

FINAL BILL REPORT

SHB 1346

C 84 L 17
Synopsis as Enacted

Brief Description: Clarifying the authority of a nurse working in a school setting.

Sponsors: House Committee on Education (originally sponsored by Representatives Springer, Muri, Dolan, Harris, Appleton, Tarleton, Cody, Santos and Ortiz-Self).

House Committee on Education
Senate Committee on Early Learning & K-12 Education

Background:

Students attend school with a broad range of health conditions. These range from potentially life-threatening acute and chronic conditions to correctable vision problems. Before a child is allowed to attend public school, the school must receive a medication or treatment order addressing any life threatening health condition the child has that may require medical services, including nursing services, to be performed at the school.

The scope of practice and training for nurses is regulated through a tiered licensure system, with licensed practical nurses having the least amount of training and advanced registered nurse practitioners (ARNP) having the most training. The National Association of School Nurses (NASN) recommends that, at a minimum, a school nurse should be licensed as a registered nurse (RN).

In addition, the NASN recommends that a school nurse be clinically supervised and evaluated by an RN knowledgeable about the scope and standards of practice for school nursing. Many of the duties of a school nurse must be carried out by an RN or an ARNP, such as:

- consulting and coordinating with students' parents and health care providers;
- preparing student health care plans;
- performing health assessments and health evaluations for special education students;
- training and supervising the appropriate school district personnel in proper procedures to ensure a safe, therapeutic learning environment; and
- health teaching.

In a first class school district (2,000 or more enrolled students), a school nurse must hold an education staff associate certificate. The knowledge and skills acquired through this

certification process are over and above the knowledge and skills required for licensure as an RN.

Summary:

An RN or an ARNP working in a school setting is authorized and responsible for the nursing care of students to the extent that the care is within the practice of nursing. A school administrator may supervise an RN or an ARNP in aspects of employment other than the practice of nursing. Only an RN or an ARNP may supervise, direct, or evaluate a licensed nurse working in a school setting with respect to the practice of nursing.

This does not:

- prohibit a non-nurse supervisor from supervising, directing, or evaluating a licensed nurse working in a school setting with respect to matters other than the practice of nursing;
- require an RN or an ARNP to be clinically supervised in a school setting; or
- prohibit a non-nurse supervisor from conferring with a licensed nurse working in a school setting with respect to the practice of nursing.

The Superintendent of Public Instruction must notify each school district of these requirements, within existing funds.

The "practice of nursing" means registered nursing practice, advanced registered nursing practice, and licensed practical nursing practice as defined in nursing care statute. Such practice includes the administration of medication pursuant to a medication or treatment order and the decision to summon emergency medical assistance. It also requires compliance with any state or federal statute or administrative rule specifically regulating licensed nurses, including any statute or rule defining or establishing standards of patient care or professional conduct or practice.

Votes on Final Passage:

House	95	1
Senate	47	0

Effective: July 23, 2017
