

RCW 70A.450.010 Purpose of chapter. Asbestos is a known human carcinogen that causes painful, premature deaths due to diseases such as asbestosis, mesothelioma, lung and gastrointestinal cancers, and other diseases and cancers. Activities that can lead to the release of asbestos fibers include installation, use, maintenance, repair, removal, and disposal of asbestos-containing building materials.

Many people are unaware that asbestos-containing building materials are still imported, sold, and used in the United States. Because few regulations exist that require the disclosure of asbestos in building materials, people can unknowingly be exposed to asbestos. Asbestos is generally invisible, odorless, very durable, and highly aerodynamic. Exposure can occur well after it has been disturbed and long distances from where the asbestos release occurred.

The purpose of this chapter is to allow people to make informed decisions regarding whether or not they purchase or use building materials containing asbestos. More specifically, building materials that contain asbestos must be clearly labeled as such by manufacturers, wholesalers, and distributors. [2013 c 51 § 1. Formerly RCW 70.310.010.]
