**HB 1482**

**Brief Description:** Concerning reclaimed water permitting.

**Sponsors:** Representatives McCoy, Chandler, Blake, Van De Wege, Kretz, Upthegrove and Nelson; by request of Department of Ecology.

**Brief Summary of Bill**

- Redefines several definitions relating to reclaimed water systems.
- Authorizes reclaimed water to be beneficially used for surface percolation if the reclaimed water meets state drinking water contaminant criteria.
- Provides rule making authority for the Department of Ecology and the Department of Health in establishing a lead agency to carry out all the provisions of the reclaimed water code, including enforcement and permitting.
- Authorizes the Department of Ecology to use fees to administer reclaimed water system permits.
- Establishes permit provisions for a reclaimed water project.
- Allows the lead agency to enter and inspect the permitted properties in order to determine compliance with laws and rules.
- Authorizes penalties up to \$10,000, imprisonment in the county jail up to one year, or both, for violations of the reclaimed water code.

**Hearing Date:** 1/27/09

**Staff:** Jaclyn Ford (786-7339)

**Background:**

---

*This analysis was prepared by non-partisan legislative staff for the use of legislative members in their deliberations. This analysis is not a part of the legislation nor does it constitute a statement of legislative intent.*

Reclaimed water is an effluent derived from a wastewater treatment system that has been treated in order to be suitable for a beneficial use or a controlled use that otherwise would not occur. Reclaimed water may be used for a variety of nonpotable water purposes including irrigation, agricultural uses, industrial and commercial uses, stream flow augmentation, dust control, fire suppression, surface percolation, and discharge into constructed wetlands.

The Department of Health (DOH) issues permits to water generators for commercial or industrial uses of reclaimed water. The Department of Ecology (DOE) issues reclaimed water permits for land applications of reclaimed water. The DOH and the DOE were required to adopt a single set of standards, procedures, and guidelines for industrial and commercial uses and land applications of reclaimed water. These standards were adopted in the mid-1990s and resulted from consultation with an advisory committee of stakeholders.

Several task forces established by the DOE and the DOH have reviewed the current reclaimed water regulations and have suggested ways to make development of reclaimed water facilities easier and more efficient.

### **Summary of Bill:**

Reclaimed water may be beneficially used for surface percolation if it meets the state drinking water contaminant criteria.

The DOE and the DOH have rule making authority to carry out the provisions of the reclaimed water code, including rule making authority on permitting and enforcement. The DOE and the DOH will determine by rule which agency must act as the lead agency.

The reclaimed water permit must include provisions that protect human health and the environment. The permit also must assure adequate and reliable treatment, and govern the water quality, location, rate, and purpose of use. A permit may only be issued to (1) a municipal, quasi-municipal, or governmental entity; (2) a private utility; (3) the holder of a waste disposal permit; (4) the owner of an agricultural processing facility that is generating agricultural industrial process water for agricultural use; or (5) the owner of an industrial facility that is generating industrial process water for reuse.

Private utilities may have to provide information to the lead agency verifying that they have the financial resources to ensure the reliability, continuity, and supervision of the reclaimed water facility.

The lead agency must provide adequate public notice and opportunity for review and comment on all initial permit and renewal applications. The permitting decision is appealable.

The DOE may use permit fees for administration of the reclaimed water system permits.

The lead agency has the right to enter and inspect any public or private property related to the reclaimed water permit in order to determine compliance with laws and rules. During the inspections, the lead agency must have free and unimpeded access to all data, facilities, and property involved in the generation, distribution, and use of reclaimed water.

All plans, reports, and proposed methods of operation and maintenance must be approved by the lead agency before construction may begin.

Violations of the reclaimed water code may include fines up to \$10,000 and the costs of prosecution, imprisonment in the county jail up to one year, or both. Each day of a willful violation of the reclaimed water code may be deemed a separate and additional violation.

**Appropriation:** None.

**Fiscal Note:** Available.

**Effective Date:** The bill takes effect 90 days after adjournment of the session in which the bill is passed.
