

WAC 173-182-335 Planning standards for storage. (1) Plan holders shall identify both on-water devices and shoreside interim storage locations.

(a) For marine waters, shoreside storage can be identified to meet fifty percent of storage requirements in the tables in WAC 173-182-355 through 173-182-450, if the plan holders can demonstrate that recovered oil can be transported to the shoreside storage.

(b) For freshwater environments, shoreside storage can be identified to meet sixty-five percent of the storage requirements in the tables below, if the plan holders can demonstrate that recovered oil can be transported to the shoreside storage.

(2) For covered vessel plan holders, at least twenty-five percent of the total worst case discharge volume at twenty-four hours, from the planning standard tables in WAC 173-182-355 through 173-182-450, must be dedicated to on-water storage.

(3) For facility plan holders, one hundred percent of the storage requirements may be met through shoreside storage assets provided shoreside storage is the most appropriate method for containing recovered oil, given the limitations of geography and local environmental conditions, as required in the tables in WAC 173-182-355 through 173-182-450.
