Washington State House of Representatives Office of Program Research

Finance Committee

HB 2482

Brief Description: Reinstating semiconductor tax incentives.

Sponsors: Representatives Harris, Santos and Stonier.

Brief Summary of Bill

- Extends two tax preferences for semiconductor manufacturing until January 1, 2034.
- Reinstates six expired tax preferences, contingent on new industry investment until January 1, 2034.

Hearing Date: 2/2/24

Staff: Kristina King (786-7190).

Background:

Business and Occupation Tax.

Washington's major business tax is the business and occupation (B&O) tax. The B&O tax is imposed on the gross receipts of business activities conducted within the state, without any deduction for the costs of doing business. Businesses must pay the B&O tax even though they may not have any profits or may be operating at a loss.

Sales and Use Tax.

Retail sales taxes are imposed on retail sales of most articles of tangible personal property, digital products, and some services. A retail sale is a sale to the final consumer or end user of the property, digital product, or service. If retail sales taxes were not collected when the user acquired the property, digital products, or services, then use tax applies to the value of property, digital product, or service when used in this state. The state, all counties, and all cities levy retail

sales and use taxes. The state sales and use tax rate is 6.5 percent; local sales and use tax rates vary from 0.5 percent to 4.0 percent, depending on the location.

Tax Preference Performance Statement.

State law provides for a range of tax preferences that confer reduced tax liability upon a designated class of taxpayer. Tax preferences include tax exclusions, deductions, exemptions, preferential tax rates, deferrals, and credits. Currently, Washington has over 650 tax preferences, including a variety of sales and use tax exemptions. Legislation that establishes or expands a tax preference must include a Tax Preference Performance Statement (TPPS) that identifies the public policy objective of the preference, as well as specific metrics that the Joint Legislative Audit and Review Committee (JLARC) can use to evaluate the effectiveness of the preference. All new tax preferences automatically expire after 10 years unless an alternative expiration date is provided.

Semiconductor Tax Incentives.

Semiconductor manufacturing is the process of creating integrated circuits or microchips. These materials are used in the construction of electronic devices.

There are two tax preferences in effect for the semiconductor industry:

- a preferential B&O rate of 0.275 percent on the manufacturing or processing for hire of semiconductor materials including silicon crystals, silicon ingots, raw polished semiconductor wafers, and compound semiconductor wafers; and
- a sales and use tax exemption for manufacturers and processors for hire on purchases of
 gases and chemicals used to produce semiconductor materials. Manufacturers of silicon
 solar wafers, silicon solar cells, thin film solar devices, solar grade silicon, or compound
 semiconductor solar wafers also qualify for this exemption.

The tax preferences require beneficiaries to maintain the number of persons employed, at least 90 percent of the employment average for the previous three years, or to reimburse 50 percent of the benefits. The preferences expire on December 1, 2028.

The two existing preferences were created at the same time as six additional tax preferences for the semiconductor industry. However, the six preferences expired January 1, 2024 because they were contingent upon a manufacturer making at least a \$1 billion investment in new buildings and machinery and equipment, to site and operate a semiconductor microchip fabrication facility. This investment did not occur. The six preferences that expired are:

- a B&O tax credit of \$3,000 for each job manufacturing production position that takes place in a new building that manufacture semiconductive materials;
- a B&O tax exemption for semiconductor microchip manufacturing;
- a preferential B&O tax rate of 0.275 percent for businesses manufacturing semiconductor materials, including microchips;
- a sales and use tax exemption for labor, services, and sales of tangible personal property related to the construction of new buildings used for manufacturing semiconductor materials;

- a sales and use tax exemption for purchases of gases and chemicals used in the semiconductor manufacturing process; and
- a property tax exemption for machinery and equipment exempt from sales and use taxes used in manufacturing semiconductor materials.

Summary of Bill:

The six expired tax preferences are reinstated contingent upon the construction of a new semiconductor manufacturing fabrication built by January 1, 2034, with an investment of at least \$1 billion in buildings and equipment. The reinstated tax preferences are exempt from TPPS requirements.

The expiration date for the two preferences in effect is extended to January 1, 2034.

Appropriation: None.

Fiscal Note: Available.

Effective Date: The bill contains an emergency clause and takes effect immediately.
