Brief Description: Improving water quality through sound storm water management.

HB 2847 - DIGEST

(SUBSTITUTED FOR - SEE 2ND SUB)

Finds that development of consistent and predictable standards for storm water management across multiple state, federal, and local jurisdictions is imperative for the state to achieve environmental protection in a cost-effective manner.

Finds that storm water management must provide protection of natural resources while also providing state and local agencies, development interests, and others with a flexible set of tools and alternatives that can help ensure cost-effective storm water management and detention.

Finds that significant fragmentation in authority exists between local, state, and federal agencies in managing storm water. The legislature believes state agencies and local governments, and where appropriate, federal and tribal governments, should identify streamlining opportunities to address fragmentation between storm water authority exercised by local, state, and federal jurisdictions.
