

HB 1299-S - DIGEST

(DIGEST OF PROPOSED 1ST SUBSTITUTE)

Revises the Washington clean air act to exempt cattle feedlots, with operational facilities that have an inventory of at least one thousand cattle in operation between June 1st and October 1st, where vegetation forage growth is not sustained over the majority of the lot during the normal growing season, from requirements for fugitive dust caused by agricultural activity.

Expands the definitions of "agricultural activity" and "good agricultural practices" as they apply to cattle feedlots.
