known to be concealed, no work shall be performed until such conductors are located.

(7) Overload relays. Overload relays shall be reset by authorized qualified personnel only.

(8) Passageways to panels. Passageways to switch centers or panels shall at all times be kept free from obstruction. Not less than three feet of clear space shall be maintained in front of switch centers or panels at all times.

(9) Bridging fuses. Fuses shall not be doubled or bridged.

AMENDATORY SECTION (Amending Order 81-21, filed 8/27/81)

WAC 296-78-735 Elevators, moving walks. Elevators, moving walks and other lifting devices intended for either passenger or freight service shall be constructed, maintained, inspected and operated in accordance with the provisions of chapter 70.87 RCW, WAC (~~296-24-870~~) 296-24-875 through 296-24-90009 of the general safety and health standards, and those specific standards which are applicable from the division of building and construction safety inspection services, elevator section.

AMENDATORY SECTION (Amending Order 81-21, filed 8/27/81)

WAC 296-78-795 Crane cages. (1) Safe means of escape shall be provided for operators of all cranes in all operating locations. Rope ladders shall not be used as a regular means of access but may be installed as an emergency escape device to be used in the event of fire, mechanical breakdown or other emergency.

(2) The operator's cage shall be located at a place from which signals can be clearly distinguishable, and shall be securely fastened in a place and well braced to minimize vibration. It shall be large enough to allow ample room for the control equipment and the operator. The operator shall not be required to step over an open space of more than eighteen inches when entering the cage.

(3) Cab operated cranes shall be equipped with a portable fire extinguisher which meets the requirements of ~~((the general safety and health standard,))~~ WAC 296-24-590 through 296-24-59007 and WAC 296-800-300.

(4) In establishments where continuous loud noises prevail such as caused by the operation of pneumatic tools, steam exhausts from boilers, etc., adequate signals shall be installed on cranes or one or more employees shall be placed on the floor for each crane operated to give warning to other employees of the approach of a crane with a load. Where there are more than two cranes on the same runway or within the same building structure, signaling devices are required to give warning to other employees of the approach of a crane with a load.

(5) Cages of cranes subjected to heat from below shall be of noncombustible construction and shall have a steel plate shield not less than one-eighth inch thick, placed not less than six inches below the bottom of the floor of the cage.

(6) Outside crane cages shall be enclosed. There shall be windows on three sides of the cage. The windows in the front and the side opposite the door shall be the full width of the cage.

(7) The floor of the cage on out-door cranes shall be extended to form an entrance landing which shall be equipped with a handrail and toeboard constructed to the specifications of WAC 296-78-790 of this chapter.

(8) A copy of the rules for operators shall be permanently posted in the cages of all cage-operated cranes.

AMENDATORY SECTION (Amending WSR 96-17-056, filed 8/20/96, effective 10/15/96)

WAC 296-78-84005 Dry kilns. (1) Transfer, kiln and dolly tracks shall be properly maintained at all times and shall have a grade of not more than one and one-fourth percent. Bumpers or stops shall be installed at the ends of all tracks capable of stopping a normal load for which the track is installed. A means shall be provided for chocking or blocking cars.

(2) Doors.

(a) Main kiln doors. Main kiln doors shall be provided with a method of holding them open while kiln is being loaded.

(b) Counterweights on vertical lift doors shall be boxed or otherwise guarded.

(c) Means shall be provided to firmly secure main doors, when they are disengaged from carriers and hangers, to prevent toppling.

(3) Kilns whose operation requires inside inspection shall be maintained with not less than eighteen inches clearance between loaded cars and the walls of the kiln. The requirements for personal protective equipment specified in ~~((chapter 296-24 WAC, Part A-2, general safety and health standards))~~ WAC 296-800-160, safety and health core rules, and chapter 296-62 WAC, Part E, general occupational health standards, shall be complied with.

(4) Kiln loads shall be equipped or arranged for easy attachment and detachment of transfer cables. Means for stopping kiln cars shall be available at all times.

(5) Cars shall not be moved until tracks are clear and workers are out of the bight of transfer lines.

(6) When kiln or dolly loads of lumber are permitted to coast through or adjacent to any work area, audible warning shall be given.

(7) Stickers shall not be allowed to protrude more than two inches from the sides of kiln stacks.

(8) Yards and storage areas shall be kept reasonably free of debris and unnecessary obstruction. Warning signs shall be conspicuously posted wherever there is danger from moving vehicles or equipment.

AMENDATORY SECTION (Amending WSR 99-16-083, filed 8/3/99, effective 11/3/99)

WAC 296-79-010 Scope and application. (1) This chapter applies to establishments, firms, persons and corporations that manufacture, process, store, finish, or convert pulp, paper or paperboard and includes all buildings, machinery, and equipment.

(2) This chapter shall augment the Washington state general safety and health standards (chapter 296-24 WAC) ~~((and)),~~ general occupational health standards (chapter 296-62 WAC), and safety and health core rules (chapter 296-800 WAC). In the event of any conflict between any portion of this chapter and any portion of any of the general application standards, the provisions of this chapter 296-79 WAC, shall prevail.

(3) The rules contained in this chapter are minimum requirements and the use of additional guards, or other means, methods or procedures may be needed to make the work or place of work safe.

AMENDATORY SECTION (Amending WSR 99-16-083, filed 8/3/99, effective 11/3/99)

WAC 296-79-020 General requirements. (1) House-keeping.

(a) Floors must be kept reasonably clear of spilled or leaking oil, grease, water, broke, etc., that may cause slipping, tripping or falling. Nonskid type surfacing must be installed in vehicular or pedestrian traffic areas where slipping hazards otherwise would exist.

In areas where it is not possible to keep the floor free of materials which cause a slipping hazard, mats, cleats, or other suitable materials which will effectively minimize or eliminate the hazard must be installed.

(b) Hoses, cords, slings or similar items or equipment must be stored in such a manner that they will not create a hazard.

(2) Storage and transportation of materials. Materials, objects or equipment must be stored or transported by methods which will prevent them from falling, tipping or rolling.

(3) Warning of open manholes or excavations. Open manholes or excavations must be:

- Roped off, barricaded, or adequately safeguarded when located in or adjacent to walkways, aiseways, or roadways.

- Provided with warning lights or lanterns during periods of darkness or reduced visibility.

(4) Training. Employees must receive proper instruction and be familiar with safe operating procedures:

(a) Before they supervise the operation, or make adjustments to any machine or equipment.

(b) To be able to cope with emergencies arising from breaks, ruptures, or spills which would create a hazardous condition.

(c) For lifting and moving objects. Mechanical devices should be used or employees should ask for assistance in lifting or moving heavy objects.

(d) On prompt reporting of any faulty equipment or hazardous condition to the person in charge.

(5) Working alone. When an employee is assigned to work alone in a remote or isolated area, procedures must be developed to ensure:

- That the employee reports by use of radio or telephone to someone periodically; or

- At reasonable intervals a designated person must check on the employee; and

- All persons involved in working alone are advised of the procedures to be followed.

(6) Exits from hazardous areas. Where physically and reasonably possible, there must be at least two unobstructed exits from any hazardous area. Such exits should be on opposite walls.

(7) Safe work area. Sufficient clearance must be maintained between machines to allow employees a safe work area.

(8) Protection from overhead hazard. Warning signs/devices must be:

- Placed in conspicuous locations below areas where overhead work is being done and

- Removed promptly when work is completed and the overhead hazard no longer exists.

(9) Welding areas protected.

(a) Areas in which welding is being done must be screened or barricaded to protect persons from flash burns, when practical.

(b) If the welding process cannot be isolated, all persons who may be exposed to the hazard of arc flash must be properly protected.

(10) Testing safety devices. Brakes, back stops, anti-run-away devices, overload releases, emergency stops, and other

safety devices must be inspected and tested frequently to ensure that all are operative and maintained in good repair.

(11) Starting and stopping devices.

- Electrically or manually operated power starting or stopping devices must be provided within easy reach of the operator from the normal operating position.

- If necessary for safety of the operation, the machine must be so equipped that retarding or braking action can be applied at the time of or after the source of power is deactivated.

(12) Interlocks:

Interlocks that affect the safety of employees must not be bypassed except where the employer demonstrates that alternate procedures or devices provide a level of safety for employees equivalent to that provided by the safety interlock. Interlocks are considered to be bypassed anytime the designed control strategy is bypassed by means including, but not limited to, a temporary wiring change, physical interference or a temporary software change of "force."

Prior to bypassing a safety interlock the employer must:

- Develop a written procedure detailing how the bypass will be accomplished and the alternate means of protecting employees.

- Inform affected employees of all pertinent information including at a minimum the reason for the change, the date of the change, who is responsible for the change, and approximately how long the change will be in effect.

- Post appropriate warning of the change on the equipment or area.

(13) Designing control systems. Employers must ensure that all control systems are designed to:

- Ensure that the system does not create an unsafe state that endangers personnel.

- Ensure that when control systems fail, the equipment being controlled fails to a safe state.

- Have an independent method to safely stop the process or equipment, such as a hardwired emergency stop button or other controls that deenergize the system, or independent methods to force the system to a safe state.

(14) Compressed air.

(a) Compressed air must not be used for cleaning clothing that is being worn, or if it will endanger persons in the area.

(b) Sections of high pressure air hoses must be properly coupled and have safety chains or equivalent safety device attached between the sections (30 psi or more is high pressure air).

(15) Punch bars. Open pipes must not be used as punch bars if the use would create a hazard.

(16) Saw table limit stop or extension. Employees must be protected from contact with the front edge of a circular saw by:

- A limit stop which will prevent the forward swing of the cutting edge from extending beyond the edge of the table or

- Installation of a table extension.

(17) Powder-actuated tools.

- Powder-actuated tool design, construction, operation and use shall comply with all requirements specified in

"safety requirements for powder actuated fastening systems," (see chapter 296-24 WAC, Part H-1).

- A careful check must be made to ensure that no cartridges or charges are left where they could enter equipment or be accidentally discharged in any area where they could create a fire or explosion hazard.

(18) Ladders required on waterfront docks. Employers must ensure that either permanent ladders or portable ladders:

- Are readily available for emergency use on all waterfront docks.

- Extend from the face of the dock to the water line at its lowest elevation.

- Are installed at intervals not to exceed 400 feet.

- Are noticeable by painting the dock area immediately adjacent to the ladder with a bright color which contrasts with the surrounding area.

- Have been secured with a suitable method.

Note: When working on or around water also see ((~~chapter 296-24 WAC, Part A-2~~)) WAC 296-800-160.

(19) Prevent overhang while removing materials. Extreme care must be taken to prevent material from creating an overhang while removing the materials from piles or bins.

AMENDATORY SECTION (Amending WSR 99-16-083, filed 8/3/99, effective 11/3/99)

WAC 296-79-040 Fire protection, ignition sources and means of egress. For fire protection, ignition source, and means of egress requirements see chapter 296-24 WAC, Part G-1, G-2 and G-3 and WAC 296-800-300.

AMENDATORY SECTION (Amending WSR 99-16-083, filed 8/3/99, effective 11/3/99)

WAC 296-79-050 Personal protection clothing and equipment. See ((~~chapter 296-24 WAC, Part A-2~~)) WAC 296-800-160 for additional personal protective equipment requirements.

(1) Rings or other jewelry that could create a hazard should not be worn by employees while in the performance of their work.

(2) Protective footwear.

- Employees who work in areas where there is a possibility of foot injury due to falling or rolling objects must wear safety type footwear.

- Employers will supply shoe guards and toe protectors.

- Employers must also make safety shoes available for purchase by employees at not more than actual cost to the employer.

(3) Calks or other suitable footwear that will afford reasonable protection from slipping must be:

- Worn while working on logs.

- Made available at not more than actual cost to the employer.

AMENDATORY SECTION (Amending WSR 99-16-083, filed 8/3/99, effective 11/3/99)

WAC 296-79-090 Electrical equipment and distribution. All electrical installations and electrical utilization

equipment must comply with chapter 296-24 WAC, Part L, and WAC 296-800-280.

(1) Operator controlled devices. Push buttons, selector switches, remote control switches, automatic circuit activating devices, and other control circuit type devices must be marked to indicate their function and the equipment they control.

(2) Posting equipment automatically activated or remotely controlled. If it will create a hazard to personnel, equipment which is automatically activated or remotely controlled must be posted, warning persons that machine may start automatically.

AMENDATORY SECTION (Amending WSR 99-16-083, filed 8/3/99, effective 11/3/99)

WAC 296-79-100 Floors, platforms, stairways, ladders, loading docks. See chapter 296-24 WAC, Part J, and chapter 296-800 WAC.

AMENDATORY SECTION (Amending WSR 99-16-083, filed 8/3/99, effective 11/3/99)

WAC 296-79-120 Scaffolds, construction, use and maintenance. See General safety and health standards, chapter 296-24 WAC, Part ((~~J-1~~)) J-2 or Safety standards for construction work, chapter 296-155 WAC, Part J-1.

AMENDATORY SECTION (Amending WSR 99-16-083, filed 8/3/99, effective 11/3/99)

WAC 296-79-300 Machine room equipment and procedures. (1) Pulp and paper machines must be equipped with emergency stopping control(s) which can be actuated quickly from all normal operating stations. If useful for the safety of personnel, the stopping control(s) must be interlocked with adequate retarding or braking action to stop the machine as quickly as is practical. The devices must consist of push buttons for electric motive power (or electrically operated engine stops), pull cords connected directly to the prime mover, control clutches, or other devices.

(2) Steps and footwalks along the fourdrinier/forming and press section must have nonslip surfacing and be complete with standard handrails, when practical.

(3) If a machine must be lubricated while in operation an automatic lubricating device must be provided or oil cups and grease fittings must be provided which can be serviced safely without exposing the worker to any hazards.

(4) All levers carrying weights must be so constructed that weights will not slip or fall off.

(5) Guarding inrunning nip points.

(a) The drums on pulp and paper machine winders.

(i) These drums must be provided with suitable guards to prevent a person from being caught between the roll and the front drum on the winder when the pinch point is on the operator's side.

(ii) Such guards must be interlocked with the drive mechanism to prevent the winder from running while the guard is not in place. Except that the winder may be wired to

allow it to run at thread or jog speed only for adjustment and start-up purposes while the guard is not in position.

(iii) A zero speed switch or locking device must be installed to prevent the guard from being removed while the roll is turning above thread or jog speed.

(b) Rewinders.

When rewinding large rolls and the nip point is adjacent to the normal work area.

- The nip point must be protected by a barrier guard and
- Such guard must be interlocked with the drive mechanism to prevent operating the machine above thread or jog speed without the guard in place and

- A zero speed switch must be installed to prevent the guard from being raised while the roll is turning.

(c) Inrunning nips where paper is not being fed into a calender must be guarded.

(6) An audible alarm must be sounded prior to starting up any section of a pulp or paper machine. Sufficient time must be allowed between activation of the alarm system and start-up of the equipment to allow any persons to clear the hazardous area.

(7) When starting up a dryer section, steam to heat the drums must be introduced slowly and while the drums are revolving.

(8) A safe method must be used when starting paper into the nip of drum type reels or calender stacks. This may be accomplished by the use of feeder belts, carrier ropes, air carrier or other device or instrument.

- A rope carrying system should be used wherever possible at points of transfer, or

- Sheaves should be spaced so that they do not create a nip point with each other and the sheave and its support should be capable of withstanding the speed and breaking strength of the rope for which they are intended.

(9) Employees must not feed a stack with any hand held device which is capable of going through the nip.

(10) Employees must not attempt to remove a broken carrier rope from a dryer while the section is running at operating speed.

(11) Employees must stop the dryer to remove a wrap except in cases where it can be safely removed by using air or other safe means.

(12) To remove deposits from rolls, a specially designed scraper or tool shall be used. Scraping of rolls must be performed on the outgoing nip side.

(13) Doctor blades.

(a) Cleaning. Employees must not place their hands between the sharp edge of an unloaded doctor blade and the roll while cleaning the doctor blade.

(b) Doctor blades must have the sharp edges properly guarded during transportation and storage.

(c) Special protective gloves must be provided and must be worn by employees when filing or handling sharp edged doctor blades.

(14) Handling reels.

(a) Reels must stop rotating before being lifted away from reel frame.

Crane hooks must not be used to stop a turning reel.

(b) Exposed rotating reel shafts with square block ends must be guarded.

(c) The crane operator must ascertain that reels are properly seated at winder stand or at reel arms before they disengage the hooks.

(d) On stored reels, a clearance of at least 8 inches between the reels of paper must be maintained.

(15) All winder shafts must be equipped with a winder collar guide. The winder must have a guide rail to align the shaft for easy entrance into the opened rewind shaft bearing housing. If winder shafts are too heavy for manual handling, mechanical equipment must be used.

(16) Shaftless winders must be provided with a barrier guard of sufficient strength and size to confine the rolls in the event they become dislodged while running.

(17) All calender stacks and spreader bars must be grounded according to chapter 296-24 WAC, Part L, and WAC 296-800-280 as protection against shock induced by static electricity.

(18) Nonskid type surface required.

(a) All exposed sole plates between dryers, calenders, reels, and rewinders must have a nonskid type surface.

(b) A nonskid type surface must be provided in the work areas around the winders or rewinders.

(19) If a powered roll ejector is used it should be interlocked to prevent accidental actuation until the receiving platform or roll lowering table is in position to receive the roll.

(20) Employees must keep clear of hazardous areas around the lowerator, especially all lowerator openings in a floor and where roll is being discharged.

(21) Provision must be made to hold the rider roll when in a raised position unless counterbalancing eliminates the hazard.

(22) Drain openings in pits. Flush floor drain openings larger than 3 inches in diameter in the bottom of pits must be guarded to prevent workers from stepping through, while working in this area.

(23) Employees must not enter into or climb on any paper machine roll that is subject to free turning unless a positive locking device has been installed to prevent the roll from turning.

(24) The employer must ensure sufficient inspection and nondestructive examination of reel spool and calender roll journals. The type and frequency of testing must be adequate to detect indications of failure. Any reel spool or calender roll journal found to have an indication of failure must be removed from service. Nondestructive examination personnel must be qualified in accordance with SNT-TC 1A.

AMENDATORY SECTION (Amending WSR 97-22-065, filed 11/3/97, effective 1/1/98)

WAC 296-99-010 What safety hazards does this chapter require the employer to control? This chapter directs the employer to control dust fires, explosions and other safety hazards in grain handling facilities including the waterfront dock areas at marine terminals (chapter 296-56 WAC will not apply).

All provisions from chapters 296-24 ((and)), 296-62, and 296-800 WAC also apply. If rules in either of these chapters

conflict with rules in chapter 296-99 WAC, chapter 296-99 WAC will prevail.

AMENDATORY SECTION (Amending WSR 97-22-065, filed 11/3/97, effective 1/1/98)

WAC 296-99-040 What practices must an employer follow for entry into grain storage structures? This section applies to employee entry into all grain storage structures.

(1) The employer must ensure that the practice of walking down grain is prohibited. "Walking down grain" means an employee walks on grain to make it flow within or out from a grain storage structure, or an employee is on moving grain.

(2) The employer must ensure that during the entry and occupation of a storage structure the employee uses:

- A body harness with a lifeline; or
- A boatswain's chair that meets the requirements of Part ~~((J-1))~~ J-2 of chapter 296-24 WAC whenever:

(a) The employee is exposed to a fall hazard such as when entering from the top or above the level of the stored grain; or

(b) The employee is exposed to an engulfment hazard such as when entering at the level of the stored grain, or while walking or standing on the grain. The lifeline must be rigged so that its position and length will prevent the employee from sinking below waist level.

(3) The employer must ensure that during the occupation of storage structures, including walking or standing on grain, employees are protected from hazards related to:

- Mechanical;
- Electrical;
- Hydraulic; and
- Pneumatic equipment.

By using safeguards, lockout-tagout, or other equally effective means. All provisions for the control of hazardous energy (lockout/tagout) from WAC 296-24-110 apply to this chapter.

(4) The employer must ensure that employees are prohibited from entering any storage structure where a build-up of grain overhead (bridging) or on the sides could fall and bury them.

(5) The employer must ensure, as minimum precautions, that employee entry and occupation of all grain storage structures including flat storage structures is done according to all applicable requirements of WAC 296-62-145, confined space, when the storage structure:

- Has limited or restricted means of entry and exit; and
- Is not designed for continuous employee occupancy.

(6) The employer may allow an employee to perform confined space entry work in grain storage structures without a permit if the employer's representative personally monitors the work to prevent employee exposure to illness or injury from atmospheric hazards during the entire operation.

AMENDATORY SECTION (Amending WSR 00-01-038, filed 12/7/99, effective 2/1/00)

WAC 296-155-120 First-aid training and certification. This section is designed to assure that all employees in this state are afforded quick and effective first-aid attention in the event of an on the job injury. To achieve this purpose the presence of personnel trained in first-aid procedures at or near those places where employees are working is required. Compliance with the provisions of this section may require the presence of more than one first-aid trained person.

(1) The first-aid training requirements of the ~~((general))~~ safety and health ~~((standards))~~ core rules, chapter ~~((296-24))~~ 296-800 WAC, ~~((Part A-1))~~ apply within the scope of chapter 296-155 WAC.

(2) Each employer must have available at all worksites, where a crew is present, a person or persons holding a valid first-aid certificate.

(3) All crew leaders, supervisors or persons in direct charge of one or more employees must have a valid first-aid certificate.

(4) For the purposes of this section, a crew means a group of two or more employees working at any worksite.

Note: The requirement that all crew leaders, supervisors or person in direct charge of one or more employees (subsection (3) of this section) applies even if other first-aid trained person(s) are available. In emergencies, crew leaders will be permitted to work up to thirty days without having the required certificate, providing an employee in the crew or another crew leaders in the immediate work area has the necessary certificate.

AMENDATORY SECTION (Amending WSR 00-01-038, filed 12/7/99, effective 2/1/00)

WAC 296-155-125 First-aid supplies. (1) The first-aid kits and supplies requirements of the ~~((general))~~ safety and health ~~((standards))~~ core rules, chapter ~~((296-24))~~ 296-800 WAC, ~~((Part A-1))~~ apply within the scope of chapter 296-155 WAC.

(2) All vehicles used to transport work crews must be equipped with first-aid supplies.

(3) When practical, a poster must be fastened and maintained either on or in the cover of each first-aid kit and at or near all phones plainly stating the worksite address or location, and the phone numbers of emergency medical responders for the worksite.

(4) Requirements of WAC 296-62-130, Emergency washing facilities, apply within the scope of chapter 296-155 WAC.

AMENDATORY SECTION (Amending WSR 00-01-038, filed 12/7/99, effective 2/1/00)

WAC 296-155-130 First-aid station. Employers with fifty or more employees per shift at one location must establish a first-aid station in accordance with the requirements in chapter ~~((296-24))~~ 296-800 WAC~~((, Part A-1))~~.

AMENDATORY SECTION (Amending Order 92-15, filed 2/3/93, effective 3/15/93)

WAC 296-155-17321 Hygiene facilities and practices. (1) General.

(a) The employer shall provide decontamination areas for employees required to work in regulated areas or required by WAC 296-155-17319 to wear protective clothing. Exception: In lieu of the decontamination area requirement specified in this subsection, the employer may permit employees engaged in small scale, short duration operations, to clean their protective clothing or dispose of the protective clothing before such employees leave the area where the work was performed.

(b) Change areas. The employer shall ensure that change areas are equipped with separate storage facilities for protective clothing and street clothing, in accordance with WAC 296-24-12011.

(c) Equipment area. The equipment area shall be supplied with impermeable, labeled bags and containers for the containment and disposal of contaminated protective clothing and equipment.

(2) Shower area.

(a) Where feasible, shower facilities shall be provided which comply with WAC ((~~296-24-12009(3)~~) 296-24-12010) wherever the possibility of employee exposure to airborne levels of MDA in excess of the permissible exposure limit exists.

(b) Where dermal exposure to MDA occurs, the employer shall ensure that materials spilled or deposited on the skin are removed as soon as possible by methods which do not facilitate the dermal absorption of MDA.

(3) Lunch areas.

(a) Whenever food or beverages are consumed at the worksite and employees are exposed to MDA the employer shall provide clean lunch areas where MDA levels are below the action level and where no dermal exposure to MDA can occur.

(b) The employer shall ensure that employees wash their hands and faces with soap and water prior to eating, drinking, smoking, or applying cosmetics.

(c) The employer shall ensure that employees do not enter lunch facilities with contaminated protective work clothing or equipment.

AMENDATORY SECTION (Amending WSR 99-10-071, filed 5/4/99, effective 9/1/99)

WAC 296-155-17625 Employee information and training. (1) General.

(a) The employer shall communicate information concerning lead hazards according to the requirements of WISHA's Hazard Communication Standard for the construction industry, ((~~part C of~~) chapter ((~~296-62~~) 296-800 WAC, including but not limited to the requirements concerning warning signs and labels, material safety data sheets (MSDS), and employee information and training. In addition, employers shall comply with the following requirements:

(b) For all employees who are subject to exposure to lead at or above the action level on any day or who are subject to

exposure to lead compounds which may cause skin or eye irritation (e.g., lead arsenate, lead azide), the employer shall provide a training program in accordance with subsection (2) of this section and assure employee participation.

(c) The employer shall provide the training program as initial training prior to the time of job assignment or prior to the start up date for this requirement, whichever comes last.

(d) The employer shall also provide the training program at least annually for each employee who is subject to lead exposure at or above the action level on any day.

(2) Training program. The employer shall assure that each employee is trained in the following:

(a) The content of this standard and its appendices;

(b) The specific nature of the operations which could result in exposure to lead above the action level;

(c) The training requirements for respiratory protection as required by chapter 296-62 WAC, Part E (see WAC 296-62-07117, 296-62-07172, and WAC 296-62-07186 through 296-62-07190);

(d) The purpose and a description of the medical surveillance program, and the medical removal protection program including information concerning the adverse health effects associated with excessive exposure to lead (with particular attention to the adverse reproductive effects on both males and females and hazards to the fetus and additional precautions for employees who are pregnant);

(e) The engineering controls and work practices associated with the employee's job assignment including training of employees to follow relevant good work practices described in Appendix B, WAC 296-155-17652;

(f) The contents of any compliance plan in effect;

(g) Instructions to employees that chelating agents should not routinely be used to remove lead from their bodies and should not be used at all except under the direction of a licensed physician; and

(h) The employee's right of access to records under Part B, chapter 296-62 WAC and chapter 296-800 WAC.

(3) Access to information and training materials.

(a) The employer shall make readily available to all affected employees a copy of this standard and its appendices.

(b) The employer shall provide, upon request, all materials relating to the employee information and training program to affected employees and their designated representatives, and the director.

AMENDATORY SECTION (Amending WSR 95-04-007, filed 1/18/95, effective 3/1/95)

WAC 296-155-407 Protective clothing. (1) General requirements. Employees exposed to the hazards created by welding, cutting, or brazing operations shall be protected by personal protective equipment in accordance with the requirements of chapter ((~~296-24~~) 296-800 WAC, ((~~Part A-2~~) and chapter 296-24 WAC, Part I. Appropriate protective clothing required for any welding operation will vary with the size, nature and location of the work to be performed.

(2) Specified protective clothing. Protective means which may be employed are as follows:

(a) Except when engaged in light work, all welders should wear flameproof gauntlet gloves.

(b) Flameproof aprons made of leather, or other suitable material may also be desirable as protection against radiated heat and sparks.

(c) Woolen clothing preferable to cotton because it is not so readily ignited and helps protect the welder from changes in temperature. Cotton clothing, if used, should be chemically treated to reduce its combustibility. All outer clothing such as jumpers or overalls should be reasonably free from oil or grease.

(d) Sparks may lodge in rolled-up sleeves or pockets of clothing, or cuffs of overalls or trousers. It is therefore recommended that sleeves and collars be kept buttoned and pockets be eliminated from the front of overalls and aprons. Trousers or overalls should not be turned up on the outside.

Note: For heavy work, fire-resistant leggings, high boots, or other equivalent means should be used.

(e) In production work a sheet metal screen in front of the worker's legs can provide further protection against sparks and molten metal in cutting operations.

(f) Capes or shoulder covers made of leather or other suitable materials should be worn during overhead welding or cutting operations. Leather skull caps may be worn under helmets to prevent head burns.

(g) Where there is exposure to sharp or heavy falling objects, or a hazard of bumping in confined spaces, hard hats or head protectors shall be used.

AMENDATORY SECTION (Amending Order 86-14, filed 1/21/86)

WAC 296-155-005 Purpose and scope. (1) The standards included in this chapter apply throughout the state of Washington, to any and all work places subject to the Washington Industrial Safety and Health Act (chapter 49.17 RCW), where construction, alteration, demolition, related inspection, and/or maintenance and repair work, including painting and decorating, is performed. These standards are minimum safety requirements with which all industries must comply when engaged in the above listed types of work.

(2) If a provision of this chapter conflicts with a provision of the general safety and health standard (chapter 296-24 WAC) (~~(06)~~), the general occupational health standard (chapter 296-62 WAC), or the safety and health core rules (chapter 296-800 WAC), the provision of this chapter shall prevail. When a provision of this chapter conflicts with a provision of another vertical safety standard applying to the place of work, the provisions of the vertical standard of specific application shall prevail.

AMENDATORY SECTION (Amending WSR 00-08-078, filed 4/4/00, effective 7/1/00)

WAC 296-155-110 Accident prevention program. (1) Exemptions. Workers of employers whose primary business is other than construction, who are engaged solely in maintenance and repair work, including painting and decorating, are exempt from the requirement of this section provided:

(a) The maintenance and repair work, including painting and decorating, is being performed on the employer's premises, or facility.

(b) The length of the project does not exceed one week.

(c) The employer is in compliance with the requirements of WAC ((~~296-24-040~~) 296-800-140 Accident prevention program(s)), and WAC ((~~296-24-045~~) 296-800-130, Safety ((~~and health~~)) committees ((~~plan~~)) and safety meetings.

(2) Each employer shall develop a formal accident-prevention program, tailored to the needs of the particular plant or operation and to the type of hazard involved. The department may be contacted for assistance in developing appropriate programs.

(3) The following are the minimal program elements for all employers:

A safety orientation program describing the employer's safety program and including:

(a) How, where, and when to report injuries, including instruction as to the location of first-aid facilities.

(b) How to report unsafe conditions and practices.

(c) The use and care of required personal protective equipment.

(d) The proper actions to take in event of emergencies including the routes of exiting from areas during emergencies.

(e) Identification of the hazardous gases, chemicals, or materials involved along with the instructions on the safe use and emergency action following accidental exposure.

(f) A description of the employer's total safety program.

(g) An on-the-job review of the practices necessary to perform the initial job assignments in a safe manner.

(4) Each accident-prevention program shall be outlined in written format.

(5) Every employer shall conduct crew leader-crew safety meetings as follows:

(a) Crew leader-crew safety meetings shall be held at the beginning of each job, and at least weekly thereafter.

(b) Crew leader-crew meetings shall be tailored to the particular operation.

(6) Crew leader-crew safety meetings shall address the following:

(a) A review of any walk-around safety inspection conducted since the last safety meeting.

(b) A review of any citation to assist in correction of hazards.

(c) An evaluation of any accident investigations conducted since the last meeting to determine if the cause of the unsafe acts or unsafe conditions involved were properly identified and corrected.

(d) Attendance shall be documented.

(e) Subjects discussed shall be documented.

Note: Subcontractors and their employees may, with the permission of the general contractor, elect to fulfill the requirements of subsection (5)(a) and (b) of this section by attending the prime contractors crew leader-crew safety meeting. Any of the requirements of subsections (6)(a), (b), (c), and (7) of this section not satisfied by the prime contractors safety meetings shall be the responsibility of the individual employers.

(7) Minutes of each crew leader-crew meeting shall be prepared and a copy shall be maintained at the location where the majority of the employees of each construction site report for work each day.

(8) Minutes of crew leader-crew safety meetings shall be retained by the employer for at least one year and shall be made available for review by personnel of the department, upon request.

(9) Every employer shall conduct walk-around safety inspections as follows:

(a) At the beginning of each job, and at least weekly thereafter, a walk-around safety inspection shall be conducted jointly by one member of management and one employee, elected by the employees, as their authorized representative.

(b) The employer shall document walk-around safety inspections and such documentation shall be available for inspection by personnel of the department.

(c) Records of walk-around inspections shall be maintained by the employer until the completion of the job.

AMENDATORY SECTION (Amending Order 94-07, filed 7/20/94, effective 9/20/94)

WAC 296-155-140 Sanitation. (1) Potable water.

(a) An adequate supply of potable water shall be provided in all places of employment.

(b) Portable containers used to dispense drinking water shall be capable of being tightly closed and equipped with a tap. Water shall not be dipped from containers.

(c) Any container used to distribute drinking water shall be clearly marked as to the nature of its contents and not used for any other purpose.

(d) The common drinking cup is prohibited.

(e) Where single service cups (to be used but once) are supplied, both a sanitary container for the unused cups and a receptacle for disposing of the used cups shall be provided.

(f) All water containers used to furnish drinking water shall be thoroughly cleaned at least once each week or more often as conditions require.

(g) The requirements of this subsection do not apply to mobile crews or to normally unattended work locations as long as employees working at these locations have transportation immediately available, within the normal course of their duties, to nearby facilities otherwise meeting the requirements of this section.

(h) The following definitions apply:

(i) Mobile crew: A work crew that routinely moves to a different work location periodically. Normally a mobile crew is not at the same location all day.

(ii) Normally unattended work location: An unattended site that is visited occasionally by one or more employees.

(iii) Nearby facility: A sanitary facility that is within three minutes travel by the transportation provided.

(iv) "Potable water" means water which meets the quality standards for drinking purposes of state or local authority having jurisdiction or water that meets the quality standards prescribed by the United States Environmental Protection Agency's National Interim Primary Drinking Water Regulations, published in 40 CFR Part 141, and 40 CFR 147.2400.

(2) Wash water.

(a) Clean, tepid wash water, between 70 and 100 degrees Fahrenheit, shall be provided at all construction sites.

(b) Individual hand towels shall be provided. Both a sanitary container for the unused towels and a receptacle for disposal of used towels shall be provided.

(c) Hand soap, industrial hand cleaner or similar cleansing agents shall be provided. Cleansing agents shall be adequate to remove any paints, coatings, herbicides, insecticides or other contaminants.

(d) The requirements of this subsection do not apply to mobile crews or to normally unattended work locations as long as employees working at these locations have transportation immediately available, within the normal course of their duties, to nearby facilities otherwise meeting the requirements of this section.

(e) Gasoline or solvents shall not be used for personal cleaning.

(f) Wash water areas will be maintained in a dry condition. Slipping or other hazards shall be eliminated from the wash water area before it is acceptable for use.

(3) Nonpotable water.

(a) Outlets for nonpotable water, such as water for industrial or fire fighting purposes only, shall be identified by signs meeting the requirements of Part E of this chapter, to indicate clearly that the water is unsafe and is not to be used for drinking, washing or cooking purposes.

(b) There shall be no cross-connection, open or potential, between a system furnishing potable water, a system furnishing nonpotable water or a system furnishing wash water.

(4) Toilets.

(a) The provisions of this section apply to both portable chemical toilets and to flush toilets, except where flush toilets are used the requirements of WAC ((~~296-24-12007-1(a)~~)) 296-800-230 shall apply instead of (b) of this subsection.

(b) Accessible toilets shall be provided for employees according to the following table:

TABLE B-1

<u>Number of Employees</u>	<u>Toilets Required</u>
1 - 10	1
11 - 25	2
26 - 40	3
41 - 60	4
61 - 80	5
Over 80	one additional toilet for each additional twenty employees or any fraction thereof.

(c) When the employer provides both flush and portable chemical toilets, the number of employees allowed to be served by the flush toilets, per WAC ((~~296-24-12007-1(a)~~)) 296-800-230 will be calculated. That number will be subtracted from the total number of employees and the employer will be required to provide an adequate number of portable

PERMANENT

chemical toilets for the number of remaining employees, as required by (b) of this subsection.

(d) Toilets shall be maintained in clean, sanitary and functional condition. Internal latches shall be provided to secure the units from inadvertent entry. Where there are twenty or more employees consisting of both sexes, facilities shall be provided for each sex.

(i) Each unit shall be properly cleaned on a routine basis.

(ii) Chemicals, toilet tissue and sanitary seat covers shall be maintained in a supply sufficient for use during the entire shift.

(iii) Any defective or inadequate unit shall be immediately removed from service.

(e) Specifications. The following specifications apply:

(i) A noncaustic chemical toilet (portable chemical toilet is) a self-contained unit equipped with a waste receiving chemical holding container.

(ii) Portable chemical toilets consisting of only a holding tank, commonly referred to as "elevator units" or "elevator toilets" are not acceptable. "Elevator units" may be used if they are individually located in a lockable room which affords privacy. When this type unit is used in a private individual lockable room the entire room will be considered a toilet facility, as such the room will meet all requirements of toilet facilities and be inspected in accordance with subsection (5)(b)(iii) of this section.

(iii) Rooms, buildings or shelters housing toilets shall be of sound construction, easy to clean, provide shelter and provide privacy. The toilet rooms shall be ventilated to the outside and adequately lighted. All openings into the toilet room shall be covered with 16-mesh screen.

(iv) Toilets shall be serviced on a regular schedule. Servicing shall include the use of a disinfectant for cleaning urinals and seats, removing waste from containers, recharging containers with an odor controlling chemical and installing an adequate supply of toilet tissue and seat covers.

(v) Service shall be performed in accordance with local codes by approved servicing organizations. Waste shall be disposed of or discharged in accordance with requirements of local health department regulations.

(vi) Waste containers shall be fabricated from impervious materials, e.g. plastic, steel, fiberglass or their equivalent. Containers shall be water tight and capable of containing the chemical waste in a sanitary manner. The container shall be fitted to the building in a manner so as to prevent insects from entering from the exterior of the building. Containers shall be adequate in size to be used by the number of persons, according to the schedule for minimum requirements, without filling the container to more than half of its volume before regularly scheduled servicing.

(vii) Removal of waste shall be handled in a clean and sanitary manner by means of a vacuum hose and received by a leak-proof tank truck. All valves on the tank shall be leak-proof.

(viii) Provisions shall be made so service trucks have a clear approach and convenient access to the toilets to be serviced.

(ix) Disposal of waste from tank trucks shall be in accordance with local health department requirements. In the absence of provisions by local health departments, waste

must be disposed of through municipal or district sanitary sewage systems. Municipal or area sanitary sewage districts shall provide sewage disposal locations and facilities which are adequate and convenient for duly authorized toilet service organizations.

(f) The requirements of this subsection do not apply to mobile crews or to normally unattended work locations as long as employees working at these locations have transportation immediately available, within the normal course of their duties, to nearby facilities otherwise meeting the requirements of this section.

(5)(a) On multi-employer worksites, the prime contractor shall ensure that the requirements of this section are met. Each employer is responsible for seeing that facilities for their own employees are provided.

(b) Each employer shall ensure, at the beginning of each shift, that the sanitation facilities required by this section are inspected. If any facility or unit fails to meet the following requirements, immediate corrective action shall be taken. Such action shall be documented and maintained at the site for at least 72 hours. Inspection shall establish:

(i) Potable water: Sufficient supply of water, sufficient supply of cups, container integrity, cleanliness of unit and area, capacity of trash receptacle (empty).

(ii) Wash water: Sufficient supply of clean water, proper temperature, sufficient supply of towels, sufficient supply of cleansing agents, container integrity, cleanliness of unit and area without the presence of physical hazards, capacity of trash receptacle (empty).

(iii) Toilets: Sufficient supply of toilet tissue and sanitary seat covers, capacity and condition of chemical agent, capacity and condition of holding tank, cleanliness of unit and area without the presence of physical hazards, physical and structural condition of unit, condition of lock, condition of toilet seat and tissue holder, absence of all foreign debris.

(c) The location of the facilities required by subsections (1), (2) and (4) of this section shall be as close as practical to the highest concentration of employees.

(i) On multistory structures they shall be furnished on every third floor.

(ii) At all sites they shall be located within 200 feet horizontally of all employees.

(iii) The requirements of subsection (5)(c)(i) and (ii) do not apply to mobile crews or to normally unattended work locations as long as employees working at these locations have transportation immediately available, within the normal course of their duties, to nearby facilities otherwise meeting the requirements of this section.

(6) Food handling. All employees' food service facilities and operations shall meet the applicable laws, ordinances and regulations of the jurisdictions in which they are located.

(7) Temporary sleeping quarters. When temporary sleeping quarters are provided, they shall be heated, ventilated and lighted.

AMENDATORY SECTION (Amending Order 92-15, filed 2/3/93, effective 3/15/93)

WAC 296-155-17323 Communication of hazards to employees. (1) Signs and labels.

PERMANENT

(a) The employer shall post and maintain legible signs demarcating regulated areas and entrances or accessways to regulated areas that bear the following legend:

DANGER MDA MAY CAUSE CANCER LIVER TOXIN
AUTHORIZED PERSONNEL ONLY
RESPIRATORS AND PROTECTIVE CLOTHING
MAY BE REQUIRED TO BE WORN IN THIS AREA

(b) The employer shall ensure that labels or other appropriate forms of warning are provided for containers of MDA within the workplace. The labels shall comply with the requirements of WAC ((296-62-0541)) 296-800-170 and shall include one of the following legends:

(i) For pure MDA

DANGER CONTAINS MDA MAY CAUSE CANCER LIVER TOXIN

(ii) For mixtures containing MDA

DANGER CONTAINS MDA CONTAINS MATERIALS
WHICH MAY CAUSE CANCER LIVER TOXIN

(2) Material safety data sheets (MSDS). Employers shall obtain or develop, and shall provide access to their employees to, a material safety data sheet (MSDS) for MDA.

(3) Information and training.

(a) The employer shall provide employees with information and training on MDA, in accordance with WAC ((296-62-054 through 296-62-05415)) 296-800-170, at the time of initial assignment and at least annually thereafter.

(b) In addition to the information required under WAC ((296-62-054)) 296-800-170, the employer shall:

(i) Provide an explanation of the contents of this section, including Appendices A and B of this section, and indicate to employees where a copy of the standard is available;

(ii) Describe the medical surveillance program required under WAC 296-155-17327, and explain the information contained in Appendix C of this standard; and

(iii) Describe the medical removal provision required under WAC 296-155-17327.

(4) Access to training materials.

(a) The employer shall make readily available to all affected employees, without cost, all written materials relating to the employee training program, including a copy of this regulation.

(b) The employer shall provide to the director, upon request, all information and training materials relating to the employee information and training program.

AMENDATORY SECTION (Amending WSR 99-10-071, filed 5/4/99, effective 9/1/99)

WAC 296-155-174 Cadmium. (1) Scope. This standard applies to all occupational exposures to cadmium and cadmium compounds, in all forms, in all construction work where an employee may potentially be exposed to cadmium. Construction work is defined as work involving construction, alteration, and/or repair, including but not limited to the following:

(a) Wrecking, demolition, or salvage of structures where cadmium or materials containing cadmium are present;

(b) Use of cadmium containing-paints and cutting, brazing, burning, grinding, or welding on surfaces that were painted with cadmium-containing paints;

(c) Construction, alteration, repair, maintenance, or renovation of structures, substrates, or portions thereof, that contain cadmium, or materials containing cadmium;

(d) Cadmium welding; cutting and welding cadmium-plated steel; brazing or welding with cadmium alloys;

(e) Installation of products containing cadmium;

(f) Electrical grounding with cadmium-welding, or electrical work using cadmium-coated conduit;

(g) Maintaining or retrofitting cadmium-coated equipment;

(h) Cadmium contamination/emergency cleanup; and

(i) Transportation, disposal, storage, or containment of cadmium or materials containing cadmium on the site or location at which construction activities are performed.

(2) Definitions.

(a) Action level (AL) is defined as an airborne concentration of cadmium of 2.5 micrograms per cubic meter of air (2.5 µg/m³), calculated as an 8-hour time-weighted average (TWA).

(b) Authorized person means any person authorized by the employer and required by work duties to be present in regulated areas or any person authorized by WISHA or regulations issued under it to be in regulated areas.

(c) Competent person, in accordance with WAC 296-155-012(4), means a person designated by the employer to act on the employer's behalf who is capable of identifying existing and potential cadmium hazards in the workplace and the proper methods to control them in order to protect workers, and has the authority necessary to take prompt corrective measures to eliminate or control such hazards. The duties of a competent person include at least the following: Determining prior to the performance of work whether cadmium is present in the workplace; establishing, where necessary, regulated areas and assuring that access to and from those areas is limited to authorized employees; assuring the adequacy of any employee exposure monitoring required by this standard; assuring that all employees exposed to air cadmium levels above the PEL wear appropriate personal protective equipment and are trained in the use of appropriate methods of exposure control; assuring that proper hygiene facilities are provided and that workers are trained to use those facilities; and assuring that the engineering controls required by this standard are implemented, maintained in proper operating condition, and functioning properly.

(d) Director means the director of the department of labor and industries or authorized representative.

(e) Employee exposure and similar language referring to the air cadmium level to which an employee is exposed means the exposure to airborne cadmium that would occur if the employee were not using respiratory protective equipment.

(f) Final medical determination is the written medical opinion of the employee's health status by the examining physician under subsection (12)(c) through (l) of this section

or, if multiple physician review under subsection (12)(m) of this section or the alternative physician determination under subsection (12)(n) of this section is invoked, it is the final, written medical finding, recommendation or determination that emerges from that process.

(g) High-efficiency particulate air (HEPA) filter means a filter capable of trapping and retaining at least 99.97 percent of mono-dispersed particles of 0.3 micrometers in diameter.

(h) Regulated area means an area demarcated by the employer where an employee's exposure to airborne concentrations of cadmium exceeds, or can reasonably be expected to exceed the permissible exposure limit (PEL).

(i) This section means this cadmium standard.

(3) Permissible exposure limit (PEL). The employer shall assure that no employee is exposed to an airborne concentration of cadmium in excess of five micrograms per cubic meter of air ($5 \mu\text{g}/\text{m}^3$), calculated as an 8-hour time-weighted average exposure (TWA).

(4) Exposure monitoring

(a) General.

(i) Prior to the performance of any construction work where employees may be potentially exposed to cadmium, the employer shall establish the applicability of this standard by determining whether cadmium is present in the workplace and whether there is the possibility that employee exposures will be at or above the action level. The employer shall designate a competent person who shall make this determination. Investigation and material testing techniques shall be used, as appropriate, in the determination. Investigation shall include a review of relevant plans, past reports, material safety data sheets, and other available records, and consultations with the property owner and discussions with appropriate individuals and agencies.

(ii) Where cadmium has been determined to be present in the workplace, and it has been determined that there is a possibility the employee's exposure will be at or above the action level, the competent person shall identify employees potentially exposed to cadmium at or above the action level.

(iii) Determinations of employee exposure shall be made from breathing-zone air samples that reflect the monitored employee's regular, daily 8-hour TWA exposure to cadmium.

(iv) Eight-hour TWA exposures shall be determined for each employee on the basis of one or more personal breathing-zone air samples reflecting full shift exposure on each shift, for each job classification, in each work area. Where several employees perform the same job tasks, in the same job classification, on the same shift, in the same work area, and the length, duration, and level of cadmium exposures are similar, an employer may sample a representative fraction of the employees instead of all employees in order to meet this requirement. In representative sampling, the employer shall sample the employee(s) expected to have the highest cadmium exposures.

(b) Specific.

(i) Initial monitoring. Except as provided for in (b)(iii) of this subsection, where a determination conducted under (a)(i) of this subsection shows the possibility of employee exposure to cadmium at or above the action level, the employer shall conduct exposure monitoring as soon as practicable that is

representative of the exposure for each employee in the workplace who is or may be exposed to cadmium at or above the action level.

(ii) In addition, if the employee periodically performs tasks that may expose the employee to a higher concentration of airborne cadmium, the employee shall be monitored while performing those tasks.

(iii) Where the employer has objective data, as defined in subsection (14)(b) of this section, demonstrating that employee exposure to cadmium will not exceed airborne concentrations at or above the action level under the expected conditions of processing, use, or handling, the employer may rely upon such data instead of implementing initial monitoring.

(iv) Where a determination conducted under (a) or (b) of this subsection is made that a potentially exposed employee is not exposed to airborne concentrations of cadmium at or above the action level, the employer shall make a written record of such determination. The record shall include at least the monitoring data developed under (b)(i) through (iii) of this subsection, where applicable, and shall also include the date of determination, and the name and Social Security number of each employee.

(c) Monitoring frequency (periodic monitoring).

(i) If the initial monitoring or periodic monitoring reveals employee exposures to be at or above the action level, the employer shall monitor at a frequency and pattern needed to assure that the monitoring results reflect with reasonable accuracy the employee's typical exposure levels, given the variability in the tasks performed, work practices, and environmental conditions on the job site, and to assure the adequacy of respiratory selection and the effectiveness of engineering and work practice controls.

(ii) If the initial monitoring or the periodic monitoring indicates that employee exposures are below the action level and that result is confirmed by the results of another monitoring taken at least seven days later, the employer may discontinue the monitoring for those employees whose exposures are represented by such monitoring.

(d) Additional monitoring. The employer also shall institute the exposure monitoring required under (b)(i) and (c) of this subsection whenever there has been a change in the raw materials, equipment, personnel, work practices, or finished products that may result in additional employees being exposed to cadmium at or above the action level or in employees already exposed to cadmium at or above the action level being exposed above the PEL, or whenever the employer or competent person has any reason to suspect that any other change might result in such further exposure.

(e) Employee notification of monitoring results.

(i) No later than five working days after the receipt of the results of any monitoring performed under this section, the employer shall notify each affected employee individually in writing of the results. In addition, within the same time period, the employer shall post the results of the exposure monitoring in an appropriate location that is accessible to all affected employees.

(ii) Wherever monitoring results indicate that employee exposure exceeds the PEL, the employer shall include in the written notice a statement that the PEL has been exceeded

and a description of the corrective action being taken by the employer to reduce employee exposure to or below the PEL.

(f) Accuracy of measurement. The employer shall use a method of monitoring and analysis that has an accuracy of not less than plus or minus 25 percent ($\pm 25\%$), with a confidence level of 95 percent, for airborne concentrations of cadmium at or above the action level and the permissible exposure limit.

(5) Regulated areas.

(a) Establishment. The employer shall establish a regulated area wherever an employee's exposure to airborne concentrations of cadmium is, or can reasonably be expected to be in excess of the permissible exposure limit (PEL).

(b) Demarcation. Regulated areas shall be demarcated from the rest of the workplace in any manner that adequately establishes and alerts employees of the boundaries of the regulated area, including employees who are or may be incidentally in the regulated areas, and that protects persons outside the area from exposure to airborne concentrations of cadmium in excess of the PEL.

(c) Access. Access to regulated areas shall be limited to authorized persons.

(d) Provision of respirators. Each person entering a regulated area shall be supplied with and required to use a respirator, selected in accordance with subsection (7)(b) of this section.

(e) Prohibited activities. The employer shall assure that employees do not eat, drink, smoke, chew tobacco or gum, or apply cosmetics in regulated areas, or carry the products associated with any of these activities into regulated areas or store such products in those areas.

(6) Methods of compliance.

(a) Compliance hierarchy.

(i) Except as specified in (a)(ii) of this subsection, the employer shall implement engineering and work practice controls to reduce and maintain employee exposure to cadmium at or below the PEL, except to the extent that the employer can demonstrate that such controls are not feasible.

(ii) The requirement to implement engineering controls to achieve the PEL does not apply where the employer demonstrates the following:

(A) The employee is only intermittently exposed; and

(B) The employee is not exposed above the PEL on 30 or more days per year (12 consecutive months).

(iii) Wherever engineering and work practice controls are not sufficient to reduce employee exposure to or below the PEL, the employer nonetheless shall implement such controls to reduce exposures to the lowest levels achievable. The employer shall supplement such controls with respiratory protection that complies with the requirements of subsection (7) of this section and the PEL.

(iv) The employer shall not use employee rotation as a method of compliance.

(b) Specific operations.

(i) Abrasive blasting. Abrasive blasting on cadmium or cadmium-containing materials shall be conducted in a manner that will provide adequate protection.

(ii) Heating cadmium and cadmium-containing materials. Welding, cutting, and other forms of heating of cadmium

or cadmium-containing materials shall be conducted in accordance with the requirements of WAC 296-155-415 and 296-155-420, where applicable.

(c) Prohibitions.

(i) High speed abrasive disc saws and similar abrasive power equipment shall not be used for work on cadmium or cadmium-containing materials unless they are equipped with appropriate engineering controls to minimize emissions, if the exposure levels are above the PEL.

(ii) Materials containing cadmium shall not be applied by spray methods, if exposures are above the PEL, unless employees are protected with supplied-air respirators with full facepiece, hood, helmet, suit, operated in positive pressure mode and measures are instituted to limit overspray and prevent contamination of adjacent areas.

(d) Mechanical ventilation.

(i) When ventilation is used to control exposure, measurements that demonstrate the effectiveness of the system in controlling exposure, such as capture velocity, duct velocity, or static pressure shall be made as necessary to maintain its effectiveness.

(ii) Measurements of the system's effectiveness in controlling exposure shall be made as necessary within five working days of any change in production, process, or control that might result in a significant increase in employee exposure to cadmium.

(iii) Recirculation of air. If air from exhaust ventilation is recirculated into the workplace, the system shall have a high efficiency filter and be monitored to assure effectiveness.

(iv) Procedures shall be developed and implemented to minimize employee exposure to cadmium when maintenance of ventilation systems and changing of filters is being conducted.

(e) Compliance program.

(i) Where employee exposure to cadmium exceeds the PEL and the employer is required under (a) of this subsection to implement controls to comply with the PEL, prior to the commencement of the job the employer shall establish and implement a written compliance program to reduce employee exposure to or below the PEL. To the extent that engineering and work practice controls cannot reduce exposures to or below the PEL, the employer shall include in the written compliance program the use of appropriate respiratory protection to achieve compliance with the PEL.

(ii) Written compliance programs shall be reviewed and updated as often and as promptly as necessary to reflect significant changes in the employer's compliance status or significant changes in the lowest air cadmium level that is technologically feasible.

(iii) A competent person shall review the comprehensive compliance program initially and after each change.

(iv) Written compliance programs shall be provided upon request for examination and copying to the director, or authorized representatives, affected employees, and designated employee representatives.

(7) Respirator protection.

(a) General. For employees who use respirators required by this section, the employer must provide respirators that comply with the requirements of this section. Respirators must be used during:

(i) Periods necessary to install or implement feasible engineering and work-practice controls when employee exposures exceed the PEL.

(ii) Maintenance and repair activities, and brief or intermittent operations, for which employee exposures exceed the PEL and engineering and work-practice controls are not feasible or are not required.

(iii) Work operations in regulated areas specified in subsection (5) of this section.

(iv) Work operations for which the employer has implemented all feasible engineering and work-practice controls, and such controls are not sufficient to reduce exposures to or below the PEL.

(v) Emergencies.

(vi) Work operations for which an employee, who is exposed to cadmium at or above the action level, requests a respirator.

(vii) Work operations for which engineering controls are not required under (a)(ii) of this subsection to reduce employee exposures that exceed the PEL.

(b) Respirator program.

(i) The employer must implement a respiratory protection program as required by chapter 296-62 WAC, Part E (except WAC 296-62-07130(1) and WAC 296-62-07150 through WAC 296-62-07156).

(ii) If an employee has breathing difficulty during fit testing or respirator use, the employer must provide the employee with a medical examination as required by subsection (12)(f)(ii) of this section to determine if the employee can use a respirator while performing the required duties.

(iii) No employees must use a respirator when, based on their recent medical examination, the examining physician determines that the employee will be unable to continue to function normally while using a respirator. If the physician determines the employee must be limited in, or removed from, their current job because of the employee's inability to use a respirator, the job limitation or removal must be conducted as required by (k) and (l) of this subsection.

(c) Respirator selection.

(i) The employer must select the appropriate respirator from Table 1 of this section.

Table 1

Respiratory Protection for Cadmium

Airborne concentration or condition of use ^a	Required respirator type ^b
50 x or less	A full facepiece air-purifying respirator equipped with a HEPA filter, or a powered air-purifying respirator with a tight-fitting half-mask equipped with a HEPA filter, or a supplied air respirator with a tight-fitting half-mask operated in the continuous flow mode.
250 x or less	A powered air-purifying respirator with a tight-fitting full facepiece equipped with a HEPA filter, or a supplied-air respirator with a tight-fitting full facepiece operated in the continuous flow mode.
1000 x or less	A supplied-air respirator with half-mask or full facepiece operated in the pressure demand or other positive pressure mode.
>1000 x or unknown concentrations	A self-contained breathing apparatus with a full facepiece operated in the pressure demand or other positive pressure mode, or a supplied-air respirator with a full facepiece operated in the pressure demand or other positive pressure mode and equipped with an auxiliary escape type self-contained breathing apparatus operated in the pressure demand mode.
Fire fighting	A self-contained breathing apparatus with full facepiece operated in the pressure demand or other positive pressure mode.

Note: ^a Concentrations expressed as multiple of the PEL.
^b Respirators assigned for higher environmental concentrations may be used at lower exposure levels. Quantitative fit testing is required for all tight-fitting air purifying respirators where airborne concentration of cadmium exceeds 10 times the TWA PEL (10 x 5 µg/m³ = 50 µg/m³). A full facepiece respirator is required when eye irritation is experienced.
^c HEPA means High Efficiency Particulate Air.
^d Fit testing, qualitative or quantitative, is required.
 Source: Respiratory Decision Logic, NIOSH, 1987.

(ii) The employer shall provide a powered, air-purifying respirator (PAPR) instead of a negative-pressure respirator when an employee entitled to a respirator chooses to use this

Table 1

Respiratory Protection for Cadmium

Airborne concentration or condition of use ^a	Required respirator type ^b
10 x or less	A half-mask, air-purifying respirator equipped with a HEPA ^c filter. ^d
25 x or less	A powered air-purifying respirator ("PAPR") with a loose-fitting hood or helmet equipped with a HEPA filter, or a supplied-air respirator with a loose-fitting hood or helmet facepiece operated in the continuous flow mode.

PERMANENT

type of respirator and such a respirator will provide adequate protection to the employee.

(8) Emergency situations. The employer shall develop and implement a written plan for dealing with emergency situations involving substantial releases of airborne cadmium. The plan shall include provisions for the use of appropriate respirators and personal protective equipment. In addition, employees not essential to correcting the emergency situation shall be restricted from the area and normal operations halted in that area until the emergency is abated.

(9) Protective work clothing and equipment

(a) Provision and use. If an employee is exposed to airborne cadmium above the PEL or where skin or eye irritation is associated with cadmium exposure at any level, the employer shall provide at no cost to the employee, and assure that the employee uses, appropriate protective work clothing and equipment that prevents contamination of the employee and the employee's garments. Protective work clothing and equipment includes, but is not limited to:

(i) Coveralls or similar full-body work clothing;

(ii) Gloves, head coverings, and boots or foot coverings; and

(iii) Face shields, vented goggles, or other appropriate protective equipment that complies with WAC 296-155-215.

(b) Removal and storage.

(i) The employer shall assure that employees remove all protective clothing and equipment contaminated with cadmium at the completion of the work shift and do so only in change rooms provided in accordance with subsection (10)(a) of this section.

(ii) The employer shall assure that no employee takes cadmium-contaminated protective clothing or equipment from the workplace, except for employees authorized to do so for purposes of laundering, cleaning, maintaining, or disposing of cadmium-contaminated protective clothing and equipment at an appropriate location or facility away from the workplace.

(iii) The employer shall assure that contaminated protective clothing and equipment, when removed for laundering, cleaning, maintenance, or disposal, is placed and stored in sealed, impermeable bags or other closed, impermeable containers that are designed to prevent dispersion of cadmium dust.

(iv) The employer shall assure that containers of contaminated protective clothing and equipment that are to be taken out of the change rooms or the workplace for laundering, cleaning, maintenance or disposal shall bear labels in accordance with subsection (13)(c) of this section.

(c) Cleaning, replacement, and disposal.

(i) The employer shall provide the protective clothing and equipment required by (a) of this subsection in a clean and dry condition as often as necessary to maintain its effectiveness, but in any event at least weekly. The employer is responsible for cleaning and laundering the protective clothing and equipment required by this subsection to maintain its effectiveness and is also responsible for disposing of such clothing and equipment.

(ii) The employer also is responsible for repairing or replacing required protective clothing and equipment as needed to maintain its effectiveness. When rips or tears are

detected while an employee is working they shall be immediately mended, or the worksuit shall be immediately replaced.

(iii) The employer shall prohibit the removal of cadmium from protective clothing and equipment by blowing, shaking, or any other means that disperses cadmium into the air.

(iv) The employer shall assure that any laundering of contaminated clothing or cleaning of contaminated equipment in the workplace is done in a manner that prevents the release of airborne cadmium in excess of the permissible exposure limit prescribed in subsection (3) of this section.

(v) The employer shall inform any person who launders or cleans protective clothing or equipment contaminated with cadmium of the potentially harmful effects of exposure to cadmium, and that the clothing and equipment should be laundered or cleaned in a manner to effectively prevent the release of airborne cadmium in excess of the PEL.

(10) Hygiene areas and practices.

(a) General. For employees whose airborne exposure to cadmium is above the PEL, the employer shall provide clean change rooms, handwashing facilities, showers, and lunchroom facilities that comply with WAC 296-155-140.

(b) Change rooms. The employer shall assure that change rooms are equipped with separate storage facilities for street clothes and for protective clothing and equipment, which are designed to prevent dispersion of cadmium and contamination of the employee's street clothes.

(c) Showers and handwashing facilities.

(i) The employer shall assure that employees whose airborne exposure to cadmium is above the PEL shower during the end of the work shift.

(ii) The employer shall assure that employees who are exposed to cadmium above the PEL wash their hands and faces prior to eating, drinking, smoking, chewing tobacco or gum, or applying cosmetics.

(d) Lunchroom facilities.

(i) The employer shall assure that the lunchroom facilities are readily accessible to employees, that tables for eating are maintained free of cadmium, and that no employee in a lunchroom facility is exposed at any time to cadmium at or above a concentration of 2.5 $\mu\text{g}/\text{m}^3$.

(ii) The employer shall assure that employees do not enter lunchroom facilities with protective work clothing or equipment unless surface cadmium has been removed from the clothing and equipment by HEPA vacuuming or some other method that removes cadmium dust without dispersing it.

(11) Housekeeping.

(a) All surfaces shall be maintained as free as practicable of accumulations of cadmium.

(b) All spills and sudden releases of material containing cadmium shall be cleaned up as soon as possible.

(c) Surfaces contaminated with cadmium shall, wherever possible, be cleaned by vacuuming or other methods that minimize the likelihood of cadmium becoming airborne.

(d) HEPA-filtered vacuuming equipment or equally effective filtration methods shall be used for vacuuming. The equipment shall be used and emptied in a manner that minimizes the reentry of cadmium into the workplace.

(e) Shoveling, dry or wet sweeping, and brushing may be used only where vacuuming or other methods that minimize the likelihood of cadmium becoming airborne have been tried and found not to be effective.

(f) Compressed air shall not be used to remove cadmium from any surface unless the compressed air is used in conjunction with a ventilation system designed to capture the dust cloud created by the compressed air.

(g) Waste, scrap, debris, bags, containers, personal protective equipment, and clothing contaminated with cadmium and consigned for disposal shall be collected and disposed of in sealed impermeable bags or other closed, impermeable containers. These bags and containers shall be labeled in accordance with subsection (13)(b) of this section.

(12) Medical surveillance.

(a) General.

(i) Scope.

(A) Currently exposed—The employer shall institute a medical surveillance program for all employees who are or may be exposed at or above the action level and all employees who perform the following tasks, operations, or jobs: Electrical grounding with cadmium-welding; cutting, brazing, burning, grinding, or welding on surfaces that were painted with cadmium-containing paints; electrical work using cadmium-coated conduit; use of cadmium containing paints; cutting and welding cadmium-plated steel; brazing or welding with cadmium alloys; fusing of reinforced steel by cadmium welding; maintaining or retrofitting cadmium-coated equipment; and, wrecking and demolition where cadmium is present. A medical surveillance program will not be required if the employer demonstrates that the employee:

(I) Is not currently exposed by the employer to airborne concentrations of cadmium at or above the action level on 30 or more days per year (twelve consecutive months); and

(II) Is not currently exposed by the employer in those tasks on 30 or more days per year (twelve consecutive months).

(B) Previously exposed—The employer shall also institute a medical surveillance program for all employees who might previously have been exposed to cadmium by the employer prior to the effective date of this section in tasks specified under (a)(i)(A) of this subsection, unless the employer demonstrates that the employee did not in the years prior to the effective date of this section work in those tasks for the employer with exposure to cadmium for an aggregate total of more than 12 months.

(ii) To determine an employee's fitness for using a respirator, the employer shall provide the limited medical examination specified in (f) of this subsection.

(iii) The employer shall assure that all medical examinations and procedures required by this section are performed by or under the supervision of a licensed physician, who has read and is familiar with the health effects WAC 296-62-07441, Appendix A, the regulatory text of this section, the protocol for sample handling and lab selection in WAC 296-62-07451, Appendix F, and the questionnaire of WAC 296-62-07447, Appendix D.

(iv) The employer shall provide the medical surveillance required by this section, including multiple physician review under (m) of this subsection without cost to employees, and

at a time and place that is reasonable and convenient to employees.

(v) The employer shall assure that the collecting and handling of biological samples of cadmium in urine (CdU), cadmium in blood (CdB), and beta-2 microglobulin in urine (B₂-M) taken from employees under this section is done in a manner that assures their reliability and that analysis of biological samples of cadmium in urine (CdU), cadmium in blood (CdB), and beta-2 microglobulin in urine (B₂-M) taken from employees under this section is performed in laboratories with demonstrated proficiency to perform the particular analysis. (See WAC 296-62-07451, Appendix F.)

(b) Initial examination.

(i) For employees covered by medical surveillance under (a)(i) of this subsection, the employer shall provide an initial medical examination. The examination shall be provided to those employees within 30 days after initial assignment to a job with exposure to cadmium or no later than 90 days after the effective date of this section, whichever date is later.

(ii) The initial medical examination shall include:

(A) A detailed medical and work history, with emphasis on: Past, present, and anticipated future exposure to cadmium; any history of renal, cardiovascular, respiratory, hematopoietic, reproductive, and/or musculo-skeletal system dysfunction; current usage of medication with potential nephrotoxic side-effects; and smoking history and current status; and

(B) Biological monitoring that includes the following tests:

(I) Cadmium in urine (CdU), standardized to grams of creatinine (g/Cr);

(II) Beta-2 microglobulin in urine (B₂-M), standardized to grams of creatinine (g/Cr), with pH specified, as described in WAC 296-62-07451, Appendix F; and

(III) Cadmium in blood (CdB), standardized to liters of whole blood (lwb).

(iii) Recent examination: An initial examination is not required to be provided if adequate records show that the employee has been examined in accordance with the requirements of (b)(ii) of this subsection within the past 12 months. In that case, such records shall be maintained as part of the employee's medical record and the prior exam shall be treated as if it were an initial examination for the purposes of (c) and (d) of this subsection.

(c) Actions triggered by initial biological monitoring.

(i) If the results of the biological monitoring tests in the initial examination show the employee's CdU level to be at or below 3 µg/g Cr, B₂-M level to be at or below 300 µg/g Cr and CdB level to be at or below 5 µg/lwb, then:

(A) For employees who are subject to medical surveillance under (a)(i)(A) of this subsection because of current or anticipated exposure to cadmium, the employer shall provide the minimum level of periodic medical surveillance in accordance with the requirements in (d)(i) of this subsection; and

(B) For employees who are subject to medical surveillance under (a)(i)(B) of this subsection because of prior but not current exposure, the employer shall provide biological monitoring for CdU, B₂-M, and CdB one year after the initial

biological monitoring and then the employer shall comply with the requirements of (d)(vi) of this subsection.

(ii) For all employees who are subject to medical surveillance under (a)(i) of this subsection, if the results of the initial biological monitoring tests show the level of CdU to exceed 3 µg/g Cr, the level of B₂-M to be in excess of 300 µg/g Cr, or the level of CdB to be in excess of 5 µg/lwb, the employer shall:

(A) Within two weeks after receipt of biological monitoring results, reassess the employee's occupational exposure to cadmium as follows:

(I) Reassess the employee's work practices and personal hygiene;

(II) Reevaluate the employee's respirator use, if any, and the respirator program;

(III) Review the hygiene facilities;

(IV) Reevaluate the maintenance and effectiveness of the relevant engineering controls;

(V) Assess the employee's smoking history and status;

(B) Within 30 days after the exposure reassessment, specified in (c)(ii)(A) of this subsection, take reasonable steps to correct any deficiencies found in the reassessment that may be responsible for the employee's excess exposure to cadmium; and

(C) Within 90 days after receipt of biological monitoring results, provide a full medical examination to the employee in accordance with the requirements of (d)(ii) of this subsection. After completing the medical examination, the examining physician shall determine in a written medical opinion whether to medically remove the employee. If the physician determines that medical removal is not necessary, then until the employee's CdU level falls to or below 3 µg/g Cr, B₂-M level falls to or below 300 µg/g Cr and CdB level falls to or below 5 µg/lwb, the employer shall:

(I) Provide biological monitoring in accordance with (b)(ii)(B) of this subsection on a semiannual basis; and

(II) Provide annual medical examinations in accordance with (d)(ii) of this subsection.

(iii) For all employees who are subject to medical surveillance under (a)(i) of this subsection, if the results of the initial biological monitoring tests show the level of CdU to be in excess of 15 µg/g Cr, or the level of CdB to be in excess of 15 µg/lwb, or the level of B₂-M to be in excess of 1,500 µg/g Cr, the employer shall comply with the requirements of (c)(ii)(A) and (B) of this subsection. Within 90 days after receipt of biological monitoring results, the employer shall provide a full medical examination to the employee in accordance with the requirements of (d)(ii) of this subsection. After completing the medical examination, the examining physician shall determine in a written medical opinion whether to medically remove the employee. However, if the initial biological monitoring results and the biological monitoring results obtained during the medical examination both show that: CdU exceeds 15 µg/g Cr; or CdB exceeds 15 µg/lwb; or B₂-M exceeds 1500 µg/g Cr, and in addition CdU exceeds 3 µg/g Cr or CdB exceeds 5 µg/liter of whole blood, then the physician shall medically remove the employee from exposure to cadmium at or above the action level. If the sec-

ond set of biological monitoring results obtained during the medical examination does not show that a mandatory removal trigger level has been exceeded, then the employee is not required to be removed by the mandatory provisions of this section. If the employee is not required to be removed by the mandatory provisions of this section or by the physician's determination, then until the employee's CdU level falls to or below 3 µg/g Cr, B₂-M level falls to or below 300 µg/g Cr and CdB level falls to or below 5 µg/lwb, the employer shall:

(A) Periodically reassess the employee's occupational exposure to cadmium;

(B) Provide biological monitoring in accordance with (b)(ii)(B) of this subsection on a quarterly basis; and

(C) Provide semiannual medical examinations in accordance with (d)(ii) of this subsection.

(iv) For all employees to whom medical surveillance is provided, beginning on January 1, 1999, and in lieu of (c)(iii) of this subsection, whenever the results of initial biological monitoring tests show the employee's CdU level to be in excess of 7 µg/g Cr, or B₂-M level to be in excess of 750 µg/g Cr, or CdB level to be in excess of 10 µg/lwb, the employer shall comply with the requirements of (c)(ii)(A) and (B) of this subsection. Within 90 days after receipt of biological monitoring results, the employer shall provide a full medical examination to the employee in accordance with the requirements of (d)(ii) of this subsection. After completing the medical examination, the examining physician shall determine in a written medical opinion whether to medically remove the employee. However, if the initial biological monitoring results and the biological monitoring results obtained during the medical examination both show that: CdU exceeds 7 µg/g Cr; or CdB exceeds 10 µg/lwb; or B₂-M exceeds 750 µg/g Cr, and in addition CdU exceeds 3 µg/g Cr or CdB exceeds 5 µg/liter of whole blood, then the physician shall medically remove the employee from exposure to cadmium at or above the action level. If the second set of biological monitoring results obtained during the medical examination does not show that a mandatory removal trigger level has been exceeded, then the employee is not required to be removed by the mandatory provisions of this section. If the employee is not required to be removed by the mandatory provisions of this section or by the physician's determination, then until the employee's CdU level falls to or below 3 µg/g Cr, B₂-M level falls to or below 300 µg/g Cr and CdB level falls to or below 5 µg/lwb, the employer shall:

(A) Periodically reassess the employee's occupational exposure to cadmium;

(B) Provide biological monitoring in accordance with (b)(ii)(B) of this subsection on a quarterly basis; and

(C) Provide semiannual medical examinations in accordance with (d)(ii) of this subsection.

(d) Periodic medical surveillance.

(i) For each employee who is covered by medical surveillance under (a)(i)(A) of this subsection because of current or anticipated exposure to cadmium, the employer shall provide at least the minimum level of periodic medical surveillance, which consists of periodic medical examinations and periodic biological monitoring. A periodic medical examina-

tion shall be provided within one year after the initial examination required by (b) of this subsection and thereafter at least biennially. Biological sampling shall be provided at least annually either as part of a periodic medical examination or separately as periodic biological monitoring.

(ii) The periodic medical examination shall include:

(A) A detailed medical and work history, or update thereof, with emphasis on: Past, present, and anticipated future exposure to cadmium; smoking history and current status; reproductive history; current use of medications with potential nephrotoxic side-effects; any history of renal, cardiovascular, respiratory, hematopoietic, and/or musculoskeletal system dysfunction; and as part of the medical and work history, for employees who wear respirators, questions 3 through 11 and 25 through 32 in WAC 296-62-07447, Appendix D;

(B) A complete physical examination with emphasis on: Blood pressure, the respiratory system, and the urinary system;

(C) A 14 inch by 17 inch, or a reasonably standard sized posterior-anterior chest x-ray (after the initial x-ray, the frequency of chest x-rays is to be determined by the examining physician);

(D) Pulmonary function tests, including forced vital capacity (FVC) and forced expiratory volume at 1 second (FEV1);

(E) Biological monitoring, as required in (b)(ii)(B) of this subsection;

(F) Blood analysis, in addition to the analysis required under (b)(ii)(B) of this subsection, including blood urea nitrogen, complete blood count, and serum creatinine;

(G) Urinalysis, in addition to the analysis required under (b)(ii)(B) of this subsection, including the determination of albumin, glucose, and total and low molecular weight proteins;

(H) For males over 40 years old, prostate palpation, or other at least as effective diagnostic test(s); and

(I) Any additional tests or procedures deemed appropriate by the examining physician.

(iii) Periodic biological monitoring shall be provided in accordance with (b)(ii)(B) of this subsection.

(iv) If the results of periodic biological monitoring or the results of biological monitoring performed as part of the periodic medical examination show the level of the employee's CdU, B₂-M, or CdB to be in excess of the levels specified in (c)(ii) and (iii) of this subsection; or, beginning on January 1, 1999, in excess of the levels specified in (c)(ii) or (iv) of this subsection, the employer shall take the appropriate actions specified in (c)(ii) through (iv) of this subsection, respectively.

(v) For previously exposed employees under (a)(i)(B) of this subsection:

(A) If the employee's levels of CdU did not exceed 3 µg/g Cr, CdB did not exceed 5 µg/lwb, and B₂-M did not exceed 300 µg/g Cr in the initial biological monitoring tests, and if the results of the follow-up biological monitoring required by (c)(i)(B) of this subsection one year after the initial examination confirm the previous results, the employer

may discontinue all periodic medical surveillance for that employee.

(B) If the initial biological monitoring results for CdU, CdB, or B₂-M were in excess of the levels specified in (c)(i) of this subsection, but subsequent biological monitoring results required by (c)(ii) through (iv) of this subsection show that the employee's CdU levels no longer exceed 3 µg/g Cr, CdB levels no longer exceed 5 µg/lwb, and B₂-M levels no longer exceed 300 µg/g Cr, the employer shall provide biological monitoring for CdU, CdB, and B₂-M one year after these most recent biological monitoring results. If the results of the follow-up biological monitoring specified in this section, confirm the previous results, the employer may discontinue all periodic medical surveillance for that employee.

(C) However, if the results of the follow-up tests specified in (d)(v)(A) or (B) of this subsection indicate that the level of the employee's CdU, B₂-M, or CdB exceeds these same levels, the employer is required to provide annual medical examinations in accordance with the provisions of (d)(ii) of this subsection until the results of biological monitoring are consistently below these levels or the examining physician determines in a written medical opinion that further medical surveillance is not required to protect the employee's health.

(vi) A routine, biennial medical examination is not required to be provided in accordance with (c)(i) and (d) of this subsection if adequate medical records show that the employee has been examined in accordance with the requirements of (d)(ii) of this subsection within the past 12 months. In that case, such records shall be maintained by the employer as part of the employee's medical record, and the next routine, periodic medical examination shall be made available to the employee within two years of the previous examination.

(e) Actions triggered by medical examinations. If the results of a medical examination carried out in accordance with this section indicate any laboratory or clinical finding consistent with cadmium toxicity that does not require employer action under (b), (c), or (d) of this subsection, the employer shall take the following steps and continue to take them until the physician determines that they are no longer necessary.

(i) Periodically reassess: The employee's work practices and personal hygiene; the employee's respirator use, if any; the employee's smoking history and status; the respiratory protection program; the hygiene facilities; the maintenance and effectiveness of the relevant engineering controls; and take all reasonable steps to correct the deficiencies found in the reassessment that may be responsible for the employee's excess exposure to cadmium.

(ii) Provide semiannual medical reexaminations to evaluate the abnormal clinical sign(s) of cadmium toxicity until the results are normal or the employee is medically removed; and

(iii) Where the results of tests for total proteins in urine are abnormal, provide a more detailed medical evaluation of the toxic effects of cadmium on the employee's renal system.

(f) Examination for respirator use.

PERMANENT

(i) To determine an employee's fitness for respirator use, the employer shall provide a medical examination that includes the elements specified in (f)(i)(A) through (D) of this subsection. This examination shall be provided prior to the employee's being assigned to a job that requires the use of a respirator or no later than 90 days after this section goes into effect, whichever date is later, to any employee without a medical examination within the preceding 12 months that satisfies the requirements of this section.

(A) A detailed medical and work history, or update thereof, with emphasis on: Past exposure to cadmium; smoking history and current status; any history of renal, cardiovascular, respiratory, hematopoietic, and/or musculo-skeletal system dysfunction; a description of the job for which the respirator is required; and questions 3 through 11 and 25 through 32 in WAC 296-62-07447, Appendix D;

(B) A blood pressure test;

(C) Biological monitoring of the employee's levels of CdU, CdB and B₂-M in accordance with the requirements of (b)(ii)(B) of this subsection, unless such results already have been obtained within the twelve months; and

(D) Any other test or procedure that the examining physician deems appropriate.

(ii) After reviewing all the information obtained from the medical examination required in (f)(i) of this subsection, the physician shall determine whether the employee is fit to wear a respirator.

(iii) Whenever an employee has exhibited difficulty in breathing during a respirator fit test or during use of a respirator, the employer, as soon as possible, shall provide the employee with a periodic medical examination in accordance with (d)(ii) of this subsection to determine the employee's fitness to wear a respirator.

(iv) Where the results of the examination required under (f)(i), (ii), or (iii) of this subsection are abnormal, medical limitation or prohibition of respirator use shall be considered. If the employee is allowed to wear a respirator, the employee's ability to continue to do so shall be periodically evaluated by a physician.

(g) Emergency examinations.

(i) In addition to the medical surveillance required in (b) through (f) of this subsection, the employer shall provide a medical examination as soon as possible to any employee who may have been acutely exposed to cadmium because of an emergency.

(ii) The examination shall include the requirements of (d)(ii), of this subsection, with emphasis on the respiratory system, other organ systems considered appropriate by the examining physician, and symptoms of acute overexposure, as identified in Appendix A, WAC 296-62-07441 (2)(b)(i) and (ii) and (4).

(h) Termination of employment examination.

(i) At termination of employment, the employer shall provide a medical examination in accordance with (d)(ii) of this subsection, including a chest x-ray where necessary, to any employee to whom at any prior time the employer was required to provide medical surveillance under (a)(i) or (g) of this subsection. However, if the last examination satisfied the requirements of (d)(ii) of this subsection and was less than six

months prior to the date of termination, no further examination is required unless otherwise specified in (c) or (e) of this subsection;

(ii) In addition, if the employer has discontinued all periodic medical surveillance under (d)(v) of this subsection, no termination of employment medical examination is required.

(i) Information provided to the physician. The employer shall provide the following information to the examining physician:

(i) A copy of this standard and appendices;

(ii) A description of the affected employee's former, current, and anticipated duties as they relate to the employee's occupational exposure to cadmium;

(iii) The employee's former, current, and anticipated future levels of occupational exposure to cadmium;

(iv) A description of any personal protective equipment, including respirators, used or to be used by the employee, including when and for how long the employee has used that equipment; and

(v) Relevant results of previous biological monitoring and medical examinations.

(j) Physician's written medical opinion.

(i) The employer shall promptly obtain a written, signed, medical opinion from the examining physician for each medical examination performed on each employee. This written opinion shall contain:

(A) The physician's diagnosis for the employee;

(B) The physician's opinion as to whether the employee has any detected medical condition(s) that would place the employee at increased risk of material impairment to health from further exposure to cadmium, including any indications of potential cadmium toxicity;

(C) The results of any biological or other testing or related evaluations that directly assess the employee's absorption of cadmium;

(D) Any recommended removal from, or limitation on the activities or duties of the employee or on the employee's use of personal protective equipment, such as respirators;

(E) A statement that the physician has clearly and carefully explained to the employee the results of the medical examination, including all biological monitoring results and any medical conditions related to cadmium exposure that require further evaluation or treatment, and any limitation on the employee's diet or use of medications.

(ii) The employer shall promptly obtain a copy of the results of any biological monitoring provided by an employer to an employee independently of a medical examination under (b) and (d) of this subsection, and, in lieu of a written medical opinion, an explanation sheet explaining those results.

(iii) The employer shall instruct the physician not to reveal orally or in the written medical opinion given to the employer specific findings or diagnoses unrelated to occupational exposure to cadmium.

(k) Medical removal protection (MRP).

(i) General.

(A) The employer shall temporarily remove an employee from work where there is excess exposure to cadmium on each occasion that medical removal is required under (c), (d), or (f) of this subsection and on each occasion that a physician

determines in a written medical opinion that the employee should be removed from such exposure. The physician's determination may be based on biological monitoring results, inability to wear a respirator, evidence of illness, other signs or symptoms of cadmium-related dysfunction or disease, or any other reason deemed medically sufficient by the physician.

(B) The employer shall medically remove an employee in accordance with (k) of this subsection regardless of whether at the time of removal a job is available into which the removed employee may be transferred.

(C) Whenever an employee is medically removed under (k) of this subsection, the employer shall transfer the removed employee to a job where the exposure to cadmium is within the permissible levels specified in subsection (12) of this section as soon as one becomes available.

(D) For any employee who is medically removed under the provisions of (k)(i) of this subsection, the employer shall provide follow-up medical examinations semiannually until, in a written medical opinion, the examining physician determines that either the employee may be returned to his/her former job status or the employee must be permanently removed from excess cadmium exposure.

(E) The employer may not return an employee who has been medically removed for any reason to his/her former job status until a physician determines in a written medical opinion that continued medical removal is no longer necessary to protect the employee's health.

(ii) Where an employee is found unfit to wear a respirator under (f)(ii) of this subsection, the employer shall remove the employee from work where exposure to cadmium is above the PEL.

(iii) Where removal is based upon any reason other than the employee's inability to wear a respirator, the employer shall remove the employee from work where exposure to cadmium is at or above the action level.

(iv) Except as specified in (k)(v) of this subsection, no employee who was removed because his/her level of CdU, CdB and/or B₂-M exceeded the trigger levels in (c) or (d) of this subsection may be returned to work with exposure to cadmium at or above the action level until the employee's levels of CdU fall to or below 3 µg/g Cr, CdB fall to or below 5 µg/lwb, and B₂-M fall to or below 300 µg/g Cr.

(v) However, when in the examining physician's opinion continued exposure to cadmium will not pose an increased risk to the employee's health and there are special circumstances that make continued medical removal an inappropriate remedy, the physician shall fully discuss these matters with the employee, and then in a written determination may return a worker to his/her former job status despite what would otherwise be unacceptably high biological monitoring results. Thereafter and until such time as the employee's biological monitoring results have decreased to levels where he/she could have been returned to his/her former job status, the returned employee shall continue medical surveillance as if he/she were still on medical removal. Until such time, the employee is no longer subject to mandatory medical removal. Subsequent questions regarding the employee's medical

removal shall be decided solely by a final medical determination.

(vi) Where an employer, although not required by this section to do so, removes an employee from exposure to cadmium or otherwise places limitations on an employee due to the effects of cadmium exposure on the employee's medical condition, the employer shall provide the same medical removal protection benefits to that employee under (l) of this subsection as would have been provided had the removal been required under (k) of this subsection.

(l) Medical removal protection benefits.

(i) The employer shall provide medical removal protection benefits to an employee for up to a maximum of 18 months each time, and while the employee is temporarily medically removed under (k) of this subsection.

(ii) For purposes of this section, the requirement that the employer provide medical removal protection benefits means that the employer shall maintain the total normal earnings, seniority, and all other employee rights and benefits of the removed employee, including the employee's right to his/her former job status, as if the employee had not been removed from the employee's job or otherwise medically limited.

(iii) Where, after 18 months on medical removal because of elevated biological monitoring results, the employee's monitoring results have not declined to a low enough level to permit the employee to be returned to his/her former job status:

(A) The employer shall make available to the employee a medical examination pursuant to this section in order to obtain a final medical determination as to whether the employee may be returned to his/her former job status or must be permanently removed from excess cadmium exposure; and

(B) The employer shall assure that the final medical determination indicates whether the employee may be returned to his/her former job status and what steps, if any, should be taken to protect the employee's health.

(iv) The employer may condition the provision of medical removal protection benefits upon the employee's participation in medical surveillance provided in accordance with this section.

(m) Multiple physician review.

(i) If the employer selects the initial physician to conduct any medical examination or consultation provided to an employee under this section, the employee may designate a second physician to:

(A) Review any findings, determinations, or recommendations of the initial physician; and

(B) Conduct such examinations, consultations, and laboratory tests as the second physician deems necessary to facilitate this review.

(ii) The employer shall promptly notify an employee of the right to seek a second medical opinion after each occasion that an initial physician provided by the employer conducts a medical examination or consultation pursuant to this section. The employer may condition its participation in, and payment for, multiple physician review upon the employee doing the following within fifteen (15) days after receipt of this notice, or receipt of the initial physician's written opinion, whichever is later:

(A) Informing the employer that he or she intends to seek a medical opinion; and

(B) Initiating steps to make an appointment with a second physician.

(iii) If the findings, determinations, or recommendations of the second physician differ from those of the initial physician, then the employer and the employee shall assure that efforts are made for the two physicians to resolve any disagreement.

(iv) If the two physicians have been unable to quickly resolve their disagreement, then the employer and the employee, through their respective physicians, shall designate a third physician to:

(A) Review any findings, determinations, or recommendations of the other two physicians; and

(B) Conduct such examinations, consultations, laboratory tests, and discussions with the other two physicians as the third physician deems necessary to resolve the disagreement among them.

(v) The employer shall act consistently with the findings, determinations, and recommendations of the third physician, unless the employer and the employee reach an agreement that is consistent with the recommendations of at least one of the other two physicians.

(n) Alternate physician determination. The employer and an employee or designated employee representative may agree upon the use of any alternate form of physician determination in lieu of the multiple physician review provided by (m) of this subsection, so long as the alternative is expeditious and at least as protective of the employee.

(o) Information the employer must provide the employee.

(i) The employer shall provide a copy of the physician's written medical opinion to the examined employee within five working days after receipt thereof.

(ii) The employer shall provide the employee with a copy of the employee's biological monitoring results and an explanation sheet explaining the results within five working days after receipt thereof.

(iii) Within 30 days after a request by an employee, the employer shall provide the employee with the information the employer is required to provide the examining physician under (i) of this subsection.

(p) Reporting. In addition to other medical events that are required to be reported on the OSHA Form No. 200, the employer shall report any abnormal condition or disorder caused by occupational exposure to cadmium associated with employment as specified in Chapter (V)(E) of the Bureau of Labor Statistics Recordkeeping Guidelines for Occupational Injuries and Illnesses.

(13) Communication of cadmium hazards to employees

(a) General. In communications concerning cadmium hazards, employers shall comply with the requirements of WISHA's Hazard Communication Standard, chapter 296-62 WAC, Part C, including but not limited to the requirements concerning warning signs and labels, material safety data sheets (MSDS), and employee information and training. In addition, employers shall comply with the following requirements:

(b) Warning signs.

(i) Warning signs shall be provided and displayed in regulated areas. In addition, warning signs shall be posted at all approaches to regulated areas so that an employee may read the signs and take necessary protective steps before entering the area.

(ii) Warning signs required by (b)(i) of this subsection shall bear the following information:

Danger, Cadmium, Cancer Hazard, Can Cause Lung and Kidney Disease, Authorized Personnel Only, Respirators
Required in This Area

(iii) The employer shall assure that signs required by this section are illuminated, cleaned, and maintained as necessary so that the legend is readily visible.

(c) Warning labels.

(i) Shipping and storage containers containing cadmium, cadmium compounds, or cadmium contaminated clothing, equipment, waste, scrap, or debris shall bear appropriate warning labels, as specified in (c)(ii) of this subsection.

(ii) The warning labels shall include at least the following information:

Danger, Contains Cadmium, Cancer Hazard, Avoid Creating Dust, Can Cause Lung and Kidney Disease

(iii) Where feasible, installed cadmium products shall have a visible label or other indication that cadmium is present.

(d) Employee information and training.

(i) The employer shall institute a training program for all employees who are potentially exposed to cadmium, assure employee participation in the program, and maintain a record of the contents of such program.

(ii) Training shall be provided prior to or at the time of initial assignment to a job involving potential exposure to cadmium and at least annually thereafter.

(iii) The employer shall make the training program understandable to the employee and shall assure that each employee is informed of the following:

(A) The health hazards associated with cadmium exposure, with special attention to the information incorporated in WAC 296-62-07441, Appendix A;

(B) The quantity, location, manner of use, release, and storage of cadmium in the workplace and the specific nature of operations that could result in exposure to cadmium, especially exposures above the PEL;

(C) The engineering controls and work practices associated with the employee's job assignment;

(D) The measures employees can take to protect themselves from exposure to cadmium, including modification of such habits as smoking and personal hygiene, and specific procedures the employer has implemented to protect employees from exposure to cadmium such as appropriate work practices, emergency procedures, and the provision of personal protective equipment;

(E) The purpose, proper selection, fitting, proper use, and limitations of respirators and protective clothing;

(F) The purpose and a description of the medical surveillance program required by subsection (12) of this section;

(G) The contents of this section and its appendices; and
 (H) The employee's rights of access to records under chapter 296-62 WAC, Part B.

(iv) Additional access to information and training program and materials.

(A) The employer shall make a copy of this section and its appendices readily available to all affected employees and shall provide a copy without cost if requested.

(B) Upon request, the employer shall provide to the director or authorized representative, all materials relating to the employee information and the training program.

(e) Multi-employer workplace. In a multi-employer workplace, an employer who produces, uses, or stores cadmium in a manner that may expose employees of other employers to cadmium shall notify those employers of the potential hazard in accordance with WAC ((296-62-05409)) 296-800-170 of the chemical hazard communication program standard.

(14) Recordkeeping.

(a) Exposure monitoring.

(i) The employer shall establish and keep an accurate record of all air monitoring for cadmium in the workplace.

(ii) This record shall include at least the following information:

(A) The monitoring date, shift, duration, air volume, and results in terms of an 8-hour TWA of each sample taken, and if cadmium is not detected, the detection level;

(B) The name, Social Security number, and job classification of all employees monitored and of all other employees whose exposures the monitoring result is intended to represent, including, where applicable, a description of how it was determined that the employee's monitoring result could be taken to represent other employee's exposures;

(C) A description of the sampling and analytical methods used and evidence of their accuracy;

(D) The type of respiratory protective device, if any, worn by the monitored employee and by any other employee whose exposure the monitoring result is intended to represent;

(E) A notation of any other conditions that might have affected the monitoring results;

(F) Any exposure monitoring or objective data that were used and the levels.

(iii) The employer shall maintain this record for at least thirty (30) years, in accordance with WAC 296-62-05207.

(iv) The employer shall also provide a copy of the results of an employee's air monitoring prescribed in subsection (4) of this section to an industry trade association and to the employee's union, if any, or, if either of such associations or unions do not exist, to another comparable organization that is competent to maintain such records and is reasonably accessible to employers and employees in the industry.

(b) Objective data for exemption from requirement for initial monitoring.

(i) For purposes of this section, objective data are information demonstrating that a particular product or material containing cadmium or a specific process, operation, or activity involving cadmium cannot release dust or fumes in concentrations at or above the action level even under the worst-case release conditions. Objective data can be obtained from

an industry-wide study or from laboratory product test results from manufacturers of cadmium-containing products or materials. The data the employer uses from an industry-wide survey must be obtained under workplace conditions closely resembling the processes, types of material, control methods, work practices, and environmental conditions in the employer's current operations.

(ii) The employer shall maintain the record for at least 30 years of the objective data relied upon.

(c) Medical surveillance.

(i) The employer shall establish and maintain an accurate record for each employee covered by medical surveillance under (a)(i) of this subsection.

(ii) The record shall include at least the following information about the employee:

(A) Name, Social Security number, and description of duties;

(B) A copy of the physician's written opinions and of the explanation sheets for biological monitoring results;

(C) A copy of the medical history, and the results of any physical examination and all test results that are required to be provided by this section, including biological tests, x-rays, pulmonary function tests, etc., or that have been obtained to further evaluate any condition that might be related to cadmium exposure;

(D) The employee's medical symptoms that might be related to exposure to cadmium; and

(E) A copy of the information provided to the physician as required by subsection (12)(i) of this section.

(iii) The employer shall assure that this record is maintained for the duration of employment plus thirty (30) years, in accordance with WAC 296-62-05207.

(iv) At the employee's request, the employer shall promptly provide a copy of the employee's medical record, or update as appropriate, to a medical doctor or a union specified by the employee.

(d) Training. The employer shall certify that employees have been trained by preparing a certification record which includes the identity of the person trained, the signature of the employer or the person who conducted the training, and the date the training was completed. The certification records shall be prepared at the completion of training and shall be maintained on file for one (1) year beyond the date of training of that employee.

(e) Availability.

(i) Except as otherwise provided for in this section, access to all records required to be maintained by (a) through (d) of this subsection shall be in accordance with the provisions of WAC 296-62-052.

(ii) Within 15 days after a request, the employer shall make an employee's medical records required to be kept by (c) of this subsection available for examination and copying to the subject employee, to designated representatives, to anyone having the specific written consent of the subject employee, and after the employee's death or incapacitation, to the employee's family members.

(f) Transfer of records. Whenever an employer ceases to do business and there is no successor employer or designated organization to receive and retain records for the prescribed

period, the employer shall comply with the requirements concerning transfer of records set forth in WAC 296-62-05215.

(15) Observation of monitoring.

(a) Employee observation. The employer shall provide affected employees or their designated representatives an opportunity to observe any monitoring of employee exposure to cadmium.

(b) Observation procedures. When observation of monitoring requires entry into an area where the use of protective clothing or equipment is required, the employer shall provide the observer with that clothing and equipment and shall assure that the observer uses such clothing and equipment and complies with all other applicable safety and health procedures.

(16) Appendices.

(a) Compliance with the fit testing requirements in WAC 296-62-07201 through 296-62-07248, Appendices A-1, A-2 and A-3 of chapter 296-62 WAC, Part E, are mandatory.

(b) Except where portions of WAC 296-62-07441, 296-62-07443, 296-62-07447, 296-62-07449, and 296-62-07451, Appendices A, B, D, E, and F, respectively, to this section are expressly incorporated in requirements of this section, these appendices are purely informational and are not intended to create any additional obligations not otherwise imposed or to detract from any existing obligations.

AMENDATORY SECTION (Amending Order 93-07, filed 10/29/93, effective 12/10/93)

WAC 296-155-17609 Exposure assessment. (1) General.

(a) Each employer who has a workplace or operation covered by this standard shall initially determine if any employee may be exposed to lead at or above the action level.

(b) For the purposes of this section, employee exposure is that exposure which would occur if the employee were not using a respirator.

(c) With the exception of monitoring under subsection (3) of this section, where monitoring is required by this standard, the employer shall collect personal samples representative of a full shift including at least one sample for each job classification in each work area either for each shift or for the shift with the highest exposure level.

(d) Full shift personal samples shall be representative of the monitored employee's regular, daily exposure to lead.

(2) Protection of employees during assessment of exposure.

(a) With respect to the lead related tasks listed in this subdivision, where lead is present, until the employer performs an employee exposure assessment as required in this section and documents that the employee performing any of the listed tasks is not exposed above the PEL, the employer shall treat the employee as if the employee were exposed above the PEL, and not in excess of ten (10) times the PEL, and shall implement employee protective measures prescribed in subdivision (e) of this subsection. The tasks covered by this requirement are:

(i) Where lead containing coatings or paint are present: Manual demolition of structures (e.g. dry wall), manual

scraping, manual sanding, heat gun applications, and power tool cleaning with dust collection systems;

(ii) Spray painting with lead paint.

(b) In addition, with regard to tasks not listed in subdivision (a), where the employer has any reason to believe that an employee performing the task may be exposed to lead in excess of the PEL, until the employer performs an employee exposure assessment as required by this section and documents that the employee's lead exposure is not above the PEL the employer shall treat the employee as if the employee were exposed above the PEL and shall implement employee protective measures as prescribed in subdivision (e) of this subsection.

(c) With respect to the tasks listed in this subdivision, where lead is present, until the employer performs an employee exposure assessment as required in this section, and documents that the employee performing any of the listed tasks is not exposed in excess of 500 $\mu\text{g}/\text{m}^3$, the employer shall treat the employee as if the employee were exposed to lead in excess of 500 $\mu\text{g}/\text{m}^3$ and shall implement employee protective measures as prescribed in subdivision (e) of this subsection. Where the employer does establish that the employee is exposed to levels of lead below 500 $\mu\text{g}/\text{m}^3$, the employer may provide the exposed employee with the appropriate respirator prescribed for such use at such lower exposures, in accordance with Table 1 of WAC 296-155-17613. The tasks covered by this requirement are:

(i) Using lead containing mortar; lead burning;

(ii) Where lead containing coatings or paint are present: Rivet busting; power tool cleaning without dust collection systems; cleanup activities where dry expendable abrasives are used; and abrasive blasting enclosure movement and removal.

(d) With respect to the tasks listed in this subdivision, where lead is present, until the employer performs an employee exposure assessment as required in this section and documents that the employee performing any of the listed tasks is not exposed to lead in excess of 2,500 $\mu\text{g}/\text{m}^3$ (50xPEL), the employer shall treat the employee as if the employee were exposed to lead in excess of 2,500 $\mu\text{g}/\text{m}^3$ and shall implement employee protective measures as prescribed in (e) of this subsection. Where the employer does establish that the employee is exposed to levels of lead below 2,500 $\mu\text{g}/\text{m}^3$, the employer may provide the exposed employee with the appropriate respirator prescribed for use at such lower exposures, in accordance with Table I of this WAC 296-155-17613. Protection described in this section is required where lead containing coatings or paint are present on structures when performing:

(i) Abrasive blasting;

(ii) Welding;

(iii) Cutting; and

(iv) Torch burning.

(e) Until the employer performs an employee exposure assessment as required by this section and determines actual employee exposure, the employer shall provide to employees performing the tasks described in (a) through (d) of this subsection with interim protection as follows:

(i) Appropriate respiratory protection in accordance with WAC 296-155-17613.

(ii) Appropriate personal protective clothing and equipment in accordance with WAC 296-155-17615.

(iii) Change areas in accordance with WAC 296-155-17619(2).

(iv) Hand washing facilities in accordance with WAC 296-155-17619(5).

(v) Biological monitoring in accordance with WAC 296-155-17621 (1)(a), to consist of blood sampling and analysis for lead and zinc protoporphyrin levels, and

(vi) Training as required by WAC 296-155-17625 (1)(a) regarding (~~Part C of chapter 296-62 WAC,~~) WAC 296-800-170, Chemical hazard communication; training as required by WAC 296-155-17625 (2)(c), regarding use of respirators; and training in accordance with WAC 296-155-100.

(3) Basis of initial determination.

(a) Except as provided by (c) and (d) of this subsection the employer shall monitor employee exposures and shall base initial determinations on the employee exposure monitoring results and any of the following, relevant considerations:

(i) Any information, observations, or calculations which would indicate employee exposure to lead;

(ii) Any previous measurements of airborne lead; and

(iii) Any employee complaints of symptoms which may be attributable to exposure to lead.

(b) Monitoring for the initial determination where performed may be limited to a representative sample of the exposed employees who the employer reasonably believes are exposed to the greatest airborne concentrations of lead in the workplace.

(c) Where the employer has previously monitored for lead exposures, and the data were obtained within the past 12 months during work operations conducted under workplace conditions closely resembling the processes, type of material, control methods, work practices, and environmental conditions used and prevailing in the employer's current operations, the employer may rely on such earlier monitoring results to satisfy the requirements of subdivision (a) of this subsection and subsection (5) of this section if the sampling and analytical methods meet the accuracy and confidence levels of subsection (9) of this section.

(d) Where the employer has objective data, demonstrating that a particular product or material containing lead or a specific process, operation or activity involving lead cannot result in employee exposure to lead at or above the action level during processing, use, or handling, the employer may rely upon such data instead of implementing initial monitoring.

(i) The employer shall establish and maintain an accurate record documenting the nature and relevancy of objective data as specified in WAC 296-155-17629(4), where used in assessing employee exposure in lieu of exposure monitoring.

(ii) Objective data, as described in subdivision (d) of this subsection, is not permitted to be used for exposure assessment in connection with subsection (2) of this section.

(4) Positive initial determination and initial monitoring.

(a) Where a determination conducted under subsections (1), (2) and (3) of this section shows the possibility of any

employee exposure at or above the action level the employer shall conduct monitoring which is representative of the exposure for each employee in the workplace who is exposed to lead.

(b) Where the employer has previously monitored for lead exposure, and the data were obtained within the past 12 months during work operations conducted under workplace conditions closely resembling the processes, type of material, control methods, work practices, and environmental conditions used and prevailing in the employer's current operations, the employer may rely on such earlier monitoring results to satisfy the requirements of (a) of this subsection if the sampling and analytical methods meet the accuracy and confidence levels of subsection (9) of this section.

(5) Negative initial determination. Where a determination, conducted under subsections (1), (2), and (3) of this section is made that no employee is exposed to airborne concentrations of lead at or above the action level the employer shall make a written record of such determination. The record shall include at least the information specified in subsection (3)(a) of this section and shall also include the date of determination, location within the worksite, and the name and social security number of each employee monitored.

(6) Frequency.

(a) If the initial determination reveals employee exposure to be below the action level further exposure determination need not be repeated except as otherwise provided in subsection (7) of this section.

(b) If the initial determination or subsequent determination reveals employee exposure to be at or above the action level but at or below the PEL the employer shall perform monitoring in accordance with this section at least every 6 months. The employer shall continue monitoring at the required frequency until at least two consecutive measurements, taken at least 7 days apart, are below the action level at which time the employer may discontinue monitoring for that employee except as otherwise provided in subsection (7) of this section.

(c) If the initial determination reveals that employee exposure is above the PEL the employer shall perform monitoring quarterly. The employer shall continue monitoring at the required frequency until at least two consecutive measurements, taken at least 7 days apart, are at or below the PEL but at or above the action level at which time the employer shall repeat monitoring for that employee at the frequency specified in subdivision (b) of this subsection, except as otherwise provided in subsection (7) of this section. The employer shall continue monitoring at the required frequency until at least two consecutive measurements, taken at least 7 days apart, are below the action level at which time the employer may discontinue monitoring for that employee except as otherwise provided in subsection (7) of this section.

(7) Additional exposure assessments. Whenever there has been a change of equipment, process, control, personnel or a new task has been initiated that may result in additional employees being exposed to lead at or above the action level or may result in employees already exposed at or above the action level being exposed above the PEL, the employer shall conduct additional monitoring in accordance with this section.

(8) Employee notification.

(a) Within 5 working days after completion of the exposure assessment the employer shall notify each employee in writing of the results which represent that employee's exposure.

(b) Whenever the results indicate that the representative employee exposure, without regard to respirators, is at or above the PEL the employer shall include in the written notice a statement that the employee's exposure was at or above that level and a description of the corrective action taken or to be taken to reduce exposure to below that level.

(9) Accuracy of measurement. The employer shall use a method of monitoring and analysis which has an accuracy (to a confidence level of 95%) of not less than plus or minus 25 percent for airborne concentrations of lead equal to or greater than 30 µg/m³.

AMENDATORY SECTION (Amending Order 93-07, filed 10/29/93, effective 12/10/93)

WAC 296-155-17615 Protective work clothing and equipment. (1) Provision and use. Where an employee is exposed to lead above the PEL without regard to the use of respirators, where employees are exposed to lead compounds which may cause skin or eye irritation (e.g., lead arsenate, lead azide), and as protection for employees performing tasks as specified in WAC 296-155-17609(2), the employer shall provide at no cost to the employee and assure that the employee uses appropriate protective work clothing and equipment that prevents contamination of the employee and the employee's garments such as, but not limited to:

- (a) Coveralls or similar full-body work clothing;
- (b) Gloves, hats, and shoes or disposable shoe coverlets; and
- (c) Face shields, vented goggles, or other appropriate protective equipment which complies with WAC ((296-24-078)) 296-800-160.

(2) Cleaning and replacement.

(a) The employer shall provide the protective clothing required in subsection (1) of this section in a clean and dry condition at least weekly, and daily to employees whose exposure levels without regard to a respirator are over 200 µg/m³ of lead as an 8-hour TWA.

(b) The employer shall provide for the cleaning, laundering, and disposal of protective clothing and equipment required by subsection (1) of this section.

(c) The employer shall repair or replace required protective clothing and equipment as needed to maintain their effectiveness.

(d) The employer shall assure that all protective clothing is removed at the completion of a work shift only in change areas provided for that purpose as prescribed in WAC 296-155-17619(2).

(e) The employer shall assure that contaminated protective clothing which is to be cleaned, laundered, or disposed of, is placed in a closed container in the change area which prevents dispersion of lead outside the container.

(f) The employer shall inform in writing any person who cleans or launders protective clothing or equipment of the potentially harmful effects of exposure to lead.

(g) The employer shall assure that the containers of contaminated protective clothing and equipment required by subsection (e) of this subsection are labeled as follows:

Caution: Clothing contaminated with lead. Do not remove dust by blowing or shaking. Dispose of lead contaminated wash water in accordance with applicable local, state, or federal regulations.

(h) The employer shall prohibit the removal of lead from protective clothing or equipment by blowing, shaking, or any other means which disperses lead into the air.

AMENDATORY SECTION (Amending WSR 94-16-145, filed 8/3/94, effective 9/12/94)

WAC 296-155-180 Hazard communication. General.

The employer shall develop and maintain a **chemical hazard communication program** as required by ((chapter 296-62 WAC, Part C)) **WAC 296-800-170**, which will provide information to all employees relative to hazardous chemicals or substances to which they are exposed, or may become exposed, in the course of their employment.

AMENDATORY SECTION (Amending Order 94-07, filed 7/20/94, effective 9/20/94)

WAC 296-155-200 General requirements. (1) Application.

(a) Protective equipment, including personal protective equipment for eyes, face, head, hearing, and extremities, protective clothing, respiratory devices, and protective shields and barriers, shall be used, and maintained in a sanitary and reliable condition wherever it is necessary by reason of hazards of processes or environment, chemical hazards, radiological hazards, or mechanical irritants encountered in a manner capable of causing injury or impairment in the function of any part of the body through absorption, inhalation or physical contact.

(b) Employee owned equipment. Where employees provide their own protective equipment, the employer shall be responsible to assure its adequacy, including proper maintenance and sanitation of such equipment.

(c) Design. All personal protective equipment shall be of safe design and construction for the work to be performed.

(2) Construction personnel shall comply with plant or job safety practices and procedures, peculiar to particular industries and plants, relating to protective equipment and procedures when engaged in construction work in such plants or job sites.

(3) The employer is responsible for requiring the wearing of appropriate personal protective equipment in all operations where there is an exposure to hazardous conditions or where this part indicates a need for using such equipment to reduce the hazards to the employees.

(4) Where there is a danger of contact with moving parts of machinery, or the work process is such that a hazard exists:

(a) The clothing of employees shall fit closely about the body.

(b) Dangling neck wear, bracelets, wristwatches, rings, or similar articles shall not be worn by employees.

(5) Employees, whose duties are performed in areas and under circumstances where they are exposed to the danger of moving vehicles, shall wear work vests of highly visible materials, or equivalent distinguishing apparel.

(6) Employers shall ensure that employees wear no less than a short sleeved shirt, long pants, and shoes. Employees shall wear no less than a short sleeved shirt, long pants, and shoes. Shoes shall meet the requirements of WAC 296-155-212.

Note: For additional personal protective and life saving equipment requirements, refer to ((the general safety and health standards, WAC 296-24-075 through 296-24-092)) WAC 296-800-160.

AMENDATORY SECTION (Amending WSR 95-17-036, filed 8/9/95, effective 9/25/95)

WAC 296-155-20301 Definitions. Confined space means a space that:

- (1) Is large enough and so configured that an employee can bodily enter and perform assigned work; and
- (2) Has limited or restricted means for entry or exit (for example, tanks, vessels, silos, storage bins, hoppers, vaults, and pits are spaces that may have limited means of entry); and

(3) Is not designed for continuous employee occupancy.

"Corrosives" means substances which in contact with living tissue cause destruction of the tissue by chemical action.

"Hazardous atmosphere" means an atmosphere that may expose employees to the risk of death, incapacitation, impairment of ability to self-rescue (that is, escape unaided from a permit space), injury, or acute illness from one or more of the following causes:

- (1) Flammable gas, vapor, or mist in excess of ten percent of its lower flammable limit (LFL);
- (2) Airborne combustible dust at a concentration that meets or exceeds its LFL;

Note: This concentration may be approximated as a condition in which the dust obscures vision at a distance of five feet (1.52m) or less.

(3) Atmospheric oxygen concentration below 19.5 percent or above 23.5 percent;

(4) Atmospheric concentration of any substance for which a dose or a permissible exposure limit is published in chapter 296-62 WAC, general occupational health standards, and which could result in employee exposure in excess of its dose or permissible exposure limit;

Note: An atmospheric concentration of any substance that is not capable of causing death, incapacitation, impairment of ability to self-rescue, injury, or acute illness due to its health effects is not covered by this provision.

(5) Any other atmospheric condition that is immediately dangerous to life or health.

Note: For air contaminants for which WISHA has not determined a dose or permissible exposure limit, other sources of information, such as material safety data sheets that comply with the Chemical Hazard Communication Standard, ((chapter

296-62 WAC, Part C)) WAC 296-800-170, published information, and internal documents can provide guidance in establishing acceptable atmospheric conditions.

"Irritants" means substances which on immediate, prolonged, or repeated contact with normal living tissue will induce a local inflammatory reaction.

"Oxygen deficient atmospheres" means atmospheres at sea level having less than 19.5% oxygen by volume or having a partial pressure of 148 millimeters of mercury or less. This may deviate when working at higher altitudes and should be determined for an individual location. Factors such as acclimatization, physical condition of persons involved, etc., must be considered for such circumstances and conditions. (See chapter 296-62 WAC, Part M, permit-required confined spaces.)

"Toxicants" means substances which have the inherent capacity to produce personal injury or illness to persons by absorption through any body surface.

AMENDATORY SECTION (Amending Order 94-07, filed 7/20/94, effective 9/20/94)

WAC 296-155-260 Fire protection. (1) General requirements.

(a) The employer shall be responsible for development of a fire protection program to be followed throughout all phases of construction and demolition work, and the employer shall provide for fire fighting equipment as specified in this part. As fire hazards occur, there shall be no delay in providing necessary equipment.

(b) Access to all available fire fighting equipment shall be maintained at all times.

(c) All fire fighting equipment, provided by the employer, shall be conspicuously located.

(d) All fire fighting equipment shall be periodically inspected by a competent person, and maintained in operating condition. Defective equipment shall be immediately replaced.

(e) As warranted by the project, the employer shall provide a trained and equipped fire fighting organization (fire brigade) to assure adequate protection to life.

(2) Water supply.

(a) A temporary or permanent water supply, of sufficient volume, duration, and pressure, required to properly operate fire fighting equipment shall be made available as soon as combustible materials accumulate.

(b) Where underground water mains are to be provided, they shall be installed, completed, and made available for use as soon as practicable.

(3) Portable fire fighting equipment.

(a) A fire extinguisher, rated not less than 2A, shall be provided for each 3,000 square feet of a combustible building area, or major fraction thereof. Travel distance from any point of the protected area to the nearest fire extinguisher shall not exceed a horizontal distance of 100 feet.

Note: One 55-gallon open drum of water with two fire pails may be substituted for a fire extinguisher having a 2A rating.

(b) A 1/2-inch diameter garden-type hose line, not to exceed 100 feet in length and equipped with a nozzle, may be

substituted for a 2A-rated fire extinguisher, provided it is capable of discharging a minimum of 5 gallons per minute with a minimum hose stream range of 30 feet horizontally. The garden-type hose lines shall be mounted on conventional racks or reels. The number and location of hose racks or reels shall be such that at least one hose stream can be applied to all points in the area.

(c) One or more fire extinguishers, rated not less than 2A, shall be provided on each floor. In multistory buildings, where combustibles are present, at least one fire extinguisher shall be located adjacent to a stairway.

(d) Extinguishers and water drums, subject to freezing, shall be protected from freezing.

(e) A fire extinguisher, rated not less than 10B, shall be provided within 50 feet of wherever more than 5 gallons of

flammable or combustible liquids or 5 pounds of flammable gas are being used on the jobsite. This requirement does not apply to the integral fuel tanks of motor vehicles.

(f) Carbon tetrachloride and other toxic vaporizing liquid fire extinguishers are prohibited.

(g) Portable fire extinguishers shall be inspected periodically and maintained in accordance with Maintenance and Use of Portable Fire Extinguishers, NFPA No. 10A-1981 and ~~((the general safety and health standards, chapter 296-24 WAC, Part G-3))~~ WAC 296-800-300.

(h) Fire extinguishers which have been listed or approved by a nationally recognized testing laboratory, shall be used to meet the requirements of this part. (See Table D-1)

Note: One hundred feet, or less, of 1-1/2 inch hose, with a nozzle capable of discharging water at 25 gallons or more per minute, may be substituted for a fire extinguisher rated not more than 2A in the designated area provided that the hose line can reach all points in the area.

(i) If fire hose connections are not compatible with local fire fighting equipment, the contractor shall provide adapters, or equivalent, to permit connections.

(j) During demolition involving combustible materials, charged hose lines, supplied by hydrants, water tank trucks with pumps, or equivalent, shall be made available.

(4) Fixed fire fighting equipment.

(a) Sprinkler protection.

(i) If the facility being constructed includes the installation of automatic sprinkler protection, the installation shall closely follow the construction and be placed in service as soon as applicable laws permit following completion of each story.

(ii) During demolition or alterations, existing automatic sprinkler installations shall be retained in service as long as reasonable. The operation of sprinkler control valves shall be permitted only by properly authorized persons.

Note: Modification of sprinkler systems to permit alterations or additional demolition should be expedited so that the automatic protection may be returned to service as quickly as possible. Sprinkler control valves shall be checked daily at close of work to ascertain that the protection is in service.

(b) Standpipes. In all structures in which standpipes are required, or where standpipes exist in structures being altered, they shall be brought up as soon as applicable laws permit, and shall be maintained as construction progresses in such a manner that they are always ready for fire protection use. The standpipes shall be provided with Siamese fire department connections on the outside of the structure, at the street level, which shall be conspicuously marked. There shall be at least one standard hose outlet at each floor.

PERMANENT

(5) Fire alarm devices.

(a) An alarm system, e.g., telephone system, siren, etc., shall be established by the employer whereby employees on the site and the local fire department can be alerted for an emergency.

(b) The alarm code and reporting instructions shall be conspicuously posted at phones and at employee entrances.

(6) Fire cutoffs.

(a) Fire walls and exit stairways, required for the completed buildings, shall be given construction priority. Fire doors, with automatic closing devices, shall be hung on openings as soon as practical.

(b) Fire cutoffs shall be retained in buildings undergoing alterations or demolition until operations necessitate their removal.

Reviser's note: RCW 34.05.395 requires the use of underlining and deletion marks to indicate amendments to existing rules. The rule published above varies from its predecessor in certain respects not indicated by the use of these markings.

AMENDATORY SECTION (Amending WSR 95-04-007, filed 1/18/95, effective 3/1/95)

WAC 296-155-407 Protective clothing. (1) General requirements. Employees exposed to the hazards created by welding, cutting, or brazing operations shall be protected by personal protective equipment in accordance with the requirements of chapter 296-24 WAC, ~~((Part A-2 and))~~ Part I and WAC 296-800-160. Appropriate protective clothing required for any welding operation will vary with the size, nature and location of the work to be performed.

(2) Specified protective clothing. Protective means which may be employed are as follows:

(a) Except when engaged in light work, all welders should wear flameproof gauntlet gloves.

(b) Flameproof aprons made of leather, or other suitable material may also be desirable as protection against radiated heat and sparks.

(c) Woolen clothing preferable to cotton because it is not so readily ignited and helps protect the welder from changes in temperature. Cotton clothing, if used, should be chemically treated to reduce its combustibility. All outer clothing such as jumpers or overalls should be reasonably free from oil or grease.

(d) Sparks may lodge in rolled-up sleeves or pockets of clothing, or cuffs of overalls or trousers. It is therefore recommended that sleeves and collars be kept buttoned and pockets be eliminated from the front of overalls and aprons. Trousers or overalls should not be turned up on the outside.

Note: For heavy work, fire-resistant leggings, high boots, or other equivalent means should be used.

(e) In production work a sheet metal screen in front of the worker's legs can provide further protection against sparks and molten metal in cutting operations.

(f) Capes or shoulder covers made of leather or other suitable materials should be worn during overhead welding or cutting operations. Leather skull caps may be worn under helmets to prevent head burns.

(g) Where there is exposure to sharp or heavy falling objects, or a hazard of bumping in confined spaces, hard hats or head protectors shall be used.

AMENDATORY SECTION (Amending Order 74-19, filed 5/6/74)

WAC 296-301-010 Textiles—Application requirements. (1) Application. The requirements of this chapter for textile safety apply to the design, installation, processes, operation, and maintenance of textile machinery, equipment, and other plant facilities in all plants engaged in the manufacture and processing of textiles, except those processes used exclusively in the manufacture of synthetic fibers.

(2) These standards shall be augmented by the Washington state general safety and health standards, and any other regulations of general application which are or will be made applicable to all industries.

(3) The provisions of this chapter shall prevail in the event of conflict with or duplication of, provisions contained in chapter 296-24 WAC, the general safety and health standards ~~((and)),~~ chapter 296-62 WAC, the general occupational health standards, and chapter 296-800 WAC, the safety and health core rule book.

(4) WAC ~~((296-24-006 through))~~ 296-24-012 ~~((of the general safety and health standards,))~~ and 296-800-360 shall apply where applicable to this industry.

AMENDATORY SECTION (Amending WSR 99-17-094 and 99-22-093, filed 8/17/99 and 11/2/99, effective 1/1/00)

WAC 296-301-020 General safety requirements. (1) Means of stopping machines. Every textile machine shall be provided with individual mechanical or electrical means for stopping such machines. On machines driven by belts and shafting a locking-type shifter or an equivalent positive device shall be used. On operations where injury to the operator might result if motors were to restart after power failures, provision shall be made to prevent machines from automatically restarting upon restoration of power.

(2) Handles. Stopping and starting handles shall be designed to the proper length to prevent the worker's hand or fingers from striking against any revolving part, gear guard, or any other part of the machine.

(3) Machine guarding. An employer must ensure that power transmission parts are guarded according to the requirements of WAC 296-24-205 through 296-24-20527.

(4) Housekeeping. Aisles and working spaces shall be kept in good order in accordance with requirements of WAC 296-24-735 through 296-24-73505 and WAC 296-800-220.

(5) Inspection and maintenance. All guards and other safety devices, including starting and stopping devices, shall be properly maintained.

(6) Lighting and illumination. Lighting and illumination shall conform to ~~((the general occupational health standards, chapter 296-62))~~ the safety and health core rule book, WAC 296-800-210.

(7) Identification of piping systems. Identification of piping systems shall conform to American National Standard A13.1-1956.

PERMANENT

(8) Identification of physical hazards. Identification of physical hazards shall be in accordance with the requirements of WAC 296-24-135 through 296-24-13503, of the general safety and health standards.

(9) Steam pipes. All pipes carrying steam or hot water for process or servicing machinery, when exposed to contact and located within seven feet of the floor or working platform shall be covered with a heat-insulating material, or guarded with equivalent protection.

AMENDATORY SECTION (Amending WSR 99-17-094, filed 8/17/99, effective 12/1/99)

WAC 296-301-220 Personal protective equipment.

(1) Personal protective equipment. Workers engaged in handling acids or caustics in bulk, repairing pipe lines containing acids or caustics, etc., shall be provided with personal protective equipment to conform to the requirements of WAC ((296-24-07501 and 296-24-07801)) 296-800-160.

(2) Respiratory protection. Employers must provide respiratory protection as required in chapter 296-62 WAC, Part E.

AMENDATORY SECTION (Amending WSR 00-01-038, filed 12/7/99, effective 2/1/00)

WAC 296-301-215 First aid. The first-aid provisions of ((chapter 296-24 WAC, Part A-1 of the general safety and health standards,)) the safety and health core rule book, WAC 296-800-150 apply within the scope of chapter 296-301 WAC.

AMENDATORY SECTION (Amending Order 74-17, filed 5/6/74)

WAC 296-302-010 Bakery equipment—General requirements. (1) Application. The requirements of this chapter shall apply to the design, installation, operation and maintenance of machinery and equipment used within a bakery.

(2) These standards shall be augmented by the Washington state general safety and health standards, and any other regulations of general application which are or will be made applicable to all industries.

(3) The provisions of this chapter shall prevail in the event of a conflict with, or duplication of, provisions contained in chapters 296-24 ((and)), 296-62, and 296-800 WAC.

(4) WAC ((296-24-006 through)) 296-24-012 ((of the general safety and health standards, chapter 296-24 WAC)) and 296-800-360, shall apply where applicable to this industry.

AMENDATORY SECTION (Amending Order 74-17, filed 5/6/74)

WAC 296-302-02501 General requirements for flour-handling. (1) Wherever any of the various pieces of apparatus comprising a flour-handling system are run in elec-

trical unity with one another the following safeguards shall apply:

(a) Each apparatus shall be safeguarded by a disconnecting means for the motor circuits as required by National Electrical Code - 1971 edition.

(b) Wherever a flour-handling system is of such size that the beginning of its operation is far remote from its final delivery end, all electric motors operating each apparatus comprising this system shall be controlled at each of two points, one located at each remote end, either of which will stop all motors.

(c) Motor control switches shall be capable of being locked in the open position.

(d) Control circuits for magnetic controllers shall be so arranged that the opening of any one of several limit switches, which may be on an individual unit, will serve to de-energize all of the motors of that unit.

(2) Removable covers on all flour-handling equipment shall be so designed that the lifting effort shall not be more than 50 pounds.

(3) Wherever flour-handling systems are of large construction, suitable walkways or platforms or both shall be constructed around and over bins and apparatus, in accordance with the applicable requirements of the general safety and health standard((s)), chapter 296-24 WAC and safety and health core rules, chapter 296-800 WAC.

(a) All walkway surfaces shall be maintained in nonslip condition.

(b) Elevated walkways shall have railings and toeboards in compliance with applicable requirements of the general safety and health standard((s)), chapter 296-24 WAC and safety and health core rules, chapter 296-800 WAC.

(c) All ladders leading to upper walkways shall be in accordance with the applicable requirements of the general safety and health standard((s)), chapter 296-24 WAC and safety and health core rules, chapter 296-800 WAC.

(d) Wherever walkways are near the ceiling construction of the building, where obstruction to head room is lower than normal standing height, methods shall be provided to warn any occupant of the walkway. This should be done by means of "tell tales" or other suitable means located ahead of the obstruction. Suitable signs shall also be placed on walkways warning occupants of possible danger.

(4) All oscillating and vibrating sifters shall be protected with guard rails in compliance with applicable requirements of the general safety and health standard((s)), chapter 296-24 WAC and safety and health core rules, chapter 296-800 WAC.

(5) All mechanical transmission shafting, gearing, and sprocket drives shall be completely guarded, preferably with dust-tight housing. Lubrication fittings shall extend to the outside of the guard.

(6) All guards shall be readily removable.

(7) All flour-handling equipment, each individual unit or the entire system collectively, shall be so constructed that all interior or exterior protruding corners are of a rounded nature.

(8) When Class II hazardous conditions prevail, electric motors, motor controllers, and switches shall be of the type

approved for such locations in accordance with the requirements of the National Electrical Code - 1971 edition.

AMENDATORY SECTION (Amending Order 74-17, filed 5/6/74)

WAC 296-302-050 Miscellaneous equipment. (1)

Proof boxes. All door locks shall be operable both from within and outside the box. Guide rails shall be installed to center the rack as it enters, passes through, and leaves the proof box.

(2) Fermentation room. Fermentation room doors shall have nonshatterable wire glass or plastic panels for vision through doors.

(3) Troughs. Troughs shall be mounted on antifriction bearing casters thus making it possible for the operator to move and direct the motion of the trough with a minimum of effort.

(4) Hand trucks.

(a) Casters shall be set back from corners to be out of the way of toes and heels, but not far enough back to cause the truck to be unstable.

(b) A lock or other device shall be provided to hold the handle in vertical position when the truck is not in use.

(5) Lift trucks. A lock or other device shall be provided to hold the handle in vertical position when the truck is not in use.

(6) Racks.

(a) Sharp splintered or rough corners and edges shall be eliminated.

(b) Racks shall be equipped with handles so located with reference to the frame of the rack that no part of the operator's hands extends beyond the outer edge of the frame when holding onto the handles.

(c) Antifriction bearing casters shall be used to give the operator better control of the rack.

(d) End guards shall be used at shelf levels on proofing racks.

(7) Conveyors.

(a) Wherever a conveyor passes over a main aisleway, regularly occupied work area, or passageway, the underside of the conveyor shall be completely enclosed to prevent broken chains or other material from falling in the passageway or work area.

(b) Stop bumpers shall be installed on all delivery ends of conveyors, wherever manual removal of the product carried is practiced.

(c) All conveyors shall have stop buttons at all operating stations. In addition, emergency stop bars or switches shall be installed at any machine infeed location fed by the conveyor where pinch points exist.

(8) Overhead rail systems.

(a) Handles for operating devices for trolley switches which hang less than 6 feet 8 inches from the floor shall be of pliable material.

(b) Floor scales. Nonshatterable transparent material shall be used to cover dials.

(9) Dough chutes. The entrance to the chute shall be guarded so as to protect the employee from falling into chute,

stepping into chute, or tripping over too low an edge of the chute.

(10) Skids.

(a) All sharp corners or edges shall be eliminated on all metal skids.

(b) All edges and corners shall be protected on skids to prevent exposed splinters.

(11) Ingredient premixers, (~~emulsifiers~~) emulsifiers, etc.

(a) All top openings shall be provided with covers attached to the machines. These covers should be so arranged and interlocked that power will be shutoff whenever the cover is opened to a point where the operator's fingers might come in contact with the beaters.

(b) Portable electrical agitators for ingredient premixers shall have the attachment cord so wired that the agitator will be grounded whenever it is connected to a source of power.

(12) Chain tackle.

(a) All chain tackle shall be marked prominently, permanently, and legibly with maximum load capacity.

(b) All chain tackle shall be marked permanently, and legibly with minimum support specification.

(c) Safety hooks shall be used.

(13) Trough hoists, etc.

(a) All hoists shall be marked prominently, permanently, and legibly with maximum load capacity.

(b) All hoists shall be marked permanently and legibly with minimum support specifications.

(c) Safety catches shall be provided for the chain so that the chain will hold the load in any position.

(d) Safety hooks shall be used.

(14) Air-conditioning units.

(a) All sharp corners and edges shall be eliminated.

(b) On large units with doors to chambers large enough to be entered, all door locks shall be operable from both inside and outside.

(15) Pan washing tanks.

(a) Counter-balanced hinged covers, or sliding covers, shall be provided.

(b) The surface of the floor of the working platform shall be maintained in nonslip condition.

(c) Working platforms shall be kept at least 32 inches below the top of the tank or guardrail.

(d) All electrical sockets in pan washing rooms shall be nonmetallic and keyless and other electrical equipment shall be moisture proof.

(e) Power ventilated exhaust hoods shall be provided over the tanks.

(16) Pan washing machines. Sharp corners and edges shall be eliminated.

(17) Cake depositors. All pinch points shall be eliminated, guarded, or shielded so that hands and arms cannot reach these pinch points while the machine is in operation.

(18) Icing machines. All pinch points shall be eliminated, or provided with guards or shields so hands and arms cannot reach these pinch points while the machine is in operation.

(19) Bread coolers, conveyor type.

(a) All pinch points shall be eliminated or guarded.

(b) Stop bumpers on all delivery ends of conveyors shall be installed wherever manual removal of the product carried is practiced.

(20) Bread coolers, rack type.

(a) Guardrails shall be installed to the center rack as it enters and leaves the cooler.

(b) All door locks shall be operable from both within and outside the cooler.

(21) Bread and cake boxes, trays, etc.

(a) Sharp corners and edges shall be eliminated on metal parts.

(b) All wooden corners and edges shall be protected to prevent splinters.

(22) Doughnut machines. Separate flues shall be provided, (a) for venting vapors from the frying section, and (b) for venting products of combustion from the combustion chamber used to heat the fat.

(23) Open fat kettles.

(a) The floor around kettles shall be maintained in non-slip condition.

(b) Fire extinguishing devices suitable for Class-B fires shall be provided. See ~~((general safety and health standards,))~~ WAC ~~((296-24-590))~~ 296-800-300, fire extinguishers.

(c) Goggles or face shields shall be provided to prevent injuries from hot fat splashes.

(d) The top of the kettle shall be not less than 36 inches above floor or working level.

(24) Steam kettles.

(a) Positive locking devices shall be provided to hold kettles in the desired position.

(b) Kettles with steam jackets shall be provided with safety valves in accordance with the ASME Pressure Vessel Code, section VIII, Unfired Pressure Vessels, 1968.

AMENDATORY SECTION (Amending Order 74-17, filed 5/6/74)

WAC 296-302-060 Biscuit and cracker equipment.

(1) Meal, peanut, and fig grinders.

(a) If the hopper is removable it shall be provided with an electric interlock so that the machine cannot be put in operation when the hopper is removed.

(b) Where grid guards cannot be used, feed conveyors to hoppers, or baffle-type hoppers, shall be provided. Hoppers in such cases shall be enclosed and provided with hinged covers, and equipped with electric interlock to prevent operation of the machine with the cover open.

(2) Sugar and spice pulverizers.

(a) All drive belts used in connection with sugar and spice pulverizers shall be grounded by means of metal combs or other effective means of removing static electricity. All pulverizing of sugar or spice grinding shall be done in accordance with NFPA 62-1967 (Standard for Dust Hazards of Sugar and Cocoa), NFPA 656-1959 (Standard for Dust Hazards in Spice Grinding Plants).

(b) Magnetic separators shall be provided to reduce fire and explosion hazards.

(3) Cheese, fruit, and food cutters. These machines shall be protected in accordance with the requirements of (1) of this section.

(4) Jam, icing, and marshmallow beaters of horizontal tub type. All top openings shall be provided with covers attached to the machines.

(5) Reversible dough brakes. Reversible brakes shall be provided with a guard or tripping mechanism on each side of the rolls. These guards shall be so arranged as to stop the machine or reverse the direction of the rolls so that they are outrunning if the guard is moved by contact of the operator.

(6) Cross-roll brakes. Cross-roll brakes shall be provided with guards that are similar in number and equal in effectiveness to guards on hand-fed brakes.

(7) Box- and roll-type dough sheeters.

(a) Sheetting rolls shall be guarded at the point where the dough enters the rolls so that the operator's fingers cannot get into the nip point.

(b) Hoppers for sheeters shall have an automatic stop bar or automatic stopping device along the back edge of the hopper. If construction does not permit location at the back edge, the automatic stop bar or automatic stopping device shall be located where it will be most effective to accomplish the desired protection.

(8) Cutting and panning, embossing, peeling, bar, and frutana machines.

(a) Roll stands, other than hand fed, shall be guarded at the point where the dough enters the rolls so that the operator's fingers cannot get into the nip points.

(b) Guards shall be provided at each side of the cutter to prevent hands from getting under the cutter.

(c) Reciprocating panner heads shall be guarded to protect the operator from being caught between moving and stationary parts.

(d) Motor control buttons shall be located within view of the cutting head.

(9) Rotary, die machines, pretzel rolling, and pretzel-stick extruding machines. Dough hoppers shall have the entire opening protected with grid-type guards to prevent the employee from getting his hands caught in moving parts, or the hopper shall be extended high enough so that the operator's hands cannot get into moving parts.

(10) Band ovens. Band ovens shall be so arranged, or guarded, that the operator cannot get caught at the nip point between the band and the drive pulley or the takeup pulley, or between the oven conveyor and the oven frame.

(11) Wafer-cutting machines. These machines shall be so guarded that it will be impossible for employee's fingers or hands to come in contact with the saws or knives while feeding the machine.

(12) Pan cooling towers.

(a) Where pan cooling towers extend to two or more floors, a lockout switch shall be provided on each floor in order that mechanics working on the tower may positively lock the mechanism against starting. Only one start switch shall be used in the motor control circuit.

(b) All unused sides of pan cooling tower conveyors shall be enclosed or effectively guarded to a height of 7 feet above each floor.

(c) Wherever a pan cooling tower conveyor passes through a floor, the opening shall be protected by a standard railing and toeboard as defined by the general safety and health standard((s)), chapter 296-24 WAC and safety and

health core rules, chapter 296-800 WAC, or by other equivalent protection.

(d) Wherever a pan conveyor passes over a main aisleway, regularly occupied work area, or passageway, the underside of the conveyor shall be completely enclosed to prevent pans, broken chains, or other material from falling in the aisleway, work area or passageway.

(e) Sprocket wheels of pan conveyors shall be enclosed so that accidental contact cannot be made at the point where the chain comes in contact with the sprocket.

(f) Wherever conveyor bars, flights, and attachments pass in opposite directions within 6 inches of each other, a sheet metal partition or screen with openings no larger than one-half inch shall be placed between the conveyor chains which run in opposite directions.

(13) Chocolate melting, refining, and mixing kettles. Each kettle shall be provided with a cover to enclose the top of the kettle. The bottom outlet of each kettle shall be of such size and shape that the operator cannot reach in to touch the revolving paddle or come in contact with the shear point between the paddle and the side of the kettle.

(14) Caddie, cover, and box stitchers (wire stitchers). A guard shall be mounted on the stitching head to prevent operators from getting fingers caught between the stitching head and the clincher block.

(15) Carton-wrapping and bundling machines. The end seal drums on carton and bundling machines shall be provided with guards.

(16) Carton and lining feeding machines. Cutting knives shall be provided with a hinged hood to cover the knives. These guards shall be electrically interlocked to stop the machine if they are removed.

(17) Peanut cooling trucks. Mechanically operated peanut cooling trucks shall have a grid-type cover over the entire top.

AMENDATORY SECTION (Amending Order 74-17, filed 5/6/74)

WAC 296-302-06513 Oil-burning equipment. (1) The storage and distribution of fuel oil in bakeries shall be arranged according to reference NFPA 31-1968 Standard for Installation of Oil Burning Equipment.

(2) Oil burners shall be of a type approved by Underwriters' Laboratories, Inc. (See WAC ~~((296-24-006, of the general safety and health standards))~~ 296-800-360, using standards from outside organizations.)

(a) Each oil burner shall be equipped with an electric ignition or gas pilot.

(b) Oil burners shall be protected against flame failure and overflowing of oil by a quick-acting combustion safeguard operated by the main burner flame. The time interval between flame failure and fuel shutoff shall be short enough to prevent a dangerous accumulation of an explosive mixture or the entry of a dangerous amount of fuel oil into the heating system; with the exception that on ovens requiring 150,000 b.t.u. per hour or less any combustion safeguard listed by the Underwriters Laboratories, Inc., may be used. (See WAC 296-24-006, of the general safety and health standards.)

(c) The shutting off of the fuel supply shall be accomplished by stopping the individual burner pump equipped with a pressure cutoff valve, or by closing a suitable valve.

(d) Oil-fired ovens shall have dampers so arranged that a small amount of air is passed through the furnace at all times.

(e) Oil burners capable of being withdrawn from the furnace (for adjustment, etc.) shall be provided with an interlock which will prevent the burner from starting when in the withdrawn position.

(f) Preheating of oil, where necessary, shall be done by steam, hot water, or electric heater, and shall be thermostatically controlled. Heaters shall be substantially constructed with all joints made oil tight. Thermometers shall be installed at accessible locations to indicate the temperature of the heated oil. Heaters shall be bypassed or provided with means to prevent abnormal pressure.

(g) Oil burners equipped with mechanical means for supplying air shall have an interlock between the air pressure and the oil supply so that the burner cannot operate unless air for proper combustion is available.

(3) High-pressure atomizing oil burners shall be provided with a pressure cutoff valve between the pump and the nozzle.

(4) Air atomizing burners equipped with maximum-minimum or modulating controls, and which are arranged to have the ignition turned off after initial lighting has been accomplished, shall be equipped with a quick-acting flame safeguard directly actuated by the main flame of the burner.

(5) Mechanical atomizing burners of the rotary type shall be operated on the on-off principle and shall be equipped with safeguards actuated by the main flame.

(6) Evaporator-type burners shall be installed in such a way that provision is made to open the draft damper before oil can be admitted to the burners.

(7) Burners supplied by "vapofiers" shall be equipped with a protected gas or electric pilot. In combination vapofier-gas heating systems, the burner shall be protected in accordance with the requirements of WAC 296-302-06509.

AMENDATORY SECTION (Amending Order 74-18, filed 5/6/74)

WAC 296-303-01001 General industrial safety standards. (1) General. These standards shall be augmented by the Washington state general safety and health standards, and any other regulations of general application which are or will be made applicable to all industries.

(2) Additional requirements. The employer shall comply with the provisions of the standards referenced in this section. In the event of any conflict between this section and WAC 296-303-015 through 296-303-040, the requirements of WAC 296-303-015 through 296-303-040 shall apply. The provisions of this chapter shall prevail in the event of conflict with, or duplication of, provisions contained in chapters 296-24 ~~((and)),~~ 296-62, and 296-800 WAC.

(a) Industrial lighting. American National Standard Practice for Industrial Lighting, ANSI A11.1-1965 (R-1970).

(b) Floor and wall openings, railings, and toeboards. American National Standard Safety Requirements for Floor

and Wall Openings, Railings, and Toeboards, ANSI A13.1-1956.

(c) Identification of piping systems. American National Standard Safety Standard for Mechanical Power Transmission Apparatus, ANSI A13.1-1956.

(d) Mechanical power transmission apparatus. American National Standard Safety Standard for Mechanical Power Transmission Apparatus, ANSI B15.1-1971.

(e) Pressure piping—Power piping. American National Standard Code for Pressure Piping—Power Piping, ANSI B31.1.0-1967. Addenda to the American National Standard Code for Pressure Piping—Power Piping, ANSI B31.1.0a-1969.

(f) Sanitation. American National Standard Requirements for Sanitation in Places of Employment, ANSI Z4.1-1968.

(g) Local exhaust systems. American National Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems, ANSI Z9.2-1960.

(h) Gas appliances and gas piping. American National Standard for the Installation of Gas Appliances and Gas Piping, ANSI Z21.30-1964.

(3) WAC ((~~296-24-006 through~~)) 296-24-012 ((~~of the general safety and health standards, chapter 296-24 WAC,~~)) and 296-800-360 shall apply where applicable to this industry.

AMENDATORY SECTION (Amending WSR 98-02-006, filed 12/26/97, effective 3/1/98)

WAC 296-304-010 Scope and application. (1) The provisions and standards of the general safety and health standards, chapters 296-24 ((~~and~~)), 296-62 and 296-800 WAC, and such other codes and standards as are promulgated by the department of labor and industries which are applicable to all industries, shall be applicable in the ship repairing, shipbuilding, or shipbreaking industries whenever the employees are covered under the Washington State Industrial Safety and Health Act, chapter 49.17 RCW. The rules of this chapter and the rules of the aforementioned chapters 296-24 ((~~and~~)), 296-62, and 296-800 WAC are applicable to all ship repairing, shipbuilding, and shipbreaking industries and operations, provided that such rules shall not be applicable to those operations under the exclusive safety jurisdiction of the federal government.

(2) The responsibility for compliance with these regulations is placed upon "employers" as defined in WAC 296-304-01001.

(3) It is not the intent of these regulations to place additional responsibilities or duties on owners, operators, agents or masters of vessels unless such persons are acting as employers, nor is it the intent of these regulations to relieve such owners, operators, agents or masters of vessels from responsibilities or duties now placed upon them by law, regulation or custom.

(4) The responsibilities placed upon the competent person herein shall be deemed to be the responsibilities of the employer.

AMENDATORY SECTION (Amending WSR 98-02-006, filed 12/26/97, effective 3/1/98)

WAC 296-304-06013 Health and sanitation. "Hazardous material" - A material with one or more of the following characteristics:

- Has a flash point below 140°F, closed cup, or is subject to spontaneous heating;
- Has a threshold limit value below 500 p.p.m. in the case of a gas or vapor, below 500 mg./m.3 for fumes, and below 25 m.p.p.c.f. in case of a dust;
- Has a single dose oral LD50 below 500 mg./kg.;
- Is subject to polymerization with the release of large amounts of energy;
- Is a strong oxidizing or reducing agent;
- Causes first degree burns to skin in short time exposure, or is systematically toxic by skin contact; or
- In the course of normal operations, may produce dusts, gases, fumes, vapors, mists, or smokes that have one or more of the above characteristics.

(1) No chemical product, such as a solvent or preservative; no structural material, such as cadmium or zinc coated steel, or plastic material; and no process material, such as welding filler metal; which is a hazardous material may be used until the employer has ascertained the potential fire, toxic, or reactivity hazards which are likely to be encountered in the handling, application, or utilization of such a material.

(2) In order to ascertain the hazards, as required by subsection (1) of this section, the employer shall obtain the following items of information which are applicable to a specific product or material to be used:

(a) The name, address, and telephone number of the source of the information specified in this section preferably those of the manufacturer of the product or material.

(b) The trade name and synonyms for a mixture of chemicals, a basic structural material, or for a process material; and the chemical name and synonyms, chemical family, and formula for a single chemical.

(c) Chemical names of hazardous ingredients, including, but not limited to, those in mixtures, such as those in: (i) Paints, preservatives, and solvents; (ii) alloys, metallic coatings, filler metals and their coatings or core fluxes; and (iii) other liquids, solids, or gases (e.g., abrasive materials).

(d) An indication of the percentage, by weight or volume, which each ingredient of a mixture bears to the whole mixture, and of the threshold limit value of each ingredient, in appropriate units.

(e) Physical data about a single chemical or a mixture of chemicals, including boiling point, in degrees Fahrenheit; vapor pressure, in millimeters of mercury; vapor density of gas or vapor (air=1); solubility in water, in percent by weight; specific gravity of material (water=1); percentage volatile, by volume, at 70°F.; evaporation rate for liquids (either butyl acetate or ether may be taken as 1); and appearance and odor.

(f) Fire and explosion hazard data about a single chemical or a mixture of chemicals, including flashpoint, in degrees Fahrenheit; flammable limits, in percent by volume in air; suitable extinguishing media or agents; special fire fighting procedures; and unusual fire and explosion hazard information.

(g) Health hazard data, including threshold limit value, in appropriate units, for a single hazardous chemical or for the individual hazardous ingredients of a mixture as appropriate, effects of overexposure; and emergency and first aid procedures.

(h) Reactivity data, including stability, incompatibility, hazardous decomposition products, and hazardous polymerization.

(i) Procedures to be followed and precautions to be taken in cleaning up and disposing of materials leaked or spilled.

(j) Special protection information, including use of personal protective equipment, such as respirators, eye protection, and protective clothing, and of ventilation, such as local exhaust, general, special, or other types.

(k) Special precautionary information about handling and storing.

(l) Any other general precautionary information.

(3) The pertinent information required by subsection (2) of this section shall be recorded either on United States Department of Labor Form LSB 00S-4, Material Safety Data Sheet, or on an essentially similar form which has been approved by the department of labor and industries. Copies of Form LSB 00S-4 may be obtained at any of the following regional offices of the occupational safety and health administration:

(a) Pacific region. (Arizona, California, Hawaii, and Nevada.)

10353 Federal Building, 450 Golden Gate Avenue, Box 36017, San Francisco, Calif. 94102.

(b) Region X, OSHA, (Alaska, Washington, Idaho, and Oregon), Federal Office Building, 909 First Avenue, Seattle, Washington 98174.

A completed MSDS form shall be preserved and available for inspection for each hazardous chemical on the work-site.

(4) The employer shall instruct employees who will be exposed to the hazardous materials as to the nature of the hazards and the means of avoiding them.

(5) The employer shall provide all necessary controls, and the employees shall be protected by suitable personal protective equipment against the hazards identified under subsection (1) of this section and those hazards for which specific precautions are required in WAC 296-304-020 through 296-304-04013.

(6) The employer shall provide adequate washing facilities for employees engaged in the application of paints or coatings or in other operations where contaminants can, by ingestion or absorption, be detrimental to the health of the employees. The employer shall encourage good personal hygiene practices by informing the employees of the need for removing surface contaminants by thorough washing of hands and face prior to eating or smoking.

(7) The employer shall not permit eating or smoking in areas undergoing surface preparation or preservation or where shiprepairing, shipbuilding, or shipbreaking operations produce atmospheric contamination.

(8) The employer shall not permit employees to work in the immediate vicinity of uncovered garbage and shall ensure that employees working beneath or on the outboard side of a

vessel are not subject to contamination by drainage or waste from overboard discharges.

(9) Requirements of (~~chapter 296-62 WAC, Part C~~) WAC 296-800-170, Chemical hazard communication program, will apply to shiprepairing, shipbuilding, and shipbreaking when potential hazards of chemicals and communicating information concerning hazards and appropriate protective equipment is applicable to an operation.

AMENDATORY SECTION (Amending WSR 99-05-080, filed 2/17/99, effective 6/1/99)

WAC 296-305-01003 Scope and application. (1) The rules of this chapter shall apply with respect to any and all activities, operations and equipment of employers and employees involved in providing fire protection services which are subject to the provisions of the Washington Industrial Safety and Health Act of 1973 (chapter 49.17 RCW).

(2) The provisions of this chapter apply to all fire fighters and their work places, including the fire combat scene. Although enforcement of applicable standards will result from provable violations of these standards at the fire combat scene, agents of the department will not act in any manner that will reduce or interfere with the effectiveness of the emergency response of a fire fighting unit. Activities directly related to the combating of a fire will not be subjected to the immediate restraint provisions of RCW 49.17.130.

(3) In the development of this document many consensus standards of the industry were considered and evaluated as to adaptability to the Washington state fire service industry. Where adaptable and meaningful, the fire fighter safety elements of these standards were incorporated into this WAC. Chapter 296-305 WAC, shall be considered as the fire fighter safety standards for the state of Washington.

(4) The provisions of this chapter cover existing requirements that apply to all fire departments. All fire departments shall have in place their own policy statement and operating instructions that meet or exceed these requirements. This chapter contains state and/or federal performance criteria that fire departments shall meet.

(5) Unless specifically stated otherwise by rule, if a duplication of regulations, or a conflict exists between the rules regulating wildland fire fighting and other rules in the chapter, only the rules regulating wildland fire fighting shall apply to wildland fire fighting activities and equipment.

(6) The provisions of this chapter shall be supplemented by the provisions of the general safety and health standards of the department of labor and industries, chapters 296-24 (including Part G-2, Fire protection) (~~and~~), 296-62 and 296-800 WAC. In the event of conflict between any provision(s) of this chapter and any provision(s) of the general safety and health standards, the provision(s) of this chapter shall apply.

(7) The provisions of this standard do not apply to industrial fire brigades, as defined in this chapter. Industrial fire brigades are covered under the provisions of chapter 296-24 WAC, Part G-2, Fire protection.

AMENDATORY SECTION (Amending WSR 99-05-080, filed 2/17/99, effective 6/1/99)

WAC 296-305-01005 Definitions. Unless the context indicates otherwise, words used in this chapter shall have the meaning given in this section.

Accident: An unexpected event that interrupts or interferes with the orderly progress of the fire department operations and may or may not include personal injury or property damage.

Accountability system: A system of fire fighter accountability that provides for the tracking and inventory of all members.

ACGIH: American Conference of Governmental Industrial Hygienists.

Aerial ladder: A ladder mounted on top of an apparatus, hydraulic or pneumatic controlled.

Aerial tower: Telescopic elevating platform or water tower assembly usually with a ladder on top of the section.

Aerial platform: A device consisting of two or more booms or sections with a passenger carrying platform assembly.

ANSI: American National Standards Institute.

Apparatus: A mobile piece of fire equipment such as a pumper, aerial, tender, automobile, etc.

Approved:

(1) A method, equipment, procedure, practice, tool, etc., which is sanctioned, consented to, confirmed or accepted as good or satisfactory for a particular purpose or use by a person, or organization authorized to make such a judgment.

(2) Means approved by the director of the department of labor and industries or his/her authorized representative: Provided, however, That should a provision of this chapter state that approval by an agency or organization other than the department of labor and industries is required, such as Underwriters' Laboratories or the Bureau of Mines, the provisions of chapter ((296-24)) 296-800 WAC((Part A-1,)) shall apply.

Audiogram: A chart, graph, or table resulting from an audiometric test showing an individual's hearing threshold levels as a function of frequency.

Authorized person: A person approved or assigned by the employer to perform a specific type of duty or duties or to be at a specific location or locations at the job site.

Beacon: A flashing or rotating light.

Bloodborne pathogens: Pathogenic microorganisms that are present in human blood and can cause disease in humans. These pathogens include, but are not limited to, hepatitis B virus (HBV) and human immunodeficiency virus (HIV).

Blowup (wildfire): Sudden increase in fire intensity or rate of spread sufficient to preclude direct control or to upset existing control plans. Often accompanied by violent convection and may have other characteristics of a fire storm.

Chemical-protective clothing: Items made from chemical-resistive materials, such as clothing, hood, boots, and gloves, that are designed and configured to protect the wearer's torso, head, arms, legs, hands, and feet from hazardous materials. Chemical-protective clothing (garments) can

be constructed as a single, or multi-piece, garment. The garment may completely enclose the wearer either by itself or in combination with the wearer's respiratory protection, attached or detachable hood, gloves, and boots.

Chief: The employer representative highest in rank who is responsible for the fire department's operation.

Combat scene: The site where the suppression of a fire or emergency exists.

Confinement: Those procedures taken to keep a material in a defined or local area.

Confined space: Means a space that:

(1) Is large enough and so configured that an employee can bodily enter and perform assigned work; and

(2) Has limited or restricted means for entry or exit (for example, tanks, vessels, silos, storage bins, hoppers, vaults, and pits are spaces that may have limited means of entry.); and

(3) Is not designed for continuous employee occupancy.

Containment: The actions taken to keep a material in its container (e.g. stop the release of the material or reduce the amount being released.)

Contaminated: The presence or the reasonably anticipated presence of nuisance materials foreign to the normal atmosphere, blood, hazardous waste, or other potentially infectious materials on an item or surface.

Contaminated laundry: Laundry which has been soiled with blood or other potentially infectious materials or may contain contaminated sharps.

Contamination: The process of transferring a hazardous material from its source to people, animals, the environment, or equipment, which may act as a carrier.

dBA: A measure of noise level expressed as decibels measured on the "A" scale.

Deck pipe: A permanently mounted device which delivers a large stream of water.

Decontamination:

(1) The physical or chemical process of reducing and preventing the spread of contamination from persons or equipment used at a hazardous materials incident.

(2) The use of physical or chemical means to remove, inactivate, or destroy bloodborne pathogens on a surface or item to the point where they are no longer capable of transmitting infectious particles and the surface or item is rendered safe for handling, use, or disposal.

Department: Department of labor and industries.

Director of fire department: The chief or principle administrator of the fire department.

Director: The director of the department of labor and industries, or his/her designated representative.

Disinfection: A procedure which inactivates virtually all recognized pathogenic microorganisms, but not necessarily all microbial forms (example: bacterial endospores) on inanimate objects.

Drill tower: A structure which may or may not be attached to the station and which is principally used for training fire fighters in fire service techniques.

Driver: A person having satisfactorily completed the fire department's "requirements of driver" of a specific piece of fire apparatus.

Emergency: A sudden and unexpected event calling for immediate action.

Emergency incident: A specific emergency operation.

Emergency medical care: The provision of treatment to, and/or transportation of, patients which may include first-aid, cardiopulmonary resuscitation, basic life support, advanced life support, and other medical procedures that occur prior to arrival at a hospital or other health care facility.

Emergency operations: Activities of the fire department relating to rescue, fire suppression, emergency medical care, and special operations, including response to the scene of an incident and all functions performed at the scene.

Employee: An employee of an employer who is employed in the business of his/her employer whether by way of manual labor or otherwise and every person in this state who is engaged in the employment of or who is working under an independent contract the essence of which is their personal labor for an employer under this chapter whether by way of manual labor or otherwise. Also see "Member."

Employer: Any person, firm, corporation, partnership, business trust, legal representative, or other business entity which engages in any business, industry, profession, or activity in this state and employs one or more employees or who contracts with one or more persons, the essence of which is the personal labor of such person or persons and includes the state, counties, cities, and all municipal corporations, public corporations, political subdivisions of the state, and charitable organizations.

Employer representative: A fire department officer authorized by the chief or director of the fire department to act in his/her behalf.

Engine (pumper): A piece of apparatus equipped with hose and a pump for the purpose of supplying water under pressure through hose lines.

Engineering control: Any procedure other than an administrative control that reduces exposures by modifying the source or reducing the exposure to an individual. Examples of engineering controls include the use of isolation, containment, encapsulation, sound absorbing materials for noise control, and ventilation.

Explosion proof equipment: Equipment enclosed in a case that is capable of withstanding an explosion or a specified gas or vapor which may occur within it and of preventing the ignition of a specified gas or vapor surrounding the enclosure by sparks, flashes, or explosion of the gas or vapor within, and which operates at such an external temperature that it will not ignite a surrounding flammable atmosphere.

Fastest means available: The (nearest-closest) telephone, portable radio, mobile radio, telephone/radio dispatcher or any other mode of mechanical communication.

Fire apparatus: A fire department emergency vehicle used for rescue, fire suppression, or other specialized functions.

Fire boat: A fire department watercraft having a permanent, affixed fire fighting capability.

Fire combat training: Training received by fire fighters on the drill ground, drill tower, or industrial site to maintain the fire fighter's proficiency.

Fire department: An organization providing any or all of the following: Rescue, fire suppression, and other related activities. For the purposes of this standard the term "Fire Department" shall include any public, private, or military organization engaging in this type of activity.

Fire department facility: Any building or area owned, operated, occupied, or used by a fire department on a routine basis. This does not include locations where a fire department may be summoned to perform emergency operations or other duties, unless such premises are normally under the control of the fire department.

Fire department safety officer: The member of the fire department assigned and authorized as the principal safety officer to perform the duties and responsibilities specified in this standard.

Fire fighter: A member of a fire department whose duties require the performance of essential fire fighting functions or substantially similar functions.

Fire retardant: Any material used to reduce, stop or prevent the flame spread.

Fly: Extendible sections of ground or aerial ladders.

Foot stand, ladder: Devices attached to inside of beams of ladders that when folded down, provide foot space.

Ground jack: Heavy jacks attached to frame of chassis of aerial-equipped apparatus to provide stability when the aerial portion of the apparatus is used.

Ground mobile attack: The activities of wildland fire fighting with hose lines being used by personnel working around a moving engine. See mobile attack.

Guideline: An organizational directive that establishes a standard course of action.

Halyard: Rope used on extension ladders for the purpose of raising or lowering fly section(s). A wire cable may be referred to as a halyard when used on the uppermost fly section(s) of three or four section extension ladders.

Hazard communication program: A procedure to address comprehensively the issue of evaluating the potential hazards of chemicals and communicating information concerning hazards and appropriate protective measures to employees. See ((~~chapter 296-62 WAC, Part C~~)) WAC 296-800-170, Chemical Hazard Communication(s) Program.

Hazardous area: The immediate area where members might be exposed to a hazard.

Hazardous atmosphere: Any atmosphere, either immediately or not immediately dangerous to life or health, which is oxygen deficient or which contains a toxic or disease-producing contaminant.

Hazardous condition: The physical condition or act which is causally related to accident occurrence. The hazardous condition is related directly to both the accident type and the agency of the accident.

Hazardous material: A substance (solid, liquid, or gas) that when released is capable of creating harm to people, the environment, and property.

Hazardous substances: Substances that present an unusual risk to persons due to properties of toxicity, chemical activity, corrosivity, etiological hazards of similar properties.

HEPA filtration: High efficiency particulate air filtration found in vacuum system capable of filtering 0.3 micron particles with 99.97% efficiency.

Hose bed: Portion of fire apparatus where hose is stored.

Hose tower: A vertical enclosure where hose is hung to dry.

Hot zone: Area immediately surrounding a hazardous materials incident, which extends far enough to prevent adverse effects from hazardous materials releases to personnel outside the zone. This zone is also referred to as the exclusion zone or the restricted zone in other documents.

Identify: To select or indicate verbally or in writing using recognized standard terms. To establish the identity of; the fact of being the same as the one described.

IDLH: Immediately dangerous to life and health.

Imminent hazard (danger): An act or condition that is judged to present a danger to persons or property and is so immediate and severe that it requires immediate corrective or preventative action.

Incident commander: The person in overall command of an emergency incident. This person is responsible for the direction and coordination of the response effort.

Incident command system (ICS): A system that includes: Roles, responsibilities, operating requirements, guidelines and procedures for organizing and operating an on-scene management structure.

Incipient (phase) fire: The beginning of a fire; where the oxygen content in the air has not been significantly reduced and the fire is producing minute amounts of water vapor, carbon dioxide, carbon monoxide and other gases; the room has a normal temperature and can be controlled or extinguished with a portable fire extinguisher or small hose, e.g., a kitchen stove fire.

Industrial fire brigade: An organized group of employees whose primary employment is other than fire fighting who are knowledgeable, trained and skilled in specialized operations based on site-specific hazards present at a single commercial facility or facilities under the same management.

Initial stage (initial action): Shall encompass the control efforts taken by resources which are first to arrive at an incident.

Injury: Physical damage suffered by a person that requires treatment by a practitioner of medicine (a physician, nurse, paramedic or EMT) within one year of the incident regardless of whether treatment was actually received.

Interior structural fire fighting: The physical activity of fire suppression, rescue or both, inside of buildings or enclosed structures which are involved in a fire situation beyond the incipient stage. See structural fire fighting.

Life safety or rescue rope: Rope dedicated solely for the purpose of constructing lines for supporting people during rescue, fire fighting, or other emergency operations, or during training evolutions.

Line: Rope when in use.

Live fire training: Any fire set within a structure, tank, pipe, pan, etc., under controlled conditions to facilitate the training of fire fighters under actual fire conditions.

Locking in: The act of securing oneself to a ladder by hooking a leg over a rung and placing top of foot against the other leg or against the ladder.

Manned station: See staffed station.

May: A permissive use or an alternative method to a specified requirement.

Member: A person involved in performing the duties and responsibilities of a fire department under the auspices of the organization. A fire department member may be a full-time or part-time employee or a paid or unpaid volunteer, may occupy any position or rank within the fire department, and engages in emergency operations. Also see Employee.

Mobile attack: The act of fighting wildland fires from a moving engine.

Monitor: A portable appliance that delivers a large stream of water.

Mop up: The act of making a wildfire/wildland fire safe after it is controlled, such as extinguishing or removing burning materials along or near the control line, felling snags, trenching logs to prevent rolling.

NFPA: National Fire Protection Association.

NIIMS: National Interagency Incident Management System.

NIOSH: National Institute of Occupational Safety and Health.

Nondestructive testing: A test to determine the characteristics or properties of a material or substance that does not involve its destruction or deterioration.

Nonskid: The surface treatment that lessens the tendency of a foreign substance to reduce the coefficient of friction between opposing surfaces.

Occupational exposure: Means reasonably anticipated skin, eye, mucous membrane or parenteral contact with blood or other potentially infectious materials that may result from the performance of an employee's duties.

Officer: (1) Person in charge of a particular task or assignment.

(2) A supervisor.

OSHA: Occupational Safety and Health Administration.

Other potentially infectious materials (OPIM): (1) The following body fluids: Semen, vaginal secretions, cerebrospinal fluid, synovial fluid, pleural fluid, pericardial fluid, peritoneal fluid, amniotic fluid, saliva in dental procedures, any body fluid that is visibly contaminated with blood, and all body fluids in situations where it is difficult or impossible to differentiate between body fluids;

(2) Any unfixed tissue or organ (other than intact skin) from a human (living or dead); and

(3) HIV-containing cell or tissue cultures, organ cultures, and HIV-or HBV-containing culture medium or other solutions; and blood, organs, or other tissues from experimental animals infected with HIV or HBV.

Outrigger: Manually or hydraulically operated metal enclosures and jacks which are extended and placed in contact with the ground to give the apparatus a wide, solid base to support different loads.

Overhauling: That portion of fire extinguishment involving discovery of hidden fires or smoldering material.

PASS: Personal alert safety system.

PEL: Permissible exposure limit.

Personal protective equipment (PPE): (1) The equipment provided to shield or isolate a person from the chemical, physical, and thermal hazards that may be encountered at a hazardous materials incident. Personal protective equipment includes both personal protective clothing and respiratory protection. Adequate personal protective equipment should protect the respiratory system, skin, eyes, face, hands, feet, head, body, and hearing.

(2) Specialized clothing or equipment worn by an employee for protection against a hazard. General work clothes (e.g., uniforms, pants, shirts, or blouses) not intended to function as protection against a hazard are not considered to be personal protective equipment.

Place of employment: Any premises, room or other place where an employee or employees are employed for the performance of labor or service over which the employer has the right of access or control. For the purposes of this code, fireground and emergency scenes are also considered places of employment.

Platform: The portion of a telescoping or articulating boom used as a working surface.

Positive communication: Visual, audible, physical, safety guide rope, or electronic means which allows for two way message generation and reception.

PPE: Personal protective equipment.

Prefire training: The training of fire fighters in recognizing sources and locations of potential fires and the method of fire combat to be used.

Probable fatality: (1) An occupational injury or illness, which, by the doctor's prognosis, could lead to death.

(2) An occupational injury or illness, which by its very nature, is considered life threatening.

Protective clothing: Equipment designed to protect the wearer from heat and/or hazardous materials contacting the skin or eyes. Protective clothing is divided into five types:

- (1) Structural fire fighting protective clothing;
- (2) Liquid splash-protective clothing;
- (3) Vapor-protective clothing;
- (4) High temperature-protective proximity clothing; and
- (5) Wildland fire fighting clothing.

Note: See Protective ensemble.

Protective ensemble: Multiple elements of clothing and equipment designed to provide a degree of protection for fire fighters from adverse exposures to the inherent risks of structural fire fighting operations and certain other emergency operations. The elements of the protective ensemble are helmets, coats, trousers, gloves, footwear, interface components (hoods), and if applicable, personal alert system (PASS) devices, and self-contained breathing apparatus.

Proximity protective clothing: Radiant reflective protective garments configured as a coat and trousers, or as a coverall, and interface components that are designed to provide protection for the fire fighter's body from conductive, convective, and radiant heat.

Pumper: See engine.

Qualified: One who by possession of a recognized degree, certificate or professional standing, or who by knowledge, training or experience has successfully demonstrated his/her ability to solve or resolve problems related to the subject matter, the work or the project.

Rapid intervention team (RIT): On-scene team of at least two members designated, dedicated and equipped to effect an immediate rescue operation if the need arises.

RCW: Revised Code of Washington.

Rescue: Those activities directed at locating endangered persons at an emergency incident and removing those persons from danger.

Rescue craft: Any fire department watercraft used for rescue operations.

Respirator: A device designed to protect the wearer from breathing harmful atmospheres. See respiratory protection.

Respiratory equipment: Self-contained breathing apparatus designed to provide the wearer with a supply of respirable atmosphere carried in or generated by the breathing apparatus. When in use, this breathing apparatus requires no intake of air or oxygen from the outside atmosphere.

(1) Respirators (closed circuit): Those types of respirators which retain exhaled air in the system and recondition such air for breathing again.

(2) Respirators (open circuit): Those types of respirators which exhaust exhaled air to the outside of the mask into the ambient air.

(3) Respirators (demand): Those types of respirators whose input air to the mask is started when a negative pressure is generated by inhalation.

(4) Respirators (pressure demand): Those types of respirators which constantly and automatically maintain a positive pressure in the mask by the introduction of air when the positive pressure is lowered (usually from .018 psi to .064 psi) through the process of inhalation or leakage from the mask.

Respiratory protection: Equipment designed to protect the wearer from the inhalation of contaminants. Respiratory protection is divided into three types:

- (1) Positive pressure self-contained breathing apparatus (SCBA);
- (2) Positive pressure airline respirators;
- (3) Negative pressure air purifying respirators.

Responding: The usual reference to the act of responding or traveling to an alarm or request for assistance.

Risk assessment: To set or determine the possibility of suffering harm or loss, and to what extent.

Safe and healthful working environment: The work surroundings of an employee with minimum exposure to unsafe acts and/or unsafe conditions.

Safety officer: Either the fire department safety officer or an assistant safety officer (see fire department safety officer).

Safety net: A rope or nylon strap net not to exceed 6-inch mesh, stretched and suspended above ground level at the base of drill tower, and at such a height that a falling body would be arrested prior to striking the ground.

Scabbard: A guard which will prevent accidental injury and covers the blade and pick of an axe or other sharp instrument when worn by the fire fighter.

SCBA: Self contained breathing apparatus.

Service testing: The regular, periodic inspection and testing of apparatus and equipment according to an established schedule and procedure, to insure that it is in safe and functional operating condition.

Shall: Mandatory.

Should: Recommended.

Signalman: A person so positioned that he/she can direct the driver when the drivers vision is obstructed or obscured.

SOP: Standard operating procedure or guidelines.

Staffed station: A fire station continuously occupied by fire fighters on scheduled work shifts. The staffed station may also serve as headquarters for volunteers.

Standard operating procedure or guidelines: An organizational directive that establishes a standard course of action. See SOP.

Station (fire station): Structure in which fire service apparatus and/or personnel are housed.

Structural fire fighting: The activities of rescuing, fire suppression, and property conservation involving buildings, enclosed structures, vehicles, vessels, or similar properties that are involved in a fire or emergency situation. See interior structural fire fighting.

Structural fire fighting protective clothing: This category of clothing, often called turnout or bunker gear, means the protective clothing normally worn by fire fighters during structural fire fighting operations. It includes a helmet, coat, pants, boots, gloves, and a hood. Structural fire fighters' protective clothing provides limited protection from heat but may not provide adequate protection from the harmful gases, vapors, liquids, or dusts that are encountered during hazardous materials incidents.

Support function: A hazardous chemical operation involving controlled chemical uses or exposures in nonflammable atmospheres with minimum threats in loss of life, personnel injury, or damage to property or to the environment. Functions include decontamination, remedial cleanup of identified chemicals, and training.

Support function protective garment: A chemical-protective suit that meets the requirements of NFPA Standard on Support Function Garments, 1993.

Tail/running board: Standing space on the side or rear of an engine or pumper apparatus.

Team: Two or more individuals who are working together in positive communication with each other through visual, audible, physical, safety guide rope, electronic, or other means to coordinate their activities and who are in close

proximity to each other to provide assistance in case of emergency.

Tillerman: Rear driver of tractor-trailer aerial ladder.

Trench: A narrow excavation made below the surface of the ground. The depth is generally greater than the width, but the width of a trench is not greater than 15 feet.

Turnout clothing: See structural fire fighting protective clothing.

Turntable: The rotating surface located at the base of an aerial ladder, or boom, on aerial apparatus.

Universal precaution: An approach to infection control. According to the concept of universal precautions, all human blood and certain human body fluids are treated as if known to be infectious for HIV, HBV, and other bloodborne pathogens.

Vapor barrier: Material used to prevent or substantially inhibit the transfer of water, corrosive liquids and steam or other hot vapors from the outside of a garment to the wearer's body.

Variance: An allowed or authorized deviation from specific standard(s) when an employer substitutes measures which afford an equal degree of safety. Variances are issued as temporary or permanent with interim measures issued, when requested, until a determination or decision is made.

Vessel: Means every description of watercraft or other artificial contrivance used or capable of being used as a means of transportation on water, including special-purpose floating structures not primarily designed for or used as a means of transportation on water.

WAC: Washington Administrative Code.

Wheel blocks (chocks): A block or wedge placed under a wheel to prevent motion.

Wildfire: An unplanned and unwanted fire requiring suppression action; an uncontrolled fire, usually spreading through vegetative fuels and often threatening structures.

Wildland fire: A fire burning in natural vegetation that requires an individual or crew(s) to expend more than one hour of labor to confine, control and extinguish. Agencies may substitute crews to avoid the one hour bench mark or increase crew size to complete the job in less than one hour. One hour was chosen as the maximum time that individuals should work in high temperatures in structural protective clothing.

Wildland fire fighting enclosure: A fire apparatus enclosure with a minimum of three sides and a bottom.

WISHA: Washington Industrial Safety Health Act.

Work environment: The surrounding conditions, influences or forces to which an employee is exposed while working.

Workplace: See place of employment.

WRD: WISHA regional directive.

AMENDATORY SECTION (Amending WSR 96-11-067, filed 5/10/96, effective 1/1/97)

WAC 296-305-01009 Appeals. Any party authorized to appeal from an action of the department as set forth in RCW 49.17.140(3), may do so by filing a notice of appeal in writ-

ing. The appeal must contain the recommended subject matter, as noted below, by serving a copy of such notice of appeal either in person or by mail upon the assistant director of the Consultation and Compliance Services Division, (7273 Linderson Way, Tumwater, Washington) P.O. Box 44600, Olympia, Washington 98504-4600. The appeal must be sent to the department within fifteen working days of the communication of the notice.

The notice of appeal should contain:

- (1) The name and address of the appealing party and his/her representative if any;
- (2) The place where the alleged safety violation occurred;
- (3) A statement identifying the order, decision or citation appealed from, by report number and date of issuance;
- (4) The grounds upon which the appealing party considers such order, decision, or citation to be unjust or unlawful;
- (5) A statement of facts in support of each ground stated;
- (6) The relief sought, including the specific nature and extent;
- (7) A statement that the person signing the notice of appeal has read it and to the best of his/her knowledge, information and belief there is good ground to support it. A notice of appeal may be signed by the party or by his/her authorized representative.

References:

AMENDATORY SECTION (Amending WSR 99-05-080, filed 2/17/99, effective 6/1/99)

WAC 296-305-01509 Management's responsibility.

- (1) It shall be the responsibility of management to establish, supervise, maintain, and enforce, in a manner which is effective in practice:
 - (a) A safe and healthful working environment, as it applies to noncombat conditions or to combat conditions at a fire scene after the fire has been extinguished, as determined by the officer in charge.
 - (b) An accident prevention program as required by this chapter.
 - (c) Programs for training employees in the fundamentals of accident prevention.
 - (d) Procedures to be used by the fire department safety officer and incident commander to ensure that emergency medical care is provided for members on duty.
 - (e) An accident investigation program as required by this chapter.
- (2) The fire department shall be responsible for providing suitable expertise to comply with all testing requirements in this chapter. Such expertise may be secured from within the fire department, from equipment and apparatus manufacturers, or other suitable sources.
- (3) Members who are under the influence of alcohol or drugs shall not participate in any fire department operations

or other functions. This rule does not apply to persons taking prescription drugs as directed by a physician or dentist providing such use does not endanger the worker or others.

(4) Alcoholic beverages shall not be allowed in station houses, except at those times when station houses are used as community centers, with the approval of management.

(5) A bulletin board or posting area exclusively for safety and health and large enough to display the required safety and health posters. The WISHA poster (WISHA form F416-081-000) and other safety education material shall be provided. A bulletin board of "white background" and "green trim" is recommended.

(6) The fire department shall develop and maintain a hazard communication program as required by ~~((chapter 296-62 WAC, Part C))~~ WAC 296-800-170, which will provide information to all employees relative to hazardous chemicals or substances to which they are exposed, or may routinely be exposed to, in the course of their employment.

(7) Personnel.

(a) The employer shall assure that employees who are expected to do interior structural fire fighting are physically capable of performing duties that may be assigned to them during emergencies.

(b) The employer shall not permit employees with known physical limitations reasonably identifiable to the employer, for example, heart disease or seizure disorder, to participate in structural fire fighting emergency activities unless the employee has been released by a physician to participate in such activities.

AMENDATORY SECTION (Amending WSR 96-11-067, filed 5/10/96, effective 1/1/97)

WAC 296-305-01515 First-aid training and certification. (1) All fire fighters except directors of fire departments and the directors' designated personnel, shall have as a minimum first-aid training as evidenced by a current, valid first-aid card, EMT or First Responder certification.

(2) New fire fighters shall have such first-aid training within 90 days of the date of their employment or enroll for training in the next available class for which they are eligible.

(3) First-aid training and certification for other employees and directors of fire departments shall conform to the requirements of ~~((chapter 296-24 WAC, Part A-4))~~ WAC 296-800-150.

(4) Fire service duties include exposure to bloodborne pathogens. The requirements of this section and chapter 296-62 WAC, Part J, Biological Agents, shall apply.

AMENDATORY SECTION (Amending WSR 96-11-067, filed 5/10/96, effective 1/1/97)

WAC 296-305-01517 First-aid kits. (1) To assure the emergency medical care of the fire fighters there shall be present at each emergency incident at least the following items:

- 1 (one) utility scissors, EMT-type
- 1 CPR barrier
- 3 (three) rolls 1 inch adhesive tape
- 6 (six) 4" x 4" sterile, individually wrapped gauze pads

- 4 (four) combination pads, sterile, individually wrapped
- 4 (four) soft roller bandages, assorted size, sterile, individually wrapped cling type
- 2 (two) burn sheets, sterile, individually wrapped
- 2 (two) triangular bandages
- 1 (one) multi-trauma dressing, sterile
- 2 (two) supply disposable gloves
- 2 (two) wire splints or equivalent
- (2) All fire stations shall maintain a first-aid kit. The kit shall contain at least the following items:
 - 6 (six) 4" x 4" sterile, individually wrapped gauze pads
 - 4 (four) combination pads, sterile, individually wrapped
 - 2 (two) rolls 1 inch adhesive tape
 - 4 (four) soft roller bandages, assorted size, sterile, individually wrapped cling type
 - 2 (two) triangular bandages
 - 1 (one) utility scissors, EMT-type
 - 1 (one) pair tweezers
 - 1 (one) package assorted adhesive bandages
- (3) All fire apparatus shall contain a first-aid kit as described in (~~chapter 296-24 WAC, Part A-1~~) WAC 296-800-150.
- (4) All fire departments providing emergency medical services to the public shall conform to the requirements of chapter 18.73 RCW Emergency Care and Transportation Services (and if applicable, chapter 248-17 WAC, Ambulance Rules and Regulations) which require additional first-aid equipment.

Additional references: Chapter (~~294-24~~) 296-800 WAC(~~, Part A-1~~).

AMENDATORY SECTION (Amending WSR 96-11-067, filed 5/10/96, effective 1/1/97)

WAC 296-305-04511 Elevated platforms. (1) Elevated platform system design requirements:

- (a) The platform shall have a minimum floor area of fourteen square feet.
- (b) The platform shall be provided with a guard railing. The guard railing shall be 42 to 45 inches high on all sides.
- (c) The railing shall be constructed so that there is no opening below it greater than 19 inches.
- (d) There shall be two gates below the top railing, each of which shall be provided with suitable safety latches.
- (e) A kick plate not less than four inches high shall be provided around the floor of the platform.
- (f) Drain openings shall be provided to prevent water accumulation on the platform.
- (g) A heat-protective shield shall be provided on the platform for the protection of the operator.
- (h) Hydraulic or pneumatic systems shall have a minimum bursting strength of at least four times the operating pressure for which the system is designed.
- (i) The basic structural elements of the hydraulic or articulating boom shall have a safety factor of three.
- (j) Each hydraulic or pneumatic system for the boom shall be equipped with a pilot operated check valve or other appropriate device to prevent free fall in the event of hydraulic failure.

(2) Requirements related to the controlling of elevated platforms:

(a) A control or device shall be provided at both the lower control station and the platform control station to allow either operator to completely deactivate the platform controls.

(b) During the deactivation of the platform controls, the lower controls shall remain operable.

(c) A plate shall be located at the platform control unit or units listing the following information:

(i) Model and serial number of the manufacturer;

(ii) Rated capacity of the platform;

(iii) Operating pressure of the hydraulic or pneumatic systems or both;

(iv) Caution or restriction of operation or both; and

(v) Control instructions.

(vi) This plate shall be clearly visible to the operator at the lower control position.

(d) There shall be an operator at the lower controls at all times while the fire fighter is in the bucket.

(e) The operator at the lower controls shall make certain the fire fighter on the platform is secured by his life belt, or equivalent, before raising the platform.

(3) Testing of elevated platforms and related apparatus shall be conducted annually.

(a) Testing of elevated platforms and related apparatus shall be in accordance with NFPA, Standard for Testing Fire Department Aerial Ladders 1914, 1991 edition.

(b) It is recommended that the boom section as well as the support section of the apparatus which supports the turntable should be nondestructively tested by a certified testing agency every five years.

(c) After any accident that causes structural damage, testing shall be performed and all defects detected shall be corrected before the apparatus is returned to service.

(d) Elevated platform testing shall follow recommendations of the current National Fire Code.

(e) Fire apparatus elevated platforms shall be positioned for the greatest stability feasible at the fire scene.

(4) A two-way voice communication system shall be installed between the platform and the lower control station.

(5) Automotive apparatus used in conjunction with elevated platforms shall be used in accordance with the following:

(a) Hand or air brakes shall be set before the platform is operated.

(b) Jacks or outriggers shall be used if the platform is to be elevated.

(c) Wheel blocks shall also be used when the platform is in operation unless the type of apparatus is one that has wheels that lift off the ground when the jacks or outriggers are engaged.

(d) Ground plates shall be used under the outriggers or jacks.

(e) Sand shall be put under jacks and outriggers when operating on ice or snow.

(f) When working on or near energized electrical lines, the fire department shall develop operational procedures for observing the following minimum working clearances:

(i) For lines rated 50 kv or below, the minimum clearance shall be ten feet.

(ii) For lines rated over 50 kv, the minimum clearance shall be ten feet plus 0.4 inch for each 1 kv.

(iii) For low voltage lines (operating at 750 volts or less), the work shall be performed in a manner to prevent the fire fighters contacting the energized conductor.

(6) Appliances mounted on elevated platforms. Platform mounted monitors shall be operated in accordance with the manufacturer's instructions.

Additional References: WAC ((296-24-885)) 296-24-880.

AMENDATORY SECTION (Amending WSR 96-11-067, filed 5/10/96, effective 1/1/97)

WAC 296-305-05503 Summary of training requirements. (1) Training on hearing conservation shall conform to chapter 296-62 WAC, Part K, and WAC 296-305-02005.

(2) Training on medical procedures shall conform to WAC 296-305-02501.

(3) Training on respiratory equipment shall conform to chapter 296-62 WAC, Part E, Respiratory protection, and WAC 296-305-04001.

(4) Training on employee right-to-know procedures shall conform to ((chapter 296-62 WAC, Part C)) WAC 296-800-170, chemical hazard communication program.

(5) Training on overhaul procedures and operations shall conform to WAC 296-305-05001.

(6) Training on wildland fires shall conform to WAC 296-305-07001 through 296-305-07019.

(7) Training on confined space entry and/or rescue shall conform to chapter 296-62 WAC, Part M, Permit-required confined spaces and WAC 296-305-05003.

(8) Live fire training in structures shall conform to NFPA 1403 and this section.

(9) The employer shall provide training and education for all members commensurate with those duties and functions that members are expected to perform. Such training and education shall be provided to members before they perform emergency activities. Fire service leaders and training instructors shall be provided with training and education which is more comprehensive than that provided to the general membership of the fire department.

(10) The employer shall assure that training and education is conducted frequently enough to assure that each member is able to perform the member's assigned duties and functions satisfactorily and in a safe manner so as not to endanger members or other employees. All members shall be provided with training at least annually. In addition, members who are expected to perform interior structural fire fighting shall be provided with an education session or training at least quarterly.

AMENDATORY SECTION (Amending WSR 99-05-080, filed 2/17/99, effective 6/1/99)

WAC 296-305-06005 Ground ladders. This section establishes the minimum requirements for the construction,

care and use of the common types of ladders used in fire combat.

(1) Ladder locks or pawls on extension ladders shall be so fastened or secured to the beams that vibration and use will not cause loosening of bolts and nuts.

(a) Pawls or ladder locks shall be so constructed that the hook portion of the pawl that engages the rung shall have sufficient bearing surface or area to prevent the hook from cutting into rungs when engaged.

(b) Such hooks shall be properly finished to eliminate sharp edges and points.

(2) Staypoles or tormenters shall be furnished on all extension ladders extending over forty feet. Staypole or tormenters spikes shall not project beyond the butt of the ladder when nested.

(3) All ladders shall be stored in a manner to provide ease of access for inspection, and to prevent danger of accident when withdrawing them for use.

(4) Fire fighters shall climb and descend ground ladders with the fly in, for safety purposes, when not in conflict with the manufacturer's recommendations. Even when ladders are routinely used in the fly out configuration, in adverse conditions fire fighters shall be permitted to climb and descend ground ladders with the fly in to assure secure footing.

(5) All ladders regardless of type shall be inspected thoroughly after each use. Records shall be kept of the inspections and repairs.

(6) The following metal ladder components shall be checked:

(a) Rungs for welds, damage or weakness caused by overloading or bumping against other objects, looseness and cracks, etc.

(b) Beams for welds, rivets and bolts, signs of strain or metal fatigue, and deformation from heat or overloading.

(c) Bolts and rivets for tightness.

(d) Butt spurs for excessive wear or other defects.

(e) Halyards for the same defects listed for wood ladder halyards and cable halyards, for fraying or breaking.

(f) Heat sensor label, when provided, for change indicating heat exposure.

(7) The following wood ladder components shall be checked:

(a) Bolts for snugness and tightness without crushing the wood.

(b) Beams for dark streaks; when a wood ground ladder develops dark streaks in the beams, the ladder shall be removed from service and service tested as specified in this chapter, prior to further use.

(c) Protective varnish finish for damage or wear, at least once a month and redone annually or at such frequency as specified by the manufacturer. If the protective finish becomes charred or blistered, the ladder shall be removed from service and service tested as specified in this chapter, prior to further use.

(8) Methods of fastening ladder halyards, either of wire or fibrous material, shall be in a manner that the connection is stronger than the halyard.

(9) Any defect noted in above visual inspection shall be corrected prior to testing.

(10) Every portable ladder shall be tested following the correction of defects disclosed by the visual inspections.

(11) New ground ladders purchased after the effective date of this chapter shall be constructed and certified in accordance with the requirements of NFPA Standard 1931, 1994 edition.

(12) All fireground ladders shall be inspected and maintained in accordance with the requirements of the 1994 edition of NFPA 1932. When metal ground ladders are tested, they shall be tested in accordance with the strength service testing procedures of the 1984 edition of NFPA 1932.

(a) Extension ladders that were constructed prior to the adoption of the 1984 edition of NFPA 1931, may, when tested in accordance with this chapter, be tested with a minimum test load of 400 pounds and a preload of 300 pounds. Ladders tested under this exception shall be used with a maximum load limit of 500 pound distributed or 400 pound concentrated. Ladders shall be tested in the configuration they are used.

(b) Additional requirements for wooden ground ladders; whenever any wood ground ladder has been exposed or is suspected of having been exposed to direct flame contact the ladder shall be service tested as specified in section 5-2 of NFPA Standard 1932, 1984 edition.

Note 1: Hardness testing and eddy current NDE testing is not required in the fire department annual maintenance inspection unless the individual ladder has been subjected to a high heat exposure which could have annealed the metal and diminished the structural integrity. The ladder manufacturer's recommendations should be followed with respect to hardness and eddy current testing.

Note 2: Testing should follow the recommended procedures taught by Washington State Fire Protection Bureau.

Additional references: Chapter 296-24 WAC, Part J-1 and WAC 296-800-290.

AMENDATORY SECTION (Amending WSR 99-05-080, filed 2/17/99, effective 6/1/99)

WAC 296-305-06007 Electrical. (1) Temporary lighting with the use of 110 - 120 VAC equipment.

(a) All lighting equipment shall be provided with heavy duty flexible cords with SO or SJ jackets or equivalent. All lighting equipment shall be used with heavy duty flexible extension cords with 12-3 conductors with SO or SJ jackets or equivalent.

(b) Electrical cords shall have weather tight bodies and caps, 20 amp rated at 120 VAC with appropriately sized plugs and sockets.

(c) Temporary lights that are used in moist, damp, and/or other hazardous locations shall be approved for the purpose.

(d) Temporary lights shall be constructed so that water cannot enter or accumulate in wireways, lampholders or other electrical parts.

(e) Temporary lights that are used in moist and/or other hazardous locations shall have 120 VAC single-phase 15 and/or 20 amp in-line resettable ground fault circuit interrupters.

(f) Temporary lights shall be equipped with a handle and be insulated from heat and possible electrical shock.

(g) Temporary lights shall not be suspended by their electrical cords unless cords and lights are designed and labeled for this means of suspension.

(h) Temporary lights shall be protected by guards of a nonconductive or insulated material to prevent accidental contact with the bulb.

(2) 120 VAC cord reels shall be approved for use in damp or hazardous locations.

(a) Bodies and caps shall be weather tight, 20 amp rated at 120 VAC.

(b) Cords on cord reels that do not exceed 150 feet in length shall be SO or SJ type jackets or equivalent.

(c) Cords that exceed 150 feet in length on reels, shall have 10-3 conductors.

(d) Cord reels that are not permanently mounted on a vehicle shall be insulated from the ground when in use.

(3) Twelve volt portable type hand lanterns shall be constructed of molded composition or other type approved for the purpose.

(a) Portable hand lanterns used in moist and/or other hazardous locations shall be operated at a maximum of 12 volts.

(b) Hand lamps shall be equipped with a handle and a substantial guard over the bulb and attached to the lampholder.

(4) Portable and vehicle-mounted generators.

(a) Portable generators. Under the following conditions, the frame of a portable generator shall not be required to be grounded and shall be permitted to serve as the grounding electrode for a system supplied by the generator:

(i) The generator supplies only equipment mounted on the generator or cord-connected and plug-connected equipment through receptacles mounted on the generator, or both, and

(ii) The noncurrent-carrying metal part of equipment and the equipment grounding conductor terminals of the receptacles are bonded to the generator frame.

(b) Vehicle-mounted generators. Under the following conditions, the frame of a vehicle may serve as the grounding electrode for a system supplied by a generator located on the vehicle:

(i) The frame of the generator is bonded to the vehicle frame; and

(ii) The generator supplies only equipment located on the vehicle and/or cord-connected and plug-connected equipment through receptacles mounted on the vehicle or on the generator; and

(iii) The noncurrent-carrying metal parts of equipment and the equipment grounding conductor terminals of the receptacles are bonded to the generator frame.

Additional references: Article 250 National Electrical Code. Chapter 296-24 WAC, Part L and WAC 296-800-280.

AMENDATORY SECTION (Amending WSR 96-11-067, filed 5/10/96, effective 1/1/97)

WAC 296-305-06503 General requirements. (1) Stations and administrative offices shall comply with the requirements of the general occupational health standards, WAC ((296-62-09003)) 296-800-210, Lighting ((and illumination)) in the workplace.

(2) Every new fire station built after the effective date of this chapter, whether manned or unmanned, shall be equipped with an approved emergency lighting system that will light dormitories, hallways, and apparatus bay areas in case of electrical power failure.

(3) No new fire station or new addition to an existing fire station, shall incorporate sliding poles or slides in their design or construction.

(4) The requirements of chapter 296-24 WAC, Part B-2, Window washing, shall be followed when employees are engaged in window washing operations.

(5) All new fire stations and other new fire department facilities which contain sleeping quarters shall be fully protected with automatic sprinkler systems.

(6) All existing fire stations and existing fire department facilities with sleeping quarters, that undergo a major renovation that consists of more than sixty percent of the assessed evaluation of the existing structure shall be fully protected with automatic sprinkler systems.

(7) Eye protection shall be worn when charging, changing or adding fluid to storage batteries. Personnel that will be charging storage batteries shall be qualified to perform this function by the employer. See WAC 296-24-23015.

(8) Stairway tread shall be of a nonskid design. Examples of nonskid: Grip strut grating, serrated edge grating, metal grating, aluminum safety tread, abrasive metal stair tread, or pressure sensitive nonskid type.

(9) In existing facilities where sliding poles or slides are used, the pole or slide hole shall be guarded in such a manner as to prevent anyone from walking directly into the pole or slide hole opening.

(10) To absorb the shock to sliding employees, the bottom of all slide poles or slides shall have a three-foot diameter cushioned rubber mat, or its equivalent.

(11) Nothing shall be stored or placed at the bottom of a pole or slide hole for a radius of three feet from the pole. Doors shall not protrude within three feet of the pole or slide.

(12) Stair and landing protection: Stairways, guardrails, landings, and handrails shall be constructed to the requirements of chapter 19.27 RCW the State Building Code Act, and chapter 296-24 WAC, Part J-1.

(13) A standard guard railing for a landing platform shall include a toeboard, which is a vertical barrier, at floor level erected along exposed edges of a floor opening, wall opening, platform, runway or ramp to prevent falls of material.

(14) Any new facility, or addition, alteration, or repair to an existing facility shall be in compliance with chapter 19.27 RCW, the State Building Code Act.

(15) New stations containing a kitchen, and station kitchens remodeled after the date of this chapter, shall have an alarm activated service disconnect of fixed cooking appliances.

AMENDATORY SECTION (Amending WSR 96-11-067, filed 5/10/96, effective 1/1/97)

WAC 296-305-06511 Indoor air quality. Air quality shall be consistent with WAC 296-62-075 through 296-62-07515, Air contaminants and WAC ((296-62-12000 through

296-62-12009)) 296-800-240, Environmental tobacco smoke ((in office work environments)).

Note: For extended work shifts all eight-hour PEL's shall be time-weighted to adjust for additional worker exposure during extended work shifts.

(1) If indoor air monitoring indicates over-exposure to contaminant PEL's, engineering controls shall be utilized to reduce fire fighter exposure to the lowest feasible level.

(2) All fixed internal combustion equipment such as, but not limited to emergency generators, shall be effectively exhausted to the exterior of the fire stations.

(3) All facilities dedicated to the maintenance and repair of internal combustion equipment shall have means for effective ventilation to the exterior of the building.

(4) All fire stations built after January 1, 1997, shall be designed and constructed to conform to ACGIH ventilation recommended criteria for exhaust of internal combustion engines.

Additional reference: Industrial Ventilation Manual of Recommended Practices ISBN No.: 0-936712-65-1.

AMENDATORY SECTION (Amending WSR 96-11-067, filed 5/10/96, effective 1/1/97)

WAC 296-305-06515 Hose drying towers. (1) The floor openings on hose tower platforms shall be equipped with a forty-two inch guardrail with mid-rail and shall be capable of withstanding a force of 250 pounds applied in any direction at any point on the top rail. The work platform shall be equipped with toeboards.

(2) The requirements for offset ladder platforms and ladder cage guards, when ladders extend beyond twenty feet, shall apply to hose drying towers.

(3) Ropes and attachments used to hoist hose in the hose towers shall have a breaking strength of 1500 pounds for a safe load strength of 300 pounds (five-to-one safety factor).

(4) Approved head protection shall be worn by all persons in the hose tower whenever hose handling/hanging operations are taking place.

(5) Ropes utilizing a pulley block shall be appropriately sized for the sheave to prevent possible jamming or damage to the rope.

Additional reference: Chapter 296-24 WAC, Part J-1 and chapter 296-800 WAC.

WSR 01-11-080
PERMANENT RULES
PUGET SOUND
CLEAN AIR AGENCY
 [Filed May 16, 2001, 8:43 a.m.]

Date of Adoption: May 10, 2001.

Purpose: To more effectively implement the State Environmental Policy Act (SEPA).

Statutory Authority for Adoption: Chapter 70.94 RCW.

Adopted under notice filed as WSR 01-07-088 on March 21, 2001.

Changes Other than Editing from Proposed to Adopted Version: (1) In Section 2.02, four sections that were listed by reference (197-11-158, 355, 721, and 775) were deleted.

(2) Section 2.05 was deleted and the remaining sections renumbered accordingly.

(3) In the "Mitigated DNS" section, subsection (f) was deleted and the remaining subsections renumbered.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 0, Amended 0, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: Thirty-one days after filing.

May 14, 2001

Laurie Halvorson

General Counsel

NEW SECTION

REGULATION I ARTICLE 2: STATE ENVIRONMENTAL POLICY ACT

REGULATION I SECTION 2.01 AUTHORITY

The Agency adopts this regulation under the State Environmental Policy Act (SEPA), RCW 43.21C.120, and the SEPA rules, WAC 197-11-904. This regulation contains this Agency's SEPA procedures and policies. The SEPA rules must be used in conjunction with this regulation. The SEPA rules mean chapter 197-11 of the Washington Administrative Code (WAC).

NEW SECTION

REGULATION I SECTION 2.02 ADOPTION BY REFERENCE

The Agency adopts the following sections of chapter 197-11 WAC by reference:

- 197-11-040 Definitions.
- 197-11-050 Lead agency.
- 197-11-055 Timing of the SEPA process.
- 197-11-060 Content of environmental review.
- 197-11-070 Limitations on actions during SEPA process.
- 197-11-080 Incomplete or unavailable information.
- 197-11-090 Supporting documents.
- 197-11-100 Information required of applicants.
- 197-11-250 SEPA/Model Toxics Control Act integration.
- 197-11-253 SEPA lead agency for MTCA actions.

- 197-11-256 Preliminary evaluation.
- 197-11-259 Determination of nonsignificance for MTCA remedial actions.
- 197-11-262 Determination of significance and EIS for MTCA remedial actions.
- 197-11-265 Early scoping for MTCA remedial actions.
- 197-11-268 MTCA interim actions.
- 197-11-300 Purpose of this part.
- 197-11-305 Categorical exemptions.
- 197-11-310 Threshold determination required.
- 197-11-315 Environmental checklist.
- 197-11-330 Threshold determination process.
- 197-11-335 Additional information.
- 197-11-340 Determination of nonsignificance (DNS).
- 197-11-350 Mitigated DNS.
- 197-11-360 Determination of significance (DS)/initiation of scoping.
- 197-11-390 Effect of threshold determination.
- 197-11-400 Purpose of EIS.
- 197-11-402 General requirements.
- 197-11-405 EIS types.
- 197-11-406 EIS timing.
- 197-11-408 Scoping.
- 197-11-410 Expanded scoping.
- 197-11-420 EIS preparation.
- 197-11-425 Style and size.
- 197-11-430 Format.
- 197-11-435 Cover letter or memo.
- 197-11-440 EIS contents.
- 197-11-442 Contents of EIS on nonproject proposals.
- 197-11-443 EIS contents when prior nonproject EIS.
- 197-11-444 Elements of the environment.
- 197-11-448 Relationship of EIS to other considerations.
- 197-11-450 Cost-benefit analysis.
- 197-11-455 Issuance of DEIS.
- 197-11-460 Issuance of FEIS.
- 197-11-500 Purpose of this part.
- 197-11-502 Inviting comment.
- 197-11-504 Availability and cost of environmental documents.
- 197-11-508 SEPA register.
- 197-11-510 Public notice.
- 197-11-535 Public hearings and meetings.
- 197-11-545 Effect of no comment.
- 197-11-550 Specificity of comments.
- 197-11-560 FEIS response to comments.
- 197-11-570 Consulted agency costs to assist lead agency.
- 197-11-600 When to use existing environmental documents.
- 197-11-610 Use of NEPA documents.
- 197-11-620 Supplemental environmental impact statement—Procedures.
- 197-11-625 Addenda—Procedures.
- 197-11-630 Adoption—Procedures.
- 197-11-635 Incorporation by reference—Procedures.
- 197-11-640 Combining documents.
- 197-11-650 Purpose of this part.
- 197-11-655 Implementation.
- 197-11-660 Substantive authority and mitigation.

PERMANENT

197-11-680	Appeals.	197-11-926	Lead agency for governmental proposals.

NEW SECTION

REGULATION I SECTION 2.03 DESIGNATION OF RESPONSIBLE OFFICIAL

(a) For proposals for which the Agency is the lead agency, the responsible official shall be the Control Officer or Agency employee designated by the Control Officer.

(b) For all proposals for which the Agency is the lead agency, the responsible official shall make the threshold determination, supervise scoping and preparation of any required environmental impact statement (EIS), and perform any other functions assigned to the "lead agency" or "responsible official" by those sections of the SEPA rules adopted by reference in Section 2.02.

(c) The Agency shall retain all documents required by the SEPA rules (chapter 197-11 WAC) and make them available in accordance with chapter 42.17 RCW.

NEW SECTION

REGULATION I SECTION 2.04 LEAD AGENCY DETERMINATION AND RESPONSIBILITIES

(a) When the Agency receives an application for or initiates a proposal that involves a nonexempt action, the Agency shall determine the lead agency for that proposal under WAC 197-11-050, 197-11-253, and 197-11-922 through 197-11-940; unless the lead agency has been previously determined or the Agency is aware that another agency is in the process of determining the lead agency. When the Agency is the lead agency for a proposal, the responsible

official shall supervise compliance with the threshold determination requirements, and if an EIS is necessary, shall supervise preparation of the EIS.

(b) When the Agency is not the lead agency for a proposal, the Agency shall use and consider, as appropriate, either the DNS or the final EIS of the lead agency in making decisions on the proposal. The Agency shall not prepare or require preparation of a DNS or EIS in addition to that prepared by the lead agency, unless required under WAC 197-11-600. In some cases, the Agency may conduct supplemental environmental review under WAC 197-11-600.

(c) If the Agency receives a lead agency determination made by another agency that appears inconsistent with the criteria of WAC 197-11-253 or 197-11-922 through 197-11-940, it may object to the determination. Any objection must be made to the agency originally making the determination and resolved within 15 days of receipt of the determination, or the Agency must petition the Department of Ecology for a lead agency determination under WAC 197-11-946 within the 15-day time period. Any such petition on behalf of the Agency may be initiated by the Control Officer.

(d) The Agency may make agreements as to lead agency status or shared lead agency duties for a proposal under WAC 197-11-942 and 197-11-944.

(e) When the Agency makes a lead agency determination for a private project, the Agency shall require sufficient information from the applicant to identify which other agencies have jurisdiction over the proposal.

NEW SECTION

REGULATION I SECTION 2.05 USE OF EXEMPTIONS

(a) When the Agency receives an application for a permit or, in the case of governmental proposals, the Agency initiates the proposal, the Agency shall determine whether the permit and/or the proposal is exempt. The Agency's determination that a permit or proposal is exempt shall be final and not subject to administrative review. If a permit or proposal is exempt, none of the procedural requirements of this regulation apply to the proposal. The Agency shall not require completion of an environmental checklist for an exempt permit or proposal.

(b) In determining whether or not a proposal is exempt, the Agency shall make certain the proposal is properly defined and shall identify the governmental licenses required (WAC 197-11-060). If a proposal includes exempt and non-exempt actions, the Agency shall determine the lead agency, even if the license application that triggers the Agency's consideration is exempt.

(c) If a proposal includes both exempt and nonexempt actions, the Agency may authorize exempt actions prior to compliance with the procedural requirements of this regulation, except that:

(1) The Agency shall not give authorization for:

(A) Any nonexempt action;

(B) Any action that would have an adverse environmental impact; or

(C) Any action that would limit the choice of alternatives.

(2) The Agency may withhold approval of an exempt action that would lead to modification of the physical environment, when such modification would serve no purpose if nonexempt action(s) were not approved; and

(3) The Agency may withhold approval of exempt actions that would lead to substantial financial expenditures by a private applicant when the expenditures would serve no purpose if nonexempt action(s) were not approved.

NEW SECTION

REGULATION I SECTION 2.06 ENVIRONMENTAL CHECKLIST

(a) A completed environmental checklist (or a copy), in the form provided in WAC 197-11-960, shall be filed at the same time as an application for a permit, license, certificate, or other approval not specifically exempted in this regulation; except, a checklist is not needed if the Agency and applicant agree an EIS is required, SEPA compliance has been completed, or SEPA compliance has been initiated by another agency. The Agency shall use the environmental checklist to determine the lead agency and, if the Agency is the lead agency, for determining the responsible official and for making the threshold determination.

(b) For private proposals, the Agency will require the applicant to complete the environmental checklist, providing assistance as necessary. For Agency proposals, the Agency shall complete the environmental checklist. The Agency may require that it, and not the private applicant, will complete all or part of the environmental checklist for a private proposal, if either of the following occurs:

(1) The Agency has technical information on a question or questions that is unavailable to the private applicant; or

(2) The applicant has provided inaccurate information on previous proposals or on proposals currently under consideration.

NEW SECTION

REGULATION I SECTION 2.07 MITIGATED DNS

(a) As provided in this section and in WAC 197-11-350, the responsible official may issue a DNS based on conditions attached to the proposal by the responsible official or on changes to, or clarifications of, the proposal made by the applicant.

(b) An applicant may request in writing early notice of whether a DS is likely under WAC 197-11-350. "Early notice" means the Agency's response to an applicant stating whether it considers issuance of a determination of significance likely for the applicant's proposal. The request must:

(1) Follow submission of a complete permit application and environmental checklist for a nonexempt proposal for which the Agency is lead agency; and

(2) Precede the Agency's actual threshold determination for the proposal.

(c) The responsible official shall respond to the request for early notice within 30 working days. The response shall:

(1) Be written;

(2) State whether the Agency currently considers issuance of a DS likely and, if so, indicate the general or specific area(s) of concern that is/are leading the Agency to consider a DS; and

(3) State that the applicant may change or clarify the proposal to mitigate the indicated impacts, revising the environmental checklist and/or permit application as necessary to reflect the changes or clarifications.

(d) As much as possible, the Agency should assist the applicant with identification of impacts to the extent necessary to formulate mitigation measures.

(e) When an applicant submits a changed or clarified proposal, along with a revised or amended environmental checklist, the Agency shall base its threshold determination on the changed or clarified proposal and shall make the determination within 15 days of receiving the changed or clarified proposal:

(1) If the Agency indicated specific mitigation measures in its response to the request for early notice, and the applicant changed or clarified the proposal to include those specific mitigation measures, the Agency shall issue and circulate a DNS under WAC 197-11-340(2).

(2) If the Agency indicated areas of concern, but did not indicate specific mitigation measures that would allow it to issue a DNS, the Agency shall make the threshold determination, issuing a DNS or DS as appropriate.

(3) The applicant's proposed mitigation measures (clarifications, changes, or conditions) must be in writing and must be specific.

(4) Mitigation measures that justify issuance of a mitigated DNS may be incorporated in the DNS by reference to Agency staff reports, studies, or other documents

(f) Mitigation measures incorporated in the mitigated DNS shall be deemed conditions of approval of the permit decision and may be enforced in the same manner as any term or condition of the permit, or enforced in any manner specifically prescribed by the Agency.

(g) If the Agency's tentative decision on a permit or approval does not include mitigation measures that were incorporated in a mitigated DNS for the proposal, the Agency should evaluate the threshold determination to ensure consistency with WAC 197-11-340 (3)(a) (withdrawal of DNS).

(h) The Agency's written response under Section 2.07(c) of this regulation shall not be construed as a determination of significance. In addition, preliminary discussion of clarifications or changes to a proposal, as opposed to a written request for early notice, shall not bind the Agency to consider the clarifications or changes in its threshold determination.

NEW SECTION

REGULATION I SECTION 2.08 PREPARATION OF EIS—ADDITIONAL CONSIDERATIONS

(a) Preparing a draft and final EIS (DEIS and FEIS) and draft and final supplemental EIS (SEIS) is the responsibility of the responsible official. Before the Agency issues an EIS, the responsible official shall be satisfied that it complies with this regulation and chapter 197-11 WAC.

(b) The DEIS and FEIS or draft and final SEIS shall be prepared by Agency staff or by a consultant selected by the Agency. The Agency retains sole authority to select persons or firms to author, co-author, provide special services, or otherwise participate in preparing required environmental documents. If the responsible official requires an EIS for a proposal and determines that someone other than the Agency will prepare the EIS, the responsible official shall notify the applicant immediately after completion of the threshold determination. The responsible official shall also notify the applicant of the Agency's procedure for EIS preparation, including approval of the DEIS and FEIS prior to distribution.

(c) The Agency may require an applicant to provide information the Agency does not possess, including specific investigations. However, the applicant is not required to supply information that is not required under this regulation or that is being requested from another agency. (This does not apply to information the Agency may request under another regulation or statute.)

NEW SECTION

REGULATION I SECTION 2.09 ADDITIONAL ELEMENTS TO BE COVERED IN AN EIS

The following additional elements are part of the environment for the purpose of EIS content, but do not add to the criteria for threshold determination or perform any other function or purpose under this regulation:

- (a) Economy
- (b) Social policy analysis
- (c) Cost-benefit analysis

NEW SECTION

REGULATION I SECTION 2.10 PUBLIC NOTICE

(a) Whenever the Agency issues a DNS under WAC 197-11-340(b) or a DS under WAC 197-11-360(c), the Agency shall give public notice as follows:

(1) If public notice is required for a nonexempt license, the notice shall state whether a DS or DNS has been issued and when comments are due.

(2) If no public notice is required for the permit or approval, the Agency shall give notice of the DNS or DS by:

(A) Notifying public or private groups that have expressed interest in a certain proposal or in the type of proposal being considered, and

(B) Posting notice on the Agency website.

(3) Whenever the Agency issues a DS under WAC 197-11-360(3), the Agency shall state the scoping procedure for the proposal in the DS as required in WAC 197-11-408 and in the public notice.

(b) Whenever the Agency issues a DEIS under WAC 197-11-455(5) or a SEIS under WAC 197-11-620, notice of the availability of those documents shall be given by:

(1) Indicating the availability of the DEIS in any public notice required for a nonexempt license; and at least one of the following methods:

(2) Posting the property, for site-specific proposals;

(3) Publishing notice in a newspaper of general circulation in the county, city, or general area where the proposal is located;

(4) Notifying public or private groups that have expressed interest in a certain proposal or in the type of proposal being considered;

(5) Notifying the news media;

(6) Placing notices in appropriate regional, neighborhood, ethnic, or trade journals;

(7) Publishing notice in Agency newsletters and/or sending notice to Agency mailing lists (general lists or specific lists for proposals or subject areas); and/or

(8) Posting notice on the Agency website.

(c) Whenever possible, the Agency shall integrate the public notice required under this section with existing notice procedures for the Agency's nonexempt permit(s) or approval(s) required for the proposal.

(d) The Agency may require an applicant to complete the public notice requirements for the applicant's proposal at his or her expense.

NEW SECTION

REGULATION I SECTION 2.11 DESIGNATION OF OFFICIAL TO PERFORM CONSULTED AGENCY RESPONSIBILITIES FOR THE AGENCY

(a) The Control Officer shall be responsible for preparing written comments for the Agency in response to a consultation request prior to a threshold determination, participation in scoping, and reviewing a DEIS.

(b) The Control Officer shall be responsible for the Agency's compliance with WAC 197-11-550 whenever the Agency is a consulted agency and is authorized to develop operating procedures that will ensure that responses to consultation requests are prepared in a timely fashion and include data from the Agency.

NEW SECTION

REGULATION I SECTION 2.12 SEPA SUBSTANTIVE AUTHORITY

(a) The policies and goals set forth in this section supplement those in the existing authority of the Agency.

(b) Any governmental action on public or private proposals that are not exempt may be conditioned or denied under SEPA to mitigate the environmental impact, subject to the following limitations:

(1) Mitigation measures or denials shall be based on policies, plans, rules, or regulations designated in this article as a basis for the exercise of substantive authority and in effect when the DNS or DEIS is issued. The responsible official shall cite the Agency's SEPA policy that is the basis of any condition or denial under this regulation (for proposals of applicants).

(2) Mitigation measures shall be related to specific, adverse environmental impacts clearly identified in an environmental document on the proposal and shall be stated in writing by the responsible official. Such document may be the permit itself, or may be combined with other Agency doc-

uments, or may reference relevant portions of environmental documents.

(3) Mitigation measures shall be reasonable and capable of being accomplished.

(4) Responsibility for implementing mitigation measures may be imposed upon an applicant only to the extent attributable to the identified adverse impacts of its proposal. Voluntary additional mitigation may occur.

(5) The Agency shall consider whether local, state, or federal requirements and enforcement would mitigate an identified significant impact.

(6) To deny a proposal under SEPA, the Agency must find that:

(A) The proposal would be likely to result in significant adverse environmental impacts identified in a final or supplemental EIS prepared pursuant to this regulation; and

(B) Reasonable mitigation measures are insufficient to mitigate the identified impact.

(c) The Agency designates and adopts by reference the following policies, plans, rules, and regulations as the potential bases for the Agency's exercise of substantive authority under SEPA, pursuant to this section:

(1) The Agency shall use all practicable means, consistent with other essential considerations of state policy, to improve and coordinate plans, functions, programs, and resources to the end that the state and its citizens may:

(A) Fulfill the responsibilities of each generation as trustee of the environment for succeeding generations;

(B) Ensure for all people of Washington, safe, healthful, productive, and aesthetically and culturally pleasing surroundings;

(C) Attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences;

(D) Preserve important historic, cultural, and natural aspects of our national heritage;

(E) Maintain, wherever possible, an environment that supports diversity and variety of individual choice;

(F) Achieve a balance between population and resource use that will permit high standards of living and a wide sharing of life's amenities; and

(G) Enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources.

(2) The Agency recognizes that each person has a fundamental and inalienable right to a healthful environment and that each person has a responsibility to contribute to the preservation and enhancement of the environment.

(3) The Agency adopts by reference the policies in the following laws and Agency resolutions, regulations, and plans:

(A) Federal and state Clean Air Acts, and regulations adopted thereunder.

(B) Agency Regulations I, II, and III.

(C) Resolutions adopted by the Agency Board of Directors.

(D) Maintenance plans.

(E) Washington State Implementation Plan.

(F) Final Report of the Agency PM2.5 Stakeholder Group, dated October 15, 1999.

(4) The Agency establishes the following additional policies:

(A) Air quality

(i) Policy Background

(a) Air pollution can be damaging to human health, plants and animals, visibility, aesthetics, and the overall quality of life.

(b) The Agency is responsible for monitoring air quality in the Puget Sound area, setting standards, and regulating development to achieve regional air quality standards.

(c) Federal, state, and regional regulations and programs cannot always anticipate or adequately mitigate adverse air quality impacts.

(ii) Policies

(a) To minimize or prevent adverse air quality impacts.

(b) To secure and maintain such levels of air quality as will protect human health and safety and, to the greatest degree practicable, prevent injury to plant and animal life and to property, foster the comfort and convenience of its inhabitants, seek public participation in policy planning and implementation, promote the economic and social development of the Puget Sound area, and facilitate the enjoyment of the natural attractions of the Puget Sound area.

(c) To eliminate emissions of ozone-depleting chlorofluorocarbons, in the interests of national and global environmental protection; and to consider energy efficiency and conservation to reduce greenhouse gases.

(d) To reduce woodstove emissions by educating the public about the effects of woodstove emissions, other heating alternatives, and the desirability of achieving better emission performance and heating efficiency from woodstoves pursuant to standards adopted by the Department of Ecology; and to encourage replacing uncertified woodstoves with cleaner sources of heat.

(e) To reduce outdoor burning to the greatest extent practical.

(f) To develop and adopt strategies for effectively reducing or eliminating impacts from toxic air contaminants.

(g) To control volatile organic compound (VOC) emissions in order to maintain the National Ambient Air Quality Standard for ozone.

(h) If the responsible official makes a written finding that the applicable federal, state, and/or regional regulations did not anticipate or are inadequate to address the particular impact(s) of a project, the responsible official may condition or deny the proposal to mitigate its adverse impacts.

(B) Land Use

(i) Policy background

(a) Adverse land use impacts may result when a proposed project or land use policy includes uses that may be consistent with applicable zoning requirements but inconsistent with air quality regulations.

(b) Adverse cumulative land use impacts may result when particular uses permitted under the zoning code occur in an area to such an extent that they expose sensitive populations to air quality related health and environmental adverse impacts.

(ii) Policies

(a) To ensure that proposed uses in projects are reasonably compatible with surrounding uses and are consistent with applicable air quality regulations.

(b) To reduce regional air pollution emissions associated with land uses by promoting clean alternative forms of domestic use fuels, including natural gas, in new single and multifamily housing developments within urban growth areas. In addition, to discourage wood as a source of heat for residential development in low-lying areas susceptible to pollution accumulations.

(c) To encourage municipal curbside solid and yard waste collection services at reasonable costs.

(C) Transportation

(i) Policy Background

(a) Excessive traffic can adversely affect regional air quality.

(b) Substantial traffic volumes associated with major projects may adversely impact air quality in surrounding areas.

(ii) Policies

(a) To minimize or prevent adverse traffic impacts that would undermine the air quality of a neighborhood or surrounding areas.

(b) To promote transportation demand and systems management actions designed to reduce vehicle emissions by reducing the use of single occupancy vehicles, reducing traffic congestion, and increasing public transportation services.

(c) To encourage integrating land use and transportation planning.

(d) To emphasize the importance of air quality conformity determinations required for proposed transportation plans, programs, and projects.

(e) To pursue and support alternative and clean fuels projects and programs.

(f) To promote and support land use plans and projects designed to reduce vehicle emissions by reducing the use of single occupant vehicles, number of vehicle miles traveled, and traffic congestion; and supporting the use of public transportation.

(g) In determining the necessary air quality impact mitigation, the responsible official will examine the mitigation proposed by the local jurisdiction.

(D) Cumulative Effects

(i) The analysis of cumulative effects shall include a reasonable assessment of:

(a) The capacity of natural systems, such as air, water, light, and land, to absorb the direct and reasonably anticipated indirect impacts of the proposal, and

(b) The demand upon facilities, services, and natural systems of present, simultaneous, and known future development in the area of the project or action.

(ii) An action or project may be conditioned or denied to lessen or eliminate its cumulative effects on the environment:

(a) When considered together with prior, simultaneous, or induced future development; or

(b) When, taking into account known future development under established zoning or other regulations, it is determined that a project will use more than its share of present and planned facilities, services, and natural systems.

NEW SECTION**REGULATION I SECTION 2.13 NOTICE/STATUTE OF LIMITATIONS**

(a) The Agency, applicant for, or proponent of an action may publish a notice of action pursuant to RCW 43.21C.080 for any action.

(b) The form of the notice shall be substantially in the form provided in WAC 197-11-990. The notice shall be published by the city clerk or county auditor, applicant, or proponent pursuant to RCW 43.21C.080.

NEW SECTION**REGULATION I SECTION 2.14 FEES**

In addition to the fees set forth in Article 6, the following fees apply:

(a) Threshold Determination

The Agency may contract directly with a consultant for preparation of an environmental checklist or other information needed for the Agency to make a threshold determination, and may bill such costs and expenses directly to the applicant. The Agency may require the applicant to post bond or otherwise ensure payment of such costs and expenses. In addition, the Agency may charge and collect a reasonable fee from any applicant to cover the costs incurred by the Agency in preparing an environmental checklist or other information needed for the Agency to make a threshold determination.

(b) Environmental Impact Statement

(1) When the Agency is the lead agency for a proposal requiring an EIS and the responsible official determines that the EIS shall be prepared by employees of the Agency, the Agency may charge and collect a reasonable fee from any applicant to cover costs incurred by the Agency in preparing the EIS. The responsible official shall advise the applicant(s) of the projected costs for the EIS prior to actual preparation; the applicant shall post bond or otherwise ensure payment of such costs.

(2) The responsible official may determine that the Agency will contract directly with a consultant for preparation of an EIS, or a portion of the EIS, for activities initiated by some persons or entity other than the Agency and may bill such costs and expenses directly to the applicant. The Agency may require the applicant to post bond or otherwise ensure payment of such costs.

(3) If a proposal is modified so that an EIS is no longer required, the responsible official shall refund any fees collected under Section 2.14 (a) or (b) of this regulation that remain after incurred costs are paid.

(c) The Agency may collect a reasonable fee from an applicant to cover the cost of meeting the public notice requirements of this regulation relating to the applicant's proposal.

(d) The Agency shall not collect a fee for performing its duties as a consulted agency, except as provided in WAC 197-11-570.

(e) The Agency may charge any person for copies of any document prepared under this ordinance, and for mailing the document, in a manner provided by chapter 42.17 RCW.

WSR 01-11-102

PERMANENT RULES

DEPARTMENT OF LICENSING

[Filed May 21, 2001, 10:49 a.m.]

Date of Adoption: May 17, 2001.

Purpose: The purpose of this new chapter is to implement those parts of RCW 18.210.005, 18.210.020, 18.210.130, and 18.210.150 requiring the establishment of standards of practice, outlining professional conduct, defining direct supervision and establishing the professional seal/stamp and its proper usage for persons who are licensed under chapter 18.210 RCW to practice, or offer to practice the design of on-site wastewater treatment systems in the state, and licensed professional engineers under chapter 18.43 RCW practicing on-site design.

Statutory Authority for Adoption: RCW 18.210.050, 18.210.060.

Adopted under notice filed as WSR 01-05-033 on February 13, 2001.

Changes Other than Editing from Proposed to Adopted Version: Title: The title is changed to "Rules of Professional Practice for Licensees Designing On-Site Wastewater Treatment Systems" to avoid confusion with similar board rules for engineers.

WAC 196-33-100 Purpose and definitions: In line 11, the reference to the "department of health" is changed to "state board of health" to correct the referenced authority.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 5, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 5, Amended 0, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: Thirty-one days after filing.

May 17, 2001

George A. Twiss
Executive Director

PERMANENT

(New Chapter)
Chapter 196-33 WAC

Rules of Professional Practice for Licensees Designing
On-Site Wastewater Treatment Systems

NEW SECTION

WAC 196-33-100 Purpose and definitions (1) The purpose of Chapter 196-33 WAC is to provide further guidance to licensees with respect to the accepted professional conduct and standard of practice, as indicated in chapter 18.210 RCW, and generally expected of those practicing professional on-site wastewater treatment system designing. These standards shall apply to all persons authorized to practice on-site wastewater treatment system design services, whether licensed professional designers under chapter 18.210 RCW, or licensed professional engineers under chapter 18.43 RCW. The board recognizes the need to establish standards with which to measure the performance of practitioners. The board further recognizes, as a minimum standard, those standards for the design of on-site wastewater treatment systems required by WAC 246-272, promulgated by the state board of health in accordance with their authority granted in chapter 43.20.050 RCW. It is the intent of the board to introduce guidance and direction through these rules, together with recommended standards and guidance documents.

(2) The word "licensee" in these rules of professional practice shall mean any person holding a license issued in accordance with chapter 18.210 RCW, or chapter 18.43 RCW, issued by this board.

(3) All licensees are charged with having knowledge of and practicing in accordance with the provisions of these rules of professional practice.

(4) Should there be any conflict in the guidance provided in this chapter and the intent of the language of Chapter 18.210 RCW, the intent of the language in Chapter 18.210 RCW prevails.

(5) Terms used in this chapter shall have the same definition as provided in Chapter 18.210 RCW.

NEW SECTION

WAC 196-33-200 Fundamental canons and guidelines for professional practice and conduct The specialized and complex knowledge required for on-site wastewater treatment system design makes it imperative that licensees exercise a standard of care that holds paramount the protection of the health, safety, environment, property, and welfare of the public.

(1) Licensees are expected to apply the skill, diligence and judgment required by the professional standard of care, to achieve the goals and objectives agreed with the client or employer, and are expected to promptly inform the client or employer of progress and changes in conditions that may affect the appropriateness or achievability of some or all of the goals and objectives of the client or employer. Licensees are obliged to:

(a) be honest and fair in their dealings, and to conform to the relevant laws and codes of the jurisdiction in which they practice.

(b) be able to demonstrate that their final products and work plans adequately consider the primary importance of protecting the safety, health, property, and welfare of the general public.

(c) approve or seal only documents prepared by them or under their direct supervision.

(d) inform their clients or employers of the possible consequences, when an overruling or disregarding of the licensee's professional judgment may threaten the safety or health of the public. If in the judgment of the licensee an imminently dangerous situation persists, they shall promptly inform appropriate authorities.

(e) inform the board in writing, citing specific facts to which the licensee has direct knowledge, if they have knowledge or reason to believe that another person or firm may be in violation of any of the provisions of chapter 18.210 RCW or these rules of professional conduct, and cooperate with the board in furnishing such further information or assistance as may be required.

(2) Licensees shall be competent in the technology, and knowledgeable of the codes, regulations, and guidelines applicable to the services they perform.

(3) Licensees shall be qualified by education and/or experience in the technical area of on-site wastewater treatment system design applicable to services performed and the technologies utilized.

(4) Licensees may accept primary contractual responsibility requiring education and/or experience outside their own area of competence, provided their services are restricted to those phases of the project in which they are qualified.

(5) Licensees shall not affix their signatures or seals to any plan or document dealing with subject matter in which they lack competence by virtue of education and/or experience.

(6) Licensees shall act in professional matters for each employer or client as faithful agents or trustees.

(7) Licensees shall be objective and truthful in professional documents, reports, statements, or testimony. They shall include all relevant and pertinent information in such reports, statements or testimony. They shall not knowingly falsify, misrepresent or conceal a material fact in offering or providing services to a client or employer.

(8) Licensees shall avoid all known or potential conflicts of interest with their employers or clients and shall promptly inform their employers or clients of any business association, interest, or circumstances, which could influence their judgment, or the quality of their services.

(9) Licensees shall only accept compensation from one party for services on a project, unless the circumstances are fully disclosed to and agreed to, by all interested parties.

(10) Licensees shall not solicit or, accept gratuities, directly or indirectly, from contractors, their agents, or other parties dealing with their clients or employers in connection with work for which they are responsible.

(11) Licensees shall advise their employers or clients when, as a result of their studies, they believe a project will not achieve the goals established with the client.

(12) Licensees shall not use confidential information coming to them in the course of their assignments as a means of making personal profit if such action is adverse to the interests of their clients, employers or the public.

(13) Licensees employed full-time shall not accept professional employment outside of their regular work or interest without the knowledge and consent of their employers.

(14) Licensees shall offer their professional services in a truthful, objective, and professional manner that results in public trust in the integrity of the on-site design profession.

(15) Licensees shall not request, propose or accept professional commissions on a contingent basis under circumstances in which their professional judgments may be compromised.

(16) Licensees shall not offer or accept money, goods or other favors as inducement to receive favorable consideration for a professional assignment or as an inducement to approve, authorize or influence the granting of a professional assignment. This shall not preclude the securing of salaried positions through employment agencies.

(17) Licensees shall negotiate contracts for professional services fairly and on the basis of demonstrated competence and qualifications for the type of professional service required.

(18) Licensees shall not falsify or permit misrepresentation of their academic or professional qualifications or experience.

(19) Licensees shall not advertise professional services in a way that is false or misleading as to the qualification, experience, or capability of the licensee.

(20) Public statements by licensees regarding the practice of on-site wastewater treatment systems design shall be objective and truthful.

(21) Licensees should endeavor to extend the public knowledge of on-site wastewater treatment system design and shall not participate in the dissemination of untrue, unfair, or exaggerated statements regarding the profession.

(22) Professional reports, statements, or testimony made to the public or public entities shall include all relevant and pertinent information to support conclusions or opinions expressed.

(23) Licensees when serving as an expert witness shall express an on-site design opinion only when it is founded upon adequate knowledge of the facts, upon a background of technical competence, and upon honest conviction.

(24) Licensees shall issue no statements, criticisms, or arguments regarding on-site design matters, which are inspired or paid for by interested parties, unless they indicate on whose behalf the statements, are made.

(25) Licensees shall continue their professional development throughout their careers, and shall provide opportunities for the professional development of those individuals under their supervision.

(26) Licensees shall respond to any legal request for information by the board and/or appear before the board in the time frame established by the board or their staff designee.

(27) In addition to the requirements of Chapter 18.210.020 and this chapter, the following acts are contrary to the standard of practice for individuals authorized to practice under this chapter and constitute unprofessional conduct in the practice of on-site wastewater treatment system designing:

(a) Duplicating, copying, removing or attempting to remove materials from the custody and control of the Board that are exempt from inspection or copying under chapter 42.17 RCW when such duplication, copying or removal was not expressly authorized by the board.

(b) Failure to notify a client or employer that a project could not be completed or was not completed.

(c) Failure to respond to client inquiries under conditions which endanger the health, safety, or welfare of the public or the client or the client's property.

(d) Failure to respond to inquiries from other on-site practitioners or governmental agencies regarding differences in your respective work products, under conditions which endanger the public health, safety, or welfare or the health, safety, or welfare of the client or the client's property.

NEW SECTION

WAC 196-33-300 Providing direct supervision.

Direct supervision is a combination of activities by which a licensee maintains control over those decisions that are the basis for the finding, conclusions, analysis, rationale, details, and judgments that are embodied in the development and preparation of on-site plans, specifications, reports, and related activities. Direct supervision explains the relationship between the licensee and those persons who are performing the work controlled by the licensee. Direct supervision requires providing personal direction, oversight, inspection, observation and supervision of the work being certified.

Communications between the licensee and those persons who are performing the work include, but are not limited to, use of any of the following ways: Direct face-to-face communications; written communications; U.S. mail; electronic mail; facsimiles; telecommunications, or other current technology: Provided, that the licensee retains, maintains, and asserts continuing control and judgment.

Nothing in this section shall be construed to relieve the licensee from the responsibility of final decision making and plan stamping.

NEW SECTION

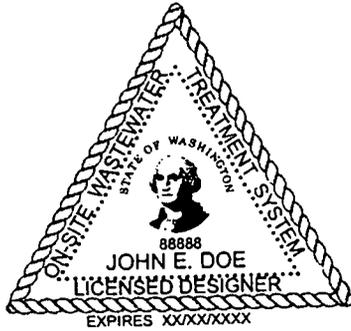

WAC 196-33-400 Seals and stamps All individuals licensed in accordance with chapter 18.210 RCW shall procure a seal/stamp that conforms to the design as authorized by the board. It is the responsibility of the licensee to maintain control over the use of his/her stamp/seal. The impression or image of the seal/stamp shall conform to the below-illustrated design and be of a size that assures full legibility of the following required information:

(1) State of Washington;

(2) Licensed On-Site Wastewater Treatment System Designer;

(3) License number;

- (4) Licensee's name as shown on license;
 (5) Date of license expiration.

NEW SECTION

WAC 196-33-500 Seal and stamp usage The use of the seal/stamp shall be in accordance with chapters 18.43 RCW and 18.210 RCW, or as otherwise described herein:

(1) Final documents are those documents that are prepared and distributed for use for construction, final agency approvals, use by clients, and record drawings or as-builts for filing with public officials where such record drawings or as-builts are required to be prepared by the licensee. Any final document must contain the seal/stamp, license expiration date and signature of the licensee who prepared or directly supervised the work. For the purpose of this section "document" is defined as plans, designs, specifications and reports.

(2) Preliminary documents are those documents not considered final as defined herein, but are released or distributed by the licensee. Preliminary documents must be clearly identified as "PRELIMINARY" or contain such wording so it may be differentiated from a final document. Preliminary documents shall be stamped and dated, but need not be signed by the licensee.

(3) Plan sets: Every page of a plan set must contain the seal/stamp and signature of the licensee(s) who prepared or who had direct supervision over the preparation of the work.

(a) Plans/designs containing work prepared by or under the direct supervision of more than one licensee shall be sealed/stamped by each licensee and shall clearly note the extent of each licensee's responsibility.

(b) As provided for in subsections (1) and (2) of this section, each page of a plan set must contain the seal/stamp of the licensee who prepared or who had direct supervision over the preparation of the work and may contain the signature of the licensee depending on whether the plan set is final or preliminary.

(c) Plan/design sheets containing and/or depicting background and/or supporting information that is duplicated from other plans need only be sealed/stamped by the licensee(s) who prepared or was in direct supervision of the design on that plan sheet. Whenever possible, the origin of the background information should be noted on the plan sheet.

(d) All design revisions to final plan/design sheets shall be performed by qualified licensees and shall be done in accordance with the provisions of RCW 18.210. The revised

plan/design sheets shall clearly identify on each sheet; the revisions made and shall contain the name and seal of the licensee, and signature of licensee with the date the revision was made.

(4) Specifications: Specifications that are prepared by or under the direct supervision of a licensee shall contain the seal/stamp and signature of the licensee. If the specifications prepared by a licensee are a portion of a bound specification document that contains specifications other than that of an on-site design nature, the licensee need only seal/stamp that portion or portions of the documents for which the licensee is responsible. Nothing herein should be construed to require that each page of a on-site design specification be sealed/stamped by the licensee.

(5) Document review: When a licensee is required to review work prepared by another licensed on-site designer, the reviewing licensee shall fully review those documents and shall prepare a report that discusses the findings of the review with any supporting calculations and sketches. The reviewing licensee would then seal/stamp and sign the report. The report would make reference to and/or be attached to the subject document(s) reviewed.

(6) Nothing in this section requires the stamping of plans/designs by employees of local health districts acting in their capacity as on-site inspectors/reviewers, whether or not licensed under 18.210 RCW.

WSR 01-12-002

PERMANENT RULES

WASHINGTON CITIZENS' COMMISSION ON SALARIES FOR ELECTED OFFICIALS

[Filed May 23, 2001, 2:09 p.m.]

Date of Adoption: May 18, 2001.

Purpose: Implement the Public Disclosure Act and the Open Public Meetings Act by (1) advising the public about how to obtain public records from the commission and (2) providing the public with basic information about how the commission will conduct public hearings.

Statutory Authority for Adoption: Chapters 34.05, 42.17 RCW.

Adopted under notice filed as WSR 01-04-033 on January 31, 2001.

Changes Other than Editing from Proposed to Adopted Version: WAC 183-04-030(4), change address and phone and fax numbers; WAC 183-04-030(5), change executive in second line to administrative; and WAC 183-04-040 (2)(c), change fax number.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 14, Amended 0, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: Thirty-one days after filing.

Executive Director

Title 183 WAC

WASHINGTON CITIZENS' COMMISSION ON SALARIES FOR ELECTED OFFICIALS

Chapter 183-04 WAC

PUBLIC RECORDS

NEW SECTION

WAC 183-04-010 Purpose. The purpose of this chapter is to implement the public records provisions of chapter 42.17 RCW.

NEW SECTION

WAC 183-04-020 Definitions. The definitions in this section apply throughout this chapter unless the context clearly requires otherwise:

(1) "Commission" means the Washington citizens' commission on salaries for elected officials. Where appropriate, the term "commission" also refers to the staff and employees of the commission.

(2) "Executive director" means the executive director of the commission.

(3) As used in this chapter:

(a) Citations to state statutes and regulations include such laws as now or hereafter amended.

(b) The singular shall take the plural and either gender, the other, as the context requires.

NEW SECTION

WAC 183-04-030 Description of organization, operations, and procedures. A description of the commission's organization and the general course and method by which the commission's operations are channeled and determined, along with the nature and requirements of all formal and informal procedures are summarized as follows:

(1) The commission is a state agency authorized by Article 28, section 1 of the state Constitution and created in chapter 43.03 RCW. The commission studies and establishes salaries for the:

(a) Governor, lieutenant governor, secretary of state, treasurer, auditor, attorney general, superintendent of public

instruction, commissioner of public lands, and insurance commissioner;

(b) Members of the legislature; and

(c) Justices of the supreme court, and judges of the courts of appeals, superior courts, and district courts.

(2) The commission's authority and duties are described in Article 28, section 1 of the state Constitution and in chapter 43.03 RCW.

(3) Membership on the commission is described in RCW 43.03.305. The commission may delegate certain duties to subordinates but remains responsible for the official acts of staff and employees.

(4) The commission's office is located at: 1210 Eastside Street, Olympia, Washington. The commission's telephone number is (360) 586-7542. The commission's FAX number is (360) 586-7544. The commission's website is at www.salaries.wa.gov and e-mails may be sent to the commission by accessing that site. The commission shall accept public records requests only at the locations and through the means described in WAC 183-04-040.

(5) The commission has an executive director who, as the chief administrative officer of the commission, is delegated authority over matters affecting the operation of the commission.

(6) As needed, the commission may also have additional staff and employees.

(7) The commission conducts its meetings in compliance with the Open Public Meetings Act, chapter 42.30 RCW and chapter 183-06 WAC.

(8) The commission's generally applicable statements of procedure are adopted as authorized by law and contained in Title 183 WAC.

NEW SECTION

WAC 183-04-040 Where and when public records may be obtained. (1) The commission's office is not open on a full-time year-round basis. The public can find out the commission's hours of operation by contacting the commission's general mailing address, telephone number, or website address identified in WAC 183-04-030.

(2) The public may nevertheless obtain public records year-round, as follows:

(a) Mail. The public may mail public records requests to the commission at any time, regardless of whether the office is open or not. When the office is closed, the commission makes arrangements for such requests to be handled. Requests by mail shall be addressed to the commission's mailing address: The Washington Citizens' Commission on Salaries for Elected Officials, c/o Public Records Officer, P.O. Box 43120; Olympia, WA 98504-3120. The front of the envelope shall conspicuously state: "Public Records Request."

(b) E-mail. When the commission's office is open, the commission will accept public disclosure requests by e-mail. E-mail requests shall be sent to the commission by accessing the commission's website at www.salaries.wa.gov and following the instructions for e-mail. E-mail requests shall contain the subject line "Public Records Request."

(c) FAX. When the commission's office is open, the commission will accept public disclosure requests by FAX. FAX requests shall be addressed to "The Washington Citizens' Commission on Salaries for Elected Officials, c/o Public Records Officer" with the subject line "Public Records Request" and sent to (360) 586-7544.

(d) In person. In person requests shall be made during the hours identified in WAC 183-04-050. When the commission's office is open, requests may be made in person at the commission's office. When the commission's office is closed, requests may be made in person at the Office of Financial Management, 6639 Capitol Blvd., Tumwater, Washington. FAX requests shall be addressed to "The Washington Citizens' Commission on Salaries for Elected Officials, c/o Public Records Officer" with the subject line "Public Records Request" and sent to the office of financial management (360) 664-3423.

(e) Telephone. Requests may not be made by telephone.

NEW SECTION

WAC 183-04-050 Public records available. (1) The public may obtain public records of the commission under these rules, in accordance with chapter 42.17 RCW, and except as otherwise provided by law.

(2) Public records are available for public inspection and copying from 9:00 a.m. to noon and from 1:00 p.m. to 4:00 p.m. Monday through Friday, excluding legal holidays (unless the requesting party and the commission agree on a different time) as described in WAC 183-04-040.

NEW SECTION

WAC 183-04-060 Public records officer. The commission shall designate a public records officer to have charge of its public records. The public records officer shall be responsible for implementing the commission's public disclosure rules and for coordinating staff and employees in this regard. The public records officer may choose such designees as may be appropriate.

NEW SECTION

WAC 183-04-070 Requests for public records. Chapter 42.17 RCW requires the commission to prevent invasions of privacy, protect public records from damage or disorganization, and prevent excessive interference with essential functions and unreasonable disruptions of operations. Accordingly, the public may inspect, copy, or obtain copies of public records upon compliance with the following procedures:

(1) A member of the public who seeks a public record shall make a written request. No particular form of writing is required so long as the request complies with WAC 183-04-040 and contains the following additional information:

- (a) The name, mailing address, and telephone number of the person requesting the record.
- (b) The calendar date on which the request is made.
- (c) Identification of the record requested with sufficient particularity that the commission can identify the requested

record and make it available. Such identifying information might include the title, subject matter, and date of the record.

(d) A signed statement that the records will not be used for commercial purposes if a list of individuals is being requested, or for any other use prohibited by law.

(2) To facilitate processing the request, the person requesting the record may also include:

- (a) Either a FAX number or an e-mail address, or both.
- (b) A reference to the record as it is described in the current public record index maintained by the commission.
- (3) The public may make written public records requests to the commission, by mail, by FAX, or by e-mail in accordance with WAC 183-04-040. Members of the public making public records requests in person who have not reduced their request to writing shall be asked to complete a short form with the needed information. The purpose of requiring written requests is to assist the commission in tracking, managing, and responding to requests in a timely and orderly fashion.

(4) The commission shall assist persons making public records requests to appropriately identify the public records being sought. The commission may ask the requesting party to clarify what information is being sought.

NEW SECTION

WAC 183-04-080 Copying and fees. (1) Copying.

(a) The commission shall make copies on the commission's copy equipment when doing so will not unreasonably disrupt the operations of the commission or cause excessive interference with other essential functions.

(b) Persons requesting public records may use their own copying equipment and paper without charge when the use of such equipment does not cause damage or disorganization to the public records, unreasonably impede the operations of the commission or cause excessive interference with other essential functions. The commission may supervise such copying at all times.

(2) Fees.

(a) The commission shall not charge a fee for locating documents, for making them available, or for inspection of public records by the public.

(b) The commission may impose a reasonable fee for providing copies of public records, for use of the commission's equipment, and for mailing costs, postage, delivery costs, and other costs directly incident to copying the records. The commission shall not charge fees that exceed the amount necessary to reimburse the commission for its actual costs.

(c) The commission shall not provide copies to requesting parties unless associated fees have been paid in full by cash, check, or money order. To ensure that copies requested and made are actually paid for, the commission may require payment prior to making the copies.

(d) The commission may agree to provide copies without fee to federal, state, local, or tribal governments, or to others, when doing so is in the best interest of the commission.

NEW SECTION

WAC 183-04-090 Disclosure procedure. (1) The commission shall review the requested public records prior to disclosure.

(2) If the records do not contain materials exempt from public disclosure, the commission shall disclose the records.

(3) If the records contain materials exempt from public disclosure, the commission shall deny disclosure of the exempt materials and disclose any remaining, nonexempt materials. At the time of the denial, the commission shall clearly specify in writing the reasons for the denial, including a statement of the specific exemptions or reason for denial of disclosure.

NEW SECTION

WAC 183-04-100 Review of denials of requests for public records. For the purpose of judicial review, final agency action is deemed to have occurred at the end of the second business day after the requesting party receives notification of a denial of inspection.

NEW SECTION

WAC 183-04-110 Records index. (1) Availability. The commission shall maintain and make available for public inspection and copying an index that provides identifying information for public records falling within the requirements of RCW 42.17.260.

(2) Form and content. The index shall be maintained in electronic form with copies available on paper. The index shall contain topic and subtopic headings.

(3) Location and availability. The index shall be available to the public under the same rules and on the same conditions as are applied to other public records.

(4) Schedule for revisions and updates. The commission will revise and update the index biennially.

Chapter 183-06 WAC**PUBLIC HEARING PROCEDURES**NEW SECTION

WAC 183-06-010 Definitions. The definitions in this section apply throughout this chapter unless the context clearly requires otherwise:

(1) "Chair" means the chair of the commission.

(2) "Commission" means the Washington citizens' commission on salaries for elected officials. Where appropriate, the term "commission" also refers to the staff and employees of the commission.

(3) "Executive director" means the executive director of the commission.

(4) As used in this chapter:

(a) Citations to state statutes and regulations include such laws as now or hereafter amended.

(b) The singular shall take the plural and either gender, the other, as the context requires.

NEW SECTION

WAC 183-06-020 Meetings. (1) Other than executive sessions, the commission's regular meetings, special meetings, and emergency meetings are open to the general public.

(2) Regular meetings. In conformance with the requirement of RCW 43.03.310 that the commission schedule at least four public hearings to take public testimony on its proposed salary schedule, the commission shall schedule such hearings by majority vote. The public hearings so scheduled shall be "regular meetings" as defined by RCW 42.30.075. The commission shall fix the time and place of these public hearings and publish a schedule in the *Washington State Register*, in accordance with chapter 42.30 RCW, the Open Public Meetings Act.

(3) Special meetings. The chair or a majority of commission members may call a special meeting at any time in accordance with RCW 42.30.080. In addition, the time and place of special meetings scheduled at the same time that the regular meetings described in subsection (1) of this section are scheduled will also be published in the *Washington State Register*.

(4) Executive sessions. The chair or a majority of commission members may call an executive session at any time in accordance with RCW 42.30.110.

(5) The presence of any eight members of the commission shall constitute a quorum.

(6) The commission shall maintain records of proceedings as minutes of the meetings, duly recorded, and maintained at the commission's office.

NEW SECTION

WAC 183-06-030 Conduct of meetings and order of business. (1) All commission meeting business shall be transacted by motion. Motions may be made by any commission member and shall require a second.

(2) Voting on all motions shall be by voice vote unless a division is called for in which case the executive director shall call the roll in alphabetical order and record the vote of each member present, "yea" or "nay."

(3) The order of commission meeting business shall be conducted as prescribed by the agenda.

(4) The executive director shall prepare each meeting's agenda in consultation with the chair.

(5) The commission shall approve the minutes of the preceding meeting as the first act of each meeting.

(6) The chair or any commission member may modify a meeting's agenda by motion.

(7) Public hearings. The commission seeks to foster public comment on proposed salary schedules through its public hearing process. The commission will, whenever possible, allow any person an opportunity to present written or oral testimony at its public hearings, upon compliance with reasonable procedures. Such procedures include, but may not be limited to, the following:

(a) Those wishing to present oral testimony shall sign the public testimony roster. The commission will call for public comments in the order appearing on the roster. Elected officials and expert witnesses may be scheduled first because

their testimony may help answer pending questions from the public.

(b) To ensure that everyone attending the hearing can hear all oral testimony and questions, commenters shall speak using the microphone provided for the public, after being recognized by the presiding member of the commission. The presiding member of the commission is generally the chair.

(c) Oral testimony and questions should be addressed to the presiding member of the commission.

(d) Because the commission wants to hear from as many people as possible, the commission may place reasonable limits on the time allowed for oral testimony. Time for testimony is generally limited to five minutes per person. Answers to questions from the commission is generally limited to three minutes.

(e) Persons testifying, whether orally or in writing, shall state their name and identify whether they represent an organization. If they represent an organization, they shall identify the organization. At their option, they may also state their address.

(f) Commenters should focus their testimony on the relationship between elected officials' salaries and the duties of their position (RCW 43.03.300 and 43.03.310(I)). Testimony should not focus on elected officials' job performance. Consideration of job performance is allocated to the voters, not the commission.

(g) Commenters shall briefly describe the identity and nature of any documents referenced in their comments, and indicating where the document can be reviewed or obtained.

WSR 01-12-003
PERMANENT RULES
DEPARTMENT OF
FINANCIAL INSTITUTIONS

[Filed May 23, 2001, 3:13 p.m., effective July 1, 2001]

Date of Adoption: May 23, 2001.

Purpose: To increase fees and assessments paid by banks, thrifts, and other entities regulated by the Division of Banks in an amount up to the "fiscal growth factor." Rule allows a waiver of fees and assessments, if certain conditions are met.

Citation of Existing Rules Affected by this Order: Repealing WAC 208-586-135, 208-544-037 and 208-544-050; and amending chapters 208-544 and 208-586 WAC.

Statutory Authority for Adoption: RCW 30.04.030, 33.04.025, 43.320.040.

Adopted under notice filed as WSR 01-07-081 on March 21, 2001 (published on April 4, 2001).

Changes Other than Editing from Proposed to Adopted Version: The proposed rules provided for the removal of the cap on assessment fees and an automatic annual increase on July 1, 2001, and every July 1 thereafter, up to the amount of the fiscal growth factor for that fiscal year, as allowed under Initiative 601. The final rules leave the cap on assessment fees in place and limit the number of annual fee increases to two: One on July 1, 2001, and one on July 1, 2002.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 2, Amended 2, Repealed 2.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: July 1, 2001.

May 23, 2001

John L. Bley

Director

AMENDATORY SECTION (Amending WSR 01-06-024, filed 2/27/01, effective 3/30/01)

WAC 208-544-039 Charges and fees effective July 1, ((1999)) 2001. The division intends to increase the rate of its charges and fees each year for several bienniums. The division intends to initiate a rule making for this purpose each biennium. This rule provides for an automatic annual increase in the rate of charges and fees each fiscal year during the 2001-03 biennium.

(1) Effective July 1, ((1999)) 2001, the rate of charges and fees under WAC 208-512-045, 208-544-020 and 208-544-030 shall be as follows:

(a) WAC 208-512-045 (1)(c) and (d) - The fee shall be \$100.00 for the issuance and filing of certificates.

(b) WAC 208-512-045 (1)(e) - The fee shall be 50 cents per page.

(c) WAC 208-512-045(2) - The fee shall be \$((96.87)) 102.43 per employee hour expended.

(d) WAC 208-544-020(1) - The rates shall be the following:

If total assets are:		The assessment is:		
Over	But not Over	This Amount	Plus	Of Excess Over
Million	Million			Million
0	500	0	((-0000151549)) <u>0.000016022</u>	0
500	1,000	((7,577)) <u>8.011</u>	((-0000145309)) <u>0.000015364</u>	500
1,000	10,000	((44,842)) <u>15.693</u>	((-0000143149)) <u>0.0000015134</u>	1,000
10,000	—	((443,676)) <u>151.899</u>	.000	10,000

(e) WAC 208-544-020(2) - The rate shall be ((-000037876)) 0.04005.

(f) WAC 208-544-030(1) - The fee shall be \$((69.95)) 73.95 per hour.

PERMANENT

(g) WAC 208-544-030(2) - The fee shall be \$((96.87)) 102.43 per hour.

(2) ~~((Thereafter, effective July 1, 2000, and again on July 1, 2001, the charges and fees set forth in subsection (1)(e), (d), (e), (f), and (g) of this section shall be increased by the fiscal growth factor as determined by the office of financial management pursuant to RCW 43.135.025.))~~ (a) On July 1, 2002, the rate of charges and fees under subsection (1)(c), (d), (e), (f), and (g) of this section, as increased in the prior fiscal year, will increase by a percentage rate equal to the fiscal growth factor for the then current fiscal year. As used in this section, "fiscal growth factor" has the same meaning as the term is defined in RCW 43.135.025.

(b) The director may round off a rate increase under this subsection. However, no rate increase may exceed the applicable fiscal growth factor.

(c) By June 1 of each year the director will make available a chart of the new rates that will take effect on the immediately following July 1.

(3) The director may ~~((suspend the collection of))~~ waive any or all of the charges and/or fees imposed under this section, in whole or in part, when he or she determines that both of the following factors are present:

(a) The banking ~~((examination fund established in RCW 43-320-110))~~ program fund exceeds the projected acceptable minimum fund balance level approved by the office of financial management (OFM); and

(b) That such course of action would be fiscally prudent.

(4)(a) If the charges and fees assessed under WAC 208-544-020(1) relating to a semiannual asset charge and WAC 208-544-030(1) relating to the hourly examination fee exceed ninety-five percent of the charges and fees applicable for a two-year period of the comparable federal chartering regulator (CFCR) or its successor then the charges and fees paid in excess of such amount shall be rebated to the institution pursuant to (d) of this subsection unless abated by the director as provided in (e) of this subsection.

(b) For purposes of determining rebate entitlement, the total of semiannual asset charges and examination fees will be determined by adding the monthly average semiannual asset charge and the monthly average examination fee for any twenty-four month period beginning on or after July 1, 2000. The monthly average semiannual asset charge is determined by dividing the semiannual asset charges by six and applying the monthly average to the previous six months. The monthly average examination fee is determined by dividing the examination fee for each examination during the averaging period by the number of months between each such examination and the previous examination as determined by the date of the examinations and applying the monthly average to those months. The CFRC charge is determined in the same manner. Under no circumstances will an institution be permitted to calculate a rebate based on a period of time that was included, in whole or in part, in the calculation of another rebate under this section.

(c) The rebate is determined by the difference between the sum of the applicable monthly average state charges and fees for the twenty-four month period minus ninety-five percent of the sum of the applicable monthly average CFRC

charges and fees for the same period, as each are determined in (b) of this subsection.

(d) Entitlement of the rebate will occur only upon petition and satisfactory proof to the director.

(e) Rebate abatement. At the discretion of the director, all or part of the rebate determined under (d) of this subsection may be denied if the director determines that:

(i) The institution required a substantially greater than average amount of supervisory time for reasons other than as a result of economic, legal, regulatory, or other conditions beyond the control of competent management;

(ii) The institution required a substantially greater than average amount of examination time for an institution of its size for reasons other than as a result of economic, legal, regulatory, or other conditions beyond the control of competent management;

(iii) Examinations or investigations were performed by third parties under personal services contracts;

(iv) The banking program fund does not exceed the projected acceptable minimum fund balance level approved by OFM or is insufficient to satisfy the rebates under this subsection and still maintain the operations of the department at a fiscally prudent level;

(v) The institution maintained a composite uniform financial institution rating (CAMELS) of 3, 4 or 5 during any time during the rebate period; or

(vi) Such other factors as the director may deem equitable or relevant.

(f) Institutions may become eligible to receive a rebate after June 30, 2002, for amounts paid on or after July 1, 2000.

REPEALER

The following sections of the Washington Administrative Code are repealed:

WAC 208-544-037	Charges and fees effective June 25, 1999.
WAC 208-544-050	Limitations on assessments.

AMENDATORY SECTION (Amending WSR 01-06-024, filed 2/27/01, effective 3/30/01)

WAC 208-586-140 Charges and fees effective July 1, ((1999)) 2001. The division intends to increase the rate of its charges and fees each year for several bienniums. The division intends to initiate a rule making for this purpose each biennium. This rule provides for an automatic annual increase in the rate of charges and fees each fiscal year during the 2001-03 biennium.

(1) Effective July 1, ((1999)) 2001, the rate of charges and fees under chapters 208-586 and 208-594 WAC shall be as follows:

(a) WAC 208-586-030(1) - The fee shall be \$((43.05)) 45.51 per hour.

(b) WAC 208-586-030(2) - The fee shall be \$((48.43)) 51.19 per hour.

(c) WAC 208-586-030(3) - The fee shall be \$((53.84)) 56.89 per hour.

- (d) WAC 208-586-040 - The asset charge shall be ~~((.03229+6))~~ 0.0348046 per thousand dollars of assets.
- (e) WAC 208-586-075 - The fee shall be \$2,500.00 for the first branch and \$500.00 for each additional branch.
- (f) WAC 208-586-080 - The fee shall be \$50.00 for the home office and each branch.
- (g) WAC 208-586-090 - The fee shall be ~~\$(64.57))~~ 68.27 per hour.
- (h) WAC 208-586-100 - The fee shall be ~~\$(53.84))~~ 56.89 per hour.
- (i) WAC 208-586-110 - The fee shall be ~~\$(53.84))~~ 56.89 per hour.

(j) WAC 208-586-120 - The fee shall be \$5,000.00.
 (k) WAC 208-594-070 - The fee shall be \$1,000.00.
 (2) ~~((Thereafter, effective July 1, 2000, and again on July 1, 2001, the charges and fees set forth in subsection (1)(a), (b), (c), (d), (g), (h), and (i) of this section shall be increased by the fiscal growth factor as determined by the office of financial management pursuant to RCW 43.135.025.))~~ (a) On July 1, 2002, the rate of charges and fees under subsection (1)(a), (b), (c), (d), (g), (h), and (i) of this section, as increased in the prior fiscal year, will increase by a percentage rate equal to the fiscal growth factor for the then current fiscal year. As used in this section, "fiscal growth factor" has the same meaning as the term is defined in RCW 43.135.025.

(b) The director may round off a rate increase under this subsection. However, no rate increase may exceed the applicable fiscal growth factor.

(c) By June 1 of each year, the director will make available a chart of the new rates that will take effect on the immediately following July 1.

(3) The director may ~~((suspend the collection of))~~ waive any or all of the charges and/or fees imposed under this section, in whole or in part, when he or she determines that both of the following factors are present:

- (a) The banking ~~((examination fund established in RCW 43.320.110))~~ program fund exceeds the projected acceptable minimum fund balance level approved by the office of financial management; and
- (b) That such course of action would be fiscally prudent.

REPEALER

The following section of the Washington Administrative Code is repealed:

WAC 208-586-135 Charges and fees effective June 25, 1999.

WSR 01-12-004
PERMANENT RULES
DEPARTMENT OF
FINANCIAL INSTITUTIONS

[Filed May 23, 2001, 3:14 p.m.]

Date of Adoption: May 23, 2001.

Purpose: To increase assessments and fees paid by credit unions and other parties to the Division of Credit Unions.

Citation of Existing Rules Affected by this Order: Repealing WAC 208-418-060; and amending WAC 208-418-020, 208-418-040, 208-418-050, and 208-418-070.

Statutory Authority for Adoption: RCW 31.12.426(1), 31.12.516(2), 43.320.040.

Adopted under notice filed as WSR 01-07-082 on March 21, 2001.

Changes Other than Editing from Proposed to Adopted Version: Based on comments received, the division changed the rule in its final version to limit to two the number of automatic annual increases in the rate of assessment/fees: One on July 1, 2001, and one on July 1, 2002.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 3, Amended 4, Repealed 1.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: Thirty-one days after filing.

May 23, 2001
 John L. Bley
 Director

NEW SECTION

WAC 208-418-010 Definitions. Unless the context clearly requires otherwise, as used in this chapter:

- (1) "Credit union" includes a Washington credit union, an out-of-state credit union and a foreign credit union.
- (2) "Foreign credit union" means a credit union organized and operating under the laws of another country or other foreign jurisdiction, that is operating a branch in Washington in accordance with RCW 31.12.471.
- (3) "Hourly fee" means a fee of \$57.42 per hour per examiner or other staff person of the division.
- (4) "Out-of-state credit union" means a credit union organized and operating under the laws of another state or U.S. territory or possession, that is operating a branch in Washington in accordance with RCW 31.12.471.
- (5)(a) "Total assets" of a Washington credit union includes all assets of the credit union as reported on the credit union's most recent form 5300 or similar financial report.
- (b) "Total assets" of an out-of-state or foreign credit union is derived from the following fraction:

$$\frac{\text{Total assets x in-state branch shares and deposits}}{\text{Total shares and deposits}}$$

PERMANENT

"Total assets" and "shares and deposits" include respectively all assets and shares and deposits as reported on the credit union's most recent form 5300 or similar financial report.

(6) "Washington credit union" means a credit union organized and operating under chapter 31.12 RCW.

AMENDATORY SECTION (Amending WSR 96-12-058, filed 5/31/96, effective 7/1/96)

WAC 208-418-020 Collection of fees. Chapter ~~((274, Laws of 1996,))~~ 31.12 RCW authorizes the director to charge fees to credit unions and certain ~~((related parties))~~ other persons in order to cover the costs of the operation of the division of credit unions and to establish a reasonable reserve for the division. As set forth in more detail in this chapter, the fees for this purpose shall consist of:

- (1) Quarterly asset assessments charged to credit unions;
- (2) Charges to a credit union for costs incurred by the division for certain types of attorney general or special counsel assistance in regard to the credit union; and
- (3) Certain other fees charged by the director.

~~((Fees must be paid no later than thirty days after their due date.))~~ The director may waive all or any portion of any fee payable by a credit union or other ~~((party based on the ability of the credit union or party to pay the fee))~~ person.

AMENDATORY SECTION (Amending WSR 96-12-058, filed 5/31/96, effective 7/1/96)

WAC 208-418-040 Quarterly asset assessments. (1) The director will charge each credit union a quarterly asset assessment at the rate set forth in subsection (2) of this section. Asset assessments will be due on January 1, April 1, July 1, and October 1. Asset assessments must be paid no later than thirty days after their due date. The assessments will be computed on total assets as of the prior June 30 for the October 1 and January 1 assessments, and as of the prior December 31 for the April 1 and July 1 assessments. ~~((Quarterly asset assessments are charged for the calendar quarter that begins on the due date of the assessment. No rebates will be made to credit unions that cease to be state chartered during the quarter.))~~

(2) Credit Union's Total Assets	Quarterly Asset Assessment
over \$500M	\$((18,357)) 18,883 + ((-000015)) 0.00001543 x total assets over \$500M
over \$100M up to \$500M	\$((5,104)) 5,250 + ((-000033134)) 0.00003408 x total assets over \$100M
over \$((20)) 25M up to \$100M	((-000051035)) 0.00005250 x total assets
over \$10M up to \$((20)) 25M	\$((1,125)) 1,157
over \$2M up to \$10M	\$((750)) 771

(2) Credit Union's Total Assets	Quarterly Asset Assessment
over \$((200)) 500K up to \$2M	\$((500)) 514
up to \$((200)) 500K	\$0
((Corporate Centrals	-0000252 x total assets))

M = Million K = Thousand

(3) Quarterly asset assessments are charged for the calendar quarter that begins on the due date of the assessment. No rebates will be made to credit unions that cease to be state-chartered during the quarter. A credit union converting to state charter will pay a prorated quarterly asset assessment for the quarter during which the conversion is completed.

(4) ~~((For the purpose of this chapter, "total assets" includes all assets held by a Washington chartered credit union whether held within this state or a branch in another state, and assets of foreign credit unions held through branches within the state of Washington, as reported on the credit union's form 5300 or similar financial report. However, the director may waive any assessment on assets held by Washington chartered credit unions through branches in other states based upon reciprocal agreements with the other state's regulatory authority. As used in this chapter, "foreign credit union" means a credit union chartered under the laws of another state or a foreign country.))~~ From time to time, the director may determine that asset assessments on an out-of-state credit union or foreign credit union are inappropriate relative to the level of examination and supervision of that credit union by the division. In that event, the director may charge the credit union hourly fees for examination and supervision of the credit union, including, but not limited to, off-site monitoring, in lieu of asset assessments. Such fees are due upon receipt of billing from the division.

AMENDATORY SECTION (Amending WSR 96-12-058, filed 5/31/96, effective 7/1/96)

WAC 208-418-050 Pass through of attorney general costs. (1) The director will charge each credit union the actual cost incurred by the division of credit unions for certain legal assistance rendered by an assistant attorney general or special counsel in regard to the credit union. Legal assistance includes legal assistance rendered in connection with: Supervisory committee meetings and board meetings; receiverships, conservatorships, liquidations and declarations of insolvency; enforcement agreements or actions; collection actions; administrative hearings; and ~~((written))~~ opinions requested by a credit union or the division of credit unions. Charges are due upon receipt of billing from the division.

(2) The division will notify a credit union before the division incurs expense for legal assistance which may be charged to the credit union under this section.

AMENDATORY SECTION (Amending WSR 96-12-058, filed 5/31/96, effective 7/1/96)

WAC 208-418-070 Other fees. (1) The director will charge hourly fees as follows:

PERMANENT

(a) An hourly fee will be charged to a ~~((party))~~ person other than a credit union or a subsidiary of one or more credit unions for each electronic data processing examination of the ~~((party))~~ person by the division of credit unions.

(b) An hourly fee will be charged to a credit union for the processing of the credit union's application to add a community group to its field of membership.

(c) An hourly fee will be charged to a credit union for a fraud investigation of the credit union and/or ~~((its related parties))~~ persons involved with the credit union by the division.

(d) An hourly fee will be charged to ~~((a))~~ an out-of-state or foreign credit union for ~~((an on-site))~~ examination and supervision by the division under WAC 208-418-040(4).

(e) An hourly fee will be charged to ~~((a))~~ an out-of-state or foreign credit union for the processing of the credit union's application to ~~((do business))~~ operate a branch in this state.

(f) An hourly fee will be charged to other divisions or agencies for examinations, investigations, or similar undertakings performed on their behalf by the division.

(2) ~~((As used in this section, "hourly fee" means a fee of \$55.82 per hour per examiner or other staff person of the division.~~

~~((3)))~~ In addition, the director will charge a credit union or other person for the actual cost incurred by the division for an examination or investigation of the credit union ~~((and/or its related parties))~~ or person performed under personal services contract by third parties.

~~((4)))~~ (3) Charges under this section are due upon receipt of billing from the division.

NEW SECTION

WAC 208-418-090 Rate increase. The division intends to increase its assessment and fee rates each year for several bienniums. The division intends to initiate a rule making for this purpose each biennium. This rule provides for an automatic annual increase in the rate of assessments and fees each fiscal year during the 2001-03 biennium.

(1) On July 1, 2001, and July 1, 2002, the fee and assessment rates under WAC 208-418-010(3) and 208-418-040, as increased in the prior fiscal year, will increase by a percentage rate equal to the fiscal growth factor for the then current fiscal year. As used in this section, "fiscal growth factor" has the same meaning as the term is defined in RCW 43.135.025.

(2) The director may round off a rate increase under subsection (1) of this section. However, no rate increase may exceed the applicable fiscal growth factor.

(3) By June 1 of each year, the director will make available a chart of the new rates that will take effect on the immediately following July 1.

NEW SECTION

WAC 208-418-100 Waiver of fees. The director may waive any or all of the fees and assessments imposed under WAC 208-418-040 and 208-418-070, in whole or in part, when he or she determines that both of the following factors are present:

(1) The credit union program fund exceeds the projected acceptable minimum fund balance level approved by the office of financial management; and

(2) That such course of action would be fiscally prudent.

REPEALER

The following section of the Washington Administrative Code is repealed:

WAC 208-418-060

One-time special assessment for fiscal 1997.

WSR 01-12-009
PERMANENT RULES
EMPLOYMENT SECURITY DEPARTMENT
 [Filed May 24, 2001, 1:14 p.m.]

Date of Adoption: May 16, 2001.

Purpose: To add a new section to chapter 192-150 WAC clarifying that an individual who volunteers to be included in a layoff will not be considered to have separated from work for a disqualifying reason when the layoff is initiated and announced by the employer and the employer takes the final action to terminate the employment relationship.

Citation of Existing Rules Affected by this Order: Repealing WAC 192-16-070.

Statutory Authority for Adoption: RCW 50.12.010, 50.12.040.

Adopted under notice filed as WSR 01-04-082 on February 7, 2001.

Changes Other than Editing from Proposed to Adopted Version: Added the words "in writing" to subsection (1)(a). Changed the words "in a manner to encourage" in subsection (2) to "or otherwise encourages." These changes are not substantive but are intended to clarify the regulation.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 1, Amended 0, Repealed 1.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 1, Amended 0, Repealed 1.

Effective Date of Rule: Thirty-one days after filing.

May 21, 2001
 Dr. Sylvia P. Mundy
 Commissioner

NEW SECTION

WAC 192-150-100 Employer-initiated layoffs or reductions in force. (1) You will not be considered to have been separated from employment for a disqualifying reason when:

(a) Your employer takes the first action in the separation process by announcing in writing to its employees that:

(i) The employer plans to reduce its work force through a layoff or reduction-in-force, and

(ii) That employees can offer to be among those included in the layoff or reduction-in-force;

(b) You offer to be one of the employees included in the layoff or reduction-in-force; and

(c) Your employer takes the final action in the separation process by accepting your offer to be one of the employees

PERMANENT

included in the layoff or reduction-in-force, thereby ending your employment relationship.

(2) This section does not apply to situations where an employer modifies benefits or otherwise encourages early retirement or early separation, but the employer and employee do not follow the steps in subsection (1)(a) through (c).

REPEALER

The following section of the Washington Administrative Code is repealed:

WAC 192-16-070 Interpretive regulations—
Voluntary quit—RCW
50.20.050

PERMANENT RULES
WENATCHEE VALLEY COLLEGE

[Filed May 25, 2001, 10:25 a.m.]

Date of Adoption: May 23, 2001.

Purpose: Adopt rules, chapter 132W-125 WAC, Withholding services for outstanding debt; chapter 132W-105 WAC, Board of trustees; chapter 132W-109 WAC, Practice and procedure; chapter 132W-112 WAC, Student rights and freedoms; chapter 132W-115 WAC, Student code of conduct and discipline procedure; chapter 132W-117 WAC, Parking and traffic; chapter 132W-277 WAC, Public records; and chapter 132W-325 WAC, Environmental protection.

Statutory Authority for Adoption: Chapter 28B.50 RCW.

Adopted under notice filed as WSR 01-07-058 on March 19, 2001.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 98, Amended 0, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 98, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: Thirty-one days after filing.

Reviser's note: The material contained in this filing exceeded the page-count limitations of WAC 1-21-040 for appearance in this issue of the Register. It will appear in the 01-14 issue of the Register.

WSR 01-12-021

PERMANENT RULES

DEPARTMENT OF AGRICULTURE

[Filed May 25, 2001, 12:25 p.m.]

Date of Adoption: May 25, 2001.

Purpose: Reinstate grain inspection program rules and fees for inspection services. Adjust the Washington State Department of Agriculture (WSDA) grain inspection program fee schedule to reflect increases in hourly fees, targeted unit fees, and targeted export tonnage fees for grain and commodity inspection.

Citation of Existing Rules Affected by this Order: Amending [new sections] WAC 16-238-010, 16-238-020, 16-238-030, 16-238-060, 16-238-070, 16-238-082, 16-238-090, 16-238-100, and 16-238-110.

Statutory Authority for Adoption: RCW 22.09.790.

Adopted under notice filed as WSR 01-09-075 on April 17, 2001.

Changes Other than Editing from Proposed to Adopted Version: Inadvertently when fee increases were calculated, one error occurred due to rounding. Therefore, that fee was adjusted downward to come into compliance with the fiscal growth factor provisions of Initiative 601.

Number of Sections Adopted in Order to Comply with Federal Statute: New 9, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 9, Amended 0, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 9, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 9, Amended 0, Repealed 0.

Other Findings Required by Other Provisions of Law as Precondition to Adoption or Effectiveness of Rule: (1) Initiative 601; and (2) the United States Department of Agriculture has oversight of fees charged under the federal Grain Inspection, Packers and Stockyards Administration.

Effective Date of Rule: Thirty-one days after filing.

James M. Jesernig

Director

PERMANENT

Chapter 16-238

WSDA Grain Inspection Program—Fee Schedule

NEW SECTION

WAC 16-238-010 Definitions. (1) "Department" means the Washington state department of agriculture.

(2) "Ton" means two thousand pounds avoirdupois.

(3) "Overtime" means any time worked on Saturdays, Sundays, or holidays and all time worked before or after the regularly scheduled working hours, Monday through Friday.

(4) "Fees" means any charge made by the department for inspection and handling of any commodity or for services related to weighing or storage of grains or commodities.

(5) "Occasional work stoppage" means the union stop work meetings usually held once per month.

(6) "USDA" means the United States Department of Agriculture.

(7) "GIPSA/FGIS" means the Grain Inspection, Packers and Stockyards Administration, Federal Grain Inspection Service.

NEW SECTION

WAC 16-238-020 Grain and commodity inspection points. The following cities in the state of Washington are hereby designated as inspection points for the purpose of inspecting and weighing standardized grains, beans, peas, lentils and other commodities: Colfax, Kalama, Olympia, Pasco, Seattle, Spokane, Tacoma and Vancouver.

NEW SECTION

WAC 16-238-030 General provisions for assessment of fees. (1) Straight time fee, per hour, per employee, except GIPSA/FGIS scale authorization services \$26.34. \$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.

The straight time fee will be assessed where no other fee, guarantee of expenses or contractual agreement exists or is specified in the schedule of fees or in any situation where the fees generated through the service provided are not equivalent to the straight time fee, per hour, per employee, including applicable supervisory and clerical hours.

(2) GIPSA/FGIS scale authorization fee, per hour, per employee \$34.87. \$35.87, effective June 30, 2001; \$36.87, effective July 1, 2001.

The GIPSA/FGIS scale authorization fee, per hour, per employee will be assessed when GIPSA/FGIS scale authorization services are requested or required. Travel time, mileage, per diem, overtime, late notice, call-back, standby and service cancellation fees may be assessed in addition to the hourly fee.

(3) Overtime and night shift rate per hour, per employee \$6.87. \$7.06, effective June 30, 2001; \$7.25, effective July 1, 2001.

When a service is requested before or after regularly scheduled working hours, Monday through Friday, during

established meal periods on any shift, or anytime on Saturdays, Sundays or holidays, the overtime and night shift rate per hour, per employee, including applicable supervisory and clerical hours, shall be charged in addition to the regular inspection and weighing fees. When an applicant contracts for a permanent night shift(s), the overtime and night shift fee for the night shift(s) will be waived after the initial seven-day notice period expires.

(4) Late notice fee, per hour, per employee \$4.57. \$4.70, effective June 30, 2001; \$4.83, effective July 1, 2001.

Requests for service on Saturdays, Sundays, or holidays, or for work before or after regularly scheduled working hours, Monday through Friday, must be received by the inspection office no later than 2:00 p.m. of the last regularly scheduled working day prior to the requested service. When the request is not received by 2:00 p.m., service will be provided if personnel are available. The late notice fee will be assessed, per hour, per employee, for the hours of the requested service that the department is able to staff.

Note: Service requests that are beyond the normal scope or volume requested at an inspection site must be received by the inspection office no later than 2:00 p.m. of the last regularly scheduled working day prior to the requested date of service. The requested service will be provided if the department is able to locate adequate staff.

(5) Call-back fee, per employee \$22.94. \$23.58, effective June 30, 2001; \$24.22, effective July 1, 2001.

(a) When requests for service are received after the close of business on a regular scheduled working day and the department can locate adequate staff to provide the requested service, a call-back fee will be assessed for each employee scheduled for that shift or service request.

(b) One call-back fee per employee will be assessed for each employee scheduled on a shift on a Saturday, Sunday, or holiday.

(6) Shift request fee, per hour, per employee \$6.87. \$7.06, effective June 30, 2001; \$7.25, effective July 1, 2001.

Requests for establishing a night shift or graveyard shift must be provided in writing. The requested shift(s) will commence seven days after the written request is presented. If the night shift or graveyard shift begins before the seven-day notice period has expired, the shift request fee will be assessed per hour, per employee assigned to the new shift(s) until the seven-day notice period expires.

Locations that are not routinely staffed, due to inconsistent workloads that are inadequate to allow the department to maintain full-time staffing, will be subject to the shift request fee for day shifts in addition to night shifts or graveyard shifts.

At locations where staffing has been reduced, due to a lack of work, below the full-time permanent day shift numbers, and an applicant requests a day shift that will begin before the seven-day notice period has expired, the shift request fee will be assessed, per hour, per employee, until the seven-day notice period has expired for the personnel above the current permanent staff number that are necessary to staff the requested day shift work.

PERMANENT

(7) Shift cancellation fee, per hour, per employee \$6.87.
.. \$7.06, effective June 30, 2001; \$7.25, effective July 1, 2001.

Requests for cancellation of an applicant requested night shift or graveyard shift must be provided, in writing, at least twenty-one days prior to the cessation date. If the applicant does not provide the full twenty-one day notice, the shift cancellation fee will be assessed for all hours that the assigned staff would have worked until the twenty-one day notice period expires.

Locations that are not routinely staffed, due to inconsistent schedules, or at locations that are inadequately staffed due to a lack of work, will be assessed the shift cancellation fee for all shifts where the full twenty-one day cancellation notice period is not provided.

(8) Standby fee, four-hour minimum, per hour, per employee \$28.77.
\$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.

When a service is requested before or after the inspection office's established standard workday, Monday through Friday or anytime on Saturdays, Sundays, or holidays, and the service cannot be performed through no fault of the department, the four-hour minimum standby fee will be assessed, per employee; except as follows.

When service is requested at locations that are not routinely staffed on a Monday through Friday basis, due to inconsistent work schedules or a lack of work, and the department is able to staff appropriate personnel to accommodate the service requested by the applicant, and the requested service cannot be performed through no fault of the department, the four-hour minimum standby fee will be assessed, per employee.

When service is requested that commences within two hours of the regular starting time of a shift or ends within two hours of the regular ending time of a shift, and the service cannot be performed through no fault of the department, the standby fee will be assessed on a per hour, per employee basis.

The standby fee will be assessed, per hour, per employee, for all hours over the four-hour minimum that continue to be staffed at the request of the applicant.

(9) Service cancellation fee, per employee . . . \$115.08.
\$108.36, effective June 30, 2001; \$111.36, effective July 1, 2001.

When a service is requested before or after working hours, Monday through Friday or anytime on a Saturday, Sunday or holiday, and a cancellation of the request is not received by 2:00 p.m. of the last regularly scheduled working day prior to the requested service, the service cancellation fee will be assessed, per employee.

When service is requested at locations that are not routinely staffed on a Monday through Friday basis, due to inconsistent schedules or at locations that are inadequately staffed due to a lack of work, and a cancellation of the request is not received by 2:00 p.m. of the inspection office's last regularly scheduled working day prior to the requested service, the service cancellation fee will be assessed, per employee.

(10) Guarantee of expense. When a service is requested that requires assignment of personnel at a facility where the volume of work at the established fees is not adequate to pay the cost of providing the service, a guarantee of the expense of providing the service is required.

(11) Guaranteed staffing levels. An applicant may enter into an agreement with the department at guaranteed staffing levels and negotiated minimum hours and unit fees, provided the department has adequate trained personnel to accommodate the request.

(12) Revenue insufficiency - export locations. When the lot size or workload is not of sufficient size to generate revenue equivalent to the straight time fee, per hour, per employee, an additional fee shall be assessed so that total revenue generated on a daily basis is equal to the straight time fee, per hour, per employee: Provided, That such revenue insufficiency may be established on the basis of the average hourly revenue generated at the work site over the Monday through Sunday work week (weekly averaging), upon written request of the applicant for service. In the absence of such request, fees shall be assessed on a daily basis.

Note: The weekly averaging computation utilizes the prior week's invoices representing shiplots completed before the start of business on Monday and does not include fees assessed for GIPSA/FGIS scale authorization, overtime, late notice, call-back, standby, shift request, or shift cancellation.

(13) Official commercial inspection services. Official commercial inspection services may be provided, on-site, at the applicant's request, when:

- (a) Appropriate space, equipment and security can be provided by the applicant;
- (b) The applicant provides a full definition of the requested services;
- (c) The program is able to provide appropriate licensed personnel to accomplish the defined, requested service; and
- (d) A guarantee of expense can be negotiated.

Note: The applicant must fully define the requested services so the department can determine appropriate staffing levels and create a guarantee of expense proposal.

(14) Travel time, mileage, per diem. When service requests are performed at other than the established grain and commodity inspection points, or qualified personnel to provide the requested service must travel from a different inspection point to the service location, the applicant may be assessed:

(a) Travel time from the established inspection point to the service location and return, at the appropriate fee(s) cited in WAC 16-238-030, per employee; and

(b) Mileage from the established inspection point to the service location and return, at the state of Washington's current general administration private vehicle mileage reimbursement rate.

(c) In addition, if the travel is of sufficient duration, an amount equal to the established state of Washington per diem rates provided to the employee(s) in travel status will be assessed to the applicant.

(15) Timely payment. Payment of fees and charges is due within thirty days after the date of the statement.

PERMANENT

- (a) If payment is not received within thirty days, service may be withheld until the delinquent account is paid; or
- (b) In the case of such delinquent accounts, cash payment for subsequent service may be required; and
- (c) A penalty of twelve percent per annum shall be assessed on the delinquent account balance.

NEW SECTION

WAC 16-238-060 Fees for official sampling, inspection, and/or weighing services under the United States Grain Standards Act. (1) Fees for combination inspection and weighing services:

- (a) From barges or waterborne vessel to elevator, per ton. \$0.128.
- (b) Bin transfers, per ton. \$0.128.
- (c) From elevator to ocean-going vessel:
 - (i) First 3,000,000 short tons per fiscal year, per ton. \$0.128.
\$0.131 effective June 30, 2001; \$0.134, effective July 1, 2001.
 - (ii) From 3,000,001 to 5,000,000 short tons per fiscal year, per ton \$0.131.
 - (iii) From 5,000,001 to 6,500,000 short tons per fiscal year, per ton \$0.128.
 - (iv) Over 6,500,000 short tons per fiscal year, per ton. \$0.120.

Note: The tonnage assessment is applied in full lot increments and is reset at the beginning of each fiscal year. The fiscal year begins July 1 and ends the following June 30.

- (d) From elevator to unit trains or from unit trains to elevator, per ton \$0.128.

(2) Fees for official sampling and inspection, without weighing; or sampling only without weighing, of:

- (a) Carlots sampled by USDA approved diverter-type mechanical samplers, per car \$15.50.
\$15.94, effective June 30, 2001; \$16.00, effective July 1, 2001.

Note: The per car fee will be assessed for each carlot included in a batch when an applicant requests batch grading of railcars sampled by diverter-type mechanical sampler.

- (b) Carlots, sampled by USDA approved grain trier, original inspections, subsequent original inspections, and new sample reinspections, per car \$24.00.
\$24.68, effective June 30, 2001; \$25.00, effective July 1, 2001.

- (c) Trucklots, sampled by approved grain trier, original or new sample reinspections, per truck \$15.00.
\$15.43, effective June 30, 2001; \$15.80, effective July 1, 2001.

- (d) Reinspections, based on official file sample, per sample, except Canola \$9.00.
\$9.25, effective June 30, 2001; \$9.50, effective July 1, 2001.

Note: Canola reinspections are provided on an hourly fee basis.

- (e) Bagged grains, per hundredweight (cwt). . . \$0.065.
\$0.066, effective June 30, 2001; \$0.067, effective July 1, 2001.

Note: Factor-only reinspections available at the established reinspection fee, contingent on GIPSA/FGIS approval of the factor-only reinspection service option.

Fees for laboratory determination of erucic acid, and/or glucosinolate, and/or oil content of Canola are equivalent to the USDA published.

(3) Fees for official Class X weighing service; without inspection:

- (a) From elevator to conveyance, except trucks, per ton. \$0.107.
\$0.110, effective June 30, 2001; \$0.112, effective July 1, 2001.
- (b) From conveyance to elevator, except trucks, per ton. \$0.107.
\$0.110, effective June 30, 2001; \$0.112, effective July 1, 2001.
- (c) Bin transfers, per ton \$0.107.
\$0.110, effective June 30, 2001; \$0.112, effective July 1, 2001.
- (d) Trucks, per weight lot \$7.50.
\$7.71, effective June 30, 2001; \$7.92, effective July 1, 2001.

(4) Fees for other official weighing services:

- (a) Class Y weighing services, per hour, per employee \$26.34.
\$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.
- (b) Checkweighing of bagged grain, per hour, per employee \$26.34.
\$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.
- (5) Fees for inspection of submitted samples:
 - (a) Analysis under the United States Grain Standards Act, except Canola, per inspection. \$7.75.
\$7.97, effective June 30, 2001; \$8.00, effective July 1, 2001.

Note: Submitted sample certificates of grade for barley may show, on request, dockage to the nearest one-tenth percent without additional charge.

- (b) Canola, per inspection. \$14.20.
\$14.60, effective June 30, 2001; \$15.00, effective July 1, 2001.

Note: Fees for laboratory determination of erucic acid, and/or glucosinolate, and/or oil content of Canola are equivalent to the USDA published fees.

- (c) Reinspections, based on official file sample, per sample, except Canola \$9.00.
\$9.25, effective June 30, 2001; \$9.50, effective July 1, 2001.

Note: Canola reinspections are provided as an hourly fee service. When submitted samples are not of sufficient size to allow for official grade analysis, obtainable factors may be provided, upon request of the applicant, at the factor-only rate shown in subsection (6) of this section.

(6) Fees for factor analysis:

- (a) Nongrade determining factors requested by applicant, in addition to the original inspection grade results, per factor \$2.50.

PERMANENT

\$2.57, effective June 30, 2001; \$2.60, effective July 1, 2001.

(b) Nongrade determining factors requested in shipload-
ing subplot analysis, per factor. \$2.50.

\$2.57, effective June 30, 2001; \$2.60, effective July 1, 2001.

(c) Factor only determinations, per factor. \$2.50.
\$2.57, effective June 30, 2001; \$2.60, effective July 1, 2001.

Note: A maximum of three factors will be available at the factor-
only fee. Applicants requesting more than three factors will
be assessed the appropriate submitted sample rate shown in
subsection (5) of this section.

(7) Fees for official constituent analysis via near-infrared
transmittance (NIRT) technology:

(a) In conjunction with official inspection for grade, per
test \$6.25.

\$6.42, effective June 30, 2001; \$6.50, effective July 1, 2001.

(b) Not in conjunction with official inspection for grade,
per test \$8.50.

\$8.74, effective June 30, 2001; \$8.80, effective July 1, 2001.

(c) Reinspection based on official file sample, per
test \$8.50.

\$8.74, effective June 30, 2001; \$8.80, effective July 1, 2001.

Note: When a reinspection service includes a request for a new
sample, the appropriate sampling fee in subsection (2) of
this section will be assessed in addition to the fee cited in (c)
of this subsection.

(8) Fees for qualitative or quantitative testing for the
presence of mycotoxins via USDA approved "ELISA" or
"Fluorometric" methods:

(a) Official sample or new sample reinspection, includ-
ing official sampling, per test. \$37.50.

(b) Submitted samples and reinspections based on offi-
cial file sample, per test \$26.34.

\$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.

Note: Mycotoxin testing services utilizing thin layer chromatog-
raphy or equivalent USDA approved technology available
at the USDA published rate.

(9) Fees for stowage examination services on vessels or
ocean-going barges:

(a) Initial inspection, five hold/stowage space/tank max-
imum, minimum fee. \$120.00.

\$123.44 effective June 30, 2001; \$126.50 effective July 1, 2001.

(b) Initial inspection, above five hold/stowage
space/tank maximum, per hold/stowage space/tank . \$24.00.

\$24.68, effective June 30, 2001; \$25.30, effective July 1, 2001.

(c) Return to hold/stowage space/tank during inspection
service, per hold/stowage space/tank \$24.00.

\$24.68, effective June 30, 2001; \$25.30, effective July 1, 2001.

(d) Subsequent inspections, three hold/stowage
space/tank maximum, minimum fee \$72.00.

\$74.06, effective June 30, 2001; \$75.90, effective July 1, 2001.

(e) Subsequent inspection, above three hold/stowage
space/tank maximum, per hold/stowage space/tank . \$24.00.

(f) Travel time, midstream or at a nongrain loading berth,
two-hour minimum per inspection request, per hour, per
employee \$26.34.

\$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.

(g) Stowage examination services requested on a Satur-
day, Sunday, or holiday, four-hour minimum, per hour, per
employee \$26.34.

\$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.

Note: At anchor stowage examination services will be conducted
at the convenience of the designated grain inspection office
during daylight hours under safe working and weather con-
ditions. The applicant is responsible for securing licensed
tug or water taxi to provide safe transportation to and from
the anchor point. Two vessel or ship's agent representatives
will accompany each WSDA inspector performing stowage
examination services. Appropriate fees contained in WAC
16-238-030 may be assessed in addition to the fees noted in
(a) through (f) of this subsection.

(10) Fees for other stowage examination services:

(a) Sea van containers, when not in conjunction with
checkloading service, per inspection \$8.10.

\$8.33, effective June 30, 2001; \$8.50, effective July 1, 2001.

(b) Railcars, trucks, or other containers, per railcar, not
in conjunction with loading, per inspection \$8.10.

\$8.33, effective June 30, 2001; \$8.50, effective July 1, 2001.

Note: Fees for stowage examination service will not be assessed
when official sampling and inspection, or official weighing
occurs at the time of loading, unless the applicant requests
an official stowage examination certificate. The stowage
examination requirement associated with service at the time
of loading may be waived in accordance with GIPSA/FGIS
Directive 9020.1.

(11) Fees for phytosanitary certification:

(a) In conjunction with official inspection, per
certificate \$6.75.

\$6.94, effective June 30, 2001; \$7.13, effective July 1, 2001.

Note: Hourly fees may be assessed for research necessary to
produce the requested certificate.

(b) When not in conjunction with official inspection, add
required sampling time, per hour per employee. . . . \$26.34.

\$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.

(12) Fees for miscellaneous services:

(a) Waxy corn, per analysis \$12.75.

\$13.11, effective June 30, 2001; \$13.40, effective July 1, 2001.

(b) Ship composite samples, initial set of three provided
to applicant.

(c) Ship composite samples, in excess of (b) of this sub-
section, when requested in advance, per sample \$5.25.

PERMANENT

\$5.40, effective June 30, 2001; \$5.50, effective July 1, 2001.

(d) Divided original certificates or letterhead statements, per certificate or letterhead statement \$1.50. \$1.54, effective June 30, 2001; \$1.58, effective July 1, 2001.

(e) Extra copies of certificates or letterhead statements, per certificate or letterhead statement \$3.00. \$3.08, effective June 30, 2001; \$3.16, effective July 1, 2001.

(f) Facsimile transmissions, per page \$1.00. \$1.02, effective June 30, 2001; \$1.04, effective July 1, 2001.

(g) Mailing of samples, at cost, minimum fee . . . \$2.00. \$2.05, effective June 30, 2001; \$2.10, effective July 1, 2001.

(h) Sample pickup fee, on department established routes, per sample \$0.60. \$0.61, effective June 30, 2001; \$0.62, effective July 1, 2001.

Other services under the United States Grain Standards Act not specifically identified in WAC 16-239-060 will be provided under the appropriate subsection(s) of WAC 16-238-030 and/or at the published rates of the laboratory or organization providing the official service or analysis. New or special analysis requests may require applicant provided supplies and/or equipment.

NEW SECTION

WAC 16-238-070 Fees for official services under the Agricultural Marketing Act of 1946. (1) Fees for combination inspection and weighing services:

(a) Bulk commodities under federal or state standards, per ton. \$0.128. \$0.131, effective June 30, 2001; \$0.134, effective July 1, 2001.

(b) Bulk commodities, factor determinations, per ton. \$0.128. \$0.131, effective June 30, 2001; \$0.134, effective July 1, 2001.

(c) Sample and weigh grain by-products into thirty ton maximum containers, including stowage examination \$15.00. \$15.43, effective June 30, 2001; \$15.80, effective July 1, 2001.

(2) Fees for official sampling and inspection without weighing; or sampling only without weighing, of:

(a) Bulk carlots, sampled by USDA approved diverter-type mechanical samplers, per car \$15.50. \$15.94, effective June 30, 2001; \$16.00, effective July 1, 2001.

(b) Bulk carlots, sampled by USDA approved grain trier, per car. \$24.00. \$24.68, effective June 30, 2001; \$25.00, effective July 1, 2001.

(c) Bulk trucklots or containerlots, sampled by USDA approved grain trier, per truck or containerlot. \$15.00. \$15.43, effective June 30, 2001; \$15.80, effective July 1, 2001.

(d) Inspection of bagged commodities, per hundred-weight (cwt) \$0.065. \$0.066, effective June 30, 2001; \$0.067, effective July 1, 2001.

Note: A minimum fee equivalent to the hourly fee cited in WAC 16-238-020 is assessed for bagged and bulk commodity sampling and inspection, or sampling only services.

(3) Fees for official weighing service, without inspection:

(a) From elevator to conveyance, except trucks, per ton. \$0.107. \$0.110, effective June 30, 2001; \$0.112, effective July 1, 2001.

(b) From conveyance to elevator, except trucks, per ton. \$0.107. \$0.110, effective June 30, 2001; \$0.112, effective July 1, 2001.

(c) Bin transfers, per ton \$0.107. \$0.110, effective June 30, 2001; \$0.112, effective July 1, 2001.

(d) Trucks, per weight lot \$7.50. \$7.71, effective June 30, 2001; \$7.92, effective July 1, 2001.

(4) Fees for other official weighing services:

(a) Checkweighing of bagged commodities, per hour, per employee \$26.34. \$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.

(5) Fees for inspection of submitted samples:

(a) Standardized commodities, thresher run or processed, per sample \$14.20. \$14.60, effective June 30, 2001; \$15.00, effective July 1, 2001.

(b) Commodities inspected under GIPSA/FGIS factor-only inspection procedures, per sample \$14.20. \$14.60, effective June 30, 2001; \$15.00, effective July 1, 2001.

Note: Fees for laboratory determinations of commodity constituents are assessed at the USDA published rate or at cost from the service provider.

(6) Fees for factor analysis:

(a) Nongrade determining factors requested by applicant, in addition to the original inspection results, except moisture, per factor \$2.50. \$2.57, effective June 30, 2001; \$2.60, effective July 1, 2001.

(b) Moisture only, per determination \$5.25. \$5.40, effective June 30, 2001; \$5.50, effective July 1, 2001.

(c) Nongrade determining factors requested in shiploading subplot analysis, per factor \$2.50. \$2.57, effective June 30, 2001; \$2.60, effective July 1, 2001.

(d) Factor-only determinations, first two factors. \$3.00. \$3.08, effective June 30, 2001; \$3.16, effective July 1, 2001.

PERMANENT

Note: Additional factors available at the per factor fee in (a) of this subsection. Applicants requesting more than five factors will be assessed the submitted sample rate in subsection (5) (a) of this section for the requested factors. When submitted samples are not of sufficient size to allow for official grade analysis, factor-only analysis will be available, on request of the applicant.

(7) Fees for qualitative or quantitative testing for the presence of mycotoxins via USDA approved "ELISA" or "Fluorometric" methods:

- (a) Official samples and new sample reinspections, including official sampling, per test \$37.50.
- (b) Submitted samples and reinspections based on official file sample, per test \$26.34.
\$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.

Note: Mycotoxin testing services utilizing thin layer chromatography or equivalent USDA approved technology will be available at the USDA published rate.

(8) Fees for stowage examination services on vessels or ocean-going barges:

- (a) Initial inspection, five hold/stowage space/tank maximum, minimum fee \$120.00.
\$123.44, effective June 30, 2001; \$126.50, effective July 1, 2001.
- (b) Initial inspection, above five hold/stowage space/tank maximum, per hold/stowage space/tank . \$24.00.
\$24.68, effective June 30, 2001; \$25.30, effective July 1, 2001.
- (c) Return to hold/stowage space/tank during inspection service, per hold/stowage space/tank \$24.00.
\$24.68, effective June 30, 2001; \$25.30, effective July 1, 2001.
- (d) Subsequent inspection, three hold/stowage space/tank maximum, minimum fee \$72.00.
\$74.06, effective June 30, 2001; \$75.90, effective July 1, 2001.
- (e) Subsequent inspection, above three hold/stowage space/tank maximum, per hold/stowage space/tank . \$24.00.
- (f) Travel time, midstream or at a nongrain loading berth, two-hour minimum per inspection request, per hour, per employee \$26.34.
\$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.
- (g) Stowage examination services provided on a Saturday, Sunday, or holiday, four-hour minimum, per hour, per employee \$26.34.
\$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.

Note: At anchor stowage examination services will be conducted at the convenience of the designated grain inspection office during daylight hours under safe working and weather conditions. The applicant is responsible for securing licensed tug or water taxi to provide safe transportation to and from the anchor point. Two vessel or ship's agent representatives will accompany each WSDA inspector performing stowage examination services. Appropriate fees contained in WAC 16-238-030 may be assessed in addition to the fees noted in (a) through (f) of this subsection.

(9) Fees for other stowage examination services:

- (a) Sea van containers, when not in conjunction with checkloading service, per inspection \$8.10.
\$8.33, effective June 30, 2001; \$8.50, effective July 1, 2001.
- (b) Railcars, trucks, or other containers, per railcar, truck or other container \$8.10.
\$8.33, effective June 30, 2001; \$8.50, effective July 1, 2001.
- (10) Fees for phytosanitary certification:
 - (a) In conjunction with official inspection, per certificate \$6.75.
\$6.94, effective June 30, 2001; \$7.13, effective July 1, 2001.

Note: Hourly fees may be assessed for research necessary to produce the requested certificate.

- (b) When not in conjunction with official inspection, add required sampling time, per hour per employee. . . . \$26.34.
\$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.

(11) Fees for miscellaneous services:

- (a) Falling numbers determinations, per determination \$12.75.
\$13.11, effective June 30, 2001; \$13.40, effective July 1, 2001.
- (b) Liquefaction number, per determination \$0.50.
\$0.51, effective June 30, 2001; \$0.52, effective July 1, 2001.
- (c) Divided original certificates or letterheads, per certificate or letterhead \$1.50.
\$1.54, effective June 30, 2001; \$1.58, effective July 1, 2001.
- (d) Extra copies of certificates or letterheads, per certificate or letterhead \$3.00.
\$3.08, effective June 30, 2001; \$3.16, effective July 1, 2001.
- (e) Sanitation inspections at commodity processing sites, initial inspection no charge.
- (f) Sanitation inspections, return to failed facility, four-hour minimum, per hour, per employee. \$26.34.
\$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.
- (g) Sampling of processed commodities, two-hour minimum, per hour, per employee \$26.34.
\$27.09, effective June 30, 2001; \$27.84, effective July 1, 2001.

Note: Laboratory fees associated with processed commodity lots will be assessed per the GIPSA/FGIS rates. Postage and other costs for sample delivery to the appropriate analyzing laboratory will be assessed to the applicant for service.

- (h) Facsimile transmissions, per page \$1.00.
\$1.02, effective June 30, 2001; \$1.04, effective July 1, 2001.
- (i) Mailing of samples, at cost, minimum fee . . . \$2.00.
\$2.05, effective June 30, 2001; \$2.10, effective July 1, 2001.
- (j) Sample pickup fee, on department established routes, per sample \$0.60.
\$0.61, effective June 30, 2001; \$0.62, effective July 1, 2001.

PERMANENT

Other services under the Agricultural Marketing Act of 1946 not specifically identified in WAC 16-238-070 will be provided under the appropriate subsection(s) of WAC 16-238-030, and/or at the published rates of the laboratory or organization providing the official service or analysis. New or special analysis requests may require applicant-provided supplies and/or equipment.

NEW SECTION

WAC 16-238-082 Fees for services performed under state regulation or standards or "as specified" by the applicant for service when no official standards exist. (1) Inspection of miscellaneous agricultural commodities under chapter 16-213 WAC:

(a) Submitted sample inspection, cultivated buckwheat, Washington state grade or for factor-only analysis, per sample \$7.50.
\$7.71, effective June 30, 2001; \$7.92, effective July 1, 2001.

(b) Bulk carlots, cultivated buckwheat, sampled by USDA approved diverter-type mechanical samplers, per car \$15.50.
\$15.94, effective June 30, 2001; \$16.00, effective July 1, 2001.

(c) Bulk carlots, cultivated buckwheat, sampled by USDA approved grain trier, per car \$24.00.
\$24.68, effective June 30, 2001; \$25.00, effective July 1, 2001.

(d) Bulk trucklots or containerlots, cultivated buckwheat, sampled by USDA approved grain trier, per truck or containerlot. \$15.00.
\$15.43, effective June 30, 2001; \$15.80, effective July 1, 2001.

(e) Cracked corn, corn screenings, and mixed grain screenings sampling, inspection and weighing services are available at the fees cited in WAC 16-238-060.

(f) Bagged commodities, per hundredweight (cwt) \$0.065.
\$0.066, effective June 30, 2001; \$0.067, effective July 1, 2001.

(2) Fees for miscellaneous services:

(a) Unofficial constituent analysis via near-infrared transmittance (NIRT) technology available at the fees cited in WAC 16-238-060.

(b) Laboratory analysis of commodities covered in WAC 16-238-082, or for the analysis of constituents or conditions of grains or commodities not provided for in the official standards or specifically addressed in WAC 16-238-060 or 16-238-070 may be available as an unofficial service. If available, the services will be provided under the appropriate section(s) of WAC 16-238-030, and/or at the published rates of the laboratory or organization providing the service or analysis.

Services not specifically identified in WAC 16-238-082 may be provided under the appropriate subsection(s) of WAC 16-238-030, and/or at the published rates of the laboratory or organization providing the service or analysis. New or spe-

cial analysis requests may require applicant provided supplies and/or equipment.

NEW SECTION

WAC 16-238-090 Covered commodities. Commodities covered under chapter 22.09 RCW in respect to sampling, inspection, weighing, and quality or constituent determinations shall include all grains with standards or inspection criteria established under the United States Grain Standards Act, all commodities with standards or inspection criteria established under the Agricultural Marketing Act, all commodities with standards or inspection criteria established under Washington state standards, and the by-products resulting from conditioning or processing the above grains and commodities.

NEW SECTION

WAC 16-238-100 Grades and standards. The grades and standards established by the United States Department of Agriculture as of August 1, 1984, and subsequently, for all grains and commodities included within the provisions of this chapter, are hereby adopted. In addition, the procedures to sample, grade, test and weigh grains and commodities, established by the regulations and instructions under the United States Grain Standards Act and the Agricultural Marketing Act of 1946, are hereby adopted for this state.

NEW SECTION

WAC 16-238-110 Scales. United States Department of Agriculture, Grain Inspection, Packers and Stockyards Administration, Federal Grain Inspection Service (USDA, GIPSA, FGIS) delegated official scale testing and authorization authority to the Washington state department of agriculture in July of 1984. Scales under USDA, GIPSA, FGIS jurisdiction are required to be tested and certified for accuracy at least twice per year by an authorized Washington state department of agriculture scale expert or USDA, GIPSA, FGIS scale specialist. When scales are tested by the department or by USDA, GIPSA, FGIS, a seal shall be placed on the scales. The seal shall be dated and shall indicate approval or rejection. When scales are tested, a copy of a scale test report shall be forwarded to the USDA, GIPSA, FGIS and copies shall be maintained by the department and at the facility where the scale is located.

WSR 01-12-022

PERMANENT RULES

DEPARTMENT OF LICENSING

[Filed May 25, 2001, 2:27 p.m.]

Date of Adoption: May 25, 2001.

Purpose: To set fees for geologists licensing services provided by the Department of Licensing.

Statutory Authority for Adoption: Chapter 18.220 RCW.

PERMANENT

Adopted under notice filed as WSR 01-07-100 on March 21, 2001.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 1, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 0, Amended 0, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: Thirty-one days after filing.

Assistant Director

NEW SECTION

WAC 308-15-150 Fees.

Type of Fee	Amount
Geologist License	
Application fee	100.00
Application fee - Reciprocity	200.00
Initial License	100.00
Examination	
Fundamentals of Geology (vendor charge)	125.00
Practice of Geology (vendor charge)	150.00
Administration fee for reexamination	65.00
Review of Examination	
Manual regrade (vendor charge)	50.00
Administrative fee for regrade	15.00
Late fee (if examination is scheduled less than 30 days prior to Examination date - vendor charge)	25.00
Specialty License	
Specialty fee (if you are also applying for geologist license)	
Application fee - 1 Specialty	200.00
Application fee - 2 Specialties	300.00
Application fee - Reciprocity - 1 Specialty	350.00
Application fee - Reciprocity - 2 Specialties	500.00
Initial license - 1 Specialty	185.00
Initial license - 2 Specialties	270.00

Type of Fee	Amount
Fee per Specialty (if you are a licensed geologist)	
Application fee	100.00
Application fee - Reciprocity	150.00
Initial license	85.00
Examination fee per Specialty	300.00
Examination review	100.00
Renewal Fees	
Annual Renewal fee (geologist)	100.00
Additional fee for late renewal (geologist)	100.00
Annual Renewal fee (geologist plus 1 specialty)	185.00
Additional fee for late renewal (geologist plus 1 specialty)	185.00
Annual Renewal fee (geologist plus 2 specialties)	270.00
Additional fee for late renewal (geologist plus 2 specialties)	270.00
Miscellaneous Fees	
Duplicate License or Wall Certificate	25.00
Certification of license records to other jurisdictions	45.00
Proctor Examination in another Jurisdiction	100.00

PERMANENT

NEW SECTION

WAC 308-15-010 State board of licensing. (1) **Meetings:** The Washington state geologist licensing board, hereafter called the board, will hold its regular public meeting annually in March. Special public meetings may be held at such times and places as the board may find necessary. Public notice of all public meetings will be issued as required by the Open Public Meetings Act, chapter 42.30 RCW.

(2) **Rules of order:** The latest edition of *Robert's Rules of Order* will govern the conduct of business at meetings and sessions of the board.

(3) **Officers:** The board will elect a chair, a vice-chair and a secretary. Beginning with the March 2002 meeting, the board will elect officers for the ensuing year at its regular annual meeting.

(4) **Quorum:** A quorum at any regular or special meeting or session will consist of four members of the board.

(5) **Licensed geologists:** The board will maintain a roster of licensed geologists.

NEW SECTION

WAC 308-15-020 Definitions. (1) **"Geological work of a character satisfactory to the board"** means that the applicant's qualifying work history consists of professional experience in the practice of geology. Professional geological work is work performed at a professional level that requires the application of professional knowledge, principles and methods to geological problems through the exercise of individual initiative and judgment in investigating, measuring, interpreting and reporting on the physical phenomena of the earth. Implicit in this definition is the recognition of professional responsibility and integrity and the acknowledgment of minimal supervision. Professional geological work specifically does not include routine activities by themselves such as drafting, sampling, sample preparation, routine laboratory work, or core logging, where the elements of initiative, scientific judgment and decision making are lacking, nor does it include activities which do not use scientific methods to process and interpret geologic data. It also does not include engineering or other physical sciences where geological investigation, analysis and interpretation are minimal or lacking. Professional specialty experience is considered to meet this definition.

(2) **"Professional specialty practice of a character satisfactory to the board"** means that the applicant has qualifying work history pertinent to the specialty that meets the standards for professional geologic work defined above. Elements, typical applications, types of projects, and required

knowledge, skills and abilities for the engineering geologist and hydrogeologist specialties are outlined in WAC 308-15-090.

(3) **"Year of professional practice"** means at least 1600 hours of work in the practice during a year. Examples of a "year of professional practice" include 200 eight-hour days or 160 ten-hour days during a year. Part-time work will be counted on a prorated basis.

(4) **"Year of professional specialty practice"** means at least 1600 hours of work in a specialty during a calendar year, per examples given in subsection (3) of this section.

(5) **"Geologic interpretation," as applied to the practice of geology and its specialties,** is the iterative process by which geologists, using generally accepted geologic principles, determine geologic history, origin and process from observation and testing of rock, soil and water characteristics, contents, distribution, orientation, lateral and vertical continuity; and resulting landforms.

(6) **"Geologic mapping"** is the process by which geologic observations, data and interpretations are gathered, located and portrayed, such as in plan view and on cross-sections. Information and data are gathered in a format on geologic maps and cross-sections, at a level of detail and at a frequency of data points appropriate for the application and the scale of the portrayal.

(7) **"Grandparenting"** means the issuance of a license as a geologist, engineering geologist, or hydrogeologist within one year after July 1, 2001, or for licensing in a new specialty within one year of recognition of the specialty by the board, without further written examination, if the applicant meets the requirements outlined in WAC 308-15-040 and, for a specialty, WAC 308-15-090.

(8) **"Reciprocity"** means the issuance of a license without examination as a geologist or specialty geologist to a person who holds a license or certificate of qualifications issued by proper authority of any state, territory, or possession of the United States, District of Columbia, or any foreign country, if the applicant meets the requirements outlined in WAC 308-15-040 and, for a specialty, WAC 308-15-090.

NEW SECTION

WAC 308-15-030 How do I apply for a geologist license? (1) Contact the board to obtain the application forms and instructions.

(2) Review the available options for licensure:

(a) Examination in WAC 308-15-050;

(b) Reciprocity in WAC 308-15-060; and

(c) Grandparenting in WAC 308-15-020(7).

If you are applying for licensure by examination, your application must be received by the date specified in the application instructions.

(3) Solicit references and transcripts in the format and on the forms as specified in the application instructions.

(4) Send your application forms to the address noted on the form, along with applicable fees, references and transcripts.

NEW SECTION**WAC 308-15-040 What are the minimum requirements to be eligible for a geologist or specialty license?**

You are eligible for licensure as a professional geologist or specialist if you meet the following minimum requirements:

- (1) You are of good moral character, as attested to by two references.
- (2) You have graduated from an accredited college or university with a degree in geology, engineering geology, hydrogeology or one of the related geological sciences, or educational equivalents, and completed a minimum of 30 semester/45 quarter hours or their equivalent of course work in geological science. This includes classes in physical geology, historical geology, structural geology, mineralogy/petrology and sedimentary geology/stratigraphy. If you do not meet these requirements, you must demonstrate to the board that you have completed educational equivalents. You must document your college or university educational experience by submitting official sealed transcripts to the board.
- (3) You have at least five years of professional geological or specialty practice or, if applying for a specialty, five years of specialty practice satisfactory to the board, after receipt of a bachelor's degree. The following education and experience criteria qualify toward accumulation of the required years of professional work:
 - (a) You will receive up to two years' credit, one year for each year of full time graduate study in geology, engineering geology, hydrogeology or one of the related geological sciences, as documented in the transcripts provided;
 - (b) You must have at least three years of geological experience under the supervision of state-licensed geologists or specialty geologists or others who, in the opinion of the board, are qualified to have responsible charge as provided by the information supplied on forms provided by the board.
 - (i) Your geological experience may include geological research or teaching at the university or college level which, in the judgment of the board, is comparable to experience obtained in the practice of geology or a specialty.
 - (ii) If requested by the board, you may be required to submit one or more reports which were prepared by you or where you contributed to their preparation.
 - (c) If you are applying under the grandparenting provisions in this chapter, you may comply with this requirement by providing documentation of geological experience where you were the person in responsible charge and meet the requirements in (b) of this subsection.
 - (4) You must have passed a geologist examination and, if applying for a specialty, a specialty examination, unless you are eligible for licensure by grandparenting. All examinations must be adopted by or acceptable to the board.

NEW SECTION

WAC 308-15-050 What is the examination process to be licensed as a geologist? (1) Beginning July 1, 2002, you will be required to take and pass an examination to become a licensed geologist in the state of Washington.

(2) The board has adopted the national Association of State Boards of Geology (ASBOG) standardized examina-

tion. You will be notified of the date and time of the examination when you receive your application packet.

(a) **Nature of the examination:** Information on the examination is available on the ASBOG website. The examination currently consists of two parts: Fundamentals of Geology (FG) and Practice of Geology (PG). Each part of the examination is four hours long.

(b) **Testing location and date:** The location and testing date will be posted on the department of licensing's geologist website. The examination is administered every March and September.

(c) **Applying for the examination:** To apply for the examination, you must submit the following to the board:

- (i) Completed state geologist licensing application form;
 - (ii) Professional and personal references required to document five years of professional experience; and
 - (iii) Official sealed transcripts.
- (3) **Fees:** You must send in your examination and application fees with your application. The application must be received by the date specified in the application instructions. If you do not meet the requirements for licensing, only your examination fees will be refunded. Fees are listed in WAC 308-15-150.

(4) **Special accommodations:** If you have a disability, the board will provide accommodations consistent with the Americans with Disabilities Act. You should request special accommodations at least ninety days prior to the examination date.

(5) **Notification of scoring:** The board will notify you by mail of your examination score within ninety days of taking the examination.

(6) **Failing the examination:** If you fail the examination, for a fee you can request:

- (a) A report showing the failed subject areas; or
- (b) To review the examination, question by question, at a location specified by the board. You will be allowed to see the test and review those questions you failed and those you answered correctly. An answer key is not provided and you are not allowed to keep or copy the examination.

(7) **Retake of examination:** You must submit a request on a form provided by the board and the required fees to retake either part of the examination.

NEW SECTION

WAC 308-15-060 How do I obtain a geologist or specialty license by reciprocity. To obtain a license as a geologist or specialty geologist without further examination, you must meet all of the following criteria:

(1) Your education and experience qualifications must meet the requirements of WAC 308-15-040 and, if applying for specialty geologist license, WAC 308-15-090;

(2) You currently must hold a valid geologist or specialty geologist license, registration, or certification issued by a state or jurisdiction approved by the board; and

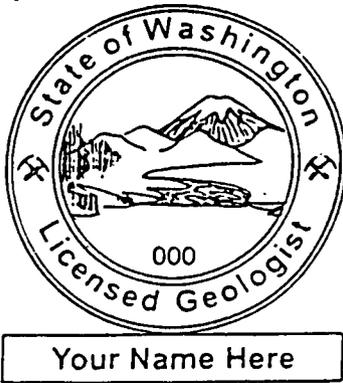

(3) You must have passed the geologist examination adopted by or acceptable to the board. If you are applying for a specialty geologist license, you must also have passed a

specialty geologist examination adopted by or acceptable to the board.

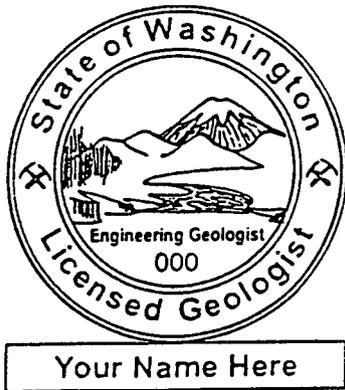

NEW SECTION

WAC 308-15-070 Do I need a stamp? Upon licensure, you must obtain a stamp bearing your name, license number, and the legend "State of Washington Licensed Geologist." If you are licensed as an engineering geologist or hydrogeologist, the specialty must be noted on the stamp. Facsimiles of the stamps of the designs authorized by the director are shown below.

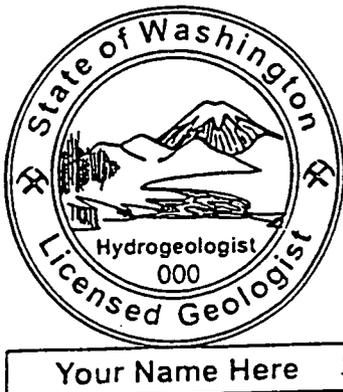

Geologist stamp here

Engineering geologist stamp here

Hydrogeologist stamp here

NEW SECTION

WAC 308-15-075 When do I need to use my stamp?

(1) You must stamp, sign, and date every final geology or specialty geology report, letter report, or document that is prepared by you or prepared under your supervision or direction and submitted to other parties.

(a) All figures, maps, and plates bound within final reports or documents do not need to be individually stamped, signed and dated. Unbound final figures, maps, and plates must be individually stamped, signed and dated.

(b) Preliminary or draft geology or specialty geology work does not have to be stamped, but the documents and all associated figures, maps, and plates must be clearly marked as preliminary or draft.

(2) You must stamp, sign, and date every final geology or specialty geology design and specification that is prepared by you or prepared under your supervision or direction. Preliminary or draft geology or specialty geology design and specification drawings do not have to be stamped, but each design and specification must be clearly marked as preliminary or draft.

(3) If you stamp, sign and date work that you have only reviewed, you are responsible to the same extent as if you prepared the report, design or specification.

NEW SECTION

WAC 308-15-080 What do I need to know about renewing or reinstating my license? (1) **Term of license:**

Your license will be issued for a period of one year.

(2) **Address changes:** Your renewal notice will be sent to the address of record. You must notify the geologist licensing board in writing within thirty days of any address changes.

(3) **Renewal date:** Your license renewal date will be your birth date.

(a) If your license is issued during the first year of the program (July 1, 2001, through June 30, 2002), your renewal date will be the first birth date to occur after July 1, 2002. However, if your next birth date is within three months of the initial date of issuance of the license, your original license will expire on the second birthday following issuance of your original license.

(b) If your license is issued after June 30, 2002, your renewal after the first year of the program will be for a one-year period, due on your birth date. However, if your next birth date is within three months of the initial date of issuance of your license, your license will expire on the second birthday following issuance of your original license.

(4) **Renewal fee and late fee:** You must pay the prescribed renewal fee to the department of licensing on or before the expiration date. If you fail to pay your license renewal fee within ninety days following the expiration date, you must pay the renewal fee plus a late fee equal to one additional year's renewal fee.

(5) **Reinstatement:** In addition to the fees outlined in subsection (4) of this section, if you fail to pay a renewal fee for a period of five years or more, you may be reinstated upon payment of all delinquent renewal fees, the current year's

PERMANENT

renewal fee, and a late fee equal to an additional year's renewal fee. In addition to the payment of delinquent fees and a reinstatement fee, you must submit the following:

- (a) A summary of the current law and rules governing geologists;
- (b) A professional resume of your geologist activities during the delinquent period, including licensure in another jurisdiction, with sufficient detail to demonstrate to the board that your skills have been maintained; and
- (c) A detailed explanation of the circumstances surrounding the reason you allowed your license to expire.

NEW SECTION

WAC 308-15-090 What are the specialty licenses, qualifications and processes for licensure? (1) The types of specialty licenses are engineering geologist and hydrogeologist. In addition to being a licensed geologist, if your practice is predominantly specialty geologic work as outlined in (a)(i) and (ii) or (b)(i) and (ii) of this subsection, you must have a license to practice the specialty.

(a) **Engineering geologist.**

(i) **Elements of the engineering geologist specialty:** In addition to tasks commonly performed by licensed geologists, the practice of engineering geology includes the designation and classification of geotechnical soil and rock units using engineering soil and rock classification systems. The relationship between the strength characteristics of soil and rock, the effects of ground and surface water and current and past surficial geologic processes, including slope, fluvial and coastal processes, as well as deep-seated geologic processes such as volcanic activity and seismicity, on landform development are interpreted. Geotechnical zones or domains are designated for each site or area based on soil and rock strength characteristics, common landforms, related geologic processes or other pertinent factors. Proposed developmental modifications such as removing vegetation, using various types of earth materials in construction, applying loads to foundations, constructing cut or fill slopes, and modifying ground or surface water characteristics, are then evaluated and, where appropriate, analyzed to predict likely changes in types and rates of surficial geologic processes. Surficial and deep-seated geologic processes are likewise evaluated and analyzed to predict their effect on proposed development or use.

(ii) **Typical engineering geologic applications and types of projects:** Engineering geology is applied during all project phases, from project conception through planning, design, construction and, where warranted, closure. Planning-level engineering geology work is commonly conducted in response to forest practice regulations, critical areas ordinances for various jurisdictions, and the State Environmental Policy Act. Typical planning-level engineering geology applications include: Timber harvest planning, proposed siting of residential and commercial developments and other buildings and facilities, and alternative route selection for roads, rail lines, trails and utilities. Site-specific civil engineering projects where engineering geologic services are commonly applied include: Road, trail and railroad cuts,

fills, and tunnels; foundations for bridges and other drainage structures; retaining walls, dams, buildings, water towers, power transmission line towers, slope, channel and shoreline stabilization facilities, fish ladders, ski lifts and other structures; landings for logging; airport landing strips, rock bolt systems and blasting plans.

(iii) **Knowledge, skills and abilities required for licensure as an engineering geologist:** In addition to being licensed as a geologist in the state of Washington, you must also possess the following knowledge, skills and abilities in order to be licensed as an engineering geologist:

(A) Knowledge of the geology of the state of Washington; (B) Skill and ability in use of geotechnical field classification systems for soil and rock;

(C) Ability to recognize landforms resulting from surficial and deep-seated geologic processes;

(D) Knowledge of and ability to evaluate and analyze soil and rock mechanical relationships related to geologic materials and surficial geologic processes;

(E) Knowledge of the appropriate application of geotechnical laboratory testing methods;

(F) Ability to interpret and portray engineering geologic information and data three-dimensionally, at a scale appropriate for site-specific application; and

(G) Knowledge and understanding of the principles of grading codes, as well as critical areas, shoreline and other pertinent regulations.

(b) **Hydrogeologist.**

(i) **Elements of the hydrogeologist specialty.** In addition to tasks commonly performed by licensed geologists, the practice of hydrogeology involves the study of the movement of water and other fluids through geologic materials, the mechanical, physical, chemical, and thermal interaction of fluids with geologic materials, and the transport of energy and chemical constituents by fluids in the subsurface.

(ii) **Typical hydrogeologic applications and types of projects.** Typical applications include regional or basin ground water resource quantity and quality characterization and development; protection of ground water resources; waste site subsurface characterization; design of vadose and saturated zone cleanups; design, testing, and construction supervision of test, production, recharge, injection, remediation, dewatering and resource protection wells; fluid flow and transport modeling; dewatering system design; and evaluation of potential impacts caused by proposed activities on the quantity and quality of ground water and potential mitigations.

(iii) **Knowledge, skills and abilities required for licensure as a hydrogeologist:** In addition to being licensed as a geologist in the state of Washington, you must also possess the following knowledge, skills and abilities in order to be licensed as a hydrogeologist:

(A) Knowledge of the hydrogeology of the state of Washington;

(B) Knowledge of and skill in applying the principles of vadose and saturated zone hydraulics, and ground water quantity and quality;

(C) Knowledge of federal, state, county and local regulations applicable to ground water resources;

(D) Ability to apply elementary soil and rock mechanics in relation to ground water, including the description of soil and rock samples; and

(E) Ability to prepare and interpret logs as they relate to subsurface fluid movement, interaction with geologic materials, and transport of energy and chemical constituents.

(2) Process required for licensure in a specialty.

(a) **Documentation of specialty experience:** To obtain a specialty license, you must provide a documented record of five years of experience in the applicable geologic specialty, per WAC 308-15-040.

(b) **Documentation of specialty education and training:** In addition to the educational requirements outlined for geologists under WAC 308-15-040, you must complete advanced study, seminars or on-the-job training pertinent to the specialty and acceptable to the board. Examples of academic training pertinent to engineering geology include classes in engineering geology, environmental geology, rock and soil mechanics, geomorphology, volcanology and seismicity. Examples of seminars pertinent to engineering geology include slope stability, rock slope engineering, tunneling, blast design, shoreline processes and engineering geologic field methods short courses. Examples of academic training pertinent to hydrogeology include classes in hydrogeology, geomorphology, hydraulics and advanced geochemistry. Examples of seminars pertinent to hydrogeology include classes taught by experts in the discipline, classes offered in hydrogeologic computer modeling, and various seminars and symposia on ground water, geochemical forensics and ground water law and regulations.

(c) **Examination requirements for specialty licensure:** During the period July 1, 2001, to June 30, 2002, a license in a specialty can be obtained by "grandparenting" as outlined in WAC 308-15-040. Following the period ending June 30, 2002, a license in a specialty can be obtained through reciprocity, as outlined in WAC 308-15-040. For those who are not eligible for grandparenting, a specialty examination is required in addition to the examination described for geologist licensure in WAC 308-15-040. An examination will be required for each specialty license and will be administered as needed.

NEW SECTION

WAC 308-15-100 What is a brief adjudicative proceeding (BAP)? The board adopts RCW 34.05.482 through 34.05.494 of the Administrative Procedure Act to administer brief adjudicative proceedings (BAP). These proceedings are conducted at the request of an applicant for reasons set out in subsection 308-15-101 or at the discretion of the board chair per RCW 34.05.482.

NEW SECTION

WAC 308-15-101 When can a brief adjudicative proceeding (BAP) be requested? Requests for a BAP will be conducted where the matter is limited solely to one or more of the following issues:

(1) To determine whether an applicant for licensing meets the minimum criteria for licensing to practice as a geologist in this state and the board proposes to deny the application;

(2) To determine whether a person is in compliance with the terms and conditions of a final order or agreement previously issued by the board;

(3) To determine whether an applicant for or in the examination process will be denied to sit for future examinations; and

(4) To determine whether a license holder requesting renewal or reinstatement has submitted all required information and meets minimum criteria for renewal or reinstatement.

NEW SECTION

WAC 308-15-102 What records are required for a brief adjudicative proceeding (BAP)? (1) Original or renewal license: The preliminary record for an application for an original or renewal license will include:

(a) The application for the license, renewal, reinstatement or approval and all associated documents; and

(b) All documents relied on by the program in proposing to deny the application, renewal, reinstatement or approval; and (c) All correspondence between the applicant for license, renewal, reinstatement or approval and the program regarding the application.

(2) Final order or agreement: The preliminary record to determine compliance with a previously issued final order or agreement will include:

(a) The previously issued final order or agreement; and (b) All reports or other documents submitted by, or at the direction of, the license holder, in full or partial fulfillment of the terms of the final order or agreement; and

(c) All correspondence between the license holder and the program, regarding compliance with the final order or agreement; and

(d) All documents relied on by the program that show the license holder has failed to comply with the previously issued final order or agreement.

NEW SECTION

WAC 308-15-103 How are brief adjudicative proceedings (BAPs) conducted? (1) A presiding officer, designated by the director, conducts brief adjudicative proceedings. The presiding officer will have agency expertise in the subject matter but will not have personally participated in the decision to issue the initiating document.

(2) The parties or their representatives may present written documentation. The presiding officer will designate the date by which written documents must be submitted by the parties.

(3) The presiding officer may, at his or her discretion, entertain oral argument from the parties or their representatives.

(4) No witnesses may appear to testify.

(5) In addition to the record, the presiding officer may employ agency expertise as a basis for a decision.

(6) The presiding officer will not issue an oral order. Within ten days of the final date for submission of materials or oral argument, if any, the presiding officer will enter an initial order.

WSR 01-12-029
PERMANENT RULES
DEPARTMENT OF
FINANCIAL INSTITUTIONS

[Filed May 29, 2001, 10:25 a.m., effective July 1, 2001]

Date of Adoption: May 29, 2001.

Purpose: To increase fees and assessments paid by consumer loan companies, check cashers and sellers, mortgage brokers, and escrow officers and agents to the Division of Consumer Services.

Citation of Existing Rules Affected by this Order: Amending WAC 208-630-021, 208-630-022, 208-630-023, 208-620-190, 208-680B-080, 208-660-010, and 208-660-060.

Statutory Authority for Adoption: RCW 18.44.410, 19.146.223, 19.146.225, 19.146.265, 31.04.165, 31.45.200.

Adopted under notice filed as WSR 01-07-083 on March 21, 2001.

Changes Other than Editing from Proposed to Adopted Version: Based on comments received, the division changed the rule in its final version to limit to two the number of automatic annual increases in the rate of assessments/fees: One on July 1, 2001, and one on July 1, 2002.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 8, Amended 7, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: July 1, 2001.

May 29, 2001

John L. Bley

Director

AMENDATORY SECTION (Amending WSR 97-09-035, filed 4/11/97, effective 5/12/97)

WAC 208-630-021 Application review and investigation fee. (1) The director shall collect a fee of ~~((sixty-five dollars))~~ \$66.81 per employee hour expended for services, plus actual expenses, for review of application and investigation of:

- (a) New license applications;
- (b) Additional locations;
- (c) Change of control;
- (d) Relocation of office;
- (e) Voluntary or involuntary liquidation of licensee; and
- (f) Small loan endorsement applications.

(2) The director may require a lump sum payment in advance to cover the anticipated cost of review and investigation of the activities described in this section. If the lump sum payment required exceeds the actual amount derived in subsection (1) of this section, the amount in excess shall be refunded.

AMENDATORY SECTION (Amending WSR 97-09-035, filed 4/11/97, effective 5/12/97)

WAC 208-630-022 Annual assessment charge. (1)

The director will charge each licensee an annual assessment at the rate set forth in subsection (2) of this section. Assessments for a calendar year will be computed on total volume of transactions as of December 31 of the previous calendar year. For licensees with a fiscal year of January through December, annual assessments are due on or before April 15. For licensees with a fiscal year other than that stated above, annual assessments are due one hundred five days after the close of the licensee's fiscal year. ~~((For the calendar year 1997, annual assessments for all licensees are due on or before June 30, 1997.))~~

(2) The annual assessment rate is:

(a) For check cashers:

(i) If the volume of checks cashed is one million dollars or less, there is no annual assessment;

(ii) If the volume of checks cashed is over one million dollars, the annual assessment is ~~((five hundred dollars))~~ \$513.95 per licensed location.

(b) For check sellers:

(i) If the volume of checks sold is one million dollars or less, there is no annual assessment;

(ii) If the volume of checks sold is over one million dollars, the annual assessment is ~~((five hundred dollars))~~ \$513.95 per licensed location.

(c) For licensees with small loan endorsements, in addition to (a) and/or (b) of this subsection:

(i) If the volume of small loans made is one million dollars or less, there is no annual assessment;

(ii) If the volume of small loans made is over one million dollars, the annual assessment is ~~((five hundred dollars))~~ \$513.95 per licensed location.

(3) For purposes of this section, "volume" includes all transactions made under this chapter and chapter 31.45 RCW by a Washington licensed check casher or check seller at all licensed locations.

AMENDATORY SECTION (Amending WSR 97-09-035, filed 4/11/97, effective 5/12/97)

WAC 208-630-023 Examination fees. The fee for examinations described in WAC 208-630-015 shall be ~~((sixty-five dollars))~~ \$66.81 per employee hour expended.

PERMANENT

NEW SECTION

WAC 208-630-02303 Fee increase. The division intends to increase its fee and assessment rates each year for several bienniums. The division intends to initiate a rule making for this purpose each biennium. This rule provides for an automatic annual increase in the rate of fees and assessments each fiscal year during the 2001-03 biennium.

(1) On July 1, 2002, the fee and assessment rates under WAC 208-630-021, 208-630-022, and 208-630-023, as increased in the prior fiscal year, will increase by a percentage rate equal to the fiscal growth factor for the then current fiscal year. As used in this section, "fiscal growth factor" has the same meaning as the term is defined in RCW 43.135.025. However, there will be no rate increase under this subsection (1) for assessments described in WAC 208-630-022 (2)(a)(i), (b)(i) and (c)(i).

(2) The director may round off a rate increase under subsection (1) of this section. However, no rate increase may exceed the applicable fiscal growth factor.

(3) By June 1 of each year, the director will make available a chart of the new rates that will take effect on the immediately following July 1.

NEW SECTION

WAC 208-630-02305 Waiver of fees. The director may waive any or all of the fees and assessments imposed under WAC 208-630-021, 208-630-022, and 208-630-023, in whole or in part, when he or she determines that both of the following factors are present:

(1) The consumer services program fund exceeds the projected acceptable minimum fund balance level approved by the office of financial management; and

(2) That such course of action would be fiscally prudent.

AMENDATORY SECTION (Amending WSR 96-04-013, filed 1/26/96, effective 2/26/96)

WAC 208-620-190 Schedule of fees. The director shall collect fees for services as specified below:

(1) **Applications and certificates.**

(a) A charge of (~~ninety dollars~~) \$92.51 per hour for services plus actual expenses for review of application and attendant investigation for:

(i) New consumer loan company certificate of authority or licensed location certificate;

(ii) Branch licensed locations certificate;

(iii) Relocation of main office or branch;

(iv) Notice of change of control;

(v) Opinions rendered regarding interpretations of statutes and rules.

(b) A fee of (~~one hundred dollars~~) \$102.79 for issuing the following certificates:

(i) Certificate of authority;

(ii) Licensed location certificate;

(iii) Certificate of good standing.

(2) **Examinations.** A charge of (~~sixty-five dollars~~) \$66.81 per hour for regular and special examinations of the licensee's records. The director will submit a statement for

the charges following the completion of any applicable examination. The charges must be paid within thirty days after the statement is submitted to the licensee.

(3) **Annual assessment fee.**

(a) An annual assessment fee based on adjusted total loan value as defined in (b) of this subsection. The amount of the annual assessment fee is (~~(.000169792)~~) 0.000174529 multiplied by the adjusted total loan value as calculated from the consolidated annual report for the previous calendar year.

(b) The "adjusted total loan value" is the sum of:

(i) The total unpaid balance of loans originated subject to the act that were retained or purchased by the licensee; and

(ii) The total unpaid balance of loans originated subject to the act that were sold by the licensee with servicing retained (if any); and

(iii) The total amount of loans originated subject to the act that were sold by the licensee during the previous calendar year with servicing released (if any).

NEW SECTION

WAC 208-620-191 Fee increase. The division intends to increase its fee and assessment rates each year for several bienniums. The division intends to initiate a rule making for this purpose each biennium. This rule provides for an automatic annual increase in the rate of fees and assessments each fiscal year during the 2001-03 biennium.

(1) On July 1, 2002, the fee and assessment rates under WAC 208-620-190, as increased in the prior fiscal year, will increase by a percentage rate equal to the fiscal growth factor for the then current fiscal year. As used in this section, "fiscal growth factor" has the same meaning as the term is defined in RCW 43.135.025.

(2) The director may round off a rate increase under subsection (1) of this section. However, no rate increase may exceed the applicable fiscal growth factor.

(3) By June 1 of each year, the director will make available a chart of the new rates that will take effect on the immediately following July 1.

NEW SECTION

WAC 208-620-192 Waiver of fees. The director may waive any or all of the fees and assessments imposed under WAC 208-620-190, in whole or in part, when he or she determines that both of the following factors are present:

(1) The consumer services program fund exceeds the projected acceptable minimum fund balance level approved by the office of financial management; and

(2) That such course of action would be fiscally prudent.

AMENDATORY SECTION (Amending WSR 96-21-082, filed 10/16/96, effective 11/16/96)

WAC 208-680B-080 Escrow officer and agent fees. The director shall charge the following fees:

Title of Fee	Fee
Escrow officer:	
First examination	\$((150.00))
Reexamination	<u>154.19</u>
Original license	((150.00))
License renewal	<u>154.19</u>
Transfer of license, name or address change or license activation	((160.00)) <u>164.46</u>
Duplicate license	((160.00)) <u>164.46</u> ((25.00)) <u>25.70</u> ((25.00)) <u>25.70</u>
Escrow agent:	
Application and original certificate	((345.00))
Renewal	<u>354.63</u>
Late renewal with penalty	((345.00))
Transfer of certificate, name or address change	<u>354.63</u>
Duplicate certificate	((517.50)) <u>531.93</u> ((25.00)) <u>25.70</u> ((25.00)) <u>25.70</u>
Escrow agent branch office:	
Application and original license	((345.00))
Renewal	<u>354.63</u>
Late renewal with penalty	((345.00))
Transfer of license, name or address change	<u>354.63</u>
Duplicate license	((517.50)) <u>531.93</u> ((25.00)) <u>25.70</u> ((25.00)) <u>25.70</u>

NEW SECTION

WAC 208-680B-081 Fee increase. The division intends to increase its fee and assessment rates each year for several bienniums. The division intends to initiate a rule making for this purpose each biennium. This rule provides for an automatic annual increase in the rate of fees and assessments each fiscal year during the 2001-03 biennium.

(1) On July 1, 2002, the fee and assessment rates under WAC 208-680B-080, as increased in the prior fiscal year, will increase by a percentage rate equal to the fiscal growth factor for the then current fiscal year. As used in this section, "fiscal growth factor" has the same meaning as the term is defined in RCW 43.135.025.

(2) The director may round off a rate increase under subsection (1) of this section, However, no rate increase may exceed the applicable fiscal growth factor.

(3) By June 1 of each year, the director will make available a chart of the new rates that will take effect on the immediately following July 1.

NEW SECTION

WAC 208-680B-082 Waiver of fees. The director may waive any or all of the fees and assessments imposed under WAC 208-680B-080, in whole or in part, when he or she determines that both of the following factors are present:

(1) The consumer services program fund exceeds the projected acceptable minimum fund balance level approved by the office of financial management; and

(2) That such course of action would be fiscally prudent.

AMENDATORY SECTION (Amending WSR 01-01-044, filed 12/8/00, effective 1/8/01)

WAC 208-660-010 Definitions. As used in this chapter, the following definitions apply, unless the context otherwise requires:

(1) "Advertising material" means any form of sales or promotional materials to be used in connection with the mortgage broker business.

(2) "Affiliate" means any person who controls, is controlled by, or is under common control with, another person.

(3) "Application deposit" means a deposit in immediately available funds consisting of ~~((three hundred fifty dollars))~~ the equivalent of ten hours investigation fees under WAC 208-660-060 for each license applied for and ((one hundred seventy five dollars)) the equivalent of five hours investigation fees under WAC 208-660-060 for each branch office certificate applied for. ~~((For example, an applicant requesting a license and two branch office certificates must submit an application deposit of seven hundred dollars (calculated by adding three hundred fifty dollars to the product of two times one hundred seventy five dollars).))~~

(4) "Approved examination" means a written examination approved by the director.

(5) "Approved licensing or continuing education course" means a licensing or continuing education course approved by the director.

(6) "Borrower" means any person who consults with or retains a mortgage broker or loan originator in an effort to obtain or seek advice or information on obtaining or applying to obtain a residential mortgage loan for himself, herself, or persons including himself or herself, regardless of whether the person actually obtains such a loan.

(7) "Branch office" means a fixed physical location such as an office, separate from the principal place of business of the licensee, where the licensee holds itself out as a mortgage broker.

(8) "Branch office certificate" means a branch office license issued by the director to engage in the mortgage broker business as the branch office indicated in the certificate, pursuant to RCW 19.146.265.

(9) "Certificate of passing an approved examination" means a certificate signed by the examination administrator verifying that the individual performed with a satisfactory score or higher on an approved licensing examination.

PERMANENT

(10) "Certificate of satisfactory completion of an approved continuing education course" means a certificate signed by the course provider verifying that the individual has attended an approved continuing education course.

(11) "Certificate of satisfactory completion of an approved licensing course" means a certificate signed by the course provider verifying that the individual has attended at least forty hours of class of an approved licensing course.

(12) "Consumer Protection Act" means chapter 19.86 RCW.

(13) A person "controls" an entity if the person, directly or indirectly through one or more intermediaries, alone or in concert with others, owns, controls, or holds the power to vote twenty-five percent or more of the outstanding stock or voting power of the controlled entity.

(14) A person is "convicted" of a crime, irrespective of the pronouncement or suspension of sentence, if the person:

- Is convicted of the crime in any jurisdiction;
- Is convicted of a crime which, if committed within this state would constitute such a crime under the laws of this state;
- Has plead guilty or no contest or nolo contendere or stipulated to facts that are sufficient to justify a finding of guilt to such a charge before a court or federal magistrate; or
- Has been found guilty of such a crime by the decision or judgment of a court or federal magistrate or by the verdict of a jury.

(15) "Department" means the department of financial institutions.

(16) "Designated broker" means a natural person designated by the applicant for a license or licensee who meets the experience, education, and examination requirements set forth in RCW 19.146.210(e).

(17) "Director" means the director of financial institutions.

(18) "Employee" means any natural person who:

- Has an employment relationship, acknowledged by both the employee and the mortgage broker; and
- Is treated as an employee by the mortgage broker for purposes of compliance with federal income tax laws.

(19) "Financial institution" means a federally insured bank, savings bank, savings and loan association, or credit union, whether state or federally chartered, authorized to conduct business in this state.

(20) "Financial misconduct" means without limitation:

- Any conduct prohibited by the Mortgage Broker Practices Act;
- Any similar conduct prohibited by statutes governing mortgage brokers in other states; and
- Any similar conduct prohibited by statutes governing other segments of the financial services industry, including but not limited to the Consumer Protection Act, statutes governing the conduct of securities broker dealers, financial advisers, escrow officers, title insurance companies, limited practice officers, trust companies, and other licensed or chartered financial service providers.

(21) A person "holds oneself out" by advertising or otherwise informing the public that the person engages in any of the activities indicated, including without limit through the

use of business cards, stationery, brochures, rate lists or other promotional items.

(22) "Independent contractor" or "person who independently contracts" means any person that:

- Expressly or impliedly contracts to perform mortgage broker activities for a licensee;
- With respect to its manner or means of performing the activities, is not subject to the licensee's right of control; and
- Is not treated as an employee by the licensee for purposes of compliance with federal income tax laws.

(23) "Investigation" means an examination undertaken for the purpose of detection of violations of this chapter or securing information lawfully required under this chapter.

(24) "License" means a license issued by the director to engage in the mortgage broker business.

(25) "Licensee" or "licensed mortgage broker" means:

- A mortgage broker licensed by the director; and
- Any person required to be licensed pursuant to RCW 19.146.200 and 19.146.020.

(26) "Loan originator" means a natural person:

- Who is a mortgage broker employee who performs any mortgage broker activities; or
- Who is retained as an independent contractor by a mortgage broker, or represents a mortgage broker, in the performance of any mortgage broker activities.

(27) "Lock-in agreement" means an agreement with a borrower made by a mortgage broker or loan originator, in which the mortgage broker or loan originator agrees that, for a period of time, a specific interest rate or other financing terms will be the rate or terms upon which it will make a loan available to the borrower.

(28) "Material litigation" means any conviction in the prior seven years for a felony, or for a gross misdemeanor involving dishonesty or financial misconduct, and any litigation pending at any time during the prior seven years that would be relevant to the director's ruling on an application for a license, including but not limited to, the following types of litigation:

- Criminal actions involving felony charges.
- Criminal or civil actions involving dishonesty or financial misconduct.

(29) "Mortgage broker" means any person that for compensation or gain, or in the expectation of compensation or gain:

- Makes a residential mortgage loan or assists a person in obtaining a residential mortgage loan; or
- Holds himself or herself out as being able to do so.

(30) "Mortgage Broker Practices Act" means chapter 19.146 RCW and chapter 208-660 WAC.

(31) "Out-of-state applicant or licensee" means an applicant for a license or licensee that does not maintain a physical office within this state.

(32) "Person" means a natural person, corporation, company, partnership, limited liability company, or association.

(33) "Prepaid escrowed costs of ownership," as used in RCW 19.146.030(5), means any amounts prepaid by the borrower for the payment of taxes, property insurance, interim interest, and similar items in regard to the security property.

(34) "Principal" means any person who controls, directly or indirectly through one or more intermediaries, alone or in

concert with others, a ten percent or greater interest in a partnership, company, association or corporation, and the owner of a sole proprietorship.

(35) "RCW" means the *Revised Code of Washington*.

(36) "Real Estate Settlement Procedures Act" means the Real Estate Settlement Procedures Act, 12 U.S.C. Sections 2601 et seq., and Regulation X, 24 C.F.R. Sections 3500 et seq.

(37) "Registered agent" means a person or persons located within this state that is appointed to accept service of process for an out-of-state licensee.

(38) "Residential mortgage loan" means any loan primarily for personal, family, or household use secured by a mortgage or deed of trust on residential real estate upon which is constructed or intended to be constructed a single family dwelling or multiple family dwelling of four or less units.

(39) "Subsidiary" means a corporation, company, partnership, or association that is controlled by another.

(40) "Third-party provider" means any third party, other than a mortgage broker or lender, that provides goods or services to the mortgage broker in connection with the preparation of a borrower's loan and includes, but is not limited to, credit reporting agencies, title insurance companies, appraisers, structural and pest inspectors, or escrow companies. However, "third-party provider" does include a third-party lender, to the extent it provides lock-in arrangements to the mortgage broker in connection with the preparation of a borrower's loan.

(41) "Transfer" means a sale, transfer, assignment, or other disposition, whether by operation of law in a merger or otherwise.

(42) "Truth in Lending Act" means the Truth in Lending Act, 15 U.S.C. Sections 1601 et seq., and Regulation Z, 12 C.F.R. Sections 226 et seq.

AMENDATORY SECTION (Amending WSR 96-04-028, filed 2/1/96, effective 4/1/96)

WAC 208-660-060 Department's fees and assessments. (1) Upon completion of processing and reviewing an application for a license or branch office certificate, the department will prepare a billing, regardless of whether a license or certificate has been issued, calculated at the rate of ~~((thirty-five dollars))~~ \$35.98 per hour that each staff person devoted to processing and reviewing the application. The application deposit will be applied against this bill. Any amount left owing to the department will be billed to and paid promptly by the applicant, while any balance remaining from the deposit will be refunded promptly to the applicant.

(2) Upon completion of any examination of the books and records of a licensee, the department will furnish to the licensee a billing to cover the cost of the examination. The examination charge will be calculated at the rate of ~~((forty-five dollars))~~ \$46.26 per hour that each staff person devoted to the examination. The examination billing will be paid by the licensee promptly upon receipt. Licensees that were issued licenses prior to March 21, 1994, have prepaid in their initial license fee the cost of the first compliance examination

of the licensee conducted by the department during the first two years after the date of issuance of the license.

(3) Each licensee shall pay to the director an annual assessment of ~~((five hundred dollars))~~ \$513.95 for each license, and ~~((five hundred dollars))~~ \$513.95 for each branch office certificate. The annual assessment(s) will be due no later than the last business day of the month in which the anniversary date of the issuance of the broker's license occurs.

(4) Upon completion of any investigation of the books and records of a mortgage broker other than a licensee, the department will furnish to the broker a billing to cover the cost of the investigation. The investigation charge will be calculated at the rate of ~~((forty-five dollars))~~ \$46.26 per hour that each staff person devoted to the investigation. The investigation billing will be paid by the mortgage broker promptly upon receipt.

NEW SECTION

WAC 208-660-061 Fee increase. The division intends to increase its fee and assessment rates each year for several bienniums. The division intends to initiate a rule making for this purpose each biennium. This rule provides for an automatic annual increase in the rate of fees and assessments each fiscal year during the 2001-03 biennium.

(1) On July 1, 2002, the fee and assessment rates under WAC 208-660-060, as increased in the prior fiscal year, will increase by a percentage rate equal to the fiscal growth factor for the then current fiscal year. As used in this section, "fiscal growth factor" has the same meaning as the term is defined in RCW 43.135.025.

(2) The director may round off a rate increase under subsection (1) of this section. However, no rate increase may exceed the applicable fiscal growth factor.

(3) By June 1 of each year, the director will make available a chart of the new rates that will take effect on the immediately following July 1.

NEW SECTION

WAC 208-660-062 Waiver of fees. The director may waive any or all of the fees and assessments imposed under WAC 208-660-060, in whole or in part, when he or she determines that both of the following factors are present:

(1) The consumer services program fund exceeds the projected acceptable minimum fund balance level approved by the office of financial management; and

(2) That such course of action would be fiscally prudent.

WSR 01-12-032

PERMANENT RULES

BOARD OF

PILOTAGE COMMISSIONERS

[Filed May 29, 2001, 10:28 a.m., effective July 1, 2001]

Date of Adoption: May 10, 2001.

PERMANENT

Purpose: To establish a Puget Sound pilotage district annual tariff for pilotage services.

Citation of Existing Rules Affected by this Order: Amending WAC 363-116-300.

Statutory Authority for Adoption: RCW 88.16.035.

Adopted under notice filed as WSR 01-08-081 on April 3, 2001.

Changes Other than Editing from Proposed to Adopted Version: The adopted tariff is an increase of 5.33% less than was proposed, resulting in an increase of 1.32% in all tariff categories except transportation.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 0, Amended 1, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 1, Repealed 0.

Effective Date of Rule: July 1, 2001.

May 25, 2001
Peggy Larson
Administrator

Any tow exceeding seven hours, two pilots are mandatory. Harbor shifts shall constitute and be limited to those services in moving vessels from dock to dock, from anchorage to dock, from dock to anchorage, or from anchorage to anchorage in the same port after all other applicable tariff charges for pilotage services have been recognized as payable.

Waterway and bridge charges:

Ships up to 90' beam:

A charge of \$~~((189.00))~~ 191.00 shall be in addition to bridge fees for any vessel movements both inbound and outbound required to transit south of Spokane Street in Seattle, south of Eleventh Street in any of the Tacoma waterways, in Port Gamble, or in the Snohomish River. Any vessel movements required to transit through bridges shall have an additional charge of \$~~((90.00))~~ 91.00 per bridge.

Ships 90' beam and/or over:

A charge of \$~~((255.00))~~ 258.00 shall be in addition to bridge fees for any vessel movements both inbound and outbound required to transit south of Spokane Street in Seattle and south of Eleventh Street in any of the Tacoma waterways. Any vessel movements required to transit through bridges shall have an additional charge of \$~~((179.00))~~ 181.00 per bridge.

(The above charges shall not apply to transit of vessels from Shilshole Bay to the limits of Lake Washington.)

Two or three pilots required:

In a case where two or three pilots are employed for a single vessel waterway or bridge transit, the second and/or third pilot charge shall include the bridge and waterway charge in addition to the harbor shift rate.

Compass adjustment	\$ ((254.00)) <u>257.00</u>
Radio direction finder calibration	\$ ((254.00)) <u>257.00</u>
Launching vessels	\$ ((382.00)) <u>387.00</u>
Trial trips, 6 hours or less (Minimum \$ ((714.00)) <u>726.00</u>)	\$ ((119.00)) <u>121.00</u> per hr.
Trial trips, over 6 hours (two pilots)	\$ ((238.00)) <u>241.00</u> per hr.
Shilshole Bay – Salmon Bay	\$ ((149.00)) <u>151.00</u>
Salmon Bay – Lake Union	\$ ((116.00)) <u>118.00</u>
Lake Union – Lake Washington (plus LOA zone from Webster Point)	\$ ((149.00)) <u>151.00</u>
Cancellation charge	LOA Zone I

AMENDATORY SECTION (Amending WSR 00-11-119, filed 5/22/00, effective 7/1/00)

WAC 363-116-300 Pilotage rates for the Puget Sound pilotage district. Effective 0001 hours July 1, ~~((2000))~~ 2001, through 2400 hours June 30, ~~((200+))~~ 2002.

CLASSIFICATION	RATE
Ship length overall (LOA)	
Charges:	per LOA rate schedule in this section
Boarding fee:	\$36.00
Per each boarding/deboarding at the Port Angeles pilot station.	
Harbor shift - Live ship (Seattle Port)	LOA Zone I
Harbor shift - Live ship (other than Seattle Port)	LOA Zone I
Harbor shift Dead ship	Double LOA Zone I
Dead ship towing charge:	Double LOA
LOA of tug+ LOA of tow+ beam of tow	Zone

PERMANENT

Cancellation charge—Port Angeles (when a pilot is ordered and vessel proceeds to a port outside the Puget Sound pilotage district without stopping for pilot or when a pilot order is cancelled less than twelve hours prior to the original ETA.)

LOA Zone II

Docking delay after anchoring: ~~\$(119.00)~~
121.00
 per hr.

Applicable harbor shift rate to apply, plus ~~\$(119.00)~~
121.00 per hour standby. No charge if delay is 60 minutes or less. If the delay is more than 60 minutes, charge is ~~\$(119.00)~~ 121.00 for every hour or fraction thereof.

Sailing delay: ~~\$(119.00)~~
121.00 per
 hour

No charge if delay is 60 minutes or less. If the delay is more than 60 minutes, charge is ~~\$(119.00)~~ 121.00 for every hour or fraction thereof. The assessment of the standby fee shall not exceed a period of twelve hours in any twenty-four hour period.

Slowdown: ~~\$(119.00)~~
121.00 per
 hour

When a vessel chooses not to maintain its normal speed capabilities for reasons determined by the vessel and not the pilot, and when the difference in arrival time is one hour, or greater, from the predicted arrival time had the vessel maintained its normal speed capabilities, a charge of ~~\$(119.00)~~ 121.00 per hour, and each fraction thereof, will be assessed for the resultant difference in arrival time.

Tonnage charges:

0 to 20,000 gross tons:
 Additional charge to LOA zone mileage of ~~\$(0.0060)~~
0.0061 a gross ton for all gross tonnage up to 20,000 gross tons.

20,000 to 50,000 gross tons:
 Additional charge to LOA zone mileage of ~~\$(0.0616)~~
0.0624 a gross ton for all gross tonnage in excess of 20,000 gross tons up to 50,000 gross tons.

50,000 gross tons and up:
 In excess of 50,000 gross tons, the charge shall be ~~\$(0.0737)~~ 0.0747 per gross ton.

For vessels where a certificate of international gross tonnage is required, the appropriate international gross tonnage shall apply.

Delayed arrival-Port Angeles: ~~\$(119.00)~~
121.00 per
 hour

When a pilot is ordered for an arriving inbound vessel at Port Angeles and the vessel does not arrive within two hours of its ETA, or its ETA is amended less than six hours prior to the original ETA, a charge of ~~\$(119.00)~~ 121.00 for each hour delay, or fraction thereof, shall be assessed in addition to all other appropriate charges.

When a pilot is ordered for an arriving inbound vessel at Port Angeles and the ETA is delayed to six hours or more beyond the original ETA, a cancellation charge shall be assessed, in addition to all other appropriate charges, if the ETA was not amended at least twelve hours prior to the original ETA.

Transportation to vessels on Puget Sound:

March Point or Anacortes	\$ 144.00
Bangor	84.00
Bellingham	158.00
Bremerton	44.00
Cherry Point	175.00
Dupont	85.00
Edmonds	27.00
Everett	52.00
Ferndale	173.00
Manchester	66.00
Mukilteo	52.00
Olympia	108.00
Point Wells	27.00
Port Gamble	77.00
Port Townsend (Indian Island)	109.00
Seattle	15.00
Semiahmoo (Blaine)	196.00
Tacoma	56.00
Tacoma Smelter	66.00
Winslow	42.00

- (a) Intraharbor transportation for the Port Angeles port area - transportation between Port Angeles pilot station and Port Angeles harbor docks - \$15.00.
- (b) Interport shifts: Transportation paid to and from both points.
- (c) Intraharbor shifts: Transportation to be paid both ways. If intraharbor shift is cancelled on or before scheduled reporting time, transportation paid one way only.
- (d) Cancellation: Transportation both ways unless notice of cancellation is received prior to scheduled reporting time in which case transportation need only be paid one way.
- (e) Any new facilities or other seldom used terminals, not covered above, shall be based on mileage x \$1.80 per mile. Delinquent payment charge: 1 1/2% per month after 45 days from first billing.

Delinquent payment charge: 1 1/2% per month after 45 days from first billing.

Nonuse of pilots: Ships taking and discharging pilots without using their services through all Puget Sound and adjacent inland waters shall pay full pilotage fees on the LOA zone mileage basis from Port Angeles to destination,

PERMANENT

from place of departure to Port Angeles, or for entire distance between two ports on Puget Sound and adjacent inland waters.

LOA rate schedule

The following rate schedule is based upon distances furnished by National Oceanic and Atmospheric Administration, computed to the nearest half-mile and includes retirement fund contributions.

WSR 01-12-034
PERMANENT RULES
DEPARTMENT OF
LABOR AND INDUSTRIES
 [Filed May 29, 2001, 1:41 p.m.]

Date of Adoption: May 29, 2001.

Purpose: Fee increases for the Board of Boiler Rules—
 Substantive, chapter 296-104 WAC.

The Board of Boiler Rules is adopting a 2.87% (rounded down to the nearest tenth of a dollar) general increase in fees. The 2.87% rate is the Office of Financial Management's maximum allowable fiscal growth rate factor for fiscal year 2001. The general fee increases are necessary to maintain the financial health and operational effectiveness of the boiler board program.

Citation of Existing Rules Affected by this Order:
 Amending WAC 296-104-055 and 296-104-700.

Statutory Authority for Adoption: RCW 70.79.030, 70.79.040, 70.79.150, 70.79.290, 70.79.330, and 70.79.350.

Other Authority: Chapter 70.79 RCW.

Adopted under notice filed as WSR 01-09-091 on April 18, 2001.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 0, Amended 2, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 2, Repealed 0.

Effective Date of Rule: Thirty-one days after filing.

May 29, 2001

Kenneth E. Eshleman, Chair
Board of Boiler Rules

AMENDATORY SECTION (Amending WSR 99-22-026, filed 10/26/99, effective 11/26/99)

WAC 296-104-055 Administration—What are the examination fees? A fee of ~~((sixty dollars))~~ \$61.70 will be charged for each applicant sitting for an inspection examination(s). If an applicant fails to pass the examination this fee shall be good for one year during which a reexamination may be taken. Checks for examination fees shall be made payable to the state treasurer.

AMENDATORY SECTION (Amending WSR 00-21-024, filed 10/10/00, effective 11/13/00)

WAC 296-104-700 What are the inspection fees—Certificate fees—Expenses? The following fees shall be paid by, or on behalf of, the owner or user upon the completion of the inspection. The inspection fees apply to inspections made by inspectors employed by the state.

Heating boilers:	Internal	External
Cast iron—All sizes	((27.05)) <u>27.80</u>	((21.65)) <u>22.20</u>
All other boilers less than 500 sq. ft.	((32.50)) <u>33.40</u>	((21.65)) <u>22.20</u>
500 sq. ft. to 2500 sq. ft.	((54.15)) <u>55.70</u>	((27.05)) <u>27.80</u>
Each additional 2500 sq. ft. of total heating surface, or any portion thereof	((21.65)) <u>22.20</u>	((10.80)) <u>11.10</u>
Power boilers:	Internal	External
Less than 100 sq. ft.	((27.05)) <u>27.80</u>	((21.65)) <u>22.20</u>
100 sq. ft. to less than 500 sq. ft.	((32.50)) <u>33.40</u>	((21.65)) <u>22.20</u>

500 sq. ft. to 2500 sq. ft.	((54.15)) <u>55.70</u>	((27.05)) <u>27.80</u>
Each additional 2500 sq. ft. of total heating surface, or any portion thereof	((21.65)) <u>22.20</u>	((10.80)) <u>11.10</u>
Pressure vessels:		
Automatic utility hot water supply heaters per RCW 70.79.090		((5.40)) <u>5.50</u>
All other pressure vessels:		
Square feet shall be determined by multiplying the length of the shell by its diameter.		
Less than 15 sq. ft.	((21.65)) <u>22.20</u>	((16.25)) <u>16.70</u>
15 sq. ft. to less than 50 sq. ft.	((32.50)) <u>33.40</u>	((16.25)) <u>16.70</u>
50 sq. ft. to 100 sq. ft.	((37.90)) <u>38.90</u>	((21.65)) <u>22.20</u>
For each additional 100 sq. ft. or any portion thereof	((10.80)) <u>11.10</u>	((37.90)) <u>38.90</u>
Certificate of inspection fees: For objects inspected, the certificate of inspection fee is \$((16.25)) <u>16.70</u> per object.		
Nonnuclear shop inspections, field construction inspections, and special inspection services:		
For each hour or part of an hour up to 8 hours		((32.50)) <u>33.40</u>
For each hour or part of an hour in excess of 8 hours		((48.75)) <u>50.10</u>
Nuclear shop inspections, nuclear field construction inspections, and nuclear triennial shop survey and audit:		
For each hour or part of an hour up to 8 hours		((48.75)) <u>50.10</u>
For each hour or part of an hour in excess of 8 hours		((75.80)) <u>77.90</u>
Nonnuclear triennial shop survey and audit:		
When state is authorized inspection agency:		
For each hour or part of an hour up to 8 hours		((32.50)) <u>33.40</u>
For each hour or part of an hour in excess of 8 hours		((48.75)) <u>50.10</u>
When insurance company is authorized inspection agency:		
For each hour or part of an hour up to 8 hours		((48.75)) <u>50.10</u>
For each hour or part of an hour in excess of 8 hours		((75.80)) <u>77.90</u>

PERMANENT

Expenses shall include:

Travel time and mileage: The department shall charge for its inspectors' travel time from their offices to the inspection sites and return. The travel time shall be charged for at the same rate as that for the inspection, audit, or survey. The department shall also charge the current Washington office of financial management accepted mileage cost fees or the actual cost of purchased transportation. Hotel and meals: Actual cost not to exceed the office of financial management approved rate.

Reinspection fee: Same as the fee for the previous inspection during which discrepancies were reported. The fee will be charged only if the discrepancies are not corrected before the reinspection. The fee shall not exceed ((~~\$ 26.00~~)) \$ 26.70. Washington state specials: For each vessel to be considered by the board for a Washington state special certificate, a fee of ((~~\$ 300.00~~)) \$ 308.60 must be paid to the department before the board meets to consider the vessel. The board may, at its discretion, prorate the fee when a number of vessels that are essentially the same are to be considered.

WSR 01-12-035
PERMANENT RULES
DEPARTMENT OF
LABOR AND INDUSTRIES
 [Filed May 29, 2001, 1:44 p.m.]

Date of Adoption: May 29, 2001.

Purpose: Fees for electrical (chapters 296-46A and 296-401B WAC), contractor registration (chapter 296-200A WAC), elevator (chapter 296-96 WAC) and factory assembled structures (chapters 296-150C, 296-150F, 296-150M, 296-150P, 296-150R, 296-150T, and 296-150V WAC). The last time the fees for any of these programs was reviewed or increased was in June of 1999. The purpose of this project is to increase fees by 2.87% (rounded down to the nearest tenth of a dollar) and to incorporate the fee increases that are the result of chapter 159, Laws of 2001 (SSB 5101) being signed into law. The 2.87% rate is the Office of Financial Management's maximum allowable fiscal growth rate factor for fiscal year 2001. Increasing the fees as a result of SSB 5101 will ensure that the appropriate fees are charged in compliance with the new law changes and will reduce possible confusion as to what fee is charged.

In addition to the general fee increases and the fee changes resulting from SSB 5101, a new fee is being proposed to cover the cost of FAS plan review requests submitted via electronic mail. This new fee is necessary to cover the additional costs associated with receipt of and review of plans submitted electronically. Also, minor technical changes are being made to the fees in the FAS rules to include correcting a reference to electrical plan review fees per WAC 296-46A-140 and that one free copy of the rules will be provided yearly upon request.

These fee increases are necessary to comply with the law and/or to maintain the operational effectiveness of the contractor registration, factory assembled structures (FAS), electrical and elevator programs.

Citation of Existing Rules Affected by this Order: Amending WAC 296-46A-910, 296-46A-915, 296-96-01010, 296-96-01027, 296-96-01030, 296-96-01035, 296-96-01040, 296-96-01045, 296-96-01050, 296-96-01055, 296-96-01060, 296-96-01065, 296-150C-3000, 296-150F-3000, 296-150M-3000, 296-150P-3000, 296-150R-3000, 296-150T-3000, 296-150V-3000, 296-200A-900, and 296-401B-700.

Statutory Authority for Adoption: RCW 43.22.350, 43.22.434, 43.22.480, 43.22.500, 18.27.070, 18.27.075, 70.87.030, 19.28.041, 19.28.051, 19.28.101, 19.28.121, 19.28.161, 19.28.201, 19.28.211, 19.28.341, and chapter 159, Laws of 2001 (SSB 5101).

Other Authority: Chapters 43.22, 19.28, 18.27, and 70.87 RCW.

Adopted under notice filed as WSR 01-09-090 on April 18, 2001.

Changes Other than Editing from Proposed to Adopted Version: **WAC 296-46A-910 Inspection fees.** The proposed fee in subsection (1)(b)(i) was changed from \$162.53 to \$162.50 in order to correct a rounding error.

WAC 296-200A-900 What fees does the department charge contractors for issuance, renewal and reinstatement of certificates of registration? A new fee structure was included for the issuance, renewal, and reinstatement of certificates of registration, effective August 1, 2001. This new fee structure is necessary to comply with chapter 159, Laws of 2001 (SSB 5101) that was signed into law and will take effect on July 22, 2001. This legislation requires the department to charge a fee of \$100 for issuing, renewing, or reregistering a certificate of registration and a \$20 fee to cover the costs for the service of process in an action against the contractor, the contractor's bond, or the deposit (the fee is currently \$10.00). For purposes of administration, the department is requiring contractors with an even unified business identifier to pay \$50 (one half of \$100) for a certificate of registration that expires one year after issuance, renewal, or reinstatement or until suspended or revoked. Likewise, the department is requiring contractors with an odd unified business identifier to pay \$100 for a certificate of registration that expires two years after issuance, renewal, or reinstatement or until suspended or revoked. After the first issuance, renewal or reinstatement of contractors at the \$50 price all contractors will be required to comply with the two-year (\$100) registration requirements.

Effective Date of Rule: Thirty-one days after filing.

May 29, 2001

Gary Moore

Director

AMENDATORY SECTION (Amending WSR 01-01-097, filed 12/15/00, effective 1/18/01)

WAC 296-46A-910 Inspection fees. To calculate inspection fees, the amperage is based on the conductor ampacity or the overcurrent device rating. The total fee must not be less than the number of progress inspection (one-half hour) units times the progress inspection fee rate from subsection (8) PROGRESS INSPECTIONS below.

(1) RESIDENTIAL.

(a) Single and two-family residential (new construction).

Notes: • Square footage is the area included within the surrounding exterior walls of a building exclusive of any interior courts. (This includes any floor area in an attached garage, basement, or unfinished living space.)

• "Inspected with the service" means that a separate service inspection fee is included on the same electrical work permit and "inspected at the same time" means all wiring is to be ready for inspection during the initial inspection trip.

• An "outbuilding" is a structure that serves a direct accessory function to the residence, such as a pump house or storage building. Outbuilding does not include buildings used for commercial type occupancies or additional dwelling occupancies.

(i)	First 1300 sq. ft.	(\$ 67.00) <u>\$ 68.90</u>
	Each additional 500 sq. ft. or portion of	(\$ 21.50) <u>\$ 22.10</u>
(ii)	Each outbuilding or detached garage inspected at the same time as a dwelling unit on the property	(\$ 28.00) <u>\$ 28.80</u>
(iii)	Each outbuilding or detached garage inspected separately	(\$ 44.25) <u>\$ 45.50</u>
(iv)	Each swimming pool - inspected with the service	(\$ 44.25) <u>\$ 45.50</u>
(v)	Each swimming pool - inspected separately	(\$ 67.00) <u>\$ 68.90</u>
(vi)	Each hot tub, spa, or sauna - inspected with the service	(\$ 28.00) <u>\$ 28.80</u>
(vii)	Each hot tub, spa, or sauna - inspected separately	(\$ 44.25) <u>\$ 45.50</u>
(viii)	Each septic pumping system - inspected with the service	(\$ 28.00) <u>\$ 28.80</u>
(ix)	Each septic pumping system - inspected separately	(\$ 44.25) <u>\$ 45.50</u>

(b) Multifamily residential and miscellaneous residential structures, services and feeders (new construction).

(i) Each service and/or feeder

Ampacity	Service/Feeder	Additional Feeder
0 to 200	(\$ 72.25) <u>\$ 74.30</u>	(\$ 21.50) <u>\$ 22.10</u>
201 to 400	(\$ 89.75) \$ <u>92.30</u>	(\$ 44.25) <u>\$ 45.50</u>
401 to 600	(\$ 123.25) \$ <u>126.70</u>	(\$ 61.50) <u>\$ 63.20</u>
601 to 800	(\$ 158.00) \$ <u>162.50</u>	(\$ 84.25) <u>\$ 86.60</u>
801 and over	(\$ 225.25) \$ <u>231.70</u>	(\$ 169.00) <u>\$ 173.80</u>

- (c) Single-family or multi-family altered services including circuits.
- (i) Each altered service and/or altered feeder

Ampacity	Service or Feeder
0 to 200	(\$ 61.50) \$ <u>63.20</u>
201 to 600	(\$ 89.75) \$ <u>92.30</u>
601 and over	(\$ 135.25) \$ <u>139.10</u>

(ii) Maintenance or repair of meter or mast (no alterations to service or feeder) ~~(\$ 33.50)~~ \$ 34.30

(d) Single or multi-family residential circuits only (no service inspection).

Note: Altered or added circuit fees are calculated per panelboard. Total cost of the alterations in an individual panel should not exceed the cost of a complete altered service or feeder of the same rating, as shown in subsection (1) RESIDENTIAL (c) (table) above.

(i) 1 to 4 circuits (see note) ~~(\$ 44.25)~~ \$ 45.50

• Except: Water heater load control devices installed in residences as part of an energy conservation program ~~(\$ 27.00)~~ \$ 27.70

Note: The ~~(\$ 27.00)~~ \$ 27.70 permit fee for water heater load control devices will expire on December 31, 2001.

(ii) Each additional circuit (see note) ~~(\$ 5.00)~~ \$ 5.10

(e) Mobile homes, modular homes, mobile home parks, and RV parks.

(i) Mobile home or modular home service or feeder only ~~(\$ 44.25)~~ \$ 45.50

(ii) Mobile home service and feeder ~~(\$ 72.25)~~ \$ 74.30

(f) Mobile home park sites and RV park sites.

Note: For master service installations, see subsection (2).

(i) First site service or site feeder ~~(\$ 44.25)~~ \$ 45.50

(ii) Each additional site service; or additional site feeder inspected at the same time as the first service or feeder ~~(\$ 28.00)~~ \$ 28.80

(2) COMMERCIAL/INDUSTRIAL.

(a) New service or feeder and additional new feeders inspected at the same time (includes circuits).

Note: For large COMMERCIAL/INDUSTRIAL projects that include multiple feeders, "inspected at the same time" can be interpreted to include additional inspection trips for a single project. The additional inspections must be for electrical work specified on the permit at the time of purchase. The permit fee for such projects must be calculated from (2) (a) (i) (table) above. However, the total fee must not be less than the number of progress inspection (one-half hour) units times the progress inspection fee rate from subsection (8) PROGRESS INSPECTIONS below.

PERMANENT

Ampacity	Service/Feeder	Additional Feeder	401 to 600	(\$89.75) \$92.30	(\$44.25) \$45.50
0 to 100	(\$72.25) \$74.30	(\$44.25) \$45.50	. 601 and over	(\$101.75) \$104.60	(\$50.75) \$52.20

201 to 400	(\$169.00) \$173.80	(\$67.00) \$68.90	(a)	Irrigation machines.	
401 to 600	(\$197.00) \$202.60	(\$78.75) \$81.00	(i)	Each tower when inspected at the same time as a service and feeder from (2) COMMERCIAL/INDUSTRIAL (\$5.00) \$5.10	
601 to 800	(\$254.50) \$261.80	(\$107.25) \$110.30	(ii)	Towers - when not inspected at the same time as a service and feeders - one to six towers (\$67.00) \$68.90	
801 to 1000	(\$310.75) \$319.60	(\$129.75) \$133.40	(iii)	Each additional tower (\$5.00) \$5.10	
1000 and over	(\$339.00) \$348.70	(\$181.00) \$186.10	(5)	MISCELLANEOUS - commercial/industrial and residential.	

(b) Altered services or feeders (no circuits).

(i) Service/feeders

Ampacity	Service or Feeder
0 to 200	(\$72.25) \$74.30
201 to 600	(\$169.00) \$173.80
601 to 1000	(\$254.50) \$261.80
1000 and over	(\$282.75) \$290.80

(ii) Maintenance or repair of meter or mast (no alteration to the service or feeder) ~~(\$61.50)~~ \$63.20

(c) Circuits only.

Note: Altered/added circuit fees are calculated per panelboard. Total cost of the alterations in a panel (or panels) should not exceed the cost of a new feeder (or feeders) of the same rating, as shown in subsection (2) COMMERCIAL/INDUSTRIAL (a)(i)(table) above.

- (i) First five circuits per branch circuit panel ~~(\$56.25)~~ \$57.80
- (ii) Each additional circuit per branch circuit panel ~~(\$5.00)~~ \$5.10
- (d) Over 600 volts surcharge per permit. ~~(\$56.25)~~ \$57.80

(3) TEMPORARY SERVICE(S).

Notes: • Temporary electrical power and lighting installations must be used during the period of construction, remodeling, maintenance, repair, or demolition of buildings, structures, equipment, or similar activities.

• Temporary electrical power and lighting installations are allowed during emergencies and for tests, experiments, and developmental work. Temporary electrical power and lighting installations are allowed for a period not to exceed 90 days for Christmas decorative lighting and similar purposes. Temporary wiring shall be removed immediately upon completion of construction or purpose for which the wiring was installed.

• Temporary stage or concert inspections requested outside of normal business hours will be subject to the portal-to-portal hourly fees in subsection (11) OTHER INSPECTIONS. The fee for such after hours inspections shall be the greater of the fee from (3) TEMPORARY SERVICES (a) or the portal-to-portal fee.

- (a) Temporary services, temporary stage or concert productions.

Ampacity	Service/Feeder	Additional Feeder
0 to 60	(\$38.75) \$39.80	(\$20.00) \$20.50
0 to 100	(\$44.25) \$45.50	(\$21.50) \$22.10
101 to 200	(\$56.25) \$57.80	(\$28.00) \$28.80
201 to 400	(\$67.00) \$68.90	(\$33.50) \$34.40

- (i) First thermostat ~~(\$33.50)~~ \$34.40
- (ii) Each additional thermostat inspected at the same time as the first ~~(\$10.50)~~ \$10.80
- (b) Low-voltage systems and telecommunications systems. Includes all telecommunications installations, fire alarm and burglar alarm nurse call, intercom, security systems, energy management control systems, HVAC/refrigeration control systems (other than thermostats above), industrial and automation control systems, lighting control systems, stand-alone sound systems, public address, and similar low-energy circuits and equipment.
 - (i) First 2500 sq. ft. or less ~~(\$38.75)~~ \$39.80
 - (ii) Each additional 2500 sq. ft. or portion of ~~(\$10.50)~~ \$10.80
- (c) Signs and outline lighting.
 - (i) First sign (no service included) ~~(\$33.50)~~ \$34.40
 - (ii) Each additional sign inspected at the same time on the same building or structure ~~(\$16.00)~~ \$16.40
- (d) Berth at a marina or dock.

Note: Five berths or more shall be permitted to have the inspection fees based on appropriate service and feeder fees from section (2) COMMERCIAL/INDUSTRIAL (a)(i) above.

 - (i) Berth at a marina or dock ~~(\$44.25)~~ \$45.50
 - (ii) Each additional berth inspected at the same time ~~(\$28.00)~~ \$28.80
- (e) Yard pole, pedestal, or other meter loops only.
 - (i) Yard pole, pedestal, or other meter loops only ~~(\$44.25)~~ \$45.50
 - (ii) Meters installed remote from service equipment: Inspected at same time as service, temporary service or other installations ~~(\$10.50)~~ \$10.80
- (f) Emergency inspections requested outside normal work hours. Regular fee plus surcharge of: ~~(\$84.25)~~ \$86.60
- (g) Generators.
 - (i) Portable generators: Permanently installed transfer equipment for portable generators ~~(\$61.50)~~ \$63.20
 - (ii) Permanently installed generators: Refer to appropriate residential or commercial new service or feeder section
 - (h) Annual permit fee for plant location employing regular electrical maintenance staff - each inspection two-hour maximum.

Inspections	Fee
1 to 3 plant electricians	12 (\$1,618.00) \$1,664.40

PERMANENT

4 to 6 plant electricians	24	(\$ 3,237.50) <u>\$ 3,330.40</u>
7 to 12 plant electricians	36	(\$ 4,856.00) <u>\$ 4,995.30</u>
13 to 25 plant electricians	52	(\$ 6,475.50) <u>\$ 6,661.30</u>
more than 25 plant electricians	52	(\$ 8,095.00) <u>\$ 8,327.30</u>

(i) Telecommunications annual permit fee.
 (i) For commercial/industrial location employing full-time telecommunications maintenance staff or having a yearly maintenance contract with a licensed electrical/telecommunications contractor.
 Annual inspection time required may be estimated by ~~(\$ 134.00)~~ the purchaser at the rate for "Other inspections" in this \$ 137.80 section, charged portal-to-portal per hour - two-hour minimum.
 Each additional hour, or portion thereof, of portal-to-portal inspection time ~~(\$ 67.00)~~ \$ 68.90

(6) CARNIVAL INSPECTIONS.
 (a) First carnival field inspection each year.
 (i) Each ride and generator truck ~~(\$ 16.00)~~ \$ 16.40
 (ii) Each remote distribution equipment, concession or gaming show ~~(\$ 5.00)~~ \$ 5.10
 (iii) If the calculated fee for first field inspection of (a) and (b) above is less, the minimum inspection fee shall be: ~~(\$ 84.25)~~ \$ 86.60

(b) Subsequent carnival inspections.
 (i) First 10 rides, concessions, generators, remote distribution equipment or gaming show ~~(\$ 84.25)~~ \$ 86.60
 (ii) Each additional ride, concession, generator, remote distribution equipment or gaming show ~~(\$ 5.00)~~ \$ 5.10
 (c) Concession(s) or ride(s) not part of a carnival.
 (i) First field inspection each year of a single concession or ride, not part of a carnival ~~(\$ 67.00)~~ \$ 68.90
 (ii) Subsequent inspection of a single concession or ride, not part of a carnival ~~(\$ 44.25)~~ \$ 45.50

(7) TRIP FEES.
 (a) Requests by property owners to inspect existing installations. ~~(\$ 67.00)~~ \$ 68.90
 (b) Submitter notifies the department that work is ready for inspection when it is not ready. ~~(\$ 33.50)~~ \$ 34.40
 (c) Additional inspection required because submitter has provided the wrong address. ~~(\$ 33.50)~~ \$ 34.40
 (d) More than one additional inspection required to inspect corrections; or for repeated neglect, carelessness, or improperly installed electrical work. ~~(\$ 33.50)~~ \$ 34.40
 (e) Each trip necessary to remove a noncompliance notice. ~~(\$ 33.50)~~ \$ 34.40
 (f) Corrections have not been made in the prescribed time, unless an exception has been requested and granted. ~~(\$ 33.50)~~ \$ 34.40
 (g) Installations that are covered or concealed before inspection. ~~(\$ 33.50)~~ \$ 34.40

(8) PROGRESS INSPECTIONS.
 Note: The fees calculated in subsections (1) through (6) must apply to all electrical work. This section must be applied to a permit where the permit holder has requested additional inspections beyond the number supported by the permit fee calculated at the rate in (1) through (6).
 (a) On partial or progress inspections, each one-half hour. ~~(\$ 33.50)~~ \$ 34.40

(9) PLAN REVIEW FEE.
 (a) Fee is thirty-five percent of the electrical work permit fee as determined by WAC 296-46A-910, plus a plan review submission fee of: ~~(\$ 56.25)~~ \$ 57.80
 (b) Supplemental submissions of plans per hour or fraction of an hour. ~~(\$ 67.00)~~ \$ 68.90
 (c) Plan review shipping and handling fee. ~~(\$ 16.00)~~ \$ 16.40

(10) OUT-OF-STATE INSPECTIONS.
 (a) Permit fees will be charged according to the fees listed in this section.
 (b) Travel expenses:
 (i) All travel expenses and per diem for out-of-state inspections are billed following completion of each inspection(s). These expenses can include, but are not limited to: Inspector's travel time, travel cost and per diem at the state rate. Travel time is hourly based on the rate in subsection (11) of this section

(11) OTHER INSPECTIONS.
 (a) Inspections not covered by above inspection fees must be charged portal-to-portal per hour: ~~(\$ 67.00)~~ \$ 68.90

(12) REFUND PROCESSING FEE.
 (a) All requests for permit fee refunds will be assessed a processing fee. ~~(\$ 10.50)~~ \$ 10.80

(13) VARIANCE REQUEST PROCESSING FEE.
 (a) Variance request processing fee. This fee is nonrefundable once the transaction has been made. ~~(\$ 67.00)~~ \$ 68.90

AMENDATORY SECTION (Amending WSR 01-01-097, filed 12/15/00, effective 1/18/01)

WAC 296-46A-915 Electrical/telecommunications contractor license, administrator certificate and examination, and copy fees.

(1) GENERAL OR SPECIALTY CONTRACTOR LICENSE (per twenty-four month period) ~~(\$ 216.25)~~ \$ 222.40
 (a) Reinstatement of a general or specialty contractor's license after a suspension ~~(\$ 43.50)~~ \$ 44.70

(2) ADMINISTRATOR CERTIFICATE
 Note: Failure to appear for an examination results in forfeiture of the examination fee.

(a) Administrator certificate examination application (nonrefundable) ~~(\$ 27.00)~~ \$ 27.70
 (b) Administrator first-time examination fee ~~(\$ 64.75)~~ \$ 66.60
 (c) Administrator retest examination fee ~~(\$ 75.75)~~ \$ 77.90
 (d) Administrator original certificate (request for certificate submitted with application) ~~(\$ 64.50)~~ \$ 66.30
 (e) Administrator certificate renewal (per twenty-four month period) ~~(\$ 81.00)~~ \$ 83.80
 (f) Late renewal of administrator certificate (per twenty-four month period) ~~(\$ 162.25)~~ \$ 166.90
 (g) Transfer of administrator designation ~~(\$ 32.25)~~ \$ 33.10
 (h) Certified copy of each document (maximum per file): ~~(\$ 45.75)~~ \$ 47.00

First document: ~~(\$ 20.75)~~ \$ 21.30

PERMANENT

	Each additional document:	\$ 2.00
(i)	Reinstatement of an administrator's certificate after a suspension	(\$ 43.50) \$ 44.70
(3)	REFUND PROCESSING FEE	(\$ 10.50) \$ 10.80

AMENDATORY SECTION (Amending WSR 01-02-026, filed 12/22/00, effective 1/22/01)

WAC 296-96-01010 What are the permit fees for conveyances other than material lifts and hoists and how are they calculated? Permit fees are based on the total cost of the conveyance and labor to install. The following permit fees apply to the construction, alteration, or relocation of all conveyances except for material lifts:

TOTAL COST OF CONVEYANCE	FEE
\$250 to and including \$1,000	\$(30.50) 31.30
\$1,001 to and including \$15,000	
For the first \$1,001	((43.00)) 44.20
Each additional \$1,000 or fraction thereof	((8.50)) 8.70
\$15,001 to and including \$100,000	
For first \$15,001	((165.25)) 169.90
For each additional \$1,000 or fraction thereof	((5.50)) 5.60
OVER \$100,001	
For the first \$100,001	((694.50)) 714.40
For each additional \$1,000 or fraction thereof	((4.50)) 4.60

AMENDATORY SECTION (Amending WSR 01-02-026, filed 12/22/00, effective 1/22/01)

WAC 296-96-01027 Are initial installation permit fees refundable? Your initial installation permit fees are refundable minus a processing fee unless your permits have expired. No refunds will be issued for expired permits. All requests for refunds must be submitted in writing to the elevator section and must identify the specific permits for which the refunds are requested.

The processing fee for a refund is ~~\$(26.00))~~ 26.70

AMENDATORY SECTION (Amending WSR 01-02-026, filed 12/22/00, effective 1/22/01)

WAC 296-96-01030 What is the process for installation and alteration plan approval? Prior to the start of construction, you must submit to the department for approval two copies of plans for new installations or major alterations. To be approved, the plan must comply with the latest adopted edition of the American Society of Mechanical Engineers (ASME) A17.1, the National Electrical Code (NEC) and applicable Washington Administrative Codes (WAC). In addition, the plans must include all information necessary in determining whether each installation/alteration complies

with all applicable codes. You must keep a copy of the approved plan on the job site until the department has witnessed all acceptance tests. Any alterations to the approved plan must be submitted to the department for approval before a final inspection will be conducted. The nonrefundable fees for reviewing your plans are:

For each installation/major alteration ~~\$(22.25))~~ 22.80
If more than two sets of plans are submitted, the fee for each additional set ~~\$(22.25))~~ 22.80

AMENDATORY SECTION (Amending WSR 01-02-026, filed 12/22/00, effective 1/22/01)

WAC 296-96-01035 Are there inspection fees? The initial inspection of a conveyance or for the initial inspection of construction, alteration or relocation of a conveyance is included with your permit fee. Once the department has approved the conveyance you will be issued a permit that is valid for 30-days. Prior to the expiration of the 30-day permit the application for an annual operating permit and the appropriate fees must be paid to the department. Once the department has received the appropriate fees and application you will be issued your first annual operating permit. You are required to renew your annual operating permit yearly.

The following exceptions do require a fee:

RE-INSPECTION	FEE
If a conveyance does not pass an initial inspection and a second inspection is required, the fee for each conveyance re-inspected is	\$(78.75)) 81.00
If any additional re-inspections are required, the fee for each conveyance re-inspected	\$(401.75)) 104.60

The department may waive re-inspection fees.

AMENDATORY SECTION (Amending WSR 01-02-026, filed 12/22/00, effective 1/22/01)

WAC 296-96-01040 What is the fee for testing and inspecting regular elevators used as temporary personnel elevators? (1) The fee for the inspecting and testing of regular elevators used as temporary personnel elevators is ~~\$(67.50))~~ 69.40, in addition to any other fees required in this chapter. This fee purchases a 30-day temporary use permit that may be renewed at the department's discretion.

(2) When this temporary use permit is purchased, a notice declaring that the equipment has not received final approval from the department must be conspicuously posted on the elevator.

AMENDATORY SECTION (Amending WSR 01-02-026, filed 12/22/00, effective 1/22/01)

WAC 296-96-01045 What are the inspection requirements and fees for conveyances in private residences? (1) Chapter 70.87 RCW requires the department to inspect all new, altered or relocated conveyances operated exclusively for single-family use in private residences. Prior to inspection, you must complete a permit application as described in

PERMANENT

WAC 296-96-01005 and pay the appropriate fee listed in WAC 296-96-01010.

(2) Chapter 70.87 RCW allows the department to inspect conveyances operated exclusively for single-family use in private residences when the department is investigating an accident or an alleged or apparent violation of the statute or these rules.

(3) No annual inspection and operating permit is required for a private residence conveyance operated exclusively for single-family use unless the owner requests it. When an owner requests an inspection and an annual operating permit, the following fee must be paid prior to an inspection:

TYPE OF CONVEYANCE	FEE
Each inclined stairway chair lift in private residence	\$(16.50) 16.90
Each inclined wheel chair lift in a private residence	((22.25)) 22.80
Each vertical wheel chair lift in a private residence	((28.00)) 28.80
Each dumbwaiter in a private residence.	((22.25)) 22.80
Each inclined elevator at a private residence.	((78.75)) 81.00
Each private residence elevator	((50.75)) 52.20
Duplication of a lost, damaged or stolen operating permit	((5.00)) 5.10

AMENDATORY SECTION (Amending WSR 01-02-026, filed 12/22/00, effective 1/22/01)

WAC 296-96-01050 How do I get a supplemental inspection? Any person, firm, corporation or governmental agency can request a supplemental inspection from the department by paying a fee of ~~\$(291.50)~~ 299.80 per day plus the standard per diem and mileage allowance granted to department inspectors.

AMENDATORY SECTION (Amending WSR 01-02-026, filed 12/22/00, effective 1/22/01)

WAC 296-96-01055 Are technical services available and what is the fee? You may request elevator field technical services from the department by paying a fee of ~~\$(56.25)~~ 57.80 per hour plus the standard per diem and mileage allowance granted to department inspectors. These field technical services may include code evaluation, code consultation, plan examination, code interpretation and clarification of technical data relating to the application of the department's conveyance rules. Field technical services do not include inspections.

AMENDATORY SECTION (Amending WSR 01-02-026, filed 12/22/00, effective 1/22/01)

WAC 296-96-01060 Can I request an after hours inspection and what is the fee? You may request an inspection outside of normal business hours, which are 7:00 a.m. to 5:00 p.m., if an inspector is available and the inspection is authorized by the department. The minimum fee for an after-hours inspection is ~~\$(70.75)~~ 72.70 per hour plus the standard per diem and mileage allowance granted to department inspectors. This fee is in addition to any other fees required for your project.

AMENDATORY SECTION (Amending WSR 01-02-026, filed 12/22/00, effective 1/22/01)

WAC 296-96-01065 What are the annual operating permits fees? An annual operating permit will be issued to you upon payment of the appropriate fee:

TYPE OF CONVEYANCE	FEE
Each hydraulic elevator	\$(78.75)) 80.90
Each roped-hydraulic elevator	((101.75)) 104.60
plus for each hoistway opening in excess of two	((7.75)) 7.90
Each cable elevator	((101.75)) 104.60
plus for each hoistway opening in excess of two	((7.75)) 7.90
Each cable elevator traveling more than 25 feet without an opening—for each 25 foot traveled	((10.75)) 11.00
Each limited-use/limited-application (LULA) elevator	((78.75)) 80.90
Each escalator	((78.75)) 80.90
Each dumbwaiter in other than a private residence	((50.75)) 52.20
Each material lift	((67.50)) 69.40
Each incline elevator in other than a private residence	((101.75)) 104.60
Each belt manlift	((78.75)) 80.90
Each stair lift in other than a private residence	((50.75)) 52.20
Each wheel chair lift in other than a private residence	((50.75)) 52.20
Each personnel hoist	((78.75)) 80.90
Each grain elevator personnel lift	((78.75)) 80.90

PERMANENT

Each material hoist	((78.75)) 80.90	Each hand-powered manlift or freight elevator	((50.75)) 52.20
Each special purpose elevator	((78.75)) 80.90	Each boat launching elevator	((78.75)) 80.90
Each private residence elevator installed in other than a private residence	((78.75)) 80.90	Each auto parking elevator	((78.75)) 80.90
Each casket lift	((78.75)) 80.90	Each moving walk	((78.75)) 80.90
Each sidewalk freight elevator	((78.75)) 80.90	Duplication of a damaged, lost or stolen operating permit	((5.00)) 5.10

AMENDATORY SECTION (Amending WSR 99-12-080, filed 5/28/99, effective 6/28/99)

WAC 296-200A-900 What fees does the department charge contractors for issuance, renewal and reinstatement of certificates of registration? (1) For the purposes of this chapter:

(a) A contractor's registration is **renewed** before it expires.

(b) A contractor's registration is **reinstated** after the registration:

(i) Has expired; or

(ii) Has been suspended because the contractor's insurance has expired; or

(iii) Has been suspended because the contractor's bond has been canceled or impaired.

(c) A contractor **reregisters** when his or her business structure changes.

(2) The department charges the following fees:

(a) Before August 1, 2001:

(i) \$45.00 for each issuance, renewal or reregistration of a certificate of registration.

~~((b)) \$45.00~~ (ii) \$46.20 for the reinstatement of a certificate of registration.

(b) On or after August 1, 2001:

(i) \$50.00 for each issuance, renewal or reregistration of a certificate of registration for contractors with an even numbered Unified Business Identifier number. This registration is valid for one year from date of issuance, renewal or reregistration or until it is suspended or revoked.

(ii) \$100.00 for each issuance, renewal or reregistration of a certificate of registration for contractors with an odd numbered Unified Business Identifier number or those who are not required to have a Unified Business Identifier by the department of revenue. This registration is valid for two years from date of issuance, renewal or reregistration or until it is suspended or revoked.

(iii) \$46.20 for the reinstatement of a certificate of registration.

(iv) After the issuance, renewal or reregistration of a certificate of registration granted under (b)(i) and (ii) of this subsection all contractors (regardless of Unified Business Identifier number) must comply with the two-year registration provisions established under (b)(ii) of this subsection.

(c) ~~((10.75))~~ \$11.00 for providing a duplicate certificate of registration.

(d) ~~((21.50))~~ \$22.10 for each requested certified letter prepared by the department.

(e) \$2.00 per copy for documents copied from a contractor's file. The maximum copy charge for copies from one contractor's file will be ~~((25.00))~~ \$25.70.

(f) On or after July 22, 2001, a fee of \$20.00 is required to cover the costs for the service of process in an action against the contractor, the contractor's bond, or the deposit under RCW 18.27.040.

AMENDATORY SECTION (Amending WSR 01-01-097, filed 12/15/00, effective 1/18/01)

WAC 296-401B-700 Fees for certificates of competency, examination and reciprocity. When an individual applies to take a competency examination or to obtain a certificate of competency, the individual must pay the appropriate fee(s) listed below.

Type of Certificate	Fee
(1) Journeyman or specialty electrician certificate renewal (per 36-month period)	\$((64.50)) 66.30
(2) Late renewal of journeyman or specialty electrician certificate (per 36-month period)	\$((130.00)) 133.70

PERMANENT

WSR 01-11-037
PERMANENT RULES
DEPARTMENT OF
SOCIAL AND HEALTH SERVICES

(Aging and Adult Services)
(Office of Rates Management)
[Filed May 29, 2001, 3:35 p.m.]

Date of Adoption: May 29, 2001.

Purpose: Clarify and revise chapter 388-96 WAC on settlements (WAC 388-96-218); bed banking and conversion (WAC 388-96-708 and 388-96-709), new contractors rates (WAC 388-96-710); lid and median calculation and use of greater of actual [days] or days at 85% occupancy to set rates (WAC 388-96-713); budget dial comparisons (WAC 388-96-723); case mix index for not meeting 90% MDS return threshold (WAC 388-96-740); effective date of capital add-on (WAC 388-96-776); and add delay of preliminary settlement as not subject to WAC 388-96-904 hearing (WAC 388-96-901). Add new sections receipt notice (WAC 388-96-732); not billing for the last day of stay (WAC 388-96-802); and requirement to report change in resident finances within seventy-two hours (WAC 388-96-803).

Citation of Existing Rules Affected by this Order: Amending WAC 388-96-010, 388-96-218, 388-96-369, 388-96-384, 388-96-559, 388-96-708, 388-96-709, 388-96-710, 388-96-718, 388-96-713, 388-96-714, 388-96-723, 388-96-740, 388-96-776, 388-96-777, 388-96-780, and 388-96-901.

Statutory Authority for Adoption: RCW 74.46.800.

Adopted under notice filed as WSR 01-06-057 on March 7, 2001.

WSR 01-12-039
PERMANENT RULES
LOTTERY COMMISSION

[Filed May 30, 2001, 9:18 a.m.]

Date of Adoption: May 18, 2001.

Purpose: This rule requires retailer compliance with the state and federal laws prohibiting discrimination against persons with disabilities.

Citation of Existing Rules Affected by this Order: Amending WAC 315-04-085.

Statutory Authority for Adoption: RCW 67.70.040.

Adopted under notice filed as WSR 01-08-037 on March 30, 2001.

Number of Sections Adopted in Order to Comply with Federal Statute: New 1, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 0, Amended 0, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: Thirty-one days after filing.

 Rules Coordinator

NEW SECTION

WAC 315-04-085 Accessibility for persons with disabilities. Pursuant to lottery rules and policy, lottery retailers shall comply with state and federal laws prohibiting discrimination against and requiring accessibility for persons with disabilities, including, but not limited to, the Americans with Disabilities Act of 1990 and chapter 49.60 RCW. Prior to any sale of lottery tickets, new lottery retailers must certify that they comply with state and federal laws or must submit a plan that ensures that they will comply within a reasonable amount of time. Within time limits specified by the lottery, retailers who hold lottery licenses at the time this rule takes effect must certify that they comply with state and federal laws or must submit a plan that ensures that they will comply within a reasonable amount of time.

AMENDATORY SECTION (Amending Order 83, filed 12/16/85)

WAC 315-06-040 Disclosure of probability of purchasing a winning ticket. (1) The estimated average probability of purchasing a winning ticket shall be conspicuously displayed on:

~~(a) The back of tickets for a specific game (The estimated average probability of purchasing a winning ticket for each category of prize in a specific game shall be conspicuously displayed on:~~

~~(a));~~

(b) All printed promotional and advertising materials for a specific game, including but not limited to, brochures, posters, billboards, placards, and point-of-sale displays (and

~~(b) Instructions to lottery retailers for the conduct of a specific game).~~

(2) The estimated average probability of purchasing a winning ticket shall be communicated in television and radio commercials for a specific game.

~~((2))~~ (3) The estimated average probability of purchasing a winning ticket for each category of prize in a specific game shall be conspicuously displayed as part of:

(a) The "how-to-play" brochure which explains the procedures for the lottery's on-line games; and

(b) The brochures of instructions to lottery retailers for the conduct of specific scratch games.

(4) The disclosure required by this section shall not apply to generic promotional and advertising materials publicizing the Washington state lottery which do not promote a specific game.

**WSR 01-12-041
 PERMANENT RULES
 DEPARTMENT OF REVENUE**

[Filed May 30, 2001, 12:58 p.m.]

Date of Adoption: May 30, 2001.

Purpose: These rules explain the sales and use tax deferral program for manufacturers and research and development facilities located in distressed areas as provided by chapter 82.60 RCW. They provide definitions, guidance on the use of the deferral certificate, and the record-keeping requirements of the distressed area deferral program. The legislature has revised the program criteria several times and each revision created additional criteria for prospective applicants. The revised WAC 458-20-24001 explains the current program criteria, requirements, and procedures, which have been in effect for applications filed after July 31, 1999. The new WAC 458-20-24001A explains the program criteria, requirements, and procedures that apply to previous periods. WAC 458-20-24001A provides the information in three separate parts, each based on the period application for [which] the deferral program was made. The parts are drafted to stand on their own so that the reader need only read the part that applies to the period during which application was made to find all pertinent information.

PERMANENT

Citation of Existing Rules Affected by this Order:
Amending WAC 458-20-24001 Sales and use tax deferral—
Manufacturing and research/development activities in dis-
tressed areas—Applications filed after July 31, 1999.

Statutory Authority for Adoption: RCW 82.32.300.

Adopted under notice filed as WSR 01-08-034 on March
29, 2001.

Changes Other than Editing from Proposed to Adopted
Version: Description of changes from proposed Rule 24001
to adopted Rules 24001 and 24001A:

In Rule 24001, we added the term "deferral" in the sec-
ond sentence of subsection (2)(j), so that it properly reads
"When an application for sales and use tax deferral is timely
submitted, costs incurred before the application date are
allowable, if they otherwise qualify."

In Rule 24001, we added the following sentences after
the first sentence of the second paragraph of subsection
(4)(b), "The department has instituted a geographic informa-
tion system (GIS) to assist taxpayers in determining taxing
jurisdiction boundaries, local tax rates, and a mapping an
address lookup system to determine whether a specific
address is within a CEZ. The system is available on the
department's internet website at <http://www.dor.wa.gov>."
These two sentences were also added to Rule 24001A in sub-
sections (3)(b)(iii) and (16)(c).

In Rule 24001, we added the following phrase to the sec-
ond sentence of subsection (2)(k), "computer programming,
the production of computer software" to the definition of
manufacturing. We added the same phrase to Rule 24001A
in the second sentences of subsections (1)(k), (14)(l), and
(27)(l). This language is in the statute, but unintentionally
left out of the proposed rule drafts.

Number of Sections Adopted in Order to Comply with
Federal Statute: New 0, Amended 0, Repealed 0; Federal
Rules or Standards: New 0, Amended 0, Repealed 0; or
Recently Enacted State Statutes: New 1, Amended 1,
Repealed 0.

Number of Sections Adopted at Request of a Nongov-
ernmental Entity: New 0, Amended 0, Repealed 0.

Assistant Director

Legislation and Policy

AMENDATORY SECTION (Amending Order 88-5, filed
8/16/88)

**WAC 458-20-24001 Sales and use tax deferral—
Manufacturing and research/development ((~~facilities~~))**

**activities in distressed areas—Applications filed after
July 31, 1999.** ((~~(1) Introduction. Chapter 82.60 RCW estab-
lishes a sales and use tax deferral program. The purpose of
the program is to promote economic stimulation, create
employment opportunities, and reduce poverty in certain dis-
tressed areas of the state. Thus, the legislature established this
tax deferral program to be effective solely in those distressed
areas and under circumstances where the deferred tax pay-
ments are for investments or costs that result in the creation
of a specified minimum number of jobs. In general, the defer-
ral applies to sales and use taxes on materials, labor, and ser-
vices rendered in the construction of qualified buildings,
machinery, and equipment.~~

~~(2) In addition to the tax deferral benefits of this pro-
gram, the department of employment security administers
economic incentives and funding programs which encourage
"first source contract" hiring of unemployed persons and
state public assistance recipients. The employment security
department should be contacted directly for information con-
cerning such nontax related programs.~~

~~(3) Definition of terms. For purposes of this section:~~

~~(a) "Applicant" means a person applying for a tax defer-
ral under chapter 82.60 RCW.~~

~~(b) "Person" has the meaning given in RCW 82.04.030.
It means any individual, receiver, administrator, executor,
assignee, trustee in bankruptcy, trust, estate, firm, copartner-
ship, joint venture, club, company, joint stock company, busi-
ness trust, municipal corporation, political subdivision of the
state of Washington, corporation, association, society, or any
group of individuals acting as a unit, whether mutual, cooper-
ative, fraternal, nonprofit, or otherwise and the United States
or any instrumentality thereof. For purposes of this section
the relationship of landlord and tenant between separate per-
sons, at arms length, shall not be considered as any of the
types of relationships which are identified above as "per-
sons."~~

~~(c) "Certificate holder" means an applicant to whom a
tax deferral certificate has been issued.~~

~~(d) "Recipient" means a person who has been granted a
tax deferral under this program.~~

~~(e) "Department" means the department of revenue.~~

~~(f) "Eligible area" means:~~

~~(i) A county in which the average level of unemployment
for the three calendar years preceding the year in which an
application is filed exceeds the average state unemployment
for those years by twenty percent; or~~

~~(ii) A metropolitan statistical area, as defined by the
Office of Federal Statistical Policy and Standards, United
States Department of Commerce, in which the average level
of unemployment for the calendar year immediately preced-
ing the year in which an application is filed under this chapter
exceeds the average state unemployment for such calendar
year by twenty percent. Applications under this subsection
shall be filed by April 30, 1989. For the purpose of (f)(i)
of this subsection, the average unemployment rate for the
county must be twenty percent above the average unemploy-
ment rate for the state in the preceding three calendar years.
In determining an eligible area under this subsection the
department may compare the county's average unemploy-~~

PERMANENT

ment rate in the prior three years to one hundred twenty percent of the state's average unemployment rate based on official unemployment figures published by the department of employment security.

(g) "Eligible investment project" means that portion of an investment project which:

(i) Is directly utilized to create at least one new full time qualified employment position for each three hundred thousand dollars of investment on which a deferral is requested; and

(ii) Either initiates a new operation or expands or diversifies a current operation by expanding or renovating an existing building, machinery and equipment, with costs in excess of twenty-five percent of the true and fair value of the plant complex prior to the improvement. (See the definition of "improvement" in (h)(iii) of this subsection.)

(h) For the purposes of the above paragraph the following definitions will apply:

(i) "Qualified employment position" means a permanent, full-time employee employed in the eligible investment project during the entire tax year following the operational completion of the project. In the event an employee is either voluntarily or involuntarily separated from employment the employment position will be considered filled if the employer is either training or actively recruiting a replacement employee so long as the position is not actually vacant for any period in excess of thirty consecutive days.

(ii) The requirement for employment during the "entire tax year," for purposes of this tax deferral program, will be satisfied if the full-time position is filled for a period of twelve consecutive months.

(iii) An "improvement" shall mean the physical alteration by significant expansion, modernization, or renovation of an existing plant complex, excluding land, where the cost of such expansion, etc., exceeds twenty-five percent of the true and fair value of the existing plant complex prior to the initiation of the expansion or renovation. The term "improvement" is further defined to include those portions of an existing building which do not increase the usable floor space, but is limited to the renovation, modernization, or any other form of alteration or addition and the equipment and machinery installed therein during the course of construction. The twenty-five percent test may be satisfied by considering the value of both the building and machinery and equipment; however, at least forty percent of the total renovation costs must be attributable to the physical renovation of the building structure alone.

(iv) "True and fair value" means the value listed on the assessment rolls as determined by the county assessor for the land, buildings, or equipment for ad valorem property tax purposes at the time of application.

(v) "Plant complex" shall mean land, machinery, and buildings adapted to industrial, computer, warehouse, or research and development use as a single functional or operational unit for the designing, assembling, processing, or manufacturing of finished or partially finished products from raw materials or fabricated parts.

(vi) "Eligible investment project" does not include either an investment project undertaken by a light and power business as defined in RCW 82.16.010(5), or investment projects

which have already received deferrals under chapter 82.60 RCW.

(i) "Investment project" means an investment in qualified buildings and qualified machinery and equipment, including labor and services rendered in the planning, installation, and construction of the project. A person who does not build or remodel its own building, but leases from a third party, is eligible for sales and use tax deferral provided that an investment in qualified machinery and equipment is made by such person and a new structure used to house the manufacturing activities is constructed. The lessor/owner of the structure is not eligible for deferral unless the underlying ownership of the buildings, machinery, and equipment vests in the same persons.

(j) "Manufacturing" has the meaning given in RCW 82.04.110 and WAC 458-20-136 now and as hereafter amended. Manufacturing, for purposes of this section, shall also include computer programming, the production of computer-related service, and the activities performed by research and development laboratories and commercial testing laboratories.

(k) "Qualified buildings" means new structures used to house manufacturing activities as defined above and includes plant offices, warehouses, or other facilities for the storage of raw material and finished goods if such facilities are essential or an integral part of a manufacturing operation. The term also includes parking lots, landscaping, sewage disposal systems, cafeterias, and the like, which are attendant to the initial construction of an eligible investment project. The term "new structures" means either a newly constructed building or a building newly purchased by the certificate holder. A pre-owned or existing building is eligible for deferral provided that the certificate holder expands, modernizes, renovates, or remodels the pre-owned or existing building by physical alteration thereof.

(l) "Qualified machinery and equipment" means all new industrial and research fixtures, equipment, and support facilities that are an integral and necessary part of a manufacturing operation, as defined above. "Qualified machinery and equipment" includes, but is not limited to, computers, software, data processing equipment, laboratory equipment; manufacturing components such as belts, pulleys, shafts and moving parts; molds, tools and dies; operating structures and all equipment used to control or operate machinery. It also includes machinery and equipment acquired under the terms of a long or short term lease by the recipient. The tax deferral applies to equipment purchased outright by the recipient (or the transfer of machinery and equipment into the state of Washington) and leased equipment. Acquisition of spare parts for machinery, equipment, etc., in excess of normal operating levels shall not be eligible for deferral.

(m) "New machinery and equipment" means either new to the taxing jurisdiction of the state or new to the certificate holder. Used equipment is eligible for deferral provided that the certificate holder either brings the machinery or equipment into Washington for the first time or purchases it at retail in Washington.

(n) "Initiation of construction," for purposes of applying for the investment tax deferral relating to the construction of

new buildings, shall mean the date upon which on-site construction work commences:

(o) "Initiation of construction," for purposes of applying for the investment tax deferral relating to a major improvement of existing buildings, shall mean the date upon which the new construction by renovation, modernization, or expansion, by physical alteration, begins:

(p) "Operationally complete" means the eligible investment project is constructed or improved to the point of being fully and functionally useable for its intended purpose as described in the application.

(4) Application procedure. An application for sales and use tax deferral under this program must be made prior to the initiation of construction, as defined above. However, any application by a metropolitan statistical area defined as an "eligible area" in subsection (3)(f)(ii) of this section must be filed by April 30, 1989. Application forms will be supplied to the applicant by the department upon request. The completed application is to be sent in duplicate to the following address:

State of Washington
Department of Revenue
Audit Procedures & Review
Olympia, WA 98504
Mail Stop AX-02

(5) The department will verify the information contained in the application and either approve or disapprove the application within sixty days. If approved, a tax deferral certificate shall be issued effective as of the date the application was received by the department. If disapproved, the department shall notify the applicant as to the reason(s) for disapproval. The applicant may seek administrative review of the department's refusal to issue a certificate pursuant to the provisions of WAC 458-20-100, within twenty days from the date of notice of the department's refusal, or within any extension of such time granted by the department.

(6) For purposes of making application for tax deferral and of approving such applications, the state-wide and county unemployment statistics last published by the department will be used to determine eligible areas. The department will publish a list of eligible areas by county, on May 1 of each year.

(7) Use of the certificate. A tax deferral certificate issued under this program shall be for the use of the recipient thereof for deferral of sales and use taxes due on each eligible investment project. Deferral is limited only to investment in qualified buildings and qualified machinery and equipment as defined in this section. Thus, sales and use taxes cannot be deferred on items which do not become part of the qualified buildings, machinery, and equipment.

(8) The tax deferral certificate shall be used in a manner similar to that of a resale certificate as set forth in WAC 458-20-102. The certificate holder shall provide its vendors with a copy of the tax deferral certificate at the time goods or services are purchased. The seller or vendor shall be relieved of the responsibility for collection of the sales or use tax upon presentation of the certificate. The seller or vendor shall retain a copy of the certificate as part of its permanent records. A blanket certificate may be provided by the certifi-

cate holder and accepted by the seller covering all such purchases relative to the eligible project. The seller or vendor is liable for reporting business and occupation tax on all tax deferral sales.

(9) Audit procedure. An applicant must provide the department with the estimated cost of the investment project at the time the application is made. Following approval of the application and issuance of a sales and use tax deferral certificate, a certificate holder must notify the department, in writing, when the value of the investment project reaches the estimated cost as stated on the tax deferral certificate. At that time the certificate holder may not utilize the certificate further. If a certificate holder has reached its level of estimated costs and the project is not operationally complete, the certificate holder may apply for a supplemental certificate stating a revised amount upon which the deferral of sales and use taxes is requested. The certificate holder shall amend the original application to account for the additional costs. The department will grant or deny the amended application on the same basis as original applications.

(10) The certificate holder shall notify the department in writing when the construction project is operationally complete. Upon receipt of such notification or other information, the department shall conduct a final audit of the investment project. The certificate holder shall open its books and records to the department and make available the final cost figures for the investment project. The department may request reasonable supporting documentation and other proof to justify the final cost of the project.

(11) Upon completion of the audit the department shall certify the amount of sales and use taxes subject to deferral and the date on which the project was operationally complete. The recipient shall be notified in writing of the total amount of deferred taxes, the date(s) upon which the deferred taxes shall be paid, and any reports required to be submitted in the subsequent years. If the department disallows all or any portion of the amount of sales and use taxes requested for deferral, the recipient may seek administrative review of the department's action pursuant to the provisions of WAC 458-20-100, within twenty days from the date of the notice of disallowance.

(12) The department shall keep a running total of all deferral certificates granted during each fiscal biennium.

(13) The deferral is allowable only in respect to investment in the construction of a new plant complex or the enlargement or improvement of an existing plant complex directly used in manufacturing activities, as defined above. Where a plant complex is used partly for manufacturing and partly for purposes which do not qualify for deferral under this section and it is not possible to identify the nonqualifying items through separate accounting, the applicable tax deferral shall be determined by apportionment according to the ratio which the construction cost per square foot of that portion of the plant complex directly used for manufacturing purposes bears to the construction cost per square foot of the total plant complex.

(14) The amount of tax deferral allowable for leased equipment shall be calculated upon that amount of the consideration paid by the lessee/recipient to the lessor:

~~(a) Over the initial term of the lease, excluding any period of extension or option to renew, where the lease term ends on or before the last date for repayment of the deferred taxes; or~~

~~(b) Over that portion of the lease term to the last date for repayment of deferred taxes as provided hereinafter, where the lease term, excluding any period of extension or option to renew extends beyond such repayment date.~~

~~(15) After that date the lessee/recipient shall pay the appropriate sales taxes to the lessor for the remaining term of the lease.~~

~~(16) No taxes may be deferred under this section prior to July 1, 1985. No applications for deferral of taxes will be accepted after May 1, 1994 nor will sales or use tax deferral certificates be issued on or after July 1, 1994. See subsection (4) of this section for application deadline for any metropolitan statistical area. In tabulating the total amount of deferrals granted under this law there shall be considered a total of three fiscal biennia within which applications shall be accepted.~~

~~(17) Reporting and monitoring procedure. Each recipient of sales and use tax deferral shall submit a report to the department on December 31st of each year during the repayment period until all taxes are repaid. The first report shall be submitted in the third year after the date on which the construction project has been operationally complete to coincide with the first payment of deferred taxes. The report shall contain information from which the department may determine whether the recipient is meeting the requirements of the deferral law.~~

~~(18) The report shall be made to the department in a form and manner prescribed by the department. The report shall contain information regarding the recipient's average employment in the state for the prior three years, the actual employment related to the project, the actual wages of the employees related to the project, and any other information required by the department. If the recipient fails to submit a report or submits an inadequate or falsified report, the department may declare the amount of deferred taxes outstanding to be immediately assessed and payable. An inadequate or falsified report is one that contains material omissions or contains knowingly false statements and information.~~

~~(19) The department shall notify the department of employment security of the names of all recipients of tax deferrals under this program. On or before December 31st of each year a deferral is in effect, the department shall request information on each recipient's employment in the state for that year, including employment related to the deferral project, and the wages of such employees. The department of employment security shall make, and certify to the department, all determinations of employment and wages required under this subsection.~~

~~(20) If, on the basis of the recipient's annual report or other information including that submitted by the department of employment security, the department finds that an investment project is not eligible for tax deferral, the department will (a) declare the amount of deferred taxes outstanding to be immediately due or (b) assess interest on the deferred taxes for the project.~~

~~(21) If the department finds that an investment project has been operationally complete for three years and has failed to create the required number of qualified employment positions, the department shall assess interest, but not penalties, on the deferred taxes. The interest shall be assessed at the rate of nine percent per annum, shall be assessed retroactively to the date of deferral, and shall accrue until the deferred taxes are paid. A recipient of deferred taxes shall have from the date on which the construction project was certified as operationally complete to December 31st of the first year of repayment in which to create the required number of employment positions under this law.~~

~~(22) If the department finds that the investment project is not eligible for tax deferral for reasons other than failure to create the required number of qualified employment positions, the amount of deferred taxes outstanding for the project shall be immediately due. The reasons for disqualification include, but are not limited to, the following:~~

~~(a) The facility is not used for a manufacturing, warehouse, computer, or research and development operations;~~

~~(b) The recipient has not made an investment in qualified buildings, machinery, and equipment.~~

~~(23) Any action taken by the department to assess interest or disqualify a recipient for tax deferral shall be subject to administrative review pursuant to the provisions of WAC 458-20-100.~~

~~(24) The law expressly excuses the obligation for repayment of sales or use tax upon the value of labor directly applied in the construction of an investment project for which deferral has been granted. Provided:~~

~~(a) That deferral has been granted after June 11, 1986; and~~

~~(b) That eligibility for the granted tax deferral has been perfected by actually meeting all of the eligibility requirements, based upon the recipient's annual December 31 reports and any other information available to the department.~~

~~(25) The recipient must establish, by clear and convincing evidence, the value of all construction and installation labor for which repayment of sales tax is sought to be excused. Such evidence must include, but is not limited to: A written, signed, and dated itemized billing from construction/installation contractors or independent third party labor providers which states the value of labor charged separately from the value of materials.~~

~~(26) The above information must be maintained in the recipient's permanent records for the department's review and verification at the time of the final audit of the investment project.~~

~~(27) In the absence of such itemized billings in its permanent records, no recipient may be excused from repayment of sales tax on the value of labor in an amount exceeding thirty percent of its gross construction or installation contract charges.~~

~~(28) The value of labor for which an excuse from repayment of sales or use tax may be received will not exceed the value which is subject to such taxes under the general provisions of chapters 82.08 and 82.12 RCW.~~

~~(29) Payment procedures. The recipient of sales and use tax deferral under this program shall begin paying the~~

deferred taxes in the third year after the date certified by the department as the date on which the construction project was operationally complete. The first payment will be due on December 31st of the third calendar year after such certified date, with subsequent annual payments due on December 31st of the following four years, with amounts of payment scheduled as follows:

Repayment Year	Percentage of Deferred Tax Repaid
1	10%
2	15%
3	20%
4	25%
5	30%

(30) ~~The department may authorize an accelerated repayment schedule upon request of the recipient. Interest shall not be charged on any taxes deferred under this rule during the period of deferral, although other penalties and interest applicable to delinquent excise taxes may be assessed and imposed for any delinquent payments during the repayment period pursuant to chapter 82.32 RCW. The debt for deferred taxes shall not be extinguished by insolvency or other failure of the recipient nor shall the debt for the deferred taxes be extinguished by the sale, exchange, or other disposition of the recipient's business. Any person who becomes a successor (see WAC 458-20-216) to such investment project shall be liable for the full amount of any unpaid, deferred taxes under the same terms and conditions as the original recipient.~~

(31) ~~Disclosure of information. The law provides that information contained in applications, reports, and other information received by the department in connection with this tax deferral program shall not be confidential and shall be subject to disclosure.~~) (1) **Introduction.** Chapter 82.60 RCW establishes a sales and use tax deferral program. The purpose of the program is to promote economic stimulation, create employment opportunities, and reduce poverty in certain areas of the state. The legislature established this program to be effective solely in those areas and under circumstances where the deferral is for investments that result in the creation of a specified minimum number of jobs or investment for a qualifying project.

(a) This deferral program applies to taxes imposed on the construction of qualified buildings or acquisition of qualified machinery and equipment and requires the recipient of the deferral to maintain the manufacturing or research and development activity for an eight-year period. This rule does not address RCW 82.08.02565 and 82.12.02565, which provide a statewide sales and use tax exemption for machinery and equipment used directly in a manufacturing operation. Refer to WAC 458-20-13601 for more information regarding the statewide exemption.

(b) This program was first enacted in 1985. The legislature made major revisions to program criteria in 1993, 1994, 1995, 1996, and 1999, specifically to the definitions of "eligible area," "eligible investment project," and "qualified building." Each revision created additional criteria for prospective applicants. This rule sets forth the requirements for applica-

tions made after July 31, 1999. For applications made prior to August 1, 1999, see WAC 458-20-24001A.

(c) The employment security department and the department of community, trade, and economic development administer programs for distressed areas and job training and should be contacted directly for information concerning these programs.

(2) **Definitions.** The following definitions apply to applications made after July 31, 1999.

(a) "Acquisition of equipment or machinery" means the equipment and machinery is under the dominion and control of the recipient.

(b) "Applicant" means a person applying for a tax deferral under chapter 82.60 RCW.

(c) "Certificate holder" means an applicant to whom a tax deferral certificate has been issued.

(d) "Computer-related services" means services that are connected or interact directly in the manufacture of computer hardware or software or the programming of the manufactured hardware. This includes the manufacture of hardware such as chips, keyboards, monitors, any other hardware, and the components of these items. It includes creating operating systems and software that will be copied and sold as canned software. "Computer-related services" does not include information services. The activities performed by the manufacturer to test, correct, revise, or upgrade software or hardware before they are approved for sale to the consumer are considered computer-related services.

(e) "Department" means the department of revenue.

(f) "Eligible area" means:

(i) Rural county. A rural county is a county with fewer than one hundred persons per square mile as determined annually by the office of financial management and published by the department of revenue effective for the period July 1st through June 30th; or

(ii) Community empowerment zone (CEZ). A "community empowerment zone" means an area meeting the requirements of RCW 43.31C.020 and officially designated by the director or a county containing a CEZ.

(g) "Eligible investment project" means an investment project in an eligible area. "Eligible investment project" does not include an investment project undertaken by a light and power business as defined in RCW 82.16.010, other than that portion of a cogeneration project that is used to generate power for consumption within the manufacturing site of which the cogeneration project is an integral part. It also does not include an investment project that has already received a deferral under chapter 82.60 RCW.

(h) "Industrial fixture" means an item attached to a building or to land. Fixtures become part of the real estate to which they are attached and upon attachment are classified as real property, not personal property. Examples of "industrial fixtures" are fuel oil lines, boilers, craneways, and certain concrete slabs.

(i) "Initiation of construction," in regards to the construction, expansion, or renovation of buildings, means the commencement of on-site construction work. Land clearing prior to excavation of the building site does not commence construction nor does planning commence construction.

(j) "Investment project" means an investment in qualified buildings or qualified machinery and equipment, including labor and services rendered in the planning, installation, and construction of the project. When an application for sales and use tax deferral is timely submitted, costs incurred before the application date are allowable, if they otherwise qualify.

(k) "Manufacturing" has the meaning given in RCW 82.04.120. Manufacturing also includes computer programming, the production of computer software, and other computer-related services, and the activities performed by research and development laboratories and commercial testing laboratories.

(l) "Operationally complete" means the project is capable of being used for its intended purpose as described in the application.

(m) "Person" has the meaning given in RCW 82.04.030. "Person" does not include the state of Washington or its institutions. "Person" can be either a lessee or a lessor, who can apply separately for individual investment projects at the same site, if they comply with the other requirements of chapter 82.60 RCW. The lessor/owner of the structure is not eligible for deferral unless the underlying ownership of the buildings, machinery, or equipment vests in the lessor/owner, or unless the lessor has by written contract agreed to pass the economic benefit of the deferral to the lessee in the form of reduced rent payments.

(n) "Qualified buildings" means construction of new structures and expansion or renovation of existing structures for the purpose of increasing floor space or production capacity, used for manufacturing and research and development activities.

"Qualified buildings" are limited to structures used for manufacturing and research and development activities. "Qualified buildings" include plant offices and warehouses if such facilities are essential to or an integral part of a factory, mill, plant, or laboratory. "Office" means space used by professional, clerical, or administrative staff. For plant office space to be a qualified building its use must be essential or integral to the manufacturing or research and development operation. Office space that is used by supervisors and their staff, by technicians, by payroll staff, by the safety officer, and by the training staff are examples of qualifying office space. "Warehouse" means buildings or facilities used for the storage of raw materials or finished goods.

(o) "Qualified employment position" means a permanent full-time employee employed in the eligible investment project during the entire tax year. The "entire tax year" means the full-time position is filled for a period of twelve consecutive months. Full-time means at least thirty-five hours a week, four hundred fifty-five hours a quarter, or one thousand eight hundred twenty hours a year.

(p) "Qualified machinery and equipment" means all new industrial and research fixtures, equipment, and support facilities that are an integral and necessary part of a manufacturing or research and development operation. "Qualified machinery and equipment" includes computers, desks, filing cabinets, photocopiers, printers, software, data processing equipment, laboratory equipment; manufacturing compo-

nents such as belts, pulleys, shafts and moving parts; molds, tools and dies; operating structures; and all equipment used to control or operate machinery. It also includes machinery and equipment acquired under the terms of a lease by the recipient. "New" as used in this subsection means either new to the taxing jurisdiction of the state or new to the certificate holder.

(q) "Recipient" means a person receiving a tax deferral under this program.

(r) "Research and development" means the development, refinement, testing, marketing, and commercialization of a product, service, or process before commercial sales have begun. As used in this subsection, "commercial sales" excludes sales of prototypes or sales for market testing if the total gross receipts from such sales of the product, service, or process do not exceed one million dollars.

(s) "Resident" means the person who fills the qualified employment position makes his or her home in the CEZ. A mailing address alone is insufficient to establish that a person is a resident.

(3) **Issuance of deferral certificate.** The department will issue a sales and use tax deferral certificate for state and local sales and use taxes due under chapters 82.08, 82.12, and 82.14 RCW for an eligible investment project. The department will state on the certificate the amount of tax deferral for which the recipient is eligible. Recipients must keep track of how much tax is deferred.

(4) **Eligible investment amount.** There may or may not be a hiring requirement, depending on the location of the project.

(a) **No hiring requirements.** There are no hiring requirements for qualifying projects located in counties with fewer than one hundred persons per square mile. Monitoring and reporting procedures are explained in subsection (12) of this rule. Buildings that will be used partly for manufacturing or research and development and partly for other purposes are eligible for a deferral on a proportionate basis. Subsection (5) of this rule explains the procedure for apportionment.

(b) **Hiring requirements.** There are hiring requirements for qualifying projects located in CEZs or in counties containing CEZs. The applicant applies for a deferral of investment that correlates to the estimated number of persons to be hired based on the following formula:

Number of qualified employment positions to be hired x \$750,000 = amount of investment eligible for deferral

Applicants must make good faith estimates of hiring.

The recipient must fill the positions by persons who at the time of hire are residents of the CEZ. The department has instituted a geographic information system (GIS) to assist taxpayers in determining taxing jurisdiction boundaries, local tax rates, and a mapping and address lookup system to determine whether a specific address is within a CEZ. The system is available on the department's internet website at <http://www.dor.wa.gov>. A recipient must fill the qualified employment positions by the end of the calendar year following the year in which the project is certified as operationally complete and retain the position during the entire tax year. If the recipient does not fill the qualified employment positions by the end of the second calendar year following the year in

which the project is certified as operationally complete, all deferred taxes are immediately due.

(5) Apportionment of costs between qualifying and nonqualifying investments. The deferral is allowable only in respect to investment in the construction of a new building or the expansion or renovation of existing buildings used in manufacturing, research and development, and commercial testing laboratories.

(a) Where a building(s) is used partly for manufacturing or research and development and partly for purposes that do not qualify for deferral under this rule, the deferral will be determined by apportionment of the total project costs. The applicable tax deferral will be determined by apportionment according to the ratio the construction cost per square foot of that portion of the building(s) directly used for manufacturing or research and development purposes bears to the construction cost per square foot of the total building(s).

Apportionment formula:

Eligible square feet of building(s)

_____ = Percent Eligible

Total square feet of building(s)

Percent Eligible x Total Project Costs = Eligible Costs.

"Total Project Costs" means cost of multipurpose buildings and other improvement costs associated with the deferral project. Machinery and equipment are not included in this calculation. Common areas, such as hallways and bathrooms, are not included in the square feet figure for either the numerator or the denominator. The cost of the common areas is multiplied by the percent eligible to determine the portion of the common area that is eligible for deferral.

Eligible Tax Deferred = Eligible Cost x Tax Rate.

(b) Qualified machinery and equipment is not subject to apportionment.

(6) Leased equipment. The amount of tax deferral allowable for leased equipment is the amount of the consideration paid by the recipient to the lessor over the initial term of the lease, excluding any period of extension or option to renew, up to the last date for repayment of the deferred taxes. After that date the recipient must pay the appropriate sales taxes to the lessor for the remaining term of the lease.

(7) Application procedure and review process. An application for sales and use tax deferral under this program must be made prior to the initiation of construction, prior to the acquisition of machinery and equipment, and prior to the filling of qualified employment positions. Persons who apply after construction is initiated or finished or after acquisition of machinery and equipment are not eligible for the program. Applications for persons subject to hiring requirements must include information regarding the estimated total project cost and the qualified employment positions.

(a) Application forms will be supplied to the applicant by the department upon request. The completed application may be sent by FAX to (360) 586-2163 or mailed to the following address:

State of Washington
Department of Revenue
Special Programs
P.O. Box 448
Olympia, WA 98507-0448

Applications and reports received by the department under chapter 82.60 RCW are not confidential and are subject to disclosure. (RCW 82.60.100.)

(b) The department will verify the information contained in the application and approve or disapprove the application within sixty days. If approved, the department will issue a tax deferral certificate. If disapproved, the department will notify the applicant as to the reason(s) for disapproval. The U.S. Post Office postmark or FAX date will be used as the date of application.

(c) The applicant may seek administrative review of the department's disapproval of an application within thirty days from the date of notice of the disallowance pursuant to the provisions of WAC 458-20-100, Appeals, small claims and settlements. The filing of a petition for review with the department starts a review of departmental action.

(8) Program termination. No applications for deferral of taxes will be accepted after June 30, 2004.

(9) Eligible area criteria. The office of financial management will determine annually the counties with fewer than one hundred persons per square mile. The department will update and distribute the list each year. The list will be effective on July 1 of each year.

If an investment project is located in an area that qualifies under more than one type of eligible area, the department will automatically assign the project to the eligible area that imposes the least burden on the taxpayer and with the greatest benefit to the taxpayer. If the applicant elects to be bound by the requirements of the other potential eligible area, the applicant must make a written statement to that effect. For example, on October 1, 1999, the city of Yakima qualifies as a CEZ, and the entire county of Yakima has fewer than one hundred persons per square mile. The CEZ requirements are more restrictive than counties containing fewer than one hundred persons per square mile. The department will assign the project to the "fewer than one hundred persons per square mile designation" unless the applicant elects to be bound by the CEZ requirements.

(10) Use of the certificate. A tax deferral certificate issued under this program is for the use of the recipient for deferral of sales and use taxes due on each eligible investment project. Deferral is limited only to investment in qualified building or qualified machinery and equipment as defined in this rule. Thus, sales and use taxes cannot be deferred on items that do not become part of the qualified buildings, machinery, or equipment. In addition, the deferral is not to be used to defer the taxes of the persons with whom the recipient does business, persons the recipient hires, or employees of the recipient.

The tax deferral certificate is to be used in a manner similar to that of a resale certificate as set forth in WAC 458-20-102, Resale certificates. The certificate holder must provide a copy of the tax deferral certificate to the seller at the time goods or services are purchased. The seller will be relieved

PERMANENT

of the responsibility for collection of the sales or use tax upon presentation of the certificate. The seller must retain a copy of the certificate as part of its permanent records for a period of at least five years. A blanket certificate may be provided by the certificate holder and accepted by the seller covering all such purchases relative to the eligible project. The seller is liable for business and occupation tax on all tax deferral sales.

(11) Project operationally complete. An applicant must provide the department with the estimated cost of the investment project at the time the application is made. Following approval of the application and issuance of a tax deferral certificate, a certificate holder must notify the department, in writing, when the value of the investment project reaches the estimated cost as stated on the tax deferral certificate.

(a) If a certificate holder has reached its level of estimated costs and the project is not operationally complete, the certificate holder may request an amended certificate stating a revised amount upon which the deferral taxes are requested. Requests must be mailed or faxed to the department.

(b) The certificate holder must notify the department in writing when the construction project is operationally complete. The department will certify the date on which the project is operationally complete. The recipient of the deferral must maintain the manufacturing or research and development activity for eight years from this date.

(12) Reporting and monitoring procedure. Requirement to submit annual reports. Each recipient of a tax deferral under chapter 82.60 RCW must submit a report on December 31st of the year in which the investment project is certified by the department as having been operationally completed and on December 31st of each of the seven succeeding calendar years. The report must be made to the department in a form and manner prescribed by the department. If the recipient fails to submit a report or submits an inadequate or falsified report, the department may declare the amount of deferred taxes outstanding to be immediately due and payable. An inadequate or falsified report is one that contains material omissions or contains knowingly false statements and information.

(13) Repayment of deferred taxes. Repayment of tax deferred under chapter 82.60 RCW is excused, except as otherwise provided in RCW 82.60.070 and this subsection.

(a) Repayment of tax deferred under chapter 82.60 RCW is not required, and interest and penalties under RCW 82.60.070 will not be imposed, on machinery and equipment that qualifies for exemption under RCW 82.08.02565 or 82.12.02565.

(b) The following subsections describe the various circumstances under which repayment of the deferral may occur. Outstanding taxes are determined by reference to the following table. The table presumes the taxpayer maintained eligibility for the entire year.

Repayment Year	Percentage of Deferred Tax Waived
1 (Year operationally complete)	0%
2	0%

Repayment Year	Percentage of Deferred Tax Waived
3	0%
4	10%
5	15%
6	20%
7	25%
8	30%

Any action taken by the department to disqualify a recipient for tax deferral or assess interest will be subject to administrative review pursuant to the provisions of WAC 458-20-100, Appeals, small claims and settlements. The filing of a petition for review with the department starts a review of departmental action.

(c) Failure of investment project to satisfy general conditions. If, on the basis of the recipient's annual report or other information, including that submitted by the employment security department, the department of revenue finds that an investment project is not eligible for tax deferral for reasons other than failure to create the required number of qualified employment positions, the department will declare the amount of deferred taxes outstanding to be immediately due. An example of a disqualification under this section is a facility not being used for a manufacturing or research and development operation.

(d) Failure of investment project to satisfy required employment positions conditions. If, on the basis of the recipient's annual report or other information, the department finds that an investment project has been operationally complete for three years and has failed to create the required number of qualified employment positions, the amount of taxes deferred will be immediately due. The department will assess interest at the rate and as provided for delinquent excise taxes under RCW 82.32.050 (retroactively to the date the application was filed). There is no proration of the amount owed under this subsection. No penalties will be assessed.

(14) Debt not extinguished because of insolvency or sale. Insolvency or other failure of the recipient does not extinguish the debt for deferred taxes nor will the sale, exchange, or other disposition of the recipient's business extinguish the debt for the deferred taxes. Transfer of ownership does not terminate the deferral. The deferral is transferred, subject to the successor meeting the eligibility requirements of chapter 82.60 RCW, for the remaining periods of the deferral. Any person who becomes a successor (see WAC 458-20-216) to such investment project is liable for the full amount of any unpaid, deferred taxes under the same terms and conditions as the original recipient of the deferral.

(15) Disclosure of information. Applications and reports received by the department under chapter 82.60 RCW are not confidential and are subject to disclosure. (RCW 82.60.100.)

PERMANENT

NEW SECTION

WAC 458-20-24001A Sales and use tax deferral—Manufacturing and research/development activities in distressed areas—Applications filed prior to August 1, 1999. Introduction. Chapter 82.60 RCW establishes a sales and use tax deferral program. The purpose of the program is to promote economic stimulation, create employment opportunities, and reduce poverty in certain areas of the state. The legislature established this program to be effective solely in those areas and for those circumstances where the deferral is for investments that result in the creation of a specified minimum number of jobs or investment for a qualifying project.

The program applies to sales and use taxes on materials and labor and services rendered in the construction of qualified buildings or acquisition of qualified machinery and equipment and requires the recipient of the deferral to maintain the manufacturing or research and development activity for an eight-year period. This rule does not address RCW 82.08.02565 and 82.12.02565, which provide a statewide sales and use tax exemption for machinery and equipment used directly in a manufacturing operation. Refer to WAC 458-20-13601 for more information regarding the statewide exemption.

This program was enacted in 1985. The legislature made major revisions to program criteria in 1993, 1994, 1995, 1996, and 1999, specifically to the definitions of "eligible area," "eligible investment project," and "qualified building." Each revision created additional criteria for prospective applicants. This rule is written in three parts and covers applications made prior to July 31, 1999. Each part sets forth the requirements on the basis of the period of time in which application is made. Refer to the year during which application was made for information on an individual application. For applications made after July 31, 1999, see WAC 458-20-24001.

The employment security department and the department of community, trade, and economic development administer additional programs for distressed areas and job training and should be contacted directly for information concerning these programs.

PART I**Applications after July 1, 1995, to July 31, 1999**

(1) **Definitions.** For the purposes of this part, the following definitions apply for applications made on and after July 1, 1995, and before August 1, 1999:

(a) "Acquisition of equipment or machinery" means the equipment and machinery is under the dominion and control of the recipient.

(b) "Applicant" means a person applying for a tax deferral under chapter 82.60 RCW.

(c) "Certificate holder" means an applicant to whom a tax deferral certificate has been issued.

(d) "Computer-related services" means services that are connected or interact directly in the manufacture of computer hardware or software or the programming of the manufactured hardware. This includes the manufacture of hardware such as chips, keyboards, monitors, any other hardware, and

the components of these items. It includes creating operating systems and software that will be copied and sold as canned software. "Computer-related services" does not include information services. The activities performed by the manufacturer to test, correct, revise, or upgrade software or hardware before they are approved for sale to the consumer are considered computer-related services.

(e) "Department" means the department of revenue.

(f) "Eligible area" means one of the areas designated according to the following classifications:

(i) Unemployment county. A county in which the average level of unemployment for the three calendar years preceding the year in which an application is filed exceeds the average state unemployment for those years by twenty percent. In making this calculation, the department will compare the county's average unemployment rate in the prior three years to one hundred twenty percent of the state's average unemployment rate based on official unemployment figures published by the department of employment security;

(ii) Median income county. On and after June 6, 1996, a county that has a median household income that is less than seventy-five percent of the state median income for the previous three years;

(iii) MSA. A metropolitan statistical area, as defined by the Office of Federal Statistical Policy and Standards, United States Department of Commerce, in which the average level of unemployment for the calendar year immediately preceding the year in which an application is filed under chapter 82.60 RCW exceeds the average state unemployment for such calendar year by twenty percent;

(iv) CEZ and county containing a CEZ. A designated community empowerment zone (CEZ) approved under RCW 43.63A.700 or a county containing such a community empowerment zone;

(v) Timber impact area towns. A town with a population of less than twelve hundred persons that is located in a county that is a timber impact area, as defined in RCW 43.31.601, but that is not an unemployment county as defined in Part I;

(vi) Governor's designation county. A county designated by the governor as an eligible area under RCW 82.60.047; or

(vii) Contiguous county. A county that is contiguous to an unemployment county or a governor's designation county.

(g)(i) "Eligible investment project" means:

(A) An investment project in an unemployment county, a median income county, an MSA, a timber impact area town, or a governor's designation county; or

(B) That portion of an investment project in a CEZ, a county containing a CEZ, or a contiguous county, that is directly utilized to create at least one new full-time qualified employment position for each seven hundred fifty thousand dollars of investment.

(ii) "Eligible investment project" does not include an investment project undertaken by a light and power business as defined in RCW 82.16.010, other than that portion of a cogeneration project that is used to generate power for consumption within the manufacturing site of which the cogeneration project is an integral part. It also does not include an

investment project that has already received a deferral under chapter 82.60 RCW.

(h) "Industrial fixture" means an item attached to a building or to land. Fixtures become part of the real estate to which they are attached and upon attachment are classified as real property, not personal property. Examples of "industrial fixtures" are fuel oil lines, boilers, craneways, and certain concrete slabs.

(i) "Initiation of construction," in regards to the construction, expansion, or renovation of buildings, means the commencement of on-site construction work. Land clearing prior to excavation of the building site does not commence construction nor does planning commence construction.

(j) "Investment project" means an investment in qualified buildings or qualified machinery and equipment, including labor and services rendered in the planning, installation, and construction of the project. When an application for sales and use tax deferral is timely submitted, costs incurred before the application date are allowable, if they otherwise qualify.

(k) "Manufacturing" has the meaning given in RCW 82.04.120. Manufacturing, for purposes of the distressed area deferral program, also includes computer programming, the production of computer software, and other computer-related services, and the activities performed by research and development laboratories and commercial testing laboratories.

(l) "Operationally complete" means the project is capable of being used for its intended purpose as described in the application.

(m) "Person" has the meaning given in RCW 82.04.030. "Person" does not include the state of Washington or its institutions. "Person" can be either a lessee or a lessor, who can apply separately for individual investment projects at the same site, if they comply with the other requirements of RCW 82.60. The lessor/owner of the structure is not eligible for deferral unless the underlying ownership of the buildings, machinery, or equipment vests exclusively in the lessor/owner, or unless the lessor has by written contract agreed to pass the economic benefit of the deferral to the lessee in the form of reduced rent payments.

(n) "Qualified buildings" means construction of new structures, and expansion or renovation of existing structures for the purpose of increasing floor space or production capacity, used for manufacturing and research and development activities.

"Qualified buildings" are limited to structures used for manufacturing and research and development activities. "Qualified buildings" include plant offices and warehouses if such facilities are essential or an integral part of a factory, mill, plant, or laboratory. "Office" means space used by professional, clerical, or administrative staff. For plant office space to be a qualified building its use must be essential or integral to the manufacturing or research and development operation. Office space that is used by supervisors and their staff, by technicians, by payroll staff, by the safety officer, and by the training staff are examples of qualifying office space. "Warehouse" means facilities used for the storage of raw materials or finished goods.

(o) "Qualified employment position" means a permanent full-time employee employed in the eligible investment project during the entire tax year. The "entire tax year" means the full-time position is filled for a period of twelve consecutive months. "Full time" means at least 35 hours a week, 455 hours a quarter, or 1,820 hours a year.

(p) "Qualified machinery and equipment" means all new industrial and research fixtures, equipment, and support facilities that are an integral and necessary part of a manufacturing or research and development operation. "Qualified machinery and equipment" includes computers, desks, filing cabinets, photocopiers, printers, software, data processing equipment, laboratory equipment; manufacturing components such as belts, pulleys, shafts and moving parts; molds, tools and dies; operating structures; and all equipment used to control or operate machinery. It also includes machinery and equipment acquired under the terms of a lease by the recipient. "New" as used in this subsection means either new to the taxing jurisdiction of the state or new to the certificate holder.

(q) "Recipient" means a person receiving a tax deferral under this program.

(r) "Research and development" means the development, refinement, testing, marketing, and commercialization of a product, service, or process before commercial sales have begun. As used in this subsection, "commercial sales" excludes sales of prototypes or sales for market testing if the total gross receipts from such sales of the product, service, or process do not exceed one million dollars.

(2) **Issuance of deferral certificate.** The department will issue a sales and use tax deferral certificate for state and local sales and use taxes due under chapters 82.08, 82.12, and 82.14 RCW for an eligible investment project. The department will state on the certificate the amount of tax deferral for which the recipient is eligible. Recipients must keep track of how much tax is deferred.

(3) **Eligible investment amount.** There may or may not be a hiring requirement, depending on the location of the project.

(a) **No hiring requirements.** There are no hiring requirements for qualifying projects located in distressed counties, MSAs, median income counties, governor-designated counties, or timber impact towns. Monitoring and reporting procedures are explained in subsection (10) of this rule. Buildings that will be used partly for manufacturing or research and development and partly for other purposes are eligible for a deferral on a proportionate basis. Subsection (4) of this rule explains the procedure for apportionment.

(b) **Hiring requirements.** There are hiring requirements for qualifying projects located in CEZs, in counties containing CEZs, or in contiguous counties. Total qualifying project costs, including any part of the project that would qualify under RCW 82.08.02565 and 82.12.02565, must be examined to determine the number of positions associated with the project. An applicant who knows at the time of application that he or she will not fill the required qualified employment positions is not eligible for the deferral. Applicants must make good faith estimates of hiring. The applicant applies for a deferral of investment that correlates to the estimated number of persons to be hired. The investment must include

the amount of machinery and equipment eligible for the exemption under RCW 82.08.02565 and 82.12.02565. An applicant can amend the number of persons hired until completion of the project. The qualified employment positions filled by December 31 of the year of completion are the benchmark to be used during the next seven years in determining hiring compliance.

(i) Total qualifying project costs are divided by seven hundred fifty thousand, the result being the qualified employment positions.

(ii) In addition, the number of qualified employment positions created by an investment project will be reduced by the number of full-time employment positions maintained by the recipient in any other community in this state that are displaced as a result of the investment project. This reduction requires a reexamination of whether the seventy-five percent hiring requirement (as explained below) is met.

(iii) This number, which is the result of (i) and (ii) of this subsection, is the number of positions used as the benchmark over the life of the deferral. For recipients locating in a CEZ or a county containing a CEZ, seventy-five percent of the new positions must be filled by residents of a CEZ located in the county where the project is located. The department has instituted a geographic information system (GIS) to assist taxpayers in determining taxing jurisdiction boundaries, local tax rates, and a mapping and address lookup system to determine whether a specific address is within a CEZ. The system is available on the department's internet website at <http://www.dor.wa.gov>. For recipients located in a contiguous county, residents of an adjacent unemployment or governor-designated county must fill seventy-five percent of the new positions.

(iv) The qualified employment positions are reviewed each year, beginning December 31st of the year the project is operationally complete and each year for seven years. If the recipient has failed to create the requisite number of positions, the department will issue an assessment as explained under subsection (11) of this rule.

(v) In addition to the hiring requirements for new positions under (b) of this subsection, the recipient of a deferral for an expansion or diversification of an existing facility must ensure that he or she maintains the same percentage of employment positions filled by residents of the contiguous county or the CEZ that existed prior to the application being made. This percentage must be maintained for seven years.

(vi) Qualified employment positions do not include those positions filled by persons hired in excess of the ratio of one employee per required dollar of investment for which a deferral is granted. In the event an employee is either voluntarily or involuntarily separated from employment, the employment position will be considered filled if the employer is either training or actively recruiting a replacement employee, so long as the position is not actually vacant for any period in excess of thirty consecutive days.

(4) **Apportionment of costs between qualifying and nonqualifying investments.** The deferral is allowable only in respect to investment in the construction of a new building or the expansion or renovation of existing buildings used in manufacturing and research and development.

(a) Where a building(s) is used partly for manufacturing or research and development and partly for purposes that do not qualify for deferral under this rule, the deferral will be determined by apportionment of the total project costs. The applicable tax deferral will be determined by apportionment according to the ratio the construction cost per square foot of that portion of the building(s) directly used for manufacturing or research and development purposes bears to the construction cost per square foot of the total building(s).

Apportionment formula:

$$\frac{\text{Eligible square feet of building(s)}}{\text{Total square feet of building(s)}} = \text{Percent Eligible}$$

$$\text{Percent Eligible} \times \text{Total Project Costs} = \text{Eligible Costs.}$$

"Total Project Costs" means cost of multipurpose buildings and other improvement costs associated with the deferral project. Machinery and equipment are not included in this calculation. Common areas, such as hallways and bathrooms, are not included in the square feet figure for either the numerator or the denominator. The cost of the common areas is multiplied by the percent eligible to determine the portion of the common area that is eligible for deferral.

$$\text{Eligible Tax Deferred} = \text{Eligible Cost} \times \text{Tax Rate.}$$

(b) Qualified machinery and equipment is not subject to apportionment.

(5) **Leased equipment.** The amount of tax deferral allowable for leased equipment is the amount of the consideration paid by the recipient to the lessor over the initial term of the lease, excluding any period of extension or option to renew, up to the last date for repayment of the deferred taxes. After that date the recipient must pay the appropriate sales taxes to the lessor for the remaining term of the lease.

(6) **Application procedure and review process.** An application for sales and use tax deferral under this program must be made prior to the initiation of construction and the acquisition of machinery and equipment. Persons who apply after construction is initiated or after acquisition of machinery and equipment are not eligible for the program. Applications for persons subject to hiring requirements must include information regarding the estimated total project cost and the qualified employment positions.

(a) Application forms will be supplied to the applicant by the department upon request. The completed application may be sent by FAX to (360) 586-2163 or mailed to the following address:

State of Washington
Department of Revenue
Special Programs
P.O. Box 448
Olympia, WA 98507-0448

(b) The department will verify the information contained in the application and approve or disapprove the application within sixty days. If approved, the department will issue a tax deferral certificate. If disapproved, the department will notify the applicant as to the reason(s) for disapproval. The

U.S. Post Office postmark or FAX date will be used as the date of application.

(c) The applicant may seek administrative review of the department's disapproval of an application within thirty days from the date of notice of disallowance pursuant to the provisions of WAC 458-20-100, Appeals, small claims and settlements. The filing of a petition for review with the department starts a review of departmental action.

(7) **Eligible area criteria.** The statewide and county unemployment statistics last published by the department will be used to determine eligible areas based on unemployment. Median income county designation is based on data produced by the office of financial management and made available to the department on November 1 of each year. The timber impact town designation is based on information provided by the department of employment security.

If an investment project is located in an area that qualifies under more than one type of eligible area, the department will automatically assign the project to the eligible area that imposes the least burden on the taxpayer and with the greatest benefit to the taxpayer. If the applicant elects to be bound by the requirements of the other potential eligible area, the applicant must make a written statement to that effect. For example, on May 1, 1998, the city of Yakima qualifies as a CEZ, and the entire county of Yakima qualifies as an unemployment county. The CEZ requirements are more restrictive than the unemployment county requirements. The department will assign the project to the distressed area eligible area unless the applicant elected to be bound by the CEZ requirements.

(8) **Use of the certificate.** A tax deferral certificate issued under this program is for the use of the recipient for deferral of sales and use taxes due on each eligible investment project. Deferral is limited only to investment in qualified building or qualified machinery and equipment as defined in Part I. Thus, sales and use taxes cannot be deferred on items that do not become part of the qualified buildings, machinery, or equipment. In addition, the deferral is not to be used to defer the taxes of the persons with whom the recipient does business, persons the recipient hires, or employees of the recipient.

The tax deferral certificate is used in a manner similar to that of a resale certificate as set forth in WAC 458-20-102, Resale certificates. The certificate holder must provide a copy of the tax deferral certificate to the seller at the time goods or services are purchased. The seller is relieved of the responsibility for collection of the sales or use tax upon presentation of the certificate. The seller must retain a copy of the certificate as part of its permanent records for a period of at least five years. A blanket certificate may be provided by the certificate holder and accepted by the seller covering all such purchases relative to the eligible project. The seller is liable for business and occupation tax on all tax deferral sales.

(9) **Project operationally complete.** An applicant must provide the department with the estimated cost of the investment project at the time the application is made. Following approval of the application and issuance of a deferral certificate, a certificate holder must notify the department, in writ-

ing, when the value of the investment project reaches the estimated cost as stated on the tax deferral certificate.

(a) If a certificate holder has reached its level of estimated costs and the project is not operationally complete, the certificate holder may request an amended certificate stating a revised amount upon which the deferral is requested. Requests must be mailed or faxed to the department.

(b) The certificate holder must notify the department in writing when the construction project is operationally complete. The department will certify the date on which the project was operationally complete. The recipient of the deferral must maintain the manufacturing or research and development activity for eight years from this date.

(10) **Reporting and monitoring procedure.** Requirement to submit annual reports. Each recipient of a deferral granted after July 1, 1995, must submit a report to the department on December 31st of the year in which the investment project is certified by the department as having been operationally completed, and on December 31st of each of the seven succeeding calendar years. The report must be made to the department in a form and manner prescribed by the department. The report must contain information regarding the actual employment related to the project and any other information required by the department. If the recipient fails to submit a report or submits an inadequate or falsified report, the department may declare the amount of deferred taxes outstanding to be immediately due and payable. An inadequate or falsified report is one that contains material omissions or contains knowingly false statements and information.

(11) **Repayment of deferred taxes.** Repayment of tax deferred under chapter 82.60 RCW is excused, except as otherwise provided in RCW 82.60.070 and this subsection, on an investment project for which a deferral has been granted under chapter 82.60 RCW after June 30, 1994.

(a) Taxes deferred under this chapter need not be repaid on machinery and equipment for lumber and wood product industries, and sales of or charges made for labor and services, of the type which qualified for exemption under RCW 82.08.02565 or 82.12.02565.

(b) The following describes the various circumstances under which repayment of the deferral may be required. Outstanding taxes are determined by reference to the following table. The table presumes the taxpayer maintained eligibility for the entire year.

Repayment Year	Percentage of Deferred Tax Waived
1 (Year operationally complete)	0%
2	0%
3	0%
4	10%
5	15%
6	20%
7	25%
8	30%

Any action taken by the department to disqualify a recipient for tax deferral or require payment of all or part of

PERMANENT

deferred taxes is subject to administrative review pursuant to the provisions of WAC 458-20-100, Appeals, small claims and settlements. The filing of a petition for review with the department starts a review of departmental action. See subsection (d) for repayment and waiver for deferrals with hiring requirements.

(c) **Failure of investment project to satisfy general conditions.** If, on the basis of the recipient's annual report or other information, including that submitted by the department of employment security, the department finds that an investment project is not eligible for tax deferral for reasons other than failure to create the required number of qualified employment positions, the department will declare the amount of deferred taxes outstanding to be immediately due. For example, a reason for disqualification would be that the facilities are not used for a manufacturing or research and development operation.

(d) **Failure of investment project to satisfy required employment positions conditions.** If, on the basis of the recipient's annual report or other information, the department finds that an investment project has been operationally complete for three years and has failed to create the required number of qualified employment positions, the amount of taxes deferred will be immediately due. The department will assess interest at the rate and as provided for delinquent excise taxes under RCW 82.32.050 (retroactively to the date the application was filed). There is no proration of the amount owed under this subsection. No penalties will be assessed.

(e) **Failure of investment project to satisfy employee residency requirements.** If, on the basis of the recipient's annual report or other information, the department finds that an investment project under RCW 82.60.040 (1)(b) or (c) has failed to comply with any requirement of RCW 82.60.045 for any calendar year for which reports are required under this subsection, twelve and one-half percent of the amount of deferred taxes will be immediately due. For each year a deferral's requirements are met twelve and one-half percent of the amount of deferred taxes will be waived. The department will assess interest at the rate provided for delinquent excise taxes under RCW 82.32.050, retroactively to the date the application was filed. Each year the employment requirement is met, twelve and one-half percent of the deferred tax will be waived, if all other program requirements are met. No penalties will be assessed.

(f) The department of employment security makes and certifies to the department all determinations of employment and wages required under this subsection.

(12) **Debt not extinguished because of insolvency or sale.** Insolvency or other failure of the recipient does not extinguish the debt for deferred taxes nor will the sale, exchange, or other disposition of the recipient's business extinguish the debt for the deferred taxes. Transfer of ownership does not terminate the deferral. The deferral is transferred, subject to the successor meeting the eligibility requirements of this chapter, for the remaining periods of the deferral. Any person who becomes a successor (see WAC 458-20-216) to such investment project is liable for the full

amount of any unpaid, deferred taxes under the same terms and conditions as the original recipient.

(13) **Disclosure of information.** Applications and reports received by the department under chapter 82.60 RCW are not confidential and are subject to disclosure. (RCW 82.60.100.)

PART II

Applications from July 1, 1994, to June 30, 1995

(14) **Definitions.** For the purposes of this part, the following definitions apply for applications made on and after July 1, 1994 and before July 1, 1995.

(a) "Acquisition of equipment or machinery" means the date the equipment and machinery is under the dominion and control of the recipient.

(b) "Applicant" means a person applying for a tax deferral under chapter 82.60 RCW.

(c) "Certificate holder" means an applicant to whom a tax deferral certificate has been issued.

(d) "Computer-related services" means services that are connected or interact directly in the manufacture of computer hardware or software or the programming of the manufactured hardware. This includes the manufacture of hardware such as chips, keyboards, monitors, any other hardware, and the components of these items. It includes creating operating systems and software that will be copied and sold as canned software. "Computer-related services" does not include information services. The activities performed by the manufacturer to test, correct, revise, and upgrade software or hardware before they are approved for sale to the consumer are considered computer-related services in this instance.

(e) "Department" means the department of revenue.

(f) "Eligible area" means:

(i) Unemployment county. A county in which the average level of unemployment for the three calendar years preceding the year in which an application is filed exceeds the average state unemployment for those years by twenty percent. The department may compare the county's average unemployment rate in the prior three years to one hundred twenty percent of the state's average unemployment rate based on official unemployment figures published by the department of employment security;

(ii) MSA. A metropolitan statistical area, as defined by the Office of Federal Statistical Policy and Standards, United States Department of Commerce, in which the average level of unemployment for the calendar year immediately preceding the year in which an application is filed under chapter 82.60 RCW exceeds the average state unemployment for such calendar year by twenty percent;

(iii) CEZ. A designated community empowerment zone approved under RCW 43.63A.700;

(iv) Timber impact area towns. A town with a population of less than twelve hundred persons that is located in a county that is a timber impact area, as defined in RCW 43.31.601, but that is not an unemployment county as defined in this subsection;

(v) Contiguous county. A county that is contiguous to an unemployment county or a governor's designation county; or

(vi) Governor's designation county. A county designated by the governor as an eligible area under RCW 82.60.047.

(g)(i) "Eligible investment project" means that portion of an investment project which:

(A) Is directly utilized to create at least one new full-time qualified employment position for each seven hundred fifty thousand dollars of investment on which a deferral is requested; and

(B) Either initiates a new operation, or expands or diversifies a current operation by expanding, equipping, or renovating an existing facility with costs in excess of twenty-five percent of the true and fair value of the facility prior to improvement. "Improvement" means the physical alteration by significant expansion, modernization, or renovation of an existing facility, excluding land, where the cost of such expansion, etc., exceeds twenty-five percent of the true and fair value of the existing facility prior to the initiation of the expansion or renovation. The term "improvement" is further defined to include those portions of an existing facility which do not increase the usable floor space, but is limited to the renovation, modernization, or any other form of alteration or addition and the equipment and machinery installed therein during the course of construction. The twenty-five percent test may be satisfied by considering the value of both the building and machinery and equipment; however, at least forty percent of the total renovation costs must be attributable to the physical renovation of the building structure alone. "True and fair value" means the value listed on the assessment rolls as determined by the county assessor for the buildings or equipment for ad valorem property tax purposes at the time of application.

(ii) "Eligible investment project" does not include either an investment project undertaken by a light and power business as defined in RCW 82.16.010, other than cogeneration projects that are both an integral part of a manufacturing facility and owned at least fifty percent by the manufacturer, or investment projects that have already received deferrals under chapter 82.60 RCW.

(h) "Industrial fixture" means an item attached to a building or to land. Fixtures become part of the real estate to which they are attached and upon attachment are classified as real property, not personal property. Examples of "industrial fixtures" are fuel oil lines, boilers, craneways, and certain concrete slabs.

(i) "Initiation of construction," in regards to the construction of new buildings, means the commencement of on-site construction work.

(j) "Initiation of construction," in regards to the construction of expanding or renovating existing structures for the purpose of increasing floor space or production capacity used for manufacturing and research and development, means the commencement of the new construction by renovation, modernization, or expansion, by physical alteration.

(k) "Investment project" means an investment in qualified buildings or qualified machinery and equipment, including labor and services rendered in the planning, installation, and construction of the project. A person who does not build or remodel his or her own building, but leases from a third party, is eligible for sales and use tax deferral on the machin-

ery and equipment provided that an investment in qualified machinery and equipment is made by such person and a new structure used to house the manufacturing activities is constructed.

(l) "Manufacturing" has the meaning given in RCW 82.04.120. Manufacturing, for purposes of the distressed area deferral program, also includes computer programming, the production of computer software, and other computer-related services, and the activities performed by research and development laboratories and commercial testing laboratories.

(m) "Operationally complete" means the project is capable of being used for its intended purpose as described in the application.

(n) "Person" has the meaning given in RCW 82.04.030. "Person" does not include the state of Washington or its institutions. "Person" can be either a lessee or a lessor, who can apply separately for individual investment projects at the same site, if they comply with the other requirements of RCW 82.60. The lessor/owner of the structure is not eligible for deferral unless the underlying ownership of the buildings, machinery, or equipment vests exclusively in the lessor/owner, or unless the lessor has by written contract agreed to pass the economic benefit of the deferral to the lessee in the form of reduced rent payments.

(o) "Qualified buildings" are limited to structures used for manufacturing and research and development activities. "Qualified buildings" include plant offices and warehouses if such facilities are essential or an integral part of a factory, mill, plant, or laboratory. "Office" means space used by professional, clerical, or administrative staff. For plant office space to be a qualified building its use must be essential or integral to the manufacturing or research and development operation. Office space that is used by supervisors and their staff, by technicians, by payroll staff, by the safety officer, and by the training staff are examples of qualifying office space. "Warehouse" means facilities used for the storage of raw materials or finished goods.

(p) "Qualified employment position" means a permanent full-time employee employed in the eligible investment project during the entire tax year. The "entire tax year" means the full-time position is filled for a period of twelve consecutive months. "Full time" means at least 35 hours per week, 455 hours a quarter, or 1,820 hours a year.

(q) "Qualified machinery and equipment" means all new industrial and research fixtures, equipment, and support facilities that are an integral and necessary part of a manufacturing operation or research and development operation. "Qualified machinery and equipment" includes: Computers, software, data processing equipment, laboratory equipment; manufacturing components such as belts, pulleys, shafts and moving parts; molds, tools and dies; operating structures; and all equipment used to control or operate machinery. It also includes machinery and equipment acquired under the terms of a lease by the recipient. "New" as used in this subsection means either new to the taxing jurisdiction of the state or new to the certificate holder.

(r) "Research and development" means the development, refinement, testing, marketing, and commercialization of a

product, service, or process before commercial sales have begun. As used in this subsection, "commercial sales" excludes sales of prototypes or sales for market testing if the total gross receipts from such sales of the product, service, or process do not exceed one million dollars.

(s) "Recipient" means a person receiving a tax deferral under this program.

(15) **Issuance of deferral certificate.** The department will issue a sales and use tax deferral certificate for state and local sales and use taxes due under chapters 82.08, 82.12, and 82.14 RCW for an eligible investment project. The department will state on the certificate the amount of tax deferral for which the recipient is eligible. Recipients must keep track of how much tax is deferred.

(16) **Eligible investment amount.**

(a) Projects located in unemployment counties, MSAs, governor-designated counties, or timber impact towns are eligible for a deferral on the portion of the investment project that represents one new qualified employment position for each seven hundred fifty thousand dollars of investment. The eligible amount is computed by dividing the total qualifying project costs by seven hundred fifty thousand, the result being the qualified employment positions. In addition, the number of qualified employment positions created by an investment project will be reduced by the number of full-time employment positions maintained by the recipient in any other community in this state that are displaced as a result of the investment project. This is the number of positions used as the hiring benchmark. The qualified employment positions must be filled by the end of year three. Monitoring and reporting procedures are set forth in subsection (23) of this rule. In addition, buildings that will be used partly for manufacturing or research and development and partly for other purposes are eligible for a deferral on a proportionate basis. Subsection (17) of this rule explains the procedure for apportionment.

(b) Projects located in CEZs, counties containing CEZs, or counties contiguous to an eligible county, are eligible for a deferral if the project meets specific hiring requirements. The recipient is eligible for a deferral on the portion of the investment project that represents one new qualified employment position for each seven hundred fifty thousand dollars of investment. The eligible amount is computed by dividing the total qualifying project costs by seven hundred fifty thousand, the result being the qualified employment positions. This is the number of positions used as the hiring benchmark over the life of the deferral. The qualified employment positions are reviewed each year, beginning December 31st of the year the project is operationally complete and each year for seven years. Monitoring and reporting procedures are set forth in subsection (23) of this rule. In addition, buildings that will be used partly for manufacturing or research and development and partly for other purposes are eligible for a deferral on a proportionate basis. Subsection (17) of this rule explains the procedure for apportionment.

(c) In addition to the hiring requirements for new positions under (b) of this subsection, the recipient of a deferral for an expansion or diversification of an existing facility must ensure that he or she maintains the same percentage of

employment positions filled by residents of the contiguous county or the CEZ that existed prior to the application being made. The department has instituted a geographic information system (GIS) to assist taxpayers in determining taxing jurisdiction boundaries, local tax rates, and a mapping and address lookup system to determine whether a specific address is within a CEZ. The system is available on the department's internet website at <http://www.dor.wa.gov>. This percentage must be maintained for seven years.

(d) Qualified employment positions does not include those persons hired in excess of the ratio of one employee per required dollar of investment for which a deferral is granted. In the event an employee is either voluntarily or involuntarily separated from employment, the employment position will be considered filled if the employer is either training or actively recruiting a replacement employee so long as the position is not actually vacant for any period in excess of thirty consecutive days.

(17) **Apportionment of costs between qualifying and nonqualifying investments.** The deferral is allowable only in respect to investment in the construction of a new building or the expansion or renovation of existing buildings used in manufacturing, research and development.

(a) Where a building(s) is used partly for manufacturing or research and development and partly for purposes which do not qualify for deferral under this rule the deferral will be determined by apportionment of the total project costs. The applicable tax deferral will be determined by apportionment according to the ratio the construction cost per square foot of that portion of the building(s) directly used for manufacturing or research and development purposes bears to the construction cost per square foot of the total building(s).

Apportionment formula:

$$\frac{\text{Eligible square feet of building(s)}}{\text{Total square feet of building(s)}} = \text{Percent Eligible}$$

$$\text{Percent Eligible} \times \text{Total Project Costs} = \text{Eligible Costs.}$$

"Total Project Costs" means cost of multipurpose buildings and other improvement costs associated with the deferral project. Machinery and equipment are not included in this calculation. Common areas, such as hallways and bathrooms, are not included in the square feet figure for either the numerator or the denominator. The cost of the common areas is multiplied by the percent eligible to determine the portion of the common area that is eligible for deferral.

$$\text{Eligible Tax Deferred} = \text{Eligible Cost} \times \text{Tax Rate.}$$

(b) Qualified machinery and equipment is not subject to apportionment.

(18) **Leased equipment.** The amount of tax deferral allowable for leased equipment is the amount of the consideration paid by the recipient to the lessor over the initial term of the lease, excluding any period of extension or option to renew, up to the last date for repayment of the deferred taxes. After that date the recipient must pay the appropriate sales taxes to the lessor for the remaining term of the lease.

(19) **Application procedure and review process.** An application for sales and use tax deferral under this program must be made prior to the initiation of construction and the acquisition of machinery and equipment. Persons who apply after construction is initiated or after acquisition of machinery and equipment are not eligible for the program.

(a) Application forms will be supplied to the applicant by the department upon request. The completed application may be sent by FAX to (360) 586-2163 or mailed to the following address:

State of Washington
Department of Revenue
Special Programs
P.O. Box 448
Olympia, WA 98507-0448

(b) The department will verify the information contained in the application and approve or disapprove the application within sixty days. If approved, the department will issue a tax deferral certificate. If disapproved, the department will notify the applicant as to the reason(s) for disapproval. The U.S. Post Office postmark or FAX date will be used as the date of application.

(c) The applicant may seek administrative review of the department's disapproval of an application within thirty days from the date of notice of disallowance pursuant to the provisions of WAC 458-20-100, Appeals, small claims and settlements. The filing of a petition for review with the department starts a review of departmental action.

(20) **Eligible area criteria.** The department will use the statewide and county unemployment statistics as last published by the department. Timber impact town designation is based on information provided by the department of employment security. The department will update the list of eligible areas by county, annually.

(21) **Use of the certificate.** A tax deferral certificate issued under this program will be for the use of the recipient for deferral of sales and use taxes due on each eligible investment project. Deferral is limited only to investment in qualified buildings or qualified machinery and equipment as defined in Part II. Thus, sales and use taxes cannot be deferred on items that do not become part of the qualified buildings, machinery, or equipment. In addition, the deferral is not to be used to defer the taxes of the persons with whom the recipient does business, persons the recipient hires, or employees of the recipient. The tax deferral certificate is used in a manner similar to that of a resale certificate as set forth in WAC 458-20-102, Resale certificates. The certificate holder must provide a copy of the tax deferral certificate to the seller at the time goods or services are purchased. The seller will be relieved of the responsibility for collection of the sales or use tax upon presentation of the certificate. The seller must retain a copy of the certificate as part of its permanent records for a period of at least five years. A blanket certificate may be provided by the certificate holder and accepted by the seller covering all such purchases relative to the eligible project. The seller is liable for business and occupation tax on all tax deferral sales.

(22) **Project operationally complete.** An applicant must provide the department with the estimated cost of the investment project at the time the application is made. Following approval of the application and issuance of a tax deferral certificate, a certificate holder must notify the department, in writing, when the value of the investment project reaches the estimated cost as stated on the tax deferral certificate.

(a) If a certificate holder has reached its level of estimated costs and the project is not operationally complete, the certificate holder may request an amended certificate stating a revised amount upon which the deferral of sales and use taxes is requested. Requests must be mailed or faxed to the department.

(b) The certificate holder must notify the department in writing when the construction project is operationally complete. The department will certify the date on which the project was operationally complete. The recipient of the deferral must maintain the manufacturing or research and development activity for eight years from this date.

(c) The recipient will be notified in writing of the total amount of deferred taxes, the date(s) upon which the deferred taxes must be paid, and any reports required to be submitted in the subsequent years. If the department disallows any portion of the amount of sales and use taxes requested for deferral, the recipient may seek administrative review of the department's action within thirty days from the date of the notice of disallowance pursuant to the provisions of WAC 458-20-100, Appeals, small claims and settlements. The filing of a petition for review with the department starts a review of departmental action.

(23) **Reporting and monitoring procedure.** Requirement to submit annual reports. Each recipient of a sales and use tax deferral must submit a report to the department on December 31st of the year in which the investment project is certified by the department as having been operationally completed, and on December 31st of each of the seven succeeding calendar years. The report must be made to the department in a form and manner prescribed by the department. The report must contain information regarding the actual employment related to the project and any other information required by the department. If the recipient fails to submit a report or submits an inadequate or falsified report, the department may declare the amount of deferred taxes outstanding to be immediately due and payable. An inadequate or falsified report is one that contains material omissions or contains knowingly false statements and information.

(24) **Repayment of deferred taxes.** Repayment of tax deferred under chapter 82.60 RCW is excused, except as otherwise provided in RCW 82.60.070 and this subsection on an investment project for which a deferral has been granted under chapter 82.60 RCW after June 30, 1994.

(a) The following describes the various circumstances under which repayment of the deferral may be required. Outstanding taxes are determined by reference to the following table. The table presumes the taxpayer maintained eligibility for the entire year. See subsection (c) for repayment and waiver for deferrals with hiring requirements.

Repayment Year	Percentage of Deferred Tax Waived
1	(Year operationally complete) 0%
2	0%
3	0%
4	10%
5	15%
6	20%
7	25%
8	30%

Any action taken by the department to disqualify a recipient for tax deferral or require payment of all or part of deferred taxes is subject to administrative review pursuant to the provisions of WAC 458-20-100, Appeals, small claims and settlements. The filing of a petition for review with the department starts a review of departmental action.

(b) Failure of investment project to satisfy general conditions. If, on the basis of the recipient's annual report or other information, including that submitted by the department of employment security, the department finds that an investment project is not eligible for tax deferral, other than failure to create the required number of positions, the department will declare the amount of deferred taxes outstanding to be immediately due. For example, a reason for disqualification would be that the facility is not used for manufacturing or research and development operations.

(c) Failure of investment project to satisfy employment positions conditions. If, on the basis of the recipient's annual report or other information, the department finds that an investment project has been operationally complete for three years and has failed to create the required number of qualified employment positions, the amount of taxes deferred will be immediately due. The department will assess interest at the rate and as provided for delinquent excise taxes under RCW 82.32.050 (retroactively to the date of deferral). No penalties will be assessed.

(d) Failure of investment project to satisfy employee residency requirements. If, on the basis of the recipient's annual report or other information, the department finds that an investment project under RCW 82.60.040 (1)(b) or (c) has failed to comply with the special hiring requirements of RCW 82.60.045 for any calendar year for which reports are required under this subsection, twelve and one-half percent of the amount of deferred taxes will be immediately due. For each year a deferral's requirements are met twelve and one-half percent of the amount of deferred taxes will be waived. The department will assess interest at the rate provided for delinquent excise taxes under RCW 82.32.050, retroactively to the date of deferral. No penalties will be assessed.

(e) The department of employment security makes and certifies to the department all determinations of employment and wages required under this subsection, per request.

(25) Debt not extinguished because of insolvency or sale. Insolvency or other failure of the recipient does not extinguish the debt for deferred taxes nor will the sale, exchange, or other disposition of the recipient's business

extinguish the debt for the deferred taxes. Transfer of ownership does not terminate the deferral. The deferral is transferred, subject to the successor meeting the eligibility requirements of this chapter, for the remaining periods of the deferral. Any person who becomes a successor (see WAC 458-20-216) to such investment project is liable for the full amount of any unpaid, deferred taxes under the same terms and conditions as the original recipient.

(26) Disclosure of information. Applications and reports received by the department under chapter 82.60 RCW are not confidential and are subject to disclosure. (RCW 82.60.100.)

PART III

Applications from July 1, 1992, to June 30, 1994

(27) Definitions. For the purposes of this part, the following definitions apply for applications made after July 1, 1992, but before July 1, 1994:

(a) "Acquisition of equipment or machinery" means the equipment and machinery is under the dominion and control of the recipient.

(b) "Applicant" means a person applying for a tax deferral under chapter 82.60 RCW.

(c) "Certificate holder" means an applicant to whom a tax deferral certificate has been issued.

(d) "Computer-related services" means services that are connected or interact directly in the manufacture of computer hardware or software or the programming of the manufactured hardware. This includes the manufacture of hardware such as chips, keyboards, monitors, any other hardware, and the components of these items. It includes creating operating systems and software that will be copied and sold as canned software. "Computer-related services" does not include information services. The activities performed by the manufacturer to test, correct, revise, and upgrade software or hardware before they are approved for sale to the consumer are considered computer-related services in this instance.

(e) "Department" means the department of revenue.

(f) "Eligible area" means:

(i) Unemployment county. A county in which the average level of unemployment for the three calendar years preceding the year in which an application is filed exceeds the average state unemployment for those years by twenty percent. The department may compare the county's average unemployment rate in the prior three years to one hundred twenty percent of the state's average unemployment rate based on official unemployment figures published by the department of employment security;

(ii) MSA. A metropolitan statistical area, as defined by the Office of Federal Statistical Policy and Standards, United States Department of Commerce, in which the average level of unemployment for the calendar year immediately preceding the year in which an application is filed under chapter 82.60 RCW exceeds the average state unemployment for such calendar year by twenty percent; or

(iii) CEZ. Beginning July 1, 1993, a designated community empowerment zone approved under RCW 43.63A.700.

(g)(i) "Eligible investment project" means that portion of an investment project which:

PERMANENT

(A) Is directly utilized to create at least one new full-time qualified employment position for each three hundred thousand dollars of investment on which a deferral is requested; and

(B) Either initiates a new operation, or expands or diversifies a current operation by expanding, or renovating an existing building with costs in excess of twenty-five percent of the true and fair value of the plant complex prior to improvement. "Improvement" means the physical alteration by significant expansion, modernization, or renovation of an existing plant complex, excluding land, where the cost of such expansion, etc., exceeds twenty-five percent of the true and fair value of the existing plant complex prior to the initiation of the expansion or renovation. The term "improvement" is further defined to include those portions of an existing building which do not increase the usable floor space, but is limited to the renovation, modernization, or any other form of alteration or addition and the equipment and machinery installed therein during the course of construction. The twenty-five percent test may be satisfied by considering the value of both the building and machinery and equipment; however, at least forty percent of the total renovation costs must be attributable to the physical renovation of the building structure alone. "True and fair value" means the value listed on the assessment roles as determined by the county assessor for the land, buildings, or equipment for ad valorem property tax purposes at the time of application; or

(C) Acquires machinery and equipment to be used for either manufacturing or research and development. The lessor/owner of the structure is not eligible for a deferral unless the underlying ownership of the buildings, machinery, and equipment vests exclusively in the same person.

(ii) "Eligible investment project" does not include any portion of an investment project undertaken by a light and power business as defined in RCW 82.16.010 or investment projects that have already received deferrals under chapter 82.60 RCW.

(h) "Industrial fixture" means an item attached to a building or to land. Fixtures become part of the real estate to which they are attached and upon attachment are classified as real property, not personal property. Examples of "industrial fixtures" are fuel oil lines, boilers, craneways, and certain concrete slabs.

(i) "Initiation of construction," in regards to the construction of new buildings, means the commencement of on-site construction work.

(j) "Initiation of construction," in regards to the construction of expanding or renovating existing structures for the purpose of increasing floor space or production capacity used for manufacturing and research and development, means the commencement of new construction by renovation, modernization, or expansion, by physical alteration.

(k) "Investment project" means an investment in qualified buildings and qualified machinery and equipment, including labor and services rendered in the planning, installation, and construction of the project.

(l) "Manufacturing" has the meaning given in RCW 82.04.120: Manufacturing, for purposes of the distressed area deferral program, also includes computer programming,

the production of computer software, and other computer-related services, and the activities performed by research and development laboratories and commercial testing laboratories.

(m) "Operationally complete" means the project is capable of being used for its intended purpose as described in the application.

(n) "Person" has the meaning given in RCW 82.04.030. "Person" does not include the state of Washington or its institutions. "Person" can be either a lessee or a lessor, who can apply separately for individual investment projects at the same site, if they comply with the other requirements of this chapter. The lessor/owner of the structure is not eligible for deferral unless the underlying ownership of the buildings, machinery, or equipment vests in the lessor/owner, or unless the lessor has by written contract agreed to pass the economic benefit of the deferral to the lessee in the form of reduced rent payments.

(o) "Qualified buildings" are limited to structures used for manufacturing and research and development activities. "Qualified buildings" include plant offices and warehouses if such facilities are essential or an integral part of a factory, mill, plant, or laboratory. "Office" means space used by professional, clerical, or administrative staff. For plant office space to be a qualified building, its use must be essential or integral to the manufacturing or research and development operation. Office space that is used by supervisors and their staff, by technicians, by payroll staff, by the safety officer, and by the training staff are examples of qualifying office space. "Warehouse" means facilities used for the storage of raw materials or finished goods.

(p) "Qualified employment position" means a permanent full-time employee employed in the eligible investment project during the entire tax year. The "entire tax year" means the full-time position is filled for a period of twelve consecutive months. "Full time" means at least 35 hours a week, 455 hours a quarter, or 1,820 hours a year.

(q) "Qualified machinery and equipment" means all new industrial and research fixtures, equipment, and support facilities that are an integral and necessary part of a manufacturing operation or research and development operation. "Qualified machinery and equipment" includes: Computers, software, data processing equipment, laboratory equipment; manufacturing components such as belts, pulleys, shafts and moving parts; molds, tools and dies; operating structures; and all equipment used to control or operate machinery. It also includes machinery and equipment acquired under the terms of a long- or short-term lease by the recipient. "New" as used in this subsection means either new to the taxing jurisdiction of the state or new to the certificate holder.

(r) "Recipient" means a person receiving a tax deferral under this program.

(s) "Research and development" means the development, refinement, testing, marketing, and commercialization of a product, service, or process before commercial sales have begun. As used in this subsection, "commercial sales" excludes sales of prototypes or sales for market testing if the total gross receipts from such sales of the product, service, or process do not exceed one million dollars.

(28) **Issuance of deferral certificate.** The department will issue a sales and use tax deferral certificate for state and local sales and use taxes due under chapters 82.08, 82.12, and 82.14 RCW for an eligible investment project. The department will state on the certificate the amount of tax deferral for which the recipient is eligible. Recipients must keep track of how much deferral is taken.

(29) **Eligible investment amount.** Recipients are eligible for a deferral on investment used to create employment positions.

(a) Total qualifying project costs must be examined to determine the number of positions associated with the project. Total qualifying project costs are divided by three hundred thousand, the result being the qualified employment positions. This is the number of positions used as the hiring benchmark at the end of year three. The qualified employment positions are reviewed in the third year, following December 31st of the year the project is operationally complete. If the recipient has failed to create the requisite number of positions, the department will issue an assessment under subsection (37) of this rule. Buildings that will be used partly for manufacturing or research and development and partly for other purposes are eligible for a deferral on a proportionate basis. Subsection (30) of this rule explains the procedure for apportionment.

(b) Qualified employment positions does not include those persons hired in excess of the ratio of one employee per required dollar of investment for which a deferral is granted. In the event an employee is either voluntarily or involuntarily separated from employment, the employment position will be considered filled if the employer is either training or actively recruiting a replacement employee so long as the position is not actually vacant for any period in excess of thirty consecutive days.

(30) **Apportionment of costs between qualifying and nonqualifying investments.** The deferral is allowable only in respect to investment in the construction of a new building or the expansion or renovation of existing buildings directly used in manufacturing activities, and directly used in the activities performed by research and development laboratories.

(a) Where a building(s) is used partly for manufacturing or research and development and partly for purposes, which do not qualify for deferral under this rule, the deferral will be determined by apportionment of the total project costs. The applicable tax deferral will be determined by apportionment according to the ratio the construction cost per square foot of that portion of the building(s) directly used for manufacturing or research and development purposes bears to the construction cost per square foot of the total building(s).

Apportionment formula:

$$\frac{\text{Eligible square feet of building(s)}}{\text{Total square feet of building(s)}} = \text{Percent Eligible}$$

$$\text{Percent Eligible} \times \text{Total Project Costs} = \text{Eligible Costs.}$$

"Total Project Costs" means cost of multipurpose buildings and other improvement costs associated with the deferral

project. Machinery and equipment are not included in this calculation. Common areas, such as hallways and bathrooms, are not included in the square feet figure for either the numerator or the denominator. The cost of the common areas is multiplied by the percent eligible to determine the portion of the common area that is eligible for deferral.

$$\text{Eligible Tax Deferred} = \text{Eligible Cost} \times \text{Tax Rate.}$$

(b) Qualified machinery and equipment is not subject to apportionment.

(31) **Leased equipment.** The amount of tax deferral allowable for leased equipment is the amount of the consideration paid by the recipient to the lessor over the initial term of the lease, excluding any period of extension or option to renew, up to the last date for repayment of the deferred taxes. After that date the recipient must pay the appropriate sales taxes to the lessor for the remaining term of the lease.

(32) **Application procedure and review process.** An application for sales and use tax deferral under this program must be made prior to the initiation of construction and the acquisition of equipment or machinery. Persons who apply after construction is initiated or finished or after acquisition of machinery and equipment are not eligible for the program.

(a) Application forms will be supplied to the applicant by the department upon request. The completed application may be sent by FAX to (360) 586-2163 or mailed to the following address:

State of Washington
 Department of Revenue
 Special Programs
 P.O. Box 448
 Olympia, WA 98507-0448

(b) The department will verify the information contained in the application and either approve or disapprove the application within sixty days. If approved, the department will issue a tax deferral certificate. If disapproved, the department will notify the applicant as to the reason(s) for disapproval. The U.S. Post Office postmark or FAX date will be used as the date of application.

(c) The applicant may seek administrative review of the department's refusal to issue a certificate pursuant to the provisions of WAC 458-20-100, Appeals, small claims and settlements, within thirty days from the date of notice of the department's refusal, or within any extension of such time granted by the department. The filing of a petition for review with the department starts a review of departmental action.

(33) **Unemployment criteria.** For purposes of making application for tax deferral and of approving such applications, the statewide and county unemployment statistics last published by the department will be used to determine eligible areas. The department will update the list of eligible areas by county, on an annual basis.

(34) **Use of the certificate.** A tax deferral certificate issued under this program is for the use of the recipient for deferral of sales and use taxes due on each eligible investment project. Deferral is limited only to investment in qualified buildings or qualified machinery and equipment as defined in Part III. Thus, sales and use taxes cannot be

PERMANENT

deferred on items that do not become part of the qualified buildings, machinery, or equipment.

The tax deferral certificate is to be used in a manner similar to that of a resale certificate as set forth in WAC 458-20-102, Resale certificates. The certificate holder must provide a copy of the tax deferral certificate to the seller at the time goods or services are purchased. The seller will be relieved of the responsibility for collection of the sales or use tax upon presentation of the certificate. The seller must retain a copy of the certificate as part of its permanent records for a period of at least five years. A blanket certificate may be provided by the certificate holder and accepted by the seller covering all such purchases relative to the eligible project. The seller is liable for business and occupation tax on all tax deferral sales. The deferral certificate is to defer the taxes of the recipient. For example, the deferral is not to be used to defer the taxes of the persons with whom the recipient does business, persons the recipient hires, or employees of the recipient.

(35) Project operationally complete. An applicant must provide the department with the estimated cost of the investment project at the time the application is made. Following approval of the application and issuance of a tax deferral certificate, a certificate holder must notify the department, in writing, when the value of the investment project reaches the estimated cost as stated on the tax deferral certificate.

(a) If a certificate holder has reached its level of estimated costs and the project is not operationally complete, the certificate holder may request an amended certificate stating a revised amount upon which the deferral of sales and use taxes is requested. Requests must be mailed or faxed to the department.

(b) The certificate holder must notify the department in writing when the construction project is operationally complete. The department will certify the date on which the project was operationally complete. The recipient of the deferral must maintain the manufacturing or research and development activity for eight years from this date.

(c) The recipient will be notified in writing of the total amount of deferred taxes, the date(s) upon which the deferred taxes must be paid, and any reports required to be submitted in the subsequent years. If the department disallows all or any portion of the amount of sales and use taxes requested for deferral, the recipient may seek administrative review of the department's action pursuant to the provisions of WAC 458-20-100, within thirty days from the date of the notice of disallowance.

(36) Reporting and monitoring procedure. Requirement to submit annual reports. Each recipient of a sales and use tax deferral must submit a report to the department on December 31st of each year during the repayment period until the tax deferral is repaid. The report must be made to the department in a form and manner prescribed by the department. The report must contain information regarding the actual employment related to the project and any other information required by the department. If the recipient fails to submit a report or submits an inadequate or falsified report, the department may declare the amount of deferred taxes out-

standing to be immediately assessed and payable. An inadequate or falsified report is one that contains material omissions or contains knowingly false statements and information.

(37) Repayment of deferred taxes. The recipient must begin paying the deferred taxes in the third year after the date certified by the department as the date on which the construction project has been operationally completed.

(a) The first payment will be due on December 31st of the third calendar year after such certified date, with subsequent annual payments due on December 31st of the following four years, with amounts of payment scheduled as follows:

Repayment Year	Percentage of Deferred Tax Repaid
1 (Year certified operationally complete)	0%
2	0%
3	0%
4	10%
5	15%
6	20%
7	25%
8	30%

(b) The department may authorize an accelerated repayment schedule upon request of the recipient. Interest will not be charged on any taxes deferred under this part during the period of deferral, although other penalties and interest applicable to delinquent excise taxes may be assessed and imposed for any delinquent payments during the repayment period pursuant to chapter 82.32 RCW.

(c) Taxes deferred on the sale or use of labor directly applied in the construction of an investment project for which deferral has been granted need not be repaid, provided eligibility for the granted tax deferral has been perfected by meeting all of the eligibility requirements, based upon the recipient's annual December 31 reports and any other information available to the department. The recipient must establish, by clear and convincing evidence, the value of all construction and installation labor for which repayment of sales tax is sought to be excused. Such evidence must include, but is not limited to: A written, signed, and dated itemized billing from construction/installation contractors or independent third party labor providers which states the value of labor charged separately from the value of materials. This information must be maintained in the recipient's permanent records for the department's review and verification. In the absence of such itemized billings in its permanent records, no recipient may be excused from repayment of sales tax on the value of labor in an amount exceeding thirty percent of its gross construction or installation contract charges. The value of labor for which an excuse from repayment of sales or use tax may be received will not exceed the value which is subject to such taxes under the general provisions of chapters 82.08 and 82.12 RCW.

(d) Failure of investment project to satisfy general conditions. If, on the basis of the recipient's annual report or

PERMANENT

other information, including that submitted by the department of employment security, the department finds that an investment project is not eligible for tax deferral for reasons other than failure to create the required number of qualified employment positions, the department will declare the amount of deferred taxes outstanding to be immediately due. For example, a reason for disqualification would be the facility is not used for a manufacturing or research and development operation.

(e) **Failure of investment project to satisfy required employment positions.** If, on the basis of the recipient's annual report or other information, the department finds that an investment project has been operationally complete for three years and has failed to create the required number of qualified employment positions, the department will assess interest but not penalties, on the deferred taxes for the project. The department will assess interest at the rate provided for delinquent excise taxes under RCW 82.32.050, retroactively to the date of the date of deferral. No penalties will be assessed.

(f) The department of employment security makes and certifies to the department all determinations of employment and wages required under this subsection, per request.

(g) Any action taken by the department to assess interest or disqualify a recipient for tax deferral will be subject to administrative review pursuant to the provisions of WAC 458-20-100, Appeals, small claims and settlements. The filing of a petition for review with the department starts a review of departmental action.

(38) **Debt not extinguished because of insolvency or sale.** Insolvency or other failure of the recipient does not extinguish the debt for deferred taxes nor will the sale, exchange, or other disposition of the recipient's business extinguish the debt for the deferred taxes. Transfer of ownership does not terminate the deferral. The deferral is transferred, subject to the successor meeting the eligibility requirements of this chapter, for the remaining periods of the deferral. Any person who becomes a successor (see WAC 458-20-216) to such investment project will be liable for the full amount of any unpaid, deferred taxes under the same terms and conditions as the original recipient.

(39) **Disclosure of information.** Applications and reports received by the department under chapter 82.60 RCW are not confidential and are subject to disclosure. (RCW 82.60.100.)

WSR 01-12-042
PERMANENT RULES
FOREST PRACTICES BOARD

[Filed May 30, 2001, 3:28 p.m., effective July 1, 2001]

Date of Adoption: May 17, 2001.

Purpose: The Forest Practices Board initiated this rule making because of growing concern that the forest practices rules were not providing adequate protection for salmon and other aquatic resources. The Forest Practices Board and the Department of Natural Resources face many new resource

protection challenges, the most significant of which are the impending and current listings of salmonids under the federal Endangered Species Act (ESA) and water quality-limited waters under the federal Clean Water Act (CWA).

On September 22, 1998, meeting, the Forest Practices Board approved the following goals for this rule package:

1. To provide compliance with the Endangered Species Act for aquatic and riparian-dependent species;
2. To restore and maintain riparian habitat on state and private forest lands to support a harvestable supply of fish;
3. To meet the requirements of the Clean Water Act for water quality on state and private forest lands; and
4. To keep the timber industry economically viable in Washington.

The rules as adopted are based on the Forests and Fish Report (dated April 29, 1999). This report recommended scientifically based changes to the forest practices rules developed through negotiations with the federal agencies responsible for administering the Endangered Species Act and the Clean Water Act, the forestry industry, small landowners, tribal governments, state agencies, and counties. The legislature also strongly encouraged the board to follow the recommendations of the Forests and Fish Report. The legislature found that forest practices rules consistent with the Forests and Fish Report:

(a) Would lead to:

(i) Salmon habitat that meets riparian functions vital to the long-term recovery of salmon on more than sixty thousand miles of streams in this state;

(ii) Identification of forest roads contributing to habitat degradation and corrective action to remedy those problems to protect salmon habitat;

(iii) Increased protection of steep and unstable slopes; and

(iv) The implementation of scientifically based adaptive management and monitoring processes for evaluating the impacts of forest practices on aquatic resources, and a process for amending the forest practices rules to incorporate new information as it becomes available; and

(b) Would lead to the protection of aquatic resources to the maximum extent practicable consistent with maintaining commercial forest management as an economically viable use of lands suitable for that purpose; and

(c) Would provide a regulatory climate and structure more likely to keep landowners from converting forest lands to other uses that would be less desirable for salmon recovery.

The legislature also found that rules consistent with the Forests and Fish Report constitute a comprehensive and coordinated program to provide substantial and sufficient contributions to salmon recovery and water quality enhancement in areas impacted by forest practices and are intended to fully satisfy the requirements of the Endangered Species Act (16 U.S.C. Sec. 1531 et seq.) with respect to incidental take of salmon and other aquatic resources and the Clean Water Act (33 U.S.C. Sec. 1251 et seq.) with respect to nonpoint source pollution attributable to forest practices.

The Forest Practices Board adopted emergency rules based on the Forests and Fish Report that became effective March 20, 2000, and adopted amendments to these emer-

agency rules effective July 3, 2000. These emergency rules will remain in effect until the permanent forest practices rules become effective (RCW 76.09.055). The permanent rules will take effect on July 1, 2001.

A draft environmental impact statement (EIS) analyzing the environmental effects of current rules, the preferred alternative based on the Forests and Fish Report, and a third alternative was published on March 20, 2000. The final EIS was published April 2001. In addition, a small business economic impact statement was published January 22, 2001, and a cost benefit analysis was published on February 21, 2001.

Revisions to the permanent rule proposal were made based on the public review process of the EIS and the proposed rule package, experience from implementing the forest and fish emergency rules, consensus based recommendations developed in negotiations with stakeholders, and public comments and discussions at board meetings. All final rule amendments were designed to achieve greater consistency with the Forests and Fish Report.

At the direction of the legislature in RCW 76.13.130, the board adopted an exemption from the riparian rules for small landowners (WAC 222-30-023 and 222-16-010(3)) that deviated from the Forests and Fish Report on which the riparian rules are based. Compliance with these sections does not ensure compliance with the ESA and CWA. The anticipated effects of these rules include increased protection for aquatic resources, as well as better overall protection of public resources while maintaining a viable forest products industry.

Citation of Existing Rules Affected by this Order: Amending WAC 222-08-020 Orientation and training, 222-08-030 Reporting procedures, 222-08-035 Continuing review of forest practices rules, 222-10-010 Policies and authorities, 222-10-041 Northern spotted owls, 222-12-010 Authority, 222-12-020 Rule sections, 222-12-030 Classes of forest practices, 222-12-040 Alternate plans—Policy, 222-12-045 Adaptive management program, 222-12-046 Cumulative effects, 222-12-050 Notices to comply—Stop work orders, 222-12-070 Enforcement policy, 222-12-090 Forest practices board manual, 222-16-010 General definitions, 222-16-030 Water typing system, 222-16-035 Wetland typing system, 222-16-050 Classes of forest practices, 222-16-070 Pesticide uses with the potential for a substantial impact on the environment, 222-16-080 Critical habitats (state) of threatened and endangered species, 222-16-100 Planning options for the northern spotted owl, 222-16-105 Cooperative habitat enhancement agreements, 222-20-010 Applications and notifications—Policy, 222-20-020 Application time limits, 222-20-040 Approval conditions, 222-20-050 Conversion to nonforest use, 222-20-070 Emergency forest practices, 222-20-080 Application and notification expiration, 222-20-100 Notice to parks and OAH, 222-22-070 Prescription recommendation, 222-22-080 Approval of watershed analysis, 222-22-090 Use and review of watershed analysis, 222-22-100 Application review prior to watershed analysis, 222-24-010 Policy, 222-24-020 Road location and design, 222-24-030 Road construction, 222-24-035 Landing location and construction, 222-24-040 Water crossing structures, 222-24-050 Road maintenance and abandonment, 222-24-060 Rock quarries, gravel pits, borrow pits, and spoil disposal areas, 222-30-010 Policy—Timber harvesting, 222-30-020 Harvest

unit planning and design, 222-30-025 Even-aged harvest—Size and timing, 222-30-030 Stream bank integrity, 222-30-040 Shade requirements to maintain water temperature, 222-30-050 Felling and bucking, 222-30-060 Cable yarding, 222-30-070 Ground-based logging systems, 222-30-100 Slash disposal or prescribed burning, 222-30-110 Timber harvesting on islands, 222-34-040 Site preparation and rehabilitation, 222-38-010 Policy—Forest chemicals, 222-38-020 Handling, storage, and application of pesticides, 222-38-030 Handling, storage, and application of fertilizers, 222-38-040 Handling, storage, and application of other forest chemicals, 222-46-030 Notice to comply, 222-46-040 Stop work orders, 222-46-060 Civil penalties, 222-46-070 Injunctions, civil suits, disapprovals, 222-50-010 Policy, 222-50-020 Other agency requirements, 222-50-030 Interagency agreements, 222-50-040 Safety and health, 222-50-050 Forest fire prevention and suppression, and 222-50-060 Other regulatory programs administered by the department; new sections WAC 222-10-030 SEPA policies for potentially unstable slopes and landforms, 222-10-035 Watershed analysis SEPA policies, 222-10-125 Exemption from RCW 43.21C.030 (2)(c), 222-12-0401 Alternate plans—Process, 222-12-0402 Assistance available for small forest landowners, 222-12-0403 Cooperative development of alternate plan board manual, 222-12-0404 Cooperation for effective alternate planning, 222-12-0405 Auditing and monitoring, 222-12-041 Use of approved state and federal conservation agreements for aquatic resources, 222-12-044 Cooperative opportunities, 222-16-031 Interim water typing system, 222-16-036 Wetland mapping, 222-16-051 Exception to Class IV—Special, 222-20-015 Multiyear permits, 222-20-055 Continuing forest land obligations, 222-21-005 Policy, 222-21-010 Definitions, 222-21-020 Criteria for accepting riparian easement, 222-21-030 Document standards, 222-21-035 Description of easement, 222-21-040 Timber cruises, 222-21-045 Valuation, 222-21-050 Payment of compensation, 222-21-060 Commercially reasonable harvest, 222-21-065 Uneconomic to harvest, 222-21-070 Blowdown and salvage, 222-21-080 Eminent domain, 222-21-090 Internal Department of Natural Resources review of small forest landowner office compensation decisions, 222-22-075 Monitoring, 222-22-076 Restoration, 222-23-010 Policy and definitions, 222-23-020 Submitting and processing of applications for the riparian open space program, 222-23-025 Priorities for conveyances; use of lands conveyed, 222-23-030 Conveyance forms and procedure, 222-24-015 Construction in wetlands, 222-24-026 Temporary roads, 222-24-051 Road maintenance schedule, 222-24-052 Road maintenance, 222-30-021 Western Washington riparian management zones, 222-30-022 Eastern Washington riparian management zones, 222-30-023 Riparian management zones for exempt 20-acre parcels, 222-30-045 Salvage logging within riparian management zones, 222-46-012 Representatives on inspections and 222-46-090 Financial assurances; and repealing 222-24-025 Road design.

Statutory Authority for Adoption: Chapter 34.05 RCW, RCW 76.09.040, 76.09.050, 76.09.370, 76.13.120(9).

Adopted under notice filed as WSR 01-07-117 on March 21, 2001.

Changes Other than Editing from Proposed to Adopted Version: WAC 222-08-035(4) Compliance monitoring, the

Forests and Fish Report under schedule L (key questions) asks "Are forest practices being conducted in compliance with the rules?" The addition of subsection (4) addresses this question by outlining the department's responsibilities to determine whether forest practices rules are being implemented on the ground. Compliance monitoring is required in Appendix L, I.(c), Adaptive management, of the Forests and Fish Report.

WAC 222-10-030(5) SEPA policies, language was added to clarify that three years field experience is always required.

WAC 222-12-040 (1) and (5) Alternate plans, added board manual reference.

WAC 222-12-0402 Assistance for small forest landowners, added board manual reference.

WAC 222-12-0403 Cooperative development, added board manual reference.

WAC 222-12-0405(1) Audits, additional language was added to clarify that performance reports are not required for all alternate plans.

WAC 222-12-045 Adaptive management, adds detail to the adaptive management program to clarify responsibilities, roles, and procedures instead of deferring to the board manual. Adds a subsection defining the process for bringing proposed rule changes to the board. Added a subsection on the dispute resolution process.

WAC 222-12-046 (3)(b) Cumulative effects, changed WAC reference.

WAC 222-12-046 Cumulative effects, instead of deleting former subsection (4), the paragraphing was changed so that former subsection (4) becomes a stand-alone statement that more accurately identifies the cumulative effects response to cultural resources and wildlife resource issues.

WAC 222-16-010 Bankfull depth, added reference to board manual; bankfull width, added reference to board manual and changed language from salt water to tidal water for accuracy; channel migration zone, added reference to board manual; drainage structure, cross-drains were changed to drainage structures because it is a more inclusive term; flood level 100 year, added reference to board manual; fish passage, Option 1 was chosen to be consistent with the WDFW hydraulics code, which has a definition for fish passage; stream adjacent parallel roads, the board selected Option 1 for the definition of "Stream Adjacent Parallel Roads" because the decision to provide additional protections were added in chapters 222-24 and 222-30 WAC (see description of changes below); even-aged harvest, added WAC reference; headwater spring, the addition of the word *perennial* was added to be consistent with the definition of headwater spring listed under sensitive sites; riparian management zone, the language *outer edge of* was added to define where protection begins on Type S or F Waters for the definition of bankfull width and CMZ; site class, eastern Washington site class table, for site class V the 100-year site index range was modified to read ≤ 60 ; site class, added *50-year or* to match the table.

WAC 222-16-030(2) Type F water, the change clarifies that Type F waters do not include Type S waters.

WAC 222-16-030 (5)(f) Channel width and gradient, added board manual reference.

WAC 222-16-031 Electro shocking, Option 1 was selected for defining "Type 3 water." Option 1 provides a reference to the board manual and the option of electro shocking to determine fish use. The board discussed the issue of electro shocking and that a permit from WDFW and NMFS is required and these are not easy to obtain. It was felt that this option will rarely be used, however, there would be times when it is appropriate because this interim water typing system in some cases over-predicts fish use and electro shocking is a necessary tool until the water typing model is available. This option provides the landowner with an alternative that would not be possible under Option 2; Type 4 and 5 waters, Option 1 was selected for defining "Type 4 & 5 waters." Although there was some discussion that there was a loss of protection for Type 4 streams under Option 1 others felt that buffers at the perennial initiation point were more effective for amphibian protection. The acreage reference could be changed through adaptive management if needed.

WAC 222-16-031 (4) and (5) Interim water typing system, Type 4 water, Type 5 water, the water typing was changed to the 1-5 water typing classification system to be consistent with the interim water typing system.

WAC 222-16-050(1) Class IV - special, a WAC reference was added for the exception for HCPs and other conservation agreements.

WAC 222-16-050 (3)(n) Class I, for consistency these changes reflect global changes to the new water typing system and the definition of ordinary high water mark to bankfull width.

WAC 222-16-051 Exception to Class IV - special, this section was added so that the use of approved HCPs and other conservation agreements allowed in WAC 222-12-041 would work correctly.

WAC 222-16-080 Critical habitat, Option 1 was chosen with modification to match the language in WAC 222-12-041 that provides the opportunity for public comment and scientific review.

WAC 222-20-010(9) An operator's name, changed WAC reference.

WAC 222-21-010(7) Definitions, the percentages were changed to reflect the RMZ forgone sales in the small business economic impact statement. The last sentence has been struck because the small business economic impact statement has been prepared.

WAC 222-21-020(1) Criteria for accepting riparian easement, the requirement for a final approved application was inserted to match current legislative language. Some changes to this section will be necessary when HB 2105 becomes effective in mid July 2001.

WAC 222-21-020 (3)(b) Criteria for accepting riparian easement, language has been moved to WAC 222-21-035(5).

WAC 222-21-045 Valuation, the valuation method was changed to make it consistent with statute.

WAC 222-21-050 (1)(a) Payment of compensation, the percentages were changed to reflect the RMZ forgone sales. See change to WAC 222-21-010(7).

WAC 222-21-065 Uneconomic to harvest, this change required the proposed timber harvest to meet all of the requirements in this section.

WAC 222-23-025 Riparian open space program, Option 2 was selected with modifications. Language was added clarifying the legislative purpose. *Not in priority order* was added to allow the greatest flexibility for managing the program. The additional language in the last sentence indicates the Forest Practices Board may recommend amendments in its report to the legislature to accomplish the goals of this program. The process for prioritizing applications is simplified. There was also a change in wording to clarify affected Indian tribes.

WAC 222-24-020(2) Road location and design, sensitive sites and equipment limitation zones were added for greater protection.

WAC 222-24-020(16) Ditch diversion, a sentence was added to give direction on stream-adjacent parallel roads. The language specifies the placement of relief culverts to minimize sediment delivery to streams.

WAC 222-24-035(1) Landing location and construction, equipment limitation zones were added as a place where landings would not be located.

WAC 222-24-035 [(2)](e) Landing construction, Type A and B wetlands were removed from this list because excavation activities would not be occurring in these areas.

WAC 222-24-040 (1)(d) Water crossing structures, reference to board manual was added.

WAC 222-24-040 (1)(f) Water crossing structures, subsection (f) was added to direct the placement of wood to minimize obstruction of fish passage and avoid sediment delivery to streams.

WAC 222-24-040 (3)(c) Culvert installation for Type Np and Ns waters, a few words were added to the end of the last sentence to clarify that culverts will meet the design standards set in (a) and (b) of this subsection.

WAC 222-24-040 (4)(d)(iii) Temporary water crossing in Type Np and Ns waters, additional language was added to clarify that temporary water crossing removal dates could be extended as long as the extended date results in equivalent levels of resource protection.

WAC 222-24-050(1) Road maintenance and abandonment, this language was struck because it already exists in WAC 222-24-050.

WAC 222-24-051 (5)(b) and (c) Road maintenance schedule, these were added to define the criteria for road maintenance and abandonment plans.

WAC 222-24-051 (5)(e) Road maintenance schedule, includes ditches as something to pay attention to in the road maintenance and abandonment plan for sediment delivery to streams.

WAC 222-24-051 (6)(b) Road maintenance schedule, this change reflects the department wanting a detailed description of the first year's work, not the first five years, understanding that landowners have a better idea of what will happen in the first year and planning for the additional work in the next fifteen years.

WAC 222-24-052 (1)(h) Road maintenance, subsection (h) was added to direct the placement of down wood on

stream adjacent parallel roads during the regular course of road maintenance.

WAC 222-24-060 (3) and (6)(a) Pit drainage, this language was added for clarification reasons.

WAC 222-30-010 Policy—Timber harvesting, this note was struck because this language was placed in subsection (4).

WAC 222-30-020(7) Harvest unit planning and design, reference to the board manual was added.

WAC 222-30-020(11) Wildlife reserve tree management, Option 1 was chosen, which is the old definition for the boundary between eastern and western Washington. The requirement for leave trees per acre was affected by the new definition, which split eastern and western Washington by the Cascade Crest boundary. This change was necessary so that the leave tree requirements would remain the same.

WAC 222-30-020 (12) and (13) Channel migration zone and bankfull width, a reference to the hydraulic code was added because the area in a channel migration zone and the bankfull width are regulated by the Department of Fish and Wildlife.

WAC 222-30-021 (1)(b)(ii) Hardwood conversion in the inner zone, this language was dropped because it was a duplicate of the language in (i) of this subsection.

WAC 222-30-021 (1)(b)(ii)(A) and (B) Harvest options, titles were added to clarify these sections.

WAC 222-30-021(2) Western Washington protection for Type Np and Ns waters, the word *protection* was added for clarification.

WAC 222-30-021 (2)(a) Equipment limitation zone, this was modified to clearly define the equipment limitation zone.

WAC 222-30-021 (2)(b) Sensitive sites and RMZs protection along Type Np waters, the words *Type Np RMZs* were added to clarify that these areas need protection, and is consistent with the language in the title.

WAC 222-30-022 (1)(b)(iv)(A) and (B) Eastern Washington RMZs on Type S and F waters, a number of board manual references were added.

WAC 222-30-022 (1)(d)(ii) Eastern Washington RMZs on Type S and F waters, a board manual reference was corrected.

WAC 222-30-022 (2)(c)(i)(A) and (B) Stream adjacent parallel road for Type Np waters, the word *management* was added to be consistent with the language used throughout this rule package.

WAC 222-30-023(4) Riparian management zones for exempt 20-acre parcels, subsection (4) was added to define the RMZ for 20-acre exemption, which is consistent with the 1998 definition.

WAC 222-30-025 (6)(a)(i) Even aged harvest—Size and timing, WAC reference was changed.

Number of Sections Adopted in Order to Comply with Federal Statute: New 44, Amended 65, Repealed 1; Federal Rules or Standards: New 44, Amended 65, Repealed 1; or Recently Enacted State Statutes: New 44, Amended 65, Repealed 1.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 22, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 44, Amended 65, Repealed 1.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 20, Amended 20, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 44, Amended 65, Repealed 1; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: July 1, 2001.

May 29, 2001

Pat McElroy

AMENDATORY SECTION (Amending Order 263, filed 6/16/76)

WAC 222-08-020 Orientation and training. The department shall be responsible for a continuing program of orientation and training, relating to forest practices and ~~((regulation))~~ rules thereof, pursuant to RCW 76.09.250. Such program shall include:

(1) **Investigation of current** developments in and practical applications of forest resources and related technology.

(2) **Continuing training** of department personnel in the current status of forest resources technology and related disciplines.

(3) **Dissemination of information** on current forest practice technology to the public, in a manner determined by the department to be effective.

AMENDATORY SECTION (Amending WSR 94-01-134, filed 12/20/93, effective 1/1/94)

WAC 222-08-030 Reporting procedures. The department shall:

(1) **Survey and identify** all silviculturally related non-point sources of pollution and related control programs in the state,

(2) **Prepare an analysis** of the above activities and programs, and

(3) **Report and recommend** to the forest practices board and to the governor additional rules ~~((and regulations))~~, procedures and/or methods necessary for the control of such sources to the extent feasible.

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-08-035 Continuing review of forest practices ~~((regulations))~~ rules. *(1) Annual evaluations. The department, after consulting with affected state agencies, Indian tribes, forest landowners, fish and wildlife, natural resources, and environmental interest groups, shall beginning July 1, 1988, report annually to the forest practices board an assessment of how ~~((regulations))~~ the rules and voluntary processes are working.

* (2) Adaptive management program. ~~((The department is directed to report to the board on opportunities to modify~~

~~these regulations when baseline data, monitoring, evaluation or the use of interdisciplinary teams show that such adaptive management will better meet the purposes and policies of the Forest Practices Act.))~~ The adaptive management program will be used to determine the effectiveness of forest practices rules in aiding the state's salmon recovery effort and provide recommendations to the board on proposed changes to forest practices rules to meet timber industry viability and salmon recovery. The program provides assurances that rules and guidance not meeting aquatic resource objectives will be modified in a streamlined and timely manner. The board may also use this program to adjust other forest practice rules and guidance in order to further the purposes of chapter 76.09 RCW. The specific components of the adaptive management program are set forth in WAC 222-12-045.

(3) Resource management plans. The department is directed to develop a method for cooperative voluntary resource management planning among forest landowners, governmental agencies, affected Indian tribes, and environmental groups which would result in the development of plans which might be used as an alternative to the forest practice ~~((regulations))~~ rules in achieving the purposes and policies set forth in the act. This should be done through pilot projects, at least one of which should be located on the east side of the Cascade summit and one on the west side of the Cascade summit.

(4) Compliance monitoring. The department shall conduct compliance monitoring that addresses the following key question: "Are forest practices being conducted in compliance with the rules?" The department shall provide statistically sound, biennial compliance audits and monitoring reports to the board for consideration and support of rule and guidance analysis. Compliance monitoring shall determine whether forest practices rules are being implemented on the ground. An infrastructure to support compliance will include adequate compliance monitoring, enforcement, training, education and budget.

AMENDATORY SECTION (Amending Order 429, Resolution No. 8-8-84, filed 8/29/84, effective 10/1/84)

WAC 222-10-010 Policies and authorities. (1) This chapter is promulgated pursuant to the authority granted in RCW 76.09.010, 43.21C.120 and chapter 197-11 WAC.

(2) The forest practices board, according to RCW 76.09.040, possesses the authority to promulgate forest practices ~~((regulations))~~ rules establishing minimum standards for forest practices and setting forth necessary administrative provisions.

(3) The forest practices board adopts by reference the policies of SEPA as set forth in RCW 43.21C.020.

(4) A ~~((Class IV Special))~~ forest practices ~~((approval))~~ application or notification which requires a threshold determination will be conditioned when necessary to mitigate specific adverse impacts which are identified in the environmental documents prepared under SEPA. An application ~~((for a Class IV Special forest practice))~~ or notification will be denied when the proposal would result in significant adverse impacts identified in a final or supplemental

PERMANENT

environmental impact statement prepared under SEPA, and reasonable mitigation measures are insufficient to mitigate the identified impacts and denial is consistent with all provisions of the acts cited in subsection (1) of this section.

(5) **SEPA policies** and procedures (~~required for administration of Class IV Special forest practices~~) shall be implemented by the department of natural resources.

NEW SECTION

WAC 222-10-030 *SEPA policies for potentially unstable slopes and landforms. In addition to SEPA policies established elsewhere in this chapter, the following policies apply to forest practices described in WAC 222-16-050 (1)(d) relating to construction or harvest on potentially unstable slopes or landforms.

(1) In order to determine whether such forest practices are likely to have a probable significant adverse impact, and therefore require an environmental impact statement, the applicant must submit the following additional information, prepared by a qualified expert. The expert must describe the potentially unstable landforms in and around the application site, and analyze:

(a) The likelihood that the proposed forest practices will cause movement on the potentially unstable slopes or landforms, or contribute to further movement of a potentially unstable slope or landform;

(b) The likelihood of delivery of sediment or debris to any public resources, or in a manner that would threaten public safety; and

(c) Any possible mitigation for the identified hazards and risks.

(2) The department's threshold determination will include an evaluation of whether the proposed forest practices:

(a) Are likely to increase the probability of a mass movement on or near the site;

(b) Would deliver sediment or debris to a public resource or would deliver sediment or debris in a manner that would threaten public safety; and

(c) Such movement and delivery are likely to cause significant adverse impacts.

If the department determines that (a), (b) and (c) of this subsection are likely to occur, then the forest practice is likely to have a probable significant adverse impact.

(3) The department will evaluate the proposal, using appropriate expertise and in consultation with other affected agencies and Indian tribes.

(4) Specific mitigation measures or conditions must be designed to avoid accelerating rates and magnitudes of mass wasting that could deliver sediment or debris to a public resource or could deliver sediment or debris in a manner that would threaten public safety.

(5) Qualified expert for the purposes of this section means a person with a master's degree in geology or geomorphology or a related field or a significant amount of postgraduate course or thesis work or other training in geomorphology or mass movement and, in either case, an additional 3

years of field experience in the evaluation of relevant problems in forested lands.

NEW SECTION

WAC 222-10-035 *Watershed analysis SEPA policies. When the department considers a watershed analysis for approval as in WAC 222-22-080, the department will perform a review under SEPA as a nonproject proposal. When making the threshold determination for a watershed analysis, the department shall only make a determination of significance if, when compared to rules or prescriptions in place at the time of the analysis or the 5-year review, the prescriptions will cause a probable significant adverse impact on elements of the environment other than those addressed in the watershed analysis process.

AMENDATORY SECTION (Amending WSR 96-12-038, filed 5/31/96, effective 7/1/96)

WAC 222-10-041 Northern spotted owls. The effective date of this section is July 1, 1996. The following policies shall apply to forest practices subject to SEPA if the forest practices may cause adverse impacts to northern spotted owls.

(1) **In SOSEAs or areas of SOSEAs where the goal is demographic support,** suitable spotted owl habitat should be maintained either to protect the viability of the owl(s) associated with each northern spotted owl site center or to provide demographic support for that particular SOSEA as described in the SOSEA goals.

(2) **In SOSEAs or areas of SOSEAs where the goal is dispersal support,** either suitable spotted owl habitat should be maintained to protect the viability of the owl(s) associated with each northern spotted owl site center or dispersal habitat should be managed, over time, to provide the dispersal support for that particular SOSEA as described in the SOSEA goals. Dispersal support is provided by a landscape which includes dispersal habitat at the stand level interspersed with areas of higher quality habitat. Stands of dispersal habitat should be managed to reduce gaps between stands and to maintain a sufficient level of dispersal habitat to meet the SOSEA goals over time.

(3) **In SOSEAs or areas of SOSEAs where the goal is a combination of dispersal support and demographic support,** either suitable spotted owl habitat should be maintained to protect the viability of the owl(s) associated with each northern spotted owl site center or a variety of habitat conditions should be provided which in total are more than dispersal support and less than demographic support. This can be accomplished by providing:

(a) Dispersal support as described in subsection (2) of this section;

(b) Areas of suitable spotted owl habitat that contain some opportunities for nesting as well as roosting and foraging habitat; and

(c) Connectivity between areas of SOSEAs designated for demographic support or adjacent federal lands which are

designated as late successional reserves, congressionally reserved areas, or administratively withdrawn areas.

(4) **Within SOSEAs**, the following amounts of suitable habitat are generally assumed to be necessary to maintain the viability of the owl(s) associated with each northern spotted owl site center, in the absence of more specific data or a mitigation plan, as provided for in subsections (6) and (7) of this section respectively:

(a) All suitable spotted owl habitat within 0.7 mile of each northern spotted owl site center;

(b) Including the suitable spotted owl habitat identified in (a) of this subsection:

(i) For the Hoh-Clearwater/Coastal Link SOSEA - A total of 5,863 acres of suitable spotted owl habitat within the median home range circle (2.7 mile radius).

(ii) For all other SOSEAs - A total of 2,605 acres of suitable spotted owl habitat within the median home range circle (1.8 mile radius).

The department shall first identify the highest quality suitable spotted owl habitat for this purpose. Consideration shall be given to habitat quality, proximity to the activity center and contiguity in selecting the most suitable habitat. Suitable spotted owl habitat identified outside 0.7 mile of a northern spotted owl site center may support more than one median home range circle.

Suitable spotted owl habitat harvested by a landowner shall continue to be counted as part of the total acres necessary under (b) of this subsection for other landowners within the median home range circle if the harvest is conducted pursuant to agreements or plans approved under subsection (6) of this section or WAC 222-16-080 (1)(h)(iv), (6)(a)(~~(b)~~) (iv), or (~~(e)~~) (f).

(5) **Outside SOSEAs**, during the nesting season (between March 1 and August 31), seventy acres of the highest quality suitable spotted owl habitat surrounding a northern spotted owl site center should be maintained. The seventy acres for one site center shall not be utilized for meeting suitable habitat needs of any other site center.

(6) The assumptions set forth in subsection (4) of this section are based on regional data. Applicants or others may submit information that is more current, accurate, or specific to a northern spotted owl site center, proposal, or SOSEA circumstances or goals. The department shall use such information in making its determinations under this section where the department finds, in consultation with the department of fish and wildlife, that the information is more likely to be valid for the particular circumstances than the assumptions established under subsection (4) of this section. If the department does not use the information, it shall explain its reasons in writing to the applicant.

(7) The department shall consider measures to mitigate identified adverse impacts of an applicant's proposal. Mitigation measures must contribute to the achievement of SOSEA goals or to supporting the viability of impacted northern spotted owl site centers.

NEW SECTION

WAC 222-10-125 Exemption from RCW 43.21C.030 (2)(c). Decisions pertaining to the following are not subject to any procedural requirements implementing RCW 43.21C.030 (2)(c): Approval of forest road maintenance and abandonment plans, approval of future timber harvest schedules involving east-side clear cuts, acquisitions of forest lands in the riparian open space program; and acquisitions of conservation easements pertaining to forest lands in riparian zones under the forest riparian easement program.

AMENDATORY SECTION (Amending Order 263, filed 6/16/76)

WAC 222-12-010 Authority. These forest practices (~~(regulations)~~) rules are adopted pursuant to chapter 76.09 RCW, RCW 76.13.100 through 76.13.130, and RCW 77.85.180 through 77.85.190. Where necessary to accomplish the purposes and policies stated in the act, the board is authorized to promulgate forest practices (~~(regulations establishing minimum standards for forest practices and setting forth necessary administrative provisions,)~~) rules pursuant to chapter (~~(34.04)~~) 34.05 RCW and in accordance with the procedures enumerated in the act. These rules establish minimum standards for forest practices, provide procedures for the voluntary development of resource management plans, set forth necessary administrative provisions, establish procedures for the collection and administration of forest practice fees, allow for the development of watershed analyses, and establish the riparian open space program. The board also establishes which forest practices will be included within each class and is authorized to adopt rules under RCW 76.09.055, 76.09.370, and 76.13.120(9).

Promulgation of all forest practices (~~(regulations)~~) rules shall be accomplished so that compliance with such forest practices (~~(regulations)~~) rules will achieve compliance with the water quality laws.

Those (~~(regulations)~~) rules marked with an asterisk (*) pertain to water quality protection; pursuant to RCW 76.09.040 they (~~(will also be adopted by the department of ecology and)~~) can be amended only by agreement between the board and the department of ecology.

Forest practices (~~(regulations)~~) rules shall be administered and enforced by the department except as otherwise provided in the act. Such (~~(regulations)~~) rules shall be administered so as to give consideration to all purposes and policies set forth in RCW 76.09.010.

AMENDATORY SECTION (Amending WSR 94-01-134, filed 12/20/93, effective 1/1/94)

WAC 222-12-020 ((Regulation) Rule sections. These (~~(regulations)~~) rules are organized as follows:

Chapter 222-08 WAC	Practices and procedures.
Chapter 222-10 WAC	State Environmental Policy Act Guidelines.
Chapter 222-12 WAC	Policy and organization.
Chapter 222-16 WAC	Definitions.

PERMANENT

Chapter 222-20 WAC	Application and notification procedures.
<u>Chapter 222-21 WAC</u>	<u>Small forest landowner forestry riparian easement program.</u>
Chapter 222-22 WAC	Watershed analysis.
<u>Chapter 222-23 WAC</u>	<u>Riparian open space program.</u>
Chapter 222-24 WAC	Road construction and maintenance.
Chapter 222-30 WAC	Timber harvesting.
Chapter 222-34 WAC	Reforestation.
Chapter 222-38 WAC	Forest chemicals.
Chapter 222-42 WAC	Supplemental directives.
Chapter 222-46 WAC	Consultation and enforcement.
Chapter 222-50 WAC	Relationship to other laws and ((regulations)) rules.

AMENDATORY SECTION (Amending Order 535, filed 11/16/87, effective 1/1/88)

WAC 222-12-030 Classes of forest practices. Forest practices are divided into four classes as specified by RCW 76.09.050. In certain emergencies, as defined in RCW 76.09.060(7), the application or notification may be submitted within 48 hours after commencement of the practice.

(1) **Class I forest practices** require no application or notification, but do require compliance with all other forest practices ~~((regulations))~~ rules.

(2) **Class II forest practices** require a notification to the department, and may begin 5 calendar days (or such lesser time as the department may determine) after receipt of a notification by the department ~~((of the notification))~~.

(3) **Class III forest practices** ~~((require an application which))~~ must be approved or disapproved within 30 or fewer calendar days of receipt of an application by the department. The department is directed to approve or disapprove within 14 calendar days Class III applications not requiring additional field review. Multiyear applications must be approved or disapproved within 45 days of receipt of an application by the department.

(4) **Class IV forest practices** are divided into "Class IV - special," and "Class IV - general," and ~~((require an application to the department which))~~ must be approved or disapproved within 30 calendar days of receipt of an application by the department, except that if a detailed environmental statement is necessary, additional time for approval or disapproval as specified in RCW 76.09.050 will be required.

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-12-040 *Alternate plans—Policy. ~~((All forest practice operations must comply with the act and further with the rules promulgated pursuant to the act, unless an alternate plan has been approved by the department. An applicant may submit an alternate plan for any or all of the activities described in the application. The department may~~

~~approve an application which departs from the specific provisions of chapters 222-22 through 222-38 WAC, provided that the plan must, in the determination of the department, equal or exceed the protection of public resources as provided in the Forest Practice00s Act and rules and regulations. The department shall provide an opportunity for comment to the departments of fish and wildlife, ecology, other state agencies, and affected Indian tribes prior to approval of any alternate plan.))~~ All forest practice operations must comply with both the act and the rules promulgated pursuant to the act, unless an alternate plan has been approved by the department.

(1) The alternate plan process can be used as a tool to deal with a variety of situations, including where the cumulative impacts of regulations disproportionately impact a landowner. In some instances an alternate plan may be used to make minor on-the-ground modifications, which result in significant operation efficiencies. The alternate plan process may be used to address circumstances where a landowner has an economically inaccessible unit. The alternate plan process may also be used to facilitate voluntary landscape, riparian or stream restoration. In all cases, the alternate planning process will result in a plan that provides protection to public resources at least equal in overall effectiveness as provided by the act and rules while seeking to minimize constraints to the management of the affected lands.

(2) The legislature has found in RCW 76.13.100(2) that small forest landowners should also have the option of alternate management plans or alternate harvest restrictions on smaller harvest units that may have a relatively low impact on aquatic resources. These alternate plans are intended to provide flexibility to small forest landowners that will still provide protection of riparian functions based on specific field conditions or stream conditions on the landowner's property.

(3) Alternate plans do not replace other rules that recognize different types of landowner plans. See e.g., WAC 222-08-035(3), 222-12-041, 222-16-080(6), 222-16-100(1), and 222-16-105.

(4) Landowners are encouraged to communicate with the departments of ecology, fish and wildlife, affected Indian tribes, the National Marine Fisheries Service, the United States Fish and Wildlife Service and other interested parties prior to submission of an application accompanied by an alternate plan.

NEW SECTION

WAC 222-12-0401 *Alternate plans—Process. (1) Application. A landowner may submit an alternate plan that departs from the specific provisions of chapters 222-22 through 222-38 WAC for any or all of the activities described in the application. Alternate plans must be submitted with either a two-year or multiyear application. Alternate plans may support a single forest practices application or multiple applications if the sites included in the plan have sufficient common physical characteristics and elements to justify being considered together. See *board manual* section 21.

(2) Plan preparation. The landowner is responsible for preparing and submitting an alternate plan. Small forest landowners may wish to seek the assistance of the small forest landowner office. See WAC 222-12-0402.

(3) Contents of alternate plans. Alternate plans must contain all of the following:

(a) A map of the area covered, at a scale acceptable to the department showing the location of any affected streams and other waters, wetlands, unstable slopes, and existing roads. The map must also show the location of proposed road construction, timber harvest, and other forest practices;

(b) A description of how the alternate plan provides public resource protection to meet the approval standard, including a description of the proposed alternate management strategy, prescriptions, and where applicable, aquatic resource enhancements;

(c) A list of the forest practices rules that the alternate management plan is intended to replace;

(d) Where applicable, descriptions of monitoring and adaptive management strategies, including landowner plans for annual performance reviews;

(e) Where applicable, descriptions of an implementation schedule; and

(f) When multiple forest practices applications are submitted with the same alternate plan or when an alternate plan has been used for previous applications, justification that the sites included in the plan share sufficient common physical characteristics and elements to be considered together.

(4) Review of proposed plan. Upon receipt of a forest practices application together with an alternate plan, the department will do all of the following:

(a) Appoint an interdisciplinary team.

(b) Establish a deadline for completion of the interdisciplinary team review that is consistent with the requirements of subsection (5) of this rule; and

(c) Within 5 business days of receipt of an application with an alternate plan, provide copies of the application and alternate plan to the departments of ecology and fish and wildlife, affected Indian tribes, the National Marine Fisheries Service, the United States Fish and Wildlife Service, and other parties that have expressed an interest in alternate plans in the area of the application. If the landowner is a small forest landowner under WAC 222-21-010(11), copies should also be provided to the small forest landowners office.

(5) Interdisciplinary team.

(a) The department will determine the members invited to participate on an interdisciplinary team. Teams will include members with the qualifications necessary to evaluate the alternate plan. A representative of any affected Indian tribe, and departments of ecology and fish and wildlife will be invited to participate. Each team will include a representative of the landowner and a professional forester employed by the department and shall be led by a department employee.

(b) The interdisciplinary team will conduct a site visit and submit a recommendation to the department at least 3 days prior to the expiration of the application time limit in WAC 222-20-020. The interdisciplinary team may submit a recommendation without a site visit if a small forest landowner under WAC 222-21-010(11) submitted the alternate plan using a template contained in the *board manual* and is a low impact alternate plan and the team determines a visit is not necessary to evaluate the site specific application of a template or a low impact alternate plan.

(c) The recommendation of the interdisciplinary team shall indicate whether the alternate plan meets the approval standard, or what revisions are necessary to meet the approval standard. The team is intended to work with the landowner in an attempt to reach consensus on the efficacy of the alternate plan. In the absence of consensus, the team will forward reports reflecting the majority and minority opinions, or the landowner may elect to withdraw or revise the proposal.

(6) Approval standard. An alternate plan must provide protection for public resources at least equal in overall effectiveness to the protection provided in the act and rules.

(7) Approval, conditions, or disapproval. Upon receipt of the interdisciplinary team's recommendation, the department shall determine whether to approve, disapprove, or condition the application based on the approval standard. The department shall give substantial weight to the recommendations of the interdisciplinary team in cases where a consensus recommendation is forwarded. If the department disapproves or conditions a forest practices application with an alternate plan, the department will provide a written statement to the landowner explaining why the application was conditioned or denied.

NEW SECTION

WAC 222-12-0402 *Assistance available for small forest landowners. (1) The small forest landowner office has been established within the department to be a resource and focal point for small forest landowner concerns and policies. A small forest landowner is defined in WAC 222-21-010(11). The legislature recognized that the further reduction in harvestable timber owned by small forest landowners would further erode small forest landowner's economic viability and willingness or ability to keep the lands in forestry use, and, therefore, reduced the amount of habitat available for salmon recovery and conservation of other aquatic resources. The legislature has directed that office to assist small forest landowners in preparing alternate plans appropriate to small forest landowners. See RCW 76.13.100 and 76.13.110(3).

(2) Small forest landowners interested in alternate plans are encouraged to contact the small forest landowner office for assistance in preparing an alternate plan. The office may provide technical assistance in understanding and using the *board manual* for alternate plans (section 21), assistance in developing an individualized alternate plan for the small forest landowner and facilitation of small forest landowner interactions with the department, other state agencies, federal agencies, affected Indian tribes and the interdisciplinary team that may review the small forest landowner's alternate plan.

NEW SECTION

WAC 222-12-0403 *Cooperative development of guidelines for alternate plans. The department will develop the section for alternate plans (WAC 222-12-090(21)) to submit to the board in cooperation with representatives of the small forest landowner office and advisory committee, the departments of ecology and fish and wildlife, United States

Fish and Wildlife Service, National Marine Fisheries Service, and affected Indian tribes.

The manual should include:

(1) As required by RCW 76.13.110(3), the small forest landowner office recommendations for alternate plans or alternate harvest restrictions that meet riparian functions while generally requiring less costly regulatory prescriptions;

(2) The effectiveness of strategies for meeting resource objectives and protecting public resources;

(3) Template prescriptions designed to meet resource objectives to address common situations that are repeatedly addressed in alternate plans or strategies to simplify the development of future plans or strategies, including low impact situations and site-specific physical features;

(4) Appropriate recognition or credit for improving the condition of public resources; and

(5) Criteria to assist the department in determining whether a small forest landowner alternate plan qualifies as a low impact alternate plan.

NEW SECTION

WAC 222-12-0404 *Cooperation for effective alternate planning. The department will work cooperatively with associations representing the interests of large and small forest landowners to develop more efficient alternate planning guidance and processes. In pursuing greater efficiency and technical assistance, the department will consider:

(1) Successful alternate plans, and small forest landowner alternate management strategies and processes that can be used by other small forest landowners as examples of the plan development and approval process;

(2) Auditing and monitoring results;

(3) Maintaining a list of technical experts available to landowners in preparing such plans; and

(4) Partnerships between the department and organizations supporting forest land stewardship principles.

NEW SECTION

WAC 222-12-0405 *Auditing and monitoring. (1) Audits. The department will conduct audits of landowner's compliance with the terms of alternate plans. The department will specifically review and approve each landowner's scheduled performance reports, if a performance report is required, by checking the reports themselves or by implementing a more extensive audit involving field verification. The department audit program for alternate plans will be designed to be consistent with the terms of any agreements with the federal government regarding fish and water quality.

(2) The small landowners office is required by RCW 76.13.110(3) to evaluate the cumulative impact of alternate plans for small forest landowners on essential riparian functions at the subbasin or watershed level. The department will provide the result of this evaluation to the board.

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-12-046 Cumulative effects. The purpose of this section is to identify how the forest practices rules address changes to the environment caused by the interaction of natural ecosystem processes with the effects of two or more forest practices. This interaction is referred to as "cumulative effects." The following approaches have been taken:

(1) Title 222 WAC establishes minimum standards for all forest practices, regardless of the class of forest practice application.

(2) Forest practices which have a potential for a substantial impact on the environment are classified as Class IV-Special or Class IV-General by WAC 222-16-050 and receive an evaluation as to whether or not a detailed statement must be prepared pursuant to chapter 43.21C RCW.

(3) Certain rules are designed to focus on specific aspects of cumulative effects of forest practices. For example:

(a) WAC 222-08-035 requires continuing review of the forest practices (~~(regulations))~~ rules and voluntary processes and adopts the concept of adaptive management. WAC 222-12-045 also adopts adaptive management.

(b) WAC 222-12-040 allows alternate plans that (~~(equal or exceed the protection of public resources as provided in the act and rule))~~ provide protection to public resources at least equal in overall effectiveness to the protection provided in the Forest Practices Act and rules.

(c) WAC (~~(222-24-050(1))~~) 222-24-051 allows the department to require road maintenance and abandonment plans (~~(for those drainages or road systems the department determines based on physical evidence to have a potential to damage public resources))~~.

(d) WAC 222-30-025 addresses harvest unit size and separation requirements.

(e) Chapter 222-22 WAC addresses cumulative effects on the public resources of fish, water, and capital improvements of the state or its political subdivisions.

(f) Chapter 222-46 WAC establishes the enforcement policy for forest practices.

~~((4) The board is considering measures to further protect cultural resources and wildlife resources. The board shall continue consultation with the departments of ecology, fish and wildlife, natural resources, forest landowners, and federally recognized tribes on these resource issues.))~~ The board shall continue consultation with the departments of ecology, fish and wildlife, natural resources, forest landowners, and federally recognized tribes to further protect cultural resources and wildlife resource issues.

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-12-050 Notices to comply—Stop work orders. (1) **Violations.** When a forest practice has been completed, the department may issue a notice to comply requiring the operator or landowner to correct or compensate for damage to public resources where there was:

- (a) A violation of the act, or these rules((:)); or
- (b) A deviation from the approved application((:)); or
- (c) A willful or negligent disregard for potential damage to a public resource.

(2) **Other required action.** When a forest practice has not yet been completed, the department may issue either a notice to comply to the operator and/or landowner, or a stop work order to the operator, requiring him/her to prevent potential or continuing damage to a public resource where:

- (a) The need for additional actions or restrictions has become evident((:)); and
- (b) The department determines that a specific course of action is needed to prevent potential or continuing damage to public resources((:)); and
- (c) The damage would result or is resulting from the forest practices activities, whether or not the activities involve any violation, unauthorized deviation or negligence.

(3) **No notice to comply** shall be issued to require a person to prevent, correct, or compensate for any damage to public resources which occurs more than 1 year after the date of completion of the forest practices operations involved exclusive of reforestation, unless such forest practices were not conducted in accordance with forest practices rules: Provided, That this provision shall not relieve the forest landowner from any obligation to comply with forest practices rules ((and regulations)) pertaining to providing continuing road maintenance.

(4) **No notice to comply** to recover money damages shall be issued more than 2 years after the date the damage involved occurs.

(5) **In emergency action**, where the department requires the operator or landowner to do immediate work in the bed of the stream the department shall first seek approval from the department of fish and wildlife.

AMENDATORY SECTION (Amending Order 263, filed 6/16/76)

WAC 222-12-070 Enforcement policy. Procedures for enforcement of these ((regulations)) rules by the department are provided in chapter 222-46 WAC. Where the department of ecology determines that a person has failed to comply with the forest practices ((regulations)) rules relating to water quality protection, and that the department of natural resources has not issued a stop work order or notice to comply, the department of ecology shall inform the department thereof in writing. If the department of natural resources fails to take authorized enforcement action within 24 hours, under RCW 76.09.080, 76.09.090, 76.09.120 or 76.09.130, the department of ecology may petition to the chairman of the appeals board, who shall, within 48 hours, either deny the petition or direct the department of natural resources to immediately issue a stop work order or a notice to comply or impose a penalty. No civil or criminal penalties shall be imposed for past actions or omissions if such actions or omissions were conducted pursuant to an approval or directive of the department of natural resources.

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-12-090 Forest practices board manual. When approved by the board the manual serves as an advisory technical supplement to these forest practices ((regulations)) rules. The department, in cooperation with the departments of fish and wildlife, agriculture, ecology, and such other agencies, affected Indian tribes, or interested parties as may have appropriate expertise, is directed to prepare, and submit to the board for approval, revisions to the forest practices board manual. The manual shall include:

(1) **Method for determination of adequate shade requirements on streams** needed for use with WAC 222-30-040.

(2) ((The standard methods for measuring channel width, stream gradient and flow which are used in the water typing criteria WAC 222-16-030.)) **Standards for identifying channel migration zones and bankfull channel features.**

(3) ((A chart for establishing recommended permanent culvert sizes and associated data.)) **Guidelines for forest roads.**

(4) **Guidelines** for clearing slash and debris from Type ((4)) **Np** and ((5)) **Ns** Waters.

(5) **Guidelines** for landing location and construction.

(6) **Guidelines** for determining acceptable stocking levels.

(7) **Guidelines** for ((calculating average widths of)) riparian management zones.

(8) **Guidelines** for wetland delineation.

(9) **Guidelines** for wetland replacement or substitution.

(10) A list of nonnative wetland plant species.

(11) The standard methodology, which shall specify the quantitative methods, indices of resource conditions, and definitions, for conducting watershed analysis under chapter 222-22 WAC. The department, in consultation with Timber/Fish/Wildlife's Cooperative Monitoring, Evaluation and Research Committee (CMER), may make minor modifications to the version of the standard methodology approved by the board. Substantial amendments to the standard methodology requires approval by the board.

(12) **Guidelines for forest chemicals.**

(a) A list of special concerns related to aerial application of pesticides developed under WAC 222-16-070(3).

(b) **Guidelines for aerial applications of pesticides and other forest chemicals under chapter 222-38 WAC.**

(13) **Guidelines for determining fish use for the purpose of typing waters under WAC 222-16-031.**

(14) **Survey protocol for marbled murrelets.** The Pacific seabird survey protocol in effect March 1, 1997, shall be used when surveying for marbled murrelets in a stand. Surveys conducted before the effective date of this rule are valid if they were conducted in substantial compliance with generally accepted survey protocols in effect at the beginning of the season in which they were conducted.

(15) The department shall, in consultation with the department of fish and wildlife, develop **platform protocols** for use by applicants in estimating the number of platforms, and by the department in reviewing and classifying forest

practices under WAC 222-16-050. These protocols shall include:

(a) A sampling method to determine platforms per acre in the field;

(b) A method to predict the number of platforms per acre based on information measurable from typical forest inventories. The method shall be derived from regression models or other accepted statistical methodology, and incorporate the best available data; and

(c) Other methods determined to be reliable by the department, in consultation with the department of fish and wildlife.

(16) Guidelines for evaluating potentially unstable slopes and landforms.

(17) Guidelines for the small forest landowner forestry riparian easement program.

(18) Guidelines for riparian open space program.

(19) Guidelines for hardwood conversion.

(20) Guidelines for financial assurances.

(21) Guidelines for alternate plans.

(22) Guidelines for adaptive management program.

(23) Guidelines for field protocol to locate mapped divisions between stream types and perennial stream identification.

(24) Guidelines for interim modification of bull trout habitat overlay.

(25) Guidelines for bull trout presence survey protocol.

(26) Guidelines for placement strategy for woody debris in streams.

NEW SECTION

WAC 222-12-041 Use of approved state and federal conservation agreements for aquatic resources. (1) Forest practices consistent with an agreement described in subsection (3) below are exempt from the forest practices rules in chapters 222-22 through 222-38 WAC if the following criteria are met:

(a) The forest practices rule pertains to a species included within aquatic resources and that species is covered by an agreement listed in subsection (3) below; and

(b) The primary risk(s) to public resources addressed by the forest practice rules (e.g., delivery of sediment to waters from roads, harvest activities, or mass wasting events; chemical contamination of waters; inadequate recruitment of large woody debris; delivery of thermal energy to waters) is addressed in the agreement. The agreement may address the risk using different prescriptions, approaches, or timing than the forest practice rule.

(2)(a) When the landowner submits an application or notification, the landowner must include a proposed list of specific rules replaced.

(b) The department will review and confirm whether the rules identified by the landowner meet the criteria identified in subsection (1) above.

(c) At the request of the department, the landowner will confer in good faith with the department and provide the department and other interested parties with information necessary to assist the department in implementing this section.

(3) This section applies to landowners who are operating consistent with one of the following agreements that covers a species included within aquatic resources provided that the agreement has received environmental review with an opportunity for public comment under the National Environmental Policy Act, 42 U.S.C. section 4321 et seq., the Endangered Species Act, 16 U.S.C. section 1531 et seq., or the State Environmental Policy Act, chapter 43.21C RCW;

(a) A habitat conservation plan and incidental take permit approved by the Secretary of the Interior or Commerce pursuant to 16 U.S.C. section 1539(a);

(b) An incidental take statement issued by the Secretary of the Interior or Commerce pursuant to 16 U.S.C. 1536(b);

(c) An "unlisted species agreement" approved by the U.S. Fish and Wildlife Service or National Marine Fisheries Service; or

(d) A candidate conservation agreement or other cooperative or conservation agreement entered into with a federal or state fish and wildlife agency pursuant to its statutory authority for fish and wildlife protection.

For any agreement with a formal application date after July 1, 2001, the landowner must have made a good faith effort to involve the department of fish and wildlife, the department of ecology, department of natural resources, and affected Indian tribes in the development of the related plan or management strategy.

NEW SECTION

WAC 222-12-044 Cooperative opportunities. The forest practices board recognizes and encourages collaborative efforts to build solutions to pressing forest practices issues. The forest practices board may at any time use this method to assist in assessing and recommending solutions to issues. The benefits of this method lie in the ability of disparate groups to use consensus processes to bring recommendations to the forest practices board. The board will continue to utilize collaborative efforts, such as the Timber, Fish, and Wildlife (TFW) or similar forum. Participants would ideally consist of representation by timber interests, environmental interests, state agencies, local government, federal agencies, tribal governments and other interested parties so long as the collaborative effort utilizes a consensus approach to resolving or addressing issues.

AMENDATORY SECTION (Amending Order 535, filed 11/16/87, effective 1/1/88)

WAC 222-12-045 *Adaptive management program. ~~((In order to further the purposes of chapter 76.09 RCW the board has adopted a policy of adaptive management designed to modify these regulations and their application based on cooperative research, monitoring, and evaluation. Such adaptive management shall include the measures set out in WAC 222-08-035.))~~ ***Adaptive management program.** In order to further the purposes of chapter 76.09 RCW, the board has adopted and will manage a formal science-based program, as set forth in WAC 222-08-035(2). Refer to board manual section 22 for program guidance and further information.

(1) Purpose: The purpose of the program is to provide science-based recommendations and technical information to assist the board in determining if and when it is necessary or advisable to adjust rules and guidance for aquatic resources to achieve resource goals and objectives. The board may also use this program to adjust other rules and guidance. The goal of the program is to affect change when it is necessary or advisable to adjust rules and guidance to achieve the goals of the forests and fish report or other goals identified by the board. There are three desired outcomes: Certainty of change as needed to protect targeted resources; predictability and stability of the process of change so that landowners, regulators and interested members of the public can anticipate and prepare for change; and application of quality controls to study design and execution and to the interpreted results.

(2) Program elements: By this rule, the board establishes an active, ongoing program composed of the following initial elements, but not to exclude other program elements as needed:

(a) Key questions and resource objectives: Upon receiving recommendations from the TFW policy committee, or similar collaborative forum, the board will establish key questions and resource objectives and prioritize them.

(i) Projects designed to address the key questions shall be established in the order and subject to the priorities identified by the board.

(ii) Resource objectives are intended to ensure that forest practices, either singularly or cumulatively, will not significantly impair the capacity of aquatic habitat to:

(A) Support harvestable levels of salmonids;

(B) Support the long-term viability of other covered species; or

(C) Meet or exceed water quality standards (protection of beneficial uses, narrative and numeric criteria, and anti-degradation).

(iii) Resource objectives consist of functional objectives and performance targets. Functional objectives are broad statements regarding the major watershed functions potentially affected by forest practices. Performance targets are the measurable criteria defining specific, attainable target forest conditions and processes.

(iv) Resource objectives are intended for use in adaptive management, rather than in the regulatory process. Best management practices, as defined in the rules and manual, apply to all forest practices regardless of whether or not resource objectives are met at a given site.

(b) Participants: The board will manage the program and has empowered the following entities to participate in the program: The cooperative monitoring evaluation and research committee (CMER), the TFW policy committee (or similar collaborative forum), the adaptive management program administrator, and other participants as directed to conduct the independent scientific peer review process. The program will strive to use a consensus-based approach to make decisions at all stages of the process. Specific consensus-decision stages will be established by CMER and approved by the board. Ground rules will follow those established by the TFW process as defined in the board manual.

(i) CMER. By this rule, the board establishes a cooperative monitoring evaluation and research (CMER) committee to impose accountability and formality of process, and to conduct research and validation and effectiveness monitoring to facilitate achieving the resource objectives. The purpose of CMER is to advance the science needed to support adaptive management. CMER also has ongoing responsibility to continue research and education in terrestrial resource issues. CMER will be made up of members that have expertise in a scientific discipline that will enable them to be most effective in addressing forestry, fish, wildlife, and landscape process issues. Members will represent timber landowners, environmental interests, state agencies, county governments, federal agencies and tribal governments from a scientific standpoint, not a policy view. CMER members will be approved by the board. This will not preclude others from participating in and contributing to the CMER process or its subcommittees. CMER shall also develop and manage as appropriate:

(A) Scientific advisory groups and subgroups;

(B) Research and monitoring programs;

(C) A set of protocols and standards to define and guide execution of the process including, but not limited to, research and monitoring data, watershed analysis reports, interdisciplinary team evaluations and reports, literature reviews, and quality control/quality assurance processes;

(D) A baseline data set used to monitor change; and

(E) A process for policy approval of research, monitoring, and assessment projects and use of external information, including the questions to be answered and the timelines.

(ii) TFW policy committee (policy). TFW, or a similar collaborative forum, is managed by a policy committee (hereafter referred to in this section as "policy"). Policy membership is self-selecting, and at a minimum should include representatives of the following caucuses: Timber landowners (industrial and nonindustrial private landowners); environmental community; tribal governments; county governments; state departments (including fish and wildlife, ecology, and natural resources); and federal agencies (including National Marine Fisheries Service, U.S. Fish and Wildlife Service, U.S. Environmental Protection Agency and U.S. Forest Service). Policy members will participate without compensation or per diem.

(iii) Adaptive management program administrator (program administrator). The department will employ a full-time independent program administrator to oversee the program and support CMER. The program administrator will have credentials as a program manager, scientist, and researcher. The program administrator will make reports to the board and have other responsibilities as defined in the board manual.

(c) Independent scientific peer review process. By this rule, the board establishes an independent scientific peer review process to determine if the scientific studies that address program issues are scientifically sound and technically reliable; and provide advice on the scientific basis or reliability of CMER's reports. Products that must be reviewed include final reports of CMER funded studies, certain CMER recommendations, and pertinent studies not published in a CMER-approved, peer-reviewed journal. Other

products that may require review include, but are not limited to, external information, work plans, requests for proposal, subsequent study proposals, the final study plan, and progress reports.

(d) Process: The following stages will be used to affect change for managing adaptive management proposals and approved projects. If consensus cannot be reached by participants at any stage, the issue will be addressed within the dispute resolution process.

(i) Proposal initiation: Adaptive management proposals can be initiated at this stage by any of the participants listed in (2)(b) of this subsection to the program administrator, or initiation may be proposed by the general public at board meetings. Proposals must provide the minimum information as outlined in the board manual and demonstrate how results of the proposal will address key questions and resource objectives or other program rule and/or guidance issues. The board may initiate proposals or research questions in the course of fulfilling their duties according to statute.

(ii) Proposal approval and prioritization: The program administrator will manage the proposal approval and prioritization process at this stage and consult with CMER on the program workplan. CMER proposals will be forwarded by the program administrator to policy and then to the board. The board will make the final determination regarding proposal approvals and prioritization. The board will act on proposal approval and prioritization in a timely manner.

(iii) CMER implementation of proposal: Board approved proposals are systematically implemented through CMER at this stage by the program administrator.

(iv) Independent scientific peer review: An independent scientific peer review process will be used at identified points within this stage of implementation depending upon the study and will be used on specified final studies or at the direction of the board.

(v) CMER committee technical recommendations: Upon completion, final CMER reports and information will be forwarded at this stage by the program administrator to policy in the form of a report that includes technical recommendations and a discussion of rule and/or guidance implications.

(vi) Policy petitions for amendment: Upon receipt of the CMER report, policy will prepare program rule amendments and/or guidance recommendations in the form of petitions for amendment. When completed, the petitions and the original CMER report and/or other information as applicable will be forwarded by the program administrator to the board for review and action. Policy recommendations to the board will be accompanied by formal petitions for rule making (RCW 34.05.330). Policy will use the CMER results to make specific petitions to the board for amending:

(A) The regulatory scheme of forest practices management (Title 222 WAC rules and board manual);

(B) Voluntary, incentive-based, and training programs affecting forestry;

(C) The resource objectives; and

(D) CMER itself, adaptive management procedures, or other mechanisms implementing the recommendations contained in the most current forests and fish report.

(vii) Board action to adopt petitions for amendment: Upon receiving a formal petition for amendment to rules and/or guidance, the board will take appropriate and timely action. There will be a public review of all petitions as applicable. The board will make the final determination.

(e) Biennial fiscal and performance audits. The board shall require biennial fiscal and performance audits of the program by the department or other appropriate and accepting independent state agency.

(f) CMER five-year peer review process. Every five years the board will establish a peer review process to review all work of CMER and other available, relevant data, including recommendations from the CMER staff. There will be a specified, but limited, period for public review and comment.

(g) Funding. Funding is essential to implement the adaptive management program, which is dependent on quality and relevant data. The department shall request biennial budgets to support the program priority projects and basic infrastructure needs including funding to staff the adaptive management program administrator position. A stable, long-term funding source is needed for these activities.

(h) Dispute resolution process. If consensus cannot be reached through the adaptive management program process, participants will have their issues addressed by this dispute resolution process. Potential failures include, but are not limited to: The inability of policy to agree on research priorities, program direction, or recommendations to the board for uses of monitoring and/or research after receiving a report from CMER; the inability of CMER to produce a report and recommendation on schedule; and the failure of participants to act on policy recommendations on a specified schedule. Key attributes of the dispute resolution process are:

(i) Specific substantive and benchmark (schedule) triggers will be established by the board for each monitoring and research project for invoking dispute resolution;

(ii) The dispute resolution process will be staged in three parts and may be applied at any level of the adaptive management process. Any participant, or the board, may invoke each succeeding stage, if agreement is not reached by the previous stage, within the specified time (or if agreements are not substantially implemented) as follows:

(A) Stage one will be an attempt by CMER and policy to reach consensus. On technical issues, CMER shall have up to six months to reach a consensus unless otherwise agreed upon by policy. Parties may move the process to stage two after an issue has been before policy for six months unless otherwise agreed. The time periods commence from referral of technical issues to CMER, report by CMER to policy, or the raising of a nontechnical issue (or matter not otherwise referable to CMER) directly at policy.

(B) Stage two will be either informal mediation or formal arbitration. Within one month, one or the other will be picked, with the default being formal unless otherwise agreed. Stage two will be completed within three months (including the one month to select the process) unless otherwise agreed.

(C) If stage two does not result in consensus, stage three will be action by the board. The board will consider policy and CMER reports, and majority and minority thinking regarding the results and uses of the results can be brought forward to the board. The board will make the final determination regarding dispute resolution.

AMENDATORY SECTION (Amending WSR 98-07-047, filed 3/13/98, effective 5/1/98)

WAC 222-16-010 General definitions.* Unless otherwise required by context, as used in these ((regulations)) rules:

"**Act**" means the Forest Practices Act, chapter 76.09 RCW.

"**Affected Indian tribe**" means any federally recognized Indian tribe that requests in writing from the department information on forest practices applications and notification filed on specified areas.

"**Alluvial fan**" see "sensitive sites" definition.

"**Appeals board**" means the forest practices appeals board established in the act.

"**Aquatic resources**" means water quality, fish, the Columbia torrent salamander (*Rhyacotriton kezeri*), the Cascade torrent salamander (*Rhyacotriton cascadae*), the Olympic torrent salamander (*Rhyacotriton olympian*), the Dunn's salamander (*Plethodon dunni*), the Van Dyke's salamander (*Plethodon vandyke*), the Tailed frog (*Ascaphus truei*) and their respective habitats.

"**Area of resource sensitivity**" means areas identified in accordance with WAC 222-22-050 (2)(d) or 222-22-060(2).

"**Bankfull depth**" means the average vertical distance between the channel bed and the estimated water surface elevation required to completely fill the channel to a point above which water would enter the floodplain or intersect a terrace or hillslope. In cases where multiple channels exist, the bankfull depth is the average depth of all channels along the cross-section. (See board manual section 2.)

"**Bankfull width**" means:

(a) For streams - the measurement of the lateral extent of the water surface elevation perpendicular to the channel at bankfull depth. In cases where multiple channels exist, bankfull width is the sum of the individual channel widths along the cross-section (see board manual section 2).

(b) For lakes, ponds, and impoundments - line of mean high water.

(c) For tidal water - line of mean high tide.

(d) For periodically inundated areas of associated wetlands - line of periodic inundation, which will be found by examining the edge of inundation to ascertain where the presence and action of waters are so common and usual, and so long continued in all ordinary years, as to mark upon the soil a character distinct from that of the abutting upland.

"**Basal area**" means the area in square feet of the cross section of a tree bole measured at 4 1/2 feet above the ground.

"**Bedrock hollows**" (colluvium-filled bedrock hollows, or hollows; also referred to as zero-order basins, swales, or

bedrock depressions) means landforms that are commonly spoon-shaped areas of convergent topography within unchannelled valleys on hillslopes. (See board manual section 16 for identification criteria.)

"**Board**" means the forest practices board established by the act.

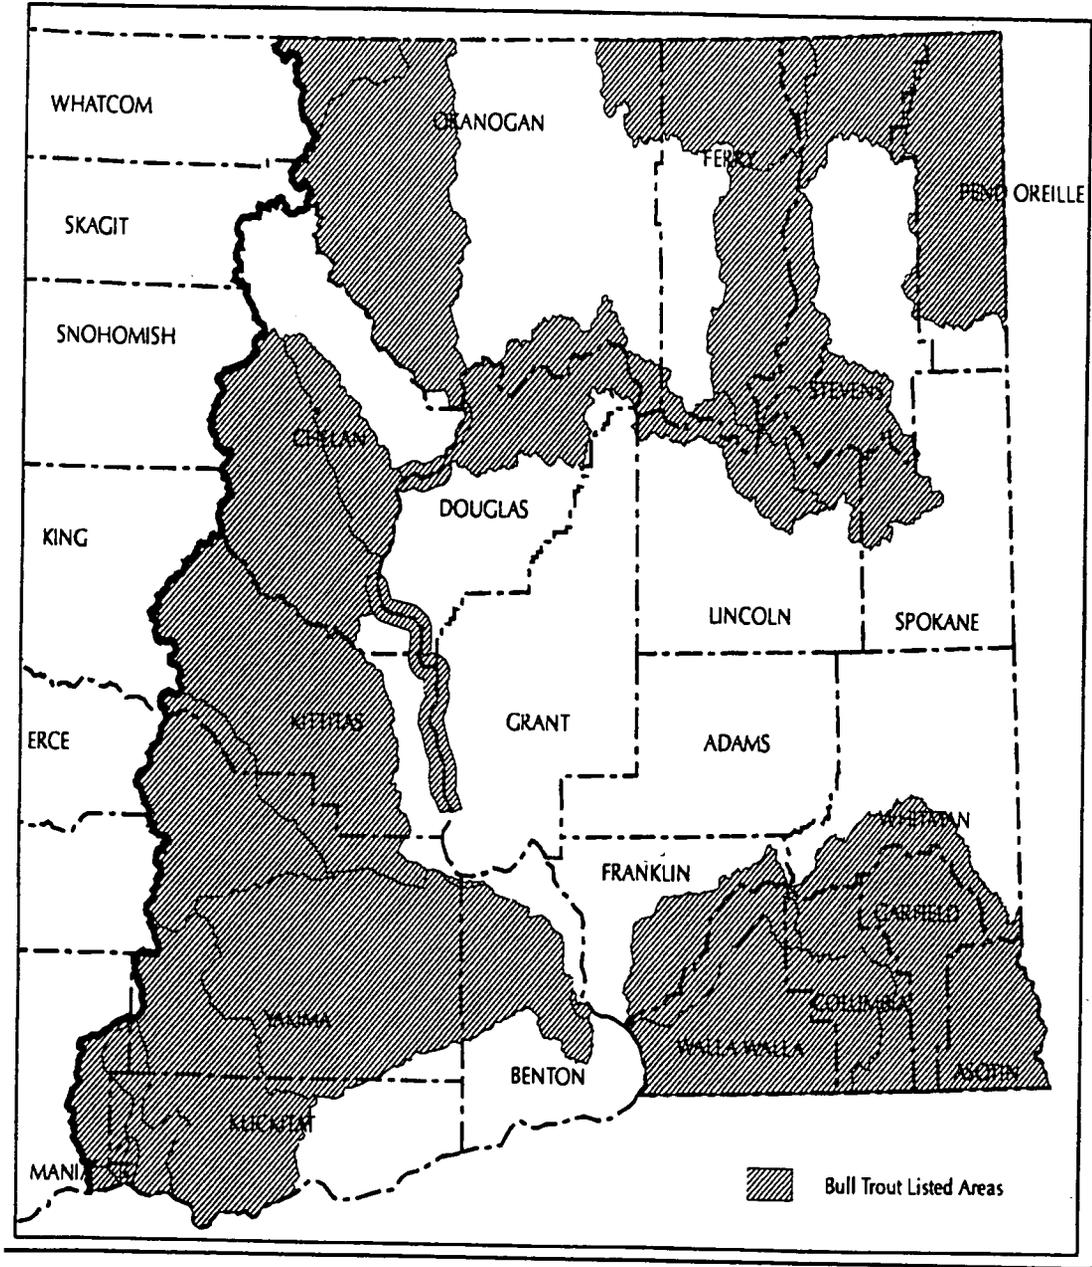

"**Bog**" means wetlands which have the following characteristics: Hydric organic soils (peat and/or muck) typically 16 inches or more in depth (except over bedrock or hardpan); and vegetation such as sphagnum moss, labrador tea, bog laurel, bog rosemary, sundews, and sedges; bogs may have an overstory of spruce, western Hemlock, lodgepole pine, cedar, whitepine, crabapple, or aspen, and may be associated with open water. This includes nutrient-poor fens. (See ((the Forest Practices)) board manual section 8.)

"**Borrow pit**" shall mean an excavation site outside the limits of construction to provide material necessary to that construction, such as fill material for the embankments.

"**Bull trout habitat overlay**" means those portions of Eastern Washington streams containing bull trout habitat as identified on the department of fish and wildlife's bull trout map. Prior to the development of a bull trout field protocol and the habitat-based predictive model, the "bull trout habitat overlay" map may be modified to allow for locally-based corrections using current data, field knowledge, and best professional judgment. A landowner may meet with the departments of natural resources, fish and wildlife and, in consultation with affected tribes and federal biologists, determine whether certain stream reaches have habitat conditions that are unsuitable for supporting bull trout. If such a determination is mutually agreed upon, documentation submitted to the department will result in the applicable stream reaches no longer being included within the definition of bull trout habitat overlay. Conversely, if suitable bull trout habitat is discovered outside the current mapped range, those waters will be included within the definition of "bull trout habitat overlay" by a similar process.

PERMANENT

Bull Trout Overlay Map

PERMANENT

"Channel migration zone (CMZ)" means the area where the active channel of a stream is prone to move and this results in a potential near-term loss of riparian function and associated habitat adjacent to the stream. (See the board manual section 2 for descriptions and illustrations of CMZs, delineation guidelines), except as modified by a permanent levee or dike. For this purpose, near-term means the time scale required to grow a mature forest.

"Chemicals" means substances applied to forest lands or timber including pesticides, fertilizers, and other forest chemicals.

"Clearcut" means a harvest method in which the entire stand of trees is removed in one timber harvesting operation. Except as provided in WAC 222-30-110, an area remains clearcut until:

It meets the minimum stocking requirements under WAC 222-34-010(2) or 222-34-020(2); and

The largest trees qualifying for the minimum stocking levels have survived on the area for five growing seasons or, if not, they have reached an average height of four feet.

"Columbia River Gorge National Scenic Area or CRGNSA" means the area established pursuant to the

Columbia River Gorge National Scenic Area Act, 16 U.S.C. §544b(a).

"**CRGNSA special management area**" means the areas designated in the Columbia River Gorge National Scenic Area Act, 16 U.S.C. §544b(b) or revised pursuant to 16 U.S.C. §544b(c). For purposes of this rule, the special management area shall not include any parcels excluded by 16 U.S.C. §544f(o).

"**CRGNSA special management area guidelines**" means the guidelines and land use designations for forest practices developed pursuant to 16 U.S.C. §544f contained in the CRGNSA management plan developed pursuant to 15 U.S.C. §544d.

"**Commercial tree species**" means any species which is capable of producing a merchantable stand of timber on the particular site, or which is being grown as part of a Christmas tree or ornamental tree-growing operation.

"**Completion of harvest**" means the latest of:

Completion of removal of timber from the portions of forest lands harvested in the smallest logical unit that will not be disturbed by continued logging or an approved slash disposal plan for adjacent areas; or

Scheduled completion of any slash disposal operations where the department and the applicant agree within 6 months of completion of yarding that slash disposal is necessary or desirable to facilitate reforestation and agree to a time schedule for such slash disposal; or

Scheduled completion of any site preparation or rehabilitation of adjoining lands approved at the time of approval of the application or receipt of a notification: Provided, That delay of reforestation under this paragraph is permitted only to the extent reforestation would prevent or unreasonably hinder such site preparation or rehabilitation of adjoining lands.

"**Constructed wetlands**" means those wetlands voluntarily developed by the landowner. Constructed wetlands do not include wetlands created, restored, or enhanced as part of a mitigation procedure or wetlands inadvertently created as a result of current or past practices including, but not limited to: Road construction, landing construction, railroad construction, or surface mining.

"**Contamination**" means ((the)) introducing into the atmosphere, soil, or water, sufficient quantities of substances as may be injurious to public health, safety or welfare, or to domestic, commercial, industrial, agriculture or recreational uses, or to livestock, wildlife, fish or other aquatic life.

"**Convergent headwalls**" (or headwalls) means tear-drop-shaped landforms, broad at the ridgetop and terminating where headwaters converge into a single channel; they are broadly concave both longitudinally and across the slope, but may contain sharp ridges separating the headwater channels. (See board manual section 16 for identification criteria.)

"**Conversion option harvest plan**" means a voluntary plan developed by the landowner and approved by the local government entity indicating the limits of harvest areas, road locations, and open space.

"**Conversion to a use other than commercial timber operation**" shall mean a bona fide conversion to an active use which is incompatible with timber growing.

"**Cooperative habitat enhancement agreement (CHEA)**" see WAC 222-16-105.

"**Critical habitat (federal)**" means the habitat of any threatened or endangered species designated as critical habitat by the United States Secretary of the Interior or Commerce under Sections 3 (5)(A) and 4 (a)(3) of the Federal Endangered Species Act.

"**Critical nesting season**" means for marbled murrelets - April 1 to August 31.

"**Critical ((wildlife)) habitat (state)**" means those habitats designated by the board in accordance with WAC 222-16-080.

"**Cultural resources**" means archaeological and historic sites and artifacts and traditional religious, ceremonial and social uses and activities of affected Indian tribes.

"**Cumulative effects**" means the changes to the environment caused by the interaction of natural ecosystem processes with the effects of two or more forest practices.

"**Daily peak activity**" means for marbled murrelets - one hour before official sunrise to two hours after official sunrise and one hour before official sunset to one hour after official sunset.

"**Debris**" means woody vegetative residue less than 3 cubic feet in size resulting from forest practice activities which would reasonably be expected to cause significant damage to a public resource.

"**Deep-seated landslides**" means landslides in which most of the area of the slide plane or zone lies below the maximum rooting depth of forest trees, to depths of tens to hundreds of feet. (See board manual section 16 for identification criteria.)

"**Demographic support**" means providing sufficient suitable owl habitat within the SOSEA to maintain the viability of northern spotted owl sites identified as necessary to meet the SOSEA goals.

"**Department**" means the department of natural resources.

"**Desired future condition (DFC)**" is a reference point on a pathway and not an endpoint for stands. DFC means the stand conditions of a mature riparian forest at 140 years of age, the midpoint between 80 and 200 years. Where basal area is the only stand attribute used to describe 140-year old stands, these are referred to as the "Target Basal Area."

"**Diameter at breast height (dbh)**" means the diameter of a tree at 4 1/2 feet above the ground measured from the uphill side.

"**Dispersal habitat**" see WAC 222-16-085(2).

"**Dispersal support**" means providing sufficient dispersal habitat for the interchange of northern spotted owls within or across the SOSEA, as necessary to meet SOSEA goals. Dispersal support is provided by a landscape consisting of stands of dispersal habitat interspersed with areas of higher quality habitat, such as suitable spotted owl habitat found within RMZs, WMZs or other required and voluntary leave areas.

"**Drainage structure**" means a construction technique or feature that is built to relieve surface runoff and/or intercepted ground water from roadside ditches to prevent exces-

sive buildup in water volume and velocity. A drainage structure is not intended to carry any typed water. Drainage structures include structures such as: Cross drains, relief culverts, ditch diversions, water bars, or other such structures demonstrated to be equally effective.

"Eastern Washington" means ((the lands of the state lying east of an administrative line which approximates the change from the Western Washington timber types to the Eastern Washington timber types described as follows:

Beginning at the International Border and Okanogan National Forest boundary at the N1/4 corner Section 6, T. 40N, R. 24E., W.M., south and west along the Pasayten Wilderness boundary to the west line of Section 30, T. 37N, R. 19E.,

Thence south on range line between R. 18E. and R. 19E., to the Lake Chelan-Sawtooth Wilderness at Section 31, T. 35N, R. 19E.,

Thence south and east along the eastern wilderness boundary of Lake Chelan-Sawtooth Wilderness to the west line of Section 18, T. 31N, R. 19E. on the north shore of Lake Chelan,

Thence south on the range line between R. 18E. and R. 19E. to the SE corner of T. 28N, R. 18E.,

Thence west on the township line between T. 27N, and T. 28N to the NW corner of T. 27N, R. 17E.,

Thence south on range line between R. 16E. and R. 17E. to the Alpine Lakes Wilderness at Section 31, T. 26N, R. 17E.,

Thence south along the eastern wilderness boundary to the west line of Section 6, T. 22N, R. 17E.,

Thence south on range line between R. 16E. and R. 17E. to the SE corner of T. 22N, R. 16E.,

Thence west along township line between T. 21N, and T. 22N to the NW corner of T. 21N, R. 15E.,

Thence south along range line between R. 14E. and R. 15E. to SW corner of T. 20N, R. 15E.,

Thence east along township line between T. 19N, and T. 20N to the SW corner of T. 20N, R. 16E.,

Thence south along range line between R. 15E. and R. 16E. to the SW corner of T. 18N, R. 16E.,

Thence west along township line between T. 17N, and T. 18N to the SE corner of T. 18N, R. 14E.,

Thence south along range line between T. 14E. and R. 15E. to the SW corner of T. 14N, R. 15E.,

Thence south and west along Wenatchee National Forest Boundary to the NW corner of T. 12N, R. 14E.,

Thence south along range line between R. 13E. and R. 14E. to SE corner of T. 10N, R. 13E.,

Thence west along township line between T. 9N, and T. 10N to the NW corner of T. 9N, R. 12E.,

Thence south along range line between R. 11E. and R. 12E. to SE corner of T. 8N, R. 11E.,

Thence west along township line between T. 7N, and T. 8N to the Gifford Pinchot National Forest Boundary,

Thence south along Forest Boundary to SE corner of Section 33, T. 7N, R. 11E.,

Thence west along township line between T. 6N, and T. 7N to SE corner of T. 7N, R. 9E.,

Thence south along Skamania-Klickitat County line to Oregon-Washington)) the geographic area in Washington east of the crest of the Cascade Mountains from the international border to the top of Mt. Adams, then east of the ridge line dividing the White Salmon River drainage from the Lewis River drainage and east of the ridge line dividing the Little White Salmon River drainage from the Wind River drainage to the Washington-Oregon state line.

PERMANENT

Eastern Washington Definition Map

"Eastern Washington timber habitat types" means elevation ranges associated with tree species assigned for the purpose of riparian management according to the following:

<u>Timber Habitat Types</u>	<u>Elevation Ranges</u>
ponderosa pine	0 - 2500 feet
mixed conifer	2501 - 5000 feet
high elevation	above 5000 feet

"Edge" of any water means the outer edge of the water's bankfull width or, where applicable, the outer edge of the associated channel migration zone.

"End hauling" means the removal and transportation of excavated material, pit or quarry overburden, or landing or road cut material from the excavation site to a deposit site not adjacent to the point of removal.

"Equipment limitation zone" means a 30-foot wide zone measured horizontally from the outer edge of the bankfull width of a Type Np or Ns Water. It applies to all perennial and seasonal nonfish bearing streams.

"Erodible soils" means those soils that, when exposed or displaced by a forest practice operation, ((that)) would be readily moved by water.

"Even-aged harvest methods" means the following harvest methods:

Clearcuts;

Seed tree harvests in which twenty or fewer trees per acre remain after harvest;

Shelterwood regeneration harvests in which twenty or fewer trees per acre remain after harvest;

Group or strip shelterwood harvests creating openings wider than two tree heights, based on dominant trees;

Shelterwood removal harvests which leave fewer than one hundred fifty trees per acre which are at least five years old or four feet in average height;

Partial cutting in which fewer than fifty trees per acre remain after harvest;

Overstory removal when more than five thousand board feet per acre is removed and fewer than fifty trees per acre at least ten feet in height remain after harvest; and

Other harvesting methods designed to manage for multiple age classes in which six or fewer trees per acre remain after harvest.

Except as provided above for shelterwood removal harvests and overstory removal, trees counted as remaining after harvest shall be at least ten inches in diameter at breast height and have at least the top one-third of the stem supporting green, live crowns. Except as provided in WAC 222-30-110, an area remains harvested by even-aged methods until it meets the minimum stocking requirements under WAC ((222-30-010(2))) 222-34-010(2) or 222-34-020(2) and the largest trees qualifying for the minimum stocking levels have survived on the area for five growing seasons or, if not, they have reached an average height of four feet.

"Fen" means wetlands which have the following characteristics: Peat soils 16 inches or more in depth (except over bedrock); and vegetation such as certain sedges, hardstem bulrush and cattails; fens may have an overstory of spruce and may be associated with open water.

"Fertilizers" means any substance or any combination or mixture of substances used principally as a source of plant food or soil amendment.

"Fill" means the placement of earth material or aggregate for road or landing construction or other similar activities. ((Fill does not include the growing or harvesting of timber including, but not limited to, slash burning, site preparation, reforestation, precommercial thinning, intermediate or final harvesting, salvage of trees, brush control, or fertilization.))

"Fish" means for purposes of these rules, species of the vertebrate taxonomic groups of *Cephalospidomorphi* and *Osteichthyes*.

~~("Flood level - 50 year." For purposes of field interpretation of these regulations, the 50 year flood level shall be considered to refer to a vertical elevation measured from the ordinary high water mark which is 1.25 times the vertical distance between the average stream bed and the ordinary high water mark, and in horizontal extent shall not exceed 2 times the channel width measured on either side from the ordinary high water mark, unless a different area is specified by the department based on identifiable topographic or vegetative features or based on an engineering computation of flood magnitude that has a 2 percent chance of occurring in any given year. The 50 year flood level shall not include those lands that can reasonably be expected to be protected from flood waters by flood control devices maintained by or under license from the federal government, the state, or a political subdivision of the state.))~~ **"Fish habitat"** means habitat, which is used by fish at any life stage at any time of the year including potential habitat likely to be used by fish, which could be recovered by restoration or management and includes off-channel habitat.

"Flood level - 100 year." Is a calculated flood event flow based on an engineering computation of flood magnitude that has a 1 percent chance of occurring in any given year. For purposes of field interpretation, landowners may use the following methods:

Flow information from gauging stations;

Field estimate of water level based on guidance for "Determining the 100-Year Flood Level" in the forest practices board manual section 2.

The 100-year flood level shall not include those lands that can reasonably be expected to be protected from flood waters by flood control devices maintained by or under license from the federal government, the state, or a political subdivision of the state.

"Forest land" means all land which is capable of supporting a merchantable stand of timber and is not being actively used for a use which is incompatible with timber growing.

"Forest land owner" shall mean any person in actual control of forest land, whether such control is based either on legal or equitable title, or on any other interest entitling the holder to sell or otherwise dispose of any or all of the timber on such land in any manner: Provided, That any lessee or other person in possession of forest land without legal or equitable title to such land shall be excluded from the definition of "forest land owner" unless such lessee or other person

has the right to sell or otherwise dispose of any or all of the timber located on such forest land.

"Forest practice" means any activity conducted on or directly pertaining to forest land and relating to growing, harvesting, or processing timber, including but not limited to:

- Road and trail construction;
- Harvesting, final and intermediate;
- Precommercial thinning;
- Reforestation;
- Fertilization;
- Prevention and suppression of diseases and insects;
- Salvage of trees; and
- Brush control.

"Forest practice" shall not include: Forest species seed orchard operations and intensive forest nursery operations; or preparatory work such as tree marking, surveying and road flagging; or removal or harvest of incidental vegetation from forest lands such as berries, ferns, greenery, mistletoe, herbs, mushrooms, and other products which cannot normally be expected to result in damage to forest soils, timber or public resources.

"Forest road" means ways, lanes, roads, or driveways on forest land used since 1974 for forest practices or forest management activities such as fire control. "Forest roads" does not include skid trails, highways, or county roads except where the county is a forest landowner or operator.

"Forest trees" excludes trees cultivated by agricultural methods in growing cycles shorter than ten years: Provided, That Christmas trees are forest trees and: Provided further, That this exclusion applies only to trees planted on land that was not in forest use immediately before the trees were planted and before the land was prepared for planting the trees.

"Full bench road" means a road constructed on a side hill without using any of the material removed from the hillside as a part of the road. This construction technique is usually used on steep or unstable slopes.

"Green recruitment trees" means those trees left after harvest for the purpose of becoming future wildlife reserve trees under WAC 222-30-020(11).

"Groundwater recharge areas for glacial deep-seated slides" means the area upgradient that can contribute water to the landslide, assuming that there is an impermeable perching layer in or under a deep-seated landslide in glacial deposits. (See board manual section 16 for identification criteria.)

"Headwater spring" means a permanent spring at the head of a perennial channel. Where a headwater spring can be found, it will coincide with the uppermost extent of Type Np Water.

"Herbicide" means any substance or mixture of substances intended to prevent, destroy, repel, or mitigate any tree, bush, weed or algae and other aquatic weeds.

"Historic site" includes:

Sites, areas and structures or other evidence of human activities illustrative of the origins, evolution and development of the nation, state or locality; or

Places associated with a personality important in history; or

Places where significant historical events are known to have occurred even though no physical evidence of the event remains.

"Horizontal distance" means the distance between two points measured at a 0% slope.

"Hyporheic" means an area adjacent to and below channels where interstitial water is exchanged with channel water and water movement is mainly in the downstream direction.

"Identified watershed processes" means the following components of natural ecological processes that may in some instances be altered by forest practices in a watershed:

- Mass wasting;
- Surface and road erosion;
- Seasonal flows including hydrologic peak and low flows and annual yields (volume and timing);
- Large organic debris;
- Shading; and
- Stream bank and bed stability.

"Inner gorges" means canyons created by a combination of the downcutting action of a stream and mass movement on the slope walls; they commonly show evidence of recent movement, such as obvious landslides, vertical tracks of disturbance vegetation, or areas that are concave in contour and/or profile. (See board manual section 16 for identification criteria.)

"Insecticide" means any substance or mixture of substances intended to prevent, destroy, repel, or mitigate any insect, other arthropods or mollusk pests.

"Interdisciplinary team" (ID Team) means a group of varying size comprised of individuals having specialized expertise, assembled by the department to respond to technical questions associated with a proposed forest practice activity.

"Islands" means any island surrounded by salt water in Kitsap, Mason, Jefferson, Pierce, King, Snohomish, Skagit, Whatcom, Island, or San Juan counties.

"Limits of construction" means the area occupied by the completed roadway or landing, including the cut bank, fill slope, and the area cleared for the purpose of constructing the roadway or landing.

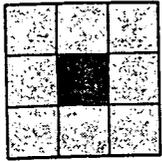

"Load bearing portion" means that part of the road, landing, etc., which is supportive soil, earth, rock or other material directly below the working surface and only the associated earth structure necessary for support.

"Local government entity" means the governments of counties and the governments of cities and towns as defined in chapter 35.01 RCW.

"Low impact harvest" means use of any logging equipment, methods, or systems that minimize compaction or disturbance of soils and vegetation during the yarding process. The department shall determine such equipment, methods or systems in consultation with the department of ecology.

"Marbled murrelet detection area" means an area of land associated with a visual or audible detection of a marbled murrelet, made by a qualified surveyor which is documented and recorded in the department of fish and wildlife data base. The marbled murrelet detection area shall be com-

prised of the section of land in which the marbled murrelet detection was made and the eight sections of land immediately adjacent to that section.

■ Detection Section
 ■ Detection Area

"Marbled murrelet nesting platform" means any horizontal tree structure such as a limb, an area where a limb branches, a surface created by multiple leaders, a deformity, or a debris/moss platform or stick nest equal to or greater than 7 inches in diameter including associated moss if present, that is 50 feet or more above the ground in trees 32 inches dbh and greater (generally over 90 years of age) and is capable of supporting nesting by marbled murrelets.

"Median home range circle" means a circle, with a specified radius, centered on a spotted owl site center. The radius for the median home range circle in the Hoh-Clearwater/Coastal Link SOSEA is 2.7 miles; for all other SOSEAs the radius is 1.8 miles.

"Merchantable stand of timber" means a stand of trees that will yield logs and/or fiber:

- Suitable in size and quality for the production of lumber, plywood, pulp or other forest products;
- Of sufficient value at least to cover all the costs of harvest and transportation to available markets.

"Multiyear permit" means a permit to conduct forest practices which is effective for longer than two years but no longer than five years.

"Northern spotted owl site center" means the location of status 1, 2 or 3 northern spotted owls based on the following definitions:

- Status 1: Pair or reproductive - a male and female heard and/or observed in close proximity to each other on the same visit, a female detected on a nest, or one or both adults observed with young.
- Status 2: Two birds, pair status unknown - the presence or response of two birds of opposite sex where pair status cannot be determined and where at least one member meets the resident territorial single requirements.
- Status 3: Resident territorial single - the presence or response of a single owl within the same general area on three or more occasions within a breeding season with no response by an owl of the opposite sex after a complete survey; or three or more responses over several years (i.e., two responses in year one and one response in year two, for the same general area).

In determining the existence, location, and status of northern spotted owl site centers, the department shall consult with the department of fish and wildlife and use only those

sites documented in substantial compliance with guidelines or protocols and quality control methods established by and available from the department of fish and wildlife.

"Notice to comply" means a notice issued by the department pursuant to RCW 76.09.090 of the act and may require initiation and/or completion of action necessary to prevent, correct and/or compensate for material damage to public resources which resulted from forest practices.

"Occupied marbled murrelet site" means:

(1) A contiguous area of suitable marbled murrelet habitat where at least one of the following marbled murrelet behaviors or conditions occur:

- (a) A nest is located; or
- (b) Downy chicks or eggs or egg shells are found; or
- (c) Marbled murrelets are detected flying below, through, into or out of the forest canopy; or
- (d) Birds calling from a stationary location within the area; or
- (e) Birds circling above a timber stand within one tree height of the top of the canopy; or

(2) A contiguous forested area, which does not meet the definition of suitable marbled murrelet habitat, in which any of the behaviors or conditions listed above has been documented by the department of fish and wildlife and which is distinguishable from the adjacent forest based on vegetative characteristics important to nesting marbled murrelets.

(3) For sites defined in (1) above, the outer perimeter of the occupied site shall be presumed to be the closer, measured from the point where the observed behaviors or conditions listed in (1) above occurred, of the following:

- (a) 1.5 miles from the point where the observed behaviors or conditions listed in (1) above occurred; or
- (b) The beginning of any gap greater than 300 feet wide lacking one or more of the vegetative characteristics listed under "suitable marbled murrelet habitat"; or
- (c) The beginning of any narrow area of "suitable marbled murrelet habitat" less than 300 feet in width and more than 300 feet in length.

(4) For sites defined under (2) above, the outer perimeter of the occupied site shall be presumed to be the closer, measured from the point where the observed behaviors or conditions listed in (1) above occurred, of the following:

- (a) 1.5 miles from the point where the observed behaviors or conditions listed in (1) above occurred; or
- (b) The beginning of any gap greater than 300 feet wide lacking one or more of the distinguishing vegetative characteristics important to murrelets; or
- (c) The beginning of any narrow area of suitable marbled murrelet habitat, comparable to the area where the observed behaviors or conditions listed in (1) above occurred, less than 300 feet in width and more than 300 feet in length.

(5) In determining the existence, location and status of occupied marbled murrelet sites, the department shall consult with the department of fish and wildlife and use only those sites documented in substantial compliance with guidelines or protocols and quality control methods established by and available from the department of fish and wildlife.

"Old forest habitat" see WAC 222-16;085 (1)(a).

PERMANENT

"Operator" shall mean any person engaging in forest practices except an employee with wages as his/her sole compensation.

"Ordinary high-water mark" means the mark on the shores of all waters, which will be found by examining the beds and banks and ascertaining where the presence and action of waters are so common and usual, and so long continued in all ordinary years, as to mark upon the soil a character distinct from that of the abutting upland, in respect to vegetation: Provided, That in any area where the ordinary high-water mark cannot be found, the ordinary high-water mark adjoining saltwater shall be the line of mean high tide and the ordinary high-water mark adjoining freshwater shall be the line of mean high-water.

"Other forest chemicals" means fire retardants when used to control burning (other than water), nontoxic repellents, oil, dust-control agents (other than water), salt, and other chemicals used in forest management, except pesticides and fertilizers, that may present hazards to the environment.

"Park" means any park included on the parks register maintained by the department pursuant to WAC 222-20-100(2). Developed park recreation area means any park area developed for high density outdoor recreation use.

"Partial cutting" means the removal of a portion of the merchantable volume in a stand of timber so as to leave an uneven-aged stand of well-distributed residual, healthy trees that will reasonably utilize the productivity of the soil. Partial cutting does not include seedtree or shelterwood or other types of regeneration cutting.

"Pesticide" means any insecticide, herbicide, fungicide, or rodenticide, but does not include nontoxic repellents or other forest chemicals.

"Plantable area" is an area capable of supporting a commercial stand of timber excluding lands devoted to permanent roads, utility rights-of-way, that portion of riparian management zones where scarification is not permitted, and any other area devoted to a use incompatible with commercial timber growing.

"Power equipment" means all machinery operated with fuel burning or electrical motors, including heavy machinery, chain saws, portable generators, pumps, and powered backpack devices.

"Preferred tree species" means the following species listed in descending order of priority for each timber habitat type:

<u>Ponderosa pine habitat type</u>	<u>Mixed conifer habitat type</u>
<u>all hardwoods</u>	<u>all hardwoods</u>
<u>ponderosa pine</u>	<u>western larch</u>
<u>western larch</u>	<u>ponderosa pine</u>
<u>Douglas-fir</u>	<u>western red cedar</u>
<u>western red cedar</u>	<u>white pine</u>
	<u>Douglas-fir</u>
	<u>lodgepole pine</u>

"Public resources" means water, fish, and wildlife and in addition shall mean capital improvements of the state or its political subdivisions.

"Qualified surveyor" means an individual who has successfully completed the marbled murrelet field training course offered by the department of fish and wildlife or its equivalent.

"Rehabilitation" means the act of renewing, or making usable and reforesting forest land which was poorly stocked or previously nonstocked with commercial species.

~~("Relief culvert" means a structure to relieve surface runoff from roadside ditches to prevent excessive buildup in water volume and velocity.)~~

"Resource characteristics" means the following specific measurable characteristics of fish, water, and capital improvements of the state or its political subdivisions:

For fish and water:

Physical fish habitat, including temperature and turbidity;

Turbidity in hatchery water supplies; and

Turbidity and volume for areas of water supply.

For capital improvements of the state or its political subdivisions:

Physical or structural integrity.

If the methodology is developed and added to the manual to analyze the cumulative effects of forest practices on other characteristics of fish, water, and capital improvements of the state or its subdivisions, the board shall amend this list to include these characteristics.

"Riparian function" includes bank stability, the recruitment of woody debris, leaf litter fall, nutrients, sediment filtering, shade, and other riparian features that are important to both riparian forest and aquatic system conditions.

"Riparian management zone (RMZ)" means:

(1) For Western Washington

(a) The area protected on each side of a Type S or F Water measured horizontally from the outer edge of the bankfull width or the outer edge of the CMZ, whichever is greater (see table below); and

<u>Site Class</u>	<u>Western Washington Total RMZ Width</u>
<u>I</u>	<u>200'</u>
<u>II</u>	<u>170'</u>
<u>III</u>	<u>140'</u>
<u>IV</u>	<u>110'</u>
<u>V</u>	<u>90'</u>

(b) The area protected on each side of Type Np Waters, measured horizontally from the outer edge of the bankfull width. (See WAC 222-30-021(2).)

(2) For Eastern Washington

(a) The area protected on each side of a Type S or F Water measured horizontally from the outer edge of the bankfull width or the outer edge of the CMZ, whichever is greater (see table below); and

PERMANENT

Site Class	Eastern Washington Total RMZ Width
I	130'
II	110'
III	90' or 100'*
IV	75' or 100'*
V	75' or 100'*

* Dependent upon stream size. (See WAC 222-30-022.)

(b) The area protected on each side of Type Np Waters, measured horizontally from the outer edge of the bankfull width. (See WAC 222-30-022(2).)

(3) **For exempt 20 acre parcels**, a specified area along-side Type S and F Waters where specific measures are taken to protect water quality and fish and wildlife habitat.

"RMZ core zone" means:

(1) **For Western Washington**, the 50 foot buffer of a Type S or F Water, measured horizontally from the outer edge of the bankfull width or the outer edge of the channel migration zone, whichever is greater. (See WAC 222-30-021.)

(2) **For Eastern Washington**, the 30 foot buffer of a Type S or F Water, measured horizontally from the outer edge of the bankfull width or the outer edge of the channel migration zone, whichever is greater. (See WAC 222-30-022.)

"RMZ inner zone" means:

(1) **For Western Washington**, the area measured horizontally from the outer boundary of the core zone of a Type S or F Water to the outer limit of the inner zone. The outer limit of the inner zone is determined based on the width of the affected water, site class and the management option chosen for timber harvest within the inner zone. (See WAC 222-30-021.)

(2) **For Eastern Washington**, the area measured horizontally from the outer boundary of the core zone 45 feet (for streams less than 15 feet wide) or 70 feet (for streams more than 15 feet wide) from the outer boundary of the core zone. (See WAC 222-30-022.)

"RMZ outer zone" means the area measured horizontally between the outer boundary of the inner zone and the RMZ width as specified in the riparian management zone definition above. RMZ width is measured from the outer edge of the bankfull width or the outer edge of the channel migration zone, whichever is greater. (See WAC 222-30-021 and 222-30-022.)

"Road construction" means the establishment of any new sub-grade including widening, realignment, or modification of an existing road prism, with the exception of replacing or installing drainage structures, for the purposes of managing forest land under Title 222 WAC.

"Road maintenance" means any road work specifically related to maintaining water control or road safety and visibility (such as: grading, spot rocking, resurfacing, roadside vegetation control, water barring, ditch clean out, replacing or installing relief culverts, cleaning culvert inlets and outlets) on existing forest roads.

"Rodenticide" means any substance or mixture of substances intended to prevent, destroy, repel, or mitigate rodents or any other vertebrate animal which the director of the state department of agriculture may declare by regulation to be a pest.

"Salvage" means the removal of snags, down logs, windthrow, or dead and dying material.

"Scarification" means loosening the topsoil and/or disrupting the forest floor in preparation for regeneration.

"Sensitive sites" are areas near or adjacent to Type Np Water and have one or more of the following:

(1) **Headwall seep** is a seep located at the toe of a cliff or other steep topographical feature and at the head of a Type Np Water which connects to the stream channel network via overland flow, and is characterized by loose substrate and/or fractured bedrock with perennial water at or near the surface throughout the year.

(2) **Side-slope seep** is a seep within 100 feet of a Type Np Water located on side-slopes which are greater than 20 percent, connected to the stream channel network via overland flow, and characterized by loose substrate and fractured bedrock, excluding muck with perennial water at or near the surface throughout the year. Water delivery to the Type Np channel is visible by someone standing in or near the stream.

(3) **Type Np intersection** is the intersection of two or more Type Np Waters.

(4) **Headwater spring** means a permanent spring at the head of a perennial channel. Where a headwater spring can be found, it will coincide with the uppermost extent of Type Np Water.

(5) **Alluvial fan** means an erosional land form consisting of cone-shaped deposit of water-borne, often coarse-sized sediments.

(a) The upstream end of the fan (cone apex) is typically characterized by a distinct increase in channel width where a stream emerges from a narrow valley;

(b) The downstream edge of the fan is defined as the sediment confluence with a higher order channel; and

(c) The lateral margins of a fan are characterized by distinct local changes in sediment elevation and often show disturbed vegetation.

Alluvial fan does not include features that were formed under climatic or geologic conditions which are not currently present or that are no longer dynamic.

"Shorelines of the state" shall have the same meaning as in RCW 90.58.030 (Shoreline Management Act).

"Side casting" means the act of moving excavated material to the side and depositing such material within the limits of construction or dumping over the side and outside the limits of construction.

"Site class" means a grouping of site indices that are used to determine the 50-year or 100-year site class. In order to determine site class, the landowner will obtain the site class index from the state soil survey, place it in the correct index range shown in the two tables provided in this definition, and select the corresponding site class. The site class will then drive the RMZ width. (See WAC 222-30-021 and 222-30-022.)

(1) For Western Washington

<u>Site class</u>	<u>50-year site index range</u> (state soil survey)
I	137+
II	119-136
III	97-118
IV	76-96
V	<75

(2) For Eastern Washington

<u>Site class</u>	<u>100-year site index range</u> (state soil survey)	<u>50-year site index range</u> (state soil survey)
I	120+	86+
II	101-120	72-85
III	81-100	58-71
IV	61-80	44-57
V	≤60	<44

(3) For purposes of this definition, the site index at any location will be the site index reported by the *Washington State Department of Natural Resources State Soil Survey*, (soil survey) and detailed in the associated forest soil summary sheets. If the soil survey does not report a site index for the location or indicates noncommercial or marginal forest land, or the major species table indicates red alder, the following apply:

(a) If the site index in the soil survey is for red alder, and the whole RMZ width is within that site index, then use site class V. If the red alder site index is only for a portion of the RMZ width, or there is on-site evidence that the site has historically supported conifer, then use the site class for conifer in the most physiographically similar adjacent soil polygon.

(b) In Western Washington, if no site index is reported in the soil survey, use the site class for conifer in the most physiographically similar adjacent soil polygon.

(c) In Eastern Washington, if no site index is reported in the soil survey, assume site class III, unless site specific information indicates otherwise.

(d) If the site index is noncommercial or marginally commercial, then use site class V.

See also section 7 of the board manual.

"Site preparation" means those activities associated with the removal of slash in preparing a site for planting and shall include scarification and/or slash burning.

"Skid trail" means a route used by tracked or wheeled skidders to move logs to a landing or road.

"Slash" means pieces of woody material containing more than 3 cubic feet resulting from forest practice activities.

"SOSEA goals" means the goals specified for a spotted owl special emphasis area as identified on the SOSEA maps (see WAC 222-16-086). SOSEA goals provide for demographic and/or dispersal support as necessary to complement

the northern spotted owl protection strategies on federal land within or adjacent to the SOSEA.

"Spoil" means excess material removed as overburden or generated during road or landing construction which is not used within limits of construction.

"Spotted owl dispersal habitat" see WAC 222-16-085(2).

"Spotted owl special emphasis areas (SOSEA)" means the geographic areas as mapped in WAC 222-16-086. Detailed maps of the SOSEAs indicating the boundaries and goals are available from the department at its regional offices.

"Stop work order" means the "stop work order" defined in RCW 76.09.080 of the act and may be issued by the department to stop violations of the forest practices chapter or to prevent damage and/or to correct and/or compensate for damages to public resources resulting from forest practices.

"Stream-adjacent parallel roads" means roads (including associated right-of-way clearing) in a riparian management zone on a property that have an alignment that is parallel to the general alignment of the stream, including roads used by others under easements or cooperative road agreements. Also included are stream crossings where the alignment of the road continues to parallel the stream for more than 250 feet on either side of the stream. Not included are federal, state, county or municipal roads that are not subject to forest practices rules, or roads of another adjacent landowner.

"Sub-mature habitat" see WAC 222-16-085 (1)(b).

"Suitable marbled murrelet habitat" means a contiguous forested area containing trees capable of providing nesting opportunities:

(1) With all of the following indicators unless the department, in consultation with the department of fish and wildlife, has determined that the habitat is not likely to be occupied by marbled murrelets:

(a) Within 50 miles of marine waters;

(b) At least 40% of the dominant and codominant trees are Douglas-fir, western hemlock, western red cedar or sitka spruce;

(c) Two or more nesting platforms per acre;

(d) At least 7 acres in size, including the contiguous forested area within 300 feet of nesting platforms, with similar forest stand characteristics (age, species composition, forest structure) to the forested area in which the nesting platforms occur.

"Suitable spotted owl habitat" see WAC 222-16-085(1).

"Temporary road" means a forest road that is constructed and intended for use during the life of an approved forest practices application/notification. All temporary roads must be abandoned in accordance to WAC 222-24-052(3).

"Threaten public safety" means to increase the risk to the public at large from snow avalanches, identified in consultation with the department of transportation or a local government, or landslides or debris torrents caused or triggered by forest practices.

PERMANENT

"Threatened or endangered species" means all species of wildlife listed as "threatened" or "endangered" by the United States Secretary of the Interior or Commerce, and all species of wildlife designated as "threatened" or "endangered" by the Washington fish and wildlife commission.

"Timber" shall mean forest trees, standing or down, of a commercial species, including Christmas trees.

"Unconfined avulsing stream" means generally fifth order or larger waters that experience abrupt shifts in channel location, creating a complex flood plain characterized by extensive gravel bars, disturbance species of vegetation of variable age, numerous side channels, wall-based channels, oxbow lakes, and wetland complexes. Many of these streams have dikes and levees that may temporarily or permanently restrict channel movement.

"Water bar" means a diversion ditch and/or hump in a trail or road for the purpose of carrying surface water runoff into the vegetation duff, ditch, or other dispersion area so that it does not gain the volume and velocity which causes soil movement and erosion.

"Watershed administrative unit (WAU)" means an area shown on the map specified in WAC 222-22-020(1).

"Watershed analysis" means, for a given WAU, the assessment completed under WAC 222-22-050 or 222-22-060 together with the prescriptions selected under WAC 222-22-070 and shall include assessments completed under WAC 222-22-050 where there are no areas of resource sensitivity.

"Weed" is any plant which tends to overgrow or choke out more desirable vegetation.

"Western Washington" means the ~~((lands of the state lying west of the administrative line described in the definition of))~~ geographic area of Washington west of the Cascade crest and the drainages defined in Eastern Washington.

"Wetland" means those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions, such as swamps, bogs, fens, and similar areas. This includes wetlands created, restored, or enhanced as part of a mitigation procedure. This does not include constructed wetlands or the following surface waters of the state intentionally constructed from wetland sites: Irrigation and drainage ditches, grass lined swales, canals, agricultural detention facilities, farm ponds, and landscape amenities.

"Wetland functions" include the protection of water quality and quantity, providing fish and wildlife habitat, and the production of timber.

"Wetland management zone" means a specified area adjacent to Type A and B Wetlands where specific measures are taken to protect the wetland functions.

"Wildlife" means all species of the animal kingdom whose members exist in Washington in a wild state. The term "wildlife" includes, but is not limited to, any mammal, bird, reptile, amphibian, fish, or invertebrate, at any stage of development. The term "wildlife" does not include feral domestic mammals or the family Muridae of the order Rodentia (old world rats and mice).

"Wildlife reserve trees" means those defective, dead, damaged, or dying trees which provide or have the potential to provide habitat for those wildlife species dependent on standing trees. Wildlife reserve trees are categorized as follows:

Type 1 wildlife reserve trees are defective or deformed live trees that have observably sound tops, limbs, trunks, and roots. They may have part of the top broken out or have evidence of other severe defects that include: "Cat face," animal chewing, old logging wounds, weather injury, insect attack, or lightning strike. Unless approved by the landowner, only green trees with visible cavities, nests, or obvious severe defects capable of supporting cavity dependent species shall be considered as Type 1 wildlife reserve trees. These trees must be stable and pose the least hazard for workers.

Type 2 wildlife reserve trees are dead Type 1 trees with sound tops, limbs, trunks, and roots.

Type 3 wildlife reserve trees are live or dead trees with unstable tops or upper portions. Unless approved by the landowner, only green trees with visible cavities, nests, or obvious severe defects capable of supporting cavity dependent species shall be considered as Type 3 wildlife reserve trees. Although the roots and main portion of the trunk are sound, these reserve trees pose high hazard because of the defect in live or dead wood higher up in the tree.

Type 4 wildlife reserve trees are live or dead trees with unstable trunks or roots, with or without bark. This includes "soft snags" as well as live trees with unstable roots caused by root rot or fire. These trees are unstable and pose a high hazard to workers.

"Windthrow" means a natural process by which trees are uprooted or sustain severe trunk damage by the wind.

"Yarding corridor" means a narrow, linear path through a riparian management zone to allow suspended cables necessary to support cable logging methods or suspended or partially suspended logs to be transported through these areas by cable logging methods.

"Young forest marginal habitat" see WAC 222-16-085 (1)(b).

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-16-030 Water typing system. ~~((^{*}))~~ Until the fish habitat water type maps described below are adopted by the board, the Interim Water Typing System established in WAC 222-16-031 will continue to be used. The department in cooperation with the departments of fish and wildlife, and ecology, and in consultation with affected Indian tribes ~~((shall))~~ will classify streams, lakes and ponds ~~((and)).~~ The department will prepare ((stream classification)) water type maps showing the location of Type ((1, 2, 3 and 4)) S, F, and N (Np and Ns) Waters within the ((various)) forested areas of the state. ((Such maps shall be available for public inspection at region offices of the department. The waters will be classified using the following criteria:)) The maps will be based on a multiparameter, field-verified geographic information system (GIS) logistic regression model. The multiparameter model will be designed to identify fish habitat by using geo-

morphic parameters such as basin size, gradient, elevation and other indicators. The modeling process shall be designed to achieve a level of statistical accuracy of 95% in separating fish habitat streams and nonfish habitat streams. Furthermore, the demarcation of fish and nonfish habitat waters shall be equally likely to over and under estimate the presence of fish habitat. These maps shall be referred to as "fish habitat water typing maps" and shall, when completed, be available for public inspection at region offices of the department.

Fish habitat water type maps will be updated every five years where necessary to better reflect observed, in-field conditions. Except for these periodic revisions of the maps, on-the-ground observations of fish or habitat characteristics will generally not be used to adjust mapped water types. However, if an on-site interdisciplinary team using nonlethal methods identifies fish, or finds that habitat is not accessible due to naturally occurring conditions and no fish reside above the blockage, then the water type will be immediately changed to reflect the findings of the interdisciplinary team. The finding will be documented on a water type update form provided by the department and the fish habitat water type map will be updated as soon as practicable. If a dispute arises concerning a water type the department shall make available informal conferences, as established in WAC 222-46-020 which shall include the departments of fish and wildlife, and ecology, and affected Indian tribes and those contesting the adopted water types. ((These conferences shall be established under procedures established in WAC 222-46-020.))

The waters will be classified using the following criteria:

*~~(1)~~ **"Type ~~(1)~~ S Water"** means all waters, within their ~~((ordinary high water mark))~~ bankfull width, as inventoried as "shorelines of the state" under chapter 90.58 RCW and the rules promulgated pursuant to chapter 90.58 RCW, ~~(, but not including those waters' associated wetlands as defined in chapter 90.58 RCW.)~~ including periodically inundated areas of their associated wetlands.

*~~(2)~~ **"Type ~~(2)~~ F Water"** ~~((shall))~~ means segments of natural waters other than Type S Waters, which are ~~((not classified as Type 1 Water and have a high fish, wildlife, or human use. These are segments of natural waters and periodically inundated areas of their associated wetlands, which))~~ within the bankfull widths of defined channels and periodically inundated areas of their associated wetlands, or within lakes, ponds, or impoundments having a surface area of 0.5 acre or greater at seasonal low water and which in any case contain fish habitat or are described by one of the following four categories:

(a) Waters, which are diverted for domestic use by more than ~~((100))~~ 10 residential or camping units or by a public accommodation facility licensed to serve more than ~~((100))~~ 10 persons, where such diversion is determined by the department to be a valid appropriation of water and the only practical water source for such users. Such waters shall be considered to be Type ~~((2))~~ F Water upstream from the point of such diversion for 1,500 feet or until the drainage area is reduced by 50 percent, whichever is less;

(b) Waters, which are diverted for use by federal, state, tribal or private fish hatcheries. Such waters shall be considered Type F Water upstream from the point of diversion for

1,500 feet, including tributaries if highly significant for protection of downstream water quality. The department may allow additional harvest beyond the requirements of Type F Water designation provided the department determines after a landowner-requested on-site assessment by the department of fish and wildlife, department of ecology, the affected tribes and interested parties that:

(i) The management practices proposed by the landowner will adequately protect water quality for the fish hatchery; and

(ii) Such additional harvest meets the requirements of the water type designation that would apply in the absence of the hatchery;

(c) Waters, which are within a federal, state, local, or private campground having more than ~~((30))~~ 10 camping units: Provided, That the water shall not be considered to enter a campground until it reaches the boundary of the park lands available for public use and comes within 100 feet of a camping unit, trail or other park improvement;

~~((e))~~ Are used by substantial numbers of anadromous or resident game fish for spawning, rearing or migration. Waters having the following characteristics are presumed to have highly significant fish populations:

(i) Stream segments having a defined channel 20 feet or greater in width between the ordinary high water marks and having a gradient of less than 4 percent.

(ii) Lakes, ponds, or impoundments having a surface area of 1 acre or greater at seasonal low water; or

(d) Are used by salmonids for off-channel habitat. These areas are critical to the maintenance of optimum survival of juvenile salmonids. This habitat shall be identified based on the following criteria) (d) Riverine ponds, wall-based channels, and other channel features that are used by fish for off-channel habitat. These areas are critical to the maintenance of optimum survival of fish. This habitat shall be identified based on the following criteria:

(i) The site must be connected to a ~~((stream-bearing salmonids))~~ fish habitat stream and accessible during some period of the year; and

(ii) The off-channel water must be accessible to ~~((juvenile salmonids through a drainage with less than a 5% gradient))~~ fish.

~~((*)~~ **"Type ~~(3)~~ Water"** shall mean segments of natural waters which are not classified as Type 1 or 2 Water and have a moderate to slight fish, wildlife, and human use. These are segments of natural waters and periodically inundated areas of their associated wetlands which:

(a) Are diverted for domestic use by more than 10 residential or camping units or by a public accommodation facility licensed to serve more than 10 persons, where such diversion is determined by the department to be a valid appropriation of water and the only practical water source for such users. Such waters shall be considered to be Type 3 Water upstream from the point of such diversion for 1,500 feet or until the drainage area is reduced by 50 percent, whichever is less;

(b) Are used by significant numbers of anadromous fish for spawning, rearing or migration. Waters having the fol-

lowing characteristics are presumed to have significant anadromous fish use:

(i) Stream segments having a defined channel of 5 feet or greater in width between the ordinary high water marks; and having a gradient of less than 12 percent and not upstream of a falls of more than 10 vertical feet.

(ii) Ponds or impoundments having a surface area of less than 1 acre at seasonal low water and having an outlet to an anadromous fish stream.

(e) ~~Are used by significant numbers of resident game fish. Waters with the following characteristics are presumed to have significant resident game fish use:~~

~~(i) Stream segments having a defined channel of 10 feet or greater in width between the ordinary high water marks; and a summer low flow greater than 0.3 cubic feet per second; and a gradient of less than 12 percent.~~

~~(ii) Ponds or impoundments having a surface area greater than 0.5 acre at seasonal low water; or~~

~~(d) Are highly significant for protection of downstream water quality. Tributaries which contribute greater than 20 percent of the flow to a Type 1 or 2 Water are presumed to be significant for 1,500 feet from their confluence with the Type 1 or 2 Water or until their drainage area is less than 50 percent of their drainage area at the point of confluence, whichever is less.~~

~~*(4) "Type 4 Water" classification shall be applied to segments of natural waters which are not classified as Type 1, 2 or 3, and for the purpose of protecting water quality downstream are classified as Type 4 Water upstream until the channel width becomes less than 2 feet in width between the ordinary high water marks. Their significance lies in their influence on water quality downstream in Type 1, 2, and 3 Waters. These may be perennial or intermittent.~~

~~*(5) "Type 5 Water" classification shall be applied to all natural waters not classified as Type 1, 2, 3 or 4; including streams with or without well defined channels, areas of perennial or intermittent seepage, ponds, natural sinks and drainageways having short periods of spring or storm runoff.~~

~~*(6)) Np Water" means all segments of natural waters within the bankfull width of defined channels that are perennial nonfish habitat streams. Perennial streams are waters that do not go dry any time of a year of normal rainfall. However, for the purpose of water typing, Type Np Waters include the intermittent dry portions of the perennial channel below the uppermost point of perennial flow. If the uppermost point of perennial flow cannot be identified with simple, nontechnical observations (see board manual, section 23), then Type Np Waters begin at a point along the channel where the contributing basin area is:~~

~~(a) At least 13 acres in the Western Washington coastal zone (which corresponds to the Sitka spruce zone defined in Franklin and Dyrness, 1973);~~

~~(b) At least 52 acres in other locations in Western Washington;~~

~~(c) At least 300 acres in Eastern Washington.~~

~~(4) "Type Ns Water" means all segments of natural waters within the bankfull width of the defined channels that are not Type S, F, or Np Waters. These are seasonal, nonfish habitat streams in which surface flow is not present for at~~

least some portion of a year of normal rainfall and are not located downstream from any stream reach that is a Type Np Water. Ns Waters must be physically connected by an above-ground channel system to Type S, F, or Np Waters.

~~*(5) For purposes of this section:~~

~~(a) "Residential unit" means a home, apartment, residential condominium unit or mobile home, serving as the principal place of residence.~~

~~(b) "Camping unit" means an area intended and used for:~~

~~(i) Overnight camping or picnicking by the public containing at least a fireplace, picnic table and access to water and sanitary facilities; or~~

~~(ii) A permanent home or condominium unit or mobile home not qualifying as a "residential unit" because of part time occupancy.~~

~~(c) ("Resident game fish" means game fish as described in the Washington game code that spend their life cycle in fresh water. Steelhead, searun cutthroat and Dolly Varden trout are anadromous game fish and should not be confused with resident game fish.~~

~~(d)) "Public accommodation facility" means a business establishment open to and licensed to serve the public, such as a restaurant, tavern, motel or hotel.~~

~~((e)) (d) "Natural waters" only excludes water conveyance systems which are artificially constructed and actively maintained for irrigation.~~

~~((f)) (e) "Seasonal low flow" and "seasonal low water" mean the conditions of the 7-day, 2-year low water situation, as measured or estimated by accepted hydrologic techniques recognized by the department.~~

~~((g)) (f) "Channel width and gradient" means a measurement over a representative section of at least 500 linear feet with at least 10 evenly spaced measurement points along the normal stream channel but excluding unusually wide areas of negligible gradient such as marshy or swampy areas, beaver ponds and impoundments. Channel gradient may be determined utilizing stream profiles plotted from United States geological survey topographic maps (see board manual section 23).~~

~~((h)) (g) "Intermittent streams" means those segments of streams that normally go dry.~~

~~(h) "Fish habitat" means habitat which is used by any fish at any life stage at any time of the year, including potential habitat likely to be used by fish which could be recovered by restoration or management and includes off-channel habitat.~~

NEW SECTION

WAC 222-16-031 Interim water typing system. Until the fish habitat water type maps mentioned above are available, waters will be classified according to the interim water typing system described below. If a dispute arises concerning a water type, the department shall make available informal conferences, which shall include the departments of fish and wildlife, ecology, and affected Indian tribes and those contesting the adopted water types. These conferences shall be established under procedures established in WAC 222-46-020.

For the purposes of this interim water typing system see the following table:

Water Type Conversion Table

Permanent Water Typing	Interim Water Typing
Type "S"	Type 1 Water
Type "F"	Type 2 and 3 Water
Type "Np"	Type 4 Water
Type "Ns"	Type 5 Water

*(1) **"Type 1 Water"** means all waters, within their ordinary high-water mark, as inventoried as "shorelines of the state" under chapter 90.58 RCW and the rules promulgated pursuant to chapter 90.58 RCW, but not including those waters' associated wetlands as defined in chapter 90.58 RCW.

*(2) **"Type 2 Water"** means segments of natural waters which are not classified as Type 1 Water and have a high fish, wildlife, or human use. These are segments of natural waters and periodically inundated areas of their associated wetlands, which:

(a) Are diverted for domestic use by more than 100 residential or camping units or by a public accommodation facility licensed to serve more than 10 persons, where such diversion is determined by the department to be a valid appropriation of water and only considered Type 2 Water upstream from the point of such diversion for 1,500 feet or until the drainage area is reduced by 50 percent, whichever is less;

(b) Are diverted for use by federal, state, tribal or private fish hatcheries. Such waters shall be considered Type 2 Water upstream from the point of diversion for 1,500 feet, including tributaries if highly significant for protection of downstream water quality. The department may allow additional harvest beyond the requirements of Type 2 Water designation provided by the department of fish and wildlife, department of ecology, the affected tribes and interested parties that:

(i) The management practices proposed by the landowner will adequately protect water quality for the fish hatchery; and

(ii) Such additional harvest meets the requirements of the water type designation that would apply in the absence of the hatchery;

(c) Are within a federal, state, local or private campground having more than 30 camping units: Provided, That the water shall not be considered to enter a campground until it reaches the boundary of the park lands available for public use and comes within 100 feet of a camping unit.

(d) Are used by fish for spawning, rearing or migration. Waters having the following characteristics are presumed to have highly significant fish populations:

(i) Stream segments having a defined channel 20 feet or greater within the bankfull width and having a gradient of less than 4 percent.

(ii) Lakes, ponds, or impoundments having a surface area of 1 acre or greater at seasonal low water; or

(e) Are used by fish for off-channel habitat. These areas are critical to the maintenance of optimum survival of fish.

This habitat shall be identified based on the following criteria:

(i) The site must be connected to a fish bearing stream and be accessible during some period of the year; and

(ii) The off-channel water must be accessible to fish through a drainage with less than a 5% gradient.

*(3) **"Type 3 Water"** means segments of natural waters which are not classified as Type 1 or 2 Waters and have a moderate to slight fish, wildlife, and human use. These are segments of natural waters and periodically inundated areas of their associated wetlands which:

(a) Are diverted for domestic use by more than 10 residential or camping units or by a public accommodation facility licensed to serve more than 10 persons, where such diversion is determined by the department to be a valid appropriation of water and the only practical water source for such users. Such waters shall be considered to be Type 3 Water upstream from the point of such diversion for 1,500 feet or until the drainage area is reduced by 50 percent, whichever is less;

(b) Are used by fish for spawning, rearing or migration. The requirements for determining fish use are described in the board manual section 13. If fish use has not been determined:

(i) Waters having the following characteristics are presumed to have fish use:

(A) Stream segments having a defined channel of 2 feet or greater within the bankfull width in Western Washington; or 3 feet or greater in width in Eastern Washington; and having a gradient of 16 percent or less.

(B) Stream segments having a defined channel or 2 feet or greater within the bankfull width in Western Washington; or 3 feet or greater within the bankfull width in Eastern Washington, and having a gradient greater than 16 percent and less than or equal to 20 percent, and having greater than 50 acres in contributing basin size in Western Washington or greater than 175 acres contributing basin size in Eastern Washington, based on hydrographic boundaries;

(C) Ponds or impoundments having a surface area of less than 1 acre at seasonal low water and having an outlet to a fish stream;

(D) Ponds of impoundments having a surface area greater than 0.5 acre at seasonal low water.

(ii) The department shall waive or modify the characteristics in (i) of this subsection where:

(A) Waters have confirmed, long term, naturally occurring water quality parameters incapable of supporting fish;

(B) Snowmelt streams have short flow cycles that do not support successful life history phases of fish. These streams typically have no flow in the winter months and discontinue flow by June 1; or

(C) Sufficient information about a geomorphic region is available to support a departure from the characteristics in (i) of this subsection, as determined in consultation with the department of fish and wildlife, department of ecology, affected tribes and interested parties.

*(4) **"Type 4 Water"** means all segments of natural waters within the bankfull width of defined channels that are perennial nonfish habitat streams. Perennial streams are

PERMANENT

waters that do not go dry any time of a year of normal rainfall. However, for the purpose of water typing, Type 4 Waters include the intermittent dry portions of the perennial channel below the uppermost point of perennial flow. If the uppermost point of perennial flow cannot be identified with simple, nontechnical observations (see board manual, section 23), then Type 4 Waters begin at a point along the channel where the contributing basin area is:

(a) At least 13 acres in the Western Washington coastal zone (which corresponds to the Sitka spruce zone defined in Franklin and Dyrness, 1973);

(b) At least 52 acres in other locations in Western Washington;

(c) At least 300 acres in Eastern Washington.

***(5) "Type 5 Waters"** means all segments of natural waters within the bankfull width of the defined channels that are not Type 1, 2, 3, or 4 Waters. These are seasonal, nonfish habitat streams in which surface flow is not present for at least some portion of the year and are not located downstream from any stream reach that is a Type 4 Water. Type 5 Waters must be physically connected by an above-ground channel system to Type 1, 2, 3, or 4 Waters.

***(6)** For purposes of this section:

(a) "Residential unit" means a home, apartment, residential condominium unit or mobile home, serving as the principal place of residence.

(b) "Camping unit" means an area intended and used for:

(i) Overnight camping or picnicking by the public containing at least a fireplace, picnic table and access to water and sanitary facilities; or

(ii) A permanent home or condominium unit or mobile home not qualifying as a "residential unit" because of part time occupancy.

(c) "Public accommodation facility" means a business establishment open to and licensed to serve the public, such as a restaurant, tavern, motel or hotel.

(d) "Natural waters" only excludes water conveyance systems which are artificially constructed and actively maintained for irrigation.

(e) "Seasonal low flow" and "seasonal low water" mean the conditions of the 7-day, 2-year low water situation, as measured or estimated by accepted hydrologic techniques recognized by the department.

(f) "Channel width and gradient" means a measurement over a representative section of at least 500 linear feet with at least 10 evenly spaced measurement points along the normal stream channel but excluding unusually wide areas of negligible gradient such as marshy or swampy areas, beaver ponds and impoundments. Channel gradient may be determined utilizing stream profiles plotted from United States geological survey topographic maps. (See board manual section 23.)

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-16-035 Wetland typing system. *The department in cooperation with the departments of fish and wildlife, and ecology, and affected Indian tribes shall classify wetlands. The wetlands will be classified in order to distinguish those which require wetland management zones and

those which do not. Wetlands which require wetland management zones shall be identified using the following criteria: ~~Accurate delineation of wetlands in accordance with the manual shall be required only where necessary to determine whether replacement by substitution or enhancement is required pursuant to WAC 222-24-025(10) and shall be limited to the area of wetland proposed to be filled. For the purposes of determining acreage to classify or type wetlands under this section, approximate determination using aerial photographs and maps, including the national wetlands inventory, shall be sufficient. In addition, the innermost boundary of the wetland management zone on Type A or B wetlands may be determined by either of two methods: Delineation of the wetland edge, or identifying the point where the crown cover changes from less than 30% to 30% or more. Except where necessary to determine whether replacement by substitution or enhancement is required pursuant to WAC 222-24-025(10), accurate delineation shall not be required under this Title 222 WAC for activities regulated by these rules, including but not limited to the location of roads, landings, culverts, and cross drains. Landowners are encouraged to leave vegetation in these forested wetlands in undisturbed leave areas where possible. When so requested by any affected landowners, applicant or aggrieved person, the department shall make available informal conferences, which shall include the departments of fish and wildlife, and ecology, and affected Indian tribes and those contesting the adopted wetland types. These conferences shall be established under procedures established in WAC 222-46-020.~~

***(1) "Nonforested wetlands"** means any wetland or portion thereof that has, or if the trees were mature would have, a crown closure of less than 30 percent.

(a) "**Type A Wetland**" classification shall be applied to all nonforested wetlands which:

(i) Are greater than 0.5 acre in size, including any acreage of open water where the water is completely surrounded by the wetland; and

(ii) Are associated with at least 0.5 acre of ponded or standing open water. The open water must be present on the site for at least 7 consecutive days between April 1 and October 1 to be considered for the purposes of these rules; or

(b) "**Type B Wetland**" classification shall be applied to all other nonforested wetlands greater than 0.25 acre.

***(2) "Forested wetland"** means any wetland or portion thereof that has, or if the trees were mature would have, a crown closure of 30 percent or more.

***(3) "All forested and nonforested bogs" greater than 0.25 acres shall be considered Type A Wetlands.**

***(4) For the purposes of determining acreage to classify or type wetlands under this section, approximate determination using aerial photographs and maps, including the national wetlands inventory, shall be sufficient. In addition, the innermost boundary of the wetland management zone on Type A or B Wetlands may be determined by either of two methods: Delineation of the wetland edge, or identifying the point where the crown cover changes from less than 30 percent to 30 percent or more.**

NEW SECTION

WAC *222-16-036 Wetland mapping. Wetlands mapping is required in connection with any forest practices application where the proposed activities relate to timber harvest or road construction.

* (1) Landowners must map all forested wetlands and Type A and B Wetlands where more than one-tenth (0.1) acre of such wetlands will be impacted by filling and where mitigation for such filling is required.

* (2) Landowners must make an approximate determination of the boundaries and map all forested wetlands (regardless of size) that are in a riparian management zone, including those parts of the forested wetlands that lie within the harvest unit but outside of the riparian management zone. Mapping is not required if entry within the riparian management zone is not proposed as part of the harvest application.

* (3) Landowners must make an approximate determination of the boundaries and map all forested wetlands 3 acres or more in size within the boundaries of the land to be covered by the application.

* (4) All such mapping must be performed to the wetland delineation and mapping standards outlined in the board manual, section 8.

AMENDATORY SECTION (Amending WSR 98-07-047, filed 3/13/98, effective 5/1/98)

WAC *222-16-050 Classes of forest practices. There are 4 classes of forest practices created by the act. All forest practices (including those in Classes I and II) must be conducted in accordance with the forest practices (~~regulations~~) rules.

(1) "**Class IV - special.**" Except as provided in WAC 222-16-051, application to conduct forest practices involving the following circumstances requires an environmental checklist in compliance with the State Environmental Policy Act (SEPA), and SEPA guidelines, as they have been determined to have potential for a substantial impact on the environment. It may be determined that additional information or a detailed environmental statement is required before these forest practices may be conducted.

* (a) Aerial application of pesticides in a manner identified as having the potential for a substantial impact on the environment under WAC 222-16-070 or ground application of a pesticide within a Type A or B wetland.

(b) Specific forest practices listed in WAC 222-16-080 on lands designated as((:

(i)) critical ((wildlife)) habitat (state) of threatened or endangered species((; or

(ii) Critical habitat (federal) of threatened or endangered species except those excluded by the board under WAC 222-16-080(3)).

(c) Harvesting, road construction, aerial application of pesticides and site preparation on all lands within the boundaries of any national park, state park, or any park of a local governmental entity, except harvest of less than 5 MBF within any developed park recreation area and park managed salvage of merchantable forest products.

~~*(d) ((Construction of roads, landings, rock quarries, gravel pits, borrow pits, and spoil disposal areas on slide prone areas as defined in WAC 222-24-020(6) and field verified by the department, in a watershed administrative unit that has not undergone a watershed analysis under chapter 222-22 WAC, when such slide prone areas occur on an uninterrupted slope above water typed pursuant to WAC 222-16-030, Type A or Type B Wetland, or capital improvement of the state or its political subdivisions where there is potential for a substantial debris flow or mass failure to cause significant impact to public resources.~~

~~*(e) Timber harvest in a watershed administrative unit that has not undergone a watershed analysis under chapter 222-22 WAC, on slide prone areas, field verified by the department, where soils, geologic structure, and local hydrology indicate that canopy removal has the potential for increasing slope instability, when such areas occur on an uninterrupted slope above any water typed pursuant to WAC 222-16-030, Type A or Type B Wetland, or a capital improvement of the state or its political subdivisions where there is a potential for a substantial debris flow or mass failure to cause significant impact to public resources.~~

(f)) Timber harvest, or construction of roads, landings, gravel pits, rock quarries, or spoil disposal areas, on potentially unstable slopes or landforms described in (i) below that has the potential to deliver sediment or debris to a public resource or that has the potential to threaten public safety, and which has been field verified by the department (see WAC 222-10-030 SEPA policies for potential unstable slopes and landforms).

(i) For the purpose of this rule, potentially unstable slopes or landforms are one of the following: (See the board manual section 16 for more descriptive definitions.)

(A) Inner gorges, convergent headwalls, or bedrock hollows with slopes steeper than 35 degrees (70%);

(B) Toes of deep-seated landslides, with slopes steeper than 33 degrees (65%);

(C) Ground water recharge areas for glacial deep-seated landslides;

(D) Outer edges of meander bends along valley walls or high terraces of an unconfined meandering stream; or

(E) Any areas containing features indicating the presence of potential slope instability which cumulatively indicate the presence of unstable slopes.

(ii) The department will base its classification of the application/notification on professional knowledge of the area, information such as soils, geologic or hazard zonation maps and reports or other information provided by the applicant.

(iii) An application would not be classified as Class IV-Special for potentially unstable slopes or landforms under this subsection if:

(A) The proposed forest practice is located within a WAU that is subject to an approved watershed analysis;

(B) The forest practices are to be conducted in accordance with an approved prescription from the watershed analysis (or as modified through the 5-year review process); and

(C) The applicable prescription is specific to the site or situation, as opposed to a prescription that calls for additional

analysis. The need for an expert to determine whether the site contains specific landforms will not be considered "additional analysis," as long as specific prescriptions are established for such landforms.

*~~(e)~~ (f) Timber harvest, in a watershed administrative unit ((that has) not ((undergone a) subject to an approved watershed analysis under chapter 222-22 WAC, construction of roads, landings, rock quarries, gravel pits, borrow pits, and spoil disposal areas on snow avalanche slopes within those areas designated by the department, in consultation with department of transportation and local government, as high avalanche hazard where there is the potential to deliver sediment or debris to a public resource, or the potential to threaten public safety.

((~~(g)~~) (f) Timber harvest, construction of roads, landings, rock quarries, gravel pits, borrow pits, and spoil disposal areas on archaeological or historic sites registered with the Washington state office of archaeology and historic preservation, or on sites containing evidence of Native American cairns, graves, or glyptic records, as provided for in chapters 27.44 and 27.53 RCW. The department shall consult with affected Indian tribes in identifying such sites.

((~~(h)~~) *~~(g)~~ Forest practices subject to ((a) an approved watershed analysis conducted under chapter 222-22 WAC in an area of resource sensitivity identified in that analysis which deviates from the prescriptions (which may include an alternate plan) in the watershed analysis.

((~~(i)~~) *~~(h)~~ Filling or draining of more than 0.5 acre of a wetland.

(2) "**Class IV - general.**" Applications involving the following circumstances are "Class IV - general" forest practices unless they are listed in "Class IV - special." Upon receipt of an application, the department will determine the lead agency for purposes of compliance with the State Environmental Policy Act pursuant to WAC 197-11-924 and 197-11-938(4) and RCW 43.21C.037(2). Such applications are subject to a 30-day period for approval unless the lead agency determines a detailed statement under RCW 43.21C.030 (2)(c) is required. Upon receipt, if the department determines the application is for a proposal that will require a license from a county/city acting under the powers enumerated in RCW 76.09.240, the department shall notify the applicable county/city under WAC 197-11-924 that the department has determined according to WAC 197-11-938(4) that the county/city is the lead agency for purposes of compliance with State Environmental Policy Act.

(a) Forest practices (other than those in Class I) on lands platted after January 1, 1960, or on lands being converted to another use.

(b) Forest practices which would otherwise be Class III, but which are taking place on lands which are not to be reforested because of likelihood of future conversion to urban development. (See WAC 222-16-060 and 222-34-050.)

(3) "**Class I.**" Those operations that have been determined to have no direct potential for damaging a public resource are Class I forest practices. When the conditions listed in "Class IV - Special" are not present, these operations may be commenced without notification or application.

(a) Culture and harvest of Christmas trees and seedlings.

*~~(b)~~ Road maintenance except: (i) Replacement of bridges and culverts across Type ((1, 2, 3)) S, F or flowing Type ((4)) Np Waters; or (ii) movement of material that has a direct potential for entering Type ((1, 2, 3)) S, F or flowing Type ((4)) Np Waters or Type A or B Wetlands.

*~~(c)~~ Construction of landings less than 1 acre in size, if not within a shoreline area of a Type ((1)) S Water, the riparian management zone of a Type ((2 or 3)) F Water, the ((ordinary high water mark)) bankfull width of a Type ((4)) Np Water, a wetland management zone, a wetland, or the CRGNSA special management area.

*~~(d)~~ Construction of less than 600 feet of road on a side-slope of 40 percent or less if the limits of construction are not within the shoreline area of a Type ((1)) S Water, the riparian management zone of a Type ((2 or Type 3)) F Water, the ((ordinary high water mark)) bankfull width of a Type ((4)) Np Water, a wetland management zone, a wetland, or the CRGNSA special management area.

*~~(e)~~ Installation or removal of a portable water crossing structure where such installation does not take place within the shoreline area of a Type ((1)) S Water and does not involve disturbance of the beds or banks of any waters.

*~~(f)~~ Initial installation and replacement of relief culverts and other drainage control facilities not requiring a hydraulic permit.

(g) Rocking an existing road.

(h) Loading and hauling timber from landings or decks.

(i) Precommercial thinning and pruning, if not within the CRGNSA special management area.

(j) Tree planting and seeding.

(k) Cutting and/or removal of less than 5,000 board feet of timber (including live, dead and down material) for personal use (i.e., firewood, fence posts, etc.) in any 12-month period, if not within the CRGNSA special management area.

(l) Emergency fire control and suppression.

(m) Slash burning pursuant to a burning permit (RCW 76.04.205).

*~~(n)~~ Other slash control and site preparation not involving either off-road use of tractors on slopes exceeding 40 percent or off-road use of tractors within the shorelines of a Type ((1)) S Water, the riparian management zone of any Type ((2 or 3)) F Water, or the ((ordinary high water mark)) bankfull width of a Type ((4)) Np Water, a wetland management zone, a wetland, or the CRGNSA special management area.

*~~(o)~~ Ground application of chemicals, if not within the CRGNSA special management area. (See WAC 222-38-020 and 222-38-030.)

*~~(p)~~ Aerial application of chemicals (except insecticides), outside of the CRGNSA special management area when applied to not more than 40 contiguous acres if the application is part of a combined or cooperative project with another landowner and where the application does not take place within 100 feet of lands used for farming, or within 200 feet of a residence, unless such farmland or residence is owned by the forest landowner. Provisions of chapter 222-38 WAC shall apply.

(q) Forestry research studies and evaluation tests by an established research organization.

*~~(r)~~ Any of the following if none of the operation or limits of construction takes place within the shoreline area of a

Type ((+)) ~~S~~ Water or the riparian management zone of a Type ((2-or-3)) ~~F~~ Water, the ((~~ordinary high water mark~~)) bankfull width of a Type ((4)) ~~Np~~ Water or flowing Type ((5)) ~~Ns~~ Water, or within the CRGNSA special management area and the operation does not involve off-road use of tractor or wheeled skidding systems on a sideslope of greater than 40 percent:

(i) Any forest practices within the boundaries of existing golf courses.

(ii) Any forest practices within the boundaries of existing cemeteries which are approved by the cemetery board.

(iii) Any forest practices involving a single landowner where contiguous ownership is less than two acres in size.

(s) Removal of beaver structures from culverts on active and inactive roads. A hydraulics project approval from the Washington department of fish and wildlife may be required.

(4) "**Class II.**" Certain forest practices have been determined to have a less than ordinary potential to damage a public resource and may be conducted as Class II forest practices: *Provided*, That no forest practice enumerated below may be conducted as a Class II forest practice if the operation requires a hydraulic project approval (RCW 75.20.100) or is within a "shorelines of the state," or involves ((~~a bond in lieu of landowners signature~~)) owner of perpetual timber rights subject to RCW 76.09.067 (other than renewals). Such forest practices require an application. No forest practice enumerated below may be conducted as a "Class II" forest practice if it takes place on lands platted after January 1, 1960, or on lands being converted to another use. Such forest practices require a Class IV application. Class II forest practices are the following:

(a) Renewal of a prior Class II notification where no change in the nature and extent of the forest practices is required under rules effective at the time of renewal.

(b) Renewal of a previously approved Class III or IV forest practice application where:

(i) No modification of the uncompleted operation is proposed;

(ii) No notices to comply, stop work orders or other enforcement actions are outstanding with respect to the prior application; and

(iii) No change in the nature and extent of the forest practice is required under rules effective at the time of renewal. Renewal of a previously approved multiyear permit for forest practices within a WAU with an approved watershed analysis requires completion of a necessary 5-year review of the watershed analysis.

* (c) Any of the following if none of the operation or limits of construction takes place within the riparian management zone of a Type ((2-or-3)) ~~F~~ Water, within the ((~~ordinary high water mark~~)) bankfull width of a Type ((4)) ~~Np~~ Water, within a wetland management zone, within a wetland, or within the CRGNSA special management area:

(i) Construction of advance fire trails.

(ii) Opening a new pit of, or extending an existing pit by, less than 1 acre.

* (d) Any of the following if none of the operation or limits of construction takes place within the riparian management zone of a Type ((2-or-3)) ~~F~~ Water, within the ((~~ordinary~~

~~high water mark~~)) bankfull width of a Type ((4)) ~~Np~~ Water, within a wetland management zone or within a wetland; and if none of the operations involve off-road use of tractor or wheeled skidding systems on a sideslope of greater than 40 percent((+)).

(e) Salvage of logging residue.

* ((e)) (f) Any of the following if none of the operation or limits of construction takes place within the riparian management zone of a Type ((2-or-3)) ~~F~~ Water, within the ((~~ordinary high water mark~~)) bankfull width of a Type ((4)) ~~Np~~ Water, within a wetland management zone, within a wetland, or within the CRGNSA special management area, and if none of the operations involve off-road use of tractor or wheeled skidding systems on a sideslope of greater than 40 percent, and if none of the operations are located on lands with a likelihood of future conversion (see WAC 222-16-060):

(i) West of the Cascade summit, partial cutting of 40 percent or less of the live timber volume.

(ii) East of the Cascade summit, partial cutting of 5,000 board feet per acre or less.

(iii) Salvage of dead, down, or dying timber if less than 40 percent of the total timber volume is removed in any 12-month period.

(iv) Any harvest on less than 40 acres.

(v) Construction of 600 or more feet of road, provided that the department shall be notified at least 2 business days before commencement of the construction.

(5) "**Class III.**" Forest practices not listed under Classes IV, I or II above are "Class III" forest practices. Among Class III forest practices are the following:

(a) Those requiring hydraulic project approval (RCW 75.20.100).

* (b) Those within the shorelines of the state other than those in a Class I forest practice.

* (c) Aerial application of insecticides, except where classified as a Class IV forest practice.

* (d) Aerial application of chemicals (except insecticides), except where classified as Class I or IV forest practices.

* (e) Harvest or salvage of timber except where classed as Class I, II or IV forest practices.

* (f) All road construction and reconstruction except as listed in Classes I, II and IV forest practices.

(g) Opening of new pits or extensions of existing pits over 1 acre.

* (h) Road maintenance involving:

(i) Replacement of bridges or culverts across Type ((1,2,3)) ~~S,F~~ or flowing Type ((4)) ~~Np~~ Waters; or

(ii) Movement of material that has a direct potential for entering Type ((1,2,3)) ~~S,F~~ or flowing Type ((4)) ~~Np~~ Waters or Type A or B Wetlands.

(i) Operations involving ((~~an applicant's bond in lieu of a landowner's signature~~)) owner of perpetual timber rights subject to RCW 76.09.067.

(j) Site preparation or slash abatement not listed in Classes I or IV forest practices.

(k) Harvesting, road construction, site preparation or aerial application of pesticides on lands which contain cul-

tural, historic or archaeological resources which, at the time the application or notification is filed, are:

(i) On or are eligible for listing on the National Register of Historic Places; or

(ii) Have been identified to the department as being of interest to an affected Indian tribe.

(l) Harvesting exceeding 19 acres in a designated difficult regeneration area.

(m) Utilization of an alternate plan. See WAC 222-12-040.

*(n) Any filling of wetlands, except where classified as Class IV forest practices.

*(o) Multiyear permits.

NEW SECTION

WAC 222-16-051 *Exception to Class IV-Special. An application would not be classified as Class IV-Special based on its potential impact to aquatic resources under any subsection of WAC 222-16-050(1) if the application is consistent with an agreement described in WAC 222-12-041(3) and the agreement addresses the risk to aquatic resources addressed in such subsection of WAC 222-16-050(1). The landowner must identify these subsections at the time of application. Forest practices applications may still be classified as Class IV-Special based upon the potential for impact to other factors listed in any subsection of WAC 222-16-050(1).

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-16-070 Pesticide uses with the potential for a substantial impact on the environment. *To identify forest practices involving pesticide uses that have the potential for a substantial impact on the environment, the department shall apply the process prescribed in this section. See WAC 222-16-050 (1)(a).

(1) Pesticide list - The department shall maintain a list of all pesticides registered under chapter 15.58 RCW for use in forest practices. The department shall conduct, in consultation with the departments of ecology, health, agriculture, and fish and wildlife, an annual review of the list for the purpose of including new pesticides and/or removing those pesticides which have been prohibited from use. The list shall be available to the public at each of the department's offices. A list of the department's offices and their addresses appears at WAC 332-10-030. In preparing the pesticide list, the department shall include information on the following characteristics:

(a) Active ingredients, name brand or trade mark, labeled uses, pesticide type, EPA-registration number;

(b) Toxicity of the pesticide based on the Environmental Protection Agency (EPA) label warning under 40 C.F.R. 156.10 (h)(1), listed as "caution," "warning," "danger," or "danger - poison" except as modified to consider aquatic or mammalian toxicity; and

(c) Whether the pesticide is a state restricted use pesticide for the protection of ground water under WAC 16-228-164(1).

(2) Key for evaluating applications. To determine whether aerial application of a pesticide has the potential for

a substantial impact on the environment, the department shall apply the following analysis:

KEY FOR EVALUATION OF SITE SPECIFIC USE OF AERIALLY APPLIED ((CHEMICALS)) PESTICIDES

Question	Question	Resp	Action
1 (a)	Is the pesticide on the pesticide list (WAC 222-16-070(1))?	Yes No	go to 2 go to 1(b)
1 (b)	Is the pesticide being used under a Dept of Agriculture Experimental Use Permit (WAC 16-228-125)?	Yes No	Class III Class IV Sp
2	Is the toxicity rating for the pesticide to be used "Danger - Poison" as designated in the pesticide list (WAC 222-16-070(1)(b))?	Yes No	Class IV Sp go to 3(a)
3 (a)	Is <i>Bacillus thuringiensis</i> (BT) the only pesticide being used on this application?	Yes No	go to 3(b) go to 4(a)
3 (b)	Is there a Threatened or Endangered species or the critical habitat (Federal) or critical ((wildlife)) habitat (State) of a species within the application area that is susceptible to the BT strain being used?	Yes No	Class IV Sp Class III
4 (a)	Is this operation occurring over ground water with a high susceptibility to contamination as specified in EPA 910/9-87-189 or in documentation provided by the department of ecology?	Yes No	go to 4(b) go to 5(a)
4 (b)	Is this pesticide a state restricted use pesticide for the protection of ground water under WAC 16-228-164 (1)?	Yes No	Class IV Sp go to 5(a)
5 (a)	Is the operation adjacent (within 100 ft.) of surface water?	Yes No	go to 5(b) go to 5(e)
5 (b)	Determine the toxicity rating from the pesticide list: *Is the toxicity rating "Caution" or "Warning"? *Is the toxicity rating "Danger"?	Yes Yes	go to 5(c) go to 5(d)
5 (c)	Is there a Group A or B water surface water system (WAC 246-290-020) intake OR a fish hatchery intake within one half mile downstream of the operation?	Yes No	Class IV Sp go to 5(e)
5 (d)	Is there a Group A or B water surface system intake OR a fish hatchery intake within 1 mile downstream of the operation?	Yes No	Class IV Sp go to 5(e)
5 (e)	Is the operation within 200 feet of the intake of a Group A or B spring water system?	Yes No	Class IV Sp go to 5(f)
5 (f)	Is the operation applying a pesticide in a Type A or B wetland?	Yes No	Class IV Sp go to 6(a)

PERMANENT

KEY FOR EVALUATION OF SITE SPECIFIC USE OF AERIALLY APPLIED ((CHEMICALS)) PESTICIDES

Question	Question	Resp	Action
6 (a)	Does any portion of the planned operation cover 240 or more contiguous acres? Pesticide treatment units will be considered contiguous if they are separated by less than 300 feet or treatment dates of adjacent units are less than 90 days apart.	Yes No	Class IV Sp go to 6(b)
6 (b)	Is there a Threatened or Endangered species or the critical habitat (Federal) or critical ((wildlife)) habitat (State) of a species within the application area?	Yes No	Class IV Sp go to 6(c)
6 (c)	If there is a special concern identified for this pesticide in the Board manual, does it apply to this application?	Yes No	Class IV Sp Class III

(3) Special concerns (see WAC 222-16-070 (2)6(c)) shall be evaluated by the department of agriculture. Information regarding special concerns shall be presented to the board for review. Approved special concerns shall be included in the ((board's)) board manual. Special concerns shall include situations where use of pesticides has the potential for a substantial impact on the environment, beyond those covered specifically in the key in subsection (2) of this section.

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-16-080 Critical ((wildlife)) habitats (state) ((and critical habitat (federal))) of threatened and endangered species. (1) Critical ((wildlife)) habitats (state) of threatened or endangered species and specific forest practices designated as Class IV-Special are as follows:

(a) Bald eagle - harvesting, road construction, aerial application of pesticides, or site preparation within 0.5 mile of a known active nest site, documented by the department of fish and wildlife, between the dates of January 1 and August 15 or 0.25 mile at other times of the year; and within 0.25 mile of a communal roosting site. Communal roosting sites shall not include refuse or garbage dumping sites.

(b) Gray wolf - harvesting, road construction, or site preparation within 1 mile of a known active den site, documented by the department of fish and wildlife, between the dates of March 15 and July 30 or 0.25 mile from the den site at other times of the year.

(c) Grizzly bear - harvesting, road construction, aerial application of pesticides, or site preparation within 1 mile of a known active den site, documented by the department of fish and wildlife, between the dates of October 1 and May 30 or 0.25 mile at other times of the year.

(d) Mountain caribou - harvesting, road construction, aerial application of pesticides, or site preparation within 0.25 mile of a known active breeding area, documented by the department of fish and wildlife.

(e) Oregon silverspot butterfly - harvesting, road construction, aerial or ground application of pesticides, or site preparation within 0.25 mile of an individual occurrence, documented by the department of fish and wildlife.

(f) Peregrine falcon - harvesting, road construction, aerial application of pesticides, or site preparation within 0.5 mile of a known active nest site, documented by the department of fish and wildlife, between the dates of March 1 and July 30; or harvesting, road construction, or aerial application of pesticides within 0.25 mile of the nest site at other times of the year.

(g) Sandhill crane - harvesting, road construction, aerial application of pesticides, or site preparation within 0.25 mile of a known active nesting area, documented by the department of fish and wildlife.

(h) Northern spotted owl(~~(--the following shall apply through June 30, 1996: Harvesting, road construction, or aerial application of pesticides on the most suitable 500 acres of nesting, roosting, and foraging habitat surrounding the northern spotted owl site center. The most suitable habitat shall be determined by the department in cooperation with the department of fish and wildlife, tribes, and others with applicable expertise. Consideration shall be given to habitat quality, proximity to the activity center and contiguity in selecting the most suitable 500 acres of habitat.~~)

Beginning July 1, 1996, the following shall apply for the northern spotted owl:))

(i) **Within a SOSEA boundary** (see maps in WAC 222-16-086), except as indicated in (h)(ii) of this subsection, harvesting, road construction, or aerial application of pesticides on suitable spotted owl habitat within a median home range circle that is centered within the SOSEA or on adjacent federal lands.

(ii) **Within the Entiat SOSEA**, harvesting, road construction, or aerial application of pesticides within the areas indicated for demographic support (see WAC 222-16-086(2)) on suitable spotted owl habitat located within a median home range circle that is centered within the demographic support area.

(iii) **Outside of a SOSEA**, harvesting, road construction, or aerial application of pesticides, between March 1 and August 31 on the seventy acres of highest quality suitable spotted owl habitat surrounding a northern spotted owl site center located outside a SOSEA. The highest quality suitable habitat shall be determined by the department in cooperation with the department of fish and wildlife. Consideration shall be given to habitat quality, proximity to the activity center and contiguity.

(iv) **Small parcel northern spotted owl exemption.** Forest practices proposed on the lands owned or controlled by a landowner whose forest land ownership within the SOSEA is less than or equal to 500 acres and where the forest practice is not within 0.7 mile of a northern spotted owl site center shall not be considered to be on lands designated as critical ((wildlife)) habitat (state) for northern spotted owls.

(i) Western pond turtle - harvesting, road construction, aerial application of pesticides, or site preparation within 0.25 mile of a known individual occurrence, documented by the department of wildlife.

PERMANENT

(j) Marbled murrelet.

(i) Harvesting, other than removal of down trees outside of the critical nesting season, or road construction within an occupied marbled murrelet site.

(ii) Harvesting, other than removal of down trees outside of the critical nesting season, or road construction within suitable marbled murrelet habitat within a marbled murrelet detection area.

(iii) Harvesting, other than removal of down trees outside of the critical nesting season, or road construction within suitable marbled murrelet habitat containing 7 platforms per acre outside a marbled murrelet detection area.

(iv) Harvesting, other than removal of down trees outside of the critical nesting season, or road construction outside a marbled murrelet detection area within a marbled murrelet special landscape and within suitable marbled murrelet habitat with 5 or more platforms per acre.

(v) Harvesting within a 300 foot managed buffer zone adjacent to an occupied marbled murrelet site that results in less than a residual stand stem density of 75 trees per acre greater than 6 inches in dbh; provided that 25 of which shall be greater than 12 inches dbh including 5 trees greater than 20 inches in dbh, where they exist. The primary consideration for the design of managed buffer zone widths and leave tree retention patterns shall be to mediate edge effects. The width of the buffer zone may be reduced in some areas to a minimum of 200 feet and extended to a maximum of 400 feet as long as the average of 300 feet is maintained.

(vi) Except that the following shall not be critical ((wildlife)) habitat (state):

(A) Where a landowner owns less than 500 acres of forest land within 50 miles of saltwater and the land does not contain an occupied marbled murrelet site; or

(B) Where a protocol survey (see WAC 222-12-090(14)) has been conducted and no murrelets were detected. The landowner is then relieved from further survey requirements. However, if an occupied marbled murrelet site is established, this exemption is void.

(2) The following critical habitats (federal) designated by the United States Secretary of the Interior or Commerce, or specific forest practices within those habitats, have been determined to ((not)) have the potential for a substantial impact on the environment((=

Marbled murrelet critical habitat 50 C.F.R. §17.95(b), 61 Fed. Reg. 26256 as a result of provisions of the state's marbled murrelet rule)) and therefore are designated as critical habitats (state) of threatened or endangered species.

(3) For the purpose of identifying forest practices which have the potential for a substantial impact on the environment with regard to threatened or endangered species newly listed by the Washington fish and wildlife commission and/or the United States Secretary of the Interior or Commerce, the department shall after consultation with the department of fish and wildlife, prepare and submit to the board a proposed list of critical ((wildlife)) habitats (state) of threatened or endangered species. This list shall be submitted to the board within ((15)) 30 days of the listing of the species. The department shall, at a minimum, consider potential impacts of forest practices on habitats essential to meeting the life requisites for each species listed as threatened or endangered.

Those critical ((wildlife)) habitats (state) adopted by the board shall be added to the list in subsection (1) of this section. See WAC 222-16-050 (1)(b)((+)).

(4) For the purpose of identifying any areas and/or forest practices within critical habitats (federal) designated by the United States Secretary of the Interior or Commerce which ((do not)) have the potential for a substantial impact on the environment, the department shall, after consultation with the department of fish and wildlife, submit to the board a proposed list of any forest practices and/or areas proposed for ((exclusion from)) inclusion in Class IV - Special forest practices. The department shall submit the list to the board within ((120)) 30 days of the date the United States Secretary of the Interior or Commerce publishes a final rule designating critical habitat (federal) in the Federal Register. Those critical habitats ((excluded)) included by the board ((from)) in Class IV - Special shall be added to the list in subsection (2) of this section. See WAC 222-16-050 (1)(b)((+)).

(5)(a) Except for bald eagles under subsection (1)(a) of this section, the critical ((wildlife)) habitats (state) of threatened and endangered species and specific forest practices designated in subsections (1) and (2) of this section are intended to be interim. These interim designations shall expire for a given species on the earliest of:

(i) The effective date of a regulatory system for wildlife protection referred to in (b) of this subsection or of substantive rules on the species.

(ii) The delisting of a threatened or endangered species by the Washington fish and wildlife commission and by the United States Secretary of Interior or Commerce.

(b) The board shall examine current wildlife protection and department authority to protect wildlife and develop and recommend a regulatory system, including baseline rules for wildlife protection. To the extent possible, this system shall:

(i) Use the best science and management advice available;

(ii) Use a landscape approach to wildlife protection;

(iii) Be designed to avoid the potential for substantial impact to the environment;

(iv) Protect known populations of threatened and endangered species of wildlife from negative effects of forest practices consistent with RCW 76.09.010; and

(v) Consider and be consistent with recovery plans adopted by the department of fish and wildlife pursuant to RCW 77.12.020(6) or habitat conservation plans or 16 U.S.C. 1533(d) rule changes of the Endangered Species Act.

(6) Regardless of any other provision in this section, forest practices applications shall not be classified as Class IV-Special based on critical ((wildlife)) habitat (state) (WAC 222-16-080((1)) or critical habitat (federal)()) WAC 222-16-050 (1)(b)((+)) for a species, if the forest practices are consistent with one or more of the following ((proposed for protection of the species)):

(a) ((A habitat conservation plan and permit or an incidental take statement covering such species approved by the Secretary of the Interior or Commerce pursuant to 16 U.S.C. §1536 (b) or 1539 (a); an "unlisted species agreement" covering such species approved by the U.S. Fish and Wildlife Service or National Marine Fisheries Service; or a "no take letter" or other cooperative or conservation agreement entered

~~into with a federal or state fish and wildlife agency pursuant to its statutory authority for fish and wildlife protection that addresses the needs of the affected species and that is subject to review under the National Environmental Protection Act, 42 U.S.C. §4321 et seq., or the State Environmental Policy Act, chapter 43.21C RCW, as applicable;)) Documents addressing the needs of the affected species provided such documents have received environmental review with an opportunity for public comment under the National Environmental Policy Act, 42 U.S.C. section 4321 et seq.:~~

(i) A habitat conservation plan and incidental take permit; or an incidental take statement covering such species approved by the Secretary of the Interior or Commerce pursuant to 16 U.S.C. § 1536 (b) or 1539 (a); or

(ii) An "unlisted species agreement" covering such species approved by the U.S. Fish and Wildlife Service or National Marine Fisheries Service; or

(iii) Other conservation agreement entered into with a federal agency pursuant to its statutory authority for fish and wildlife protection that addresses the needs of the affected species; or

(iv) A rule adopted by the U.S. Fish and Wildlife Service or the National Marine Fisheries Service for the conservation of an affected species pursuant to 16 U.S.C. section 1533(d); or

(b) Documents addressing the needs of the affected species so long as they have been reviewed under the State Environmental Policy Act;

(i) A landscape management plan; or

(ii) Another cooperative or conservation agreement entered into with a state resource agency pursuant to its statutory authority for fish and wildlife protection;

~~((A rule adopted by the U.S. Fish and Wildlife Service for the conservation of a particular threatened species pursuant to 16 U.S.C. 1533(d);))~~

(c) A special wildlife management plan (SWMP) developed by the landowner and approved by the department in consultation with the department of fish and wildlife;

(d) A bald eagle management plan approved under WAC 232-12-292;

(e) A landowner option plan (LOP) for northern spotted owls developed pursuant to WAC 222-16-100(1); ~~((or))~~

(f) A cooperative habitat enhancement agreement (CHEA) developed pursuant to WAC 222-16-105; or

(g) A take avoidance plan issued by the U.S. Fish and Wildlife Service or the National Marine Fisheries Service prior to March 20, 2000.

In those situations where one of the options above has been used, forest practices applications may still be classified as Class IV-Special based upon the presence of one or more of the factors listed in WAC 222-16-050(1), other than critical ~~((wildlife))~~ habitat (state) ~~((or critical habitat (federal)))~~ for the species covered by the existing plan.

(7) The department, in consultation with the department of fish and wildlife, shall review each SOSEA to determine whether the goals for that SOSEA are being met through approved plans, permits, statements, letters, or agreements referred to in subsection (6) of this section. Based on the consultation, the department shall recommend to the board the suspension, deletion, modification or reestablishment of the

applicable SOSEA from the rules. The department shall conduct a review for a particular SOSEA upon approval of a landowner option plan, a petition from a landowner in the SOSEA, or under its own initiative.

(8) The department, in consultation with the department of fish and wildlife, shall report annually to the board on the status of the northern spotted owl to determine whether circumstances exist that substantially interfere with meeting the goals of the SOSEAs.

AMENDATORY SECTION (Amending WSR 97-15-105, filed 7/21/97, effective 8/21/97)

WAC 222-16-100 Planning options for the northern spotted owl. (1) **Landowner option plans for the northern spotted owl.** Landowner option plans (LOPs) are intended to provide landowners with a mechanism, entered into voluntarily, to contribute to the protection of northern spotted owls by considering the needs of overall population maintenance or dispersal habitat across a defined geographic area. Forest practices applications that are in an area covered by an LOP, and that are consistent with the LOP, will not be classified as Class IV-Special on the basis of critical ~~((wildlife))~~ habitat (state) or critical habitat (federal) for the northern spotted owl. This does not preclude classification as Class IV-Special because of the presence of other factors listed in WAC 222-16-050(1).

(a) **Required elements of LOPs.** The level of detail to be included in a LOP will depend on the area of ownership involved, the time period for which the plan will be in effect, and the complexity of the management strategy. Nevertheless, each plan shall contain the elements set forth in this subsection.

(i) **Goals and objectives.** The specific goals and objectives for the landowner's contributions proposed under the LOP shall be developed by the landowner and approved by the department in consultation with the department of fish and wildlife based on the following:

(A) Mitigation under the plan must be reasonable and capable of being accomplished;

(B) To the maximum extent practicable, the plan must minimize and mitigate significant adverse impacts caused by, and identified in, the plan on individual northern spotted owl site centers or the ability of the SOSEA to meet SOSEA goals. Specific short (one to five-year) and long (greater than five-year) term goals and objectives for the LOP should be clearly stated, where applicable; and

(C) LOPs should be designed to achieve an appropriate contribution from nonfederal lands toward meeting SOSEA goals and are intended to be an efficient and effective alternative to site-by-site management planning. In Eastern Washington, LOPs must also consider the need to protect the forests from catastrophic loss from wildfire, insects, and diseases.

(ii) **Other required elements:**

(A) A description of the planning area. The LOP planning area shall include a sufficient amount of the landowner's forest land within the SOSEA to meet the goals and objectives of the plan.

(B) A description of the physical features in the planning area (e.g., geology, topography, etc.).

(C) The current habitat status. Suitable spotted owl habitat should be categorized and mapped as old forest, sub-mature, young forest marginal, or dispersal.

(D) The current species status. All status 1, 2, and 3 northern spotted owl site centers and the associated median home range circles that overlap any of the landowner's ownership within the LOP boundary must be mapped.

(E) Management proposals and relevant operations plans.

(F) Projected suitable habitat development.

(G) A plan for training.

(H) A monitoring program.

(I) Reporting standards.

(J) The conditions under which the LOP may be modified.

(K) The term of the LOP and conditions for termination. The term of the LOP shall be sufficient to meet its goals and objectives. The conditions of the LOP run with the land unless the LOP specifies alternative means to achieve the LOP goals and objectives upon mid-term sale or transfer. In addition to any other termination provisions in the LOP, plans may be terminated by mutual agreement of the landowner and the department.

(b) **Approval of LOPs.** Upon receipt of a landowner option plan, the department shall circulate the plan to the department of fish and wildlife, affected Indian tribes, local government entities, other forest landowners in the SOSEA, and the public for a thirty-day review and comment period. The department may extend this review period for up to thirty additional days. Within ninety days of receipt of the plan, the department shall review the comments and approve or disapprove the plan or submit the plan to the landowner to revise as appropriate. The department, after consultation with the department of fish and wildlife, shall approve the plan if:

(i) The plan contains all of the elements required under this section;

(ii) The plan is expected to be effective in meeting its goals and objectives;

(iii) The plan will not have a probable significant adverse impact on the ability of the SOSEA to meet its goals; and

(iv) The plan will not appreciably reduce the likelihood of the survival and recovery of the northern spotted owl in the wild.

In making its determination under this subsection, the department shall consider the direct, indirect, and cumulative effects of the plan; both the short-term and long-term effects of the plan; and whether local, state, or federal land management, regulatory, or nonregulatory requirements will mitigate identified significant adverse impacts. If the department does not approve the plan, or approves it over the objections of the department of fish and wildlife, the department shall set forth in writing a concise explanation of the reasons for its action.

(c) **Enforcement of LOPs.** The department shall review all applications and notifications from the landowner, proposed within the plan area, for consistency with the plan. Any applications or notifications found to be inconsistent with the plan shall be returned to the landowner for modification.

After landowner review, applications and notifications which are not consistent with the plan shall be classified as Class IV-Special.

(2) See WAC 222-16-105 for CHEAs.

AMENDATORY SECTION (Amending WSR 97-15-105, filed 7/21/97, effective 8/21/97)

WAC 222-16-105 Cooperative habitat enhancement agreements. (1) **Purpose.** A cooperative habitat enhancement agreement (CHEA) is intended to remove disincentives for landowners who create, enhance, or maintain habitat for the northern spotted owl or marbled murrelet by providing them with protection against future spotted owl or marbled murrelet (~~(regulation)~~) rules caused by their enhancement activities. A CHEA is an agreement between the department and a landowner, developed in cooperation with the department of fish and wildlife, for the purpose of creating, enhancing, or maintaining northern spotted owl habitat and/or marbled murrelet habitat. The agreement will apply only to forest land identified by the landowner:

(a) For northern spotted owls, outside of the median home range circles of northern spotted owl site centers in existence at the time of implementation.

(b) For marbled murrelets, any current unoccupied or potential future habitat.

(2) **Authority.** Outside of the median home range circles of northern spotted owls or an occupied marbled murrelet site, the department, in consultation with the department of fish and wildlife, may enter into agreements with nonfederal landowners to create, enhance, or maintain habitat that the northern spotted owl and/or the marbled murrelet can be expected to utilize. During the term of these agreements, forest practices covered by the agreements shall not be classified as Class IV-Special on the basis of critical (~~(wildlife)~~) habitat (state) or critical habitat (federal) for the northern spotted owl or the marbled murrelet. This does not preclude classification as Class IV-Special because of the presence of other factors listed in WAC 222-16-050(1).

(3) **Baseline.**

(a) Each agreement shall identify a baseline level of habitat, and the department shall not permit forest practices that reduce the habitat below the baseline during the term of the agreement.

(b) For northern spotted owls, the baseline may range from zero habitat to the overall levels of suitable spotted owl habitat and dispersal habitat that existed across the land in question at the time the agreement is entered into.

(c) For marbled murrelets, the baseline may range from zero habitat to the overall levels of suitable marbled murrelet habitat that existed across the land in question at the time the agreement is entered into.

(d) The department shall determine, working with the landowner and in consultation with the department of fish and wildlife, the appropriate baseline, taking into consideration:

(i) The size of the landowner's ownership and the ability of the landowner to maintain habitat conditions across the landscape in question over time;

(ii) The overall benefits of the agreement to the northern spotted owl or marbled murrelet including both the proposed measures to create, enhance, or maintain habitat and the proposed baseline levels; and

(iii) The term of the agreement.

(4) Form and content of CHEAs.

(a) The department shall, in consultation with the department of fish and wildlife, have the authority to define the form and content of CHEAs. The form and content may vary among agreements, but each must provide sufficient information for the department, the public, and other reviewers to understand and evaluate the agreement against the standards established under this section.

(b) For northern spotted owls, in addition to the elements required by the department, each agreement shall include a plan to avoid harvesting, road construction, or the aerial application of pesticides, between March 1 and August 31, on the seventy acres of highest quality suitable spotted owl habitat surrounding any known northern spotted owl site centers on lands covered by the agreement.

(5) Approval of a CHEA. Upon receipt of a CHEA, the department shall circulate the agreement to the department of fish and wildlife, affected Indian tribes, local government entities, other forest landowners in the SOSEA (if the CHEA is in a SOSEA), and the public for review and comment. Within sixty days of receipt of the agreement, the department shall review the comments and approve or disapprove the agreement or submit the agreement to the landowner to revise as appropriate. The department, after consultation with the department of fish and wildlife, may approve the agreement if the agreement will create, enhance, or maintain habitat conditions for:

(a) The northern spotted owl in a manner that provides a measurable contribution toward meeting the goals of the SOSEA or a measurable benefit to northern spotted owls outside SOSEAs.

(b) The marbled murrelet in a manner that provides a measurable benefit to the species.

(6) Enforcement of CHEAs. The department shall review all applications and notifications from the landowner, proposed within the agreement area, for consistency with the agreement. Any applications or notifications found to be inconsistent with the agreement shall be returned to the landowner for modification. After landowner review, applications and notifications which are not consistent with the agreement shall be classified based on the rules in effect at the time of application and without any of the benefits of the agreement.

AMENDATORY SECTION (Amending WSR 98-07-047, filed 3/13/98, effective 5/1/98)

WAC 222-20-010 Applications and notifications—Policy. (1) **No Class II, III or IV forest practices** shall be commenced or continued unless the department has received a notification for Class II forest practices, or approved an application for Class III or IV forest practices pursuant to the act. Where the time limit for the department to act on the application has expired, and none of the conditions in WAC

222-20-020(1) exist, the operation may commence. (NOTE: OTHER LAWS AND ((REGULATIONS)) RULES AND/OR PERMIT REQUIREMENTS MAY APPLY. SEE CHAPTER 222-50 WAC.)

(2) **The department shall** prescribe the form and contents of the notification and application, which shall specify what information is needed for a notification, and the information required for the department to approve or disapprove the application.

(3) **Except as provided in subpart (4) below, applications and notifications** ((for operations not converting to another use)) shall be signed by the landowner, the timber owner and the operator, or the operator and accompanied by a consent form signed by the timber owner and the landowner. A consent form may be another document if it is signed by the landowner(s) and it contains a statement acknowledging that he/she is familiar with the Forest Practices Act, including the provisions dealing with conversion to another use (RCW 76.09.060(3)). ~~((Where the application is not signed by the landowner, the department shall, provided all the other requirements contained in chapter 222-20 WAC are met, approve the application without the signature of the landowner if:~~

(a) ~~The operator or timber owner provides legal evidence of timber rights, ownership, or other legal rights;~~

(b) ~~The timber owner or operator posts a bond, in an amount determined by and a form acceptable to the department, securing compliance with the requirements of the forest practices regulations; and~~

(c) ~~The operator or timber owner provides evidence of reasonably advance notification to the landowner of the proposed forest practice and that the landowner has been requested to sign the application, a copy of which has been made available to the landowner: Provided, That in lieu of such evidence the applicant may submit a sworn statement indicating inability to locate the landowner after a reasonable good faith attempt to locate and notify the landowner of the proposed forest practice.))~~

(4) In lieu of a landowner's signature, where the timber rights have been transferred by deed to a perpetual owner who is different from the forest landowner, the owner of perpetual timber rights may sign a forest practices application or notification for operations not converting to another use and the statement of intent not to convert for a set period of time. The holder of perpetual timber rights shall serve the signed forest practices application or notification and the signed statement of intent on the forest landowner. The forest practices application shall not be considered complete until the holder of perpetual timber rights has submitted evidence acceptable to the department that such service has occurred.

(5) Where an application for a conversion is not signed by the landowner or accompanied by a consent form, as outlined in subsection (3) of this section, the department shall not approve the application. Applications and notifications for the development or maintenance of utility rights of way shall not be considered to be conversions.

~~((5))~~ **(6) Transfer of the approved application or notification** to a new landowner, timber owner or operator requires written notice by the original landowner or applicant to the department and should include the original application

PERMANENT

or notification number. This written notice shall be in a form acceptable to the department and shall contain an affirmation signed by the new landowner, timber owner, or operator, as applicable, that he/she agrees to be bound by all conditions on the approved application or notification. In the case of a transfer of an application previously approved without the landowner's signature the new timber owner or operator must submit a bond securing compliance with the requirements of the forest practices ~~((regulations))~~ rules as determined necessary by the department. If an application or notification indicates that the landowner or timber owner is also the operator, or an operator signed the application, no notice need be given regarding any change in subcontractors or similar independent contractors working under the supervision of the operator of record.

~~((6))~~ (7) Applications and notifications must be delivered to the department at the appropriate region office. Delivery should be in person or by registered or certified mail.

~~((7))~~ (8) Applications and notifications shall be considered received on the date and time shown on any registered or certified mail receipt, or the written receipt given at the time of personal delivery, or at the time of receipt by general mail delivery. Applications or notifications that are not complete, or are inaccurate will not be considered officially received until the applicant furnishes the necessary information to complete the application. A review statement from the U.S. Forest Service that evaluates compliance of the forest practices with the CRGNSA special management area guidelines is necessary information for an application or notification within the CRGNSA special management area. The review statement requirement shall be waived if the applicant can demonstrate the U.S. Forest Service received a complete plan application and failed to act within 45 days. An environmental checklist (WAC 197-11-315) is necessary information for all Class IV applications. A local government entity clearing and/or grading permit is necessary information for all Class IV applications on lands that will be converted to a use other than commercial timber production or on lands which have been platted after January 1, 1960, if the local government entity has jurisdiction and has an ordinance requiring such permit. If a notification or application is delivered in person to the department by the operator or the operator's authorized agent, the department shall immediately provide a dated receipt. In all other cases, the department shall immediately mail a dated receipt to the applicant.

(9) An operator's name, if known, must be included on any forest practices application or notification. The landowner or timber owner must provide notice of hiring or change of operator to the department within 48 hours. The department shall promptly notify the landowner if the operator is subject to a notice of intent to disapprove under WAC 222-46-070. Once notified, the landowner will not permit the operator, who is subject to a notice of intent to disapprove, to conduct the forest practices specified in the application or notification, or any other forest practices until such notice of intent to disapprove is removed by the department.

(10) Financial assurances may be required by the department prior to the approval of any future forest practices

application or notification to an operator or landowner under the provisions of WAC 222-46-090.

NEW SECTION

WAC 222-20-015 Multiyear permits. (1) Where a watershed analysis has been approved for a WAU under WAC 222-22-080, landowner(s) may apply for a multiyear permit. The information provided and level of detail must be comparable to that required for a two-year permit. At a minimum, the application must include:

(a) A description of the forest practices to be conducted during the period requested for the permit, and a map(s) showing their locations; and

(b) Prescriptions must be identified where operations are proposed within or include areas of resource sensitivity.

(2) A landowner may apply for a multiyear permit to perform road maintenance or abandonment if the landowner has an approved road maintenance and abandonment plan where the schedule for implementing the plan is longer than two years. The information provided and level of detail must be comparable to that required for two-year permits under WAC 222-24-050.

(3) A landowner may apply for a multiyear permit to perform an approved alternate plan.

AMENDATORY SECTION (Amending Order 535, filed 11/16/87, effective 1/1/88)

WAC 222-20-020 Application time limits. (1) **A properly completed application** shall be approved, conditioned or disapproved within 30 calendar days for Class III and Class IV forest practices, except:

(a) To the extent the department is prohibited from approving the application by the act.

(b) For "Class IV" applications when the department or the lead agency has determined that a detailed environmental statement must be made, the application must be approved, conditioned or disapproved within 60 days, unless the commissioner of public lands promulgates a formal order specifying a later date for completion of the detailed environmental statement and final action on the application. At least 10 days before promulgation of such an order extending the time, the applicant shall be given written notice that the department is requesting such extension; giving the reasons the process cannot be completed within such period; and stating that the applicant may comment in writing to the commissioner of public lands or obtain an informal conference with the department regarding the proposed extension.

(c) When they involve lands platted after January 1, 1960, or lands to be converted, the applicable time limit shall be no less than 14 business days from transmittal to the county unless the county has waived its right to object or has consented to approval of the application.

(2) **Unless the county** has waived its rights under the act or consents to approval, the department shall not approve an application involving lands platted after January 1, 1960, in the process of being platted or proposed to be converted to another use until at least 14 business days from the date of transmittal to the county.

(3) **Where a notification** is submitted for operations which the department determines involve Class III or IV forest practices, the department shall issue a stop work order or take other appropriate action. If the operations were otherwise in compliance with the act and forest practices (~~regulations~~) rules, no penalty should be imposed for those operations which occurred prior to the enforcement action: Provided, That no damage to a public resource resulted from such operations, and the operations commenced more than 5 days from receipt by the department of the notification.

(4) **If the department** fails to approve or disapprove an application or any portion thereof within the applicable time limit, the application shall be deemed approved and the operation may commence: Provided, That this provision shall not apply where:

(a) The county objects and the application involves lands platted after January 1, 1960, or lands to be converted where the county's right of objection is 14 business days which may be longer than the approval time limit.

(b) The department is prohibited from approving the application by the act.

(c) Compliance with the State Environmental Policy Act requires additional time.

(5) **If seasonal field** conditions prevent the department from being able to properly evaluate the application, the department may disapprove the application until field conditions allow for an on-site review.

(6) An application for a multiyear permit must be approved, conditioned or disapproved by the department within 45 days of receiving a complete application.

AMENDATORY SECTION (Amending 98-07-047, filed 3/13/98, effective 5/1/98)

WAC 222-20-040 Approval conditions. (1) **Whenever an approved** application authorizes a forest practice which, because of soil condition, proximity to a water course or other unusual factor, has a potential for causing material damage to a public resource, as determined by the department, the applicant shall, when requested on the approved application, notify the department 2 business days before the commencement of actual operations.

(2) **All approvals are** subject to any conditions stipulated on the approved application and to any subsequent additional requirements set forth in a stop work order or a notice to comply.

(3) **Local government entity conditions.**

(a) RCW 76.09.240(1) allows a local government entity to exercise limited land use planning or zoning authority on certain types of forest practices. This subsection is designed to ensure that local government entities exercise this authority consistent with chapter 76.09 RCW and the rules in Title 222 WAC. The system provided for in this subsection is optional.

(b) This subsection only applies to Class IV general applications on lands that will be converted to a use other than commercial timber production or to Class IV general applications on lands which have been platted after January 1, 1960.

(c) The department shall transmit the applications to the appropriate local government entity within two business days from the date the department receives the application.

(d) The department shall condition the application consistent with the request of the local government entity if:

(i) The local government entity has adopted a clearing and/or grading ordinance that addresses the items listed in (e) of this subsection and requires a permit;

(ii) The local government entity has issued a permit under the ordinance in (i) that contains the requested conditions; and

(iii) The local government entity has entered into an interagency agreement with the department consistent with WAC 222-50-030 addressing enforcement of forest practices.

(e) The local government entity conditions may only cover:

(i) The location and character of open space and/or vegetative buffers;

(ii) The location and design of roads;

(iii) The retention of trees for bank stabilization, erosion prevention, and/or storm water management; or

(iv) The protection of critical areas designated pursuant to chapter 36.70A RCW.

(f) Local government entity conditions shall be filed with the department within twenty-nine days of the filing of the application with the department or within fourteen business days of the transmittal of the application to the local government entity or one day before the department acts on the application, whichever is later.

(g) The department shall incorporate local government entity conditions consistent with this subsection as conditions of the forest practices approval.

(h) Any exercise of local government entity authority consistent with this subsection shall be considered consistent with the forest practices rules in this chapter.

(4) **Lead agency mitigation measures.**

(a) This subsection is designed to specify procedures for a mitigated DNS process that are consistent with chapters 76.09 and 43.21C RCW and the rules in Title 222 WAC and chapter 197-11 WAC.

(b) This subsection applies to all Class IV applications in which the department is not the lead agency under SEPA. (See WAC 197-11-758.)

(c) The department shall transmit the application to the lead agency within two business days from the date the department receives the application.

(d) The lead agency may specify mitigation measures pursuant to WAC 197-11-350.

(e) The lead agency threshold determination and any mitigation measures must be filed with the department within the later of (i) twenty-nine days of the receipt of the application by the department, (ii) fourteen business days of the transmittal of the application to the lead agency if the lead agency is a local government entity; or (iii) one day before the department acts on the application.

(f) Unless the applicant clarifies or changes the application to include mitigation measures specified by the lead

agency, the department must deny the application or require an EIS. (See WAC 197-11-738.)

(g) If the department does not receive a threshold determination from the lead agency by the time it must act on the application, the department shall deny the application.

(5) CRGNSA special management area.

(a) **Policy.** The states of Oregon and Washington have entered into a Compact preauthorized by Congress to implement the CRGNSA Act, 16 U.S.C. §§544, et seq. chapter 43.97 RCW, 16 U.S.C. §544c. The purposes of the CRGNSA Act are:

(i) To establish a national scenic area to protect and provide for the enhancement of the scenic, cultural, recreational, and natural resources of the Columbia River Gorge; and

(ii) To protect and support the economy of the Columbia River Gorge area by encouraging growth to occur in existing urban areas and by allowing future economic development in a manner that is consistent with paragraph (1). 16 U.S.C. §544a.

The forest practices rules addressing forest practices in the CRGNSA special management area recognize the intent of Congress and the states expressed in the CRGNSA Act and Compact and the intent of the Washington state legislature in the Forest Practices Act. These rules are designed to recognize the public interest in sound natural resource protection provided by the Act and the Compact, including the protection to public resources, recreation, and scenic beauty. These rules are designed to achieve a comprehensive system of laws and ((regulations)) rules for forest practices in the CRGNSA special management area which avoids unnecessary duplication, provides for interagency input and intergovernmental and tribal coordination and cooperation, considers reasonable land use planning goals contained in the CRGNSA management plan, and fosters cooperation among public resources managers, forest landowners, tribes and the citizens.

(b) The CRGNSA special management area guidelines shall apply to all forest practices within the CRGNSA special management area. Other forest practices rules also apply to these forest practices. To the extent these other rules are inconsistent with the guidelines, the more restrictive requirement controls. To the extent there is an incompatibility between the guidelines and another rule, the guidelines control. Copies of the guidelines can be obtained from the department Southeast and Southwest regional offices and Olympia office, as well as from the Columbia River Gorge commission and the U.S. Forest Service.

(c) The department shall review and consider the U.S. Forest Service review statement and shall consult with the U.S. Forest Service and the Columbia River Gorge commission prior to making any determination on an application or notification within the CRGNSA special management area.

AMENDATORY SECTION (Amending 91-23-052, filed 11/15/91, effective 12/16/91)

WAC 222-20-050 Conversion to nonforest use. (1) If an application to harvest signed by the landowner indicates that within 3 years after completion, the forest land will be converted to a specified active use which is incompatible

with timber growing, the reforestation requirements of these ((regulations)) rules shall not apply and the information relating to reforestation on the application form need not be supplied. However, if such specified active use is not initiated within 3 years after such harvest is completed, the reforestation requirements (See chapter 222-34 WAC) shall apply and such reforestation shall be completed within 1 additional year.

(2) For Class II, III, and IV special forest practices, if a landowner wishes to maintain the option for conversion to a use other than commercial timber operation the landowner may request the appropriate local government entity to approve a conversion option harvest plan. This plan, if approved by the local government entity and followed by the landowner, shall release the landowner from the six-year moratorium on future development, but does not create any other rights. The conversion option harvest plan shall be attached to the application or notification as a condition. Violation of the conversion option harvest plan will result in the reinstatement of the local government entity's right to the six-year moratorium. Reforestation requirements will not be waived in the conversion option harvest plan. Reforestation ((regulations)) rules shall apply at the completion of the harvest operation as required in chapter 222-34 WAC. Nothing herein shall preclude the local government entity from charging a fee to approve such a plan. (See RCW 76.09.060 (3)(b)(i).)

(3) If the application does not state that any land covered by the application will be or is intended to be converted to a specified active use incompatible with commercial timber operations and except as provided in subsection (2) of this section, the local government entity may, for six years after the date of the application, refuse to accept, process, or approve any or all applications for permits or approvals, including building permits and subdivision approvals, relating to nonforestry uses of the land subject to the application. (See RCW 76.09.060 (3)(b)(i).)

NEW SECTION

WAC 222-20-055 Continuing forest land obligations.

Continuing forest land obligations include reforestation, road maintenance and abandonment plans, and harvest strategies on perennial nonfish habitat waters in Eastern Washington.

(1) Prior to the sale or transfer of land or perpetual timber rights subject to continuing forest land obligations under the Forest Practices Act and rules, the seller must notify the buyer of the existence and nature of such a continuing obligation and the buyer must sign a notice of continuing forest land obligation indicating the buyer's knowledge of the obligations. The notice must be:

- (a) On a form prepared by the department;
- (b) Sent to the department by the seller at the time of sale or transfer of land or perpetual timber rights; and
- (c) Retained by the department.

(2) If the seller fails to notify the buyer about the continuing forest land obligation, the seller must pay the buyer's costs related to continuing forest land obligations, including all legal costs and reasonable attorneys' fees incurred by the

buyer in enforcing the continuing forest land obligation against the seller.

(3) Failure by the seller to send the required notice to the department at the time of sale will be prima facie evidence in an action by the buyer against the seller for costs related to the continuing forest land obligation prior to sale.

AMENDATORY SECTION (Amending Order 263, § 222-20-070, filed 6/16/76)

WAC 222-20-070 Emergency forest practices. No prior notification or application shall be required for emergency forest practices necessitated by and commenced during or immediately after fire, flood, windstorm, earthquake, structural failure or other catastrophic event. Within 48 hours after commencement of such practice, the operator shall submit an application or notification to the department with an explanation why emergency action was necessary. Such emergency forest practices are subject to these ~~((regulations))~~ rules: Provided, however, That the operator may take any reasonable action to minimize damage to forest lands, timber or public resources from the direct or indirect effects of the catastrophic event and: Provided further, The operator shall comply with any requirements of a notice to comply or stop work order as if conducted pursuant to an approved application.

AMENDATORY SECTION (Amending WSR 92-23-056, filed 11/17/92, effective 12/18/92)

WAC 222-20-080 Application and notification expiration. The approval given by the department to an application to conduct a forest practice shall be effective for a term of two years from the date of approval, with the exception of multiyear permits. Multiyear permits are effective for up to five years. The multiyear permit is not renewable if a five-year watershed analysis review is found necessary by the department and has not been completed. A notification is also effective for a term of two years from the date of receipt.

AMENDATORY SECTION (Amending 87-23-036 (Order 535), filed 11/16/87, effective 1/1/88)

WAC 222-20-100 Notice to parks and OAHP. (1) **Notice to parks.** The department shall send to the affected agency, within 2 business days of receipt, a copy of any notification or application for forest practices within 500 feet of the boundary of any park entity registered according to subsection (2) of this section.

(2) **Parks register.** The department shall establish and update every 5 years a parks register listing all publicly owned parks where the affected owner has filed a written request with the department for inclusion on such register. The department shall notify owners of all public parks inventoried on the state comprehensive outdoor recreation plan (SCORP) of the opportunity to register.

(3) **DNR to provide information to OAHP.** The department shall provide the office of archaeology and historic preservation (OAHP) with copies of all applications and noti-

fications for forest practices to be conducted on lands known to contain historic sites or archaeological resources as identified by OAHP.

Chapter 222-21 WAC

SMALL FOREST LANDOWNER FORESTRY RIPARIAN EASEMENT PROGRAM

NEW SECTION

WAC 222-21-005 Policy. The legislature has found that further reduction in harvestable timber owned by small forest landowners as a result of the rules adopted under RCW 76.09.055 or 76.09.370 will further erode small landowners' economic viability and willingness or ability to keep the lands in forestry use and, therefore, reduce the amount of habitat available for salmon recovery and conservation of other aquatic resources. The legislature addressed these concerns by establishing a forestry riparian easement program to acquire easements from small forest landowners along riparian and other areas of value to the state for protection of aquatic resources.

NEW SECTION

WAC 222-21-010 Definitions. The following definitions apply to this chapter:

(1) **"Commercially reasonable harvest unit"** means a harvest area that meets the requirements of WAC 222-21-060.

(2) **"Completion of harvest"** means that the trees have been harvested from an area under an approved forest practices application and that further entry into that area by any type of logging or slash treating equipment or method is not expected.

(3) **"Danger tree"** means any qualifying timber reasonably perceived to pose an imminent danger to life or improved property.

(4) **"Easement premises"** means the geographic area designated in a forestry riparian easement, including the areas in which qualifying timber is located. Easement premises may be categorized as follows:

(a) **Riparian area easement premises** means riparian areas and areas upon which qualifying timber associated with riparian areas are located.

(b) **Other easement premises** means areas of land required to be left unharvested under rules adopted under RCW 76.09.055 or 76.09.370 including areas upon which other qualifying timber outside riparian areas is located and areas of land upon which uneconomic qualifying timber is located.

(5) **"Forestry riparian easement"** means an easement covering qualifying timber granted voluntarily to the state by a small forest landowner.

(6) **"Hazardous substances"** means hazardous substances as defined in RCW 70.102.010(5), and 70.105D-020(7), and solid waste as defined in RCW 70.95.030(22).

(7) **"High impact regulatory threshold"** means the threshold where the value of qualifying timber is greater than 19.1% (for timber in Western Washington) or 12.2% (for timber in Eastern Washington) of the value of the harvested timber and qualifying timber under the approved forest practices application covering the qualifying timber.

(8) **"Qualifying timber"** means those trees covered by a forest practices application that the small forest landowner is required to leave unharvested under rules adopted under RCW 76.09.055 or 76.09.370 or that are made uneconomic to harvest by those rules, and for which the small forest landowner is willing to grant the state a forestry riparian easement. Qualifying timber is timber within or bordering a commercially reasonable harvest unit. Qualifying timber is categorized as follows:

(a) **Permanent qualifying timber** includes trees that shall not be harvested or damaged or removed from the easement premises during the term of the easement.

(i) Where permanent qualifying timber is in areas in which no harvest may take place, the easement shall describe the boundaries of the areas. No harvest of any tree within this area shall take place during the term of the easement.

(ii) Where permanent qualifying timber is located in areas in which selective harvest may take place, the permanent qualifying timber must be tagged for the duration of the easement.

(b) **Reserve qualifying timber** includes trees that may be harvested and removed but only in compliance with the terms of the easement. Reserve qualifying timber shall be identified separately from the permanent qualifying timber.

(c) **Replacement qualifying timber** includes trees which, in the future, will be substituted for the reserve qualifying timber before the reserve qualifying timber may be harvested or removed from the property. Replacement qualifying timber will be selected from time to time pursuant to the provisions of the easement and will be subject to the terms and protections of the easement.

(d) **Uneconomic qualifying timber** includes trees made uneconomical to harvest. The trees are considered permanent qualifying timber and may not be harvested or otherwise damaged during the term of the easement.

(e) **Other qualifying timber outside riparian areas** includes trees that may not be harvested under forest practices rules adopted under RCW 76.09.055 or 76.09.370 for reasons other than protection of riparian functions. It includes without limitation trees that are unharvestable because of public safety concerns. The trees are considered permanent qualifying timber and may not be harvested or otherwise damaged during the term of the easement.

(9) **"Riparian areas"** include the areas designated in a forestry riparian easement. Riparian areas include without limitation all riparian and other special management zones required by the forest practices rules for protection of aquatic resources and includes associated qualifying timber.

(10) **"Riparian function"** includes bank stability, recruitment of woody debris, leaf litter fall, nutrients, sediment filtering, shade, and other riparian features that are important to both riparian forest and aquatic systems conditions.

(11) **"Small forest landowner"** means a forest landowner meeting all of the characteristics in (a) of this subsection unless any of the exceptions in (b) of this subsection are met.

(a) As of the date a forest practices application is received for which the forestry riparian easement is associated, the forest landowner:

(i) Is an individual, partnership, corporate, or other non-governmental legal entity. If a landowner grants timber rights to another entity for less than five years, the landowner may still qualify as a small forest landowner under this section;

(ii) Has a fee interest in the land and timber or has rights to harvest the timber to be included in the forestry riparian easement that extend at least fifty years from the date the forest practices application associated with the easement is received;

(iii) Has harvested from its own lands in this state during the three years prior to the year of application an average timber volume that would qualify the forest landowner as a small timber harvester under RCW 84.33.073(1); and

(iv) Certifies at the time the forest practices application is received that it does not expect to harvest from its own lands more than the volume allowed by RCW 84.33.073(1) during the ten years following receipt of the application.

(b) At the time the forest practices application is received, a forest landowner whose prior three-year average harvest exceeds the limit of RCW 84.33.073(1), or who expects to exceed this limit during the ten years following receipt of the forest practices application, may still qualify as a small forest landowner if that landowner establishes to the small forest landowner office reasonable satisfaction that the harvest limits were or will be exceeded to raise funds to pay estate taxes or equally compelling and unexpected obligations such as court-ordered judgments or extraordinary medical expenses. (Note: The small forest landowner office will establish a board manual governing these exceptions.)

(12) **"Small forest landowner office"** is an office within the department described in RCW 76.13.110, and it shall be a resource and focal point for small landowner concerns and policies and shall have significant expertise regarding the management of small forest holdings and government programs applicable to such holdings, and the forestry riparian easement program.

(13) **"Uneconomic to harvest"** means that a harvest area meets the requirements of WAC 222-21-065.

NEW SECTION

WAC 222-21-020 Criteria for accepting riparian easement. (1) All of the following criteria must be met before the small forest landowner office may acquire a forestry riparian easement:

(a) The easements must include qualifying timber within riparian areas and may include other qualifying timber;

(b) The small forest landowner must be willing to sell or donate such easements to the state;

(c) The small forest landowner has a final, approved forest practices application including qualifying timber on the easement premises;

(d) The small forest landowner has provided a litigation guarantee or similar report from a title company for the property;

(e) Acceptable documents necessary for creation of the easement have been prepared; and

(f) The easement is not subject to unacceptable liabilities in subsection (3) of this section.

(2) Where more than one person has an interest in property to be covered by a forestry riparian easement, all persons holding rights to control or affect the easement premises, qualifying timber, and the riparian functions provided by the qualifying timber during the term of the easement must execute the easement documents or otherwise subordinate their interest to the easement interest being acquired by the state. This includes tenants in common, joint tenants, holder of reversionary interests, lien holders, and mortgages.

(3) Unacceptable liabilities for the state include, but are not limited to, the following:

(a) Potential liability exposure due to the presence of hazardous substances;

(b) Existing uses of the property that may jeopardize the protection of the easement premises, qualifying timber, and riparian functions;

(c) Any other liability where the liability may jeopardize the protection of the easement premises, qualifying timber, and its riparian functions.

NEW SECTION

WAC 222-21-030 Document standards. (1) **Riparian easement.** The riparian easement document must be substantially in the following form, but may be modified by the small forest landowner office wherever necessary to accomplish the purposes of RCW 76.13.120.

(This version assumes ownership of land and trees)

FORESTRY RIPARIAN EASEMENT

THIS GRANT OF A FORESTRY RIPARIAN EASEMENT is made on this ____ day of ____, 20__, by _____ [a _____ corporation, limited liability company, partnership, limited partnership, limited liability partnership] [husband and wife] [individual][or others as appropriate] having an address at _____ ("Grantor"), to and in favor of the State of Washington, acting by and through the Department of Natural Resources ("Grantee").

1.0 RECITALS AND PURPOSE

1.1 This Easement is intended to implement the goals of the Forest Practices Salmon Recovery Act, ESHB 2091, sections 501 through 504, chapter 4, Laws of 1999 ("Salmon Recovery Act"). The goals include avoiding the further erosion of the small forest landowners' economic viability and willingness or ability to keep the lands in forestry use which would reduce the amount of habitat available for salmon recovery and conservation of other aquatic resources, through the establishment of a forestry riparian easement program to acquire easements from small forest landowners along riparian and other areas of value to the state for protection of aquatic resources.

1.2 This Easement is intended to protect the Qualifying Timber and riparian functions associated with the qualifying timber located on the Easement Premises as provided by the terms of this Easement as set forth in Exhibit B while preserving all lawful uses of the Easement Premises by Grantor consistent with the Easement objectives, and to provide Grantee with the ability to enforce the terms thereof.

1.3 The Easement Premises and Qualifying Timber are located, as described in **Exhibit A**; that the encumbrances, if any, are as set forth in **Exhibit A**; that all Exhibits referenced herein and attachments thereto are incorporated into this Easement as part of this Easement; and that the Grantor wishes to execute this Forestry Riparian Easement.

2.0 CONVEYANCE AND CONSIDERATION

2.1 In consideration of the mutual covenants contained herein, including without limitation the monetary consideration set forth in subsection 2.2 below, the Grantor does hereby voluntarily warrant and convey to the Grantee a Forestry Riparian Easement under the Salmon Recovery Act, which Easement shall remain in full force and effect from the date hereof until it expires on (month, date, year) [50 years from the date the complete and accurate forest practices application is submitted], which Easement shall consist of the rights and restrictions expressly set forth herein.

2.2 In consideration of this Easement, Grantee shall pay to Grantor the sum of _____ dollars (\$____.00).

IN WITNESS WHEREOF Grantor and Grantee have executed this instrument on the day and year written.

GRANTOR:

_____ Date: _____

By: _____

GRANTEE:

State of Washington

By and Through the Department of
Natural Resources

EXHIBIT A

A1 DESCRIPTION AND LOCATION OF QUALIFYING TIMBER

The Qualifying Timber includes the following categories of trees located within the Easement Premises:

[List the categories relevant to particular Easement, i.e., Permanent, Reserve, Replacement, Uneconomic, or Other Qualifying Timber.] The Qualifying Timber is located as shown in the documentation attached hereto as Attachment A-1.

A2 DESCRIPTION AND LOCATION OF EASEMENT PREMISES

The Easement Premises is *[insert description using the standards developed under Section 504(9)(b) of the Salmon Recovery Act including the categories relevant to particular Easement, i.e., Riparian Area and Other Easement Premises]* as shown in the documentation attached hereto as Attachment A-2 and is located in *[insert legal subdivision/lot, etc., in which the Easement Premises exists.]*

A3 BASELINE IDENTIFICATION, DESCRIPTION AND DOCUMENTATION OF PROPERTY, EASEMENT PREMISES AND QUALIFYING TIMBER

PERMANENT

The parties agree that the current use, condition of the Easement Premises and the condition of the Qualifying Timber are documented in the inventory of their relevant features and identified in Attachment A-3 ("Baseline Documentation"), and that this documentation provides, collectively, an accurate representation at the time of this grant and is intended to serve as an objective information baseline for monitoring compliance with the terms of this grant.

EXHIBIT B

FORESTRY RIPARIAN EASEMENT TERMS AND CONDITIONS

B1 DEFINITIONS

The terms used in this Easement, including without limitation the following, are defined by the forest practices rules incorporated in Attachment B-1 to this Exhibit.

- "Danger Tree"
- "Easement Premises"
- "Qualifying Timber"
- "Hazard Substances"
- "Riparian Areas"
- "Riparian Function"

B2 RIGHTS OF GRANTEE ***[Subsection B2.4 should be included only for multiple entry Easements.]***

To accomplish the purposes of this Easement, the following rights are conveyed to Grantee by this Easement:

B2.1 To enforce the terms of this Easement as provided in subsection **B9**.

B2.2 To enter upon the Easement Premises, or to allow Grantee's agents or any experts consulted by Grantee in exercising its rights under this Easement to enter upon the Easement Premises in order to evaluate Grantor's compliance with this Easement, and to otherwise enforce the terms of this Easement.

B2.3 To convey, assign, or otherwise transfer Grantee's interests herein to another agency of the State of Washington, as provided for and limited by Section 504 of the Salmon Recovery Act.

B2.4 Where harvest of Reserve Qualifying Timber is allowed during the term of this Easement, to approve Replacement Qualifying Timber that will be protected by this Easement as provided in subsection **B3.5**.

B3 RESTRICTIONS ON GRANTOR ***[Subsection B3.6 should be included only for multiple entry Easements.]***

B3.1 Inconsistent Uses of Riparian Easement Premises

Any use of, or activity on, the Easement Premises inconsistent with the purposes and terms of this Easement, including without limitation converting to a use incompatible with growing timber, is prohibited, and Grantor acknowledges and agrees that it will not conduct, engage in, or permit any such use or activity.

B3.2 Property Outside the Easement Premises

PERMANENT

Grantor may change its use of the property on which the Easement lies to any lawful use. Grantor shall provide Grantee sixty (60) days notice prior to changing the use of the property as a courtesy to Grantee.

B3.3 Qualifying Timber

Grantor shall not engage in any activity which would result in the cutting of Qualifying Timber or the removal of that timber from the Easement Premises, except as provided in this Easement. The parties further agree that use, harvest, and treatment of the Qualifying Timber are restricted according to the forest practices rules in Attachment B-1.

B3.4 Danger Trees and Salvage

Grantor may cut a Danger Tree, which shall be left in place within the Easement Premises or moved by Grantor inside the Easement Premises. Grantor shall notify DNR within seven (7) days that a Danger Tree has been felled. Grantor shall not engage in any activities pertaining to salvage of Qualifying Timber including without limitation blowdown except as provided for in the forest practices rules.

B3.5 Harvest of Reserve Qualifying Timber and Designation of Replacement Qualifying Timber on Riparian Area Easement Premises

Grantor shall not, during the term of this Easement, harvest or remove any Reserve Qualifying Timber except as permitted under the applicable forest practices rules. Grantor shall give Grantee at least thirty (30) days written notice prior to harvest or removal of Reserve Qualifying Timber, except that where a permit or approval is required from any governmental entity, such notice shall be given thirty (30) days before submission of the application for such permit or approval. Grantor shall mark Reserve Qualifying Timber and Replacement Qualifying Timber, where Replacement Qualifying Timber is required, for review by Grantee. Grantor's thirty (30) days written notice to Grantee is effective only after both Reserve Qualifying Timber and Replacement Qualifying Timber (if required) are marked. If Grantee does not object by giving Grantor written notice within thirty (30) days of receipt of Grantor's notice, Grantor may proceed to harvest and remove the Reserve Qualifying Timber. If Grantee does object and gives Grantor written notice thereof within thirty (30) days of receipt of Grantor's notice, Grantor shall not harvest or remove Reserve Qualifying Timber until the objection is resolved. If Reserve Qualifying Timber is to be removed but Replacement Qualifying Timber is required to be left standing for the balance of the term of this Easement, then Grantor shall mark the Replacement Qualifying Timber and, if approved by Grantee, such Timber shall be considered Qualifying Timber under this Easement. A new Exhibit A shall be prepared along with a supplement to this Easement, executed by Grantor and Grantee, and recorded.

B3.6 Multiple Entry Easements

Grantor shall not, during the term of this Easement, make multiple entry harvests except as permitted under the applicable forest practices rules. Grantor shall give Grantee at least thirty (30) days written notice prior to harvest or removal of timber, except that where a permit or approval is required from any government entity, such notice shall be given thirty (30) days before submission of the application for such permit or approval. Grantor shall mark timber to be removed for review by Grantee. Grantor's thirty (30) day written notice to Grantee is effective only after the timber to be removed is marked. If Grantee does not object by giving Grantor written notice within thirty (30) days of receipt of Grantor's notice, Grantor may proceed to harvest. If Grantee does object and gives Grantor notice thereof within thirty (30) days of receipt of Grantor's notice, Grantor shall not harvest until the objection is resolved. Valuation methodology for multiple entry easements shall be in accordance with WAC 222-21-045(3).

B4 RESERVED RIGHTS

Other than specifically provided herein, Grantor is not restricted in its use of the Easement Premises.

B5 PUBLIC ACCESS

No right of public access to or across, or any public use of, the Easement Premises or the property on which it lies is conveyed by this Easement.

B6 COSTS, LIABILITIES, TAXES, AND INDEMNIFICATION**B6.1 Costs, Legal Requirements, and General Liabilities**

Except as is expressly placed on Grantee herein, Grantor retains full responsibility for the Qualifying Timber and Easement Premises. Grantor shall keep the Qualifying Timber and Easement Premises free of any liens arising out of any work performed for, materials furnished to, or obligations incurred by Grantor. Grantor remains responsible for obtaining all permits required by law.

B6.2 Taxes and Obligations

Grantor shall remain responsible for payment of taxes or other assessments imposed on the Easement Premises or the Qualifying Timber. Grantor shall furnish Grantee with satisfactory evidence of payment upon request.

B6.3 Hold Harmless**B6.3.a Grantor**

To the extent permitted by law, Grantor hereby releases and agrees to hold harmless, indemnify, and defend Grantee and its employees, agents, and assigns from and against all liabilities, penalties, costs, charges, losses, damages, expenses, causes of action, claims, demands, orders, judgments, or administrative actions, including without limitation reasonable attorneys' fees arising from or in any way connected with: (a) Injury or death of any person or any physical damage to property resulting from any act or omission, or other matter occurring on or relating to the Easement Premises or Qualifying Timber, caused solely by Grantor; (b) a breach by Grantor of its obligations under subsection **B3**; (c) the violation or alleged violation of, or other failure to comply with, any state, federal, or local law or requirement by Grantor in any way affecting, involving, or relating to the Easement Premises or the Qualifying Timber; (d) the release or threatened release onto the Easement Premises of any substance now or hereinafter classified by state or federal law as a hazardous substance or material caused solely by Grantor.

B6.3.b Grantee

To the extent permitted by law, Grantee hereby releases and agrees to hold harmless, indemnify and defend Grantor and its employees, agents, and assigns from and against all liabilities, penalties, costs, charges, losses, damages, expenses, causes of action, claims, demands, orders, judgments or administrative actions, including without limitation reasonable attorneys' fees arising from or in any way connected with: (a) Injury or death of any person or any physical damage to property resulting from any act or omission, or other matter occurring on or relating to the Easement Premises or Qualifying Timber, caused solely by Grantee; or (b) the release or threatened release onto the Easement Premises of any substance now or hereinafter classified by state or federal law as a hazardous substance or material caused solely by Grantee.

B7 SUBSEQUENT TRANSFERS**B7.1 Grantee**

Grantee may assign, convey, or otherwise transfer its interest as evidenced in this Easement, but only to another agency of the State of Washington under any circumstances in which it determines, in its sole discretion, that such transfer is in the best interests of the state. Grantee shall give written notice to Grantor of the same within thirty (30) days of such conveyance, assignment, or transfer (provided that failure to give such notice shall not affect the validity of the assignment, conveyance, or transfer).

B7.2 Grantor

Grantor may assign, convey, or otherwise transfer without restriction its interest in the Easement Premises or the Qualifying Timber identified in Exhibit A hereto. Grantor agrees to incorporate the restrictions of the Easement in any deed or other legal instrument by which Grantor divests itself of all or a portion of its interests in the Easement Premises or Qualifying Timber. Grantor shall give written notice to the Grantee of the assignment, conveyance, or other transfer of all or a portion of its interest in the Easement Premises or the Qualifying Timber within thirty (30) days of such conveyance, assignment, or transfer (provided that failure to give such notice shall not affect the validity of the assignment, conveyance, or transfer).

B7.3 Termination of Grantor's Rights and Obligations

The Grantor's personal rights and obligations under this Easement terminate upon transfer of the Grantor's interest in the property on which the Easement lies or the Qualifying Timber, except that liability under the Easement for acts or omissions occurring prior to transfer shall survive transfer.

B8 DISPUTE RESOLUTION

The parties may at any time by mutual agreement use any nonbinding alternative dispute resolution mechanism with a qualified third party acceptable to Grantor and Grantee. Grantor and Grantee shall share equally the costs charged by the third party. The existence of a dispute between the parties with respect to this Easement, including without limitation the belief by one party that the other party is in breach of its obligations hereunder, shall not excuse either party from continuing to fully perform its obligations under this Easement. The dispute resolution provided for in this subsection is optional, not obligatory, and shall not be required as a condition precedent to any remedies for enforcement of this Easement.

B9 ENFORCEMENT

B9.1 Remedies

Either party may bring any action in law or in equity in the superior court for the county in which the Easement Premises are located or in Thurston County (subject to venue change under law) to enforce any provision of this Easement, including without limitation, injunctive relief (permanent, temporary, or ex parte, as appropriate) to prohibit a breach of this Easement, enforce the rights and obligations of this Easement, restore Qualifying Timber cut or removed in violation of this Easement or for damages. Grantee may elect to pursue some or all of the remedies provided herein.

B9.1.a Damages and Restoration

If Grantor cuts or removes (or causes another to cut or remove) Qualifying Timber from the Easement Premises in violation of this Easement, Grantee shall be entitled to damages, or restoration. Damages for the cutting of Qualifying Timber or the removal of Qualifying Timber from the Easement Premises in violation of the terms of this Easement may be up to triple stumpage value times the proportion of the original compensation. The maximum amount of damages shall be calculated according to the following formula:

Where:

Sv = The stumpage value of the Qualifying Timber that is cut or removed from the Easement Premises at the time the damage was done;

C = The compensation paid by the state to the Grantor at the time the Easement became effective;

Vq = The original value of Qualifying Timber at the time the Easement became effective as calculated in WAC 222-21-050.

Maximum Damages = $3 * S_v * (C / V_q)$

In addition the Grantor shall pay interest on the amount of the damages at the maximum interest rate allowable by law.

Grantee's rights to damages under this section shall survive termination. Restoration of Qualifying Timber may include either replanting or replacing trees or both, as determined by Grantee, in its sole discretion, to be appropriate. Replanting shall be by nursery transplant seedlings approved by Grantee with subsequent silvicultural treatment including without limitation weed control and fertilization approved by Grantee. Replacing trees shall be accomplished by designation of replacement trees of the size and species acceptable to Grantee. If replacement trees are designated to replace the Qualifying Timber cut or removed in violation of the terms of this Easement, the designated trees shall be thereafter treated as Qualifying Timber under this Easement.

B9.1.b Injunctive Relief. Grantor agrees that Grantee's remedies at law for any violation of the terms of this Easement may be inadequate and that Grantee may be entitled to injunctive relief, both prohibitive and mandatory, in addition to other relief to which Grantee may be entitled, including specific performance of the terms of this Easement, without the necessity of providing either actual damages or the inadequacy of otherwise available legal remedies.

B9.1.c Relationship to Remedies in Other Laws. The remedies provided for in this section are in addition to whatever other remedies the state may have under other laws including without limitation the Forest Practices Act. Nothing in this Easement shall be construed to enlarge, diminish or otherwise alter the authority of the state to administer state law.

B9.2 Costs of Enforcement

The costs, including reasonable attorneys' fees, of enforcing this Easement shall be borne by Grantee unless Grantee prevails in a judicial action to enforce the terms of this Easement, in which case costs shall be borne by Grantor, provided that nothing herein shall make Grantor liable for costs incurred by Grantee in taking enforcement actions pursuant to other state laws.

B9.3 Forbearance/Waiver

Enforcement of this Easement against the Grantor is at the sole discretion of the Grantee, and vice versa. Any forbearance by either party to exercise its rights hereunder in the event of a breach by the other party shall not be deemed a waiver by the forbearing party of the term being breached or of a subsequent breach of that term or any other term or of any other of the forbearing party's rights under this Easement.

B9.4 Waiver of Certain Defenses

Grantor hereby waives any defense of laches, estoppel, or prescription.

B9.5 Acts Beyond Grantor's Control

Nothing herein shall be construed to entitle Grantee to bring any action or claim against Grantor on account of any change in the condition of the Easement Premises or of the Qualifying Timber that was not within Grantor's control, including without limitation fire, flood, storms, insect and disease outbreaks, earth movement, or acts of trespassers, that Grantor could not reasonably have anticipated and prevented, or from any prudent action taken by Grantor under emergency conditions to prevent, abate, or mitigate significant injury to the Easement Premises or Qualifying Timber resulting from such causes. In the event the terms of this Easement are violated by acts of trespassers that Grantor could not reasonably have anticipated or prevented, Grantor agrees, at Grantee's option, to join in any suit, to assign its right of action to Grantee, or to appoint Grantee its attorney in fact, for the purpose of pursuing enforcement action against the responsible parties.

B10 CONSTRUCTION AND INTERPRETATION**B10.1 Controlling Law**

Interpretation and performance of this Easement shall be governed by the laws of the State of Washington.

B10.2 Liberal Construction

Any general rule of construction to the contrary notwithstanding, this Easement shall be liberally construed in favor of the grant to effect the purposes of this Easement. If any provision in this instrument is found to be ambiguous, an interpretation consistent with the purposes of this Easement that would render the provision valid shall be favored over any interpretation that would render it invalid. The parties acknowledge that each has had an opportunity to have this Easement reviewed by an attorney and agree that the terms shall not be presumptively construed against either party.

B10.3 Captions

The captions in this instrument have been inserted solely for convenience of reference and are not a part of this instrument and shall have no effect upon construction or interpretation.

B11 AMENDMENT

This Easement may be jointly amended. The amendments shall be in writing and signed by authorized representatives. Grantee shall record any such amendments in a timely fashion in the official records of _____ County, Washington. All amendments shall be consistent with the purposes of this Easement.

B12 TERMINATION

Grantee may unilaterally terminate this Easement if it determines, in its sole discretion, that termination is in the best interest of the State of Washington. Grantee shall provide thirty (30) days written notice to Grantor of such termination.

B13 EXTINGUISHMENT

If circumstances arise that render the purpose of this Easement impossible to accomplish, this Easement can only be extinguished, in whole or in part, by mutual agreement of the parties or through judicial proceedings brought by one of the parties. Grantee shall be entitled to the value of the Easement as such value is determined pursuant to forest practices rules governing extinguishment or eminent domain, if no rule for extinguishment exists.

B14 CONDEMNATION

If the Easement is taken, in whole or in part, by exercise of the power of eminent domain, or acquired by purchase in lieu of condemnation, Grantee shall be entitled to compensation in accordance with the forest practices rules.

B15 NOTICE

Notices given pursuant or in relation to this Easement shall be in writing and delivered personally or by first class mail (postage pre-paid), addressed as follows:

(a) If to Grantor:

(b) If to Grantee:

Washington State Department of Natural Resources
Small Forest Landowner Office
DNR-Forest Practices Division
P.O. Box 47012
Olympia, WA 98504-7012

If either party's address changes during the term of this Easement, that party shall notify the other party of the change.

Any notice required to be given hereunder is considered as being received: (i) If delivery in person, upon personal receipt by the person to whom it is being given; or (ii) if delivered by first class U.S. mail and properly addressed, three (3) days after deposit into the U.S. mail; or (iii) if sent by U.S. mail registered or certified, upon the date receipt is acknowledged by the recipient.

B16 RECORDATION

Grantee shall record this instrument in timely fashion in the official records of _____ County, Washington and may re-record it at any time as may be required to preserve its rights in this Easement.

B17 GENERAL PROVISIONS

B17.1 Severability

If any provision in this Easement, or the application hereof to any person or circumstance, is found to be invalid, the remainder of this Easement, or the application hereof to other persons or circumstances shall not be affected thereby and shall remain in full force and effect.

PERMANENT

B17.2 Entire Agreement

This instrument sets forth the entire agreement of the parties with respect to the Easement. This instrument supercedes all other and prior discussions, negotiations, understandings, or agreements of the parties. No alteration or variation of this instrument shall be binding unless set forth in an amendment to this instrument consistent with subsection B11.

B17.3 Successors and Assigns

The covenants, terms, conditions, and restrictions of this Easement shall be binding upon and inure to the benefit of the Grantor, Grantee, and their respective successors and assigns and shall continue as a servitude running with the property on which the Easement lies for the term of this Easement set forth in subsection 2.1.

B17.4 No Forfeiture

Nothing contained herein will result in a forfeiture or reversion of Grantor's title in any respect.

B17.5 Counterparts

The parties may execute this instrument in two or more counterparts which shall, in the aggregate, be signed by both parties. Each counterpart shall be deemed an original as against the party that has signed it. In the event of any disparity between counterparts produced, the recorded counterpart shall be controlling.

B17.6 References to Statutes and Rules

Except as otherwise specifically provided, any references in this Easement to any statute or rule shall be deemed to be a reference to such statute or rule in existence at the time the action is taken or the event occurs.

B17.7 Adherence to Applicable Law

Any activity pertaining to or use of the Easement Premises or Qualifying Timber shall be consistent with applicable federal, state, or local law including chapter 76.09 RCW, the Forest Practices Act, chapter 36.70A RCW, the Growth Management Act, chapter 90.58 RCW, the Shoreline Management Act, chapter 75.20 RCW, Construction Projects in State Waters Act ("Hydraulics Code"), the Endangered Species Act (16 U.S.C. Sec. 1531, et seq.), and the Clean Water Act (33 U.S.C. Sec. 1251, et seq.), and rules adopted pursuant to these statutes (including all rules adopted under Section 4(d) of the Endangered Species Act).

(2) **Forestry riparian easement application.** The following items are required for a complete forestry riparian easement application:

- (a) A certification by the small forest landowner that he or she meets the qualifications of a small forest landowner;
- (b) The small forest landowners' timber tax identification number and permission to access harvest information at the department of revenue;
- (c) All forest practices application numbers for the commercially reasonable harvest units and the associated qualifying timber on the property;
- (d) The dates and areas of all planned future harvest entries on the easement premises;

(e) A preliminary litigation guarantee or similar report from a title company for the tax parcels that contain the easement premises;

(f) A description of past and current uses of the easement premises;

(g) Any information not specifically listed that the small forest landowner office needs to evaluate the easement and eligibility of the small forest landowner.

(3) **Baseline documentation.** The baseline documentation must describe the features and current uses on the easement premises and the qualifying timber. The information provided by the small forest landowner in subsection (2) of this section is considered part of the baseline documentation.

In addition, the department will provide documentation that includes, but is not limited to:

- (a) Cruise information consistent with the standards and methods in WAC 222-21-040;
- (b) An assessment to determine site condition and potential liabilities associated with the proposed riparian easement (see the board manual on procedures for conducting assessment); and
- (c) A description of the easement consistent with WAC 222-21-035.

Reviser's note: The brackets and enclosed material in the text of the above section occurred in the copy filed by the agency and appear in the Register pursuant to the requirements of RCW 34.08.040.

NEW SECTION

WAC 222-21-035 Description of easement. The easement premises and qualifying timber must be described as follows:

- (1) Range, township, section, and parcel number;
- (2) Forest practice base map of proposed harvest, other forest practice activities and easement;
- (3) 1:400 map of the easement premises indexed either to (1) legal land survey point or (2) geositional system points; and
- (4) Traverse of the easement premises tied to subsection (3) of this section. (See the board manual section 17 for standards of traverse.)
- (5) Where the department does not have satisfactory access to the easement premises, the landowner must designate the access route on the forest practice application base map.

NEW SECTION

WAC 222-21-040 Timber cruises. (1) This section is designed to establish methods and standards for cruises of qualifying timber for the proposed forestry riparian easements for purposes of establishing the compensation. It applies only to the department, small forest landowners, and the small forest landowner office in connection with the forestry riparian easement program.

(2) The following standards will be used for the timber cruises:

(a) The purpose of the timber cruise is to determine the volume by species and grade sufficient to value the qualifying timber.

(b) Additional trees left voluntarily by the small forest landowner may be noted, but are not included in the cruise volume.

(c) The cruise method will be a 100 percent inventory of qualifying timber on the proposed easement premises. The inventory will include species, diameter class, grade, and any other information necessary to determine valuation of the easement. (See the board manual for specific cruise standards.)

(d) A sampling cruise method may be used for easement premises under certain circumstances. (See the board manual for standards for sampling cruise method.)

NEW SECTION

WAC 222-21-045 Valuation. (1) This section is designed to establish methods and standards for valuation of forestry riparian easements for purposes of establishing the compensation. It applies only to the department, small forest landowners, and the small forest landowner office in connection with the forestry riparian easement program.

(2) The small forest landowner office will calculate the fair market value of the forestry riparian easement as of the date of receipt of the forest practices application associated with the qualifying timber. Data obtained or maintained by the department of revenue under RCW 84.33.074 and 84.33.091 will be used and adjusted to the date of receipt of the forest practices application associated with the qualifying timber. The small forest landowner must indicate whether valuation will be calculated using method (a) or (b) of this subsection. In either, the time adjustment index will be based on log price changes. The small forest landowner office will determine the specific log species and/or sorts and the log price reporting service to use after consultation with the small forest landowner advisory committee established under RCW 76.13.110(4) and the department of revenue. The small forest landowner office will generate an index that reflects the time adjustments using information and data obtained from a log price reporting service determined by the department in consultation with the small forest landowner committee.

(a) **Stumpage value determination.** The small forest landowner office will create and maintain value tables to determine stumpage value of the qualifying timber. These tables will be created using a method coordinated with the department of revenue. The values will closely approximate the stumpage value for logs that would be sold in the ordinary course of business for the date of receipt of the forest practices application. The landowner must provide the small forest landowner office with:

(i) The reference for the stumpage value table and any other needed information for use of the table (see the board manual section 17 for details); and

(ii) Any information the small forest landowner would like the department to consider in its cruise and valuation of the qualifying timber.

(b) **Small harvester tax return.** The landowner must provide mill or buyer information to the department on the sale breakdown. This includes:

(i) The volume and scaling bureau log grades of each species harvested;

(ii) The amount received for each species; and

(iii) The actual harvesting and marketing costs as defined in the department of revenue small harvester instructions.

The price received for the timber is adjusted to the date of receipt of the forest practices application using the time adjustment index and then the average logging and hauling cost per MBF is subtracted to arrive at the stumpage value. The value of the qualifying timber is determined by multiplying the time adjusted stumpage value of each species in the harvest unit by the net volume for each corresponding species

in the inventory of qualifying timber. A residual value approach is used to determine the value of species in the easement, which are not present in the harvest area. The prices for species not present in the harvest unit are based on the delivered log price report approved by the small forest landowner office that corresponds closest to the date of the forest practices application, minus the average logging and hauling costs.

(3) Reduced valuation.

(a) For an easement that allows one or more harvests of qualifying timber during the term of the easement, a reduced valuation rate will be applied to the values obtained using either method in subsection (2) of this section. The reduced rate adjusts the values for reserve and replacement qualifying timber. The rate is based on the proportionate economic value lost to the small forest landowner from the regulatory requirements and adjusted for future harvest options during the term of the easement.

(b) The value of the qualifying timber that may be harvested during the term of the easement will be reduced based on the following formula. Variables will include:

- (i) The 29 or more trees in the inner zone;
- (ii) The outer zone leave trees;
- (iii) Other regulatory requirements.

$$\text{Reduced valuation rate} = \frac{1 - \left(\frac{1}{(1 + I)^N} \right)}{1 - \left(\frac{1}{(1 + I)^{50}} \right)}$$

Where:

- I — Is the rate of return on 30 year treasury bills, as reported by the Federal Reserve Statistical Release H15 less the rate of increase in the Consumer Price Index for all urban consumers as published by the U.S. Department of Labor Bureau of Labor Statistics for the previous 12 months less the anticipated rate of growth expected on the portion of the easement subject to reentry, but not less than zero or greater than 6 percent.
- N — The single time limit established by the small forest landowner office.

(c) The reduced rate will not be applied to the department of revenue tax data values if the landowner does not intend to reenter the easement area during the length of the 50 year easement. The harvest at the time of the reentry is not required to meet the requirements in WAC 222-21-060 (5) and (6).

NEW SECTION

WAC 222-21-050 Payment of compensation. (1) The compensation offered to the small forest landowner will be 50% of the fair market value of the qualifying timber established under the process described in WAC 222-21-045, subject to the following exceptions:

(a) If the high impact regulatory threshold is exceeded for an area covered by an approved forest practices application, then the compensation offered will be increased to 100% for the value of the qualifying timber where the high impact regulatory threshold is exceeded. Use the following calculation:

Where:

Vq = value of qualifying timber;

Vh = value of harvested timber;

t = high impact of regulatory threshold (19.1% for Western Washington, 12.2% for Eastern Washington);

TV = total value of all timber covered under FPA = Vq + Vh; and

HIO - high impact override = (Vq/TV)-t;

$$\text{Compensation for easement} = (\text{HIO} * \text{TV}) + \left(\frac{t * \text{TV}}{2} \right)$$

See Section 17 of board manual for example.

(2) All compensation is subject to available funding.

(3) If funding is not available, the small forest landowner office will maintain a priority list for compensation. Priority will be based on (a) date of receipt of forest practice application and (b) date of receipt of completed postharvest questionnaire.

(4) The small forest landowner office will send the small forest landowner a notice of compensation decision within 60 days of completion of the timber cruise.

(5) Compensation will not be paid until:

- (a) The department has documented completion of harvest;
- (b) The department has verified that there has been compliance with the rules requiring leave trees in the easement area;
- (c) Any dispute over the amount of compensation or eligibility or other matter involving the forestry riparian easement has been resolved; and
- (d) The forestry riparian easement has been executed and delivered to the department.

NEW SECTION

WAC 222-21-060 Commercially reasonable harvest.

The small forest landowner office will use the following criteria to determine if an area covered by a forest practices application involves a commercially reasonable harvest. The proposed harvest must meet all of the following requirements:

- (1) The harvest unit includes or borders a riparian area;

PERMANENT

(2) The application is for a Class III or Class IV Special forest practice or a Class II that is a renewal of a Class III or Class IV Special;

(3) The harvest is not a Class IV General conversion or covered by a conversion option harvest plan;

(4) The landowner is not eligible for the 20 acre exemption under WAC 222-30-023;

(5) The value of the timber in the harvest unit, excluding qualifying timber, is equal to or exceeds the minimum required by department of revenue for taxing purposes (\$1000); and

(6) The taxable harvest equals or exceeds the value of the qualifying timber established under WAC 222-21-045, unless otherwise approved by the small forest landowner office. (See the board manual.)

NEW SECTION

WAC 222-21-065 Uneconomic to harvest. The small forest landowner office will use the following criteria to determine whether timber is qualifying timber because it is rendered uneconomic to harvest by rules adopted under RCW 76.09.055 or 76.09.370. The proposed harvest must meet all of the following requirements:

(1) The timber could have been included in a commercially reasonable harvest unit by the small forest landowner if there were no additional requirements imposed by rules adopted under RCW 76.09.055 or 76.09.370.

(2) The area is not reasonably accessible because of requirements imposed by rules adopted under RCW 76.09.055 or 76.09.370.

(3) The unit must have no reasonable unit size alternative which if used would make the area economical to harvest.

(4) The cost to access the harvest unit plus the cost to harvest must equal or exceed 35% of the stumpage value in the portion of the unit considered to be uneconomic. The small forest landowner office will determine costs and values consistent with WAC 222-21-045. Costs include harvest, construction of nonpermanent roads and/or water crossing structures, and associated expenses. When using the small harvester method to calculate stumpage values and allowable costs, the landowner may include actual timber appraisal and sale layout costs incurred, as part of the cost calculations.

NEW SECTION

WAC 222-21-070 Blowdown and salvage. After execution of a forestry riparian easement, qualifying timber may not be salvaged, including removal of blowdown, without prior written permission from the department. Prior to removal, the small forest landowner office and the small forest landowner must negotiate the terms of removal and reimbursement to the state, if any. Qualifying timber that blows down off the easement premises that presents a nuisance may be moved back onto the easement premises without permission from the department.

NEW SECTION

WAC 222-21-080 Eminent domain. If a forestry riparian easement is taken, in whole or in part, by exercise of the power of eminent domain, or acquired by purchase in lieu of condemnation, the state will receive compensation for its remaining interest in the easement based upon the following formula:

Where:

C - Is the compensation to the department for the state's remaining interest in the easement;

O - Is the original compensation for the easement paid to the small forest landowner by the state;

P - Is the proportion of the forestry riparian easement extinguished or terminated;

CPIo - Is the U.S. Consumer Price Index all urban consumers as published by the Bureau of Labor Statistics for the month in which the original compensation was determined;

CPIc - Is the U.S. Consumer Price Index all urban consumers as published by the Bureau of Labor Statistics for the most recent month available at the time the easement is terminated or extinguished;

I - Is the rate of return on 30 year treasury bonds, as reported by the Federal Reserve Statistical Release H15 less the rate of increase in the Consumer Price Index for all Urban Consumers as published by the U.S. Department of Labor Bureau of Labor Statistics for the previous 12 months;

R - Is the number of years remaining on the easement at the time of extinguishment or termination.

$$C = O * P * (CPIc / CPIo) * (1 - (1 / (1 + I)^R)) / (1 - (1 / (1 + I)^50))$$

NEW SECTION

WAC 222-21-090 Internal department of natural resources review of small forest landowner office compensation decisions. Within 30 days after the date of the notice of compensation decision, the small forest landowner may submit a written request for review to the supervisor of the department or his or her designee. The request for review must identify the issue being raised and provide any supporting documentation. The supervisor will issue a written response within 30 days.

AMENDATORY SECTION (Amending WSR 94-01-134, filed 12/20/93, effective 1/1/94)

WAC 222-22-070 Prescription recommendation. *(1) For each WAU for which a watershed analysis is undertaken, the department, or forest land owner acting under WAC 222-22-040(3), shall assemble a team of field managers qualified under WAC 222-22-030(1). The team shall include persons qualified in the disciplines indicated as necessary in ~~((the methodology))~~ watershed analysis methods, and shall generally include persons qualified in:

(a) Forest resource management;

- (b) Forest harvest and road systems engineering;
- (c) Forest hydrology; and
- (d) Fisheries science or management.

Any owner, and any cooperating group of owners, of ten percent or more of the nonfederal forest land acreage in the WAU and any affected Indian tribe shall be entitled to include one qualified individual to participate on the team at its own expense.

* (2) Each forest land owner in a WAU shall have the right to submit to the department or the forest land owner conducting the watershed analysis prescriptions for areas of resource sensitivity on its land. If these prescriptions are received within the time period described in subsection (4) of this section, they shall be considered for inclusion in the watershed analysis.

* (3) For each identified area of resource sensitivity, the field managers' team shall, in consultation with the level 1 and level 2 teams, if any, select and recommend to the department prescriptions. These prescriptions shall be reasonably designed to minimize, or to prevent or avoid, as set forth in table 1 in WAC 222-22-050 (2)(d), the likelihood of adverse change and deliverability that has the potential to cause a material, adverse effect to resource characteristics in accordance with the following:

(a) The prescriptions shall be designed to provide forest land owners and operators with as much flexibility as is reasonably possible while addressing the area of resource sensitivity. The prescriptions should, where appropriate, include, but not be limited to, plans for road abandonment, orphaned roads, and road maintenance and plans for applying prescriptions to recognized land features identified in the WAU as areas of resource sensitivity but not fully mapped;

(b) Restoration opportunities may be included as voluntary prescriptions where appropriate:

(c) Each set of prescriptions shall provide for an option for an alternate plan under WAC 222-12-040, which the applicant shows meets or exceeds the protection provided by the other prescriptions approved for a given area of resource sensitivity; and

~~((e))~~ (d) ~~The ((regulation))~~ rules of forest practices and cumulative effects under this chapter shall not require mitigation for activities or events not regulated under chapter 76.09 RCW. Any hazardous condition subject to forest practices identified in a watershed analysis requiring corrective action shall be referred to the department for consideration under RCW 76.09.300 et seq.

(e) The forests and fish riparian permanent rules, when effective, supersede all existing watershed analysis riparian prescriptions with the exception of riparian management zones for exempt 20-acre parcels, when watershed analysis prescriptions were in effect before January 1, 1999. (See WAC 222-30-021, 222-30-022, and 222-30-023.) No new riparian prescriptions will be written after completion of the riparian management zone assessment report during a watershed analysis.

* (4) The field managers' team shall submit the recommended prescriptions to the department within 30 days of the submission to the department of the level 2 assessment under WAC 222-22-060 or within 21 days of the submission to the

department of the level 1 assessment under WAC 222-22-050.

NEW SECTION

WAC 222-22-075 Monitoring. *In connection with any watershed analysis that is not a revision (WAC 222-22-090(4)), the monitoring module will be required to be completed but implementation of monitoring recommendations would be voluntary unless otherwise required by existing laws and rules, or required by an HCP implementation agreement. Implementation of the monitoring recommendations will be encouraged when needed as part of the statewide effectiveness monitoring program.

NEW SECTION

WAC 222-22-076 *Restoration. Restoration opportunities will also be identified based on the watershed resource assessment. Implementation of restoration opportunities will be voluntary.

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-22-080 *Approval of watershed analysis.

(1) Upon receipt of the recommended prescriptions resulting from a level 2 assessment under WAC 222-22-060 or a level 1 assessment under WAC 222-22-050 where a level 2 assessment will not be conducted, the department shall select prescriptions. The department shall circulate the draft watershed analysis to the departments of ecology, fish and wildlife, affected Indian tribes, local government entities, forest land owners in the WAU, and the public for review and comment. The prescriptions recommended by the field managers' team shall be given substantial weight. Within thirty days of receipt of the prescriptions, the department shall review comments, revise the watershed analysis as appropriate, and approve or disapprove the watershed analysis for the WAU.

* (2) The department should notify any governmental agency or Indian tribe having jurisdiction over activities which are not regulated under chapter 76.09 RCW but which are identified in the draft analysis as having a potential for an adverse impact on identified fish, water, and capital improvements of the state or its political subdivisions.

* (3) The department shall approve the draft watershed analysis unless it finds:

(a) For any level 1 assessment or level 2 assessment, that:

(i) The team failed in a material respect to apply the methodology, indices of resource condition, or checklists set forth in the manual; or

(ii) A team meeting the criteria promulgated by the department and using the defined methodologies, indices of resource conditions, and checklists set forth in the manual could not reasonably have come to the conclusions identified in the draft level 1 or level 2 assessment; and

(b) For the prescriptions, that they will not accomplish the purposes and policies of this chapter and of the Forest Practices Act, chapter 76.09 RCW.

(c) In making its findings under this subsection, the department shall take into account its ability to revise assessments under WAC 222-22-090(3).

* (4) If the department does not approve the draft watershed analysis, it shall set forth in writing a detailed explanation of the reasons for its disapproval.

(5) All watershed analyses must be reviewed under SEPA on a nonproject basis. SEPA review may take place concurrently with the public review in subsection (1) of this section. (See WAC 222-10-035.)

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-22-090 Use and review of watershed analysis. *(1) Where a watershed analysis has been completed for a WAU under this chapter:

(a) Any landowner within the WAU may apply for a multiyear permit to conduct forest practices according to the watershed analysis prescriptions. This permit is not renewable if a five-year review is found necessary by the department and has not been completed.

(b) Nonmultiyear forest practices applications and notifications submitted to the department shall indicate whether an area of resource sensitivity will be affected and, if so, which prescription the operator, timber owner, or forest land owner shall use in conducting the forest practice in the area of resource sensitivity;

~~((b))~~ (c) The department shall assist operators, timber owners, and forest land owners in obtaining governmental permits required for the prescription (see WAC 222-50-020 and 222-50-030);

~~((c))~~ (d) The department shall confirm that the prescription selected under (a) of this subsection was one of the prescriptions approved for the area of resource sensitivity under WAC 222-22-080 and shall require the use of the prescription; and

~~((d))~~ (e) The department shall not further condition forest practice applications and notifications in an area of resource sensitivity in a WAU where the applicant will use a prescription contained in the watershed analysis nor shall the department further condition forest practice applications and notifications outside an area of resource sensitivity in a WAU, except for reasons other than the watershed processes and fish, water, and capital improvements of the state or its political subdivisions analyzed in the watershed analysis in the WAU, and except to correct mapping errors, misidentification of soils, landforms, vegetation, or stream features, or other similar factual errors.

* (2) Pending completion of a watershed analysis for a WAU, the department shall process forest practices notifications and applications in accordance with the other chapters of this title, except that applications and notifications received for forest practices on a WAU after the date notice is mailed under WAC 222-22-040(4) commencing a watershed analysis on the WAU shall be conditioned to require compliance with interim, draft, and final prescriptions, as available.

Processing and approval of applications and notifications shall not be delayed by reason of review, approval, or appeal of a watershed analysis.

* (3) The board encourages cooperative and voluntary monitoring. Evaluation of resource conditions may be conducted by qualified specialists, analysts, and field managers as determined under WAC 222-22-030. Subsequent watershed analysis and management strategies in response to areas where recovery is not occurring shall be conducted in accordance with this chapter.

* (4) Where the condition of resource characteristics in a WAU are fair or poor, the department shall evaluate the effectiveness of the prescriptions applied under this chapter to the WAU in providing for the protection and recovery of the resource characteristic. If the department finds that the prescriptions are not providing for such protection and recovery over a period of 3 years, the department shall repeat the watershed analysis in the WAU. Aside from the foregoing, once a watershed analysis is completed on a WAU, it shall be revised in whole or in part upon the earliest of the following to occur:

(a) Five years after the date the watershed analysis is final, if necessary;

(b) The occurrence of a natural disaster having a material adverse effect on the resource characteristics of the WAU;

(c) Deterioration in the condition of a resource characteristic in the WAU measured over a 12-month period or no improvement in a resource characteristic in fair or poor condition in the WAU measured over a 12-month period unless the department determines, in cooperation with the departments of ecology, fish and wildlife, affected Indian tribes, forest land owners, and the public, that a longer period is reasonably necessary to allow the prescriptions selected to produce improvement; or

(d) The request of an owner of forest land in the WAU, which wishes to conduct a watershed analysis at its own expense.

Revision of an approved watershed analysis shall be conducted in accordance with the processes, methods, and standards set forth in this chapter, except that the revised watershed analysis shall be conducted only on the areas affected in the case of revisions under (b) or (c) of this subsection, and may be conducted on areas smaller than the entire WAU in the case of revisions under (a) and (d) of this subsection. The areas on which the watershed analysis revision is to be conducted shall be determined by the department and clearly delineated on a map before beginning the assessment revision. Forest practices shall be conditioned under the current watershed analysis pending the completion of any revisions.

AMENDATORY SECTION (Amending WSR 94-01-134, filed 12/20/93, effective 1/1/94)

WAC 222-22-100 Application review prior to watershed analysis. *The watershed analysis system established in this chapter is a principal methodology for assessing the effects on fish, water, and capital improvements of the state or its political subdivisions of two or more forest practices. Recognizing that it will not be possible to achieve state-wide implementation of the analysis process for all WAUs for some time, the board hereby establishes certain interim regulatory measures pending watershed analysis on a given WAU. These measures are designed to ensure use of the best

available analysis techniques and existing authorities to protect fish, water, and capital improvements of the state or its political subdivisions.

* (1) The department shall continue to use its implementation and enforcement authority to prevent damage to fish, water, and capital improvements of the state or its political subdivisions. See chapter 222-46 WAC.

~~((a) The department shall continue to concentrate and exercise its authority in implementing the use of existing road construction, maintenance, and abandonment rules where there is evidence of road-related damage to fish, water, and capital improvements of the state or its political subdivisions. The applicable road construction and maintenance rules can be found in chapter 222-24 WAC.~~

~~(b) The department shall report to the board each quarter the results of its road construction, maintenance, and abandonment enforcement program. No later than October 31 of each year, the board shall report on results and recommendations for regulatory change as needed to protect fish, water, and capital improvements of the state or its political subdivisions.))~~

* (2) The department shall condition the size of clearcut harvest applications in the significant rain-on-snow zone where the department determines, using local evidence, that peak flows have resulted in material damages to public resources. The department may prepare conditioning guidelines to assess and condition applications located in a significant rain-on-snow zone.

(a) Each year not later than August 31, the department shall provide a summary report of actions taken under rain-on-snow conditioning or conditioning guidelines to the appropriate board committee.

(b) Such conditioning authority shall expire upon completion of watershed analysis in a WAU.

(c) Nothing in this section shall require a watershed analysis to develop harvest size recommendations.

NEW SECTION

WAC 222-23-010 Policy and definitions. (1) Policy. The legislature determined that it is in the public interest to acquire (by purchase or donation) an interest in lands within unconfined avulsing channel migration zones that are offered for acquisition by the landowner, and therefore established a riparian open space program in RCW 76.09.040 to be administered by the department. The purpose of the acquisition is to provide for ecological protection and fisheries enhancement. The department may acquire either the fee interest in or a permanent conservation easement over such lands. This chapter implements the riparian open space program.

(2) Definitions. As used in this chapter, the following terms shall have the following meanings:

(a) "Qualifying CMZ land(s)." See WAC 222-23-020(1).

(b) An "unconfined avulsing channel migration zone" means the area within which the active channel of an unconfined avulsing stream is prone to move and where the movement would result in a potential near-term loss of riparian forest adjacent to the stream. Sizeable islands with productive timber may exist within the zone and are considered a part of

the channel migration zone. The unconfined avulsing channel migration zone does not include areas that are permanently restricted from channel movement by a dike or levee.

(c) An "unconfined avulsing stream" is defined in WAC 222-16-010.

NEW SECTION

WAC 222-23-020 Submitting and processing of applications for the riparian open space program. (1) Qualifying CMZ land(s). Lands that qualify for the riparian open space program are those lands located within an unconfined avulsing channel migration zone and are, as of the date an application is submitted to the department under this section, identified in records of the applicable county assessor as being classified or designated as forest land under chapter 84.33 RCW or as being subject to current use taxation as forest land under chapter 84.34 RCW. Qualifying CMZ lands may be placed in the riparian open space program whether they represent all or just a portion of the lands within the channel migration zone along a particular stream segment. That is, the lands to be placed in the program may include all of a landowner's lands located within the channel migration zone up to the boundary between that zone and the RMZ core area, or lands to be included may include only a portion of a landowner's lands within an unconfined avulsing channel migration zone of a given stream segment. Likewise, where more than one landowner owns land within the channel migration zone of a given stream segment, any landowner may elect to participate in the riparian open space program without regard to participation of neighboring landowners.

Land does not qualify for the riparian open space program where the department has determined that:

(a) The lack of legal access to the land is likely to materially impair the department's ability to administer the riparian open space program with respect to the land;

(b) All persons having an interest of any description in the land, including, but not limited to, joint tenancy, tenancy in common, holder of easement, or holder of lien or security interest, have not agreed to convey or subordinate such interests to the state to the extent deemed necessary by the state to transfer the fee or easement free of or superior to any such interest;

(c) The land is subject to unacceptable liabilities as defined in WAC 222-23-20(4); or

(d) There is any other circumstance making the land unsuitable for fisheries enhancement or ecological protection.

(2) **Application.** An owner or owners of qualifying CMZ lands may apply to the department to place the lands within the riparian open space program. Applications for the riparian open space program may, at the landowners' option, be submitted at the same time as a forest practices application for adjoining or nearby forestlands, or may be submitted separately (and without reference to or the requirement of a current forest practices application). The application for the riparian open space program shall be in writing on a form provided by the department and shall contain the following information:

(a) Name, address, and telephone number of applicant(s);

(b) Contact name and telephone number for questions concerning the application;

(c) Location and description of the land proposed for inclusion in the program, including estimated acreage, a description of the methods used by the landowner to determine that the land is qualifying CMZ land and a map showing the approximate boundary between the channel migration zone and the adjoining RMZ core area (and in situations where the latter is not applicable, a description of the process the landowner used to determine that the qualifying CMZ land is within an unconfined avulsing stream channel migration zone);

(d) Tax parcel identification number(s) that contain the qualifying CMZ land;

(e) List of all persons having any right or interest in the land covered by the application for the riparian open space program and a description of such right or interest;

(f) The stumpage value area and hauling zone in which the qualifying lands lie (see map at WAC 458-40-640).

(g) A map of the qualifying CMZ land;

(h) A statement indicating the landowner's desire to place the land covered by the application within the riparian open space program and whether the landowner wishes to convey the qualifying land in fee or convey only a conservation easement;

(i) Whether the landowner wishes to receive the statutory compensation for the conveyance or wishes to donate the qualifying CMZ land;

(j) Whether the landowner representative submitting the application is aware of the presence of any hazardous substances on the lands;

(k) Description and documentation of the legal and physical access to the land being acquired;

(l) The type of boundary description proposed by landowner (survey or other description); and

(m) Any other information DNR determines is necessary to assess whether the land qualifies for the riparian open space program.

(3) Review and processing of application. Within ninety days of receipt of a complete and accurate application for the riparian open space program, the department shall preliminarily determine (and advise the applicant) whether lands proposed for the riparian open space program appear to meet the requirements of this chapter and of RCW 76.09.040 (3) and (4), and, if so, whether there is funding available for the purchase. This determination is subject to subsequent confirmation of all information required for the program and eligibility of the land as qualifying for the program. If the preliminary determination is that the land qualifies for the program and if funding is available for the proposed purchase, then the following shall occur within the ninety days following notice to the landowner of the preliminary determination:

(a) The landowner, in cooperation with the department, shall delineate on the ground the boundary line between the CMZ and the RMZ core area; following which,

(b) The department shall verify the appropriateness of that delineation, determine the standards for the boundary description (i.e., a survey or other), make a final determina-

tion whether there are any unacceptable liabilities on the lands proposed for inclusion in the program, and communicate the foregoing to the landowner.

If the department determines there are no unacceptable liabilities on the lands, the landowner shall mark the boundary (as verified) using tree tags or other long-term boundary marking methods specified by the department.

(4) Unacceptable liabilities. As used in this section, unacceptable liabilities are created by the presence of hazardous substances on the qualifying CMZ lands or by other condition that creates such a liability to the department that may jeopardize the department's ability to maintain fisheries enhancement or the ecological protection of the qualifying CMZ lands, and with respect to which liability the applicant is unwilling or unable to provide reasonable indemnification to the department. If the department finds unacceptable liabilities with respect to qualifying CMZ lands, the department may reject the landowner's application.

(5) Preparation of conveyance documents. Within ninety days following placement in the field of the long-term boundary between the CMZ and the RMZ core area as provided in subsection (3) of this section, the following shall occur:

(a) The landowner shall:

(i) Traverse the boundary to determine the acreage of the qualifying lands;

(ii) Either perform a legal land survey or otherwise document the boundaries consistent with the requirements of WAC 222-23-030(3), as applicable; and

(iii) Prepare a map of the qualifying CMZ lands suitable for recording.

(b) The department shall:

(i) Conduct and finalize a cruise of the timber on the qualifying CMZ lands;

(ii) Determine the statutory compensation to be paid to the landowner;

(iii) Prepare conveyance documents consistent with this chapter; and

(iv) Prepare any other documents necessary for closing and recording the conveyance, including without limitation a real estate excise tax affidavit.

(6) **Timber cruise.** The timber cruise will be conducted by the department using a cruiser acceptable to the department and the landowner and using generally accepted cruise methodology and sampling intensity acceptable to both parties. The timber cruise shall measure all trees within the lands to be conveyed that contain measurable log volume and develop all information (species and grade) with respect to those trees necessary to apply the stumpage tables developed by the department of revenue pursuant to RCW 84.33.091; this includes volume by species and grade sufficient to apply the department of revenue stumpage tables in WAC 458-40-640, 458-40-650 and 458-40-660 (1) and (2). The department will provide the cruise data to the landowner; within thirty days thereafter, the landowner shall advise the department whether the cruise results are acceptable. The landowner or the department may, at their option, perform a check cruise.

(7) **Compensation for conveyances.** RCW 76.09.-040(3) specifies the compensation the department shall pay for purchases of qualifying CMZ lands, unless the landowner chooses to donate the property in fee or donate a conservation easement.

(a) Fee interests. For conveyances of fee interests, the department shall pay for both the land value and the timber value, as determined in this subsection. The land value component shall be the acreage of qualifying CMZ lands to be conveyed multiplied by the average per acre value of all commercial forest land in Western Washington or the average for Eastern Washington, whichever average is applicable to the qualifying CMZ lands. The department shall determine the Western and Eastern Washington averages based on the land value tables established by RCW 84.33.120 and revised annually by the department of revenue (see WAC 458-40-540). The timber value component of the compensation shall be based on the cruise volume multiplied by the appropriate department of revenue stumpage values from the stumpage value table for the applicable stumpage value area and hauling distance zone. The stumpage value tables to be applied are those found in WAC 458-40-660(2). Except as provided in (c) of this subsection, the tables applied shall be those in effect as of the date the application under this section is submitted to the department by the landowner.

(b) Conservation easements. Conservation easements shall be perpetual and not for a term of years. For conveyances of a conservation easement in which the landowner conveys an interest in the trees only, the compensation shall only include the timber value component, determined as set forth in subsection (7)(a) of this section. For conveyances of a conservation easement in which the landowner conveys interests in both land and trees, the compensation shall include the timber value component plus such portion of the land value component as determined just and equitable by the department.

(c) Adjustment in compensation. Where the department does not complete its duties as required in subsections (3) through (5) of this section within the required time period or the department is unable to complete the acquisition because of a lack of funds or other reason, the landowner has the option to require that the department recompute the compensation based on the most recently published land value and stumpage value tables.

(8) Alternative management options. In any circumstance where qualifying CMZ lands are not acquired by the department in fee or through a conservation easement, the landowner may elect to develop an alternative management option for the lands in cooperation with the department, other agencies and affected Indian tribes.

Reviser's note: The typographical error in the above section occurred in the copy filed by the agency and appears in the Register pursuant to the requirements of RCW 34.08.040.

NEW SECTION

WAC 222-23-025 Priorities for conveyances—Use of lands conveyed. (1) Priorities for conveyances. The legislature recognized, in RCW 77.85.180(4), that the adoption of forest practices rules consistent with the forests and fish

report will impose substantial burdens on forest landowners. The purpose of this program, which will be administered by the department, is to compensate landowners and provide for ecological protection and fisheries enhancement. The department shall prioritize applications under this section based on the following criteria (not in priority order): Order of receipt, ecological value (including importance to salmonids, water quality benefits, quality of habitat, site significance, etc.), and immediacy of need. If funding is or becomes unavailable to consummate a conveyance with respect to otherwise qualifying CMZ lands, the application may (at the landowner's option) be kept on file at the department pending the future availability of funding. The department will consult with representatives of affected Indian tribes, department of fish and wildlife, and department of ecology as necessary for technical expertise. The board will include, in its reports to the legislature required in RCW 76.09.380, a review of this program with recommended amendments, as necessary, to accomplish the goals of this program.

(2) Use and management of lands and easement interests acquired under riparian open space program. Subject to the exceptions set forth in this subsection (or as otherwise provided in the conveyance or easement documents), the lands conveyed or subject to the conservation easements under this chapter shall be managed by the department only in a manner necessary for ecological protection or fisheries enhancement. The conveyance of lands under the riparian open space program shall not create a right of public access to the conveyed lands across adjoining or other lands owned by the landowner conveying property or an easement under the riparian open space program.

(3) Transfer of fee or easement interest or management responsibility. After acquisition of a fee or easement interest in qualifying CMZ lands, the department may transfer its interest in such lands by a recorded instrument to another state agency, a local government within which the lands lie, or a private nonprofit nature conservation corporation (as defined in RCW 64.04.130). Alternatively, the department may contract with one or more of the foregoing entities to exercise the department's management authority over the qualifying CMZ lands. Any such contract will include provisions fully advising the contracting party of the rights of the landowner under this chapter and the conveyance instrument. The department shall notify the landowner of any transfer of its interest in the qualifying CMZ lands or any transfer of management responsibilities over those lands, provided that failure to so notify the landowner shall not affect the validity of the transfer.

NEW SECTION

WAC 222-23-030 Conveyance forms and procedure.

(1) **Fee interest.** Conveyance of a fee interest in qualifying lands shall be by deed with limited warranties. Deeds will include terms reasonably necessary and appropriate to the circumstances of the particular lands involved and shall be in a form acceptable to the department and the landowner. Prior to closing, the landowner shall procure a title report or title history for the lands being conveyed, provided that in the

case of qualifying CMZ land being donated to the department, the department shall pay the cost of the report.

(2) Conservation easement. Conveyances of a conservation easement shall be through execution by the landowner and the department of a conservation easement in a form acceptable to the department and the landowner. The easement will include terms reasonably necessary and appropriate to the circumstances of the particular lands involved. Prior to closing, the landowner shall procure a litigation guarantee or title history from a title company, provided that in the case of an easement being donated to the department, the department shall pay the cost of the guarantee or other report.

(3) Description standards. The description of the qualifying lands being conveyed shall be a legal land survey description or, if a survey is not being performed, the description shall include the township, range, section, and legal subdivision, and utilize a map at a scale of 1:400 indexed either to one legal land survey point or two geospatial system points plus a GPS traverse of the boundary between the CMZ and the RMZ core area, tied to one legal land survey point or two geospatial system points, or other description acceptable to the department.

(4) Closing and recording. Upon execution of the conveyance documents and other documents required for closing, the department shall pay any compensation owed to the landowner and record the conveyance documents. The department shall pay the recording fees. No compensating taxes under chapters 84.33 and 84.34 RCW shall be owed. Any real estate excise tax owed shall be paid by the landowner conveying the property or easement.

AMENDATORY SECTION (Amending WSR 94-01-134, filed 12/20/93, effective 1/1/94)

WAC 222-24-010 Policy. *(1) A well designed, located, constructed, and maintained system of forest roads is essential to forest management and protection of the public resources. Riparian areas contain some of the more productive conditions for growing timber, are heavily used by wildlife and provide essential habitat for fish and wildlife and essential functions in the protection of water quality. Wetland areas serve several significant functions in addition to timber production: Providing fish and wildlife habitat, protecting water quality, moderating and preserving water quantity. Wetlands may also contain unique or rare ecological systems.

*~~(2) ((All road and landing construction within wetlands shall be conducted so that choices are made in the following descending order of preference:~~

~~(a) Avoid impacts by selecting the least environmentally damaging landing location, road location and road length; or~~

~~(b) Minimize impacts by such things as reducing the sub-grade width, fill acreage and spoil areas; or~~

~~(c) Restore affected areas by removing temporary fills or road sections upon the completion of the project; or~~

~~(d) Reduce or eliminate impacts over time by preserving or maintaining areas; or~~

~~(e) Replace affected areas by creating new wetlands or enhancing existing wetlands.~~

~~*(3) An accurate delineation of wetland boundaries shall not be required under this section except where necessary to~~

~~determine acreage of road or landing construction which fills or drains more than 0.5 acre of a wetland. Landowners are encouraged to voluntarily increase wetland acreage and functions over the long term.~~

~~*(4)) To protect water quality and riparian habitat, roads must be constructed and maintained in a manner that will prevent potential or actual damage to public resources. This will be accomplished by constructing and maintaining roads so as not to result in the delivery of sediment and surface water to any typed water in amounts, at times or by means, that preclude achieving desired fish habitat and water quality by:~~

~~• Providing for fish passage at all life stages (see Washington state department of fish and wildlife hydraulic code Title 220 WAC);~~

~~• Preventing mass wasting;~~

~~• Limiting delivery of sediment and surface runoff to all typed waters; and~~

~~• Avoiding capture and redirection of surface or ground water. This includes retaining streams in their natural drainages and routing subsurface flow captured by roads and road ditches back onto the forest floor;~~

~~• Divert most road runoff to the forest floor;~~

~~• Provide for the passage of some woody debris;~~

~~• Protect stream bank stability;~~

~~• Minimizing the construction of new roads;~~

~~• Assure that there is no net loss of wetland function.~~

~~The road construction and maintenance rules in this chapter must be applied in achieving these goals. Additional guidance is identified in the board manual, section 3. If these goals are not achieved using the rules and the applied guidance, additional management strategies must be employed.~~

~~*(3) Extra protection is required during road construction and maintenance to protect ((these)) public resources and timber growing potential. Landowners and fisheries and wildlife managers are encouraged to cooperate ((to develop)) in the development of road management and abandonment plans. Landowners are further encouraged to cooperate in sharing roads to minimize road mileage and avoid duplicative road construction.~~

~~((*(5))~~ *(4) This section covers the location, design, construction, maintenance and abandonment of forest roads, bridges, stream crossings, quarries, borrow pits, and disposal sites used for forest road construction and is intended to assist landowners in proper road planning, construction and maintenance so as to protect public resources.

(Note: Other laws and ((regulations)) rules and/or permit requirements may apply. See chapter 222-50 WAC.)

NEW SECTION

WAC 222-24-015 Construction in wetlands. *(1) In order to assure that there is no net loss of wetland function, all road and landing construction near or within wetlands must be conducted so that selection of choices are made in the following order with avoidance being the most preferred and replacement being the least preferred alternative:

(a) Avoid impacts by selecting the least environmentally damaging landing location, road location and road length. Landowners must attempt to minimize road length concurrently with the attempt to avoid wetlands; or

(b) Minimize impacts by reducing the subgrade width, fill acreage and spoil areas; or

(c) Restore affected areas by removing temporary fills or road sections upon the completion of the project; or

(d) Reduce or eliminate impacts over time by preserving or maintaining areas; or

(e) Replace affected areas by creating new wetlands or enhancing existing wetlands.

***(2) An accurate delineation** of wetland boundaries will not be required under this section except where necessary to determine acreage of road or landing construction which fills or drains more than (0.1) one tenth acre of a wetland. All such mapping must follow the delineation and mapping standards outlined in the board manual, section 8.

***(3) Approximate determination** of wetland boundaries, following the guidelines in the board manual, shall be required for the purpose of avoidance during design and construction of roads. Landowners must attempt to minimize road length concurrently with the attempt to avoid wetlands. Delineation, following the guidelines in the board manual, shall be required to determine the length of road constructed within a wetland in order to determine acreage when replacement by substitution or enhancement of a wetland is required. The requirement for accurate delineation shall be limited to the area of the wetland proposed to be filled.

***(4) Filling or draining** more than 0.5 acre of a wetland requires replacement by substitution or enhancement of the lost wetland functions. (See the board manual, section 9.) The objective of successful replacement by substitution of lost wetland area will be generally on a two-for-one basis and of the same type and in the same general location. The objective of enhancing wetlands function is to provide for an equivalent amount of function to replace that which is lost. See WAC 222-16-050 (1)(h).

AMENDATORY SECTION (Amending WSR 92-15-011, filed 7/2/92, effective 8/2/92)

WAC 222-24-020 Road location and design. (1) **Fit** the road to the topography so that a minimum of alterations to the natural features will occur.

***(2) ((Minimize roads along or within narrow canyons, riparian management zones, wetlands and wetland management zones:**

(a)) Except ((where)) for crossings ((are necessary)), new stream-adjacent parallel roads shall not be located within natural drainage channels, channel migration zones, sensitive sites, equipment limitation zones, and riparian management zones when there would be substantial loss or damage to fish or wildlife habitat unless the department has determined that other alternatives will cause greater damage to public resources. Proposals with new stream-adjacent parallel roads will require an on-site review by an interdisciplinary team. The appropriate federal representative(s) will be invited to attend the interdisciplinary team to determine if the proposal is in compliance with the Endangered Species Act.

((b) ~~Roads shall not be located in wetlands when there would be substantial loss or damage to wetland functions or~~

~~acreage unless the department has determined that alternatives will cause greater damage to public resources.~~

~~(e) Approximate determination of wetland boundaries shall be required for the purpose of avoidance during design and construction of roads. Landowners should attempt to minimize road length concurrently with the attempt to avoid wetlands. Delineation shall be required to determine the length of road constructed within a wetland in order to determine acreage when replacement by substitution or enhancement of a wetland is required. The requirement for accurate delineation shall be limited to the area of the wetland proposed to be filled.))~~

***(3) Roads shall not be constructed in bogs or low nutrient fens.**

***(4) Roads shall not be located in wetlands if there would be substantial loss or damage to wetland functions or acreage, unless the department has determined that alternatives will cause greater damage to public resources.**

***(5) Minimize the number of stream crossings.**

~~((*(4))~~ ***(6) Where stream crossings are necessary:**

(a) Design stream crossings to minimize alterations to natural features;

(b) Locate and design culverts to minimize sediment delivery; and

(c) Whenever practical, cross streams at right angles to the main channel.

~~((*(5))~~ ***(7) Avoid duplicative roads** by keeping the total amount of construction to a minimum. Use existing roads whenever practical and avoid isolating patches of timber which, when removed, may require unnecessary road construction.

~~((*(6) Where feasible, do not locate roads on excessively steep or unstable slopes or known slide prone areas as determined by the department. The department shall determine whether slopes are unstable using available soils information, or from evidence of geologically recent slumps or slides, or where the natural slope exceeds the angle of repose for the particular soil types present, or where springs or seeps may indicate unstable conditions are present in or above the construction site.~~

~~Essential road construction will be accomplished by end hauling, over hauling, or other special road construction techniques unless the department determines there is potential for damage to public resources under WAC 222-16-050 (1)(e).))~~

***(8) All new road construction on side slopes that exceed 60 percent, which have the potential to deliver sediment to any typed water or wetland must utilize full bench construction techniques, including end hauling, over hauling or other special techniques. The department may waive the full bench construction requirement if a site review is conducted and the absence of delivery potential to any typed water or wetlands is determined.**

(9) Use the minimum design standard that produces a road sufficient to carry the anticipated traffic load with reasonable safety.

***(10) Subgrade width should average not more than 32 feet for double lane roads and 20 feet for single lane roads, exclusive of ditches, plus any additional width necessary for safe operations on curves and turnouts. Where road location**

in wetlands is unavoidable (see WAC 222-24-015 (1)(b)), minimize subgrade width.

(11) Balance excavation and embankments so that as much of the excavated material as is practical will be deposited in the roadway fill sections. Where full bench construction is necessary, design suitable embankments so that the excavated material may be end hauled to appropriate deposit areas.

(12) Cut and fill slopes must be designed and constructed in a manner that will assure a high likelihood of remaining stable throughout the life of the road.

*(13) All roads shall be outsloped or ditched on the uphill side and appropriate surface drainage shall be provided by the use of adequate drainage structures such as: Cross drains, ditches, drivable dips, relief culverts, water bars, diversion ditches, or other such structures demonstrated to be equally effective.

*(14) Drainage structures shall not discharge onto erodible soils, or over fill slopes unless adequate outfall protection is provided.

*(15) Relief culverts installed on forest roads shall meet the following minimum specifications: (See the board manual, section 3 for culvert spacing.)

(a) Be at least 18 inches in diameter or equivalent in western Washington and 15 inches in diameter or equivalent in eastern Washington.

(b) Be installed in a manner that efficiently captures ditchline flow and passes it to the outside of the road.

*(16) Ditch diversion. Where roadside ditches slope toward any typed water, or Type A or B Wetland, a ditch relief structure must be located as close to the stream crossing or wetland as possible so it drains off before reaching the stream. On stream-adjacent parallel roads, relief culverts shall be located at maximum distances from stream channels to minimize sediment delivery. The relief structure must allow the sediment to be deposited onto the forest floor and not carry surface water or sediment into the stream channel or wetland.

*(17) Outslope the road surface where practical. Where outsloping is not practical, provide a ditch with drainage structure on the inside of the road, except where roads are constructed in rock or other materials not readily susceptible to erosion.

*(18) Crown or slope the road to prevent the accumulation of water on the road surface.

*(19) Install rock armor headwall inlets on all stream-crossing culverts where the stream gradient above the crossing is greater than 6 percent.

*(20) Install rock armored headwalls and rock armored ditchblocks for drainage structure culverts located on erodible soils or where the affected road has a gradient greater than 6 percent.

*(21) Install drainage structures at locations where seeps and springs are known or discovered during construction to route accumulated surface water across the road prism. The water from the seeps and springs must be returned to the forest floor as close to the point of origin as reasonably practicable.

*(22) The department may require additional information for proposed road construction as part of a complete application, including:

(a) A map with detailed topographic information showing the location and alignment of the road in relation to all typed water and wetlands as required in WAC 222-16-035;

(b) Location, size, alignment and number of water crossing and drainage structures;

(c) Detailed plans for bridges, large culverts or other complex elements of the proposal; and

(d) Other information identified by the department.

NEW SECTION

WAC *222-24-026 Temporary roads. Temporary roads as defined in WAC 222-16-010 shall:

(1) Be constructed in a manner to facilitate closure and abandonment when the intended use is completed.

(2) Be designed to provide the same level of protection for public resources as provided by the rules during the length of its use.

(3) Be identified on the forest practices application or notification, along with an abandonment date. Abandonment must be accomplished under WAC 222-24-052*(3) to the specifications approved by the department by the date specified in the approved forest practices application.

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-24-030 Road construction. (1) **Right of way timber**~~((Merchantable right-of-way timber))~~ shall be removed or decked in suitable locations where the decks will not be covered by fill material or act as support for the fill or embankment.

~~*(2) ((Debris burial.~~

~~(a)) In permanent road construction, do not bury:~~

~~((+)) (a) Loose stumps, logs or chunks ((containing)) if they will contribute more than 5 cubic feet in the load-bearing portion of the road((, except as puncheon across wetlands or for culvert protection)).~~

~~((+)) (b) Any significant amount of organic debris within the top 2 feet of the load-bearing portion of the road((, except as puncheon across wetlands or for culvert protection)).~~

~~((+)) (c) Excessive accumulation of debris or slash in any part of the load-bearing portion of the road fill((, except as puncheon across wetlands or for culvert protection)).~~

~~((b) In the cases where temporary roads are being constructed across known areas of unstable soils and where possible construction failure would directly impact waters, the requirements in (a), (i), (ii) and (iii) of this subsection shall apply. A temporary road is a roadway which has been opened for the purpose of the forest practice operation in question, and thereafter will be an inactive or abandoned road.))~~

(3) **Compact fills.** During road construction, fills or embankments shall be built up by layering. Each layer shall be compacted by operating the tractor or other construction equipment over the entire surface of the layer. Chemical

compacting agents may be used in accordance with WAC 222-38-020.

*** (4) Stabilize soils.** ~~((When soil, exposed by road construction, appears to be unstable or erodible and is so located that slides, slips, slumps, or sediment may reasonably be expected to enter Type 1, 2, 3 or 4 Water and thereby cause damage to a public resource, then such exposed soil areas shall be seeded with grass, clover, or other ground cover, or be treated by erosion control measures acceptable to the department. Avoid introduction of nonnative plant species, as listed in the board manual, to wetlands and wetland management zones.))~~ Erodible soil disturbed during road construction and located where it could reasonably be expected to enter the stream network must be seeded with noninvasive plant species. The use of local area native species, adapted for rapid revegetation is preferred. Treatment with other erosion control measures may be approved by the department.

*** (5) Channel clearance.** Within 50 feet upstream from a culvert inlet clear stream channel of all debris and slash generated ((during)) by the operations that reasonably may be expected to plug the culvert prior to the removal of equipment from the vicinity, or the winter season, whichever is first. (See the board manual, section 4 for debris removal guidelines.)

*** (6) Drainage.**

(a) All required ditches ~~((, culverts, cross drains, drainage dips, water bars, and diversion ditches))~~ and drainage structures shall be installed concurrently with the construction of the roadway.

(b) Uncompleted road construction to be left over the winter season or other extended periods of time shall be drained by outsliping or ~~((cross draining))~~ drainage structures. Water bars and/or dispersion ditches may also be used to minimize eroding of the construction area and stream siltation. Water movement within wetlands must be maintained.

*** (7) Moisture conditions.** Construction shall be accomplished when moisture and soil conditions are not likely to result in excessive erosion and/or soil movement, so as to avoid damage to public resources.

*** (8) End haul/sidecasts.** End haul or overhaul construction is required where significant amounts of sidecast material would rest below the ~~((50-year))~~ 100-year flood level of ((a Type 1, 2, 3, or 4)) any typed water, within the boundary of a Type A or Type B Wetland or wetland management zones or where the department determines there is a potential for mass soil failure from overloading on unstable slopes or from erosion of side cast material causing damage to the public resources.

*** (9) Waste disposal.** When spoil, waste and/or other debris is generated during construction, this material shall be deposited or wasted in suitable areas or locations and be governed by the following:

(a) Spoil or other debris shall be deposited above the ~~((50-year))~~ 100-year flood level of ((Type 1, 2, 3, or 4 Waters)) any typed waters or in other suitable locations ((see as)) to prevent damage to public resources. The material shall be stabilized ~~((by erosion control measures as necessary to prevent the material from entering the waters))~~ using the rec-

ommended schedule and procedures found in the board manual, section 3.

(b) All spoils shall be located outside of Type A and Type B Wetlands and their wetland management zones. Spoils shall not be located within the boundaries of forested wetlands without written approval of the department and unless a less environmentally damaging location is unavailable. No spoil area greater than 0.5 acre in size shall be allowed within wetlands. (See WAC 222-24-015, Construction in wetlands.)

(10) Disturbance avoidance for northern spotted owls. Road construction, operation of heavy equipment and blasting within a SOSEA boundary shall not be allowed within 0.25 mile of a northern spotted owl site center between March 1 and August 31, provided that, this restriction shall not apply if:

(a) The landowner demonstrates that the owls are not actively nesting during the current nesting season; or

(b) The forest practice is operating in compliance with a plan or agreement developed for the protection of the northern spotted owl under WAC 222-16-080 (6)(a), (e), or (f).

(11) Disturbance avoidance for marbled murrelets.

(a) Road construction and operation of heavy equipment shall not be allowed within 0.25 mile of an occupied marbled murrelet site during the daily peak activity periods within the critical nesting season; and

(b) Blasting shall not be allowed within 0.25 mile of an occupied marbled murrelet site during the critical nesting season.

(c) Provided that, these restrictions shall not apply if the forest practice is operating in compliance with a plan or agreement developed for the protection of the marbled murrelet under WAC 222-16-080 (6)(a) or (c).

AMENDATORY SECTION (Amending WSR 92-15-011, filed 7/2/92, effective 8/2/92)

WAC 222-24-035 Landing location and construction.

*** (1) Landing location:**

Locate landings to prevent potential or actual damage to public resources. Avoid excessive excavation and filling. Landings shall not be located within natural drainage channels, channel migration zones, RMZ core and inner zones, Type Np RMZs, sensitive sites, equipment limitation zones, and Type A or B Wetlands or their wetland management zones. Minimize placement and size of landings within forested wetlands. ~~((Landings shall not be located in Type A or B Wetlands or their wetland management zones.))~~ (See WAC 222-24-015, Construction in wetlands.)

(2) Landing construction.

(a) Landings requiring sidecast or fill shall be no larger than reasonably necessary for safe operation of the equipment expected to be used.

* (b) Where the ((average general)) slopes exceed ((65)) 60 percent, fill material used in construction of landings shall be free from loose stumps and excessive accumulations of slash and shall be mechanically compacted where necessary and practical in layers by tractor to prevent soil erosion and

mass soil movement. Chemical compacting agents may be used in accordance with WAC 222-38-020.

* (c) Truck roads, skid trails, and fire trails shall be sloped or cross drained uphill of landings and the water diverted onto the forest floor away from the toe of any landing fill.

* (d) Landings shall be sloped to minimize accumulation of water on the landing.

* (e) Excavation material shall not be sidecast where there is high potential for material to enter ~~((Type A or B Wetlands or))~~ wetland management zones or ~~((below))~~ within the ((ordinary high water mark)) bankfull width of any stream or the ~~((50-year))~~ 100-year flood level of ~~((Type 1, 2, 3, or 4 Water))~~ any typed water.

* (f) All spoils shall be located outside of Type A and Type B Wetlands and their wetland management zones. Spoils shall not be located within the boundaries of forested wetlands without written approval of the department and unless a less environmentally damaging location is unavailable. No spoil area greater than 0.5 acre in size shall be allowed within wetlands. (See WAC 222-24-015, Construction in wetlands.)

*** (3) Temporary landings.**

(a) A temporary landing is intended for use during the life of an approved application/notification.

(b) It must be constructed to facilitate abandonment when the intended use is complete or upon seasonal shut-down, whichever is sooner.

(c) It must be designed to provide the same level of protection for public resources as provided by the rules during the length of its intended use.

(d) Temporary landings must be identified on the forest practices application or notification, along with an abandonment date.

(e) Temporary landings must be abandoned to the specifications approved by the department by the date specified on the approved forest practices application.

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-24-040 Water crossing structures. * (1) ~~((Bridge construction.))~~ **General provisions for all typed waters.**

In addition to the applicable general provisions below, installation, maintenance and removal of water crossing structures in or across the bankfull width of Type S or F Waters are subject to hydraulic code rules, chapter 220-110 WAC, and require hydraulic project approval (HPA) issued by the department of fish and wildlife. HPAs may be required on Type Ns and Np Waters.

(a) Bridges are required for new crossings ~~((of any Type 1 or 2 Waters))~~ and reconstructed crossings of any typed waters regularly used for recreational boating.

~~((Permanent bridges shall not constrict clearly defined channels and shall be designed to pass the 50-year flood level or the road shall be constructed to provide erosion protection from the 50-year flood waters which exceed the water-carrying capacity of the drainage structure.))~~ Structures

containing concrete must be sufficiently cured prior to contact with water.

(c) One end of each new or reconstructed permanent log or wood bridge shall be tied or firmly anchored if any of the bridge structure is within 10 vertical feet of the ~~((50-year))~~ 100-year flood level.

~~((Excavation for bridges, placement of sills or abutments, and the placement of stringers or girders shall be accomplished from outside the ordinary high water mark of all waters, except when such operations are authorized by a hydraulic project approval.~~

~~((Earth embankments constructed for use as bridge approaches shall be protected from erosion by high water. Some examples of protection are: Planted or seeded ground cover, bulkheads, rock riprap, or retaining walls.))~~ Alterations or disturbance of the stream bed, bank or bank vegetation must be limited to that necessary to construct the project. All disturbed areas must be stabilized and restored according to the recommended schedule and procedures found in section 3 of the board manual. This requirement may be modified or waived by the department, in consultation with the department of fish and wildlife, if precluded by engineering or safety factors.

~~((f))~~ (e) When earthen materials are used for bridge surfacing, only clean sorted gravel may be used, a geotextile lining must be installed and curbs of sufficient size shall be installed to ~~((be))~~ a height above the surface material ~~((and))~~ to prevent ~~((such))~~ surface material from falling into the stream bed.

(f) Wood removed from the upstream end of culverts and bridges will be placed at the downstream end of such culverts and bridges in such a way as to minimize obstruction of fish passage and to the extent practical while avoiding significant disturbance of sediment, in connection with maintenance activities.

* (2) **Bridges over Type Np and Ns Waters.** In addition to the applicable general provisions above, installation, maintenance, and removal of permanent bridges in or across Type Np and Ns Waters are subject to the following:

(a) Permanent bridges must not constrict clearly defined channels and must be designed and installed to pass the 100-year flood. The bridge and its associated embankments and fills must provide sufficient erosion protection to withstand a 100-year flood event.

(b) Excavation for and placement of the bridge foundation and superstructure must be located and conducted from outside the outer edge of the bankfull width. This requirement may be waived by the department, in consultation with the department of fish and wildlife, if it can be demonstrated that these activities may be conducted in such a manner to prevent damage to public resources.

(c) Earthen embankments constructed for use as bridge approaches must be provided with sufficient erosion protection to withstand a 100-year flood event.

* (3) **Culvert installation for Type Np and Ns Waters.** In addition to applicable general provisions above, installation, maintenance and removal of permanent culverts in or across Type Np and Ns Waters are subject to the following provisions:

(a) All permanent culverts (~~installed in forest roads shall be of a size that is adequate to carry the 50-year flood or the road shall be constructed to provide erosion protection from the 50-year flood waters which exceed the water-carrying capacity of the drainage structure. Refer to "Recommended culvert sizes" in the forest practices board manual for the size of permanent culverts recommended for use in forest roads.~~) must be designed to pass the 100-year flood event with consideration for the passage of debris likely to be encountered.

(b) The culvert and its associated embankments and fills must have sufficient erosion protection to withstand the 100-year flood event. Erosion protection may include armored overflows or the use of clean coarse fill material.

(c) If the department determines that because of unstable slopes the culvert size shown (~~on that table is~~) in the board manual, section 3, "Determining Culvert Size, Method A" would be inadequate to protect public resources, it may require a larger culvert (sizes in accordance with the nomograph (chart) contained in the forest practices board manual or with other) designed using generally accepted engineering principles that meet the standards in (a) and (b) of this subsection.

~~((a))~~ (d) No permanent culverts shall be installed that are smaller than:

(i) ~~(24 inches in diameter or the equivalent for anadromous fish streams or wetlands where anadromous fish are present.~~

(ii) ~~18 inches or the equivalent for resident game fish streams.~~

(iii) ~~18 inches or the equivalent for all other water or wetland crossings in western Washington.~~

(iv) ~~15 inches or the equivalent for all other water or wetland crossings in eastern Washington.~~

~~(b))~~ 24 inches for Type Np Waters.

(ii) 18 inches for Type Ns Waters in western Washington.

(iii) 15 inches for Type Ns Waters in eastern Washington.

(e) The alignment and slope of the culvert shall parallel the natural flow of the stream whenever possible.

~~((e) When fish life is present, construct the bottom of the culvert at or below the natural stream bed at the inlet and outlet.~~

(d) ~~Terminate culverts on materials that will not readily erode, such as riprap, the original stream bed (if stable), or other suitable materials.~~

(e) ~~If water is diverted from its natural channel, return this water to its natural stream bed via culvert, flume, spillway, or the equivalent.~~

~~(f) When flumes, downspouts, downfall culverts, etc., are used to protect fill slopes or to return water to its natural courses, the discharge point shall be protected from erosion by: (i) Reducing the velocity of the water, (ii) use of rock spillways, (iii) riprap, (iv) splash plates, or (v) other methods or structures demonstrated to be equally effective.~~

~~(g))~~ (f) Culverts must be designed and installed so they will not cause scouring of the stream bed and erosion of the banks in the vicinity of the project.

(g) When the department determines that installing a culvert in a flowing stream will result in excessive siltation and

turbidity, and siltation and turbidity would be reduced if stream flow were diverted, the department shall require the stream flow be diverted using a bypass flume or culvert, or by pumping the stream flow around the work area. This may include culvert installations that are within 0.25 miles of a Type S or F Water or within two miles of a hatchery intake in consultation with the department of fish and wildlife.

(h) Fill associated with culvert installation must have sufficient erosion protection to withstand the 100-year flood.

(i) Stream beds shall be cleared for a distance of 50 feet upstream from the culvert inlet of such slash or debris that reasonably may be expected to plug the culvert.

~~((h))~~ (j) The entrance of all culverts (should) shall have adequate catch basins and headwalls to minimize the possibility of erosion or fill failure.

~~(*3) Culverts in anadromous fish streams.~~ In addition to the requirements of subsection (2) of this section, in streams used by anadromous fish:

(a) ~~Culverts shall be either open bottomed or have the bottom covered with gravel and installed at least 6 inches below the natural stream bed at the inlet and outlet.~~

(b) ~~Closed bottom culverts shall not slope more than 1/2 percent; except as provided in (e) of this subsection; open bottom culverts shall not slope more than the natural slope of the stream bed.~~

(e) ~~Where multiple culverts are used, one culvert shall be at least 6 inches lower than the other(s).~~

(d) ~~Culverts shall be set to retain normal stream water depth throughout the culvert length. A downstream control may be required to create pooled water back into the culvert and to insure downstream stream bed stability.~~

(e) ~~Closed bottom culverts, set at existing stream gradients between 1/2 percent and 3 percent slope shall be designed with baffles for water velocity control, or have an approved designed fishway.~~

(f) ~~The department, after consultation with the department of fish and wildlife, shall impose any necessary limitations on the time of year in which such culverts may be installed to prevent interference with migration or spawning of anadromous fish.~~

~~(g) Any of the requirements in (a) through (f) of this subsection may be superseded by a hydraulic project approval.)~~

* (4) Temporary water crossings in Type Np and Ns Waters. In addition to the applicable general provisions above, installation, maintenance and removal of temporary bridges or other structures in or across Type Np and Ns Waters are subject to the following:

(a) A temporary water crossing is intended for use during the life of an approved application/notification.

(b) It must be constructed to facilitate abandonment when the intended use is complete or upon seasonal shut-down, whichever is sooner.

(c) Temporary water crossings must be identified on the forest practices application or notification, along with an abandonment date.

~~((a))~~ (d) Temporary (bridges and culverts, adequate to carry the highest anticipated flow in lieu of carrying the 50-year flood;) water crossings may be used:

(i) In ~~((the westside region))~~ western Washington if installed after June 1 and removed by September 30 of the same year.

(ii) In ~~((the eastside region))~~ eastern Washington if installed after the spring runoff and removed prior to ~~((the snow buildup which could feed a heavy runoff))~~ October 15th.

(iii) At other times, when the department and applicant can agree to specific dates of installation and removal and the extended dates result in equivalent levels of resource protection.

~~((b))~~ (e) Temporary water crossings must be designed to pass the highest peak flow event expected to occur during the length of its intended use.

(f) When the department determines that installing a culvert in a flowing stream will result in excessive siltation and turbidity, and siltation and turbidity would be reduced if stream flow were diverted, the department shall require the stream flow be diverted using a bypass flume or culvert, or by pumping the stream flow around the work area. This may include culvert installations that are within 0.25 miles of a Type S or F Water or within two miles of a hatchery intake, in consultation with the department of fish and wildlife.

(g) Temporary ~~((bridges and culverts))~~ water crossings shall be promptly removed ~~((upon completion of use,))~~ and ~~((the approaches))~~ abandoned to the specifications approved by the department upon completion of use or by the date specified in the approved forest practices application, whichever is earlier. Approaches to the crossing shall be water barred and stabilized at the time of the crossing removal. The department may waive removal of the water crossing if the applicant secures an amended forest practices application, and the structure and its approaches meet all of the requirements of a permanent water crossing structure.

~~((e))~~ (h) Temporary wetland crossings shall be abandoned and restored based on a written plan approved by the department prior to construction.

(i) Temporary water crossings must be designed to provide the same level of protection for public resources as provided by rules during the length of its use.

* (5) Properly prepared and maintained fords may be used in Type Np and Ns Waters during periods of low water ~~((providing a hydraulic permit is acquired)).~~

(a) Entry and exit points for each ford must be located as close to perpendicular along the stream as possible, but will not exceed 100 feet upstream or downstream of each other. Approaches to the ford will not run adjacent to the stream.

(b) Ford locations must be shown on the forest practices application.

(c) Best management practices for construction, maintenance and use will be utilized as appropriate or as required by conditions on the approved forest practices application.

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-24-050 *Road maintenance and abandonment. ~~((*(1) Road maintenance and abandonment plan.~~

(a) The landowner when notified by the department shall submit a plan for road maintenance and abandonment for

~~those drainages or road systems the department determines based on physical evidence to have a potential to damage public resources. The plan is subject to annual review and shall include:~~

- ~~(i) Ownership maps showing the road or road system;~~
- ~~(ii) Road status, whether active, inactive, abandoned or planned for abandonment;~~
- ~~(iii) Maintenance schedule and priorities for the year; and~~
- ~~(iv) Plan for further maintenance and reconstruction beyond the current year for repair of extensive damage.~~

~~(b) The plan shall be submitted to the department region office on or before June 30, 1988, and each June 30th thereafter unless the department agrees that no further plans are necessary.~~

~~(e) The department will review the plan annually with the landowner to determine whether it will be effective and is being implemented.~~

~~(d) Such plans shall also be reviewed with departments of ecology, fish and wildlife, and affected Indian tribes, any of whom may request an informal conference with the landowner.~~

~~*(2) Active roads. An active road is a forest road being actively used for hauling of logs, pulpwood, chips, or other major forest products or rock and other road building materials. To the extent necessary to prevent damage to public resources, the following maintenance shall be conducted on such roads:~~

- ~~(a) Culverts and ditches shall be kept functional.~~
- ~~(b) Road surface shall be maintained as necessary to minimize erosion of the surface and the subgrade.~~
- ~~(c) During and on completion of operations, road surface shall be crowned, outsloped, or water barred and berms removed from the outside edge except those intentionally constructed for protection of fills.~~

~~*(3) Inactive roads. An inactive road is a forest road on which commercial hauling is discontinued for 1 or more logging seasons, and the forest landowner desires continuation of access for fire control, forest management activities, Christmas tree growing operations, occasional or incidental use for minor forest products harvesting or similar activities on such inactive roads:~~

~~(a) Before the first winter rainy season following termination of active use, nonfunctional ditches and culverts shall be cleared and the road surface shall be crowned, outsloped, water barred or otherwise left in a condition not conducive to accelerated erosion or interrupt water movement within wetlands; and~~

~~(b) Thereafter, except as provided in (c) of this subsection, the landowner shall clear or repair ditches or culverts which he/she knows or should know to be nonfunctional and causing or likely to cause material damage to a public resource.~~

~~(c) The landowner shall not be liable for penalties or monetary damages, under the act, for damage occurring from a condition brought about by public use, unless he/she fails to make repairs as directed by a notice to comply.~~

~~*(4) Additional culverts/maintenance. If the department determines based on physical evidence that the above~~

maintenance has been or will be inadequate to protect public resources and that additional measures will provide adequate protection it shall require the landowner or operator to either elect to:

(a) Install additional or larger culverts or other drainage improvements as deemed necessary by the department; or

(b) Agree to an additional road maintenance program. Such improvements in drainage or maintenance may be required only after a field inspection and opportunity for an informal conference.

~~*(5) **Abandoned roads.** An abandoned road is a forest road which the forest landowner has abandoned in accordance with procedures of (a) through (c) of this subsection. Roads are exempt from maintenance only after (c) of this subsection is completed:~~

~~(a) Roads are outslopped, water barred, or otherwise left in a condition suitable to control erosion and maintain water movement within wetlands; and~~

~~(b) Ditches are left in a suitable condition to reduce erosion; and~~

~~(c) The road is blocked so that four wheel highway vehicles can not pass the point of closure at the time of abandonment; and~~

~~(d) Bridges, culverts, and fills on all waters are removed, except where the department determines other measures would provide adequate protection to public resources.~~

~~(e) The department shall determine whether the road has been abandoned according to procedures of this subsection. If the department determines the road is properly abandoned, it shall within thirty days notify the landowner in writing that the road is officially abandoned.~~

~~*(6) **Brush control.** Chemical control of roadside brush shall not be done where chemicals will directly enter any Type 1, 2, or 3 or flowing Type 4 or 5 Water or Type A or B Wetlands. Refer to WAC 222-38-020 for additional information.~~

~~*(7) **Road surface treatment:**~~

~~(a) Apply oil to the road surface only when the temperature is above 55 degrees F and during the season when there is a minimal chance of rain for the next 48 hours. Use of waste oil is subject to RCW 70.951.060(5).~~

~~(b) Water the road surface prior to application of oil to assist in penetration.~~

~~(c) Construct a temporary berm along the road shoulder wherever needed to control runoff of the applied chemical.~~

~~(d) Take extreme care to avoid excess application of road chemicals. Shut off the flow at all bridges.~~

~~(e) When cleaning out chemical storage tanks or the application equipment tanks used for storage and application of road treatment materials, dispose of the rinse water fluids on the road surface or in a place safe from potential contamination of water.~~

~~(f) The use of dry road chemicals shall be in compliance with WAC 222-38-020.) The goals for road maintenance are established in WAC 222-24-010. All forest roads must be improved and maintained to the standards of this chapter within 15 years of the effective date of these rules. Guidelines for how to meet these goals and standards are in the board manual, section 3. Work performed toward meeting~~

the standards must generally be even flow over the 15-year period with priorities for achieving the most benefit to public resources early in the period. Replacement will not be required for existing culverts functioning with little risk to public resources or for culverts installed under an approved forest practices application or notification if they have been properly maintained and are capable of passing fish, until the end of the culvert's functional life.

NEW SECTION

WAC *222-24-051 Road maintenance schedule. All forest roads must be covered under an approved road maintenance and abandonment plan within 5 years of the effective date of this rule or by December 31, 2005. This includes all roads that were constructed or used for forest practices after 1974. Inventory and assessment of orphan roads must be included in the road maintenance and abandonment plans as specified in WAC 222-24-052(4).

* (1) Landowners with 500 acres or more of forest land in a DNR region must maintain a schedule of submitting plans to the department that cover 20% of their roads or land base each year.

* (2) Landowners with less than 500 acres of forest land in a DNR region must submit with their first forest practice application or notification a road maintenance and abandonment plan covering the roads that will be used by the application. Within one year of the date of submittal of the first forest practices application or notification or before the end of 2005, whichever comes first, the landowner must submit a road maintenance and abandonment plan for the rest of their ownership in that region. Once the plan is approved, the landowner must attach or reference the approved road maintenance and abandonment plan when submitting subsequent applications.

(3) For those portions of their ownership that fall within a watershed administrative unit covered by an approved watershed analysis plan, chapter 222-22 WAC, landowners may follow the watershed administrative unit-road maintenance plan, providing the roads they own are covered by the plan. A proposal to update the road plan to meet the current road maintenance standards must be submitted to the department for review on or before the next scheduled road maintenance plan review. If annual reviews are not required as part of the watershed analysis road plan, the plan must be updated by October 1, 2005. All roads in the planning area must be in compliance with the current rules by the end of calendar year 2015. See the board manual section 3 for road maintenance and abandonment plan outline.

* (4) Plans will be submitted by landowners on a priority basis. Road systems or drainages in which improvement, abandonment or maintenance have the highest potential benefit to the public resource are the highest priority. Based upon a "worst first" principle, work on roads that affect the following are presumed to be the highest priority:

(a) Basins containing, or road systems potentially affecting, waters which either contain a listed threatened or endangered fish species under the federal or state law or a water body listed on the current 303(d) water quality impaired list for road related issues.

(b) Basins containing, or road systems potentially affecting, sensitive geology/soils areas with a history of slope failures.

(c) Road systems or basins where other restoration projects are in progress or may be planned coincident to the implementation of the proposed road plan.

(d) Road systems or basins likely to have the highest use in connection with future forest practices.

*(5) Based upon a "worst first" principle, road maintenance and abandonment plans must pay particular attention to:

(a) Roads that block fish passage;

(b) Roads that deliver sediment to typed water;

(c) Roads with evidence of existing or potential instability that could adversely affect public resources;

(d) Roads or ditchlines that intercept ground water; and

(e) Roads or ditches that deliver surface water to any typed waters.

*(6) Road maintenance and abandonment plans must include:

(a) Ownership maps showing all forest roads, including orphan roads; planned and potential abandonment, all typed water, Type A and B Wetlands that are adjacent to or crossed by roads, stream adjacent parallel roads and an inventory of the existing condition; and

(b) Detailed description of the first years work with a schedule to complete the entire plan within fifteen years; and

(c) Standard practices for routine road maintenance; and

(d) Storm maintenance strategy that includes prestorm planning, emergency maintenance and post storm recovery; and

(e) Inventory and assessment of the risk to public resources or public safety of orphaned roads; and

(f) The landowner or landowner representative's signature.

*(7) Priorities for road maintenance work within plans are:

(a) Removing blockages to fish passage beginning on roads affecting the most habitat first, generally starting at the bottom of the basin and working upstream;

(b) Preventing or limiting sediment delivery (areas where sediment delivery or mass wasting will most likely affect bull trout habitat will be given the highest priority);

(c) Correcting drainage or unstable sidecast in areas where mass wasting could deliver to public resources or threaten public safety;

(d) Disconnecting road drainage from typed waters;

(e) Repairing or maintaining stream-adjacent parallel roads with an emphasis on minimizing or eliminating water and sediment delivery;

(f) Improving hydrologic connectivity by minimizing the interruption of surface water drainage, interception of subsurface water, and pirating of water from one basin to another; and

(g) Repair or maintenance work which can be undertaken with the maximum operational efficiency.

*(8) Initial plans for landowners with 500 acres or more of forest land in a DNR region must be submitted to the department during the year 2001 as scheduled by the department.

*(9) Each year on the anniversary date of the plan's submittal, landowners must report work accomplished for the previous year and submit to the department a detailed description of the upcoming year's work including modifications to the existing work schedule.

The department's review and approval will be conducted in consultation with the department of ecology, the department of fish and wildlife, affected tribes and interested parties. The department will:

(a) Review the progress of the plans annually with the landowner to determine if the plan is being implemented as approved; and

(b) The plan will be reviewed by the department and approved or returned to the applicant with concerns that need to be addressed within forty-five days of the plan's submittal.

(c) Additional plans will be signed by the landowner or the landowner's representative.

*(10) The department will facilitate an annual water resource inventory area (WRIA) meeting with landowners, the department of fish and wildlife, the department of ecology, affected tribes, the National Marine Fisheries Service, the U.S. Fish and Wildlife Service, affected counties, local U.S. Forest Service, watershed councils, and other interested parties. The purpose of the meeting is to:

(a) Suggest priorities for road maintenance and abandonment planning; and

(b) Exchange information on road maintenance and stream restoration projects.

*(11) A forest practice application with a detailed one to five year work plan associated with a submitted road maintenance and abandonment plan will be treated as a multiyear permit. The application will be reviewed, approved, conditioned and/or disapproved within 45 days of acceptance. The application will be reviewed in consultation with the department of ecology, department of fish and wildlife, affected tribes and interested parties.

*(12) Regardless of the schedule for plan development, roads that are currently used or proposed to be used for timber hauling must be maintained in a condition that prevents potential or actual damage to public resources. If the department determines that log haul on such a road will cause or has the potential to cause material damage to a public resource, the department may require the applicant to submit a plan to address specific issues or segments on the haul route.

*(13) If a landowner is found to be out of compliance with the work schedule of an approved road maintenance and abandonment plan and the department determines that this work is necessary to prevent potential or actual damage to public resources, then the department will exercise its authority under WAC 222-46-030 (notice to comply) and WAC 222-46-040 (stop work order) to restrict use of the affected road segment.

(a) The landowner may submit a revised maintenance plan for maintenance and abandonment and request permission to use the road for log haul.

(b) The department must approve use of the road if the revised maintenance plan provides protection of the public resource and maintains the overall schedule of maintenance of the road system or basin.

* (14) If a landowner is notified by the department that their road(s) has the potential to damage public resources, the landowner must, within 90 days, submit to the department for review and approval a plan or plans for those drainages or road systems within the area identified by the department.

NEW SECTION

WAC 222-24-052 Road maintenance. *(1) **Forest roads.** Forest roads are defined in WAC 222-16-010. To the extent necessary to prevent potential or actual damage to public resources, the following maintenance shall be conducted on forest roads, except as addressed in subsections *(5) and *(6) of this section:

- (a) Drainage structures shall be kept functional.
- (b) Ground water that has been captured by ditchline must be diverted onto stable portions of the forest floor by using ditchouts, culverts or drivable dips.
- (c) Road surface must be maintained as necessary to:
 - (i) Minimize erosion of the surface and the subgrade; and
 - (ii) Minimize direct delivery of surface water to typed water; and
 - (iii) Minimize sediment entry to typed water; and
 - (iv) Direct any ground water that is captured by the road surface onto stable portions of the forest floor.
- (d) During and on completion of the following operations, the road surface shall be crowned, outsloped, or water barred and berms removed from the outside edge except those intentionally constructed for protection of fills:
 - (i) Log, pulp, chip, or specialized forest product haul;
 - (ii) Rock haul; and
 - (iii) Road building.
- (e) Before the first winter rainy season following termination of operations, drainage structures must be cleared and the road surface must be crowned, outsloped, water barred or otherwise left in a condition which prevents accelerated erosion, interruption of water movement within wetlands, mass wasting, or direct delivery of water or sediment to a typed water. (See the board manual section 3 for specific guidance.)
- (f) Thereafter, except as provided in (d) of this subsection, the landowner must clear or repair ditches or drainage structures that are known or should be known to be nonfunctional and causing or likely to cause material damage to a public resource.

(g) The landowner will not be liable for penalties or monetary damages, under the act, for damage occurring from a condition brought about by public use, unless the landowner fails to make repairs as directed by a notice to comply.

(h) During the regular course of road maintenance on stream-adjacent parallel roads, down wood that is blocking vehicle passage shall be placed on the side of the road closest to the adjacent water.

*(2) **Additional drainage structure maintenance.** If the department determines, based on a field inspection and physical evidence, that the above road maintenance has been or will be inadequate to protect public resources, and that additional measures will provide adequate protection, the department will require the landowner or operator to install

additional or larger drainage structures or other drainage improvements identified as necessary by the department.

*(3) **Abandoned roads.** An abandoned road is a road which the forest landowner has abandoned in accordance with procedures of (a) through (e) of this subsection. Roads are exempt from maintenance under this section only after (e) of this subsection is completed.

(a) Roads are outsloped, water barred, or otherwise left in a condition suitable to control erosion and maintain water movement within wetlands and natural drainages;

(b) Ditches are left in a suitable condition to reduce erosion;

(c) The road is blocked so that four wheel highway vehicles cannot pass the point of closure at the time of abandonment;

(d) Water crossing structures and fills on all typed waters are removed, except where the department determines other measures would provide adequate protection to public resources; and

(e) The department shall determine whether the road has been abandoned according to procedures of this subsection. If the department determines the road is properly abandoned, it must notify the landowner in writing within thirty days that the road is officially abandoned.

*(4) **Orphaned roads.** An orphaned road is a road or railroad grade that the forest landowner has not used for forest practices activities since 1974. Many of these roads are overgrown or closed off, but have not satisfied the abandonment process.

(a) An inventory and assessment, of the risk to public resources, or public safety must be completed by the landowner in conjunction with the road maintenance and abandonment plan.

(b) Five years after the effective date of this rule, when the extent of any problems associated with the orphaned roads is known, the hazard-reduction statute will be evaluated to determine if it is still needed and if funds for cost-sharing are needed to effect repair or abandonment of orphan roads. See RCW 76.09.300.

(c) Landowners are not obligated under this rule to repair or abandon such roads before the end of the five year period, but they can voluntarily take this action.

*(5) **Brush control.** Chemical control of roadside brush will be done in accordance with WAC 222-38-020.

*(6) **Road surface treatment.**

(a) Apply oil to the road surface only when the temperature is above 55 degrees F and during the season when there is a minimal chance of rain for the next 48 hours. Use of waste oil is subject to RCW 70.95I.060(5).

(b) Water the road surface prior to application of oil to assist in penetration.

(c) Construct a temporary berm along the road shoulder wherever needed to control runoff of the applied chemical.

(d) Take extreme care to avoid excess application of road chemicals. Shut off the flow at all bridges.

(e) Dispose of the rinse water fluids on the road surface or in a place safe from potential contamination of water when cleaning out chemical storage and application equipment

tanks used for storage and application of road treatment materials.

(f) Comply with WAC 222-38-020 when using dry road chemicals.

AMENDATORY SECTION (Amending WSR 92-15-011, filed 7/2/92, effective 8/2/92)

WAC 222-24-060 Rock quarries, gravel pits, borrow pits, and spoil disposal areas. Not covered by the Surface Mine Reclamation Act of 1971 (chapter 78.44 RCW).

***(1) Location of pits.** Except as approved by the department, rock quarries and gravel pits opened after January 1, 1975 shall be located above the ~~((50-year))~~ 100-year flood level.

***(2) Location of spoil disposal areas.** Except as approved by the department, spoil disposal areas shall be located:

(a) Above the ~~((50-year))~~ 100-year flood level.

(b) Where the final slope after disposal will be no steeper than 1 1/2:1.

(c) Where practical, on areas having low potential timber productivity.

(d) Where the risk of sediment delivery from soil erosion and/or mass soil movement is minimal.

(e) All spoils shall be placed to allow drainage without additional water ponding.

(f) All spoils shall be located outside of Type A and Type B Wetlands and their wetland management zones. Spoils shall not be located within the boundaries of forested wetlands without written approval of the department and unless a less environmentally damaging location is unavailable. No spoil area greater than 0.5 acre in size shall be allowed within wetlands. (See WAC 222-24-015.)

***(3) Pit drainage.** During construction and use of rock quarries, gravel pits, or borrow pits, runoff water shall be either diverted onto ~~((the))~~ a stable portion of the forest floor or be passed through one or more settling basins as approved by the department.

***(4) Rehabilitation required.** All rock quarries, gravel pits, spoil disposal areas and borrow pits used after January 1, 1975 shall be reclaimed within 2 years from the time the rock or gravel source is either exhausted or abandoned.

***(5) Rehabilitation standards.** Where rehabilitation is required:

(a) Remove all deleterious material that has potential for damaging the public resource, the soil productivity, or that would prevent reforestation of an otherwise plantable area.

(b) Grade slopes to less than the angle of repose unless otherwise approved.

(c) Reforest in accordance with chapter 222-34 WAC to the extent practical.

(d) Seed ~~((unreforested))~~ nonforested exposed erodible soils with grass, clover or other ground cover.

***(6) Major spoil disposal operations.** Where a spoil disposal operation involves more than 1,000 cubic yards of spoils:

(a) The spoils shall be placed to provide drainage onto a stable portion of the forest floor without water ponding within the disposal area;

(b) The site shall be reforested in accordance with chapter 222-34 WAC to the extent practical; and

(c) If significant erosion of the spoils develops, the eroding areas shall be water barred and any unreforested areas shall be matted, mulched, or seeded with grass or ground cover.

REPEALER

The following section of the Washington Administrative Code is repealed:

WAC 222-24-025 Road design.

AMENDATORY SECTION (Amending Order 535, filed 11/16/87, effective 1/1/88)

WAC 222-30-030 Stream bank integrity. *In the ~~((riparian management zone along all Type 1, 2 and 3))~~ RMZ core zone for Type S and F Waters and RMZs for Type Np Waters, the operator shall:

(1) **Avoid disturbing brush** and similar understory vegetation;

(2) **Avoid disturbing stumps** and root systems and any logs embedded in the bank;

(3) **Leave high stumps** where necessary to prevent felled and bucked timber from entering the water;

(4) Leave trees which display large root systems embedded in the bank.

AMENDATORY SECTION (Amending WSR 92-15-011, filed 7/2/92, effective 8/2/92)

WAC 222-30-010 Policy—Timber harvesting. ***(1)** This ~~((section))~~ chapter covers all removal of timber from forest lands in commercial operations, commercial thinning, salvage of timber, relogging merchantable material left after prior harvests, postharvest cleanup, and clearing of merchantable timber from lands being converted to other uses. It does not cover removal of incidental vegetation or removal of firewood for personal use. To the extent ~~((practical))~~ practicable, the department shall coordinate ~~((the))~~ activities ~~((on))~~ using a multiple disciplinary planning approach. ~~((The riparian management zone requirements specified in this section are designed to provide protection for water quality and fisheries and wildlife habitat through ensuring present and future supplies of large organic debris for streams, snags, canopy cover, and a multistoried diverse forest adjacent to Type 1, 2 and 3 Waters.))~~

***(2)** The goal of riparian rules is to protect aquatic resources and related habitat to achieve restoration of riparian function; and the maintenance of these resources once they are restored.

***(3)** The rules provide for the conversion and/or treatment of riparian forests which may be understocked, overstocked or uncharacteristically hardwood dominated while maintaining minimum acceptable levels of function on a

landscape scale. The diversity of riparian forests across the landscapes is addressed by tailoring riparian prescriptions to the site productivity and tree community at any site.

*(4) Wetland areas serve several significant functions in addition to timber production: Providing fish and wildlife habitat, protecting water quality, moderating and preserving water quantity. Wetlands may also contain unique or rare ecological systems. The wetland management zone and wetland requirements specified in this ~~((section))~~ chapter are designed to protect these wetland functions when measured over the length of a harvest rotation, although some of the functions may be reduced until the midpoint of the timber rotation cycle. Landowners are encouraged to voluntarily increase wetland acreage and functions over the long-term. Other laws or rules and/or permit requirements may apply. See chapter 222-50 WAC.

~~((Note: Other laws or regulations and/or permit requirements may apply. See chapter 222-50 WAC.))~~

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC *222-30-020 Harvest unit planning and design.

(1) **Logging system.** The logging system should be appropriate for the terrain, soils, and timber type so that yarding or skidding can be economically accomplished and achieve the ecological goals of WAC 222-30-010 (2), (3) and (4) in compliance with these ~~((regulations))~~ rules.

*(2) **Landing locations.** Locate landings to prevent damage to public resources. Avoid excessive excavation and filling.

*(3) **Western Washington riparian management zones.** ~~((These zones shall be measured horizontally from~~

~~the ordinary high water mark of Type 1, 2 or 3 Water and extend to the line where vegetation changes from wetland to upland plant community, or the line required to leave sufficient shade as required by WAC 222-30-040, whichever is greater, but shall not be less than 25 feet in width nor more than the maximum widths described in (c) of this subsection, provided that the riparian management zone width shall be expanded as necessary to include wetlands or ponds adjacent to the stream. When the riparian management zone overlaps a Type A or B Wetland or a wetland management zone, the requirement which best protects public resources shall apply.~~

~~(a) Harvest units shall be designed so that felling, bucking, yarding or skidding, and reforestation can be accomplished in accordance with these regulations, including those regulations relating to stream bank integrity and shade requirements to maintain stream temperature. Where the need for additional actions or restrictions adjacent to waters not covered by the following become evident, WAC 222-12-050 and 222-12-060 may apply.~~

~~(b) When requested in writing by the applicant, the department shall assist in preparation of an alternate plan for the riparian management zone.~~

~~(c) Within the riparian management zone, there shall be trees left for wildlife and fisheries habitat as provided for in the chart below. Fifty percent or more of the trees shall be live and undamaged on completion of the harvest. The leave trees shall be randomly distributed where feasible; some clumping is allowed to accommodate operational considerations. The number, size, species and ratio of leave trees, deciduous to conifer, is specified by the bed material and average width of the water type within the harvest unit. Trees left according to (d) of this subsection may be included in the number of required leave trees in this subsection.~~

PERMANENT

Western Washington Riparian Leave Tree Requirements

Water Type/ Average Width	RMZ Maximum Width	Ratio of Conifer to Deciduous/Minimum Size Leave Trees	# Trees/1000 ft. each side	
			Gravel/Cobble < 10" Diameter	Boulder/Bedrock
1 & 2 Water 75' & over	100'	representative of stand	50 trees	25 trees
1 & 2 Water under 75'	75'	representative of stand	100 trees	50 trees
3 Water 5' & over	50'	2 to 1/ 12" or next largest available	75 trees	25 trees
3 Water less than 5'	25'	1 to 1/ 6" or next largest available	25 trees	25 trees

"Or next largest available" requires that the next largest trees to those specified in the rule be left standing when those available are smaller than the sizes specified. Ponds or lakes which are Type 1, 2 or 3 Waters shall have the same leave tree requirements as boulder/bedrock streams.

~~(d) For wildlife habitat within the riparian management zone, leave an average of 5 undisturbed and uncut wildlife~~

~~trees per acre at the ratio of 1 deciduous tree to 1 conifer tree equal in size to the largest existing trees of those species within the zone. Where the 1 to 1 ratio is not possible, then substitute either species present. Forty percent or more of the leave trees shall be live and undamaged on completion of harvest. Wildlife trees shall be left in clumps whenever possible.~~

(e) When 10 percent or more of the harvest unit lies within any combination of a riparian management zone of Type 1, 2 or 3 Waters or a wetland management zone and the harvest unit is a clearcutting of 30 acres or less, leave not less than 50 percent of the trees required in (e) of this subsection.) (See WAC 222-30-021 and 222-30-023.)

*** (4) Eastern Washington riparian management zones.** ((These zones shall be measured horizontally from the ordinary high water mark of Type 1, 2 or 3 Waters and extend to the line where vegetation changes from wetland to upland plant community, or to the line required to leave sufficient shade as required by WAC 222-30-040, whichever is greater, but shall not be less than the minimum width nor more than the maximum widths described in (e) of this subsection, provided that the riparian management zone width shall be expanded as necessary to include wetlands or ponds adjacent to the stream. When the riparian management zone overlaps a Type A or B Wetland or a wetland management zone, the requirement which best protects public resources shall apply.

(a) Harvest units shall be designed so that felling, bucking, yarding or skidding, and reforestation can be accomplished in accordance with these regulations, including those regulations relating to stream bank integrity and shade requirements to maintain stream temperature. Where the need for additional actions or restrictions adjacent to waters not covered by the following become evident, WAC 222-12-050 and 222-12-060 may apply.

(b) When requested in writing by the applicant, the department shall assist in preparation of an alternate plan for the riparian management zone.

(c) Within the riparian management zone, there shall be trees left for wildlife and fisheries habitat as provided for below. Fifty percent or more of the trees shall be live and undamaged on completion of the harvest. The leave trees shall be randomly distributed where feasible; some clumping is allowed to accommodate operational considerations:

(i) The width of the riparian management zone shall be based on the adjacent harvest type as defined in WAC 222-16-010 "Partial cutting." When the adjacent unit harvest type is:

Partial cutting—The riparian management zone width shall be a minimum of 30 feet to a maximum of 50 feet on each side of the stream:

Other harvest types—The riparian management zone shall average 50 feet in width on each side of the stream with a minimum width of 30 feet and a maximum of 300 feet on each side of the stream:

(ii) Leave tree requirements within the riparian management zones of Type 1, 2 or 3 Waters:

(A) Leave all trees 12 inches or less in diameter breast height (dbh); and

(B) Leave all wildlife reserve trees within the riparian management zone where operations in the vicinity do not violate the state safety regulations (chapter 296-54 WAC and chapter 49-17 RCW administered by department of labor and industries, safety division); and

(C) Leave 16 live conifer trees/acre between 12 inches dbh and 20 inches dbh distributed by size, as representative of the stand; and

(D) Leave 3 live conifer trees/acre 20 inches dbh or larger and the 2 largest live deciduous trees/acre 16 inches dbh or larger. Where these deciduous trees do not exist, and where 2 wildlife reserve trees/acre 20 inches or larger do not exist, substitute 2 live conifer trees/acre 20 inches dbh or larger. If live conifer trees of 20 inches dbh or larger do not exist within the riparian management zone, then substitute the 5 largest live conifer trees/acre; and

(E) Leave 3 live deciduous trees/acre between 12 inches and 16 inches dbh where they exist.

(iii) Minimum leave tree requirements per acre for Type 1, 2 and 3 Waters. Trees left for (e)(ii) of this subsection shall be included in the minimum counts.

(A) On streams with a boulder/bedrock bed, the minimum leave tree requirements shall be 75 trees/acre 4 inches dbh or larger.

(B) On streams with a gravel/cobble (less than 10 inches diameter) bed, the minimum leave tree requirement shall be 135 trees/acre 4 inches dbh or larger.

(C) On lakes or ponds the minimum leave tree requirement shall be 75 trees/acre 4 inches dbh or larger.

Note: (See the Forest Practices Board Manual for assistance in calculating trees/acre and average RMZ widths.)

(d) When 10 percent or more of the harvest unit lies within any combination of a riparian management zone of Type 1, 2 or 3 Waters or a wetland management zone and either the harvest unit is a clearcutting of 30 acres or less or the harvest unit is a partial cutting of 80 acres or less, leave not less than 50 percent of the trees required in (e) of this subsection. (See WAC 222-16-010 "Partial cutting.") (See WAC 222-30-022 and 222-30-023.)

*** (5) Riparian leave tree areas.** ((The department will require trees to be left along Type 4 Water where such practices are necessary to protect public resources. Where such practices are necessary leave at least 25 conifer or deciduous trees, 6 inches in diameter or larger, on each side of every 1000 feet of stream length within 25 feet of the stream. The leave trees may be arranged to accommodate the operation.)) (See WAC 222-30-021, 222-30-022, and 222-30-023.)

*** (6) Forested wetlands.** Within the wetland, unless otherwise approved in writing by the department, harvest methods shall be limited to low impact harvest or cable systems. Where feasible, at least one end of the log shall be suspended during yarding.

(a) When forested wetlands are included within the harvest area, landowners are encouraged to leave a portion (30 to 70%) of the wildlife reserve tree requirement for the harvest area within a wetland. In order to retain undisturbed habitat within forested wetlands, these trees should be left in clumps. Leave tree areas should be clumped adjacent to streams, riparian management zones, or wetland management zones where possible and they exist within forested wetlands. Green recruitment trees should be representative of the size and species found within the wetland. Leave nonmerchantable trees standing where feasible.

(b) If a RMZ or WMZ lies within a forested wetland, the leave tree requirement associated with those areas may be counted toward the percentages in (a) of this subsection.

(c) Where riparian associated wetlands are present in the outer zone of a RMZ, trees may be left in the zone to maximize wetland function. See WAC 222-30-021 *(1)(c)(ii).

(d) If the conditions described in (a) and (b) of this subsection are met, the distribution requirements for wildlife reserve trees and green recruitment trees (subsection (11)(e) of this section) are modified as follows: For purposes of distribution, no point within the harvest unit shall be more than 1000 feet from a wildlife reserve tree and green recruitment tree retention area.

~~((d))~~ (e) Approximate determination of the boundaries of forested wetlands greater than ~~((5))~~ 3 acres shall be required. Approximate boundaries and areas shall be deemed to be sufficient for harvest operations.

~~((e))~~ (f) The department shall consult with the department of fish and wildlife and affected Indian tribes about site specific impacts of forest practices on wetland-sensitive species in forested wetlands.

* (7) **Wetland management zones (WMZ).** These zones shall apply to Type A and B Wetlands, as indicated in (a) of this subsection, and shall be measured horizontally from the wetland edge or the point where the nonforested wetland becomes a forested wetland, as determined by the method described in the board manual section 8, and shall be of an average width as described in (a) of this subsection. These zones shall not be less than the minimum nor more than the maximum widths described in (a) of this subsection. When these zones overlap a riparian management zone the requirement which best protects public resources shall apply.

* (a) Wetland management zones (WMZ) shall have variable widths based on the size of the wetland and the wetland type, described as follows:

Wetland Management Zones

Wetland Type	Acres of Nonforested Wetland	Maximum WMZ Width	Average WMZ Width	Minimum WMZ Width
A (including bogs)	Greater than 5	200 feet	100 feet	50 feet
A (including bogs)	0.5 to 5	100 feet	50 feet	25 feet
A (bogs only)	0.25 to 0.5	100 feet	50 feet	25 feet
B	Greater than 5	100 feet	50 feet	25 feet
B	0.5 to 5			25 feet
B	0.25 to 0.5	No WMZ required	No WMZ required	

*For bogs, both forested and non-forested acres are included.

PERMANENT

Wetland Management Zones

<u>Wetland Type</u>	<u>Acres of Nonforested Wetland*</u>	<u>Maximum WMZ Width</u>	<u>Average WMZ Width</u>	<u>Minimum WMZ Width</u>
<u>A (including bogs)</u>	<u>Greater than 5</u>	<u>200 feet</u>	<u>100 feet</u>	<u>50 feet</u>
<u>A (including bogs)</u>	<u>0.5 to 5</u>	<u>100 feet</u>	<u>50 feet</u>	<u>25 feet</u>
<u>A (bogs only)</u>	<u>0.25 to 0.5</u>	<u>100 feet</u>	<u>50 feet</u>	<u>25 feet</u>
<u>B</u>	<u>Greater than 5</u>	<u>100 feet</u>	<u>50 feet</u>	<u>25 feet</u>
<u>B</u>	<u>0.5 to 5</u>			<u>25 feet</u>
<u>B</u>	<u>0.25 to 0.5</u>	<u>No WMZ required</u>	<u>No WMZ required</u>	

*For bogs, both forested and nonforested acres are included.

(b) Within the WMZ, leave a total of 75 trees per acre of WMZ greater than 6 inches dbh in Western Washington and greater than 4 inches dbh in Eastern Washington, 25 of which shall be greater than 12 inches dbh including 5 trees greater than 20 inches dbh, where they exist. Leave trees shall be representative of the species found within the WMZ.

(c) Retain wildlife reserve trees where feasible. Type 1 and 3 wildlife reserve trees may be counted among, and need not exceed, the trees required in (b) of this subsection. Leave all cull logs on site.

(d) Partial-cutting or removal of groups of trees is acceptable within the WMZ. The maximum width of openings created by harvesting within the WMZ shall not exceed 100 feet as measured parallel to the wetland edge. Openings within WMZs shall be no closer than 200 feet. Landowners are encouraged to concentrate leave trees within the WMZ to the wetland edge.

* (e) Tractors, wheeled skidders, or other ground based harvesting systems shall not be used within the minimum WMZ width without written approval of the department.

* (f) When 10% or more of a harvest unit lies within ~~((any combination of))~~ a wetland management zone ~~((or a riparian management zone of Type 1, 2, or 3 Waters))~~ and

either the harvest unit is a clearcut of 30 acres or less or the harvest unit is a partial cut of 80 acres or less, leave not less than 50% of the trees required in (b) of this subsection.

***(8) Type A or B Wetlands.** Within the boundaries of Type A or B Wetlands the following shall apply:

(a) Individual trees or forested wetland areas less than 0.5 acre in size may occur. These trees have a high habitat value to the nonforested wetland. Leave individual trees or forested wetlands less than 0.5 acre. These trees may be counted toward the WMZ requirements.

(b) Harvest of upland areas or forested wetlands which are surrounded by Type A or B Wetlands must be conducted in accordance with a plan, approved in writing by the department.

(c) No timber shall be felled into or cable yarded across Type A or B Wetlands without written approval of the department.

(d) Harvest shall not be allowed within a Type A Wetland which meets the definition of a bog.

(9) Future productivity. Harvesting shall leave the land in a condition conducive to future timber production except:

(a) To the degree required for riparian management zones; or

(b) Where the lands are being converted to another use or classified urban lands as specified in WAC 222-34-050.

(10) Wildlife habitat. This subsection is designed to encourage timber harvest practices that would protect wildlife habitats, provided, that such action shall not unreasonably restrict landowners action without compensation.

(a) The applicant should make every reasonable effort to cooperate with the department of fish and wildlife to identify critical ((wildlife)) habitats (state) as defined by the board. Where these habitats are known to the applicant, they shall be identified in the application or notification.

(b) Harvesting methods and patterns in established big game winter ranges should be designed to insure adequate access routes and escape cover where practical.

(i) Where practical, cutting units should be designed to conform with topographical features.

(ii) Where practical on established big game winter ranges, cutting units should be dispersed over the area to provide cover, access for wildlife, and to increase edge effect.

(11) Wildlife reserve tree management. In areas where leaving wildlife reserve trees under this section will not create a significant fire hazard, or significant hazard to overhead power lines and operations that are proposed in the vicinity of wildlife reserve trees will not create a significant safety or residential hazard nor conflict with achieving conformance with the limitation of or performance with the provisions of chapter 76.04 RCW (snag falling law) and chapter 49.17 RCW (safety), wildlife reserve trees will be left to protect habitat for cavity nesting wildlife in accordance with the following:

(a) For the purposes of this subsection the following defines eastern and western Washington boundaries for wildlife reserve tree management. Beginning at the International Border and Okanogan National Forest boundary at the N1/4 corner Section 6, T. 40N, R. 24E., W.M., south and west

along the Pasayten Wilderness boundary to the west line of Section 30, T. 37N, R. 19E.,

Thence south on range line between R. 18E. and R. 19E., to the Lake Chelan-Sawtooth Wilderness at Section 31, T. 35N, R. 19E.,

Thence south and east along the eastern wilderness boundary of Lake Chelan-Sawtooth Wilderness to the west line of Section 18, T. 31N, R. 19E. on the north shore of Lake Chelan,

Thence south on the range line between R. 18E. and R. 19E. to the SE corner of T. 28N, R. 18E.,

Thence west on the township line between T. 27N, and T. 28N to the NW corner of T. 27N, R. 17E.,

Thence south on range line between R. 16E. and R. 17E. to the Alpine Lakes Wilderness at Section 31, T. 26N, R. 17E.,

Thence south along the eastern wilderness boundary to the west line of Section 6, T. 22N, R. 17E.,

Thence south on range line between R. 16E. and R. 17E. to the SE corner of T. 22N, R. 16E.,

Thence west along township line between T. 21N, and T. 22N to the NW corner of T. 21N, R. 15E.,

Thence south along range line between R. 14E. and R. 15E. to the SW corner of T. 20N, R. 15E.,

Thence east along township line between T. 19N, and T. 20N to the SW corner of T. 20N, R. 16E.,

Thence south along range line between R. 15E. and R. 16E. to the SW corner of T. 18N, R. 16E.,

Thence west along township line between T. 17N, and T. 18N to the SE corner of T. 18N, R. 14E.,

Thence south along range line between T. 14E. and R. 15E. to the SW corner of T. 14N, R. 15E.,

Thence south and west along Wenatchee National Forest boundary to the NW corner of T. 12N, R. 14E.,

Thence south along range line between R. 13E. and R. 14E. to the SE corner of T. 10N, R. 13E.,

Thence west along township line between T. 9N, and T. 10N to the NW corner of T. 9N, R. 12E.,

Thence south along range line between R. 11E. and R. 12E. to the SE corner of T. 8N, R. 11E.,

Thence west along township line between T. 7N, and T. 8N to the Gifford Pinchot National Forest boundary,

Thence south along forest boundary to the SE corner of Section 33, T. 7N, R. 11E.,

Thence west along township line between T. 6N, and T. 7N to the SE corner of T. 7N, R. 9E.,

Thence south along Skamania-Klickitat County line to Oregon-Washington,

(b) In Western Washington, for each acre harvested 3 wildlife reserve trees, 2 green recruitment trees, and 2 down logs shall be left. In Eastern Washington for each acre harvested 2 wildlife reserve trees, 2 green recruitment trees, and 2 down logs shall be left. Type 1 wildlife reserve trees may be counted, at the landowner's option, either as a wildlife reserve tree or as a green recruitment tree. If adequate wildlife reserve trees are not available, no additional green recruitment trees will be required as substitutes. Landowners shall not under any circumstances be required to leave more than 2 green recruitment trees per acre for the purpose of

wildlife reserve tree recruitment, or be required to leave Type 3 or 4 wildlife reserve trees.

~~((b))~~ (c) In Western Washington, only those wildlife reserve trees 10 or more feet in height and 12 or more inches dbh shall be counted toward wildlife reserve tree retention requirements. In Eastern Washington, only those wildlife reserve trees 10 or more feet in height and 10 or more inches dbh shall be counted toward wildlife reserve tree retention requirements. Green recruitment trees, 10 or more inches dbh and 30 or more feet in height and with at least 1/3 of their height in live crown, left standing after harvest may be counted toward green recruitment tree requirements. Green recruitment trees and/or wildlife reserve trees left to meet other requirements of the rules or those left voluntarily by the landowner shall be counted toward satisfying the requirements of this section. Large, live defective trees with broken tops, cavities, and other severe defects are preferred as green recruitment trees. Only down logs with a small end diameter greater than or equal to 12 inches and a length greater than or equal to 20 feet or equivalent volume shall be counted under (a) of this subsection. Large cull logs are preferred as down logs.

~~((e))~~ (d) In the areas where wildlife reserve trees are left, the largest diameter wildlife reserve trees shall be retained to meet the specific needs of cavity nesters. Where the opportunity exists, larger trees with numerous cavities should be retained and count as recruitment trees.

~~((d))~~ (e) In order to facilitate safe and efficient harvesting operations, wildlife reserve trees and recruitment trees may be left in clumps. For purposes of distribution, no point within the harvest unit shall be more than 800 feet from a wildlife reserve tree or green recruitment tree retention area. Subject to this distribution requirement, the location of these retention areas and the selection of recruitment trees shall be at the landowner's discretion. Closer spacing of retention areas through voluntary action of the landowner is encouraged. Wildlife reserve tree and green recruitment tree retention areas may include, but are not limited to, riparian management zones, riparian leave tree areas, other regulatory leave areas, or voluntary leave areas that contain wildlife reserve trees and/or green recruitment trees.

~~((e))~~ (f) In order to provide for safety, landowners may remove any Type 3 or 4 wildlife reserve tree, which poses a threat to humans working, recreating, or residing within the hazard area of that tree. In order to provide for fire safety, the distribution of wildlife reserve tree retention areas, described in ~~((d))~~ (e) of this subsection, may be modified as necessary based on a wildlife reserve tree management plan proposed by the landowner and approved by the department.

*(12) Channel migration zones. No harvest, construction or salvage will be permitted within the boundaries of a channel migration zone except for the construction and maintenance of road crossings in accordance with applicable rules and the creation and use of yarding corridors consistent with WAC 222-24-020(6), 222-30-060(1), 222-30-045(2), and chapter 220-110 WAC (Hydraulic code rules).

(13) Bankfull width. No harvest or construction will be permitted within the bankfull width of any Type S or F Water or any buffered length of Type Np Water, except for the con-

struction and maintenance of road crossings in accordance with applicable rules and creation and use of yarding corridors consistent with WAC 222-30-020 *(5)(a), 222-24-060(1), and chapter 220-110 WAC (Hydraulic code rules). No salvage may take place within the bankfull width of any typed water (see WAC 222-30-045).

NEW SECTION

WAC *222-30-021 Western Washington riparian management zones. These rules apply to all typed waters on forest land in Western Washington, except as provided in WAC 222-30-023. RMZs are measured horizontally from the outer edge of the bankfull width or channel migration zone, whichever is greater, and extend to the limits as described in this section. See the board manual section 7 for riparian design and layout guidelines.

***(1) Western Washington RMZs for Type S and F Waters** have three zones: The core zone is nearest to the water, the inner zone is the middle zone, and the outer zone is furthest from the water. (See definitions in WAC 222-16-010.) RMZ dimensions vary depending on the site class of the land, the management harvest option, and the bankfull width of the stream. See tables for management options 1 and 2 below.

None of the limitations on harvest in each of the three zones listed below will preclude or limit the construction and maintenance of roads for the purpose of crossing streams in WAC 222-24-030 and 222-24-050, or the creation and use of yarding corridors in WAC 222-30-060(1).

The shade requirements in WAC 222-30-040 must be met regardless of harvest opportunities provided in the inner zone RMZ rules. See the board manual section 1.

(a) **Core zones.** No timber harvest or construction is allowed in the core zone except operations related to forest roads as detailed in subsection (1) of this section. Any trees cut for or damaged by yarding corridors in the core zone must be left on the site. Any trees cut as a result of road construction to cross a stream may be removed from the site, unless used as part of a large woody debris placement strategy or as needed to reach stand requirements.

(b) **Inner zones.** Forest practices in the inner zone must be conducted in such a way as to meet or exceed stand requirements to achieve the goal in WAC 222-30-010(2). The width of the inner zone is determined by site class, bankfull width, and management option. Timber harvest in this zone must be consistent with the stand requirements in order to reach the desired future condition targets.

"Stand requirement" means a number of trees per acre, the basal area and the proportion of conifer in the combined inner zone and adjacent core zone so that the growth of the trees would meet desired future conditions. The following table defines basal area targets when the stand is 140 years old.

Site Class	Desired future condition target basal area per acre (at 140 years)
I	285 sq. ft.
II	275 sq. ft.

PERMANENT

Site Class	Desired future condition target basal area per acre (at 140 years)
III	258 sq. ft.
IV	224 sq. ft.
V	190 sq. ft.

Growth modeling is necessary to calculate whether a particular stand meets stand requirement and is on a trajectory towards these desired future condition basal area target. The appropriate growth model will be based on stand characteristics and will include at a minimum, the following components: The number of trees by diameter class, the percent of conifer and hardwood, and the age of the stand. See the board manual section 7.

(i) **Hardwood conversion in the inner zone.** When the existing stands in the combined core and inner zone do not meet stand requirements, no harvest is permitted in the inner zone, except in connection with hardwood conversion.

(A) The landowner may elect to convert hardwood-dominated stands in the **inner zone** to conifer-dominated stands. Harvesting and replanting shall be in accordance with the following limits:

(I) Conversion activities in the **inner zone** of any harvest unit are only allowed where all of the following are present:

- Existing stands in the combined core and inner zone do not meet stand requirements (WAC 222-30-021 (1)(b));
- There are fewer than 57 conifer trees per acre 8 inches or larger dbh in the conversion area;
- There are fewer than 100 conifer trees per acre larger than 4 inches dbh in the conversion area;
- There is evidence (such as conifer stumps, historical photos, or a conifer understory) that the conversion area can be successfully reforested with conifer and support the development of conifer stands;
- The landowner owns 500 feet above and below the harvest unit;
- The core and inner zones contain no stream adjacent parallel roads;
- Riparian areas contiguous to the proposed harvest unit are owned by the landowner proposing to conduct the conversion activities, and meet shade requirements of WAC 222-30-040 or have a 75-foot buffer with trees at least 40 feet tall on both sides of the stream for 500 feet above and below the proposed harvest unit (or the length of the stream, if less);
- The landowner has performed post-harvest treatment to the satisfaction of the department on previously converted hardwood-dominated stands.

(II) In addition to the conditions set forth above, permitted conversion activities in the **inner zone** of any harvest unit are limited by the following:

- Each continuous conversion area is not more than 500 feet in length; two conversion areas will be considered "continuous" unless the no-harvest area separating the two conversion areas is at least half the length of the larger of the two conversion areas.
- Type S and F (Type 1, 2, or 3) Water: Up to 50% of the inner zone area of the harvest unit on one side of the stream may be converted provided that:

- ◆ The landowner owns the opposite side of the stream and the landowner's riparian area on the opposite bank meets the shade requirements of WAC 222-30-040 or has a 75-foot buffer of trees at least 40 feet tall or:

- ◆ The landowner does not own land on the opposite side of the stream but the riparian area on the opposite bank meets the shade requirements of WAC 222-30-040 or has a 75-foot buffer of trees at least 40 feet tall.

- Not more than 25% of the inner zone of the harvest unit on both sides of a Type S or F Water may be converted if the landowner owns both sides.

(III) Where conversion is allowed in the **inner zone**, trees within the conversion area may be harvested except that:

- Conifer trees larger than 20 inches dbh shall not be harvested;
- Not more than 10% of the conifer stems greater than 8 inches dbh, exclusive of the conifer noted above, within the conversion area may be harvested; and

- The landowner must exercise reasonable care in the conduct of harvest activities to minimize damage to all residual conifer trees within the conversion area including conifer trees less than 8 inches dbh.

(IV) Following harvest in conversion areas, the landowner must:

- Reforest the conversion area with **conifer** tree species suitable to the site in accordance with the requirements of WAC 222-34-010; and
- Conduct post-harvest treatment of the site until the conifer trees necessary to meet acceptable stocking levels in WAC 222-34-010(2) have crowns above the brush or until the conversion area contains a minimum of 150 conifer trees greater than 8 inches dbh per acre.

- Notify the department in writing within three years of the approval of the forest practices application for hardwood conversion, if the hardwood conversion has been completed.

(V) **Tracking hardwood conversion.** The purpose of tracking hardwood conversion is to determine if hardwood conversion is resulting in adequate enhancement of riparian functions toward the desired future condition while minimizing the short term impacts on functions. The department will use existing or updated data bases developed in cooperation with the Washington Hardwoods Commission to identify watershed administrative units (WAUs) with a high percentage of hardwood-dominated riparian areas and, thus have the potential for excessive hardwood conversion under these rules. The department will track the rate of conversion of hardwoods in the riparian zone: (1) Through the application process on an annual basis; and (2) at a WAU scale on a biennial basis as per WAC 222-30-120 through the adaptive management process which will develop thresholds of impact for hardwood conversion at the watershed scale.

(ii) **Harvest options.**

(A) No inner zone management. When the existing stands in the combined core and inner zone do not meet stand requirements, no harvest is permitted in the inner zone. When no harvest is permitted in the inner zone or the landowner chooses not to enter the inner zone, the width of core, inner and outer zones are as provided in the following table:

PERMANENT

No inner zone management RMZ widths for Western Washington

Site Class	RMZ width	Core zone width (measured from outer edge of bankfull width or outer edge of CMZ of water)	Inner zone width (measured from outer edge of core zone)		Outer zone width (measured from outer edge of inner zone)	
			stream width ≤10'	stream width >10'	stream width ≤10'	stream width >10'
			I	200'	50'	83'
II	170'	50'	63'	78'	57'	42'
III	140'	50'	43'	55'	47'	35'
IV	110'	50'	23'	33'	37'	27'
V	90'	50'	10'	18'	30'	22'

(B) Inner zone management. If trees can be harvested and removed from the inner zone because of surplus basal area consistent with the stand requirement, the harvest and removal of the trees must be undertaken consistent with one of two options:

(I) **Option 1. Thinning from below.** The objective of thinning is to distribute stand requirement trees in such a way as to shorten the time required to meet large wood, fish habitat and water quality needs. This is achieved by increasing the potential for leave trees to grow larger than they otherwise would without thinning. Thinning harvest under option 1 must comply with the following:

- Residual trees left in the combined core and inner zones must meet stand requirements necessary to be on a trajectory

to desired future condition. See board manual section 7 for guidelines.

- Thinning must be from below, meaning the smallest dbh trees are selected for harvest first, then progressing to successively larger diameters.

- Thinning cannot decrease the proportion of conifer in the stand.

- Shade retention to meet the shade rule must be confirmed by the landowner for any harvest inside of 75 feet from the outer edge of bankfull width or outer edge of CMZ, whichever is greater.

- The number of residual conifer trees per acre in the inner zone will equal or exceed 57.

Option 1. Thinning from below.

Site class	RMZ width	Core zone width (measured from outer edge of bankfull width or outer edge of CMZ of water)	Inner zone width (measured from outer edge of core zone)		Outer zone width (measured from outer edge of inner zone)	
			stream width ≤10'	stream width >10'	stream width ≤10'	stream width >10'
			I	200'	50'	83'
II	170'	50'	63'	78'	57'	42'
III	140'	50'	43'	55'	47'	35'
IV	110'	50'	23'	33'	37'	27'
V	90'	50'	10'	18'	30'	22'

(II) **Option 2. Leaving trees closest to the water.** Management option 2 applies only to riparian management zones for site class I, II, and III on streams that are less than or equal to 10 feet wide and RMZs in site class I and II for streams greater than 10 feet wide. Harvest must comply with the following:

- Harvest is not permitted within 30 feet of the core zone for streams less than or equal to 10 feet wide and harvest is not permitted within 50 feet of the core zone for streams greater than 10 feet wide;

- Residual leave trees in the combined core and inner zone must meet stand requirements necessary to be on a trajectory to desired future condition. See board manual section 7 for calculating stand requirements;

- A minimum of 20 conifers per acre, with a minimum 12-inch dbh, will be retained in any portion of the inner zone where harvest occurs. These riparian leave trees will not be counted or considered towards meeting applicable stand requirements nor can the number be reduced below 20 for any reason.

- Trees are selected for harvest starting from the outer most portion of the inner zone first then progressively closer to the stream.

- If (II) of this subsection results in surplus basal area per the stand requirement, the landowner may take credit for the surplus by harvesting additional riparian leave trees required to be left in the adjacent outer zone on a basal area-for-basal area basis. The number of leave trees in the outer zone can be reduced only to a minimum of 10 trees per acre.

PERMANENT

Option 2. Leaving trees closest to water.

Site class	RMZ width	Core zone width (measured from outer edge of bankfull width or outer edge of CMZ of water)	Inner zone width				Outer zone width (measured from outer edge of inner zone)	
			stream width ≤10'	stream width ≤10'	stream width >10'	stream width >10'	stream width ≤10'	stream width >10'
				minimum floor distance		minimum floor distance		
			(measured from outer edge of core zone)					
I	200'	50'	84'	30'	84'	50'	66'	66'
II	170'	50'	64'	30'	70'	50'	56'	50'
III	140'	50'	44'	30'	**	**	46'	**

**Option 2 for site class III on streams >10' is not permitted because of the minimum floor (100') constraint.

(iii) **Where the basal area components of the stand requirement cannot be met** within the sum of the areas in the inner and core zone due to the presence of a stream-adjacent parallel road in the inner or core zone, a determination must be made of the approximate basal area that would have been present in the inner and core zones if the road was not occupying space in the core or inner zone and the shortfall in the basal area component of the stand requirement. See definition of "stream-adjacent parallel road" in WAC 222-16-010.

(A) Trees containing basal area equal to the amount determined in (iii) of this subsection will be left elsewhere in the inner or outer zone, or if the zones contain insufficient riparian leave trees, substitute riparian leave trees will be left within the RMZ width of other Type S or F Waters in the same unit or along Type Np or Ns Waters in the same unit in addition to all other RMZ requirements on those same Type S, F, Np or Ns Waters.

(B) When the stream-adjacent road basal area calculated in (iii) of this subsection results in an excess in basal area (above stand requirement) then the landowner may receive credit for such excess which can be applied on a basal area-by-basal area basis against the landowner's obligation to leave trees in the outer zone of the RMZ of such stream or other waters within the same unit, provided that the number of trees per acre in the outer zone is not reduced to less than 10 trees per acre.

(C) When the basal area requirement cannot be met, as explained in (iii) of this subsection, the shortfall may be reduced through the implementation of an acceptable large woody debris placement plan. See board manual section 26 for guidelines.

(iv) If a harvest operation includes both yarding and harvest activities within the RMZ, all calculations of basal area for stand requirements will be determined as if the yarding corridors were constructed prior to any other harvest activities. If trees cut or damaged by yarding are taken from excess basal area, these trees may be removed from the inner zone. Trees cut or damaged by yarding in a unit which does not meet the basal area target of the stand requirements cannot be

removed from the inner zone. Any trees cut or damaged by yarding in the core zone may not be removed.

(c) **Outer zones.** Timber harvest in the outer zone must leave 20 riparian leave trees per acre after harvest. "**Outer zone riparian leave trees**" are trees that must be left after harvest in the outer zone in Western Washington. Riparian leave trees must be left uncut throughout all future harvests:

Outer zone riparian leave tree requirements

Application	Leave tree spacing	Tree species	Minimum dbh required
Outer zone	Dispersed	Conifer	12" dbh or greater
Outer zone	Clumped	Conifer	12" dbh or greater
Protection of sensitive features	Clumped	Trees representative of the overstory including both hardwood and conifer	8" dbh or greater

The 20 riparian leave trees to be left can be reduced in number under the circumstances delineated in (c)(iv) of this subsection. The riparian leave trees must be left on the landscape according to one of the following two strategies. A third strategy is available to landowners who agree to a LWD placement plan.

(i) **Dispersal strategy.** Riparian leave trees, which means conifer species with a diameter measured at breast height (dbh) of 12 inches or greater, must be left dispersed approximately evenly throughout the outer zone. If riparian leave trees of 12" dbh or greater are not available, then the next largest conifers must be left. If conifers are not present, riparian leave trees must be left according to the clumping strategy in subsection (ii) below.

(ii) **Clumping strategy.** Riparian leave trees must be left clumped in the following way:

(A) Clump trees in or around one or more of the following **sensitive features** to the extent available within the outer zone. When clumping around sensitive features, riparian leave trees must be 8 inches dbh or greater and representative of the overstory canopy trees in or around the sensitive fea-

PERMANENT

ture and may include both hardwood and conifer species. Sensitive features are:

- (I) Seeps and springs;
- (II) Forested wetlands;
- (III) Topographic locations (and orientation) from which leave trees currently on the site will be delivered to the water;
- (IV) Areas where riparian leave trees may provide windthrow protection;
- (V) Small unstable, or potentially unstable, slopes not of sufficient area to be detected by other site evaluations. See WAC 222-16-050 (1)(d).

(VI) Archeological or historical sites registered with the Washington state office of archeology and historic preservation. See WAC 222-16-050 (1)(g); or

(VII) Sites containing evidence of Native American cairns, graves or glyptic records. See WAC 222-16-050 (1)(f).

(B) If sensitive features are not present, then clumps must be well distributed throughout the outer zone and the leave trees must be of conifer species with a dbh of 12 inches or greater. When placing clumps, the applicant will consider operational and biological concerns. Tree counts must be satisfied regardless of the presence of stream-adjacent parallel roads in the outer zone.

(iii) **Large woody debris in-channel placement strategy.** A landowner may design a LWD placement plan in cooperation with the department of fish and wildlife. The plan must be consistent with guidelines in the board manual section 26. The landowner may reduce the number of trees required to be left in the outer zone to the extent provided in the approved LWD placement plan. Reduction of trees in the outer zone must not go below a minimum of 10 trees per acre. If this strategy is chosen, a complete forest practices application must include a copy of the WDFW approved hydraulics project approval (HPA) permit.

(iv) **Twenty riparian leave trees must be left after harvest** with the exception of the following:

- (A) If a landowner agrees to implement a placement strategy, see (iii) of this subsection.
- (B) If trees are left in an associated channel migration zone, the landowner may reduce the number of trees required to be left according to the following:
 - (I) Offsets will be measured on a basal area-for-basal area basis.
 - (II) Conifer in a CMZ equal to or greater than 6" dbh will offset conifer in the outer zone at a one-to-one ratio.
 - (III) Hardwood in a CMZ equal to or greater than 10" dbh will offset hardwood in the outer zone at a one-to-one ratio.
 - (IV) Hardwood in a CMZ equal to or greater than 10" dbh will offset conifer in the outer zone at a three-to-one ratio.

***(2) Western Washington protection for Type Np and Ns Waters.**

(a) An **equipment limitation zone** is a 30-foot wide zone measured horizontally from the outer edge of the bankfull width of a Type Np or Ns Water where equipment use and other forest practices that are specifically limited by these rules. It applies to all perennial and seasonal streams.

(i) On-site mitigation is required if any of the following activities exposes the soil on more than 10% of the surface area of the zone:

- (A) Ground based equipment;
- (B) Skid trails;
- (C) Stream crossings (other than existing roads); or
- (D) Cabled logs that are partially suspended.

(ii) Mitigation must be designed to replace the equivalent of lost functions especially prevention of sediment delivery. Examples include water bars, grass seeding, mulching, etc.

(iii) Nothing in this subsection (2) reduces or eliminates the department's authority to prevent actual or potential material damage to public resources under WAC 222-46-030 or 222-46-040 or any related authority to condition forest practices notifications or applications.

(b) **Sensitive site and RMZs protection along Type Np Waters.** Forest practices must be conducted to protect Type Np RMZs and sensitive sites as detailed below:

(i) A 50-foot, no-harvest buffer, measured horizontally from the outer edge of bankfull width, will be established along each side of the Type Np Water as follows:

Required no-harvest, 50-foot buffers on Type Np Waters.

Length of Type Np Water from the confluence of Type S or F Water	Length of 50' buffer required on Type Np Water (starting at the confluence of the Type Np and connecting water)
Greater than 1000'	500'
Greater than 300' but less than 1000'	Distance of the greater of 300' or 50% of the entire length of the Type Np Water
Less than or equal to 300'	The entire length of Type Np Water

(ii) No timber harvest is permitted in an area within 50 feet of the outer perimeter of a soil zone perennially saturated from a headwall seep.

(iii) No timber harvest is permitted in an area within 50 feet of the outer perimeter of a soil zone perennially saturated from a side-slope seep.

(iv) No timber harvest is permitted within a 56-foot radius buffer patch centered on the point of intersection of two or more Type Np Waters.

(v) No timber harvest is permitted within a 56-foot radius buffer patch centered on a headwater spring or, in the absence of a headwater spring, on a point at the upper most extent of a Type Np Water as defined in WAC 222-16-030(3) and 222-16-031.

(vi) No timber harvest is permitted within an alluvial fan.

(vii) At least 50% of a Type Np Waters' length must be protected by buffers on both sides of the stream (2-sided buffers). Buffered segments must be a minimum of 100 feet in length. If an operating area is located more than 500 feet upstream from the confluence of a Type S or F Water and the Type Np Water is more than 1,000 feet in length, then buffer the Type Np Water according to the following table. If the percentage is not met by protecting sensitive sites listed in

PERMANENT

(b)(i) through (vii) of this subsection, then additional buffers are required on the Type Np Water to meet the requirements listed in the table.

Minimum percent of length of Type Np Waters to be buffered when more than 500 feet upstream from the confluence of a Type S or F Water

Total length of a Type Np Water upstream from the confluence of a Type S or F Water	Percent of length of Type Np Water that must be protected with a 50 foot no harvest buffer more than 500 feet upstream from the confluence of a Type S or F Water
1000 feet or less	refer to table in this subsection (i) above
1001 - 1300 feet	19%
1301 - 1600 feet	27%
1601 - 2000 feet	33%
2001 - 2500 feet	38%
2501 - 3500 feet	42%
3501 - 5000 feet	44%
Greater than 5000 feet	45%

The landowner must select the necessary priority areas for additional 2-sided buffers according to the following priorities:

- (A) Low gradient areas;
- (B) Perennial water reaches of nonsedimentary rock with gradients greater than 20% in the tailed frog habitat range;
- (C) Hyporheic and ground water influence zones; and
- (D) Areas downstream from other buffered areas.

Except for the construction and maintenance of road crossings and the creation and use of yarding corridors, no timber harvest will be allowed in the designated priority areas. Landowners must leave additional acres equal to the number of acres (including partial acres) occupied by an existing stream-adjacent parallel road within a designated priority area buffer.

(c) None of the limitations on harvest in or around Type Np Water RMZs or sensitive sites listed in (b) of this subsection will preclude or limit:

(i) The construction and maintenance of roads for the purpose of crossing streams in WAC 222-24-030 and 222-24-050.

(ii) The creation and use of yarding corridors in WAC 222-30-060(1).

To the extent reasonably practical, the operation will both avoid creating yarding corridors or road crossings through Type Np Water RMZ or sensitive sites and associated buffers, and avoid management activities which would result in soil compaction, the loss of protective vegetation or sedimentation in perennially moist areas.

Where yarding corridors or road crossings through Type Np Water RMZs or sensitive sites and their buffers cannot reasonably be avoided, the buffer area must be expanded to protect the sensitive site by an area equivalent to the dis-

turbed area or by providing comparable functions through other management initiated efforts.

Landowners must leave additional acres equal to the number of acres (including partial acres) occupied by an existing stream-adjacent parallel road within a Type Np Water RMZs or sensitive site buffer.

NEW SECTION

WAC 222-30-022 *Eastern Washington riparian management zones. For eastside forests, riparian management is intended to provide stand conditions that vary over time. It is designed to mimic eastside disturbance regimes within a range that meets functional conditions and maintains general forest health. These desired future conditions are a reference point on the pathway to restoration of riparian functions, not an end point of riparian stand development. These rules apply to all typed waters on forest land in Eastern Washington, except as provided in WAC 222-30-023. RMZs are measured horizontally from the outer edge of the bankfull width or channel migration zone, whichever is greater, and extend to the limits as described in the following section.

Eastern Washington RMZ for streams with bankfull width of less than or equal to 15 feet wide

Site Class	Total RMZ Width	Core Zone Width <small>From outer edge of bankfull width or outer edge of CMZ, whichever is greater</small>	Inner Zone Width	Outer Zone Width
I	130'	30'	45'	55'
II	110'	30'	45'	35'
III	90'	30'	45'	15'
IV	75'	30'	45'	0'
V	75'	30'	45'	0'

Eastern Washington RMZ for streams with bankfull width of greater than 15 feet wide

Site Class	Total RMZ Width	Core Zone Width <small>From outer edge of bankfull width or outer edge of CMZ, whichever is greater</small>	Inner Zone Width	Outer Zone Width
I	130'	30'	70'	30'
II	110'	30'	70'	10'
III	100'	30'	70'	0'
IV	100'	30'	70'	0'
V	100'	30'	70'	0'

*(1) Eastern Washington RMZs on Type S and F Waters have three zones: The core zone is nearest to the edge of the bankfull width or outer edge of the CMZ, which-

PERMANENT

ever is greater. The inner zone is the middle zone, and the outer zone is furthest from the water. Permitted forest practices vary by timber habitat type and site class.

None of the limitations on harvest in each of the three zones listed below will preclude or limit the construction and maintenance of roads for the purpose of crossing streams in accordance with WAC 222-24-030 and 222-24-050, or the creation and use of yarding corridors in accordance with WAC 222-30-060(1).

The shade requirements in WAC 222-30-040 must be met regardless of harvest opportunities provided in the inner zone RMZ rules. See the board manual, section 1.

(a) **Core zones.** The core zone extends 30 feet measured horizontally from the edge of the bankfull width or outer edge of the CMZ, whichever is greater, for all timber habitat types. No harvest or construction is allowed in the core zone except as detailed in subsection (1) of this section. Any trees cut for or damaged by yarding corridors must be left on site. Any trees cut as a result of road construction to cross a stream may be removed from the site unless used as part of a large woody debris replacement strategy.

(b) **Inner zones.** Width and leave tree requirements of the inner zone vary by timber habitat type as outlined below.

(i) **Ponderosa pine timber habitat type.**

(A) The width of the inner zone is 70 feet measured horizontally from the outer edge of the core zone on streams greater than 15 feet bankfull width or 45 feet measured horizontally from the outer edge of the core zone on streams with a bankfull width of 15 feet or less.

(B) No harvest is allowed in the inner zone except as described in (C) or (D) below, and as allowed for stream crossings and yarding corridors as described above in subsection (1).

(C) **Stands with a high basal area:** Harvest is permitted in the inner zone if the basal area in the inner zone is greater than 110 square feet per acre for conifer and hardwood trees equal to or greater than 6 inches dbh. The harvest must leave at least 50 trees per acre AND subject to subclause (III) below, a basal area of at least 60 square feet per acre. The trees to be left shall be selected as follows:

(I) The 21 largest trees per acre must be left; and

(II) An additional 29 trees per acre that are 10-inch dbh or greater must be left. If there are less than 29 10-inch dbh or greater trees per acre, leave the 29 largest trees. If there are more than 29 10-inch dbh or greater trees per acre, leave 29 10-inch dbh or greater trees per acre based on the following priority order:

- Trees that provide shade to water;
- Trees that lean towards the water;
- Trees of the preferred species, as defined in WAC 222-16-010;
- Trees that are evenly distributed across the inner zone.

(III) If more than 50 trees per acre are needed to meet the minimum basal area of 60 square feet per acre, then all trees greater than 6-inch dbh must be left. The minimum basal area to be left in the inner zone will be 60 square feet per acre provided that if the minimum basal area cannot be met with fewer than 100 trees of at least 6 inches dbh, then no more

than 100 trees per acre will be required to be left regardless of the basal area.

(D) **Stands with low basal areas and high density:**

Thinning is permitted if the basal area of all species is less than 60 square feet per acre AND there are more than 100 trees per acre. The thinning must leave a minimum of 100 trees per acre. The trees to be left must be selected as follows:

(I) The 50 largest trees per acre must be left; and

(II) An additional 50 trees per acre that are greater than 6 inches dbh must be left. If there are not 50 6-inch dbh or greater trees per acre, then all 6-inch dbh or greater trees per acre must be left plus the largest remaining trees to equal 50 trees per acre. Select the additional 50 trees based on the following priority order:

- Trees that provide shade to water;
- Trees that lean towards the water;
- Trees of the preferred species, as defined in WAC 222-16-010;
- Trees that are evenly distributed across the inner zone.

(E) To the extent down wood is available on site prior to harvest, at least twelve tons of down wood per acre must be left following harvest as follows:

(I) Six pieces greater than 16 inches diameter and 20 feet in length; and

(II) Four pieces greater than 6 inches in diameter and 20 feet in length.

(III) Landowner/operator is not required to create down wood.

(F) See **stream-adjacent parallel roads for all timber habitat types** in (iv) of this subsection if there is a stream-adjacent parallel road in this zone.

(ii) **Mixed conifer timber habitat type.**

(A) The width of the inner zone is 70 feet measured horizontally from the outer edge of the core zone on streams greater than 15 feet bankfull width or 45 feet measured horizontally from the outer edge of the core zone on streams with a bankfull width of 15 feet or less.

(B) No harvest is allowed in the inner zone except as described in (C) or (F) below, and as allowed for stream crossings and yarding corridors as described above in subsection (1).

(C) **Stands with a high basal area:** Harvest is permitted in the inner zone if the combined conifer and hardwood basal area for trees greater than 6 inches dbh is:

(I) Greater than 110 square feet per acre on low site indexes (site index less than 90); or

(II) Greater than 130 square feet per acre on medium site indexes (site index between 90 and 110); or

(III) Greater than 150 square feet per acre on high site indexes (site index greater than 110).

(D) The harvest must leave at least 50 trees per acre AND a basal area of at least:

(I) 70 square feet per acre on low site indexes; or

(II) 90 square feet per acre on medium site indexes; or

(III) 110 square feet per acre on high site indexes.

(E) The trees to be left shall be selected as follows:

(I) The 21 largest trees per acre must be left; and

(II) An additional 29 trees per acre that are 10-inch dbh or greater must be left. If there are less than 29 10-inch dbh or greater trees per acre, leave the 29 largest trees. If there are more than 29 10-inch dbh or greater trees per acre, leave 29 10-inch dbh trees per acre based on the following priority order:

- Trees that provide shade to water;
- Trees that lean towards the water;
- Trees of the preferred species, as defined in WAC 222-16-010; or
- Trees that are evenly distributed across the inner zone.

(III) If more than 50 trees per acre are needed to meet the minimum basal area for the site index, then all trees greater than 6 inches dbh must be left. The minimum basal area to be left in the inner zone will be 60 square feet per acre provided, that if the minimum basal area cannot be met with fewer than 100 trees at least 6 inches dbh, then no more than 100 trees per acre will be required to be left regardless of the basal area.

(F) **Stands with low basal areas and high density:** Thinning is permitted if the basal area of all species is less than the minimum requirements for the site index in (C) of this subsection AND there are more than 120 trees per acre. The thinning must leave a minimum of 120 trees per acre. The trees to be left shall be selected as follows:

- (I) The 50 largest trees per acre must be left; and
- (II) An additional 70 trees per acre greater than 6 inches dbh must be left. If there are not 70 6-inch dbh or greater trees per acre, then all 6-inch dbh or greater trees per acre must be left plus the largest remaining trees to equal 70 trees per acre. Select the additional 70 trees based on the following priority order:

- Trees that provide shade to water;
- Trees that lean towards the water;
- Trees of the preferred species, as defined in WAC 222-16-010; or
- Trees that are evenly distributed across the inner zone.

(G) To the extent down wood is available on site prior to harvest, 20 tons of down wood per acre is required to be left following harvest as follows:

- (I) 8 pieces greater than 16 inches diameter and 20 feet in length; and
 - (II) 8 pieces greater than 6 inches in diameter and 20 feet in length.
- (III) Landowner/operator is not required to create down wood.

(H) **See stream-adjacent parallel roads for all timber habitat types** in (iv) of this subsection if there is a parallel road in this zone.

(iii) **High elevation timber habitat type.**

(A) The width of the inner zone is 45 feet measured horizontally from the outer edge of the core zone on streams equal to or less than 15 feet bankfull width or 70 feet measured horizontally from the outer edge of the core zone on streams with a bankfull width of greater than 15 feet.

(B) Follow stand requirements for Western Washington riparian management zones, WAC 222-30-021 (1)(b).

Note: Option 2 is not permitted for eastside use, because of the minimum floor (100') constraint..

(C) To the extent down wood is available prior to harvest, 30 tons per acre of down wood per acre must be left following harvest as follows:

- (I) 8 pieces greater than 16 inches diameter and 20 feet in length; and
 - (II) 8 pieces greater than 6 inches in diameter and 20 feet in length.
- (III) Landowner/operator is not required to create down wood.

(D) **See stream-adjacent parallel roads for all timber habitat types** in (iv) of this subsection if there is a parallel road in this zone.

(iv) **Stream-adjacent parallel roads for all timber habitat types in the inner zone.** The shade rule, WAC 222-30-040, must be met whether or not the inner zone includes a stream-adjacent parallel road. Where a stream-adjacent parallel road exists in the inner zone and the minimum required basal area cannot be met due to the presence of the road, then the location of the road determines the allowable operations as follows:

(A) For streams with a bankfull width that is greater than 15 feet:

(I) If the edge of the road closest to the stream is 75 feet or more from the outer edge of bankfull width of the stream or outer edge of CMZ, whichever is greater, **no harvest is permitted in the inner zone.** This includes trees within the inner zone on the uphill side of the road.

(II) No harvest is permitted within the inner zone on the streamside of the road. If the edge of the road closest to the stream is less than 75 feet from the outer edge of bankfull width of the stream or outer edge of CMZ, whichever is greater then:

- Additional leave trees equal in total basal area to the trees lost due to the road must be left near the streams in or adjacent to the unit to be harvested; (See the board manual section 7.)

- Where the additional leave trees providing fish habitat for water quality function are determined to be not available or not practical by the department, landowners and operators may alternatively employ site specific management activities to replace lost riparian functions that may include placement of large woody debris in streams. (See the board manual section 7.)

(B) For streams with a bankfull width less than 15 feet:

(I) If the edge of the road closest to the stream is 50 feet or more from the outer edge of bankfull width or outer edge of CMZ, whichever is greater, no harvest is permitted in the inner zone. This includes trees within the inner zone on the uphill side of the road.

(II) No harvest is permitted within the inner zone on the stream side of the road. If the edge of the road closest to the stream is less than 50 feet from the bankfull width or CMZ, whichever is greater then:

- Additional leave trees equal in total basal area to the trees lost due to the road must be left near the streams in or adjacent to the unit to be harvested. (See the board manual section 7.)

- Where the additional leave trees providing fish habitat for water quality function are determined to be not available

or not practical by the department, landowners and operators may alternatively employ site specific management activities to replace lost riparian functions that may include placement of large woody debris in streams. (See the board manual section 7.)

(C) **Wildlife reserve trees.** Leave all wildlife reserve trees within the inner zone of the riparian management zone where operations in the vicinity do not violate the safety regulations (chapter 296-54 WAC and chapter 49-17 RCW administered by the department of labor and industries, safety division). Live wildlife reserve trees will contribute to the basal area requirements for inner zone leave trees and to leave tree counts if they are among the 21 largest trees per acre; or meet the requirement of an additional 29 leave trees per acre as per (E) above.

(c) **Outer zones.** This zone has three categories based on timber habitat type: Ponderosa pine, mixed conifer and high elevation. The width of this zone is 0 to 55 feet measured horizontally from the outer edge of the inner zone depending on the site class and stream width. (See WAC 222-16-010 definition of "RMZ outer zone.")

(i) Tree counts that must be left per acre, regardless of the presence of an existing stream-adjacent parallel road in the zone, are:

(A) Ponderosa pine habitat type - 10 dominant or codominant trees.

(B) Mixed conifer habitat type - 15 dominant or codominant trees.

(C) High elevation habitat type - See requirements for Western Washington RMZs in WAC 222-30-021 (1)(c).

(ii) Outer zone leave tree requirements in section (i) above may be reduced to 5 trees per acre in the ponderosa pine zone, 8 trees per acre in the mixed forest habitat type and 10 trees per acre in the high elevation habitat type, if the landowner voluntarily implements a LWD placement plan consistent with board manual section 26. If this strategy is chosen, a complete forest practices application must include a copy of the WDFW-approved hydraulics project approval (HPA) permit.

*** (2) Eastern Washington protection along Type Np and Ns Waters.**

(a) An **equipment limitation zone** is a 30-foot wide zone measured horizontally from the outer edge of bankfull width of a Type Np or Ns Water where equipment is limited. It applies to all perennial and seasonal streams.

(i) On-site mitigation is required if any of the following activities exposes the soil more than 10% of the surface area of the zone:

(A) Ground based equipment;

(B) Skid trails;

(C) Stream crossings (other than existing roads); or

(D) Cabled logs that are partially suspended.

(ii) Mitigation must be designed to replace the equivalent of lost functions, especially prevention of sediment delivery. Examples include water bars, grass seeding, mulching, etc.

(iii) Nothing in this subsection (2) reduces or eliminates the department's authority to prevent actual or potential material damage to public resources under WAC 222-46-030

or 222-46-040 or any related authority to condition forest practices notifications or applications.

(b) Type Np Waters.

Within 50 horizontal feet of the outer edge of bankfull width of the stream, the landowner must identify either a partial cut and/or clearcut strategy for each unit to be harvested:

Once approved by the department, the selected strategy will remain in effect until July 1, 2051. If a landowner transfers title of the harvest unit, the landowner must provide written notice of this continuing obligation to the new owner and send a copy to the department. See WAC 222-20-055.

(i) For partial cuts:

(A) Basal areas requirements are the same as those specified for the timber habitat type in the Eastern Washington RMZ inner zone.

(B) Where a stream-adjacent parallel road exists, the basal area required in (A) of this subsection is required to be left. (See stream-adjacent parallel roads for Type Np Waters in (c) below.)

(C) The trees to be included in the basal area determination and left after harvest must include:

(I) The 10 largest trees per acre;

(II) Up to an additional 40 trees per acre greater than or equal to 10 inches dbh must be left. If all or some of the trees are not at least 10 inches dbh, then the largest of the remaining trees must be left. Select trees based on the following priority order:

• Provide streambank stability;

• Provide shade to water;

• Lean towards the water;

• Preferred species, as defined in WAC 222-16-010; or

• Evenly distributed; and

If the basal area target has not been met with the trees required above, up to an additional 50 trees are required greater than 6 inches in dbh based on the above priority order.

(D) Side slope seeps must be protected with a 50-foot partial cut buffer that meets the basal area and leave tree requirements of (A), (B), and (C) above. The buffer shall be measured from the outer perimeter of the perennially saturated soil zone.

(ii) For clearcuts:

When the clearcut strategy in this subsection is selected, the landowner must simultaneously designate a 2-sided no-harvest 50-foot buffer along the stream reach in the harvest unit that:

(A) Is equal in total length to the clearcut portion of the stream reach in the harvest unit; and

(B) Meets the upper end of basal area requirements for each respective timber habitat type in the Eastern Washington RMZ inner zone. See WAC 222-30-022 (1)(b)(i), (ii) or (iii).

(C) The streamside boundary of all clearcuts must:

(I) Not exceed in total 30% of the length of the stream reach in the harvest unit;

(II) Not exceed 300 continuous feet in length;

(III) Not be located within 500 feet of the intersection of a Type S or F Water; and

(IV) Not occur within 50 feet of the following sensitive sites as defined in WAC 222-16-010:

- The outer perimeter of a soil zone perennially saturated from a headwall seep;
- The outer perimeter of a soil zone perennially saturated from a side-slope seep;
- The center of a headwater spring;
- An alluvial fan;
- The center point of intersection of two or more Type Np Waters.

(c) **Stream-adjacent parallel roads for Type Np Waters.** If a road exists in a Type Np RMZ and the basal area required to be left cannot be met within 50 feet of the outer edge of bankfull width of the stream measured horizontally due to the presence of the road, then the distance of the road to the stream determines the allowable operations as follows:

(i) A road that is within 30 to 49 feet measured horizontally from the outer edge of bankfull width of the stream requires:

(A) A total of 100 feet of riparian management zone measured horizontally (both sides of the stream count towards the total) must be left in a manner to provide maximum functions for nonfish use streams. If harvest is taking place on only one side of the stream, then 50 feet of RMZ width must be left, regardless of presence of a stream-adjacent parallel road. The width of the road is not counted as part of the total width of the RMZ.

(B) The location of the riparian management zone required in (A) of this subsection shall be based on the following priority order:

(I) Preferred: The area between the stream and the stream side edge of the road.

(II) The area that provides the most shade to the channel.

(III) The area that is most likely to deliver large woody debris to the channel.

(ii) A road that is within less than 30 feet from the outer edge of bankfull width of the stream measured horizontally requires, in addition to (c)(i)(A) and (B) of this subsection, that all trees between the stream and the streamside edge of the road must be left.

NEW SECTION

WAC 222-30-023 Riparian management zones for exempt 20-acre parcels.

Note: Compliance with this section does not insure compliance with the federal Endangered Species Act or the Clean Water Act.

On parcels of 20 contiguous acres or less, landowners with total parcel ownership of less than 80 forested acres shall not be required to leave the riparian buffers described in WAC 222-30-021 and 222-30-022. As required by RCW 76.13.130, these landowners are subject to the permanent riparian management zone rules and watershed analysis prescriptions in effect as of January 1, 1999, plus an additional fifteen percent volume requirement where watershed analysis prescriptions are not in effect.

***(1) Western Washington RMZs for exempt 20-acre parcels.** Riparian management zones are measured horizontally from the outer edge of bankfull width of a Type S or F Water and extend to the line where vegetation changes from wetland to upland plant community, or the line required to leave sufficient shade as required by WAC 222-30-040, whichever is greater, but must not be less than 29 feet in width nor more than the maximum widths described in (c) of this subsection, provided that the riparian management zone width shall be expanded as necessary to include wetlands or ponds adjacent to the stream. When the riparian management zone overlaps a Type A or B Wetland or a wetland management zone, the requirement which best protects public resources shall apply.

(a) Harvest units shall be designed so that felling, bucking, yarding or skidding, and reforestation can be accomplished in accordance with these rules, including those rules relating to stream bank integrity and shade requirements to maintain stream temperature. Where the need for additional actions or restrictions adjacent to waters not covered by the following become evident, WAC 222-12-050 and 222-12-060 may apply.

(b) When requested in writing by the applicant, the department shall assist in preparation of an alternate plan for the riparian management zone.

(c) Within the riparian management zone, trees shall be left for wildlife and fisheries habitat as provided for in the chart below. Fifty percent or more of the trees shall be live and undamaged on completion of the harvest. The leave trees shall be randomly distributed where feasible; some clumping is allowed to accommodate operational considerations. The number, size, species and ratio of leave trees, deciduous to conifer, is specified by the bed material and average width of the water type within the harvest unit. Trees left according to (d) of this subsection may be included in the number of required leave trees in this subsection.

Western Washington Riparian Leave Tree Requirements

For exempt 20-acre parcels

Water Type/Average Width	RMZ Maximum Width	Ratio of Conifer to Deciduous/ Minimum Size Leave Trees	# Trees/1000 ft. each side	
			Gravel/Cobble <10" Diameter	Boulder/Bedrock
S or F Water 75' & over	115'	representative of stand	58 trees	29 trees

Water Type/Average Width	RMZ Maximum Width	Ratio of Conifer to Deciduous/Minimum Size Leave Trees	# Trees/1000 ft. each side	
			Gravel/Cobble <10" Diameter	Boulder/Bedrock
S or F Water under 75'	86'	representative of stand	115 trees	60 trees
F Water 5' & over	58'	2 to 1/12" or next largest available*	86 trees	29 trees
F Water less than 5'	29'	1 to 1/6" or next largest available*	29 trees	29 trees

* "Or next largest available" requires that the next largest trees to those specified in the rule be left standing when those available are smaller than the sizes specified.

Ponds or lakes which are Type S or F Waters shall have the same leave tree requirements as boulder/bedrock streams.

(d) Landowners must meet shade rule in effect January 1, 1999, (WAC 222-30-040).

(e) For wildlife habitat within the riparian management zone, leave an average of 5 undisturbed and uncut wildlife trees per acre at the ratio of 1 deciduous tree to 1 conifer tree equal in size to the largest existing trees of those species within the zone. Where the 1 to 1 ratio is not possible, then substitute either species present. Forty percent or more of the leave trees shall be live and undamaged on completion of harvest. Wildlife trees shall be left in clumps whenever possible.

(f) When 10 percent or more of the harvest unit lies within any combination of a riparian management zone of Type S or F Waters or a wetland management zone and the harvest unit is a clearcutting of 20 acres or less, leave not less than 50 percent of the trees required in (c) of this subsection.

***(2) Eastern Washington riparian management zones for exempt 20-acre parcels.** These zones shall be measured horizontally from the outer edge of bankfull width of Type S or F Waters and extend to the line where vegetation changes from wetland to upland plant community, or to the line required to leave sufficient shade as required by WAC 222-30-040, whichever is greater, but shall not be less than the minimum width nor more than the maximum widths described in (c) of this subsection, provided that the riparian management zone width shall be expanded as necessary to include wetlands or ponds adjacent to the stream. When the riparian management zone overlaps a Type A or B Wetland or a wetland management zone, the requirement which best protects public resources shall apply.

(a) Harvest units shall be designed so that felling, bucking, yarding or skidding, and reforestation can be accomplished in accordance with these rules, including those rules relating to stream bank integrity and shade requirements to maintain stream temperature. Where the need for additional actions or restrictions adjacent to waters not covered by the following become evident, WAC 222-12-050 and 222-12-060 may apply.

(b) When requested in writing by the applicant, the department shall assist in preparation of an alternate plan for the riparian management zone.

(c) Within the riparian management zone, trees shall be left for wildlife and fisheries habitat as provided for below. Fifty percent or more of the trees shall be live and undamaged

on completion of the harvest. The leave trees shall be randomly distributed where feasible; some clumping is allowed to accommodate operational considerations.

(i) The width of the riparian management zone shall be based on the adjacent harvest type as defined in WAC 222-16-010 "Partial cutting." When the adjacent unit harvest type is:

Partial cutting - The riparian management zone width shall be a minimum of 35 feet to a maximum of 58 feet on each side of the stream.

Other harvest types - The riparian management zone shall average 58 feet in width on each side of the stream with a minimum width of 35 feet and a maximum of 345 feet on each side of the stream.

(ii) Leave tree requirements within the riparian management zones of Type S or F Waters:

(A) Leave all trees 12 inches or less in diameter breast height (dbh); and

(B) Leave all wildlife reserve trees within the riparian management zone where operations in the vicinity do not violate the state safety regulations (chapter 296-54 WAC and chapter 49.17 RCW administered by department of labor and industries, safety division); and

(C) Leave 18 live conifer trees per acre between 12 inches dbh and 20 inches dbh distributed by size, as representative of the stand; and

(D) Leave 4 live conifer trees per acre 20 inches dbh or larger and the 2 largest live deciduous trees per acre 16 inches dbh or larger. Where these deciduous trees do not exist, and where 2 wildlife reserve trees per acre 20 inches or larger do not exist, substitute 2 live conifer trees per acre 20 inches dbh or larger. If live conifer trees of 20 inches dbh or larger do not exist within the riparian management zone, then substitute the 5 largest live conifer trees per acre; and

(E) Leave 3 live deciduous trees per acre between 12 inches and 16 inches dbh where they exist.

(iii) Minimum leave tree requirements per acre for Type S or F Waters. Trees left for (c)(ii) of this subsection shall be included in the minimum counts.

(A) On streams with a boulder/bedrock bed, the minimum leave tree requirements shall be 75 trees per acre 4 inches dbh or larger.

(B) On streams with a gravel/cobble (less than 10 inches diameter) bed, the minimum leave tree requirement shall be 155 trees per acre 4 inches dbh or larger.

(C) On lakes or ponds, the minimum leave tree requirement shall be 86 trees per acre 4 inches dbh or larger.

PERMANENT

Note: See the board manual for guidelines for calculating trees per acre and average RMZ widths.

(d) When 10 percent or more of the harvest unit lies within any combination of a riparian management zone of Type S or F Waters or a wetland management zone and the harvest unit is 20 acres or less, leave not less than 50 percent of the trees required in (c) of this subsection. (See WAC 222-16-010 "Partial cutting.")

*** (3) Riparian leave tree areas for exempt 20-acre parcels.** The department will require trees to be left along Type Np Waters where such practices are necessary to protect public resources. Where such practices are necessary, leave at least 29 conifer or deciduous trees, 6 inches in diameter or larger, on each side of every 1000 feet of stream length within 29 feet of the stream. The leave trees may be arranged to accommodate the operation.

(4) For the purposes of this section RMZ means: A specified area alongside Type S and F Waters where specific measures are taken to protect water quality and fish and wildlife habitat.

AMENDATORY SECTION (Amending WSR 92-15-011, filed 7/2/92, effective 8/2/92)

WAC 222-30-025 Even-aged harvest—Size and timing. Except as provided in WAC 222-30-110, unit size and timing of timber harvesting by even-aged harvest methods is subject to the following requirements:

(1) Timber harvest which would result in an area larger than one hundred twenty acres and smaller than or equal to two hundred forty acres harvested by even-aged harvest methods on land owned or controlled by one landowner shall be reviewed by an interdisciplinary team, if the department determines that review is necessary. The area harvested by even-aged harvest methods, for the purposes of this subsection, shall be determined in accordance with subsection (3) of this section.

(2) Timber harvest which would result in an area larger than two hundred forty acres harvested by even-aged harvest methods on land owned or controlled by one landowner shall be prohibited. The area harvested by even-aged harvest method for the purposes of this subsection shall be determined in accordance with subsection (3) of this section.

(3) In calculating areas harvested by even-aged harvest methods, the area harvested by even-aged harvest methods shall include the acreage of that harvest unit and, all contiguous acreage harvested by even-aged harvest methods which is owned or controlled by the same landowner, except that acreage harvested by even-aged harvest methods sharing 10% or less of the common perimeter with the harvest unit under consideration shall not be considered contiguous for the purposes of this section.

(4) Harvest units shall be designed so that each harvest unit meets at least one of the following criteria:

(a) At least thirty percent of the unit's perimeter is in stands of trees that are thirty years of age or older;

(b) At least sixty percent of the unit's perimeter is in stands of trees that are fifteen years of age or older; or

(c) At least ninety percent of the unit's perimeter is in stands of trees that have survived on site a minimum of five growing seasons or, if not, have reached an average height of four feet.

Evaluation of unit perimeters is subject to the conditions specified in subsection (6) of this section.

(5) The requirements of subsections (2), (3), and (4) of this section shall apply only to timber harvest by even-aged harvest methods and shall not apply to timber harvest to salvage timber damaged by wind, disease, insects, fire, or other natural causes or to forest practices involving the clearing of land of brush or understocked hardwoods to convert to managed hardwoods or conifers.

(6) In evaluating the perimeters of harvest units pursuant to subsection (4) of this section, the following conditions shall apply:

(a) The following shall be treated as fully stocked, mature stands that will not be counted as contiguous acreage harvested by even-aged methods for the purposes of subsections (1) and (2) of this section and which will be counted as thirty-year-old stands for the purposes of subsection (4) of this section:

(i) In Western Washington, a ~~((riparian management zone or))~~ wetland management zone that is twice the width ~~((with twice the tree count))~~ required by WAC ~~((222-30-020(3)))~~ 222-30-021 and 222-30-023(1) along Type ~~((1, 2,))~~ S or ~~((3))~~ F Waters;

(ii) In Eastern Washington, ~~((a riparian management zone or))~~ wetland management zone that is the width required by WAC ~~((222-30-020(4)))~~ 222-30-022 and 222-30-023(2);

(iii) Designated upland management areas;

(iv) Lands in a shoreline of state-wide significance where harvest is limited under RCW 90.58.150;

(v) The portions of a perimeter consisting of land in uses other than forest land, such as land in agricultural or residential use and natural openings, and land not owned or controlled by the landowner who has proposed the harvest unit subject to the application under consideration;

* (vi) Along Type S and F Waters, a continuous buffer meeting the requirements of WAC 222-30-021 and 222-30-022;

* (vii) Along Type Np Waters, a continuous 50-foot wide no-harvest, no-salvage buffer.

(b) A stand of trees other than those described in (a) of this subsection shall be treated as a certain age class only if the stand is at least three hundred feet wide;

(c) Timber harvest units subject to an approved application or a notification for timber harvesting shall be treated as if the timber harvesting operation proposed in the application or notification were completed and regeneration not yet established.

(7) This section shall not apply to notifications or applications approved before July 1, 1992, or to one renewal of those applications, and shall not apply to timber that the landowner or operator demonstrated to the department is subject to a cutting right created by written contract before July 1, 1992, which cutting right would expire before all the timber subject to it could reasonably be harvested.

PERMANENT

AMENDATORY SECTION (Amending WSR 93-12-001, filed 5/19/93, effective 6/19/93)

WAC 222-30-040 Shade requirements to maintain ~~((stream))~~ water temperature. ~~*((1))~~ Within the bull trout overlay, all available shade will be retained within 75 feet from the edge of the bankfull width or the outer edge of the CMZ (whichever is greater) along Type S or F Waters. (See board manual, section 1.)

~~*((2))~~ Determination of adequate shade outside the bull trout overlay. The temperature prediction method mentioned in subsections (2) and (3) of this section shall be used to determine appropriate shade levels ~~((for flowing))~~ along Type ~~((1, 2,))~~ S and ~~((3))~~ F Waters to prevent excessive water temperatures, which may have detrimental impact on aquatic resources. No tree may be harvested within 75 feet from the edge of the bankfull width or the outer edge of the CMZ (whichever is greater) of any Type S or F Water if, according to the methodology, that tree is providing shade to the stream necessary to maintain compliance with temperature standards. If a landowner elects to remove any tree within 75 feet of any Type S or F Water, the landowner must demonstrate, using the methods in the board manual section 1, that the removal of the tree would not be contrary to the restrictions of this subsection.

~~*((2))~~ **(3) Temperature prediction method.** In addition to the riparian management zone requirements, leave trees shall be retained in riparian management zones on ~~((flowing))~~ Type ~~((1, 2,))~~ S and ~~((3))~~ F Waters as provided by the method described in the board manual which includes the following considerations:

- (a) Minimum shade retention requirements; and
- (b) Regional water temperature characteristics; and
- (c) Elevation; and
- (d) Temperature criteria defined for stream classes in chapter 173-201A WAC.

~~*((3))~~ **(4) Leave tree requirements for shade.** The method described in subsection ~~((2))~~ **(3)** of this section ~~((shall))~~ **must** be used to establish the minimum required shade cover based on site specific characteristics. When site specific data indicate that preharvest conditions do not meet the minimums established by the method, no additional shade removal from riparian management zones will be allowed.

~~*((4))~~ **(5) Shade requirements must be satisfied whether or not the inner zone includes a stream-adjacent parallel road. Nothing will preclude or limit the harvest of shade trees in connection with the construction and maintenance of road crossings or the creation and use of yarding corridors. (See WAC 222-30-060(1).)**

(6) Waivers. The department may waive or modify the shade requirements where:

- ~~((a))~~ ~~The applicant agrees to a staggered setting program producing equal or greater shade requirements to maintain stream temperature; or~~
- ~~((b))~~ ~~The applicant provides alternative means of stream temperature control satisfactory to the department; or~~
- ~~((e))~~ The temperature method indicates that additional shade will not affect ~~((stream))~~ water temperature.

NEW SECTION

WAC 222-30-045 Salvage logging within riparian management zones. Salvage logging within a riparian management zone is based upon the zone (core, inner or outer) in which the tree was originally located, applicable riparian stand requirements and the extent of previous harvest activities in the zone.

***((1)) Salvage logging within the outer edge of bankfull width of any typed water.** No salvage may take place within the outer edge of bankfull width of any typed water.

(2) Salvage logging in a core zone or channel migration zone. No salvage may take place within the RMZ core zone or a channel migration zone, including any portion of those trees that may have fallen outside of these zones.

(3) Salvage logging in the inner zone. Salvage may not take place within the inner zone if the stand requirements cannot be met by the residual stand. If the proposed salvage involves down tree(s) that originated from the inner zone, salvage of down wood may only be permitted if the down wood was not needed to meet stand requirements in the inner zone. Salvage of any existing down wood may not take place if the unremoved balance of down wood is insufficient to meet the regional down wood guidelines in (a) and (b) of this subsection. Salvage within the inner zone must be conducted to protect residual undamaged trees within the inner zone. Down wood guidelines for salvage in RMZ inner zones are:

(a) In Western Washington:

Logs with a solid core	< 1 foot diameter	1-2 foot diameter	> 2 foot diameter	Total
Number of logs/acre	85	83	26	194

(b) In Eastern Washington ponderosa pine, mixed conifer, and high elevation habitat types:

Follow the down wood requirements for each habitat type in WAC 222-30-022.

(4) Salvage logging in the outer zone. Salvage may not take place within the outer zone if the riparian leave tree requirements cannot be met by the residual standing or down trees. If the proposed salvage involves tree(s) that are down that originated from the outer zone, salvage may only be permitted of down wood if the down wood was not needed to meet riparian leave tree requirements in the outer zone.

(5) Salvage logging in sensitive sites or Type Np riparian management zones. No salvage may take place within a sensitive site or a Type Np RMZ.

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-30-050 Felling and bucking. ***((1)) Felling along water.**

(a) No trees will be felled into Type ~~((1, 2,))~~ S and ~~((3))~~ F Waters RMZ core zones, sensitive sites, or Type A or B Wetlands except trees which cannot practically and safely be felled outside ~~((the stream, lake or pond))~~ these areas using techniques in general use ~~((and these trees must then be removed promptly)).~~

Such felling and removing in Type ~~((1,2))~~ S or ~~((3))~~ F Waters shall comply with the hydraulic project approval of the department of fish and wildlife.

(b) Within ~~((riparian management))~~ RMZ inner and outer zones, and wetland management zones, fall trees favorable to the lead consistent with safety standards to yard or skid away from the waters. The use of directional falling, lining, jacking and staged falling techniques are ~~((encouraged))~~ required.

(c) Trees may be felled into Type ~~((4))~~ Np Water if logs are removed as soon thereafter as practical. See forest practices board manual section 4 guidelines for clearing slash and debris from Type ~~((4))~~ Np and ~~((5))~~ Ns Water.

***~~((2))~~ Bucking ~~((in))~~ or limbing along water.**

~~((a))~~ No bucking or limbing shall be done on trees or portions thereof lying ~~((between the banks))~~ within the bank-full width of Type ~~((1,2 or 3))~~ S, F or Np Waters, in the RMZ core zones, in sensitive sites, or in open water areas of Type A Wetlands ~~((, except as necessary to remove the timber from the water))~~. Such bucking or limbing in Type S or F Waters shall comply with the hydraulic project approval of the department of fish and wildlife.

~~((b))~~ Where bucking or limbing is done between the banks of a Type 4 Water, care shall be taken to minimize accumulation of slash in the water.

***~~((3))~~ Falling near riparian management zones, wetland management zones and setting boundaries.** Reasonable care shall be taken to avoid felling trees into riparian management zones, wetland management zones and areas outside the harvest unit.

(4) **Falling in selective and partial cuts.** Reasonable care shall be taken to fall trees in directions that minimize damage to residual trees.

(5) **Disturbance avoidance for northern spotted owls.** Felling and bucking within a SOSEA boundary shall not be allowed within 0.25 mile of a northern spotted owl site center between March 1 and August 31 provided that, this restriction shall not apply if:

(a) The landowner demonstrates that the owls are not actively nesting during the current nesting season; or

(b) The forest practice is operating in compliance with a plan or agreement developed for the protection of the northern spotted owl under WAC 222-16-080 (6)(a), (e), or (f).

(6) **Disturbance avoidance for marbled murrelets.** Felling and bucking shall not be allowed within 0.25 mile of an occupied marbled murrelet site during the daily peak activity periods within the critical nesting season, provided that, this restriction shall not apply if the forest practice is operating in compliance with a plan or agreement developed for the protection of the marbled murrelet under WAC 222-16-080 (6)(a) or (c).

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-30-060 Cable yarding. ***~~((1))~~ Type ~~((1,2))~~ S and ~~((3))~~ F Waters and sensitive sites.** No timber shall be cable yarded in or across ~~((a))~~ Type ~~((1,2))~~ S or ~~((3))~~ F Waters except where the logs will not materially damage the

bed of waters, banks of sensitive sites, or riparian management zones ~~((and removals from Type 1, 2 or 3 Water have hydraulic project approval of the department of fish and wildlife))~~. If yarding across Type S or F Waters is permitted, then yarding is limited to cable or other aerial logging methods. Any work in or above Type S or F Waters requires a hydraulics project approval (HPA). Any work in or above a Type Np or Ns Water may require a HPA. Logs must be fully suspended above the water unless otherwise allowed in the applicable HPA. Yarding corridors must be no wider or more numerous than necessary to accommodate safe and efficient transport of logs. Generally, yarding corridors should be located no closer to each other than 150 feet (measured edge to edge) and should be no wider than 30 feet. Safety is a prime consideration in the location of yarding corridors. Total openings resulting from yarding corridors must not exceed 20% of the stream length associated with the forest practices application. When changing cable locations, care must be taken to move cables around or clear of the riparian vegetation to avoid damage to riparian vegetation.

***~~((2))~~ Type A or B Wetlands.** No timber shall be cable yarded in or across Type A or B Wetlands without written approval from the department and may require a hydraulic project approval from the department of fish and wildlife.

***~~((3))~~ Deadfalls.** ~~((Any logs which are firmly embedded in the bed of a Type 1, 2, 3 and 4 Waters shall not be removed or unnecessarily disturbed without approval of the department of fish and wildlife.))~~ Logs which are firmly embedded in the bed or bank of Type S or F Waters shall not be removed or disturbed without hydraulic project approval from the department of fish and wildlife. Such activities in Type Np or Ns Waters may require a hydraulic project approval.

***~~((4))~~ Yarding in riparian management zones, sensitive sites, and wetland management zones.** Where timber is yarded from or across a riparian management zone, sensitive site, or wetland management zone reasonable care shall be taken to minimize damage to the vegetation providing shade to the stream or open water areas and to minimize disturbance to understory vegetation, stumps and root systems. Where practical and consistent with good safety practices, logs shall be yarded in the direction in which they lie and away from Type A or B Wetlands or Type ~~((1,2 and 3))~~ S, F or Np Waters until clear of the wetland management zone or riparian management zone.

(5) Direction of yarding.

(a) Uphill yarding is preferred.

(b) Where downhill yarding is used, reasonable care shall be taken to lift the leading end of the log to minimize downhill movement of slash and soils.

***~~((c))~~ When yarding parallel to a Type ~~((1,2))~~ S or ~~((3))~~ F Water channel below the ~~((50-year))~~ 100-year flood level or within the riparian management zone, reasonable care shall be taken to minimize soil disturbance and to prevent logs from rolling into the stream, lake, pond, or riparian management zone.**

(6) Disturbance avoidance for northern spotted owls. The operation of heavy equipment within a SOSEA boundary shall not be allowed within 0.25 mile of a northern spotted

owl site center between March 1 and August 31 provided that, this restriction shall not apply if:

(a) The landowner demonstrates that the owls are not actively nesting during the current nesting season; or

(b) The forest practice is operating in compliance with a plan or agreement developed for the protection of the northern spotted owl under WAC 222-16-080 (6)(a), (e), or (f).

(7) **Disturbance avoidance for marbled murrelets.** Yarding or operation of heavy equipment shall not be allowed within 0.25 mile of an occupied marbled murrelet site during the daily peak activity periods within the critical nesting season, provided that, this restriction shall not apply if the forest practice is operating in compliance with a plan or agreement developed for the protection of the marbled murrelet under WAC 222-16-080 (6)(a) or (c).

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-30-070 (~~Tractor and wheeled skidding~~)
Ground-based logging systems. *(1) Typed waters and wetlands.

(a) (~~Tractor and wheeled skidders~~) Ground-based equipment shall not be used in Type ~~((1, 2))~~ S or ~~((3))~~ F Water, except with approval by the department and with a hydraulic project approval (~~(of the)~~) issued by the department of fish and wildlife.

~~((b) In order to maintain wetland water movement and water quality, and to prevent soil compaction, tractor or wheeled skidders shall not be used in Type A or B Wetlands without prior written approval of the department.~~

~~(e) Within all wetlands, tractors and wheeled skidder systems shall be limited to low impact harvest systems. Ground-based logging systems operating in wetlands shall only be allowed within wetlands during periods of low soil moisture or frozen soil conditions.~~

~~(d) Skidding across any flowing Type 4 Water shall be minimized and when done, temporary stream crossings shall be used, if necessary, to maintain stream bed integrity.~~

~~(e) Whenever skidding in or across any type water, the direction of log movement between stream banks shall be as close to right angles to the stream channel as is practical.)~~
Yarding across Type S or F Waters is limited to cable or other aerial logging methods.

(b) Ground-based transport of logs across Type Np and Ns Waters shall minimize the potential for damage to public resources. A hydraulic project approval issued by the department of fish and wildlife may be required for ground-based equipment in Type Np or Ns Waters.

(i) Skidding logs and driving ground-based equipment through defined channels with flowing water is not allowed.

(ii) Ground-based transport of logs to landings across any Typed Np or Ns Water shall minimize the potential to damage public resources.

(iii) Whenever skidding across Type Np or Ns Waters, the direction of log movement between stream banks shall be designed to minimize sediment delivery to the stream.

(c) In order to maintain wetland water movement and water quality, and to prevent soil compaction, ground-based logging systems shall not be used in Type A or B wetlands.

(d) Where harvest in wetlands is permitted, ground-based logging systems shall be limited to low impact harvest systems. Ground-based logging systems operating in wetlands shall only be allowed during periods of low soil moisture or frozen soil conditions.

(e) Locations of temporary stream crossings to Np Waters shall be shown on the base map of the forest practices application. Whenever skidding in or across Type Np or Ns Waters, the direction of log movement between stream banks shall be designed to minimize sediment delivery to the stream. BMPs for stream crossings can be found in the board manual section 3.

***(2) Riparian management zone.**

(a) Logging will be permitted within the riparian management zone subject to riparian management zone protection in chapter 222-30 WAC. However, any use of (~~tractors, wheeled skidders, or other~~) ground-based yarding machines within the zone must be as described in an approved forest practices application or otherwise approved in writing by the department.

(b) (~~Where skidding~~) When transporting logs in or through the riparian management zone ((is necessary)) with ground-based equipment, the number of ((skidding)) routes through the zone shall be minimized.

(c) Logs shall be (~~skidded~~) transported so as to minimize damage to leave trees and vegetation in the riparian management zone, to the extent practical and consistent with good safety practices.

***(3) Wetlands management zones.**

(a) Logging will be permitted within wetland management zones subject to restrictions in WAC 222-30-020(7).

(b) Where feasible logs shall be skidded with at least (~~with~~) one end suspended from the ground so as to minimize soil disturbance and damage to leave trees and vegetation in the wetland management zone.

(c) (~~Tractors, wheeled skidders, or other~~) Ground-based harvesting systems shall not be used within the minimum WMZ width ((without written approval of the department)) unless described in an approved forest practices application or otherwise approved in writing by the department.

***(4) Deadfalls.** (~~Logs firmly embedded in the bed or bank of Type 1, 2, 3 or 4 Waters shall not be removed or unnecessarily disturbed without hydraulic project approval of the departments of fisheries or wildlife.~~) Logs firmly embedded in the bed or bank of Type S or F Waters shall not be removed or disturbed without hydraulic project approval from the department of fish and wildlife. Such activities in Type Np or Ns Waters may require a hydraulic project approval.

***(5) Moisture conditions.** (~~Tractor and wheeled skidders~~) (a) Ground-based logging systems shall not be used on exposed erodible soils or saturated soils ((when soil moisture content is so high that unreasonable soil compaction, soil disturbance, or)) if sediment delivery is likely to disturb a wetland, stream, lake or pond ((siltation would result)).

PERMANENT

(b) when soil moisture is high and unrestricted operation of ground-based equipment would result in unreasonable soil compaction, operations shall be restricted to methods that minimized widespread soil compaction or, operations postponed until site conditions improve such that yarding may proceed without causing unreasonable soil compaction and the long-term impacts to soil productivity and moisture absorption capacity that can result.

(6) **Protection of residual timber.** Reasonable care shall be taken to minimize damage from skidding to the stems and root systems of residual timber and to young reproduction.

*** (7) Skid trail location and construction.**

(a) Skid trails shall be kept to the minimum (~~((feasible))~~) width.

(b) Reasonable care shall be taken to minimize the amount of sidecast required and shall only be permitted above the (~~((50-year))~~) 100-year flood level.

(c) Skid trails shall be outloped where practical, but be insloped where necessary to prevent logs from sliding or rolling downhill off the skid trail.

(d) Skid trails running parallel or near parallel to streams shall be located outside the no-harvest zone of all typed waters and at least 30 feet from the outer edge of the bankfull width of the unbuffered portions of Type Np or Ns Water unless approved in writing by the department.

(e) Skid trails shall cross the drainage point of swales at an angle to minimize the potential for delivering sediment to a typed water or where channelization is likely to occur. See board manual section 3.

*** (8) Skid trail maintenance.**

(a) Upon completion of use and termination of seasonal use, skid trails on slopes in exposed soils shall be water barred where necessary to prevent soil erosion.

(b) Skid trails located within 200 feet horizontal distance of any typed water that directly delivers to the stream network shall use water bars, grade breaks, and/or slash to minimize sediment delivery to the stream. Water bars shall be placed at a frequency to minimize gullyng and soil erosion. In addition to water barring, skid trails with exposed soil that is erodible and may be reasonably expected to cause damage to a public resource shall be seeded with a noninvasive plant species (preferably a species native to the state) and adapted for rapid revegetation of disturbed soil, or treated with other erosion control measures acceptable to the department.

*** (9) Slope restrictions.** (~~((Tractor and wheeled skidders))~~) Ground-based systems shall not be used on slopes where in the opinion of the department this method of operation would cause (~~((unnecessary or))~~) actual or potential material damage to a public resource.

(10) **Disturbance avoidance for northern spotted owls.** The operation of heavy equipment within a SOSEA boundary shall not be allowed within 0.25 mile of a northern spotted owl site center between March 1 and August 31, provided that, this restriction shall not apply if:

(a) The landowner demonstrates that the owls are not actively nesting during the current nesting season; or

(b) The forest practice is operating in compliance with a plan or agreement developed for the protection of the northern spotted owl under WAC 222-16-080 (6)(a), (e), or (f).

(11) **Disturbance avoidance for marbled murrelets:** Operation of heavy equipment shall not be allowed within 0.25 mile of an occupied marbled murrelet site during the daily peak activity periods within the critical nesting season, provided that, this restriction shall not apply if the forest practice is operating in compliance with a plan or agreement developed for the protection of the marbled murrelet under WAC 222-16-080 (6)(a) or (c).

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-30-100 Slash disposal or prescribed burning. (1) Slash disposal or prescribed burning are prohibited in the core zone.

(2) Slash disposal techniques:

*** (a)** Any conventional method of slash disposal may be used, except in Type A or B Wetlands, wetland management zones, and (~~((riparian management))~~) RMZ core and inner zones, Type Np RMZs, sensitive sites, and on sites where the department determines that a particular method would cause unreasonable risk to leave trees, public resources or (~~((unreasonably damage))~~) site productivity. Conventional methods of slash disposal include the following: Controlled broadcast burning; pile or windrow and burn; pile or windrow without burning; mechanical scatter and compaction; scarification; chip, mulch or lop and scatter; burying; and physical removal from the forest lands: Provided, That on land shown to have low productivity potential the landowner or operator shall obtain the department's approval of its regeneration plan prior to utilizing controlled broadcast burning as a slash disposal technique. In riparian management inner zones, slash disposal shall be by hand, unless approved by the department. Slash disposal methods that employ machine piling, mechanical scatter and/or compaction, scarification or other techniques that result in soil disturbance shall not be allowed in equipment limitation zones. Scarification shall not be allowed within wetlands. Machine piling is (~~((discouraged))~~) not allowed in Type A and B Wetlands. Department approval, through a burning permit, is required for burning within an equipment limitation zone.

(b) All slash burning requires a burning permit from the department which provides for compliance with the smoke management plan and reasonable care to protect Type A and B Wetlands, wetland management zones, riparian management zones, equipment limitation zones, soil, residual timber, public resources, and other property.

~~((e))~~ Location of slash piles. Except where burning will be completed before the next ordinary high water season, slash shall not be piled or windrowed below the 50-year flood level of any Type 1, 2, 3 or 4 Water or in locations from which it could be expected to enter any stream, lake or pond.

~~((2))~~ **(3) Slash isolation, reduction, or abatement** is required when the department determines there is an extreme fire hazard according to law (see chapter 332-24 WAC).

~~((3))~~ (4) **Slash disposal** is required where the forest landowner has applied for and been granted an extension of time for reforestation on the grounds that slash disposal is necessary or desirable before reforestation.

*~~((4))~~ (5) **Removing slash and debris** from streams.

"Slash" or "debris" which can reasonably be expected to cause significant damage to the public resource shall be removed from Type ~~((1, 2, 3))~~ S, F or ((4)) Np Waters, to above the ~~((50))~~ 100-year flood level and left in a location or manner minimizing risk of re-entry into the stream, lake or pond and if substantial accumulations of slash exist below the ~~((50))~~ 100-year flood level of Type ~~((1, 2, 3))~~ S, F or ((4)) Np Waters, slash disposal is required. See the forest practices board manual section 4 for "Guidelines for clearing slash and debris from Type ((4)) Np and ((5)) Ns Waters."

*~~((5))~~ (6) **Fire trails.**

(a) Construct ~~((dips, water bars, cross drainage and ditches))~~ drainage structures as needed to control erosion.

(b) Reasonable care shall be taken to minimize excavation during fire trail construction and sidecast shall only be permitted above the ~~((50))~~ 100-year flood level.

(c) Fire trails shall not be located within Type A or B Wetlands, wetland management zones, equipment limitation zones or riparian zones without prior written approval of the department. Hand constructed fire trails are preferred within forested wetlands. When machine built fire trails are necessary for control of burning, trail width and excavation shall be minimized.

~~((6))~~ (7) **Disturbance avoidance for northern spotted owls.** Burning within a SOSEA boundary shall not be allowed within 0.25 mile of a northern spotted owl site center between March 1 and August 31, provided that, this restriction shall not apply if:

(a) The landowner demonstrates that the owls are not actively nesting during the current nesting season; or

(b) The forest practice is operating in compliance with a plan or agreement developed for the protection of the northern spotted owl under WAC 222-16-080 (6)(a), (e), or (f).

~~((7))~~ (8) **Disturbance avoidance for marbled murrelets.** Slash disposal or prescribed burning shall not be allowed within 0.25 mile of an occupied marbled murrelet site during the critical nesting season, provided that, this restriction shall not apply if the forest practice is operating in compliance with a plan or agreement developed for the protection of the marbled murrelet under WAC 222-16-080 (6)(a) or (c).

AMENDATORY SECTION (Amending WSR 92-15-011, filed 7/2/92, effective 8/2/92)

WAC 222-30-110 Timber harvesting on islands. On an island:

(1) A landowner shall not harvest by clearcut so that more than forty contiguous acres of that landowner's forest land are in a clearcut condition;

(2) Forest land harvested by clearcut remains in the clearcut condition until it has reached canopy closure or it has been reforested for at least ten years;

(3) Clearcut harvest units are contiguous unless separated by a buffer at least two hundred feet wide that has reached canopy closure, has been reforested for at least ten years, or is in a land use other than timber production.

(4) Within two hundred feet of the ~~((ordinary high water mark))~~ bankfull width of saltwater timber harvest shall be by selective harvest only, so that no more than thirty percent of the merchantable trees are harvested in any ten-year period: Provided, That other timber harvesting methods may be permitted in those limited instances where the topography, soil conditions, or silvicultural practices necessary for regeneration render selective harvest ecologically detrimental: Provided further, That harvest by clearcut on lands being converted to another use may be approved.

(5) The requirements of this section shall not apply to timber harvest ~~((to))~~ or salvage timber damaged by wind, disease, insects, fire, or other natural causes.

(6) This section shall not apply to notifications or applications approved before July 1, 1992, or to one renewal of those applications, and shall not apply to timber that the landowner or operator demonstrated to the department is subject to a cutting right created by written contract before July 1, 1992, which cutting right would expire before all the timber subject to it could reasonably be harvested.

AMENDATORY SECTION (Amending WSR 93-12-001, filed 5/19/93, effective 6/19/93)

WAC 222-34-040 Site preparation and rehabilitation. *(1) Heavy equipment. Heavy equipment shall not be used in connection with site preparation or rehabilitation work:

(a) When, because of soil moisture conditions or the type of soils, undue compaction or unnecessary damage to soil productivity would occur or erosion would result in damage to water quality; or

(b) Within riparian management zones, Type A and B Wetlands, wetland management zones, or within ~~((10 feet of the ordinary high water mark))~~ equipment limitation zones of Type ((4)) Np and ((5)) Ns Waters on slopes of 30 percent or less. On slopes greater than 30 percent heavy equipment shall not operate within 50 feet of Type ((+)) S through ((5)) Ns Waters unless a site specific plan has been approved by the department.

* (2) Surface water drainage. Where site preparation or rehabilitation involves contouring or terracing of slopes, drainage ditches, or similar work:

(a) The gradient of ditches or other artificial water courses in erodible soils shall not cause significant stream, lake, pond, or wetland siltation.

(b) Ditches and other artificial water courses shall not discharge onto any road, landing or fill.

(c) Ditches and other artificial water courses shall not be constructed to discharge onto the property of other parties without their consent.

* (3) Stream channel ~~((alignment))~~ realignment. Where work involves deepening, widening, straightening or relocating the channel; or bulkheading, riprapping or otherwise stabilizing the banks of a Type ~~((1, 2 or 3))~~ S or F Water, a

hydraulic project approval is always required, and the work shall be done only:

(a) After consultation with any party having an appropriation permit or registered right to appropriate waters from the affected stream segment in cases of streams used for domestic water supplies.

(b) Where no significant adverse effects on either the peak or minimum water levels or flows downstream can be expected.

(c) In a manner not expected to result in long-term damage to public resources or to adjacent or downstream property.

(NOTE: OTHER LAWS AND ((REGULATIONS)) RULES AND/OR PERMIT REQUIREMENTS MAY APPLY. SEE CHAPTER 222-50 WAC.)

AMENDATORY SECTION (Amending WSR 92-15-011, filed 7/2/92, effective 8/2/92)

WAC 222-38-010 Policy—Forest chemicals. *(1)

Chemicals perform important functions in forest management. The purpose of these regulations is to regulate the handling, storage and application of chemicals in such a way that the public health, lands, fish, wildlife, aquatic habitat, wetland and riparian management zone vegetation will not be significantly damaged, and water quality will not be endangered by contamination. This section in no way modifies the state department of agriculture regulations governing chemicals.

*(2) These rules are intended to implement best management practices designed to eliminate the direct entry of pesticides to water. Best management also includes minimizing the entry of forest chemicals into channel migration zones, wetland management zones, sensitive sites, or the core or inner zones of riparian management zones and buffers on Type Np Waters. Significant damage for purposes of this section includes any damage that would inhibit or preclude the existing vegetation from protecting public resources.

(NOTE: OTHER LAWS AND ((REGULATIONS)) RULES AND/OR PERMIT REQUIREMENTS MAY APPLY. SEE CHAPTER 222-50 WAC.)

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-38-020 Handling, storage, and application of pesticides. *(1) No pesticide leakage, contamination, pollution.

Transportation, handling, storage, loading, application, and disposal of pesticides shall be consistent with applicable label requirements and other state and federal requirements.

***(2) Mixing and loading areas.**

(a) Mix pesticides and clean tanks and equipment only where any accidental spills would not enter surface water, channel migration zone or wetlands.

(b) Storage and loading areas should be located where accidental spillage of pesticides will not enter surface water or wetlands. If any pesticide is spilled, immediate appropriate procedures should be taken to contain it.

(c) Use devices or procedures to prevent "back siphoning" such as providing an air gap or reservoir between the water source and the mixing tank.

***(3) Riparian management ((zone)) and wetland management zones.** Pesticide treatments within the ((riparian management zone)) RMZ core or inner zones, Type Np RMZs, sensitive sites or wetland management zones shall be by hand unless the department has approved a site specific plan with another method of treatment.

~~*(4) ((Wetland management zone. Pesticide treatment within the wetland management zone shall be by hand unless the department has approved a site specific plan with another method of treatment.~~

***(5)) Aerial application of pesticides.**

(a) To keep pesticides out of the water((; leave a 50 foot)) and wetlands, a buffer ((strip)) will be maintained during operations on all ((typed waters, except segments of Type 4 and 5 Waters with no surface water and other areas of open water, such as ponds or sloughs-)) Type S and F Waters and Type Np and Ns surface waters and Type A and B Wetlands, as set forth in (a)(i) of this subsection. To protect riparian vegetation, pesticides must not be applied to the core and inner zone, channel migration zone of any Type S or F Waters, to Type Np RMZ's, to sensitive site buffers, or to Type A or B Wetland management zones. In addition, operators must maintain an offset from the outer edge of the inner zone and wetland management zones as set forth in (a)(i) and (ii) of this subsection. (See the board manual, section 12 for a detailed example.) Where the buffer and offset widths overlap, the distance of offset must be whichever distance is greater from Type S or F Waters or Type A or B Wetlands for the applicable conditions. Aerial applications of pesticides in and around Type Np or Ns Waters with surface water and Type B Wetlands must be buffered according to (a)(iii) of this subsection. (Note: These application requirements do not apply to B.t. (Bacillus thuringiensis). When applying B.t., the operator must meet all label requirements.)

(i) Buffers on Type S and F Waters.

		DETERMINING WIND FACTOR (See the board manual section 12 for detailed examples.)			
		Favorable		Calm or Unfavorable	
NOZZLE TYPE	APPLICATION HEIGHT	BUFFER ON WATER	OFFSET FROM INNER ZONE	BUFFER ON WATER	OFFSET FROM INNER ZONE
Regular Nozzle*	Low (≤ 16 ft.)	Width of the inner zone	As needed for safety	100 ft., or the inner zone, whichever is greater	50 ft.

PERMANENT

		DETERMINING WIND FACTOR (See the board manual section 12 for detailed examples.)			
		Favorable		Calm or Unfavorable	
NOZZLE TYPE	APPLICATION HEIGHT	BUFFER ON WATER	OFFSET FROM INNER ZONE	BUFFER ON WATER	OFFSET FROM INNER ZONE
	Medium (17-50 ft.)	Width of the inner zone	As needed for safety	250 ft.	N/A
	High (51-65 ft.)	Width of the inner zone	As needed for safety	325 ft.	N/A
Raindrop Nozzle (or other nozzles that result in the same size spray droplets)**	Low (≤ 16 ft.)	Width of the inner zone	As needed for safety	Width of inner zone	20 ft.
	Medium (17-50 ft.)	Width of the inner zone	As needed for safety	Width of inner zone	20 ft.
	High (51-65 ft.)	Width of the inner zone	As needed for safety	125 ft. or the inner zone, whichever is greater	20 ft.

* Coarse spray droplets = approximately 9% of spray-droplet volume ≤ 150 u
 ** Ultra coarse spray droplets = approximately 1% of spray-droplet volume ≤ 150 u

(ii) Buffers on Type A and B Wetlands.

		DETERMINING WIND FACTOR (See the board manual section 12 for detailed examples.)			
		Favorable		Calm or Unfavorable	
NOZZLE TYPE	APPLICATION HEIGHT	BUFFER ON WET-LAND	OFFSET FROM WMZ	BUFFER ON WET-LAND	OFFSET FROM WMZ
Regular Nozzle*	Low (≤ 16 ft.)	Width of the WMZ	As needed for safety	150 ft.	N/A
	Medium (17-50 ft.)	Width of the WMZ	As needed for safety	250 ft.	N/A
	High (51-65 ft.)	Width of the WMZ	As needed for safety	325 ft.	N/A
Raindrop Nozzle (or other nozzles that result in the same size spray droplets)**	Low (≤ 16 ft.)	Width of the WMZ	As needed for safety	Width of WMZ	20 ft.
	Medium (17-50 ft.)	Width of the WMZ	As needed for safety	Width of WMZ	20 ft.
	High (51-65 ft.)	Width of the WMZ	As needed for safety	125 ft. or the width of the WMZ, whichever is greater	20 ft.

* Coarse spray droplets = approximately 9% of spray-droplet volume ≤ 150 u
 ** Ultra coarse spray droplets = approximately 1% of spray-droplet volume ≤ 150 u

(iii) Buffers on Type Np or Ns Waters with surface water present and Type B Wetlands less than 5 acres.

PERMANENT

DETERMINING WIND FACTOR (See the board manual section 12 for detailed examples.)		
	Favorable	Calm or Unfavorable
Nozzle Type	Buffer	Buffer
Regular Nozzle	50 ft.	100 ft.
Raindrop Nozzle (or other nozzles that result in the same size spray droplets)*	50 ft.	70 ft.

* Coarse spray droplets = approximately 9% of spray-droplet volume ≤ 150 u
 ** Ultra coarse spray droplets = approximately 1% of spray-droplet volume ≤ 150 u

Posting at formal, signed trailheads that are adjacent to aerially treated units is required. The signs will contain the name of the product used, date of treatment, a contact telephone number, and any applicable restrictions.

~~(*)~~ ~~(6)~~ ~~(5)~~ Ground application of pesticides with power equipment.

~~(Leave a 25-foot buffer strip on each side of Type A or B Wetlands and all typed waters, except segments of Type 4 and 5 Waters with no surface water.)~~ Ground application of pesticides with power equipment is prohibited within the core and inner zone, channel migration zone of Type S and F Waters, unless necessary to meet requirements for noxious weed control. In addition, operators shall maintain a 25 foot no application buffer strip around Type A or B Wetlands and on all sides of all other surface waters. Provided, however, That dry stream segments (i.e., channels with no surface water at the time of application) do not require a buffer.

~~(*)~~ ~~(7)~~ ~~(6)~~ Hand application of pesticides.

~~(Apply only)~~ Pesticides being applied by hand must only be applied to specific targets, such as vegetation, trees, stumps, and burrows, or as bait or in traps. No pesticides may be applied by hand within the core zone, channel migration zone of Type S and F Waters unless necessary to meet requirements for noxious weed control.

~~(*)~~ ~~(8)~~ ~~(7)~~ **Limitations on application.** Pesticides shall be applied only in accordance with all limitations:

- (a) Printed on the United States Environmental Protection Agency container registration label, and/or
- (b) Established by regulation of the state department of agriculture.
- (c) Established by state and local health departments (in municipal watersheds).
- (d) Established by the Federal Occupational Safety and Health Administration, or the state department of labor and industries, as they relate to safety and health of operating personnel and the public.

(e) The department or the department of agriculture may suspend further use of any equipment responsible for chemical leakage until the deficiency has been corrected to the satisfaction of the department suspending its usage.

~~(*)~~ ~~(9)~~ ~~(8)~~ **Container disposal.** Pesticide containers shall be either:

- (a) Removed from the forest and disposed of in the manner consistent with label directions; or
- (b) Removed and cleaned for reuse in a manner consistent with any applicable regulations of the state department of agriculture or the state or local health departments.

~~(*)~~ ~~(10)~~ ~~(9)~~ **Daily records - aerial application of pesticides.** On all aerial applications of pesticides, the operator shall maintain for 7 years daily records of spray operations as

(b) ~~(Apply)~~ The initial swath of aerial pesticides must be applied parallel to the applicable buffer strip identified in (a) of this subsection unless a deviation is approved in advance by the department. Drift control agents shall be required adjacent to buffer strips. Operators applying aerial pesticides must avoid applications that might result in drift causing direct entry of pesticides into riparian management (~~zones~~) core and inner zones, channel migration zones, sensitive sites, Type A and B Wetlands, wetland management zones, and all typed waters, except segments of Type ~~(4)~~ Np and ~~(5)~~ Ns Waters with no surface water present.

(c) Operators applying aerial pesticides must use a bucket or spray device capable of immediate shutoff.

(d) Operators applying aerial pesticides must shut off spray equipment during turns and over open water.

(e) Operators applying aerial pesticides near residences or agricultural land must either:

(i) Leave at least a 200 foot no application buffer strip around residences and 100 foot no application buffer strip adjacent to lands used for agriculture (~~unless such residence or farmland~~); or

(ii) Apply the pesticides using the widest buffer for the applicable wind conditions as determined by the applicable tables in (a) of this subsection. These provisions do not apply where the residences or agricultural land that could be affected by drift from the aerial application of the pesticide is owned by the forest landowner or where the aerial application is acceptable to the resident or landowner.

(f) The landowner shall identify for the operator the units to be sprayed and the untreated areas within the units with appropriately marked aerial photos or detailed planimetric maps. Before application of the pesticide an over-flight of the area shall be made by the pilot with the marked photos or maps. Stream and wetland buffers required under (a) of this subsection must be clearly visible from the air. The department may require additional field delineation of buffers where the operation is dependent on the use of ground cover features to determine unit area locations and where such ground cover is not readily distinguished from the no spray buffer areas.

(g) Aerial chemical application areas shall be posted by the landowner by signing at significant points of regular access at least 5 days prior to treatment. Posting shall remain at least 15 days after the spraying is complete. The department may require an extended posting period in areas where human use or consumption of plant materials is probable.

PERMANENT

required by the state department of agriculture WAC ((46-228-190)) 16-228-1320.

((*(41))) *** (10) Reporting of spills.** All potentially damaging chemical spills shall be immediately reported to the department of ecology. Emergency telephone numbers for reporting spills shall be available at the department's regional offices.

AMENDATORY SECTION (Amending WSR 93-12-001, filed 5/19/93, effective 6/19/93)

WAC 222-38-030 Handling, storage, and application of fertilizers. *** (1) Storage and loading areas.** Storage and loading areas should be located where accidental spillage of fertilizers will not enter surface water or wetlands. If any fertilizer is spilled, immediate appropriate procedures shall be taken to contain it.

*** (2) Riparian management zone and wetland management zone.** Fertilizer treatments within a riparian management zone or wetland management zone shall be by hand unless the department has approved a site specific plan with another method of treatment.

~~*** (3) ((Wetland management zone. Fertilizer treatments within a wetland management zone shall be by hand unless the department has approved a site specific plan with another method of treatment.**~~

*** (4) Aerial application of fertilizer.**

(a) Proposed fertilization units shall be planned to avoid and to minimize the direct or indirect introduction of fertilizer into waters and wetlands.

(b) Leave a 25 foot buffer from the edge of the channel migration zone on all Type ((1, 2)) S and ((3)) E Waters, except as noted in (f) of this subsection.

(c) When the helicopter flight path during fertilizer application is parallel to a water course or the WMZ edge, the centerline of the initial swath should be adjusted to prevent direct application within the buffers or WMZs.

(d) Leave at least a 200 foot buffer strip around residences and a 100 foot buffer strip adjacent to lands used for agriculture unless such residence or farmland is owned by the forest landowner or the aerial application is acceptable to the resident or landowner.

(e) The landowner shall identify for the operator the units to be fertilized and the untreated areas within the units with appropriately marked aerial photos or detailed planimetric maps. Before application of the fertilizer, an over-flight of the area shall be made by the pilot with the marked photos or maps.

(f) Where the department has been provided information by the department of ecology indicating that water quality in downstream waters is likely to be impaired by entry of fertilizer into waters, such waters shall be protected by site specific conditioning.

~~**((*(5))) * (4) Ground and hand application of fertilizers.** Prevent fertilizer from entering Type A and B Wetlands and all typed waters, except segments of Type ((4)) Np and ((5)) Ns Waters with no surface water present.~~

~~**((*(6))) * (5) Reporting of fertilizer spills.** All fertilizer spills involving streams, lakes, wetlands, or other waters of~~

the state shall be immediately reported to the department of ecology. Emergency telephone numbers for reporting spills shall be available at the department's regional offices.

AMENDATORY SECTION (Amending WSR 92-15-011, filed 7/2/92, effective 8/2/92)

WAC 222-38-040 Handling, storage, and application of other forest chemicals. *** (1) Waters and wetlands.** Do not allow direct entry of other forest chemicals into any ((typed)) water((s)) or Type A or B Wetlands, except segments of Type ((4)) Np and ((5)) Ns Waters with no surface water(~~, or Type A or B Wetlands~~) present.

*** (2) Storage, mixing, and loading areas.**

(a) Mix other forest chemicals and clean tanks and equipment only where any accidental spills would not enter surface water or wetlands.

(b) Storage and loading areas should be located where accidental spillage of other forest chemicals will not enter surface water or wetlands. If any chemical is spilled, immediate appropriate procedures should be taken to contain it.

(c) Use devices or procedures to prevent "back siphoning" such as providing an air gap or reservoir between the water source and the mixing tank.

(d) Water protection requirements in subsection (1) of this section may be waived when emergency use of fire retardants is necessary to control wildfire.

NEW SECTION

WAC 222-46-012 Representatives on inspections. In connection with any watershed analysis, any review of a pending application by an interdisciplinary team appointed by the department, any compliance studies, any effectiveness monitoring, or other research that has been agreed to by a landowner, the department will invite representatives of other agencies necessary to provide specific expertise to resolve issues that have been raised, tribes, and interest groups to accompany a department representative and, at the landowner's election, the landowner, on any such inspections. Reasonable efforts must be made by the department to notify the landowner of the persons being invited onto the property and the purposes for which they are being invited.

AMENDATORY SECTION (Amending WSR 94-01-134, filed 12/20/93, effective 1/1/94)

WAC 222-46-060 Civil penalties. (1) **Amount of penalty.** Every person who violates any provisions of RCW 76.09.010 through 76.09.280 or of the forest practices rules adopted pursuant thereto, or who converts forest land to a use other than commercial timber operation within three years after completion of the forest practice without the consent of the county, city, or town, shall be subject to a penalty in an amount of not more than ten thousand dollars for each such violation. Each and every such violation shall be a separate and distinct violation. In case of a failure to comply with a stop work order, every day's continuance thereafter shall be a separate and distinct violation.

(2) **Penalty assessments** shall consider the following:

- (a) Repairability of the adverse effect from the violation;
- (b) Whether the violation of the act or rules was intentional;
- (c) Cooperation with the department;
- (d) Previous violation history;
- (e) Severity of the impact or the potential for material damage to public resources; and
- (f) The extent to which a penalty to be imposed on a forest landowner for a forest practice violation committed by another should be reduced because the owner was unaware of the violation and did not receive substantial economic benefits from the violation.

(3) **Calculation of penalty.** The department shall evaluate any violation to determine if a civil penalty is warranted. When penalties are to be assessed they shall be calculated using the following process:

- (a) Determine the base penalty; see WAC 222-46-065.
- (b) The penalty may be adjusted using factors specific to the incident and the site. The following additional factors will be independently considered and added to the base penalty to calculate the civil penalty:

(i) **Repairability:**

Repairability shall be based on the length of time natural restoration or implementation of a restoration plan will take and whether repair can be achieved. The penalty will be substantially increased when natural restoration will not occur within three years and the damage cannot be effectively corrected. For this factor, up to double the base penalty may be added to the penalty.

(ii) **Intention:**

In making a determination of intent, the department shall consider, but not be limited to, the following considerations: The foreseeability of the violation; whether precautions were taken to avoid the violation; whether an informal conference or enforcement action was served on the violator prior to the violation. For this factor, up to double the base penalty may be added to the penalty.

(iii) **Cooperation:**

The department shall consider whether the violator did or did not make any attempt to correct the problem. Timeliness of action(s) and/or ignoring or evading agency contacts or directives shall determine if the penalty shall be increased. For this factor, up to double the base penalty may be added to the penalty.

(iv) **Previous violation(s):**

The department shall consider whether the violator has previous violations of a forest practice rule or regulation as documented in an enforcement action. The department may consider company organizations and assignment of operational responsibilities when evaluating previous violations. A history of violations with adverse impacts or potential for adverse impacts or that shows a pattern of ignoring the rules or the act, shall result in a substantially larger penalty.

Enforcement actions for the purposes of this section shall include notices to comply, stop work orders, civil penalties, and criminal citations when those enforcement actions are associated with forest practice violations. For this factor, up to quadruple the base penalty may be added to the penalty.

(v) **Severity:**

The department shall adjust the penalty based on the extent and magnitude of the damage or potential damage to public resources. For this factor, up to quadruple the base penalty may be added to the penalty.

(vi) **Landowner involvement:**

If in the opinion of the department, the landowner exercised reasonable prudence in the development of timber sale contracts or supervision of the forest practice operations, was unaware of the forest practice violation, and the landowner received no substantial economic benefit from the violation, then the landowner generally would not be assessed a civil penalty.

(c) In accordance with RCW 76.09.170, the penalty may not exceed ten thousand dollars for each and every violation.

(d) The department shall determine whether all or a portion of the penalty should be assessed against the operator, landowner, and/or timber owner. The department should consider the responsible party, the degree of control, the sophistication of the party and whether different parties conducted different violations.

(4) **Other participants.** Every person who through an act of commission or omission procures, aids or abets in the violation shall be considered to have violated the provisions of this section and shall be subject to the penalty provided for in this section.

(5) **Government employees.** No penalty shall be imposed under this section upon any governmental official, an employee of any governmental department, agency, or entity, or a member of any board created by the act for any act or omission in his/her duties in the administration of the act or of these rules.

(6) **Written notice.** The penalty shall be imposed by a notice in writing, either by certified mail with return receipt requested or by personal service, to the person incurring the same from the department describing the violation with reasonable particularity.

(7) **Remission or mitigation.** Within fifteen days after the notice is received, the person incurring the penalty may apply in writing to the supervisor of the department ~~((s manager of the region in which the penalty was issued,))~~ or his or her designee for the remission or mitigation of such penalty. Upon receipt of the application, the department may remit or mitigate the penalty upon whatever terms the department in its discretion deems proper: Provided, That the department deems such remission or mitigation to be in the best interests of carrying out the purposes of the act. The department shall have authority to ascertain the facts regarding all such applications in such reasonable manner and under such rules as they may deem proper. The reviewer may reduce, dismiss or not change the civil penalty. ~~((Within fifteen days of the completion of the regional review, the person incurring the penalty may apply in writing to the supervisor of the department for further review.))~~

(8) **Right of appeal.** Any person incurring any penalty hereunder may appeal the same to the forest practices appeals board. Such appeals shall be filed within thirty days of receipt of notice imposing any penalty unless an application for remission or mitigation is made to the department. When

such an application for remission or mitigation is made, such appeals shall be filed within thirty days of receipt of notice from the department setting forth the disposition of the application for remission or mitigation. Concurrently with the filing of any appeal to the forest practices appeals board as provided in this section, the appellant shall file a copy of the appeal with the department region from which the penalty was issued and a copy with the office of the attorney general.

(9) **Penalties due.** The penalty imposed under this section shall become due and payable thirty days after receipt of a notice imposing the same unless application for remission or mitigation is made or an appeal is filed. When such an application for remission or mitigation is made, any penalty incurred under this section shall become due and payable thirty days after receipt of notice setting forth the disposition of such application unless an appeal is filed from such disposition. Whenever an appeal of the penalty incurred is filed, the penalty shall become due and payable only upon completion of all administrative and judicial review proceedings and the issuance of a final order or decision confirming the penalty in whole or in part.

(10) **Enforcement.** If the amount of any penalty is not paid to the department within thirty days after it becomes due and payable, the attorney general, upon the request of the department, shall bring an action in the name of the state of Washington in the superior court of Thurston county or of any county in which such violator may do business, to recover such penalty, interest, costs, and attorneys' fees. In all such actions the procedure and rules of evidence shall be the same as an ordinary civil action except as otherwise provided in the Forest Practices Act. In addition to or as an alternative to seeking enforcement of penalties in superior court, the department may bring an action in district court as provided in Title 3 RCW, to collect penalties, interest, costs, and attorneys' fees.

(11) **Liens.** Penalties imposed under this section for violations associated with a conversion to a use other than commercial timber operation shall be a lien upon the real property of the person assessed the penalty. The department may collect such amounts in the same manner provided in chapter 60.04 RCW for mechanics' liens.

(12) Any person incurring a penalty is also responsible for the payment of all costs and attorneys' fees incurred with the penalty as well as interest accruing on the unpaid penalty amount.

AMENDATORY SECTION (Amending WSR 94-01-134, filed 12/20/93, effective 1/1/94)

WAC 222-46-070 Injunctions, civil suits, disapprovals. (1) **The department** may take any necessary action to enforce any final order or final decision(~~(, and)~~).

(2)(a) The department may disapprove (~~for up to one year~~) any forest practices application or notification submitted by any person who has failed to comply with a final order or decision as set forth in RCW 76.09.080, 76.09.090, or 76.09.110, or has failed to pay any civil penalties as provided in RCW 76.09.170. This disapproval will last for up to one year from the issuance of a notice of intent to disapprove

notifications and applications under this section, or until the violator pays all outstanding civil penalties and complies with all validly issued and outstanding notices to comply and stop work orders, whichever is longer.

(b) For purposes of this subsection, "validly issued" means a stop work order or notice to comply for which no appeal or request for hearing has been filed; or if appealed, it has not been declared invalid by a final order or decision and all appeals are exhausted.

(c) The department shall provide written notice of its intent to disapprove future applications or notifications, and shall forward copies of such notice to any affected landowner, timber owner or operator(~~; such written notice shall occur within ninety days of the failure to comply with a final order or decisions as set forth in RCW 76.09.080, 76.09.090, or 76.09.110, or has failed to pay any civil penalties as provided in RCW 76.09.170~~). The disapproval period shall run from thirty days following the date of actual notice or from the date all appeals, if any, have been exhausted.

(d) Any person provided notice of intent to disapprove an application or notification may seek review from the forest practices appeals board within thirty days of the date of notice.

~~((2))~~ (e) While the notice of intent to disapprove is in effect, the violator(s) may not serve as a person in charge of, be employed by, manage, or otherwise participate to any degree in forest practices.

(3) **A county** may bring injunctive, declaratory, or other actions for enforcement for forest practice activities within its jurisdiction in the superior court as provided by law against the department, the forest landowner, timber owner or operator to enforce the forest practices regulations or any final order of the department or the appeals board. No civil or criminal penalties shall be imposed for past actions or omissions if such actions or omissions were conducted pursuant to an approval or directive of the department. A county may not commence injunctions, declaratory actions, or other actions for enforcement under this subsection unless the department fails to take appropriate actions after ten days' written notice to the department by the county of a violation of the forest practices rules or final orders of the department or the appeals board.

NEW SECTION

WAC 222-46-090 Financial assurances. (1) The purpose in requiring financial assurances is to ensure that the landowner or operator has sufficient resources to cover any penalties and mitigation measures, which might be assessed.

(2) The department may require financial assurance prior to the conduct of any further forest practices from an operator or landowner who within the preceding three-year period has:

(a) Operated without an approved forest practices application, other than an unintentional operation in connection with an approved application outside the approved boundary of such an application;

(b) Continued to operate in breach of, or failed to comply with, the terms of an effective stop work order or notice to comply; or

(c) Failed to pay any civil or criminal penalty.

(3) The department must deny any application or notification for failure to submit financial assurances as required.

(4) In deciding whether to require financial assurances, the department shall consider:

- (a) The organizational size of the operator or landowner;
- (b) Whether the violation was self-reported;
- (c) The cooperation exhibited when the violation was discovered; and
- (d) Any other factors the department believes indicate that financial assurances are, or are not, warranted.

(5) When the department determines that a financial assurance is required, a notice will be issued to the landowner or operator with violations listed above. The notice cannot be appealed. The financial assurances will be required with all future forest practices activities submitted within the time frame indicated in the notice. The notice shall include the following:

(a) A reference to subsection (6) of this section which identifies the criteria for establishing the amount of the financial assurance;

(b) The types of financial assurance which can be submitted;

(c) The time period during which financial assurances will be required with every future application or notification;

(d) A statement that the department must deny any application or notification from a landowner or operator who submits an application or notification without their required financial assurance;

(e) A statement that an application or notification can be appealed pursuant to RCW 76.09.220 (8)(a), and the requirement to submit financial assurances may be challenged at that time.

(6) The amount shall be set by the department within 10 days of receipt of a Class III or IV application, or within 3 days of receipt of a Class II notification. Applicants who have been notified of a financial assurance requirement are encouraged to use the early review process for applications outlined in WAC 222-20-090. In establishing the amount of the financial assurances to be required, the department shall begin with the following base amounts:

Class II Notifications - \$10,000

Class III Applications - \$30,000

Class IV General Applications - \$20,000

Class IV Special Applications - \$50,000

The base amounts listed above are based on an estimate of the potential for civil penalties, fees and required mitigation that could result from noncompliance with forest practices rules and department directives on forest practices applications or notifications of that classification. The base amounts can be increased or decreased depending on application specific factors including, but not limited to, size of the proposed harvest area, miles of new road construction and road maintenance, proximity to water, proximity to unstable soils, proximity to threatened or endangered species, and types of violations committed by the applicant in the past. In addition, the department should consider the risk to the state of the applicant being unable to pay civil penalties or perform required mitigation work. In weighing this risk, the depart-

ment should consider the applicant's past history of payment to the department, and any other financial information the applicant chooses to submit to the department. The base amount of financial assurance to be required may be increased or decreased depending on the department's assessment of this risk.

(7) The financial assurance provided shall protect the department and the state from the risk that the landowner or operator may be financially unable to pay civil penalties, fees and/or perform mitigation work required by the department, including mitigation work performed by the department pursuant to RCW 76.09.120, because of violations of the Forest Practices Act or rules. The department may, for any reason, refuse any financial assurance not deemed adequate. The financial assurance provided may be in the following form:

(a) Bank letter of credit;

(b) Cash deposit;

(c) Savings account assignment; or

(d) Corporate surety bond executed in favor of the department.

(8) The department may obtain compensation from a financial assurance whenever the landowner or operator has failed to pay a civil penalty that is due and owing or has failed to complete mitigation as required. Payment for a specific civil penalty or mitigation does not relieve the surety, operator or landowner of financial responsibility for any other civil penalty or mitigation.

(9) Liability under the financial assurance shall be maintained until all forest practices under the forest practices notification or application issued by the department are completed or until the notification or application expires, and all of the landowner or operator's obligations under the Forest Practices Act and rules are completed to the satisfaction of the department including payment of civil penalties and completion of required mitigation work. Liability under the financial assurance may be released only upon written notification by the department. Notification shall be given upon completion of compliance or acceptance of a substitute financial assurance.

(10) Financial assurances are estimates only. Nothing in this section shall be construed to limit the department's authority to assess and collect civil penalties and fees and to require mitigation work in amounts that exceed existing financial assurances.

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-46-030 Notice to comply. If a violation, a deviation, material damage or potential for material damage to a public resource has occurred and the department determines that a stop work order is unnecessary, then the department shall issue and serve upon the operator and/or landowner a notice (~~which will~~). (1) The notice shall clearly set forth:

~~((+))~~(a) **The specific** nature, extent, and time of failure to comply with the approved application; or identifying the damage or potential damage; and/or

(b) The relevant provisions of the Forest Practices Act or of the forest practices ((~~regulations~~)) rules relating thereto;

((2)) (c) **The right** of the operator, landowner, or timber owner to a hearing before the department; and

((3)) (d) **The specific course of action** ordered by the department to be followed by the operator to correct such failure to comply and to prevent, correct and/or compensate for material damage to public resources which resulted from any violation, unauthorized deviation, or willful or negligent disregard for potential damage to a public resource; and/or those courses of action necessary to prevent continuing damage to public resources where the damage is resulting from the forest practice activities but has not resulted from any violation, unauthorized deviation, or negligence.

((4)) (2) **Local government entity conditions.** If the notice to comply involves a condition imposed pursuant to WAC 222-20-040(3), then the specific course of action ordered by the department shall include a requirement that the operator obtain approval of the local government entity of the action to be taken.

((5)) (3) **The department** shall mail a copy of the notice to comply to the forest landowner and the timber owner at the addresses shown on the application, showing the date of service upon the operator. The department shall also mail a copy to the local government entity if a condition imposed pursuant to WAC 222-20-040(3) is involved.

(4) **Such notice to comply shall become a final order** of the department: Provided, That no direct appeal to the appeals board will be allowed from such final order. Such operator shall undertake the course of action so ordered by the department unless, within fifteen days after the date of service of such notice to comply, the operator, forest landowner, or timber owner, shall request the department in writing to schedule a hearing. If so requested, the department shall schedule a hearing on a date not more than twenty days after receiving such request. The local government entity shall participate in the hearing if a condition imposed pursuant to WAC 222-20-040(3) is involved. Within ten days after such hearing, the department shall issue a final order either withdrawing its notice to comply or clearly setting forth the specific course of action to be followed by such operator. Such operator shall undertake the course of action so ordered by the department unless within thirty days after the date of such final order, the operator, forest landowner, or timber owner appeals such final order to the appeals board. No person shall be under any obligation under this section to prevent, correct, or compensate for any damage to public resources which occurs more than one year after the date of completion of the forest practices operations involved exclusive of reforestation, unless such forest practices were not conducted in accordance with forest practices rules: Provided, That this provision shall not relieve the forest landowner from any obligation to comply with forest practices rules ((~~and regulations~~)) pertaining to providing continuing road maintenance. No action to recover damages shall be taken under this section more than two years after the date the damage involved occurs.

AMENDATORY SECTION (Amending WSR 94-01-134, filed 12/20/93, effective 1/1/94)

WAC 222-46-040 Stop work orders. (1) **The department** shall have the authority to serve upon an operator a stop work order which shall be a final order of the department if:

(a) There is any violation of the provisions of the Forest Practices Act or these ((~~regulations~~)) rules; or

(b) There is a deviation from the approved application; or

(c) Immediate action is necessary to prevent continuation of or to avoid material damage to a public resource.

(2) **The stop work order** shall set forth:

(a) The specific nature, extent, and time of the violation, deviation, damage, or potential damage;

(b) An order to stop all work connected with the violation, deviation, damage, or potential damage;

(c) The specific course of action needed to correct such violation or deviation or to prevent damage and to correct and/or compensate for damage to public resources which has resulted from any violation, unauthorized deviation, or willful or negligent disregard for potential damage to a public resource. The stop work order shall also set forth those courses of action necessary to prevent continuing damage to public resources where the damage is resulting from the forest practice activities but has not resulted from any violation, unauthorized deviation, or negligence. If the stop work order involves a condition imposed pursuant to WAC 222-20-040(3), then the specific course of action ordered by the department shall include a requirement that the operator obtain approval of the local government entity of the action to be taken.

(d) The stop work order shall also set forth the right of the operator to a hearing before the appeals board.

(3) The department shall immediately file a copy of such order with the appeals board and mail a copy thereof to the timber owner and forest landowner at the addresses shown on the application. The department shall also mail a copy to the local government entity if a condition imposed pursuant to WAC 222-20-040(3) is involved.

(4) The operator, timber owner, or forest landowner may commence an appeal to the appeals board within fifteen days after service upon the operator. If such appeal is commenced, a hearing shall be held not more than twenty days after copies of the notice of appeal were filed with the appeals board. Such proceeding shall be a contested case within the meaning of chapter 34.05 RCW.

(5) The operator shall comply with the order of the department immediately upon being served, but the appeals board if requested shall have authority to continue or discontinue in whole or in part the order of the department under such conditions as it may impose pending the outcome of the proceeding.

AMENDATORY SECTION (Amending Order 263, filed 6/16/76)

WAC 222-50-010 Policy. A major policy of the Forest Practices Act and the board is to work toward a comprehensive, statewide system of laws and ((~~regulations~~)) rules for

forest practices which avoids unnecessary duplication and provides for interagency input and cooperation to the extent that can be accomplished without interfering with the authority of the affected federal, state, regional and local agencies.

AMENDATORY SECTION (Amending WSR 97-24-091, filed 12/3/97, effective 1/3/98)

WAC 222-50-020 Other agency requirements. (1) Many other laws and ~~((regulations))~~ rules apply to the conduct of forest practices. Other agencies administer some of these other regulatory programs. Permits may be required by such agencies prior to the conduct of certain forest practices. The department will maintain a list for distribution of state, regional and local regulatory programs that apply to forest practice operations. Affected parties are urged to consult with the specified agencies and independent experts with respect to the regulatory requirements shown on the list.

(2) **Hydraulics project approval law, chapter 77.55 RCW (~~(75-20-100))~~**. A hydraulics project approval must be obtained from the department of fish and wildlife prior to constructing any form of hydraulic project or other work that will use, divert, obstruct, or change the natural flow or bed of any river or stream or that will utilize any of the waters of the state or materials from the stream beds. See chapter 77.55 RCW (~~(75-20-100))~~ and WAC 232-14-010.

***~~(3)~~ Compliance with the Shoreline Management Act, chapter 90.58 RCW, is required.** The Shoreline Management Act is implemented by the department of ecology and the applicable local governmental entity. A substantial development permit must be obtained prior to conducting forest practices which are "substantial developments" within the "shoreline" area as those terms are defined by the Shoreline Management Act.

(4) Nothing in these ~~((regulations))~~ rules is intended to interfere with any authority of the department of fish and wildlife to protect wildlife under any other statutes or regulations, or under any agreements with landowners.

(5) Federal Endangered Species Act, 16 U.S.C. 1531 et seq., and other federal laws. The federal Endangered Species Act and other federal laws may impose certain obligations on persons conducting forest practices. Compliance with the Forest Practices Act or these rules does not ensure compliance with the Endangered Species Act or other federal laws.

AMENDATORY SECTION (Amending WSR 91-23-052, filed 11/15/91, effective 12/16/91)

WAC 222-50-030 Interagency agreements. The board recommends that the department negotiate interagency agreements with other governmental agencies. The board further recommends that such agreements include, to the extent acceptable to the other agency, provisions specifying:

- (1) **The law and ~~((regulations))~~ rules** covered;
- (2) **Any geographical** or other limits on the authority and responsibility under the agreement;
- (3) **Priorities** and standards for resolution of any conflicts between such laws and regulations and the act and these ~~((regulations))~~ rules;

(4) **Procedures** for administrative appeals of actions taken;

(5) **Provisions for** continuing cooperation between the department and the other agency or agencies regarding interpretation of the laws and regulations involved;

(6) **Procedures for** termination of the interagency agreement; and

(7) **Procedures for** processing applications and notifications.

The department is directed to provide copies of all such agreements to the board, and to make known to the public that such interagency agreements exist.

AMENDATORY SECTION (Amending Order 263, filed 6/16/76)

WAC 222-50-040 Safety and health. The forest practices ~~((regulations))~~ rules contained in chapters 222-24 through 222-38 WAC are automatically superseded to the extent inconsistent with any applicable safety regulations, or with any orders or directives having the force of law and based on any applicable safety regulations, including:

(1) **Chapter 296-54 WAC** (safety standards for logging operations, department of labor and industry's division of safety).

(2) **Chapter 296-24 WAC** (general safety and health standards, department of labor and industry's division of safety).

(3) **All applicable** Federal Occupational Safety and Health Administration regulations.

(4) **Regarding aircraft**, chapters 12-24, 12-28, and 12-32 WAC (Washington aeronautics commission).

(5) **Regarding explosives**, chapter 296-52 WAC (department of labor and industry) and all applicable federal regulations.

(6) **Regarding chemicals**, chapter 16-228 WAC (department of agriculture) and all applicable federal regulations.

(7) **All applicable** state and local sanitation regulations relating to municipal watersheds and sources of domestic water supply.

In such cases of conflict, the department is authorized to seek from other agencies such waivers or modifications in the applicable safety and health regulations as may be necessary for the department to be able to fully enforce the forest practices ~~((regulations))~~ rules contained in chapters 222-24 through 222-38 WAC.

Applicants are cautioned that there may be additional safety and health laws and regulations that may be applicable in addition to those specifically listed above.

AMENDATORY SECTION (Amending Order 263, filed 6/16/76)

WAC 222-50-050 Forest fire prevention and suppression. All laws and ~~((regulations))~~ rules relating to forest fire prevention and suppression apply in addition to these forest practices ~~((regulations))~~ rules and, in cases of conflict,

supersede the forest practices ((regulations)) rules contained in chapters 222-24 through 222-38 WAC.

AMENDATORY SECTION (Amending Resolution No. 82-1), filed 8/3/82, effective 10/1/82)

WAC 222-50-060 Other regulatory programs administered by the department. The board recommends that, to the extent permitted by law and when necessary the department adopt ((regulations)) rules and policies under which approved applications and notifications can serve to eliminate or reduce the need for separate permits and approvals under regulatory programs administered by the department (such as the power driven machinery permits, RCW 76.04.275, dumping mill waste and forest debris permit, RCW 76.04.242, and surface mining permits, chapter 78.44 RCW) as applied to forest practices. The department is directed to notify the public of the existence of such ((regulations)) rules and policies.

WSR 01-12-047
PERMANENT RULES
DEPARTMENT OF
SOCIAL AND HEALTH SERVICES
 (Health and Rehabilitative Services)
 [Filed May 31, 2001, 2:58 p.m.]

Date of Adoption: May 30, 2001.

Purpose: Chapter 388-865 WAC, Community mental health programs: Integration of administrative rules to be consistent with an integrated mental health system; streamlining rules by eliminating duplication and inconsistency between the rules and waivers/contracts; implementation of changes in chapter 71.05, 71.24 and 71.34 RCW; incorporates department policies; and incorporates some federal Medicaid requirements into rule.

Citation of Existing Rules Affected by this Order: Repealing chapter 388-860 WAC, Juvenile involuntary treatment, WAC 388-860-010 Purpose, 388-860-020 Definitions, 388-860-030 Application for admission—Voluntary minor, 388-860-040 Emergency detention, 388-860-050 Investigation and involuntary detention, 388-860-060 Fourteen-day commitment petition, 388-860-070 Fourteen-day commitment—Hearing, 388-860-080 One hundred eighty-day petition, hearing, and commitment, 388-860-090 Detention and commitment after eighteenth birthday, 388-860-100 Transfer from juvenile correctional institutions, 388-860-110 Conditional release or early discharge, 388-860-120 Release of voluntary/involuntary minors to the custody of parents, 388-860-130 Elopement of minors, 388-860-140 Long-term placement—Designated placement committee, 388-860-150 Revocation of a less-restrictive alternative treatment or conditional release, 388-860-160 Requirements for certifying evaluation and treatment components for minors, 388-860-170 Certification standards for evaluation and treatment program for minors, 388-860-180 Outpatient component, 388-860-190 Emergency component, 388-860-200 Inpatient component, 388-860-210 Certification procedure—Waiv-

ers—Provisional certification—Renewal of certification, 388-860-220 Decertification, 388-860-230 Appeal procedure, 388-860-240 Involuntary evaluation and treatment costs—Seventy-two hour detention/fourteen-day commitments, 388-860-250 Involuntary evaluation and treatment costs—One hundred eighty-day commitments, 388-860-260 Involuntary treatment program administration costs—Seventy-two hour/fourteen-day commitment, 388-860-270 Involuntary treatment program transportation costs, 388-860-280 Involuntary treatment program—Legal costs, 388-860-290 Patient rights, 388-860-300 Confidentiality, 388-860-310 Confidentiality of court proceeding records, 388-860-315 Mental health service provider license and certification fees, 388-860-316 Fee payment and refunds and 388-860-317 Denial, revocation, suspension, and reinstatement; chapter 388-861 WAC, Voluntary admission—Involuntary commitment, treatment and/or evaluation of mentally ill persons, WAC 388-861-010 Purpose, 388-861-020 Definitions, 388-861-030 Private agencies which may admit voluntary patients, 388-861-040 Voluntary admission to public or private agency—Voluntary adult, 388-861-081 Periodic review—Voluntary inpatient, 388-861-090 Limitation on length of stay—Readmission voluntary patients, 388-861-110 Discharge of voluntary patient—Release of clinical summary, 388-861-115 Transfer of a patient between state-operated facilities for persons with mental illness, 388-861-131 Nonadmission of involuntarily detained person—Transportation, 388-861-141 Protection of patient's property—Involuntary patient, 388-861-151 Evaluation and examination—Involuntary patient, 388-861-161 Treatment prior to hearings—Involuntary patient, 388-861-171 Early release or discharge of involuntary patient—Release of clinical summary—Notification of court, 388-861-181 Conditional release—Involuntary patient, 388-861-191 Revocation of conditional release—Secretary's designee—Involuntary patient, 388-861-201 Discharge of indigent patient—Involuntary patient, 388-861-211 Advising patient of rights, 388-861-221 Restoration procedure for a former involuntarily committed person's right to firearm possession, 388-861-231 Conversion to voluntary status by involuntary patient—Rights, 388-861-241 Rights of patient, 388-861-261 Requirements for certifying evaluation and treatment components, 388-861-263 Certification standards for evaluation and treatment program, 388-861-271 Outpatient component, 388-861-281 Emergency component, 388-861-291 Short-term inpatient component, 388-861-293 Certification procedure—Waivers—Provisional certification—Renewal of certification, 388-861-295 Decertification, 388-861-297 Appeal procedure, 388-861-301 Alternatives to inpatient treatment, 388-861-341 Use of restraints and seclusion by agency not certified as an evaluation and treatment facility, 388-861-351 Research, 388-861-361 Involuntary evaluation and treatment costs—Responsibility of involuntary patient, 388-861-363 Involuntary evaluation and treatment costs—Collection by agency, 388-861-365 Involuntary evaluation and treatment costs—Responsibility of county, 388-861-367 Involuntary evaluation and treatment costs—Responsibility of department, 388-861-371 Exceptions to rules—Waivers, 388-861-400 Mental health service provider license and certification fees, 388-861-401 Fee payment and refunds and 388-861-

PERMANENT

**WSR 01-12-070
PERMANENT RULES
DEPARTMENT OF
SOCIAL AND HEALTH SERVICES**

(Medical Assistance Administration)

[Filed June 4, 2001, 4:19 p.m.]

Date of Adoption: June 1, 2001.

Purpose: WAC 388-501-0050 Medical and dental general coverage, to explain the criteria for determining if services, equipment, and supplies are covered by the Medical Assistance Administration.

Citation of Existing Rules Affected by this Order: Amending WAC 388-501-0050.

Statutory Authority for Adoption: RCW 74.08.090.

Adopted under notice filed as WSR 00-23-051 on November 13, 2000.

Changes Other than Editing from Proposed to Adopted Version: The following changes to the rule text, illustrated by ~~strikeout~~ and underline, were made since the rule was proposed on November 13, 2000:

(1) Covered Services

(a) Covered services are:

(i) Medical and dental services, equipment, and supplies that are within the scope of the eligible client's medical assistance program (see chapter 388-529 WAC) and listed as covered in MAA rules, ~~billing instructions, or numbered memoranda;~~ and

(ii) Determined by ~~MAA~~ to be medically necessary as defined in WAC 388-500-0005 or dentally necessary as defined in WAC 388-535-0150.

(b) Providers must obtain prior authorization (PA) or expedited prior authorization (EPA) when required by ~~WAC, billing instructions, or numbered memoranda~~ MAA

(i) See WAC 388-501-0165 for the ~~prior authorization (PA) process.~~

(ii) The EPA process is designed to eliminate the need for written and telephonic requests for prior authorization for selected services and procedure codes. MAA requires a provider to create an authorization number for EPA for selected procedure codes, using the process explained in the billing instructions for the specific service or program. See MAA

PERMANENT

billing instructions for specific criteria for the expedited prior authorization (EPA) process.

(iii) See chapter 388-538 WAC for managed care requirements.

(c) Covered services are subject to the limitations specified by ~~WAC, billing instructions, or numbered memoranda MAA~~. Providers must obtain ~~prior authorization PA or expedited prior authorization EPA~~ before providing services that exceed the specified limit (quantity, frequency or duration). This is known as a limitation extension.

(i) See WAC 388-501-0165 ~~for specific criteria for the prior authorization (PA) process.~~

(ii) The EPA process is designed to eliminate the need for written and telephonic requests for prior authorization for selected services and procedure codes. MAA requires a provider to create an authorization number for EPA for selected procedure codes, using the process explained in the billing instructions for the specific service or program. See MAA billing instructions for the expedited prior authorization (EPA) process.

(iii) See chapter 388-538 WAC for managed care requirements.

(d) MAA does not reimburse for covered services, equipment or supplies that are:

(i) ~~That are included in a DSHS waived program, e.g., COPES; or~~

(ii) ~~For an MAA client who is Medicare-eligible, if:~~

(A) ~~The services, equipment or supplies are covered under Medicare; and~~

(B) ~~Medicare has not made a determination on the claim or has not been billed by the provider Part of one of the Medicare programs for qualified Medicare beneficiaries.~~

(2) Noncovered Services

(a) MAA does not cover services, equipment or supplies to which any of the following apply:

(i) The service or equipment is not included as a covered service in the state plan;

(ii) Federal or state laws or regulations prohibit coverage;

(iii) The service or equipment is considered experimental or investigational by the Food and Drug Administration or the Health Care Financing Administration; or

(iv) MAA rules, ~~billing instructions, or numbered memoranda~~ do not list the service or equipment as covered.

(b) ~~If a noncovered service, equipment or supply is required under the EPSDT/Healthy Kids program, it will be reviewed for medical necessity as a covered service. MAA reviews all initial requests for noncovered services based on WAC 388-501-0165.~~

(c) MAA reviews all initial requests for noncovered services based on WAC 388-501-0165. If a noncovered service, equipment or supply is prescribed under the EPSDT program, it will be evaluated as a covered service and reviewed for medical necessity.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 0, Amended 1, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 1, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 1, Repealed 0.

Effective Date of Rule: Thirty-one days after filing.

June 1, 2001

Brian H. Lindgren, Manager
Rules and Policies Assistance Unit

AMENDATORY SECTION (Amending WSR 00-01-088, filed 12/14/99, effective 1/14/00)

WAC 388-501-0050 Medical ((services requiring approval)) and dental general coverage. All medical and dental services ((that are provided to clients of medical care programs are subject to review and approval for reimbursement by the)), equipment, and supplies provided to medical assistance administration (MAA) clients are subject to review, before or after payment has been made. MAA may deny or recover reimbursement for such services, equipment, and supplies based on these reviews.

(1) Covered Services

(a) Covered services are:

(i) Medical and dental services, equipment, and supplies that are within the scope of the eligible client's medical assistance program (see chapter 388-529 WAC) and listed as covered in MAA rules; and

(ii) Determined to be medically necessary as defined in WAC 388-500-0005 or dentally necessary as defined in WAC 388-535-0150.

(b) Providers must obtain prior authorization (PA) or expedited prior authorization (EPA) when required by MAA.

(i) See WAC 388-501-0165 for the PA process.

(ii) The EPA process is designed to eliminate the need for written and telephonic requests for prior authorization for selected services and procedure codes. MAA requires a provider to create an authorization number for EPA for selected procedure codes, using the process explained in the billing instructions for the specific service or program.

(iii) See chapter 388-538 WAC for managed care requirements.

(c) Covered services are subject to the limitations specified by MAA. Providers must obtain PA or EPA before providing services that exceed the specified limit (quantity, frequency or duration). This is known as a limitation extension.

(i) See WAC 388-501-0165 for the PA process.

(ii) The EPA process is designed to eliminate the need for written and telephonic requests for prior authorization for selected services and procedure codes. MAA requires a provider to create an authorization number for EPA for selected procedure codes, using the process explained in the billing instructions for the specific service or program.

(iii) See chapter 388-538 WAC for managed care requirements.

(d) MAA does not reimburse for covered services, equipment or supplies:

(i) That are included in a DSHS waived program; or

(ii) For a MAA client who is Medicare-eligible if:

(A) The services, equipment or supplies are covered under Medicare; and

(B) Medicare has not made a determination on the claim or has not been billed by the provider.

(2) Noncovered services

(a) MAA does not cover services, equipment or supplies to which any of the following apply:

(i) The service or equipment is not included as a covered service in the state plan;

(ii) Federal or state laws or regulations prohibit coverage;

(iii) The service or equipment is considered experimental or investigational by the Food and Drug Administration or the Health Care Financing Administration; or

(iv) MAA rules do not list the service or equipment as covered.

(b) MAA reviews all initial requests for noncovered services based on WAC 388-501-0165.

(c) If a noncovered service, equipment or supply is prescribed under the EPSDT program, it will be evaluated as a covered service and reviewed for medical necessity.

WSR 01-12-071

PERMANENT RULES

DEPARTMENT OF

SOCIAL AND HEALTH SERVICES

(Finance Division)

[Filed June 4, 2001, 4:21 p.m.]

Date of Adoption: May 30, 2001.

Purpose: Chapter 388-05 WAC, Contractor billing requirements—General, to limit the time vendors and providers can submit billing invoices to DSHS for payment. Vendors and providers would have no more than twelve months from the time a good or service was provided in which to bill the department.

Statutory Authority for Adoption: RCW 43.17.060.

Adopted under notice filed as WSR 01-08-077 on April 3, 2001.

Changes Other than Editing from Proposed to Adopted Version: Changes were made to WAC 388-05-0005 to clarify that this rule does not supercede WAC 388-502-0150. Language was added to WAC 388-05-0010 to allow for exceptions under certain circumstances.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 3, Amended 0, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 3, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 3, Amended 0, Repealed 0.

Effective Date of Rule: Thirty-one days after filing.

May 30, 2001

Brian H. Lindgren, Manager
Rules and Policies Assistance Unit

Chapter 388-05 WAC

CONTRACTOR BILLING REQUIREMENTS—GENERAL

NEW SECTION

WAC 388-05-0001 What is the purpose of this chapter? The purpose of this chapter is to establish general procedures for contractors to follow when submitting claims for payment to the department of social and health services. Additional requirements may also apply.

NEW SECTION

WAC 388-05-0005 What contracts does this chapter apply to? This chapter applies to all contracts for personal or client services as defined in chapter 39.29 RCW and to all interlocal agreements governed by chapter 39.34 RCW. This chapter does not supersede WAC 388-502-0150 titled Time Limits for Providers to Bill Medical Assistance Administration (MAA).

NEW SECTION

WAC 388-05-0010 How soon does a contractor have to submit claims for payment to the department after the services are rendered? Each contractor who is rendering authorized services to the department or its clients shall submit claims for payment, as agreed upon between the department and the contractor, no later than twelve months after the date of service. If the claims for payment are not presented within the twelve-month period there shall not be a charge against the state. The twelve-month period may be shortened by contract or regulation. The twelve-month period may be extended by contract or regulation, but only if required by applicable state or federal law or regulation. The department may grant exceptions to the twelve-month period for initial claims when billing delays are caused by either of the following:

(a) The department's certification or authorization of services for a client for a retroactive period; or

(b) The provider proves to the department's satisfaction that there are other extenuating circumstances.

This provision shall apply to all claims for payment submitted on or after the effective date.

WSR 01-12-072
PERMANENT RULES
DEPARTMENT OF
SOCIAL AND HEALTH SERVICES
(Medical Assistance Administration)
[Filed June 4, 2001, 4:24 p.m.]

Date of Adoption: June 1, 2001.

Purpose: The department recently reorganized its rules, establishing new chapters for several program and services. WAC 388-501-0300(2) lists services, equipment, supplies, and items that are now codified primarily in new chapters 388-543 and 388-531 WAC. In order to avoid unnecessary duplication, the department is amending WAC 388-501-0300 to eliminate the list in (2), clarify the remaining policies, and add cross-references to WAC 388-501-0165.

Citation of Existing Rules Affected by this Order:
Amending WAC 388-501-0300.

Statutory Authority for Adoption: RCW 74.08.090.

Adopted under notice filed as WSR 01-09-037 on April 11, 2001.

Changes Other than Editing from Proposed to Adopted Version: (1) The Medical Assistance Administration (MAA) pays only for equipment, supplies, and services that are listed as covered in MAA published issuances, including Washington Administrative Code (WAC)...

(2) Pursuant to WAC 388-501-0165, MAA covers equipment, supplies, or services that are listed as noncovered when the equipment, supplies, or services are medically necessary justified and: (a) Required Requested under the EPSDT/healthy kids program; or (b) included in an MAA waived program; or (c) Part of one of the medical assistance programs for Qualified Medicare beneficiaries (QMBs).

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 0, Amended 1, Repealed 0.

AMENDATORY SECTION (Amending Order 3599 [WSR 00-23-052], filed 11/13/00, effective 12/14/00)

WAC 388-501-0300 Limits on scope of medical program services. (1) The medical assistance administration (MAA) ~~((shall pay))~~ pays only for equipment, supplies, and services that are listed as covered in MAA ~~((published issuances, including))~~ Washington Administrative Code (WAC), ~~((billing instructions, numbered memoranda, and bulletins, and))~~ when the items or services are:

(a) Within the scope of an eligible client's medical care program;

(b) Medically necessary as defined in WAC 388-500-0005;

(c) Billed according to the requirements in WAC 388-502-0100, 388-502-0110, and 388-502-0150; and

(d) Within accepted medical, dental, or psychiatric practice standards and are:

(i) Consistent with a diagnosis; and

(ii) Reasonable in amount and duration of care, treatment, or service.

~~((d) Not listed under subsection (2) of this section; and~~

~~((e) Billed according to the conditions of payment under WAC 388-87-010.~~

~~(2) Unless required under EPSDT/healthy kids program; included as part of a managed care plan service package; included in a waived program; or part of one of the Medicare programs for the qualified Medicare beneficiaries, the MAA shall specifically exclude from the scope of covered services:~~

~~(a) Nonmedical equipment, supplies, personal or comfort items and/or services, including, but not limited to:~~

~~(i) Air conditioners or air cleaner devices, dehumidifiers, other environmental control devices, heating pads;~~

~~(ii) Enuresis (bed wetting) training equipment;~~

~~(iii) Recliner and/or geri chairs;~~

~~(iv) Exercise equipment;~~

~~(v) Whirlpool baths;~~

~~(vi) Telephones, radio, television;~~

~~(vii) Any services connected to the telephone, television, or radio;~~

~~(viii) Homemaker services;~~

~~(ix) Utility bills; or~~

~~(x) Meals delivered to the home.~~

~~(b) Services, procedures, treatment, devices, drugs, or application of associated services which the department or HCFA consider investigative or experimental on the date the services are provided;~~

~~(c) Physical examinations or routine checkups;~~

~~(d) Cosmetic treatment or surgery, except for medically necessary reconstructive surgery to correct defects attributable to an accident, birth defect, or illness;~~

~~(e) Routine foot care that includes, but not limited to:~~

~~(i) Medically unnecessary treatment of mycotic disease;~~

~~(ii) Removal of warts, corns, or calluses;~~

~~(iii) Trimming of nails and other hygiene care; or~~

~~(iv) Treatment of asymptomatic flat feet.~~

~~(f) More costly services when less costly equally effective services as determined by the department are available;~~

PERMANENT RULES
DEPARTMENT OF
SOCIAL AND HEALTH SERVICES

(Medical Assistance Administration)

[Filed June 4, 2001, 4:26 p.m.]

Date of Adoption: June 1, 2001.

Purpose: These amendments implement the increased federal standards for the one-person medically needy income level, for the medically indigent program and the SSI-related categorically needy income level.

Citation of Existing Rules Affected by this Order: Amending WAC 388-478-0070 and 388-478-0080.

Statutory Authority for Adoption: RCW 74.04.050, 74.04.057, 74.08.090, and 74.09.500.

Other Authority: Section 1924 (42 U.S.C. 1396R-5).

Adopted under notice filed as WSR 01-09-068 on April 16, 2001.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 2, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 0, Amended 0, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 2, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 2, Repealed 0.

Effective Date of Rule: Thirty-one days after filing.

June 1, 2001

Brian H. Lindgren, Manager
Rules and Policies Assistance Unit

AMENDATORY SECTION (Amending WSR 00-10-095, filed 5/2/00, effective 5/2/00)

WAC 388-478-0070 Monthly income and countable resource standards for medically needy (MN) and medically indigent (MI) programs. (1) Beginning January 1, ~~(2000)~~ 2001, the medically needy income level (MNIL) and MI monthly income standards are as follows:

(a) One person	\$ ((539)) 556.00
(b) Two persons	\$592
(c) Three persons	\$667
(d) Four persons	\$742
(e) Five persons	\$858
(f) Six persons	\$975
(g) Seven persons	\$1,125
(h) Eight persons	\$1,242

~~(g) Procedures, treatment, prosthetics, or supplies related to gender dysphoria surgery except when recommended after a multidisciplinary evaluation including but not limited to urology, endocrinology, and psychiatry;~~

~~(h) Care, testing, or treatment of infertility, frigidity, or impotency. This includes procedures for sterilization reversals and donor ovum, sperm, or womb;~~

~~(i) Acupuncture, massage, or massage therapy;~~

~~(j) Orthoptic eye training therapy;~~

~~(k) Weight reduction and control services not provided in conjunction with a MAA medically approved program. This includes food supplements and educational products;~~

~~(l) Parts of the body, including organs, tissues, bones, and blood;~~

~~(m) Blood and eye bank charges;~~

~~(n) Domiciliary or custodial care, excluding nursing facility care;~~

~~(o) Hair pieces, wigs, or hair transplantation;~~

~~(p) Biofeedback or other self-help care;~~

~~(q) Marital counseling or sex therapy;~~

~~(r) Any service specifically excluded by statute; and~~

~~(s) Home births, except when provided as an approved service under MAA's planned home birth pilot project.~~

~~(3) Clients shall be responsible for payment as described under WAC 388-87-010 for services not covered under the client's medical care program))~~

(2) Pursuant to WAC 388-501-0165, MAA covers equipment, supplies, or services that are listed as noncovered when the equipment, supplies, or services are medically necessary and:

(a) Requested under the EPSDT program; or

(b) Included in an MAA waived program.

(3) When a client or a client's representative requests equipment, supplies, or services that are listed as noncovered, MAA evaluates the request under WAC 388-501-0165.

(4) MAA evaluates requests for covered equipment, supplies, or services that are subject to limitations or other restrictions, and approves such equipment, supplies, or services beyond those limitations or restrictions when medically necessary, under the standards for covered services in WAC 388-501-0165.

(5) MAA evaluates a request for a service that is in a covered category, but is determined to be experimental or investigational under WAC 388-531-0550, under the provisions of WAC 388-501-0165 which relate to medical necessity.

(6) Clients are responsible for payment as described under WAC 388-502-0160, for services that are not covered under the client's medical care program.

Reviser's note: The bracketed material preceding the section above was supplied by the code reviser's office.

PERMANENT

- (i) Nine persons \$1,358
- (j) Ten persons and more \$1,483

(2) The MNIL standard for a person who meets institutional status requirements is in WAC 388-513-1305(3).

(3) Countable resource standards for the MN and MI programs are:

- (a) One person \$2,000
- (b) Two persons \$3,000
- (c) For each additional family member add \$50

AMENDATORY SECTION (Amending WSR 00-10-095, filed 5/2/00, effective 5/2/00)

WAC 388-478-0080 SSI-related categorically needy income level (CNIL) and countable resource standards.

(1) The SSI-related CNIL standard is the same as the SSI monthly payment standard based upon the area of the state where the person lives. Area 1 is defined as the following counties: King, Pierce, Snohomish, Thurston, and Kitsap. Area 2 is all other counties. Beginning January 1, ~~((2000))~~ 2001, the CNIL monthly income standards are as follows:

	Area 1	Area 2
(a) Single person	\$(539.00) <u>555.90</u>	\$(518.55) <u>535.45</u>
(b) A legally married couple who are both eligible	\$(790.00) <u>815.90</u>	\$(769.00) <u>796.00</u>
(c) Supplied shelter	<u>\$357.05</u>	<u>\$357.05</u>

(2) The countable resource standards for the SSI-related CN medical program are:

- (a) One person \$2,000
- (b) A legally married couple \$3,000

WSR 01-12-079
PERMANENT RULES
DEPARTMENT OF AGRICULTURE

[Filed June 5, 2001, 12:59 p.m.]

Date of Adoption: June 1, 2001.

Purpose: WAC 16-403-141, to establish a permanent general harvest release date for Golden Delicious varieties of apples; WAC 16-403-143, to establish a permanent general harvest release date for Granny Smith variety of apples; and WAC 16-403-220, to establish a crop year marking requirement on all apple cartons.

Citation of Existing Rules Affected by this Order: Chapter 16-403 WAC, Standards for apples marketed within the state of Washington; amending WAC 16-403-141, 16-403-143, and 16-403-220.

Statutory Authority for Adoption: Chapter 15.17 RCW.

Adopted under notice filed as WSR 01-08-068 on April 3, 2001.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 0, Amended 0, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 3, Repealed 0.

Effective Date of Rule: Thirty-one days after filing.

Jim Jesernig

Director

Chapter 16-403 WAC

**STANDARDS FOR APPLES MARKETED WITHIN
THE STATE OF WASHINGTON**

AMENDATORY SECTION (Amending WSR 99-14-036, filed 6/29/99, effective 7/30/99)

WAC 16-403-141 Red Delicious, Delicious, Golden Delicious—Minimum soluble solids. For harvest of the crop of the current growing season, apples of the Red Delicious and Delicious varieties cannot be shipped prior to October 1, unless they have at least ten percent soluble solids as determined by refractometer. Apples of the Golden Delicious varieties, cannot be shipped prior to ~~((the general release as established by the Delicious maturity committee of the Washington state horticultural association))~~ September 20 unless they have at least ten and one-half percent soluble solids as determined by refractometer.

AMENDATORY SECTION (Amending WSR 92-15-056, filed 7/13/92, effective 8/13/92)

WAC 16-403-143 Granny Smith—Starch-iodine requirements. ~~((Prior to the general release date))~~ For harvest of the crop of the current growing season, ~~((as established by the Delicious maturity committee of the Washington state horticultural association, shipment shall not be allowed of))~~ apples of the Granny Smith variety ~~((which fail to))~~ cannot be shipped prior to October 10 unless they meet the stage of maturity as indicated by starch-iodine rating of 1.2 on the Cascade Analytical Inc. chart: Provided, That any such lot of apples may be shipped if not more than ten percent of the apples tested fail to meet the 1.2 rating.

PERMANENT

AMENDATORY SECTION (Amending Order 5005, filed 8/30/93, effective 9/30/93)

WAC 16-403-220 Marking requirements—Open or closed containers. (1) The containers shall bear the correct name of the variety or "variety unknown," the name of the grower, packer, or distributor, and his address, the grade, the numerical count or the minimum diameter of apples packed in a closed container, and the net contents either in terms of dry measure or weight. The minimum weight of individual apples within the container may be stated in lieu of, in combination with, or in addition to, minimum diameter as a declaration of size. All open containers and consumer packages must bear statement of net weight or volume.

(a) When the numerical count is not shown, the minimum diameter or minimum weight of individual apples shall be plainly stamped, stenciled, or otherwise marked on the container in terms of whole inches, or whole inches and not less than eight inch fractions thereof or in terms of whole grams.

(b) When used in combination with minimum diameter as a size designation, the following minimum fruit weights shall be used:

Red Delicious	Golden Delicious
2 1/8 in. or 65 grams	63 grams
2 1/4 in. or 75 grams	70 grams
2 3/8 in. or 84 grams	82 grams
2 1/2 in. or 100 grams	95 grams
2 5/8 in. or 115 grams	109 grams
2 3/4 in. or 139 grams	134 grams

(c) The word "minimum," or its abbreviation, when following a diameter size or weight size marking, means that the apples are of the size marked or larger.

(2) Over-wrapped consumer units may be marked with count, if all specimens can be counted.

(3) Any of these marks may be placed on either the end or side of the container. (California requires end markings.)

(4) When containers are marked as to number, each container shall contain the correct number of apples designated by the markings.

(5) Grade markings on consumer-type packages must be at least one-fourth inch in height.

(6) Apples which were produced outside of the state of Washington and which are graded, packed, or repacked in the state of Washington, shall be correctly labeled as to the state or country of origin, e.g., "Product of Oregon," "Grown in Oregon," "Produced in Canada."

Such marking shall be placed on the same end or side panel of the container as other markings related to grade, variety, net contents, and name and address of the grower, packer, or distributor, and shall be of similar print size. Consumer type packages shall not be required to bear a statement as to origin when such marking has been placed on the master shipping container.

(7) Containers shall be marked with the harvest year beginning on October 1 of each year and be applied only to apples harvested in the previous year; that this marking shall

occur at the time of shipment; and be displayed on the principal display panel with letters of a minimum of one-half inch in height.

Fred Stephens

Director

AMENDATORY SECTION (Amending WSR 99-06-029, filed 2/24/99, effective 3/27/99)

WAC 308-96A-099 Use class descriptions. (1) Why does the department assign use classes to vehicles?

The department assigns use classes to:

(a) Assess the proper license fees and (~~excise tax~~) taxes for vehicles;

(b) Assign special brands on subsequent owner's certificate of ownership;

PERMANENT

- (c) Apply certain restrictions on the use of the vehicles, which prints on the vehicle registrations;
- (d) Assign the proper license plates.
- (2) Under what authority does the department assign use classes to vehicles?

The department assigns use classes under the authority of RCW 46.16.040.

(3) What use classes does the department assign and when do they apply?

The use classes the department assigns are described below:

PERMANENT

ABBREVIATION	TRANSLATION	DESCRIPTION
CAB	TAXI CAB	Vehicle is used for carrying passengers between two points for compensation for an on-demand trip rather than a scheduled route. A vehicle with this use class may not carry any luggage or commodities that do not belong to a passenger being carried at the same time. In other words, the vehicle cannot just carry cargo between two points.
C/G	CONVERTER GEAR	Vehicle is an axle that is used to convert a semi-trailer to a full trailer. A converter gear may be titled but may not be licensed.
CMB	COMBINATION	Vehicle is either (1) a power unit with a declared gross weight of 42,000 pounds or more and towing a trailer; or (2) a trailing unit with permanent plates. The trailer may be towed only by a power unit with a CMB use class, or FCB depending on what is being hauled.
CMP	CAMPER	Vehicle is a slide-in pickup camper (not a canopy) as defined in RCW 46.04.085. Even if the owner has chosen to permanently attach the camper to the pickup, the units need to be titled and licensed separately.
COM	COMMERCIAL	Vehicle is either (1) a power unit that does not pull a trailer or that pulls a trailer but the gross weight for the truck and trailer does not exceed 40,000 pounds; or (2) a trailing unit that is titled in a business name (including the name of a farm). A commercial trailer may be towed by a vehicle with PAS, TRK, COM, CMB, FAR or FCB use classes. If the trailer is being towed by a vehicle with FAR or FCB use class, the use of the trailer (items carried, etc.,) must meet the farm use class requirements.
CYC	MOTORCYCLE	Vehicle is a motorcycle, motor driven cycle or scooter. A moped does not qualify to be licensed as a motorcycle as defined in RCW 46.04.330 and 46.04.332.
EX	EXEMPT	Vehicle can be any type of vehicle, which is owned by a city, county or state government agency or federally recognized Indian tribe located in the state of Washington. This includes school buses, which are owned or leased by school districts. If the school district contracts a company to provide total bus service, such as the bus, the driver and the maintenance, and the vehicle is registered in the name of the school district as registered owner, the vehicle qualifies for exempt license plates.
FAR	FARM	Vehicle is a truck (or tractor) used to transport the farmer's own farm, orchard or dairy products as defined in RCW 46.16.090, or aquatic products as defined in RCW 15.85.020, from point of production to market or warehouse. The vehicle may also be used to transport the farmer's own farm supplies.
FCB	FARM COMBINATION	Vehicle is (1) a power unit (not a trailer) with a declared gross weight of 42,000 pounds or more and towing a trailer; and (2) meets the criteria of FAR use class above.
FED	FEDERAL	Vehicle is owned by the federal government of the United States. Like exempt vehicles, this could be any type of vehicle. This does not include vehicles displaying license plates issued by the federal government.
FEX	FARM EXEMPT	Vehicle is used exclusively in agricultural pursuits on farms as defined in RCW 46.16.010(3) and 46.04.181. The vehicle is usually a truck, but it could also be a bus, a motorcycle or off-road cycle.

ABBREVIATION	TRANSLATION	DESCRIPTION
FIX	FIXED LOAD	Vehicle as defined in RCW 46.16.070(1). These vehicles have a unique use class because they are exempt from the law, which requires vehicles with a scale weight of more than six thousand pounds to have a declared gross weight of at least 150 percent of the scale weight. The basic license fee is based on the declared gross weight, or the next two thousand pound increment above the scale weight, or the next two thousand pound increment above the legal maximum gross weight as determined by the Washington state patrol or department of transportation. Fixed load vehicles are the only ones whose gross weight may actually be less than their scale weight, depending on their legal maximum gross weight. An oversize permit is required in addition to the registration in these cases.
F/H	FOR HIRE	Vehicle is used to transport people and/or commodities for compensation as defined in RCW 46.72.010. A for hire permit from business and professions division (BPD) is required.
H/C	HORSELESS CARRIAGE	Vehicle is a motorized vehicle over 40 years old with limited use as defined in RCW 46.16.307. The vehicle may not be used for normal transportation to and from work, to go to the store and pick up groceries, and so on.
H/D	HOUSE DOLLY	Vehicle constructed and used exclusively to move buildings or homes.
LOG	LOGGING	Vehicle is a truck or trailer used exclusively for hauling logs.
MH	MOTOR HOME	Motorized vehicle designed for human habitation and defined in RCW 46.04.305
MOB	MOBILE HOME	Vehicle is a manufactured home as defined in RCW 46.04.302. Mobile homes are titled but generally not registered because of their size. Manufactured homes are taxed by the county, either as personal property or real property.
ORV	OFF-ROAD VEHICLE	Vehicle is used off-road. A vehicle licensed only as an ORV may not be operated on public roadways or ocean beaches.
PAS	PASSENGER	Vehicle is used to transport passengers as defined in RCW 46.04.382. Typically passenger cars, utility or multipurpose vehicles, passenger vans, and private busses are licensed as passenger vehicles.
PED	MOPED	Vehicle as defined in RCW 46.04.304 and subject to the restrictions in RCW 46.61.710.
PER	PERSONAL	Vehicle is a personal use trailer as defined in RCW 46.16.065. Trailers owned by businesses or used for commercial purposes do not qualify for this use class.
RES	RESTORED	Vehicle is a motorized collector vehicle over 30 years old with limited use as defined in RCW 46.16.307. The vehicle may display either a collector vehicle license plate provided by the department or a license plate, which must have been first issued, for use the year the vehicle was manufactured. The vehicle must be currently registered in order to be assigned this use class and receive a special collector license plate or authority to use a restored license plate.
SCH	SCHOOL	Vehicle is owned and operated by a private school meeting the accreditation requirements of RCW 28A.195.010. The vehicle is used to transport children to and from school or in connection with school activities.
SNO	SNOWMOBILE	Vehicle is a snowmobile as defined in RCW 46.10.020(2).
SNX	EXEMPT SNOWMOBILE	Vehicle is a snowmobile as defined in RCW 46.10.010(2) and owned by a city, county or state agency.
STA	STAGE	Vehicle is used as an auto stage as defined in RCW 46.04.050.

PERMANENT

ABBREVIATION	TRANSLATION	DESCRIPTION
TLR	TRAILER	Vehicle is a personal use trailer as defined in RCW 46.04.620 but does not meet the size criteria for a PER use class. Trailers used by businesses or others for commercial purposes do not qualify for this use class.
TOW	TOW	Vehicle is a tow truck as defined in RCW 46.16.079 and 46.55.010(8). If the vehicle carries other vehicles, it does not qualify for the TOW use class and must be licensed as COM.
TRK	TRUCK	Vehicle is a personal use, light duty truck, with a declared gross weight of twelve thousand pounds or less. Trucks used for business or commercial purposes do not qualify for the TRK use class.
TVL	TRAVEL TRAILER	Vehicle is a travel trailer as defined in RCW 46.04.623, which includes park models of four hundred square feet or less and camp/tent trailers. It is designed and manufactured for temporary habitation.

(4) What use classes may the department assign to specific types of vehicles?

Use classes are assigned as listed below:

VEHICLE TYPE	USE CLASS	SPECIAL REQUIREMENTS
PASSENGER CARS	CAB, COM, EX, FED, F/H, H/C, PAS, RES, ORV, FEX, STA	COM-Scale weight((<u>Statement of use</u>) <u>seating capacity required for F/H and STA-Scale weight, ((Number of) if more than six seats</u>
LIGHT DUTY TRUCKS (INCLUDING SMALL VANS)	COM, EX, FAR, FED, FEX, H/C, RES, STA, TOW, TRK, FIX, F/H, ORV	F/H and STA-Number of seats All use classes-Scale weight
MEDIUM/HEAVY DUTY TRUCKS (INCLUDING BUSES)	CMB, COM, EX, FAR, FCB, FEX, FIX, LOG, SCH, TOW, TRK, FED, H/C, RES, F/H	F/H and STA-Number of seats All use classes-Scale weight
TRAILERS	C/G, CMB, COM, EX, FEX, LOG, PER, TLR, FED	PER-Number of wheels All use classes-Scale weight
CYCLES		
MOTORCYCLES	CYC, EX, FED, FEX, H/C, ORV, RES	
MOPEDS	EX, FED, FEX, ORV, PED	
SNOWMOBILES	SNO, SNX	
UTILITY/MULTIPURPOSE VEHICLES	CAB, COM, EX, FED, F/H, PAS, STA, TRK, FAR, FEX, H/C, ORV, RES, SCH	COM, F/H, STA, TRK, FAR and FEX-Scale weight F/H and STA-Number of seats
RECREATION VEHICLES		
TRAVEL TRAILERS (INCLUDING CAMP AND TENT TRAILERS)	EX, FED, TVL	
CAMPERS	CMP, EX, FED	
MOTOR HOMES	EX, FED, MH	
NOTE: Gross weight and seat requirements per RCW 46.16.040.		

(5) Do all powered three-wheeled vehicles need to be licensed as motorcycles?

No. If the vehicle qualifies as a motorcycle as defined in RCW 46.04.330 or 46.04.332, it will be licensed as a motorcycle for street use. However, if the vehicle has a bench seat and a steering wheel as defined in RCW 46.04.330 or 46.04.332, it will be licensed as a passenger vehicle or truck.

(6) What license plates and use class will be assigned to my for hire vehicle?

The license plates and use class assigned to your for hire vehicle depends upon how you use your vehicle. All for hire

vehicles transport passengers and commodities for compensation. For hire vehicles include cabulances, limousines, taxi cabs, and busses hauling passengers for compensation in addition to transporting school children. There are two use classes and license plate combinations assigned to for hire vehicles:

(a) CAB use class vehicles are assigned passenger license plates. These vehicles are used exclusively for transporting passengers and their possessions; and

(b) F/H use class vehicles are assigned truck license plates. These vehicles not only transport passengers for com-

PERMANENT

pensation, but also transport commodities, without passengers, for compensation.

(7) When may truck license plates be assigned to my passenger vehicle?

Truck license plates may be assigned to your passenger vehicle whenever the vehicle is used to transport commodities, produce, freight or animals for commercial purposes. The use class would be COM instead of PAS. This would require a title application, a scale weight slip and a certified/notarized statement of use describing how the vehicle will be used commercially.

(8) When may passenger license plates be assigned to my pick-up truck?

Passenger license plates may only be assigned to your pick-up truck if it has been modified to qualify as a passenger vehicle. The department requires confirmation from the Washington state patrol that the vehicle has been modified to qualify for passenger use.

(9) What use classes and license plates will be assigned to school buses?

(a) EX use class and county exempt license plates will be assigned to a school bus owned or leased by an exempt agency (school district);

(b) SCH use class and passenger license plates will be assigned to a school bus owned or leased by an accredited private school; or

(c) F/H use class and truck license plates will be assigned to school buses used for transporting passengers for compensation and not used exclusively for transporting school children to and from school or school related activities.

(10) May I license my motorcycle or any other motor vehicle for both road and off road use?

Yes, you may license your motorcycle or any other motor vehicle for both uses as long as the vehicle qualifies for road use. You will receive two registration certificates showing the vehicle is licensed for both uses. However, the certificate of ownership will show the use class associated with the road use.

(11) May I license my amphibious vehicle as a vehicle and a vessel?

Yes, you may license your amphibious vehicle for both uses as long as it qualifies for both uses. You will receive two registration certificates showing the vehicle is licensed for both uses. However, the certificate of ownership will show the use class associated with the road use.

(12) May I license my truck, truck tractor or tractor as a motor home?

Yes, you may license your truck, truck tractor or tractor as a motor home if:

(a) The vehicle meets the definition of a motor home in RCW 46.04.305; and

(b) You provide a Washington state patrol inspection confirming your vehicle may be licensed as a motor home; and

(c) You certify the vehicle will be used exclusively as a motor home and is not used for commercial use.

(13) Is my truck, truck tractor or tractor which I use exclusively for towing my travel trailer licensed differently than any other like truck?

No. Your truck, truck tractor or tractor used exclusively for towing your travel trailer must be licensed in accordance with RCW 46.16.070. Depending on scale weight the use class will be TRK or COM.

AMENDATORY SECTION (Amending WSR 99-06-029, filed 2/24/99, effective 3/27/99)

WAC 308-96A-145 Cab and chassis. (1) What is a cab and chassis?

A cab and chassis is an incomplete truck shipped from the manufacturer. The customer chooses the type of bed to be installed.

(2) Will the department issue a certificate of ownership for my cab and chassis?

Yes. However, because the cab and chassis is an incomplete vehicle, when the body or special equipment has been installed you must apply for a new certificate of ownership to reflect the correct series and body type, scale weight and the completed vehicle's new value.

(3) Will the department issue a certificate of registration for my cab and chassis?

Yes, if you intend to use the vehicle on the public highways. The gross weight will be limited to one hundred fifty percent of the scale weight. Gross weight is rounded up to the nearest two thousand pound increment and may not be increased until the certificate of ownership is corrected to reflect the completed vehicle information.

(4) What do I need to provide the department when my cab and chassis has been converted to a complete vehicle and I am applying for a new license and certificate of ownership?

Whether you titled the cab and chassis or waited until the vehicle was completed before titling, you need to provide the department with the following before you use the completed vehicle on the public highways:

(a) Proof of ownership for the cab and chassis;

(b) Proof of ownership for the equipment installed to make it a complete vehicle;

(c) A weight slip from a certified scale;

(d) Proof or payment of sales or use tax on the equipment installed to make a complete vehicle; and

(e) Applicable fees and ~~((excise tax))~~ taxes for any increased value of the completed vehicle.

AMENDATORY SECTION (Amending WSR 99-01-133, filed 12/21/98, effective 1/21/99)

WAC 308-96A-202 Power units towing trailers with permanent registrations. (1) What determines if I pay the higher gross weight fees ~~((and additional excise tax on my power unit))~~?

If the declared gross weight of the power unit exceeds forty thousand((s)) pounds AND the power unit will be towing a trailer, the power unit must be licensed with a combina-

PERMANENT

tion (CMB) or farm combination (FCB) use class. This results in higher gross weight fees (~~and excise tax~~).

(2) How do I change to a CMB or FCB use class during the registration year?

If you choose to change the use class of your power unit during the registration year, you will need to:

(a) ~~((Pay the additional excise tax for the remaining months of the registration year;~~

(b)) Pay the additional gross weight fees for the remaining months of the gross weight license period currently in effect; and

((e)) (b) Immediately attach the combination decals between the lower boltholes on the front and rear license plates.

If the license plates were issued prior to January 1, 1987, new plates are required.

(3) What if I change to a CMB or FCB use class at renewal time?

If you change use class at renewal time, you will pay the ~~((additional excise tax and))~~ gross weight fees for the new registration year. Fees are not due for the remainder of the current registration year. If the plates were issued prior to January 1, 1987, new plates are required. The combination decals assigned may not be attached to the license plates until the first day of the new registration year, when the new use class is effective.

(4) What if I change from CMB or FCB to COM or FAR?

If you change from CMB or FCB to COM or FAR, you will need to purchase new plates. ~~((If you change use class during the registration year, you would forfeit the higher amount of excise tax paid.))~~ Excess gross weight fees may be used to purchase additional months of gross weight to the end of the current registration year.

(5) If I sell the power unit with a CMB or FCB use class, will the new owner need to purchase new plates?

If the new owner retains the CMB or FCB use class, new plates are not required. If the use class is changed to commercial (COM) or farm (FAR), new plates are required.

(6) If new plates are required because of the change of use class or because they were issued prior to January 1, 1987, am I required to pay replacement plate fees?

No, you would only pay the reflectorization fee in RCW 46.16.237 and plate fee in RCW 46.16.650.

AMENDATORY SECTION (Amending WSR 99-01-133, filed 12/21/98, effective 1/21/99)

WAC 308-96A-203 Permanent trailer registrations.

(1) Do I have an option of purchasing a permanent registration for my trailer to offset the higher fees on my power unit?

Yes, if the power unit towing the trailer is properly licensed to tow a trailer with a permanent registration.

(2) How does the power unit need to be licensed to tow a trailer with a permanent registration?

The power unit must have a combination (CMB) or farm combination (FCB) use class.

(3) How does the power unit qualify for the CMB or FCB use class?

The declared gross weight of the power unit must exceed forty thousand pounds. The CMB and FCB use classes require a ~~((higher excise tax rate and))~~ higher gross weight fees to offset the annual revenue loss of the permanently licensed trailer(s) the power unit is towing.

(4) If I am not required to renew the permanent trailer registration each year, how is my registration kept updated?

Your registration will show an expiration date of "PERM." Your vehicle record will show a current expiration date, which is updated annually. And your trailer plate will have a permanent trailer validation tab assigned to it.

(5) Are there any restrictions on the use of the trailer with permanent plates?

Yes, there is a restriction printed on the registration stating that the vehicle must be towed by a power unit with a CMB or FCB use class and gross weight in excess of forty thousand pounds.

(6) How long is the permanent registration valid?

The permanent registration is valid until ownership in the trailer changes. For purposes of this section, the following are not considered changes of ownership:

- (a) Addition or deletion of spouse or co-owner; or
- (b) Change of lessee with the same lessor.

(7) What do I do if I want to cancel the permanent registration and register the trailer as commercial?

You may change from CMB to COM use class at any time. You will need to pay all fees and taxes from the date of application to the expiration date shown on the vehicle record. A partial month requires a full month's fees. The license plates must be replaced when ownership changes on a trailer with CMB use class.

(8) What type of plates do I display on a trailer with a permanent registration?

A regular trailer plate, including a permanent trailer tab and combination decal, must be displayed on the trailer. The trailer may not display personalized or other special plates in this case.

(9) How is the expiration date established for a permanent trailer registration?

If the vehicle is unlicensed at the time of application, an expiration date is established based on the date of application as defined in WAC 308-96A-260. The permanent trailer plate fee is charged. If the vehicle is currently registered, either as COM or CMB, the permanent trailer plate fee is charged and the expiration date remains the same.

(10) Do I need to get a new plate when I get a permanent trailer registration?

If the vehicle is new, is currently registered to another owner with CMB use class, or the plate was issued prior to January 1, 1987, a new plate must be issued. If the vehicle is currently registered with a COM use class, and the plate has been issued since January 1, 1987, the permanent trailer tab and combination decal may be attached to the existing plate.

(11) If the trailer has a permanent registration and I no longer wish to use the trailer, or I sell the trailer and

PERMANENT

the new owner does not wish to license the trailer, may a title purpose only title be issued?

Yes, however, a title purpose only title will not eliminate the requirement for license fees to be paid. As soon as the vehicle is no longer used as a CMB trailer, license fees are due. The owner has the choice of:

(a) Paying to change the use class to COM, in which case the registration would not need to be renewed the following year if it is not being used; or

(b) Paying the permanent trailer registration fee one time and having the vehicle be licensed.

(12) If I need to purchase new plates because of changing the use class or because the plates were issued prior to January 1, 1987, do I need to pay replacement plate fees?

No. You would only pay the reflectorization fee in RCW 46.16.237 and the plate fee in RCW 46.16.650.

AMENDATORY SECTION (Amending WSR 99-19-026, filed 9/8/99, effective 10/9/99)

WAC 308-96A-400 Excise tax exemption—Indians.

(1) **What definitions does the department apply to this section?** For purposes of this rule, the following words and terms have the following meanings:

(a) "Indian (~~(reservation))~~ country" means all lands, notwithstanding the issuance of any patent, within the exterior boundaries set aside by the United States for the use and occupancy of Indian tribes by treaty, law or executive order and which are areas currently recognized as "Indian (~~(reservations))~~ country" by the United States Department of the Interior as referenced in 18 U.S.C. 1151 and C.F.R. 25.

(b) "Indian tribe" means an Indian nation, tribe, band, or community recognized as an "Indian tribe" by the United States Department of the Interior.

(c) "Indian" means a person on the tribal rolls of the Indian tribe occupying (~~(an))~~ Indian (~~(reservation))~~ country.

(2) **What Indian (~~(reservations))~~ country tribes in Washington are recognized by the United States Department of the Interior?** The (~~(following are the))~~ only Washington "Indian (~~(reservations))~~ tribes" are those currently recognized as such by the United States Department of the Interior (~~(: Chehalis Confederated tribes, Colville Confederated tribes, Hoh tribe, Jamestown S'Klallam tribe, Kalispell tribe, Lower Elwha Klallam tribe, Lummi Nation, Makah tribe, Muckleshoot tribe, Nisqually tribe, Nooksack tribe, Port Gamble S'Klallam tribe, Puyallup tribe, Quileute tribe, Quinault Nation, Samish Nation, Sauk-Suiattle tribe, Shoalwater Bay tribe, Skokomish tribe, Spokane tribe, Squaxin Island tribe, Stillaguamish tribe, Suquamish tribe, Swinomish tribe, Tulalip tribes, Upper Skagit tribe, Yakama Nation)).~~ As of the effective date of this rule, there are twenty-eight federally recognized tribes in the state of Washington. You may contact the governor's office of Indian affairs for an up-to-date list of federally recognized Indian tribes in the state of Washington at its website www.goia.wa.gov or at:

Governor's Office of Indian Affairs
531 15th Ave. S.E.
P.O. Box 40909

Olympia, WA 98504-0909

360-753-2411

(3) **How does an Indian qualify for a motor vehicle excise tax exemption?** To qualify for (~~(a motor vehicle))~~ an RTA excise tax exemption, an Indian shall:

(a) Be enrolled as a tribal member of a recognized Washington tribe;

(b) Have their principal residence within the boundaries of (~~(the))~~ Indian (~~(reservation))~~ country of the tribe of which they are a member (~~(- Mobile homes, travel trailers and campers owned by Indians having their principal residence within the recognized Indian reservation, for the tribe in which they are duly registered on the tribal rolls, are exempt from payment of the mobile home, travel trailer and camper excise tax imposed by chapter 82.50 RCW));~~ and

(c) Be a registered owner of the vehicle for which the exemption is requested.

(4) **Are vehicles owned or leased by a governing body of an Indian tribe subject to (~~(motor vehicle))~~ RTA excise tax?** No. Vehicles owned or leased by a governing body of an Indian tribe are not subject to (~~(motor vehicle))~~ the RTA excise tax as provided in RCW 46.16.020 and 46.16.022. (~~(Mobile homes, travel trailers and campers owned by Indian tribes located on recognized Washington Indian reservations are exempt from payment of the mobile home, travel trailer and camper excise tax imposed by chapter 82.50 RCW.))~~

(5) **What documentation does the department require from a tribal member to qualify for (~~(a motor vehicle))~~ an RTA excise tax exemption?** The department requires a properly completed affidavit of exemption on a form supplied or approved by the department. An affidavit for each vehicle must be submitted at the time the exemption is established and at the time of renewal if there is a change of address and the new address is located inside the RTA boundary. The department may require such other proof of qualification for exemption, as it deems necessary.

(6) **What information must be contained within the affidavit of exemption described in subsection (5) of this section?** At the minimum, the affidavit of exemption must include the following:

(a) Description of the vehicle including the year and make and either the license plate number or the vehicle identification number;

(b) The registered owner's name, tribe, (~~(reservation))~~ their enrollment numbers and the address in Indian country where the registered owner lives, as will be shown on the vehicle registration certificate; and enrollment or Bureau of Indian Affairs number;

(c) (~~(The principal address of the registered owner as will be shown on the vehicle registration certificate;~~

(~~(d))~~) Signature of the registered owner;

(~~(e))~~) ((d)) A certification of an authorized tribal authority representing the Indian (~~(reservation of the))~~ tribe of which the registered owner is a member. The position or title of the tribal authority, their telephone number and their signature must appear on the certification. The certification must include a statement that the registered owner is an enrolled tribal member and that the address provided by the registered

owner is within the boundaries of their ~~((reservation))~~ Indian country;

~~((#))~~ (e) The position or title of the tribal authority, their telephone number and their signature.

(7) **Are there any types of vehicles for which the Indian RTA excise tax exemption does not apply?** No, the Indian RTA excise tax exemption applies to all types of vehicles for which RTA excise tax is due.

REPEALER

The following section of the Washington Administrative Code is repealed:

WAC 308-96A-410 Study fee.

AMENDATORY SECTION (Amending WSR 99-06-029, filed 2/24/99, effective 3/27/99)

WAC 308-96A-135 Fixed load vehicles. ~~((#))~~ **What is a fixed load vehicle?**

A fixed load vehicle is specified in RCW 46.16.070 and described in WAC 308-96A-099.

~~((2))~~ **Am I required to pay excise tax when I license my fixed load vehicle?**

~~Washington law requires vehicles used on the public highways to be assessed excise tax. If your fixed load vehicle is used incidentally on the public highways and its primary purpose is not transportation, you may be eligible to place your vehicle on the county personal property tax rolls. If you provide the department with proof that your vehicle is listed on the county personal property tax rolls, you will pay personal property tax in lieu of excise tax.)~~

AMENDATORY SECTION (Amending WSR 97-12-015, filed 5/28/97, effective 6/28/97)

WAC 308-57-005 Definitions. The following definitions apply to the terminology used in this chapter:

(1) ~~((~~ "Excise tax fee schedule one" means the depreciation table described in RCW 82.44.041 (3)(b).

(2) "Excise tax fee schedule two" means the depreciation table described in RCW 82.44.041(1).

(3) "Excise tax fee schedule three" means the depreciation table described in RCW 82.50.425(2).

(4) "Excise tax fee schedule four" means the depreciation table established for power units towing trailers with permanent plates issued in accordance with RCW 46.16.068.

(5) "RTA excise tax fee schedule five" means the depreciation table described in RCW 82.44.041 (3)(b) for use in the Central Puget Sound Regional Transit Authority area.

(6)) "RTA excise tax ((fee)) schedule ((six*))" means the value depreciation table described in RCW 82.44.041(1) for use in the Central Puget Sound Regional Transit Authority area.

~~((7))~~ (2) "Fleet" means any person with ~~((fifteen))~~ five or more vehicles registered in the same name.

~~((8))~~ (3) "Light duty truck" means a truck which is smaller than a truck type power unit. The empty scale weight

is six thousand pounds or less. It includes vehicles such as pickup trucks, vans, and utility vehicles.

~~((9))~~ (4) "MSRP" means the base manufacturer's suggested retail price as defined in RCW 82.44.041(3) and 82.50.425.

~~((10))~~ (5) "Purchase price" means the selling price of the vehicle before deducting for trade-in value or adding sales/use tax.

~~((11))~~ (6) "Registered within a county" means the county which the vehicle registered owner indicates as their resident address.

~~((12))~~ (7) "Tax code" means a two-digit alpha, numeric, or alpha-numeric representation of a value assigned by the department of revenue to passenger vehicles, light duty trucks, and motor homes prior to vehicle model year 1986. This value represents the value of the vehicle when first offered for sale. In 1986 and thereafter, the MSRP is used to represent the value of the vehicle.

~~((13))~~ (8) "Truck type power unit" means trucks as defined in RCW 82.44.010(3). This includes vehicles with FIX (fixed load), or TOW (tow truck) use classes, regardless of scale weight; CMB (combination), COM (commercial), FAR (farm), FCB (farm combination), F/H (for hire), LOG (logging trucks), STA (stage), and TRK (trucks whose empty scale weights exceed six thousand pounds and whose declared gross weight does not exceed twelve thousand pounds) use class.

~~((14))~~ (9) "Truck type trailing unit" means trailers as defined in RCW 82.44.010(3). This includes trailers with CMB (combination), LOG (logging), and COM (commercial) use classes.

~~((15))~~ (10) "Value code" means the value which is used to calculate the excise tax. In determining the value code, it may be a tax code, purchase price, assessor's appraisal, or MSRP.

~~((16))~~ (11) "Regional Transit Authority" or "(RTA)" means the Central Puget Sound Regional Transit Authority or Sound Transit.

AMENDATORY SECTION (Amending WSR 97-12-015, filed 5/28/97, effective 6/28/97)

WAC 308-57-010 Premise for assessing RTA excise tax. ~~((Truck type power units and trailing units))~~ All trailers and all vehicles where MSRP is not available are taxed according to the most recent purchase price and purchase year and the depreciation rates in the RTA excise tax fee schedule((s two, four or six)). All other vehicles as noted on the first MSRP, the year of service or value year are taxed using the value of the vehicle ((when it was first offered for sale)) and the ((appropriate)) RTA excise tax fee schedule. Current physical condition, mileage, or monetary value of a particular vehicle is not used to determine excise tax.

AMENDATORY SECTION (Amending WSR 97-12-015, filed 5/28/97, effective 6/28/97)

WAC 308-57-020 Modified vehicles. All new or unused vehicles modified by a licensed manufacturer, ~~((including but not limited to, van conversions, sport utility~~

~~vehicles, and limousines,))~~ shall be taxed according to the MSRP provided by the modifying manufacturer plus the cost involved in converting the vehicle. Modified vehicles include, but are not limited to, vans, pickups, utility vehicles and limousines, incomplete vehicles and kits. If the vehicle is modified by someone other than a licensed manufacturer, the original MSRP issued for the vehicle prior to the modifications plus the costs of the modifications shall be used.

AMENDATORY SECTION (Amending WSR 97-12-015, filed 5/28/97, effective 6/28/97)

WAC 308-57-030 Declaration of value. If there is no ~~((tax))~~ value code for a model year 1985 or older model vehicle and there is no MSRP information available for a model year 1986 or newer model vehicle, the owner may be required to provide a certified declaration of original value and supporting documentation to be used as the basis for assessing the RTA excise tax.

AMENDATORY SECTION (Amending WSR 97-12-015, filed 5/28/97, effective 6/28/97)

WAC 308-57-110 RTA excise tax fee schedule~~((s one and five))~~. Vehicles with the following use classes are ~~((taxed according to))~~ assessed RTA excise tax ~~((fee schedule one and when applicable, schedule five))~~ as defined in RCW 81.104.160:

- CAB (taxicab)
- COM (commercial) (if powered and the scale weight is six thousand pounds or less)
- CYC (motorcycle)
- ~~((FAR (farm) (if powered and the scale weight is six thousand pounds or less)))~~
- F/H (for hire) (if six or fewer seats or if more than six seats and the scale weight is six thousand pounds or less)
- LOG (if powered and under six thousand pounds scale weight or if nonpowered)
- MH (motor home)
- PAS (passenger)
- PER (nonpowered personal use trailer)
- STA (stage) (if six or fewer seats or if more than six seats and the scale weight is six thousand pounds or less)
- TLR (nonpowered trailer)
- TRK (if the scale weight is six thousand pounds or less)

AMENDATORY SECTION (Amending WSR 97-12-015, filed 5/28/97, effective 6/28/97)

WAC 308-57-140 RTA excise tax exemptions. The following vehicles are exempt from RTA excise taxes imposed in chapter~~((s 82.44 and 82.50))~~ 81.104 RCW:

- (1) Vehicles with tax code 95 (vehicles taxed as personal property, such as mobile homes);
- (2) Vehicles with the following use classes:
 - C/G (converter gear).
 - CMB (combination).
 - CMP (campers).
 - COM (commercial if powered over 6,000 pounds scale weight or commercial nonpowered).

- EX (exempt),
- FAR (farm).
- FCB (farm combination).
- FED (federally owned),
- FEX (farm exempt),
- F/H (for hire if over 6,000 pounds scale weight and more than six seats).
- FIX (fixed load).
- H/C (horseless carriage).
- H/D (house moving dolly),
- LOG (if powered and over 6,000 pounds scale weight).
- MOB (mobile home).
- PED (moped),
- ORV (off road vehicle),
- RES (restored).
- SCH (private school),
- SNO (snowmobile), or
- SNX (exempt snowmobile),
- STA (stage if over 6,000 pounds scale weight and more than six seats).
- TOW (tow trucks).
- TRK (if over 6,000 pounds scale weight and 12,000 pounds or less gross weight).
- TVL (travel trailer);
- (3) Vehicles registered ~~((pursuant to))~~ under WAC 308-96A-050, (nonresident members of the armed forces);
- (4) Vehicles registered ~~((pursuant to))~~ under WAC 308-96A-400, (Indian tribes and tribal members);
- (5) Vehicles registered ~~((pursuant to))~~ under WAC 308-96A-046, ~~((veteran's free license))~~ (disabled American veterans or former prisoner of war);
- (6) Vehicles registered ~~((pursuant to))~~ under WAC 308-96A-180, (rental cars);
- (7) Passenger motor vehicles registered ~~((pursuant to))~~ under WAC 308-96A-175 and 308-96A-176, (ride-sharing and transportation needs ride-sharing vehicles; ~~((and))~~);
- (8) Vehicles registered ~~((pursuant to))~~ under WAC 308-96A-063, (Foreign organization special license plate);
- (9) Vehicles registered under RCW 46.16.305, Medal of Honor recipients.

AMENDATORY SECTION (Amending WSR 97-12-015, filed 5/28/97, effective 6/28/97)

WAC 308-57-210 RTA excise tax in even dollars. ~~((Individual vehicle))~~ RTA excise taxes are rounded to the nearest whole dollar.

AMENDATORY SECTION (Amending WSR 97-12-015, filed 5/28/97, effective 6/28/97)

WAC 308-57-230 Fleet abatement. A fleet vehicle, which is required to have a December registration expiration date, ~~((shall))~~ will be charged RTA excise tax based on the current depreciation rate for the number of months required to license through December 31 of the current year. If the number of months to December 31 is fewer than four, an additional twelve months RTA excise tax will be charged at the current depreciation rate.

AMENDATORY SECTION (Amending WSR 97-12-015, filed 5/28/97, effective 6/28/97)

WAC 308-57-240 Nonfleet abatement. With department approval, the owner of a nonfleet vehicle may change the vehicle's registration expiration date. The owner (~~shall~~) will be assessed **RTA** excise tax based on the current depreciation rate for the number of months from the current expiration to the requested expiration date. The new expiration date must be greater than twelve months but not more than eighteen months from the current registration expiration date. New expiration dates may only be granted when validation tabs for the desired month and year are available.

REPEALER

The following sections of the Washington Administrative Code are repealed:

WAC 308-57-120	Excise tax fee schedules two and six.
WAC 308-57-130	Excise tax fee schedule three.
WAC 308-57-135	Excise tax fee schedule four.
WAC 308-57-500	Personal use motor vehicle excise tax credit—Qualifications.

PERMANENT

WSR 01-12-005
EMERGENCY RULES
DEPARTMENT OF
FISH AND WILDLIFE

[Order 01-89—Filed May 23, 2001, 4:31 p.m., effective May 24, 2001, 11:59 p.m.]

Date of Adoption: May 22, 2001.

Purpose: Amend personal use fishing rules.

Citation of Existing Rules Affected by this Order:
 Amending WAC 220-56-255.

Statutory Authority for Adoption: RCW 77.12.047.

Under RCW 34.05.350 the agency for good cause finds that immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.

Reasons for this Finding: The catch quota for halibut is anticipated to be taken by this time. If fishing is allowed past May 24, 2001, the quota will likely be exceeded. This action is in accordance with the halibut catch sharing plan adopted by the federal government this year. The action has been endorsed by representatives of the National Marine Fisheries Service and the International Pacific Halibut Commission. There is insufficient time to promulgate permanent rules.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 1, Amended 0, Repealed 0.

NEW SECTION

WAC 220-56-25500U Halibut—Areas and seasons. Notwithstanding the provisions of WAC 220-56-255, effective 11:59 p.m. May 24, 2001 until further notice it is unlawful to fish for and possess halibut in those waters of Marine Area 2.

WSR 01-12-006
EMERGENCY RULES
DEPARTMENT OF
FISH AND WILDLIFE

[Order 01-90—Filed May 23, 2001, 4:36 p.m.]

Date of Adoption: May 23, 2001.

Purpose: Amend commercial fishing rules.

Citation of Existing Rules Affected by this Order:
 Repealing WAC 220-32-05100A and 220-32-05100B.

Statutory Authority for Adoption: RCW 77.12.047.

Under RCW 34.05.350 the agency for good cause finds that immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.

Reasons for this Finding: Allows platform and hook and line fish to be sold, and sets final period of commercial fishing. The fishery catches are expected to remain within the allocation and guidelines of the 2001 Management Agreement and will be consistent with the biological opinion. Rule is consistent with action of the Columbia River Compact of May 23, 2001. Conforms state rules with tribal rules. There is insufficient time to promulgate permanent regulations.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 1, Amended 0, Repealed 2.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: Immediately.

NEW SECTION

WAC 220-32-05100B Columbia River salmon seasons above Bonneville Dam. Notwithstanding the provisions of WAC 220-32-050, WAC 220-32-051, WAC 220-32-052, WAC 220-32-058, effective immediately until further notice, it is unlawful for a person to take or possess salmon, shad, carp, or sturgeon taken for commercial purposes in Columbia River Salmon Management Catch Reporting Areas 1F, 1G, and 1H, and the Wind River, White Salmon River and the Klickitat River except those individuals possessing treaty fishing rights under the Yakima, Warm Springs, Umatilla, and Nez Perce treaties may fish for salmon, shad, carp,

or sturgeon under the following provisions, pursuant to lawfully enacted tribal rules:

1) Open Periods: Immediately to 11:59 p.m. May 28, 2001

a) Open Areas: SMCRA 1F, 1G, 1H, Wind River, White Salmon River, Klickitat River.

b) Gear: hoop nets, dip bag nets, and rod and reel with hook and line.

c) Allowable sale includes: salmon and shad. Sturgeon between 4 feet and 5 feet in length may be kept for subsistence purposes.

d) There will be no sanctuary in effect at Spring Creek National Fish Hatchery.

2) Open Periods: 6:00 a.m. May 24 to 6:00 p.m. May 26, 2001

a) Open Areas: SMCRA 1F, 1G, 1H

b) Gear: Gill nets.

c) Allowable sale includes: salmon and shad. Sturgeon between 4 feet and 5 feet in length may be kept for subsistence purposes.

d) There will be no sanctuary in effect at Spring Creek National Fish Hatchery.

3) Notwithstanding the provisions of WAC 220-32-058, the closed area at the mouth of:

a) Hood River are those waters along the Oregon side of the Columbia River and extends to mid-stream at right angles to the thread of the Columbia River between markers located approximately 0.85 miles down river from the west bank at the end of the break wall at the west end of the port of Hood River and 1/2 mile upriver from the east bank.

b) Herman Creek are those waters upstream from a line between deadline markers near the mouth. One marker is located on the east bank piling and the other is located on the west bank to the north of the boat ramp.

c) Deschutes River are those waters of the Columbia River extending to midstream at right angles to the thread of the Columbia River between points 1/2 mile upstream from the eastern shoreline to one mile downstream from the western shoreline.

d) Umatilla River are those waters of the Columbia River extending to midstream at right angles to the thread of the Columbia River between points 1/2 mile upstream from the eastern shoreline to one mile downstream from the western shoreline.

e) Big White Salmon River are those waters of the Columbia River extending to midstream at right angles to the thread of the Columbia River between a marker located 1/2 mile downstream from the west bank upstream to Light "35".

f) Wind River are those waters of the Columbia River extending to midstream at right angles to the thread of the Columbia River between markers located 1 1/4 miles downstream from the west bank and 1/2 mile upstream from the east bank.

g) Klickitat River are those waters of the Columbia River extending to midstream at right angles to the thread of the Columbia River between the downstream margin of Lyle Landing downstream to a marker located near the railroad tunnel approximately 1/8 miles downstream from the west bank.

h) Little White Salmon River are those waters of the Columbia River extending to midstream at right angles to the thread of the Columbia River between Light "27" upstream to a marker located approximately 1/2 mile upstream from the eastern shoreline.

4) Notwithstanding the provisions of WAC 220-22-010, during the open periods described above:

a) Area 1F (Bonneville Pool) includes those waters of the Columbia River upstream from the Bridge of the Gods, and downstream from the west end of the 3 Mile Rapids located approximately 1.8 miles below the Dalles Dam.

b) Area 1G includes those waters of the Columbia River upstream from a line drawn between a deadline marker on the Oregon shore located approximately 3/4 miles above The Dalles Dam fishway exit, thence at a right angle to the thread of the river to a point in mid-river, then downstream to Light "1" on the Washington shore, and downstream from Preacher's Eddy Light below John Day Dam.

c) Area 1H includes those waters of the Columbia River upstream from a fishing boundary marker approximately 1/2 mile above the John Day River, Oregon, extending at a right angle across the thread of the river to a point in mid-river, then downstream to a fishing boundary marker on the Washington shore approximately opposite the mouth of the John Day River, and downstream from a line at a right angle across the thread of the river one mile downstream from McNary Dam.

REPEALER

The following section of the Washington Administrative Code is repealed:

WAC 220-32-05100A	Columbia River salmon seasons above Bonneville Dam. (01-81)
-------------------	---

The following section of the Washington Administrative Code is repealed effective 12:01 a.m. May 29, 2001:

WAC 220-32-05100B	Columbia River salmon seasons above Bonneville Dam.

WSR 01-12-010

EMERGENCY RULES

EMPLOYMENT SECURITY DEPARTMENT

[Filed May 25, 2001, 9:35 a.m.]

Date of Adoption: May 25, 2001.

Purpose: Amend the regulations regarding eligibility for unemployment benefits of employees of educational institutions to make them consistent with the law as modified by the 2001 legislature. The rules define terms, clarify how the department will determine if an individual has reasonable assurance of continued employment, and further clarify how reasonable assurance will be determined for instructional, research, or principal administrative staff at community and technical colleges.

Citation of Existing Rules Affected by this Order:
Amending WAC 192-210-005 and 192-210-015.

Statutory Authority for Adoption: RCW 50.12.010 and 50.12.040.

Under RCW 34.05.350 the agency for good cause finds that immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.

Reasons for this Finding: SB 5316 was adopted by the 2001 legislature, amending RCW 50.44.053 and modifying the definition of "reasonable assurance." These amendments apply to weeks of unemployment that begin after March 31, 2001. The existing rules were adopted prior to this amendment. Regulations consistent with the new law are needed to assist the department in making eligibility decisions during the upcoming summer term or break.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: Immediately.

May 24, 2001

Paul Trause

Deputy Commissioner

AMENDATORY SECTION (Amending WSR 99-18-066, filed 8/31/99, effective 10/1/99)

WAC 192-210-005 Definitions—Educational employees. (1) **Contract.** An agreement that is binding on an educational institution to provide work and on an individual to perform services. ~~Tenure or tenure-track status is considered a contract.~~

(2) **Faculty.** A teacher, counselor, librarian, or other position with similar training, experience and level of responsibility.

(3) **Full time employment.** Employment designated as full time for or at the educational institution under a collective bargaining agreement, individual hiring contract, or other agreement (including institutional policies), as provided in RCW 50.04.310(2). For faculty at public institutions, the hiring contract, agreement or institutional policy must be consistent with the provisions of RCW 28A.150.220 (kindergarten through twelfth grade), RCW 28B.50.851 (community and technical colleges), RCW 28B.35.120

(regional universities), or RCW 28B.20.130 (other colleges and universities).

(4) **Under the same terms and conditions of employment.** This includes economic conditions of employment such as wages, duration of contract, hours of work, and general nature of the work. It does not include other conditions and details such as the specific work location, duties, or assignment. The position need not be identical to the previous position to meet this test. A position would be considered to be under the same terms and conditions of employment if it is of similar type or classification, with similar pay, fringe benefits, hours of work, general type of work, and duration of employment.

Reviser's note: The typographical error in the above section occurred in the copy filed by the agency and appears in the Register pursuant to the requirements of RCW 34.08.040.

AMENDATORY SECTION (Amending WSR 99-18-066, filed 8/31/99, effective 10/1/99)

WAC 192-210-015 How will the department decide if reasonable assurance exists?—RCW 50.44.053. (1) Reasonable assurance is a bona fide offer from an educational institution to assign an individual future work at that institution under the same terms and conditions as the individual's previous employment. It is less than a contract or written agreement, but more than a mere possibility of future employment. The department must find that continued employment for that individual is likely or probable. For instructional, research, or principal administrative staff at a community or technical college, the additional provisions of WAC 192-210-020 will be considered in determining whether the individuals has reasonable assurance.

~~(2) Decisions regarding the existence of reasonable assurance will be made on an individual basis, with consideration given to contingencies that may exist in the individual case.~~

~~(3) If there is a disagreement regarding whether an individual has reasonable assurance, the institution must provide the department with documentation in support of its statement that reasonable assurance exists for that individual.~~

~~(4) Following are some, but not all, examples of the types of documentary evidence that may be provided by an institution:~~

~~(a) The terms of any contract or agreement between the individual and the educational institution, including length, contingencies, or provisions for cancellation;~~

~~(b) Whether the employer pays fringe benefits to the individual, such as health care, during periods between academic years or terms;~~

~~(c) The number of comparable positions at the institution;~~

~~(d) Projections of student enrollment, school funding, or program funding contained in the institution's budget;~~

~~(e) Any hiring priorities used by the school, such as precedence given to full-time or tenured staff or the use of seniority lists;~~

~~(f) The individual's employment history;~~

~~(g) Whether the class(es) have been consistently offered by the institution, including whether the class has been canceled due to lack of enrollment.~~

~~(5) The existence of reasonable assurance will be determined by the total weight of the evidence, rather than the existence of any one factor included in subsection (4).~~

Reviser's note: RCW 34.05.395 requires the use of underlining and deletion marks to indicate amendments to existing rules. The rule published above varies from its predecessor in certain respects not indicated by the use of these markings.

Reviser's note: The typographical errors in the above section occurred in the copy filed by the agency and appear in the Register pursuant to the requirements of RCW 34.08.040.

Reviser's note: The spelling error in the above section occurred in the copy filed by the agency and appears in the Register pursuant to the requirements of RCW 34.08.040.

NEW SECTION

WAC 192-210-020 Reasonable assurance for instructional, research, or principal administrative staff at a community or technical college—RCW 50.44.053(3). (1) A person who performs services in an instructional, research, or principal administrative capacity at a community or technical college is presumed not to have reasonable assurance when an offer is conditioned on enrollment, funding, or program changes.

(2) A conditional or contingent offer of employment is any offer other than an agreement that is binding on the college to provide work and on the individual to perform services.

(3) The assertion by the college that an individual has reasonable assurance of continued employment is insufficient to overcome the presumption that a conditional or contingent offer of employment does not constitute reasonable assurance unless supported by documentation explaining why reasonable assurance exists. The college bears the burden of providing the department with this documentation. Primary weight will be given to the contingent nature of the offer of employment.

(4) Whether an individual has reasonable assurance from the college will be determined on a case by case basis by the total weight of evidence, rather than the existence of any single factor.

(5) Examples of the types of evidence the department will consider in deciding whether the college has overcome the presumption that a conditional or contingent offer is not reasonable assurance include, but are not limited to, the following:

(a) The terms of the offer of employment between the individual and the college, with consideration given to any provisions related to length, contingencies, or reasons for cancellation;

(b) The number of comparable positions at the college;

(c) Any hiring priorities used by the college;

(d) The college's past practices, including the individual's previous experience with similar offers of employment from that college, and whether any classes have been canceled due to lack of enrollment, lack of funding, or program changes.

WSR 01-12-024

EMERGENCY RULES

DEPARTMENT OF

FISH AND WILDLIFE

[Order 01-91—Filed May 25, 2001, 2:37 p.m., effective June 1, 2001, 6:00 a.m.]

Date of Adoption: May 25, 2001.

Purpose: Amend commercial fishing rules.

Citation of Existing Rules Affected by this Order: Repealing WAC 220-32-05700I; and amending WAC 220-32-057.

Statutory Authority for Adoption: RCW 77.12.047.

Under RCW 34.05.350 the agency for good cause finds that immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.

Reasons for this Finding: Opens Bonneville and John Day Pools for a sturgeon set line season. There is room on the guidelines in both areas to allow for a season, and harvestable numbers of sturgeon are available. Conforms state rules with tribal rules. Consistent with compact action of May 23, 2001. There is insufficient time to promulgate permanent regulations.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 1, Amended 0, Repealed 1.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: June 1, 2001, 6:00 a.m.

May 25, 2001

Director

NEW SECTION

WAC 220-32-05700I Columbia River sturgeon seasons—Above Bonneville Dam. Notwithstanding the provisions of WAC 220-32-057, effective immediately, it is unlawful to take, fish for or possess sturgeon taken for commercial purposes in Columbia River Salmon Management Catch Reporting Areas 1F, 1G, and 1H, except those individuals possessing treaty fishing rights under the Yakima, Warm Springs, Umatilla, and Nez Perce treaties may fish for sturgeon with set line gear under the following provisions:

1) Dates: 6:00 a.m. June 1, 2001 until 6:00 p.m. July 31, 2001.

- 2) Open area is 1F and 1H.
- 3) During the season specified in Section 1, it is unlawful

to:

- a) retain for commercial purposes sturgeon less than 48 inches or greater than 60 inches in length.
- b) sell, barter, or attempt to sell or barter sturgeon eggs that have been removed from the body cavity of a sturgeon prior to sale of the sturgeon to a wholesale dealer licensed under chapter RCW 75.28, or to sell or barter sturgeon eggs at retail.

c) deliver to a wholesale dealer licensed under chapter RCW 75.28 any sturgeon that are not in the round with the head and tail intact.

3) During the season specifies in Section 1, it is unlawful to use set line gear:

- a) with more than 100 hooks per set line
- b) with hooks less than the minimum size of 9/0
- c) with treble hooks
- d) without visible buoys attached and with buoys that do not specify operator and tribal identification

Reviser's note: The typographical errors in the above section occurred in the copy filed by the agency and appear in the Register pursuant to the requirements of RCW 34.08.040.

REPEALER

The following section of the Washington Administrative code is repealed effective 6:01 p.m. July 31, 2001:

WAC 220-32-057001 Columbia River sturgeon seasons—Above Bonneville Dam.

**WSR 01-12-025
EMERGENCY RULES
DEPARTMENT OF
FISH AND WILDLIFE**

[Order 01-92—Filed May 25, 2001, 2:39 p.m., effective May 29, 2001, 12:01 a.m.]

Date of Adoption: May 25, 2001.

Purpose: Amend personal use fishing rules.

Citation of Existing Rules Affected by this Order: Repealing WAC 232-28-61900H; and amending WAC 232-28-619.

Statutory Authority for Adoption: RCW 77.12.047.

Under RCW 34.05.350 the agency for good cause finds that immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.

Reasons for this Finding: In-season monitoring indicates the hatchery will meet its escapement goal. Increasing the salmon portion of the daily limit will allow anglers to harvest more of the hatchery produced chinook. There is insufficient time to promulgate permanent rules.

J. P. Koenings

Director

NEW SECTION

WAC 232-28-61900I Exceptions to statewide rules—Cowlitz River, Little White Salmon River (Drano Lake), Klickitat River, Lewis River, Wind River, White Salmon River. Notwithstanding the provisions of WAC 232-28-619:

(1) Cowlitz River - Effective immediately until further notice, those waters of the Cowlitz River mouth upstream to 400 feet or posted boundary markers below the Barrier Dam are closed for the retention of chinook salmon. South side of the river from Mill Creek upstream to the Barrier Dam closed to all fishing immediately through June 15, 2001.

(2) Little White Salmon River (Drano Lake) - Effective May 17, 2001 through June 30, 2001 it is lawful to fish for salmonids in those waters of the Little White Salmon River (Drano Lake) from the SR 14 highway bridge at the mouth upstream to markers downstream and across from the Little White Salmon National Fish Hatchery. Special four fish daily limit of spring chinook

and hatchery steelhead of which no more than two may be hatchery steelhead. Minimum size is 12 inches in length for chinook and 20 inches for hatchery steelhead. Except closed on Wednesdays immediately through May 31, 2001. Night closure and non-buoyant lure restriction in effect.

(3) Klickitat River - Effective immediately through May 30, 2001 it is lawful to fish for salmonids in those waters of the Klickitat River from the mouth upstream to Fisher Hill Bridge

Special daily limit of one chinook salmon greater than 12 inches in length or one hatchery steelhead greater than 20 inches in length. Fishing Mondays, Wednesday and Saturdays only. Night closure and non-buoyant lure restriction in effect.

(4) Lewis River (Clark County), from mouth to forks: Effective May 29, 2001 until further notice special daily limit of six chinook salmon of which no more than two may be adults. Any chinook salmon with or without an adipose fin intact may be retained. Minimum size is twelve inches for chinook.

(5) Lewis River, North Fork (Clark/Skamania counties)

EMERGENCY

WSR 01-12-026

EMERGENCY RULES
DEPARTMENT OF
FISH AND WILDLIFE

[Order 01-93—Filed May 25, 2001, 2:42 p.m., effective May 29, 2001, 12:01 a.m.]

From mouth to Colvin Creek: Effective May 29, 2001 until further notice special daily limit of six chinook salmon of which no more than two may be adults. Any chinook salmon with or without an adipose fin intact may be retained. Minimum size is twelve inches for chinook. Fishing from a floating device allowed.

From Colvin Creek to overhead powerlines at Merwin Dam: Effective May 29, 2001 until further notice special daily limit of six chinook salmon of which no more than two may be adults. Any chinook salmon with or without an adipose fin intact may be retained. Minimum size is twelve inches for chinook. Fishing from a floating device allowed. Trout: Minimum length twenty inches. Release wild cut-throat trout.

(6) Wind River - Effective May 17, 2001 through June 30, 2001 it is lawful to fish for salmonids in those waters of the Wind River from markers (buoy line) at the mouth upstream to 400 feet downstream from Shipherd Falls and effective immediately through June 30, 2001 from 100 feet upstream from Shipherd Falls upstream to 400 feet downstream from the Coffey Dam and from 100 feet upstream from the Coffey Dam to boundary markers 800 yards downstream from the fish ladder at Carson National Fish Hatchery. Special four fish daily limit of spring chinook and hatchery steelhead of which no more than two may be hatchery steelhead. Minimum size is 12 inches in length for chinook and 20 inches for hatchery steelhead. Night closure and non-buoyant lure restriction in effect.

(7) White Salmon River - Effective immediately through June 30, 2001, it is lawful to fish for salmonids in those waters of the White Salmon River from the mouth upstream to the powerhouse and immediately through June 15, 2001 from the powerhouse upstream 400 feet below Northwestern Dam. Special daily limit of two chinook salmon greater than 12 inches in length or two hatchery steelhead greater than 20 inches in length, or a combination of one such salmon and one such steelhead. Fishing only from the bank from the highway 14 bridge downstream to the buoy line.

Date of Adoption: May 25, 2001.

Purpose: Amend personal use fishing rules.

Citation of Existing Rules Affected by this Order: Repealing WAC 232-28-61900Y.

Statutory Authority for Adoption: RCW 77.12.047.

Under RCW 34.05.350 the agency for good cause finds that immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.

Reasons for this Finding: The allowable sport harvest of approximately 2,000 adult spring chinook is projected to be attained on Monday, May 28 (Memorial Day) based on ongoing creel census estimates of fishing effort and harvest that began with the opening of the fishery on April 21. Current "in-season" run size estimates indicate that the actual run to the mouth of the Yakima River will range between 22,000 - 26,000 fish. The pre-season forecast was for a 26,100 fish return and the 2,000 fish allowable sport harvest was based on this forecast.

Repealing WAC 220-56-33000M; and amending WAC 220-56-330.

Statutory Authority for Adoption: RCW 77.12.047.

Under RCW 34.05.350 the agency for good cause finds that immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.

Reasons for this Finding: Crab hard shell condition meets the criteria for harvest in Hood Canal and in the open portions of Marine Area 8-1 and 8-2. Day restrictions are needed to stay within state/tribal allocations. There is insufficient time to promulgate permanent rules.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Director

NEW SECTION

WAC 220-56-33000N Crab—Areas and seasons.
 Notwithstanding the provisions of WAC 220-56-330:

(1) Effective immediately until further notice, it is unlawful to fish for crab for personal use in Puget Sound in all waters of Marine Areas, 4, 5, 6, 7, 8-1, 8-2, 9, 10, 11, 12 and 13, except as provided herein;

(2) Effective 7:00 a.m. June 1, 2001, until further notice, it is lawful to fish for crab for personal use on Fridays, Saturdays, Sundays and Mondays in Marine Area 12 and that portion of Marine Area 9 south of a line from Foulweather Bluff to Olele point.

(3) Effective immediately until further notice, it is lawful to fish for crab for personal use on Fridays, Saturdays, Sun-

days and Mondays in that portion of Marine Area 8-2 south and east of a line from Camano Head to Sandy Point on Whidbey Island

(4) Effective 7:00 a.m. Saturday May 26, 2001 until further notice, it is lawful to fish for crab for personal use on Fridays, Saturdays, Sundays and Mondays, in that portion of Marine Area 8-1 north of a line from Snatelum Pt. (on the southeast corner of Penn Cove) to Rocky Point (on the northwest corner of Camano Island).

REPEALER

The following section of the Washington Administrative Code is repealed:

WAC 220-56-33000M Crab—Areas and seasons.

WSR 01-12-038
EMERGENCY RULES
DEPARTMENT OF
FISH AND WILDLIFE

[Order 01-96—Filed May 30, 2001, 8:18 a.m.]

Date of Adoption: May 29, 2001.

Purpose: Amend commercial fishing rules.

Statutory Authority for Adoption: RCW 77.12.047.

Under RCW 34.05.350 the agency for good cause finds that immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.

Reasons for this Finding: The 2001 legislature passed SB 5443, which states, "The application deadline in (RCW 77.65.030) does not apply to a license or permit that has not been renewed because of the death of the license or permit holder. The license or permit holder's surviving spouse, estate, or estate beneficiary must be given a reasonable opportunity to renew the license or permit." This rule enacts the provisions of SB 5443 and sets the reasonable period as the calendar year following the year of the death of the license holder. This rule is needed for immediate implementation of SB 5443, which is deemed to apply to current license renewals. Permanent rule making has been started.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 1, Amended 0, Repealed 0.

 by Larry Peck

NEW SECTION

WAC 220-20-05500A Commercial fishing license transfer upon death of the holder. Upon the death of a license holder or permit holder, any license or permit that requires annual renewal and which would expire at the end of the calendar year in which the death of the license or permit holder occurred, may be renewed by the license or permit holder's personal representative, surviving spouse, estate, or estate beneficiary during the next calendar year after the year in which the death occurred. If the license is not renewed in the calendar year after the calendar year in which the death occurred, the license may be renewed thereafter.

 EMERGENCY RULES
 DEPARTMENT OF
 FISH AND WILDLIFE**

[Order 01-97—Filed May 31, 2001, 8:28 a.m., effective June 3, 2001, 6:00 p.m.]

Date of Adoption: May 30, 2001.

Purpose: Amend personal use fishing rules.

Citation of Existing Rules Affected by this Order: Repealing WAC 220-56-32500L; and amending WAC 220-56-325.

Statutory Authority for Adoption: RCW 77.12.047.

Under RCW 34.05.350 the agency for good cause finds that immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.

Reasons for this Finding: This regulation is needed to ensure orderly fisheries, manage within court-ordered sharing requirements and to ensure conservation. The state recreational share of spot shrimp has been exceeded in the areas closed under this rule. Depth restrictions will provide opportunity to harvest available nonspot shrimp while reducing impact to the spot shrimp resource. There is insufficient time to promulgate permanent rules.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

 by Larry Peck

NEW SECTION

WAC 220-56-32500M Shrimp—Areas and seasons. Notwithstanding the provisions of WAC 220-56-325 and WAC 220-56-310:

(1) Effective 6:00 p.m. June 3, 2001 it is unlawful to harvest or possess shrimp taken for personal use in waters of Marine Area 7 south of a line from Biz Point to Cape St Mary on Lopez Island, south of Lopez Island, south of a line from Davis Point to Cattle Point on San Juan Island, south of the shores of San Juan Island to Lime Kiln Point light, and south of a line due west from Lime Kiln Point light to the international boundary.

(2) Effective immediately, until further notice, it is lawful to harvest or possess shrimp taken for personal use in Marine Areas 8-1, 8-2 or 9, except that:

(a) Spot shrimp must be returned immediately to the water unharmed.

(b) It is unlawful to set or pull shrimp gear in waters greater than 150 feet, except that it is unlawful to set or pull shrimp gear in waters greater than 90 feet in Port Townsend Bay, south and west of a line from Marrowstone Point to Point Wilson.

(c) It is unlawful to set or pull shrimp gear on Monday, Tuesday or Wednesday of each week.

(3) Effective immediately, until further notice, it is unlawful to harvest or possess shrimp taken for personal use in Marine Area 10.

REPEALER

The following section of the Washington Administrative is repealed effective 6:00 p.m. June 3, 2001:

WAC 220-56-32500L Shrimp—Areas and seasons. (01-78)

NEW SECTION

WAC 220-56-32500N Shrimp—Areas and seasons. Notwithstanding the provisions of WAC 220-56-325, it is unlawful to fish for or possess shrimp from those waters of Marine Area 12 (Hood Canal) except as provided for in this section:

- (1) Fishing for shrimp is allowed between 9:00 a.m. and 1:00 p.m. on the following date: June 6, 2001.
- (2) No shrimp fisher may leave shrimp fishing gear in the water after 1:00 p.m. June 6, 2001.
- (3) It shall be unlawful for any vessel participating in the fishery to have more than four shrimp pots operated from the vessel.
- (4) It is unlawful for any one person to take in any one day more than eighty shrimp. The first eighty shrimp taken must be retained.

REPEALER

The following section of the Washington Administrative Code is repealed effective 1:01 p.m. June 6, 2001:

WAC 220-56-32500N Shrimp—Areas and seasons.

Chapter II, Part 273 of the Code of Federal Regulations. States are required to implement these changes by June 1, 2001.

Brian H. Lindgren, Manager
Rules and Policies Assistance Unit

WSR 01-12-057
EMERGENCY RULES
DEPARTMENT OF
SOCIAL AND HEALTH SERVICES
 (Economic Services Administration)
 (Division of Assistance Programs)
 [Filed June 1, 2001, 3:45 p.m.]

Date of Adoption: June 1, 2001.

Purpose: Amend existing rules and create a new rule to implement federal regulations for sponsored aliens. Amending WAC 388-450-0155 Does the income of my sponsor affect my eligibility for cash or food assistance?, 388-450-0160 How does the department decide how much of my sponsor's income to count against my benefits? and 388-470-0060 How do the resources of my sponsor affect my eligibility for cash or food assistance benefits? [not filed by agency]; and adding WAC 388-450-0156 When am I exempt from the deeming process?

Citation of Existing Rules Affected by this Order: Amending WAC 388-450-0155, 388-450-0160, and 388-470-0060 [not filed by agency].

Statutory Authority for Adoption: RCW 74.04.050, 74.04.057, 74.04.510.

Other Authority: Title 7, Chapter II, Part 273 of the Code of Federal Regulations.

Under RCW 34.05.350 the agency for good cause finds that state or federal law or federal rule or a federal deadline for state receipt of federal funds requires immediate adoption of a rule.

Reasons for this Finding: The United States Department of Agriculture, Food and Nutrition Services (FNS) published new regulations on how to count the income of an alien's sponsor to the alien. FNS published these rules in Title 7,

AMENDATORY SECTION (Amending WSR 98-16-044, filed 7/31/98, effective 9/1/98)

WAC 388-450-0155 ((~~Deeming~~)) Does the income((— Alien sponsorship—)) of my sponsor affect my eligibility for cash or food assistance? ((This section applies to TANF/SFA and GA programs.

~~(1) Deeming is the process of determining the amount of an alien's sponsor's income available to the alien.~~

~~(2) Any alien whose sponsor is a public or private organization is ineligible for assistance for three years from the date of entry for permanent residence into the United States, unless the agency or organization is:~~

- ~~(a) No longer in existence; or~~
- ~~(b) Has become unable to meet the alien's needs.~~

~~(3) A sponsor is any individual or public or private organization who executes an affidavit or similar agreement on behalf of an alien (who is not the dependent child of the sponsor or the sponsor's spouse) as a condition of the alien's entry into the United States.~~

- ~~(a) The affidavit or agreement is irrevocable, and~~
- ~~(b) Extends for a minimum of three years after the alien's entry for permanent residence into the United States.~~

~~(4) For a period of three years following entry for permanent residence into the United States, an individually sponsored alien is responsible for:~~

- ~~(a) Providing the department with any information and documentation necessary to determine the income of the sponsor that can be deemed available to the alien; and~~
- ~~(b) Obtaining any cooperation necessary from the sponsor.~~

~~(5) For all subsections in this section, the income of an individual sponsor (and the sponsor's spouse if living with the sponsor) is deemed to be the unearned income of an alien for~~

EMERGENCY

three years following the alien's entry for permanent residence into the United States:

(6) Monthly income deemed available to the alien from the individual sponsor or the sponsor's spouse not receiving TANF/SFA or SSI is:

(a) The sponsor's total monthly unearned income, added to the sponsor's total monthly earned income reduced by twenty percent (not to exceed one hundred seventy five dollars) of the total of any amounts received by the sponsor in the month as wages or salary or as net earnings from self-employment, plus the full amount of any costs incurred in producing self-employment income in the month.

(b) The amount described in (a) of this subsection reduced by:

(i) The basic requirements standard for a family of the same size and composition as the sponsor and those other persons living in the same household as the sponsor claimed by the sponsor as dependents to determine the sponsor's federal personal income tax liability but who are not TANF/SFA recipients;

(ii) Any amounts actually paid by the sponsor to persons not living in the household claimed by the sponsor as dependents to determine the sponsor's federal personal income tax liability; and

(iii) Actual payments of spousal maintenance or child support with respect to persons not living in the sponsor's household.

(7) In any case where a person is the sponsor of two or more aliens, the sponsor's income is divided equally among the aliens to the extent that the income would be deemed the income of any one of the aliens under provisions of this section.

(8) The income deemed to a sponsored alien in determining the need of other unsponsored members of the alien's family is not considered except to the extent that the income is actually available.

(9) For the GA-U program, the alien's sponsor's income is deemed as available to the alien as provided for the TANF/SFA program:

(a) At application, for applications filed on or after July 8, 1994. For the purposes of this rule, re-application filed following a break in assistance of thirty days or more is considered an application; and

(b) For all other GA-U clients, the income of an alien's sponsor is not deemed as available to the client) The United States Immigration and Naturalization Service (INS) makes most people have a sponsor to enter the country as a permanent resident. A sponsor is a person or agency who agreed to meet the needs of the sponsored person. The department uses a process called deeming to count part of the sponsor's income to the person they sponsored.

(1) If INS required your sponsor to sign the Affidavit of Support form I-864 or I-864A, we count some of your sponsor's income against your cash and food assistance benefits. We do not count your sponsor's income if you are exempt from the deeming process under WAC 388-450-0156.

(2) If your sponsor's spouse signed the affidavit of support, we count some of their income against your cash and food assistance benefits. We do not count the income of your

sponsor's spouse if you are exempt from the deeming process under WAC 388-450-0156.

(3) You must cooperate with the deeming process in order to be eligible for benefits. You must do the following to cooperate with the process.

(a) Give us the name and address of your sponsor;
(b) Get your sponsor to cooperate with us while we decide if you are eligible for benefits; and

(c) Give us the information and proof we need to decide;
(i) If we must deem income to your assistance unit (AU);
and

(ii) The amount of income we deem to your AU.
(4) If your sponsor is not supporting you, you must still cooperate with the deeming process. We help you get the information you need to determine your eligibility and benefits.

(5) If you are not eligible for benefits because we do not have the information we need about your sponsor, we do not delay benefits to the eligible people in your AU. We decide if the others in your AU are eligible for benefits and ask for the information we need about your sponsor. We do not count your needs when we decide if you are eligible for benefits, but we count:

(a) All earned or unearned income you have that is not excluded under WAC 388-450-0015; and

(b) All deductions you would be eligible for under chapter 388-450 WAC.

(6) If you refuse to cooperate with the deeming process, the other adult members in your AU must cooperate. If the same person sponsored everyone in your AU, your AU is not eligible for benefits until a member of your AU cooperates.

(7) We decide how much of your sponsor's income to count against your benefits under WAC 388-450-0160.

NEW SECTION

WAC 388-450-0156 When am I exempt from the deeming process? (1) If you meet any of the following conditions, you are permanently exempt from the deeming process and we do not count your sponsor's income or resources against your benefits:

(a) The Immigration and Nationality Act (INA) does not require you to have a sponsor. You are not required to have a sponsor if your official status with Immigration and Naturalization Service (INS) is any of the following:

- (i) Refugee;
- (ii) Parolee;
- (iii) Asylee;
- (iv) Cuban entrant; or
- (v) Haitian entrant.

(b) You were sponsored by an organization or group as opposed to an individual;

(c) You do not meet the alien status requirements to be eligible for benefits under chapter 388-424 WAC;

(d) You have worked or can get credit for forty qualifying quarters of work under Title II of the Social Security Act. We do not count a quarter of work toward this requirement if the person working received TANF, food stamps, or non-emergency Medicaid benefits. We count a quarter of work by the following people toward your forty qualifying quarters:

- (i) Yourself;
- (ii) Your parents for the time they worked before you turned eighteen years old; and
- (iii) Your spouse if you are still married or your spouse is deceased.

- (e) You become a U.S. Citizen; or
- (f) Your sponsor dies.

(2) You are exempt from the deeming process while you are in the same AU as your sponsor;

(3) For state family assistance, general assistance, and the food assistance program for legal immigrants, you are exempt from the deeming process if:

- (a) You were sponsored more than five years ago;
- (b) Your sponsor becomes permanently incapacitated; or
- (c) You were employed by an agency of the United States government or served in the armed forces of an allied country during a military conflict between the United States and a military opponent.

(4) If you, your child, or your parent was a victim of domestic violence, you are exempt from the deeming process for twelve months if:

(a) You no longer live with the person who committed the violence; and

- (b) Leaving this person caused your need for benefits.

(5) If INS or a court decides that you, your child, or your parent was a victim of domestic violence from your sponsor, you are permanently exempt from the deeming process if:

- (a) You no longer live with your sponsor; and
- (b) Leaving your sponsor caused your need for benefits.

(6) If your AU has income at or below one hundred thirty percent of the Federal Poverty Level (FPL), you are exempt from the deeming process for twelve months. For this rule, we count the following as income to your AU:

(a) Earned and unearned income your AU receives from any source; and

(b) Any noncash items of value such as free rent, commodities, goods, or services you receive from an individual or organization;

(7) If you are exempt from the deeming process because your AU does not have income over one hundred thirty percent of the FPL, we give the United States Attorney General the following information:

(a) The names of the sponsored people in your AU;

(b) That you are exempt from deeming due to your income; and

(c) Your sponsor's name.

(8) If you are exempt from the deeming process, we count the cash your sponsor or others give you as unearned income against your benefits.

AMENDATORY SECTION (Amending WSR 99-16-024, filed 7/26/99, effective 9/1/99)

WAC 388-450-0160 (~~Sponsored alien — Food assistance.~~) **How does the department decide how much of my sponsor's income to count against my benefits?** (~~For food assistance, this section applies to aliens for whom a sponsor has signed an affidavit of support or similar statement on or after February 1, 1983.~~

~~(1) For the purpose of this rule, income of the sponsor means:~~

~~(a) Income of the sponsor; and~~

~~(b) Income of the sponsor's spouse when the spouse lives with the sponsor.~~

~~(2) Portions of the income of a sponsor is counted as unearned income and applied to the food assistance benefits of a sponsored alien. The income of an alien's sponsor is available for three years following the alien's admission for permanent residence to the U.S.~~

~~(3) The income of the alien's sponsor must be verified by the client at application or recertification for food assistance.~~

~~(4) The available income is computed as follows:~~

~~(a) Total monthly earned and unearned income of the sponsor:~~

~~(i) Minus twenty percent of the gross earned income; and~~

~~(ii) Minus the amount of the gross income eligibility standard for a household size equal to the sponsor, the sponsor's spouse, and all dependents.~~

~~(b) Plus any actual money paid to the alien by the sponsor or sponsor's spouse in excess of the amount computed in subsection (4)(a) of this section is treated as unearned income.~~

~~(5) The net income in subsection (4) of this section is available to a sponsored alien who:~~

~~(a) Applies for and receives food assistance; or~~

~~(b) Is recertified for food assistance.~~

~~(6) If the sponsored alien can show the sponsor is also sponsoring other aliens, the available income is divided by the number of sponsored aliens applying for, or receiving food assistance.~~

~~(7) If an alien changes sponsors during the certification period, available income is reviewed based on the required information about the new sponsor as soon as possible after the information is supplied and verified by the client.)~~ (1) We must count some of your sponsor's income as unearned income to your assistance unit (AU) if:

(a) Your sponsor signed the INS affidavit of support form I-864 or I-864A; and

(b) You are not exempt from the deeming process under WAC 388-450-0156.

(2) In addition to counting your sponsor's income, we must also count the income of your sponsor's spouse if they signed the affidavit of support.

(3) We take the following steps to decide the monthly amount of your sponsor's income we deem as your income and count against your benefits:

(a) We start with your sponsor's earned and unearned income that is not excluded under WAC 388-450-0015;

(b) If your sponsor's spouse signed the affidavit of support, we add all of the spouse's earned and unearned income that is not excluded under WAC 388-450-0015;

(c) We subtract twenty percent of the above amount that is earned income under WAC 388-450-0030;

(d) For cash assistance, we subtract the need standard under WAC 388-478-0015. We count the following people who live in your sponsor's home as a part of your sponsor's AU to decide the need standard:

(i) Your sponsor;

(ii) Your sponsor's spouse; and

(iii) Everyone else in their home that they could claim as a dependent for Federal income tax purposes.

(e) For food assistance, we subtract the maximum gross monthly income under WAC 388-478-0060. We count the following people that live in your sponsor's home as a part of your sponsor's AU to decide the maximum gross monthly income:

(i) Your sponsor;

(ii) Your sponsor's spouse; and

(iii) Everyone else in their home that they could claim as a dependent for Federal income tax purposes.

(f) If you can show that your sponsor has sponsored other people as well, we divide the result by the total number of people who they sponsored.

(4) After we have decided how much income to deem to you, we count the following income from your sponsor:

(a) The amount of income calculated from the deeming process; and

(b) If your sponsor gives you money for your needs, any amount they give you above the amount we calculate from the deeming process.

WSR 01-12-064
EMERGENCY RULES
DEPARTMENT OF
FISH AND WILDLIFE

[Order 01-102—Filed June 4, 2001, 2:26 p.m., effective June 6, 2001, 7:00 p.m.]

Date of Adoption: June 1, 2001.

Purpose: Amend commercial fishing rules.

Citation of Existing Rules Affected by this Order: Repealing WAC 220-52-04600N; and amending WAC 220-52-040 and 220-52-046.

Statutory Authority for Adoption: RCW 77.12.047.

Under RCW 34.05.350 the agency for good cause finds that immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.

Reasons for this Finding: These actions are necessitated to maintain state/tribal crab allocations. There is insufficient time to promulgate permanent rules.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 2, Amended 0, Repealed 1.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Mak-

ing: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: June 6, 2001, 7:00 p.m.

June 1, 2001

J. P. Koenings

Director

NEW SECTION

WAC 220-52-04000Z Commercial crab fishery—
Exceptions to permanent rules for pot limits. Notwithstanding the provisions of WAC 220-52-040, effective 7:00 p.m. June 6, 2001 until 11:00 a.m. June 8, 2001 it is lawful to fish for crabs for commercial purposes with no more than 25 pots per license in all waters of Marine Fish-Shellfish Management and Catch Reporting Areas 24A, 24B, 24C, 24D and that portion of 26A north of line from the south tip of Possession Point on Whidbey Island to the shipwreck at Picnic Point.

NEW SECTION

WAC 220-52-04600P Puget Sound crab fishery—
Exceptions to permanent seasons and areas. Notwithstanding the provisions of WAC 220-52-046, effective 7:00 p.m. June 6, 2001 until 11:00 a.m. June 8, 2001 the following areas are open to commercial crab fishing:

1) Those waters of Marine Fish-Shellfish Management and Catch Reporting Areas 24A, 24B, 24C, 24D, and the portion of Marine Fish/Shellfish Catch Area 26A north of line from the south tip of Possession Point on Whidbey Island to the shipwreck at Picnic Point with the following exceptions:

a) Cornet Bay: That portion of Marine Fish/Shellfish Catch Area 24A south of a line projected true east and west from the north tip of Ben Ure Island.

b) Langley: That portion of Marine Fish/Shellfish Catch Area 24C inshore of the 400-foot depth contour within an area described by two lines projected northeasterly from Sandy Point and the entrance to the marina at Langley;

c) Port Gardner: That portion of Marine Fish/Shellfish Catch Area 26A east of a line projected from the outermost tip of the ferry dock at Mukilteo projected to the green #3 buoy at the mouth of the Snohomish River and west of a line projected from that #3 buoy southward to the oil boom pier on the shoreline will be closed to commercial harvests through November 30, 2000. The affected parties will discuss continuation of the commercial closure in this area by that date.

d) E. Port Susan Area: That portion of Marine Fish/Shellfish Catch Area 24B east of a line projected from the five-meter tower (located between Gedney Island and Priest Point) to Barnum Point and south of a line projected west from Kayak Point, and north of a line projected from the five-meter tower to Priest Point.

e) Holmes Harbor: That portion of Marine Fish/Shellfish Catch Area 24D south of a line extending from the point located at the southern end of Honeymoon Bay (48° 03.047', 122° 32.306') to the point just north of Beverly Beach.

EMERGENCY

2) Crab pots shall not be tended from one half hour after sunset to one half hour before sunrise.

REPEALER

The following sections of the Washington Administrative Code are repealed effective 7:00 p.m. June 6, 2001:

WAC 220-52-04600N Commercial crab fishery—
Exceptions to permanent seasons and areas. (01-23)

EMERGENCY RULES
DEPARTMENT OF
FISH AND WILDLIFE

[Order 01-101—Filed June 4, 2001, 2:29 p.m., effective June 9, 2001, 7:00 a.m.]

Date of Adoption: June 1, 2001.

Purpose: Amend personal use fishing rules.

Citation of Existing Rules Affected by this Order:
Repealing WAC 220-56-33000N; and amending WAC 220-56-330.

Statutory Authority for Adoption: RCW 77.12.047.

Under RCW 34.05.350 the agency for good cause finds that immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.

Reasons for this Finding: Crab hard shell condition meets the criteria for harvest in Hood Canal and in Marine Areas 8-1 and 8-2. Day restrictions are needed to stay within state/tribal allocations. There is insufficient time to promulgate permanent rules.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 1, Amended 0, Repealed 1.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: June 9, 2001, 7:00 a.m.

June 1, 2001

J. P. Koenings

Director

NEW SECTION

WAC 220-56-33000P Crab—Areas and seasons. Notwithstanding the provisions of WAC 220-56-330:

(1) Effective immediately until further notice, it is unlawful to fish for crab for personal use in Puget Sound in all waters of Marine Areas, 4, 5, 6, 7, 8-1, 8-2, 9, 10, 11, 12 and 13, except as provided herein;

(2) Effective Immediately until further notice, it is lawful to fish for crab for personal use on Fridays, Saturdays, Sundays and Mondays in Marine Area 12 and that portion of Marine Area 9 south of a line from Foulweather Bluff to Olele point.

(3) Effective 7:00 a.m. June 9, 2001 until further notice, it is lawful to fish for crab for personal use on Fridays, Saturdays, Sundays and Mondays in Marine Areas 8-1 and 8-2.

REPEALER

The following section of the Washington Administrative Code is repealed effective 7:00 a.m. June 9, 2001:

WAC 220-56-33000N Crab—Areas and seasons.
(01-94)

WSR 01-12-066
EMERGENCY RULES
DEPARTMENT OF
FISH AND WILDLIFE

[Order 01-95—Filed June 4, 2001, 2:31 p.m., effective June 9, 2001, 8:00 a.m.]

Date of Adoption: June 1, 2001.

Purpose: Amend personal use fishing rules.

Citation of Existing Rules Affected by this Order:
Repealing WAC 232-28-61900J; and amending WAC 232-28-619.

Statutory Authority for Adoption: RCW 77.12.047.

Under RCW 34.05.350 the agency for good cause finds that immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.

Reasons for this Finding: This rule is necessary to regulate a juvenile fishing derby on planted trout. Following conclusion of the derby, the planted trout are available to all fishers. There is insufficient time to promulgate permanent rules.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 1, Amended 0, Repealed 1.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: June 9, 2001, 8:00 a.m.

June 1, 2001

J. P. Koenigs
Director

NEW SECTION

WAC 232-28-61900J Bridgeport Fishing Derby. Notwithstanding the provisions of WAC 232-28-619, effective 8:00 a.m. June 9, 2001 through 8:00 p.m. June 10, 2001, in those waters of the Columbia River inside the blocked-off portion of the City of Bridgeport Marina:

(1) Open to juvenile fishers only from 8:00 a.m. June 9, 2001 through 2:00 p.m. June 10, 2001. Trout: No limit during the fishery provided for in this section. No minimum size.

(2) Open to all fishers from 2:01 p.m. June 10, 2001 through 8:00 p.m. June 10, 2001. Trout: No daily or possession limit during the fishery provided for in this section. No minimum size.

REPEALER

The following section of the Washington Administrative Code is repealed effective 8:01 p.m. June 10, 2001:

WAC 232-28-61900J Bridgeport Fishing Derby.

WSR 01-12-067

EMERGENCY RULES

DEPARTMENT OF ECOLOGY

[Order 01-03—Filed June 4, 2001, 4:10 p.m.]

Date of Adoption: June 4, 2001.

Purpose: To repeal a rule (chapter 173-167 WAC, a revised version of which is simultaneously being adopted). The revision more effectively addresses drought-related funding of public entities to continue agricultural activities, provide public drinking water supplies, and aid in fish and wildlife survival.

Citation of Existing Rules Affected by this Order: Repealing chapter 173-167 WAC, WAC 173-167-010 through 173-167-090.

Under RCW 34.05.350 the agency for good cause finds that immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.

Reasons for this Finding: A drought emergency exists in the state. This emergency poses a potential threat to public

health in its possible effects on drinking water supplies, and a potential threat to the general welfare of the public in its likely effects on irrigated agriculture and on those fish and wildlife which, in the judgement of federal and state authorities, are in danger of extinction. Repeal of this rule will be simultaneous with adoption of a rule to replace it, which will more effectively enable ecology to fund certain drought-related activities undertaken by eligible public entities.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 9, Amended 0, Repealed 9.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: Immediately.

June 4, 2001

Director

WSR 01-12-068

EMERGENCY RULES

DEPARTMENT OF ECOLOGY

[Order 01-04—Filed June 4, 2001, 4:12 p.m.]

Date of Adoption: June 4, 2001.

Purpose: To adopt a rule replacing chapter 173-167 WAC (which is simultaneously being repealed) to more effectively provide drought-related funding to public entities in order to continue agricultural activities, provide public drinking water supplies, and aid in the survival of fish and wildlife; the rule also establishes criteria for leasing or buying water for fish.

Statutory Authority for Adoption: RCW 43.27A-.090(11).

Under RCW 34.05.350 the agency for good cause finds that immediate adoption, amendment, or repeal of a rule is necessary for the preservation of the public health, safety, or general welfare, and that observing the time requirements of notice and opportunity to comment upon adoption of a permanent rule would be contrary to the public interest.

Reasons for this Finding: A drought emergency exists in the state. This emergency poses a potential threat to public health in its possible effects on drinking water supplies, and a potential threat to the general welfare of the public in its likely effects on irrigated agriculture and on those fish and wildlife which, in the judgment of federal and state authorities, are in danger of extinction.

Number of Sections Adopted in Order to Comply with Federal Statute: New 0, Amended 0, Repealed 0; Federal Rules or Standards: New 0, Amended 0, Repealed 0; or Recently Enacted State Statutes: New 0, Amended 0, Repealed 0.

Number of Sections Adopted at Request of a Nongovernmental Entity: New 0, Amended 0, Repealed 0.

Number of Sections Adopted on the Agency's Own Initiative: New 9, Amended 0, Repealed 0.

Number of Sections Adopted in Order to Clarify, Streamline, or Reform Agency Procedures: New 0, Amended 0, Repealed 0.

Number of Sections Adopted Using Negotiated Rule Making: New 0, Amended 0, Repealed 0; Pilot Rule Making: New 0, Amended 0, Repealed 0; or Other Alternative Rule Making: New 0, Amended 0, Repealed 0.

Effective Date of Rule: Immediately.

June 4, 2001

Tom Fitzsimmons

Director

Chapter 173-167 WAC

DROUGHT PREPAREDNESS FUNDING FOR AGRICULTURAL, MUNICIPAL AND UTILITY, AND FISH AND WILDLIFE NEEDS, AND FOR PURCHASING AND LEASING WATER FOR FISH

NEW SECTION

WAC 173-167-015 Purpose. The legislature in 1999 enacted Ch. 379, Laws of 1999, now codified as RCW 43.83B.430, which created, in part, the drought preparedness account and authorized the department of ecology to expend funds from that account for the purposes of drought preparedness. The purpose of this emergency rule is to establish criteria under which those funds can be made available to achieve the stated legislative purpose of drought preparedness.

NEW SECTION

WAC 173-167-025 Authority. This regulation is promulgated by the department of ecology under authorities provided in chapter 43.21A RCW, consistent with the provisions of chapter 34.05 RCW.

NEW SECTION

WAC 173-167-035 Definitions. As used in this chapter:

(1) "Ecology" is the Washington state department of ecology.

(2) "Municipality" means a city or town in the state of Washington.

(3) "Normal water supply," for the purpose of eligibility for funding under this chapter is:

(a) That amount of water put to beneficial use during the irrigation season for the irrigation of one or more crops, using reasonably efficient practices, including reasonable convey-

ance losses, under a valid water right permit or certificate, or a supported registered water right claim; or

(b) That amount or flow of water required for normal operations of fish hatchery, fish rearing, or fish passage facilities. Such facilities, where required by law, must be operating under a valid water right permit or certificate, or under a supported registered water right claim; or

(c) The flow of water that is critically necessary to maintain instream habitat conditions for existing fish populations, as determined by ecology in concert with the state department of fish and wildlife.

(4) "Previously established activities" include, but are not limited to:

(a) The irrigation of a specified number of acres, using reasonably efficient practices, under a valid water right permit or certificate, or a supported registered water right claim.

(b) The delivery of water by public entities through existing supply systems to present populations, areas, and/or facilities for purposes that are nonagricultural and not related to preservation or enhancement of fish or wildlife.

(c) Those fish-management activities presently employed to maintain or restore the fish resource.

(5) "Reasonably efficient practices" are those practices including, but not limited to, methods of conveyance, use, and disposal of water which are reasonable and appropriate under the circumstances to bring about water use efficiency as determined by an area-specific application of criteria identified by ecology, which may include, among others:

(a) Efficient practices used in the area;

(b) Standards of reasonable efficiency existing at the time the conveyance facilities were built;

(c) Cost of improvements and impacts of the costs of upgrading facilities on the continued use of water by an appropriator;

(d) Changes in water use practices and technology; and

(e) Impact of alternative water use practices on other water uses, instream flows, and the environment.

(6) "Supported registered water right claim" is a registered water right claim which includes sufficient evidence to allow ecology to make a tentative determination of the extent and validity of the claimed water right. Applications made for funding under this chapter must incorporate, either by reference or inclusion, necessary information to enable ecology to make an informed determination with respect to the claim.

(7) "Utility" means any publicly-owned drinking water supply system other than a municipality.

NEW SECTION

WAC 173-167-045 Funding and compensation—General criteria. Ecology may provide funding or compensation to public bodies in connection with projects and measures designed to alleviate drought conditions which may affect public health and safety, including, but not limited to, conditions affecting drinking water supplies, agricultural activities, and survival of fish and wildlife. The general criteria under which funds will be provided are:

(1) Public bodies eligible to receive funding or compensation are defined in RCW 43.83B.050 as "...the state of Washington, or any agency, political subdivision, taxing dis-

EMERGENCY

tract, or municipal corporation thereof, an agency of the federal government, and those Indian tribes now or hereafter recognized as such by the federal government for participation in the federal land and water conservation program and which may constitutionally receive grants or loans from the state of Washington."

(2) The water system, water source, or water body which is connected with a project or measure for which funding or compensation will be provided must be receiving, or have been projected to receive, less than seventy-five percent of normal water supply, as the result of natural drought conditions. This reduction in water supply must be such that it is causing, or will cause, undue hardship for the entities or fish or wildlife depending on the water supply.

(3) Funding or compensation must be in connection with the leasing or acquisition of water, or acquisition, construction, rehabilitation, and/or improvement of water supply facilities, or in connection with other appropriate measures to assure the:

(a) Adequate provision of drinking water to the citizens of the state;

(b) Continuation of irrigated agriculture in the state; or

(c) Survival of the state's fish and wildlife resources, with particular emphasis on fish stocks or wildlife species which have been identified as threatened or endangered by the state department of fish and wildlife, the federal national marine fisheries service, or the federal fish and wildlife service.

(4) Funding or compensation will be available only for projects or measures undertaken in response to drought conditions and not to defray costs of normal water supply operations.

(5) Grants, or combination loans and grants, may be used as matching funds in cases where federal, local, or other funds are also available.

(6) Loans for agricultural water supply facilities shall be approved using the criteria set forth in WAC 173-170-080(6), Agricultural water supply facilities.

(7) Eligibility conditions for each proposed project or measure are:

(a) The proposed project or measure must be for a beneficial use involving a previously established activity or purpose, except in the case of funding or compensation provided in connection with sustaining fish and wildlife.

(b) The proposed project or measure must assist in alleviating a water shortage.

(c) A public body receiving a grant or loan must satisfy ecology as to its ability to complete the project or measure in a timely manner.

(d) A public body receiving a loan must satisfy ecology as to its ability to repay the loan in a timely manner.

(e) Water derived from the project or measure must be put to beneficial use as a substitute for water not available because of a drought.

(f) Water derived from the project or measure must not be used to irrigate new lands.

(g) The proposed project or measure must not adversely affect existing rights, including both instream and out-of-stream rights.

(h) All required permits and approvals for the proposed project or measure must be obtained by the applicant prior to a loan or grant agreement being signed.

(8) Eligible measures that may be funded include, but are not limited to, the means for implementing water conservation procedures, acquiring alternate water sources, or transferring water rights, provided that the proposed measure represents an additional cost to the applicant as the result of drought conditions, and is not a substitute for normal water supply costs.

(a) Types of eligible measures for implementing water conservation procedures include, but are not limited to:

(i) Irrigation scheduling programs and activities, including the necessary personnel to accomplish such activities.

(ii) Implementation of water reduction programs and activities, including the necessary personnel to accomplish such activities.

(iii) Implementation of regional water conservation programs by multiple entities.

(iv) Education programs.

(b) Types of eligible measures for acquiring alternate water sources or transferring water rights include, but are not limited to:

(i) Water purchase or leasing costs.

(ii) Repair or replacement costs.

(iii) Power costs.

(9) Priority will be given to proposed projects which need additional water supplies. Need will be measured by:

(a) The short-term and long-term effects, in the absence of drought relief, that the water shortage would have on agricultural crops or on a municipality's or utility's ability to provide drinking water in its service area, or on the survival of fish or wildlife populations.

(b) The capability and reliability of the proposed project to provide an emergency water supply to the applicant.

(c) The percent of water shortage experienced or forecast for each applicant.

(10) Priority will also be given to proposed measures which:

(a) Are the most effective in achieving long-term reductions (conservation) in water requirements and/or which are the more efficient use of available supplies.

(b) Present no, or minimal, overall environmental impacts, including any detrimental effects to wetlands. Any such impacts should be identified to the best extent possible by the applicant at the time of application.

(11) Preference will be given to public bodies which are implementing activities in response to drought conditions which are in addition to the activities to be conducted with funding applied for under this chapter; such activities may include, but are not limited to, water conservation plans, water system efficiency improvements, and other drought contingency actions.

(12) A municipality or utility requesting funding under this chapter must have developed and be following a water shortage response plan.

(13) Ecology, and all state and local agencies that are affected by the proposed project or measure, in keeping with the emergency nature of these provisions, will process the

respective application(s) and provide a decision(s) to the applicant in an expeditious manner.

(14) To expedite the implementation of drought relief projects and measures, ecology can approve funding or compensation under this chapter without compliance with requirements for:

- (a) Notice of publication.
- (b) The State Environmental Policy Act.

NEW SECTION

WAC 173-167-055 Funding—Agricultural projects.

(1) Eligible projects that may be funded for drought relief of irrigated agriculture include, but are not limited to:

- (a) Pumps and accessories.
- (b) Discharge lines.
- (c) Pipelines.
- (d) Canals and laterals with control structures.
- (e) Lining of leaky canals.
- (f) Diversion structures.
- (g) Reregulating reservoirs.
- (h) Measuring devices.
- (i) Modifying an existing source or deepening an existing well.
- (j) Developing an emergency or alternate water source.
- (k) Replacement water sources, including purchasing or leasing water or water rights to be used during the drought period.

(2) Local improvement districts (LIDs) may be formed to allow funding of on-farm water conservation projects. These projects may include, but are not limited to, conversion from rill to sprinkler or drip irrigation, conversion of sprinkler to drip irrigation, and construction of water reuse ponds.

NEW SECTION

WAC 173-167-065 Funding—Municipalities and utilities projects. (1) Eligible projects that may be funded for drought relief for municipalities and utilities include, but are not limited to:

- (a) Modifying an existing source or deepening an existing well.
- (b) Developing an emergency or alternate water source.
- (c) Replacement water sources, including purchasing or leasing water or water rights to be used during the drought period.
- (d) Constructing an emergency intertie to another approved public water supply.
- (e) Transmission pipelines.
- (f) Diversion structures.
- (g) Pumps and accessories.
- (h) Source meters.
- (i) Leak detection and repair.

NEW SECTION

WAC 173-167-075 Funding—Fish and wildlife projects. (1) Eligible fish hatchery or other fish rearing facility projects that may be funded for protection from drought conditions include, but are not limited to:

- (a) Purchase and installation of water-reuse pumps.
- (b) Modifying hatchery intake and outlet structures.
- (c) Modifying stream channels adjacent to a hatchery to assure passage to the facility.
- (d) Provision and maintenance of oxygen levels in off-site holding ponds by purchase and installation of bottled gas (using air stones), or oxygen generation systems, or mechanical aeration.
- (2) Eligible projects that may be funded to protect instream fish habitat and assist in fish survival during drought conditions include, but are not limited to:
 - (a) Augmentation of instream flows through transfers of diversionary surface and ground water rights.
 - (b) Augmentation of instream flows through temporary withdrawals of ground waters.
 - (c) Stream channel modification such as trenching, sand-bagging, or berming to protect spawning gravels or to provide migratory channels for fish passage.
 - (d) Capture and relocation of stranded fish.
 - (e) Modification to existing wells and aeration towers.
 - (f) Drilling new wells.
 - (g) Installation and removal of temporary fish collection weirs.

(3) The department of fish and wildlife and any potentially affected Indian tribes will be consulted to verify eligibility, needs, and nature of all proposed fish-related projects and measures.

(4) Eligible projects that may be funded to protect aquatic and/or upland wildlife species and assist in fish survival during drought conditions include, but are not limited to:

- (a) Temporary diversion of stream flow to critical bird nesting habitat or wetland habitat populated by priority species, as identified by the state department of fish and wildlife.
- (b) Temporary impoundment of water in existing wetland habitat populated by priority species, as identified by the state department of fish and wildlife.
- (c) Temporary diversion of streamflow to upland watering devices.
- (d) Any diversion or impoundment of water described in (a) through (c) of this subsection shall be done in a manner that does not detrimentally affect fish populations listed under the federal endangered species act.

NEW SECTION

WAC 173-167-085 Criteria for buying or leasing water for fish. (1) Ecology may lease or purchase valid water rights to alleviate drought conditions affecting the state's fish resources. Water rights which are leased or purchased under the authority of this rule must be located in an area receiving, or having been forecast to receive, less than seventy-five percent of its normal seasonal water supplies.

(2) Priority consideration for purchasing and leasing water rights will be given to water rights identified as being most likely to contribute to the survival of threatened or endangered fish stocks by the Washington department of fish and wildlife, potentially affected Indian tribes, and the federal national marine fisheries and fish and wildlife services. To the fullest possible extent, purchasing and leasing water

rights will also be based on consideration of the following priorities:

- (a) The water right to be purchased or leased:
 - (i) Has sufficient documentation to allow ecology to make a tentative determination as to its extent and validity;
 - (ii) Has a sufficiently early priority date to ensure it will provide a benefit for restoring and protecting fish;
 - (iii) Was put to use in the previous year;
 - (iv) Will provide the relatively greatest benefit for restoring and protecting fish;
 - (v) Will provide benefits in addition to restoring and protecting fish, such as meeting water quality requirements; and
 - (vi) Is reasonably priced within the context of the local market for water.
- (b) Lease or purchase of the water right would:
 - (i) Receive a broad level of support among interested parties;
 - (ii) Be accomplished with partial funding from other sources;
 - (iii) Require minimal administrative costs; and
 - (iv) Would provide the longest possible period of benefit for fish.
- (3) Ecology will not purchase or lease:
 - (a) Water rights for water which will not increase streamflow in the year 2001; or
 - (b) Water rights which are subject to regulation to protect minimum flows established under chapter 90.22 RCW and chapter 173-500 WAC during the period for which ecology is seeking to enhance fish benefits.

NEW SECTION

WAC 173-167-095. Requests for funding—Contacts—Applications. (1) The ecology headquarters office, water resources program, will administer funding or compensation under this chapter in accordance with the provisions of this chapter. For applications or information regarding funding or compensation under this chapter, contact Ray Newkirk, Water Resources Program, Department of Ecology, by mail at P.O. WSR 01-12-014**OFFICE OF
COMMUNITY DEVELOPMENT**

[Filed May 25, 2001, 9:39 a.m.]

The Office of Community Development (OCD) will be publishing a draft of the 2002 low-income home energy assistance program (LIHEAP) abbreviated model plan.

The draft 2002 abbreviated plan will contain changes to the 2000 LIHEAP detailed plan. The 2000 detailed plan describes how the state of Washington, in conjunction with community-based public and private agencies, will provide energy assistance and weatherization services to low-income households. Both plans are based on the model plan format provided by the federal Department of Health and Human Services. This format ensures that the statutory requirements for LIHEAP are met.

A copy of the 2002 abbreviated plan will be available at www.liheapwa.org or www.ocd.wa.gov "Our Programs" and "LIHEAP" on May 24, 2001. The 2000 detailed plan and the 2001 abbreviated plan are currently located there. Copies can be mailed to you upon request. The abbreviated plan is also available in alternate formats upon request.

Written requests may be sent to Ms. Leona Malmberg, Department of Community, Trade and Economic Development, Community Services, 906 Columbia Street S.W., P.O. Box 48300, Olympia, WA 98504-8300.

You may also contact Ms. Malmberg by phone at (360) 725-2859 or by e-mail at leonam@cted.wa.gov to request a copy.

PROCLAMATION
OFFICE OF
THE GOVERNOR

[May 24, 2001]

WHEREAS, in accordance with Article II, Section 12, (Amendment 68) of the Washington State Constitution, the Legislature adjourned its 2001 regular session on April 22, 2001, the 105th day of the session, and adjourned the first special session of 2001 on May 24, 2001, the 30th day of the special session; and

WHEREAS, state operating, transportation and capital budgets, including bonds and measures necessary to implement them, were not passed; and

WHEREAS, substantial work remains to be done with respect to transportation, including reforms and efficiencies, regional governance, projects and investments, the Tacoma Narrows Bridge, revenue, and bonds; and

WHEREAS, work also remains to be done to pass legislation affecting the primary election system, accountability for student achievement, school safety - including anti-bullying policy, splitting the Department of Community, Trade and Economic Development, shorelines rule implementation, the siting of certain sexual predators at McNeil Island, post-retirement employment, medical coverage for the disabled who work, and welfare simplification;

NOW, THEREFORE, I, Gary Locke, Governor of the State of Washington, by virtue of the authority vested in me by Article II, Section 12 (Amendment 68) and Article III, Section 7 of the Washington State Constitution, do hereby convene the Washington State Legislature in a second special session in the Capitol at Olympia at twelve o'clock noon on June 4,

2001 for a period of not more than two weeks for the purpose of enacting legislation as described above.

IN WITNESS WHEREOF, I have hereunto set my hand and caused the Seal of the State of Washington to be affixed at Olympia this 24th day of May, A.D., two thousand one.

Gary Locke

Governor of Washington

BY THE GOVERNOR:

Sam Reed

Table of WAC Sections Affected

KEY TO TABLE

This table covers the current calendar year through this issue of the Register and should be used to locate rules amended, adopted, or repealed subsequent to the publication date of the latest WAC or Supplement.

Symbols:

- AMD = Amendment of existing section
- A/R = Amending and recodifying a section
- DECOD = Decodification of an existing section
- NEW = New section not previously codified
- OBJECT = Notice of objection by Joint Administrative Rules Review Committee
- PREP = Preproposal comments
- RE-AD = Readoption of existing section
- RECOD = Recodification of previously codified section
- REP = Repeal of existing section
- RESCIND = Rescind of existing section
- REVIEW = Review of previously adopted rule
- SUSP = Suspending an existing section

Suffixes:

- C = Continuance of previous proposal
- E = Emergency action
- P = Proposed action
- S = Supplemental notice
- W = Withdrawal of proposed action
- XA = Expedited adoption
- XR = Expedited repeal
- No suffix means permanent action

WAC # Shows the section number under which an agency rule is or will be codified in the Washington Administrative Code.

WSR # Shows the issue of the Washington State Register where the document may be found; the last three digits identify the document within the issue.

WASHINGTON STATE REGISTER Subscriptions

To: Subscription Clerk
WASHINGTON STATE REGISTER
Code Reviser's Office
PO Box 40552
Olympia, WA 98504-0552
(360) 786-6369

I would like to order _____ subscription(s) to the WASHINGTON STATE REGISTER, at an annual rate of \$210.60, sales tax included (\$195 for state agencies). Enclosed is my check or money order for \$_____. All subscriptions run from January through December. Please start my subscription with the January issue of 2001.

NAME _____

ADDRESS _____

THE WASHINGTON STATE REGISTER, published under RCW 34.08.020, is distributed on the first and third Wednesdays of each month. The Register contains the full text of proposed, emergency, and permanently adopted rules of state agencies, executive orders of the governor, notices of public meetings of state agencies, rules of the state supreme court, summaries of attorney general opinions, and juvenile disposition standards that have been filed in the code reviser's office before the closing date for that issue of the Register. A cumulative table of existing sections of the Washington Administrative Code (WAC) affected by a particular agency action guides the user to the proper issue of the Register.

The code reviser's office has established an annual subscription price of \$195 for a Register subscription, and single copies cost \$8.00. Sales tax of 8.0% applies to all sales other than to state agencies. State law requires payment in advance. To subscribe to the Register, please complete the order form above and forward it to the address indicated, accompanied by your check or money order in the amount of \$210.60 (\$195 for state agencies) payable to the code reviser's office.
