
**Agriculture & Natural Resources
Committee**

SSB 6108

Brief Description: Applying pesticides.

Sponsors: Senate Committee on Agriculture (originally sponsored by Senators Sheahan, Swecker, Rasmussen and Eide; by request of Department of Agriculture).

Brief Summary of Substitute Bill

- Converts a pilot project for authorizing certain limited pesticide application licenses into a permanent program, and expands the program to include all of eastern Washington.
- Allows the licensing fee for a license for a private applicator, limited private applicator, and rancher private applicator to be set by rule.
- Alters the description of regulated spray adjuvants and allows, in the case of spray adjuvants, the requirements for the ingredient statements to be set by rule.

Hearing Date: 2/20/04

Staff: Kenneth Hirst (786-7105).

Background:

The registration and use of pesticides is regulated at the national level by the Federal Insecticide, Fungicide, and Rodenticide Act. In general, a pesticide cannot be sold or distributed within the United States unless it has been registered with the U.S. Environmental Protection Agency (EPA). The "pesticides" regulated in this manner encompass herbicides, insecticides, and similar chemicals that control pests. At the state level, pesticides sold or distributed within the state must be registered under the Washington Pesticide Control Act. The use or application of pesticides in the state is regulated under the Washington Pesticide Application Act. These state laws are administered by the Washington State Department of Agriculture (WSDA).

A pilot project establishing licenses for certain limited applications of pesticides was authorized by legislation enacted in 1997. As expanded in 1999, the pilot project provided for limited private applicator and rancher private applicator licenses for applications of pesticides on certain lands in Ferry, Okanogan, Stevens, and Pend Oreille counties. The application of herbicides to aquatic sites is not permitted under these licenses and continuing education requirements apply to these licenses. The pilot project is to expire December 31, 2004.

Summary of Bill:

Licensing categories. On January 1, 2005, the licensing categories of a limited private applicator and rancher private applicator no longer exist on just a pilot project basis. They are made permanent and they apply in all of eastern Washington.

A limited private applicator is one who uses or is in direct supervision of the use of any herbicide classified as a restricted use pesticide, for the sole purpose of controlling weeds on non-production agricultural land owned or rented by the applicator or the applicator's employer. (Non-production agricultural lands are pastures, rangeland, fence rows, and areas around farm buildings, but not aquatic sites.) Such an applicator may also use restricted use pesticides on timber areas, excluding aquatic sites, to control weeds designated for mandatory control under the state's noxious weed control laws, weed district laws, or under state and county regulations adopted under those laws. A limited private applicator may apply restricted use herbicides to these types of land that belong to another person if the herbicides are applied without compensation other than trading of personal services between the applicator and the other person.

A rancher private applicator is one who uses or is in direct supervision of the use of any herbicide or any rodenticide classified as a restricted use pesticide for the purpose of controlling weeds and pest animals on non-production agricultural land and limited production agricultural land owned or rented by the applicator or the applicator's employer. (Limited production agricultural land is land, other than aquatic sites, used to grow hay and grain crops that are consumed by the livestock on the farm where produced. Not more than 10 percent of the hay and grain crops grown on limited production agricultural land may be sold each crop year.) Rancher private applicators may also use restricted use pesticides on timber areas, excluding aquatic sites, to control weeds designated for mandatory control under the state's noxious weed control laws, weed district laws, or under state and county regulations adopted under those laws. A rancher private applicator may apply restricted use herbicides and rodenticides to these types of land that belong to another person if they are applied without compensation other than trading of personal services between the applicator and the other person.

Applicants for licenses in these two licensing categories must be at least 16 years of age. The licenses expire on the last day of the fifth year after they are issued. Renewing a rancher private applicator license after its expiration is subject to a penalty of \$25; for a limited private applicator, it is equal to the licensing fee. The landscape application of pesticides does not include applications by limited private applicators or rancher private applicators.

Fees. The licensing fees for a private applicator, limited private applicator, and rancher private applicator are to be established by rule. The exemptions from the fee requirement provided by statute for a private applicator also apply to the two new licensing categories.

Recertification requirements. Limited private applicators must accumulate a minimum of eight WSDA-approved credits every five years. All credits must be applicable to the control of weeds. At least one-half of the credits must be directly related to weed control and the remaining must be in topic areas indirectly related to weed control. Rancher private applicators must accumulate a minimum of 12 WSDA-approved credits every five years.

Pesticide Control and Pesticide Application Acts - Generally. In the case of a spray adjuvant, the ingredient statement required for a pesticide under the state's Pesticide Control Act is not

expressly limited to containing only the names of the principal functioning agents and the total percentage of the constituents ineffective as spray adjuvants, nor, if more than three functioning agents are present, to only the names of the three principal agents. The statement must be consistent with labeling requirements adopted by rule.

The description of a spray adjuvant regulated under the state's Pesticide Control Act and Pesticide Application Act is altered and expressly does not include a product that is only intended to mark the location where a pesticide is applied.

Appropriation: None.

Fiscal Note: Not requested.

Effective Date: The bill takes effect on January 1, 2005.
