PERMANENT RULES
DEPARTMENT OF
FISH AND WILDLIFE

[Order 21-196—Filed September 23, 2021, 10:32 a.m., effective October 24, 2021]

Effective Date of Rule: Thirty-one days after filing.

Purpose: A large area of the ferruginous hawk's habitat is grasslands and shrubsteppe. Washington's drastic landscape development has altered the ferruginous hawk's breeding range. Native grasslands and arid shrublands have transformed into agriculture and urbanization. Also, there has been a decline in condition on rangelands. All these factors contribute to the loss of nesting and foraging habitat.

The reduction of prey on the breeding range and landscape during migration speak to the decline of Washington's breeding population. The breeding population of ferruginous hawks in Washington is in a sustained decline. Between 1974 and 2016, there have been significant declines in nesting territory occupancy, nest success, and productivity. Additionally, the percentage of surveyed nesting territories supporting breeding pairs has declined in the core breeding range of the species in Benton and Franklin counties. The distribution of breeding pairs statewide also appears to have shrunk since the 1990s.

With the lack of improvement in habitat conditions or movement to address the primary threats, the ferruginous hawk is now classified as endangered in Washington.

Washington department of fish and wildlife classified the ferruginous hawk as endangered in the state of Washington under WAC 220-610-010. The reason we adopted the rule is to draw attention to the growing conservation concern around this species and further prioritize it internally and externally with our conservation partners. The species meets the definition of endangered as defined in WAC 220-610-110 and will now fall under regulations and enforcement in RCW 77.15.120.

Citation of Rules Affected by this Order: Amending WAC 220-200-100 and 220-610-010.

Statutory Authority for Adoption: RCW 77.04.012, 77.04.013, 77.04.020, 77.04.055, and 77.12.020.
