

RCW 80.86.030 Sale of wholesale electricity—Greenhouse gas attributes. Large combination utilities shall work in good faith with other utilities, independent power producers, power marketers, end-use customers, and interested parties in the region to develop market structures and mechanisms that require the sale of wholesale electricity from generating resources in a manner that allows the greenhouse gas attributes of those resources to be accounted for when they are sold into organized markets. [2024 c 351 s 4.]

Effective date—2024 c 351: See note following RCW 80.86.010.
