(bb) A description of the affected employee's duties as they relate to the employee's exposure;

(cc) The employee's exposure level or anticipated exposure level to lead and to any other toxic substance (if applicable);

(dd) A description of any personal protective equipment used or to be used;

(ee) Prior blood lead determinations; and

(ff) All prior written medical opinions concerning the employee in the employer's possession or control.

(B) The employer shall provide the foregoing information to a second or third physician conducting a medical examination or consultation under this section upon request either by the second or third physician, or by the employee.

(v) Written medical opinions.

(A) The employer shall obtain and furnish the employee with a copy of a written medical opinion from each examining or consulting physician which contains the following information:

(aa) The physician's opinion as to whether the employee has any detected medical condition which would place the employee at increased risk of material impairment of the employee's health from exposure to lead;

(bb) Any recommended special protective measures to be provided to the employee, or limitations to be placed upon the employee's exposure to lead;

(cc) Any recommended limitation upon the employee's use of respirators, including a determination of whether the employee can wear a powered air purifying respirator if a physician determines that the employee cannot wear a negative pressure respirator; and

(dd) The results of the blood lead determinations.

(B) The employer shall instruct each examining and consulting physician to:

(aa) Not reveal either in the written opinion, or in any other means of communication with the employer, findings, including laboratory results, or diagnoses unrelated to an employee's occupational exposure to lead; and

(bb) Advise the employee of any medical condition, occupational or nonoccupational, which dictates further medical examination or treatment.

(vi) Alternate physician determination mechanisms. The employer and an employee or authorized employee representative may agree upon the use of any expeditious alternate physician determination mechanism in lieu of the multiple physician review mechanism provided by this subsection so long as the alternate mechanism otherwise satisfies the requirements contained in this subsection.

(d) Chelation.

(i) The employer shall assure that any person whom he retains, employs, supervises or controls does not engage in prophylactic chelation of any employee at any time.

(ii) If therapeutic or diagnostic chelation is to be performed by any person in item (10)(d)(i), the employer shall assure that it be done under the supervision of a licensed physician in a clinical setting with thorough and appropriate medical monitoring and that the employee is notified in writing prior to its occurrence.

(11) Medical removal protection.

(a) Temporary medical removal and return of an employee.

(i) Temporary removal due to elevated blood lead levels.

(A) First year of the standard. During the first year following the effective date of the standard, the employer shall remove an employee from work having a daily eight hour TWA exposure to lead at or above  $100 \mu\text{g}/\text{m}^3$  on each occasion that a periodic and a follow-up blood sampling test conducted pursuant to this section indicate that the employee's blood lead level is at or above  $80 \mu\text{g}/100 \text{ g}$  of whole blood;

(B) Second year of the standard. During the second year following the effective date of the standard, the employer shall remove an employee from work having a daily eight hour TWA exposure to lead at or above  $50 \mu\text{g}/\text{m}^3$  on each occasion that a periodic and a follow-up blood sampling test conducted pursuant to this section indicate that the employee's blood lead level is at or above  $70 \mu\text{g}/100 \text{ g}$  of whole blood;

(C) Third year of the standard, and thereafter. Beginning with the third year following the effective date of the standard, the employer shall remove an employee from work having an exposure to lead at or above the action level on each occasion that a periodic and a follow-up blood sampling test conducted pursuant to this section indicate that the employee's blood lead level is at or above  $60 \mu\text{g}/100 \text{ g}$  of whole blood; and

(D) Fifth year of the standard, and thereafter. Beginning with the fifth year following the effective date of the standard, the employer shall remove an employee from work having an exposure to lead at or above the action level on each occasion that the average of the last three blood sampling tests conducted pursuant to this section (or the average of all blood sampling tests conducted over the previous six months, whichever is longer) indicates that the employee's blood lead level is at or above  $50 \mu\text{g}/100 \text{ g}$  of whole blood; provided, however, that an employee need not be removed if the last blood sampling test indicates a blood lead level at or below  $40 \mu\text{g}/100 \text{ g}$  of whole blood.

(ii) Temporary removal due to a final medical determination.

(A) The employer shall remove an employee from work having an exposure to lead at or above the action level on each occasion that a final medical determination results in a medical finding, determination, or opinion that the employee has a detected medical condition which places the employee at increased risk of material impairment to health from exposure to lead.

(B) For the purposes of this section, the phrase "final medical determination" shall mean the outcome of the multiple physician review mechanism or alternate medical determination mechanism used pursuant to the medical surveillance provisions of this section.

(C) Where a final medical determination results in any recommended special protective measures for an employee, or limitations on an employee's exposure to lead, the employer shall implement and act consistent with the recommendation.

(iii) Return of the employee to former job status.

(A) The employer shall return an employee to his or her former job status:

(aa) For an employee removed due to a blood lead level at or above 80  $\mu\text{g}/100\text{ g}$ , when two consecutive blood sampling tests indicate that the employee's blood lead level is at or below 60  $\mu\text{g}/100\text{ g}$  of whole blood;

(bb) For an employee removed due to a blood lead level at or above 70  $\mu\text{g}/100\text{ g}$ , when two consecutive blood sampling tests indicate that the employee's blood lead level is at or below 50  $\mu\text{g}/100\text{ g}$  of whole blood;

(cc) For an employee removed due to a blood lead level at or above 60  $\mu\text{g}/100\text{ g}$ , or due to an average blood lead level at or above 50  $\mu\text{g}/100\text{ g}$ , when two consecutive blood sampling tests indicate that the employee's blood lead level is at or below 40  $\mu\text{g}/100\text{ g}$  of whole blood;

(dd) For an employee removed due to a final medical determination, when a subsequent final medical determination results in a medical finding, determination, or opinion that the employee no longer has a detected medical condition which places the employee at increased risk of material impairment to health from exposure to lead.

(B) For the purposes of this section, the requirement that an employer return an employee to his or her former job status is not intended to expand upon or restrict any rights an employee has or would have had, absent temporary medical removal, to a specific job classification or position under the terms of a collective bargaining agreement.

(iv) Removal of other employee special protective measure or limitations. The employer shall remove any limitations placed on an employee or end any special protective measures provided to an employee pursuant to a final medical determination when a subsequent final medical determination indicates that the limitations or special protective measures are no longer necessary.

(v) Employer options pending a final medical determination. Where the multiple physician review mechanism, or alternate medical determination mechanism used pursuant to the medical surveillance provisions of this section, has not yet resulted in a final medical determination with respect to an employee, the employer shall act as follows:

(A) Removal. The employer may remove the employee from exposure to lead, provide special protective measures to the employee, or place limitations upon the employee, consistent with the medical findings, determinations, or recommendations of any of the physicians who have reviewed the employee's health status.

(B) Return. The employer may return the employee to his or her former job status, end any special protective measures provided to the employee, and remove any limitations placed upon the employee, consistent with the medical findings, determinations, or recommendations of any of the physicians who have reviewed the employee's health status, with two exceptions. If:

(aa) The initial removal, special protection, or limitation of the employee resulted from a final medical determination which differed from the findings, determinations, or recommendations of the initial physician; or

(bb) The employee has been on removal status for the preceding eighteen months due to an elevated blood lead level, then the employer shall await a final medical determination.

(b) Medical removal protection benefits.

(i) Provision of medical removal protection benefits. The employer shall provide to an employee up to eighteen months of medical removal protection benefits on each occasion that an employee is removed from exposure to lead or otherwise limited pursuant to this section.

(ii) Definition of medical removal protection benefits. For the purposes of this section, the requirement that an employer provide medical removal protection benefits means that the employer shall maintain the earnings, seniority and other employment rights and benefits of an employee as though the employee had not been removed from normal exposure to lead or otherwise limited.

(iii) Follow-up medical surveillance during the period of employee removal or limitation. During the period of time that an employee is removed from normal exposure to lead or otherwise limited, the employer may condition the provision of medical removal protection benefits upon the employee's participation in follow-up medical surveillance made available pursuant to this section.

(iv) Workers' compensation claims. If a removed employee files a claim for workers' compensation payments for a lead-related disability, then the employer shall continue to provide medical removal protection benefits pending disposition of the claim. To the extent that an award is made to the employee for earnings lost during the period of removal, the employer's medical removal protection obligation shall be reduced by such amount. The employer shall receive no credit for workers' compensation payments received by the employee for treatment related expenses.

(v) Other credits. The employer's obligation to provide medical removal protection benefits to a removed employee shall be reduced to the extent that the employee receives compensation for earnings lost during the period of removal either from a publicly or employer-funded compensation program, or receives income from employment with another employer made possible by virtue of the employee's removal.

(vi) Employees whose blood lead levels do not adequately decline within eighteen months of removal. The employer shall take the following measures with respect to any employee removed from exposure to lead due to an elevated blood lead level whose blood lead level has not declined within the past eighteen months of removal

so that the employee has been returned to his or her former job status:

(A) The employer shall make available to the employee a medical examination pursuant to this section to obtain a final medical determination with respect to the employee;

(B) The employer shall assure that the final medical determination obtained indicates whether or not the employee may be returned to his or her former job status, and if not, what steps should be taken to protect the employee's health;

(C) Where the final medical determination has not yet been obtained, or once obtained indicates that the employee may not yet be returned to his or her former job status, the employer shall continue to provide medical removal protection benefits to the employee until either the employee is returned to former job status, or a final medical determination is made that the employee is incapable of ever safely returning to his or her former job status.

(D) Where the employer acts pursuant to a final medical determination which permits the return of the employee to his or her former job status despite what would otherwise be an unacceptable blood lead level, later questions concerning removing the employee again shall be decided by a final medical determination. The employer need not automatically remove such an employee pursuant to the blood lead level removal criteria provided by this section.

(vii) Voluntary removal or restriction of an employee. Where an employer, although not required by this section to do so, removes an employee from exposure to lead or otherwise places limitations on an employee due to the effects of lead exposure on the employee's medical condition, the employer shall provide medical removal protection benefits to the employee equal to that required by item (11)(b)(i) of this section.

(12) Employee information and training.

(a) Training program.

(i) Each employer who has a workplace in which there is a potential exposure to airborne lead at any level shall inform employees of the content of Appendices A and B of this regulation.

(ii) The employer shall institute a training program for and assure the participation of all employees who are subject to exposure to lead at or above the action level or for whom the possibility of skin or eye irritation exists.

(iii) The employer shall provide initial training by one hundred eighty days from the effective date for those employees covered by item (12)(a)(ii) on the standard's effective date and prior to the time of initial job assignment for those employees subsequently covered by this subsection.

(iv) The training program shall be repeated at least annually for each employee.

(v) The employer shall assure that each employee is informed of the following:

(A) The content of this standard and its appendices;

(B) The specific nature of the operations which could result in exposure to lead above the action level;

(C) The purpose, proper selection, fitting, use, and limitations of respirators;

(D) The purpose and a description of the medical surveillance program, and the medical removal protection program including information concerning the adverse health effects associated with excessive exposure to lead (with particular attention to the adverse reproductive effects on both males and females);

(E) The engineering controls and work practices associated with the employee's job assignment;

(F) The contents of any compliance plan in effect; and

(G) Instructions to employees that chelating agents should not routinely be used to remove lead from their bodies and should not be used at all except under the direction of a licensed physician.

(b) Access to information and training materials.

(i) The employer shall make readily available to all affected employees a copy of this standard and its appendices.

(ii) The employer shall provide, upon request, all materials relating to the employee information and training program to the director.

(iii) In addition to the information required by item (12)(a)(v), the employer shall include as part of the training program, and shall distribute to employees, any materials pertaining to the Occupational Safety and Health Act, the regulations issued pursuant to the act, and this lead standard, which are made available to the employer by the director.

(13) Signs.

(a) General.

(i) The employer may use signs required by other statutes, regulations or ordinances in addition to, or in combination with, signs required by this subsection.

(ii) The employer shall assure that no statement appears on or near any sign required by this subsection which contradicts or detracts from the meaning of the required sign.

(b) Signs.

(i) The employer shall post the following warning signs in each work area where the PEL is exceeded:

WARNING  
LEAD WORK AREA  
POISON  
NO SMOKING OR EATING

(ii) The employer shall assure that signs required by this subsection are illuminated and cleaned as necessary so that the legend is readily visible.

(14) Recordkeeping.

(a) Exposure monitoring.

(i) The employer shall establish and maintain an accurate record of all monitoring required in subsection (4) of this section.

(ii) This record shall include:

(A) The date(s), number, duration, location and results of each of the samples taken, including a description of the sampling procedure used to determine representative employee exposure where applicable;

(B) A description of the sampling and analytical methods used and evidence of their accuracy;

(C) The type of respiratory protective devices worn, if any;

(D) Name, social security number, and job classification of the employee monitored and of all other employees whose exposure the measurement is intended to represent; and

(E) the environmental variables that could affect the measurement of employee exposure.

(iii) The employer shall maintain these monitoring records for at least forty years or for the duration of employment plus twenty years, whichever is longer.

(b) Medical surveillance.

(i) The employer shall establish and maintain an accurate record for each employee subject to medical surveillance as required by subsection (10) of this section.

(ii) This record shall include:

(A) The name, social security number, and description of the duties of the employee;

(B) A copy of the physician's written opinions;

(C) Results of any airborne exposure monitoring done for that employee and the representative exposure levels supplied to the physician; and

(D) Any employee medical complaints related to exposure to lead.

(iii) the employer shall keep, or assure that the examining physician keeps, the following medical records:

(A) A copy of the medical examination results including medical and work history required under subsection (10) of this section;

(B) A description of the laboratory procedures and a copy of any standards or guidelines used to interpret the test results or references to that information; and

(C) A copy of the results of biological monitoring.

(iv) The employer shall maintain or assure that the physician maintains those medical records for at least forty years, or for the duration of employment plus twenty years, whichever is longer.

(c) Medical removals.

(i) The employer shall establish and maintain an accurate record for each employee removed from current exposure to lead pursuant to subsection (11) of this section.

(ii) Each record shall include:

(A) The name and social security number of the employee;

(B) The date on each occasion that the employee was removed from current exposure to lead as well as the corresponding date on which the employee was returned to his or her former job status;

(C) A brief explanation of how each removal was or is being accomplished; and

(D) A statement with respect to each removal indicating whether or not the reason for the removal was an elevated blood lead level.

(iii) The employer shall maintain each medical removal record for at least the duration of an employee's employment.

(d) Availability.

(i) The employer shall make available upon request all records required to be maintained by subsection (14) of this section to the director for examination and copying.

(ii) Environmental monitoring, medical removal, and medical records required by this subsection shall be provided upon request to employees, designated representatives, and the assistant director in accordance with WAC 296-62-05201 through 296-62-05209 and 296-62-05213 through 296-62-05217. Medical removal records shall be provided in the same manner as environmental monitoring records.

(iii) Upon request, the employer shall make an employee's medical records required to be maintained by this section available to the affected employee or former employee or to a physician or other individual designated by such affected employee or former employees for examination and copying.

(e) Transfer of records.

(i) Whenever the employer ceases to do business, the successor employer shall receive and retain all records required to be maintained by subsection (14) of this section.

(ii) Whenever the employer ceases to do business and there is no successor employer to receive and retain the records required to be maintained by this section for the prescribed period, these records shall be transmitted to the director.

(iii) At the expiration of the retention period for the records required to be maintained by this section, the employer shall notify the director at least three months prior to the disposal of such records and shall transmit those records to the director if requested within the period.

(iv) The employer shall also comply with any additional requirements involving transfer of records set forth in WAC 296-62-05215.

(15) Observation of monitoring.

(a) Employee observation. The employer shall provide affected employees or their designated representatives an opportunity to observe any monitoring of employee exposure to lead conducted pursuant to subsection (4) of this section.

(b) Observation procedures.

(i) Whenever observation of the monitoring of employee exposure to lead requires entry into an area where the use of respirators, protective clothing or equipment is required, the employer shall provide the observer with and assure the use of such respirators, clothing and such equipment, and shall require the observer to comply with all other applicable safety and health procedures.

(ii) Without interfering with the monitoring, observers shall be entitled to:

(A) Receive an explanation of the measurement procedures;

(B) Observe all steps related to the monitoring of lead performed at the place of exposure; and

(C) Record the results obtained or receive copies of the results when returned by the laboratory.

(16) Effective date. The effective date of this standard is September 6, 1980.

(17) Appendices. The information contained in the appendices to this section is not intended by itself, to create any additional obligations not otherwise imposed

by this standard nor detract from any existing obligation. Appendices are available from:

The Technical Services Section  
 Division of Industrial Safety and Health  
 P.O. Box 207  
 Olympia, WA 98504 (206) 753-6381

(18) Startup dates. All obligations of this standard commence on the effective date except as follows:

(a) The initial determination under subdivision (4)(b) shall be made as soon as possible but no later than thirty days from the effective date.

(b) Initial monitoring under subdivision (4)(d) shall be completed as soon as possible but no later than ninety days from the effective date.

(c) Initial biological monitoring and medical examinations under subsection (10) shall be completed as soon as possible but no later than one hundred eighty days from the effective date. Priority for biological monitoring and medical examinations shall be given to employees whom the employer believes to be at greatest risk from continued exposure.

(d) Initial training and education shall be completed as soon as possible but no later than one hundred eighty days from the effective date.

(e) Hygiene and lunchroom facilities under subsection (9) shall be in operation as soon as possible but no later than one year from the effective year.

(f) Respiratory protection required by subsection (6) shall be provided as soon as possible but no later than the following schedule:

(i) Employees whose eight-hour TWA exposure exceeds 200  $\mu\text{g}/\text{m}^3$  - on the effective date.

(ii) Employees whose eight-hour TWA exposure exceeds the PEL but is less than 200  $\mu\text{g}/\text{m}^3$  - one hundred fifty days from the effective date.

(iii) Powered, air-purifying respirators provided under (6)(b)(ii) - two hundred ten days from the effective date.

(iv) Quantitative fit testing required under item (6)(c)(ii) - one year from effective date. Qualitative fit testing is required in the interim.

(g) Written compliance plans required by subdivision (5)(c) shall be completed and available for inspection and copying as soon as possible but no later than the following schedule:

(i) Employers for whom compliance with the PEL or interim level is required within one year from the effective date - six months from the effective date.

(ii) Employers in secondary smelting and refining, lead storage battery manufacturing, lead pigment manufacturing and nonferrous foundry industries - one year from the effective date.

(iii) Employers in primary smelting and refining industry - one year from the effective date from the interim level; five years from the effective date for PEL.

(iv) Plans for construction of hygiene facilities, if required - six months from the effective date.

(h) The permissible exposure limit in subsection (3) shall become effective one hundred fifty days from the effective date. [Statutory Authority: RCW 49.17.040

and 49.17.050. 83-24-013 (Order 83-34), § 296-62-07521, filed 11/30/83; 82-13-045 (Order 82-22), § 296-62-07521, filed 6/11/82. Formerly WAC 296-62-07349.]

**WAC 296-62-080 Biological agents.** (1) Definition. Biological agents are organisms or their by-products.

(2) Protection from exposure. Workmen shall be protected from exposure to hazardous concentrations of biological agents which may arise from processing, handling or using materials or waste. [Order 73-3, § 296-62-080, filed 5/7/73; Order 70-8, § 296-62-080, filed 7/31/70, effective 9/1/70; Rule 8.010, effective 8/1/63.]

**WAC 296-62-090 Physical agents.**

[Order 73-3, § 296-62-090, filed 5/7/73; Order 70-8, § 296-62-090, filed 7/31/70, effective 9/1/70; Rule 9.010, effective 8/1/63.] See WAC 296-61-09001 through 296-62-09013.

**WAC 296-62-09001 Definitions.** (1) "Physical agents" shall mean, but are not limited to: Illumination, nonionizing radiation, pressure, vibration, temperature and humidity, and noise.

(2) "Illumination" means radiant energy evaluated according to its capacity to produce visual sensation.

(3) "Nonionizing radiation" as related to industrial sources, means electromagnetic radiation within the spectral range of approximately  $10^{-7}$  cm. to  $10^3$  cm. including ultraviolet, visible, infrared and microwave radiation. The electromagnetic spectrum is shown graphically in Figure 1 below.

Figure 1

(4) Pressure is a barometric force. Positive pressure would be that above 14.7 lbs. per square inch absolute and negative pressure would be that below 14.7 lbs. per square inch absolute. 14.7 lbs. per square inch equals 760 mm. mercury.

(5) "Vibration" means rapid movement to and fro or oscillating movement.

(6) "Noise" means unwanted sound or loud discordant or disagreeable sound or sounds.

(7) "Temperature" means the degree of hotness or coldness measured by use of a thermometer.

(8) "Radiant heat" means infrared radiation emitted from hot surfaces.

(9) "Relative humidity" means the percent of moisture in the air compared to the maximum amount of

moisture the air could contain at the same temperature. [Order 73-3, § 296-62-09001, filed 5/7/73.]

**WAC 296-62-09003 Lighting and illumination.** (1) Lighting which is adequately adjusted to provide a margin of safety for all work tasks shall be provided and maintained.

(a) The minimum level of task lighting for all indoor activities shall be an average of 10 foot candles measured 30 inches above the floor or at the task.

(b) The minimum level of task lighting for all outdoor activities shall be an average of five foot candles measured thirty inches above the working surface or at the task.

(2) If general lighting is not provided throughout the work area, the employer shall provide illumination which is adequately adjusted to provide visibility of nearby objects which might be potential hazards or to see to operate emergency control or other equipment. The minimum level of nontask lighting for all indoor and outdoor activities shall be an average of 3 foot candles measured 30 inches above the floor or working surface.

**NOTE:** This section establishes minimal levels of illumination for safety purposes only. Guidelines pertaining to optimal levels of lighting and illumination may be found in Practice for Industrial Lighting, ANSI/IES RP7-1979. The minimum levels specified in subsections (1) and (2) of this section represent averages with the lowest level in an area to be no less than fifty percent of the indicated value.

[Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09003, filed 11/30/83; 82-13-045 (Order 82-22), § 296-62-09003, filed 6/11/82; Order 76-6, § 296-62-09003, filed 3/1/76; Order 73-3, § 296-62-09003, filed 5/7/73.]

**WAC 296-62-09004 Ionizing radiation.** (1) Definitions applicable to this section.

**NOTE:** Definitions also appear in some subsections.

(a) "Radiation" includes alpha rays, beta rays, gamma rays, x-rays, neutrons, high-speed electrons, high-speed protons, and other atomic particles; but such term does not include sound or radio waves, or visible light, or infrared or ultraviolet light.

(b) "Radioactive material" means any material which emits, by spontaneous nuclear disintegration, corpuscular or electromagnetic emanations.

(c) "Restricted area" means any area access to which is controlled by the employer for purposes of protection of individuals from exposure to radiation or radioactive materials.

(d) "Unrestricted area" means any area access to which is not controlled by the employer for purposes of protection of individuals from exposure to radiation or radioactive materials.

(e) "Dose" means the quantity of ionizing radiation absorbed, per unit of mass, by the body or by any portion of the body. When the provisions in this section

specify a dose during a period of time, the dose is the total quantity of radiation absorbed, per unit of mass, by the body or by any portion of the body during such period of time. Several different units of dose are in current use. Definitions of units used in this section are set forth in subdivisions (f) and (g) of this subsection.

(f) "Rad" means a measure of the dose of any ionizing radiation to body tissues in terms of the energy absorbed per unit of mass of the tissue. One rad is the dose corresponding to the absorption of 100 ergs per gram of tissue (1 millirad (mrad) = 0.001 rad).

(g) "Rem" means a measure of the dose of any ionizing radiation to body tissue in terms of its estimated biological effect relative to a dose of 1 roentgen (r) of x-rays (1 millirem (mrem) = 0.001 rem). The relation of the rem to other dose units depends upon the biological effect under consideration and upon the conditions for irradiation. Each of the following is considered to be equivalent to a dose of 1 rem:

(i) A dose of 1 roentgen due to x- or gamma radiation;

(ii) A dose of 1 rad due to x-, gamma, or beta radiation;

(iii) A dose of 0.1 rad due to neutrons or high energy protons;

(iv) A dose of 0.05 rad due to particles heavier than protons and with sufficient energy to reach the lens of the eye;

(v) If it is more convenient to measure the neutron flux, or equivalent, than to determine the neutron dose in rads, as provided in item (iii) of this subdivision, 1 rem of neutron radiation may, for purposes of the provisions in this section be assumed to be equivalent to 14 million neutrons per square centimeter incident upon the body; or, if there is sufficient information to estimate with reasonable accuracy the approximate distribution in energy of the neutrons, the incident number of neutrons per square centimeter equivalent to 1 rem may be estimated from the following table:

Neutron Flux Dose Equivalents

Neutron energy (million electron volts (Mev))	Number of neutrons per square centimeter equivalent to a dose of 1 rem (neutrons/cm <sup>2</sup> )	Average flux to deliver 100 millirem in 40 hours (neutrons/cm <sup>2</sup> per sec.)
Thermal --	970 X 10 <sup>6</sup>	670
0.0001 -- --	720 X 10 <sup>6</sup>	500
0.005 -- -- --	820 X 10 <sup>6</sup>	570
0.02 -- -- --	400 X 10 <sup>6</sup>	280
0.1 -- -- --	120 X 10 <sup>6</sup>	80
0.5 -- -- --	43 X 10 <sup>6</sup>	30
1.0 -- -- --	26 X 10 <sup>6</sup>	18
2.5 -- -- --	29 X 10 <sup>6</sup>	20
5.0 -- -- --	26 X 10 <sup>6</sup>	18
7.5 -- -- --	24 X 10 <sup>6</sup>	17
10 -- -- --	24 X 10 <sup>6</sup>	17
10 to 30 --	14 X 10 <sup>6</sup>	10

(h) For determining exposures to x- or gamma rays up to 3 Mev., the dose limits specified in this section may be assumed to be equivalent to the "air dose." For the purpose of this section "air dose" means that the dose is measured by a properly calibrated appropriate instrument in air at or near the body surface in the region of the highest dosage rate.

(2) Atomic energy commission licensees—AEC contractors operating AEC plants and facilities. (a) Any employer who possesses or uses source material, byproduct material, or special nuclear material, as defined in the Atomic Energy Act of 1954, as amended, under a license issued by the atomic energy commission and in accordance with the requirements of chapter 402-24 WAC shall be deemed to be in compliance with the requirements of this section with respect to such possession and use.

(b) AEC contractors operating AEC plants and facilities: Any employer who possesses or uses source material, byproduct material, special nuclear material, or other radiation sources under a contract with the atomic energy commission for the operation of AEC plants and facilities and in accordance with the standards, procedures, and other requirements for radiation protection established by the commission for such contract pursuant to the Atomic Energy Act of 1954 as amended (42 U.S.C. 2011 et seq.) shall be deemed to be in compliance with the requirements of this section with respect to such possession and use.

(c) State licensees or registrants:

(i) Atomic Energy Act sources. Any employer who possesses or uses source material, byproduct material, or special nuclear material, as defined in the Atomic Energy Act of 1954, as amended (42 U.S.C. 2011 et seq.), and has registered such sources with, the state shall be deemed to be in compliance with the radiation requirements of this section, insofar as his possession and use of such material is concerned.

(ii) Other sources. Any employer who possesses or uses radiation sources other than source material, byproduct material, or special nuclear material, as defined in the Atomic Energy Act of 1954, as amended (42 U.S.C. 2011 et seq.), and has registered such sources with the state shall be deemed to be in compliance with the radiation requirements of this section insofar as his possession and use of such material is concerned.

(3) Exposure of individuals to radiation in restricted areas. (a) Except as provided in subdivision (b) of this subsection, no employer shall possess, use, or transfer sources of ionizing radiation in such a manner as to cause any individual in a restricted area to receive in any period of one calendar quarter from sources in the employer's possession or control a dose in excess of the limits specified in the following table:

EXPOSURE IN RESTRICTED AREAS	Rems per Calendar Quarter
Whole body: Head and trunk; active blood-forming organs; lens of eyes; or gonads - - - - -	1 1/4
Hand and forearms; feet and ankles - - - - -	18 3/4
Skin of whole body - - - - -	7 1/2

(b) An employer may permit an individual in a restricted area to receive doses to the whole body greater than those permitted under subdivision (a) of this subsection, so long as:

(i) During any calendar quarter the dose to the whole body shall not exceed 3 rems; and

(ii) The dose to the whole body, when added to the accumulated occupational dose to the whole body, shall not exceed 5 (N-18) rems, where "N" equals the individual's age in years at his last birthday; and

(iii) The employer maintains adequate past and current exposure records which show that the addition of such a dose will not cause the individual to exceed the amount authorized in this subdivision. As used in this subdivision "Dose to the whole body" shall be deemed to include any dose to the whole body, gonad, active blood-forming organs, head and trunk, or lens of the eye.

(c) No employer shall permit any employee who is under 18 years of age to receive in any period of one calendar quarter a dose in excess of 10 percent of the limits specified in the preceding table entitled "Exposure in restricted areas."

(d) "Calendar quarter" means any 3-month period determined as follows:

(i) The first period of any year may begin on any date in January: *Provided*, That the second, third and fourth periods accordingly begin on the same date in April, July, and October, respectively, and that the fourth period extends into January of the succeeding year, if necessary to complete a 3-month quarter. During the first year of use of this method of determination, the first period for that year shall also include any additional days in January preceding the starting date for the first period; or

(ii) The first period in a calendar year of 13 complete, consecutive calendar weeks; the second period in a calendar year of 13 complete consecutive weeks; the third period in a calendar year of 13 complete, consecutive calendar weeks; the fourth period in a calendar year of 13 complete, consecutive calendar weeks. If at the end of a calendar year there are any days not falling within a complete calendar week of that year, such days shall be included within the last complete calendar week of that year. If at the beginning of any calendar year there are days not falling within a complete calendar week of that year, such days shall be included within the last complete calendar week of the previous year; or

(iii) The four periods in a calendar year may consist of the first 14 complete, consecutive calendar weeks; the next 12 complete, consecutive calendar weeks, the next 14 complete, consecutive calendar weeks, and the last 12 complete, consecutive calendar weeks. If at the end of a calendar year there are any days not falling within a

complete calendar week of that year, such days shall be included (for purposes of this section) within the last complete calendar week of the year. If at the beginning of any calendar year there are days not falling within a complete calendar week of that year, such days shall be included (for purposes of this section) within the last complete week of the previous year.

(e) No employer shall change the method used by him to determine calendar quarters except at the beginning of a calendar year.

(4) Exposure to airborne radioactive material. (a) No employer shall possess, use or transport radioactive material in such a manner as to cause any employee, within a restricted area, to be exposed to airborne radioactive material in an average concentration in excess of the limits specified in Part 1 of Table I of this standard. The limits given in Part 1 are for exposure to the concentrations specified for 40 hours in any workweek of 7 consecutive days. In any such period where the number of hours of exposure is less than 40 the limits specified in the table may be increased proportionately. In any such period where the number of hours of exposure is greater than 40, the limits specified in the table shall be decreased proportionately.

(b) No employer shall possess, use, or transfer radioactive material in such a manner as to cause any individual within a restricted area, who is under 18 years of age, to be exposed to airborne radioactive material in an average concentration in excess of the limits specified in part ii of Table I of this Standard. For purposes of this subdivision, concentrations may be averaged over periods not greater than 1 week.

(c) "Exposed" as used in this subdivision means that the individual is present in an airborne concentration. No allowance shall be made for the use of protective clothing or equipment, or particle size.

(5) Precautionary procedures and personal monitoring. (a) Every employer shall make such surveys as may be necessary for him to comply with the provisions in this section. "Survey" means an evaluation of the radiation hazards incident to the production, use, release, disposal, or presence of radioactive materials or other sources of radiation under a specific set of conditions. When appropriate, such evaluation includes a physical survey of the location of materials and equipment, and measurements of levels of radiation or concentrations of radioactive material present.

(b) Every employer shall supply appropriate personnel monitoring equipment, such as film badges, pocket chambers, pocket dosimeters, or film rings, to, and shall require the use of such equipment by:

(i) Each employee who enters a restricted area under such circumstances that he receives, or is likely to receive, a dose in any calendar quarter in excess of 25 percent of the applicable value specified in subsection (3)(a) of this section; and

(ii) Each employee under 18 years of age who enters a restricted area under such circumstances that he receives, or is likely to receive a dose in any calendar quarter in excess of 5 percent of the applicable value specified in subsection (3)(a) of this section; and

(iii) Each employee who enters a high radiation area.

(c) As used in this section:

(i) "Personnel monitoring equipment" means devices designed to be worn or carried by an individual for the purpose of measuring the dose received (e.g., film badges, pocket chambers, pocket dosimeters, film rings, etc.);

(ii) "Radiation area" means any area, accessible to personnel, in which there exists radiation at such levels that a major portion of the body could receive in any 1 hour a dose in excess of 5 millirem, or in any 5 consecutive days a dose in excess of 100 millirem; and

(iii) "High radiation area" means any area, accessible to personnel, in which there exists radiation at such levels that a major portion of the body could receive in any one hour a dose in excess of 100 millirem.

(6) Caution signs, labels and signals. (a) General. (i) Symbols prescribed by this subsection shall use the conventional radiation caution colors (magenta or purple on yellow background). The symbol prescribed by this subsection is the conventional three-bladed design:

#### RADIATION SYMBOL

1. Cross-hatched area is to be magenta or purple.
2. Background is to be yellow.

FIGURE G-10

(ii) In addition to the contents of signs and labels prescribed in this subsection, employers may provide on or near such signs and labels any additional information which may be appropriate in aiding individuals to minimize exposure to radiation or to radioactive material.

(b) Radiation area. Each radiation area shall be conspicuously posted with a sign or signs bearing the radiation caution symbol described in subdivision (a) of this subsection and the words:

CAUTION  
RADIATION AREA

(c) High radiation area. (i) Each high radiation area shall be conspicuously posted with a sign or signs bearing the radiation caution symbol and the words:

CAUTION  
HIGH RADIATION AREA

(ii) Each high radiation area shall be equipped with a control device which shall either cause the level of radiation to be reduced below that at which an individual might receive a dose of 100 millirems in 1 hour upon entry into the area or shall energize a conspicuous visible or audible alarm signal in such a manner that the individual entering and the employer or a supervisor of the activity are made aware of the entry. In the case of a high radiation area established for a period of 30 days or less, such control device is not required.

(d) Airborne radioactivity area. (i) As used in the provisions of this section, "airborne radioactivity area" means:

(A) Any room, enclosure, or operating area in which airborne radioactive materials, composed wholly or partly of radioactive material, exist in concentrations in excess of the amounts specified in column 1 of Part 1 of Table I of this standard.

(B) Any room, enclosure, or operating area in which airborne radioactive materials exist in concentrations which, averaged over the number of hours in any week during which individuals are in the area, exceed 25 percent of the amounts specified in column 1 of part I of Table I of this standard.

(ii) Each airborne radioactivity area shall be conspicuously posted with a sign or signs bearing the radiation caution symbol described in subdivision (a) of this subsection and the words:

CAUTION  
AIRBORNE RADIOACTIVITY AREA

(e) Additional requirements. (i) Each area or room in which radioactive material is used or stored and which contains any radioactive material (other than natural uranium or thorium) in any amount exceeding 10 times the quantity of such material specified in Table II of this standard shall be conspicuously posted with a sign or signs bearing the radiation caution symbol described in subdivision (a) of this subsection and the words:

CAUTION  
RADIOACTIVE MATERIALS

(ii) Each area or room in which natural uranium or thorium is used or stored in an amount exceeding 100 times the quantity of such material specified in chapter 402-24 WAC shall be conspicuously posted with a sign

or signs bearing the radiation caution symbol described in subdivision (a) of this subsection and the words:

CAUTION  
RADIOACTIVE MATERIALS

(f) Containers. (i) Each container in which is transported, stored, or used a quantity of any radioactive material (other than natural uranium or thorium) greater than the quantity of such material specified in Table II of this standard shall bear a durable, clearly visible label bearing the radiation caution symbol described in subdivision (a) of this subsection and the words:

CAUTION  
RADIOACTIVE MATERIALS

(ii) Each container in which natural uranium or thorium is transported, stored, or used in a quantity greater than 10 times the quantity specified in Table II of this standard shall bear a durable, clearly visible label bearing the radiation caution symbol described in subdivision (a) of this subsection and the words:

CAUTION  
RADIOACTIVE MATERIALS

(iii) Notwithstanding the provisions of items (i) and (ii) of this subdivision a label shall not be required:

(A) If the concentration of the material in the container does not exceed that specified in column 2 of part i of Table I of this standard.

(B) For laboratory containers, such as beakers, flasks, and test tubes, used transiently in laboratory procedures, when the user is present.

(iv) Where containers are used for storage, the labels required in this subdivision shall state also the quantities and kinds of radioactive materials in the containers and the date of measurement of the quantities.

(7) Immediate evacuation warning signal. (a) Signal characteristics. (i) The signal shall be a midfrequency complex sound wave amplitude modulated at a subsonic frequency. The complex sound wave in free space shall have a fundamental frequency  $f^1$  between 450 and 500 hertz (Hz) modulated at a subsonic rate between 4 and 5 hertz.

(ii) The signal generator shall not be less than 75 decibels at every location where an individual may be present whose immediate, rapid, and complete evacuation is essential.

(iii) A sufficient number of signal units shall be installed such that the requirements of item (i) of this subdivision are met at every location where an individual may be present whose immediate, rapid, and complete evacuation is essential.

(iv) The signal shall be unique in the plant or facility in which it is installed.

(v) The minimum duration of the signal shall be sufficient to insure that all affected persons hear the signal.

(vi) The signal-generating system shall respond automatically to an initiating event without requiring any human action to sound the signal.

(b) Design objectives. (i) The signal-generating system shall be designed to incorporate components which enable the system to produce the desired signal each time it is activated within one-half second of activation.

(ii) The signal-generating system shall be provided with an automatically activated secondary power supply which is adequate to simultaneously power all emergency equipment to which it is connected, if operation during power failure is necessary, except in those systems using batteries as the primary source of power.

(iii) All components of the signal-generating system shall be located to provide maximum practicable protection against damage in case of fire, explosion, corrosive atmosphere, or other environmental extremes consistent with adequate system performance.

(iv) The signal-generating system shall be designed with the minimum number of components necessary to make it function as intended, and should utilize components which do not require frequent servicing such as lubrication or cleaning.

(v) Where several activating devices feed activating information to a central signal generator, failure of any activating device shall not render the signal-generator system inoperable to activating information from the remaining devices.

(vi) The signal-generating system shall be designed to enhance the probability that alarm occurs only when immediate evacuation is warranted. The number of false alarms shall not be so great that the signal will come to be disregarded and shall be low enough to minimize personal injuries or excessive property damage that might result from such evacuation.

(c) Testing. (i) Initial tests, inspections, and checks of the signal-generating system shall be made to verify that the fabrication and installation were made in accordance with design plans and specifications and to develop a thorough knowledge of the performance of the system and all components under normal and hostile conditions.

(ii) Once the system has been placed in service, periodic tests, inspections, and checks shall be made to minimize the possibility of malfunction.

(iii) Following significant alterations or revisions to the system, tests and checks similar to the initial installation tests shall be made.

(iv) Tests shall be designed to minimize hazards while conducting the tests.

(v) Prior to normal operation the signal-generating system shall be checked physically and functionally to assure reliability and to demonstrate accuracy and performance. Specific tests shall include:

- (A) All power sources.
- (B) Calibration and calibration stability.
- (C) Trip levels and stability.
- (D) Continuity of function with loss and return of required services such as AC or DC power, air pressure, etc.
- (E) All indicators.
- (F) Trouble indicator circuits and signals, where used.
- (G) Air pressure (if used).

(H) Determine that sound level of the signal is within the limit of item (a)(ii) of this subsection at all points that require immediate evacuation.

(vi) In addition to the initial startup and operating tests, periodic scheduled performance tests and status checks must be made to insure that the system is at all times operating within design limits and capable of the required response. Specific periodic tests or checks or both shall include:

- (A) Adequacy of signal activation device.
- (B) All power sources.
- (C) Function of all alarm circuits and trouble indicator circuits including trip levels.
- (D) Air pressure (if used).
- (E) Function of entire system including operation without power where required.
- (F) Complete operational tests including sounding of the signal and determination that sound levels are adequate.

(vii) Periodic tests shall be scheduled on the basis of need, experience, difficulty, and disruption of operations. The entire system should be operationally tested at least quarterly.

(viii) All employees whose work may necessitate their presence in an area covered by the signal shall be made familiar with the actual sound of the signal—preferably as it sounds at their work location. Before placing the system into operation, all employees normally working in the area shall be made acquainted with the signal by actual demonstration at their work locations.

(8) Exceptions from posting requirements. Notwithstanding the provisions of subsection (6) of this section:

(a) A room or area is not required to be posted with a caution sign because of the presence of a sealed source, provided the radiation level 12 inches from the surface of the source container or housing does not exceed 5 millirem per hour.

(b) Rooms or other areas in onsite medical facilities are not required to be posted with caution signs because of the presence of patients containing radioactive material, provided that there are personnel in attendance who shall take the precautions necessary to prevent the exposure of any individual to radiation or radioactive material in excess of the limits established in the provisions of this section.

(c) Caution signs are not required to be posted at areas or rooms containing radioactive materials for periods of less than 8 hours: *Provided, That*

(i) The materials are constantly attended during such periods by an individual who shall take the precautions necessary to prevent the exposure of any individual to radiation or radioactive materials in excess of the limits established in the provisions of this section; and

(ii) Such area or room is subject to the employer's control.

(9) Exemptions for radioactive materials packaged for shipment. Radioactive materials packaged and labeled in accordance with regulations of the department of transportation published in 49 CFR Chapter I, are exempt from the labeling and posting requirements of this section during shipment, provided that the inside containers

are labeled in accordance with the provisions of subsection (6) of this section.

(10) Instruction of personnel, posting. (a) Employers regulated by the atomic energy commission shall be governed by 10 CFR Part 20 standards. Employers conducting business in Washington state shall be governed by the requirements of the laws and regulations of the state. All other employers shall be regulated by the following:

(b) All individuals working in or frequenting any portion of a radiation area shall be informed of the occurrence of radioactive materials or of radiation in such portions of the radiation area; shall be instructed in the safety problems associated with exposure to such materials or radiation and in precautions or devices to minimize exposure; shall be instructed in the applicable provisions of this section for the protection of employees from exposure to radiation or radioactive materials; and shall be advised of reports of radiation exposure which employees may request pursuant to the regulations in this section.

(c) Each employer to whom this section applies shall post a current copy of its provisions and a copy of the operating procedures applicable to the work conspicuously in such locations as to insure that employees working in or frequenting radiation areas will observe these documents on the way to and from their place of employment, or shall keep such documents available for examination of employees upon request.

(11) Storage of radioactive materials. Radioactive materials stored in a nonradiation area shall be secured against unauthorized removal from the place of storage.

(12) Waste disposal. No employer shall dispose of radioactive material except by transfer to an authorized recipient, or in a manner approved by the atomic energy commission or industrial health section, department of labor and industries.

(13) Notification of incidents. (a) Immediate notification. Each employer shall immediately notify the industrial hygiene section, division of industrial safety and health for employees not protected by the atomic energy commission by means of 10 CFR Part 20; subsection (2)(b) of this section by telephone or telegraph of any incident involving radiation which may have caused or threatens to cause:

(i) Exposure of the whole body of any individual to 25 rems or more of radiation; exposure of the skin of the whole body of any individual to 150 rems or more of radiation; or exposure of the feet, ankles, hands, or forearms of any individual to 375 rems or more of radiation; or

(ii) The release of radioactive material in concentrations which, if averaged over a period of 24 hours, would exceed 5,000 times the limit specified for such materials in part II of Table I of this standard.

(iii) A loss of 1 working week or more of the operation of any facilities affected; or

(iv) Damage to property in excess of \$100,000.

(b) Twenty-four hour notification. Each employer shall within 24 hours following its occurrence notify the industrial hygiene section, division of industrial safety

and health, for employees not protected by the atomic energy commission by means of 10 CFR Part 20; subsection (2)(b) of this section, by telephone or telegraph of any incident involving radiation which may have caused or threatens to cause:

(i) Exposure of the whole body of any individual to 5 rems or more of radiation; exposure of the skin of the whole body of any individual to 30 rems or more of radiation; or exposure of the feet, ankles, hands, or forearms to 75 rems or more of radiation; or

(ii) A loss of 1 day or more of the operation of any facilities; or

(iii) Damage to property in excess of \$10,000.

(14) Reports of overexposure and excessive levels and concentrations. (a) In addition to any notification required by subsection (13) of this section each employer shall make a report in writing within 30 days to the industrial hygiene section division of industrial safety and health, for employees not protected by the atomic energy commission by means of 10 CFR Part 20; or under subsection (2)(b) of this section, of each exposure of an individual to radiation or concentrations of radioactive material in excess of any applicable limit in this section. Each report required under this subdivision shall describe the extent of exposure of persons to radiation or to radioactive material; levels of radiation and concentration of radioactive material involved, the cause of the exposure, levels of concentrations; and corrective steps taken or planned to assure against a recurrence.

(b) In any case where an employer is required pursuant to the provisions of this subsection to report to the industrial hygiene section, division of industrial safety and health, any exposure of an individual to radiation or to concentrations of radioactive material, the employer shall also notify such individual of the nature and extent of exposure. Such notice shall be in writing and shall contain the following statement: "You should preserve this report for future reference."

(15) Records. (a) Every employer shall maintain records of the radiation exposure of all employees for whom personnel monitoring is required under subsection (5) of this section and advise each of his employees of his individual exposure on at least an annual basis.

(b) Every employer shall maintain records in the same units used in tables in subsection (2) of this section and Table I of this standard.

(16) Disclosure to former employee of individual employee's record. (a) At the request of a former employee an employer shall furnish to the employee a report of the employee's exposure to radiation as shown in records maintained by the employer pursuant to subdivision (15)(a) of this section. Such report shall be furnished within 30 days from the time the request is made, and shall cover each calendar quarter of the individual's employment involving exposure to radiation or such lesser period as may be requested by the employee. The report shall also include the results of any calculations and analysis of radioactive material deposited in the body of the employee. The report shall be in writing and contain the following statement: "You should preserve this report for future reference."

(b) The former employee's request should include appropriate identifying data, such as social security number and dates and locations of employment.

(17) [Reserved]

(18) Radiation standards for mining. (a) For the purpose of this subsection, a "working level" is defined as any combination of radon daughters in 1 liter of air which will result in the ultimate emission of  $1.3 \times 10^5$  million electron volts of potential alpha energy. The numerical value of the "working level" is derived from the alpha energy released by the total decay of short-lived radon daughter products in equilibrium with 100 picocuries of radon 222 per liter of air. A working level month is defined as the exposure received by a worker breathing air at one working level concentration for 4-1/3 weeks of 40 hours each.

(b) Occupational exposure to radon daughters in mines shall be controlled so that no individual will receive an exposure of more than 2 working level months in any calendar quarter and no more than 4 working level months in any calendar year. Actual exposures shall be kept as far below these values as practicable.

(c)(i) For uranium mines, records of environmental concentrations in the occupied parts of the mine, and of the time spent in each area by each person involved in an underground work shall be established and maintained. These records shall be in sufficient detail to permit calculations of the exposures, in units of working level months, of the individuals and shall be available for inspection by the industrial hygiene section, division of safety and health or their authorized representatives.

(ii) For other than uranium mines and for surface workers in all mines, item (i) of this subdivision will be applicable: *Provided, however,* That if no environmental sample shows a concentration greater than 0.33 working level in any occupied part of the mine, the maintenance of individual occupancy records and the calculation of individual exposures will not be required.

(d)(i) At the request of an employee (or former employee) a report of the employee's exposure to radiation as shown in records maintained by the employer pursuant to subdivision (c) of this subsection shall be furnished to him. The report shall be in writing and contain the following statement:

"This report is furnished to you under the provisions of the state of Washington, Ionizing Radiation Safety and Health Standards (chapter 296-62 WAC). You should preserve this report for future reference."

(ii) The former employee's request should include appropriate identifying data, such as Social Security number and dates and locations of employment. See Tables following this section.

TABLE I  
CONCENTRATIONS IN AIR AND WATER ABOVE NATURAL  
BACKGROUND  
[See notes at end of table]

Element (atomic number)	Isotope <sup>1</sup>	Part I		Part II		
		Column 1 Air ( $\mu\text{Ci/ml}$ )	Column 2 Water ( $\mu\text{Ci/ml}$ )	Column 1 Air ( $\mu\text{Ci/ml}$ )	Column 2 Water ( $\mu\text{Ci/ml}$ )	
Actinium (89)	Ac-227	S	$2 \times 10^{-12}$	$6 \times 10^{-5}$	$8 \times 10^{-14}$	$2 \times 10^{-6}$
		I	$3 \times 10^{-11}$	$9 \times 10^{-3}$	$9 \times 10^{-13}$	$3 \times 10^{-4}$
	Ac-228	S	$8 \times 10^{-8}$	$3 \times 10^{-3}$	$3 \times 10^{-9}$	$9 \times 10^{-5}$
		I	$2 \times 10^{-8}$	$3 \times 10^{-3}$	$6 \times 10^{-10}$	$9 \times 10^{-5}$
Americium (95)	Am-241	S	$6 \times 10^{-12}$	$1 \times 10^{-4}$	$2 \times 10^{-13}$	$4 \times 10^{-6}$
		I	$1 \times 10^{-10}$	$8 \times 10^{-4}$	$4 \times 10^{-12}$	$3 \times 10^{-5}$
	Am-242m	S	$6 \times 10^{-12}$	$1 \times 10^{-4}$	$2 \times 10^{-13}$	$4 \times 10^{-6}$
		I	$3 \times 10^{-10}$	$3 \times 10^{-3}$	$9 \times 10^{-12}$	$9 \times 10^{-5}$
	Am-242	S	$4 \times 10^{-8}$	$4 \times 10^{-3}$	$1 \times 10^{-9}$	$1 \times 10^{-4}$

Any single radionuclide not listed above with decay mode other than alpha emission or spontaneous fission and with radioactive half-life less than 2 hours.	Sub <sup>2</sup>	S	1X10 <sup>-6</sup>	—	3X10 <sup>-8</sup>	—

TABLE I  
CONCENTRATIONS IN AIR AND WATER ABOVE NATURAL BACKGROUND  
[See notes at end of table]

Element (atomic number)	Isotope <sup>1</sup>	Part I		Part II	
		Column 1 Air (μCi/ml)	Column 2 Water (μCi/ml)	Column 1 Air (μCi/ml)	Column 2 Water (μCi/ml)
Any single radionuclide not listed above with decay mode other than alpha emission or spontaneous fission and with radioactive half-life greater than 2 hours.	—	3X10 <sup>-9</sup>	9X10 <sup>-5</sup>	1X10 <sup>-10</sup>	3X10 <sup>-6</sup>
		6X10 <sup>-13</sup>	4X10 <sup>-7</sup>	2X10 <sup>-14</sup>	3X10 <sup>-8</sup>

<sup>1</sup>Soluble(S); Insoluble(I).

<sup>2</sup>"Sub" means that values given are for submersion in a semi-spherical infinite cloud of airborne material.

NOTE: In any case where there is a mixture in air or water of more than one radionuclide, the limiting values for purposes of this Appendix should be determined as follows:

1. If the identity and concentration of each radionuclide in the mixture are known, the limiting values should be derived as follows: Determine, for each radionuclide in the mixture, the ratio between the quantity present in the mixture and the limit otherwise established in Appendix "A" for the specific radionuclide when not in a mixture. The sum of such ratios for all the radionuclides in the mixture may not exceed "1" (i.e., "unity").

Example: If radionuclides a, b, and c are present in concentrations C<sub>a</sub>, C<sub>b</sub>, and C<sub>c</sub>, and if the applicable MPC's are MPC<sub>a</sub>, MPC<sub>b</sub>, and MPC<sub>c</sub> respectively, then the concentrations shall be limited so that the following relationship exists:

$$\frac{C_a}{MPC_a} + \frac{C_b}{MPC_b} + \frac{C_c}{MPC_c} \leq 1$$

2. If either the identity or the concentration of any radionuclide in the mixture is not known, the limiting values for purposes of Appendix "A" shall be:

- a. For purposes of Table I, Col. 1 ..... 6X10<sup>-13</sup>
- b. For purposes of Table I, Col. 2 ..... 4X10<sup>-7</sup>
- c. For purposes of Table II, Col. 1 ..... 2X10<sup>-14</sup>
- d. For purposes of Table II, Col. 2 ..... 3X10<sup>-8</sup>

3. If any of the conditions specified below are met, the corresponding values specified below may be used in lieu of those specified in paragraph 2 above.

a. If the identity of each radionuclide in the mixture is known but the concentration of one or more of the radionuclides in the mixture is not known, the concentration limit for the mixture is the limit specified in Appendix "A" for the radionuclide in the mixture having the lowest concentration limit; or b. If the identity of each radionuclide in the mixture is not known, but it is known that certain radio nuclides specified in Appendix "A" are not present in the mixture, the concentration limit for the mixture is the lowest concentration limit specified in Appendix "A" for any radionuclide which is not known to be absent from the mixture; or

b. For purposes of Table II, Column 1,  $3 \times 10^{-12}$   $\mu\text{Ci/ml}$  gross alpha activity;  $2 \times 10^{-12}$   $\mu\text{Ci/ml}$  natural uranium; or 3 micrograms per cubic meter of air natural uranium.

5. For purposes of this note, a radionuclide may be considered as not present in a mixture if (a) the ratio of the concentration of that radionuclide in the mixture ( $C_a$ ) to the concentration limit for that radionuclide specified in Table II of Appendix "A" ( $\text{MPC}_a$ ) does not exceed 1/10, (i.e.,  $C_a/\text{MPC}_a \leq 1/10$  and (b) the sum of such ratios for all radionuclides considered as not present in the mixture does not exceed 1/4, (i.e.,  $C_a/\text{MPC}_a + C_b/\text{MPC}_b + \dots \leq 1/4$ ). [Order 75-15, § 296-62-09004, filed 4/18/75.]

c. Element (atomic number) and isotope	Part I		Part II	
	Column 1 Air ( $\mu\text{Ci/ml}$ )	Column 2 water ( $\mu\text{Ci/ml}$ )	Column 1 Air ( $\mu\text{Ci/ml}$ )	Column 2 water ( $\mu\text{Ci/ml}$ )
If it is known that Sr-90, I-125, I-126, I-129, I-131, (I-133 Table II only), Pb-210, Po-210, At-211, Ra-223, Ra-224, Ra-226, Ac-227, Ra-228, Th-230, Pa-231, Th-232, Th-nat, Cm-248, Cf-254, and Fm-256 are not present	—	$9 \times 10^{-5}$	—	$3 \times 10^{-6}$
If it is known that Sr-90, I-125, I-126, I-129, (I-131, I-133, Table II only), Pb-210, Po-210, Ra-223, Ra-226, Ra-228, Pa-231, Th-nat, Cm-248, Cf-254, and Fm-256 are not present	—	$6 \times 10^{-5}$	—	$2 \times 10^{-6}$
If it is known that Sr-90, I-129, (I-125, I-126, I-131, Table II only), Pb-210, Ra-226, Ra-228, Cm-248, and Cf-254 are not present	—	$2 \times 10^{-5}$	—	$6 \times 10^{-7}$
If it is known that (I-129, Table II only), Ra-226, and Ra-228 are not present	—	$3 \times 10^{-6}$	—	$1 \times 10^{-7}$
If it is known that alpha-emitters and Sr-90, I-129, Pb-210, Ac-227, Ra-228, Pa-230, Pu-241, and Bk-249 are not present	$3 \times 10^{-9}$	—	$1 \times 10^{-10}$	—
If it is known that alpha-emitters and Pb-210, Ac-227, Ra-228, and Pu-241 are not present	$3 \times 10^{-10}$	—	$1 \times 10^{-11}$	—
If it is known that alpha-emitters and Ac-227 are not present	$3 \times 10^{-11}$	—	$1 \times 10^{-12}$	—
If it is known that Ac-227, Th-230, Pa-231, Pu-238, Pu-239, Pu-240, Pu-242, Pu-244 Cm-248, Cf-249 and Cf-251 are not present	$3 \times 10^{-12}$	—	$1 \times 10^{-13}$	—

4. If the mixture of radionuclides consists of uranium and its daughter products in ore dust prior to chemical processing of the uranium ore, the values specified below may be used in lieu of those determined in accordance with paragraph 1 above or those specified in paragraphs 2 and 3 above.

a. For purposes of Table I, Column 1,  $1 \times 10^{-10}$   $\mu\text{Ci/ml}$  gross alpha activity; or  $5 \times 10^{-11}$   $\mu\text{Ci/ml}$  natural uranium; or 75 micrograms per cubic meter of air natural uranium.

**WAC 296-62-09005 Nonionizing radiation.** Workmen shall be protected from exposure to hazardous levels of nonionizing radiations.

(1) Introduction. Biological responses in the various sections of the electro-magnetic spectrum are different. In certain instances there are also different responses within any segment of the spectrum, such as the infrared. Experience and experimentation have been sufficient to permit the establishment of certain standards which can be used to promote a healthful working environment.

(2) Microwaves. (a) Definitions. (i) "Partial body irradiation" shall mean the case in which part of the body is exposed to the incident electromagnetic energy.

(ii) "Radiation protection standard" means radiation level which shall not be exceeded.

(iii) "Symbol" means the overall design, shape, and coloring of the microwave radiation sign shown in figure 2.

(iv) "Whole body irradiation" shall mean the case in which the entire body is exposed to the incident electromagnetic energy or in which the cross section of the body is smaller than the cross section of the incident radiation beam.

(b) Radiation protection standard.

(i) For normal environmental conditions and for incident electromagnetic energy of frequencies from 10 megahertz to 100 gigahertz, the radiation protection standard is  $10 \text{ mW/cm}^2$  (milliwatt per square centimeter) as averaged over any possible 0.1-hour period. This means the following:

Power density:  $10 \text{ mW/cm}^2$  for periods of 0.1-hour or more.

Energy density:  $1 \text{ mW-hr/cm}^2$  (milliwatt hour per square centimeter) during any 0.1-hour period.

This standard applies whether the radiation is continuous or intermittent.

(ii) These formulated standards pertain to both whole body irradiation and partial body irradiation. Partial body irradiation must be included since it has been shown that some parts of the human body (e.g., eyes, testicles) may be harmed if exposed to incident radiation levels significantly in excess of these levels.

(c) Warning symbol.

(i) The warning symbol for microwave radiation hazards shall consist of a red isosceles triangle above an inverted black isosceles triangle, separated and outlined by an aluminum color border. The words "Warning—Microwave Radiation Hazard" shall appear in the upper triangle. See Figure 2.

(ii) American National Standard Safety Color Code for Marking Physical Hazards and the Identification of Certain Equipment, Z53.1-1953, shall be used for color specification. All lettering and the border shall be of aluminum color.

(iii) The inclusion and choice of warning information or precautionary instructions is at the discretion of the user. If such information is included it shall appear in the lower triangle of the warning symbol.

NOTE: Subsection (2) of this section does not apply to the deliberate exposure of patients by, or under the direction of, practitioners of the healing arts.

- Place handling and mounting instructions on reverse side.
- D = Scaling Unit.
- Lettering: Ratio of letter height to thickness of letter lines.

Upper triangle:           5 to 1 Large  
                                  6 to 1 Medium  
Lower triangle:           4 to 1 Small  
                                  6 to 1 Medium

- Symbol is square, triangles are right-angle isosceles.

FIG. 2

### Microwave Radiation Hazard Warning Symbol

#### (3) Permissible exposure limits.

(a) These exposure limit values refer to levels of physical agents and represent conditions under which it is believed that nearly all workers may be repeatedly exposed day after day without adverse effect. They are

(1983 Ed.)

based on the best available information from experimental studies. Because of wide variations in individual susceptibility, exposure of an occasional individual, at, or even below, the permissible limit may not prevent annoyance, aggravation of a preexisting condition, or physiological damage.

(b) Permissible exposure limits refer to levels of exposure for an 8-hour workday within a 40-hour week. Exceptions are those limits which are given a ceiling value "C."

(c) These limits should be interpreted and applied only by a technically qualified person.

(d) Ceiling value. There are some physical agents which produce physiological response from short intense exposure and whose permissible limit is more appropriately based on this particular response. Physical agents with this type of response are best controlled by a ceiling "C" limit which is a maximum level of exposure which shall not be exceeded.

#### (4) 6943Å Lasers. Eye protection.

(a) The permissible exposure limits for exposure of the eye refer to levels of laser energy at the cornea under conditions to which nearly all workers may be exposed without adverse effects. These permissible exposure limits shall be used in the control of exposures to the eye from Q-Switched, and Non-Q-Switched laser energy at 6943Å.

(b) The values apply to direct illumination or specular reflected laser energy (6943Å) at the cornea and do not apply to laser energy at any other wave length or operational mode.

Mode	Energy Density Joules/sq. centimeter
Q-Switched (1 nanosecond – 1 microsecond)	$1 \times 10^{-7}$ *
Non-Q-Switched (1 microsecond – 0.1 sec. pulse)	$1 \times 10^{-6}$ *

\*Ceiling value

#### (5) Continuous wave lasers. Eye protection.

(a) The permissible exposure limits for exposure of the eye refer to levels of laser energy at the cornea under conditions to which nearly all workers may be exposed without adverse effects. These permissible exposure limits shall be used in the control of exposures to the eye from continuous wave laser energy in the 4000Å to 7500Å region of the spectra.

(b) The values apply to direct illumination or specular reflected continuous wave laser energy (4000Å to 7500Å) at the cornea and do not apply to laser energy at any other wave length or operational mode.

Mode	Power Density Watt/sq. centimeter
Continuous Wave (>0.1 sec.)	1 X 10 <sup>-5</sup> *

\*Ceiling value

(6) Lasers. Skin protection.

(a) The permissible exposure limits for exposure of the skin to levels of laser energy in the visible, near infrared, and infrared portions of the spectra are under conditions which it is believed nearly all workers may be exposed without adverse effects.

(b) These values shall be used in the control of exposure to pulsed and continuous wave laser energy.

(c) The notation "SKIN PROTECTION" refers to the potential risk of exposure of the skin to laser energy. These limits are not directly related to, or part of, the permissible exposure limit for eye protection and are intended to suggest that appropriate control measures may be necessary to prevent damage to the skin.

(d) The values apply to the maximum intensity of laser energy incident on the skin (excluding eyes) in the visible, near infrared and infrared wave lengths.

Mode	
Pulsed	0.1 Joules/sq. centimeter* (Energy Density)
Continuous Wave	1.0 Watts/sq. centimeter* (Power Density)

\*Ceiling value

(7) Ultraviolet radiation.

(a) These permissible exposure limits refer to ultraviolet radiation in the spectral region between 200 and 400 nanometer (nm) and represent conditions under which it is believed that nearly all workers may be repeatedly exposed without adverse effect. These values for exposure of the eye or the skin apply to ultraviolet radiation from arcs, gas, and vapor discharges, and incandescent sources, but do not apply to ultraviolet lasers or solar radiation. These levels should not be used for determining exposure of photosensitive individuals to ultraviolet radiation. These values shall be used in the control of exposure to continuous sources where the exposure relation shall not be less than 0.1 sec.

(b) The permissible exposure limit for occupational exposure to ultraviolet radiation incident upon skin or eye where irradiance values are known and exposure time is controlled are as follows:

(i) For the near ultraviolet spectral region (320 to 400 nanometer (nm)) total irradiance incident upon the unprotected skin or eye shall not exceed milliwatt/sq. centimeter for periods greater than 10<sup>3</sup> seconds (approximately 16 minutes) and for exposure times less than 103 seconds shall not exceed one Joules/sq. centimeter.

(ii) For the actinic ultraviolet spectral region (200 – 315 nm), radiant exposure incident upon the unprotected skin or eye shall not exceed the values given in Table 4 within an 8-hour period.

(iii) To determine the effective irradiance of a broad-band source weighted against the peak of the spectral effectiveness curve (270 nanometer(nm)), the following weighting formulas shall be used.

$$E_{eff} = \sum \frac{(E-\text{Lambda}) (S-\text{Lambda})}{(\text{Delta}-\text{Lambda})}$$

Where:

$E_{eff}$  = effective irradiance relative to a monochromatic source at 270nm

$E-\text{Lambda}$  = spectral irradiance in Watts/sq. centimeter/nanometer.

$S-\text{Lambda}$  = relative spectral effectiveness (unitless)

$\text{Delta}-\text{Lambda}$  = band width in nanometers

(iv) Permissible exposure time in seconds for exposure to actinic ultraviolet radiation incident upon the unprotected skin or eye may be computed by dividing 0.003 Joules/sq. centimeter by (<sup>E</sup>eff in Watts/sq. centimeter. The exposure time may also be determined using Table 5 which provides exposure times corresponding to effective irradiances in  $\mu\text{W}/\text{cm}^2$ .

Densities and Transmissions (in Percent); also Tolerances in Densities and Transmissions of Various Shades of Glasses for Protection Against Injurious Rays

(Shades 3 to 8, inclusive, are for use in goggles, shades 10 to 14, inclusive, for welder's helmets and face shields)

[CODIFICATION NOTE: The graphic presentation of this table has been varied slightly in order that it would fall within the printing specifications for the Washington Administrative Code. In the following table, the original table had columns relating to (1) "Optical Density" which is now "Part 1," (2) "Total Visible Luminous Transmittance" and "Maximum total Infrared" which are now "Part 2," (3) "Maximum Ultraviolet Transmission" which is now "Part 3," and (4) "Recommended Uses" which is now "Part 4." These columns were all positioned side by side. In the new WAC format these are split up into four separate tables.]

TABLE 6--Part 1

Shade No.	Recommended Uses
3.0	Glare of reflected sunlight from snow, water, sand, etc., stray light from cutting and welding metal pouring and work around furnaces and foundries.
4.0	
5.0	Light acetylene cutting and welding; light electric spot welding.
6.0	
7.0	Acetylene cutting and medium welding; arc welding up to 30 amperes.
8	
9	Heavy acetylene welding; arc cutting and welding between 30 and 75 amperes.
10	
11	Arc cutting and welding between 75 and 200 amperes.
12	
13	Arc cutting and welding between 200 and 400 amperes.
14	Arc cutting and welding above 400 amperes.

- a. American Standard Safety Code for the Protection of Heads, Eyes, and Respiratory Organs.
- b. Standard density is defined as the logarithms (base 10) of the reciprocal of the transmission. Shade number is determined by the density according to the relations:

$$\text{Shade number} = 7/3 \text{ density} + 1 \text{ with tolerances as given in the table.}$$

NOTE: Safety glasses are available with lenses which protect the eyes against ultraviolet radiation.

[Statutory Authority: RCW 49.17.040, 80-16-029 (Order 80-22), § 296-62-09005, filed 10/31/80. Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240, 80-11-010 (Order 80-14), § 296-62-09005, filed 8/8/80; Order 73-3, § 296-62-09005, filed 5/7/73.]

**WAC 296-62-09007 Pressure.** (1) Workmen exposed to pressures above normal atmospheric pressure which may produce physiological injury shall adhere to decompression schedules or other tables as are or may be adopted by the department of labor and industries: for example, state of Washington "safety standards for compressed air work" and "safety regulations for scuba diving." The employer shall provide and supervise the

use of decompression equipment and schedules in accordance with applicable requirements.

(2) If no specific requirements prevail for an unusual condition, a plan based on the recommendations of professionally qualified advisors, experienced with hazards associated with such exposures, shall be followed by both the employer and employee. [Order 73-3, § 296-62-09007, filed 5/7/73.]

**WAC 296-62-09009 Vibration.** Reasonable precautions shall be taken to protect workmen against the hazardous effects of unavoidable exposure to vibrations. [Order 73-3, § 296-62-09009, filed 5/7/73.]

**WAC 296-62-09013 Temperature, radiant heat, or temperature-humidity combinations.** (1) Workmen subjected to temperature extremes, radiant heat, humidity, or air velocity combinations which, over a period of time, are likely to produce physiological responses which are harmful shall be afforded protection by use of adequate controls, methods or procedures, or protective clothing. This shall not be construed to apply to normal occupations under atmospheric conditions which may be expected in the area except that special provisions which are required by other regulations for certain areas or occupations shall prevail. [Order 73-3, § 296-62-09013, filed 5/7/73.]

**WAC 296-62-09015 Hearing conservation.** The employer shall administer a continuing effective hearing conservation program, as described in WAC 296-62-09015 through 296-62-09055 whenever employee noise exposures equal or exceed an 8-hour time-weighted average (TWA) sound level of 85 decibels (dB) measured on the A-scale weighting at slow response or, equivalently, a noise dose of fifty percent. For purposes of the hearing conservation program, employee noise exposures shall be computed in accordance with WAC 296-62-09055, Appendix E: Noise exposure computation, without regard to any attenuation provided by the use of personal protective equipment. [Statutory Authority: RCW 49.17.040 and 49.17.050, 83-24-013 (Order 83-34), § 296-62-09015, filed 11/30/83; 82-03-023 (Order 82-1), § 296-62-09015, filed 1/15/82.]

**WAC 296-62-09017 Definitions.** These definitions apply to the following terms as used in WAC 296-62-09015 through 296-62-09055.

(1) Audiogram - A chart, graph, or table resulting from an audiometric test showing an individual's hearing threshold levels as a function of frequency.

(2) Audiologist - A professional, specializing in the study and rehabilitation of hearing, who is certified by the American Speech, Hearing, and Language Association or licensed by a state board of examiners.

(3) Baseline audiogram - The audiogram against which future audiograms are compared.

(4) Criterion sound level - A sound level of 90 decibels.

(5) Decibel (dB) - Unit of measurement of sound level.

(6) Hertz (Hz) – Unit of measurement of frequency, numerically equal to cycles per second.

(7) Impulsive or impact noise – Noise levels which involve maxima at intervals greater than one second. Where the intervals are less than one second, the noise levels shall be considered continuous.

(8) Medical pathology – A disorder or disease. For purposes of this regulation, a condition or disease affecting the ear, which should be treated by a physician specialist.

(9) Noise dose – The ratio, expressed as a percentage, of (a) the time integral, over a stated time or event, of the 0.6 power of the measured SLOW exponential time-averaged, squared A-weighted sound pressure and (b) the product of the criterion duration (8 hours) and the 0.6 power of the squared sound pressure corresponding to the criterion sound level (90 dB).

(10) Noise dosimeter – An instrument that integrates a function of sound pressure over a period of time in such a manner that it directly indicates a noise dose.

(11) Otolaryngologist – A physician specializing in diagnosis and treatment of disorders of the ear, nose and throat.

(12) Representative exposure – Measurements of an employee's noise dose or 8-hour time-weighted average sound level that the employer deems to be representative of the exposure of other employees in the workplace.

(13) Standard threshold shift – A hearing level change, relative to the baseline audiogram, of an average of 10 dB or more at 2000, 3000, and 4000 Hz in either ear.

(14) Sound level – Ten times the common logarithm of the ratio of the the square of the measured A-weighted sound pressure to the square of the standard reference pressure of 20 micropascals. Unit: Decibels (dB). For use with this regulation, SLOW time response, in accordance with ANSI S1.4-1971 (R1976), is required unless specifically specified otherwise.

(15) Sound level meter – An instrument for the measurement of sound level.

(16) Time-weighted average sound level – That sound level, which if constant over an 8-hour period, would result in the same noise dose as if measured in the time varying noise level environment. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09017, filed 11/30/83; 82-03-023 (Order 82-1), § 296-62-09017, filed 1/15/82.]

**WAC 296-62-09019 Monitoring.** (1) When reasonable information indicates that any employee's exposure may equal or exceed an 8-hour time-weighted average of 85 dBA, the employer shall obtain individual or representative exposure measurements for all employees who may be exposed at or above that level.

(2) The sampling strategy shall be designed to identify all employees required to be included in the hearing conservation program and to enable the proper selection of hearing protectors.

(3) Where circumstances such as high worker mobility, significant variations in sound level, or a significant component of impulse noise exist, the employer shall use

representative personal sampling to comply with the monitoring requirements of this section unless the employer can establish that area sampling produces equivalent results. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09019, filed 11/30/83; 82-03-023 (Order 82-1), § 296-62-09019, filed 1/15/82.]

**WAC 296-62-09021 Method of noise measurement.**

(1) Noise dosimeters which comply, as a minimum, with the provisions of subdivision (1)(a) of this section or sound level meters which comply, as a minimum, with the provisions of subdivision (1)(b) of this section shall be used whenever employee exposures are evaluated for the purpose of complying with WAC 296-62-09015 through 296-62-09055.

(a) Dosimeters. Dosimeters shall meet the Class 2A-90/80-5 requirements of the American National Standard Specification for Personal Noise Dosimeters, S1.25-1978.

(b) Sound level meters. Sound level meters shall meet the Type 2 requirements of the American National Standard Specification for Sound Level Meters, S1.4-1971 (R1976).

(2) All continuous, intermittent, and impulsive sound levels from 80 dBA to 130 dBA shall be integrated into the exposure computation.

(3) Monitoring shall be repeated whenever a change in production, process, equipment or controls increases noise exposures to the extent that:

(a) Additional employees may be exposed at or above an 8-hour time-weighted average of 85 dBA; or

(b) The attenuation provided by hearing protectors being used by employees may be rendered inadequate to meet the requirements of WAC 296-62-09033. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09021, filed 11/30/83; 82-03-023 (Order 82-1), § 296-62-09021, filed 1/15/82.]

**WAC 296-62-09023 Calibration of monitoring equipment.** Dosimeters and sound level meters used to monitor employee noise exposure shall be calibrated using the instrument manufacturer's calibration instructions before and after each day's use. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09023, filed 11/30/83; 82-03-023 (Order 82-1), § 296-62-09023, filed 1/15/82.]

**WAC 296-62-09024 Employee notification.** The employer shall notify each employee exposed at or above an 8-hour time-weighted average of 85 dBA of the results of the monitoring. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09024, filed 11/30/83.]

**WAC 296-62-09025 Observation of monitoring.** The employer shall provide affected employees or their representatives with an opportunity to observe any measurements of employee noise exposure which are conducted pursuant to WAC 296-62-09019. [Statutory

Authority: RCW 49.17.040 and 49.17.050. 82-03-023 (Order 82-1), § 296-62-09025, filed 1/15/82.]

**WAC 296-62-09026 Noise control.** (1) Whenever employee noise exposures equal or exceed an 8-hour time-weighted average of 90 dBA, feasible administrative or engineering controls shall be utilized.

(2) Upon request, the employer shall prepare and submit a written compliance plan to the director or his/her designee. This plan must include a description of the manner in which compliance will be achieved with respect to cited violations of WAC 296-62-09026(1) and shall include proposed abatement methods, anticipated completion dates, and provision for progress reports to the director or his/her designee. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09026, filed 11/30/83.]

**WAC 296-62-09027 Audiometric testing program.**

(1) The employer shall establish and maintain a mandatory audiometric testing program as provided in this section for all employees whose exposures equal or exceed an 8-hour time-weighted average of 85 dBA.

(2) The program shall be provided at no cost to employees.

(3) Audiometric tests shall be performed by a licensed or certified audiologist, otolaryngologist, or other qualified physician, or by a technician who is certified by the council of accreditation in occupational hearing conservation. A technician who performs audiometric tests must be responsible to an audiologist, otolaryngologist or other qualified physician.

(4) All audiograms obtained pursuant to this section shall meet the requirements of WAC 296-62-09047, Appendix A: Audiometric measuring instruments.

(5) Baseline audiogram.

(a) Prior to or within 180 days after an employee's first exposure to noise at or above a time-weighted average of 85 dBA, the employer shall establish for each employee so exposed a valid baseline audiogram against which subsequent audiograms can be compared. Employers who utilize mobile test units are allowed up to one year to obtain a valid baseline audiogram for each exposed employee, provided that each employee so exposed shall be trained and shall wear suitable hearing protectors in accordance with WAC 296-62-09015 through 296-62-09055.

(b) Testing to establish a baseline audiogram shall be preceded by at least 14 hours without exposure to workplace noise.

This may be accomplished by use of hearing protectors; however, the employer shall notify employees of the need to avoid high levels of nonoccupational noise exposure during the 14-hour period immediately preceding the audiometric examination.

(6) Annual audiogram.

(a) At least annually (i.e. every 12-month interval) after obtaining the baseline audiogram, the employer shall obtain a new audiogram for each employee exposed at or above a time-weighted average of 85 dBA.

(b) Annual audiometric testing may be conducted at any time during the workshift.

(7) Evaluation of audiogram.

(a) Each employee's annual audiogram shall be compared to that employee's baseline audiogram to determine if a standard threshold shift has occurred. This comparison may be made by a certified audiometric technician.

(b) If the annual audiogram indicates that an employee has suffered a standard threshold shift, the employer may obtain a retest within 30 days and consider the results of the retest as the annual audiogram.

(c) An audiologist, otolaryngologist or other qualified physician shall review audiograms which indicate a standard threshold shift to determine whether there is need for further evaluation. The employer shall provide to the person performing this evaluation the following information:

(i) A copy of the requirements for hearing conservation as set forth in WAC 296-62-09015 through 296-62-09055;

(ii) The baseline audiogram and most recent audiogram of the employee to be evaluated;

(iii) Measurements of background sound pressure levels in the audiometric test room as required in WAC 296-62-09049, Appendix B: Audiometric test rooms; and

(iv) Records of audiometer calibrations required by WAC 296-62-09029(5).

(d) Inform each employee of the results of his/her audiometric test and whether or not there has been a hearing level decrease or improvement since his/her previous test.

(8) Follow-up procedures. If a comparison of the annual audiogram to the baseline audiogram indicates a standard threshold shift, the employer shall ensure that the following steps are taken:

(a) Employees not using hearing protectors shall be fitted with hearing protectors, trained in their use and care, and required to use them.

(b) Employees already using hearing protectors shall be refitted and retrained in the use of hearing protectors and provided with hearing protectors offering greater attenuation if necessary.

(c) Inform the employee in writing, within 21 days of the determination, of the existence of a standard threshold shift;

(d) Refer the employee, at no cost to the employee, for a clinical audiological evaluation or an otological examination, as appropriate, if additional testing is necessary or if the employer suspects that a medical pathology of the ear (as defined in WAC 296-62-09017) is caused or aggravated by the wearing of hearing protectors; and

(e) Inform the employee of the need for an otological examination if a medical pathology of the ear which is unrelated to the use of hearing protectors is suspected.

(9) Revised baseline. An annual audiogram may be substituted for the baseline audiogram when, in the judgment of the audiologist, otolaryngologist or other qualified physician who is evaluating the audiogram:

(a) The standard threshold shift revealed by the audiogram is persistent; or

(b) The hearing threshold shown in the annual audiogram indicates significant improvement over the baseline audiogram. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09027, filed 11/30/83; 82-03-023 (Order 82-1), § 296-62-09027, filed 1/15/82.]

**WAC 296-62-09029 Audiometric test requirements.**

(1) Audiometric tests shall be pure tone, air conduction, hearing threshold examinations, with test frequencies including as a minimum 500, 1000, 2000, 3000, 4000, and 6000 Hz. Tests at each frequency shall be taken separately for each ear.

(2) Audiometric tests shall be conducted with audiometers (including microprocessor audiometers) that meet the specifications of, and are maintained and used in accordance with, American National Standard Specification for Audiometers, S3.6-1969(R1973).

(3) Pulsed-tone and self-recording audiometers, if used, shall meet the requirements specified in WAC 296-62-09047, Appendix A: Audiometric measuring instruments.

(4) Audiometric examinations shall be administered in a room meeting the requirements listed in WAC 296-62-09049, Appendix B: Audiometric test rooms.

(5) Audiometer calibration.

(a) The functional operation of the audiometer shall be checked before each day's use by testing a person with known, stable hearing thresholds, and by listening to the audiometer's output to make sure that the output is free from distorted or unwanted sounds. Deviations of 10 dB or greater shall require an acoustic calibration.

(b) Audiometer calibration shall be checked acoustically at least annually in accordance with WAC 296-62-09051, Appendix C: Acoustic calibration of audiometers. Test frequencies below 500 Hz and above 6000 Hz may be omitted from this check.

(c) An exhaustive calibration shall be performed at least every two years in accordance with sections 4.1.2; 4.1.3; 4.1.4.3; 4.2; 4.4.1; 4.4.2; 4.4.3; and 4.5 of the American National Standard Specification for Audiometers, S3.6-1969(R1973). Test frequencies below 500 Hz and above 6000 Hz may be omitted from the calibration. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09029, filed 11/30/83; 82-03-023 (Order 82-1), § 296-62-09029, filed 1/15/82.]

**WAC 296-62-09031 Hearing protectors.** (1) Employers shall make hearing protectors available to all employees exposed to a time-weighted average of 85 dBA or greater at no cost to the employees. Hearing protectors shall be replaced as necessary.

(2) Employers shall ensure that hearing protectors are worn:

(a) By any employee who is exposed to an 8-hour time-weighted average of 85 dBA or greater; or

(b) By any employee who is exposed to noise above 115 dBA; or

(c) By any employee who is exposed to any impulsive or impact noise measured at or above 140 dB peak using an impulse sound level meter set to either the linear or C-scale.

(3) Employees shall be given the opportunity to select their hearing protectors from at least two different types (i.e. molded, self-molded, custom molded, or ear muffs) of suitable hearing protectors provided by the employer.

(4) The employer shall provide training in the use and care of all hearing protectors provided to employees.

(5) The employer shall ensure proper initial fitting and supervise the correct use of all hearing protectors. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09031, filed 11/30/83; 82-13-045 (Order 82-22), § 296-62-09031, filed 6/11/82; 82-03-023 (Order 82-1), § 296-62-09031, filed 1/15/82.]

**WAC 296-62-09033 Hearing protector attenuation.**

(1) The employer shall evaluate hearing protector attenuation for the specific noise environments in which the protector will be used by one of the methods described in WAC 296-62-09053, Appendix D: Methods for estimating the adequacy of hearing protector attenuation, or by other methods if approved by the director.

(2) Hearing protectors must attenuate employee exposure at least to a time-weighted average of 85 dBA or below.

(3) The adequacy of hearing protector attenuation shall be re-evaluated whenever employee noise exposures increase to the extent that the hearing protectors provided may no longer provide adequate attenuation. The employer shall provide more effective hearing protectors where necessary. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09033, filed 11/30/83; 82-13-045 (Order 82-22), § 296-62-09033, filed 6/11/82; 82-03-023 (Order 82-1), § 296-62-09033, filed 1/15/82.]

**WAC 296-62-09035 Training program.** (1) The employer shall institute a training program for all employees who are exposed to noise at or above an 8-hour time-weighted average of 85 dBA, and shall ensure employee participation in such program.

(2) The training program shall be repeated annually for each employee included in the hearing conservation program. Information provided in the training program shall be updated to be consistent with changes in protective equipment and work processes.

(3) The employer shall ensure that each employee is informed of the following:

(a) The effects of noise on hearing;

(b) The purpose of hearing protectors, the advantages, disadvantages, and attenuation of various types, and instructions on selection, fitting, use, and care; and

(c) The purpose of audiometric testing, and an explanation of the test procedures.

(d) The right to access to records as specified in WAC 296-62-09041(5).

(4) A written description of the training program instituted shall be maintained by each employer. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09035, filed 11/30/83; 82-03-023 (Order 82-1), § 296-62-09035, filed 1/15/82.]

**WAC 296-62-09037 Access to information and training materials.** (1) The employer shall make available to affected employees or their representatives copies of this standard and shall also post a copy in the workplace.

(2) The employer shall provide to affected employees any informational materials pertaining to this standard that are supplied to the employer by the director.

(3) The employer shall provide, upon request, all materials related to the employer's training and education program pertaining to this standard to the director. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-03-023 (Order 82-1), § 296-62-09037, filed 1/15/82.]

**WAC 296-62-09039 Warning signs.** (1) Signs shall be posted at entrances to or on the periphery of all well defined work areas in which employees may be exposed at or above 115 dBA.

(2) Warning signs shall clearly indicate that the area is a high noise area and that hearing protectors are required. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09039, filed 11/30/83; 82-03-023 (Order 82-1), § 296-62-09039, filed 1/15/82.]

**WAC 296-62-09041 Recordkeeping.** (1) Exposure measurements. The employer shall maintain an accurate record of all employee exposure measurements required by this section.

(2) Audiometric tests.

(a) The employer shall retain a legible copy of all employee audiograms obtained pursuant to WAC 296-62-09027.

(b) This record shall include:

- (i) Name and job classification of the employee;
- (ii) Date of the audiogram;
- (iii) The examiner's name;
- (iv) Date of the last acoustic or exhaustive calibration of the audiometer; and
- (v) Employee's most recent noise exposure assessment.

(3) Audiometric test rooms. The employer shall maintain accurate records of the measurements of the background sound pressure levels in audiometric test rooms.

(4) Record retention. The employer shall retain records required in this section for at least the following periods:

(a) Noise exposure measurement records shall be retained for two years.

(b) Audiometric test records shall be retained for the duration of the affected employee's employment.

(5) Access to records. All records required by this section shall be provided upon request to employees,

former employees, representatives designated by the individual employee, and the director. The provisions of WAC 296-62-05201 through 296-62-05209 and 296-62-05213 through 296-62-05217 apply to access to records under this section.

(6) Transfer of records. If the employer ceases to do business, the employer shall transfer to the successor employer all records required to be maintained by this section, and the successor employer shall retain them for the remainder of the period prescribed in WAC 296-62-09041 (4). [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09041, filed 11/30/83; 82-03-023 (Order 82-1), § 296-62-09041, filed 1/15/82.]

**WAC 296-62-09043 Appendices.** WAC 296-62-09047, 296-62-09049, 296-62-09051, and 296-62-09053 and 296-62-09055, Appendices A, B, C, D, and E are incorporated as part of this section and the contents of these appendices are mandatory. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09043, filed 11/30/83; 82-03-023 (Order 82-1), § 296-62-09043, filed 1/15/82.]

**WAC 296-62-09045 Effective dates.** (1) WAC 296-62-09015 through 296-62-09053 shall become effective 60 days after filing with the code reviser, unless otherwise noted below.

(2) Monitoring conducted pursuant to WAC 296-62-09019 shall be completed no later than 180 days from the effective date of the standard.

(3) Baseline audiograms required by WAC 296-62-09027 shall be completed no later than December 31, 1982. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-03-023 (Order 82-1), § 296-62-09045, filed 1/15/82.]

**WAC 296-62-09047 Appendix A: Audiometric measuring instruments.** (1) In the event that pulsed-tone audiometers are used, they shall have a tone on-time of at least 200 milliseconds.

(2) Self-recording audiometers shall comply with the following requirements:

(a) The chart upon which the audiogram is traced shall have lines at positions corresponding to all multiples of 10 dB hearing level within the intensity range spanned by the audiometer. The lines shall be equally spaced and shall be separated by at least 1/4 inch. Additional increments are optional. The audiogram pen tracings shall not exceed 2 dB in width.

(b) It shall be possible to set the stylus manually at the 10dB increment lines for calibration purposes.

(c) The slewing rate for the audiometer attenuator shall not be more than 6 dB/sec except that an initial slewing rate greater than 6 dB/sec is permitted at the beginning of each new test frequency, but only until the second subject response.

(d) The audiometer shall remain at each required test frequency for 30 seconds ( $\pm 3$  seconds). The audiogram shall be clearly marked at each change of frequency and the actual frequency change of the audiometer shall not

deviate from the frequency boundaries marked on the audiogram by more than  $\pm 3$  seconds.

(e) It must be possible at each test frequency to place a horizontal line segment parallel to the time axis on the audiogram, such that the audiometric tracing crosses the line segment at least six times at the test frequency. At each test frequency the threshold shall be the average of the midpoints of the tracing excursions. [Statutory Authority: RCW 49.17.040 and 49.17.050, 83-24-013 (Order 83-34), § 296-62-09047, filed 11/30/83; 82-03-023 (Order 82-1), § 296-62-09047, filed 1/15/82.]

**WAC 296-62-09049 Appendix B: Audiometric test rooms.** Rooms used for audiometric testing shall not have background sound pressure levels exceeding those in Table B-1 when measured by equipment conforming at least to the Type 2 requirements of American National Standard Specification for Sound Level Meters, S1.4-1971 (R1976), and to the Class II requirements of American National Standard Specification for Octave, Half-Octave, and Third-Octave Band Filter Sets, S1.11-1971 (R1976).

TABLE B-1 - Maximum Allowable Octave-Band Sound Pressure Levels for Audiometric Test Rooms.

Octave-band center frequency (Hz) . . .	500	1000	2000	4000	8000
Sound pressure level (dB).....	40	40	47	57	62

[Statutory Authority: RCW 49.17.040 and 49.17.050, 82-03-023 (Order 82-1), § 296-62-09049, filed 1/15/82.]

**WAC 296-62-09051 Appendix C: Acoustic calibration of audiometers.** Audiometer calibration shall be checked acoustically, at least annually, according to the procedures described in this Appendix. The equipment necessary to perform these measurements is a sound level meter, octave-band filter set, and a National Bureau of Standards 9A coupler. In making these measurements, the accuracy of the calibrating equipment shall be sufficient to determine that the audiometer is within the tolerance permitted by American National Standard Specifications for Audiometers, S3.6-1969(R1973).

(1) Sound pressure output check.

(a) Place the earphone coupler over the microphone of the sound level meter and place the earphone on the coupler.

(b) Set the audiometer's hearing threshold level (HTL) dial to 70 dB.

(c) Measure the sound pressure level of the tones at each test frequency from 500 Hz through 6000 Hz for each earphone.

(d) At each frequency the readout on the sound level meter should correspond to the levels in Table C-1 or Table C-2, as appropriate, for the type of earphone, in the column entitled "sound level meter reading."

(2) Linearity check.

(a) With the earphone in place, set the frequency to 1000 Hz and the HTL dial on the audiometer to 70 dB.

(b) Measure the sound levels in the coupler at each 10dB decrement from 70 dB to 10 dB, noting the sound level meter reading at each setting.

(c) For each 10dB decrement on the audiometer the sound level meter should indicate a corresponding 10 dB decrease.

(d) This measurement may be made electrically with a voltmeter connected to the earphone terminals.

(3) Tolerances.

When any of the measured sound levels deviate from the levels in Table C-1 or Table C-2 by  $\pm 3$  dB at any test frequency between 500 and 3000 Hz, 4 dB at 4000 Hz, or 5 dB at 6000 Hz, an exhaustive calibration is required.

Table C-1 - Reference threshold levels for telephonics - TDH-39 earphones

Frequency, Hz	Reference threshold level for TDH-39 earphones, dB	Sound level meter reading, dB
500	11.5	81.5
1000	7	77
2000	9	79
3000	10	80
4000	9.5	79.5
6000	15.5	85.5

Table C-2 - Reference threshold levels for telephonics - TDH-49 Earphones

Frequency, Hz	Reference threshold level for TDH-49 earphones, dB	Sound level meter reading, dB
500	13.5	83.5
1000	7.5	77.5
2000	11	81.0
3000	9.5	79.5
4000	10.5	80.5
6000	13.5	83.5

[Statutory Authority: RCW 49.17.040 and 49.17.050, 83-24-013 (Order 83-34), § 296-62-09051, filed 11/30/83; 82-13-045 (Order 82-22), § 296-62-09051, filed 6/11/82; 82-03-023 (Order 82-1), § 296-62-09051, filed 1/15/82.]

**WAC 296-62-09053 Appendix D: Methods for estimating the adequacy of hearing protector attenuation.**

(1) Hearing protector attenuation must be sufficient to reduce employee exposure to a TWA of 85 dBA.

(2) The most convenient method to use is the noise reduction rating (NRR) developed by the Environmental Protection Agency (EPA). According to EPA regulation, the NRR must be shown on the hearing protector package. The NRR is then related to an individual worker's noise environment in order to assess the adequacy of the attenuation of a given hearing protector. This appendix describes two methods of using the NRR to determine whether a particular hearing protector provides adequate protection within a given exposure environment. Selection between the two procedures is dependent upon the employer's noise measuring instruments.

(3) When using the NRR to assess hearing protector adequacy, one of the following methods must be used:

(a) When using a dosimeter that is capable of making A-weighted measurements:

(i) Convert the A-weighted dose to TWA.

(ii) Subtract 7 dB from the NRR.

(iii) Subtract the remainder from the A-weighted TWA to obtain the estimated A-weighted TWA under the ear protector.

(b) When using a sound level meter set to the A-weighting network:

(i) Obtain the employee's A-weighted TWA.

(ii) Subtract 7 dB from the NRR, and subtract the remainder from the A-weighted TWA to obtain the estimated A-weighted TWA under the ear protector.

(4) Other methods may be utilized if they are at least as effective as the NRR if approved by the director. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-09053, filed 11/30/83; 82-03-023 (Order 82-1), § 296-62-09053, filed 1/15/82.]

**WAC 296-62-09055 Appendix E: Noise exposure computation.** (1) Computation of employee noise exposure.

(a) Noise dose is computed using Table E-1 as follows:

(i) When the sound level, L, is constant over the entire work shift, the noise dose, D, in percent, is given by:  $D=100 C/T$  where C is the total length of the work day, in hours, and T is the reference duration corresponding to the measured sound level, L, as given in Table E-1 or by the formula shown as a footnote to that table.

(ii) When the workshift noise exposure is composed of two or more periods of noise at different levels, the total noise dose over the work day is given by:  $D=100(C_1/T_1+C_2/T_2+... +C_n/T_n)$ , where  $C_n$  indicates the total time of exposure at a specific noise level, and  $T_n$  indicates the reference duration for that level as given by Table E-1.

(b) The 8-hour time-weighted average sound level (TWA), in decibels, may be computed from the dose, in percent, by means of the formula:  $TWA = 16.61 \log_{10}(D/100)+90$ . For an 8-hour workshift with the

noise level constant over the entire shift, the TWA is equal to the measured sound level.

(c) A table relating dose and TWA is given in subsection (2) of this section.

TABLE E-1

A-weighted sound level, L (decibel)	Reference duration, T (hour)
80	32
81	27.9
82	24.3
83	21.1
84	18.4
85	16
86	13.9
87	12.1
88	10.6
89	9.2
90	8
91	7.0

119	0.14
120	0.125
121	0.11
122	0.095
123	0.082
124	0.072
125	0.063
126	0.054
127	0.047
128	0.041
129	0.036

A-weighted sound level, L (decibel)	Reference duration, T (hour)
130	0.031

In the above table the reference duration T, is computed by

$$T = \frac{8}{2^{(L-90)/5}}$$

where L is the measured A-weighted sound level.

(2) Conversion between "dose" and "8-hour time-weighted average" sound level.

(a) Compliance with WAC 296-62-09015 through 296-62-09055 of this regulation is determined by the amount of exposure to noise in the workplace. The amount of such exposure is usually measured with an audiodosimeter which gives a readout in terms of "dose." In order to better understand the requirements of these standards, dosimeter readings can be converted to an "8-hour time-weighted average (TWA) sound level."

(b) In order to convert the reading of a dosimeter into TWA, see Table E-2. This table applies to dosimeters that are set by the manufacturer to calculate dose or percent exposure according to the relationships in Table E-1. So, for example, a dose of 91 percent over an eight-hour day results in a TWA of 89.3 dB, and a dose of 50 percent corresponds to a TWA of 85 dB.

(c) If the dose as read on the dosimeter is less than or greater than the values found in Table E-2, the TWA may be calculated by using the formula:  $TWA = 16.61 \log_{10} (D/100) + 90$  where TWA = 8-hour time-weighted average sound level and D = accumulated dose in percent exposure.

Table E-2 - Conversion from "percent noise exposure" or "dose" to "8-hour time-weighted average sound level" (TWA)

Dose or percent noise exposure	TWA (dBA)

[Statutory Authority: RCW 49.17.040 and 49.17.050, 83-24-013 (Order 83-34), § 296-62-09055, filed 11/30/83.]

**WAC 296-62-100 Oxygen deficient atmospheres.**

(1) Definition. A lack of sufficient oxygen is deemed to exist if the atmosphere at sea level has less than 18% oxygen by volume or has a partial pressure of oxygen of 135 millimeters of mercury (mm. Hg) or less. This may deviate when working at higher elevations and should be determined for an individual location. Factors such as acclimatization, physical conditions of the persons involved, etc., must be considered for such circumstances and conditions.

(2) Entering areas with possible oxygen deficient atmospheres. Workmen entering any area where a lack of sufficient oxygen is probable shall be supplied with and shall use approved equipment (for specific requirements see applicable provisions of chapter 296-62 WAC) capable of providing safe respirable air, or prior to entry and at all times when workmen are in such areas a sufficient supply of safe, respirable air shall be provided. All workers so exposed shall be under constant observation. If the oxygen content is unknown or may change during occupation, tests shall be required prior to and during occupation of questionable areas. [Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240, 81-16-015 (Order 81-20), § 296-62-100, filed 7/27/81; Order 73-3, § 296-62-100, filed 5/7/73; Order 70-8, § 296-62-100, filed 7/31/70, effective 9/1/70; Rule 10.010, effective 8/1/63.]

**WAC 296-62-110 Ventilation.**

[Order 73-3, § 296-62-110, filed 5/7/73; Order 70-8, § 296-62-110, filed 7/31/70, effective 9/1/70; Rules 11.010-11.030, effective 8/1/63.] See WAC 296-62-11001 through 296-62-11013.

**WAC 296-62-11001 Definition.** Ventilation shall mean the provision, circulation or exhausting of air into or from an area or space.

(1) "Local exhaust ventilation" shall mean the mechanical removal of contaminated air from the point where the contaminant is being generated or liberated.

(2) "Dilution ventilation" means inducing and mixing uncontaminated air with contaminated air in such quantities that the resultant mixture in the breathing zone will not exceed the permissible exposure limit (PEL) specified for any contaminant.

(3) "Exhaust ventilation" means the general movement of air out of the area or confined space by mechanical or natural means.

(4) "Tempered makeup air" means air which has been conditioned by changing its heat content to obtain a specific desired temperature. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-62-11001, filed 11/13/80; Order 73-3, § 296-62-11001, filed 5/7/73.]

**WAC 296-62-11003 Ventilation guide.** In addition to those mandatory controls as set forth in WAC 296-62-11015 through 296-62-11021, the Industrial Ventilation Manual of Recommended Practices as compiled and approved by the American Conference of Governmental Industrial Hygienists, applicable ANSI Standard or other National Concensus Standards recommended by the federal government, should be used as a guide for ventilation requirements. [Order 73-3, § 296-62-11003, filed 5/7/73.]

**WAC 296-62-11005 Adequate system.** Adequate ventilation systems shall be installed as needed to control concentrations of airborne contaminants below applicable threshold limit values. [Order 73-3, § 296-62-11005, filed 5/7/73.]

**WAC 296-62-11007 Exhaust.** Exhaust from ventilation systems shall discharge in such a manner that the contaminated air being exhausted will not present a health hazard to any workman or reenter buildings in harmful amounts. [Order 73-3, § 296-62-11007, filed 5/7/73.]

**WAC 296-62-11009 Make-up air quantity.** Make-up air shall be of ample quantity to replace the exhausted air and shall be tempered when necessary. [Order 73-3, § 296-62-11009, filed 5/7/73.]

**WAC 296-62-11011 Design and operation.** Ventilation systems shall be designed and operated in such a manner that workmen will not be subjected to excessive air velocities. [Order 73-3, § 296-62-11011, filed 5/7/73.]

**WAC 296-62-11013 Compatibility of systems.** Makeup air systems shall be designed and operated in such a manner that they will not interfere with the effectiveness of the exhaust air system. [Order 73-3, § 296-62-11013, filed 5/7/73.]

**WAC 296-62-11015 Abrasive blasting.** (1) Definitions.

(a) "Abrasive" means a solid substance used in an abrasive blasting operation.

(b) "Abrasive-blasting respirator" means a continuous flow air-line respirator constructed so that it will cover the wearer's head, neck, and shoulders to protect him from rebounding abrasive.

(c) "Blast cleaning barrel" means a complete enclosure which rotates on an axis, or which has an internal moving tread to tumble the parts, in order to expose various surfaces of the parts to the action of an automatic blast spray.

(d) "Blast cleaning room" means a complete enclosure in which blasting operations are performed and where the operator works inside of the room to operate the blasting nozzle and direct the flow of the abrasive material.

(e) "Blasting cabinet" means an enclosure where the operator stands outside and operates the blasting nozzle through an opening or openings in the enclosure.

(f) "Clean air" means air of such purity that it will not cause harm or discomfort to an individual if it is inhaled for extended periods of time.

(g) "Dust collector" means a device or combination of devices for separating dust from the air handled by an exhaust ventilation system.

(h) "Exhaust ventilation system" means a system for removing contaminated air from a space, comprising two or more of the following elements (i) enclosure or hood, (ii) duct work, (iii) dust collecting equipment, (iv) exhauster, and (v) discharge stack.

(i) "Particulate-filter respirator" means an air purifying respirator, commonly referred to as a dust or a fume respirator, which removes most of the dust or fume from the air passing through the device.

(j) "Respirable dust" means airborne dust in sizes capable of passing through the upper respiratory system to reach the lower lung passages.

(k) "Rotary blast cleaning table" means an enclosure where the pieces to be cleaned are positioned on a rotating table and are passed automatically through a series of blast sprays.

(1) "Abrasive blasting" means the forcible application of an abrasive to a surface by pneumatic pressure, hydraulic pressure, or centrifugal force.

(2) Dust hazards from abrasive blasting.

(a) Abrasives and the surface coatings on the materials blasted are shattered and pulverized during blasting operations and the dust formed will contain particles of respirable size. The composition and toxicity of the dust from these sources shall be considered in making an evaluation of the potential health hazards.

(b) The concentration of respirable dust or fume in the breathing zone of the abrasive-blasting operator or any other worker shall be kept below the levels specified in WAC 296-62-075 through 296-62-07515.

(c) Organic abrasives which are combustible shall be used only in automatic systems. Where flammable or explosive dust mixtures may be present, the construction of the equipment, including the exhaust system and all electric wiring shall conform to the requirements of American National Standard Installation of Blower and

Exhaust Systems for Dust, Stock, and Vapor Removal or Conveying, Z33.1-1961 (NFPA 91-1961), and American National Standard Electrical Code, C1-1968 (NFPA 70-1968). The blast nozzle shall be bonded and grounded to prevent the build-up of static charges. Where flammable or explosive dust mixtures may be present, the abrasive blasting enclosure, the ducts, and the dust collector shall be constructed with loose panels or explosion venting areas, located on sides away from any occupied area, to provide for pressure relief in case of explosion, following the principles set forth in the National Fire Protection Association Explosion Venting Guide, NFPA 68-1954.

(3) Blast-cleaning enclosures.

(a) Blast-cleaning enclosures shall be exhaust ventilated in such a way that a continuous inward flow of air will be maintained at all openings in the enclosure, during the blasting operation.

(i) All air inlets and access openings shall be baffled or so arranged that by the combination of inward air flow and baffling the escape of abrasive or dust particles into an adjacent work area will be minimized and visible spurts of dust will not be observed.

(ii) The rate of exhaust shall be sufficient to provide prompt clearance of the dust-laden air within the enclosure after the cessation of blasting.

(iii) Before the enclosure is opened, the blast shall be turned off and the exhaust system shall be run for a sufficient period of time to remove the dusty air within the enclosure.

(iv) Safety glass protected by screening shall be used in observation windows, where hard deep-cutting abrasives are used.

(v) Slit abrasive-resistant baffles shall be installed in multiple sets at all small access openings where dust might escape, and shall be inspected regularly and replaced when needed.

(A) Doors shall be flanged and tight when closed.

(B) Doors on blast-cleaning rooms shall be operable from both inside and outside, except that where there is a small operator access door, the large work access door may be closed or opened from the outside only.

(4) Exhaust ventilation systems.

(a) The construction, installation, inspection, and maintenance of exhaust systems shall conform to the principles and requirements set forth in American National Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems, Z9.2-1960, and ANSI Z33.1-1961.

(i) When dust leaks are noted, repairs shall be made as soon as possible.

(ii) The static pressure drop at the exhaust ducts leading from the equipment shall be checked when the installation is completed and periodically thereafter to assure continued satisfactory operation. Whenever an appreciable change in the pressure drop indicates a partial blockage, the system shall be cleaned and returned to normal operating condition.

(b) In installations where the abrasive is recirculated, the exhaust ventilation system for the blasting enclosure

shall not be relied upon for the removal of fines from the spent abrasive instead of an abrasive separator. An abrasive separator shall be provided for the purpose.

(c) The air exhausted from blast-cleaning equipment shall be discharged through dust collecting equipment. Dust collectors shall be set up so that the accumulated dust can be emptied and removed without contaminating other working areas.

(5) Personal protective equipment. See applicable provisions of chapters 296-24 and 296-62 WAC.

(a) Abrasive-blasting respirators shall be worn by all abrasive-blasting operators:

(i) When working inside of blast-cleaning rooms, or

(ii) When using silica sand in manual blasting operations where the nozzle and blast are not physically separated from the operator in an exhaust ventilated enclosure, or

(iii) Where concentrations of toxic dust dispersed by the abrasive-blasting may exceed the limits set in WAC 296-62-075 through 296-62-07515 and the nozzle and blast are not physically separated from the operator in an exhaust-ventilated enclosure.

(b) Particulate filter respirators, commonly referred to as dust-filter respirators, properly fitted, may be used for short, intermittent, or occasional dust exposures such as cleanup, dumping of dust collectors, or unloading shipments of sand at a receiving point, when it is not feasible to control the dust by enclosure, exhaust ventilation, or other means. Respirators used shall be approved for protection against the specific type of dust encountered.

(i) Dust-filter respirators may be used to protect the operator of outside abrasive-blasting operations where nonsilica abrasives are used on materials having low toxicities.

(ii) Dust-filter respirators shall not be used for continuous protection where silica sand is used as the blasting abrasive, or toxic materials are blasted.

(c) A respiratory protection program as defined and described in applicable provisions of chapters 296-24 and 296-62 WAC, shall be established wherever it is necessary to use respiratory protective equipment.

(d) Refer to applicable provisions of chapter 296-24 WAC for operators personal protective equipment.

(6) Operational procedures and general safety. Dust shall not be permitted to accumulate on the floor or on ledges outside of an abrasive-blasting enclosure, and dust spills shall be cleaned up promptly. Aisles and walkways shall be kept clear of steel shot or similar abrasive which may create a slipping hazard.

(7) Scope. This paragraph applies to all operations where an abrasive is forcibly applied to a surface by pneumatic or hydraulic pressure, or by centrifugal force. It does not apply to steam blasting, or steam cleaning, or hydraulic cleaning methods where work is done without the aid of abrasives. [Statutory Authority: RCW 49.17-.040, 49.17.050, and 49.17.240. 81-16-015 (Order 81-20), § 296-62-11015, filed 7/27/81; 80-11-010 (Order 80-14), § 296-62-11015, filed 8/8/80; Order 73-3, § 296-62-11015, filed 5/7/73.]

**WAC 296-62-11017 Grinding, polishing, and buffing operations.** (1) Definitions. (a) "Abrasive cutting-off wheels" means organic-bonded wheels, the thickness of which is not more than one forty-eighth of their diameter for those up to, and including, 20 inches in diameter, and not more than one-sixteenth of their diameter for those larger than 20 inches in diameter, used for a multitude of operations variously known as cutting, cutting off, grooving, slotting, coping, jointing, and the like. The wheels may be "solid" consisting of organic-bonded abrasive material throughout, "steel centered" consisting of a steel disc with a rim of organic-bonded material moulded around the periphery or of the "inserted tooth" type consisting of a steel disc with organic-bonded abrasive teeth or inserts mechanically secured around the periphery.

(b) "Belts" means all power-driven, flexible, coated bands used for grinding, polishing, or buffing purposes.

(c) "Branch pipe" means the part of an exhaust system piping that is connected directly to the hood or enclosure.

(d) "Cradle" means a movable fixture, upon which the part to be ground or polished is placed.

(e) "Disc wheels" means all power-driven rotatable discs faces with abrasive materials, artificial or natural, and used for grinding or polishing on the side of the assembled disc.

(f) "Entry loss" means the loss in static pressure caused by air flowing into a duct or hood. It is usually expressed in inches of water gauge.

(g) "Exhaust system" means a system consisting of branch pipes connected to hoods of enclosures, one or more header pipes, an exhaust fan, means for separating solid contaminants from the air flowing in the system, and a discharge stack to outside.

(h) "Grinding wheels" means all power-driven rotatable grinding or abrasive wheels, except disc wheels as defined in this standard, consisting of abrasive particles held together by artificial or natural bonds and used for peripheral grinding.

(i) "Header pipe (main pipe)" means a pipe into which one or more branch pipes enter and which connects such branch pipes to the remainder of the exhaust system.

(j) "Hoods and enclosures" means the partial or complete enclosure around the wheel or disc through which air enters an exhaust system during operation.

(k) "Horizontal double-spindle grinder" means a grinding machine carrying two power-driven, rotatable, coaxial, horizontal spindles upon the inside ends of which are mounted abrasive disc wheels for grinding two surfaces simultaneously.

(l) "Horizontal single-spindle disc grinder" means a grinding machine carrying an abrasive disc wheel upon one or both ends of a power-driven, rotatable single horizontal spindle.

(m) "Polishing and buffing wheels" means all power-driven rotatable wheels composed all or in part of textile fabrics, wood, felt, leather, paper, and may be coated with abrasives on the periphery of the wheel for purposes of polishing, buffing, and light grinding.

(n) "Portable grinder" means any power-driven rotatable grinding, polishing, or buffing wheel mounted in such manner that it may be manually manipulated.

(o) "Scratch brush wheels" means all power-driven rotatable wheels made from wire or bristles, and used for scratch cleaning and brushing purposes.

(p) "Swing-frame grinder" means any power-driven rotatable grinding, polishing, or buffing wheel mounted in such a manner that the wheel with its supporting framework can be manipulated over stationary objects.

(q) "Velocity pressure (vp)" means the kinetic pressure in the direction of flow necessary to cause a fluid at rest to flow at a given velocity. It is usually expressed in inches of water gauge.

(r) "Vertical spindle disc grinder" means a grinding machine having a vertical, rotatable power-driven spindle carrying a horizontal abrasive disc wheel.

(2) Application. (a) Every establishment performing dry grinding, dry polishing, or buffing shall provide suitable hood or enclosures that are connected to exhaust systems.

(b) Such exhaust systems shall be operated continuously whenever such operations are carried on, and be capable of preventing contaminants from entering the breathing zone.

(3) Hood and branch pipe requirements. (a) Hoods connected to exhaust systems shall be used, and such hoods shall be designed, located, and placed so that the dust or dirt particles shall fall or be projected into the hoods in the direction of the air flow. No wheels, discs, straps, or belts shall be operated in such manner and in such direction as to cause the dust and dirt particles to be thrown into the operator's breathing zone.

(b) Grinding wheels on floor stands, pedestals, benches, and special-purpose grinding machines and abrasive cutting-off wheels shall have not less than the minimum exhaust volumes shown in Table 8 with a recommended minimum duct velocity of 4,500 feet per minute in the branch and 3,500 feet per minute in the main. The entry losses from all hoods except the vertical-spindle disc grinder hood, shall equal 0.65 velocity pressure for a straight takeoff and 0.45 velocity pressure for a tapered takeoff. The entry loss for the vertical-spindle disc grinder hood is shown in figure 3. (See Fig. 3 following this section.)

**TABLE 8**  
GRINDING AND ABRASIVE CUTTING-OFF WHEELS

Wheel diameter (inches)	Wheel width (inches)	Minimum exhaust volume (feet <sup>3</sup> /min.)
To 9	1 1/2	220
Over 9 to 16	2	390
Over 16 to 19	3	500
Over 19 to 24	4	610

**TABLE 8**  
GRINDING AND ABRASIVE CUTTING-OFF WHEELS

Wheel diameter (inches)	Wheel width (inches)	Minimum exhaust volume (feet <sup>3</sup> /min.)
Over 24 to 30	5	880
Over 30 to 36	6	1,200

For any wheel wider than wheel diameter shown in Table 8, increase the exhaust volume by the ratio of the new width to the width shown.

Example:

If wheel width = 4 1/2 inches, then  

$$\frac{4.5}{4} \times 610 = 686 \text{ (rounded to 690).}$$

(c) Scratch-brush wheels and all buffing and polishing wheels mounted on floor stands, pedestals, benches, or special-purpose machines shall have not less than the minimum exhaust volume shown in Table 9.

**TABLE 9**  
BUFFING AND POLISHING WHEELS

Wheel diameter (inches)	Wheel width (inches)	Minimum exhaust volume (feet <sup>3</sup> /min.)
To 9	2	300
Over 9 to 16	3	500
Over 16 to 19	4	610
Over 19 to 24	5	740
Over 24 to 30	6	1,040
Over 30 to 36	6	1,200

(d) Grinding wheels or discs for horizontal single-spindle disc grinders shall be hooded to collect the dust or dirt generated by the grinding operation and the hoods shall be connected to branch pipes having exhaust volumes as shown in Table 10.

**TABLE 10**  
HORIZONTAL SINGLE-SPINDLE DISC GRINDER

Disc diameter (inches)	Exhaust volume (feet <sup>3</sup> /min.)
Up to 12	220
Over 12 to 19	390
Over 19 to 30	610
Over 30 to 36	880

(e) Grinding wheels or discs for horizontal double-spindle disc grinders shall have a hood enclosing the

grinding chamber and the hood shall be connected to one or more branch pipes having exhaust volumes as shown in Table 11.

**TABLE 11**  
HORIZONTAL DOUBLE-SPINDLE DISC GRINDER

Disc diameter (inches)	Exhaust volume (feet <sup>3</sup> /min.)
Up to 19	610
Over 19 to 25	880
Over 25 to 30	1,200
Over 30 to 53	1,770
Over 53 to 72	6,280

(f) Grinding wheels or discs for vertical single-spindle disc grinders shall be encircled with hoods to remove the dust generated in the operation. The hoods shall be connected to one or more branch pipes having exhaust volumes as shown in Table 12.

**TABLE 12**  
VERTICAL SPINDLE DISC GRINDER

Disc diameter (inches)	One-half or more of disc covered		Disc not covered	
	Num-ber <sup>1</sup>	Exhaust feet <sup>3</sup> /min.	Num-ber <sup>1</sup>	Exhaust feet <sup>3</sup> /min.
Up to 20	1	500	2	780
Over 20 to 30	2	780	2	1,480
Over 30 to 53	2	1,770	4	3,530
Over 53 to 72	2	3,140	5	6,010

<sup>1</sup>Number of exhaust outlets around periphery of hood, or equal distribution provided by other means.

(g) Grinding and polishing belts shall be provided with hoods to remove dust and dirt generated in the operations and the hoods shall be connected to branch pipes having exhaust volumes as shown in Table 13.

**TABLE 13**  
GRINDING AND POLISHING BELTS

Belts width (inches)	Exhaust volume (feet <sup>3</sup> /min.)
Up to 3	220
Over 3 to 5	300
Over 5 to 7	390
Over 7 to 9	500
Over 9 to 11	610
Over 11 to 13	740

(h) Cradles and swing-frame grinders. Where cradles are used for handling the parts to be ground, polished, or buffed, requiring large partial enclosures to house the complete operation, a minimum average air velocity of 150 feet per minute shall be maintained over the entire opening of the enclosure. Swing-frame grinders shall also be exhausted in the same manner as provided for cradles. (See Fig. 5 following this section.)

(i) Where the work is outside the hood, air volumes must be increased as shown in American Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems, Z9.2-1960 (Section 4, Exhaust Hoods).

(4) Exhaust systems. (a) Exhaust systems for grinding, polishing, and buffing operations should be designed in accordance with American Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems, Z9.2-1960.

(b) Exhaust systems for grinding, polishing, and buffing operations shall be tested in the manner described in American Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems, Z9.2-1960.

(c) All exhaust systems shall be provided with suitable dust collectors.

(5) Hood and enclosure design. (a)(i) It is the dual function of grinding and abrasive cutting-off wheel hoods to protect the operator from the hazards of bursting wheels as well as to provide a means for the removal of dust and dirt generated. All hoods shall be not less in structural strength than specified in the American National Standard Code for the Use, Care, and Protection of Abrasive Wheels, B7.1-1970.

(ii) For grinding machines for which no standard hoods are available, hoods meeting the requirements of (5)(a)(i) above shall be developed and so located so as to comply with the requirements of this section.

(b) Exhaust hoods for floor stands, pedestals, and bench grinders shall be designed in accordance with figure 4. (See Fig. 4 following this section.) The adjustable tongue shown in the figure shall be kept in working order and shall be adjusted within one-fourth inch of the wheel periphery at all times.

(c) Swing-frame grinders shall be provided with exhaust booths as indicated in figure 5. (See Fig. 5 following this section.)

(d) Portable grinding operations, whenever the nature of the work permits, shall be conducted within a partial enclosure. The opening in the enclosure shall be no

larger than is actually required in the operation and an average face air velocity of not less than 200 feet per minute shall be maintained.

(e) Hoods for polishing and buffing and scratch-brush wheels shall be constructed to conform as closely to figure 6 as the nature of the work will permit. (See Fig. 6 following this section.)

(f) Cradle grinding and polishing operations shall be performed within a partial enclosure similar to figure 7. (See Fig. 7 following this section.) The operator shall be positioned outside the working face of the opening of the enclosure. The face opening of the enclosure should not be any greater in area than that actually required for the performance of the operation and the average air velocity into the working face of the enclosure shall not be less than 150 feet per minute.

(g) Hoods for horizontal single-spindle disc grinders shall be constructed to conform as closely as possible to the hood shown in figure 8. (See Fig. 8 following this section.) It is essential that there be a space between the back of the wheel and the hood, and a space around the periphery of the wheel of at least 1 inch in order to permit the suction to act around the wheel periphery. The opening on the side of the disc shall be no larger than is required for the grinding operation, but must never be less than twice the area of the branch outlet.

(h) Horizontal double-spindle disc grinders shall have a hood encircling the wheels and grinding chamber similar to that illustrated in figure 9. (See Fig. 9 following this section.) The openings for passing the work into the grinding chamber should be kept as small as possible, but must never be less than twice the area of the branch outlets.

(i) Vertical-spindle disc grinders shall be encircled with a hood so constructed that the heavy dust is drawn off a surface of the disc and the lighter dust exhausted through a continuous slot at the top of the hood as shown in figure 3. (See Fig. 3 following this section.)

(j) Grinding and polishing belt hoods shall be constructed as close to the operation as possible. The hood should extend almost to the belts, and 1-inch wide openings should be provided on either side. Figure 10 shows a typical hood for a belt operation. (See Fig. 10 following this section.)

(6) Scope. This paragraph, prescribes the use of exhaust hood enclosures and systems in removing dust, dirt, fumes, and gases generated through the grinding, polishing, or buffing of ferrous and nonferrous metals.

[Order 73-3, § 296-62-11017 and diagrams, filed 5/7/73.]

**WAC 296-62-11019 Spray-finishing operations.** (1) Definitions. (a) "Spray-finishing operations" means employment of methods wherein organic or inorganic materials are utilized in dispersed form from deposit on surfaces to be coated, treated or cleaned. Such methods of deposit may involve either automatic, manual, or electrostatic deposition but do not include metal spraying or metallizing, dipping, flow coating, roller coating, tumbling, centrifuging, or spray washing and degreasing as conducted in self-contained washing and degreasing machines or systems.

(b) "Spray booth" spray booths are defined and described in WAC 296-24-370 through 296-24-37007. (See sections 103, 104, and 105 of the Standard for Spray Finishing Using Flammable and Combustible Materials, NFPA No. 33-1969.)

(c) "Spray room" means a room in which spray-finishing operations not conducted in a spray booth are performed separately from other areas.

(d) "Minimum maintained velocity" means the velocity of air movement which must be maintained in order to meet minimum specified requirements for health and safety.

(2) Location and application. Spray booths or spray rooms are to be used to enclose or confine all operations. Spray-finishing operations shall be located as provided

in sections 201 through 206 of the Standard for Spray Finishing Using Flammable and Combustible Materials, NFPA No. 33-1969.

(3) Design and construction of spray booths.

(a) Spray booths shall be designed and constructed in accordance with WAC 296-24-370 through 296-24-37007 (see sections 301-304 and 306-310 of the Standard for Spray Finishing Using Flammable and Combustible Materials, NFPA No. 33-1969), for general construction specifications.

NOTE: For a more detailed discussion of fundamentals relating to this subject, see ANSI Z9.2-1960.

(i) Lights, motors, electrical equipment and other sources of ignition shall conform to the requirements of WAC 296-24-370. (See section 310 and chapter 4 of the Standard for Spray Finishing Using Flammable and Combustible Materials, NFPA No. 33-1969.)

(ii) In no case shall combustible material be used in the construction of a spray booth and supply or exhaust duct connected to it.

(b) Unobstructed walkways shall not be less than 6 1/2 feet high and shall be maintained clear of obstruction from any work location in the booth to a booth exit or open booth front. In booths where the open front is the only exit, such exits shall be not less than 3 feet

wide. In booths having multiple exits, such exits shall not be less than 2 feet wide, provided that the maximum distance from the work location to the exit is 25 feet or less. Where booth exits are provided with doors, such doors shall open outward from the booth.

(c) Baffles, distribution plates, and dry-type overspray collectors shall conform to the requirements of WAC 296-24-370. (See sections 304 and 305 of the Standard for Spray Finishing Using Flammable and Combustible Materials, NFPA No. 33-1969.)

(i) Overspray filters shall be installed and maintained in accordance with the requirements of WAC 296-24-370, (See section 305 of the Standard for Spray Finishing Using Flammable and Combustible Materials, NFPA No. 33-1969), and shall only be in a location easily accessible for inspection, cleaning, or replacement.

(ii) Where effective means, independent of the overspray filters are installed which will result in design air distribution across the booth cross section, it is permissible to operate the booth without the filters in place.

(d)(i) For wet or water-wash spray booths, the water-chamber enclosure, within which intimate contact of contaminated air and cleaning water or other cleaning medium is maintained, if made of steel, shall be 18 gauge or heavier and adequately protected against corrosion.

(ii) Chambers may include scrubber spray nozzles, headers, troughs, or other devices. Chambers shall be provided with adequate means for creating and maintaining scrubbing action for removal of particulate matter from the exhaust air stream.

(e) Collecting tanks shall be of welded steel construction or other suitable noncombustible material. If pits are used as collecting tanks, they shall be concrete, masonry, or other material having similar properties.

(i) Tanks shall be provided with weirs, skimmer plates, or screens to prevent sludge and floating paint from entering the pump suction box. Means for automatically maintaining the proper water level shall also be provided. Fresh water inlets shall not be submerged. They shall terminate at least one pipe diameter above the safety overflow level of the tank.

(ii) Tanks shall be so constructed as to discourage accumulation of hazardous deposits.

(f) Pump manifolds, risers, and headers shall be adequately sized to insure sufficient water flow to provide efficient operation of the water chamber.

(4) Design and construction of spray rooms.

(a) Spray rooms, including floors, shall be constructed of masonry, concrete, or other noncombustible material.

(b) Spray rooms shall have noncombustible fire doors and shutters.

(c) Spray rooms shall be adequately ventilated so that the atmosphere in the breathing zone of the operator shall be maintained in accordance with the requirements of (6)(b) of this section.

(d) Spray rooms used for production spray-finishing operations shall conform to the requirements of spray booths.

(5) Ventilation.

(a) Ventilation shall be provided in accordance with provisions of WAC 296-24-370, (See chapter 5 of the Standard for Spray Finishing Using Flammable or Combustible Materials, NFPA No. 33-1969), and in accordance with the following:

(i) Where a fan plenum is used to equalize or control the distribution of exhaust air movement through the booth, it shall be of sufficient strength or rigidity to withstand the differential air pressure or other superficially imposed loads for which the equipment is designed and also to facilitate cleaning. Construction specifications shall be at least equivalent to those of (5)(c) of this section.

(ii) All fan ratings shall be in accordance with Air Moving and Conditioning Association Standard Test Code for Testing Air Moving Devices, Bulletin 210, April 1962.

(b) Inlet or supply ductwork used to transport makeup air to spray booths or surrounding areas shall be constructed of noncombustible materials.

(i) If negative pressure exists within inlet ductwork, all seams and joints shall be sealed if there is a possibility of infiltration of harmful quantities of noxious gases, fumes, or mists from areas through which ductwork passes.

(ii) Inlet ductwork shall be sized in accordance with volume flow requirements and provide design air requirements at the spray booth.

(iii) Inlet ductwork shall be so supported throughout its length to sustain at least its own weight plus any negative pressure which is exerted upon it under normal operating conditions.

(c) Ducts shall be so constructed as to provide structural strength and stability at least equivalent to sheet steel of not less than the following thickness:

DIAMETER OR GREATER DIMENSION

(U.S.  
gauge)

Up to 8 inches inclusive . . . . .	No. 24
Over 8 inches to 18 inches inclusive . . . . .	No. 22
Over 18 inches to 30 inches inclusive . . . . .	No. 20
Over 30 inches . . . . .	No. 18

(i) Exhaust ductwork shall be adequately supported throughout its length to sustain its weight plus any normal accumulation in interior during normal operating conditions and any negative pressure exerted upon it.

(ii) Exhaust ductwork shall be sized in accordance with good design practice which shall include consideration of fan capacity, length of duct, number of turns and elbows, variation in size, volume, and character of materials being exhausted. See American National Standard Z9.2-1960 for further details and explanation concerning elements of design.

(iii) Longitudinal joints in sheet steel ductwork shall be either lock-seamed, riveted, or welded. For other than steel construction, equivalent securing of joints shall be provided.

(iv) Circumferential joints in ductwork shall be substantially fastened together and lapped in the direction

of airflow. At least every fourth joint shall be provided with connecting-flanges, bolted together or of equivalent fastening security.

(v) Inspection or clean-out doors shall be provided for every 9 to 12 feet of running length for ducts up to 12 inches in diameter, but the distance between clean-out doors may be greater for larger pipes. (See 8.3.21 of American National Standard Z9.1-1960.) A clean-out door or doors shall be provided for servicing the fan, and where necessary, a drain shall be provided.

(vi) Where ductwork passes through a combustible roof or wall, the roof or wall shall be protected at the point of penetration by open space or fire-resistive material between the duct and the roof or wall. When ducts pass through fire-walls, they shall be provided with automatic fire dampers on both sides of the wall, except that three-eighth-inch steel plates may be used in lieu of automatic fire dampers for ducts not exceeding 18 inches in diameter.

(vii) Ductwork used for ventilating any process covered in this standard shall not be connected to ducts ventilating any other process or any chimney or flue used for conveying any products of combustion.

(6) Velocity and air flow requirements.

(a) Except where a spray booth has an adequate air replacement system, the velocity of air into all openings of a spray booth shall be not less than that specified in Table 14 for the operating conditions specified. An adequate air replacement system is one which introduces replacement air upstream or above the object being sprayed and is so designed that the velocity of air in the booth cross section is not less than that specified in Table 14 when measured upstream or above the object being sprayed.

**TABLE 14**  
MINIMUM MAINTAINED VELOCITIES  
INTO SPRAY BOOTHS

Operating conditions for object completely inside booth	Crossdraft f.p.m.	Airflow Velocities, f.p.m.	
		Design	Range
Electrostatic and automatic airless operation contained in booth without operator.	Negligible . . . . .	50 large booth	50-75
		100 small booth	75-125
Air-operated guns, manual or automatic	Up to 50 . . . . .	100 large booth	75-125
		150 small booth	125-175
Air-operated guns, manual or automatic	Up to 100 . . . . .	150 large booth	125-175
		200 small booth	150-250

NOTES:

(1) Attention is invited to the fact that the effectiveness of the spray booth is dependent upon the relationship of the depth of the booth to its height and width.

(2) Crossdrafts can be eliminated through proper design and such design should be sought. Crossdrafts in excess of 100 fpm (feet per minute) should not be permitted.

(3) Excessive air pressures result in loss of both efficiency and material waste in addition to creating a backlash that may carry overspray and fumes into adjacent work areas.

(4) Booths should be designed with velocity shown in the column headed "Design." However, booths operating with velocities shown in the column headed "Range" are in compliance with this standard.

(b) In addition to the requirements in (6)(a) of this section the total air volume exhausted through a spray booth shall be such as to dilute solvent vapor to at least 25 percent of the lower explosive limit of the solvent being sprayed. An example of the method of calculating this volume is given below.

Example: To determine the lower explosive limits of the most common solvents used in spray finishing, see Table 15. Column 1 gives the number of cubic feet of vapor per gallon of solvent and column 2 gives the lower explosive limit (LEL) in percentage by volume of air. Note that the quantity of solvent will be diminished by the quantity of solids and nonflammable contained in the finish.

To determine the volume of air in cubic feet necessary to dilute the vapor from 1 gallon of solvent to 25 percent of the lower explosive limit, apply the following formula:

$$\text{Dilution volume required per gallon of solvent} = \frac{4 (100 - \text{LEL}) (\text{cubic feet of vapor per gallon})}{\text{LEL}}$$

Using toluene as the solvent.

(1) LEL of toluene from Table 15, column 2, is 1.4 percent.

(2) Cubic feet of vapor per gallon from Table 15, column 1, is 30.4 cubic feet per gallon.

(3) Dilution volume required =

$$\frac{4 (100 - 1.4) 30.4}{1.4} = 8,564 \text{ cubic feet.}$$

(4) To convert to cubic feet per minute of required ventilation, multiply the dilution volume required per gallon of solvent by the number of gallons of solvent evaporated per minute.

**TABLE 15**  
LOWER EXPLOSIVE LIMIT OF SOME

<sup>1</sup>At 212°F.

(c)(i) When an operator must position himself in a booth downstream of the object being sprayed, an air supplied respirator or other type of respirator listed in the applicable provisions of chapter 296-62 WAC for the material being sprayed should be used by the operator.

(ii) Where downdraft booths are provided with doors, such doors shall be closed when spray painting.

(7) Make-up air.

(a) Clean fresh air, free of contamination from adjacent industrial exhaust systems, chimneys, stacks, or vents, shall be supplied to a spray booth or room in quantities equal to the volume of air exhausted through the spray booth.

(b) Where a spray booth or room receives make-up air through self-closing doors, dampers, or louvers, they shall be fully open at all times when the booth or room is in use for spraying. The velocity of air through such doors, dampers, or louvers shall not exceed 200 feet per minute. If the fan characteristics are such that the required air flow through the booth will be provided, higher velocities through the doors, dampers, or louvers may be used.

(c)(i) Where the air supply to a spray booth or room is filtered, the fan static pressure shall be calculated on the assumption that the filters are dirty to the extent that they require cleaning or replacement.

(ii) The rating of filters shall be governed by test data supplied by the manufacturer of the filter. A pressure gauge shall be installed to show the pressure drop across the filters. This gauge shall be marked to show the pressure drop at which the filters require cleaning or replacement. Filters shall be replaced or cleaned whenever the pressure drop across them becomes excessive or whenever the air flow through the face of the booth falls below that specified in Table 14.

(d)(i) Means of heating make-up air to any spray booth or room, before or at the time spraying is normally performed, shall be provided in all places where the outdoor temperature may be expected to remain below 55° F. for appreciable periods of time during the operation of the booth except where adequate and safe means of radiant heating for all operating personnel affected is provided. The replacement air during the heating seasons shall be maintained at not less than 65° F. at the point of entry into the spray booth or spray room. When otherwise unheated make-up air would be at a temperature of more than 10° F. below room temperature, its temperature shall be regulated as provided in section 3.6 of ANSI Z9.2-1960.

(ii) As an alternative to an air replacement system complying with the preceding section, general heating of the building in which the spray room or booth is located may be employed provided that all occupied parts of the building are maintained at not less than 65° F. when the exhaust system is in operation or the general heating system supplemented by other sources of heat may be employed to meet this requirement.

(iii) No means of heating make-up air shall be located in a spray booth.

(iv) Where make-up air is heated by coal or oil, the products of combustion shall not be allowed to mix with the make-up air, and the products of combustion shall be conducted outside the building through a flue terminating at a point remote from all points where make-up air enters the building.

(v) Where make-up air is heated by gas, and the products of combustion are not mixed with the make-up air but are conducted through an independent flue to a point outside the building remote from all points where make-up air enters the building, it is not necessary to comply with (7)(d)(vi) of this section.

(vi) Where make-up air to any manually operated spray booth or room is heated by gas and the products of

combustion are allowed to mix with the supply air, the following precautions must be taken:

(A) The gas must have a distinctive and strong enough odor to warn workmen in a spray booth or room of its presence if in an unburned state in the make-up air.

(B) The maximum rate of gas supply to the make-up air heater burners must not exceed that which would yield in excess of 200 p.p.m. (parts per million) of carbon monoxide or 2,000 p.p.m. of total combustible gases in the mixture if the unburned gas upon the occurrence of flame failure were mixed with all of the makeup air supplied.

(C) A fan must be provided to deliver the mixture of heated air and products of combustion from the plenum chamber housing the gas burners to the spray booth or room.

(8) Scope. Spray booths or spray rooms are to be used to enclose or confine all spray finishing operations covered by this paragraph. This paragraph does not apply to the spraying of the exteriors of buildings, fixed tanks, or similar structures, nor to small portable spraying apparatus not used repeatedly in the same location. [Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 81-16-015 (Order 81-20), § 296-62-11019, filed 7/27/81; Order 73-3, § 296-62-11019, filed 5/7/73.]

**WAC 296-62-11021 Open surface tanks. (1) General.**

(a) This section applies to all operations involving the immersion of materials in liquids, or in the vapors of such liquids, for the purpose of cleaning or altering the surface or adding to or imparting a finish thereto or changing the character of the materials, and their subsequent removal from the liquid or vapor, draining, and drying. These operations include washing, electroplating, anodizing, pickling, quenching, dyeing, dipping, tanning, dressing, bleaching, degreasing, alkaline cleaning, stripping, rinsing, digesting, and other similar operations.

(b) Except where specific construction specifications are prescribed in this section, hoods, ducts, elbows, fans, blowers, and all other exhaust system parts, components, and supports thereof shall be so constructed as to meet conditions of service and to facilitate maintenance and shall conform in construction to the specifications contained in American National Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems, Z9.2-1960.

**(2) Classification of open-surface tank operations.**

(a) Open-surface tank operations shall be classified into 16 classes, numbered A-1 to D-4, inclusive.

(b) Determination of class. Class is determined by two factors, hazard potential designated by a letter from A to D, inclusive, and rate of gas, vapor, or mist evolution designated by a number from 1 to 4, inclusive (for example, B.3).

(c) Hazard potential is an index, on a scale of from A to D, inclusive, of the severity of the hazard associated with the substance contained in the tank because of the toxic, flammable, or explosive nature of the vapor, gas,

or mist produced therefrom. The toxic hazard is determined from the concentration, measured in parts by volume of a gas or vapor, per million parts by volume of contaminated air (ppm), or in milligrams of mist per cubic meter of air (mg/m<sup>3</sup>), below which ill effects are unlikely to occur to the exposed worker. The concentrations shall be those in WAC 296-62-075 through 296-62-07515.

(d) The relative fire or explosion hazard is measured in degrees Fahrenheit in terms of the closed-cup flash point of the substance in the tank. Detailed information on the prevention of fire hazards in dip tanks may be found in Dip Tanks Containing Flammable or Combustible Liquids, NFPA No. 34-1966, National Fire Protection Association. Where the tank contains a mixture of liquids, other than organic solvents, whose effects are additive, the hygienic standard of the most toxic component (for example, the one having the lowest ppm or mg/m<sup>3</sup>) shall be used, except where such substance constitutes an insignificantly small fraction of the mixture. For mixtures of organic solvents, their combined effect, rather than that of either individually, shall determine the hazard potential. In the absence of information to the contrary, the effects shall be considered as additive. If the sum of the ratios of the airborne concentration of that contaminant exceeds unity, the toxic concentration shall be considered to have been exceeded. (See Note A of (2)(e) of this section.)

(e) Hazard potential shall be determined from Table 16, with the value indicating greater hazard being used. When the hazardous material may be either a vapor with a permissible exposure limit in ppm or a mist with a TLV in mg/m<sup>3</sup>, the TLV indicating the greater hazard shall be used (for example, A takes precedence over B or C; B over C; C over D).

**NOTE A:**

$$\frac{c_1}{\text{PEL}} + \frac{c_2}{\text{PEL}} + \frac{c_3}{\text{PEL}} + \dots + \frac{c_N}{\text{PEL}} > 1$$

where:

c = Concentration measured at the operation in ppm.

**TABLE 16**  
DETERMINATION OF HAZARD POTENTIAL

Hazard potential	Toxicity Group		
	Gas or vapor (ppm)	Mist (mg/m <sup>3</sup> )	Flash point (in degrees F.)
A.....	0 - 10	0 - 0.1	.....
B.....	11 - 100	0.11 - 1.0	Under 100
C.....	101 - 500	1.1 - 10	100-200
D.....	Over 500	Over 10	Over 200

(f) Rate of gas, vapor, or mist evolution is a numerical index, on a scale of from 1 to 4, inclusive, both of the relative capacity of the tank to produce gas, vapor, or mist and of the relative energy with which it is projected or carried upwards from the tank. Rate is evaluated in terms of;

(i) The temperature of the liquid in the tank in degrees Fahrenheit;

(ii) The number of degrees Fahrenheit that this temperature is below the boiling point of the liquid in degrees Fahrenheit;

(iii) The relative evaporation of the liquid in still air at room temperature in an arbitrary scale—fast, medium, slow, or nil; and

(iv) The extent that the tank gases or produces mist in an arbitrary scale—high, medium, low, and nil. (See Table 17, Note 2.) Gassing depends upon electrochemical or mechanical processes, the effects of which have to be individually evaluated for each installation (See Table 17, Note 3).

(g) Rate of evolution shall be determined from Table 17. When evaporation and gassing yield different rates, the lowest numerical value shall be used.

**TABLE 17**  
DETERMINATION OF RATE OF GAS,  
VAPOR, OR MIST EVOLUTION<sup>1</sup>

Rate	Liquid temperature, °F	Degrees below boiling point	evaporation <sup>2</sup>	Relative Gassing <sup>3</sup>
1	Over 200	0-20	Fast	High
2	150-200	21-50	Medium	Medium
3	94-149	51-100	Slow	Low
4	Under 94	Over 100	Nil	Nil

**NOTE 1.** In certain classes of equipment, specifically vapor degreasers, an internal condenser or vapor level thermostat is used to prevent the vapor from leaving the tank during normal operations. In such cases, rate of vapor evolution from the tank into the workroom is not dependent upon the factors listed in the table, but rather upon abnormalities of operating procedure, such as carry out of vapors from excessively fast action, dragout of liquid by entrainment in parts, contamination of solvent by water and other materials, or improper heat balance. When operating procedure is excellent, effective rate of evolution may be taken as 4. When operating procedures are average, the effective rate of evolution may be taken as 3. When operation is poor, a rate of 2 or 1 is indicated, depending upon observed conditions.

**NOTE 2.** Relative evaporation rate is determined according to the methods described by A. K. Doolittle in *Industrial and Engineering Chemistry*, vol. 27, p. 1169, (3) where time for 100— percent evaporation is as follows: Fast: 0-3 hours; Medium: 3-12 hours; Slow: 12-50 hours; Nil: more than 50 hours.

**NOTE 3.** Gassing means the formation by chemical or electrochemical action of minute bubbles of gas under the surface of the liquid in the tank and is generally limited to aqueous solutions.

(3) Ventilation. Where ventilation is used to control potential exposures to workers as defined in (2)(c) of this section, it shall be adequate to reduce the concentration of the air contaminant to the degree that a hazard to the worker does not exist. Methods of ventilation are discussed in American National Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems, Z9.2-1960.

(4) Control requirements.

(a) Control velocities shall conform to Table 18 in all cases where the flow of air past the breathing or working zone of the operator and into the hoods is undisturbed by local environmental conditions, such as open windows, wall fans, unit heaters, or moving machinery.

(b) All tanks exhausted by means of hoods which;

(i) Project over the entire tank;

(ii) Are fixed in position in such a location that the head of the workman, in all his normal operating positions while working at the tank, is in front of all hood openings; and

(iii) Are completely enclosed on at least two sides, shall be considered to be exhausted through an enclosing hood.

(iv) The quantity of air in cubic feet per minute necessary to be exhausted through an enclosing hood shall be not less than the product of the control velocity times the net area of all openings in the enclosure through which air can flow into the hood.

**TABLE 18**  
CONTROL VELOCITIES IN FEET PER MINUTE (F.P.M.) FOR  
UNDISTURBED LOCATIONS

Class (See Sub- paragraph (2) and Tables 16 and 17)	Enclosing hood (See Subparagraph (4)(ii))		Lateral exhaust <sup>1</sup> (See Sub- Paragraph (4)(iii))	Canopy hood <sup>2</sup> (See Sub- paragraph (4)(iv))	
	One open side	Two open sides		Three open sides	Four open sides
A-1 and A-2	100	150	150	Do not use	Do not use
A-3 (Note <sup>2</sup> ), B-1, B-2, and C-1	75	100	100	125	175
B-3, C-2, and D-1 (Note <sup>3</sup> )	65	90	75	100	150
A-4 (Note <sup>2</sup> ), C-3, and D-2 (Note <sup>3</sup> )	50	75	50	75	125
B-4, C-4, D-3 (Note <sup>3</sup> ), and D-4	General room ventilation required.				

<sup>1</sup>See Table 19 for computation of ventilation rate.

<sup>2</sup>Do not use canopy hood for Hazard Potential A processes.

<sup>3</sup>Where complete control of hot water is desired, design as next highest class.

(c) All tanks exhausted by means of hoods which do not project over the entire tank, and in which the direction of air movement into the hood or hoods is substantially horizontal, shall be considered to be laterally exhausted. The quantity of air in cubic feet per minute necessary to be laterally exhausted per square foot of

tank area in order to maintain the required control velocity shall be determined from Table 19 for all variations in ratio of tank width (W) to tank length (L). The total quantity of air in cubic feet per minute required to be exhausted per tank shall be not less than the product of the area of tank surface times the cubic feet per minute per square foot of tank area, determined from Table 19.

(i) For lateral exhaust hoods over 42 inches wide, or where it is desirable to reduce the amount of air removed from the workroom, air supply slots or orifices shall be provided along the side or the center of the tank opposite from the exhaust slots. The design of such systems shall meet the following criteria:

(A) The supply air volume plus the entrained air shall not exceed 50 percent of the exhaust volume.

(B) The velocity of the supply airstream as it reaches the effective control area of the exhaust slot shall be less than the effective velocity over the exhaust slot area.

(C) The vertical height of the receiving exhaust hood, including any baffle, shall not be less than one-quarter the width of the tank.

(D) The supply airstream shall not be allowed to impinge on obstructions between it and the exhaust slot in such a manner as to significantly interfere with the performance of the exhaust hood.

TABLE 19

MINIMUM VENTILATION RATE IN CUBIC FEET OF AIR PER MINUTE PER SQUARE FOOT OF TANK AREA FOR LATERAL EXHAUST

Required minimum control velocity, f.p.m. (from Table)	C.f.m. per sq. ft. to maintain required minimum velocities at following ratios (tank width (W)/tank length (L)). <sup>1</sup>				
	0.0-0.09	0.1-0.24	0.25-0.49	0.5-0.99	1.0-2.0

Hood along one side or two parallel sides of tank when one hood is against a wall or baffle.<sup>2</sup>  
Also for a manifold along tank centerline.<sup>3</sup>

Hood along one side or two parallel sides of free standing tank not against wall or baffle.

50	75	90	100	110	125
75	110	130	150	170	190
100	150	175	200	225	250
150	225	260	300	340	375

<sup>1</sup>It is not practicable to ventilate across the long dimension of a tank whose ratio W/L exceeds 2.0.

It is understandable to do so when W/L exceeds 1.0. For circular tanks with lateral exhaust along up the circumference use W/L = 1.0 for over one-half the circumference use W/L = 0.5.

<sup>2</sup>Baffle is a vertical plate the same length as the tank, and with the top of the plate as high as the tank is wide. If the exhaust hood is on the side of a tank against a building wall or close to it, it is perfectly baffled.

<sup>3</sup>Use W/L as tank width in computing when manifold is along centerline, or when hoods are used on two parallel sides of a tank.

Tank Width (W) means the effective width over which the hood must pull air to operate (for example, where the hood face is not back from the edge of the tank, this set back must be added in measuring tank width). The surface area of tanks can frequently be reduced and better control obtained (particularly on conveyerized systems) by using covers extending from the upper edges of the slots toward the center of the tank.

(E) Since most failure of push-pull systems result from excessive supply air volumes and pressures, methods of measuring and adjusting the supply air shall be provided. When satisfactory control has been achieved, the adjustable features of the hood shall be fixed so that they will not be altered.

(d) All tanks exhausted by means of hoods which project over the entire tank, and which do not conform to the definition of enclosing hoods, shall be considered to be overhead canopy hoods. The quantity of air in cubic feet per minute necessary to be exhausted through a canopy hood shall be not less than the product of the control velocity times the net area of all openings between the bottom edges of the hood and the top edges of the tank.

(e) The rate of vapor evolution (including steam or products of combustion) from the process shall be estimated. If the rate of vapor evolution is equal to or greater than 10 percent of the calculated exhaust volume required, the exhaust volume shall be increased in equal amount.

(5) Spray cleaning and degreasing. Wherever spraying or other mechanical means are used to disperse a liquid above an open-surface tank, control must be provided for the airborne spray. Such operations shall be enclosed as completely as possible. The inward air velocity into the enclosure shall be sufficient to prevent the discharge of spray into the workroom. Mechanical baffles may be used to help prevent the discharge of spray. Spray painting operations are covered in WAC 296-62-11019.

(6) Control means other than ventilation. Tank covers, foams, beads, chips, or other materials floating on the tank surface so as to confine gases, mists, or vapors to the area under the cover or to the foam, bead, or chip layer; or surface tension depressive agents added to the liquid in the tank to minimize mist formation, or any combination thereof, may all be used as gas, mist, or vapor control means for open-surface tank operations, provided that they effectively reduce the concentrations of hazardous materials in the vicinity of the worker below the limits set in accordance with (2) of this section.

(7) System design.

(a) The equipment for exhausting air shall have sufficient capacity to produce the flow of air required in each of the hoods and openings of the system.

(b) The capacity required in (7)(a) of this section shall be obtained when the airflow producing equipment is operating against the following pressure losses, the sum of which is the static pressure:

(i) Entrance losses into the hood.

(ii) Resistance to airflow in branch pipe including bends and transformations.

(iii) Entrance loss into the main pipe.

(iv) Resistance to airflow in main pipe including bends and transformations.

(v) Resistance of mechanical equipment; that is, filters, washers, condensers, absorbers, etc., plus their entrance and exit losses.

(vi) Resistance in outlet duct and discharge stack.

(c) Two or more operations shall not be connected to the same exhaust system where either one or the combination of the substances removed may constitute a fire, explosion, or chemical reaction hazard in the duct system. Traps or other devices shall be provided to insure that condensate in ducts does not drain back into any tank.

(d) The exhaust system, consisting of hoods, ducts, air mover, and discharge outlet shall be designed in accordance with American National Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems, Z9.2-1960, or the manual, Industrial Ventilation, published by the American Conference of Governmental Industrial Hygienists. Airflow and pressure loss data provided by the manufacturer of any air cleaning device shall be included in the design calculations.

(8) Operation.

(a) The required airflow shall be maintained at all times during which gas, mist, or vapor is emitted from the tank, and at all times the tank, the draining, or the drying area is in operation or use. When the system is first installed, the airflow from each hood shall be measured by means of a pitot traverse in the exhaust duct and corrective action taken if the flow is less than that required. When the proper flow is obtained, the hood static pressure shall be measured and recorded. At intervals of not more than 3 months operation, or after a prolonged shutdown period, the hoods and duct system shall be inspected for evidence of corrosion or damage. In any case where the airflow is found to be less than required, it shall be increased to the required value. (Information on airflow and static pressure measurement and calculations may be found in American National Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems, Z9.2-1960, or in the manual, Industrial Ventilation, published by the American Conference of Governmental Industrial Hygienists.)

(b) The exhaust system shall discharge to the outer air in such a manner that the possibility of its effluent entering any building is at a minimum. Recirculation shall only be through a device for contaminant removal which will prevent the creation of a health hazard in the room or area to which the air is recirculated.

(c) A volume of outside air in the range of 90 percent to 110 percent of the exhaust volume shall be provided to each room having exhaust hoods. The outside air supply shall enter the workroom in such a manner as not to be detrimental to any exhaust hood. The airflow of the makeup air system shall be measured on installation. Periodically, thereafter, the airflow should be remeasured, and corrective action shall be taken when the airflow is below that required. The makeup air shall be uncontaminated.

(9) Personal protection.

(a) All employees working in and around open surface tank operations must be instructed as to the hazards of their respective jobs, and in the personal protection and first aid procedures applicable to these hazards.

(b) All persons required to work in such a manner that their feet may become wet shall be provided with rubber or other impervious boots or shoes, rubbers, or wooden-soled shoes sufficient to keep feet dry.

(c) All persons required to handle work wet with a liquid other than water shall be provided with gloves impervious to such a liquid and of a length sufficient to prevent entrance of liquid into the tops of the gloves. The interior of gloves shall be kept free from corrosive or irritating contaminants.

(d) All persons required to work in such a manner that their clothing may become wet shall be provided with such aprons, coats, jackets, sleeves, or other garments made of rubber, or of other materials impervious to liquids other than water, as are required to keep their clothing dry. Aprons shall extend well below the top of boots to prevent liquid splashing into the boots. Provision of dry, clean, cotton clothing along with rubber shoes or short boots and an apron impervious to liquids other than water shall be considered a satisfactory substitute where small parts are cleaned, plated, or acid dipped in open tanks and rapid work is required.

(e) Whenever there is a danger of splashing, for example, when additions are made manually to the tanks, or when acids and chemicals are removed from the tanks, the employees so engaged shall be required to wear either tight-fitting chemical goggles or an effective face shield. (See WAC 296-24-078.)

(f) When, during emergencies as described in (11)(e) of this section, workers must be in areas where concentrations of air contaminants are greater than the limit set by (2)(c) of this section, or oxygen concentrations are less than 18 percent, they shall be required to wear respirators adequate to reduce their exposure to a level below these limits, or to provide adequate oxygen. Such respirators shall also be provided in marked, quickly accessible storage compartments built for the purpose, when there exists the possibility of accidental release of hazardous concentrations of air contaminants. Respirators shall meet the applicable provisions of chapter 296-62 WAC and shall be selected by a competent industrial hygienist or other technically qualified source. Respirators shall be used in accordance with the applicable provisions of chapter 296-62 WAC, and persons who may require them shall be trained in their use.

(g) Near each tank containing a liquid which may burn, irritate, or otherwise be harmful to the skin if splashed upon the worker's body, there shall be a supply of clean cold water. The water pipe (carrying a pressure not exceeding 25 pounds) shall be provided with a quick opening valve and at least 48 inches of hose not smaller than three-fourths inch, so that no time may be lost in washing off liquids from the skin or clothing. Alternatively, deluge showers and eye flushes shall be provided in cases where harmful chemicals may be splashed on parts of the body.

(h) Operators with sores, burns, or other skin lesions requiring medical treatment shall not be allowed to work at their regular operations until so authorized by a physician. Any small skin abrasions, cuts, rash, or open sores which are found or reported shall be treated by a properly designated person so that chance of exposures to the chemicals are removed. Workers exposed to chromic acids shall have a periodic examination made of the nostrils and other parts of the body, to detect incipient ulceration.

(i) Sufficient washing facilities, including soap, individual towels, and hot water, shall be provided for all persons required to use or handle any liquids which may burn, irritate, or otherwise be harmful to the skin, on the basis of at least one basin (or its equivalent) with a hot water faucet for every 10 employees. (See WAC 296-24-12009.)

(j) Locker space or equivalent clothing storage facilities shall be provided to prevent contamination of street clothing.

(k) First aid facilities specific to the hazards of the operations conducted shall be readily available.

(10) Special precautions for cyanide. Dikes or other arrangements shall be provided to prevent the possibility of intermixing of cyanide and acid in the event of tank rupture.

(11) Inspection, maintenance, and installation.

(a) Floors and platforms around tanks shall be prevented from becoming slippery both by original type of construction and by frequent flushing. They shall be firm, sound, and of the design and construction to minimize the possibility of tripping.

(b) Before cleaning the interior of any tank, the contents shall be drained off, and the cleanout doors shall be opened where provided. All pockets in tanks or pits, where it is possible for hazardous vapors to collect, shall be ventilated and cleared of such vapors.

(c) Tanks which have been drained to permit employees to enter for the purposes of cleaning, inspection, or maintenance may contain atmospheres which are hazardous to life or health, through the presence of flammable or toxic air contaminants, or through the absence of sufficient oxygen. Before employees shall be permitted to enter any such tank, appropriate tests of the atmosphere shall be made to determine if the limits set by (2)(c) of this section are exceeded, or if the oxygen concentration is less than 18 percent.

(d) If the tests made in accordance with (11)(c) of this section indicate that the atmosphere in the tank is unsafe, before any employee is permitted to enter the tank, the tank shall be ventilated until the hazardous atmosphere is removed, and ventilation shall be continued so as to prevent the occurrence of a hazardous atmosphere as long as an employee is in the tank.

(e) If, in emergencies, such as rescue work, it is necessary to enter a tank which may contain a hazardous atmosphere, suitable respirators, such as self-contained breathing apparatus; hose mask with blower, if there is a possibility of oxygen deficiency; or a gas mask, selected and operated in accordance with (9)(f) of this section, shall be used. If a contaminant in the tank can cause

dermatitis, or be absorbed through the skin, the employee entering the tank shall also wear protective clothing. At least one trained standby employee, with suitable respirator, shall be present in the nearest uncontaminated area. The standby employee must be able to communicate with the employee in the tank and be well able to haul him out of the tank with a lifeline if necessary.

(f) Maintenance work requiring welding or open flame, where toxic metal fumes such as cadmium, chromium, or lead may be evolved, shall be done only with sufficient local exhaust ventilation to prevent the creation of a health hazard, or be done with respirators selected and used in accordance with (9)(f) of this section. Welding, or the use of open flames near any solvent cleaning equipment shall be permitted only after such equipment has first been thoroughly cleared of solvents and vapors.

(12) Vapor degreasing tanks.

(a) In any vapor degreasing tank equipped with a condenser and vapor level thermostat, the condenser or thermostat shall keep the level of vapors below the top edge of the tank by a distance at least equal to one-half the tank width, or at least 36 inches, whichever is shorter.

(b) Where gas is used as a fuel for heating vapor degreasing tanks, the combustion chamber shall be of tight construction, except for such openings as the exhaust flue, and those that are necessary for supplying air for combustion. Flues shall be of corrosion-resistant construction and shall extend to the outer air. If mechanical exhaust is used on this flue, a draft diverter shall be used. Special precautions must be taken to prevent solvent fumes from entering the combustion air of this or any other heater when chlorinated or fluorinated hydrocarbon solvents (for example, trichloroethylene; Freon) are used.

(c) Heating elements shall be so designed and maintained that their surface temperature will not cause the solvent or mixture to decompose, break down, or be converted into an excessive quantity of vapor.

(d) Tanks or machines of more than 4 square feet of vapor area, used for solvent cleaning or vapor degreasing, shall be equipped with suitable cleanout or sludge doors located near the bottom of each tank or still. These doors shall be so designed and gasketed that there will be no leakage of solvent when they are closed.

(13) Scope.

(a) This paragraph applies to all operations involving the immersion of materials in liquids, or in the vapors of such liquids, for the purpose of cleaning or altering their surfaces, or adding or imparting a finish thereto, or changing the character of the materials, and their subsequent removal from the liquids or vapors, draining, and drying. Such operations include washing, electroplating, anodizing, pickling, quenching, dyeing, dipping, tanning, dressing, bleaching, degreasing, alkaline cleaning, stripping, rinsing, digesting, and other similar operations, but do not include molten materials handling operations, or surface coating operations.

(b) "Molten materials handling operations" means all operations, other than welding, burning, and soldering

operations, involving the use, melting, smelting, or pouring of metals, alloys, salts, or other similar substances in the molten state. Such operations also include heat treating baths, descaling baths, die casting stereotyping, galvanizing, tinning, and similar operations.

(c) "Surface coating operations" means all operations involving the application of protective, decorative, adhesive, or strengthening coating or impregnation to one or more surfaces, or into the interstices of any object or material, by means of spraying, spreading, flowing, brushing, roll coating, pouring, cementing, or similar means; and any subsequent draining or drying operations, excluding open-tank operations. [Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 81-16-015 (Order 81-20), § 296-62-11021, filed 7/27/81; 80-11-010 (Order 80-14), § 296-62-11021, filed 8/8/80; Order 73-3, § 296-62-11021, filed 5/7/73.]

**WAC 296-62-130 Emergency washing facilities.** (1) Definitions. Emergency washing facilities shall mean deluge showers, eye wash fountains or available water supply suitable for drenching or cleansing purposes. Every washing facility using nonpotable water shall have signs stating water is nonpotable.

(2) Facilities Required. Emergency washing facilities shall be readily available in the immediate work area for workmen who may be exposed to the hazards of harmful concentrations of contact chemical agents. Such facilities shall be periodically inspected to ensure that they function correctly and that the quality and quantity of water is satisfactory for emergency washing purposes. [Order 73-3, § 296-62-130, filed 5/7/73; Order 70-8, § 296-62-130, filed 7/31/70, effective 9/1/70; Rule 13.010, effective 8/1/63.]

**WAC 296-62-145 Confined spaces.**

[Order 73-3, § 296-62-145 reference section, filed 5/7/73.] See WAC 296-62-14501 through 296-62-14529.

**WAC 296-62-14501 Definitions.** (1) "Confined space" means any space having a limited means of egress which is subject to the accumulation of toxic or flammable contaminants or an oxygen deficient atmosphere. Confined spaces include but are not limited to storage tanks, process vessels, bins, boilers, ventilation or exhaust ducts, sewers, underground utility vaults, tunnels, pipelines and open top spaces more than 4 feet in depth, such as pits, tubes, vaults and vessels.

(2) Toxic atmospheres are atmospheres having concentrations of airborne chemicals in excess of permissible exposure limits as defined in WAC 296-62-075 through 296-62-07517.

(3) Chemical contact agents are defined in WAC 296-62-07003.

(4) Oxygen deficient atmospheres are deemed to exist if the atmosphere at sea level has less than 18% oxygen by volume or has a partial pressure of 135 millimeters of mercury or less. This may deviate when working at higher altitudes and should be determined for an individual location. Factors such as acclimatization, physical

condition of persons involved, etc., must be considered for such circumstances and conditions.

(5) Flammable atmospheres are atmospheres in excess of 20% of the lower explosive limit. These are usually toxic as well as flammable. [Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 80-11-010 (Order 80-14), § 296-62-14501, filed 8/8/80; Order 73-3, § 296-62-14501, filed 5/7/73.]

**WAC 296-62-14503 Personnel requirements for entry into confined spaces.** Workmen required to enter confined spaces shall be protected from the hazards which may result from the entry.

(1) Management shall be responsible for procedures, training, and planning for entry into confined spaces which present a problem due to toxicity, flammability, oxygen deficiency or excess, mechanical, electrical, corrosive or temperature hazard.

(2) Management shall develop, distribute and enforce a written procedure which shall include planning, general precautions, procedures, evaluation of hazards, ventilation requirements, personal protection, isolation and responsibilities.

(3) For each project or job, individuals who are competent in the evaluation of hazards, precautions, first aid and artificial respiration shall specifically be assigned. All personnel shall be trained in the use of personal protective equipment required for the job assignment.

(4) Management shall instruct all involved employees in the safe procedures to be followed. [Order 73-3, § 296-62-14503, filed 5/7/73.]

**WAC 296-62-14505 General precautions.** (1) Toxic or flammable atmospheres. Employees shall not be permitted to enter atmospheres in a confined space which has contained toxic, flammable or corrosive materials or which may have had such materials accidentally introduced or generated until such space has been evaluated and/or tested by a competent person who shall declare the space safe for entry.

(2) Exposure to temperature extremes and noise shall be controlled as defined in WAC 296-62-09011 and 296-62-09013.

(3) Exposure to ionizing radiation shall be controlled as defined in rules and regulations for radiation protection, chapter 402-12 WAC as administered by the state of Washington, department of social and health services, health services division. [Order 73-3, § 296-62-14505, filed 5/7/73.]

**WAC 296-62-14507 Toxic atmospheres.** (1) Atmospheres where contamination is below permissible exposure limits as defined in chapter 296-62 WAC may be entered without respiratory protection.

(2) Atmospheres where contamination is above the permissible exposure limits but below values immediately hazardous to life or health may be entered when respiratory protective equipment as defined in the applicable provisions of chapter 296-62 WAC is properly worn.

(3) Atmospheres immediately hazardous to life may be entered only in the event of emergency and then only when employees are protected by equipment approved for such exposures.

(4) Atmospheres where the toxicity is not known shall require full protection.

(5) Entry into spaces which contain or could contain corrosive chemicals or chemicals which are toxic through skin absorption shall require equipment to prevent skin and/or eye contact. [Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 81-16-015 (Order 81-20), § 296-62-14507, filed 7/27/81; 80-11-010 (Order 80-14), § 296-62-14507, filed 8/8/80; Order 73-3, § 296-62-14507, filed 5/7/73.]

**WAC 296-62-14509 Flammable atmospheres.** Atmospheres which contain or could contain flammable gases or vapors shall not be entered if the concentration of gases or vapors in any part of the area is more than 20% of the lower explosive limit except in the event of emergency and then only when employees are protected by equipment approved for such exposures. [Order 73-3, § 296-62-14509, filed 5/7/73.]

**WAC 296-62-14511 Oxygen deficiency or excess.**

(1) All employees required to enter into confined spaces shall be instructed as to the nature of the hazards involved, the necessary precautions to be taken and in the use of protective and emergency equipment required. The employer shall comply with any specific regulations that apply to work in dangerous or potentially dangerous areas.

(2) Atmospheres having an oxygen content less than 18% oxygen at sea level (this may deviate at higher elevations) shall not be entered without approved respiratory protective equipment which will provide an adequate supply of breathing air.

(3) In the event that the air may be diluted by an unknown gas, the atmosphere shall be considered highly toxic and/or flammable. [Order 73-3, § 296-62-14511, filed 5/7/73.]

**WAC 296-62-14513 Mechanical hazards.** (1) Confined areas containing parts which may move or which contain agitators, fans or other power driven moving parts of potential hazard to employees shall not be entered until it is assured that such parts cannot move to injure the employee.

(a) Open and lock circuit breakers or switches, or remove fuses or disconnect wiring and tag the location.

(b) Disconnect and tag belt or mechanical linkage.

(c) Physically block part against movement and tag switches, clutches or other means of control.

(d) Tagging of controls without other means of control shall be considered satisfactory only if the control is barricaded and/or is under constant observation during occupancy of the space. [Order 73-3, § 296-62-14513, filed 5/7/73.]

**WAC 296-62-14515 Electrical hazards.** (1) Electrical circuits in the confined area which may present a

hazard shall be disconnected, locked out and tagged in accordance with WAC 296-62-14513(1)(a). All temporary lights shall be protected against damage and cords shall be heavy duty and kept clear of working spaces and walkways. Only low voltage, battery operated, or ground fault protected equipment shall be used on water-sides of boilers or when electrically conductive liquids are involved.

(2) Electric supply circuits, lighting, portable tools, and other equipment used where potentially hazardous concentrations of flammable vapors, gases or dusts are present or may develop shall conform to the current National Electric Code requirements.

(3) Portable electric tools shall be grounded or isolation transformers, ground fault interrupters or double insulated tools shall be required. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-15-017 (Order 83-19), § 296-62-14515, filed 7/13/83, effective 9/12/83; 82-13-045 (Order 82-22), § 296-62-14515, filed 6/11/82; Order 73-3, § 296-62-14515, filed 5/7/73.]

**WAC 296-62-14517 Procedures for entry into toxic or flammable atmospheres.** Every reasonable effort shall be made to reduce the hazard to safe levels prior to permitting entry into the enclosed space.

(1) Preliminary preparations. (a) Determine type and extent of contamination including gases, liquids, sludge, residue or absorbed and/or adsorbed material.

(b) Survey area to determine the effect of escape of gases or vapors in surrounding areas.

(c) Post or barricade area to prevent unauthorized entry.

(d) Ensure control of all sources of ignition when a potential fire hazard exists.

(e) Collect and inspect the condition of all equipment needed including pumps, ventilating equipment, personal protective equipment, atmospheric testing equipment and mechanical equipment. Ensure that all equipment is in good condition and is compatible with the work involved.

(f) Ensure that all required personnel are available and familiar with the hazards. [Order 73-3, § 296-62-14517, filed 5/7/73.]

**WAC 296-62-14519 Removal of flammable or toxic material.** (1) Remove all possible liquid product, sludge or residue if present by draining, pumping or washing as applicable. Dispose of solid, liquid or gaseous materials in a manner which will not cause air or water pollution, a fire hazard or endanger workmen or equipment.

(2) Vent any pressure as required.

(3) Isolate tank or confined space from all potential sources of hazardous materials by one of the following:

(a) Remove a valve, spool piece, or expansion joint and cap open ends. Tag line.

(b) Insert a blank in the line and tag it. [Order 73-3, § 296-62-14519, filed 5/7/73.]

**WAC 296-62-14521 Vapor freeing.** (1) Vapor Freeing is usually done by ventilation. The effectiveness of ventilation is dependent upon the number of air

changes and the efficiency of mixing of the air with the gas in the tank. Ventilation by supply air provides more efficient mixing than exhaust air but cannot be used if it creates a hazard near the discharge point. Exhaust air ducts must be placed at locations remote from air inlets and may require moving to various locations.

(2) Prior to entry, a minimum of five air changes is recommended where oxygen deficiency may exist and ten air changes is recommended where a toxic and/or flammable material is involved.

(3) Concentrations of vapors or gases in the flammable or above the flammable range may require replacement by an inerting gas such as nitrogen or carbon dioxide to prevent explosions.

(a) When inert gases are used, they must subsequently be replaced by air prior to entry except when the inerting provides safer working conditions.

(4) All fans and other equipment used for removing flammable gases or vapors shall conform to NFPA requirements and shall not create an ignition hazard.

(5) Oxygen shall never be used for ventilation. [Order 73-3, § 296-62-14521, filed 5/7/73.]

**WAC 296-62-14523 Evaluation of potentially hazardous atmospheres.** Evaluation of the atmospheres shall be made by competent personnel.

(1) Atmospheric tests shall be made using accepted procedures and/or instruments to determine the kind and extent of any hazards present. However, atmospheric tests should be supplemented by other types of evaluation.

(2) Evaluation shall consider such factors as degree of toxicity, flammability, oxygen deficiency, noise, temperature, vapor pressures, sorption on surface, sludges, residue and ventilation rates.

(3) Evaluation shall be made immediately prior to entry and during occupation at intervals dependent on the possibility of changing conditions.

(4) Testing or other evaluation shall be made in all locations where employees may be exposed.

(5) If there is any doubt as to the validity of evaluation, the hazard shall be assumed to be high, and personal protective equipment or measures used accordingly. [Order 73-3, § 296-62-14523, filed 5/7/73.]

**WAC 296-62-14525 Entry into confined space.** After initial cleaning, vapor freeing, and evaluation of the atmosphere, the confined space may be entered to complete cleaning, repair or other work.

(1) Respiratory protective equipment shall be used when indicated.

(2) An observer capable of maintaining communication at all times shall be located outside the confined space. He shall have respiratory protection available when indicated.

(3) If the possibility of a highly toxic or flammable atmosphere, or oxygen deficiency exists or can develop, workers shall wear safety harness with lifeline attached and a means of rescue shall be provided.

(4) Fire extinguishing equipment shall be immediately available when indicated.

(5) Ventilation shall be maintained at all times when employees are in confined spaces except when the atmosphere has been purposely inerted to provide safer working conditions. All work shall stop and the area shall be evacuated if ventilation fails.

(6) All tools and equipment shall be available as required.

(7) Emergency lighting shall be available as required.

(8) The area shall be evacuated if any indication of ill effects such as dizziness, irritation or excessive odors are noted. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-03-023 (Order 82-1), § 296-62-14525, filed 1/15/82; Order 73-3, § 296-62-14525, filed 5/7/73.]

**WAC 296-62-14527 Hot work.** (1) Any hot work involving sources of ignition and including welding and burning shall require positive assurance that fire hazards and flammable atmospheres have been controlled. Combustible material shall be protected.

(2) Usually the atmosphere should be tested by a combustible gas indicator and/or other device as indicated. Tests should be made frequently enough to assure that safe conditions prevail.

(3) Hot work permits are required prior to entry.

(4) Where hot work involves the generation of toxic gases, vapors, or fumes, local exhaust and/or respiratory protection shall be required.

(5) Compressed gas cylinders should not generally be allowed in confined spaces. Compressed gas lines shall be protected from rupture or damage.

(6) Compressed gas cylinders or electric generators should be attended at all times. Sources of compressed gases or arc welding power shall be turned off immediately when an emergency arises or when work is interrupted or completed. [Order 73-3, § 296-62-14527, filed 5/7/73.]

**WAC 296-62-14529 Use of toxic and/or flammable materials in confined spaces.** Work in confined spaces frequently requires the use of toxic or flammable materials. These include but are not confined to coatings, linings, paints, cements, and solvents.

(1) Quantities of toxic or flammable materials brought into or used in confined spaces shall be limited to the smallest amount consistent with efficient use.

(2) Containers shall be designed to minimize evaporation and spillage. Safety cans or small squeeze bottles are preferable when applicable.

(3) Continuous ventilation shall be provided in sufficient quantity and design to control fire and health hazards.

(4) Atmospheres shall be tested and/or evaluated to provide positive assurance that hazards do not exist. In no instance shall flammable vapor concentrations exceed 20% of the lower explosive limit. Evaluation shall be repeated at intervals to ensure no hazardous build up of concentrations.

(5) Spraying of toxic or flammable substances such as paint is not recommended.

(6) Respiratory protective equipment shall be used as defined in WAC 296-62-14507.

(7) Sources of ignition shall be eliminated when flammable liquids are used.

(8) Materials, equipment and training shall be provided to clean up spills.

(9) All applicable instructions or recommendations from the manufacturer shall be enforced. [Order 73-3, § 296-62-14529, filed 5/7/73.]

**WAC 296-62-14531 Exposure to cotton dust in cotton gins.** (1) Scope and application. This section applies to the control of employee exposure to cotton dust in cotton gins.

(2) Definitions. For the purposes of this section:

(a) "Blow down" - the cleaning of equipment and surface with compressed air.

(b) "Cotton dust" - dust present in the air during the handling or processing of cotton which may contain a mixture of many substances including ground-up plant matter, fiber, bacteria, fungi, soil, pesticides, noncotton plant matter and other contaminants which may have accumulated with the cotton during the growing, harvesting and subsequent processing or storage periods.

(c) "Director" - The director of department of labor and industries, or his designated representative.

(3) Work practices. Each employer shall immediately establish and implement a written program of work practices, which shall minimize cotton dust exposure for each specific job. Where applicable, the following work practices shall be included in the written work practices program:

(a) General. (i) All surfaces shall be maintained as free as practicable of accumulations of cotton dust.

(ii) The employer shall inspect, clean, maintain and repair, all engineering control equipment, production equipment and ventilation systems including power sources, ducts, and filtration units of the equipment, and at a minimum, tape or cover leaks in valves, flashing, elbows, and bands on air lines.

(iii) Cotton and cotton waste shall be stacked, sorted, baled, dumped, removed or otherwise handled by mechanical means except where the employer can show that it is infeasible to do so. Where infeasible, the method used for handling cotton and cotton waste shall be the method which most effectively reduces exposure to the lowest level feasible.

(b) Specific. (i) Floors and other accessible surfaces contaminated with cotton dust may not be cleaned by the use of compressed air.

(ii) Cleaning of clothing with compressed air is prohibited.

(iii) Floor sweeping shall be performed by a vacuum or with methods designed to minimize dispersal of dust.

(iv) Compressed air "blow-down" cleaning shall be prohibited, except where alternative means are not feasible. Where compressed air "blow-down" is done, respirators shall be worn by the employees performing the "blow-down," and employees in the area whose presence

is not required to perform the "blow-down" shall be required to leave the area during this cleaning operation.

(c) Work practice plan. A written work place plan shall be kept which shall list appropriate schedules for carrying out housekeeping operations, and for cleaning and maintaining dust collection equipment. The plan shall be made available for inspection by the director.

(4) Use of respirators.

(a) General. Where the use of respirators is required under this section, the employer shall provide, at no cost to the employee, and assure the use of respirators which comply with the requirements of this subsection.

(b) Use of respirators. Respirators shall be used in the following circumstances:

(i) By workers identified by medical surveillance under subitem (5)(f)(i)(D) of this subsection; or

(ii) During operations such as maintenance and repair activities in which work practice controls are not feasible; or

(iii) In operations specified under subitem (3)(b)(iv) of this subsection.

(c) Availability upon request. Respirators shall be made available upon request, to any employee exposed to cotton dust.

(d) Respirator selection. (i) Where respirators are required under this section, the employer shall select, provide and assure the use of any respirator tested and approved for protection against dust by the National Institute Of Occupational Safety and Health (NIOSH) under the provisions of 30 CFR Part 11.

(ii) Where respirators are required by this subsection, the employer shall provide either any NIOSH approved respirator or at the option of each affected worker, a NIOSH approved powered air purifying respirator with a high efficiency filter.

(e) Respirator program. The employer shall institute a respirator program in accordance with WAC 296-62-071.

(f) Respirator usage. (i) The employer shall assure that the respirator used by each employee exhibits minimum facepiece leakage and that the respirator is fitted properly.

(ii) The employer shall allow each employee who uses a filter respirator to change the filter elements whenever an increase in breathing resistance is detected by the employee, and shall maintain an adequate supply of filter elements for this purpose.

(iii) The employer shall allow employees who wear respirators to wash their faces and respirator facepieces to prevent skin irritation associated with respirator use.

(5) Medical surveillance.

(a) General. (i) Each employer who has an operating gin in which cotton dust is present shall institute a program of medical surveillance for all employees exposed to cotton dust.

(ii) The employer shall assure that all medical examinations and procedures are performed by or under the supervision of a licensed physician, and are provided without cost to the employee.

(iii) Persons other than licensed physicians, who administer the pulmonary function testing required by this

section, shall complete a NIOSH approved training course in spirometry.

(b) Initial examinations. For each ginning season, at the time of initial assignment, the employer shall provide each employee who is or may be exposed to cotton dust, with an opportunity for medical surveillance that shall include:

(i) A medical history;  
(ii) The standardized questionnaire in Appendix B; and

(iii) A pulmonary function measurement, including a determination of forced vital capacity (FVC) and forced expiratory volume in 1 second ( $FEV_1$ ), and the percentage that the measured values of FEV and FVC differ from the predicted values, using the standard tables in Appendix C. The predicted FEV, and FVC for blacks shall be multiplied by 0.85 to adjust for racial differences.

(iv) Based upon the questionnaire results, each employee shall be graded according to Schilling's byssinosis classification system.

(c) Mid-season retest. The determinations required under subsection (5)(b) of this section shall be made again for each employee after at least 14 days of employment and before the termination of employment for the season. The determinations shall be made following at least 24 hours or one working day after previous exposure to cotton dust. The pulmonary function tests shall be repeated during the shift, no sooner than four and no more than 10 hours after the beginning of the work shift; and, in any event, no more than one hour after cessation of exposure.

(d) Periodic examinations. (i) The employer shall provide the medical surveillance under this subsection (5) annually.

(ii) A comparison shall be made between the current examination results and those of previous examinations and a determination made by the physician as to whether there has been a significant change.

(iii) An employee whose  $FEV_1$  is less than 60 percent of the predicted value shall be referred to a physician for a detailed pulmonary examination.

(e) Information provided to the physician. The employer shall provide the following information to the examining physician:

(i) A copy of this regulation and its appendices;  
(ii) A description of the affected employee's duties as they relate to the employee's exposure;  
(iii) A description of any personal protective equipment used or to be used; and

(iv) Information from previous medical examinations of the affected employee which is not readily available to the examining physician.

(f) Physician's written opinion. (i) The employer shall obtain and furnish the employee with a copy of the written opinion from the examining physician containing the following:

(A) The results of the medical examination and tests, including any determinations made under subitem (5)(d)(ii) of this section.

(B) The physician's opinion as to whether the employee has any detected medical conditions which would place the employee at increased risk of material impairment of the employee's health from exposure to cotton dust;

(C) The physician's recommended limitations upon the employee's exposure to cotton dust or upon the employee's use of respirators;

(D) The physician's recommendations for the employee's use of a respirator where dust effects could be suppressed by respirator use;

(E) A statement that the employee has been informed by the physician of the results of the medical examination and any medical conditions which require further examination or treatment.

(ii) The written opinion obtained by the employer shall not reveal specific findings or diagnosis unrelated to occupational exposure.

(g) Spanish speaking employees. An employer whose workforce consists of a significant percentage of Spanish speaking workers who cannot communicate effectively in English, shall provide bilingual administration of the medical surveillance requirements, including use of the Spanish questionnaire provided in Appendix B.

(h) Nonduplication of medical surveillance. (i) During any one ginning season, an employer is not required to provide medical surveillance as described in subsection (5) of this section for any employee who can demonstrate that both the background medical surveillance and the mid-season retest required by subsection (5) of this section were administered during that ginning season while in the employment of another gin employer.

(ii) If an employee can demonstrate that the background medical surveillance has been administered but not the mid-season retest, the employer shall provide the mid-season medical retest of subdivision (5)(c) of this section, and comply with provisions of subdivision (5)(d)-(5)(f) of this section. Where the employer is administering only the mid-season retest, the employer shall provide the mid-season retest after at least 14 days of employment in his gin and before termination of employment for the season.

(iii) For purposes of this section, where the employer does not administer any medical surveillance, the employer shall be satisfied that an employee has undergone the medical surveillance required under subdivisions (5)(a) to (5)(c) of this section upon receipt of written notification from the employer who administered the test, or upon receipt by the physician supervising the program, of a copy of the results of medical surveillance.

(6) Employee education and training.

(a) Training program. (i) Each employer who operates an active gin shall institute a training program for all his employees, prior to initial assignment, and shall assure that each employee is informed of the following:

(A) The specific nature of the operations which could result in exposure to cotton dust;

(B) The measures, including work practices, required by subsection (3) of this section, necessary to protect the employee from excess exposures;

(C) The purpose, proper use and limitations of respirators required by subsection (4) of this section;

(D) The purpose for and a description of the medical surveillance program required by subsection (5) of this section; and other information which will aid exposed employees in understanding the hazards of cotton dust exposure; and

(E) The contents of this standard and its appendices.

(b) Access to training materials. (i) Each employer shall post a copy of this section with its appendices in a public location at the workplace, and shall, upon request, make copies available to employees.

(ii) The employer shall provide all materials relating to the employee training and information program to the director upon request.

(iii) An employer whose workforce consists of a significant percentage of Spanish speaking employees who cannot communicate effectively in English shall provide bilingual administration of the provisions of this section.

(iv) In addition to the information required by subdivision (6)(a), the employer shall include as part of his training program and distribute to employees any materials pertaining to the Washington Industrial Safety and Health Act, the regulations issued pursuant to that act, and to this cotton dust standard which are made available by the director.

(7) Signs.

(a) The employer shall post the following warning sign in each work area where there is potential exposure to cotton dust:

WARNING:

COTTON DUST WORK AREA  
MAY CAUSE ACUTE OR DELAYED  
LUNG INJURY (BYSSINOSIS)

(b) An employer whose workforce consists of a significant percentage of Spanish-speaking employees who cannot communicate effectively in English shall provide bilingual versions of the sign required by subdivision (7)(a) of this section.

(8) Recordkeeping.

(a) Medical surveillance. (i) The employer shall establish and maintain an accurate medical record for each employee subject to medical surveillance required by subsection (5) of this section.

(ii) The record shall include:

(A) The name, social security number and description of the duties of the employee;

(B) A copy of the medical surveillance results including the medical history, questionnaire responses, results of all tests and the physician's recommendation;

(C) A copy of the physician's written opinion;

(D) Any employee medical complaints related to exposure to cotton dust;

(E) The type of protective devices worn, and length of time worn;

(F) A copy of this standard and its appendices, except that the employer may keep one copy of the standard and its appendices for all employees: provided that he references the standard in the medical surveillance records of each employee.

(iii) The employer shall maintain this record for at least 10 years.

(b) Availability. (i) The employer shall make available upon request all records required to be maintained by subsection (8) of this section to the director for examination and copying.

(ii) Employee medical records shall be provided upon request to employees, designated representatives, and the assistant director in accordance with WAC 296-62-05201 through 296-62-05209 and 296-62-05213 through 296-62-05217.

(c) Transfer of records. (i) Whenever the employer ceases to do business, the successor employer shall receive and retain all records required to be maintained by subsection (8) of this section.

(ii) Whenever the employer ceases to do business, and there is no successor employer to receive and retain the records for the prescribed period, these records shall be transmitted to the director.

(iii) At the expiration of the retention period for the records required to be maintained by this section, the employer shall notify the director at least three months prior to the disposal of such records and shall transmit those records to the director if he requests them within that period.

(iv) The employer shall also comply with any additional requirements involving transfer of records set forth in WAC 296-62-05215.

(9) Effective date. This standard shall become effective 30 days after it is filed with the code reviser.

(10) Appendices. Appendices to this section are found in the Federal Register, Vol. 43, No. 122, dated 6-23-78, and the corrections in Vol. 43, No. 153, dated 8-8-78; the contents of these appendices are mandatory. Appendices are available from:

Statutory Authority: RCW 49.17.040, 49.17.150 and 49.17.240. 79-02-037 (Order 79-1), § 296-62-14531, filed 1/23/79.]

**WAC 296-62-14533 Cotton dust.** (1) Scope and application.

(a) This section applies to the control of employee exposure to cotton dust in all workplaces, except as provided in subsection (1)(b) of this section.

(b) This section does not apply to:

(i) The harvesting of cotton;

(ii) The ginning of cotton (exposure to cotton dust in cotton ginning is covered by WAC 296-62-14531);

(iii) Maritime operations are covered by chapters 296-56 and 296-304 WAC;

(iv) The handling or processing of woven or knitted materials; and

(v) The handling or processing of washed cotton.

(c) This section provides mandatory requirements for the control of employee exposure to cotton dust. The mandatory nature of these requirements is not intended, however, to discourage or inhibit the development of different, equally effective means of providing the required protection. The variance and procedure section, WAC 296-24-010, provides a mechanism for employers to obtain variances from the provisions of this section where the employer has developed alternative procedures which are "as safe and healthful as" those required by this section. As implemented by the procedural regulations in WAC 296-24-010, the variance provisions permit the flexibility which contributes to efficient compliance with the standard. To aid in the expeditious processing of variance applications, the procedures allow, where appropriate, for the grant of interim orders pending a decision on the merits of the variance as well as for the consideration of variances applicable to groups of employers. We encourage interested employers to utilize the variance provisions where equally safe and healthful protective means are available.

(2) Definitions applicable to this section:

(a) "Blow down" - the cleaning of equipment and surfaces with compressed air.

(b) "Cotton dust" - dust present in the air during the handling or processing of cotton, which may contain a mixture of many substances including ground-up plant matter, fiber, bacteria, fungi, soil, pesticides, noncotton plant matter and other contaminants which may have accumulated with the cotton during the growing, harvesting and subsequent processing or storage periods. Any dust present during the handling and processing of cotton through the weaving or knitting of fabrics, and dust present in other operations or manufacturing processes using new or waste cotton fibers or cotton fiber byproducts from textile mills are considered cotton dust.

(c) "Director" - the director of labor and industries or his authorized representative.

(d) "Lint-free respirable cotton dust" - particles of cotton dust of approximately 15 microns or less aerodynamic equivalent diameter.

(e) "Vertical elutriator cotton dust sampler" - a dust sampler which has a particle size cut-off at approximately 15 microns aerodynamic equivalent diameter when operating at the flow rate of  $7.4 \pm 0.2$  liters per minute.

(f) "Yarn manufacturing" - all textile mill operations from opening to, but not including, slashing and weaving.

(g) "Washed cotton" - cotton which has been thoroughly washed in hot water and is known in the cotton textile trade as purified or dyed. Washed cotton does not include steamed, autoclaved cotton or cotton washed solely in solvents.

(3) Permissible exposure limits.

(a) The employer shall assure that no employee who is exposed to cotton dust in yarn manufacturing is exposed to airborne concentrations of lint-free respirable cotton

dust greater than  $200 \mu\text{g}/\text{m}^3$  mean concentration, averaged over an eight-hour period, as measured by a vertical elutriator or a method of equivalent accuracy and precision.

(b) The employer shall assure that no employee who is exposed to cotton dust in the textile processes known as slashing and weaving is exposed to airborne concentrations of lint-free respirable cotton dust greater than  $750 \mu\text{g}/\text{m}^3$  mean concentration, averaged over an eight-hour period, as measured by a vertical elutriator or a method of equivalent accuracy and precision.

(c) The employer shall assure that no employee who is exposed to cotton dust (except for exposures in yarn manufacturing and slashing and weaving covered by subsection (3)(a) and (b) of this section) is exposed to airborne concentrations of lint-free respirable cotton dust greater than  $500 \mu\text{g}/\text{m}^3$  mean concentration, averaged over an eight-hour period, as measured by a vertical elutriator or a method of equivalent accuracy and precision.

(4) Exposure monitoring and measurement.

(a) General. (i) For the purposes of this section, employee exposure is that exposure which would occur if the employee were not using a respirator.

(ii) The sampling device to be used shall be either the vertical elutriator cotton dust sampler or a method of equivalent accuracy and precision.

(iii) If an alternative to the vertical elutriator cotton dust sampler is used, the employer shall establish equivalency by demonstrating that the alternative sampling devices:

(A) Collect respirable particulates in the same range as the vertical elutriator (approximately 15 microns);

(B) Replicate exposure data in side-by-side field comparisons; and

(C) Are equivalent within an accuracy and precision range of plus or minus twenty-five percent for ninety-five percent of the samples over the range of 0.5 to 2 times the permissible exposure limit.

(b) Initial monitoring. Each employer who has a place of employment in which cotton dust is present, shall conduct monitoring by obtaining measurements which are representative of the exposure of all employees to airborne concentrations of lint-free respirable cotton dust over an eight-hour period. The sampling program shall include at least one determination during each shift for each work area.

(c) Periodic monitoring. (i) The employer shall repeat the measurements required by subsection (4)(b) of this section at least every six months.

(ii) Whenever there has been a production, process, or control change which may result in new or additional exposure to cotton dust, or whenever the employer has any other reason to suspect an increase in employee exposure, the employer shall repeat the monitoring and measurements required by subsection (4)(b) of this section for those employees affected by the change or increase.

(d) Employee notification. (i) Within five working days after the receipt of monitoring results, the employer

shall notify each employee in writing of the exposure measurements which represent that employee's exposure.

(ii) Whenever the results indicate that the employee's exposure exceeds the applicable permissible exposure limit specified in subsection (3) of this section, the employer shall include in the written notice a statement that the permissible exposure limit was exceeded and a description of the corrective action taken to reduce exposure below the permissible exposure limit.

(5) Methods of compliance.

(a) Engineering and work practice controls. The employer shall institute engineering and work practice controls to reduce and maintain employee exposure to cotton dust at or below the permissible exposure limit specified in subsection (3) of this section, except to the extent that the employer establishes that such controls are not feasible.

(b) Whenever feasible engineering and work practice controls are not sufficient to reduce employee exposure to or below the permissible exposure limit, the employer shall nonetheless institute these controls to immediately reduce exposure to the lowest feasible level, and shall supplement these controls with the use of respirators which shall comply with the provisions of subsection (6) of this section.

(c) Compliance program. (i) Each employer shall establish and implement a written program sufficient to reduce exposures to or below the permissible exposure limit solely by means of engineering controls and work practices as required by subsection (5)(a) of this section.

(ii) The written program shall include at least the following:

(A) A description of each operation or process resulting in employee exposure to cotton dust;

(B) Engineering plans and other studies used to determine the controls for each process;

(C) A report of the technology considered in meeting the permissible exposure limit;

(D) Monitoring data obtained in accordance with subsection (4) of this section;

(E) A detailed schedule for development and implementation of engineering and work practice controls, including exposure levels projected to be achieved by such controls;

(F) Work practice program; and

(G) Other relevant information.

(iii) The employer's schedule as set forth in the compliance program, shall project completion no later than March 27, 1984.

(iv) The employer shall complete the steps set forth in his program by the dates in the schedule.

(v) Written programs shall be submitted, upon request, to the director, and shall be available at the worksite for examination and copying by the director,

and any affected employee or their designated representatives.

(vi) The written programs required under subsection (5)(c) of this section shall be revised and updated at least every six months to reflect the current status of the program and current exposure levels.

(d) Mechanical ventilation. When mechanical ventilation is used to control exposure, measurements which demonstrate the effectiveness of the system to control exposure, such as capture velocity, duct velocity, or static pressure shall be made at least every six months. Measurements of the system's effectiveness to control exposures shall also be made within five days of any change in production, process or control which may result in any increase in airborne concentrations of cotton dust.

(6) Use of respirators.

(a) General. Where the use of respirators is required under this section, the employer shall provide, at no cost to the employee, and assure the use of respirators which comply with the requirements of this subsection (6). Respirators shall be used in the following circumstances:

(i) During the time periods necessary to install or implement feasible engineering controls and work practice controls;

(ii) During maintenance and repair activities in which engineering and work practice controls are not feasible;

(iii) In work situations where feasible engineering and work practice controls are not yet sufficient to reduce exposure to or below the permissible exposure limit;

(iv) In operations specified under subsection (7)(a) of this section; and

(v) Whenever an employee requests a respirator.

(b) Respirator selection. (i) Where respirators are required under this section, the employer shall select the appropriate respirator from Table I and shall assure that the employee uses the respirator provided.

TABLE I

Cotton dust concentration	Required respirator
Not greater than—	
(a) 5 x the applicable permissible exposure limit.	1. Any dust respirator, including single use.
(b) 10 x the applicable permissible exposure limit.	1. Any dust respirator, except single use or quarter mask; or 2. Any supplied air respirator; or 3. Any self-contained breathing apparatus.
(c) 100 x the applicable permissible exposure limit.	1. High efficiency particulate filter respirator with a full facepiece; or 2. Any supplied air respirator with full facepiece, helmet or hood; or 3. Any self-contained breathing apparatus with full facepiece.

Cotton dust concentration	Required respirator
(d) Greater than 100 x the applicable permissible exposure limit.	<ol style="list-style-type: none"> <li>1. A powered air-purifying respirator with high efficiency particulate filter; or</li> <li>2. A self-contained breathing apparatus with a full facepiece operated in pressure demand or other positive pressure mode; or</li> <li>3. A type "C" supplied air respirator operated in pressure demand or other positive pressure mode; or</li> <li>4. A combination respirator which includes a type "C" supplied-air respirator with a full facepiece operated in pressure or continuous-flow mode and an auxiliary self-contained breathing apparatus operated in pressure demand or other positive pressure mode</li> </ol>

(ii) The employer shall select respirators from those tested and approved for protection against dust by the National Institute for Occupational Safety and Health (NIOSH) under the provisions of 30 CFR Part 11.

(iii) Whenever respirators are required by this section for concentrations not greater than 5 x the applicable permissible exposure limit, the employer shall provide and permit the employee to use, at the employee's option, single use dust respirator in preference to any respirator specified in paragraph (a) of Table I.

(iv) Whenever respirators are required by this section for concentrations not greater than 100 x the applicable permissible exposure limit, the employer shall, upon the request of the employee, provide a powered air purifying respirator with a high efficiency particulate filter in lieu of the respirator specified in paragraphs (a), (b), or (c) of Table I.

(v) Whenever a physician determines that an employee is unable to wear any form of respirator, including a power air purifying respirator, the employee shall be given the opportunity to transfer to another position which is available or which later becomes available having a dust level at or below the PEL. The employer shall assure that an employee who is transferred due to an inability to wear a respirator suffers no loss of earnings or other employment rights or benefits as a result of the transfer.

(vi) Until September 27, 1980, the employer shall provide any dust respirator, including single use, to all employees exposed to cotton dust, unless the employer has conducted the monitoring required by subsection (4)(b) of this section or otherwise has monitored employee exposure. As soon as monitoring has been conducted, the employer shall select the appropriate respirator from Table I.

(c) Respirator program. The employer shall institute a respirator program in accordance with WAC 296-62-071.

(d) Respirator usage. (i) The employer shall assure that the respirator used by each employee exhibits minimum facepiece leakage and that the respirator is fitted properly.

(ii) The employer shall allow each employee who uses a filter respirator, to change the filter elements whenever an increase in breathing resistance is detected by the employee. The employer shall maintain an adequate supply of filter elements for this purpose.

(iii) The employer shall allow employees who wear respirators to wash their faces and respirator facepieces to prevent skin irritation associated with respirator use.

(7) Work practices. Each employer shall, regardless of the level of employee exposure, immediately establish and implement a written program of work practices, which shall minimize cotton dust exposure for each specific job. Where applicable, the following work practices shall be included in the work practices program:

(a) Compressed air "blow down" cleaning shall be prohibited, where alternative means are feasible. Where compressed air "blow down" is done, respirators shall be worn by the employees performing the "blow down," and employees in the area whose presence is not required to perform the "blow down" shall be required to leave the area during this cleaning operation.

(b) Cleaning of clothing or floors with compressed air shall be prohibited.

(c) Floor sweeping shall be performed with a vacuum or with methods designed to minimize dispersal of dust.

(d) Cotton and cotton waste shall be stacked, sorted, baled, dumped, removed or otherwise handled by mechanical means, except where the employer can show that it is infeasible to do so. Where infeasible, the method used for handling cotton and cotton waste shall be the method which reduces exposure to the lowest level feasible.

(e) The employer shall inspect, clean, maintain, and repair, all engineering control equipment and ventilation systems including power sources, ducts, and filtration units of the equipment.

(8) Medical surveillance.

(a) General. (i) Each employer who has a place of employment in which cotton dust is present shall institute a program of medical surveillance for all employees exposed to cotton dust.

(ii) The employer shall assure that all medical examinations and procedures are performed by or under the supervision of a licensed physician and are provided without cost to the employee.

(iii) Persons other than licensed physicians, who administer the pulmonary function testing required by this section shall complete a NIOSH approved training course in spirometry.

(b) Initial examinations. The employer shall provide each employee who is or may be exposed to cotton dust with an opportunity for medical surveillance. For new employees this examination shall be provided prior to initial assignment. The medical surveillance shall include at least the following:

(i) A medical history;

(ii) The standardized questionnaire contained in WAC 296-62-14537; and

(iii) A pulmonary function measurement, including a determination of forced vital capacity (FVC) and forced

expiratory volume in one second ( $FEV_1$ ), and the percentage that the measured values of FEV and FVC differ from the predicted values, using the standard tables in WAC 296-62-14539. The predicted  $FEV_1$  and FVC for blacks shall be multiplied by 0.85 to adjust for racial differences.

These determinations shall be made for each employee before the employee enters the workplace on the first day of the work week, following at least thirty-five hours after previous exposure to cotton dust. The tests shall be repeated during the shift, no sooner than four and no more than ten hours after the beginning of the work shift, and, in any event, no more than one hour after cessation of exposure.

(iv) Based upon the questionnaire results, each employee shall be graded according to Schilling's byssinosis classification system.

(c) Periodic examinations. (i) The employer shall provide annual medical surveillance for all employees exposed to cotton dust which shall include at least an update of the medical history and standardized questionnaire (the abbreviated questionnaire, App. B-III) and the pulmonary function measurements in subsection (8)(b) of this section.

(ii) Medical surveillance as required in subsection (8)(c)(i) of this section shall be provided every six months for all employees in the following categories:

(A) An  $FEV_1$  of greater than eighty percent of the predicted value, but with an  $FEV_1$  decrement of five percent or 200 ml. on a first working day;

(B) An  $FEV_1$  of less than eighty percent of the predicted value; or

(C) Where, in the opinion of the physician, any significant change in questionnaire findings, pulmonary function results, or other diagnostic tests has occurred.

(iii) An employee whose  $FEV_1$  is less than sixty percent of the predicted value shall be referred to a physician for a detailed pulmonary examination.

(iv) A comparison shall be made between the current examination results and those of previous examinations and a determination made by the physician as to whether there has been a significant change.

(d) Information provided to the physician. The employer shall provide the following information to the examining physician:

(i) A copy of this regulation and its appendices;

(ii) A description of the affected employee's duties as they relate to the employee's exposure;

(iii) The employee's exposure level or anticipated exposure level;

(iv) A description of any personal protective equipment used or to be used; and

(v) Information from previous medical examinations of the affected employee which is not readily available to the examining physician.

(e) Physician's written opinion. (i) The employer shall obtain and furnish the employee with a copy of a written opinion from the examining physician containing the following:

(A) The results of the medical examination and tests;

(B) The physician's opinion as to whether the employee has any detected medical conditions which would place the employee at increased risk of material impairment of the employee's health from exposure to cotton dust;

(C) The physician's recommended limitations upon the employee's exposure to cotton dust or upon the employee's use of respirators including a determination of whether an employee can wear a negative pressure respirator, and where the employee cannot, a determination of the employee's ability to wear a powered air purifying respirator; and

(D) A statement that the employee has been informed by the physician of the results of the medical examination and any medical conditions which require further examination or treatment.

(ii) The written opinion obtained by the employer shall not reveal specific findings or diagnoses unrelated to occupational exposure.

(9) Employee education and training.

(a) Training program.

(i) The employer shall provide a training program for all employees in all workplaces where cotton dust is present, and shall assure that each employee in these workplaces is informed of the following:

(A) The specific nature of the operations which could result in exposure to cotton dust at or above the permissible exposure limit;

(B) The measures, including work practices required by subsection (7) of this section, necessary to protect the employee from exposures in excess of the permissible exposure limit;

(C) The purpose, proper use and limitations of respirators required by subsection (6) of this section;

(D) The purpose for and a description of the medical surveillance program required by subsection (8) of this section and other information which will aid exposed employees in understanding the hazards of cotton dust exposure; and

(E) The contents of this standard and its appendices.

(ii) The training program shall be provided prior to initial assignment and shall be repeated at least annually.

(b) Access to training materials. (i) Each employer shall post a copy of this section with its appendices in a public location at the workplace, and shall, upon request, make copies available to employees.

(ii) The employer shall provide all materials relating to the employee training and information program to the director upon request.

(iii) In addition to the information required by subsection (9)(a) of this section, the employer shall include as part of the training program, and shall distribute to employees, any materials, pertaining to the Washington Industrial Safety and Health Act, the regulations issued pursuant to that act, and this cotton dust standard, which are made available to the employer by the director.

(10) Signs: The employer shall post the following warning sign in each work area where the permissible exposure limit for cotton dust is exceeded:

## WARNING

## COTTON DUST WORK AREA

## May Cause Acute or Delayed Lung Injury

## (Byssinosis)

## RESPIRATORS REQUIRED IN THIS AREA

## (11) Recordkeeping.

(a) Exposure measurements. (i) The employer shall establish and maintain an accurate record of all measurements required by subsection (4) of this section.

(ii) The record shall include:

(A) A log containing the items listed in WAC 296-62-14535(4)(a), and the dates, number, duration, and results of each of the samples taken, including a description of the procedure used to determine representative employee exposures;

(B) The type of protective devices worn, if any, and length of time worn; and

(C) The names, social security number, job classifications, and exposure levels of employees whose exposure the measurement is intended to represent.

(iii) The employer shall maintain this record for at least twenty years.

(b) Medical surveillance. (i) The employer shall establish and maintain an accurate medical record for each employee subject to medical surveillance required by subsection (8) of this section.

(ii) The record shall include:

(A) The name and social security number and description of the duties of the employee;

(B) A copy of the medical examination results including the medical history, questionnaire responses, results of all tests, and the physician's recommendation;

(C) A copy of the physician's written opinion;

(D) Any employee medical complaints related to exposure to cotton dust;

(E) A copy of this standard and its appendices, except that the employer may keep one copy of the standard and the appendices for all employees, provided that he references the standard and appendices in the medical surveillance record of each employee; and

(F) A copy of the information provided to the physician as required by subsection (8)(d) of this section.

(iii) The employer shall maintain this record for at least twenty years.

(c) Availability. (i) The employer shall make all records required to be maintained by subsection (11) of this section available to the director for examination and copying.

(ii) Employee exposure measurement records and employee medical records required by this subsection shall be provided upon request to employees, designated representatives, and the assistant director in accordance with WAC 296-62-05201 through 296-62-05209 and 296-62-05213 through 296-62-05217.

(d) Transfer of records. (i) Whenever the employer ceases to do business, the successor employer shall receive and retain all records required to be maintained by subsection (11) of this section.

(ii) Whenever the employer ceases to do business, and there is no successor employer to receive and retain the records for the prescribed period, these records shall be transmitted to the director.

(iii) At the expiration of the retention period for the records required to be maintained by this section, the employer shall notify the director at least three months prior to the disposal of such records and shall transmit those records to the director if he requests them within that period.

(iv) The employer shall also comply with any additional requirements involving transfer of records set forth in WAC 296-62-05215.

## (12) Observation of monitoring.

(a) The employer shall provide affected employees or their designated representatives an opportunity to observe any measuring or monitoring of employee exposure to cotton dust conducted pursuant to subsection (4) of this section.

(b) Whenever observation of the measuring or monitoring of employee exposure to cotton dust requires entry into an area where the use of personal protective equipment is required, the employer shall provide the observer with and assure the use of such equipment and shall require the observer to comply with all other applicable safety and health procedures.

(c) Without interfering with the measurement, observers shall be entitled to:

(i) An explanation of the measurement procedures;

(ii) An opportunity to observe all steps related to the measurement of airborne concentrations of cotton dust performed at the place of exposure; and

(iii) An opportunity to record the results obtained.

(13) Effective date.

(a) General. This emergency rule is effective upon filing with the code reviser, except as otherwise provided below.

(b) Startup dates. (i) Initial monitoring. The initial monitoring required by subsection (4)(b) of this section shall be completed as soon as possible but no later than September 27, 1980.

(ii) Methods of compliance; engineering and work practice controls. Engineering and work practice controls required by subsection (5) of this section shall be implemented no later than March 27, 1984.

(iii) Compliance program. The compliance program required by subsection (5)(c) of this section shall be established no later than March 27, 1981.

(iv) Respirators. The respirators required by subsection (6) of this section shall be provided no later than April 27, 1980. Until September 27, 1980, the provisions of subsection (6)(b)(vi) of this section apply.

(v) Work practices. The work practices required by subsection (7) of this section shall be implemented no later than June 27, 1980.

(vi) Medical surveillance. The initial medical surveillance required by subsection (8) of this section shall be completed no later than March 27, 1981.

(vii) Employee education and training. The initial education and training required by subsection (9) of this

section shall be completed as soon as possible but no later than June 27, 1980.

(14) Appendices.

(a) Appendix B, WAC 296-62-14537, Appendix C, WAC 296-62-14539 and Appendix D, WAC 296-62-14541 are incorporated as part of this chapter and the contents of these appendices are mandatory.

(b) Appendix A, WAC 296-62-14535 contains information which is not intended to create any additional obligations not otherwise imposed or to detract from any existing obligations. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-03-023 (Order 82-1), § 296-62-14533, filed 1/15/82. Statutory Authority: 49.17.040, 49.17.050, and 49.17.240. 81-16-015 (Order 81-20), § 296-62-14533, filed 7/27/81. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-62-14533, filed 11/13/80.]

**WAC 296-62-14535 Appendix A--Air sampling and analytical procedures for determining concentrations of cotton dust.**

(1) Sampling locations. The sampling procedures must be designed so that samples of the actual dust concentrations are collected accurately and consistently and reflect the concentrations of dust at the place and time of sampling. Sufficient number of six-hour area samples in each distinct work area of the plant should be collected at locations which provide representative samples of air to which the worker is exposed. In order to avoid filter overloading, sampling time may be shortened when sampling in dusty areas. Samples in each work area should be gathered simultaneously or sequentially during a normal operating period. The daily time-weighted average (TWA) exposure of each worker can then be determined by using the following formula:

$$\frac{\text{Summation of hours spent in each location and the dust concentration in that location.}}{\text{Total hours exposed}}$$

A time-weighted average concentration should be computed for each worker and properly logged and maintained on file for review.

(2) Sampling equipment. (a) Sampler. The instrument selected for monitoring is the Lumsden-Lynch vertical elutriator. It should operate at a flow rate of  $7.4 \pm 0.2$  liters/minute. The samplers should be cleaned prior to sampling. The pumps should be monitored during sampling.

(b) Filter holder. A three-piece cassette constructed of polystyrene designed to hold a 37-mm diameter filter should be used. Care must be exercised to insure that an adequate seal exists between elements of the cassette.

(c) Filters and support pads. The membrane filters used should be polyvinyl chloride with a 5- $\mu$ m pore size and 37-mm diameter. A support pad, commonly called a backup pad, should be used under the filter membrane in the field monitor cassette.

(d) Balance. A balance sensitive to 10 micrograms should be used.

(3) Instrument calibration procedure. Samplers shall be calibrated when first received from the factory, after

repair, and after receiving any abuse. The samplers should be calibrated in the laboratory both before they are used in the field and after they have been used to collect a large number of field samples. The primary standard, such as a spirometer or other standard calibrating instruments such as a wet test meter or a large bubble meter or dry gas meter, should be used. Instructions for calibration with the wet test meter follow. If another calibration device is selected, equivalent procedures should be used:

(a) Level wet test meter. Check the water level which should just touch the calibration point at the left side of the meter. If water level is low, add water 1-2° F. warmer than room temperature of till point. Run the meter for thirty minutes before calibration;

(b) Place the polyvinyl chloride membrane filter in the filter cassette;

(c) Assemble the calibration sampling train;

(d) Connect the wet test meter to the train.

The pointer on the meter should run clockwise and a pressure drop of not more than 1.0 inch of water indicated. If the pressure drop is greater than 1.0, disconnect and check the system;

(e) Operate the system for ten minutes before starting the calibration;

(f) Check the vacuum gauge on the pump to insure that the pressure drop across the orifice exceeds seven-tenths inches of mercury;

(g) Record the following on calibration data sheets:

(i) Wet test meter reading, start and finish;

(ii) Elapsed time, start and finish (at least two minutes);

(iii) Pressure drop at manometer;

(iv) Air temperature;

(v) Barometric pressure; and

(vi) Limiting orifice number.

(h) Calculate the flow rate and compare against the flow of  $7.4 \pm 0.2$  liters/minute. If flow is between these limits, perform calibration again, average results, and record orifice number and flow rate. If flow is not within these limits, discard or modify orifice and repeat procedure;

(i) Record the name of the person performing the calibration, the date, serial number of the wet test meter, and the number of the critical orifices being calibrated.

(4) Sampling procedure. (a) Sampling data sheets should include a log of:

(i) The date of the sample collection;

(ii) The time of sampling;

(iii) The location of the sampler;

(iv) The sampler serial number;

(v) The cassette number;

(vi) The time of starting and stopping the sampling and the duration of sampling;

(vii) The weight of the filter before and after sampling;

(viii) The weight of dust collected (corrected for controls);

(ix) The dust concentration measured;

(x) Other pertinent information; and

- (xi) Name of person taking sample.
- (b) Assembly of filter cassette should be as follows:
- (i) Loosely assemble three-piece cassette;
  - (ii) Number cassette;
  - (iii) Place absorbent pad in cassette;
  - (iv) Weigh filter to an accuracy of 10  $\mu\text{g}$ ;
  - (v) Place filter in cassette;
  - (vi) Record weight of filter in log, using cassette number for identification;
  - (vii) Fully assemble cassette, using pressure to force parts tightly together;
  - (viii) Install plugs top and bottom;
  - (ix) Put shrink band on cassette, covering joint between center and bottom parts of cassette; and
  - (x) Set cassette aside until shrink band dries thoroughly.
- (c) Sampling collection should be performed as follows:
- (i) Clean lint out of the motor and elutriator;
  - (ii) Install vertical elutriator in sampling locations specified above with inlet 4-1/2 to 5-1/2 feet from floor (breathing zone height);
  - (iii) Remove top section of cassette;
  - (iv) Install cassette in ferrule of elutriator;
  - (v) Tape cassette to ferrule with masking tape or similar material for air-tight seal;
  - (vi) Remove bottom plug of cassette and attach hose containing critical orifice;
  - (vii) Start elutriator pump and check to see if gauge reads above 17 in. of Hg vacuum;
  - (viii) Record starting time, cassette number, and sampler number;
  - (ix) At end of sampling period stop pump and record time; and
  - (x) Controls with each batch of samples collected, two additional filter cassettes should be subjected to exactly the same handling as the samples, except that they are not opened. These control filters should be weighed in the same manner as the sample filters.
- Any difference in weight in the control filters would indicate that the procedure for handling sample filters may not be adequate and should be evaluated to ascertain the cause of the difference, whether and what necessary corrections must be made, and whether additional samples must be collected.
- (d) Shipping. The cassette with samples should be collected, along with the appropriate number of blanks, and shipped to the analytical laboratory in a suitable container to prevent damage in transit.
- (e) Weighing of the sample should be achieved as follows:
- (i) Remove shrink band;
  - (ii) Remove top and middle sections of cassette and bottom plug;
  - (iii) Remove filter from cassette and weigh to an accuracy of 10  $\mu\text{g}$ ; and
  - (iv) Record weight in log against original weight.
- (f) Calculation of volume of air sampled should be determined as follows:

(i) From starting and stopping times of sampling period, determine length of time in minutes of sampling period; and

(ii) Multiply sampling time in minutes by flow rate of critical orifice in liters per minute and divide by 1000 to find air quantity in cubic meters.

(g) Calculation of dust concentrations should be made as follows:

(i) Subtract weight of clean filter from dirty filter and apply control correction to find actual weight of sample. Record this weight (in  $\mu\text{g}$ ) in log; and

(ii) Divide mass of sample in  $\mu\text{g}$  by air volume in cubic meters to find dust concentration in  $\mu\text{g}/\text{m}$ . Record in log. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-62-14535, filed 11/13/80.]

**WAC 296-62-146 Appendices.** Contains appendices to chapter 296-62 WAC, for air contaminants, etc., that are not found immediately following their respective sections. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-146, filed 8/27/81.]

**WAC 296-62-14601 Appendix A--Requirements for classification and respiratory use of workers exposed to cotton dust in gins.**

APPENDIX A—REQUIREMENTS FOR CLASSIFICATION AND RESPIRATORY USE OF WORKERS EXPOSED TO COTTON DUST IN GINS

Functional severity	FEV 1 (percent of predicted)	FEV 1 (percent)
F0 . . . . .	Greater than 80 (no evidence of chronic ventilatory impairment).	(a)-4 to 0; or more. (b)-9 to -5 or more. (c)-10 or more.
F1 . . . . .	60-79 (evidence of slight to moderate irreversible impairment of ventilatory capacity).	(a)-4 to 0; or more. (b)-5 or more.
F2 . . . . .	Less than 60 (evidence of moderate to severe irreversible impairment of ventilatory capacity).	.....

NOTE: These recommendations are generally accepted criteria for classification and management of workers exposed to cotton dust. Since medical removal provisions are not included in the standard, WISHA believes them to constitute equally useful criteria for the physician to use in determining whether a gin worker is suffering any degree of functional severity which calls for respiratory protection.

Although these criteria are advisory, a worker who falls in the F2 category of functional severity shall be sent to a pulmonary physician according to WAC 296-62-14531 (5)(d)(iii). [Statutory Authority: RCW 49.17-.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-14601, filed 8/27/81.]

(Furnishing your Social Security number is voluntary. Your refusal to provide this number will not affect any right, benefit, or privilege to which you would be entitled if you did provide your Social Security number. Your Social Security number is being requested since it will permit use in future determinations in statistical research studies.)			

**B. OCCUPATIONAL HISTORY TABLE**

Complete the following table showing the entire work history of the individual from present to initial employment. Sporadic, part-time periods of employment, each of no significant duration, should be grouped if possible.

INDUSTRY AND LOCATION	TENURE OF EMPLOYMENT		SPECIFIC OCCUPATION	AVERAGE NO. DAYS WORKED PER WEEK	HAZARDOUS HEALTH EXPOSURE ASSOCIATED WITH WORK		
	FROM 19__	TO 19__			YES	NO	IF YES, DESCRIBE

## C. SYMPTOMS

Use actual wording of each question. Put X in appropriate square after each question. When in doubt record "No".

COUGH

1. Do you usually cough first thing in the morning?  
(on getting up)\*  
(Count a cough with first smoke or on  
"first going out of doors". Exclude  
clearing throat or a single cough.) 1  Yes 2  No
2. Do you usually cough during the day or at night?  
(Ignore an occasional cough.) 1  Yes 2  No

If YES to either question 1 or 2:

3. Do you cough like this on most days for as much as  
three months a year? 1  Yes 2  No 9  NA
4. Do you cough on any particular day of the week? 1  Yes 2  No

If YES:

5. Which day? Mon. Tue. Wed. Thur. Fri. Sat. Sun. \_\_\_\_\_

PHLEGM

6. Do you usually bring up any phlegm from your  
chest first thing in the morning? (on getting  
up)\* (Count phlegm with the first smoke or on  
"first going out of doors." Exclude phlegm  
from the nose. Count swallowed phlegm.) 1  Yes 2  No
7. Do you usually bring up any phlegm from your  
chest during the day or at night?  
(Accept twice or more.) 1  Yes 2  No

If YES to either question 6 or 7:

8. Do you bring up phlegm like this on most days  
for as much as three months each year? 1  Yes 2  No

If YES to question 3 or 8:

9. How long have you had this phlegm? (cough)  
(Write in number of years)
- (1)  2 years or less  
(2)  More than 2 years - 9 years  
(3)  10-19 years  
(4)  20+ years

\*These words are for subjects who work at night

CHEST ILLNESS

10. In the past three years, have you had a period of (increased) cough and phlegm lasting for 3 weeks or more?
- (1)  No  
 (2)  Yes, only one period  
 (3)  Yes, two or more periods

For subjects who usually have phlegm:

11. During the past 3 years have you had any chest illness which has kept you off work, indoors at home or in bed? (For as long as one week, flu?)
- 1  Yes    2  No

If YES to 11:

12. Did you bring up (more) phlegm than usual in any of these illnesses?
- 1  Yes    2  No

If YES to 12: During the past three years have you had:

13. Only one such illness with increased phlegm?
- 1  Yes    2  No

14. More than one such illness:
- 1  Yes    2  No

Br. Brade \_\_\_\_\_

TIGHTNESS

15. Does your chest ever feel tight or your breathing become difficult?
- 1  Yes    2  No

16. Is your chest tight or your breathing difficult on any particular day of the week? (after a week or 10 days away from the mill)
- 1  Yes    2  No

17. If YES, Which day? Mon. (1) Sometimes (3) Tues. (2) Always (4) Wed. (5) Thur. (6) Fri. (7) Sat. (8) Sun.

18. If YES Monday: At what time on Monday does your chest feel tight or your breathing difficult?
- Before entering mill  
 After entering mill

(ASK ONLY IF NO TO QUESTION 15)

19. In the past, has your chest ever been tight or your breathing difficult on any particular day of the week?
- 1  Yes    2  No

20. If YES, Which day? Mon. (1) Sometimes (3) Tues. (2) Always (4) Wed. (5) Thur. (6) Fri. (7) Sat. (8) Sun.

**BREATHLESSNESS**

21. If disabled from walking by any condition other than heart or lung disease put "X" in the space and leave questions (22-30) unasked.

22. Are you ever troubled by shortness of breath, when hurrying on the level or walking up a slight hill?

1  Yes 2  No

If NO, grade is 1. If YES, proceed to next question

23. Do you get short of breath walking with other people at an ordinary pace on the level?

1  Yes 2  No

If NO, grade is 2. If YES, proceed to next question

24. Do you have to stop for breath when walking at your own pace on the level?

1  Yes 2  No

If NO, grade is 3. If YES, proceed to next question

25. Are you short of breath on washing or dressing?

1  Yes 2  No

If NO, grade is 4. If YES, grade is 5.

26.

Dyspnea Grd. \_\_\_\_\_

**ON MONDAYS:**

27. Are you ever troubled by shortness of breath, when hurrying on the level or walking up a slight hill?

1  Yes 2  No

If NO, grade is 1. If YES, proceed to next question

28. Do you get short of breath walking with other people at an ordinary pace on the level?

1  Yes 2  No

If NO, grade is 2. If YES, proceed to next question

29. Do you have to stop for breath when walking at your own pace on the level?

1  Yes 2  No

If NO, grade is 3. If YES, proceed to next question

30. Are you short of breath on washing or dressing?

1  Yes 2  No

If NO, grade is 4. If YES, grade is 5

31.

B. Grd. \_\_\_\_\_

**OTHER ILLNESSES AND ALLERGY HISTORY**

32. Do you have a heart condition for which you are under a doctor's care?

1  Yes 2  No

**OTHER ILLNESSES AND ALLERGY HISTORY CONTINUED:**

33. Have you ever had asthma? 1  Yes 2  No  
 If yes, did it begin: (1) Before age 30   
 (2) After age 30
34. If yes before 30: did you have asthma before ever going to work in a textile mill? 1  Yes 2  No
35. Have you ever had hay fever or other allergies (other than above)? 1  Yes 2  No

**TOBACCO SMOKING**

36. Do you smoke? 1  Yes 2  No  
 Record Yes if regular smoker up to one month ago. (Cigarettes, cigar or pipe)
- If NO to (33).
37. Have you ever smoked? (Cigarettes, cigars, pipe. Record NO if subject has never smoked as much as one cigarette a day, or 1 oz. of tobacco a month, for as long as one year.) 1  Yes 2  No

If Yes to (33) or (34); what have you smoked for how many years? (Write in specific number of years in the appropriate square)

	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
Years	(<5)	(5-9)	(10-14)	(15-19)	(20-24)	(25-29)	(30-34)	(35-39)	(>40)
38. Cigarettes									
39. Pipe									
40. Cigars									

41. If cigarettes, how many packs per day?  Less than 1/2 pack  
 Write in number of cigarettes \_\_\_\_\_  
 1/2 pack, but less than 1 pack  
 1 pack, but less than 1 1/2 packs  
 1-1/2 packs or more
42. Number of pack years: \_\_\_\_\_
43. If an ex-smoker (cigarettes, cigar or pipe), how long since you stopped? (Write in number of years.) \_\_\_\_\_  
 0-1 year  
 1-4 years  
 5-9 years  
 10+ years

**OCCUPATIONAL HISTORY**

Have you ever worked in:

- 44. A foundry? (As long as one year)      1  Yes    2  No
- 45. Stone or mineral mining, quarrying or processing? (As long as one year)      1  Yes    2  No
- 46. Asbestos milling or processing? (Ever)      1  Yes    2  No
- 47. Cotton or cotton blend mill? (For controls only)      1  Yes    2  No
- 48. Other dusts, fumes or smoke? If yes, specify.      1  Yes    2  No

Type of exposure \_\_\_\_\_

Length of exposure \_\_\_\_\_

\* Proveer su número de seguro social es voluntario. El rehuso de proveer este número no afecta ningun derecho, beneficio, o privilegio al cual ud. podría tener derecho. Su número de seguro social ha sido requerido desde que este permite el uso de determinaciones en el futuro en la busqueda de estudios estaticales.

Registro Federal, Vol. 43, No. 122, Viernes 23 de junio de 1978.

B. TABLA DE HISTORIA LABORAL

Llene la siguiente tabla indicando la historia laboral del individuo desde que lo primero empleo hasta el presente. Períodos de empleo aislados ó de tiempo parcial deben ser agrupados si es posible.

INDUSTRIA Y LOCAL	Tiempo de empleo		TRABAJO ESPECIFICO	Promedio de # de días : trab.por sem.	RIESGO DE SALUD POR CONTACTO ASOCIADO CON EL TRABAJO		
	Desde 19__	Hasta 19__			SI	NO	Si se contesta "Si" explique

C. Síntomas

Empléense las palabras exactas de cada pregunta. Póngase una "x" en la casilla que sigue cada pregunta. En caso de duda, póngase "No." Donde no hay casilla, póngase un círculo alrededor de la repuesta apropiada.

LA TOS

1. ¿Tose Ud. ordinamente al levantarse por la mañana? (Tenga en cuenta la flema arrancada al fumar o al salir de la casa por primera vez. No tenga en cuenta los mucos nasales).

1.  Sí 2.  No

2. ¿Tose Ud. ordinariamente de día ó de noche?

1.  Sí 2.  No

Si se contesta "Sí" a las preguntas 1 ó 2, pregúntese:

3. ¿Tose así la mayoría de los días por un periodo de por lo menos 3 meses durante el pasado año?

1.  Sí 2.  No

4. ¿Tose Ud. mas de lo ordinario algun día en particular de la semana?

1.  Sí 2.  No

Si contesta "Si"; pregúntese:

5. ¿Que día? Lun. Mar. Mier. Jue. Vie. Sab. Dom.

LA FLEMA

6. ¿Se arranca Ud. flema ó catarro del pecho al levantarse? (Tenga en cuenta la flema arrancada al fumar or al salir de la casa por primera vez. No tenga en cuenta los mucos nasales. Tenga en cuenta la flema que se traga).

1.  Sí 2.  No

7. ¿Se arranca Ud. flema ó catarro del pecho ordinariamente de día ó de noche? (Nótense solo 2 veces o mas)

1.  Sí 2.  No

8. Arroja ud. flemas así la mayor parte de días tanto como tres meses al año?

1.  Sí 2.  No

Si se contesta "Sí" a las preguntas 3 ó 8, pregúntese:

¿Cuantos años hace que se arranca flema ó catarro o tose frecuentemente?

(Responda en numeros de años)

- (1)  2 años ó menos  
 (2)  mas de 2 años - 9 años  
 (3)  10-19 años  
 (4)  20 años ó mas

ENFERMEDADES PULMONARIAS

10. ¿Durante los tres pasados años, ha pasado algún periodo de tos\* y flemas que duró 3 semanas o más?

\*Sujetos que ordinariamente se arrancan flemas

- No  
 Sí, un solo período  
 Sí, dos periodos o mas

11. ¿Ha tenido Ud. durante los 3 años pasados alguna enfermedad del pecho que le haya impedido a trabajar o obligado a permanecer en casa ó en cama por tanto como una semana? (por ejemplo, ¿la gripe?)

- Sí  No

Si se contesta "Sí" a la pregunta 11, pregúntese:

12. ¿Se arrancó Ud. más flemas que lo general durante alguno de estos ataques?

- Sí  No

Si se contesta "Sí" a 12, pregúntese:

13. ¿Ha tenido durante los tres años pasados:

Solo un tal ataque con aumento de flemas?

- Sí  No

14. Más de uno?

- Sí  No

Br. Grade \_\_\_\_\_

LA OPRISION DEL PECHO

15. ¿Ha tenido Ud. alguna vez opresión en el pecho ó dificultad en respirar?

Sí  No

16. ¿Se le oprime el pecho ó se le hace difícil respirar algún día en la semana en particular? (después de una semana ó 10 días de ausencia de la planta)

Sí  No

17. Si se contesta "Sí," ¿Que día?

Lun. Mar. Mier. Jue. Vie. Sab. Dom. Siempre A veces

18. Si se contesta "Sí" para los lunes, pregúntese: ¿A que hora del lunes siente opresión en el pecho o dificultad en respirar?

- a.  Antes de entrar en la desmotadora
- b.  Después de entrar en la desmotadora
- c.  Después de salir de la desmotadora

(Pregúntese solo si se contesta "No" a la 15)

19. ¿En el pasado, se le ha oprimido el pecho o hecho difícil respirar algún día de la semana en particular?

Sí  No

20. Si se contesta "Sí," ¿Que día?

Lun. Mar. Mier. Jue. Vier. Sab. Dom. Siempre A veces

EL DESALIENTO (La Dispnea)

21. Si se inhabilita de caminar a causa de cualquier condición que no sea enfermedad del corazón o de los pulmones, ponga una "X" y ignore las preguntas 22-30.

22. ¿Lo aflige un desaliento al caminar aprisa en terreno llano ó al subir una pequeña cuesta?

Sí  No

(Si "No", el grado es 1. Si es "Sí", siga a la próxima pregunta)

23. ¿Lo aflige un desaliento al caminar con otros de su propia edad a su paso ordinario en terreno llano?

Sí  No

(Si "No" el grado es 2. Si es "Sí", prosiga)

24. ¿Tiene que detenerse porque se ahoga al caminar a paso ordinario en terreno llano?

Sí  No

(Si "No" el grado es 3. Si es "Sí", prosiga)

25. ¿Se desalienta al lavarse ó vestirse?

Sí  No

(Si "No", el grado es 4. Si es "Sí", el grado es 5.)

26. Dyspnea Grd. \_\_\_\_\_  
LOS LUNES: EL PRIMER DIA DE VUELTA AL TRABAJO DESPUES DE SUS DIAS LIBRES

27. ¿Lo aflige un desaliento al caminar aprisa en terreno llano ó al subir una pequeña cuesta?

Sí  No

(Si "No", el grado es 1. Si es "Sí", siga a la próxima pregunta)

28. ¿Lo aflige un desaliento al caminar con otros de su propia edad a su paso ordinario en terreno llano?

Sí  No

(Si "No", el grado es 2. Si es "Sí", prosiga)

29. ¿Tiene que detenerse porque se ahoga al caminar a paso ordinario en terreno llano?

Sí  No

(Si "No", el grado es 3. Si es "Sí", prosiga)

Años	(<5)	(5-9)	(10-14)	(15-19)	(20-24)	(25-29)	(30-34)	(35-39)	(>40)

39. Pipa									
40. Puros									

30. ¿Se desalienta al lavarse o vestirse?  
 Sí  No  
 (Si "No", el grado es 4. Si es "Sí", el grado es 5.)

31. Br. Grd. \_\_\_\_\_

OTRAS ENFERMEDADES

32. ¿Tiene Ud. una condición del corazón que requiere los servicios de un medico?  
 Sí  No

33. ¿Ha tenido alguna vez asma?  
 Sí  No  
 Si se contesta "Sí", a la 33, pregúntese si empezó: \_\_\_\_\_  
 Antes de los 30 años  
 \_\_\_\_\_ Después de los 30 años

34. Si se contesta "Antes de los 30 años"; ¿Tenia Ud. asma antes de trabajar en una desmotadora de algodón?  
 Sí  No

35. ¿Ha tenido alguna vez otras alergias (ademas de las de arriba)?  
 Sí  No

CONSUMO DE TABACO

36. ¿Fuma Ud. actualmente? Indique "Sí" si fumaba regularmente hasta hace un mes (Cigarillos, puros, o pipa)  
 Sí  No  
 Si contesta "No" a la (33), pregúntese:

37. ¿Ha fumado Ud. alguna vez? (Cigarillos, puros, ó pipa. Indique "No" si el sujeto nunca ha fumado ni un cigarillo diario ó una onza de tabaco al mes, por un año)  
 Sí  No  
 Si se contesta "Sí" a la (33) o (34); ¿que ha fumado Ud. y por cuantos años? (Indique el numero especifico de años en la casilla apropiada)

41. ¿Si fuma cigarrillos, cuantas cajetillas fuma diarias? Indique en numero de cigarrillos:  
 menos de 1/2 cajetilla  
 1/2 cajetilla, pero menos de 1  
 1 cajetilla, pero menos de 1 1/2  
 1 1/2 cajetillas ó más

42. Numero de cajetillas por año \_\_\_\_\_

43. Si ha dejado de fumar (cigarrillos, pipas ó puros), cuanto tiempo hace que lo dejó. (Indique en numero de años)  
 0 - 1 año  
 1 - 4 años  
 5 - 9 años  
 10 años o más

HISTORIA LABORAL

¿Ha trabajado Ud. alguna vez en:

44. Una fundación (por tanto como un año)?  Sí  No

45. La minería ó elaboración de piedras ó metales (por tanto como un año)?  Sí  No

46. En una planta de asbesto? (alguna vez)  Sí  No

47. En una fabrica de algodón ó de mezclado de algodón  Sí  No

48. En proximidad de otros polvos, emanaciones o humos? Si se contesta "Sí", especifíquese:  Sí  No

**WAC 296-62-14607 Appendix D--Pulmonary function standards for cotton dust standard.** The spirometric measurements of pulmonary function shall conform to the following minimum standards, and these standards are not intended to preclude additional testing or alternate methods which can be determined to be superior.

(1) APPARATUS

(a) The instrument shall be accurate to within  $\pm 50$  milliliters or within  $\pm 3$  percent of reading, whichever is greater.

(b) The instrument should be capable of measuring vital capacity from 0 to 7 liters BTPS.

(c) The instrument shall have a low inertia and offer low resistance to airflow such that the resistance to airflow at 12 liters per second must be less than 1.5 cm. H<sub>2</sub>O/liter/sec.

(d) The zero time point for the purpose of timing the FEV<sub>1</sub> shall be determined by extrapolating the steepest portion of the volume time curve back to the maximal inspiration volume (1, 2, 3, 4) or by an equivalent method.

(e) Instruments incorporating measurements of airflow to determine volume shall conform to the same volume accuracy stated in (a) of this subsection when presented with flow rates from at least 0 to 12 liters per second.

(f) The instrument or user of the instrument must have means of correcting volumes to a body temperature saturated with water vapor (BTPS) under conditions of varying ambient spirometer temperatures and barometric pressures.

(g) The instrument used shall provide a tracing or display of either flow versus volume or volume versus time during the entire forced expiration. A tracing or display is necessary to determine whether the patient has performed the test properly. The tracing must be stored and available for recall and must be of sufficient size that hand measurements may be made within requirement of paragraph (a) of this subsection. If a paper record is made it must have a paper speed of at least 2 cm/sec and a volume sensitivity of at least 10.0 mm of chart per liter of volume.

(h) The instrument shall be capable of accumulating for a minimum of ten seconds and shall not stop accumulating volume before (i) the volume change for a 0.5 second interval is less than 25 milliliters or (ii) the flow is less than 50 milliliters per second for a 0.5 second interval.

(i) The forced vital capacity (FVC) and forced inspiratory volume in 1 second (FEV<sub>1.0</sub>) measurements shall comply with the accuracy requirements stated in paragraph (a) of this subsection. That is, they should be accurately measured to within  $\pm 50$  ml or within  $\pm 3$  percent of reading, whichever is greater.

(j) The instrument must be capable of being calibrated in the field with respect to the FEV<sub>1</sub> and FVC. This calibration of the FEV<sub>1</sub> and FVC may be either directly or indirectly through volume and time base measurements. The volume calibration source should provide a

volume displacement of at least 2 liters and should be accurate to within  $\pm 30$  milliliters.

(2) TECHNIQUE FOR MEASUREMENT OF FORCED VITAL CAPACITY MANEUVER.

(a) Use of a nose clip is recommended but not required. The procedures shall be explained in simple terms to the patient who shall be instructed to loosen any tight clothing and stand in front of the apparatus. The subject may sit, but care should be taken on repeat testing that same position be used and, if possible, the same spirometer. Particular attention shall be given to insure that the chin is slightly elevated with the neck slightly extended. The patient shall be instructed to make a full inspiration from a normal breathing pattern and then blow into the apparatus, without interruption, as hard, fast, and completely as possible. At least three forced expirations shall be carried out. During the maneuvers, the patient shall be observed for compliance with instructions. The expirations shall be checked visually for reproducibility from flow-volume or volume-time tracings or displays. The following efforts shall be judged unacceptable when the patient:

(i) has not reached full inspiration preceding the forced expiration,

(ii) has not used maximal effort during the entire forced expiration,

(iii) has not continued the expiration for at least 5 seconds or until an obvious plateau in the volume time curve has occurred,

(iv) has coughed or closed his glottis,

(v) has an obstructed mouthpiece or a leak around the mouthpiece (obstruction due to tongue being placed in front of mouthpiece, false teeth falling in front of mouthpiece, etc.),

(vi) has an unsatisfactory start of expiration, one characterized by excessive hesitation (or false starts), and therefore not allowing back extrapolation of time 0 (extrapolated volume on the volume time tracing must be less than 10 percent of the FVC),

(vii) has an excessive variability between the three acceptable curves. The variation between the two largest FVC's and FEV<sub>1</sub>'s of the three satisfactory tracings should not exceed 10 percent or  $\pm 100$  milliliters, whichever is greater.

(b) Periodic and routine recalibration of the instrument or method for recording FVC and FEV<sub>1.0</sub> should be performed using a syringe or other volume source of at least 2 liters.

(3) INTERPRETATION OF SPIROGRAM.

(a) The first step in evaluating a spirogram should be to determine whether or not the patient has performed the test properly or as described in subsection (2) of this section. From the three satisfactory tracings, the forced vital capacity (FVC) and forced expiratory volume in 1 second (FEV<sub>1.0</sub>) shall be measured and recorded. The largest observed FVC and largest observed FEV<sub>1.0</sub> shall be used in the analysis regardless of the curve(s) on which they occur.

(b) The following guidelines are recommended by NIOSH for the evaluation and management of workers

exposed to cotton dust. It is important to note that employees who show reductions in FEV<sub>1</sub>/FVC ratio below .75 or drops in Monday FEV<sub>1</sub> of 5 percent or greater on their initial screening exam, should be reevaluated within a month of the first exam. Those who show consistent decrease in lung function, as shown on the following table, should be managed as recommended.

**(4) QUALIFICATIONS OF PERSONNEL ADMINISTERING THE TEST.**

Technicians who perform pulmonary function testing should have the basic knowledge required to produce meaningful results. Training consisting of approximately 16 hours of formal instruction should cover the following areas.

(a) Basic physiology of the forced vital capacity maneuver and the determinants of airflow limitation with emphasis on the relation to reproducibility of results.

(b) Instrumentation requirements including calibration procedures, sources of error and their correction.

(c) Performance of the testing including subject coaching, recognition of improperly performed maneuvers and corrective actions.

(d) Data quality with emphasis on reproducibility.

(e) Actual use of the equipment under supervised conditions.

(f) Measurement of tracings and calculations of results. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-14607, filed 8/27/81.]

**WAC 296-62-200 Coke oven emissions.** Scope and application. This section applies to the control of employee exposure to coke oven emissions. [Order 77-14, § 296-62-200, filed 7/25/77.]

**WAC 296-62-20001 Definitions.** For the purpose of this section:

(1) "Authorized person." Any person specifically authorized by the employer whose duties require the person to enter a regulated area, or any person entering such an area as a designated representative of employees for the purpose of exercising the opportunity to observe monitoring and measuring procedures under WAC 296-62-20025.

(2) "Beehive oven." A coke oven in which the products of carbonization other than coke are not recovered, but are released into the ambient air.

(3) "Coke oven." A retort in which coke is produced by the destructive distillation or carbonization of coal.

(4) "Coke oven battery." A structure containing a number of slot-type coke ovens.

(5) "Coke oven emissions." The benzenesoluble fraction of total particulate matter present during the destructive distillation or carbonization of coal for the production of coke.

(6) "Director." The director of the department of labor and industries or his or her authorized representative.

(7) "Emergency." Any occurrence such as, but not limited to, equipment failure which is likely to, or does, result in any massive release of coke oven emissions.

(8) "Existing coke oven battery." A battery in operation or under construction on January 20, 1977, and which is not rehabilitated.

(9) "Rehabilitated coke oven battery." A battery which is rebuilt, overhauled, renovated, or restored such as from the pad up, after January 20, 1977.

(10) "Stage charging." A procedure by which a predetermined volume of coal in each larry car hopper is introduced into an oven such that no more than two hoppers are discharging simultaneously.

(11) "Sequential charging." A procedure, usually automatically timed, by which a predetermined volume of coal in each larry car hopper is introduced into an oven such that no more than two hoppers commence or finish discharging simultaneously although, at some point, all hoppers are discharging simultaneously.

(12) "Pipeline charging." Any apparatus used to introduce coal into an oven which uses a pipe or duct permanently mounted onto an oven and through which coal is charged.

(13) "Green push." Coke which when removed from the oven results in emissions due to the presence of unvolatilized coal. [Order 77-14, § 296-62-20001, filed 7/25/77.]

**WAC 296-62-20003 Permissible exposure limit.**

The employer shall assure that no employee is exposed to coke oven emissions at concentrations greater than 150 micrograms per cubic meter of air (150 ug/m<sup>3</sup>), averaged over any 8-hour period. [Order 77-14, § 296-62-20003, filed 7/25/77.]

**WAC 296-62-20005 Regulated areas.** (1) The employer shall establish regulated areas and shall limit access to them to authorized persons.

(2) The employer shall establish the following as regulated areas:

(a) The coke oven battery including topside and its machinery, pushside and its machinery, coke side and its machinery, and the battery ends; the wharf; and the screening station;

(b) The beehive oven and its machinery. [Order 77-14, § 296-62-20005, filed 7/25/77.]

**WAC 296-62-20007 Exposure monitoring and measurement.**

(1) Monitoring program. (a) Each employer who has a place of employment where coke oven emissions are present shall monitor employees employed in the regulated area to measure their exposure to coke oven emissions.

(b) The employer shall obtain measurements which are representative of each employee's exposure to coke oven emissions over an eight-hour period. All measurements shall determine exposure without regard to the use of respiratory protection.

(c) The employer shall collect full-shift (for at least seven continuous hours) personal samples, including at least one sample during each shift for each battery and each job classification within the regulated areas including at least the following job classifications:

(i) Lidman;

- (ii) Tar chaser;
- (iii) Larry car operator;
- (iv) Luterman;
- (v) Machine operator, coke side;
- (vi) Benchman, coke side;
- (vii) Benchman, pusher side;
- (viii) Heater;
- (ix) Quenching car operator;
- (x) Pusher machine operator;
- (xi) Screening station operator;
- (xii) Wharfman;
- (xiii) Oven patcher;
- (xiv) Oven repairman;
- (xv) Spellman; and
- (xvi) Maintenance personnel.

(d) The employer shall repeat the monitoring and measurements required by subsection (1) of this section at least every three months.

(2) Redetermination. Whenever there has been a production, process, or control change which may result in new or additional exposure to coke oven emissions, or whenever the employer has any other reason to suspect an increase in employee exposure, the employer shall repeat the monitoring and measurements required by subsection (1) of this section for those employees affected by such change or increase.

(3) Employee notification. (a) The employer shall notify each employee in writing of the exposure measurements which represent that employee's exposure within five working days after the receipt of the results of measurements required by subsection (1) and (2) of this section.

(b) Whenever such results indicate that the representative employee exposure exceeds the permissible exposure limit, the employer shall, in such notification, inform each employee of that fact and of the corrective action being taken to reduce exposure to or below the permissible exposure limit.

(4) Accuracy of measurement. The employer shall use a method of monitoring and measurement which has an accuracy (with a confidence level of 95%) of not less than plus or minus 35% for concentrations of coke oven emissions greater than or equal to 150 U<sub>g</sub>/m<sup>3</sup>. [Order 77-14, § 296-62-20007, filed 7/25/77.]

**WAC 296-62-20009 Methods of compliance.** The employer shall control employee exposure to coke oven emissions by the use of engineering controls, work practices and respiratory protection as follows:

(1) Priority of compliance methods. (a) Existing coke oven batteries. (i) The employer shall institute the engineering and work practice controls listed in subsections (2), (3) and (4) of this section in existing coke oven batteries at the earliest possible time, but not later than January 20, 1980, except to the extent that the employer can establish that such controls are not feasible. In determining the earliest possible time for institution of engineering and work practice controls, the requirement, effective August 27, 1971, to implement feasible administrative or engineering controls to reduce exposures to coal tar pitch volatiles, shall be considered. Wherever

the engineering and work practice controls which can be instituted are not sufficient to reduce employee exposures to or below the permissible exposure limit, the employer shall nonetheless use them to reduce exposures to the lowest level achievable by these controls and shall supplement them by the use of respiratory protection which complies with the requirements of WAC 296-62-20011.

(ii) The engineering and work practice controls required under subsection (2), (3) and (4) of this section are minimum requirements generally applicable to all existing coke oven batteries. If, after implementing all controls required by subsections (2), (3) and (4) of this section, or after January 20, 1980, whichever is sooner, employee exposures still exceed the permissible exposure limit, employers shall research, develop and implement any other engineering and work practice controls necessary to reduce exposure to or below the permissible exposure limit, whenever the engineering and work practice controls which can be instituted are not sufficient to reduce employee exposures to or below the permissible exposure limit, the employer shall nonetheless use them to reduce exposures to the lowest level achievable by these controls and shall supplement them by the use of respiratory protection which complies with the requirements of WAC 296-62-20011.

(b) New or rehabilitated coke oven batteries. The employer shall institute the best available engineering and work practice controls on all new or rehabilitated coke oven batteries to reduce and maintain employee exposures at or below the permissible exposure limit, except to the extent that the employer can establish that such controls are not feasible. Wherever the engineering and work practice controls which can be instituted are not sufficient to reduce employee exposures to or below the permissible exposure limit, the employer shall nonetheless use them to reduce exposures to the lowest level achievable by these controls and shall supplement them by the use of respiratory protection which complies with the requirements of WAC 296-62-20011.

(c) Beehive ovens. The employer shall institute engineering and work practice controls on all beehive ovens at the earliest possible time to reduce and maintain employee exposures at or below the permissible exposure limit, except to the extent that the employer can establish that such controls are not feasible. In determining the earliest possible time for institution of engineering and work practice controls, the requirement, effective August 27, 1971, to implement feasible administrative or engineering controls to reduce exposures to coal tar pitch volatiles, shall be considered. Wherever the engineering and work practice controls which can be instituted are not sufficient to reduce employee exposures to or below the permissible exposure limit, the employer shall nonetheless use them to reduce exposures to the lowest level achievable by these controls and shall supplement them by the use of respiratory protection which complies with the requirements of WAC 296-62-20011.

(2) Engineering controls. (a) Charging. The employer shall equip and operate existing coke oven batteries with

all of the following engineering controls to control coke oven emissions during charging operations:

(i) One of the following methods of charging:

(A) Stage charging as described in subsection (3)(a)(ii) of this section; or

(B) Sequential charging as described in subsection (3)(a)(ii) of this section except that subsection (3)(a)(ii) and (3)(d) of this section does not apply to sequential charging; or

(C) Pipeline charging or other forms of enclosed charging in accordance with subsection (2)(a) of this section, except subsections (2)(a)(ii), (iv), (v), (vi) and (viii) of this section do not apply.

(ii) Drafting from two or more points in the oven being charged, through the use of double collector mains, or a fixed or moveable jumper pipe system to another oven, to effectively remove the gases from the oven to the collector mains;

(iii) Aspiration systems designed and operated to provide sufficient negative pressure and flow volume to effectively move the gases evolved during charging into the collector mains, including sufficient steam pressure, and steam jets of sufficient diameter;

(iv) Mechanical volumetric controls on each larry car hopper to provide the proper amount of coal to be charged through each charging hole so that the tunnel head will be sufficient to permit the gases to move from the oven into the collector mains;

(v) Devices to facilitate the rapid and continuous flow of coal into the oven being charged, such as stainless steel liners, coal vibrators or pneumatic shells;

(vi) Individually operated larry car drop sleeves and slide gates designed and maintained so that the gases are effectively removed from the oven into the collector mains;

(vii) Mechanized gooseneck and standpipe cleaners;

(viii) Air seals on the pusher machine leveler bars to control air infiltration during charging; and

(ix) Roof carbon cutters or a compressed air system or both on the pusher machine rams to remove roof carbon.

(b) Coking. The employer shall equip and operate existing coke oven batteries with all of the following engineering controls to control coke oven emissions during coking operations:

(i) A pressure control system on each battery to obtain uniform collector main pressure;

(ii) Ready access to door repair facilities capable of prompt and efficient repair of doors, door sealing edges and all door parts;

(iii) An adequate number of spare doors available for replacement purposes;

(iv) Chuck door gaskets to control chuck door emissions until such door is repaired, or replaced; and

(v) Heat shields on door machines.

(3) Work practice controls. (a) Charging. The employer shall operate existing coke oven batteries with all of the following work practices to control coke oven emissions during the charging operation:

(i) Establishment and implementation of a detailed, written inspection and cleaning procedure for each battery consisting of at least the following elements:

(A) Prompt and effective repair or replacement of all engineering controls;

(B) Inspection and cleaning of goosenecks and standpipes prior to each charge to a specified minimum diameter sufficient to effectively move the evolved gases from the oven to the collector mains;

(C) Inspection for roof carbon build-up prior to each charge and removal of roof carbon as necessary to provide an adequate gas channel so that the gases are effectively moved from the oven into the collector mains;

(D) Inspection of the steam aspiration system prior to each charge so that sufficient pressure and volume is maintained to effectively move the gases from the oven to the collector mains;

(E) Inspection of steam nozzles and liquor sprays prior to each charge and cleaning as necessary so that the steam nozzles and liquor sprays are clean;

(F) Inspection of standpipe caps prior to each charge and cleaning and luting or both as necessary so that the gases are effectively moved from the oven to the collector mains; and

(G) Inspection of charging holes and lids for cracks, warpage and other defects prior to each charge and removal of carbon to prevent emissions, and application of luting material to standpipe and charging hole lids where necessary to obtain a proper seal.

(ii) Establishment and implementation of a detailed written charging procedure, designed and operated to eliminate emissions during charging for each battery, consisting of at least the following elements:

(A) Larry car hoppers filled with coal to a predetermined level in accordance with the mechanical volumetric controls required under subsection (2)(a)(iv) of this section so as to maintain a sufficient gas passage in the oven to be charged;

(B) The larry car aligned over the oven to be charged, so that the drop sleeves fit tightly over the charging holes; and

(C) The oven charged in accordance with the following sequence of requirements:

(aa) The aspiration system turned on;

(bb) Coal charged through the outermost hoppers, either individually or together, depending on the capacity of the aspiration system to collect the gases involved;

(cc) The charging holes used under subsection (3)(a)(ii), (3)(b) of this section relidded or otherwise sealed off to prevent leakage of coke oven emissions;

(dd) If four hoppers are used, the third hopper discharged and relidded or otherwise sealed off to prevent leakage of coke oven emissions;

(ee) The final hopper discharged until the gas channel at the top of the oven is blocked and then the chuck door opened and the coal leveled;

(ff) When the coal from the final hopper is discharged and the leveling operation complete, the charging hole relidded or otherwise sealed off to prevent leakage of coke oven emissions; and

(gg) The aspiration system turned off only after the charging holes have been closed.

(iii) Establishment and implementation of a detailed written charging procedure, designed and operated to eliminate emissions during charging of each pipeline or enclosed charged battery.

(b) Coking. The employer shall operate existing coke oven batteries pursuant to a detailed written procedure established and implemented for the control of coke oven emissions during coking, consisting of at least the following elements:

(i) Checking oven back pressure controls to maintain uniform pressure conditions in the collecting main;

(ii) Repair, replacement and adjustment of oven doors and check doors and replacement of door jambs so as to provide a continuous metal-to-metal fit;

(iii) Cleaning of oven doors, chuck doors and door jambs each coking cycle so as to provide an effective seal;

(iv) An inspection system and corrective action program to control door emissions to the maximum extent possible; and

(v) Luting of doors that are sealed by luting each coking cycle and reluting, replacing or adjusting as necessary to control leakage.

(c) Pushing. The employer shall operate existing coke oven batteries with the following work practices to control coke oven emissions during pushing operations:

(i) Coke and coal spillage quenched as soon as practicable and not shoveled into a heated oven; and

(ii) A detailed written procedure for each battery established and implemented for the control of emissions during pushing consisting of the following elements:

(A) Dampening off the ovens and removal of charging hole lids to effectively control coke oven emissions during the push;

(B) Heating of the coal charge uniformly for a sufficient period so as to obtain proper coking including preventing green pushes;

(C) Prevention of green pushes to the maximum extent possible;

(D) Inspection, adjustment and correction of heating flue temperatures and defective flues at least weekly and after any green push, so as to prevent green pushes;

(E) Cleaning of heating flues and related equipment to prevent green pushes, at least weekly and after any green push.

(d) Maintenance and repair. The employer shall operate existing coke oven batteries pursuant to a detailed written procedure of maintenance and repair established and implemented for the effective control of coke oven emissions consisting of the following elements:

(i) Regular inspection of all controls, including goose-necks, standpipes, standpipe caps, charging hole lids and castings, jumper pipes and air seals for cracks, misalignment or other defects and prompt implementation of the necessary repairs as soon as possible;

(ii) Maintaining the regulated area in a neat, orderly condition free of coal and coke spillage and debris;

(iii) Regular inspection of the damper system, aspiration system and collector main for cracks or leakage, and prompt implementation of the necessary repairs;

(iv) Regular inspection of the heating system and prompt implementation of the necessary repairs;

(v) Prevention of miscellaneous fugitive topside emissions;

(vi) Regular inspection and patching of over brickwork;

(vii) Maintenance of battery equipment and controls in good working order;

(viii) Maintenance and repair of coke oven doors, chuck doors, door jambs and seals; and

(ix) Repairs instituted and completed as soon as possible, including temporary repair measures instituted and completed where necessary, including but not limited to:

(A) Prevention of miscellaneous fugitive topside emissions; and

(B) Chuck door gaskets, which shall be installed prior to the start of the next coking cycle.

(4) Filtered air. (a) The employer shall provide positive-pressure, temperature controlled filtered air for larry car, pusher machine, door machine, and quench car cabs.

(b) The employer shall provide standby pulpits on the battery topside, at the wharf, and at the screening station, equipped with positive-pressure, temperature controlled filtered air.

(5) Emergencies. Whenever an emergency occurs, the next coking cycle may not begin until the cause of the emergency is determined and corrected, unless the employer can establish that it is necessary to initiate the next coking cycle in order to determine the cause of the emergency.

(6) Compliance program. (a) Each employer shall establish and implement a written program to reduce exposures solely by means of the engineering and work practice controls specified in subsections (2) through (4) of this section.

(b) The written program shall include at least the following:

(i) A description of each coke oven operation by battery, including work force and operating crew, coking time, operating procedures and maintenance practices;

(ii) Engineering plans and other studies used to determine the controls for the coke battery;

(iii) A report of the technology considered in meeting the permissible exposure limit;

(iv) Monitoring data obtained in accordance with WAC 296-62-20007.

(v) A detailed schedule for the implementation of the engineering and work practice controls specified in subsections (2) through (4) of this section; and

(vi) Other relevant information.

(c) If, after implementing all controls required by subsections (2)-(4) of this section, or after January 20, 1980, whichever is sooner, the permissible exposure limit is still exceeded, the employer shall develop a detailed written program and schedule for the development and implementation of any additional engineering controls

and work practices necessary to reduce exposure to or below the permissible exposure limit.

(d) Written plans for such programs shall be submitted, upon request, to the Director, and shall be available at the worksite for examination and copying by the Director, and the authorized employee representative. The plans required under subsection (6) of this section shall be revised and updated at least every six months to reflect the current status of the program.

(7) Training in compliance procedures. The employer shall incorporate all written procedures and schedules required under this section in the education and training program required under WAC 296-62-20019 and, where appropriate, post in the regulated area. [Order 77-14, § 296-62-20009, filed 7/25/77.]

**WAC 296-62-20011 Respiratory protection. (1) General.**

(a) Where respiratory protection is required under this section, the employer shall provide and assure the use of respirators which comply with the requirements of this section. Compliance with the permissible limit exposure may not be achieved by the use of respirators except:

(i) During the time period necessary to install or implement feasible engineering and work practice controls; or

(ii) In work operations such as maintenance and repair activity in which engineering and work practice controls are technologically not feasible; or

(iii) In work situations where feasible engineering and work practice controls are not yet sufficient to reduce exposure to or below the permissible exposure limit; or

(iv) In emergencies.

(b) Notwithstanding any other requirement of this section, until January 20, 1978, the wearing of respirators shall be at the discretion of each employee where the employee is not in the vicinity of visible emissions.

**(2) Selection.**

(a) Where respirators are required under this section, the employer shall select, provide and assure the use of the appropriate respirator or combination of respirators from Table I below.

**TABLE I**

**RESPIRATORY PROTECTION FOR COKE OVEN EMISSIONS**

Airborne concentration of coke oven emissions	Required respirator
(i) Any concentration.	(A) A Type C supplied air respirator operated in pressure demand or other positive pressure or continuous flow mode; or (B) A powered air-purifying particulate filter respirator for dust, mist, and fume; or (C) A powered air-purifying particulate filter respirator combination chemical cartridge

**TABLE I**

**RESPIRATORY PROTECTION FOR COKE OVEN EMISSIONS**

Airborne concentration of coke oven emissions	Required respirator
(ii) Concentrations not greater than 1500 $\mu\text{g}/\text{m}^3$ .	and particulate filter respirator for coke oven emissions. (A) Any particulate filter respirator for dust, mist and fume, except single-use respirator; or (B) Any particulate filter respirator or combination chemical cartridge and particulate filter respirator for coke oven emissions; or (C) Any respirator listed in subsection (2)(a)(i) of this section.

(b) Not later than January 20, 1978, whenever respirators are required by this section for concentrations not greater than 1500  $\mu\text{g}/\text{m}^3$ , the employer shall provide, at the option of each affected employee, either a particulate filter respirator as provided in subsection (2)(a)(ii) of this section, or a powered air purifying respirator as provided in subsection (2)(a)(i) of this section.

(c) The employer shall select respirators from among those approved for protection against dust, fume, and mist by the National Institute for Occupational Safety and Health (NIOSH) under the provisions of 30 CFR Part 11, except that not later than January 20, 1979, the employer shall select respirators from among those approved by NIOSH for protection against coke oven emissions.

(3) Respirator program. The employer shall institute a respiratory protection program in accordance with WAC 296-62-071.

**(4) Respirator usage.**

(a) The employer shall assure that the respirator issued to the employee exhibits minimum facepiece leakage and that the respirator is fitted properly. The employer shall perform quantitative fit tests annually for each employee who uses a nonpowered, particulate filter respirator.

(b) The employer shall allow each employee who uses a filter respirator to change the filter elements whenever an increase in breathing resistance is detected and shall maintain an adequate supply of filter elements for this purpose.

(c) The employer shall allow employees who wear respirators to wash their face and respirator facepiece to prevent skin irritation associated with respirator use. [Statutory Authority: 49.17.040, 49.17.050, and 49.17.240. 81-16-015 (Order 81-20), § 296-62-20011, filed 7/27/81; Order 77-14, § 296-62-20011, filed 7/25/77.]

**WAC 296-62-20013 Protective clothing and equipment. (1) Provision and Use.** The employer shall provide

and assure the use of appropriate protective clothing and equipment, such as but not limited to:

- (a) Flame resistant jacket and pants;
- (b) Flame resistant gloves;
- (c) Face shields or vented goggles which comply with WAC 296-24-078;
- (d) Footwear providing insulation from hot surfaces;
- (e) Safety shoes which comply with WAC 296-24-088; and
- (f) Protective helmets which comply with WAC 296-24-084.

(2) **Cleaning and Replacement.** (a) The employer shall provide the protective clothing required by subsection (1)(a) and (b) of this section in a clean and dry condition at least weekly.

(b) The employer shall clean, launder, or dispose of protective clothing required by subsections (1)(a) and (b) of this section.

(c) The employer shall repair or replace the protective clothing and equipment as needed to maintain their effectiveness.

(d) The employer shall assure that all protective clothing is removed at the completion of a work shift only in change rooms prescribed in WAC 296-62-20015.

(e) The employer shall assure that contaminated protective clothing which is to be cleaned, laundered, or disposed of, is placed in a closed container in the changeroom.

(f) The employer shall inform any person who cleans or launders protective clothing required by this section, of the potentially harmful effects of exposure to coke oven emissions. [Order 77-14, § 296-62-20013, filed 7/25/77.]

**WAC 296-62-20015 Hygiene facilities and practices.** (1) **Change rooms.** The employer shall provide clean change rooms equipped with storage facilities for street clothes and separate storage facilities for protective clothing and equipment whenever employees are required to wear protective clothing and equipment in accordance with WAC 296-62-20013.

(2) **Showers.** (a) The employer shall assure that employees working in the regulated area shower at the end of the work shift.

(b) The employer shall provide shower facilities in accordance with WAC 296-24-12009.

(3) **Lunchrooms.** The employer shall provide lunchroom facilities which have a temperature controlled, positive pressure, filtered air supply, and which are readily accessible to employees working in the regulated area.

(4) **Lavatories.** (a) The employer shall assure that employees working in the regulated area wash their hands and face prior to eating.

(b) The employer shall provide lavatory facilities in accordance with WAC 296-24-12007.

(5) **Prohibition of activities in the regulated area.**

(a) The employer shall assure that in the regulated area, food or beverages are not present or consumed, smoking products are not present or used, and cosmetics

are not applied, except, that these activities may be conducted in the lunchrooms, change rooms and showers required under subsection (1)-(3) of this section.

(b) Drinking water may be consumed in the regulated area. [Order 77-14, § 296-62-20015, filed 7/25/77.]

**WAC 296-62-20017 Medical surveillance.** (1) **General requirements.** (a) Each employer shall institute a medical surveillance program for all employees who are employed in the regulated areas at least 30 days per year.

(b) This program shall provide each employee covered under subsection (1)(a) of this section with an opportunity for medical examinations in accordance with this section.

(c) The employer shall inform any employee who refuses any required medical examination of the possible health consequences of such refusal and shall obtain a signed statement from the employee indicating that the employee understands the risk involved in the refusal to be examined.

(d) The employer shall assure that all medical examinations and procedures are performed by or under the supervision of a licensed physician, and are provided without cost to the employee.

(2) **Initial examinations.** At the time of initial assignment to a regulated area or upon the institution of the medical surveillance program, the employer shall provide a medical examination including at least the following elements:

(a) A work history and medical history which shall include smoking history and the presence and degree of respiratory symptoms, such as breathlessness, cough, sputum production, and wheezing;

(b) A 14" x 17" posterior-anterior chest x-ray and International Labour Office UICC/Cincinnati (ILO U/C) rating;

(c) Pulmonary function tests including forced vital capacity (FVC) and forced expiratory volume at one second (FEV 1.0) with recording of type of equipment used;

(d) Weight;

(e) A skin examination;

(f) Urinalysis for sugar, albumin, and hematuria;

(g) A sputum cytology examination; and

(h) A urinary cytology examination.

(3) **Periodic examinations.** (a) The employer shall provide the examinations specified in subsections (2)(a)-(f) of this section at least annually for employees covered under subsection (1)(a) of this section.

(b) The employer shall provide the examinations specified in subsection (2)(a)-(h) of this section at least semi-annually for employees 45 years of age or older or with five or more years employment in the regulated area.

(c) Whenever an employee who is 45 years of age or older or with five or more years employment in the regulated area transfers or is transferred from employment in a regulated area, the employer shall continue to provide the examinations specified in subsections (2)(a)-(h)

of this section semi-annually, as long as that employee is employed by the same employer or a successor employer.

(d) Whenever an employee has not taken the examination specified in subsections (3)(a)-(c) of this section within the six months preceding the termination of employment, the employer shall provide such examinations to the employee upon termination of employment.

(4) Information provided to the physician. The employer shall provide the following information to the examining physician:

(a) A copy of this regulation and its Appendixes;

(b) A description of the affected employee's duties as they relate to the employee's exposure;

(c) The employee's exposure level or anticipated exposure level;

(d) A description of any personal protective equipment used or to be used; and

(e) Information from previous medical examinations of the affected employee which is not readily available to the examining physician.

(5) Physician's written opinion. (a) The employer shall obtain a written opinion from the examining physician which shall include:

(i) The results of the medical examinations;

(ii) The physician's opinion as to whether the employee has any detected medical conditions which would place the employee at increased risk of material impairment of the employee's health from exposure to coke oven emissions;

(iii) Any recommended limitations upon the employee's exposure to coke oven emissions or upon the use of protective clothing or equipment such as respirators; and

(iv) A statement that the employee has been informed by the physician of the results of the medical examination and any medical conditions which require further explanation or treatment.

(b) The employer shall instruct the physician not to reveal in the written opinion specific findings or diagnoses unrelated to occupational exposure.

(c) The employer shall provide a copy of the written opinion to the affected employee. [Order 77-14, § 296-62-20017, filed 7/25/77.]

**WAC 296-62-20019 Employee information and training.** (1) Training program. (a) The employer shall institute a training program for employees who are employed in the regulated area and shall assure their participation.

(b) The training program shall be provided as of January 20, 1977, for employees who are employed in the regulated area at that time or at the time of initial assignment to a regulated area.

(c) The training program shall be provided at least annually for all employees who are employed in the regulated area, except that training regarding the occupational safety and health hazards associated with exposure to coke oven emissions and the purpose, proper use, and limitations of respiratory protective devices shall be provided at least quarterly until January 20, 1978.

(d) The training program shall include informing each employee of:

(i) The information contained in the substance information sheet for coke oven emissions (Appendix A);

(ii) The purpose, proper use, and limitations of respiratory protective devices required in accordance with WAC 296-62-20011.

(iii) The purpose for and a description of the medical surveillance program required by WAC 296-62-20017 including information on the occupational safety and health hazards associated with exposure to coke oven emissions;

(iv) A review of all written procedures and schedules required under WAC 296-62-20009; and

(v) A review of this standard.

(2) Access to training materials. (a) The employer shall make a copy of this standard and its appendixes readily available to all employees who are employed in the regulated area.

(b) The employer shall provide all materials relating to the employee information and training program to the director. [Order 77-14, § 296-62-20019, filed 7/25/77.]

**WAC 296-62-20021 Precautionary signs and labels.**

(1) General. (a) The employer may use labels or signs required by other statutes, regulations or ordinances in addition to, or in combination with, signs and labels required by this section.

(b) The employer shall assure that no statement appears on or near any sign required by this section which contradicts or detracts from the effects of the required sign.

(c) The employer shall assure that signs required by this section are illuminated and cleaned as necessary so that the legend is readily visible.

(2) Signs. (a) The employer shall post signs in the regulated area bearing the legends:

DANGER

CANCER HAZARD

AUTHORIZED PERSONNEL ONLY

NO SMOKING OR EATING

(b) In addition, not later than January 20, 1978, the employer shall post signs in the areas where the permissible exposure limit is exceeded bearing the legend:

RESPIRATOR REQUIRED

(3) Labels. The employer shall apply precautionary labels to all containers of protective clothing contaminated with coke oven emissions. The label shall bear the following legend:

CAUTION

CLOTHING CONTAMINATED WITH COKE

EMISSIONS

DO NOT REMOVE DUST BY BLOWING OR SHAKING

[Order 77-14, § 296-62-20021, filed 7/25/77.]

**WAC 296-62-20023 Recordkeeping.** (1) Exposure measurements. The employer shall establish and maintain an accurate record of all measurements taken to monitor employee exposure to coke oven emissions required in WAC 296-62-20007.

(a) This record shall include:

(i) Name, social security number, and job classification of the employees monitored;

(ii) The date(s), number, duration and results of each of the samples taken, including a description of the sampling procedure used to determine representative employee exposure where applicable;

(iii) The type of respiratory protective devices worn, if any;

(iv) A description of the sampling and analytical methods used and evidence of their accuracy; and

(v) The environment variables that could affect the measurement of employee exposure.

(b) The employer shall maintain this record for at least 40 years or for the duration of employment plus 20 years, whichever is longer.

(2) Medical surveillance. The employer shall establish and maintain an accurate record for each employee subject to medical surveillance as required by WAC 296-62-20017.

(a) The record shall include:

(i) The name, social security number, and description of duties of the employee;

(ii) A copy of the physician's written opinion;

(iii) The signed statement of any refusal to take a medical examination under WAC 296-62-20017; and

(iv) Any employee medical complaints related to exposure to coke oven emissions.

(b) The employer shall keep, or assure that the examining physician keeps, the following medical records:

(i) A copy of the medical examination results including medical and work history required under WAC 296-62-20017;

(ii) A description of the laboratory procedures used and a copy of any standards or guidelines used to interpret the test results;

(iii) The initial x-ray;

(iv) The x-rays for the most recent 5 years;

(v) Any x-ray with a demonstrated abnormality and all subsequent x-rays;

(vi) The initial cytologic examination slide and written description;

(vii) The cytologic examination slide and written description for the most recent 10 years; and

(viii) Any cytologic examination slides with demonstrated atypia, if such atypia persists for 3 years, and all subsequent slides and written descriptions.

(c) The employer shall maintain medical records required under subsection (2) of this section for at least 40 years, or for the duration of employment plus 20 years, whichever is longer.

(3) Availability. (a) The employer shall make available upon request all records required to be maintained by this section to the director for examination and copying.

(b) Employee exposure measurement records and employee medical records required by this subsection shall be provided upon request to employees, designated representatives, and the assistant director in accordance with WAC 296-62-05201 through 296-62-05209 and 296-62-05213 through 296-62-05217.

(c) The employer shall make available upon request employee medical records required to be maintained by subsection (2) of this section to a physician designated by the affected employee or former employee.

(4) Transfer of records. (a) Whenever the employer ceases to do business, the successor employer shall receive and retain all records required to be maintained by this section.

(b) Whenever the employer ceases to do business and there is no successor employer to receive and retain the records for the prescribed period, these records shall be transmitted by registered mail to the director.

(c) At the expiration of the retention period for the records required to be maintained under subsections (1) and (2) of this section, the employer shall transmit these records by registered mail to the director or shall continue to retain such records.

(d) The employer shall also comply with any additional requirements involving transfer of records set forth in WAC 296-62-05215. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-20023, filed 8/27/81; Order 77-14, § 296-62-20023, filed 7/25/77.]

**WAC 296-62-20025 Observation of monitoring.** (1) Employee observation. The employer shall provide affected employees or their representatives an opportunity to observe any measuring or monitoring of employee exposure to coke oven emissions conducted pursuant to WAC 296-62-20007.

(2) Observation procedures. (a) Whenever observation of the measuring or monitoring of employee exposure to coke oven emissions requires entry into an area where the use of protective clothing or equipment is required, the employer shall provide the observer with and assure the use of such equipment and shall require the observer to comply with all other applicable safety and health procedures.

(b) Without interfering with the measurement, observers shall be entitled to:

(i) An explanation of the measurement procedures;

(ii) Observe all steps related to the measurement of coke oven emissions performed at the place of exposure; and

(iii) Record the results obtained. [Order 77-14, § 296-62-20025, filed 7/25/77.]

**WAC 296-62-20027 Appendix A--Coke oven emissions substance information sheet.**

#### APPENDIX A

#### COKE OVEN EMISSIONS SUBSTANCE INFORMATION SHEET

#### I. SUBSTANCE IDENTIFICATION

- (1) Substance: Coke oven emissions
- (2) Definition: The benzene-soluble fraction of total particulate matter present during the destructive distillation or carbonization of coal for the production of coke.
- (3) Permissible exposure limit: 150 micrograms per cubic meter of air determined as an average over an 8-hour period.
- (4) Regulated areas: Only employees authorized by your employer should enter a regulated area. The employer is required to designate the following areas as regulated areas: the coke oven battery, including topside and its machinery, pushside and its machinery, and the screening station; and the wharf, the beehive ovens and machinery.

## II. HEALTH HAZARD DATA

Exposure to coke oven emissions is a cause of lung cancer, and possibly kidney cancer, in humans. Although it does not have an excess number of skin cancer cases in humans, repeated skin contact with coke oven emissions should be avoided.

## III. PROTECTIVE CLOTHING AND EQUIPMENT

- (1) Respirators: Respirators will be provided by your employer for routine use if your employer is in the process of implementing engineering and work practice controls or where engineering and work practice controls are not feasible or insufficient. You must wear respirators for nonroutine activities or in emergency situations where you are likely to be exposed to levels of coke oven emissions in excess of the permissible exposure limit. Until January 20, 1978, the routine wearing of respirators is voluntary. Until that date, if you choose not to wear a respirator you do not have to do so. You must still have your respirator with you and you must still wear it if you are near visible emissions. Since how well your respirator fits your face is very important, your employer is required to conduct fit tests to make sure the respirator seals properly when you wear it. These tests are simple and rapid and will be explained to you during your training sessions.
- (2) Protective clothing: Your employer is required to provide, and you must wear, appropriate, clean, protective clothing and equipment to protect your body from repeated skin contact with coke oven emissions and from the heat generated during the coking process. This clothing should include such items as jacket and pants and flame resistant gloves. Protective equipment should include face shield or vented goggles, protective helmets and safety shoes, insulated from hot surfaces where appropriate.

## IV. HYGIENE FACILITIES AND PRACTICES

You must not eat, drink, smoke, chew gum or tobacco, or apply cosmetics in the regulated area, except that drinking water is permitted. Your employer is required to provide lunchrooms and other areas for these purposes.

Your employer is required to provide showers, washing facilities, and change rooms. If you work in a regulated area, you must wash your face, and hands before eating. You must shower at the end of the work shift. Do not take used protective clothing out of the change rooms without your employer's permission. Your employer is required to provide for laundering or cleaning of your protective clothing.

## V. SIGNS AND LABELS

Your employer is required to post warning signs and labels for your protection. Signs must be posted in regulated areas. The signs must warn that a cancer hazard is present, that only authorized employees may enter the area, and that no smoking or eating is allowed. In regulated areas where coke oven emissions are above the permissible exposure limit, the signs should also warn that respirators must be worn.

## VI. MEDICAL EXAMINATIONS

If you work in a regulated area at least 30 days per year, your employer is required to provide you with a medical examination every year. The medical examination must include a medical history, a chest x-ray; pulmonary function test; weight comparison; skin examination; a urinalysis and a urine and sputum cytology exam for the early detection of urinary or lung cancer. The cytology exams are only included in the initial exam until you are either 45 years or older or have 5 or more years employment in the regulated areas when the medical exams including these tests are to be given every 6 months. The examining physician will provide a written opinion to your employer containing the results of the medical exams. You should also receive a copy of this opinion.

## VII. OBSERVATION OF MONITORING

Your employer is required to monitor your exposure to coke oven emissions and you are entitled to observe the monitoring procedure. You are entitled to receive an explanation of the measurement procedure, observe the steps taken in the measurement procedure, and to record the results obtained. When the monitoring procedure is taking place in an area where respirators or personal protective clothing and equipment are required to be worn, you must also be provided with and must wear the protective clothing and equipment.

## VIII. ACCESS TO RECORDS

You or your representative are entitled to records of your exposure to coke oven emissions upon request to your employer. Your medical examination records can

be furnished to your physician upon request to your employer.

#### IX. TRAINING AND EDUCATION

Additional information on all of these items plus training as to hazards of coke oven emissions and the engineering and work practice controls associated with your job will also be provided by your employer. [Order 77-14, Appendix A (codified as WAC 296-62-20027), filed 7/25/77.]

**WAC 296-62-20029 Appendix B--Industrial hygiene and medical surveillance guidelines.**

#### APPENDIX B

#### INDUSTRIAL HYGIENE AND MEDICAL SURVEILLANCE GUIDELINES

##### I. INDUSTRIAL HYGIENE GUIDELINES

- (1) Sampling. (Benzene-Soluble Fraction Total Particulate Matter).

Samples collected should be full shift (8-hour) samples. Sampling should be done using a personal sampling pump with pulsation damper at a flow rate of 2 liters per minute. Samples should be collected on 0.8 micrometer pore size silver membrane filters (37 mm diameter) preceded by Gelman glass fiber type A filters encased in three-piece plastic (polystyrene) field monitor cassettes. The cassette face cap should be on and the plug removed. The rotameter should be checked every hour to ensure that proper flow rates are maintained.

A minimum of three full-shift samples should be collected for each job classification on each battery, at least one during and the night. If disparate results are obtained for particular job classification, sampling should be repeated. It is advisable to sample each shift on more than one day to account for environmental variables (wind, precipitation, etc.) which may affect sampling. Differences in exposures among different work shifts may indicate a need to improve work practices on a particular shift. Sampling results from different shifts for each job classification should not be averaged. Multiple samples from same shift may be used to calculate an average exposure for a particular job classification.

- (2) Analysis.

(a) All extraction glassware is cleaned with dichromic acid cleaning solution, rinsed with tap water, then dionized water, acetone, and allowed to dry completely. The glassware is rinsed with nanograde benzene before use. The Teflon cups are cleaned with benzene then with acetone.

(b) Pre-weigh the 2 ml Perkin-Elmer Teflon cups to one hundredth of a milligram on a Perkin-Elmer autobalance AD 2 Tare weight of the cups is about 50 mg.

(c) Place the silver membrane filter and glass fiber filter into a 15 ml test tube.

(d) Extract with 5 ml of benzene for five minutes in an ultrasonic cleaner.

(e) Filter the extract in 15 ml medium glass fritted funnels.

(f) Rinse test tube and filters with two 1.5 ml aliquots of benzene and filter through the fritted glass funnel.

(g) Collect the extract and two rinses in a 10 ml Kontes graduated evaporative concentrator.

(h) Evaporate down to a 1 ml while rinsing the sides with benzene.

(i) Pipet 0.5 ml into the Teflon cup and evaporate to dryness in a vacuum oven at 40° C for 3 hours.

(j) Weight the Teflon cup and the weight gain is due to the benzene soluble residue in half the Sample.

##### II. MEDICAL SURVEILLANCE GUIDELINES

- (1) General.

The minimum requirements for the medical examination for coke oven workers are given in WAC 296-62-20017.

The initial examination is to be provided to all coke oven workers at the time of the initial assignment to a job in the regulated area. The examination includes a 14" x 17" posterior-anterior chest x-ray and a ILO/UC rating to assure some standardization of x-ray reading, pulmonary function tests (FVC and FEV 1.0), weight, urinalysis, skin examination and a sputum and urinary cytologic examination. These tests are to serve as the baseline for comparing the employee's future test results. Periodic exams include all the elements of the initial exams except that the cytologic tests are to be performed only on those employees who are 45 years of age or older or who have worked for 5 or more years in the regulated area; periodic exams are to be performed semi-annually for this group instead of annually. The examination contents are minimum requirements, additional tests such as lateral and oblique x-rays or additional pulmonary function tests may be performed if deemed necessary.

- (2) Pulmonary function tests.

Pulmonary function tests should be performed in a manner which minimizes subject and operator bias. There has been shown to be learning effects with regard to the results obtained from certain tests, such as FEV 1.0. Best results can be obtained by multiple trials for each subject. The best of three trials or the average of the last three of five trials may be used in obtaining reliable results. The type of equipment used (manufacturer, model, etc.) should be recorded with the results as reliability and accuracy varies and such information may be important in the evaluation of test results. Care should be exercised to obtain the best possible testing equipment.

(3) Sputum cytology.  
Sputum can be collected by aerosol inhalation during the medical exam or by spontaneous early morning cough at home. Sputum is induced by transoral inhalation of an aerosolized solution of eight per cent sodium chloride in water. After inhaling as few as three to five breaths the subject usually yields an adequate sputum specimen. A minimum of three samples should be collected by the subject at home. All sputum should be collected directly into sixty percent alcohol.

Scientific evidence suggests that chest x-rays and sputum cytology should be used together as screening tests for lung cancer in high risk populations, such as coke oven workers. The tests are to be performed every six months on workers who are 45 years of age or older or have worked in the regulated area for 5 or more years. Since the tests seem to be complementary, it may be advantageous to alternate the test procedures. For instance, chest x-rays could be obtained in June and December and sputum cytologies could be obtained in March and September. Facilities for providing necessary diagnostic investigation should be readily available as well as chest physicians, surgeons, radiologists, pathologists, and immunotherapists to provide any necessary treatment services.

[Order 77-14, Appendix B (codified as WAC 296-62-20029), filed 7/25/77.]

### Chapter 296-64 WAC

#### SAFETY STANDARDS—OCCUPATIONAL DISEASES

##### WAC

##### STANDARDS RELATING TO PRECAUTIONARY LABELING OF HAZARDOUS SUBSTANCES USED IN PLACES OF EMPLOYMENT

296-64-400	Purpose and scope.
296-64-405	Definitions.
296-64-410	General requirements.
296-64-415	General labeling requirements and attached appendices.
296-64-420	Container handling and storage.
296-64-425	Exemptions.

##### DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER

296-64-001	Preface. [Preface, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-002	Introduction. [Introduction, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-005	Foreword. [Foreword, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-010	Safety standards relating to dusts, fumes, vapors and gases in industry—Application. [Standard 1, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-020	Definitions. [Standard 2, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.

296-64-030	Control of atmospheric contaminants. [Standard 3, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-031	Threshold limit values. [Appendix 1, filed 3/23/60.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-040	Specifications of air requirements per worker in industrial plants. [Standard 4, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-050	Local exhaust ventilation. [Standard 5, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-060	Personal protective equipment. [Standard 6, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-070	Substitution of nonhazardous equipment, material or process. [Standard 7, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-080	Dust allaying media. [Standard 8, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-090	Isolation of hazardous operations. [Standard 9, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-100	Sanitation and cleanliness. [Standard 10, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-110	Rubber boots. [Standard 11, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-120	Applying paint by the spray method in fixed finishing shops. [Spray paint in fixed finishing shops rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-130	Galvanizing. [Galvanizing rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-140	Workmen exposed to silicosis. [Exposure to silicosis rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-150	Plywood manufacturing—Men handling glue (core) sections. [Plywood—glue (core) section rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-160	Auto repair and internal combustion engine adjusting plants. [Auto repair and internal combustion engine adjusting plant rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-170	Applying paint by the method of the spray, other than in fixed finishing shops. [Spray paint rules (other than in fixed finishing shops), effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-180	Wool weaving. [Wool weaving rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-190	Sea foods—Fresh and canning industry employees. [Sea food rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-200	Paint and kalsomine manufacturing and handling. [Paint and kalsomine manufacturing and handling rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-210	Handling and emptying of sacks or barrels containing dry kalsomine, cement, sand—blasting sand and other like material except in manufacturing plants. [Paint and kalsomine sack and barrel rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-220	Shingle manufacturing. [Shingle manufacturing rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
296-64-230	Compressed air chambers, hard rock workers—Soft earth tunnels and open cuts. [Compressed air, hard rock, soft earth tunnels, and open cut rules, effective

- 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
- 296-64-240 Electric and gas torch workers. [Electric and gas torch rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
- 296-64-250 Battery manufacturing and rebuilding. [Battery manufacturing and rebuilding rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
- 296-64-260 Power propelled trucks operated within buildings. [Power propelled truck rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
- 296-64-270 Polishing, grinding and buffing machine operators. [Polishing, grinding, and buffing rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
- 296-64-280 Plating and removal of plating, including acid dips. [Plating and stripping rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
- 296-64-290 Dry cleaning by use of any solvent, producing fumes, gases or vapors injurious to health, including, but not limiting the same to, carbon tetrachloride, trichloroethylene, perchloroethylene and their sequel. [Dry cleaning rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.
- 296-64-300 Lumber and timber treated with arsenic compounds and the handling thereof. [Arsenic treated lumber rules, effective 10/1/38.] Repealed by Order 70-8 (part), filed 7/31/70, effective 9/1/70.

#### STANDARDS RELATING TO PRECAUTIONARY LABELING OF HAZARDOUS SUBSTANCES USED IN PLACES OF EMPLOYMENT

**WAC 296-64-400 Purpose and scope.** (1) The purposes of these standards are to provide reasonable requirements for the protection of the health and safety of employed persons, to provide the labeling requirements similar to or uniform with those of other states at industrial level. These purposes are accomplished herein by:

- (a) Proper identification of containers of hazardous substances
- (b) Adequate warning of the hazards of these substances
- (c) Sufficient information of precautions to be exercised

(2) The scope of these standards is to provide warning label requirements for containers holding substances capable, under the definitions set forth herein, of producing a health, fire or explosion hazard when such substances are used in any place of employment governed under the Washington industrial insurance and medical aid act. These standards shall be supplementary to any applicable regulations as promulgated by any other Washington state or federal agency. [Standard I, effective 12/1/62.]

**WAC 296-64-405 Definitions.** (1) "Approved" - shall mean approved by the director of the department of labor and industries or his authorized representative.

(2) "Department" - shall mean the Washington state department of labor and industries.

(3) "Division" - shall mean the division of safety of the department.

(4) "Section" - shall mean the industrial hygiene section of the division.

(5) "Supervisor" - shall mean the supervisor of the division.

(6) "Shall" - where used, shall mean a mandatory requirement.

(7) "Should" - where used, shall mean the recommended practice recognized as satisfactory by the division.

(8) "Singular-plural" - the singular shall mean the plural and the plural the singular.

(9) "Adequate or effective" - shall mean the satisfactory conditions subject to the determination by the supervisor.

(10) "Combustible liquid" - any liquid which gives off flammable vapors, above 80°F. to and including 120°F. as determined by flash point with Tagliabue's open cup method as used for testing of burning oils.

(11) "Container" - an individual package such as, but not limited to, a bag, barrel, bottle, box, can, carboy, cylinder, drum, or tube that is used to store or dispense a hazardous substance. A container shall not include tank trucks, tank cars, pipe lines or equipment used to hold or convey hazardous substances during transportation or during the process of manufacture.

(12) "Corrosive (physiological)" - a substance which in contact with living tissue causes destruction of the tissue by chemical action. This term shall not refer to action on inanimate surfaces.

(13) "Dust" - solid particles suspended in air generated by handling, crushing, grinding, rapid impact, detonation, or decrepitation of organic or inorganic materials such as, rock, ore, metal, coal, wood, grain, etc. Dusts do not diffuse in air but settle under the influence of gravity.

(14) "Extremely flammable liquid" - any liquid which gives off flammable vapors, at or below a temperature of 20°F. as determined by flash point with Tagliabue's open cup method as used for testing of burning oils.

(15) "Flammable liquid" - any liquid which gives off flammable vapors, above 20°F. to and including 80°F. as determined by flash point with Tagliabue's open cup method as used for testing of burning oils.

(16) "Fume" - solid particles suspended in air generated by condensation from the gaseous state, generally after volatilization from molten metals, etc., and often accompanied by a chemical reaction such as oxidation. Fumes flocculate and sometimes coalesce.

(17) "Gas" - a normally formless fluid which occupies the space of enclosure and which can be changed to the liquid or solid state by the effect of increased pressure or decreased temperature or both. A gas diffuses.

(18) "Hazardous substance" - any substance or mixture of substances which is toxic, corrosive, an irritant, flammable, extremely flammable or generates pressure through decomposition, heat, or other means, if such substance or mixture of substances may cause substantial (as medically interpreted) personal injury or illness during or as a direct result of any customary or reasonably anticipated handling or use. Hazardous substances

shall not include liquefied petroleum gases stored or used as fuels.

(19) "Irritant (physiological)" – any substance which on immediate, prolonged, or repeated contact with normal living tissue will induce a local inflammatory reaction.

(20) "Mist" – liquid droplets suspended in air generated by condensation from the gaseous to the liquid state or by breaking up a liquid into a dispersed state, such as by splashing, foaming or atomizing.

(21) "Mixture" – a physical commingling of two or more substances which may not bear a fixed proportion to one another and which have not reacted chemically with one another.

(22) "Oxidizing material" – a substance that stimulates the oxidation or combustion of organic or inorganic matter.

(23) "Poison" – any substance or mixture of substances which falls within any of the following categories:

(a) Produces death within fourteen days in half or more than half of a group of ten or more laboratory white rats each weighing between two hundred and three hundred grams, at a single dose of fifty milligrams or less per kilogram of body weight, when orally administered, or

(b) Produces death within fourteen days in half or more than half of a group of ten or more laboratory white rats each weighing two hundred to three hundred grams, when inhaled continuously for a period of one hour or less at an atmospheric concentration of two hundred parts per million or less by volume of gas or vapor or two milligrams or less per liter of mist, fume or dust, provided such concentration is likely to be encountered by man when substances are used in any reasonable foreseeable manner, or

(c) Produces death within fourteen days in half or more than half of a group of ten or more rabbits tested in a dosage of two hundred milligrams or less per kilogram of body weight, when administered by continuous contact with the bare skin for twenty-four hours or less.

(d) If available data on human experience with any substance in the above named concentrations indicate results different from those obtained on animals, the human data shall take precedence.

(24) "Toxic substance" – a substance which has the inherent capacity to produce personal injury or illness to man through ingestion, inhalation or absorption through any body surface.

(25) "Vapor" – the gaseous form of a substance which is normally in the solid or liquid state. A vapor diffuses.

(26) "Label" – means a display of written or printed matter, upon or attached to the immediate container. [Standard II, effective 12/1/62.]

**WAC 296-64-410 General requirements.** (1) All containers holding hazardous substances in places of employment governed by the industrial insurance and medical aid acts shall be labeled in accordance with these standards.

(2) No employer shall distribute, make available, furnish or supply for use by his employees any hazardous substance unless its container is labeled accordance with these standards.

(3) No employer shall distribute, make available, or supply for re-use a container which has been used to hold a hazardous substance without thoroughly and properly cleaning (make innocuous or neutralized) such container, unless the container is to be used for the same substance. [Standard III, effective 12/1/62.]

**WAC 296-64-415 General labeling requirements and attached appendices.** (1) The following data shall appear on original containers of hazardous substances which shall include but be not limited to the substances used for illustrative purposes in the appendices attached hereto, consisting of:

Appendix I – MCA Manual L-1, 1961 edition, Table 1, Selection of Precautionary Statements.

Appendix II – MCA Manual L-1, 1961 edition, Container Handling and Storage.

Appendix III – MCA Manual L-1, 1961 edition, Illustrative Labels for Hazardous Chemicals.

(a) Name and place of business of manufacturer, distributor or seller.

(b) Chemical, common or recognized generic name (not trade name only) of each component that is a hazardous substance.

(c) A signal word in the following order of diminishing severity of hazard, "DANGER," "WARNING" or "CAUTION."

NOTE: Appendix III Illustrative Labels for Hazardous Chemicals

(d) Affirmative statement of principal hazard or hazards such as "FLAMMABLE," "VAPOR HARMFUL," "CAUSES BURNS," "ABSORBED THROUGH SKIN," "IRRITANT," or similar wording descriptive of the hazard.

(e) Precautionary measures covering actions to be followed or avoided.

(f) Instructions as to first aid treatment in case of contact or exposure, where advisable.

(g) The word "POISON" for poisonous substances as defined in WAC 296-64-405 or when required by any statute of this state, regulations of any state agency, or federal statute.

(h) In the case of poisons a practical first aid treatment or antidote immediately following the word "POISON," shall be included.

(i) Instructions, where necessary, for handling and storage of containers.

NOTE: Appendix II Container Handling and Storage

(j) Additional warnings may be indicated by the particular form or manner in which a product is sold or the circumstances surrounding its use.

(2) When original containers are of such small size as to make the requirements of subsection (1) of this section impractical, the following minimum data shall appear on such containers:

(a) Name and place of business of manufacturer, distributor or seller.

(b) Chemical, common or recognized generic name (not trade name only) of each component that is a hazardous substance.

(c) A signal word in the following order of diminishing severity of hazard, "DANGER," "WARNING" or "CAUTION."

NOTE: Appendix III Illustrative Labels For Hazardous Chemicals

(d) Affirmative statement of principal hazard or hazards such as "FLAMMABLE," "VAPOR HARMFUL," "CAUSES BURNS," "ABSORBED THROUGH SKIN," "IRRITANT," or similar wording descriptive of the hazard.

(e) Instructions as to first aid treatment in case of contact or exposure, where advisable.

(f) The word "POISON" for poisonous substances and a practical first aid treatment or antidote immediately after the word "POISON."

(g) Precautionary measures covering actions to be followed or avoided and handling and storage instructions may be abbreviated or deleted depending on the container size.

(h) Additional warnings may be indicated by the particular form or manner in which a product is sold or the circumstances surrounding its use.

(3) When containers of hazardous substances, other than original containers, are used or handled in industry, the following minimum data shall appear on such containers:

(a) Chemical, common or recognized generic name (not trade name only) of each component that is a hazardous substance.

(b) A signal word in the following order of diminishing severity of hazard "DANGER," "WARNING," or "CAUTION."

NOTE: Appendix III Illustrative Labels for Hazardous Chemicals

(c) Affirmative statement of principal hazard or hazards such as "FLAMMABLE," "VAPOR HARMFUL," "CAUSES BURNS," "ABSORBED THROUGH SKIN," "IRRITANT" or similar wording descriptive of the hazard.

(d) The word "POISON" for poisonous substances and a practical first aid treatment or antidote immediately after the word "POISON."

(e) Additional warnings may be indicated by the particular form or manner in which a product is sold or the circumstances surrounding its use.

(4) **Outside containers or wrappers.** Appropriate handling and storage instructions, as included in subsection (1)(j) of this section, must appear on the outside container or wrapper if outside containers or wrappers are used.

(5) **Required typography and location of warning test.** Warning statements or labels required by the provisions of these standards shall be displayed prominently on the container and shall be in contrast by typography, layout or color with other printed matter on the container.

(6) **Practical equivalent.** Use of wording on labels, which is the practical equivalent of that shown in Appendix I shall constitute compliance with these standards, except that no words shall be regarded as the practical equivalent of the words "POISON" or "POISONOUS."

(7) Hazardous substances which are in the process of manufacture, but are not in pipelines or equipment used to hold or convey such substances, may be declared by the director, or his authorized representative to be exempt in whole or in part from the labeling requirements of standard IV upon acceptable proof that there exist other provisions deemed adequate for the safety and health of the persons employed therein.

(8) Substances which are still in the developmental stage and are used solely for experimental purposes shall not be required to be labeled as herein before required, but shall bear warning labels advising the persons working on the development and/or testing of the substances of the precautions to take against any known hazards that exist, and warning of other possible hazards that may exist, by the following supplementary statement or its practical equivalent: "Important! The properties of this substance have not been fully investigated and its handling or use may be hazardous. Exercise due care." [Standard IV, effective 12/1/62.]

#### WAC 296-64-420 Container handling and storage.

Appropriate instructions shall be given in separate labels or in combination with the warning labels attached to the container whenever required for the safe handling and storage of containers. Care shall always be exercised in handling and storing containers of hazardous substances. The general instructions set out in Appendix II [see WAC 296-64-415] shall be used as a guide in labeling for special handling and storing certain classes of containers. Applicable phrases may be selected from these statements. [Standard V, effective 12/1/62.]

**WAC 296-64-425 Exemptions.** Containers of products coming under and labeled in accordance with the Federal and Washington State Food, Drug and Cosmetic acts, the Federal Insecticide Fungicide and Rodenticide Act, the Washington Pesticide Act, the Federal Hazardous Substances Labeling Act, the Interstate Commerce Commission and Foreign Commerce Regulations shall be exempt from the requirements of these standards. [Standard VI, effective 12/1/62.]

### Chapter 296-78 WAC

#### SAFETY STANDARDS FOR SAWMILLS AND WOODWORKING OPERATIONS

##### WAC

296-78-500	Foreword.
296-78-505	Definitions applicable to this chapter.
296-78-510	Education and first-aid standards.
296-78-515	Management's responsibility.
296-78-520	Employee's responsibility.
296-78-525	Accident prevention programs.
296-78-530	Safety and health committee plan.
296-78-535	Safety bulletin board.

- 296-78-540 First-aid training and certification.  
 296-78-545 First-aid kit.  
 296-78-550 First-aid station.  
 296-78-555 First-aid room.  
 296-78-560 Safe place standards.  
 296-78-565 Log dumps and ponds—Headmills.  
 296-78-56501 Log dumps and ponds.  
 296-78-56503 Log hauls.  
 296-78-56505 Boats and mechanical devices on waters.  
 296-78-56507 Log decks.  
 296-78-56509 Mechanical barkers.  
 296-78-56511 Head rigs and feed works.  
 296-78-56513 Log carriages.  
 296-78-570 Band saws—Saws.  
 296-78-575 Circular saws.  
 296-78-580 Edgers.  
 296-78-585 Equalizer saws.  
 296-78-590 Gang saws and re-saws.  
 296-78-595 Jump saws.  
 296-78-600 Trimmer and slasher saws.  
 296-78-605 Swing saws.  
 296-78-610 Circular saws, speeds, repairs.  
 296-78-615 Saw filing and grinding rooms and equipment.  
 296-78-620 Miscellaneous woodworking machines—Planers, stickers, molders, matchers.  
 296-78-625 Planers (stave and headings).  
 296-78-630 Stave croziers.  
 296-78-635 Jointers.  
 296-78-640 Jointers (stave and heading).  
 296-78-645 Wood shapers.  
 296-78-650 Boring and mortising machines.  
 296-78-655 Tenoning machines.  
 296-78-660 Lathe (pail and barrel).  
 296-78-665 Sanding machines.  
 296-78-670 Glue machines.  
 296-78-675 Lath mills.  
 296-78-680 Veneer and plywood plants—Peeling and barking.  
 296-78-685 Veneer lathe.  
 296-78-690 Veneer slicer and cutter.  
 296-78-695 Veneer clipper.  
 296-78-700 Veneer wringer (swede).  
 296-78-705 The shake and shingle industry.  
 296-78-70501 Definitions—Terms, general.  
 296-78-70503 Shake and shingle machinery—General.  
 296-78-70505 Shake machinery.  
 296-78-70507 Upright shingle machine.  
 296-78-70509 Related shake and shingle sawing machinery.  
 296-78-70511 Safety rules.  
 296-78-710 Construction and isolated equipment.  
 296-78-71001 General.  
 296-78-71003 Floor openings.  
 296-78-71005 Floors, docks, platforms and runways.  
 296-78-71007 Footwalks and passageways.  
 296-78-71009 Stairways and ladders.  
 296-78-71011 Egress and exit.  
 296-78-71013 Cableways.  
 296-78-71015 Tanks and chemicals.  
 296-78-71017 Dry kilns.  
 296-78-71019 Exhaust systems.  
 296-78-71021 Spray painting.  
 296-78-71023 Lighting.  
 296-78-71025 Gas piping and appliances.  
 296-78-715 Mechanical, steam and electrical equipment.  
 296-78-71501 General provisions.  
 296-78-71503 Lock out—Tag out.  
 296-78-71505 Mechanical power transmission apparatus.  
 296-78-720 Boiler and pressure vessels.  
 296-78-725 Nonionizing radiation.  
 296-78-730 Electrical service and equipment.  
 296-78-735 Elevators, moving walks.  
 296-78-740 Transportation—Lumber handling equipment—Cranes—Construction.  
 296-78-745 Electrical equipment.  
 296-78-750 Chains, wire rope, cables and fiber rope.  
 296-78-755 Natural and synthetic fiber rope slings.  
 296-78-760 Synthetic web slings.  
 296-78-765 Floor operated cranes.  
 296-78-770 Operators.  
 296-78-775 Signalpersons.  
 296-78-780 Repairpersons.  
 296-78-785 Construction requirements.  
 296-78-790 Crane platforms and footwalks.  
 296-78-795 Crane cages.  
 296-78-800 Crane rail stops, bumpers and fenders.  
 296-78-805 Crawler locomotive and truck cranes.  
 296-78-810 Chain and electric hoists.  
 296-78-815 Monorail hoists.  
 296-78-820 Air hoists.  
 296-78-825 Jib, pillar, and portable floor cranes, crabs, and winches.  
 296-78-830 Standard crane hand signals—Illustrations.  
 296-78-835 Vehicles.  
 296-78-840 Loading, piling, storage and conveying.  
 296-78-84001 Loading, piling, storage and conveying—General.  
 296-78-84003 Conveyors.  
 296-78-84005 Dry kilns.  
 296-78-84007 Chippers and logs.  
 296-78-84009 Bins and bunkers.  
 296-78-84011 Burners.

**DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER**

- 296-78-005 Foreword. [Order 76-7, § 296-78-005, filed 3/1/76; Order 74-28, § 296-78-005, filed 5/7/74; Foreword, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-007 Definitions applicable to this chapter. [Order 74-28, § 296-78-007, filed 5/7/74.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-010 General safety standards. [Rules A-1 through A-19, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-015 Minimum requirements for first aid. [Rule B-1, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-020 First-aid kit. [Rule B-2, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-025 First-aid room. [Rule B-3, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-030 Construction and isolated equipment. [Order 77-12, § 296-78-030, filed 7/11/77; Order 76-7, § 296-78-030, filed 3/1/76; Order 74-28, § 296-78-030, filed 5/7/74; Rules C-1 through C-61, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-035 Mechanical, steam and electrical equipment—General provisions. [Order 74-28, § 296-78-035, filed 5/7/74; Rules D-1 through D-19, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-040 Boiler and pressure vessels. [Order 74-28, § 296-78-040, filed 5/7/74; Rule D-20, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-045 Electrical service and equipment. [Order 74-28, § 296-78-045, filed 5/7/74; Rule D-21, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-050 Electrical utilization—Definitions. [Rule D-22, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.

- 296-78-055 Electrical utilization—General requirements—Safety. [Rule D-23, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-060 Electrical utilization—General requirements—Current. [Rule D-24, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-065 Electrical utilization—General requirements—Grounding. [Rule D-25, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-070 Electrical utilization—General requirements—Circuits to be grounded. [Rule D-26, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-075 Electrical utilization—General requirements—Grounding noncurrent-carrying metal parts. [Rule D-27, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-080 Electrical utilization—Working spaces about electrical equipment—Dimensions. [Rule D-28, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-085 Electrical utilization—Guarding or isolating live parts—Inclosure or elevation. [Rule D-29, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-090 Electrical utilization—Separation and barriers. [Rule D-30, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-095 Electrical utilization—Hazardous locations. [Rule D-31, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-100 Electrical utilization—Suitability and size of conductors. [Rule D-32, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-105 Electrical utilization—Fuses and circuit breakers. [Rule D-33, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-110 Electrical utilization—General requirements for switches—Accessibility, marking and installation. [Rule D-34, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-115 Electrical utilization—Guarding switches. [Rule D-35, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-120 Electrical utilization—Platforms and mats. [Rule D-36, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-125 Electrical utilization—Switchboards and panelboards—Control or arrangement. [Rule D-37, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-130 Electrical utilization—Inclosure of parts. [Rule D-38, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-135 Electrical utilization—Motors and motor-driven machinery—Grounding machine frames. [Rule D-39, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-140 Electrical utilization—Mats and platforms. [Rule D-40, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-145 Electrical utilization—Water barrel rheostats prohibited. [Rule D-41, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-150 Electrical utilization—Employees—Safety requirements. [Rule D-42, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-155 Electrical utilization—"Bridging" fuses prohibited. [Rule D-43, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-160 Electrical utilization—Leakage of electricity shall be reported. [Rule D-44, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-162 Electrical utilization—Safe standing room required. [Rule D-45, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-165 Electrical utilization—Use of disconnected wires for starting machinery prohibited. [Rules D-46 through D-53, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-170 Elevators, moving walks and other lifting devices. [Order 76-29, § 296-78-170, filed 9/30/76; Order 74-28, § 296-78-170, filed 5/7/74; Rule D-54, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-175 Platform hoists. [Rule D-55, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-180 Transportation—Lumber handling equipment—Cranes—Construction. [Order 74-28, § 296-78-180, filed 5/7/74; Rule E-1, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-185 Electrical equipment. [Order 74-28, § 296-78-185, filed 5/7/74; Rule E-2, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-190 Chains, wire rope, cables and fiber rope. [Order 74-28, § 296-78-190, filed 5/7/74; Rule E-3, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-195 Floor operated cranes. [Order 74-28, § 296-78-195, filed 5/7/74; Rule E-4, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-200 Operators. [Order 77-12, § 296-78-200, filed 7/11/77; Order 74-28, § 296-78-200, filed 5/7/74; Rule E-5, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-205 Signalmen. [Order 74-28, § 296-78-205, filed 5/7/74; Rule E-6, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-210 Repairmen. [Order 74-28, § 296-78-210, filed 5/7/74; Rule E-7, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-215 Construction requirements. [Order 74-28, § 296-78-215, filed 5/7/74; Rule E-8, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-220 Crane platforms and footwalks. [Order 74-28, § 296-78-220, filed 5/7/74; Rule E-9, effective 6/1/51,

- filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-225 Crane cages. [Order 74-28, § 296-78-225, filed 5/7/74; Rule E-10, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-230 Crane rail stops, bumpers and fenders. [Order 74-28, § 296-78-230, filed 5/7/74; Rule E-11, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-235 Crawler locomotive and truck cranes. [Order 74-28, § 296-78-235, filed 5/7/74; Rule E-12, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-240 Construction, operation and maintenance—Chain and electric hoists. [Order 74-28, § 296-78-240, filed 5/7/74; Rule E-13, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-245 Monorail hoists. [Order 74-28, § 296-78-245, filed 5/7/74; Rule E-14, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-250 Air hoists. [Order 74-28, § 296-78-250, filed 5/7/74; Rule E-15, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-255 Jib, pillar, and portable floor cranes, crabs, and winches. [Order 74-28, § 296-78-255, filed 5/7/74; Rule E-16, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-260 Standard crane hand signals—Illustration. [Order 74-28, § 296-78-260, filed 5/7/74; Rule E-17, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-265 Vehicles. [Order 77-12, § 296-78-265, filed 7/11/77; Order 74-28, § 296-78-265, filed 5/7/74; Rules E-18 through E-39, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-270 Loading, piling, storage and conveying. [Order 76-7, § 296-78-270, filed 3/1/76; Order 74-28, § 296-78-270, filed 5/7/74; Rules F-1 through F-43, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-275 Log dumps and ponds—Headmills. [Order 76-7, § 296-78-275, filed 3/1/76; Order 74-28, § 296-78-275, filed 5/7/74; Rules G-1 through G-50, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-280 Band saws—Saws. [Order 76-7, § 296-78-280, filed 3/1/76; Order 74-28, § 296-78-280, filed 5/7/74; Rule H-1, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-285 Circular saws. [Order 74-28, § 296-78-285, filed 5/7/74; Rule H-2, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-290 Edgers. [Order 77-12, § 296-78-290, filed 7/11/77; Order 76-7, § 296-78-290, filed 3/1/76; Order 74-28, § 296-78-290, filed 5/7/74; Rules H-3A through H-3J, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-295 Equalizer saws. [Order 74-28, § 296-78-295, filed 5/7/74; Rule H-4, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-300 Gang saws and re-saws. [Order 74-28, § 296-78-300, filed 5/7/74; Rule H-5, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-305 Jump saws. [Order 74-28, § 296-78-305, filed 5/7/74; Rule H-6, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-310 Saws—Shingle saws. [Rule H-7, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-315 Trimmer and slasher saws. [Order 74-28, § 296-78-315, filed 5/7/74; Rule H-8, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-320 Barrel stave saws. [Order 74-28, § 296-78-320, filed 5/5/74; Rule H-9, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-325 Swing saws. [Order 74-28, § 296-78-325, filed 5/7/74; Rule H-10, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-330 Table saws. [Order 74-28, § 296-78-330, filed 5/7/74; Rule H-11, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-335 Circular saws, speeds, repairs. [Order 74-28, § 296-78-335, filed 5/7/74; Rule H-12, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-340 Saw filing and grinding rooms and equipment. [Order 74-28, § 296-78-340, filed 5/7/74; Rule H-13, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-345 Miscellaneous woodworking machines—Planers, stickers, molders, matchers. [Order 74-28, § 296-78-345, filed 5/7/74; Rule I-1, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-350 Planers (stave and heading). [Order 74-28, § 296-78-350, filed 5/7/74; Rule I-2, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-355 Stave croziers. [Order 74-28, § 296-78-355, filed 5/7/74; Rule I-3, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-360 Jointers. [Order 74-28, § 296-78-360, filed 5/7/74; Rule I-4, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-365 Jointers (stave and heading). [Order 74-28, § 296-78-365, filed 5/7/74; Rule I-5, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-

- 21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-370 Miscellaneous woodworking machines—Jointers—(Shingle). [Rule I-6, effective 6/1/51, filed 3/23/60.] Repealed by Order 74-28, filed 5/7/74 and Order 76-7, filed 3/1/76.
- 296-78-375 Wood shapers. [Order 74-28, § 296-78-375, filed 5/7/74; Rule I-7, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-380 Boring and mortising machines. [Order 74-28, § 296-78-380, filed 5/7/74; Rule I-8, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-385 Tenoning machines. [Order 74-28, § 296-78-385, filed 5/7/74; Rule I-9, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-390 Lathe (pail and barrel). [Order 74-28, § 296-78-390, filed 5/7/74; Rule I-10, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-395 Sanding machines. [Order 74-28, § 296-78-395, filed 5/7/74; Rule I-11, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-400 Glue machines. [Order 74-28, § 296-78-400, filed 5/7/74; Rule I-12, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-405 Lath mills. [Order 74-28, § 296-78-405, filed 5/7/74; Rule J-1, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-410 Veneer and plywood plants—Peeling and barking. [Order 74-28, § 296-78-410, filed 5/7/74; Rule K-1, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-415 Veneer lathe. [Order 74-28, § 296-78-415, filed 5/7/74; Rules K-2 through K-4, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-420 Veneer slicer and cutter. [Order 74-28, § 296-78-420, filed 5/7/74; Rule K-5, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-425 Veneer clipper. [Order 74-28, § 296-78-425, filed 5/7/74; Rule K-6, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-430 Veneer wringer (swede). [Order 74-28, § 296-78-430, filed 5/7/74; Rule K-7, effective 6/1/51, filed 3/23/60.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.
- 296-78-450 The shake and shingle industry. [Order 76-7, § 296-78-450, filed 3/1/76; Order 74-28, § 296-78-450, filed 5/7/74.] Repealed by 81-18-029 (Order 81-21), filed 8/27/81. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240.

**WAC 296-78-500 Foreword.** (1) General requirements. The chapter 296-78 WAC shall apply to and include safety requirements for all installations where the

primary manufacturing of wood building products takes place. The installations may be a permanent fixed establishment or a portable operation. These operations shall include but are not limited to log and lumber handling, sawing, trimming and planing, plywood or veneer manufacturing, canting operations, waste or residual handling, operation of dry kilns, finishing, shipping, storage, yard and yard equipment, and for power tools and affiliated equipment used in connection with such operation. WAC 296-78-450 shall apply to shake and shingle manufacturing. The provisions of WAC 296-78-500 through 296-78-84011 are also applicable in shake and shingle manufacturing except in instances of conflict with the requirements of WAC 296-78-705. (Rev. 1-28-76.)

(2) This standard shall augment the Washington state general safety and health standards, general occupational health standards, electrical workers safety rules, and any other standards which are applicable to all industries governed by chapter 80, Laws of 1973, Washington Industrial Safety and Health Act. In the event of any conflict between any portion of this chapter and any portion of any of the general application standards, the provisions of this chapter 296-78 WAC, shall apply.

(3) In exceptional cases where compliance with specific provisions of this chapter can only be accomplished to the serious detriment and disadvantage of an operation, variance from the requirement may be permitted by the director of the department of labor and industries after receipt of application for variance which meets the requirements of WAC 296-24-010, general safety and health standards.

(4) No safety program will run itself. To be successful, the wholehearted interest of the employees' group (labor unions) and management must not only be behind the program, but the fact must also be readily apparent to all. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-500, filed 8/27/81.]

**WAC 296-78-505 Definitions applicable to this chapter.** (1) "A-frame" means a structure made of two independent columns fastened together at the top and separated at the bottom for stability.

(2) "Annealing" heating then cooling to soften and render less brittle.

(3) "Binder" a hinged lever assembly used to connect the ends of a wrapper to tighten the wrapper around the load of logs or materials.

(4) "Boom" logs or timbers fastened together end to end and used to contain floating logs. The term includes enclosed logs.

(5) "Brow log" a log placed parallel to a roadway at a landing or dump to protect vehicles while loading or unloading.

(6) "Bunk" a cross support for a load.

(7) "Cant" a log slabbed on one or more sides.

(8) "Carriage" (log carriage) a framework mounted on wheels which runs on tracts or in grooves in a direction parallel to the face of the saw, and which contains

apparatus to hold a log securely and advance it toward the saw.

(9) "Carrier" an industrial truck so designed and constructed that it straddles the load to be transported with mechanisms to pick up the load and support it during transportation.

(10) "Chipper" a machine which cuts material into chips.

(11) "Chock," "bunk block," and "cheese block" a wedge that prevents logs or loads from moving.

(12) "Cold deck" a pile of logs stored for future removal.

(13) "Crotch lines" two short lines attached to a hoisting line by a ring or shackle, the lower ends being attached to loading hooks.

(14) "Dog" (carriage dog) a steel tooth or assembly of steel teeth, one or more of which are attached to each carriage knee to hold log firmly in place on carriage.

(15) "Drag saw" a power-driven, reciprocating cross-cut saw mounted on suitable frame and used for bucking logs.

(16) "Head block" that part of a carriage which holds the log and upon which it rests. It generally consists of base, knee, taper set, and mechanism.

(17) "Head rig" a combination of head saw and log carriage used for the initial breakdown of logs into timbers, cants, and boards.

(18) "Hog" a machine for cutting or grinding slabs and other coarse residue from the mill.

(19) "Husk" a head saw framework on a circular mill.

(20) "Industrial truck" a mobile, power-driven vehicle used to carry, push or pull material. It is designed for "in-plant" or "on-site" use rather than highway use.

(21) "Kiln tender" the operator of a kiln.

(22) "Lift truck" an industrial truck used for lateral transportation and equipped with a power-operated lifting device, usually in the form of forks, for piling or un-piling lumber units or packages.

(23) "Live rolls" cylinders of wood or metal mounted on horizontal axes and rotated by power, which are used to convey slabs, lumber, and other wood products.

(24) "Loading boom" any structure projecting from a pivot point and intended to be used for lifting and guiding loads for the purpose of loading or unloading.

(25) "Log" a portion of a tree, usually a minimum of twelve feet in length, capable of being further processed into a variety of wood products.

(26) "Log deck" a platform in the sawmill on which the logs remain until needed for sawing.

(27) "Log haul" a conveyor for transferring logs to mill.

(28) "Lumber dimensions" the nominal size of surfaced lumber, unless otherwise stated.

(29) "Lumber hauling truck" an industrial truck, other than a lift truck or a carrier, used for the transport of lumber.

(30) "Package" a unit of lumber.

(31) "Peavy" a stout wooden handle fitted with a spike and hook and used for rolling logs.

(32) "Peeler block" a portion of a tree usually bucked in two foot intervals plus trim, to be peeled in a lathe or

sliced in a slicer into veneer for further processing into plywood.

(33) "Pike pole" a long pole whose end is shod with a sharp pointed spike.

(34) "Pitman rod" connecting rod.

(35) "Resaw" band, circular, or sash gang saws used to break down slabs, cants, or flitches into lumber.

(36) "Running line" any moving rope as distinguished from a stationary rope such as a guyline.

(37) "Safety factor" a calculated reduction factor which may be applied to laboratory test values to obtain safe working stresses for wooden beams and other mechanical members; ratio of breaking load to safe load.

(38) "Saw guide" a device for steadying a circular or bandsaw.

(39) "Setwork" a mechanism on a sawmill carriage which enables an operator to move the log into position for another cut.

(40) "Sorting gaps" the areas on a log pond enclosed by boom sticks into which logs are sorted.

(41) "Spreader wheel" a metal wheel that separates the board from the log in back of circular saws to prevent binding.

(42) "Splitter" a knife-type, nonrotating spreader.

(43) "Sticker" a strip of wood or other material used to separate layers of lumber.

(44) "Stiff boom" the anchored, stationary boom sticks which are tied together and on which boom persons work.

(45) "Swifter" is a tying of boom sticks together to prevent them from spreading while being towed.

(46) "Telltale" a device used to serve as a warning for overhead objects.

(47) "Top saw" the upper of two circular saws on a head rig, both being on the same husk.

(48) "Tramway" a way for trams, usually consisting of parallel tracks laid on wooden beams.

(49) "Trestle" a braced framework of timbers, piles or steelwork for carrying a road or railroad over a depression.

(50) "Wrapper" a chain, strap or wire rope assembly used to contain a load of logs or materials. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-505, filed 8/27/81.]

**WAC 296-78-510 Education and first-aid standards.** It shall be the duty of every employer to comply with such standards and systems of education for safety as shall be, from time to time, prescribed for such employer by the director of labor and industries through the division of industrial safety and health or by statute. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-510, filed 8/27/81.]

**WAC 296-78-515 Management's responsibility.** (1) It shall be the responsibility of management to establish and supervise:

(a) A safe and healthful working environment.

(b) An accident prevention program as required by these standards.

(c) Training programs to improve the skill and competency of all employees in the field of occupational safety and health. Such training shall include the on-the-job instructions on the safe use of powered materials handling equipment, machine tool operations, use of toxic materials and operation of utility systems prior to assignments to jobs involving such exposures.

(2) Management shall not assign mechanics, millwrights, or other persons to work on equipment by themselves when there is a probability that the person could fall from elevated work locations or equipment or that a person could be pinned down by heavy parts or equipment so that they could not call for or obtain assistance if the need arises.

**NOTE:** This subsection does not apply to operators of motor vehicles, watchmen or certain other jobs which, by their nature, are singular employee assignments. However, a definite procedure for checking the welfare of all employees during their working hours shall be instituted and all employees so advised.

(3) After the emergency actions following accidents that cause serious injuries that have immediate symptoms, a preliminary investigation of the cause of the accident shall be conducted. The investigation shall be conducted by a person designated by the employer, the immediate supervisor of the injured employee, witnesses, employee representative if available and any other person with the special expertise required to evaluate the facts relating to the cause of the accident. The findings of the investigation shall be documented by the employer for reference at any following formal investigation.

(4) Reporting of fatality or multiple hospitalization accidents.

(a) Within twenty-four hours after the occurrence of an employment accident which results in an immediate or probable fatality(s) or which results in the hospitalization of two or more employees, the employer of any employee so injured or killed shall report the accident, either orally or in writing, to the nearest office of the department. The reporting may be by telephone or telegraph. The reporting shall relate the circumstances of the accident, the number of fatalities, and the extent of any injuries. The director may require such additional reports, in writing or otherwise, as he deems necessary, concerning the accident.

(b) Equipment involved in an accident resulting in an immediate or probable fatality, shall not be moved, until a representative of the division of industrial safety and health investigates the accident and releases such equipment, except where removal is essential to prevent further accident. Where necessary to remove the victim, such equipment may be moved only to the extent of making possible such removal.

(c) Upon arrival of division of industrial safety and health investigator, employer shall assign to assist the investigator, the immediate supervisor and all employees

who were witnesses to the accident, or whoever the investigator deems necessary to complete his investigation.

(5) A system for maintaining records of occupational injuries and illnesses as prescribed by chapter 296-27 WAC.

**NOTE:** Recordable cases include:

- (1) Every occupational death.
- (2) Every industrial illness.
- (3) Every occupational injury that involves one of the following:
  - (a) Unconsciousness.
  - (b) Inability to perform all phases of regular job.
  - (c) Inability to work full time on regular job.
  - (d) Temporary assignment to another job.
  - (e) Medical treatment beyond first aid.

All employers with eleven or more employees shall record occupational injury and illness information on forms OSHA 101 - supplementary record occupational injuries and illnesses and OSHA 200 - log and summary. Forms other than OSHA 101 may be substituted for the supplementary record of occupational injuries and illnesses if they contain the same items. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-515, filed 8/27/81.]

**WAC 296-78-520 Employee's responsibility.** (1) Employees shall coordinate and cooperate with all other employees in an attempt to eliminate accidents.

(2) Employees shall study and observe all safe practices governing their work.

(3) Employees should offer safety suggestions, wherein such suggestions may contribute to a safer work environment.

(4) Employees shall apply the principles of accident prevention in their daily work and shall use proper safety devices and protective equipment as required by their employment or employer.

(5) Employees shall properly care for all personal protective equipment.

(6) Employees shall make a prompt report to their immediate supervisor, of each industrial injury or occupational illness, regardless of the degree of severity.

(7) Employees shall not wear torn or loose clothing while working around machinery. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-520, filed 8/27/81.]

**WAC 296-78-525 Accident prevention programs.**

Each employer shall develop a formal accident-prevention program, tailored to the needs of the particular plant or operation and to the type of hazards involved. The division may be contacted for assistance in developing appropriate programs.

(1) The following are the minimal program elements for all employers:

(a) A safety orientation program describing the employer's safety program and including:

(i) How and when to report injuries, including instruction as to the location of first-aid facilities.

(ii) How to report unsafe conditions and practices.

(iii) The use and care of required personal protective equipment.

(iv) The proper actions to take in event of emergencies including the routes of exiting from areas during emergencies.

(v) Identification of the hazardous gases, chemicals or materials involved along with the instructions on the safe use and emergency action following accidental exposure.

(vi) A description of the employers total safety program.

(vii) An on-the-job review of the practices necessary to perform the initial job assignments in a safe manner.

(b) A designated safety and health committee consisting of management and employee representatives with the employee representatives being elected or appointed by fellow employees.

(2) Each accident-prevention program shall be outlined in written format. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-525, filed 8/27/81.]

**WAC 296-78-530 Safety and health committee plan.** (1) All employers of eleven or more employees, shall have a designated safety committee composed of employer and employee elected members.

(a) The terms of employee-elected members shall be a maximum of one year. Should a vacancy occur on the committee, a new member shall be elected prior to the next scheduled meeting.

(b) The number of employer-selected members shall not exceed the number of employee-elected members.

(2) The safety committee shall have an elected chairperson.

(3) The safety committee shall be responsible for determining the frequency of committee meetings.

**NOTE:** If the committee vote on the frequency of safety meetings is stalemated, the division's regional safety educational representative may be consulted for recommendations.

(a) The committee shall be responsible for determining the date, hour and location of the meetings.

(b) The length of each meeting shall not exceed one hour except by majority vote of the committee.

(4) Minutes of each committee meeting shall be prepared and filed for a period of at least one year and shall be made available for review by noncompliance personnel of the division of industrial safety and health.

(5) Safety and health committee meetings shall address the following:

(a) A review of the safety and health inspection reports to assist in correction of identified unsafe conditions or practices.

(b) An evaluation of the accident investigations conducted since the last meeting to determine if the cause of the unsafe acts or unsafe conditions involved was properly identified and corrected.

(c) An evaluation of the accident or illness prevention program with the discussion of recommendation for improvement where indicated.

(d) The attendance shall be documented.

(e) The subject(s) discussed shall be documented.

(6) All employers of ten or less employees and employers of eleven or more employees where the employees are segregated on different shifts or in widely dispersed locations in crews of ten or less employees, may elect to have foreman-crew meetings in lieu of a safety and health committee plan provided:

(a) Foreman-crew safety meetings be held at least once a month, however, if conditions require, weekly or semimonthly meetings shall be held to discuss safety problems as they arise.

(b) All items under subsection (5) of this section shall be covered. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-530, filed 8/27/81.]

**WAC 296-78-535 Safety bulletin board.** There shall be installed and maintained in every fixed establishment, a safety bulletin board sufficient in size to display and post safety bulletins, newsletters, posters, accident statistics and other safety educational material. It is recommended that safety bulletin boards be painted green and white. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-535, filed 8/27/81.]

**WAC 296-78-540 First-aid training and certification.** The purpose of this section is to assure that all employees of this state can be afforded quick, and effective first-aid attention in the event that an injury occurs on the job. The means of achieving this purpose is to assure the presence of personnel trained in first-aid procedures at or near those places where employees are working. Compliance with the provisions of this section may require the presence of more than one first-aid trained person.

(1) In addition to RCW 51.36.030, every employer shall comply with the department's requirements for first-aid training and certification.

(2) There shall be present or available at all times, a person or persons holding a valid certificate of first-aid training. (A valid first-aid certificate is one which is less than three years old.)

(3) Compliance with the requirements of subsection (2) of this section may be achieved as follows:

(a) All foremen, supervisors, or persons in direct charge of crews working in physically dispersed operations, shall have a valid first-aid certificate: *Provided*, That if the duties or work of the foreman, supervisor or person in direct charge of a crew, is absent from the crew, another person holding a valid first-aid certificate shall be present. For the purpose of this section, a crew shall mean a group of two or more employees working at a work site separate and remote from the main office or fixed work place (such as occurs in construction, logging, etc.). In emergencies, foremen will be permitted to

work up to thirty days without having the required certificate, providing an employee in the crew or another foreman in the immediate work area has the necessary certificate.

(b) In fixed establishments, all foremen, supervisors, or persons in direct charge if a group or groups of employees shall have a valid first-aid certificate: *Provided*, That in fixed establishments where the foreman, supervisor, or person in charge has duties which require his absence from the work site of the group, another person holding a valid first-aid certificate shall be present or available to the groups. Foremen, supervisors or persons in direct charge of a group or groups of employees will be permitted to work up to thirty days without having the required certificate, providing an employee in the crew or another foreman in the immediate work area has the necessary certificate.

(c) In fixed establishments organized into distinct departments or equivalent organizational units such as department stores, large company offices, etc., a person or persons holding a valid first-aid certificate shall be present or available at all times employees are working within that department or organizational unit.

(d) In small businesses, offices or similar types of fixed workplaces, compliance may be achieved by having a number of such small businesses, offices, etc., combined into a single unit for the purpose of assuring the continued presence or availability of a person or persons holding a valid first-aid training certificate. A plan for combining a number of small businesses, etc., into such a group shall be submitted to the division of industrial safety and health, safety education section, for approval. That section is also available to assist employers who wish to develop such a plan. Criteria for approval by the division shall include:

(i) The businesses within the group must not be widely dispersed;

(ii) The name(s) of the person or persons holding the first-aid certificate, their usual places of work, their work phone numbers, and other appropriate information shall be posted in each establishment which is a member of the group, in a place which can reasonably be expected to give notice to employees of that establishment;

(iii) First-aid kits shall be available and maintained as required by WAC 296-24-065.

(e) Valid certification shall be achieved by passing a course of first-aid instruction and participation in practical application of the following subject matter:

Bleeding control and bandaging.

Practical methods of artificial respiration including mouth to mouth to nose resuscitation.

Closed chest heart massage.

Poisons.

Shock, unconsciousness, stroke.

Burns, scalds.

Sunstroke, heat exhaustion.

Frostbite, freezing, hypothermia.

Strains, sprains, hernias.

Fractures, dislocations.

Proper transportation of the injured.

Bites, stings.

Subjects covering specific health hazards likely to be encountered by co-workers of first-aid students enrolled in the course.

(4) Industrial first-aid course instructors will, upon request, be furnished by the division of industrial safety and health, department of labor and industries, either directly or through a program with the community colleges or vocational education.

(5) Employers of employees working in fixed establishments, meeting the following criteria, are exempt from the requirements of this section: *Provided*

(a) They can submit written evidence to the department upon request, that the worksite of their employees is within a two minute time frame of response by an aid car, medic unit or established ambulance service with first-aid trained attendants.

(b) There is a back-up aid car, medic unit or established ambulance service within the two minute response time; or that a first-aid trained person with readily available transportation is on the site of the posted emergency phone number for immediate dispatch in the event the primary unit is not available.

(c) There are no traffic impediments, such as draw bridges, railroad tracks, etc., along the normal route of travel of the aid car, medic unit or established ambulance service that would delay arrival beyond the required two minute time frame.

(d) Emergency telephone numbers are posted on all first-aid kits and at all telephones on the worksite.

(e) The above services are available or exist at all times when more than one employee is on the worksite.

NOTE: A construction site that will be of more than six months duration, such as a large building, shall be considered a fixed establishment for the purposes of this section. Doctor's offices and clinics are not to be considered as alternates due to the fact that very often doctor's schedules require them to be away from their offices.

[Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-540, filed 8/27/81.]

**WAC 296-78-545 First-aid kit.** (1) All employers who employ men and women covered by the Industrial Safety and Health Act shall furnish first-aid kits as required by the division of industrial safety and health, department of labor and industries, (RCW 51.36.030).

(2) First-aid supplies shall be readily accessible when required.

(3) In the absence of readily accessible first-aid supplies such as first-aid kits, first-aid stations, first-aid rooms or their equivalent, all crew trucks, power shovels, cranes, locomotives, loaders, dozers, logging trucks, speeders, freight trucks and similar equipment shall be equipped with not less than a ten package first-aid kit.

(4) All crew vehicles used for transporting workers shall be equipped with not less than a ten package first-aid kit. When more than five employees are being transported on any one trip, the kit shall be increased in size to comply with a 16, 24, or 36 package kit depending

upon the number of personnel normally being transported.

(5) At least one first-aid kit shall be available on construction jobs, line crews, and other transient or short duration jobs. The size and quantity of first-aid kits, required to be located at any site, shall be determined by the number of personnel normally dependent upon each kit as outlined in the following table:

NUMBER OF PERSONNEL NORMALLY ASSIGNED TO WORKSITE	MINIMUM FIRST-AID SUPPLIES REQUIRED AT WORKSITE
1 - 50 persons	First-Aid Kit
1 - 5	10 package kit
6 - 15	16 package kit
16 - 30	24 package kit
31 - 50	36 package kit
51 - 200 persons	First-Aid Station
51 - 75	One 36 and one 10 package kit
76 - 100	One 36 and one 16 package kit
101 - 150	One 36 and one 24 package kit
151 - 200	Two 36 package kits
Over 200 persons	First-Aid Room Refer to WAC 296-24-070

(6) Employers shall establish a procedure to assure that first-aid kits and required contents are maintained in a serviceable condition.

(7) First-aid kits shall contain at least the following items:

#### 10 Package Kit

- 1 Pkg. adhesive bandages, 1" (16 per pkg.)
- 1 Pkg. bandage compress, 4" (1 per pkg.)
- 1 Pkg. scissors\* and tweezers (1 each per pkg.)
- 1 Pkg. triangular bandage, 40" (1 per pkg.)
- 1 Pkg. antiseptic soap or pads (3 per pkg.)
- 5 Pkgs. of consulting physician's choice\*\*

#### 16 Package Kit

- 1 Pkg. absorbent gauze, 24" x 72" (1 per pkg.)
- 1 Pkg. adhesive bandages, 1" (16 per pkg.)
- 2 Pkgs. bandage compresses, 4" (1 per pkg.)
- 1 Pkg. eye dressing (1 per pkg.)
- 1 Pkg. scissors\* and tweezers (1 each per pkg.)
- 2 Pkgs. triangular bandages, 40" (1 per pkg.)
- 1 Pkg. antiseptic soap or pads (3 per pkg.)
- 7 Pkgs. of consulting physician's choice\*\*

#### 24 Package Kit

- 2 Pkgs. absorbent gauze, 24" x 72" (1 per pkg.)
- 2 Pkgs. adhesive bandages, 1" (16 per pkg.)
- 2 Pkgs. bandage compresses, 4" (1 per pkg.)
- 1 Pkg. eye dressing (1 per pkg.)
- 1 Pkg. scissors\* and tweezers (1 each per pkg.)
- 6 Pkgs. triangular bandages (1 per pkg.)
- 1 Pkg. antiseptic soap or pads (3 per pkg.)
- 9 Pkgs. of consulting physician's choice\*\*

#### 36 Package Kit

- 4 Pkgs. absorbent gauze, 24" x 72" (1 per pkg.)
- 2 Pkgs. adhesive bandages, 1" (16 per pkg.)
- 5 Pkgs. bandage compresses, 4" (1 per pkg.)
- 2 Pkgs. eye dressing (1 per pkg.)
- 1 Pkg. scissors\* and tweezers (1 each per pkg.)
- 8 Pkgs. triangular bandages, 40" (1 per pkg.)
- 1 Pkg. antiseptic soap or pads (3 per pkg.)
- 13 Pkgs. of consulting physician's choice\*\*

\*Scissors shall be capable of cutting 2 layers of 15 oz. cotton cloth or its equivalent.

\*\*First-aid kits shall be maintained at the ten, sixteen, twenty-four or thirty-six package level. In the event the consulting physician chooses not to recommend items, the department of labor and industries shall be contacted for recommended items to complete the kit.

(8) Where the eyes or body of any person may be exposed to injurious chemicals and/or materials, suitable facilities for quick drenching or flushing of the eyes and body shall be provided, within the work area, for immediate emergency use.

(9) When practical, a poster shall be fastened and maintained either on or in the cover of each first-aid kit and at or near all phones plainly stating, the phone numbers of available doctors, hospitals, and ambulance services within the district of the worksite.

(10) When required by the department, in addition to the first-aid kit which must be kept on the equipment or at the place of work, there shall be available within the closest practicable distance from the operations (not to exceed one-half mile) the following items:

- 1 set of arm and leg splints.
- 2 all wool blankets or blankets equal in strength and fire resistant (properly protected and marked).
- 1 stretcher.

[Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-545, filed 8/27/81.]

**WAC 296-78-550 First-aid station.** (1) First-aid stations shall be located as close as practicable to the highest concentration of personnel.

(2) First-aid stations shall be well marked and available to personnel during all working hours.

(3) One person holding a valid first-aid certificate shall be responsible for the proper use and maintenance of the first-aid station.

(4) First-aid stations shall be equipped with a minimum of two first-aid kits, the size of which shall be dependent upon the number of personnel normally employed at the worksite. One first-aid kit may be a permanent wall-mounted kit, but in all cases the station shall be equipped with at least one portable first-aid kit.

(5) When required by the department, the station shall be equipped with two wool blankets and a stretcher in addition to first-aid kits.

(6) A roster, denoting the telephone numbers and addresses of doctors, hospitals and ambulance services available to the worksite, shall be posted at each first-aid station. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-550, filed 8/27/81.]

**WAC 296-78-555 First-aid room.** (1) Every fixed establishment employing more than two hundred persons shall have a first-aid room plainly designated as such, located as close as possible to the heaviest concentrated work area.

(2) The first-aid room shall be well lighted and ventilated, kept clean and orderly, provided with hot and cold

running water, and maintained in a fully-equipped condition.

(3) The first-aid room shall be manned and maintained by:

- (a) A licensed physician; or
- (b) A licensed or registered nurse; or
- (c) An employee who:

(i) Holds a valid advanced first-aid certificate as recognized by the department,

(ii) works in the vicinity of the first-aid room, and

(iii) does not perform other work of the nature that is likely to affect adversely her/his ability to administer first-aid.

(4) First-aid rooms shall be equipped with items recommended by the consulting physician or plant medical officer and, as a minimum, should contain an adequate supply of the following:

- Antiseptic soap
- 3/4" or 1" adhesive compresses
- Adhesive knuckle bands
- 2" bandage compresses
- 4" bandage compresses
- 3" x 3" gauze pads
- Assorted sizes of large gauze pads
- 2" roller bandages
- 3" roller bandages
- 4" roller bandages
- Assorted adhesive tape rolls
- Eye dressings
- Ammonia inhalants
- Burn ointment
- Triangular bandages
- Scissors, forceps, razor and blades, medicine droppers
- Safety pins
- Drinking cups
- Rubbing alcohol
- Absorbent cotton
- Arm and leg splints
- Antidotes for specific industrial poisons
- Pressure points chart
- Stretcher
- Wool blankets and clean linen
- Hot water bottles
- Quick colds or ice bag
- Emergency first-aid kit
- A method of sterilizing instruments

(5) A poster shall be maintained on, or in the cover of, each first-aid cabinet and near each first-aid room phone. Such poster will state phone numbers of available doctors, hospitals, and ambulance services within the employer's district. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-555, filed 8/27/81.]

**WAC 296-78-560 Safe place standards.** (1) Each employer shall furnish to each of his employees a place of employment free from recognized hazards that are causing or likely to cause serious injury or death to his employees.

(2) Every employer shall furnish and use safety devices and safeguards, and shall adopt and use practices, means, methods, operations, and processes which are reasonably adequate to render such employment and place of employment safe. Every employer shall do every other thing reasonably necessary to protect the life and safety of employees.

(3) No employer shall require any employee to go or be in any employment or place of employment which is not safe.

(4) No employer shall fail or neglect:

(a) To provide and use safety devices and safeguards.

(b) To adopt and use methods and processes reasonably adequate to render the employment and place of employment safe.

(c) To do every other thing reasonably necessary to protect the life and safety of employees.

(5) No employer, owner, or lessee of any real property shall construct or cause to be constructed any place of employment that is not safe.

(6) No person shall do any of the following:

(a) Remove, displace, damage, destroy or carry off any safety device, safeguard, notice, or warning, furnished for use in any employment or place of employment.

(b) Interfere in any way with the use thereof by any other person.

(c) Interfere with the use of any method or process adopted for the protection of any employee, including himself, in such employment, or place of employment.

(d) Fail or neglect to do every other thing reasonably necessary to protect the life and safety of employees.

(e) Intoxicating beverages and narcotics shall not be permitted or used in or around work sites. Workers under the influence of alcohol or narcotics shall not be permitted on the work site. This rule does not apply to persons taking prescription drugs and or narcotics as directed by a physician providing such use shall not endanger the worker or others. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-560, filed 8/27/81.]

**WAC 296-78-565 Log dumps and ponds--Headmills.** [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-565, filed 8/27/81.]

**WAC 296-78-56501 Log dumps and ponds.** (1) Log dumps, booms, ponds or storage areas, if used at night, shall be illuminated in accordance with the requirements of WAC 296-62-09003, general occupational health standards.

(2) A log dump shall be constructed at each log pond or decking ground. Log trucks shall not be unloaded by use of peavies or by hand.

(a) The roadbed shall be of hard packed gravel, heavy planking or equivalent material and shall be maintained at all times. Roadbeds at log dumps shall be of width and evenness to insure safe operation of equipment.

(b) A mechanical unloading device shall be provided and used for unloading logs. Log unloading areas shall

be arranged and maintained to provide a safe working area.

(c) Signs prohibiting unauthorized foot or vehicle traffic in log unloading and storage areas shall be posted.

(d) At no time shall one person be permitted to work alone on a log dump, a booming or rafting grounds, or a log pond.

(3) Water log dumps. Ungrounded electrically powered hoists using handheld remote control in grounded locations, such as log dumps or mill log lifts, shall be actuated by circuits operating at less than 50 volts to ground.

(4)(a) A brow log, skid timbers or the equivalent shall be installed on all log dumps.

(b) Where logs are unloaded onto skids, sufficient space shall be provided between the top of the skids and the ground to accommodate the body of a person.

(c) All truck dumps shall be built with not more than six inches variation of level from side to side.

(5)(a) All truck log dumps shall be equipped with a positive safeguard to prevent logs from leaving the load on the side opposite the brow log. Jill pokes shall not be used on truck log dumps.

(b) Unloading lines shall be attached and tightened or other positive safeguard in place before binder chains are released at any log dump.

(c) Stakes and chocks which trip shall be constructed in such manner that the tripping mechanism that releases the stake or chocks is activated at the opposite side of the load being tripped.

(d) Binders shall be released only from the side on which the unloader operates, except when released by remote control devices or except when person making release is protected by racks or stanchions or other equivalent means.

(e) Loads on which a binder is fouled by the unloading machine shall have an extra binder or metal band of equal strength placed around the load, or the load shall be otherwise secured so that the fouled binder can be safely removed.

(f) Unloading lines, crotch lines, or equally effective means shall be arranged and used in a manner to minimize the possibility of any log swinging or rolling back.

(6)(a) In unloading operations, the operator of unloading machine shall have an unobstructed view of the vehicle and the logs being unloaded.

(b) Unloading lines shall be arranged so that it is not necessary for the employees to attach them from the pond or dump site of the load except when entire loads are lifted from the log-transporting vehicle.

(7) All log dumps shall be kept reasonably free of bark and other debris.

(8) Employees shall remain in the clear until all moving equipment has come to a complete stop.

(9) Artificial log ponds subject to unhealthy stagnation shall be drained, cleansed, and water changed at least once every six months.

(10) All employees whose regular work requires walking on logs shall wear spiked or calked shoes, except when working in snow.

(11) Employees working on, over or along water, where the danger of drowning exists, shall be provided with and shall wear approved personal flotation devices.

(a) Employees are not considered exposed to the danger of drowning:

(i) When working behind standard height and strength guardrails;

(ii) When working inside operating cabs or stations which eliminate the possibility of accidentally falling into the water;

(iii) When wearing approved safety belts with lifeline attached so as to preclude the possibility of falling into the water.

(b) Prior to and after each use, personal floating devices shall be inspected for defects which would reduce their designed effectiveness. Defective personal flotation devices shall not be used.

(c) To meet the approved criteria required by subsection (11) of this subsection, a personal flotation device shall be approved by the United States Coast Guard as a Type I PFD, Type II PFD, Type III PFD, or Type V PFD, or their equivalent, pursuant to 46 CFR 160 (Coast Guard lifesaving equipment specifications) and 33 CFR 175.23 (Coast Guard table of devices equivalent to personal flotation devices). Ski belt or inflatable type personal flotation devices are specifically prohibited.

(12)(a) Wooden pike poles shall be of continuous, straight grained No. 1 material. Defective poles, blunt or dull pikes shall not be used.

(b) Aluminum or other metal poles shall not be used where hazard of coming in contact with live electric wires exists.

(13)(a) Walkways and floats shall be provided and security anchored to provide safe passage for workers.

(b) Permanent cable swifters shall be so arranged that it will not be necessary to roll boom sticks in order to attach or detach them.

(c) Inspection of cable or dogging lines shall be made as necessary to determine when repair or removal from service is necessary.

(14)(a) Decks of floats or other walkways shall be kept above the waterline at all times and shall be capable of supporting four times the load to be imposed.

(b) Floating donkeys or other power-driven machinery used on booms shall be placed on a raft or float with enough buoyancy to keep the deck above water.

(15)(a) All regular boom sticks and foot logs shall be reasonably straight, have all protruding knots and bark removed, and shall be capable of supporting above the waterline at either end, any necessary weight of workers and equipment.

(b) Stiff booms shall be two float logs wide secured by boom chains or other connecting devices, and of a width adequate for the working needs. Walking surfaces shall be free of loose material and maintained in good repair.

(c) Boom sticks shall be fastened together with cross-ties or couplings. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-56501, filed 8/27/81.]

**WAC 296-78-56503 Log hauls.** (1) Every log haul used as a walkway shall have at least one walkway with standard railing to enable workers to stand clear of the logs in the chute. Cleats shall be installed to provide safe footing on sloping walkways.

(2) Workers shall not stand under or dangerously near to logs that are being hoisted vertically to the log deck.

(3)(a) Log haul gears and bull chain drive mechanism shall be adequately guarded for the protection of employees.

(b) Log haul bull chains or cable shall be designed, installed, and maintained to provide a 4 to 1 safety factor for the intended load.

(c) Troughs for the return strand of log haul chains shall be provided over passageways.

(d) Overhead protection shall be provided for employees working below logs being moved to the log deck.

(4) Log haul controls shall be arranged to operate from a position where the operator will at all times be in the clear of logs, machinery lines and rigging. Such controls shall operate mechanism only when moved toward the log slip or deck.

(5) Where possible an automatic stop shall be installed on all log hauls. A positive stop shall be installed on all log hauls to prevent logs from traveling too far ahead in the mill.

(6)(a) Slip persons shall handle pike poles in such manner as to be in the clear in case of a slip back.

(b) All sorting gaps shall have a stiff boom on each side.

(c) The banks of the log pond in the vicinity of the log haul shall be reinforced to prevent caving in. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-56503, filed 8/27/81.]

**Reviser's note:** The caption of this section was supplied by the code reviser's office.

**WAC 296-78-56505 Boats and mechanical devices on waters.** (1) Prior to starting the boat motor, any spilled fuel shall be removed and vapors shall be exhausted from any area in which they may accumulate.

(2) The bilge area shall be kept clean and oil, grease, fuel, or highly combustible materials shall not be allowed to accumulate.

(3) Adequate ventilation equipment shall be provided and used for the bilge area to prevent the accumulation of toxic or explosive gases or vapors.

(4) Adequate ventilation equipment shall be provided and used for the cabin area on enclosed cabin-type boats to prevent an accumulation of harmful gases or vapors.

(5) Deck and cabin lighting shall be provided and used where necessary to provide safe levels of illumination aboard boats. Boats operated during the period from sunset to sunrise, or in conditions of restricted visibility, shall display navigation lights as required by the United States Coast Guard. Searchlights or floodlights shall be provided to facilitate safe navigation and to illuminate working or boarding areas adjacent to the craft.

(6) On craft used by workers wearing calked shoes, all areas where the operator or workers must stand or walk shall be made of or be covered with wood or other suitable matting or nonslip material and such covering shall be maintained in good condition.

(7) Each boat shall be provided with a fire extinguisher and life ring with at least fifty feet of one-fourth inch line attached. On log broncs, boom-scooters, or other small boomboats where all occupants are required to wear life saving devices and a life ring would present a tripping hazard, the life ring may be omitted.

(8)(a) Along docks, walkways, or other fixed installations on or adjacent to open water more than five feet deep, approved life rings with at least ninety feet of one-fourth inch line attached, shall be provided. The life rings shall be spaced at intervals not to exceed two hundred feet and shall be kept in easily visible and readily accessible locations.

(b) When employees are assigned work at other casual locations where exposure to drowning exists, at least one approved life ring with at least ninety feet of line attached, shall be provided in the immediate vicinity of the work assigned.

(c) When work is assigned over water where the vertical drop from the accidental fall would exceed fifty feet, special arrangements shall be made with and approved by the department of labor and industries prior to such assignment.

(d) Lines attached to life rings on fixed locations shall be at least ninety feet in length, at least one-fourth inch in diameter, and have a minimum breaking strength of five hundred pounds. Similar lines attached to life rings on boats shall be at least fifty feet in length.

(e) Life rings must be United States Coast Guard approved thirty-inch size.

(f) Life rings and attached lines shall be maintained to retain at least seventy-five percent of their designed buoyancy and strength.

(g) Log broncs, boom-scooters, and boomboats shall not be loaded with personnel or equipment so as to adversely affect their stability or seaworthiness.

(h) Boats shall not be operated at an excessive speed or handled recklessly.

(i) Boat fuel shall be transported and stored in approved containers (Underwriters' Laboratories, Inc.). [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-56505, filed 8/27/81.]

**WAC 296-78-56507 Log decks.** (1) Dry deck storage. (a) Dry deck storage areas shall be kept orderly and shall be maintained in a condition which is conducive to safe operation of mobile equipment.

(b) Logs shall be stored in stabilized piles, and roadways and traffic lanes shall be maintained at a width adequate for safe travel of log handling equipment.

(c) Logs shall be arranged to minimize the chance of accidentally rolling from the deck.

(2)(a) Employees shall not spool cable on winch or drums with their hands.

(b) Log wells shall be provided with safeguard to prevent logs from rolling back into well off log deck.

(3) Jump skids on log decks shall be installed in grooves in a manner that they cannot work out onto the carriage way.

(4)(a) Log decks shall be provided with effective means to prevent logs from accidentally rolling down the deck onto the carriage or its runway.

(b) Swing saws. Swing saws on log decks shall be equipped with a barricade and stops for protection of employees who may be on the opposite side of the log haul chute.

(c) Drag saws. Where reciprocating log cutoff saws (drag saws) are provided, they shall not project into walkway or aisle.

(d) Circular cutoff saws. Circular log bucking or cutoff saws shall be so located and guarded as to allow safe entrance to and exit from the building.

(e) Entrance doorway. Where the cutoff saw partially blocks the entrance from the log haul runway the entrance shall be guarded.

(5) A barricade or other positive stop shall be erected between the sawyer's stand and the log deck to protect the sawyer from rolling logs. Such barricade or stop shall be of sufficient strength to stop any log.

(6) Chains from overhead canting gear or other equipment shall not be allowed to hang over the log deck in such manner as to endanger workers.

(7) Canting gear control levers shall be so arranged that they move away from the carriage to operate.

(8) Moving parts or equipment on or about log decks shall be guarded.

(9) Peavies, canthooks and other hand tools shall be kept in good repair at all times.

(10) Workers shall not go below logs on decks that are likely to roll or be rolled. Means of access shall be provided to the head rig which does not subject employees to the hazard of moving logs or equipment. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-56507, filed 8/27/81.]

**WAC 296-78-56509 Mechanical barkers.** (1) Rotary barkers. Rotary barking devices shall be so guarded as to protect employees from flying chips, bark, or other extraneous material.

(2) Elevating ramp. If an elevating ramp or gate is used, it shall be provided with a safety chain, hook, or other means of suspension while employees are underneath.

(3) Area around barkers. The hazardous area around ring barkers and their conveyors shall be fenced off or posted as a prohibited area for unauthorized persons.

(4) Enclosing hydraulic barkers. Hydraulic barkers shall be enclosed with strong baffles at the inlet and outlet. The operator shall be protected by adequate safety glass or equivalent.

(5) Holddown rolls. Holddown rolls shall be installed at the infeed and outfeed sections of mechanical ring barkers to control the movement of logs.

(6) If such holddown rolls have a tendency to throw logs or chunks, horseshoe or equivalent type guards shall be installed to contain the logs or chunks. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-56509, filed 8/27/81.]

**WAC 296-78-56511 Head rigs and feed works.** (1) A clear walkway shall be provided along the upper side of the log deck and around the head rig unless an overhead walkway is provided.

(2) The sawyer shall be primarily responsible for the safety of the carriage crew and off-bearers. He shall exercise due care in the operation of the carriage and log turning devices.

(3) Feedworks and log turning control levers shall be so arranged that they may be securely locked when not in use and shall be guarded against accidental contact.

(4)(a) A positive means shall be provided to prevent unintended movement of the carriage. This shall involve a control locking device, a carriage tie-down, or both.

(b) An emergency control or equally effective means shall be provided so that the sawyer may stop the head rig section of the mill without leaving the operator station.

(5) An effective method of disengaging the head rig saws from the power unit shall be installed on all head rigs where the power unit is not directly controlled by the sawyer. The saws shall be disengaged from the source of power while repairs or changes are made.

(6) A shield of lexan, makrolon, merlon, plestar, or equivalent transparent material, shall be installed between the sawyer's stand and the head saws in all circular mills. In band mills and chipper type installations, a wire screen of not less than twelve gauge wire, one-half inch mesh, mounted in a frame in compliance with the requirements of WAC 296-24-20531 of the general safety and health standards, is an acceptable substitute for the type shield required in circular mills.

(7) Safety glasses, safety shields or other suitable eye protection shall be provided for and use by head rig off-bearers. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-56511, filed 8/27/81.]

**WAC 296-78-56513 Log carriages.** (1) Carriages upon which employees are required to work shall be solidly decked over.

(2) Dogs. Dogging devices shall be adequate to secure logs, cants, or boards, during sawing operations.

(3) The feed control lever of friction or belt driven carriage feed works shall be arranged to operate away from the saws or carriage track.

(4) A quick action valve, controlled from the sawyer's stand, shall be located in the steam line to any steam operated feed works. The valve shall be tested daily.

(5) Valves in steam feeds shall be closed and locked in a neutral position before the sawyer leaves his station. Leaking steam valves or piping shall not be used on carriage drives.

(6)(a) Where employees ride the headrig carriage, clearance of the rear edge of the carriage shall be either not more than two inches or shall be not less than thirty inches from the side wall of the building. The side wall shall be boarded over smoothly to height of not less than six feet six inches from the setter's platform and for at least the length of the carriage travel. Where the clearance is thirty inches or more the floor between the back side of the setter's platform and the wall shall be raised to the level of the platform. The clearance between the floor edge and the platform shall not be more than two inches.

(b) Barriers and warning signs. A barrier shall be provided to prevent employees from entering the space necessary for travel of the carriage, with headblocks fully retracted, for the full length and extreme ends of carriage runways. Warning signs shall be posted at possible entry points to this area.

(7) Safe access to the head rig shall be provided.

(8) No roof truss or roof timber or other obstruction shall be located within six feet six inches of the upper surface of the setter's platform on any carriage.

(9) Doors which lead onto a passageway at the end or side of the carriage runway shall be provided with a handrail opposite such doorway. Handrail shall not be less than eighteen inches from the carriage run. A warning sign shall be posted on the entrance side of such doorways.

(10) A stop or bumper capable of stopping the loaded carriage at operating speed shall be installed at each end of the carriage run.

(11) Rail sweeps shall be installed in front of the front wheels in the direction of travel. Such sweeps shall extend to within one-fourth inch of the rail.

(12) Where power operated log turners are used, carriage knees shall be provided with goosenecks or other means of protecting the carriage crew from climbing logs.

(13) Employees shall use a stick or wire brush to clear head blocks of debris.

(14) All weakened or broken carriage boards which will not support the load to be imposed with a safety factor of 4, shall be immediately replaced. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-56513, filed 8/27/81.]

**WAC 296-78-570 Band saws—Saws.** (1) Band head rigs shall be given a thorough daily inspection and any deficiency reported and corrected.

(2) Any band saw found to have developed a crack greater than one-tenth the width of the saw shall be removed from service until the width of the saw is reduced to eliminate the crack, the cracked section is removed, or the development of the crack is arrested by welding.

(3) Band saws shall not be continued in use of the head rig for which they have been designed after they have been reduced forty percent in width.

(4) Leather gloves, or equivalent hand protection, shall be worn by employees while changing band saws.

(5) All head band saw wheels shall have a minimum rim thickness of five-eighths inch, except for a distance of not to exceed one inch from the front edge of the wheel.

(6) Provisions shall be made for alerting and warning employees before starting band head saws, and measures shall be taken to insure that all persons are in the clear.

(7) No band saw shall be run at a peripheral speed in excess of that recommended by the manufacturer. The manufacturer's recommended maximum speed shall be stamped in plainly legible figures on some portion of the assembly.

(8) A band wheel that has developed a crack in the rim shall be immediately removed from service. If a crack has developed in a spoke the wheel shall be removed from service until repaired.

(9) All band wheels shall be completely encased or guarded on both sides. The exposed part of the saw blade on the uptravel between the two wheels shall be encased, and no portion of the blade exposed, except such part of the cutting edge as is essential for sawing the material at hand.

(10) All band wheel guards shall be constructed of not less than ten U.S. gauge metal, or not less than two inch wood material or equivalent, attached to the frames. Ventilating ports shall not exceed 2 x 4 inches in size. Openings necessary for lubrication or repair of the saw shall have doors or gates of equivalent strength to the remainder of the guard.

(11) Every band mill shall be equipped with a saw catcher, rest or guard of substantial construction.

(12) All band saws other than head mills shall be enclosed or guarded except the working side of the blade between the guide and the table. The guard for the portion of the saw between the sliding guide and the upper saw wheel guard shall be adjusted with the guide.

(13) Each gang ripper of band or straight saw type shall have the cutting edges of the saw guarded by a hood or screen secured to the framework of the machine. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-570, filed 8/27/81.]

**WAC 296-78-575 Circular saws.** (1) Single circular head saws. Circular head saws shall not be operated at speeds in excess of those specified by the manufacturer. Maximum speed shall be etched on the saw.

(2) On all circular saw mills the horizontal distance from the side of the saw to the nearest post of the husk or frame shall be at least one inch greater than the clear vertical distance between the collars of the top and bottom saws.

(3) Circular head saws shall be equipped with safety guides that can be readily adjusted without use of wrench or other hand tools. Brackets or edging supports shall be installed between the saw and the side of the husk.

(4) The upper saw of a double circular mill shall be provided with a hood or guard. A screen or other suitable device shall be placed so as to protect the sawyer from flying particles.

(5) All circular sawmills where live rolls are not used behind the head saw shall be equipped with an effective spreader or splitter. In any mill where the head saw is used for edging lumber, the splitter shall be solid and stationary and shall extend above the head blocks.

(6) Drag saws or circular cut-off saws shall be so arranged that they will not project into any passageway. When existing installations do not leave clear passage, saws shall be fenced off in order to make it impossible for anyone to walk into them. Means to securely hold material being sawed shall be provided wherever such material creates a hazard.

(7) All employees shall be in the clear before starting operation of drag or swing cut-off saws.

(8) Twin circular head saws. Twin circular head saw rigs such as scrag saws, shall meet the specifications for single circular head saws in subsection (1) of this section, where applicable. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-575, filed 8/27/81.]

**WAC 296-78-580 Edgers.** (1) Edgers shall be guarded by a metal housing of ten gauge sheet metal, ten gauge by one-half inch mesh wire, screen, or by a baffle of not less than two inch wood material.

(2) Openings in end frames shall be enclosed with sheet metal, wire screen or wood and may be hinged or arranged to permit oiling and removal of saws.

(3) The top of the edger shall be guarded to prevent contact by employees or debris being thrown and all chains and gears fully enclosed as required by WAC 296-78-710 of this chapter.

(4) Vertical arbor edgers installed ahead of the main saw shall be so located and guarded that an employee cannot contact any part of the edger saws from his normal operating position.

(5) Edgers shall not be located in the main roll case behind the head saw.

(6) All edgers shall be equipped with pressure feed rolls. The controls shall be installed and located so that from the normal work station the operator can quickly stop the infeed drive without releasing the hold down tension of the pressure rolls.

(7) All edgers shall be provided with a method of preventing or guarding against kickbacks. Finger units or dogs installed at the edger, or hinged steel plates suspended across the feed table may be used for this purpose. A kickback barricade, in line with the edger, if fenced off may be used.

(8) Pressure and feed rolls on edgers shall be guarded against accidental contact by means of roll covers, bars or strips. The pressure rolls shall not be lifted while stock is being run, or while any person is in line with the feed side of the saws.

(9) Edger men shall not raise feed rolls and reach between saws while edger is in operation.

(10) Edger men shall not put hands on cants being run through the edger.

(11) Live rolls in back of edger shall operate at a speed not less than the speed of the edger feed rolls.

(12) Tables in back of edgers shall be kept clear of cants, edgings and unnecessary debris. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-580, filed 8/27/81.]

**WAC 296-78-585 Equalizer saws.** (1) Equalizer saws for bolts, staves, heading, etc., shall have the saws encased, except that portion immediately adjacent to the feeding device.

(2) Feeding devices on all such equipment shall be provided with guards to prevent contact with the feeding device by employees. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-585, filed 8/27/81.]

**WAC 296-78-590 Gang saws and re-saws.** (1) Gang saws and re-saws shall be fully guarded or housed in accordance with conditions. Cranks, pitman rods, and other moving parts shall be guarded.

(2) Feed rolls shall be enclosed by a cover over the top, front, and open ends except where guarded by location. Drive mechanism to feed rolls shall be enclosed.

(3) Feed rolls shall be enclosed and if the operator stands within thirty inches of the feed rolls, they shall be so guarded as to prevent operator coming into contact with them.

(4) Circular re-saws or rip saws, except power feed rip saws with a roller or wheel back of the saw, shall be provided with splitters or spreaders.

(5) A hood of metal or wood of sufficient strength to give protection against splinters or flying teeth shall be provided over all circular rip saws.

(6) That portion of the saw extending below the table shall be so guarded as to prevent contact.

(7) Circular rip saws shall be equipped with a standard anti-kickback device.

(8) Carriage cradles of whole-log sash gang saws, Swedish gangs shall be of height to prevent logs from kicking out while being loaded.

(9) Band re-saws. Band re-saws shall meet the specifications for band head saws as required in WAC 296-78-570(7).

(10) Circular gang re-saws.

(a) Banks of circular gang re-saws shall be guarded by a hood to contain teeth or debris which can be thrown by the saws.

(b) Circular gang re-saws shall be provided with safety fingers or other anti-kickback devices.

(c) Circular gang re-saws shall not be operated at speeds exceeding those recommended by the manufacturer.

(d) Feed belts and drive pulleys shall be guarded in accordance with the requirements of WAC 296-24-205 through 296-24-20533 of the general safety and health standard.

(e) Each circular gang re-saw, except self-feed saws with a live roll or wheel at back of saw, shall be provided with spreaders. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-590, filed 8/27/81.]

**WAC 296-78-595 Jump saws.** (1) Jump saws shall have guards below the top of the table or roll case. A guard shall be placed over the roll casing to prevent persons from walking into or over the saw.

(2) Jump saws, underhung swing saws, or bed trimmers shall be so arranged that the saws are fully enclosed when not in actual use.

(3) A positive stop shall be installed to prevent the saw from passing the front edge of the roll case or table. The throat in the table or roll case shall be only wide enough to permit unobstructed operation of the saw.

(4) Guards constructed of not less than two inch wood material or of heavy wire mesh mounted in a steel frame shall be placed in front of jump saw trimmers. Stops shall be installed to prevent timber from being thrown off the roll case.

(5) Foot treadle operated saws shall be provided with safeguards to prevent accidental contact. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-595, filed 8/27/81.]

**WAC 296-78-600 Trimmer and slasher saws.** (1) Trimmer of slasher saws shall be guarded in front by a flat or round steel framework with a rigid metal screen or light iron bars attached thereto, or by wood baffles of not less than two inch wood material securely bolted to the frame.

Maximum speed. Trimmer saws shall not be run at peripheral speeds in excess of those recommended by the manufacturer.

(2) Front guards for a series of saws shall be set as close to the top of the feed table as is practical when considering the type of machine in use and the material being cut. The end saws of a series shall be guarded or fenced off.

(3) The rear of a series of saws shall have a stationary or swinging guard of not less than two inch wood material or equivalent the full width of the saws and as much wider as is necessary to protect persons at the rear of the trimmer.

(4) Safety stops. Automatic trimmer saws shall be provided with safety stops or hangers to prevent saws from dropping on table.

(5) Feed chains shall be stopped while employees are on the feed table.

(6) Spotters for trimmers or slashers shall be provided with goggles or other eye protection when conditions so warrant. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-600, filed 8/27/81.]

**WAC 296-78-605 Swing saws.** (1) Overhead swing cut-off saws shall be guarded by a hood which shall cover the upper half of the cutting edge at least to the depth of the teeth.

(2) The driving belts on overhead swing cut-off saws, where exposed to contact, shall be provided with guards as required by WAC 296-78-030.

(3) Saws shall be completely enclosed when in idle position.

(4) Power operated swing saws shall have controls so arranged that the operators will not stand directly in front of saw when making cut.

(5) All swing saws shall be equipped with a counter balance which shall be permanently fastened to the frame of the saw and so arranged or adjusted that it will return the saw beyond the rear edge of the table or roll case without a rebounding motion. Wire rope, chain or nonmetallic rope running to a weight over a sheave shall not be used for attaching counter balance.

(6) No swing cut-off or trim saw shall be located directly in line with stock coming from an edger.

(7) Swing limit stops shall be provided and so adjusted that at no time shall the forward swing of the saw extend the cutting edge of the saw beyond a line perpendicular with the edge of the saw table, roll case, guard or barrier.

(8) Saws that are fed into the cut by means of air, steam, hydraulic cylinders, or other power device or arrangement shall be designed so they can be locked or rendered inoperative.

(9) Foot treadle operated saws shall be provided with safeguards to prevent accidental contact.

(10) Swing saws on log decks shall be equipped with a positive stop for the protection of persons who may be on the opposite side of the log haul chute.

(11) Operators of hand operated swing saws shall not stand directly in front of saw while making cut.

(12) Tables or roll casings for swing saws shall be provided with stops or lineup rail to prevent material being pushed off on opposite side. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-605, filed 8/27/81.]

**WAC 296-78-610 Circular saws, speeds, repairs.**

(1) Circular saws shall not be operated at speeds in excess of that specified by the manufacturer. Speeds shall be etched on all new saws. When saws are repaired, re-manufactured or retensioned in any way to change their operating speeds, such change of speed shall be etched on the saw. These etched speeds shall not be exceeded.

(2) Circular saws shall be inspected for cracks each time that the teeth are filed or set.

(3) A circular saw shall be discontinued from use until properly repaired when found to have developed a crack equal to the length indicated in the following table:

Length of Crack	Diameter
1/2 - inch . . . . .	Up to 12"
1 - inch . . . . .	Over 12" to 24"
1-1/2 - inch . . . . .	Over 24" to 36"
2 - inch . . . . .	Over 36" to 48"
2-1/2 - inch . . . . .	Over 48" to 60"
3 - inch . . . . .	Over 60"

(4) Welding or slotting of cracked saws shall be done by a sawsmith under a procedure recommended by the saw manufacturer. Holes shall not be drilled in saws as a means of arresting cracks. After saws are repaired they shall be retensioned. Unless a sawsmith is employed, saws shall be returned to the manufacturer for welding

or tensioning. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-610, filed 8/27/81.]

**WAC 296-78-615 Saw filing and grinding rooms and equipment.** (1) Approaches to filing rooms shall be kept free from material and equipment at all times.

(2) Enclosed grinding and filing rooms shall be ventilated as specified in the general occupational health standard, WAC 296-62-110 through 296-62-11019.

(3) Each filing and grinding room shall be provided with two exits so arranged as to permit easy escape in case of fire.

(4) Floor shall be cleaned regularly and shall be kept free from oil, grease and other materials that might cause employees to slip or fall.

(5) Flooring around machines shall be kept in good repair at all times.

(6) Saw grinding machine belts shall be provided with guards where these belts pass through the frame of the machine.

(7) All grinding wheels on such machines shall be provided with a metal retaining hood which shall also cover the arbor ends if they are exposed to contact.

(8) Filing room employees shall be provided with goggles, face shields, or other necessary protective equipment and are required to wear the same.

(9) Guarding and mounting of abrasive wheels shall be in accordance with WAC 296-24-18003 through 296-24-18007 of the general safety and health standards. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-615, filed 8/27/81.]

**WAC 296-78-620 Miscellaneous woodworking machines--Planers, stickers, molders, matchers.** (1) Each planing, molding, sticking and matching machine shall have all cutting heads, and saws if used, covered by a solid metal guard.

(2) Planers, stickers, molding, sticking and matching machines shall be provided with exhaust fans, hoods and dust conveyors to remove the harmful dusts, etc., from the vicinity of the operator. Such hoods may be arranged to serve as guards for cutting heads.

(3) Planers and other machinery or equipment shall not be oiled while in motion, unless provided with guards or other devices to permit oiling without any possibility of contact with moving parts of machinery.

(4) Feed rolls shall be guarded by means of roll covers, bars or strips, attached to the roll frame in such manner as to remain in adjustment for any thickness of lumber.

(5)(a) Levers or controls shall be so arranged or guarded as to prevent accidental operation of machines.

(b) Foot treadle operated machines shall have a treadle guard fastened over the treadle.

(c) Locks, blocks, or other device shall be provided for positive immobilization of machine controls while repairs or adjustments are being made.

(6) Side head hoods shall be of sufficient height to safeguard the head set screw.

(7) Side heads shall not be adjusted while machine is in operation, except when extension adjusting devices are provided.

(8) Side belt and pulley guards shall be kept in place at all times the machine is in motion.

(9) All universal joints shall be enclosed. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-620, filed 8/27/81.]

**WAC 296-78-625 Planers (stave and headings).** (1) Each planer (stave and heading) shall have all cutting heads, and saws if used, covered by a solid metal guard.

(2) Stave and heading planers shall be provided with exhaust fans, hoods and dust conveyors to remove the harmful dusts, etc., from the vicinity of the operator. Such hoods may be arranged to serve as guards for cutting heads.

(3) Sectional feed rolls should be provided. Where solid feed rolls are used, a sectional finger device (or other means equally effective) shall be provided to prevent kickbacks. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-625, filed 8/27/81.]

**WAC 296-78-630 Stave croziers.** (1) Stave croziers shall have the heads guarded completely by the exhaust hood or other device, except that portion which actually inbeds itself in the stock.

(2) Each stave crozier shall have all feed chains and sprockets completely enclosed. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-630, filed 8/27/81.]

**WAC 296-78-635 Jointers.** (1) Each hand feed jointer or buzz planer with horizontal head shall be provided with an automatic guard over the cutting head both in front of and in back of the guide.

(2) Each jointer or buzz planer with horizontal head shall be equipped with a cylindrical cutting head, the throat of which shall not exceed three-eighths inch in depth or one-half inch in width.

(3) Each jointer or buzz planer with vertical head shall be guarded by an exhaust hood or other approved device which shall completely enclose the revolving head except for a slot sufficiently wide to permit the application of material.

(4) Push sticks shall be provided and used for feeding stock through hand operated jointers or buzz planers. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-635, filed 8/27/81.]

**WAC 296-78-640 Jointers (stave and heading).** (1) Stave and heading jointers and matchers shall have the heads guarded completely by the exhaust hood or other device, except that portion where the stock is applied.

(2) Foot power stave jointing machines shall have the knife effectively guarded to prevent the operator's fingers from coming in contact with it. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-640, filed 8/27/81.]

**WAC 296-78-645 Wood shapers.** (1) The cutting head of each wood shaper, hand feed panel raiser, or other similar machine not automatically fed, shall be guarded with a cage or pulley guard or other device so designed as to keep the operator's hands away from the cutting edge. In no case shall a warning device of leather or other material attached to the spindle be acceptable. Cylindrical heads shall be used wherever the nature of the work permits. The diameter of circular shaper guards shall be not less than the greatest diameter of the cutter.

(2) All double spindle shapers shall be provided with a spindle starting and stopping device for each spindle or provision shall be made that only one spindle operate at any one time. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-645, filed 8/27/81.]

**WAC 296-78-650 Boring and mortising machines.** Boring and mortising machines shall be provided with safety bit chucks without projecting set screws. Automatic machines shall be provided with point of operation guards. When necessary to prevent material from revolving with the bit, clamps or stops shall be provided and used to hold material firmly against the guides. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-650, filed 8/27/81.]

**WAC 296-78-655 Tenoning machines.** (1) Each tenoning machine shall have all cutting heads, saws if used, and all exposed moving parts guarded. In the case of cutting heads and saws, the guard shall be of solid metal.

(2) If sheet metal is used, it shall be not less than ten U.S. gauge in thickness. If cast metal is used it shall be not less than three-sixteenths inch thick, or if aluminum is used, it shall be not less than five-eighths inch thick. The hood of the exhaust system may form part or all of the guard. When so used, the hood shall be constructed of metal of a thickness not less than that specified herein.

(3) Feed chains and sprockets of all double end tenoning machines shall be completely enclosed, except that portion of chain used for conveying stock. At rear ends of frames over which the feed conveyors run, sprockets and chains shall be guarded at the sides by plates projecting beyond the periphery of sprockets and ends of lugs.

(4) The rear end of the frame over which the feed conveyors run shall be so extended that the material as it leaves the machine will be guided to a point within easy reach of the person removing stock at the rear of the tenoner.

(5) Single end tenoners, hand fed, shall have a piece of sheet metal placed so that the operator's hands cannot slip off the lever handle into the tool in passing. Such guard shall be fastened to the lever. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-655, filed 8/27/81.]

**WAC 296-78-660 Lathe (pail and barrel).** (1) Each profile, swing-head and back-knife lathe shall have all cutting heads covered by a solid metal guard.

(2) If sheet metal is used, it shall be not less than ten U.S. gauge in thickness. If cast metal is used, it shall be not less than three-sixteenths inch thick, or if aluminum is used, it shall be not less than five-eighths inch thick. The hood of the exhaust system may form part or all of the guard. When so used, the hood shall be constructed of metal of a thickness not less than that specified above.

(3) Pail and barrel lathes shall be guarded in accordance with the specifications for Profile and Back-knife lathes insofar as they are applicable. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-660, filed 8/27/81.]

**WAC 296-78-665 Sanding machines.** (1) Each belt sanding machine shall have both pulleys enclosed in such a manner as to guard the points where the belt runs onto the pulleys. The edges of the unused run of belt shall be enclosed or otherwise guarded from contact by employees.

(2) Each drum sanding machine shall be provided with a guard so arranged as to completely enclose the revolving drum except such portion required for the application of the material to be finished. Guards with hinges to facilitate the insertion of sandpaper may be installed. The exhaust hood may form part or all of this guard. When so used, the hood shall conform to the specifications as given under exhaust systems in WAC 296-78-710.

(3) All standard stationary sanding machines shall be provided with exhaust systems in conformity with the section of this code dealing with exhaust systems.

(4) All portable sanding machines shall be provided with means of removing excessive dust, or employees using equipment shall be provided with such necessary respiratory protective equipment as will conform to the requirements of the general occupational health standards, chapter 296-62 WAC. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-665, filed 8/27/81.]

**WAC 296-78-670 Glue machines.** (1) Personal protective equipment as required by the general safety and health standard, WAC 296-24-075 through 296-24-092, and the general occupational health standard, WAC 296-62-11021, and proper washing facilities with noncaustic soap and sterilizers, shall be provided for all employees handling glue. Rubber gloves and other personal equipment must be sterilized when transferred from one person to another.

(2) Glue spreaders shall be enclosed on the in-running side, leaving only sufficient space to insert the stock.

(3) All glue spreaders shall be equipped with a panic bar or equivalent type device that can be reached from either the infeed or outfeed side of the spreader to shut-off the power in an emergency situation. Such device shall be installed on existing glue spreaders no later than April 1, 1982, and be standard equipment on any glue spreader purchased after January 1, 1982.

(4) All glue mixing and handling rooms where located above work areas shall have water tight floors.

(5) All glue rooms shall be provided with ventilation in accordance with WAC 296-62-110 through 296-62-11013, of the general occupational health standard. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-670, filed 8/27/81.]

**WAC 296-78-675 Lath mills.** (1) Lath mills shall be so arranged that stock pickers shall be protected from slabs and blocks from slasher and trimmers.

(2) Bolters and lath machines shall be provided with a wall or shield of not less than two inch wood material or equivalent, constructed in front of the machines, to protect stock pickers and passing employees from kickbacks.

(3) Lath bolters and lath mills shall have all feed rolls, belts, gears and moving parts provided with approved guards. Feed chains shall be guarded to as low a point as the maximum height of the stock will permit.

(4)(a) Lath bolters and lath mill saws shall be provided with a sheet metal guard not less than one-eighth inch thick, or a cast iron guard not less than three-sixteenths inch thick, or equivalent. These hoods may be hinged so that they can be turned back to permit changing of the saws.

(b) A metal plate baffle, finger device or other device, shall be installed to prevent kickbacks.

(5)(a) The feed rolls on bolters or lath mills shall not be raised while any employee is in line with the saws.

(b) The stock shall be pushed through the saws with another piece of stock or push stick.

(6)(a) The lath trimmer shall be provided with guards on the ends, the top and the rear so designed as to contain debris and prevent employee contact with the saw. The belt drive shall be provided with guards as required by WAC 296-78-710.

(b) The entire top half of all trimmer saws shall be provided with guards. The guards shall be so adjusted as to prevent employees from accidentally contacting saws. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-675, filed 8/27/81.]

**WAC 296-78-680 Veneer and plywood plants--Peeling and barking.** (1) Where peeling or barking pits are located directly under the log cranes, logs shall not be moved over workers.

(2) Single spiked hooks without a bell shall not be used for handling logs. Hooks shall be equipped with hand holds and shall be maintained in condition to safely perform the job application.

(3) Mechanical barking devices shall be so guarded as to protect employees from flying chips, bark or other matter.

(4) Logs shall not be removed from barker until barking head has ceased to revolve, unless barker is so designed and arranged that barking head will not create or constitute a hazard to employees. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-680, filed 8/27/81.]

**WAC 296-78-685 Veneer lathe.** (1) The elevating ramp (gate) shall be provided with a safety chain and hook or other positive means of suspension while employees are working underneath same.

(2) The area under the tipple from lathe to stock trays shall be provided with railings or other suitable means of preventing employees from entering this area, if access is not prevented by the construction of the machine and employees can enter this area.

(3) Catwalks shall be provided along stock trays so that employees will not have to climb on the sides of trays to straighten stock.

(4) Any section of stock trays shall be locked out or shall have an operator stationed at starting controls while stock is being removed or adjusted.

(5) Guards which will cover the cutting edge of veneer lathe and clipper blades shall be provided and used while such blades are being transported about premises. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-685, filed 8/27/81.]

**WAC 296-78-690 Veneer slicer and cutter.** Each veneer slicer and each rotary veneer cutter shall have all revolving and other moving knives provided with guards. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-690, filed 8/27/81.]

**WAC 296-78-695 Veneer clipper.** (1) Each veneer clipper shall have either automatic feed or shall be provided with a guard which will make it impossible to place any portion of the hand under the knife while feeding stock. Where practicable, such guard shall be of the vertical finger type.

(2) The rear of each manually operated clipper shall be guarded either by a screen or vertical finger guard which shall make it impossible for any portion of the hand to be placed under the knife while removing clipped stock. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-695, filed 8/27/81.]

**WAC 296-78-700 Veneer wringer (swede).** The entry side of each veneer wringer other than glue spreader shall be enclosed, leaving only sufficient space to insert stock. A guard shall be provided to prevent the veneer from overriding the top roll and kicking back. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-700, filed 8/27/81.]

**WAC 296-78-705 The shake and shingle industry.** The following terms and standards shall apply only in the manufacturing of shakes and shingles and these requirements shall take precedence over other sawmill and woodworking standards. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-705, filed 8/27/81.]

**WAC 296-78-70501 Definitions--Terms, general.**

(1) "Block(s)" - those sections of a log cut in various lengths.

(2) "Block(s)" and "bolt(s)" may be considered to be synonymous.

(3) "Clipper saw" - a circular saw used to trim manufactured shingles.

(4) "Groover" - a cylinder-type knife (knives) similar to a planer knife (knives), used to cut grooves into the face surface of shakes or shingles.

(5) "Hip" and "ridge saw" - a circular saw used to cut various angles on the side edge of shakes or shingles.

(6) "Johnson bar" - a shaft used to control the feed of the carriage.

(7) "Knee bolter circular saw" - a stationary circular saw used to trim and debark blocks (the blocks are manually maneuvered onto a carriage and fed into a saw).

(8) "Log haul" - a power conveyor used to move logs to mill.

(9) "Packers" - employees who pack the manufactured shakes or shingles into bundles.

(10) "Panagraph power splitter" - a hydraulically operated wedge, manually positioned into place, used to split blocks.

(11) "Power saw splitter" - a stationary circular saw used to split (saw) blocks, (the blocks are manually maneuvered onto a carriage and fed into the saw).

(12) "Set works" - a component of the shingle machine, located on the machine frame, used to control the thickness of each shingle being manufactured.

(13) "Shake machine" - a band saw used to cut shake blanks into manufactured shakes.

(14) "Shake splitter" - a stationary hydraulically operated wedge, manually controlled, used to split shake blocks into shake blanks or boards.

(15) "Shim saw" - a circular saw used to re-cut manufactured shingles into narrow widths.

(16) "Shingle machine" - a machine used to manufacture shingles; composed of a feed, set works, and carriage system, all functioning in relation to a circular saw.

(17) "Shingle saw" - a circular saw used to cut shingles from blocks.

(18) "Spault" - the first and last section(s) of a block as it is cut into shingles.

(19) "Spault catcher" - a device located on the shingle machine next to the solid feed rolls, used to hold the last section of each block being cut (called a spault), in place.

(20) "Track or swing cutoff saw" - a circular saw used to cut blocks from a log. [Statutory Authority:

RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-70501, filed 8/27/81.]

**WAC 296-78-70503 Shake and shingle machinery--General.** (1) Track or swing cutoff circular saw.

(a) A power operated track or swing cutoff circular saw shall have controls so arranged that operators are not positioned directly in front of the saw while making a cut.

(b) All track or swing cutoff circular saws shall be completely encased or guarded when the saw is in the retract position, except for that portion of the guard that must be left open for the operation of the saw.

(c) Track or swing cutoff circular saw guards shall be constructed of sheet metal not less than one-eighth inch thick, or a wood guard of not less than nominal two inch thick wood material, or equivalent.

Hinged or removable doors or gates will be permitted where necessary to permit adjusting and oiling.

(d) The driving belt(s) on the track or swing cutoff circular saw shall be guarded in accordance with the general safety and health standard, WAC 296-24-205 through 296-24-20533.

(e) A safety catch shall be provided to prevent the track cutoff saw from leaving the track.

(2) Overhead deck splitter - panagraph.

(a) Panagraph splitters shall have a shroud incorporated on the upper pressure plate to eliminate the possibility of the splitter moving from the operating area. This shroud shall be constructed of solid design with a minimum width of three inches and a minimum thickness of three-eighths inch.

(b) Mechanically operated overhead splitters shall have handles moving opposite the stroke of the piston.

(c) When the leading edge of the panagraph splitter is completely extended, the maximum clearance from the deck to the splitting edge shall be two inches.

(3) Power splitter saw. Power splitters shall have spreaders behind the saw to prevent materials from squeezing the saw or being thrown back on the operator. The top of the saw shall be completely covered.

(4) Knee bolter circular saw.

(a) A safety catch shall be provided to prevent the bolter carriage from leaving the track.

(b) Bolter saws shall be provided with a canopy guard of sheet metal not less than one-eighth inch thick, or cast iron guard not less than three-sixteenths inch thick or a wood guard of not less than nominal four inch thick wood material or equivalent.

The bolter canopy guard shall completely enclose the rear portion of the saw. It shall be so arranged and adjusted as to cover the front of the saw; not to exceed twenty inches from the top of the carriage to the bottom of the guard on sixteen inch and eighteen inch block and twenty-six inches on twenty-four inch blocks, of the material being cut.

(c) Bolter saws shall be provided with wipers of belting or other suitable material. These wipers shall be installed on both sides of the saw in such a manner as to deflect knots, chips, slivers, etc., that are carried by the saw.

(d) A positive device shall be provided and used to manually lock and hold the feed table in the neutral position when not in use.

(e) That portion of all bolter saws which is below and behind the saw table shall be guarded by the exhaust hood or other device. Hinged or removable doors or gates will be permitted where necessary to permit adjusting and oiling. [Statutory Authority: RCW 49.17-.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-70503, filed 8/27/81.]

**WAC 296-78-70505 Shake machinery.** (1) Shake splitters.

(a) A positive deenergizing device shall be provided within ready reach of each shake splitter operator.

(b) Each shake splitter shall be provided with an adjustable stroke limiter to eliminate the splitting blade from striking the table.

(c) All splitters shall have a maximum clearance of four inches, from the splitting edge to the table surface, when the splitter is in the extended position.

(d) All splitter tables shall have a friction surface to reduce kick out of the material being split.

(e) Shake splitters shall not be operated at a speed that would cause chunks to be thrown in such a manner as to create a hazard.

(f) The use of foot pedal (treadle) mechanisms shall be provided with protection to prevent unintended operation from falling or moving objects or by accidental stepping onto the pedal.

(i) The pedal shall have a nonslip surface.

(ii) The pedal return spring shall be of the compression type, operating on a rod or guided within a hole or tube, or designed to prevent interleaving of spring coils in event of breakage.

(iii) If pedal counterweights are provided, the path of the travel of the weight shall be enclosed.

(2) Shake saw guards.

(a) Every shake band saw shall be equipped with a saw guard on both sides of the blade down to the top side of the guide.

(b) The outside saw guard shall extend a minimum of three and one-half inches below the bottom edge of the saw guide.

(c) The maximum opening between the saw guide and table rolls shall be fifteen inches.

(3) Shake saw band wheel guards.

(a) The band wheels on all shake band saws shall be completely encased or guarded on both sides. The guards shall be constructed of not less than No. 14 U.S. gauge metal or material equal in strength.

(b) The metal doors, on such guards, shall have a wood liner of a minimum thickness of one-half inch.

(4) Shake saw band wheel speeds and maintenance.

(a) No band wheel shall be run at a peripheral speed in excess of that recommended by the manufacturer.

(b) Each band wheel shall be carefully inspected at least once a month by management.

Any band wheel in which a crack is found in the rim or in a spoke shall be immediately discontinued from service until properly repaired.

(c) Each band saw frame shall be provided with a tension indicator. [Statutory Authority: RCW 49.17-.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-70505, filed 8/27/81.]

**WAC 296-78-70507 Upright shingle machine.** (1) Upright shingle saw guard.

(a) Every shingle machine carriage shall be equipped with a hand guard which:

(i) Projects at least one inch beyond the cutting edge of the saw.

(ii) Shall be located not more than one-half inch from the side of the saw blade.

(b) Shingle saw guards shall have a rim guard so designed and installed as to prevent chips and knots from flying from the saws. Such guards shall cover the edge of the saw to at least the depth of the teeth, except such part of the cutting edge as is essential for sawing the material.

(c) Saw arbors and couplings shall be guarded to prevent contact.

(d) Every part of a clipper saw blade, except that part which is exposed to trim shingles, shall be enclosed by a guard, so designed and installed to prevent contact with the clipper saw. An additional guard shall be installed not more than four inches above the clipper board and not more than one-half inch from the vertical plane of the saw.

(e) The underside of clipper saw boards shall be equipped with a finger guard to effectively protect the operator's fingers. The guard shall be a minimum of five inches long and one and one-quarter inches deep.

(2) Upright carriage guards.

(a) Automatic revolving cam set works and rocker arms, on machine frame, shall be guarded where exposed to contact.

(b) The spault catchers shall be not less than three-sixteenths inch thick and kept sharp at all times. Missing teeth shall be replaced.

(3) Carriage feed works.

(a) The pinion gear, bull wheel and Johnson bar, operating the saw carriage, shall be guarded where exposed to contact.

(b) Each shingle machine clutch treadle shall be arranged so that it is necessary to manually operate the treadle to start the machine. Devices which start the machine when the jaw treadle is released shall not be installed or used. The carriage shall have a brake to hold it in a neutral position.

(c) Carriage speed shall not exceed thirty-four strokes per minute. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-70507, filed 8/27/81.]

**WAC 296-78-70509 Related shake and shingle sawing machinery.** (1) Flat or taper saw. A wood or metal guard or its equivalent shall be secured to the sliding table at the side nearest the sawyer to protect him from contact with the cutting edge of the saw when a block is not in the cut.

(2) Hip and ridge saws. The hip and ridge saws shall be guarded with a hood-like device. This guard shall cover that portion of the saw not needed to cut the material, located above the cutting table.

(a) The remaining portion of the saw, located below the table, shall be guarded to prevent contact by employees.

(b) The hip and ridge guarding standard is applicable to both shake and shingle hip and ridge saws.

(3) Shim stock saws. The top ends and sides of the shim stock saws shall be guarded. All shim stock saw power transmission mechanism shall be guarded.

(4) Shake or shingle groover. The top ends and sides of the groover, to include the press rolls, shall be guarded to contain material or debris which can be thrown and to prevent contact. All groover machine power transmission mechanism shall be guarded in compliance with WAC 296-78-710.

(5) Circular saws, speeds and repairs.

(a) Maximum allowable speeds.

(i) No circular saw shall be run at a speed in excess of that recommended by the manufacturer.

(ii) Such speed shall be etched or otherwise permanently marked on the blade, and that speed shall not be exceeded.

(b) Repairs and reconditions.

(i) Shingle saws when reduced in size to less than forty inches in diameter shall be discontinued from service as shingle saws on upright or vertical machines.

(ii) Shingle saws may be reconditioned for use as clipper saws provided the surface is reground and the proper balance attained.

(iii) Shingle saws may be used to no less than thirty-six inches on flat or taper saw machines. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-70509, filed 8/27/81.]

#### **WAC 296-78-70511 Safety rules. (1) General.**

(a) Workers shall not leave shingle machines unattended while the carriage is in motion.

(b) Shingle blocks shall not be piled more than one tier high on tables or roll cases. Chunks may be placed horizontally one tier high on top of shingle blocks. Shingle blocks shall be piled in a stable manner, not more than seventy-two inches high, within the immediate working area of the shingle sawyer or the area shall be barricaded.

(c) Provisions shall be made to prevent blocks from falling into the packing area.

(d) On each machine operated by electric motors, positive means shall be provided for rendering such controls or devices inoperative while repairs or adjustments are being made to the machines they control.

(e) Workers shall not stand on top of blocks while in the process of splitting other blocks into bolts.

(2) Jointers (shingle). Shingle jointers shall have the front, or cutting face of the knives, housed except for a narrow slot through which the shingles may be fed against the knives. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-70511, filed 8/27/81.]

**WAC 296-78-710 Construction and isolated equipment.** [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-710, filed 8/27/81.]

**WAC 296-78-71001 General.** (1) Construction when not specifically covered in these standards shall be governed by such other standards adopted by the department of labor and industries as may apply.

(2) All buildings, docks, tramways, walkways, log dumps and other structures shall be so designed, constructed, and maintained as to provide a safety factor of four. This means that all members shall be capable of supporting four times the maximum load to be imposed. This provision refers to buildings, docks and so forth designed and constructed subsequent to the effective date of these standards and also refers in all cases where either complete or major changes or repairs are made to such buildings, docks, tramways, walkways, log dumps and other structures.

(3) Basements on ground floors under mills shall be evenly surfaced, free from unnecessary obstructions and debris, and provided with lighting facilities in compliance with the requirements of the general occupational health standards, WAC 296-62-09003.

(4) All engines, motors, transmission machinery or operating equipment installed in mill basements or ground floors shall be equipped with standard safeguards for the protection of workers.

(5) Hazard marking. Physical hazard marking shall be as specified in WAC 296-24-135 through 296-24-13503 of the general safety and health standards.

(6) Flooring of buildings, ramps and walkways not subject to supporting motive equipment shall be of not less than two-inch wood planking or material of equivalent structural strength.

(7) Flooring of buildings, ramps, docks, trestles and other structure required to support motive equipment shall be of not less than full two and one-half inch wood planing or material of equivalent structural strength. However, where flooring is covered by steel floor plates, two inch wood planking or material of equivalent structural strength may be used.

(8) Walkways, docks, and platforms.

(a) Walkways, docks and platforms shall be constructed and maintained in accordance with the requirements of the general safety and health standards, WAC 296-24-735 through 296-24-75011.

(b) Maintenance. Walkways shall be evenly floored and kept in good repair.

(c) Where elevated platforms are used they shall be equipped with stairways or ladders in accordance with the general safety and health standards, WAC 296-24-765 through 296-24-81013. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71001, filed 8/27/81.]

**WAC 296-78-71003 Floor openings.** (1) All floor openings either temporary or permanent, shall be protected as required by the general safety and health standards, WAC 296-24-750 through 296-24-75011.

(2) The area under floor openings shall, where practical, be fenced off. When this is not practical, the areas shall be plainly marked with yellow lines and telltaills shall be installed to hang within five and one-half feet of the ground or floor level.

(3) Where floor openings are used to drop materials from one level to another, audible warning systems shall be installed and used to indicate to employees on the lower level that material is to be dropped. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71003, filed 8/27/81.]

**WAC 296-78-71005 Floors, docks, platforms and runways.** (1) Faces of docks except on loading and unloading sides of rail and truck loading platforms, and runways used for the operation of lift trucks and other vehicles shall have a guard or shear timber eight by eight inches set over three inch blocks and securely fastened to the floor by bolts of not less than five-eighths inch diameter.

(2) The flooring of buildings, docks and passageways shall be kept in good repair at all times. When a hazardous condition develops that cannot be immediately repaired, the area shall be fenced off and not used until adequate repairs are made.

(3) All working areas shall be kept free from unnecessary obstruction and debris.

(4) Floors around machines and other places where workers are required to stand shall be provided with effective means to prevent slipping. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71005, filed 8/27/81.]

**WAC 296-78-71007 Footwalks and passageways.**

(1) All footwalks and passageways subject to slipping hazards due to peculiarities of conditions or processes of the operation shall be provided with nonslip surfaces.

(2) Walkways in accordance with WAC 296-78-71001(8) shall be provided over roll casings, transfer tables, conveyors or other moving parts except where stepping over such equipment is not in connection with usual and necessary traffic.

(3) Walkways alongside of sorting tables shall be of sufficient width to provide safe working area. Such walkways shall be evenly floored and kept in good repair at all times. They shall be kept free from obstructions and debris.

(4) When employees are required to clear plug-ups in veneer trays or lumber sorting trays, adequate walkways with standard guardrails shall be provided for access to the trays whenever possible. When walkways are not provided, safety belts or harnesses with lanyards, tied off to substantial anchorages, shall be provided and used at all times.

(5) Walkways and stairways with standard hand rails shall be provided wherever space will permit, for oilers and other employees whose duties require them to go consistently to elevated and hazardous locations.

(a) Where such passageways are over walkways or work areas, standard toeboards shall be provided.

(b) Protection as required by the general safety and health standard, WAC 296-24-205 through 296-24-20533 shall be provided against contact with transmission machinery or moving conveyors. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71007, filed 8/27/81.]

**WAC 296-78-71009 Stairways and ladders.** (1) Stairways shall be used in preference over ladders wherever possible. Stairways or ladders, whichever is used, shall be constructed and maintained in accordance with the provisions of the general safety and health standard, WAC 296-24-75009 through 296-24-81013.

(2) Doors shall not open directly on a flight of stairs.

(3) Permanent ladders shall be fastened securely at both top and bottom.

(4) Portable ladders shall not be used upon footing other than suitable type.

(5) Hooks or other means of securing portable ladders when in use, shall be provided.

(6) Portable ladders shall not be used for oiling machinery which is in motion. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71009, filed 8/27/81.]

**WAC 296-78-71011 Egress and exit.** (1) In all enclosed buildings, means of egress shall be provided in accordance with the provisions of the general safety and health standard, WAC 296-24-550 through 296-24-56531.

(2) All swinging doors shall be provided with windows, the bottom of which shall be not more than forty-eight inches above the floor. One window shall be provided for each section of double swinging doors. All such windows shall be of shatter proof or safety glass unless otherwise protected against breakage.

(3) Outside exits shall open outward. Where sliding doors are used as exits, an inner door not less than two feet six inches by six feet shall be cut inside each of the main doors and arranged to open outward.

(4) At least two fire escapes or substantial outside stairways, shall be provided for mill buildings where the floor level is more than eight feet above the ground.

(a) Buildings over one hundred fifty feet in length shall have at least one additional fire escape or substantial outside stairway for each additional one hundred fifty feet of length or fraction thereof.

(b) Passageways to fire escapes or outside stairways shall be marked and kept free of obstructions at all times.

(c) Fire protection. The requirements of WAC 296-24-585 through 296-24-62003 of the general safety and health standard, shall be complied with in providing the necessary fire protection for sawmills.

(d) Fire drills shall be held at least quarterly and shall be documented.

(5) Where a doorway opens upon a roadway, railroad track, or upon a tramway or dock over which vehicles travel, a barricade or other safeguard and a warning sign shall be placed to prevent workers from stepping directly into moving traffic.

(6) Tramways and trestles shall be substantially supported by piling or framed bent construction which shall be frequently inspected and maintained in good repair at all times. Tramways or trestles used both for vehicular and pedestrian traffic shall have a walkway with standard hand rail at the outer edge and shear timber on the inner edge, and shall provide three feet clearance to vehicles. When walkways cross over other thoroughfares, they shall be solidly fenced at the outer edge to a height of 42 inches over such thoroughfares.

(7) Where tramways and trestles are built over railroads they shall have a vertical clearance of twenty-two feet above the top of the rails. When constructed over carrier docks or roads, they shall have a vertical clearance of not less than six feet above the drivers foot rest on the carrier, and in no event shall this clearance be less than twelve feet from the surface of the lower roadway or dock.

(8) Walkways (either temporary or permanent) shall be not less than twenty-four inches wide and two inches thick, nominal size, securely fastened at each end. When such walkways are used on an incline the angle shall not be greater than twenty degrees from horizontal.

(9) Walkways from the shore or dock to floats or barges shall be securely fastened at the shore end only and clear space provided for the other end to adjust itself to the height of the water.

(10) Cleats of one by four inch material shall be fastened securely across walkways at uniform intervals of eighteen inches whenever the grade is sufficient to create a slipping hazard. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71011, filed 8/27/81.]

**WAC 296-78-71013 Cableways.** (1)(a) Inclined cableways shall have a central line between the rails in practical alignment with the center of the hoisting drums. A substantial bumper shall be installed at the foot of each incline.

(b) Barricades or warning signs shall be installed to warn pedestrians to stand clear of the cables on inclined cableways. The cables shall not be put into motion without activating an alarm system, either audible or visible, which will inform anyone on the tracks to stand clear.

(2) Employees shall not ride on or stand below the cars on an inclined cableway. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71013, filed 8/27/81.]

**WAC 296-78-71015 Tanks and chemicals.** (1) All open vats and tanks into which workers may fall shall be guarded with standard railings or screen guards in all cases where such guarding is possible with regard to practical operation.

(2) Foundations of elevated tanks shall be accessible for inspections. When the tank platform is more than five feet above the ground a stairway or ladder shall be permanently attached.

(3) Every open tank over five feet in height shall be equipped with fixed standard ladders both inside and out, extending from the bottom to the rim of the tank

arranged to be accessible to each other, so far as local conditions permit.

(4) The use of chemicals for treating of lumber for prevention of sap stain or mold or as preservatives, shall conform to the requirements of WAC 296-62-11021, open surface tanks.

(a) Storage, handling, and use of chemicals. Threshold limits. Employees shall not be exposed to airborne concentration of toxic dusts, vapors, mists or gases that exceed the threshold limit values set forth in WAC 296-62-070 through 296-62-080 of the general occupational health standards.

(b) Protective equipment. The use of chemicals shall be controlled so as to protect employees from harmful exposure to toxic materials. Where necessary, employees shall be provided with and required to wear such protective equipment as will afford adequate protection against harmful exposure as required by WAC 296-24-075 through 296-24-092 of the general safety and health standards.

(5)(a) Means shall be provided and used to collect any excess of chemicals used in treating lumber so as to protect workers from accidental contact with harmful concentrations of toxic chemicals or fumes.

(b) Dip tanks containing flammable or combustible liquids shall be constructed, maintained and used in accordance with WAC 296-24-405 of the general safety and health standards.

(c) An evacuation plan shall be developed and implemented for all employees working in the vicinity of dip tanks using flammable and/or combustible liquids. A copy of the plan shall be available at the establishment for inspection at all times. Every employee shall be made aware of the evacuation plan and know what to do in the event of an emergency and be evacuated in accordance with the plan. The plan shall be reviewed with employees at least quarterly and documented.

(d) When automatic foam, automatic carbon dioxide or automatic dry chemical extinguishing systems are used, an alarm device shall be activated to alert employees in the dip tank area before and during the activation of the system. The following combinations of extinguishment systems when used in conjunction with the evacuation plan as stated above will be acceptable in lieu of bottom drains:

(i) A dip tank cover with an automatic foam extinguishing system under the cover, or an automatic carbon dioxide system, or an automatic dry chemical extinguishing system, or an automatic water spray extinguishing system;

(ii) An automatic dry chemical extinguishing system with an automatic carbon dioxide system or a second automatic dry chemical extinguishing system or an automatic foam extinguishing system;

(iii) An automatic carbon dioxide system with a second automatic carbon dioxide system or an automatic foam extinguishing system.

(e) The automatic water spray extinguishing systems, automatic foam extinguishing systems, and dip tank covers shall conform with the requirements of WAC 296-24-405. The automatic carbon dioxide systems and

dry chemical extinguishing system shall conform with the requirements of WAC 296-24-615 and 296-24-620.

(6) Where workers are engaged in the treating of lumber with chemicals or are required to handle lumber or other materials so treated, the workers shall be provided with, at no cost to the worker, and required to use such protective equipment as will provide complete protection against contact with toxic chemicals or fumes therefrom.

(7) Sanitation requirements. The requirements of WAC 296-24-120 through 296-24-13013 of the general safety and health standards, shall govern sanitation practices.

(8) The sides of steam vats and soaking pits unless otherwise guarded shall extend forty-two inches above the floor level. The floor adjacent thereto shall be of nonslip construction.

(9) Large steam vats or soaking pits, divided into sections, shall be provided with substantial walkways between each section, each walkway to be provided with standard railings which may be removable if necessary. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71015, filed 8/27/81.]

**WAC 296-78-71017 Dry kilns.** (1) Dry kilns shall be so constructed upon solid foundations that tracks will not sag. Dry kilns shall be provided with suitable walkways. Each kiln shall have doors that operate from the inside and be provided with escape doors of adequate height and width to accommodate an average size man, that also operates from the inside, and shall be located in or near the main door. Escape doors shall swing in the direction of exit. Kiln doors and door carriers shall be fitted with safety devices to prevent the doors or carriers from falling.

(2) Ladders. A fixed ladder, in accordance with the requirements of WAC 296-24-810 through 296-24-81009 of the general safety and health standards, or other means shall be provided to permit access to the roof. Where controls and machinery are mounted on the roof, a permanent stairway with standard handrail shall be installed in accordance with the requirements of WAC 296-24-765 through 296-24-76523 of the general safety and health standards.

(3) A heated room shall be provided for the use of the kiln operator in inclement weather. He should remain in such room for at least ten minutes after leaving a hot kiln before going to cold outside air.

(4) Where operating pits are used, they shall be well ventilated, drained and lighted. Substantial gratings shall be installed at the kiln floor line. Steam lines shall be provided with insulation wherever exposed to contact by employees. Fans shall be enclosed by standard safeguards.

(5) Mechanical equipment. All belts, pulleys, blowers, and other exposed moving equipment used in or about kilns shall be guarded in accordance with the requirements of WAC 296-24-205 through 296-24-20533 of

the general safety and health standards. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71017, filed 8/27/81.]

**WAC 296-78-71019 Exhaust systems.** (1) Air requirements in buildings, where persons are habitually employed, shall meet the requirements of the general occupational health standard, WAC 296-62-100 through 296-62-11013.

(2) Where the natural ventilation is not sufficient to remove dust, fumes or vapors that create or constitute a hazard, additional means of removal shall be provided.

(3) All mills containing one or more machines whose operations create dust, shavings, chips or slivers during a period of time equal to or greater than one-fourth of the working day or shift, shall be equipped with a collecting system either continuous or automatic in action and of sufficient strength and capacity to thoroughly remove such refuse from the points of operation of the machines and the work areas.

(4) Each woodworking machine that creates dust, shavings, chips, or slivers shall be equipped with an exhaust or conveyor system located and adjusted to remove the maximum amount of refuse from the point of operation and immediate vicinity.

(5) Blower, collecting and exhaust systems shall be designed, constructed and maintained in accordance with American National Standards Z33.1 - 1961 (for the installation of blower and exhaust systems for dust, stock and vapor removal or conveying) and Z12.2 - 1962 (R1969) (code for the prevention of dust explosions in woodworking and wood flour manufacturing plants).

(6) Fans used for ventilating shall be of ample capacity, as evidenced by the performance schedules of the manufacturers, and shall be guarded when exposed to contact. Hoods, dust conveyors, dust collectors and other accessory equipment shall be large enough to insure free intake and discharge.

(7) The outlet or discharge of all ventilating equipment shall be so arranged that at no time will the dust, vapors, gases or other air borne impurities discharged, create or constitute a hazard.

(8) Where a hood is used to form a part or all of the guard required on a given machine, it shall be constructed of not less than ten U.S. gauge sheet metal, or if of cast iron it shall be not less than three-sixteenths inches in thickness.

(9) All exhaust pipes shall be of such construction and internal dimensions as to minimize the possibility of clogging. They shall be readily accessible for cleaning.

(10) All exhaust pipes shall empty into settling or dust chambers which shall effectively prevent the dust or refuse from entering any work area. Such settling or dust chambers shall be so designed and operated as to reduce to a minimum the danger of fire or dust explosions.

(11) In lieu of a general ventilating system, exhaust or blower units may be installed on the dust or fume producing machine, provided the required protection is secured thereby.

(12) When proper ventilation is not provided, and temporary hazardous conditions are therefore encountered, the employer shall furnish approved respiratory and visual equipment: *Provided, however,* That the exposure to such hazard shall not be for more than two hours duration. Protective measures and equipment shall meet the requirements of the general occupational health standard, WAC 296-62-070 through 296-62-09001 and the requirements of the general safety and health standard, WAC 296-24-081 through 296-24-08113.

(13) Provisions for the daily removal of refuse shall be made in all operations not required to have an exhaust system, or having refuse too heavy, or bulky, or otherwise unsuitable to be handled by an exhaust system. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71019, filed 8/27/81.]

**WAC 296-78-71021 Spray painting.** All spray painting operations shall be carried on in accordance with the requirements of the general safety and health standard, WAC 296-24-370 through 296-24-37027 and the general occupational health standard, WAC 296-62-11019. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71021, filed 8/27/81.]

**WAC 296-78-71023 Lighting.** The lighting and illumination requirements of the general occupational health standards, WAC 296-62-09003, shall apply. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-13-045 (Order 82-22), § 296-78-71023, filed 6/11/82. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71023, filed 8/27/81.]

**WAC 296-78-71025 Gas piping and appliances.** All gas piping and appliances shall be installed in accordance with the American National Standard Requirements for Gas Appliances and Gas Piping Installations, Z21.30 - 1964. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71025, filed 8/27/81.]

**WAC 296-78-715 Mechanical, steam and electrical equipment.** [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-715, filed 8/27/81.]

**WAC 296-78-71501 General provisions.** (1) All machinery or other equipment located or used on the premises of the operation or in the processes incidental thereto, shall be provided and maintained with approved standard safeguards, irrespective of ownership.

(2) Machines shall be so located that each operator will have sufficient space in which to handle material with the least possible interference from or to other workers or machines.

(3) Machines shall be so placed that it will not be necessary for the operator to stand where passing traffic creates a hazard.

(4) Aisles of sufficient width to permit the passing of vehicles or employees without crowding shall be provided in all work areas and stock or storage rooms.

(5) All metal decking around machinery shall be equipped to effectively prevent slipping.

(6) All machinery or equipment started by a control so located as to create impaired vision of any part of such machinery or equipment shall be provided with an audible warning device, where such machinery or equipment is exposed to contact at points not visible to the operator. Such devices shall be sounded before starting up unless positive mechanical or electrical interlocking controls are provided which will prevent starting until all such posts are cleared.

(7) A mechanical or electrical power control device shall be provided at each machine which will make it possible for the operator to stop the machine feed without leaving his position at the point of operation.

(8) All machines operated by means of treadles, levers, or other similar devices, shall be provided with positive and approved nonrepeat devices except where such machine is being used as an automatic repeating device.

(9) Operating levers and treadles on all machines or machinery shall be so located and protected that they cannot be shifted or tripped accidentally.

(10) All power driven machinery shall be stopped and brought to a complete standstill before any repairs or adjustments are made or pieces of material or refuse removed, except where motion is necessary to make adjustments. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71501, filed 8/27/81.]

**WAC 296-78-71503 Lock out--Tag out.** (1) To avoid accidental activation of machinery, electrical devices or other equipment which could create a hazardous condition while performing maintenance, repair, cleanup or construction work, the main disconnect(s) (line circuit breakers) shall first be locked out and tagged in accordance with the following provisions:

(2) Effective date. Effective July 1, 1982, only padlocks or other equivalent protective devices shall be used for locking out the main disconnect(s) (line circuit breakers) of machinery, electrical devices or other equipment that is shut down while maintenance, repair, cleanup, construction work or other type of work is done to the equipment. Tags shall be used to supplement the padlocks or other equivalent protective devices, and shall be used only for informational purposes.

(3) Padlocks, tags or equivalent protective devices to be supplied. The employer shall supply and the employee(s) shall use as many padlocks or other equivalent protective devices as are necessary to effectively lock out all affected equipment.

(4) Lock out plan. An effective lock out plan shall be formulated in writing and all concerned employees so informed. The plan shall contain specific procedures for locking out equipment, information to be contained on supplemental tags and specific procedures for unlocking equipment after repairs, cleanup, etc., have been completed.

(5) Informational tags. Tags used for providing supplemental information with lock out padlocks or other equivalent protective devices shall contain the name of the person authorizing placement, reason for placing, date, signature of person placing tag and such other relative information as deemed necessary by the person placing the tag.

(6) Lock out by pushbutton only. Locking out a machine or item of equipment by use of a pushbutton or other local control device only will not be acceptable as meeting the intent of these rules.

(7) Coordination of locking out devices. When repair, adjustment, cleanup, maintenance or construction work is necessary and the lock out procedures must be followed by any person not familiar with all power sources or material entry sources to any area involved, that person shall consult with the operator, supervisor, or some person that is capable of informing him of proper lock out procedures and supplemental tagging information.

(8) Lock out before removing guards. Equipment shall be stopped and locked out before employees remove guards or reach into any potentially hazardous area. The only exception to this rule will be when equipment must be in motion in order to make proper adjustments.

(9) Removal of lock outs. Each person actively engaged in the repair, maintenance, cleanup, etc., shall lock out the affected equipment and place the informational tag. Upon completion of the work and reinstallation of the guards, that person shall personally remove his lock and tag, except when it is positively determined that an employee has left the premises without removing his lock and tag, other persons may remove the locks and tags in accordance with a procedure formulated by each firm and approved by the division of industrial safety and health.

(10) Valves to be locked and tagged out. Each valve used to control the flow of hazardous materials into, or used to activate the equipment being worked on, shall be locked and tagged out.

(11) Piping systems deactivated. Prior to working on piping systems containing pressurized or hazardous materials, the valve(s) controlling the flow to the affected area shall be locked and tagged out. The piping in the area to be worked on shall be drained and purged, if needed. If the piping contains hazardous materials, the piping shall be isolated from the work area by the insertion of blank flanges in the piping system.

(12) Pipe lines without valves. If pipelines or ducts are constructed without valves or closures that can be locked out, the lines or ducts shall be broken at a flange and a blank flange inserted to stop accidental flow of any hazardous material.

(13) Testing after lock out. After locking out and tagging equipment, a test shall be conducted to ascertain that the equipment has been made inoperative or the flow of hazardous material has been positively stopped. Precautions shall be taken to ascertain that persons will not be subjected to hazard while conducting the test if power source or flow of material is not shut off.

(14) Temporary or alternate power to be avoided. Whenever possible, temporary or alternate sources of

power to the equipment being worked on shall be avoided. If the use of such power is necessary, all affected employees shall be informed and the source of temporary or alternate power shall be identified. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71503, filed 8/27/81.]

**WAC 296-78-71505 Mechanical power transmission apparatus.** (1) Machines and other equipment shall not be oiled while in motion, unless provided with guards or other devices to permit oiling without any possibility of contact with moving parts of machinery.

(2) Inspections shall be made to assure that shaftings, bearings and machines are in proper alignment at all times and that bolts in shaft hangars, couplings and boxes are tight.

(3) Isolated bearings or other equipment not reached by walkway shall be served by a ladder or other means of safe access.

(4) Running belts under power on or off pulleys shall be accomplished by mechanical means which will not expose employees to moving elements of the operation.

(5) Counterweights located on or near passageways or work areas shall be provided with enclosures. Overhead counterweights shall be provided with substantial safety chains or cables, or otherwise secured against falling.

(6) The construction, operation, and maintenance of all mechanical power-transmission apparatus shall be in accordance with the requirements of WAC 296-24-205 through 296-24-20533 of the general safety and health standard.

(7) Baffles shall be erected, where necessary, to protect employees from breaking belts, chains, ropes or cables.

(8) Overhead horizontal belts, chains or rope drives shall be provided with guards.

(9) Hydraulic systems. Means shall be provided to block, chain, or otherwise secure equipment normally supported by hydraulic pressure so as to provide for safe maintenance. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-71505, filed 8/27/81.]

**WAC 296-78-720 Boiler and pressure vessels.** Boilers and pressure vessels shall be constructed, maintained and inspected in accordance with the provisions of the boiler and unfired pressure vessel law, chapter 70.79 RCW, and chapter 296-104 WAC as administered by the boiler inspection section of the department of labor and industries. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-720, filed 8/27/81.]

**WAC 296-78-725 Nonionizing radiation.** (1) Only qualified and trained employees shall be assigned to install, operate, adjust, and maintain laser equipment.

(2) Employees, when working in areas in which a potential exposure to direct or reflected laser light greater than 0.005 watts (5 milliwatts) exists, shall be provided with antilaser safety goggles which will protect for the

specific wavelength of the laser and be of optical density (O.D.) adequate for the energy involved.

(3) Areas in which lasers are used shall be posted with standard laser warning placards.

(4) Beam shutters or caps shall be utilized, or the laser turned off, when laser transmission is not actually required. When the laser is left unattended for a substantial period of time, such as during lunch hour, overnight, or at change of shifts, the laser shall be turned off or shutters or caps shall be utilized.

(5) The laser beam shall not be directed at employees.

(6) The laser equipment shall bear such labels, logos and data placards to indicate maximum output and class designation as required of the manufacturer at time of sale, by I.A.W. Part 1040, CFR Title 21. Such labels, logos, data placards, etc., shall be maintained in a legible condition.

(7) Employees shall not be exposed to light intensities in excess of:

(a) Direct staring: One micro-watt per square centimeter;

(b) Incidental observing: One milliwatt per square centimeter;

(c) Diffused reflected light: Two and one-half watts per square centimeter.

(8) The laser equipment shall not be modified except by the manufacturer. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-725, filed 8/27/81.]

**WAC 296-78-730 Electrical service and equipment.**

(1) Electrical service and equipment shall be constructed, maintained, inspected and operated in accordance with the provisions of chapter 19.28 RCW, chapter 296-46 WAC, WAC 296-24-950 through 296-24-955, and the electrical standard as promulgated by the division of building and construction safety inspection services.

(2) Repairs. Electrical repairs shall be made only by authorized and qualified personnel.

(3) Identification. Marks of identification on electrical equipment shall be clearly visible.

(4) Protective equipment. Rubber protective equipment shall be provided as required by WAC 296-24-092(1) of the general safety and health standard.

(5) Open switches. Before working on electrical equipment, switches shall be open and shall be locked out.

(6) Concealed conductors. Where electrical conductors are known to be concealed, no work shall be performed until such conductors are located.

(7) Overload relays. Overload relays shall be reset by authorized qualified personnel only.

(8) Passageways to panels. Passageways to switch centers or panels shall at all times be kept free from obstruction. Not less than three feet of clear space shall be maintained in front of switch centers or panels at all times.

(9) Bridging fuses. Fuses shall not be doubled or bridged. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-730, filed 8/27/81.]

**WAC 296-78-735 Elevators, moving walks.** Elevators, moving walks and other lifting devices intended for either passenger or freight service shall be constructed, maintained, inspected and operated in accordance with the provisions of chapter 70.87 RCW, WAC 296-24-870 through 296-24-90009 of the general safety and health standards, and those specific standards which are applicable from the division of building and construction safety inspection services, elevator section. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-735, filed 8/27/81.]

**WAC 296-78-740 Transportation--Lumber handling equipment--Cranes--Construction.** (1) All apparatus shall be designed throughout, with not less than the following factors of safety, under static full rated load stresses, based on ultimate strength of the material used:

Material	Factor of Safety
Cast iron . . . . .	12
Cast steel . . . . .	8
Structural steel . . . . .	5
Forged steel . . . . .	5
Cables . . . . .	5

(2) A notice shall be placed on every crane and hoist showing the maximum allowable load in pounds or tons. This notice shall be placed in such a manner as to be clearly legible from the floor.

(3) Cranes shall be of what is known as "all steel construction." No cast iron shall be used in parts subject to tension except in drums, trolley sides, bearings, brackets and brake shoes.

(4) The construction of cranes shall be such that all parts may be safely lubricated and inspected when cranes are not in operation.

(5) Bolts subject to stress shall be of the through type and all bolts shall be equipped with approved protection so that the bolt will not work loose or nuts work off.

(6) Outside crane cages shall be enclosed. There shall be windows on three sides of the cage and windows in the front, and the side opposite the door shall be the full width of the cage.

(7) Where a tool box or receptacle is used for the storing of oil cans, tools, etc., it shall be permanently secured in the cage or on the foot-walk of outside cranes and on the foot-walk of inside cranes. Tool boxes of hot metal cranes shall be constructed of metal.

(8) All gears on cranes shall be provided with standard guards.

(9) Keys projecting from revolving shafts shall be guarded.

(10) A braking apparatus shall be provided on every type of crane and shall be so designed and installed as to be capable of effectually braking a weight of at least one

and one-half times the full rated load. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-740, filed 8/27/81.]

**WAC 296-78-745 Electrical equipment.** (1) All exposed current-carrying parts except conductors, connected to circuits above three hundred volts to ground shall be so isolated, insulated, or guarded that no employee can come in contact with them. Exposed parts less than 300 volts shall be protected in some suitable way against possible accidental contact. Exposed metallic parts of conduit armored cable or molding shall be permanently grounded.

(2) Guards for the current-carrying parts of unisolated electrical equipment, such as controllers, motors, transformers, automatic cutouts, circuit breakers, switches, and other devices shall consist of cabinets, casings, or shields of permanently grounded metal or of insulating material.

(3) All parts of electrical equipment, such as fuses and the handles and arc chutes of circuit breakers, shall be so isolated or guarded that the liability of employees being struck or burned by sparking, flashing or movement during operation is reduced to a minimum.

(4) All exposed noncurrent carrying metal parts of electrical equipment shall be permanently grounded. The ground connection through well bonded track rails will be considered satisfactory.

(5) The metallic parts of portable cranes, derricks, hoists, and similar equipment on which wires, cables, chains, or other conducting objects are maintained shall be provided with an effective protective ground, where operated in the vicinity of supply lines.

(6) Readily accessible means shall be provided whereby all conductors and equipment located in cranes can be disconnected entirely from the source of energy at a point as near as possible to the main current collectors.

(7) Means shall be provided to prevent the starting and operation of equipment by unauthorized persons.

(8) The control levers of traveling cranes shall be so located that the operator can readily face the direction of travel.

(9) A hoist limiting device shall be provided for each hoist.

(10) All fuses shall be of the enclosed arcless type. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-745, filed 8/27/81.]

**WAC 296-78-750 Chains, wire rope, cables and fiber rope.** (1) Ropes, cables, slings, and chains.

(a) Safe usage. Ropes, cables, slings, and chains shall be used in accordance with safe use practices recommended by the manufacturer or within safe limits recommended by the equipment manufacturer when used in conjunction with it.

(b) Proof testing. The employer shall ensure that before use, each new, repaired, or reconditioned alloy steel chain sling, including all welded components in the sling assembly, shall be proof tested by the sling manufacturer

or equivalent entity, in accordance with paragraph 5.2 of the American Society of Testing and Materials Specification A391.65 (ANSI G61.1-1968). The employer shall retain the certificate of the proof test and shall make it available for examination. When a chain sling assembly is made up of segments of proof tested alloy chain and proof tested individual components such as mechanical coupling links, hooks and similar devices; it is not necessary to test the assembled unit, when appropriate test certification of individual components is available and the assembled sling is appropriately tagged by the manufacturer or equal entity. The sling shall not be used in excess of the rated capacity of the weakest component.

(c) Slings. Slings and their fittings and fastenings, when in use, shall be inspected daily for evidence of overloading, excessive wear, or damage. Slings found to be defective shall be removed from service.

(2) Proper storage shall be provided for slings while not in use.

(3) Protection shall be provided between the sling and sharp unyielding surfaces of the load to be lifted.

(4) Hooks. No open hook shall be used in rigging to lift any load where there is hazard from relieving the tension on the hook from the load or hook catching or fouling.

(5) Ropes or cables. Wire rope or cable shall be inspected when installed and once each day thereafter, when in use. It shall be removed from hoisting or load-carrying service when kinked or when one of the following conditions exist:

(a) When three broken wires are found in one lay of 6 by 6 wire rope.

(b) When six broken wires are found in one lay of 6 by 19 wire rope.

(c) When nine broken wires are found in one lay of 6 by 37 wire rope.

(d) When eight broken wires are found in one lay of 8 by 19 wire rope.

(e) When marked corrosion appears.

(f) Wire rope of a type not described herein shall be removed from service when four percent of the total number of wires composing such rope are found to be broken in one lay.

(g) Condemned. When wire rope, slings or cables deteriorate through rust, wear, broken wires, kinking or other conditions, to the extent there is a reasonable doubt that the necessary safety factor is maintained, the use of such equipment shall be discontinued.

(6) Wire rope removed from service due to defects shall be plainly marked or identified as being unfit for further use on cranes, hoists, and other load-carrying devices.

(7) The ratio between the rope diameter and the drum, block, sheave, or pulley tread diameter shall be such that the rope will adjust itself to the bend without excessive wear, deformation, or injury. In no case shall the safe value of drums, blocks, sheaves, or pulleys be reduced when replacing such items unless compensating changes are made for rope used and for safe loading limits.

(8) Drums, sheaves, and pulleys. Drums, sheaves, and pulleys shall be smooth and free from surface defects liable to injure rope. Drums, sheaves, or pulleys having eccentric bores or cracked hubs, spokes, or flanges shall be removed from service.

(9) Connections. Connections, fittings, fastenings, and other parts used in connection with ropes and cables shall be of the quality, size and strength recommended by the manufacturer for the use intended. These connections shall be installed in accordance with the manufacturer's recommendations.

(10) Socketing, splicing, and seizing.

(a) Socketing, splicing, and seizing of cables shall be performed only by qualified persons.

(b) All eye splices shall be made in a manner recommended by the manufacturer and wire rope thimbles of proper size shall be fitted in the eye, except that in slings the use of thimbles shall be optional.

(11) Wire rope clips attached with U-bolts shall have these bolts on the dead or short end of the rope. The U-bolt nuts shall be retightened immediately after initial load carrying use and at frequent intervals thereafter. The number and spacing of clips shall be as follows:

Improved Plow Steel Diameter of Rope	Number of Clips (Drop Forged)	Required Other Material	Minimum Space Between Clips
3/8 to 5/8"	3	4	3-3/4"
3/4"	4	5	4-1/2"
7/8"	4	5	5-1/4"
1 "	5	6	6 "
1-1/8"	6	6	6-3/4"
1-1/4"	6	7	7-1/2"
1-3/8"	7	7	8-1/4"
1-1/2"	7	8	9 "

(a) When a wedge socket-type fastening is used, the dead or short end of the cable shall be clipped with a U-bolt or otherwise made secure against loosening.

(b) Fittings. Hooks, shackles, rings, pad eyes, and other fittings that show excessive wear or that have been bent, twisted, or otherwise damaged shall be removed from service.

(12) Running lines. Running lines of hoisting equipment located within six feet six inches of the ground or working level shall be boxed off or otherwise guarded, or the operating area shall be restricted.

(13) Preventing abrasion. The reeving of a rope shall be so arranged as to minimize chafing or abrading while in use.

(14) Sheave guards. Bottom sheaves shall be protected by close fitting guards to prevent cable from jumping the sheave.

(15) There shall be not less than two full wraps of hoisting cable on the drums of cranes and hoists at all times of operation.

(16) Where the cables are allowed to pile on the drums of cranes, the drums shall have a flange at each end to prevent the cables from slipping off the drum.

(17) Chains. Chains used in load carrying service shall be inspected before initial use and weekly thereafter.

If at any time any three-foot length of chain is found to have stretched one-third the length of a link it shall be discarded.

(18) Chains shall be spliced in compliance with the requirements of the general safety and health standard, WAC 296-24-29413.

(19) Wherever annealing of chains is attempted, it shall be done in properly equipped annealing furnaces and under the direct supervision of a competent person thoroughly versed in heat treating.

Chain shall be normalized or annealed periodically as recommended by the manufacturer.

(20) Fiber rope.

(a) Frozen fiber rope shall not be used in load carrying service.

(b) Fiber rope that has been subjected to acid shall not be used for load carrying purposes.

(c) Fiber rope shall be protected from abrasion by padding where it is fastened or drawn over square corners or sharp or rough surfaces. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-750, filed 8/27/81.]

**WAC 296-78-755 Natural and synthetic fiber rope slings.** (1) Sling use.

(a) Fiber rope slings made from conventional three strand construction fiber rope shall not be used with loads in excess of the rated capacities prescribed in Tables D-16 through D-19 of Part "D" of the general safety and health standards, chapter 296-24 WAC.

(b) Slings not included in these tables shall be used only in accordance with the manufacturer's recommendations.

(2) Safe operating temperatures. Natural and synthetic fiber rope slings, except for wet frozen slings, may be used in a temperature range from minus 20°F to plus 180°F without decreasing the working load limit. For operations outside this temperature range and for wet frozen slings, the sling manufacturer's recommendations shall be followed.

(3) Splicing. Spliced fiber rope slings shall not be used unless they have been spliced in accordance with the following minimum requirements and in accordance with any additional recommendations of the manufacturer:

(a) In manila rope, eye splices shall consist of at least three full tucks, and short splices shall consist of at least six full tucks, three on each side of the splice center line.

(b) In synthetic fiber rope, eye splices shall consist of at least four full tucks, and short splices shall consist of at least eight full tucks, four on each side of the center line.

(c) Strand end tails shall not be trimmed flush with the surface of the rope immediately adjacent to the full tucks. This applies to all types of fiber rope and both eye and short splices. For fiber rope under one inch in diameter, the tail shall project at least six rope diameters beyond the last full tuck. For fiber rope one inch in diameter and larger, the tail shall project at least six inches beyond the last full tuck. Where a projecting tail interferes with the use of the sling, the tail shall be tapered and spliced into the body of the rope using at least

two additional tucks (which will require a tail length of approximately six rope diameters beyond the last full tuck).

(d) Fiber rope slings shall have a minimum clear length of rope between eye splices equal to ten times the rope diameter.

(e) Knots shall not be used in lieu of splices.

(f) Clamps not designed specifically for fiber ropes shall not be used for splicing.

(g) For all eye splices, the eye shall be of such size to provide an included angle of not greater than sixty degrees at the splice when the eye is placed over the load or support.

(4) End attachments. Fiber rope slings shall not be used if end attachments in contact with the rope have sharp edges or projections.

(5) Removal from service. Natural and synthetic fiber rope slings shall be immediately removed from service if any of the following conditions are present:

(a) Abnormal wear.

(b) Powdered fiber between strands.

(c) Broken or cut fibers.

(d) Variations in the size or roundness of strands.

(e) Discoloration or rotting.

(f) Distortion of hardware in the sling.

(6) Repairs. Only fiber rope slings made from new rope shall be used. Use of repaired or reconditioned fiber rope slings is prohibited. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-755, filed 8/27/81.]

**WAC 296-78-760 Synthetic web slings.** (1) Sling identification. Each sling shall be marked or coded to show the rated capacities for each type of hitch and type of synthetic web material.

(2) Webbing. Synthetic webbing shall be of uniform thickness and width and selvage edges shall not be split from the webbing's width.

(3) Fittings. Fittings shall be:

(a) Of a minimum breaking strength equal to that of the sling; and

(b) Free of all sharp edges that could in any way damage the webbing.

(4) Attachment of end fittings to webbing and formation of eyes. Stitching shall be the only method used to attach end fittings to webbing and to form eyes. The thread shall be in an even pattern and contain a sufficient number of stitches to develop the full breaking strength of the sling.

(5) Sling use. Synthetic web slings illustrated in Figure D-6 shall not be used with loads in excess of the rated capacities specified in Tables D-20 through D-22. Slings not included in these tables shall be used only in accordance with the manufacturer's recommendations.

(6) Environmental conditions. When synthetic web slings are used, the following precautions shall be taken:

(a) Nylon web slings shall not be used where fumes, vapors, sprays, mists or liquids of acids or phenolics are present.

(b) Polyester and polypropylene web slings shall not be used where fumes, vapors, sprays, mists or liquids of caustics are present.

(c) Web slings with aluminum fittings shall not be used where fumes, vapors, sprays, mists or liquids of caustics are present.

(7) Safe operating temperatures. Synthetic web slings of polyester and nylon shall not be used at temperatures in excess of 180°F. Polypropylene web slings shall not be used at temperatures in excess of 200°F.

(8) Repairs.

(a) Synthetic web slings which are repaired shall not be used unless repaired by a sling manufacturer or an equivalent entity.

(b) Each repaired sling shall be proof tested by the manufacturer or equivalent entity to twice the rated capacity prior to its return to service. The employer shall retain a certificate of the proof test and make it available for examination.

(c) Slings, including webbing and fittings, which have been repaired in a temporary manner shall not be used.

(9) Removal from service. Synthetic web slings shall be immediately removed from service if any of the following conditions are present:

(a) Acid or caustic burns;

(b) Melting or charring of any part of the sling surface;

(c) Snags, punctures, tears or cuts;

(d) Broken or worn stitches; or

(e) Distortion of fittings. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-760, filed 8/27/81.]

**WAC 296-78-765 Floor operated cranes.** (1) An unobstructed aisle not less than three feet wide shall be maintained for travel of the operator except in such cases where the control handles are hung from the trolleys of traveling cranes.

(2) The controller or controllers, if rope operated, shall automatically return to the "off" position when released by the operator.

(3) Pushbuttons, in pendant stations, shall return to the "off" position when pressure is released by the crane operator.

(4) All pushbuttons shall be marked to indicate their purpose. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-765, filed 8/27/81.]

**WAC 296-78-770 Operators.** (1) Cranes shall be operated only by regular crane operators, authorized substitutes who have had adequate experience and training under the supervision of a competent operator, or by crane repair person or inspectors.

(2) No person under the age of eighteen years shall be permitted to operate a crane.

(3) Operators shall be required to pass a practical examination limited to the specific type of equipment to be operated. Operators shall meet the following physical qualifications:

(a) Have vision of at least 20/30 Snellen in one eye, and 20/50 in the other, with or without corrective lenses.

(b) Be able to distinguish red, green, and yellow, regardless of position of colors, if color differentiation is required for operation.

(c) Hearing, with or without hearing aid, must be adequate for the specific operation.

(d) A history of epilepsy or an uncorrected disabling heart condition shall be cause for a doctor decision to determine qualifications to operate a crane.

(4) Hands shall be kept free when going up and down ladders. Articles which are too large to go into pockets or belts shall be lifted to or lowered from the crane by hand line. (Except where stairways are provided.)

(5) Cages shall be kept free of clothing and other personal belongings. Tools, extra fuses, oil cans, waste and other articles necessary in the crane cage shall be stored in a tool box and not left loose on or about the crane.

(6) The operator shall familiarize himself fully with all crane rules and with the crane mechanism and its proper care. If adjustments or repairs are necessary, he shall report the same at once to the proper authority.

(7) The operator shall not eat, smoke or read while actually engaged in the operation of the crane.

(8) The operator or someone especially designated shall lubricate all working parts of the crane.

(9) Cranes shall be examined for loose parts or defects each day on which they are in use.

(10) Sawdust, oil or other debris shall not be allowed to accumulate to create a fire, health or slipping hazard.

(11) Operators shall avoid, as far as possible, carrying loads over workers. Loads shall not be carried over employees without sounding an audible warning alarm.

(12) Whenever the operator finds the main or emergency switch open, he shall not close it, even when starting on regular duty, until he has made sure that no one is on or about the crane. He shall not oil or repair the crane unless the main switch is open.

(13) If the power goes off, the operator shall immediately throw all controllers to "off" position until the power is again available.

(14) Before closing the main switch the operator shall make sure that all controllers are in "off" position until the power is again available.

(15) The operator shall pay special attention to the block, when long hitches are made, to avoid tripping the limit switch.

(16) The operator shall recognize signals only from the person who is supervising the lift except for emergency stop signals. Operating signals shall follow established standard crane signals as illustrated in WAC 296-78-830 of this chapter. Whistle signals may be used where one crane only is in operation. Cranes shall have audible warning device which shall be sounded in event of emergency.

(17) Before starting to hoist, the operator shall place the trolley directly over the load to avoid swinging it when being hoisted.

(18) The operator shall not make side pulls with the crane except when especially instructed to do so by the proper authority.

(19) When handling maximum loads, the operator shall test the hoist brakes after the load has been lifted a few inches. If the brakes do not hold, the load shall be lowered at once and the brakes adjusted or repaired.

(20) Bumping into runway stops or other cranes shall be avoided. When the operator is ordered to engage with or push other cranes, he shall do so with special care for the safety of persons on or below cranes.

(21) When lowering a load, the operator shall proceed carefully and make sure that he has the load under safe control.

(22) When leaving the cage the operator shall throw all controllers to "off" position and open the main switch.

(23) If the crane is located out of doors the operator shall lock the crane in a secure position to prevent it from being blown along or off the track by a severe wind.

(24) Railroad cars shall not be pulled along the tracks with sidepulls on an overhead crane.

(25) Operators shall not move the crane or a load unless floor signals are clearly understood.

(26) The rated lifting capacity of a crane shall not be exceeded. If any doubt exists about the weight of a load which might exceed the rated capacity, the foreman in charge must be contacted before any attempt is made to lift the load. The foreman shall determine that the load is within the rated capacity of the crane or the load shall not be lifted.

(27) Crane operators and floorpersons shall coordinate their activities on every lift or movement of the crane. Both the operator and signalperson shall clearly understand any problem a movement might create with regard to surrounding materials, structures, equipment or personnel. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-770, filed 8/27/81.]

**WAC 296-78-775 Signalpersons.** (1) Signalpersons shall give all the signals to the operator in accordance with established standard signals as illustrated in WAC 296-78-830 of this chapter.

(2) A designated person shall be responsible for the condition and use of all hoisting accessories and for all hitches.

(3) Before an operator moves a crane upon which an empty chain or cable sling is hanging, both ends of the sling shall be placed on the hook.

(4) Signalpersons, where necessary, shall walk ahead of the moving load and warn people to keep clear of it. They shall see that the load is carried high enough to clear all obstructions.

(5) Signalpersons shall notify the person in charge in advance when an extra heavy load is to be handled.

(6) No person shall be permitted to stand or pass under an electric magnet in use.

(7) The electrical circuit for electric magnets shall be maintained in good condition. Means for taking up the

slack cable shall be provided. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-775, filed 8/27/81.]

**WAC 296-78-780 Repairpersons.** (1) When repairs are necessary, repairpersons shall have the crane run to a location where the repair work will least interfere with the other cranes and with operations on the floor.

(2) Before starting repairs, repairpersons shall see that all controllers are thrown to the "off" position, and that main or emergency switches are opened; one of these shall be locked out in compliance with WAC 296-78-715(11) of this chapter.

(3) Repairpersons shall immediately place warning signs or "Out of Order" signs on a crane to be repaired and also on the floor beneath or hanging from the crane so that it can easily be seen from the floor. If other cranes are operated on the same runway, repairpersons shall also place rail stops at a safe distance or make other safe provisions.

(4) When repairing runways, repairpersons shall place rail stops and warning signs or signals so as to protect both ends of the section to be repaired.

(5) Repairpersons shall take care to prevent loose parts from falling or being thrown upon the floor beneath.

(6) Repairs shall not be considered complete until all guards and safety devices have been put in place and the block and tackle and other loose material have been removed. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-780, filed 8/27/81.]

**WAC 296-78-785 Construction requirements.** (1) Calculations for wind pressure on outside overhead traveling cranes shall be based on not less than 30 pounds per square foot of exposed surface.

(2) No overhung gears shall be used unless provided with an effective means of keeping them in place, and keys shall be secured to prevent gears working loose.

Safety lugs or brackets shall be provided on the trolley frames and bridge ends of overhead traveling cranes, so that in the event of a broken axle or wheel the trolley or bridge proper will not have a drop greater than one inch.

(3) Where there are no members over an outside overhead crane suitable for attaching blocks for repair work, and a locomotive crane is not available, a structural steel outrigger of sufficient strength to lift the heaviest part of the trolley shall be provided.

(4) Outside overhead traveling cranes shall be equipped with wind indicators and rail clamps as required by the general safety and health standards, WAC 296-24-23503.

(5) Foot brakes, or other effective means shall be provided to control the bridge travel of all overhead traveling cranes. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-785, filed 8/27/81.]

**WAC 296-78-790 Crane platforms and footwalks.**

(1) Platforms shall be provided when changing and repairing truck wheels on end trucks.

(2) A platform or footwalk shall be located on crane or crane runway to give access to the crane cage, and it shall be accessible from one or more stairways or fixed ladders. This platform or footwalk shall be not less than eighteen inches in width.

(3) Where stairways are used to give access to platforms they shall make an angle of not more than fifty degrees with the horizontal and shall be equipped with substantial railing. If ladders are used to give access to platforms they shall extend not less than thirty-six inches above the platform. Railed stairways or ladders to be used as a means of ingress and egress to crane cages shall be located at either or both ends.

(4) A footwalk shall be placed along the entire length of the bridge on the motor side, and a short platform twice the length of the trolley placed at one end of the girder on the opposite side, with a vertical clearance of at least six feet six inches where the design of crane or building permits, but in no case shall there be less than four feet clearance. For hand operated cranes the footwalk shall not be required to be installed on the bridge of the crane, but there shall be a repair platform equal in strength and design to that required for motor operated cranes, installed on the wall of the building or supported by the crane runway at a height equal to the lower edge of the bridge girder to facilitate necessary repairs.

(5) Clear width of footwalks shall not be less than eighteen inches except around the bridge motor where it may be reduced to fifteen inches.

(6) Footwalks shall be of substantial construction and rigidly braced. Footwalks for outside service shall be constructed so as to provide proper drainage, but the cracks between the boards shall not be wider than one-fourth inch.

(7) Every footwalk shall have a standard railing and toeboard at all exposed edges. Railings and toeboards shall conform in construction and design with the following requirements:

(a) Railings shall be not less than thirty-six inches nor more than forty-two inches in height, with an additional rail midway between the top rail and the floor.

(b) Pipe railings shall be not less than one and one-fourth inch inside diameter if of iron or be not less than one and one-half inches outside diameter if of brass tubing.

(c) Metal rails other than pipe shall be at least equal in strength to that of one and one-half by three-sixteenths inch angle and shall be supported by uprights of equal strength.

(d) Posts or uprights shall be spaced not more than eight feet center to center.

(e) Toeboards shall be not less than four inches in height.

(f) Toeboards shall be constructed in a permanent and substantial manner of metal, wood, or other material equivalent thereto in strength. Where of wood, toeboards shall be at least equal in cross section to one inch by

four inches; where of steel at least one-eighth inch by four inches; where of other construction at least equal to the requirements for steel. Perforations up to one-half inch are permissible in metal toeboards.

(8) No openings shall be permitted between the bridge footwalk and the crane girders. Where wire mesh is used to fill this opening the mesh openings shall be not greater than one-half inch.

(9) All footwalks and platforms shall be so designed as to be capable of sustaining a concentrated load of one hundred pounds per lineal foot. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-790, filed 8/27/81.]

**WAC 296-78-795 Crane cages.** (1) Safe means of escape shall be provided for operators of all cranes in all operating locations. Rope ladders shall not be used as a regular means of access but may be installed as an emergency escape device to be used in the event of fire, mechanical breakdown or other emergency.

(2) The operator's cage shall be located at a place from which signals can be clearly distinguishable, and shall be securely fastened in a place and well braced to minimize vibration. It shall be large enough to allow ample room for the control equipment and the operator. The operator shall not be required to step over an open space of more than eighteen inches when entering the cage.

(3) Cab operated cranes shall be equipped with a portable fire extinguisher which meets the requirements of the general safety and health standard, WAC 296-24-590 through 296-24-59007.

(4) In establishments where continuous loud noises prevail such as caused by the operation of pneumatic tools, steam exhausts from boilers, etc., adequate signals shall be installed on cranes or one or more employees shall be placed on the floor for each crane operated to give warning to other employees of the approach of a crane with a load. Where there are more than two cranes on the same runway or within the same building structure, signaling devices are required to give warning to other employees of the approach of a crane with a load.

(5) Cages of cranes subjected to heat from below shall be of noncombustible construction and shall have a steel plate shield not less than one-eighth inch thick, placed not less than six inches below the bottom of the floor of the cage.

(6) Outside crane cages shall be enclosed. There shall be windows on three sides of the cage. The windows in the front and the side opposite the door shall be the full width of the cage.

(7) The floor of the cage on out-door cranes shall be extended to form an entrance landing which shall be equipped with a handrail and toeboard constructed to the specifications of WAC 296-78-790 of this chapter.

(8) A copy of the rules for operators shall be permanently posted in the cages of all cage-operated cranes. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-795, filed 8/27/81.]

**WAC 296-78-800 Crane rail stops, bumpers and fenders.** (1) Rail stops shall be provided at both ends of the crane runway and at ends of the crane bridge. When two trolleys are operated on the same bridge rails, bumpers shall be provided to prevent collision of trolleys.

(2) Bumpers and rail stops shall extend at least as high as the centers of the wheel.

(3) Rail stops shall be fastened to the girders or girders and rails, but not to the rails alone. This does not apply to portable rail stops. Portable rail stops shall not be used as permanent rail stops.

(4) Rail stops shall be built up of plates and angles or be made of cast steel.

(5) Fenders shall be installed which extend below the lowest point of the treads of gantry type crane wheels. They shall be of a shape and form that will tend to push or raise an employee's hand, arm or leg off the rail and away from the wheel. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-800, filed 8/27/81.]

**WAC 296-78-805 Crawler locomotive and truck cranes.** Crawler locomotive and truck cranes shall be constructed, maintained, inspected and operated in accordance with the provisions of WAC 296-24-240 through 296-24-24019 of the general safety and health standards. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-805, filed 8/27/81.]

**WAC 296-78-810 Chain and electric hoists.** (1) Chain and electric hoists shall be of what is known as "all steel construction." No cast iron shall be used in parts subject to tension except drums, bearings or brake shoes.

(2) The chains shall be made of the best quality steel or iron with welded links.

(3) Chain and electric hoists shall have a factor of safety of at least five.

(4) Chain and electric hoists shall be equipped with a device which will automatically lock the load when hoisting is stopped.

(5) Electric hoists shall be provided with a limit stop to prevent the hoist block from traveling too far in case the operating handle is not released in time.

(6) Workers shall not ride the load of any chain or electric hoist. If necessary to balance the load manually, it shall be done from a safe distance.

(7) The rated capacity of the hoist shall be posted on both the hoist and the jib or rail. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-810, filed 8/27/81.]

**WAC 296-78-815 Monorail hoists.** (1) No attempt shall be made with a monorail hoist to lift or move an object by a side pull, unless designed for that purpose.

(2) A stop shall be provided at all switches and turntables which will prevent the trolley from running off should the switch be turned or be left in the open position.

(3) All monorail hoists operating on swivels shall be equipped with one or more safety catches which will support the load should a suspension pin fail. All trolley frames shall be safeguarded against spreading.

(4) Rail stops shall be provided at the ends of crane runways. Such rail stops shall extend at least as high as the centers of the wheels.

(5) All monorail hoists shall have the rated capacity posted on both the hoist and the rail. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-815, filed 8/27/81.]

**WAC 296-78-820 Air hoists.** (1) To prevent piston rod lock nuts from becoming loose and allowing rod to drop when supporting a load, lock nut shall be secured to piston rod by a castellated nut and cotter-pin.

(2) A clevis, "D" strap or other means shall be used to prevent the hoist cylinder becoming detached from the hanger.

(3) All air hoists shall have their rated capacity posted on both the hoist and the jib or rail. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-820, filed 8/27/81.]

**WAC 296-78-825 Jib, pillar, and portable floor cranes, crabs, and winches.** (1) Side pulls shall not be made with jib or pillar cranes. The arm or boom shall be directly over the load when making a lift.

(2) The gears of all cranes shall be enclosed, and if hand operated by means of a crab or winch, a locking dog shall be provided to hold load when the handle is released.

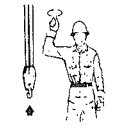

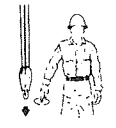

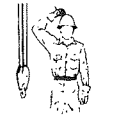

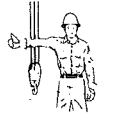

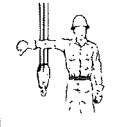

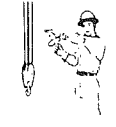

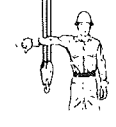

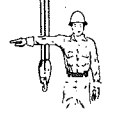

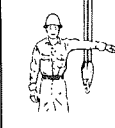

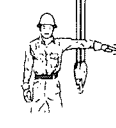

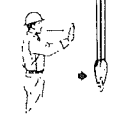

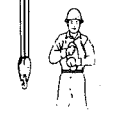

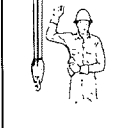

(3) Some form of brake or safety lowering device shall be provided on all crabs, winches, and jib cranes.

(4) A hoist limiting device shall be provided on all jib cranes of ten or more tons capacity.

(5) The rated capacity of the hoisting device shall be posted on the hoist and the arm or boom. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-825, filed 8/27/81.]

**WAC 296-78-830 Standard crane hand signals—Illustrations.** (1) The following hand signals shall be used for crawler, locomotive, and truck cranes and a copy shall be posted in the cab at the operator's station.

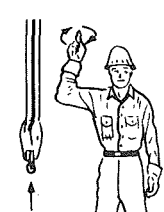

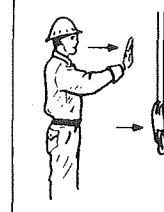

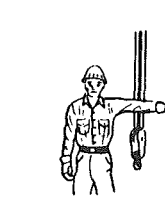

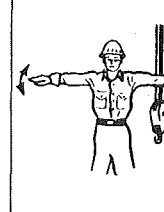

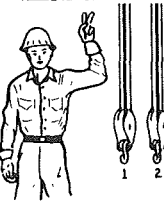

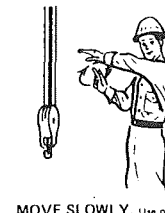

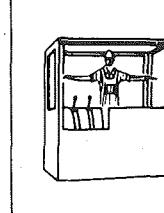

**CRAWLER, LOCOMOTIVE, AND TRUCK CRANES**

				
HOIST. With forearms vertical, forefingers circling up, move hand in small horizontal circle.	LOWER. With arm extended downward, forefinger pointing down, move hand in small horizontal circles.	USE MAIN HOIST. Tap flat on head; then use regular signal.	USE WHIRLINE (Auxiliary Hoist). Tap above with one hand; then use regular signal.	RAISE BOOM. Arm extended, fingers closed, thumb pointing upward.
				
LOWER BOOM. Arm extended, fingers closed, thumb pointing downward.	MOVE SLOWLY. Use one hand to give any motion signal and place other hand motionless in front of hand giving the motion signal. (Hoist slowly shown as example.)	RAISE THE BOOM AND LOWER THE LOAD. With arm extended, thumb pointing up, flex fingers in and out as long as load movement is desired.	LOWER THE BOOM AND RAISE THE LOAD. With arm extended, thumb pointing down, flex fingers in and out as long as load movement is desired.	SWING. Arm extended, point with finger in direction of swing of boom.
				
STOP. Arm extended, palm down, hold position rigidly.	EMERGENCY STOP. Arm extended, palm down, move hand slightly right and left.	TRAVEL. Arm extended forward, hand open and slightly raised, make pushing motion in direction of travel.	DOG EVERYTHING. Clasp hands in front of body.	TRAVEL (Both Tracks). Use both fists in front of body, making a circular motion about each other, indicating direction of travel, forward or backward. (For crawler cranes only.)
				
TRAVEL (One Track). Lock the track on side indicated by raised fist. Travel opposite track in direction indicated by circular motion of other fist, rotated vertically in front of body. (For crawler cranes only.)	EXTEND BOOM (Telescoping Booms). Both fists in front of body with thumbs pointing outward.	RETRACT BOOM (Telescoping Booms). Both fists in front of body with thumbs pointing toward each other.	EXTEND BOOM (Telescoping Boom). One Hand Signal. One fist in front of chest with thumb lapping chest.	RETRACT BOOM (Telescoping Boom). One Hand Signal. One fist in front of chest, thumb pointing outward and heel of fist lapping chest.

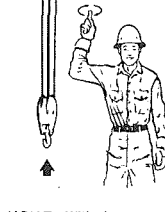

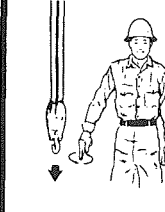

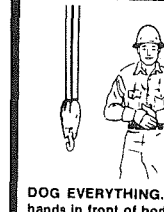

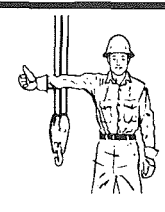

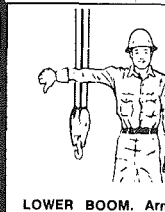

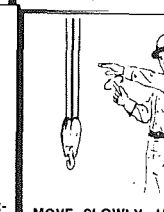

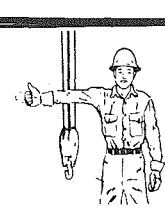

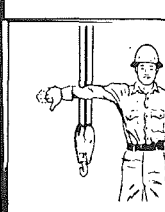

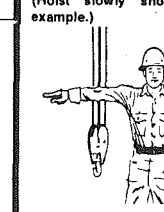

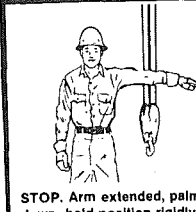

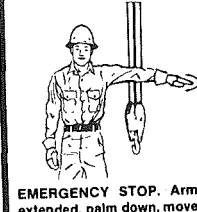

(2) The following hand signals shall be used for overhead and gantry cranes and a copy shall be posted in the cab at the operator's station.

(3) The following hand signals shall be used for derricks and a copy shall be posted in the cab at the operator's station.

STANDARD HAND SIGNALS FOR CONTROLLING OVERHEAD AND GANTRY CRANES

 <p><b>HOIST.</b> With forearm vertical, forefinger pointing up, move hand in small horizontal circle.</p>	 <p><b>LOWER.</b> With arm extended downward, forefinger pointing down, move hand in small horizontal circles.</p>	 <p><b>BRIDGE TRAVEL.</b> Arm extended forward, hand open and slightly raised, make pushing motion in direction of travel.</p>
 <p><b>TROLLEY TRAVEL.</b> Palm up, fingers closed, thumb pointing in direction of motion, jerk hand horizontally.</p>	 <p><b>STOP.</b> Arm extended palm down, move arm back and forth.</p>	 <p><b>EMERGENCY STOP.</b> Both arms extended, palms down, move arms back and forth.</p>
 <p><b>MULTIPLE TROLLEYS.</b> Hold up one finger for block marked "1" and two fingers for block marked "2". Regular signals follow.</p>	 <p><b>MOVE SLOWLY.</b> Use one hand to give any motion signal and place other hand motionless in front of hand giving the motion signal. (Hoist slowly shown as example.)</p>	 <p><b>MAGNET IS DISCONNECTED.</b> Crane operator spreads both hands apart, palms up.</p>

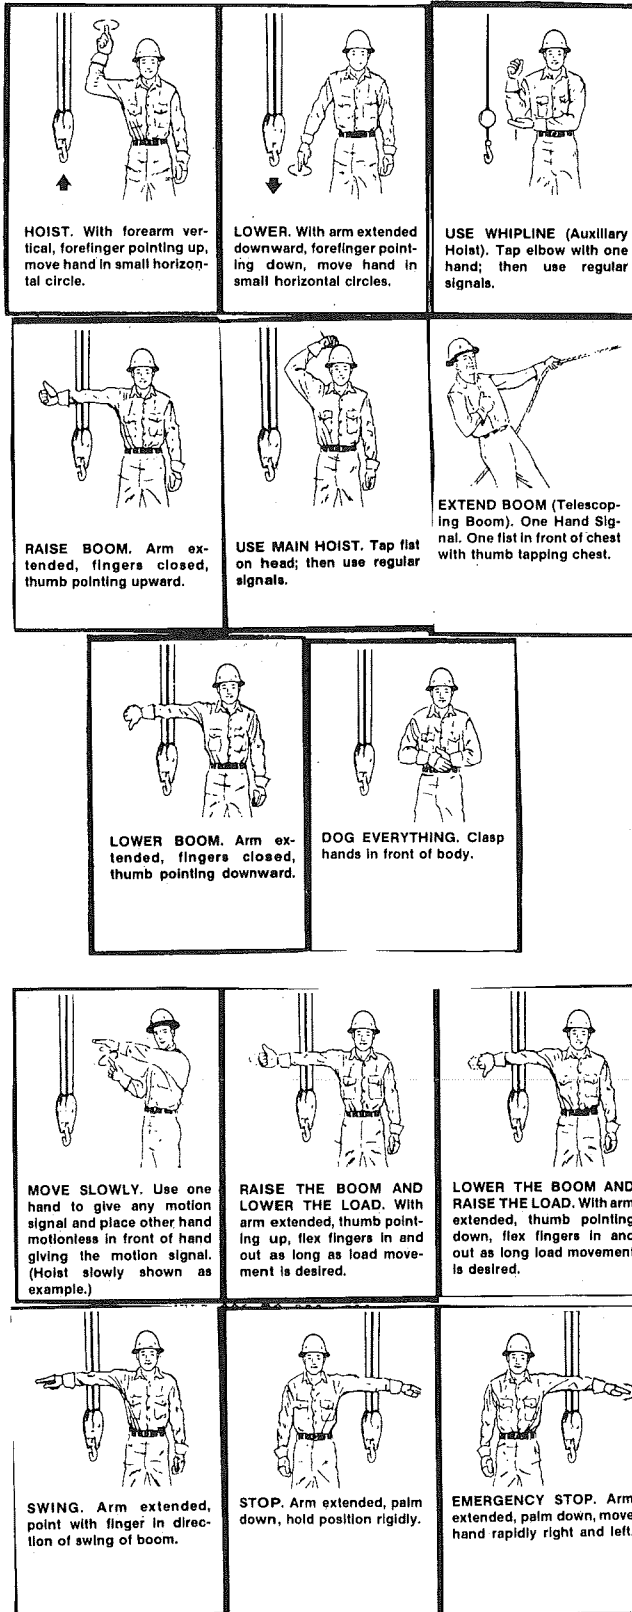

STANDARD HAND SIGNALS FOR CONTROLLING DERRICKS

 <p><b>HOIST.</b> With forearm vertical, forefinger pointing up, move hand in small horizontal circle.</p>	 <p><b>LOWER.</b> With arm extended downward, forefinger pointing down, move hand in small horizontal circles.</p>	 <p><b>DOG EVERYTHING.</b> Clasp hands in front of body.</p>
 <p><b>RAISE BOOM.</b> Arm extended, fingers closed, thumb pointing upward.</p>	 <p><b>LOWER BOOM.</b> Arm extended, fingers closed, thumb pointing downward.</p>	 <p><b>MOVE SLOWLY.</b> Use one hand to give any motion signal and place other hand motionless in front of hand giving the motion signal. (Hoist slowly shown as example.)</p>
 <p><b>RAISE THE BOOM AND LOWER THE LOAD.</b> With arm extended, thumb pointing up, flex fingers in and out as long as load movement is desired.</p>	 <p><b>LOWER THE BOOM AND RAISE THE LOAD.</b> With arm extended, thumb pointing down, flex fingers in and out as long as load movement is desired.</p>	 <p><b>SWING.</b> Arm extended, point with finger in direction of swing of boom.</p>
 <p><b>STOP.</b> Arm extended, palm down, hold position rigidly.</p>	 <p><b>EMERGENCY STOP.</b> Arm extended, palm down, move hand rapidly right and left.</p>	

(4) The following hand signals shall be used for portal, tower, and pillar cranes and a copy shall be posted in the cab at the operator's station.

STANDARD HAND SIGNALS FOR CONTROLLING PORTAL, TOWER AND PILLAR CRANES

[Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-830, filed 8/27/81.]

**WAC 296-78-835 Vehicles. (1) Vehicles.**

(a) Scope. Vehicles shall include all mobile equipment normally used in sawmill, planing mill, storage, shipping, and yard operations, including log sorting yards.

(b) Lift trucks. Lift truck shall be designed, constructed, maintained and operated in accordance with the requirements of WAC 296-24-230 through 296-24-23035 of the general safety and health standards.

(c) Carriers. Drive chains on lumber carriers shall be adequately guarded to prevent contact at the pinch points.

(d)(i) Lumber carriers shall be so designed and constructed that the operator's field of vision shall not be unnecessarily restricted.

(ii) Carriers shall be provided with ladders or equivalent means of access to the operator's platform or cab.

(e) Lumber hauling trucks.

(i) On trucks where the normal operating position is ahead of the load in the direction of travel, the cab shall be protected by a barrier at least as high as the cab. The barrier shall be capable of stopping the weight of the load capacity of the vehicle if the vehicle were to be stopped suddenly while traveling at its normal operating speed. The barrier shall be constructed in such a manner that individual pieces of a normal load will not go through openings in the barrier.

(ii) Stakes, stake pockets, racks, tighteners, and binders shall provide a positive means to secure the load against any movement during transit.

(iii) Where rollers are used, at least two shall be equipped with locks which shall be locked when supporting loads during transit.

(2) All vehicles used in a sawmill, lumber yard, factory or other establishment shall be equipped with audible warning signals that shall be maintained in good order at all times.

(3) Flywheels, gears, sprockets and chains and other exposed parts that constitute a hazard to workers shall be enclosed in standard guards.

(4) All vehicles operated after dark or in any area of reduced visibility shall be equipped with head lights which adequately illuminate the direction of travel for the normal operating speed of the vehicle. The vehicle shall also be equipped with tail lights which are visible enough to give sufficient warning to surrounding traffic at the normal traffic operating speed.

(5) All vehicles operated in areas where overhead hazards exist shall be equipped with an overhead guard for the protection of the operator.

(6) Where vehicles are so constructed and operated that there is a possibility of the operator being injured by backing into objects, a platform guard shall be provided and so arranged as not to hinder the exit of the driver.

(7) Trucks, lift trucks and carriers shall not be operated at excessive rates of speed. When operating on tramways or docks more than six feet above the ground

or lower level they shall be limited to a speed of not more than twelve miles per hour. When approaching blind corners they shall be limited to four miles per hour.

(8) Vehicles shall not be routed across principal thoroughfares while employees are going to or from work unless pedestrian lanes are provided.

(a) Railroad tracks and other hazardous crossings shall be plainly posted and traffic control devices (American National Standard D8.1 - 1967 for Railroad-Highway Grade Crossing Protection) should be utilized.

(b) Restricted overhead clearance. All areas of restricted side or overhead clearance shall be plainly marked.

(c) Pickup and unloading points. Pickup and unloading points and paths for lumber packages on conveyors and transfers and other areas where accurate spotting is required, shall be plainly marked and wheel stops provided where necessary.

(d) Aisles, passageways, and roadways. Aisles, passageways, and roadways shall be sufficiently wide to provide safe side clearance. One-way aisles may be used for two-way traffic if suitable turnouts are provided.

(9) Where an operator's vision is impaired by the vehicle or load it is carrying, he shall move only on signal from someone so stationed as to have a clear view in the direction the vehicle is to travel.

(10) Lift trucks shall be equipped, maintained and operated in compliance with the requirements of the general safety and health standard, WAC 296-24-230 through 296-24-23035.

(11) Load limits. No vehicle shall be operated with loads exceeding its safe load capacity.

(12) Vehicles with internal combustion engines shall not be operated in enclosed buildings or buildings with ceilings less than sixteen feet high unless the buildings have ventilation adequate to maintain air quality as required by the general occupational health standard, chapter 296-62 WAC.

(13) Vehicles shall not be refueled while motor is running. Smoking or open flames shall not be allowed in the refueling area.

(14) No employee other than trained operators or mechanics shall start the motor of, or operate any log or lumber handling vehicle.

(15) All vehicles shall be equipped with brakes capable of holding and controlling the vehicle and capacity load upon any grade or incline over which they may operate.

(16) Unloading equipment and facilities.

(a) Machines used for hoisting, unloading, or lowering logs shall be equipped with brakes capable of controlling or holding the maximum load in midair.

(b) The lifting cylinders of all hydraulically operated log handling machines, where the load is lifted by wire rope, shall be equipped with a positive device for preventing the uncontrolled lowering of the load or forks in case of a failure in the hydraulic system.

(c) A limit switch shall be installed on powered log handling machines to prevent the lift arms from traveling too far in the event the control switch is not released in time.

(d) When forklift-type machines are used to load trailers, a means of securing the loading attachment to the fork shall be installed and used.

(e) A-frames and similar log unloading devices shall have adequate height to provide safe clearance for swinging loads and to provide for adequate crotch lines and spreader bar devices.

(f) Log handling machines used to stack logs or lift loads above operator's head shall be equipped with overhead protection.

(g) Unloading devices shall be equipped with a horn or other plainly audible signaling device.

(h) Movement of unloading equipment shall be coordinated by audible or hand signals when operator's vision is impaired or operating in the vicinity of other employees.

Lift trucks regularly used for transporting peeler blocks or cores shall have tusks or a similar type hold down device to prevent the blocks or cores from rolling off the forks.

(17) Where spinners are used on steering wheels, they shall be of the automatic retracting type or shall be built into the wheel in such a manner as not to extend above the plane surface of the wheel. Vehicles equipped with positive antikickback steering are exempted from this requirement.

(18) Mechanical stackers and unstackers shall have all gears, sprockets and chains exposed to the contact of workers, fully enclosed by guards as required by WAC 296-78-710 of this chapter.

(19) Manually operated control switches shall be properly identified and so located as to be readily accessible to the operator. Main control switches shall be so designed that they can be locked in the open position.

(20) Employees shall not stand or walk under loads being lifted or moved. Means shall be provided to positively block the hoisting platform when employees must go beneath the stacker or unstacker hoist.

(21) No person shall ride any lift truck or lumber carrier unless a suitable seat is provided, except for training purposes.

(22) Unstacking machines shall be provided with a stopping device which shall at all times be accessible to at least one employee working on the machine.

(23) Floor of unstacker shall be kept free of broken stickers and other debris. A bin or frame shall be provided to allow for an orderly storage of stickers.

(24) Drags or other approved devices shall be provided to prevent lumber from running down on graders.

(25) Liquefied petroleum gas storage and handling. Storage and handling of liquefied petroleum gas shall be in accordance with the requirements of WAC 296-24-475 through 296-24-47517 of the general safety and health standards.

(26) Flammable liquids. Flammable liquids shall be stored and handled in accordance with WAC 296-24-

330 through 296-24-33019 of the general safety and health standards.

(27) Guarding side openings. The hoistway side openings at the top level of the stacker and unstacker shall be protected by enclosures of standard railings.

(28) Guarding hoistway openings. When the hoist platform or top of the load is below the working platform, the hoistway openings shall be guarded.

(29) Guarding lower landing area. The lower landing area of stackers and unstackers shall be guarded by enclosures that prevent entrance to the area or pit below the hoist platform. Entrances should be protected by electrically interlocked gates which, when open, will disconnect the power and set the hoist brakes. When the interlock is not installed, other positive means of protecting the entrance shall be provided.

(30) Lumber lifting devices. Lumber lifting devices on all stackers shall be designed and arranged so as to minimize the possibility of lumber falling from such devices.

(31) Inspection. At the start of each work shift, equipment operators shall inspect the equipment they will use for evidence of failure or incipient failure. Equipment found to have defects which might affect the operating safety shall not be used until the defects are corrected.

(32) Cleaning pits. Safe means of entrance and exit shall be provided to permit cleaning of pits.

(33) Preventing entry to hazardous area. Where the return of trucks from unstacker to stacker is by mechanical power or gravity, adequate signs, warning devices, or barriers shall be erected to prevent entry into the hazardous area. [Statutory Authority: RCW 49.17-.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-835, filed 8/27/81.]

**WAC 296-78-840 Loading, piling, storage and conveying.** [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-840, filed 8/27/81.]

**WAC 296-78-84001 Loading, piling, storage and conveying—General.** (1) Units or loads of lumber built up for transportation by overhead cranes, lift trucks, auto trucks, or manually or mechanically operated transfers shall be provided with at least one set of stickers for each eighteen inches in height of unit or load. One set of stickers shall be not more than six inches from the top of units of lumber up to three inch dimension. Where dimension of material is greater than three inches, a set of stickers shall be placed under the top layer. Stickers shall extend the full width of the package, shall be uniformly spaced, and shall be aligned one above the other. Stickers may be lapped with a minimum overlapping of twelve inches. Stickers shall not protrude more than two inches beyond the sides of the package.

(2) Lumber loading. Loads shall be built and secured to insure stability in transit.

(3) Units or loads of lumber shall not be lifted or moved until all workers are in the clear.

(4) Gradient of roll sets or roll cases over which units of lumber are to be moved shall not exceed three percent. The movement of units shall be under control at all times.

(5) Stacking of lumber in yards, either by units or in block piles, shall be conducted in a safe and orderly manner.

(6) Foundations for piling lumber in yards shall be capable of supporting the maximum applied load without tipping or sagging.

(7) The height of stacked units in storage areas shall not exceed seven of the usual four foot units, subject to the following qualifications:

(a) Units of lumber shall not be stacked more than four high unless two or more stacks of units are tied together with ties.

(b) Long units of lumber shall not be stacked upon shorter packages except where a stable pile can be made with the use of package separators.

(c) In unit package piles, substantial polsters or unit separators shall be placed between each package directly over the stickers.

(8) Wooden horses used for loading preformed loads of lumber shall be of material not less than four by six inches in cross section net measure.

(9) Unstable piles. Piles of lumber which have become unstable shall be immediately made stable or removed.

(10) Lift boards or pallets shall be loaded in such a manner as to prevent material from spilling or the material shall be secured with a binder.

(11) Packing rooms shall be kept free of debris and chutes shall be equipped with a means of slowing down the materials.

(12) Sorting chains shall be provided with a stopping device which shall at all times be readily accessible to at least one employee working on the chain.

(13) The inside of the walkway of all green chains and sorting tables shall be provided with a standard toeboard.

(14) Rollers or other devices shall be provided for removing heavy dimension lumber from the cabin or table.

(15) Roll casings and transfer tables shall be cleaned regularly and shall be kept reasonably free from debris.

(16) In all permanent installations, green chains and sorting tables shall be roofed over to provide protection from inclement weather. Normal work stations shall be provided with a drained work surface which is evenly floored of nonslip material.

(17) Power driven rolls shall be operated in a manner to prevent end collisions.

(18) The space between live rolls shall be filled in on either side of crosswalks with material of structural strength to withstand the load imposed with a four to one safety factor.

(19) The driving mechanism of live rolls shall be guarded wherever exposed to contact.

(20) Live rolls shall be replaced when their surface develops a break or hole.

(21) Guarding. Spiked live rolls shall be guarded.

(22) Ramps or skidways used to transfer lumber or materials from one level to another shall be provided

with all safeguards necessary for the protection of workers.

(23) Landings on a lower level where lumber or timbers are discharged over ramps or skidways shall be provided with a solid bumper not less than six inches in height at the outer edge. Such landing shall be maintained in good repair at all times.

(24) Ramps or skidways shall be so arranged that the person putting lumber down shall have a clear view of the lower landing. Lumber or timbers shall not be put down until all workers are in the clear.

(25)(a) The under face of all ramp or skidway landings shall be fenced off or other positive means provided to prevent persons from walking out under dropping timber.

(b) Return strands of sorting table ramp chains shall be supported by troughs of sufficient strength to support the weight of a broken chain. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-84001, filed 8/27/81.]

**WAC 296-78-84003 Conveyors.** (1) Construction, operation, and maintenance of conveyors shall be in accordance with American National Standard B20.1 - 1957, Safety Code for Conveyors, Cableways and related equipment.

(2) Conveyor troughs in which the working strands of a conveyor operate shall be of ample dimension and strength to carry a broken chain and shall afford effective protection to all employees.

(3) When the return strand of a conveyor operates within seven feet of the floor there shall be a trough provided of sufficient strength to carry the weight resulting from a broken chain.

(4) When the return strands of a conveyor pass over passageways or work areas such guards shall be placed under them as will effectively protect workers.

(5) When the working strand of a conveyor crosses within three feet of the floor level in passageways, the trough in which it works shall be bridged the full width of the passageway.

(6) Where conveyor, idler pulleys or other equipment is located over or dangerously near burning refuse, any worker going to such location shall use a safety line which shall be securely fastened to his body and tended by a helper.

(7) Conveyors shall be provided with an emergency panic-type stopping device which can be reached by a person in a sitting position on the conveyor. Such device shall be located near the material entrance to each barker, chipper, hog, saw, or similar type of equipment except where the conveyor leading into such equipment is under constant control of an operator who has full view of the material entrance and is located or restrained where he/she cannot possibly fall onto the conveyor. The device shall stop the conveyor a sufficient distance away from the hazard to prevent injury or further injury by the hazard.

(8) Screw or auger type conveyor troughs and boxes shall be equipped with covers. If it is not practical to

cover the troughs or boxes, other equivalent type guards shall be provided. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-84003, filed 8/27/81.]

**WAC 296-78-84005 Dry kilns.** (1) Transfer, kiln and dolly tracks shall be properly maintained at all times and shall have a grade of not more than one and one-fourth percent. Bumpers or stops shall be installed at the ends of all tracks capable of stopping a normal load for which the track is installed. A means shall be provided for chocking or blocking cars.

(2) Doors.

(a) Main kiln doors. Main kiln doors shall be provided with a method of holding them open while kiln is being loaded.

(b) Counterweights on vertical lift doors shall be boxed or otherwise guarded.

(c) Means shall be provided to firmly secure main doors, when they are disengaged from carriers and hangers, to prevent toppling.

(3) Kilns whose operation requires inside inspection shall be maintained with not less than eighteen inches clearance between loaded cars and the walls of the kiln. The requirements for personal protective equipment specified in WAC 296-24-075 through 296-24-092 shall be complied with.

(4) Kiln loads shall be equipped or arranged for easy attachment and detachment of transfer cables. Means for stopping kiln cars shall be available at all times.

(5) Cars shall not be moved until tracks are clear and workers are out of the bight of transfer lines.

(6) When kiln or dolly loads of lumber are permitted to coast through or adjacent to any work area, audible warning shall be given.

(7) Stickers shall not be allowed to protrude more than two inches from the sides of kiln stacks.

(8) Yards and storage areas shall be kept reasonably free of debris and unnecessary obstruction. Warning signs shall be conspicuously posted wherever there is danger from moving vehicles or equipment. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-84005, filed 8/27/81.]

**WAC 296-78-84007 Chippers and logs.** (1) Chippers. The feed system to the chipper shall be arranged so the operator does not stand in direct line with the chipper spout (hopper). The chipper spout shall be enclosed to a height or distance of not less than forty inches from the floor or the operator's station. A safety belt and lifeline shall be worn by workers when working at or near the spout unless the spout is guarded. The lifeline shall be short enough to prevent workers from falling into the chipper.

(2) Hog mills shall be provided with feed chutes so designed and arranged that from no position on the rim of the chute shall the distance to the knives or feed roll be less than forty inches. Baffles shall be provided which shall effectively prevent material from being thrown from the mill.

(3) Employees feeding hog mills shall be provided with safety belts and lines, which they shall be required to use at all times, unless otherwise protected from any possibility of falling into the mill. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-84007, filed 8/27/81.]

**WAC 296-78-84009 Bins and bunkers.** (1) Bins, bunkers, hoppers, and fuel houses. Guarding. Open bins, bunkers, and hoppers whose upper edges extend less than three feet above working level shall be equipped with standard handrails and toeboards, or have their tops covered by a substantial grill or grating with openings small enough to prevent a person from falling through.

(2) Fuel hoppers shall be provided with doors that may be remotely operated.

(3) Fuel hoppers shall be provided with platforms with standard railings and adequately lighted for the protection of workers taking out fuel.

(4)(a) Fuel bins shall be provided with an approved railed platform or walkway near the top or other approved means, for the use of employees engaged in dislodging congested fuel. No employee shall enter any fuel bin except where adequately safeguarded.

(b) Recognizing however, the varying designs of fuel storage vaults and the type of fuel handled and certain peculiar local conditions, the adequacy of safety devices shall be determined by a duly authorized representative of the department of labor and industries, division of industrial safety and health.

(c) During operations when the flow of normal fuel is interrupted but dust from operating sanders is received in the bin, workers shall not enter the fuel bin until the flow of sander dust has been discontinued and the dust has settled.

(d) Use of wheeled equipment to load bins. Where automotive or other wheeled equipment is used to move materials into bins, bunkers, and hoppers, adequate guard rails shall be installed along each side of the runway, and a substantial bumper stop provided when necessary. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-84009, filed 8/27/81.]

**WAC 296-78-84011 Burners.** (1) Burners and smoke stacks other than the self-supporting type shall be adequately guyed. Buckle guys shall be installed if burner or stack is more than fifty feet in height.

(2) Runway. The conveyor runway to the burner shall be equipped with a standard handrail. If the runway crosses a roadway or thoroughfare, standard toeboards shall be provided in addition. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-78-84011, filed 8/27/81.]

## Chapter 296-79 WAC

### SAFETY STANDARDS FOR PULP, PAPER, AND PAPERBOARD MILLS AND CONVERTERS

WAC	
296-79-010	Scope and application.
296-79-020	General requirements.
296-79-030	Guards and guarding.
296-79-040	Fire protection and ignition sources.
296-79-050	Personal protection.
296-79-060	Protection from radiation.
296-79-070	Illumination.
296-79-080	Elevators, manlifts and other lifting devices.
296-79-090	Electrical equipment and distribution.
296-79-100	Floors, platforms, stairways, ladders, loading docks.
296-79-110	Elevated runways and ramps used by vehicles.
296-79-120	Scaffolds, construction, use and maintenance.
296-79-130	Crossovers, aisles, passages.
296-79-140	Installation, inspection, and maintenance of pipes, piping systems, and hoses.
296-79-150	Mobile equipment and lift trucks.
296-79-160	Requirements for cranes and hoists—General safety and health standards to prevail.
296-79-170	Requirements for crawler and truck cranes.
296-79-180	Privately owned standard gauge railroad operations.
296-79-190	Loading and unloading materials from railway cars or trucks.
296-79-200	Bridge and dock plates.
296-79-210	Belt, chain and roller type conveyors, maintenance and inspection.
296-79-220	Deactivating and lockout requirements.
296-79-230	Vessel or confined area requirements.
296-79-240	Storage of fuel, oil, flammables and chemicals.
296-79-250	Safety procedure for handling dry sulfur.
296-79-255	Safety procedure for handling liquid sulfur.
296-79-260	Pulpwood storage and handling.
296-79-270	Pulpwood preparation—Scope and application.
296-79-27001	Barkers, chippers, and hog feed devices.
296-79-27003	Log hauls, slips, and carriages.
296-79-27005	Band saws.
296-79-27007	Circular saws speeds and repairs.
296-79-27009	Slasher saws—tables.
296-79-27011	Circular swing saws.
296-79-27013	Drag saws—Fixed chain saws—Circular cut-off saws.
296-79-27015	Construction and use of pulpwood splitters.
296-79-280	Chip and hog fuel storage.
296-79-290	Stock preparation and reprocessing—Scope and application.
296-79-29001	Digester valves and piping.
296-79-29003	Warning of digester being blown.
296-79-29005	Unplugging quick lime stoppages.
296-79-29007	Bleach plant.
296-79-29009	Audible alarm in bleach plant.
296-79-29011	Pocket grinder doors.
296-79-29013	Pulping device procedures.
296-79-29015	Off machine repulping devices.
296-79-29017	Pulping device cleaning, inspection and repairing.
296-79-29019	Guarding hand knives and sharpening steels.
296-79-29021	Shredders and blowers.
296-79-29023	Clearing shredder jams.
296-79-29025	Repairing shredders.
296-79-29027	Guillotine type roll splitters.
296-79-29029	Broke hole.
296-79-29031	Industrial kiln guns and ammunition.
296-79-29033	Chlorine dioxide system.
296-79-29035	Piling and unpling pulp.
296-79-29037	Chocking rolls.
296-79-300	Machine room equipment and procedures.
296-79-310	Converting operations (bag and container manufacturing, printing, coating, finishing and related processes)—Scope and application.
296-79-31001	General requirements.
296-79-31003	Corrugator.
296-79-31005	Adhesive system.

- 296-79-31007 Printing and cutting.
- 296-79-31009 Die cutting.
- 296-79-31011 Power lifts on gluers, tapers and stitchers.
- 296-79-31013 Strapping-banding operations.
- 296-79-320 Recovery furnace area requirements.

**WAC 296-79-010 Scope and application.** (1) This chapter applies to establishments, firms, persons and corporations dealing with the manufacturing, processing, storing, finishing or converting of pulp, paper or paper-board and all buildings, machinery and equipment pertaining thereto.

(2) This chapter shall augment the Washington state general safety and health standards, general occupational health standards, electrical workers safety rules, and any other standards which are applicable to all industries governed by chapter 80, Laws of 1973 (chapter 49.17 RCW), Washington Industrial Safety and Health Act. In the event of any conflict between any portion of this chapter and any portion of any of the general application standards, the provisions of this chapter 296-79 WAC, shall apply.

(3) When the words "shall" or "must" are used in this chapter, the requirement is compulsory. The words "may" or "should," as used in this standard, identify recommendations or suggestions only.

(4) The rules contained in this chapter are minimum requirements and the use of additional guards, or other means, methods or procedures may be needed in order to make the work or place of work safe. [Order 74-24, § 296-79-010, filed 5/6/74; Order 70-6, § 296-79-010, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-020 General requirements.** (1) Housekeeping. Floors shall be kept reasonably clear of spilled or leaking oil, grease, water, broke, etc., that may cause slipping, tripping or falling. Nonskid type surfacing shall be installed in vehicular or pedestrian traffic areas in which slipping hazards otherwise would exist.

In areas where it is not possible to keep the floor free of materials which cause a slipping hazard, mats, cleats, or other suitable materials which will effectively minimize or eliminate the hazard shall be installed.

(2) Storage of hoses, cords, slings or similar items or equipment. Hoses, cords, slings or similar items or equipment shall be stored in such a manner that they will not create a hazard.

(3) Storage and transportation of materials. Materials, objects or equipment shall be stored or transported by use of means or methods which will prevent them from falling, tipping or rolling.

(4) Compressed gas cylinders. Compressed gas cylinders shall be stored away from heat sources, combustible materials or other materials which may cause hazardous conditions. Storage facilities shall comply with the requirements of the general safety and health standards, chapter 296-24 WAC. Cylinders shall be secured in a manner which will prevent them from tipping or falling. Acetylene cylinders shall be stored, transported, or used while in the upright position only.

(5) Warning of obstructions. Open manholes or excavations shall be roped off, barricaded, or adequately

safeguarded by an approved method when located in or adjacent to walkways, aiseways, or roadways. During periods of darkness or reduced visibility, such areas shall be provided with warning lights or lanterns.

(6) Employees to be instructed. Employees shall not be permitted to operate any machine or equipment until they have received proper instruction and are familiar with safe operating procedures.

(7) Training personnel to handle emergencies. In each area where hazardous substances may be encountered, personnel shall be trained to cope with emergencies arising from breaks, ruptures, or spills which would create a hazardous condition.

(8) Working alone. When an employee is assigned to work alone in a remote or isolated area, a system shall be instituted whereby such employee reports by use of radio or telephone to someone periodically or a designated person shall check on his safety at reasonable intervals. All persons involved in working alone shall be advised of the procedures to be followed.

(9) Lifting or moving objects. Employees shall be instructed in proper lifting or moving techniques and methods. Mechanical devices should be used or employees should ask for assistance in lifting or moving heavy objects.

(10) Reporting hazards. Any faulty equipment or hazardous condition shall be promptly reported to the person in charge.

(11) Exits from hazardous areas. Where physically and reasonably possible, there shall be at least two unobstructed exits from any hazardous area. Such exits shall preferably be on opposite walls.

(12) Safe work area. Sufficient clearance shall be maintained between machines to allow employees a safe work area.

(13) Protection from overhead hazard. Warning signs shall be placed in conspicuous locations below areas where overhead work is being done and shall be removed promptly when work is completed.

(14) Welding areas protected. Areas in which welding is being done shall be screened or barricaded to protect persons from flash burns, when practical. If the welding process cannot be isolated, all persons who may be exposed to the hazard of arc flash shall be properly protected.

(15) Testing safety devices. Brakes, back stops, anti-runaway devices, overload releases and other safety devices shall be inspected and tested frequently to ensure that all are operative and maintained in good repair.

(16) Starting and stopping devices. Electrically or manually operated power disconnecting devices shall be provided within easy reach of the operator while in his normal operating position. If necessary for safety of the operation, the machine shall be so equipped that retarding or braking action can be applied at the time of or after the source of power is deactivated.

(17) Use of compressed air for cleaning purposes. Compressed air shall not be used for cleaning purposes if it may endanger other persons in the area or for cleaning clothing while it is being worn.

(18) Coupling high pressure air hoses. Sections of high pressure air hoses shall be properly coupled and have safety chains or equivalent safety device attached between the sections (30 psi or more is high pressure air).

(19) Punch bars. Open pipes shall not be used as punch bars if the use would create a hazard.

(20) Saw table limit stop or extension. Employees shall be protected from contact with the front edge of a circular saw by a limit stop which will prevent the forward swing of the cutting edge from extending beyond the edge of the table or a table extension shall be installed.

(21) Explosive-actuated tools. Explosive-actuated tool design, construction, operation and use shall comply with all requirements specified in "safety requirements for powder actuated fastening systems," adopted by the department of labor and industries. In addition, after using such tools a careful check shall be made in order to ascertain that no cartridges or charges are left where they could enter equipment or be accidentally discharged in any area where they could create a fire or explosion hazard.

(22) Approved life buoys. Where work is being performed on docks or adjacent to open water five feet or more in depth U.S. Coast Guard approved life buoys shall be provided. Such life buoys shall have sufficient line attached and be spaced at intervals not exceeding 200 feet.

(23) Ladders required on waterfront docks. Either permanent ladders or portable ladders which are readily available for emergency use shall be provided on all waterfront docks. Such ladders shall extend from the face of the dock to the water line at its lowest elevation. Spacing between ladder installations shall not exceed 400 feet. The dock area immediately adjacent to ladder locations shall be painted with a bright color which contrasts with the surrounding area. A suitable method shall be used to secure the ladders.

(24) Protection from hot pipes. All exposed hot pipes within seven feet of the floor or working platform, or within 15" measured horizontally from stairways, ramps or fixed ladders, shall be covered with an insulating material or be guarded in such a manner as to prevent contact.

(25) Prevent overhang while removing materials. Extreme care shall be taken to prevent material from creating an overhang while removing the materials from piles or bins.

(26) Establishments subject to chapter 296-79 WAC shall comply with the following standards of the American National Standards Institute:

(a) ANSI Z33.1-1961, Installation of Blower and Exhaust Systems for Dust, Stock and Vapor Removal or Conveying;

(b) ANSI B56.1-1969, Safety Standard for Powered Industrial Trucks. [Statutory Authority: RCW 49.17-.040 and 49.17.050. 82-13-045 (Order 82-22), § 296-79-020, filed 6/11/82; Order 77-12, § 296-79-020, filed 7/11/77; Order 74-24, § 296-79-020, filed

5/6/74; Order 70-6, § 296-79-020, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-030 Guards and guarding.** (1) General safety and health standards to prevail where applicable. Driving mechanisms, power transmission equipment or apparatus, prime movers, shear or pinch points or other similar hazardous areas of exposure shall be properly safeguarded with standard safeguards as required by the general safety and health standards.

(2) Safeguarding specific areas, machines or conditions. To augment the general safeguarding requirements contained in the previous rule, certain equipment, tools, machines, and areas present definite hazards and shall be safeguarded by compliance with the following requirements:

(a) Conveyors. Hazardous areas of conveyors shall be adequately safeguarded or workers shall be protected from hazard by other effective means.

(b) Broke shredders. Cutting heads shall be completely enclosed except for opening at feed side sufficient only to permit entry of stock. The enclosure shall be bolted or locked in place and shall be of solid material or with mesh or other openings not exceeding 1/2 inch.

(c) Sharp edged slitter knives. Sharp edged slitter knives subject to accidental contact shall be effectively guarded. Carriers shall be provided and used when transporting or carrying sharp edged slitter knives.

(d) Wheels of traveling sections of conveyors. Traveling sections of conveyors and other equipment with wheels which run on rails or guides, other than railroad equipment, shall be provided with wheel sweep guards installed in front of the traveling wheels in all areas where persons may be exposed to contact. Sweep guards shall have not greater than 1/4 inch clearance above the rail or guide.

(e) Stitching or sewing machine. Carton or bag stitching machines shall be properly safeguarded to prevent persons from coming in contact with the stitching head and other pinch or nip points.

(f) Beaters and pulpers. Where the top edge of vessels or tubs is less than standard height guardrails above the floor or operator's platform, a guardrail of standard height shall be installed. If necessary for the protection of the person feeding equipment, an intermediate guardrail or other suitable protection shall be installed. Beater rolls shall be provided with covers.

(g) First dryer. A permanent guard or apron guard, or both, shall be installed to protect workers from any exposed ingoing nip of the first dryer drum in each section if the area is accessible to workers while the dryer is in operation.

(h) Floor and drain openings. Floor and drain openings in walkways and general work areas shall be covered with material or gratings with openings no larger than 2" in the narrow dimension.

(i) Mechanical devices to dump chip cars, trucks or trailers. When using mechanical equipment to elevate the front end of the chip containers for dumping into a hopper, the shear area between the floor and the elevated section shall be safeguarded. The pit area shall be

adequately safeguarded or barricaded. Safeguards shall be installed around the exposed sides of a chip hopper.

(3) Replacing guards. All permanent guards must be replaced or adequate temporary safeguards provided before a machine is put into operation.

(4) Protection from moving materials. When material, such as chunks, slivers, cants, or logs could be thrown or flipped by a saw, barker, or other machines, adequate barricades, screens, netting, or other safeguards shall be provided and maintained.

(5) Circular saws (not slasher saws). Saws shall be provided with standard guards, in accordance with American National Standard 01.1-1954 (reaffirmed 1961).

(6) Protection for areas where guards are impractical. Where normal guarding is impractical the hazard shall be reduced to a minimum by use of safety chains, lifelines, signs or other reasonable means. Areas which present a major physical hazard which cannot be reasonably safeguarded shall be identified by use of paint or other materials.

(7) Transporting knives. Knives used for chip or hog fuel machines, or guillotine cutters, shall be secured in properly constructed containers during transportation.

(8) Hand knife or scissors. Workers shall be furnished properly designed and constructed sheaths for safely carrying knives and scissors used for cutting or trimming pulp and paper.

(9) Safe storage for knives and scissors. Tables where paper is being cut shall be equipped with sheaths or shelves for safe storage of knives and scissors.

(10) Safeguard for foot operated treadle switch used to activate power driven equipment. Foot operated treadle switches used for activation of power driven equipment shall be protected by a stirrup type guard or equivalent protection shall be provided to prevent accidental activation.

(11) Automatic pressure actuated stopping devices. Hand fed machines and other moving equipment which create shear or pinch points which cannot be reasonably guarded may be safeguarded by the installation of pressure activated bars or sensing devices which, when contacted, will automatically stop the machine or equipment. [Order 74-24, § 296-79-030, filed 5/6/74; Order 70-6, § 296-79-030, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-040 Fire protection and ignition sources.** (1) Portable fire extinguishers. Portable fire extinguishers shall be constructed, tested, maintained, and used in accordance with the recommendations specified by the National Fire Protection Association or other similar recognized agencies.

(2) Suitable fire extinguishing equipment. Fire extinguishing equipment suitable for use for the type or types of fire which could be expected in an area shall be provided.

(3) Vaporizing liquid type extinguishers. Vaporizing liquid type extinguishers shall not be used if known to create a condition which is hazardous to health.

(4) Proper type of fire extinguisher to be used. Each person who is expected or required to use fire extinguishing equipment shall be instructed as to the proper type or types of extinguishing equipment to be used for each class of fire.

(5) Fire drills, etc. Personnel shall be instructed on procedures to be followed in case of fire.

(6) Posting areas where fire or explosion hazards exist. Areas where a fire or explosion hazard exists shall be posted with NO SMOKING or other suitable signs which would indicate that such hazard exists.

(7) Sources of ignition prohibited in hazardous areas. Spark-producing tools, lights or other sources of ignition shall not be used in any area where the hazard of explosion exists.

(8) Welding and burning permits. A written welding or burning permit shall be secured from a delegated person when welding and burning is to be done in an area near flammable or combustible materials or in areas where a potentially explosive condition exists. Permits shall not be valid for more than 24 hours.

(9) Internal dust fires in or around gas hoods. A safe written procedure shall be developed by the company for control of dust fires in or around gas hoods. Personnel shall be properly instructed and trained in this procedure. [Order 74-24, § 296-79-040, filed 5/6/74; Order 70-6, § 296-79-040, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-050 Personal protection.** (1) Personal protective equipment and clothing. Personal protective clothing and equipment as required by the general safety and health standards and the general occupational health standards shall be furnished by the employer and worn or used by the employee when needed to eliminate or minimize the degree of hazard involved with any specific operation.

(a) Required clothing, caps, etc. Employees shall wear sufficient clothing to protect them from hazards to which they may be exposed while performing their duties. Consideration must be given to temperatures in certain areas in which persons work. Employees whose hair is long enough to be caught in machinery or equipment around which they work shall wear caps, hair nets or other protection which will adequately confine the hair while performing their duties.

Rings or other jewelry which could create a hazard should not be worn by employees while in the performance of their work.

(b) Protective footwear. Employees who work in areas where there is a possibility of foot injury due to falling or rolling objects shall wear safety type footwear. Shoe guards and toe protectors will be supplied by management. Management shall also make safety shoes available for purchase by employees at not more than actual cost to management.

Calks or other suitable footwear which will afford reasonable protection from slipping shall be worn while working on logs. Calk boots shall be made available at cost.

(2) Working over or near water. (a) Employees working over or near water who are exposed to the danger of

drowning shall be provided with and shall wear U.S. Coast Guard approved personal flotation devices.

(b) Prior to and after each use, buoyant work devices shall be inspected for defects which would alter their strength or buoyancy. Defective units shall not be used.

(3) Protection from noise. The hearing protection requirements of the general occupational health standards, chapter 296-62 WAC, shall apply.

(4) Respiratory protection. The respiratory protection requirements of the general occupational health standards, chapter 296-62 WAC, shall apply. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-79-050, filed 11/30/83; 82-13-045 (Order 82-22), § 296-79-050, filed 6/11/82; Order 74-24, § 296-79-050, filed 5/6/74; Order 70-6, § 296-79-050, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-060 Protection from radiation.** Special rules and regulations regarding the use of ionizing radiation shall be posted and followed as required by the atomic energy commission or the appropriate state agency, whichever has authority. For protection from other types of radiation, the rules contained in the general occupational health standards, chapter 296-62 WAC, shall prevail. [Order 74-24, § 296-79-060, filed 5/6/74; Order 70-6, § 296-79-060, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-070 Illumination.** (1) Sufficient illumination required. All areas shall be sufficiently illuminated in order that persons in the area can safely perform their assigned duties. The recommended levels of illumination specified in the general occupational health standards shall be followed where applicable. When areas are not specifically referred to in the general occupational health standards and the adequacy of illumination for the area or task performed is questionable, a determination of the amount of illumination needed shall be made by the industrial hygiene section of the division of industrial safety and health.

(2) Emergency or secondary lighting system required. (a) There shall be an emergency or secondary lighting system which can be actuated immediately upon failure of the normal power supply system. The emergency or secondary lighting system shall provide illumination in the following areas:

(i) Wherever it is necessary for workers to remain at their machine or station to shut down equipment in case of power failure.

(ii) At stairways and passageways or aiseways used by workers as an emergency exit in case of power failure.

(iii) In all plant first aid and/or medical facilities.

(b) Emergency lighting facilities shall be checked at least every 30 days for mechanical defects. Defective equipment shall be given priority for repair schedule.

(3) Extension cord type lights. All extension cord type lights shall be provided with proper guards. [Order 74-24, § 296-79-070, filed 5/6/74; Order 70-6, § 296-79-070, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-080 Elevators, manlifts and other lifting devices.** (1) Elevators, manlifts, etc. All elevators, manlifts or other lifting devices shall be installed and maintained in conformity with the requirements specified in the Washington state elevator laws and regulations adopted by the elevator section of the division of building and construction safety inspection, department of labor and industries.

(2) Inspection of elevators, etc., for acid towers. Outside elevators shall be inspected daily during winter months when ice materially affects safety. Elevators, runways, stairs, etc., for acid towers shall be inspected monthly for defects that may occur because of exposure to acid or corrosive gases.

(3) Gas masks on elevators. Elevators located in areas where exposure to potentially harmful concentrations of toxic substances may occur shall be equipped with an adequate supply of gas masks to protect the maximum number of passengers.

(4) Posting elevators. Elevators shall be posted indicating the maximum number of persons allowed to ride. [Order 74-24, § 296-79-080, filed 5/6/74; Order 70-6, § 296-79-080, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-090 Electrical equipment and distribution.** (1) National electrical code to prevail. All electrical installations and electrical utilization equipment shall comply with the National Electrical Code requirements.

(2) Authorized personnel to do electrical work. Only those persons who are qualified to do the work assigned and are authorized by the employer shall be allowed to perform electrical work on any electrical equipment or wiring installations.

(3) High voltage areas to be guarded. Motor rooms, switch panel rooms or other areas where persons may come in contact with high voltages shall be fenced off or be enclosed in a separate area. The gate, door or access to such area shall be posted with a notice stating that only authorized persons are allowed in the area.

(4) Control panels. Floor stand panels should be protected from being struck by moving equipment and handles and buttons shall be protected from accidental actuation.

(5) Switches or control devices. Switches, circuit breakers or other control devices shall be so located that they are readily accessible for activation or deactivation and shall be marked to indicate their function or machine which they control. The positions of ON and OFF shall be marked or indicated and provision shall be made for locking or tagging out the circuit.

(6) Starting requirements for electrically driven equipment after power failure. Electrically driven equipment shall be so designed that it will not automatically start upon restoration of power after a power failure if it will create a hazard to personnel.

(7) Posting equipment automatically activated or remotely controlled. Equipment which is automatically activated or remotely controlled shall be posted, warning persons that machine may start automatically if it will create a hazard to personnel. [Order 74-24, § 296-79-

090, filed 5/6/74; Order 70-6, § 296-79-090, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-100 Floors, platforms, stairways, ladders, loading docks.** (1) Construction and maintenance. Floors, platforms, stairways, ladders, and loading docks shall be constructed, maintained and used in accordance with the requirements specified in the general safety and health standards and shall have nonskid type surfaces where needed to minimize the hazard of slipping. [Order 74-24, § 296-79-100, filed 5/6/74; Order 70-6, § 296-79-100, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-110 Elevated runways and ramps used by vehicles.** (1) Elevated runway and ramp construction. Elevated runways or ramps shall be constructed to safely support four times the weight of any load to which it may be subjected. Runways and ramps shall be cleated, grooved, rough surfaced, or covered with a material which will minimize the danger of skidding. The maximum inclination of a ramp used for wheeled equipment shall not exceed 20° from horizontal.

(2) Guarding exposed sides. Elevated ramps or runways used for the travel of wheeled equipment shall have exposed sides guarded with a substantial bull rail or shear rail of sufficient height to prevent wheeled equipment from going over the rail. Standard guardrails shall be installed on runways wherever the height exceeds 4 feet above the adjacent area except where used for loading or unloading purposes. [Order 74-24, § 296-79-110, filed 5/6/74; Order 70-6, § 296-79-110, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-120 Scaffolds, construction, use and maintenance.** Whenever work must be performed at a height which cannot be reached from the floor or permanent platform and where it would not be safe practice to use a ladder, a properly constructed scaffold shall be provided and used. All scaffolds shall have a factor of safety of four times any load to which they may be subjected and be adequately secured or stabilized to prevent tipping. Scaffolds shall be constructed in accordance with acceptable engineering practices and shall be maintained in a safe condition. Tools or materials which would create a tripping hazard or which may fall from the platform shall be secured or removed. Persons shall not ride on a roller scaffold while it is being moved. [Order 74-24, § 296-79-120, filed 5/6/74; Order 70-6, § 296-79-120, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-130 Crossovers, aisles, passages.** (1) Crossing conveyors. Where access is required, crossovers or underpasses with proper safeguards shall be provided over or under all conveyors.

(2) Clearances to be marked. Low clearance areas under conveyors which could present a hazard to mobile equipment operations shall be identified by a suitable means, such as signs, contrasting colors, or tell-tales.

(3) Aisles or passageways. Aisles or passageways should be at least three feet wider than the widest vehicle or load traveling the aisle or passageway. When this

clearance cannot be maintained, adequate precautions shall be taken.

(4) Crossovers over obstructions in passageways. Crossovers shall be provided where employees are required to cross over transmission drive lines or other permanent obstructions in passageways or walkways. [Order 74-24, § 296-79-130, filed 5/6/74; Order 70-6, § 296-79-130, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-140 Installation, inspection, and maintenance of pipes, piping systems, and hoses.** (1) Definitions applicable to this section.

(a) Hazardous material system – any system within the following classifications:

(i) Flammable or explosive – any system containing materials which are hazardous because they are easily ignited and create a fire or explosion hazard, defined by NFPA as Class I liquids;

(ii) Chemically active or toxic – any system containing material which offers corrosion or toxic hazard in itself or can be productive of harmful gases upon release, defined by NFPA 704M as Class 3 and 4 materials;

(iii) Thermally hazardous – any system above 130°F which exposes persons to potential thermal burns;

(iv) Pressurized – any gaseous system above 200 psig or liquid system above 500 psig.

(b) Piping system – any fixed piping, either rigid pipe or flexible hose, including all fittings and valves, in either permanent or temporary application.

(2) Design and installation. All new piping systems intended to be used in hazardous material service shall be designed and installed in accordance with applicable provisions of the ASME Code for Pressure Piping or in accordance with applicable provisions of ANSI B31.1 through B31.8. The referenced edition in effect at the time of installation shall be utilized.

NOTE: Both referenced standards have identical requirements.

(3) Inspection and maintenance.

(a) Management shall develop a formal program of inspections for all hazardous material piping systems. The program shall be based on sound maintenance engineering principle and shall demonstrate due consideration for the manufacturing specifications of the pipe, hose, valves and fittings, the ambient environment of the installation and the corrosive or abrasive effect of the material handled within the system.

(b) Type and frequency of tests and/or inspections and selection of inspection sites shall be adequate to give indications that minimum safe design operating tolerances are maintained. The tests may include visual or nondestructive methods.

(c) All companies shall submit their formal program of initial and ongoing inspections to the department for approval within one year after the effective date of this requirement.

(d) All existing hazardous material systems shall be inspected to the criteria of this section prior to two years after effective date, or in accordance with a schedule approved by the department.

(4) Inspection records.

(a) Results of inspections and/or tests shall be maintained as a record for each system.

(b) Past records may be discarded provided the current inspection report and the immediately preceding two reports are maintained.

(c) When a system is replaced, a new record shall be established and all past records may be discarded.

(d) The records for each system shall be made available for review by the department upon request.

(e) Portions of systems that are buried or enclosed in permanent structures in such a manner as to prevent exposure to employees even in the event of a failure, may be exempted from the inspection requirements only.

(5) Systems or sections of systems found to be below the minimum design criteria requirements for the current service shall be repaired or replaced with component parts and methods which equal the requirements for new installations.

(6) Identification of piping systems.

(a) Pipes containing hazardous materials shall be identified. It is recommended that USAS A13.1 "Scheme for Identification of Piping Systems" be followed.

(b) Positive identification of a piping system content shall be lettered legend giving the name of the content in full or abbreviated form, or a commonly used identification system. Such identification shall be made and maintained at suitable intervals and at valves, fittings, and on both sides of walls or floors as needed. Arrows may be used to indicate the direction of flow. Where it is desirable or necessary to give supplementary information such as hazard of use of the piping system content, this may be done by additional legend or by color applied to the entire piping system or as colored bands. Legends may be placed on colored bands.

Examples of legend which may give both positive identification and supplementary information regarding hazards or use are:

Ammonia .....	Hazardous liquid or gas
Chlorine .....	Hazardous liquid or gas
Chlorine dioxide .....	Hazardous liquid or gas
Sulphur dioxide .....	Hazardous gas
Liquid caustic .....	Hazardous liquid
Liquid sulphur .....	Hazardous liquid
Sulphuric acid .....	Hazardous liquid
Sodium chlorate .....	When dry, danger of fire or explosion

NOTE: Manual L-1, published by Chemical Manufacturers Association, Inc., is a valuable guide in respect to supplementary legend.

(c) When color, applied to the entire piping system or as colored bands, is used to give supplementary information it should conform to the following:

CLASSIFICATION	PREDOMINANT COLOR
F—Fire-protection equipment .....	Red
D—Dangerous materials .....	Yellow (or orange)
S—Safe materials .....	Green (or the achromatic colors, white, black, gray or aluminum)

CLASSIFICATION

PREDOMINANT COLOR

and, when required,

P—Protective materials ..... Bright blue

(d) Legend boards showing the color and identification scheme in use shall be prominently displayed at each plant. They shall be located so that employees who may be exposed to hazardous material piping systems will have a frequent reminder of the identification program.

(e) All employees who work in the area of hazardous material piping systems shall be given training in the color and identification scheme in use.

(7) Test holes not to be covered. Test holes in blow lines of piping systems shall not be covered with insulation or other materials.

(8) Steam hoses. Steam hoses shall be specifically designed to safely carry steam at any pressures to which they may be subjected. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-13-053 (Order 81-9), § 296-79-140, filed 6/17/81. Statutory Authority: RCW 49.17.040, 49.17.240, and chapters 43.22 and 42.30 RCW. 81-03-007 (Order 80-31), § 296-79-140, filed 1/8/81; Order 74-24, § 296-79-140, filed 5/6/74; Order 70-6, § 296-79-140, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-150 Mobile equipment and lift trucks.**

(1) All industrial powered trucks should be engineered, designed, constructed, maintained and used in accordance with the recommendations specified in USAS B56.1-1969 "Safety Code for Powered Industrial Trucks."

(2) Operator training. Methods shall be devised by management to train personnel in the safe operation of powered industrial trucks and only trained and authorized operators shall be permitted to operate such vehicles.

(3) Special duties of operator. Special duties of the operator of a power-driven vehicle shall include the following:

(a) To test brakes, steering gear, lights, horns, warning devices, clutches, etc., before operating vehicle;

(b) Not to move a vehicle while an unauthorized rider is on his vehicle;

(c) To slow down and sound horn upon approaching blind corners or other places where vision or clearance is limited;

(d) To comply with all speed and traffic regulations and other applicable rules;

(e) To have the vehicle he operates under control at all times so that he can safely stop the vehicle in case of emergency; and

(f) When driving a fork lift vehicle on a grade, the load shall be kept on the upgrade side.

(4) Operator to be in proper position. Control levers of lift trucks, front end loaders, or similar types of equipment shall not be operated except when the operator is in his proper operating position.

(a) No person shall be permitted to ride on a powered hand truck unless it is so designed by the manufacturer.

A limit switch shall be on operating handle—30 degrees each way from a 45-degree angle up and down.

(b) When a powered industrial truck is left unattended, load engaging means shall be fully lowered, controls shall be neutralized, power shall be shut off, and brakes set. Wheels shall be blocked if the truck is parked on an incline.

(c) A powered industrial truck is unattended when the operator is 25 feet or more away from the vehicle which remains in his view, or whenever the operator leaves the vehicle and it is not in his view.

(d) When the operator of an industrial truck is dismounted and within 25 feet of the truck still in his view, the load engaging means shall be fully lowered, controls neutralized, and the brakes set to prevent movement.

(5) Raised equipment to be blocked. Employees shall not work below the raised bed of a dump truck, raised buckets of front end loaders, raised blades of tractors or in similar positions without blocking the equipment in a manner that will prevent it from falling. When working under equipment suspended by use of jacks, safety stands or blocking shall also be used in conjunction with the jack.

(6) Precautions to be taken while inflating tire. Unmounted split rim wheels shall be placed in a safety cage or other device shall be used which will prevent a split rim from striking the worker if it should dislodge while the tire is being inflated.

(7) Reporting suspected defects. If, in the opinion of the operator, a power-driven vehicle is unsafe, the operator shall report the suspected defect immediately to the person in charge. Any defect which would make the vehicle unsafe to operate under existing conditions shall be cause to take the vehicle out of service and it shall not be put back into use until it has been made safe.

(8) Safe speed. Vehicles shall not be driven faster than a safe speed which is compatible with existing conditions.

(9) Unobstructed view. Vehicle operators shall have a reasonably unobstructed view of the direction of travel, or, where this is not possible, the operator shall be directed by a person or by a safe guidance means or device.

Where practical, mirrors shall be installed at blind corners or intersections which will allow operators to observe oncoming traffic.

It is recommended that vehicles operating in congested areas should be provided with an audible or visual alarm system.

(10) Passengers to ride properly. Passengers shall not be permitted to ride with legs or arms extending outside any vehicle nor shall they be permitted to ride unless a passenger seat or other protective device is provided.

(11) Horns and lights. (a) Each vehicle shall be provided with a horn.

(b) Any vehicle required to travel away from an illuminated area shall be equipped with a light or lights which adequately illuminate the direction of travel.

(12) Guard on operator's platform. Every power truck operated from an end platform or standing position shall

be equipped with a platform extending beyond the operator's position, strong enough to withstand a compression load equal to the weight of the loaded vehicle applied along the longitudinal axis of the truck with the outermost projection of the platform against the flat vertical surface.

(13) Brakes on power-driven vehicles. Vehicles shall be equipped with brakes and devices which will hold a parked vehicle with load on any grade on which it may be used. The brakes and parking devices shall be kept in proper operating condition at all times.

(14) Cleaning vehicles. All vehicles shall be kept free of excessive accumulations of dust and grease that may present a hazard.

(15) Moving vehicles. Vehicles shall be controlled manually while being pushed or towed except when a tow bar is used. Special precautions shall be taken when pushing vehicles where view is obstructed. Pushing of vehicles or railroad cars with the forks or clamps of a lift truck is prohibited.

(16) Prohibited forms of riding. Riding on tongue or handles of trailers or forks of vehicles is prohibited.

(17) Jumping on or off moving vehicles. Jumping on or off moving vehicles is prohibited.

(18) Traffic lanes, designation and systems. Regular traffic lanes should be established and clearly designated and followed whenever practical. A one-way traffic system should be employed if practical.

(19) Clear lanes. Traffic lanes being used by pedestrians or equipment shall be kept clear of dunnage, pallets, etc., and equipment not in use.

(20) Lifting capacity of vehicle to be observed. At no time shall a load in excess of the manufacturer's maximum lifting capacity rating be lifted, carried, or moved by a lift truck. Such lifting capacity can be altered with the approval of the equipment manufacturer.

(21) Posting rated capacity. The maximum rated lifting capacity of all lift trucks shall at all times be posted on the vehicle in such a manner that it is readily visible to the operator.

(22) Carrying loose material. Lift trucks shall not be used to carry loose loads of pipe, steel, iron, lumber, palletized material, rolls of paper, or barrels unless adequate clearance is provided and the loads are stabilized.

(23) Position of lift forks or clamps. The forks or clamps of lift trucks shall be kept as low as possible while the vehicle is moving. They shall be lowered to the floor when the vehicle is parked.

(24) Walking under loads prohibited. No person shall be allowed under the raised load of a lift truck.

(25) Hoisting of personnel on vehicle forks prohibited. Personnel shall not be hoisted by standing directly on the forks of vehicles.

(26) Using forklifts as elevated work platforms. A platform or structure built specifically for hoisting persons may be used providing the following requirements are complied with:

(a) The structure must be securely attached to the forks and shall have standard guardrails and toeboards installed on all sides.

(b) The hydraulic system shall be so designed that the lift mechanism will not drop faster than 135 feet per minute in the event of a failure in any part of the system. Forklifts used for elevating work platforms shall be identified that they are so designed.

(c) A safety strap shall be installed or the control lever shall be locked to prevent the boom from tilting.

(d) An operator shall attend the lift equipment while workers are on the platform.

(e) The operator shall be in the normal operating position while raising or lowering the platform.

(f) The vehicle shall not travel from point to point while workers are on the platform except that inching or maneuvering at very slow speed is permissible.

(g) The area between workers on the platform and the mast shall be adequately guarded to prevent contact with chains or other shear points.

(27) Overhead guards on lift trucks. All lift trucks shall be equipped with an overhead guard constructed and installed to conform to USAS B56.1-1969 "Safety Code for Powered Industrial Trucks." This guard may be removed only when it cannot be used due to the nature of the work being performed in which case loads shall be maintained so as not to create a hazard to the operator.

(28) Protection from exhaust system. Any exhaust system which would be exposed to contact shall be properly insulated or isolated to prevent personnel from being burned. Exhaust systems on lift trucks and jitneys shall be constructed to discharge either within 20" from the floor or 84" or more above the floor. The exhausted gases shall be directed away from the operator and the equipment shall be designed in such a manner that the operator will not be exposed to the fumes.

(29) Emergency exit from mobile equipment. Mobile equipment with an enclosed cab shall be provided with an escape hatch or other method of exit in case the regular exit cannot be used.

(30) Vehicle wheels chocked. When driving mobile equipment onto the bed of a vehicle, the wheels of the vehicle shall be chocked.

(31) Prevent trailer from tipping. Suitable methods shall be used or devices installed which will prevent the trailer from tipping while being loaded or unloaded.

(32) Refueling. Gasoline or LPG engines shall be shut off during refueling.

(33) Close valve on LPG container. Whenever vehicles using LP gas as a fuel are parked overnight or stored for extended periods of time indoors, with the fuel container in place, the service valve of the fuel container shall be closed.

(34) LP tanks. LP vehicle fuel tanks shall be installed and protected in a manner which will minimize the possibility of damage to the tank.

(35) Inspecting and testing of LPG containers. LPG containers shall be inspected and tested periodically.

(36) Spinners on steering wheels. The use of spinners on steering wheels shall be prohibited unless an anti-kick device is installed or the equipment has a hydraulic steering system. [Order 74-24, § 296-79-150, filed

5/6/74; Order 70-6, § 296-79-150, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-160 Requirements for cranes and hoists—General safety and health standards to prevail.** All applicable rules for design, construction, maintenance, operation and testing of cranes and hoists contained in the general safety and health standards shall be complied with. [Order 74-24, § 296-79-160, filed 5/6/74; Order 70-6, § 296-79-160, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-170 Requirements for crawler and truck cranes.** (1) Rated capacity chart. A chart indicating the manufacturer's rated capacity at all operating radii for all permissible boom lengths and jib lengths with alternate ratings for optional equipment affecting such ratings shall be posted in all mobile type cranes and shall be readily visible to the operator in his normal operating position.

(2) Boom length indicated. The length shall be plainly marked on each boom section of a mobile crane having a sectioned boom.

(3) Radius or boom angle indicator. A radius or boom angle indicator shall be installed where it is readily visible to the operator in his normal operating position on all cranes having a movable working boom.

(4) Safety device for light fixtures. Any light fixtures attached to crane boom or machinery house shall have a safety strap or other device attached which will prevent the fixture from falling.

(5) Boom stops. Boom stops shall be installed to govern the upward travel of the boom to a safe limit. Boom stops shall be of adequate strength to prevent the boom from traveling past the vertical position.

(6) Controls marked. Crane operating controls shall be marked or an explanation of the controls' functions shall be posted in full view of the operator.

(7) Locking hydraulic outriggers. Hydraulic outriggers shall be equipped with a pilot operated check valve or a mechanical lock shall be installed which will prevent outriggers from retracting in case of failure of the hydraulic system.

(8) Top of boom painted. The top six feet of the boom or jib shall be painted bright yellow or other bright contrasting color if the boom is yellow.

(Several makes of cranes are already "all yellow." Users say they want to retain the contrasting color theme to call attention to the boomtop.)

(9) Warning devices. All cranes shall be equipped with a suitable warning device such as a horn or whistle.

(10) Hook safety device. All hooks shall be equipped with a safety device or other effective means shall be used to prevent accidental unhooking of the load.

(11) Counterweight limited. The amount of crane counterweight shall not exceed the maximum amount specified by the crane manufacturer.

(12) Use proper size wire rope for sheaves. The size and diameter of sheaves and wire rope shall be compatible and follow the recommendations published by the

Wire Rope Institute or other acceptable engineering practices.

(13) Loading or unloading gear. Unloading gear such as grapples, tongs, and buckets, shall not be left suspended when not in use.

(a) Where grapples, trip tongs or similar device is used for loading, the log holding device shall be lowered to the ground whenever the machine is unattended.

(14) No one under load. Personnel shall not position themselves under crane loads and such loads shall not be carried over workers.

(15) Operating clearance from stationary objects. A distance of 30" shall be maintained between the outermost part of a revolving crane and any stationary object within the swing radius of the crane where the area is accessible to workers or the hazardous area must be temporarily guarded or barricaded.

(16) Clearance requirements from unprotected electrical transmission and distribution lines.

(a) Except as provided in subdivision (b), all parts of cranes and loads being handled shall maintain the following specified clearances:

(i) For lines rated 50 kv or below, minimum clearance between the lines and any part of the crane or load shall be ten feet;

(ii) For lines rated over 50 kv minimum, clearance between the lines and any part of the crane or load shall be 10 feet plus 0.4 inch for each 1 kv over 50 kv, or twice the length of the line insulator but never less than 10 feet;

(iii) In transit with no load and boom lowered the equipment clearance shall be a minimum of 4 feet for voltages less than 50 kv, and 10 feet for voltages over 50 kv up to and including 345 kv, and 16 feet for voltages up to and including 750 kv;

(iv) A person shall be designated to observe clearance of the equipment and give timely warning for all operations where it is difficult for the operator to maintain the desired clearance by visual means;

(v) Any overhead wire shall be considered to be an energized line unless and until the person owning such line or the electrical utility authorities indicate that it is not an energized line and it has been visibly grounded.

(b) Cranes may be operated within the clearances specified in subdivision (a) only when the following precautions are taken:

(i) Lines may be deenergized and visibly grounded at the point of work; or

(ii) Lines owned or under the control of the employer may be deenergized, grounded and locked out on the employer's premises; or

(iii) On N.E.C. approved installation of insulated aerial cable, insulating barriers, not a part of or an attachment to the equipment or machinery, may be erected to prevent physical contact with the line.

(17) Operators shall avoid contacting overhead obstructions which may damage the boom or adversely affect stability. In instances where the operator may have difficulty in observing clearances, a signal person shall be stationed where they can observe clearances and signal the operator.

(18) Safe travel across thoroughfares or railroad tracks. When moving across thoroughfares or railroad tracks with cranes, shovels or similar types of equipment, which by its design does not allow the operator clear vision of approaching traffic, a flagperson shall be stationed where he/she can control other traffic and signal the equipment operator.

(19) One crew member to give signals. Only a designated member of the crew shall give signals to the crane operator except that anyone may give an emergency stop signal.

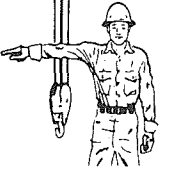

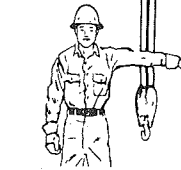

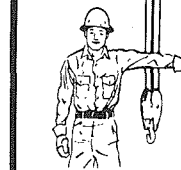

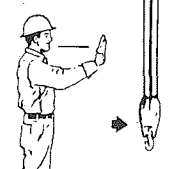

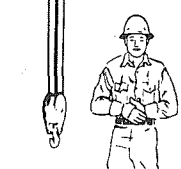

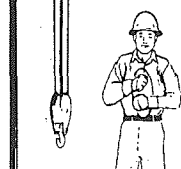

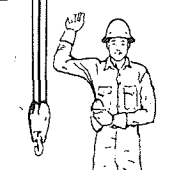

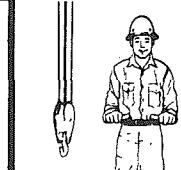

(20) Standard hand signals. When visual signals are used standard hand signals, as illustrated in the general safety and health standards, shall be used for directing crane operators.

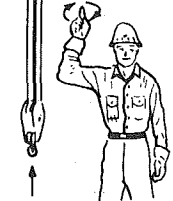

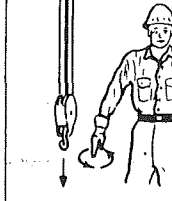

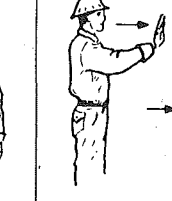

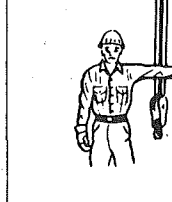

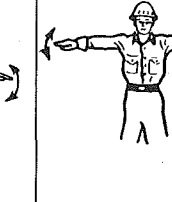

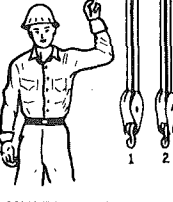

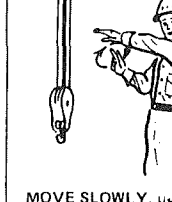

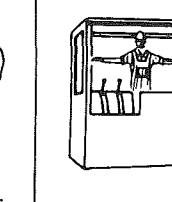

CRAWLER, LOCOMOTIVE, AND TRUCK CRANES  
STANDARD HAND SIGNALS

CRAWLER, LOCOMOTIVE, AND TRUCK CRANES (CONTINUED)

OVERHEAD AND GANTRY CRANES  
STANDARD HAND SIGNALS

 <b>SWING.</b> Arm extended, point with finger in direction of swing of boom.	 <b>STOP.</b> Arm extended, palm down, hold position rigidly.	 <b>EMERGENCY STOP.</b> Arm extended, palm down, move hand rapidly right and left.
 <b>TRAVEL.</b> Arm extended forward, hand open and slightly raised, make pushing motion in direction of travel.	 <b>DQG EVERYTHING.</b> Clasp hands in front of body.	 <b>TRAVEL (Both Tracks).</b> Use both fists in front of body, making a circular motion about each other, indicating direction of travel; forward or backward. (For crawler cranes only.)
 <b>TRAVEL (One Track).</b> Lock the track on side indicated by raised fist. Travel opposite track in direction indicated by circular motion of other fist, rotated vertically in front of body. (For crawler cranes only.)	 <b>EXTEND BOOM (Telescoping Booms).</b> Both fists in front of body with thumbs pointing outward.	 <b>RETRACT BOOM (Telescoping Booms).</b> Both fists in front of body with thumbs pointing toward each other.
 <b>RETRACT BOOM (Telescoping Boom).</b> One Hand Signal. One flat in front of chest, thumb pointing outward and heel of flat tapping chest.	 <b>EXTEND BOOM (Telescoping Boom).</b> One Hand Signal. One flat in front of chest with thumb tapping chest.	

 <b>HOIST.</b> With forearm vertical, forefinger pointing up, move hand in small horizontal circle.	 <b>LOWER.</b> With arm extended downward, forefinger pointing down, move hand in small horizontal circles.	 <b>BRIDGE TRAVEL.</b> Arm extended forward, hand open and slightly raised, make pushing motion in direction of travel.
 <b>TROLLEY TRAVEL.</b> Palm up, fingers closed, thumb pointing in direction of motion, jerk hand horizontally.	 <b>STOP.</b> Arm extended, palm down, move arm back and forth.	 <b>EMERGENCY STOP.</b> Both arms extended, palms down, move arms back and forth.
 <b>MULTIPLE TROLLEYS.</b> Hold up one finger for block marked "1" and two fingers for block marked "2". Regular signals follow.	 <b>MOVE SLOWLY.</b> Use one hand to give any motion signal and place other hand motionless in front of hand giving the motion signal. (Hoist slowly shown as example.)	 <b>MAGNET IS DISCONNECTED.</b> Crane operator spreads both hands apart, palms up.

(21) Signals by use of radio frequencies. Class "D" citizen's band radio frequencies shall not be used for signaling crane operators. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240, 81-13-053 (Order 81-9), § 296-79-170, filed 6/17/81. Statutory Authority: RCW 49.17.040, 49.17.240, and chapters 43.22 and 42.30 RCW, 81-03-007 (Order 80-31), § 296-79-170, filed 1/8/81; Order 74-24, § 296-79-170, filed 5/6/74; Order 70-6, § 296-79-170, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-180 Privately owned standard gauge railroad operations.** (1) Blue flag or light. A blue signal (blue flag or blue light for nonilluminated areas) shall be displayed at one or both ends of an engine, car(s), or train, to indicate that workers are under or about the railway equipment. When such warning devices are displayed, the equipment shall not be coupled to or moved. On a dead end spur, a blue signal may be displayed adjacent to the switch opening while cars are being loaded or unloaded.

(2) Work being carried on which subjects employees to the hazard of moving railroad equipment shall be protected by blue signals and derails set a minimum of 50 feet from one or both ends of the worksite. Where the spur track switch is less than 50 feet from the work location, the switch padlocked in the open position will take the place of the derail and the blue signal shall be placed at that point.

(3) Signals unobscured. Equipment which would obscure the blue signal shall not be placed on the track.

(4) Signals displayed by each maintenance crew. Each maintenance crew shall display and remove its own set of blue signals.

(5) Warning device. A flashing warning light or other device shall be installed near any opening which leads to a passageway crossing railroad tracks adjacent to the building. Such light or device shall be activated prior to any switching or movement of railroad equipment to warn workers of the dangerous condition in the area.

(6) Cars to be immobilized. Spotted cars shall either have brakes set, wheels blocked, or shall be coupled to other immobilized cars to prevent each car from rolling.

(7) Crawling under or between coupled cars prohibited. Workers shall not crawl under or pass between coupled railroad cars to cross tracks.

(8) Warning at road crossing. An audible whistle, horn or bell shall be sounded by the locomotive engineer to give adequate warning prior to switching across any road crossing.

(9) Flying switches. When switching railroad equipment in congested areas or across roadways or walkways "flying switches" shall be prohibited.

(10) Car opening devices. All box car doors and associated mechanisms shall be carefully inspected before workers attempt to open or close them. If the door is not free and cannot be opened safely by hand, equipment shall be provided, where necessary, and a safe method shall be used to open or close the door.

(11) Clearance from railroad tracks. Materials shall not be stacked or piled closer than 8 1/2' from the center line of a standard gauge railroad track.

(12) Operating under limited visibility conditions.

(a) Unless trains are operated in a manner to allow the operator to see a safe stopping distance in the direction of travel, a flagperson(s) shall be positioned in such a manner to safely direct movement of the train.

(b) Flagperson shall remain within sight of the operator or shall be equipped to maintain visual or voice communication with the operator as conditions dictate.

(13) A flagperson shall direct the movement of trains being moved across main roads or thoroughfares which do not have adequate traffic warning lights, bells or barricades. [Statutory Authority: RCW 49.17.040, 49.17.240, and chapters 43.22 and 42.30 RCW. 81-03-007 (Order 80-31), § 296-79-180, filed 1/8/81; Order 74-24, § 296-79-180, filed 5/6/74; Order 70-6, § 296-79-180, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-190 Loading and unloading materials from railway cars or trucks.** (1) Safe access to top of railroad cars or trucks. Platforms with ladders or stairways shall be installed or made available when needed so that workers may safely gain access to and perform work on the top of railroad cars or trucks when ladders are not installed on such equipment.

(2) Nets not to cover ladders. Rolled chip nets shall not be positioned where they cover the ladders on railroad cars or trucks.

(3) Tipple type unloading device. When a tipple type unloading device is used for removing chips from cars, the cars shall be properly secured in place and all employees shall be in the clear before dumping operation is started.

(4) Handling pulp chips and hog fuel from trucks and trailers. (a) Elevating platform-type or cable-lift type unloading devices shall have adequate back bumper stops.

(b) Side rails or other positive means to prevent the trailer from falling shall be used while unloading single trailer units.

(c) The truck or tractor shall be secured when elevating platform lifts are used to elevate both the tractor and trailer or single unit trucks.

(d) All personnel shall be clear of all hoisting or elevating mechanisms before dumping commences.

(e) No person shall remain in any truck while the truck is being elevated.

(5) Taking chip samples. A safe area and suitable device shall be provided for the chip tester to use while taking chip samples.

(6) Derail required while unloading hazardous materials. To protect tank cars from being moved while loading or unloading hazardous materials by use of pipes or hoses, a derail and blue flag shall be set between the spotted tank cars and any moving railroad equipment.

(7) Moving cars by tugger or powered drums. When rail cars are moved by a tugger or powered drums with cables, a means should be provided or the area barricaded in such a manner that the moving cables do not endanger the workers.

(8) Handling pulpwood from flatcars and all other railway cars. (a) Railroad flatcars for the conveyance of pulpwood loaded parallel to the length of the car shall be equipped with safety-stake pockets.

(b) Where pulpwood is loaded crosswise on a flatcar sufficient stakes of sizes not smaller than 4 by 4 inches shall be used to prevent the load from shifting.

(c) When it is necessary to cut stakes, those on the unloading side should be partially cut through first, and then the binder wires cut on the opposite side. Wire cutters equipped with long extension handles shall be used. No person shall be permitted along the dumping side of the car after the stakes have been cut.

(d) Cutting bands on log bundles. When cutting bands on bundled logs, workers shall position themselves in a safe location. Double bitted axes shall not be used for cutting bands. Caution shall be used to prevent being struck by ends of bands being cut and, if needed, personal protective equipment shall be worn.

(e) Flatcars and all other cars shall be chocked during unloading. Where equipment is not provided with hand brakes, rail clamping chocks shall be used.

(9) Handling pulpwood from trucks. (a) Cutting of stakes and binder wires shall be done in accordance with (8)(c) of this section.

(b) Binders or stakes shall not be loosened or removed until the logs are secured and held by equipment which

will prevent them from rolling off the truck, or barricades shall be provided which will prevent logs from striking the person removing the binders or stakes.

(c) Where binder chains and crane slings are used, the crane slings shall be attached and taut before the binder chains are released. The hooker shall see that the helper is clear before signaling for the movement of the load.

(d) Driver to leave truck cab while unloading. The truck driver shall leave the truck cab and be in the clear, preferably in a designated area, and shall be in clear view of the unloading equipment operator while the unloader is approaching the loaded truck.

(e) Driver to remain outside cab during unloading. The truck driver shall remain outside the cab and clear of the load while logs are being unloaded except that after a complete load is lifted as a unit and held stationary he may enter the cab and drive forward from under the suspended load. [Order 74-24, § 296-79-190, filed 5/6/74; Order 70-6, § 296-79-190, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-200 Bridge and dock plates.** Properly constructed bridge or dock plates shall be furnished and used to bridge the area between a dock and truck or railroad car. The following requirements shall be complied with for construction and use of such bridge or dock plates:

(1) Strength. The plate shall be capable of supporting three times the maximum load to which it will be subjected.

(2) Stops required. The plates shall be provided with positive stops to prevent the plates from shifting or moving.

(3) Plates to bear solidly. The plates shall bear solidly on the dock and on the floor of the car or truck. Plates with excessive teeter or rock shall be repaired or replaced.

(4) Upturn or lip on plates. The sides of bridge or dock plates shall have an upturn or lip of at least 4" covering the area between the edge of the loading dock and edge of car or truck floor whenever this distance exceeds 18" to prevent wheeled equipment from running off the sides.

(5) Bearing surface. Bridge or dock plates shall have at least 6" bearing surface on the loading dock.

(6) Suitable fittings to be used. Bridge or dock plates intended to be moved by mechanized equipment shall be designed for this purpose or appropriate fittings or attachments shall be used. [Order 74-24, § 296-79-200, filed 5/6/74; Order 70-6, § 296-79-200, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-210 Belt, chain and roller type conveyors, maintenance and inspection.** (1) Protection from falling material. Whenever conveyors pass adjacent to or over working areas or passageways used by personnel, protective guards shall be installed. These guards shall be designed to catch and hold any load or materials which may fall off or become dislodged and injure a worker.

(2) Walking on rolls prohibited. Employees shall not be allowed to walk on the rolls of roller type conveyors except for emergency.

(3) Guarding shaftway and material entrances of elevator type conveyors. Guards, screens or barricades of sufficient strength and size to prevent material from falling shall be installed on all sides of the shaftway of elevator type conveyors except at openings where material is loaded or unloaded. Automatic shaftway gates or suitable barriers shall be installed at each floor level where material is loaded or unloaded from the platform.

(4) Emergency conveyor stops. Conveyors shall be provided with an emergency stopping device which can be reached from the conveyor. Such device shall be located near the material entrance to each barker, chipper, saw, or similar type of equipment except where the conveyor leading into such equipment is under constant control of an operator who has full view of the material entrance and is located where he cannot possibly fall onto the conveyor.

(5) Safe access to conveyors. Where conveyors are in excess of 7' in height, means shall be provided to safely permit essential inspection and maintenance operations.

(6) Adjustment. All take-up devices provided for the purpose of adjusting for stretch in the belt, chain or cable should be checked at intervals for proper functioning and adjustment.

(7) Worn parts. Any part showing signs of significant wear shall be inspected carefully and replaced prior to reaching a condition where it may create a hazard.

(8) Replacement of parts. Replacement parts shall be equal to or exceed the manufacturer's specifications. [Order 74-24, § 296-79-210, filed 5/6/74; Order 70-6, § 296-79-210, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-220 Deactivating and lockout requirements.** (1) Tagout or other alternative security procedures shall be phased out by (one after effective date). In the one year interim, all requirements and procedures of this section shall apply except:

(a) Physical restraint devices other than padlocks may be used.

(b) Whenever devices other than identified padlocks are used, a warning information tag shall be required.

(c) Whenever the operating control cannot be physically blocked by the restraining device, a warning information tag shall be required.

(2) Control requirement. Whenever the unexpected startup of machinery, the energizing of electrical circuits, the flow of material in piping systems or the removal of guards would endanger workers, such exposure shall be prevented by deactivating and locking out the controls as required by this section.

**EXCEPTION:** In instances where any machine must be in motion for proper adjustment, for removal or replacement of materials from the machine, for machine clothing changes or for roping up, the following precautions shall be observed:

(a) The machine shall be operated at slow or jog speed;

(b) Extension tools which minimize personnel exposure shall be used where possible;

(c) The operating controls shall at all times be under the control of a qualified operator or craftsman;

(d) All personnel shall remain in view of the operator or other means of communication shall be established whenever possible;

(e) All personnel must be beyond the reach of other machine section(s) or element(s) which offer potential exposure. In any instance where such potential exposure exists, such other section(s) or element(s) shall be separately locked out.

(3) Equipment requirements.

(a) The employer shall provide and each employee shall use as many padlocks, tags, chains, or devices as required to implement these requirements.

(b) Provisions shall be made whereby the source of power or exposure can be locked out in accordance with the requirements of this section.

(c) On electrically powered equipment, "stop/start" control switches shall not be used as lockout switches. Lockout switches must be circuit disconnects and must adequately separate the power source from the prime mover so that accidental startup of the equipment being locked out is precluded.

(4) Training requirements.

(a) Each person who will be given authority to implement these requirements shall first be thoroughly trained in the requirements and procedures.

(b) Before being given authority to deactivate and lockout a particular system or piece of equipment, authorized personnel shall be made fully aware of all power sources and/or material entry sources which may offer exposure.

(c) On complex systems or equipment which contain multiple lockout points not at the immediate work location, a complete checklist of all lockout points necessary for isolation is recommended to help eliminate the chance of human error.

(5) Control procedure.

(a) Each person who would be exposed to the hazard shall apply a personal padlock on the control mechanism. Padlocks shall be applied in such a manner as to physically block the control from being moved into the operating position. Each lock shall be personally identified or an information tag identifying the owner shall be attached to the lock.

(b) Padlocks used in lockout procedures may only be removed by the person identified on the lock, except, when it is positively determined that the owner/user of the lock has left the premises without removing a lock, the job supervisor may remove the lock in accordance with a specific procedure formulated by the local plant labor/management safety committee or approved by the department.

(6) Testing after lockout or tagout. After tagging or locking out equipment, a test shall be conducted to ascertain that the equipment has been made inoperative or

the flow of material has been positively stopped. Precautions shall be taken to ascertain that persons will not be subjected to hazard while conducting test if power source or flow of material is not shut off.

(7) Alternate lockout procedure. Before an alternate procedure can be utilized, a specific written procedure shall be reviewed by the local plant labor/management safety committee and approved by the department of labor and industries.

(8) Temporary or alternate power to be avoided. Whenever possible, temporary or alternate sources of power to the equipment being worked on shall be avoided. If the use of such power is necessary, all affected employees shall be informed and the source of temporary or alternate power shall be identified.

(9) Where tags are required to implement these lockout and control procedures, the tag and attachment device shall be constructed of such material that it will not be likely to deteriorate in the environment that it will be subjected to.

(10) Provisional exception. Electrical lighting and instrument circuits of 240 volts or less on single phase systems or 277 volts on three-phase systems may be exempted from the lockout requirements of (5)(a) of this section provided that:

(a) An information tag meeting the requirements of subsection (9) of this section is used in lieu of a padlock;

(b) The information tag shall be placed on the switch or switch cover handle in such a manner as to easily identify the deactivated switchgear.

(11) Deactivating piping systems.

(a) Hazardous material systems are defined as: Gaseous systems that are operated at more than 200 psig; systems containing any liquid at more than 500 psig; systems containing any material at more than 130°F; systems containing material which is chemically hazardous as defined by NFPA 704 M Class 3 and 4; systems containing material classified as flammable or explosive as defined in NFPA Class I.

(b) Lockout of piping systems shall provide isolation to the worksite, including backflow where such potential exists and the system is classified as a hazardous material system. The required method shall be applied based on the content of the system as specified below:

(i) Nonhazardous systems shall be deactivated by locking out either the pump or a single valve.

(ii) Hazardous material systems shall be deactivated by one of the following methods:

(A) Locking out both the pump and one valve between the pump and the worksite;

(B) Locking out two valves between the hazard source and the worksite;

(C) Installing and locking out a blank flange between the hazard source and worksite;

(D) On hazardous chemical systems where methods (A), (B) or (C) are not available, or where methods (A), (B) or (C) by themselves create a hazard, single valve closure isolation may be used provided that potentially exposed employees are adequately protected by other means such as personal protective equipment.

(E) On all steam systems where methods (A), (B) or (C) are not available, single valve closure isolation may be used provided that the system is equipped with valves meeting all requirements of ANSI B16.5 and ANSI B16.34. Where single valve isolation is used, the steamline must also be equipped with a bleed valve downstream from the valve closure to prove isolation of the worksite.

(12) Reactivating separated hazardous material systems. When a blank flange (blind) is used to separate off portions of hazardous material systems from a portion which is in operation, removal of the blind offers potential exposure to employees. The removal procedure shall be protected by:

(a) Two separate valve closures between the blank flange and the potential exposure; or

(b) A single valve closure with a bleeder valve or weep drain between the blank flange and the valve closure. Employees shall closely check for evidence of escape-ment from the bleeder valve or weep plug before starting to remove the blank flange.

(c) Where subdivisions (a) or (b) are not possible or, in themselves create a hazard, potentially exposed employees must be adequately protected by personal protective equipment before removing the blank flange.

(d) Bleeder valves are recommended behind all primary valve closures on hazardous material systems. Consideration should be given to the nature of the material in the system when installing bleeder valves. To assist in preventing plugging, bleeder valves should generally be installed in the top one-third of the pipe. Short exhaust pipes should be installed on bleeder valves to direct the flow of possible escapement away from the position where an employee would normally be when using the bleeder valve. [Statutory Authority: RCW 49.17-.040, 49.17.050 and 49.17.240. 81-13-053 (Order 81-9), § 296-79-220, filed 6/17/81. Statutory Authority: RCW 49.17.040, 49.17.240, and chapters 43.22 and 42.30 RCW. 81-03-007 (Order 80-31), § 296-79-220, filed 1/8/81; Order 76-7, § 296-79-220, filed 3/1/76; Order 74-24, § 296-79-220, filed 5/6/74; Order 70-6, § 296-79-220, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-230 Vessel or confined area requirements.** (1) Management's responsibility for planning. Management shall be responsible for developing a written procedure to be followed for safe entry of employees into confined areas, tanks, vessels, or sewers and for maintaining a safe condition while work is being performed therein. Such procedure shall include the following minimum requirements:

(a) All vessels, sewers or confined areas must be properly ventilated at all times. Such areas shall be tested and/or evaluated by a person thoroughly trained and instructed in the use of instruments required, or qualified to make evaluations of conditions which may be encountered, before employees enter and at reasonable intervals as work progresses. Special consideration shall be given to the possibility that the area may be deficient of oxygen or may contain dangerous concentrations of gases or toxic substances.

(b) Each vessel, tank or confined area shall be cleaned and/or purged as thoroughly as practical prior to entry.

(c) All equipment necessary to perform the work, including safety equipment, must be at the job site and shall be inspected or tested to assure that it functions properly.

(d) All electrical circuits, valves, ducts, pipes, and other equipment shall be locked out, tagged out, or blanked as required in accordance with the applicable rules contained in WAC 296-79-220 of this chapter.

(e) Prior to and while welding or burning is being done in areas where a fire or explosion hazard may exist, the applicable rules contained in WAC 296-79-040 of this chapter, shall be complied with.

(f) For evaluating conditions concerning health, fire or explosion hazards, requirements outlined in the general occupational health standards, chapter 296-62 WAC, shall be followed.

(2) Designated person in charge. Management shall designate an individual who shall be responsible for the safety of the employees and institute such means, methods, and practices as to render the work and place of work safe. The designated person shall ascertain that the required written procedures are followed.

(3) Employees to be thoroughly instructed in procedure. All employees involved in the entry of vessels or confined areas shall be thoroughly instructed in safe procedures to be followed.

(4) Protective equipment required. Any employee entering a vessel or enclosed area shall use any protective equipment or clothing needed to afford him proper protection. Each person shall wear equipment capable of providing safe respirable air if the area may be deficient of oxygen or shall wear proper respiratory protective equipment if the atmosphere may contain a hazardous concentration of contaminants. In addition, while entering or working in an atmosphere immediately hazardous to health, employees shall wear a safety harness with lifeline attached and continue to wear such equipment so long as the hazard exists.

(5) Attendant required. An attendant shall remain outside at the opening of the confined area to render assistance necessary to persons inside. The attendant shall be provided with life support equipment necessary for his protection if an emergency arises which would require him to enter the area.

(6) Life support equipment required. Life support equipment which will afford proper protection to the employee from any condition which may arise shall be available either within the vessel or confined area or at the entrance thereto.

(7) Mechanical device required when entry from the top. Where employees must enter a vessel or confined area from the top, and where it would be impossible to manually rescue or remove overcome persons in the area, a mechanical device shall be provided with which the attendant can lift employees out.

(8) Electrical shock protection. Electrical circuits leading into vessels or confined areas where electrical conductive hazards exist shall be protected by a ground fault interrupter or the voltage shall not exceed 24 volts.

(9) Battery operated flashlights or lanterns. Battery operated flashlights or lantern shall be readily available for use by persons working in areas where escape would be difficult if normal lighting system should fail. Only explosion-proof type lights shall be taken into any atmosphere which may contain an explosive concentration.

(10) Use of materials which may create hazardous atmosphere. Tests shall be conducted at reasonable intervals when using materials for cleaning, coating or other purposes which may cause the atmosphere to become hazardous. [Order 74-24, § 296-79-230, filed 5/6/74; Order 70-6, § 296-79-230, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-240 Storage of fuel, oil, flammables and chemicals.** (1) Handling and labeling of flammable and hazardous materials. Containers of toxic, flammable or irritating substances shall be properly labeled and stored as specified in "precautionary labeling of hazardous substances used in places of employment," as adopted by the department of labor and industries.

(2) To be stored away from sources of ignition. Fuels, oils, flammable chemicals or other flammable materials shall be stored in a room or area away from sources of ignition.

(3) Provide for safe handling. Provisions shall be made for handling drums safely and means shall be afforded to position drums on their sides when material must be discharged from a valve or spigot placed in the top of the drum.

(4) Bonding (grounding) required. When dispensing material which may be ignited by static electricity, a method shall be provided to properly bond (ground) the drum and container into which material is being dispensed.

(5) Storage of drums. Drums shall be stored in a manner which will prevent them from falling or rolling.

(6) Bagged or drummed chemicals. Bagged or drummed chemicals shall be handled properly to prevent spillage or damage to the containers. Chemicals shall be stored in such a manner that they will not decompose, contaminate, or react with other chemicals which could present a hazard. The manufacturer's safe practices recommendations or those published by the Manufacturing Chemists Association should be followed.

(7) Storing liquid chlorine tanks. Sufficient and adequate ventilation shall be provided when liquid chlorine tanks are stored in a room. At least two exits, remote from each other, shall be provided for all rooms in which chlorine is stored.

(8) Hoops for acid storage tanks. Hoops of tanks shall be made of rods rather than flat strips and shall be safely maintained by scheduled inspections.

(9) Turpentine systems and storage tanks. Nonsparking tools and ground hose shall be used when pumping out the tank. The tank shall be surrounded by a berm or moat. Drainage or diking of tanks shall comply with the general safety and health standards, WAC 296-24-33005. [Order 76-7, § 296-79-240, filed 3/1/76; Order 74-24, § 296-79-240, filed 5/6/74; Order 70-6, § 296-79-240, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-250 Safety procedure for handling dry sulfur.** (1) Sulfur burners. Sulfur-burner houses shall be safely and adequately ventilated, and every precaution shall be taken to guard against dust, explosion hazards and fires, in accordance with American National Standards Z9.2-1960 and Z12.12-1968.

(a) Nonsparking tools and equipment shall be used in handling dry sulfur.

(b) Sulfur storage bins shall be kept free of sulfur dust accumulation, and buildings should be designed with explosion relief, in accordance with American National Standard Z9.2-1960.

(c) Electrical equipment shall be of the explosion-proof type, in accordance with the safety standard for installing electric wires and equipment, chapter 296-46 WAC, and WAC 296-24-950 and 296-24-955, general safety and health standards.

(d) Sulfur-melting equipment shall not be located in the burner room. [Order 76-7, § 296-79-250, filed 3/1/76; Order 74-24, § 296-79-250, filed 5/6/74; Order 70-6, § 296-79-250, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-255 Safety procedure for handling liquid sulfur.** (1) Each facility utilizing liquid sulfur shall carefully examine its own handling system and formulate a written procedure for maintenance, receiving, storing and using this product. Minimum requirements for the procedure shall be as follows:

(a) Maintenance personnel and all personnel who work at unloading or usage points shall be adequately trained to recognize the dangers of escapement from the system and first aid practices to be followed in the event of exposure.

(b) Adequate protective equipment (gloves, goggles, etc.) and respiratory protective equipment shall be provided at appropriate locations and personnel who reasonably could be exposed shall be trained in the proper use of these items.

(c) A minimum of two trained employees shall be assigned when a tank car is first opened in preparation for venting and unloading. Approved respiratory protective equipment for H<sub>2</sub>S exposure, chemical splash goggles and gloves shall be worn when performing this work. Spark producing or electric operated tools shall not be used to unplug railroad car vents.

(d) Where venting can cause harmful exposure to other unprotected workers in the area, a venting system shall be installed which adequately contains any gas escapement from a tank car while venting. The vented gas shall be carried to a safe location for discharge or circulated through a scrubbing system. The venting system shall be connected before valves which would allow escapement are opened.

(e) No smoking, open burning or welding shall be permitted while unloading is in process or danger of gas escapement exists.

(2) Maintenance. (a) Any maintenance which involves opening a part of the handling system shall be attempted only after purging that portion of the system as completely as is practical.

(b) All sources of possible contamination into the purged section shall be isolated by valving off or blank flanging. The lockout-tagout procedures contained in WAC 296-79-220 of this chapter, shall be followed.

(c) When opening the system, protective equipment shall be worn by the person or persons involved until such time as the equipment is proven to be free of contamination in harmful quantity.

(d) The danger of heating any portion of the system shall be carefully explained to maintenance crews. Adequate safety procedures shall be followed if heating, welding or cutting are to be attempted.

(e) Any maintenance requiring entry into a portion of the system shall be done in compliance with WAC 296-79-230 of this chapter. [Order 74-24, § 296-79-255, filed 5/6/74.]

**WAC 296-79-260 Pulpwood storage and handling.**

(1) Proper piling of logs. Logs shall be piled or removed in an orderly manner. The piles shall be stable and individual logs properly placed to prevent them from rolling or falling. The ends shall not project into walkways, roadways or areas reserved for other purposes and sufficient clearance shall be maintained for safe travel of all vehicles and loads.

(2) Prohibited use of wire rope doglines. Wire rope doglines used for towing or rafting shall not be used when:

(a) They acquire jaggars to the extent that they present a hazard to the employees handling them; or

(b) When they are weakened to the extent that they are hazardous.

(3) Boom stick to support weight. Boom sticks shall be capable of safely supporting the weight imposed upon them.

(4) Stiff boom construction. Stiff booms shall be made by fastening not less than two boom sticks together. The width of the stiff boom shall be not less than 36" measured from outside to outside of the outer logs. The boom sticks shall be fastened together with not less than 4" by 6" cross ties or cable lashing properly recessed into notches in the boom sticks and secured.

(5) Pike poles. Pike poles shall be kept in good repair. Conductive pike poles shall not be used when it is possible that they may come in contact with electrical conductors.

(6) Logs not to be lifted over employees. Logs shall not be lifted over employees and employees shall stay clear of the hazardous area near where logs are being lifted or swung.

(7) Log storing or sorting in water. Storing or sorting on water or any boom work other than boom boat operations, shall require a minimum of two persons.

(8) Overhead protection on mobile equipment. All mobile equipment used to handle logs, blocks or cants shall be provided with adequate overhead protection.

(9) Arrangement of unloading lines. Unloading lines shall be so arranged that it is not necessary for the worker to attach them on the pond or dump side of the load.

(10) Unauthorized traffic prohibited. Unauthorized vehicles and unauthorized foot traffic shall not be allowed in any active sorting, storing, loading, or unloading areas.

(11) Safe movement of equipment. Log unloaders shall not be moved about the premises with loads raised higher than absolutely necessary.

(12) High visibility jackets or vests required. Jackets or vests of fluorescent or other high visibility material shall be worn by persons working on dry land log storage.

(13) Dumps to be cleaned. All log dumps shall be periodically cleared of bark and other debris.

(14) Hand tools. Handles of wood hooks shall be locked to the shank to prevent them from rotating. [Order 74-24, § 296-79-260, filed 5/6/74; Order 70-6, § 296-79-260, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-270 Pulpwood preparation--Scope and application.** All sections of this chapter which include WAC 296-79-270 in the section number apply to pulpwood preparation. [Order 74-24, § 296-79-270, filed 5/6/74; Order 70-6, § 296-79-270, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-27001 Barkers, chippers, and hog feed devices.** (1) Barker feeding devices shall be designed in such a manner that the operator will not be required to hold or make any physical contact with any log or bolt during the barking operations.

(2) Walkways or floors alongside the drum of any barker shall be equipped with standard guardrails on each side exposed to the drum.

(3) Employees shall not enter any hazardous area in or around a barker until the main disconnect switch has been opened and locked or tagged out and the switch has been tried to assure that the equipment is de-energized.

(4) A dog or locking device in addition to the motor switch, clutch, belt shifter or other power disconnecting device shall be installed on all intermittent barking drums to prevent the drum from moving while it is being filled or emptied.

(5) Hydraulic barkers. (a) The inlet and outlet areas of hydraulic barkers shall be equipped with baffles or devices which will reasonably prevent material from flying out while the machine is in operation.

(b) The operator shall be protected by at least five-ply laminated glass or material of equivalent strength.

(6) When changing knives in a barker, chipper or hog, the main disconnect switch shall be opened and locked or tagged out.

(7) The high pressure hoses of hydraulic barkers shall be secured in such a manner that the hose connection ends will be restrained if a hose connection fails.

(8) The feed operator's station shall not be in direct line with the chipper blades. Suitable safeguards shall be installed to prevent chips or chunks from being thrown out and striking the person feeding the machine.

(9) The feed entrance shall be barricaded by means of a standard height guardrail so as to prevent anyone from falling into the chipper.

(10) When the operator cannot readily observe the material being fed into the chipper, a mirror shall be installed in such a position that the ingoing material can be observed.

(11) Safety belts with lifelines attached and face protection shall be worn by employees who manually feed material or clear jams in machines unless other provisions are made which will protect the employees.

(12) Iron bars shall not be used to clear jams or plug-up at the feed entrance to a chipper or hog while the machine is running.

(13) Speed governor. Water wheels, when directly connected to marker disks or grinders, shall be provided with speed governors, if operated with gate wide open. Water wheels directly connected to pulp grinders shall be provided with speed governors limiting the peripheral speed of the grinder to that recommended by the manufacturer.

(14) Knot cleaners. The operators of knot cleaners of the woodpecker type shall wear eye protection equipment. Knot cleaners of the woodpecker type should be enclosed to protect passersby from flying chips. [Order 74-24, § 296-79-27001, filed 5/6/74.]

#### **WAC 296-79-27003 Log hauls, slips, and carriages.**

(1) Controls shall be arranged to operate from a position where the operator will at all times be in the clear of logs, machinery, lines, and rigging. Controls shall be marked to indicate their function.

(2) A guard shall be provided to prevent logs from rolling off the log deck into the well.

(3) When needed for protection of personnel, an automatic stop or interlocking device shall be installed on log hauls or slips.

(4) A barricade or other positive stop of adequate strength shall be provided to protect the sawyer from rolling logs.

(5) Canting gear or other equipment shall not be allowed to hang over the log deck in such a manner as to endanger employees.

(6) Canting gear controls shall be marked to indicate their function.

(7) The sawyer shall be primarily responsible for the safety of the carriage crew and offbearers. He shall exercise due care in the operation of the carriage and log turning devices.

(8) Feed works and log turning control levers shall be so arranged that they may be secured when not in use and shall be adequately guarded against accidental activation.

(9) A control device shall be provided so that the sawyer may stop the head rig section of the mill without leaving his stand.

(10) An effective method of disengaging the head rig saws from the power unit shall be installed on all head rigs where the power unit is not directly controlled by the sawyer. The saws shall be disengaged from the source of power and locked or tagged out before repairs or changes are made.

(11) The sawyer shall be safeguarded either by his location or by use of substantial screens or approved safety glass.

(12) Carriages upon which persons are required to work shall be solidly decked over and the employee properly protected.

(13) The feed control lever of friction or belt driven carriage feed works shall be designed to operate away from the saws or carriage track.

(14) A substantial stop or bumper shall be installed at each end of the carriage run.

(15) Substantial sweeps shall be installed in front of each carriage wheel. Such sweeps shall extend to within 1/4 inch of the rails.

(16) Where power operated log turners are used, carriage knees shall be provided with goosenecks or other substantial means of protecting the carriage crew. [Order 74-24, § 296-79-27003, filed 5/6/74.]

**WAC 296-79-27005 Band saws.** (1) Band saws shall be given a thorough daily inspection and any deficiency reported and corrected.

(2) Any band saw found to have developed a crack greater than one-tenth the width of the saw shall be removed from service until the width of the saw is reduced to eliminate the crack, the cracked section is removed, or the development of the crack is arrested by welding.

(3) Band saws shall not be continued in use on the head rig for which they have been designed after they have been reduced 40% in width.

(4) Band saw guides shall be maintained in good condition and proper alignment at all times.

(5) All head band saw wheels shall have a minimum rim thickness of 5/8", except for a distance not to exceed one inch from the front edge of the wheel.

(6) Band saws shall not be run at a speed in excess of the manufacturer's recommendations.

(7) A band wheel that has developed a crack in the rim shall be immediately removed from service. If a crack has developed in a spoke, the wheel shall be removed from service until properly repaired.

(8) All band wheel guards shall be constructed of not lighter than ten U.S. Gauge metal, or not less than two-inch wood material or equivalent, attached to substantial frames. Necessary ventilating ports, not larger than two by four inches, and suitable doors or gates for the lubrication and repair of the saw will be permitted.

(9) Every band mill shall be equipped with a saw catcher, rest or guard of substantial construction.

(10) Each gang ripper of band or straight saw type shall have the cutting edges of the saw guarded by a hood or screen substantially secured to the framework of the machine. [Order 74-24, § 296-79-27005, filed 5/6/74.]

**WAC 296-79-27007 Circular saws speeds and repairs.** (1) Circular saws shall not be operated at speeds in excess of those specified by the manufacturers.

(2) Circular saws shall be inspected for cracks each time the teeth are filed or set. They shall be discontinued

from use until properly repaired when found to have developed a crack exceeding the safe limits specified by the manufacturer.

(3) Damaged saws shall be repaired only by persons experienced and knowledgeable in this type of work or by a manufacturers representative. [Order 74-24, § 296-79-27007, filed 5/6/74.]

**WAC 296-79-27009 Slasher saws--tables.** (1) Slasher saws shall be guarded in accordance with WAC 296-79-030(4) of this chapter.

(2) Saws shall be stopped and locked or tagged out whenever it is necessary for any person to be on the slasher table.

(3) Saws below table where not protected by the frame of the machine, the underside of the slasher saws shall be adequately guarded. [Order 74-24, § 296-79-27009, filed 5/6/74.]

**WAC 296-79-27011 Circular swing saws.** (1) Each circular swing saw shall be provided with a hood guard that completely encloses the upper half of the saw.

(2) Each swing saw shall be equipped with a positive stop at the extent of the swing necessary to cut the material. [Order 74-24, § 296-79-27011, filed 5/6/74.]

**WAC 296-79-27013 Drag saws--Fixed chain saws--Circular cut-off saws.** (1) Saws shall be so arranged that they will not project into any passageway when in an idle or working position. When existing conditions do not leave clear passage the saws shall be fenced off in order to make it impossible for anyone to walk into them.

(2) Log decks shall be equipped with a device to hold the material stable when being cut.

(3) Drag saws and fixed chain saws shall be equipped with a device that will safely lock them in an "up" position.

(4) All persons shall be in the clear before starting operations of a drag-chain or swing saw. [Order 74-24, § 296-79-27013, filed 5/6/74.]

**WAC 296-79-27015 Construction and use of pulp-wood splitters.** (1) The activating control unit for a splitter shall be of the clutch or positive acting type and shall be so arranged and designed that it will not repeat without additional activation before starting a second cycle.

(2) The base or rest upon which the wood seats while being split shall have a corrugated surface or other means shall be provided which will prevent the wood block or log from shifting as the pressure is applied.

(3) The splitter base or rest and wood to be split shall be free of ice, snow, and chips.

(4) The splitter machine operator shall have a clear, unobstructed view of the work area adjacent to the splitting operation when other workers must be in such area while blocks are being split. [Order 74-24, § 296-79-27015, filed 5/6/74.]

**WAC 296-79-280 Chip and hog fuel storage.** (1) Entry into bins and silos. (a) No worker shall be permitted to enter a bin unless provided with a safety belt, with line attached, and an attendant stationed at the bin to summon assistance.

(b) Before entry into chip bins and silos, all applicable rules under vessel entry, WAC 296-79-230, of this chapter, shall be complied with.

(c) Chip and sawdust bins. Steam or compressed air lances, or other facilities, shall be used for breaking down the arches caused by jamming in chip lofts.

(d) Employees shall be prohibited from working under overhangs or bridges. Extreme care shall be taken to prevent chips or hog fuel from creating an overhang or bridging.

(e) Hog fuel bins shall be provided with an approved railed platform or walkways near the top or other approved means shall be provided for use of employees engaged in dislodging hog fuel.

(2) Exterior chip and hog fuel storage. When mobile equipment is used on top of hog fuel or chip piles, a roll-over protection system shall be installed on the equipment. If the cab is of the enclosed type, windshield wipers shall be installed. If used during hours of darkness the area shall be adequately illuminated or the equipment shall have adequate lights to provide the operator sufficient illumination to safely perform the work. [Order 74-24, § 296-79-280, filed 5/6/74; Order 70-6, § 296-79-280, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-290 Stock preparation and reprocessing--Scope and application.** All sections of this chapter which include WAC 296-79-290 in the section number apply to stock preparation and reprocessing. [Order 74-24, § 296-79-290, filed 5/6/74; Order 70-6, § 296-79-290, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-29001 Digester valves and piping.** The blow valve of a digester shall be arranged so as to be operated from another room, remote from safety valves.

(1) Digester piping shall meet the criteria of the boiler and pressure vessel standards.

(2) Heavy duty pipe, valves, and fittings shall be used between the digester and blow pit. These valves, fittings, and pipes shall be inspected at least semiannually to determine the degree of deterioration and should be replaced when necessary.

(3) Digester blow valves or controls shall be pinned or locked in closed position throughout the entire cooking period. [Order 74-24, § 296-79-29001, filed 5/6/74.]

**WAC 296-79-29003 Warning of digester being blown.** Audible warning signals and red warning lights shall be installed in areas which may be hazardous to personnel while digesters are being blown. Such devices shall be activated prior to blowing a digester and the warning lights shall remain lighted as long as the hazard exists.

(1) Blowing digester. Blowoff valves shall be opened slowly.

(2) After the digester has started to be blown, the blow-off valve shall be left open, and the hand plate shall not be removed until the person responsible signals the blow-pit person that the blow is completed. Whenever it becomes necessary to remove the hand plate to clear stock, operators shall wear eye protection equipment and protective clothing to guard against burns from hot stock.

(3) In addition to the vessel entry procedure of WAC 296-79-230, of this chapter, the blow pit door or hatch shall be locked open whenever a person is in the blow pit.

(4) Blow pit hoops shall be maintained in a safe condition.

(5) Where the processes of the sulfate and soda operations are similar to those of the sulfite processes, the standard of WAC 296-79-29001 and 296-79-29003, of this chapter, shall apply to both processes.

(6) At least one unobstructed exit at each end of the room shall be provided on each floor of a digester building.

(7) Means shall be provided whereby the digester cook shall signal the man in the chip bin before starting to load the digester. [Order 77-12, § 296-79-29003, filed 7/11/77; Order 76-7, § 296-79-29003, filed 3/1/76; Order 74-24, § 296-79-29003, filed 5/6/74.]

**WAC 296-79-29005 Unplugging quick lime stop-pages.** Water shall not be used to unplug quick lime stops or plugs in pipes or confined spaces. [Order 74-24, § 296-79-29005, filed 5/6/74.]

**WAC 296-79-29007 Bleach plant.** (1) Work areas used for preparation and processing of bleaching mixtures shall be equipped with properly designed exhaust ventilation systems capable of clearing the area of toxic gases.

(2) Bleaching containers, such as cells, towers, etc., except the Bellmer type, shall be completely covered on the top, with the exception of one small opening large enough to allow filling but too small to admit a person. This opening should be covered by a door and guarded with standard guardrail and toeboards. Platforms leading from one engine to another shall have standard guardrails in accordance with the General Safety and Health Standards, WAC 296-24-75007. [Order 74-24, § 296-79-29007, filed 5/6/74.]

**WAC 296-79-29009 Audible alarm in bleach plant.** An audible alarm system shall be installed and it shall be activated whenever a serious leak or break develops in the bleach plant area which creates a health or fire hazard. [Order 74-24, § 296-79-29009, filed 5/6/74.]

**WAC 296-79-29011 Pocket grinder doors.** Doors of pocket grinders shall be so designed and arranged as to keep them from closing accidentally. [Order 74-24, § 296-79-29011, filed 5/6/74.]

**WAC 296-79-29013 Pulping device procedures.** Each company shall develop a safe procedure which

shall be followed for feeding, clearing jams, or removing foreign objects from any pulping device. These procedures shall comply with applicable provisions of this standard. [Order 74-24, § 296-79-29013, filed 5/6/74.]

**WAC 296-79-29015 Off machine repulping devices.**

(1) When fed manually from the floor above, conveniently located emergency stop devices shall be provided at the top level.

(2) When fed from floor above, the chute opening, if less than standard guardrail height from the feed platform or floor, shall be provided with a complete guardrail or other enclosure to standard guardrail height. Openings for manual feeding shall be sufficient only for entry of stock and shall be provided with at least two permanently secured crossrails, in accordance with, the general safety and health standards, WAC 296-24-75003. [Order 74-24, § 296-79-29015, filed 5/6/74.]

**WAC 296-79-29017 Pulping device cleaning, inspection and repairing.** When cleaning, inspecting or other work requires that persons enter pulping devices, all control devices shall be locked or tagged out in accordance with the requirements of this standard. [Order 74-24, § 296-79-29017, filed 5/6/74.]

**WAC 296-79-29019 Guarding hand knives and sharpening steels.** Hand knives and sharpening steels used in rag and old paper preparation, shall be provided with guards at the junction of the handle and the blade. Stanley-type utility knives with blade exposure 2 1/2 inches or less are exempted from this requirement. [Order 74-24, § 296-79-29019, filed 5/6/74.]

**WAC 296-79-29021 Shredders and blowers.** On manually fed broke shredders, the feed table shall be of such height and distance from the knives as to prevent the operator from reaching or falling into the knives or the operator shall be safeguarded by other acceptable means.

(1) A smooth-pivoted idler roll resting on the stock or feed table shall be provided in front of feed rolls except when arrangements prevent the operator from standing closer than 36 inches to any part of the feed rolls.

(2) Any manually fed cutter, shredder, or duster shall be provided with an idler roll as specified in (1) of this section or the operator shall use special hand-feeding tools.

(3) Hoods of cutters, shredders, and dusters shall have exhaust ventilation, in accordance with American National Standard Z9.2-1960 and chapter 296-62 WAC, general occupational health standards.

(4) Blowers used for transporting rags shall be provided with feed hoppers having outer edges located not less than 48 inches from the fan.

(5) The arrangement of the blower discharge outlets and work areas shall be such as to prevent material from falling on workers. [Order 74-24, § 296-79-29021, filed 5/6/74.]

**WAC 296-79-29023 Clearing shredder jams.** To clear jams or blockage to the machine, the operator shall use objects which will not create a hazard. The use of metal bars for such purposes is prohibited. [Order 74-24, § 296-79-29023, filed 5/6/74.]

**WAC 296-79-29025 Repairing shredders.** Repairs shall be done only when the shredder is shut down and the control devices are locked or tagged out in accordance with the requirements of this standard. [Order 74-24, § 296-79-29025, filed 5/6/74.]

**WAC 296-79-29027 Guillotine type roll splitters.**

(1) The engaging control for activating the guillotine blade shall be a positive two-hand operating control or located far enough from the cutting location so that the operator cannot reach the blade during the cutting process. In either control method, "deadman type" switch gear which demands continuous operator activation shall be installed and used.

(2) Personnel shall not position any part of the body under the blade.

(3) Rolls shall be in the horizontal position while being split.

(4) Rolls shall be centered directly below the blade. [Order 76-7, § 296-79-29027, filed 3/1/76; Order 74-24, § 296-79-29027, filed 5/6/74.]

**WAC 296-79-29029 Broke hole.** (1) An alarm bell or flashing light shall be actuated or other suitable warning shall be given before dropping material through a broke hole when persons working below may be endangered.

(2) Broke holes shall be guarded to the fullest extent possible consistent with operational necessities. The degree of guarding provided by standard height and strength guardrails will be considered as a minimum acceptable level of protection.

(3) When repulping devices or feed conveyor systems for repulping devices are located beneath broke holes, special precautions shall be used. The broke hole opening shall be reduced to the smallest practical dimension. If such broke hole opening must be large enough to permit a worker to fall through and the opening is not guarded at least to the equivalent degree of protection provided by standard guardrails, any employee pushing broke down the broke hole shall wear a safety belt attached to a safety belt line. The safety belt line shall be fastened in such a manner that it is impossible for the person to fall into the repulping device.

(4) Guarding to the equivalent degree of protection provided by standard guardrails and meeting the requirements of subsections (2) and (3), may be achieved by the use of guard bars separated no more than 15-1/2 inches in a vertical plane and 12 inches in a horizontal plane, or any other location within that segment. [Statutory Authority: RCW 49.17.040, 49.17.240, and chapters 43.22 and 42.30 RCW. 81-03-007 (Order 80-31), § 296-79-29029, filed 1/8/81; Order 74-24, § 296-79-29029, filed 5/6/74.]

**WAC 296-79-29031 Industrial kiln guns and ammunition.** Management shall develop written instructions, including safety procedures, for storing and operating industrial kiln guns and ammunition. All personnel working with this equipment shall be instructed in these procedures and shall follow them. [Order 74-24, § 296-79-29031, filed 5/6/74.]

**WAC 296-79-29033 Chlorine dioxide system.** (1) Sodium chlorate. (a) Personnel handling and working with sodium chlorate shall be thoroughly instructed in precautions to be used in handling and special work habits. Refer to Manufacturing Chemists Association Chemical Data Sheet No. SD-42 (Sodium Chlorate).

(b) Personnel exposed to direct contact with sodium chlorate shall wear neoprene or other special protective clothing and special footwear.

(c) Facilities for storage and handling of sodium chlorate shall be constructed so as to eliminate possible contact of dry or evaporated sodium chlorate with wood or other material which could cause a fire or explosion. Refer to Manufacturing Chemists Association Chemical Data Sheet No. SD-42 (Sodium Chlorate).

(d) Sodium chlorate facilities should be constructed with a minimum of packing glands, stuffing boxes, etc. Refer to Manufacturing Chemists Association Chemical Data Sheet No. SD-42 (Sodium Chlorate).

(2) Chlorine dioxide. (a) Chlorine dioxide generating and storage facilities shall be placed in areas which are adequately ventilated and are easily kept clean of wood, paper, pulp, etc., to avoid contamination which might cause a reaction. This can be accomplished by placing these facilities in a separate room or in a designated outside space.

(b) Only authorized personnel shall be allowed in close proximity to the chlorine dioxide generating equipment. The generating area shall have signs warning of the hazard and restricting entrance to authorized personnel only.

(c) When reasonably possible, the sample station should be located on the outside of the generating room. Goggles must be worn when taking samples.

(d) Two alternate direction exits shall be provided from the generator working areas.

(3) General. (a) Safety showers and/or jump tanks and eye wash facilities shall be provided for persons working around sodium chlorate and the other hazardous chemicals involved in this process.

(b) Water hoses for flushing spills shall be adequate in size and located where needed.

(c) All equipment involved in this process where pressure may be generated shall be provided with adequate pressure relief.

(d) Welding or burning shall not be performed on the generator system while it is operating. Immediately before maintenance can be performed on the inside of any of this equipment, it shall be thoroughly flushed with water and purged of hazardous gases.

(e) Respiratory protective equipment approved for use in chlorine and chlorine dioxide exposures shall be provided at appropriate locations.

(f) Facilities handling sodium chlorate and chlorine dioxide shall be declared "no smoking" areas and shall have signs posted accordingly.

(g) Management shall be responsible for developing written instructions including safety procedures for operating and maintaining the generator and associated equipment. All personnel working on this equipment shall be thoroughly trained in these procedures and shall follow them. A periodic review of these procedures is recommended. [Order 74-24, § 296-79-29033, filed 5/6/74.]

**WAC 296-79-29035 Piling and unpling pulp.** (1) Piles of wet lap pulp (unless palletized) shall be stepped back one-half the width of the sheet for each 8 feet of pile height. Sheets of pulp shall be interlapped to make the pile secure. Pulp shall not be piled over pipelines to jeopardize pipes, or so as to cause overloading of floors, or to within 18 inches below sprinkler heads.

(2) Piles of pulp shall not be undermined when being unplied.

(3) Floor capacities shall be clearly marked on all floors.

(4) Baled paper and rags shall be stored in stable piles which do not extend into the area necessary for the proper function of sprinkler systems, where sprinklers are used for fire protection in the storage area. [Order 76-7, § 296-79-29035, filed 3/1/76; Order 74-24, § 296-79-29035, filed 5/6/74.]

**WAC 296-79-29037 Chocking rolls.** (1) Where pulp or paper rolls are of uniform size, cribbing should be constructed to keep rolls from moving.

(2) Where rolls are stacked and not nested two or more high, chocks shall be installed between each roll on the floor and at every row. The face of each chock should be formed on a radius to conform to the average roll size in use, and the chock shall prevent roll movement.

(3) When rolls are decked two or more high, the bottom rolls shall be chocked on each side to prevent shifting in either direction.

(4) A supply of portable roll chocks should be available to be used where there are gaps in the bottom row of rolls. These should be as light as possible while still providing maximum blocking effect. [Order 74-24, § 296-79-29037, filed 5/6/74.]

**WAC 296-79-300 Machine room equipment and procedures.** (1) Lock-out and tag-out procedures to be followed. Lock-out and tag-out requirements and procedures contained in these standards shall be complied with.

(2) Emergency stopping controls. Pulp and paper machines shall be equipped with emergency stopping control(s) which can be actuated quickly from all normal operating stations. If useful for the safety of personnel, the stopping control(s) shall be interlocked with adequate retarding or braking action to stop the machine as quickly as is practical.

(3) Walkways. Steps and footwalks along the four-driner and press section shall have nonslip surfacing and be complete with standard handrails, when practical.

(4) Machine lubrication. If a machine must be lubricated while in operation an automatic lubricating device shall be provided or oil cups and grease fittings shall be provided which can be serviced safely without exposing the worker to any hazards.

(5) Weights on levers. All levers carrying weights shall be so constructed that weights will not slip or fall off.

(6) Guarding inrunning nip points. (a) The drums on pulp and paper machine winders shall be provided with suitable guards to prevent a person from being caught between the roll and the front drum on the winder when the pinch point is on the operator's side. Any such guard shall be interlocked with the drive mechanism to prevent the winder from running while the guard is not in place except that the winder may be wired to allow it to run at a slow speed only for adjustment and start-up purposes while the guard is not in position. A zero speed switch or locking device shall be installed to prevent the guard from being removed while the roll is turning.

Paper machine winders when used to produce rolls of 15 inches or less in diameter may be exempted from this subsection but must comply with the provisions of (6)(b).

(b) Rewinders. (i) When rewinding large rolls and the nip point is adjacent to the normal work area, the nip point shall be protected by a barrier guard. Such guard shall be interlocked with the drive mechanism to prevent operating the machine above jog speed without the guard in place. A zero speed switch shall be installed to prevent the guard from being raised while the roll is turning.

(ii) On small rolls 15 inches or less in diameter where barrier guards are impractical they shall not be required if the nip point is separated from the employees by at least 18" while operating at more than jog speed. When the rewinder is running at more than jog speed no worker shall place any part of his body closer than 18" from the nip.

(c) Inrunning nips where paper is not being fed into a calender should be protected by barriers.

(7) Audible alarm in dryer section. An audible alarm shall be sounded prior to starting up any section of a pulp or paper machine. Sufficient time shall be allowed between activation of the alarm system and start-up of the equipment to allow any persons to clear the hazardous area.

(8) Starting up dryer section. In starting up a dryer section, steam to heat the drums shall be introduced slowly and while the drums are revolving.

(9) Starting paper into nip. When starting paper into the nip of drum type reels or calender stacks a safe method shall be used. This may be accomplished by the use of feeder belts, carrier ropes, air carriage or other device or instrument. A rope carrying system should be used wherever possible at points of transfer. Sheaves should be spaced so that they do not create a nip point with each other and the sheave and its support should be

capable of withstanding the speed and breaking strength of the rope for which they are intended.

(10) Feeding stack with hand held device. Employees shall not feed a stack with any hand held device which is capable of going through the nip.

(11) Broken carrier rope. Employees shall not attempt to remove a broken carrier rope from a dryer while the section is running at operating speed.

(12) Removing a wrap. Employees shall stop dryer to remove a wrap except in cases where it can be safely removed by using air or other safe means.

(13) Deposits on rolls. To remove deposits from rolls, a specially designed scraper or tool shall be used. Scraping of rolls shall be performed on the outgoing nip side.

(14) Cleaning doctor blades. Employees shall not place their hands between the sharp edge of an unloaded doctor blade and the roll while cleaning the doctor blade.

(15) Sharp edges of doctor blades to be covered. Doctor blades shall have the sharp edges properly guarded during transportation and storage.

(16) Handling doctor blades. Special protective gloves shall be provided and shall be worn by employees when filing or handling sharp edged doctor blades.

(17) Steps, platforms or walkways for calender stacks. When steps, platforms, or walkways are necessary to perform work on calender stacks they shall have nonskid type surfaces. Guardrails shall be installed where possible.

(18) Lifting reels. (a) Reels shall stop rotating before being lifted away from reel frame.

(b) All lifting equipment (clamps, cables, and slings) shall be maintained in a safe condition and inspected regularly.

(c) Exposed rotating reel shafts with square block ends shall be guarded.

(19) Reels to be properly seated. The crane operator shall ascertain that reels are properly seated at winder stand or at reel arms before he disengages the hooks.

(20) Space between reels. On stack reels, a clearance of at least 8 inches between the reels of paper shall be maintained.

(21) Set screws. Set screws for securing core collars to winding and unwinding shafts shall not protrude above the face of the collar. All edges of the collar that an operator's hand may come in contact with shall be beveled to remove all sharp corners.

(22) Properly set up core cutting device. The worker shall make certain that any core cutting device is properly set up and guard is in proper position before using the machine.

(23) Winder shaft. All winder shafts should be equipped with a winder collar guide. The winder should have a guide rail to align the shaft for easy entrance into the opened rewind shaft bearing housing. If winder shafts are too heavy for manual handling, mechanical equipment shall be used.

(24) Barrier guards for shaftless winders. Shaftless winders shall be provided with a barrier guard of sufficient strength and size to confine the rolls in the event they become dislodged while running.

(25) Grounding. All calender stacks and spreader bars shall be grounded as protection against shock induced by static electricity.

(26) Sole plates. All exposed sole plates between dryers, calenders, reels and rewinders shall have a nonskid type surface.

(27) Nonskid type surface required. A nonskid type surface shall be provided in the work areas around the winders or rewinders. Areas in front of the winder shall be kept clear of oil, broke, and other debris that may cause workers to slip, trip, or fall.

(28) Roll lowering table. If a powered roll ejector is used it should be interlocked to prevent accidental actuation until the receiving platform or roll lowering table is in position to receive the roll.

(29) Lowerator. Employees shall keep clear of hazardous areas around the lowerator, especially all lowerator openings in a floor and where roll is being discharged.

(30) Rider rolls. Provision shall be made to hold the rider roll when in a raised position unless counterbalancing eliminates the hazard.

(31) Gas hood entry procedures. Whenever an employee is inside a gas hood he shall be accompanied by another worker or a person shall be stationed near the entrance.

(32) Drain openings in pits. Flush floor drain openings larger than 3" in diameter in the bottom of pits shall be guarded to prevent workers from stepping through, while working in this area. [Statutory Authority: RCW 49.17-.040, 49.17.240, and chapters 43.22 and 42.30 RCW. 81-03-007 (Order 80-31), § 296-79-300, filed 1/8/81; Order 76-7, § 296-79-300, filed 3/1/76; Order 74-24, § 296-79-300, filed 5/6/74; Order 70-6, § 296-79-300, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-310 Converting operations (bag and container manufacturing, printing, coating, finishing and related processes)—Scope and application.** All sections of this chapter which include WAC 296-79-310 in the section number apply to converting operations (bag and container manufacturing, printing, coating, finishing and related processes). [Order 74-24, § 296-79-310, filed 5/6/74; Order 70-6, § 296-79-310, filed 7/10/70, effective 8/10/70.]

**WAC 296-79-31001 General requirements.** (1) Applicable rules of this standard to prevail. Rules contained in this standard shall prevail where applicable to converting operations.

(2) Use of both hands required to activate guillotine trimmers. Guillotine-type trimmers shall be designed in a manner which will require the operator to use both hands simultaneously to activate the cutting blade. If machine helpers are employed in the control function of the cutter, separate two-hand controls shall be provided for the control function performed by the helper.

(3) Nonrepeat device required for guillotine trimmers. Guillotine-type trimmers shall be designed in a manner that the trimming blade will not repeat unless manually reactivated.

(4) Sorting and counting tables. Tables shall be smooth and free from splinters, with edges and corners rounded.

(a) Paddles shall be smooth and free from splinters.

(5) Mirrors should be installed to assist the converting machine operator in viewing blind work stations where a hazard exists.

(6) Mechanical lifting devices shall be provided for placing and removing rolls from rewinders. Rolls shall not be left suspended overhead while the controls are unattended.

(7) Rolls handled by cranes or hoists shall not be handled over the heads of workers.

(8) When using a crane or hoist to place rolls into a backstand and the operator cannot see both ends of the backstand, assistance will be provided or appropriate devices will be installed to eliminate the hazards involved. The operator shall ascertain that rolls are properly seated at winder stand or at roll arms before he disengages the hooks.

(9) Slitters, slotters, and scorers not in use shall be properly stored as not to create a hazard.

(10) All power closing sections shall be equipped with an audible warning system which will be activated when closing the sections.

(11) Roll-type embosser. The nipping point located on the operator's side shall be guarded by either automatic or manually operated barrier guards interlocked with the drive. [Order 76-7, § 296-79-31001, filed 3/1/76; Order 74-24, § 296-79-31001, filed 5/6/74.]

**WAC 296-79-31003 Corrugator.** (1) Every recessed floor conveyor system shall be identified by standard color coding, and so designed and installed to minimize tripping hazards.

(2) All areas subject to wet processes shall be provided with drains.

(a) Drain trenches shall be provided with gratings flush with the adjoining floor.

(b) Use of curbing in work areas should be avoided in new installations. If the use of curbing cannot be avoided, the design shall be such that the curbs do not constitute a tripping hazard in normal working areas. When curbing exists and constitutes a hazard, it shall be color coded.

(3) Rails of rail mounted devices such as roll stands shall be flush with the adjacent floor, and so installed to provide a minimum of 18" clearance between the equipment and walls or other fixed objects.

(4) All corrugating and pressure rolls shall be equipped with appropriately designed and installed threading guides so as to prevent contact with the infeed nip of the various rolls by the operator.

(5) A minimum of 4" clearance shall be maintained between heated drums, idler rolls, and cross shafting on all preheaters and preconditioners.

(6) Lower elevating conveyor belt rolls on the single facer bridge shall have a minimum nip clearance of 4".

(7) Web shears at the discharge end of the double facer shall be equipped with barrier type guards.

(8) Slitter stations not in use shall be disconnected from the power source by positive means.

(9) Elevating type conveyors shall have the floor area color-coded. [Order 74-24, § 296-79-31003, filed 5/6/74.]

**WAC 296-79-31005 Adhesive system.** (1) The adhesive system shall be so designed and installed as to keep fumes and airborne dust within limits set by the occupational health standards, chapter 296-62 WAC. [Order 74-24, § 296-79-31005, filed 5/6/74.]

**WAC 296-79-31007 Printing and cutting.** (1) Printer slotter.

(a) The in-feed nip shall be guarded to prevent contact with the in-running feed rolls. Shear and pinch points at the feed mechanism shall be color-coded and/or identified by signs.

(b) Employees shall wear eye protection while removing staples from the dies or while adjusting slotter knives. [Order 74-24, § 296-79-31007, filed 5/6/74.]

**WAC 296-79-31009 Die cutting.** (1) Bobst type die cutters. (a) The space where the sheet enters the die shall be guarded to prohibit entry of the operator's hand. If this guard is hinged or otherwise moveable it shall be interlocked to prevent the equipment from moving unless the guard is in the proper position.

(b) A minimum of 4" shall be provided between the end of the slat and the guide bar. [Order 74-24, § 296-79-31009, filed 5/6/74.]

**WAC 296-79-31011 Power lifts on gluers, tapers and stitchers.** (1) Elevated operator stands for lifts shall have toe boards on three sides. [Order 74-24, § 296-79-31011, filed 5/6/74.]

**WAC 296-79-31013 Strapping-banding operations.** (1) Eye protection shall be worn when hand strapping or breaking bands. [Order 74-24, § 296-79-31013, filed 5/6/74.]

**WAC 296-79-320 Recovery furnace area requirements.** (1) Warning system. An audible warning system shall be installed in kraft and soda base sulfite recovery furnace areas and shall be actuated whenever an emergency exists.

(2) Personnel to be instructed in emergency procedures. All personnel working in recovery furnace areas shall be instructed on procedures to be followed when emergency warning systems are actuated.

(3) Warning system maintenance. Emergency warning systems in the recovery furnace areas shall be kept in proper working condition and shall be tested or checked weekly.

(4) Personnel to stand to side while opening firebox door. Personnel shall stand to the side while opening a furnace or boiler firebox door.

(5) Smelt tanks. Smelt-dissolving tanks shall be covered and the cover kept closed, except when samples are being taken. [Order 74-24, § 296-79-320, filed 5/6/74;]

Order 70-6, § 296-79-320, filed 7/10/70, effective 8/10/70.]

### Chapter 296-80 WAC

## SAFETY RULES GOVERNING THE CONSTRUCTION, OPERATION, MAINTENANCE AND INSPECTION OF INCLINED PASSENGER LIFTS

#### WAC

296-80-010	Scope.
296-80-020	Definitions.
296-80-030	Approval of plans and specifications.
296-80-040	Runway enclosures.
296-80-050	Landing enclosure.
296-80-060	Enclosure clearances.
296-80-070	Machine rooms.
296-80-080	Machine supports and factors of safety.
296-80-090	Car clearances.
296-80-100	Counterweights when used.
296-80-110	Landing doors or gates.
296-80-120	Landing sills.
296-80-130	Guide rails.
296-80-140	Car enclosure.
296-80-150	Safeties.
296-80-160	Car speed governors.
296-80-170	Machines.
296-80-180	Terminal stopping and safety devices.
296-80-190	Operation and control.
296-80-200	Limits of speed.
296-80-210	Ropes.
296-80-220	Fastening car and counterweight ends of ropes.
296-80-230	Rope tags.
296-80-240	Buffers.
296-80-250	Electrical equipment.
296-80-260	Inspections and tests.
296-80-270	Maintenance.
296-80-280	Rack and pinion drive.
296-80-290	Variations from requirements—How granted.

**WAC 296-80-010 Scope.** These regulations apply to the construction, operation, maintenance and inspection of all inclined passenger lifts for public, private or industrial use installed in the state of Washington after the date these regulations come into force. [Order 71-16, § 296-80-010, filed 12/7/71.]

**WAC 296-80-020 Definitions.** (1) "Inclined passenger lift" means a device constructed and operated for transporting persons from one elevation to another and consisting essentially of a car or platform traveling on guide rails in an inclined plane. For the purpose of these rules, the terms "inclined passenger lifts" shall have the same meaning as the terms "passenger elevator" as defined by RCW 70.87.010 (4)(a).

(2) Devices installed indoors on stairways and utilizing chairs for carrying passengers are not considered as being inclined passenger lifts insofar as these regulations are concerned.

(3) "Enforcing authority" means the division of building and construction safety inspection services of the department of labor and industries. [Order 71-16, § 296-80-020, filed 12/7/71.]

**WAC 296-80-030 Approval of plans and specifications.** (1) Before commencing construction of any inclined passenger lift the owner shall submit complete plans and specifications to the enforcing authority for approval.

(2) Plans and specifications covering the installation of an inclined passenger lift shall be endorsed by a professional engineer before approval by the enforcing authority will be considered. [Order 71-16, § 296-80-030, filed 12/7/71.]

**WAC 296-80-040 Runway enclosures.** (1) Runways of inclined passenger lifts shall be enclosed along each side except at landing areas with wire fencing of the chain-link type or equal wherever the possibility exists of third parties gaining access to the track.

(2) Runway enclosures shall extend to a height of at least six (6) feet above the grade level or the highest working level adjacent to the runway or from the threads of adjoining stairways or platforms.

(3) Wire used for runway enclosures shall not be less than the number 9 A.W.G. and open work in the enclosure shall reject a ball two inches in diameter.

(4) Emergency exits shall be provided in the runway enclosure of an inclined passenger lift.

(5) Emergency doors shall be installed in the side of the runway enclosure adjacent to the entrance in the car enclosure and shall be fitted with locks that will permit the doors to be opened from inside without a key. [Order 71-16, § 296-80-040, filed 12/7/71.]

**WAC 296-80-050 Landing enclosure.** (1) The landing area of an inclined passenger lift adjacent to the runway shall be enclosed with substantial masonry, concrete, metal, wood, safety glass or screen walls.

(2) Landing enclosure walls shall be a minimum of six feet in height and any open work in the walls shall reject a ball one inch in diameter. [Order 71-16, § 296-80-050, filed 12/7/71.]

**WAC 296-80-060 Enclosure clearances.** (1) No section of the runway enclosure shall be less than three feet from the running line of the car.

(2) There shall be a clearance of not less than three-fourths inch between the sides of the car and the landing area enclosure.

(3) Where a landing platform is used the minimum clearance between the car platform and the landing sill shall be three-fourths inch and the maximum permissible clearance shall be one and one-fourth inch. [Order 71-16, § 296-80-060, filed 12/7/71.]

**WAC 296-80-070 Machine rooms.** (1) Safe and convenient access shall be provided to machine rooms of inclined passenger lifts from outside the runway enclosure.

(2) Machine rooms shall be substantially constructed to protect equipment from the weather and shall be secured against unauthorized persons.

(3) A minimum of seven feet head room shall be maintained in machine rooms.

(4) Machine room illumination shall be not less than ten foot candles at floor level.

(5) Light switches and motor disconnect switches shall be located as close as possible to the lock jamb side of machine room access doors.

(6) Machine enclosures shall provide a minimum of twelve inches horizontal or vertical clearance as necessary to give access to such parts of the machinery as require maintenance. [Order 71-16, § 296-80-070, filed 12/7/71.]

**WAC 296-80-080 Machine supports and factors of safety.** (1) Machinery and sheaves shall be so supported and held as to effectually prevent any part becoming displaced.

(2) The factor of safety for machine beams and their immediate supporting beams shall be as follows, based on the breaking strength of the material used:

(a) For steel — 5.

(b) Reinforced concrete — 7. [Order 71-16, § 296-80-080, filed 12/7/71.]

**WAC 296-80-090 Car clearances.** (1) When the car is at its top landing the clear distance between the front of the car and the corresponding point of any obstruction at the upper end of the runway shall be at least the sum of the following:

(a) The clearance between the counterweight buffer and its striking block which shall be at least six inches on cars using counterweights.

(b) The stroke of the buffer used.

(c) Two feet.

(2) When the car is resting on its fully compressed buffer there shall be a minimum clear distance of two feet between the rear of the car and the lower end of the runway enclosure. [Order 71-16, § 296-80-090, filed 12/7/71.]

**WAC 296-80-100 Counterweights when used.** When the car is at its lower landing the clear distance between the upper end of the counterweight and the corresponding point of any obstruction at the upper end of the runway shall be at least the sum of the following:

(a) The clear distance between the top of the car buffer and its striking block which shall be at least three inches.

(b) The stroke of the car buffer used.

(c) Six inches. [Order 71-16, § 296-80-100, filed 12/7/71.]

**WAC 296-80-110 Landing doors or gates.** (1) At each landing area of an inclined passenger lift the opening providing access to the car shall be protected by a door or gate.

(2) Landing doors or gates shall be adequate in height and shall be either solid or of open work construction rejecting a ball one inch in diameter.

(3) Landing doors or gates shall be equipped with a locking device which will prevent the opening of a door or gate if the car is not within the landing zone, and the starting of the car if a door or gate is not closed.

(4) The maximum distance between the runway side of the landing door and the runway side of the landing sill shall not exceed four inches. [Order 71-16, § 296-80-110, filed 12/7/71.]

**WAC 296-80-120 Landing sills.** Landing sills for inclined passenger lifts shall be constructed and maintained so that persons will not readily slip thereon and shall be flush with adjacent floor surfaces. [Order 71-16, § 296-80-120, filed 12/7/71.]

**WAC 296-80-130 Guide rails.** (1) Guide rails for inclined passenger lifts shall be rigidly fixed and supported in proper alignment to withstand the loads likely to be imposed upon them by the car or counterweight.

(2) Guide rails shall be constructed of metal. [Order 71-16, § 296-80-130, filed 12/7/71.]

**WAC 296-80-140 Car enclosure.** (1) Inclined passenger lift cars shall have metal frames and metal outside frames of platforms.

(2) Cars shall be enclosed on the sides with solid or perforated materials or other effective means to protect passengers to a height of six feet, and if perforated materials be used, openings shall reject a ball one inch in diameter.

(3) Car enclosures shall be metal, wood or other suitable material capable of safely withstanding any load or pressure to which they may be subjected.

(4) Each entrance to an inclined passenger lift car shall be provided with a door or gate covering the full width and height of the opening.

(5) Car doors or gates may be solid or have openings that will reject a ball one inch in diameter.

(6) Each car door or gate shall be of the sliding type.

(7) Inclined passenger lift car doors or gates shall be equipped with a contact that shall prevent operation of the car unless the door or gate is fully closed. On leaving landing or landings car door or gates shall be mechanically locked.

(8) Cars of inclined passenger lifts shall be provided with a device that will prevent the car from leaving the guide rails.

(9) In addition to a capacity plate that shall be posted in the car of every inclined passenger lift, a data plate specifying the following shall also be attached to the car:

(a) Manufacturer.

(b) Speed.

(c) Number and size of ropes.

(10) Use of glass in elevator cars. If glass is used, it shall be laminated type.

(11) Ventilation. Where car doors are used, means for ventilation shall be provided in the car. Vent openings shall reject a ball one inch in diameter. [Order 71-16, § 296-80-140, filed 12/7/71.]

**WAC 296-80-150 Safeties.** (1) Every inclined passenger lift shall have a car safety installed on the car and must function independently of the cable and hoisting systems, and shall be applied automatically where a

governor driven by the movement of the car exceeds a predetermined maximum speed.

(2) Car safeties shall be capable of stopping and sustaining the car with contract load. [Order 71-16, § 296-80-150, filed 12/7/71.]

**WAC 296-80-160 Car speed governors.** (1) The car speed governor shall be set to cause application of the safety at a speed not more than forty percent and not less than fifteen percent above the contract speed of the car.

(2) Car speed governors shall be equipped with a data plate specifying:

- (a) The manufacturer, and
- (b) The rated tripping speed.

(3) Governor operated switch. A switch shall be provided on the speed governor and operated by the over-speed action of the governor which will remove power from the driving-machine motor and brake when over-speed occurs.

(4) On inclined passenger lifts every car safety shall be provided with a safety mechanism switch operated by the car safety mechanism when the safety is applied.

(5) The car safety mechanism switch shall, when operated, remove power from the driving-machine motor and brake before or at the time of application of the safety.

(6) The car safety mechanism switch shall be designed to prevent automatic reset on release of safeties. [Order 71-16, § 296-80-160, filed 12/7/71.]

**WAC 296-80-170 Machines.** (1) Drums and sheaves shall be of cast iron or steel and shall have finished grooves which may be faced with material, other than iron or steel, having sufficient traction.

(2) The radius of U grooves shall be approximately one thirty-second inch larger than the radius of the ropes.

(3) The diameter of sheaves or drums for hoisting ropes shall be at least forty times the diameter of the ropes used.

(4) The factors of safety based on static loads to be used in the design of inclined lift hoisting machines based on the ultimate strength of material shall be at least:

- (a) Wrought iron or wrought steel — 8.
- (b) Cast iron, cast steel or other materials — 10.

(5) Set-screw fastenings shall not be used instead of keys or pins except when the connection is not subject to torque.

(6) The use of friction gearing or clutch mechanisms for connecting drums or sheaves to the main driving gear is forbidden.

(7) The installation of belt or chain-driven machines to drive an inclined passenger lift is forbidden.

(8) The use of worm gearing with cast iron teeth or the use of cast iron pinion of spur gearing is prohibited.

(9) Inclined passenger lift machines shall be equipped with electrically-released brakes capable of stopping and holding the car with its rated load.

(10) Brakes shall be applied automatically by springs or gravity when the operating device is at the "stop" position.

(11) Brakes shall not be released until power has been applied to the motor on the "up" direction. [Order 71-16, § 296-80-170, filed 12/7/71.]

**WAC 296-80-180 Terminal stopping and safety devices.** (1) Inclined passenger lifts shall be provided with upper and lower normal terminal stopping devices arranged to stop the car automatically at the top and bottom terminal landings.

(2) Inclined passenger lifts shall be provided with upper and lower final terminal stopping devices, arranged to stop the car and counterweight automatically from contract speed within the top clearance and the bottom over-travel, independently of the operating device.

(3) Final limit switches shall be set to operate with the car as close to the terminal landing as practical, without interfering with normal operation and shall be set to open on contact with the buffer.

(4) Final limit switches shall be located in the runway and be operated by the movement of the car.

(5) The final terminal stopping device shall act to prevent movement of the car in both directions.

(6) The normal and final terminal stopping devices shall not control the same switches on the controller unless two or more separate and independent switches are provided, two of which shall be closed to complete the motor and brake circuit in each direction of travel.

(7) When 2-phase or 3-phase alternating current is used to operate the inclined passenger lift, the controller switches referred to in subsection (6) shall be of the multipole type.

(8) Normal and final terminal stopping switches shall be of the enclosed type.

(9) The cams for operating the terminal stopping switches shall be of metal and shall be so located and of sufficient length to maintain the switches in the "open" position when the car has reached its maximum travel at either end of the runway.

(10) Inclined passenger lifts utilizing machines of the winding-drum type shall have, in addition to final limit switches located in the runway and operated by the movement of the car, final terminal stopping switches on the machine.

(11) Chain, rope or belt-driven machine terminal stopping devices shall not be used for inclined passenger lifts having winding-drum machines.

(12) Inclined passenger lifts having winding-drum machines driven by 2-phase or 3-phase a.c. motors shall have the mainline circuit to the motor and the brake directly opened either by:

- (a) Contacts in the machine stop-motion switch, or
- (b) Runway limit switches.

(13) The runway limit switches referred to in subsection (12-b) may be operated either by a cam attached to the car or, the up-travel limit switch may be operated by a cam attached to the car and the down-travel limit switch may be operated by a cam attached to the counterweight; and the opening of the contacts shall take

place before or coincident with the opening of the final terminal stopping device and shall prevent movement of the machine in either direction.

(14) Inclined passenger lifts having winding-drum machines shall be provided with a slack cable device which will cut off the power and stop the machine if the car is obstructed in its descent.

(15) Slack cable switches shall be so constructed that they will not automatically reset when the slack in the cable is removed.

(16) Electric slack cable switches shall be of the enclosed type. [Order 71-16, § 296-80-180, filed 12/7/71.]

**WAC 296-80-190 Operation and control.** (1) The controls of an automatic inclined passenger lift shall be so constructed that:

(a) It is impossible to start the car unless all runway doors are closed and in a position to be locked when the car leaves a landing.

(b) After car has started for a given landing, it is impossible for an impulse to be given from any landing to reverse direction of the car until it has reached the destination corresponding to the first impulse.

(2) Every inclined passenger lift shall be provided with a stopping device which can be operated from the car, that when operated, will cut off power to the driving machine and set the brake.

(3) MANUALLY OPERATED INCLINE LIFT. EXCEPTION: Controls shall be so arranged when in compliance and required with section 1, subsection (a) and section (2). The operator located either in the hoisting room or in the car may stop the incline passenger lift or reverse direction at his discretion. [Order 71-16, § 296-80-190, filed 12/7/71.]

**WAC 296-80-200 Limits of speed.** Maximum speed for inclined passenger lifts shall not exceed four hundred feet per minute. [Order 71-16, § 296-80-200, filed 12/7/71.]

**WAC 296-80-210 Ropes.** (1) The factor of safety based on static loads for car and counterweight ropes shall be at least 7:1.

(2) The minimum number of hoisting ropes shall be as follows:

(a) Traction machines — 3.

(b) Winding-drum machines — 2.

(3) A hoisting rope less than one-half inch diameter shall not be used.

(4) The repair or lengthening of car or counterweight ropes by splicing is forbidden.

(5) All ropes anchored to a winding drum shall have not less than one and one-half turns of rope on the drum when the car or counterweight has reached the extreme limits of its overtravel.

(6) When the ropes are fastened inside a winding drum, they shall pass around the shaft before being fastened, or be fastened to a clevis passing around the shaft in cases where the shaft revolves in an opposite direction

to the drum and the end of such ropes shall be secured by clips or by individual tapered babbitted sockets.

(7) The hoisting ropes of incline passenger lifts having drum type driving machines with one-to-one roping shall be reshackled at the car ends at intervals not longer than two years. [Order 71-16, § 296-80-210, filed 12/7/71.]

**WAC 296-80-220 Fastening car and counterweight ends of ropes.** (1) The car and counterweight ends of ropes shall be fastened by individual tapered babbitted sockets or

(2) By other types of rope fastenings that meet the approval of the enforcing agency.

(3) The rope sockets shall be of a type which will develop at least eighty percent of the breaking strength of the strongest rope to be used in such fastenings, and U-bolt type rope clips (clamps) shall not be used for load line fastenings. [Order 71-16, § 296-80-220, filed 12/7/71.]

**WAC 296-80-230 Rope tags.** (1) Every person installing a hoisting, counterweight, or governor rope shall provide a metal or plastic tag legibly showing the date of installation, the grade of material, diameter, ultimate strength and notice if rope is "preformed" or "nonpreformed."

(2) The tag required under subsection (1) shall be attached to the rope at the car, counterweight or governor, as the case may be. [Order 71-16, § 296-80-230, filed 12/7/71.]

**WAC 296-80-240 Buffers.** (1) Spring or oil buffers shall be provided for the car and counterweight where used at the lower end of the runway.

(2) Buffers shall be mounted on substantial supports and shall withstand without damage the impact of the fully loaded car or counterweight at contract speed. [Order 71-16, § 296-80-240, filed 12/7/71.]

**WAC 296-80-250 Electrical equipment.** The installation of all electrical equipment used in connection with an inclined passenger lift shall comply with the requirements of the National Electrical Code 1971 Edition A USA Standard. [Order 71-16, § 296-80-250, filed 12/7/71.]

**WAC 296-80-260 Inspections and tests.** (1) On completion of every new or altered inclined passenger lift installation, test shall be made with contract load in the car under supervision of the enforcing authority, before the equipment is placed in regular service.

(2) In the tests required under subsection (1) brakes, limit switches, buffers, car safeties, speed governors, and all other safety devices shall be caused to function.

(3) Prior to placing any new or altered inclined passenger lift into regular service, a thorough examination of the entire installation shall be made by the enforcing authority to insure conformity with these regulations in all respects.

(4) Failure of any safety device to function properly under test, or noncompliance with any part of the governing regulations shall be cause to withhold clearance for operation until satisfactory repairs or alterations are effected.

(5) Every existing inclined passenger lift shall be inspected at least once each year by the enforcing authority, and repairs or tests deemed necessary by the inspector shall be made as directed unless a variance is obtained pursuant to WAC 296-80-290. [Order 71-16, § 296-80-260, filed 12/7/71.]

**WAC 296-80-270 Maintenance.** (1) Owners of inclined passenger lifts shall be responsible for maintaining their equipment in safe operating condition at all times.

(2) When an inspector discovers an unsafe condition in connection with an inclined passenger lift that is not specifically covered by these regulations, he shall issue an order requiring the owner to make such changes, improvements or repairs as may be necessary to remove hazards to persons or reduce the possibility of accidents and the owner shall comply with the order of the inspector.

(3) These regulations become operative on and after the date of [See RCW 34.04.040 ". . . (2) Emergency rules adopted under RCW 34.04.030 shall become effective upon filing. All other rules hereafter adopted shall become effective upon the expiration of thirty days after the date of filing, unless a later date is required by statute or specified in the rule. . . ."] [Order 71-16, § 296-80-270, filed 12/7/71.]

**WAC 296-80-280 Rack and pinion drive.** Rack and pinion drive may be used for inclined passenger lifts. [Order 71-16, § 296-80-280, filed 12/7/71.]

**WAC 296-80-290 Variances from requirements--How granted.** Variances from the requirements of these rules may be granted by the supervisor of the elevator section when it is determined that the inclined passenger lift gives adequate protection to the safety of passengers. [Order 71-16, § 296-80-290, filed 12/7/71.]

### Chapter 296-81 WAC

#### SAFETY RULES GOVERNING EXISTING ELEVATORS, DUMBWAITERS, ESCALATORS AND OTHER LIFTING DEVICES--MOVING WALKS

##### WAC

296-81-005	National Elevator Codes adopted.
296-81-006	National Elevator Code adopted--1967.
296-81-007	National Elevator Code adopted.
296-81-008	National Elevator Code supplement adopted.
296-81-009	National Safety Standard for Manlifts adopted.

##### EXISTING INSTALLATIONS

296-81-010	Hoistway enclosures.
296-81-020	Hoistway gates and doors.
296-81-030	Car enclosures.
296-81-040	Car doors and gates.
296-81-050	Brakes.
296-81-060	Car safeties.
296-81-070	Overspeed governors.

296-81-080	Periodic inspections and tests.
296-81-090	Maintenance inspection and test periods.
296-81-100	Ropes, rope connections, data and record.
296-81-110	Electric and electro-hydraulic dumbwaiters.
296-81-120	Hydraulic elevators.
296-81-130	Sidewalk elevators.
296-81-140	Hand power elevators and dumbwaiters.
296-81-150	Car operating and terminal stopping devices and electrical protective devices.
296-81-160	Power supply switch.
296-81-170	Access to machine room and machinery space.
296-81-180	Capacity posting.
296-81-190	Illumination.
296-81-200	Adoption of elevator codes.
296-81-220	Illumination of pits.
296-81-240	Valves.
296-81-260	Photo electric or electric eye devices.
296-81-270	Counterweight pit guards.
296-81-300	Operation and leveling.
296-81-305	Door operation.
296-81-310	Door delay.
296-81-315	Car interior.
296-81-320	Car controls.
296-81-325	Car position indicator signal.
296-81-330	Telephone or intercommunicating system.
296-81-335	Floor covering.
296-81-340	Handrails.
296-81-345	Minimum illumination.
296-81-350	Door jam marking.
296-81-355	Hall buttons.
296-81-360	Hall lantern.
296-81-365	Emergency use.
296-81-370	Effective date.
296-81-990	Advisory board.

**Reviser's note:** As a part of Order 70-11, filed 9/18/70, effective date 10/21/70, the administration of chapter 296-81 WAC, Safety rules governing elevators, dumbwaiter, escalator and other lifting devices--Moving walks shall be under the jurisdiction of the division of building and construction safety inspection services of the department of labor and industries.

#### DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER

296-81-002	Foreword. [Foreword, filed 9/28/64.] Repealed by 82-12-005 (Order 82-18), filed 5/20/82. Statutory Authority: RCW 70.87.030.
296-81-003	Waiver and variance. [Waiver and Variance, filed 9/28/64.] Repealed by 82-12-005 (Order 82-18), filed 5/20/82. Statutory Authority: RCW 70.87.030.

#### WAC 296-81-005 National Elevator Codes adopted.

(1) American Standard Safety Code for Elevators, Dumbwaiters and Escalators A 17.1 1960 shall apply to all elevators, dumbwaiters, and escalators installed between November 1, 1963, and December 29, 1967.

(2) American Standard Safety Code Rules for Moving Walks A.S.A. 17.1.13 1962 shall apply to all moving walks installed between November 1, 1963, and December 29, 1967.

(3) Part X of A.S.A. A17.1 1960 Maintenance shall apply to installations in existence on November 1, 1963. [Statutory Authority: RCW 70.87.030. 82-12-005 (Order 82-18), § 296-81-005, filed 5/20/82. Prior: Effective 11/1/63.]

**WAC 296-81-006 National Elevator Code adopted--1967.** USAS STANDARD A 17.1-1965 "Safety Code for Elevators, Dumbwaiters, Escalators and Moving Walks" (Revision and Consolidation of A17.1-1-1960, A17.1a-1963, and A17.1-13-1962) plus

Supplement USAS-A17.1a-1967, USAS A17.1b-1968, USAS A17.1c-1969 (excluding Appendix E) and ANSI A17.1d-1970 shall apply to all elevators, dumbwaiters, escalators, and moving walks installed from December 30, 1967, through February 24, 1972. [Statutory Authority: RCW 70.87.030. 82-12-005 (Order 82-18), § 296-81-006, filed 5/20/82; Order 70-11, § 296-81-006, filed 9/18/70; filed 12/29/67.]

**Reviser's note:** The A.S.A. publications are published by the American Society of Mechanical Engineers at 345 47th Street, New York, New York 10017.

**WAC 296-81-007 National Elevator Code adopted.**

(1) The American National Standard Safety Code for Elevators, Dumbwaiters, Escalators and Moving Walks, American National Standards Institute A17.1, as amended or revised through the year 1971, are hereby adopted as the standards for compliance in this state for elevators, dumbwaiters, escalators, and moving walks installed from February 25, 1972, through June 30, 1982.

(2) The American National Standard Safety Code for Elevators, Dumbwaiters, Escalators, and Moving Walks, ANSI A17.1, 1981 edition, is hereby adopted as the standard for elevators, dumbwaiters, escalators, and moving walks installed on or after July 1, 1982. [Statutory Authority: RCW 70.87.030. 82-12-005 (Order 82-18), § 296-81-007, filed 5/20/82; Order 72-2, § 296-81-007, filed 2/25/72.]

**WAC 296-81-008 National Elevator Code supplement adopted.**

The American National Standard Supplement to Safety Code for Elevators, Dumbwaiters, Escalators and Moving Walks, A17.1-1971, ANSI A17.1a-1972 is hereby adopted as additional standards for compliance in this state for elevators, dumbwaiters, escalators, and moving walks installed from February 25, 1972, through June 30, 1982, and by this reference such standards are incorporated herein as though fully set forth. Copies of this supplement may be obtained from The American Society of Mechanical Engineers, 345 East 47th Street, New York, New York 10017. [Statutory Authority: RCW 70.87.030. 82-12-005 (Order 82-18), § 296-81-008, filed 5/20/82; Order 76-37, § 296-81-008, filed 12/3/76; Order 74-31, § 296-81-008, filed 6/14/74.]

**WAC 296-81-009 National Safety Standard for Manlifts adopted.** The USA Safety Standard for Manlifts, USAS A90.1-1969, is hereby adopted as the standards for compliance in this state for belt manlifts, and by this reference such standards are incorporated herein as though fully set forth. Copies of these standards may be obtained from the American Society of Mechanical Engineers, United Engineering Center, 345 East 47th Street, New York, New York 10017. [Order 74-31, § 296-81-009, filed 6/14/74.]

**EXISTING INSTALLATIONS**

**WAC 296-81-010 Hoistway enclosures.** (1) Local laws and ordinances shall govern the fire-resistive requirements for the hatchway enclosures.

(2) Where doors and hoistway enclosures are not required to be fire resistant, the hoistway shall be enclosed with material, which may be solid or with openings that do not exceed one-half inch in diameter, to a height of six feet above each floor or landing and above the treads of adjacent stairways.

(3) Enclosures shall be so supported and braced as to deflect not over one inch when subjected to a force of one hundred pounds applied perpendicularly at any point. Adjacent to the counterweights, the enclosure must extend the full height of the floor and extend six inches past the counterweight raceway.

(4) The hoistway enclosures on the sides used for entrance and exit shall extend from the required landing opening to the underside of the floor above, except for elevators equipped with car gates or doors provided with car door or gate electric contacts.

(5) Where an elevator does not have a car door and the sill projects inward from the general line of the hoistway, the projections which are opposite the car entrance (except door operating devices, interlocks, indicator and signal devices) shall be beveled on the under side or shall be guarded with a metal plate of not less than No. 16 U.S. gauge, or three quarter inch metal covered wood. The angle of such bevels of guard plates shall be not less than sixty degrees from the horizontal and not over seventy-five degrees, and they shall be smooth and firmly and permanently fastened to the hoistway enclosure. [Rules 1.010-1.050, filed 9/28/64.]

**WAC 296-81-020 Hoistway gates and doors.** (1) Freight elevator landing openings shall be provided with manually or power operated gates or doors at each landing, guarding the full width of the opening. Gates and doors shall conform to the following requirements:

(a) Balanced type vertically sliding hoistway gates shall extend from a point not more than two inches from the landing threshold to a point not less than sixty-six inches above the landing threshold. Gates shall be solid or shall be openwork of a design to reject a ball two inches in diameter and shall be so located that the distance from the hoistway face of the gate to the hoistway edge of the landing sill shall be not more than two and one-half inches. Gates shall be constructed of metal or wood and shall be so designed and guided that they will withstand a lateral pressure of one hundred pounds applied at approximately their center without breaking or being permanently deformed and without displacing the gate from its guides or tracks. Where handline operations are used, an opening in the hoistway door or gate will be permitted providing it is at least thirty inches from the floor and is not over five inches in width and not more than thirty-six inches high.

(2) Hoistway doors shall be of the vertically sliding, biparting counter-balanced type or of the horizontally swinging or sliding type.

(a) Hoistway gates or doors of electric or electro-hydraulic elevators shall be equipped with an approved type combination electric contact and mechanical lock or an approved type hoistway door interlock which shall prevent operation of the elevator by the normal operating devices unless the door or gate is closed or is locked in the closed position, providing that where the rated speed of the elevator exceeds one hundred and fifty feet per minute hoistway door interlocks shall be provided.

(b) Power door or gate operating devices, if provided, shall be of a type and design approved by the enforcing agency.

(3) Every existing passenger elevator entrance shall be equipped with hoistway doors, and hoistway door interlocks.

(4) Where hoistway doors at all landings are equipped with mechanical unlocking devices, they shall conform to the following:

(a) The device shall be designed to prevent unlocking the door with common tools.

(b) The operating means for unlocking the door shall be available to and used only by inspectors, maintenance men, and repair men.

(5) Installation of hoistway door unlocking devices may be made on hoistway doors of power elevators subject to the following provisions:

(a) The elevator shall have hoistway doors which are unlocked when closed with the car at floor, or locked but openable from landing by means effective only when car is in landing zone.

(b) The operating means for unlocking the door shall be mounted in a receptacle with a breakable, transparent cover clearly marked in letters at least one eighth inch high: ELEVATOR DOOR KEY FOR FIRE DEPARTMENT AND EMERGENCY USE ONLY.

(c) The receptacle shall be located at the bottom landing.

(6) Where automatic operation elevators with swinging doors have clearance greater than two and one-half inches between the inside face of the hoistway door and the hoistway edge of the threshold, the hoistway door shall be equipped with an extension panel on the lower portion of the door extending up at least thirty-six inches above the bottom of the door and having the inside face of this panel within two and one-half inches of the line of the threshold when the door is closed and the top surface of this panel shall be beveled at not less than sixty degrees from the horizontal. [Rules 2.010-2.060, filed 9/28/64.]

**WAC 296-81-030 Car enclosures.** Car enclosures for freight and passenger cars shall conform with the following:

(1) Freight elevator cars shall be enclosed to a height of at least six feet from the floor on all sides, where there are no hoistway doors or gates, with solid panel or openwork which will reject a two inch ball. On the side of the car adjacent to the counterweight runway and extending six inches each side of the counterweight runway, the enclosure shall extend to the car top or underside of car crosshead. Overhead protection of solid

or openwork material: If openwork, it shall reject a one and one-half inch ball and shall be sufficiently strong to support three hundred pounds applied at any point. Simultaneous application of these loads is not required. Suitable overhead protection may be installed directly over the area where the operator runs the controls, providing the overhead protection covers sufficient area for safe protection of operator.

(2) Passenger elevator cars shall be fully enclosed on all sides and the top, except the opening for entrances. It shall be of metal or wood in conformity with the local fire regulations. The car top shall be capable of sustaining a load of three hundred pounds on any square area of two feet on a side and one hundred pounds applied at any point. Simultaneous application of these loads is not required. [Rule 3.010, filed 9/28/64.]

**WAC 296-81-040 Car doors and gates.** (1) Car doors or gates shall be required at each entrance to the elevator car.

(2) Car doors or gates may be horizontal or vertical sliding.

(3) Gates, except collapsible, may be solid or may be openwork of a design to reject a ball two inches in diameter. Gates shall be constructed of metal or wood and shall be so designed that they will withstand a lateral pressure of one hundred pounds applied at approximately their center without breaking or being permanently deformed and without displacing the gate from its guides or tracks.

(4) Collapsible gates shall reject a three inch diameter ball when fully extended (closed position) when installed on passenger cars and shall reject a four and one-half inch ball when fully extended (closed position) when installed on freight cars. Such gates shall not be power opened for more than one-third of their clear opening distance or for a maximum power opening distance not to exceed ten inches. Collapsible gates shall have at least every fourth vertical member guided at the top and every second vertical member guided at the bottom.

(5) Car doors and gates when in the fully closed position shall conform to the following:

(a) For passenger cars they shall protect the full width and height of the car entrance opening provided that vertically sliding gates may extend from a point not more than one inch above the car floor to a point not less than six feet above the floor.

(b) For freight elevators they shall protect the full width of the car entrance opening. Car doors shall extend from the car floor to a height of not less than six feet above the car floor. Vertically sliding gates shall extend from a point not more than one inch above the car floor to a point not less than six feet above the car floor.

(6) Car doors and gates of electric and electro-hydraulic elevators shall be equipped with approved car door or gate electric contacts which will prevent operation of the elevator by the normal operating device unless the car door or gate is in the closed position. [Order 74-31, § 296-81-040, filed 6/14/74; Rules 4.010-4.060, filed 9/28/64.]

**WAC 296-81-050 Brakes.** All electric elevators shall be equipped with effective brakes that are released electrically and applied by springs. The brakes shall be designed to have a capacity sufficient to hold the car at rest with its rated load. At least one brake shall be mounted on the driving machine worm shaft. Exceptions to this rule may be made by the enforcing agency if an impractical condition is encountered, providing other safe means are provided. [Rule 5.010, filed 9/28/64.]

**WAC 296-81-060 Car safeties.** The car of every elevator suspended by wire ropes shall be provided with car safeties as hereinafter defined. The safety device shall be capable of stopping and sustaining the entire car with its rated load in the event of cable severance or overspeed. There shall be a switch provided on the car actuated by the setting of the safeties that will remove the electric power from the driving machine motor and brake. Car safety devices (safeties) are identified and classified on the basis of performance characteristics after the safety begins to apply pressure on the guide rails.

(1) **Type A safeties.** Safeties which develop a rapidly increasing pressure on the guide rails during the stopping interval, the stopping distance being very short due to the inherent design of the safety. The operating force is derived entirely from the mass and the motion of the car or the counterweight being stopped. These safeties apply pressure on the guide rails through eccentrics, rollers, or similar devices without any flexible medium purposely introduced to limit the retarding force and increase the stopping distance.

(2) **Type B safeties.** Safeties which apply limited pressure on the guide rails during the stopping interval, and which provide stopping distances that are related to the mass being stopped and the speed at which application of the safety is initiated. Retarding forces are reasonably uniform after the safety is fully applied. Continuous tension in the governor rope may or may not be required to operate the safety during the entire stopping interval. Minimum and maximum distances are specified on the basis of governor tripping speed.

(3) **Type C safeties (Type A with oil buffers).** Safeties which develop retarding forces during the compression stroke of one or more oil buffers interposed between the lower members of the car frame and a governor-operated type A auxiliary safety plank applied on the guide rails. The stopping distance is equal to the effective stroke of the buffers.

(4) **Type G safeties.** Safeties similar to type B except having a gradually increasing retarding force. This safety may be either of the wedge clamp type or the flexible guide clamp type applied by a cable which unwinds a drum below the car floor.

(5) **Slack rope safeties that are actuated by the slackening or breaking of the hoisting ropes.** This type of safety is not actuated by an overspeed governor. [Rule 6.010, filed 9/28/64.]

**WAC 296-81-070 Overspeed governors.** A speed governor or inertia trip safety or a slack cable operated safety shall be installed on all elevators except hydraulic

elevators and shall be so designed that it will actuate the car safeties before the car attains a speed of one hundred and forty percent of the rated speed. Governor ropes shall be not less than three eighths inch in diameter, if iron or steel rope, and not less than three quarter inch manila rope. Tiller rope shall not be used. [Rule 7.010, filed 9/28/64.]

**WAC 296-81-080 Periodic inspections and tests.** (1) Periodic inspections shall be made of all existing installations at regular intervals to determine that the equipment is in a proper operating condition and in conformity with these rules.

(2) The owner or his authorized agent shall cause periodic tests to be made by a person qualified to perform such service and a report indicating the date of inspection with all pertinent data included, which shall be sent to the supervisor of the division of safety.

(3) All parts of the equipment including all safeties, governors, and oil buffers shall be inspected at twelve month intervals, and when necessary tested to determine that they are in a proper operating condition and that parts subject to wear, such as ropes, bearings, gears, car safety, guide rails and fastenings, and governor parts, oil buffers, etc., have not worn or become defective to such an extent as to affect the proper operation of the equipment or installation. Any such worn or defective equipment or part shall be adjusted, repaired or replaced. [Rules 8.010-8.030, filed 9/28/64.]

**WAC 296-81-090 Maintenance inspection and test periods.** Tests of elevator car and counterweight safeties, governors, and oil buffers shall be made at intervals not exceeding five years. The owner or his authorized agent shall have these tests made in lieu of one of the periodic inspections and tests. The car safety, counterweight safety where provided, and the governor shall be subjected to inspections and tests as follows: (1) Type A safeties and Type A safety parts of Type C safeties shall, prior to the safety tests, be inspected and the safety operated by hand to determine that:

(a) They are in a proper operating condition and in conformity with the requirements as set forth in Rule 8.030.

(b) Following hand operation the safety rollers or dogs operate simultaneously and have approximately the same travel.

(c) There is sufficient remaining travel of the rollers of dogs to bring the car and its rated load to rest from rated speed. The safety tests for Type A, B, and C shall be made with the rated load in the car by tripping the governor by hand at rated speed. The tests shall also specify the stopping distances. A metal or plastic tag shall be attached to the safety-releasing carrier in a permanent manner, giving the date of the safety test together with the name of the person or firm who performed the test. [Rule 9.010, filed 9/28/64.]

**WAC 296-81-100 Ropes, rope connections, data and record.** (1) Elevator cars of electric and roped hydraulic elevators shall be suspended by steel wire ropes.

Only iron (low carbon steel) or steel wire ropes with fibre cores, having the commercial classification of "elevator wire rope," shall be used for the suspension of elevator cars and for the suspension of counterweights.

(2) The minimum number of hoisting ropes used shall be three for traction elevators and two for drum type elevators.

(3) Hoisting chains where permitted on double car units, shall comply with the chain manufacturer's specifications as to maintenance and inspection. The operation of these units must be by remote control, and no one shall be allowed to ride on the cars at any time.

(4) The car and counterweight ends of car and counterweight wire ropes, or the stationary hitch ends where multiple roping is used shall be fastened in such a manner that the looped ends of the turned back portion in the rope sockets shall be readily visible.

Fastenings shall be:

(a) By individual tapered babbitted rope sockets or,

(b) By other types of rope fastenings that meet the approval of the enforcing agency.

(5) The rope sockets shall be of a type which will develop at least eighty percent of the breaking strength of the strongest rope to be used in such fastenings, and U-bolt type rope clips (clamps) shall not be used for load line fastenings.

(6) A metal or plastic data tag shall be securely attached to one of the wire rope fastenings each time the ropes are renewed or reshackled. This data tag shall bear the following information:

(a) Name of rope manufacturer.

(b) The diameter in inches.

(c) The manufacturer's rated breaking strength.

(d) The month and year the ropes were installed.

(e) Whether nonperformed or performed.

(f) Name of the person or firm who installed ropes. [Rules 10.010-10.060, filed 9/28/64.]

**WAC 296-81-110 Electric and electro-hydraulic dumbwaiters.** (1) Dumbwaiter cars may be constructed of metal or wood and shall be in compliance with local ordinances as to fire resistivity providing it is constructed to carry its rated load without distortion. The dumbwaiter car must be fully enclosed except for the landing sides. The car floor shall not exceed nine square feet in area and the total inside height shall not exceed four feet and the maximum capacity shall not exceed five hundred pounds. The fire resistance rating for the hoistway and hoistway doors shall conform with the local area fire ordinances where required. Hoistway doors shall be installed at each hoistway opening. Hoistway doors shall be equipped with electric contacts and mechanical locks.

(2) Electrically operated machines shall be equipped with brakes that are electrically released and applied automatically by springs in conformity with the requirements set forth in WAC 296-81-050(1).

(3) Dumbwaiters equipped with winding drum machines having a travel of more than thirty feet and a rated load of more than one hundred pounds, shall be

equipped with a slack rope switch which will automatically remove the power from the motor and brake when the hoisting ropes become slack. [Rules 11.010-11.030, filed 9/28/64.]

**WAC 296-81-120 Hydraulic elevators.** All hydraulic elevators shall be equipped with electrically operated anti-creep leveling devices. [Order 74-31, § 296-81-120, filed 6/14/74; Rule 12.010, filed 9/28/64.]

**WAC 296-81-130 Sidewalk elevators.** Electrically operated sidewalk elevators shall be in conformity with the following requirements: (1) Where the top opening is located in the sidewalk or other area exterior to the building, all electrical equipment on the car or in the hoistway shall be weatherproof. The operation of power sidewalk elevators through openings in the sidewalk, or through openings in other exterior areas which are protected by hinged doors or vertically lifting covers, shall conform to the following:

(a) The elevator shall be operated in both the up and down directions through the opening, only from the sidewalk or other exterior area. The operation shall be by means of:

(i) Key-operated continuous-pressure type, up and down switches, or

(ii) Continuous-pressure-type up-and-down operating buttons on the free end of a detachable, flexible cord five feet or less in length.

(iii) Continuous-pressure-type up-and-down operating buttons may be installed on the elevator car providing the control is so designed that the buttons will not function unless the sidewalk doors are locked in the open position and that a safety screen that will open and close with the car is installed.

(b) Key-operated switches shall be of continuous-pressure spring-return type, with the key removable only when the switch is in the off position.

(2) A sidewalk elevator that derives its power directly from city water mains, and that is controlled by a manually operated three position valve may be operated by a handline providing that a device is permanently installed on the hand line that will stop the car in the up direction before the bow iron on the car comes in contact with the sidewalk doors. The device must be so designed that it will not deflect or become deformed under a minimum stress of one hundred fifty pounds. There also must be installed over the sidewalk area a substantial screen that will open and close with the car when the sidewalk doors are in the open position. [Rules 13.010-13.020, filed 9/28/64.]

**WAC 296-81-140 Hand power elevators and dumbwaiters.** (1) Cars of hand power elevators and dumbwaiters shall be enclosed on all sides not used for entrance. Elevator cars upon which an operator is permitted to ride shall have not more than one compartment.

(2) Hand elevators having a travel of more than fifteen feet shall be provided with a car safety, capable of stopping and sustaining the car and rated load. The car

safety device is not required to be operated by a speed governor, and may be of the instantaneous type operated as a result of the breaking or slackening of the suspension members.

(3) Hoistway doors for hand powered elevators shall be so designed that they will insure protection at each landing.

(4) Doors for hand powered dumbwaiters shall be so designed that they will insure protection at all landings.

(5) Every hoistway door, gate, or entrance of hand elevators and hand dumbwaiters shall have conspicuously displayed on the landing side in letters not less than two inches high, the words: DANGER-ELEVATOR-KEEP CLOSED or DANGER-DUMBWAITER-KEEP CLOSED. [Rules 14.010-14.050, filed 9/28/64.]

**WAC 296-81-150 Car operating and terminal stopping devices and electrical protective devices.** (1) Handles of lever-type operating devices of car-switch operation elevators shall be so arranged that they will return to the stop position and latch in this position automatically when no pressure is exerted against the handle.

(2) All electric operating devices shall be of the enclosed type. Handrope, wheel, lever, rod or crank type operating devices may be permitted only on freight elevators, provided that electric elevators equipped with these types of operating devices shall be provided with a sequence device.

(3) **Phase reversal and failure protection.** Elevators having polyphase alternating current power supply shall be provided with means to prevent the starting of the elevator motor if:

(a) The phase rotation is in the wrong direction, or

(b) There is a failure of any phase. This does not apply to hydro-electric elevators.

(4) **Main line contactor.** A contactor shall be installed in addition to the direction switches, which will cut off main line current to the motor and apply the brake when any of the final terminal stopping devices operate.

(5) Final terminal stopping devices shall be provided for the following conditions:

(a) Final terminal stopping devices shall be provided and arranged to cause the electric power to be removed automatically from the elevator driving-machine motor and brake after the car has passed a terminal landing but so that under normal operating conditions, it will not function when the car is stopped by the normal terminal stopping device. Where spring buffers are provided, the device shall function before the buffer is engaged.

(b) Elevators having traction machines shall have final terminal stopping switches located in the hoistway and operated by cams attached to the car.

(c) Elevators having winding-drum machines shall have final terminal stopping switches, located on and operated by the driving machine, which shall not be driven by chain, rope, or belt. Also, stopping switches shall be installed in the hoistway that are operated by cams attached to the car or counterweights.

(6) All elevators having winding-drum machines shall have a slack rope device with an electric switch of the

enclosed, manually reset type which will cause the electric power to be removed from the driving machine motor and brake if the hoisting ropes become slack.

(7) The emergency stop switch shall be of the manually opened and closed, or manually opened and automatically closed type operated from within the car and shall be located within or adjacent to the car operating panel. When operated this switch shall cause the electric power to be removed from the driving-machine motor and brake of an electric elevator or from the electrically operated valves and/or pump motor of a hydraulic elevator. [Rules 15.010-15.070, filed 9/28/64.]

**WAC 296-81-160 Power supply switch.** A fused disconnect switch or a circuit breaker shall be installed and connected into the power supply line to each elevator motor or to the motor of the motor generator set. Disconnect switches or circuit breakers shall be of the manually closed multipole type. Where circuit breakers are used as a disconnecting means, they shall not be of the instantaneous type and shall not be opened automatically by a fire alarm system. [Rule 16.010, filed 9/28/64.]

**WAC 296-81-170 Access to machine room and machinery space.** A permanent safe means of access shall be provided either by stairway or ladder to elevator and dumbwaiter machine rooms, and overhead machinery space. Ladders shall be constructed in conformity with the safety factors as recognized by the American Standard Association, or by other sound engineering practices. Ladders shall have not less than six and one-half inches from the back of the rungs to the building structure or other objects. There must be at least thirty inches of clear climbing space from the face of the ladder to any fixed object. Carrying of material with hands or arms while ascending or descending the ladder shall be prohibited. Access ladders to the machine room or machinery space shall not be installed within the elevator hatchway. Trap doors that are used as a means of access to the elevator machine room shall be of the counter-balanced type. [Rule 17.010, filed 9/28/64.]

**WAC 296-81-180 Capacity posting.** Every elevator and dumbwaiter shall be provided with a capacity plate or sign permanently and securely fastened in place in the elevator car. Capacity plates or signs shall indicate the rated load of the elevator in pounds. On freight elevator cars the plate or sign shall also specify "FOR FREIGHT ONLY." [Rule 18.010, filed 9/28/64.]

**WAC 296-81-190 Illumination.** All elevator cars shall be provided with an electric light or lights. Where the car lights are controlled by a switch in the car, the control switch shall be located in or adjacent to the car operating device. It is recommended that light switches, if installed in cars of automatic operation elevators, be of the key operated type. [Rule 19.010, filed 9/28/64.]

**WAC 296-81-200 Adoption of elevator codes.** (1) Public hearings were held July 23, 1963 and September

24, 1963 at Olympia, Washington, in accordance with section 25, chapter 130, Laws of 1919, as amended by RCW 49.16.090, chapter 34.04 RCW to consider safety rules governing construction, alterations, use and maintenance of elevators, belt manlifts and moving walks.

(2) American Standard Safety Code for elevators, dumbwaiters and escalators A17.1 1960 shall apply to all new installations.

(3) American Standard Safety Code rules for moving walks A.S.A. 17.1.13 1962. This shall apply to all installations.

(4) Part X of A.S.A. A17.1 1960 maintenance shall apply to existing installations. This part gives maintenance instructions in regard to lubrication, cleanliness, painting, and refinishing, reshackeling and tagging of hoisting ropes, and the inspection and testing of pressure tanks and piston rods.

(5) These requirements became effective as of November 1, 1963.

National Elevator Code adopted—1967: WAC 296-81-006.

[Section 20 of rules, filed 9/28/64.]

**WAC 296-81-220 Illumination of pits.** A permanent lighting fixture shall be provided in all pits which shall provide an illumination of not less than five foot candles at the pit floor. A light switch shall be provided and shall be so located as to be accessible from the pit access door. [Order 73-1, § 296-81-220, filed 4/16/73.]

**WAC 296-81-240 Valves.** A shut-off valve shall be installed in the pit on all hydraulic elevators. (For new installations.) [Order 73-1, § 296-81-240, filed 4/16/73.]

**WAC 296-81-260 Photo electric or electric eye devices.** An elevator equipped with a photo electric or electric eye device for reopening of the car and hoistway doors shall be provided with a means that will automatically bypass the light ray if obstruction of the light ray for approximately 20 seconds has prevented the doors from closing. The light ray shall not be reestablished until the doors have fully closed. Upon a sufficient showing of need by a hospital or a nursing home, the department may authorize an automatic bypass means that will cause the doors to close within 35 seconds after the expiration of the normal door open time. [Statutory Authority: RCW 70.87.030. 82-12-005 (Order 82-18), § 296-81-260, filed 5/20/82; Order 76-37, § 296-81-260, filed 12/3/76; Order 73-1, § 296-81-260, filed 4/16/73.]

**WAC 296-81-270 Counterweight pit guards.** (1) Where practicable. Unperforated metal guards shall be installed in the pit on the open side or sides on all counterweights where spring or solid-type buffers are used or where oil buffers attached to the counterweight are used.

EXCEPTION: Where compensating chains or ropes are attached to the counterweight the guard may be omitted

on the side facing the elevator car to which the chains or ropes are attached.

(2) Design, construction and location of guards. Guards shall extend from a point not more than twelve inches above the pit floor to a point not less than seven feet nor more than eight feet above such floor, and shall be fastened to a metal frame properly reinforced and braced to be at least equal in strength and stiffness to No. 14 U.S. gauge sheet steel. [Order 73-1, § 296-81-270, filed 4/16/73.]

**WAC 296-81-300 Operation and leveling.** The elevator shall be automatic and be provided with a self-leveling feature that will automatically bring the car to the floor landings within a tolerance of plus or minus 1/2 inch under normal loading and unloading conditions. This self-leveling shall within its zone, be entirely automatic and independent of the operating device and shall correct for overtravel or undertravel. The car shall also be maintained approximately level with the landing irrespective of load. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-300, filed 12/10/80.]

**WAC 296-81-305 Door operation.** Power operated car and hoistway doors opened and closed by automatic means shall be provided.

DOOR SIZE. Minimum clear width for elevator doors shall be 32 inches.

DOOR PROTECTIVE AND REOPENING DEVICE. Doors closed by automatic means shall be provided with a door reopening device which will function to stop and reopen a car door and adjacent hoistway door in case the car door is obstructed while closing. This reopening device shall also be capable of sensing an object or person in the path of a closing door without requiring contact for activation at a nominal 5 and 20 inches above the floor. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-305, filed 12/10/80.]

**WAC 296-81-310 Door delay.** (1) HALL CALL. The minimum acceptable initial transfer time from notification that a car is answering a call (lantern and audible signal) until the doors of the car start to close shall be 0 to 5 ft. - 4 sec., 10 ft. - 7 sec., 15 ft., - 10 sec., 20 ft. - 13 sec. The distance shall be established from a point in the center of the corridor or lobby (maximum 5 feet) directly opposite the farthest hall button controlling that car to the centerline of the hoistway entrance.

(2) CAR CALL. The minimum acceptable initial transfer time for doors to remain fully open shall be not less than 3 seconds. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-310, filed 12/10/80.]

**WAC 296-81-315 Car interior.** The car interior shall allow for the turning of a wheelchair. The minimum clear distance between walls or between wall and door, excluding return panels, shall be not less than 68 x 54 inches. Minimum distance from wall to return panel shall be not less than 51 inches.

**EXCEPTION.** Elevators provided in existing schools, institutions, or other buildings specifically authorized by local authorities may have a minimum clear distance between walls or between wall and door including return panels of not less than 54 x 54 inches. Minimum distance from wall to return panel shall be not less than 51 inches. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-315, filed 12/10/80.]

**WAC 296-81-320 Car controls.** At least one set of controls shall be readily accessible from a wheelchair upon entering an elevator.

The centerline of the alarm button and emergency stop switch shall be at nominal (35) inches and the highest floor buttons no higher than (54) inches from the floor. Floor registration buttons, exclusive of border, shall be a minimum of (3/4) inch in size, raised or flush. Visual indication shall be provided to show each call registered and extinguished when call is answered. Depth of flush buttons when operated shall not exceed (3/8) inch.

Markings shall be adjacent to the controls on a contrasting color background to the left of the controls. Letters or numbers shall be a minimum of (5/8) inch high and raised (.030) inch. Applied plates permanently attached shall be acceptable. Emergency controls shall be grouped together at the bottom of the control panel. Symbols as indicated shall be used to assist in readily identifying essential controls (see ANSI A17.1, page 114, Rule 211.1). Controls not essential to the operation of the elevator may be located as convenient. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-320, filed 12/10/80.]

**WAC 296-81-325 Car position indicator signal.** A car position indicator shall be provided above the car operating panel or over the opening of each car to show the position of the car in the hoistway by illumination of the indication corresponding to the landing at which the car is stopped or passing.

Indications shall be on a contrasting color background and a minimum of (1/2) inch in height. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-325, filed 12/10/80.]

**WAC 296-81-330 Telephone or intercommunicating system.** A means to two-way communication shall be provided between the elevator and a point outside the hoistway in accordance with the requirements found in the latest edition of ANSI A17.1. If a telephone is provided, the highest part shall be located a maximum of (54) inches from the floor with a minimum cord length of (36) inches.

Markings or the international symbol for telephones shall be on or adjacent to the control on a contrasting color background. Letters or numbers shall be a minimum of (5/8) inch high and raised (.030) inch. Applied plates permanently attached shall be acceptable. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-330, filed 12/10/80.]

**WAC 296-81-335 Floor covering.** Floor covering should have a nonslip hard surface which permits easy movement of wheelchairs. If carpeting is used, it should be securely attached, heavy duty, with a tight weave and low pile, installed without padding. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-335, filed 12/10/80.]

**WAC 296-81-340 Handrails.** A handrail shall be provided on all walls of the car not used for normal exits. There shall be a space of (1 1/2) inches between the wall and the rail. The rail shall be at a nominal height of (35) inches from the floor. The hand grip portion of handrails shall be not less than (1 1/4) inches nor more than 2 inches in width and shall be basically oval or round in cross-section and shall have smooth surfaces with no sharp corners, with handrail ends returned to the wall. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-340, filed 12/10/80.]

**WAC 296-81-345 Minimum illumination.** The minimum illumination shall be in accordance with the latest edition of ANSI A17.1. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-345, filed 12/10/80.]

**WAC 296-81-350 Door jam marking.** The floor designation shall be provided at each hoistway entrance on both sides of jamb visible from within the car and the elevator lobby at a centerline height of (60) inches above the floor. Designations shall be on contrasting color background (2) inches high and raised (.30) inch. Applied plates permanently attached shall be acceptable. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-350, filed 12/10/80.]

**WAC 296-81-355 Hall buttons.** The centerline of the hall call buttons shall be a nominal (42) inches above the floor. The button designating the UP direction shall be on top.

Direction buttons, exclusive of border, shall be a minimum of (3/4) inch in size, raised, or flush. Visual indication shall be provided to show each call registered and extinguished when the call is answered. Depth of flush buttons when operated shall not exceed (3/8) inch. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-355, filed 12/10/80.]

**WAC 296-81-360 Hall lantern.** A visual and audible signal shall be provided at each hoistway entrance, indicating to the prospective passenger, the car answering the call and its direction of travel.

The visual signal for each direction shall be direction indicators, white to indicate "UP" and red to indicate "DOWN" and shall be a minimum of (2 1/2) inches in size and visible from the proximity of the hall call button. The audible signal shall sound once for the UP direction and twice for the DOWN direction.

The centerline of the fixture shall be located a minimum of (6) feet from the floor.

The use of in car lanterns conforming to above and located in jamb shall be acceptable. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-360, filed 12/10/80.]

**WAC 296-81-365 Emergency use.** Elevators shall comply with ANSI Standard A17.1, Rule 211.3a. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-365, filed 12/10/80.]

**WAC 296-81-370 Effective date.** The preceding WAC rules, 296-81-300 through 296-81-365, shall apply to all new installations made after the adoption of these rules. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-81-370, filed 12/10/80.]

**WAC 296-81-990 Advisory board.** (1) There is created an advisory board on conveyances. The board shall be composed of five persons appointed by the director of labor and industries or his or her designee with the advice of the chief of the elevator section. The first board members shall serve the following terms:

- (a) One member shall serve for one year;
- (b) One member shall serve for two years;
- (c) One member shall serve for three years; and
- (d) Two members shall serve for four years.

After the first terms, all members shall serve for four years.

(2) The board shall meet on the third Tuesday of February, May, August, and November of each year, and at other times at the discretion of the chief of the elevator section. The board members shall serve without per diem or travel expenses.

(3) The purposes of the board are to advise the department on adoption of codes and rules that apply to conveyances; methods for enforcing and administering the elevator law, chapter 70.87 RCW; and matters of concern to the industry and to owners and users of conveyances.

(4) The chief of the elevator section shall act as secretary for the board. [Statutory Authority: RCW 70.87.030. 82-12-005 (Order 82-18), § 296-81-990, filed 5/20/82.]

### Chapter 296-82 WAC

#### SAFETY STANDARDS FOR EXISTING BELT MANLIFTS

##### WAC

296-82-010	Belt manlifts—Definitions.
296-82-016	General requirements—Landings.
296-82-019	General requirements—Floor opening guards.
296-82-022	General requirements—Protection of entrances and exits.
296-82-025	General requirements—Guards for openings.
296-82-028	General requirements—Guards at floor landings.
296-82-031	General requirements—Bottom arrangement.
296-82-034	General requirements—Top clearance.
296-82-037	General Requirements—Emergency exit ladders.
296-82-040	General requirements—Illumination.
296-82-045	Belt manlifts mechanical requirements—Machines.

296-82-048	Belt manlifts mechanical requirements—Speed.
296-82-051	Belt manlifts mechanical requirements—Platforms or steps.
296-82-054	Belt manlifts mechanical requirements—Handholds.
296-82-057	Belt manlifts mechanical requirements—Up limit stops.
296-82-060	Belt manlifts mechanical requirements—Emergency stop.
296-82-066	Belt manlifts mechanical requirements—Instruction and warning signs.
296-82-070	Operating rules—Carrying of materials and tools.
296-82-078	Tests and inspections—Periodic inspection.

#### DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER

296-82-013	General requirements—Floor openings. [Rule 1.010, effective 12/1/62.] Repealed by Order 74-31, filed 6/14/74.
296-82-063	Belt manlifts mechanical requirements—Factors of safety. [Rule 2.070, effective 12/1/62.] Repealed by Order 74-31, filed 6/14/74.
296-82-075	Tests and inspection—Acceptance tests. [Rule 4.010, effective 12/1/62.] Repealed by Order 74-31, filed 6/14/74.

**WAC 296-82-010 Belt manlifts—Definitions.** (1) **Factor safety.** The factor of safety is the ratio of the ultimate strength of the material to the allowable stress when a part is subjected to full load operation.

(2) **Handhold (handgrip).** A handhold is a device attached to the belt to assist a passenger in maintaining balance.

(3) **Open type.** One which has a handgrip surface fully exposed.

(4) **Closed type.** A cup-shaped device in which the handgrip surface is available only in the direction of travel and is covered on the opposite run.

(5) **Limit switch.** A device the purpose of which is to cut off the power to the motor and apply the brake to stop the carrier in the event that a loaded step passes the top terminal landing.

(6) **Manlift.** A manlift is a device consisting of a power-driven endless belt provided with steps or platforms and handholds attached to it for the transportation of personnel from floor to floor.

(7) **Rated speed.** Rated speed is the speed for which the device is designed and installed.

(8) **Step (platform).** A step is a passenger carrying unit. [Rules (part), effective 12/1/62.]

**WAC 296-82-016 General requirements—Landings.**

(1) **Vertical clearance.** The clearance between the floor or mounting platform and the lower edge of the conical guard above it required by WAC 296-82-019 shall be not less than seven feet, six inches. Where this clearance cannot be obtained no access to the manlift shall be provided and the manlift runway shall be enclosed where it passes through such floor.

(2) **Clear landing space.** The floor space adjacent to the floor openings shall be free from obstructions and kept clear at all times.

(3) **Lighting of landings.** Adequate lighting, not less than three foot-candles, shall be provided at each floor landing at all times when the lift is in operation.

(4) **Landing surface.** The landing surfaces at the entrances and exits to the manlift shall be so constructed and maintained as to provide safe footing at all times.

(Coefficient of friction of not less than 0.5.)

(5) **Emergency landings.**

(a) Emergency landings shall be provided so that anyone who is required to transfer from the belt manlift to the emergency ladder will not be required to travel on an emergency ladder a distance greater than twenty-five feet to a floor landing or an emergency landing.

(b) Such emergency landings shall be accessible from both runs of the manlift and shall give access to the ladder required in WAC 296-82-037.

(c) Emergency platforms shall be completely enclosed with a standard railing and toeboard. [Rule 1.020, effective 12/1/62.]

**WAC 296-82-019 General requirements--Floor opening guards.** (1) On the ascending side of the manlift all landings shall be provided with a bevel guard or cone meeting the following requirements:

(a) **Slope.** Where possible, the cone shall make an angle of not less than forty-five degrees with the horizontal. An angle of sixty degrees or greater shall be used where ceiling heights permit.

(b) **Extent.** Where possible, the guard shall extend at least forty-two inches outward from any handhold on the belt. It shall not extend beyond the upper surface of the floor above.

(c) **Material and construction.** The cone shall be made of not less than Number 18 U.S. gauge sheet steel or material of equivalent strength or stiffness. The lower edge shall be rolled to a minimum diameter of one-half inch and the interior shall be smooth with no rivets, bolts or screws protruding.

(2) Obstructions shall be guarded in the same manner as floor openings with the same minimum distances observed. [Order 74-31, § 296-82-019, filed 6/14/74; Rule 1.030, effective 12/1/62.]

**WAC 296-82-022 General requirements--Protection of entrances and exits.** (1) **Guardrail requirement.** The entrances and exits at all floors or landings affording access to the manlift shall be guarded by a maze (staggered railing) or a handrail equipped with self closing gates.

(2) **Construction.** The rails shall be standard guardrails with toeboards meeting the requirements of the general safety standards.

(3) **Gates.** Gates, if used, shall open outward and shall be self closing. Corners of gates shall be rounded.

(4) **Maze.** Maze or staggered openings shall offer no direct passage between enclosure and outer floor space.

(5) Rails shall be located at least two feet but not more than four feet from the edge of the opening measured at right angles to the face of the belt. The intersection of the top rail and the end post at openings shall be a bend or standard long sweep "ell."

(6) Except where building layout prevents, entrances at all landings shall be in the same relative position. [Rule 1.040, effective 12/1/62.]

**WAC 296-82-025 General requirements--Guards for openings.** (1) **Construction.** The floor opening at each landing shall be guarded on sides not used for entrances or exit by a standard railing and toeboard or by panels of wire mesh of not less than number 10 U.S. gauge, expanded metal of not less than number 13 U.S. gauge or sheet metal of equivalent strength or metal on a frame of angle iron not less than one and one-quarter by one-eighth inch or of one and one-quarter inch iron pipe.

(2) When belt manlift is installed in a stair well a standard guard rail shall be placed between the floor openings of the manlift and the stairways.

(3) **Height and location.** Such rails or guards shall be at least forty two inches in height on the up-running side and sixty six inches on the down running side. If a guardrail is used the section of the guard above the rail may be of the construction specified in subsection (1) above or may consist of vertical or horizontal bars which will reject a ball six inches in diameter. Rails or guards shall be located not more than one foot from the edge of the floor opening. [Rule 1.050, effective 12/1/62.]

**WAC 296-82-028 General requirements--Guards at floor landings.** Expanded metal, sheet metal or wood guards must be installed to cover the area from the floor to seven feet above the floor on each exposed side of the belt manlift at each floor landing, so persons can not place their hands in the area where the step rollers travel. [Rule 1.060, effective 12/1/62.]

**WAC 296-82-031 General requirements--Bottom arrangement.** (1) **Bottom landing.** (Where possible.) At the bottom landing the clear area shall be not smaller than the area enclosed by the guardrails on the floors above, and any wall in front of the "down" running side of the belt shall be not less than forty-eight inches from the face of the belt. This space shall not be encroached upon by stairs or ladders.

(2) **Location of lower pulley.** The lower (boot) pulley shall be installed so that it is supported by the lowest landing served.

(3) **Mounting platform.** (a) A mounting platform shall be provided in front or to one side of the up-run at the lowest landing, unless the floor level is such that the following requirement can be met: The floor or platform shall be at or above the point at which the upper surface of the ascending step assumes a horizontal position.

(b) A platform shall be provided in front or to one side of the down-run at the lowest landing unless the floor level is such that the following requirements can be met: The floor or platform shall be at or above the point at which the upper surface of the descending step leaves the horizontal position. [Order 74-31, § 296-82-031, filed 6/14/74; Rule 1.070, effective 12/1/62.]

**WAC 296-82-034 General requirements--Top clearance.** Top emergency landing. (Where possible.) Where the center of the head pulley is greater than six feet above the top landing, an emergency landing and ladder must be installed. The landing shall be twenty-

four inches below the center of the head pulley. [Order 74-31, § 296-82-034, filed 6/14/74; Rule 1.080, effective 12/1/62.]

**WAC 296-82-037 General requirements--Emergency exit ladders.** (1) **Where required.** A fixed metal ladder accessible from both the "up" and "down" run of the manlift shall be provided where the vertical distance between landings exceeds twenty feet.

(2) **Construction.** Such ladder shall be in accordance with the existing general safety standards for ladders except that enclosing cages shall not be provided. [Rule 1.090, effective 12/1/62.]

**WAC 296-82-040 General requirements--Illumination.** (1) **General.** Both runs of the manlift shall be illuminated at all times when the lift is in operation. An intensity of not less than one foot-candle shall be maintained at all points.

(2) **Control of illumination.** Lighting of manlift runways shall be by means of circuits permanently tied in to the building circuits (no switches), or shall be arranged to be turned on by the starting switch controlling the manlift motor, or shall be controlled by switches at each landing. Where separate switches are provided at each landing, any switch shall turn on all lights necessary to illuminate the entire runway. [Rule 1.100, effective 12/1/62.]

**WAC 296-82-045 Belt manlifts mechanical requirements--Machines.** (1) **Types.** Machines shall be of the direct connected type or shall be driven by multiple V-belts. Cast-iron gears shall not be used.

(2) **Brake.** A mechanically applied, electrically released brake shall be applied to the motor shaft for direct connected units or to the in-put shaft for belt driven units. The brake shall be capable of stopping and holding the manlift with its rated capacity.

(3) **Belt fastenings.** Belts shall be fastened by a lapped splice or shall be butt spliced with a strap on the side of the belt away from the pulley. For lapped splices, the overlap of the belt at the splice shall be not less than three feet where the total travel of the manlift does not exceed one hundred feet and not less than four feet, if the travel exceeds one hundred feet.

Where butt splices are used the straps shall extend not less than three feet on one side of the butt for a travel not in excess of one hundred feet, and four feet for a travel in excess of one hundred feet.

For twelve inch belts, the joint shall be fastened with not less than twenty special elevator bolts, each of a minimum diameter of one-quarter inch. These bolts shall be arranged symmetrically in five rows so arranged as to cover the area of the joint effectively. The minimum number of bolts for a belt width of fourteen inches shall be not less than twenty-three and for belt widths of sixteen inches, the number of bolts shall be not less than twenty-seven.

(4) **Overspeed protection.** The machine shall be so designed and constructed to hold the driving pulley in event of shaft failure or overspeed. This applies to new

and existing installations. [Order 74-31, § 296-82-045, filed 6/14/74; Rule 2.010, effective 12/1/62.]

**WAC 296-82-048 Belt manlifts mechanical requirements--Speed.** All manlifts in a given plant should run at approximately the same speed. [Order 74-31, § 296-82-048, filed 6/14/74; Rule 2.020, effective 12/1/62.]

**WAC 296-82-051 Belt manlifts mechanical requirements--Platforms or steps.** (1) **Minimum depth.** Steps or platforms shall be not less than twelve inches nor more than fourteen inches deep, measured from the belt to the edge of the step or platform.

(2) **Width.** The width of the step or platform shall be not less than the width of the belt to which it is attached.

(3) **Distance between steps.** The distance between steps shall be equally spaced and not less than sixteen feet measured from the upper surface of one step to the upper surface of the next step above it.

(4) **Angle of step.** The surface of the step shall make approximately a right angle with the "up" and "down" run of the belt, and shall travel in an approximately horizontal position with the "up" and "down" run of the belt.

(5) **Surfaces.** The upper or working surfaces of the step shall be of a material having inherent nonslip characteristics (coefficient of friction not less than 0.5) or shall be covered completely by a nonslip tread securely fastened to it.

(6) **Strength of step supports.** Step frames or supports and their guides shall be adequate strength to:

(a) Prevent the disengagement of any step roller.

(b) Prevent any appreciable misalignment.

(c) Prevent any visible deformation of the step or its support.

(7) **Prohibition of steps without handholds.** No step shall be provided unless there is a corresponding handhold above or below it meeting the requirements of WAC 296-82-054. If a step is removed for repairs or permanently, the handholds immediately above and below it shall be removed before the lift is again placed in service. [Order 74-31, § 296-82-051, filed 6/14/74; Rule 2.030, effective 12/1/62.]

**WAC 296-82-054 Belt manlifts mechanical requirements--Handholds.** (1) **Location.** Handholds attached to the belt shall be provided and so installed that they are not less than four feet nor more than four feet eight inches above the step tread. These shall be so located as to be available on both the "up" and "down" run of the belt.

(2) **Size.** The grab surface of the handhold shall be not less than four and one-half inches in width. Fastenings for handholds shall not come within one inch of the belt edge.

(3) **Strength.** The handhold shall be capable of withstanding without damage a load of three hundred pounds applied parallel to the run of the belt.

(4) **Prohibition of handhold without steps.** No handhold shall be provided without a corresponding step. If a

handhold is removed permanently or temporarily, the corresponding step and handhold for the opposite direction of travel shall also be removed before the lift is again placed in service. [Order 74-31, § 296-82-054, filed 6/14/74; Rule 2.040, effective 12/1/62.]

**WAC 296-82-057 Belt manlifts mechanical requirements—Up limit stops.** (1) **Requirements.** Two separate automatic stop devices shall be provided to cut off the power and apply the brake when a loaded step passes the upper terminal landing. One of these shall consist of a switch mechanically operated by the belt or step roller. The second may consist of any of the following:

(a) Roller switch placed above and out of line with the first limit switch.

(b) Photocell and light source ("electric eye").

(c) A switch actuated by a lever, rod, or plate, the latter placed above the head pulley so as to just clear a passing step.

(2) **Manual reset location.** After the manlift has been stopped by this device it shall be necessary to reset the automatic stop manually. The device shall be so located at the top landing that a person resetting it shall have a clear view of both the "up" and "down" runs of the manlift. It shall not be possible to reset the device from any step or platform.

(3) **Cut-off point.** The device shall function so that the manlift will be stopped before the loaded step has reached a point twenty-four inches above the top terminal landing.

(4) **Electrical requirements.**

(a) Where such switches open the main motor circuit directly they shall be of the multiple type.

(b) Where photoelectric devices are used they shall be so designed and installed that the failure of the light source, or of the light sensitive element, or of any other vacuum tubes employed in the circuit will result in shutting off the power to the driving motor.

(c) Where flammable vapors or dusts may be present all electrical installations shall be in accordance with national electrical code requirements for such locations.

(d) Unless of the oil immersed type, controller contacts carrying the main motor current shall be copper to carbon, except where the circuit is broken at two or more points simultaneously. [Rule 2.050, effective 12/1/62.]

**WAC 296-82-060 Belt manlifts mechanical requirements—Emergency stop.** (1) **Requirement.** An emergency stop means shall be provided.

(2) **Location.** This stop means shall be within easy reach of the ascending and descending runs of the belt.

(3) **Operation.** This stop means shall be so connected with the control lever or operating mechanism that it will cut off the power and apply the brake when pulled in the direction of travel.

(4) **Material.** This stop may consist of a cotton rope with a wire center, manila or sisal rope, or may be made up of suitable lengths of metallic pipe or tubing. If rope

is used, it shall be not less than three-eighths inch in diameter. Wire rope, unless marlin covered, shall not be used.

(5) **Normal stopping use.** This emergency stop may be used for normal stopping (and starting) where the manlift does not run continuously.

(6) **Emergency stop switch, treadle type on down side.** An emergency stop treadle switch shall be placed in the area below the lowest landing on the "down" side. This switch must stop the mechanism if a person should fail to get off at the lowest landing and be ejected from the step as it approaches its position to travel around the boot pulley. The treadle stop switch shall be of the manual reset type. [Order 74-31, § 296-82-060, filed 6/14/74; Rule 2.060, effective 12/1/62.]

**WAC 296-82-066 Belt manlifts mechanical requirements—Instruction and warning signs.** (1) **Instruction signs at landings or on belt.** Signs of conspicuous and easily read style giving instructions for the use of the manlift shall be posted at each landing or stenciled on the belt.

(a) **Size and legibility.** Such signs shall be of letters not less than one inch in height and of a color having high contrast with the surface on which it is stenciled or painted (white or yellow on black or black on white or gray).

(b) **Inscription.** The instructions shall read approximately as follows:

"Face the belt"

"Use the handhold"

"To stop - pull rope"

(2) **Top floor warning sign or light.**

(a) **Requirement.** At the top floor an illuminated sign be displayed bearing the following wording:

"Top floor - get off"

(b) **Size of letters.** Signs shall be in block letters not less than two inches in height

(c) **Location.** This sign shall be located within easy view of an ascending passenger and not more than two feet above the top terminal landing.

(d) **Alternate warning light.** As an alternate for the sign required by (2)(a) above, a red light of not less than forty watt rating may be provided immediately below the upper terminal landing and so located as to shine in a passenger's face will be accepted.

(3) **Visitor warning.**

(a) **Requirement.** A conspicuous sign having the following legend - "employees only - visitors keep off" - shall be displayed at each landing.

(b) **Size of letters.** Sign shall be of block letters not less than two inches in height and shall be of a color offering high contrast with the background color.

(4) **Bottom of manlift warning sign or light.**

(a) A sign or light warning the passenger he is approaching bottom landing shall be posted above bottom landing in a conspicuous place. Sign or light to be similar in size to top warning light and sign noted above.

(b) An electric buzzer. An electric buzzer shall be installed five feet above the bottom landing on the down side to warn the rider that he is approaching the bottom landing and the buzzer shall be activated automatically by the weight of a load on a step. [Rule 2.080, effective 12/1/62.]

**WAC 296-82-070 Operating rules--Carrying of materials and tools.** (1) No freight or packaged goods shall be carried on any manlift.

(2) No pipe, lumber, or other construction materials shall be handled on any manlift.

(3) No tools except those which will fit entirely within a pocket in usual working clothes shall be carried on any manlift except as provided in subsection (4) below.

(4) Tools may be carried in a canvas bag having dimensions not larger than eleven inches by thirteen inches and provided with carrying loops or handles. Such bag shall be provided with a leather bottom. Such bag shall not be provided with shoulder straps but shall be carried in the passenger's hand while he is riding the manlift. [Rule 3.010, effective 12/1/62.]

**WAC 296-82-078 Tests and inspections--Periodic inspection.** (1) **Frequency.** All manlifts shall be inspected by a competent designated person at intervals of not more than thirty days.

(2) **Items covered.** This periodic inspection shall cover but is not limited to the following items:

- Steps
- Step fastenings
- Rails
- Rail supports and fastenings
- Rollers and slides
- Belt and belt tension
- Handholds and fastenings
- Guardrails
- Lubrication
- Warning signs and lights
- Signal equipment
- Drive pulley
- Bottom (boot) and pulley
- Clearance
- Pulley supports
- Motor
- Driving mechanism
- Brake
- Electrical switches

(3) **Inspection log.** A written record shall be kept of findings at each inspection. Records of inspection shall be made available to duly qualified inspectors. [Rule 4.020, effective 12/1/62.]

### Chapter 296-83 WAC ELECTRIC MANLIFTS

#### WAC

296-83-010 Scope and application.  
296-83-015 Waiver and variance.  
296-83-020 Hoistway enclosures and landings.

296-83-025 Hoistway gates.  
296-83-030 Elevator car.  
296-83-035 Elevator doors.  
296-83-040 Counterweight, enclosures and fastenings.  
296-83-045 Guide rails.  
296-83-050 Hoisting ropes.  
296-83-055 Space under hoistway.  
296-83-060 Car safeties.  
296-83-065 Brakes.  
296-83-070 Car controls and safety devices.  
296-83-075 Hoisting machine mechanisms.  
296-83-080 Elevator car and counterweight buffers.  
296-83-085 General requirements.

**WAC 296-83-010 Scope and application.** The following requirements shall apply to the installation, design and use of all one man capacity, electric elevators, subject to inspections as required by RCW 49.16.120. [Rules (part), effective 5/15/64.]

**WAC 296-83-015 Waiver and variance.** The supervisor of safety may, upon receipt of application and after adequate investigation by the department, permit a variation from these requirements when other accepted means of protection are provided. Any variation granted under the provisions of this paragraph shall be limited to the particular case or cases covered in the application for variation and may be revoked for cause. The permit for variance shall be conspicuously posted on the premises prior to becoming effective and shall remain posted during the life of such waiver. [Rules (part), effective 5/15/64.]

**WAC 296-83-020 Hoistway enclosures and landings.** Hoistways shall be fully enclosed or enclosed on all landings to a height of six feet above the landing floor or six feet above highest working level or stair level adjacent to the hoistway. Perforated hoistway enclosures can be used where fire resistivity is not required provided it conforms to the following: (1) Steel wire grill or expanded metal grill shall be at least 13 U.S. gauge steel wire.

(2) Opening in the enclosure shall reject a one inch steel ball.

(3) All hoistway landings shall be properly and adequately lighted. [§ I, Rule 1.010, effective 5/15/64.]

**WAC 296-83-025 Hoistway gates.** (1) Hoistway gates may be constructed of wood slat, steel wire grill, expanded metal or solid material, providing all openings reject a two inch ball and will resist a two hundred fifty pound horizontal thrust.

(a) Steel wire and expanded metal gates shall be of at least 13 U.S. gauge steel.

(b) Wood slats must be not less than two inches wide and one-half inch thick, nominal size.

(c) Solid material shall be not less than one eighth inch reinforced sheet steel or one-half inch plywood.

(2) Hoistway gates can be horizontal swinging, vertical or horizontal sliding or biparting gates.

(a) Hoistway gates shall extend the full width of the elevator car and from one inch above the landing floor to six feet or more above the floor.

(b) Horizontal swinging gates shall be full stopped from swinging into hoistway.

(3) Gates shall be equipped with interlocks or mechanical locks and electric contacts designed so that hoistway gates cannot be opened when the car is away from the landing. [§ II, Rules 2.010-2.030, effective 5/15/64.]

**WAC 296-83-030 Elevator car.** (1) Elevator cars will be fully enclosed to height of car or to a height of not less than six feet six inches. Elevator cars can be of perforated or solid material provided material will withstand a horizontal thrust of seventy-five pounds without deflecting one-quarter inch and all openings will reject a one inch ball.

(a) Car frames shall be of substantial metal or wood construction with a safety factor of four on metal and six on wood.

(b) Wood frames shall be gusseted and bolted or otherwise secured with large washers and lock washers.

(c) Car platform cannot exceed thirty inches inside dimension on each side (6.25 square foot area).

(2) Every car shall have a substantial protective top. The front half may be hinged. The protective top may be made from number 9 U.S. wire gauge screen, 11 gauge expanded metal, 14 gauge sheet steel or three-quarter inch or heavier plywood. If made of wire screen or metal, the openings shall reject a one-half inch diameter ball. [§ III, Rules 3.010-3.020, effective 5/15/64.]

**WAC 296-83-035 Elevator doors.** Elevator car doors shall be provided on all elevators except on fully enclosed hoistways equipped with hoistway gates and hoistways enclosed from the top of the hoistway opening to the ceiling on the landing side. (1) Car doors can be of solid or perforated construction capable of resisting a seventy-five pound thrust without deflecting one-quarter inch.

(2) Car doors may be biparting or otherwise horizontal swung provided the door swings within the elevator car.

(3) A positive locking latch device shall be provided to resist a two hundred fifty pound thrust.

(4) Interlocks or mechanical locks and electric contacts must be provided on cars operating in open hoistways. [§ IV, Rule 4.010, effective 5/15/64.]

**WAC 296-83-040 Counterweight, enclosures and fastenings.** All counterweights shall be fully enclosed for their full length of travel except in closed hoistways where counterweight guide rails have been provided.

(1) Counterweight enclosures shall provide an inspection opening in the bottom of the enclosure large enough to provide for the inspection of cable fastenings, counterweight and buffer. Counterweights of rectangular shape shall be secured by not less than two one-half inch mild steel bolts with locknuts. Round counterweights shall be fastened with a center bolt not less than three-quarter inch diameter and secured with a locknut.

(2) Bolt eyes shall be welded closed.

(3) Cable fastenings shall be not less than three U-shaped clamps with U's on the dead side of the rope or babbitted tapered elevator sockets. [§ V, Rule 5.010, effective 5/15/64.]

**WAC 296-83-045 Guide rails.** A minimum of two car guide rails shall be provided and they shall (1) Extend at least six inches beyond the maximum travel of the car with buffers compressed.

(2) Be securely fastened to a vertical supporting member for the full length of elevator travel.

(3) Be not less than one and one-half inch by one and one-half inch vertical grain fir or equivalent or one-quarter inch by two inch by two inch angle iron or equivalent.

(4) Not vary more than three-sixteenths inch thickness on brake surfaces for wood guide rails.

(5) Be secured to resist more than one-half inch total deflection on car safety application and resist a two hundred fifty pound horizontal thrust. [§ VI, Rule 6.010, effective 5/15/64.]

**WAC 296-83-050 Hoisting ropes.** Hoisting ropes shall be of good grade elevator traction wire rope and shall (1) Be not less than two ropes of not less than three-eighths inch diameter and provide a safety factor of five.

(2) Be fastened by at least three U-type cable clamps with the U on the dead return end of the rope or by approved elevator sockets of the babbitted type.

(3) Hoisting rope shall be of such length that the car platform will not be more than six inches above the top landing when the counterweight buffer is fully compressed and the counterweight shall be six inches or more away from the counterbalance sheave when the car buffer is fully compressed. [§ VII, Rule 7.010, effective 5/15/64.]

**WAC 296-83-055 Space under hoistway.** There shall be no habitable space below the elevator hoistway and counterweight shaft unless the floor is designed to withstand and impact 125 percent greater than the impact generated by a free fall of either the car or counterweight from the full height of the hoistway. [§ VIII, Rule 8.010, effective 5/15/64.]

**WAC 296-83-060 Car safeties.** All cars suspended or operated from overhead machinery shall be equipped with an approved car safety capable of stopping and holding the car with rated load. (1) Car safeties shall operate mechanically and be independent of interruption of any electrical circuit.

(2) Car safeties will automatically operate and control circuit will be broken in the event of cable breakage and on governor controlled safeties. [§ IX, Rule 9.010, effective 5/15/64.]

**WAC 296-83-065 Brakes.** All elevators shall be equipped with brakes designed to engage mechanically and release electrically. (1) Brakes shall be located on the final drive of all elevator machines.

(2) The brake actuating circuit will be so designed that interruption of power by slack cable switch, control switch, and limit switches, will actuate the brake.

(3) The brakes shall actuate under short circuit, phase failure, or reverse phase conditions. [§ X, Rule 10.010, effective 5/15/64.]

**WAC 296-83-070 Car controls and safety devices.**

(1) Car controls may be automatic pushbutton, constant pressure pushbutton or momentary pushbutton types. Hand rope and car switch controls shall not be used.

(2) Manually operated emergency stop switches shall be installed in all cars not equipped with constant pressure pushbutton controls. Switch shall be clearly marked "emergency stop."

(3) Terminal limiting devices shall operate independently of the car controls and automatically stop the car at the top and bottom terminal landings.

(4) All winding drum machine type elevators shall be equipped with top and bottom final limit switches.

(5) A slack rope device of the manual reset design shall be required on all winding drum type machines. The device shall be designed to de-energize the circuit to the drive motor and brake.

(6) All new installations shall be equipped with an overspeed governor. This governor shall be set not to exceed one hundred seventy-five feet per minute and shall be designed to de-energize the brake control and motor drive circuits simultaneously with the activation of the car safeties mechanism. Car speeds for these types of installations shall not exceed a speed of one hundred twenty-five feet per minute. [§ XI, Rules 11.010-11.060, effective 5/15/64.]

**WAC 296-83-075 Hoisting machine mechanisms.**

(1) Elevator machines shall be driven by approved type units.

(a) On direct drive or approved worm gear driven type, a mechanically actuated, electrically released brake shall be installed on the driving unit.

(b) On V belt driven types, a minimum of four belts, one-half inch minimum size, shall be used to transmit power from the motor to the drive shaft and a mechanically actuated, electrically released brake shall be installed on the final drive shaft.

(2) Wherever practical, elevator machines shall be installed on the top side of their supporting structure.

(3) All components of the driving mechanism or parts subject to stress involved in suspending the load or related equipment shall be designed to withstand eight times the total weight to be suspended, which would include load, counterweight, car and cables.

(4) Gears shall be made of steel or equivalent material. Cast iron gears are prohibited. [§ XII, Rules 12.010-12.040, effective 5/15/64.]

**WAC 296-83-080 Elevator car and counterweight buffers.** (1) On new installations, elevator cars shall be provided with adequate car buffers.

(2) All elevators using a counterweight shall be provided with adequate counterweight buffers. [§ XIII, Rules 13.010-13.020, effective 5/15/64.]

**WAC 296-83-085 General requirements.** (1) Adequate lighting shall be provided at each landing and in the shaftway.

(2) A sign bearing the following information shall be conspicuously posted within the car:

(a) Maximum capacity one person

(b) Total load limit in pounds

(c) For authorized personnel use only

(3) A fire extinguisher in proper working condition shall be attached to the car structure. [§ XIV, Rules 14.010-14.030, effective 5/15/64.]

296-84-055	Sheaves.
296-84-060	Hoisting ropes.
296-84-065	Operating rope.
296-84-070	Lighting.
296-84-075	Overhead supports.
296-84-080	General requirements.

**WAC 296-84-010 Scope and application.** The following requirements shall apply to the installation, design and use of all one man capacity, hand power counterweighted elevators subject to inspection as required by RCW 49.16.120. [Rules (part), effective 5/15/64.]

**WAC 296-84-015 Waiver and variance.** The supervisor of safety may, upon receipt of application and after adequate investigation by the department, permit a variation from these requirements when other accepted means of protection are provided. Any variation granted under the provisions of this paragraph shall be limited to the particular case or cases covered in the application for variation and may be revoked for cause. The permit for variance shall be conspicuously posted on the premises prior to becoming effective and shall remain posted during the life of such waiver. [Rules (part), effective 5/15/64.]

**WAC 296-84-020 Hoistway landings.** (1) Every hoistway landing shall be protected on sides other than the landing opening side with a standard guard rail and intermediate guard rail. All landings except the bottom landing shall have a toe board installed on all sides except the landing opening side.

(2) All hoistway entrances shall be not less than six feet six inches in height and in no case shall the width exceed the corresponding car dimensions.

(3) All hoistway entrances must be provided with an approved maze or with a hoistway gate which shall:

(a) Be at least thirty-six inches in height.

(b) Extend downward to within one inch of the landing sill.

(c) Be of the self-closing type, designed to swing horizontally out from the hoistway and closing against a full jam stop.

(d) Be located within four inches of the hoistway edge of the landing sill.

(e) Have a "DANGER" sign conspicuously posted on the landing side of the hoistway gate.

(f) Withstand a two hundred fifty pound horizontal thrust.

(4) For any new installation, all projections extending inwardly from the hoistway enclosure at the entrance side of the car platform shall be bevelled and substantially guarded on the underside by smooth solid material set at an angle of not less than sixty degrees, nor more than seventy-five degrees from the horizontal when cars are not equipped with gates. [§ I, Rules 1.010-1.040, effective 5/15/64.]

**WAC 296-84-025 Hoistway clearances.** (1) The minimum clearance between the side of the car and a hoistway enclosure shall be one inch.

(2) The clearance between the car platform and the landing sill shall not be less than one-half inch and not more than one and one-half inches. [§ II, Rules 2.010-2.020, effective 5/15/64.]

**WAC 296-84-030 Habitable space under hoistways.** There shall be no habitable space below the elevator hoistway or counterweight shaft unless the floor is supported to withstand any impact caused by the car or counterweight dropping freely onto the floor. [§ III, Rule 3.010, effective 5/15/64.]

**WAC 296-84-035 Hoistway guide rails.** (1) There shall be a minimum of two opposing guide rails extending to a point six inches beyond the full height of travel of the car when the counterweight buffer is fully compressed.

(2) All rails shall be supported by bolts, lag screws or other approved methods to a vertical supporting member which shall not exceed one-half inch deflection with the application of a two hundred fifty pound horizontal thrust at any point.

(3) Wood guide rails shall be at least one and one-half inch by one and one-half inch vertical grain fir or equivalent and shall not vary more than three-sixteenth inch in thickness on the sides to which the brakes make contact. All joints shall be kept smooth and even. [§ IV, Rules 4.010-4.030, effective 5/15/64.]

**WAC 296-84-040 Buffer springs and overtravel of car.** Substantial spring buffers shall be installed below

the car and also below the counterweight on all new installations. All installations shall have spring buffers attached below the counterweight. The hoisting rope shall be of such length that the car platform will not be more than eight inches above the top landing when the counterweight buffer spring is fully compressed. [§ V, Rule 5.010, effective 5/15/64.]

**WAC 296-84-045 Car specifications.** (1) The car shall be built to the following specifications:

(a) The car platform shall be not greater than thirty inches on either side, (6.25 square feet area).

(b) The car frame and platform shall be of steel or sound seasoned wood construction and be designed with a factor of safety of not less than four for metal and six for wood, based on a maximum capacity of two hundred fifty pounds.

(c) All frame members shall be securely bolted, riveted or welded and braced. If bolted, lock washers or lock nuts must be used.

(d) Where wooden frame members are bolted, large washers or metal plates shall be used to minimize the possibility of splitting or cracking the wood.

(2) The sides of the car shall be enclosed by a minimum of two safety guard rails with the top rail not less than thirty-six inches nor more than forty-two inches from the car floor and with the intermediate bar bisecting the height. Rails shall sustain a horizontal thrust of two hundred fifty pounds. If solid material is used it shall be smooth surfaced and not less than one-half inch thickness, if wood; and not less than sixteen gauge thickness, if steel; and shall be constructed from the car floor to a height of not less than three feet.

(a) Where the hoistway is not enclosed on the entrance side of the car, a self-locking or drop bar positive stop type car gate must be provided. Car gate may be of the folding type, horizontally swung, provided it swings into the car enclosure. Drop bar gates must be of two bar construction, parallelogram type, and conform to requirements specified for car guard rails.

(b) The car gate shall drop into locking slots or be provided with a positive locking type latch capable of withstanding two hundred fifty pounds horizontal thrust.

(3) Every car shall have a substantial protective top. The front half may be hinged. The protective top may be made from number 9 U.S. wire gauge screen, 11 gauge expanded metal, 14 gauge sheet steel or three-quarter inch or heavier plywood. If made of wire screen or metal, the openings shall reject a one-half inch diameter ball.

(4) Every car shall have a proper rack to hold the balance weights.

(5) A sign bearing the following information shall be conspicuously posted within the car:

(a) Maximum capacity one person

(b) Total load limit in pounds

(c) For authorized personnel use only.

(6) Every car shall be equipped with a spring loaded foot brake which:

(a) Will operate independently of the car safeties.

(b) Will operate in both directions and will stop and hold the car and its load.

(c) Will lock the car in its position automatically whenever the operator releases the pressure on the foot pedal.

(7) Every car shall be equipped with a car safety device which will:

(a) Apply to the sides of the main guide rails.

(b) Stop and hold the car and its load immediately when the hoisting rope breaks.

(8) Every car shall have a minimum clearance of six feet six inches from the top of the car platform to the bottom edge of the crosshead or any other obstruction.

(9) A tool box with minimum dimensions of four inches wide by sixteen inches long by three inches in depth shall be provided and firmly attached to the car structure. [§ VI, Rules 6.010-6.090, effective 5/15/64.]

**WAC 296-84-050 Counterweights.** (1) The assembly of sectional counterweight shall conform to the following requirements:

(a) Rectangular type shall be held together by at least two tie rods one-half inch in diameter fastened with lock washers and double nuts or other approved means.

(b) One three-quarter inch rod may be used to hold the sections of a round counterweight together. Any additional sections or weights shall be secured by an approved means.

(2) The eye bolt for the rope hitch shall be attached to the counterweight in a manner that will prevent the eye bolt from coming loose. The eye of eye bolts shall be welded to prevent them from opening.

(3) Every counterweight runway shall be enclosed with substantial unperforated material for its full distance of travel. Inspection openings shall be provided at either the top or bottom of the counterweight runway. These openings shall be substantially covered at all times except when actually engaged in inspection of counterweight fastenings.

(4) Workmen shall load the counterweight for the proper balance of the heaviest person using the elevator and others shall use compensating weights, which shall be available, to maintain a balance suitable for their needs.

(5) On elevators with travel of seventy-five feet or more, a compensating chain or cable shall be installed to maintain the proper balance of the counterweight to the car and load in all positions. [§ VII, Rules 7.010-7.050, effective 5/15/64.]

**WAC 296-84-055 Sheaves.** The minimum sheave diameter shall be forty times the diameter of the ropes used, i.e., fifteen inch for three-eighths inch rope. [§ VIII, Rule 8.010, effective 5/15/64.]

**WAC 296-84-060 Hoisting ropes.** (1) Hoisting rope shall be of good grade traction elevator wire rope, and shall:

(a) Be not less than three-eighths inches in diameter.

(b) Provide a factor of safety of five based on the maximum weight supported.

(c) Be of such length to prevent the counterweight from striking the overhead structure when car is at bottom landing, and prevent the car from striking the overhead before the counterweight is at its lower limit of travel.

(d) Be fastened at each end by at least three or more clamps, the "U" of the clamp bearing on the dead end of the rope.

(e) Where passed around a metal or other object less than three times the diameter of the cable, have a thimble of the correct size inserted in the eye.

(2) Approved sockets or fittings with the wire properly turned back and babbitted may be used in place of clamps noted in subsection (1)(d) above. [§ IX, Rules 9.010-9.020, effective 5/15/64.]

**WAC 296-84-065 Operating rope.** The operating rope shall be of soft hemp or cotton at least three-quarter inch in diameter, and be securely fastened at each end and shall be in proper vertical alignment to prevent bending or cutting where it passes through the openings in the platform or the protective top of the car. [§ X, Rule 10.010, effective 5/15/64.]

**WAC 296-84-070 Lighting.** Adequate lighting shall be provided at each landing and in the shaftway. [§ XI, Rule 11.010, effective 5/15/64.]

**WAC 296-84-075 Overhead supports.** The overhead supporting members shall be designed, based upon impact loads, with a factor of safety of: (1) Nine if wood;

(2) Five if steel. [§ XII, Rule 12.010, effective 5/15/64.]

**WAC 296-84-080 General requirements.** (1) No person other than an employee or duly authorized person shall ride or be permitted to ride in the car.

(2) Escape ladders shall be installed to extend the full length of the hoistway and shall be located in a position whereby, in an emergency, a person can safely transfer from the car platform to the ladder. "IMPAIRED CLEARANCE" sign to be posted at bottom of ladders when face of ladder is less than thirty inches from any structure.

(3) An automatic safety dog or device shall be installed at the bottom landing which will prevent the car from leaving the landing until manually released by the operator.

(4) A fire extinguisher in proper working condition shall be attached to the car structure. [§ XIII, Rules 13.010-13.040, effective 5/15/64.]

## Chapter 296-85 WAC

### MECHANIZED PARKING GARAGE EQUIPMENT

WAC

296-85-005 National code adopted.

**WAC 296-85-005 National code adopted.** USASI Standard A113.1-1964 "Safety Code for Mechanized Parking Garage Equipment." [Filed 12/29/67, effective 2/1/68.]

**Reviser's note:** A part of Order 70-11, filed 9/18/70, effective date 10/21/70, states that the administration of WAC 296-85-005, Safety Code for Mechanized Parking Garage Equipment shall be under the jurisdiction of the division of building and construction safety inspection services of the department of labor and industries.

**Reviser's note:** The A.S.A. publications are published by the American Society of Mechanical Engineers, United Engineering Center, 345, East 47th Street, New York, New York 10017.

**Chapter 296-86 WAC**

**REGULATIONS AND FEES FOR FREIGHT AND PASSENGER ELEVATORS, MANLIFTS, DUMBWAITERS, ESCALATORS, MOVING WALKS, AUTOMOBILE PARKING ELEVATORS, AND PERSONNEL ELEVATORS**

WAC	
296-86-010	Permits for construction, alteration, relocation of installations.
296-86-020	Construction and alteration fee.
296-86-030	Installation fee for personnel elevators, material hoists, and cantilever hoists.
296-86-040	Submission of plans for new installations.
296-86-050	Fee for checking plans for new installations.
296-86-060	Annual operating permit fees.
296-86-070	Supplemental inspections.
296-86-075	Reinspection fees.
296-86-080	Fee for inspection of regular elevators being used as temporary personnel elevators.

**WAC 296-86-010 Permits for construction, alteration, relocation of installations.** Before a permit is issued for the construction, alteration, relocation, or installation of a conveyance subject to the provisions of this act, application for such a permit shall be made to the department accompanied by the fee set forth in the appropriate fee schedule in this chapter. No work shall be done until the permit has been issued. Construction and alteration permits shall be valid for one year from date of issue. Renewals may be obtained for one dollar for each permit. No permit or fee shall be required for ordering repairs and replacement of damaged, broken, or worn parts necessary for normal maintenance and no permit or fee shall be required for any conveyance exempted by RCW 70.87.200. [Statutory Authority: RCW 70.87.030. 82-12-005 (Order 82-18), § 296-86-010, filed 5/20/82; Order 70-5, § 296-86-010, filed 6/2/70.]

**WAC 296-86-020 Construction and alteration fee.** The construction and alteration fee schedule shall be:

TOTAL COST	FEE
\$250.00 to and including \$1,000	\$ 25.00
\$1,001 to and including \$15,000	
For first \$1,001	35.00
For each additional \$1,000 or fraction	7.00
\$15,001 to and including \$100,000	
For first \$15,001	133.00
For each additional \$1,000 or fraction	5.00

TOTAL COST	FEE
Over \$100,001	
For first \$100,001	558.00
For each additional \$1,000 or fraction	4.00

[Statutory Authority: RCW 70.87.030. 82-12-005 (Order 82-18), § 296-86-020, filed 5/20/82; Order 70-5, § 296-86-020, filed 6/2/70.]

**WAC 296-86-030 Installation fee for personnel elevators, material hoists, and cantilever hoists.** The fee for the installation of each personnel elevator, material hoist, and cantilever hoist shall be \$60.00. [Statutory Authority: RCW 70.87.030. 82-12-005 (Order 82-18), § 296-86-030, filed 5/20/82; Order 76-37, § 296-86-030, filed 12/3/76; Order 74-36, § 296-86-030, filed 10/1/74; Order 70-11, § 296-86-030, filed 9/18/70, effective 10/21/70; Order 70-5, § 296-86-030, filed 6/2/70.]

**WAC 296-86-040 Submission of plans for new installations.** Plans shall be submitted in duplicate to the elevator section prior to construction for approval in accordance with the American Standard Safety Code for Elevators, Dumbwaiters, Escalators and Moving Walks A 17.1-1981. [Statutory Authority: RCW 70.87.030. 82-12-005 (Order 82-18), § 296-86-040, filed 5/20/82; Order 74-36, § 296-86-040, filed 10/1/74; Order 70-5, § 296-86-040, filed 6/2/70.]

**WAC 296-86-050 Fee for checking plans for new installations.** The fee for checking plans shall be \$20.00 for each installation. [Order 70-5, § 296-86-050, filed 6/2/70.]

**WAC 296-86-060 Annual operating permit fees.** Fees for annual operation shall be paid in accordance with the following schedule and no operating permit shall be issued for the operation of a conveyance until such fees have been received.

CONVEYANCE	ANNUAL FEE
Each passenger elevator	\$ 60.00
Each freight elevator	60.00
Each sidewalk freight elevator	60.00
Each hand power freight elevator	20.00
Each hand power manlift	26.00
Each incline lift	60.00
Each belt manlift	60.00
Each boat launching elevator	60.00
Each auto parking elevator	60.00
Each escalator	52.00
Each moving walk	52.00
Each dumbwaiter	20.00
Each people mover	45.00
Each stair lift	13.00
Each wheel chair lift	13.00
Each personnel elevator	60.00
Each material hoist	60.00
Each cantilever hoist	60.00

[Statutory Authority: RCW 70.87.030. 82-12-005 (Order 82-18), § 296-86-060, filed 5/20/82; Order 76-37, § 296-86-060, filed 12/3/76; Order 74-36, § 296-86-060, filed 10/1/74; Order 71-16, § 296-86-060, filed 12/7/71; Order 70-11, § 296-86-060, filed 9/18/70, effective 10/22/70; Order 70-5, § 296-86-060, filed 6/2/70.]

**WAC 296-86-070 Supplemental inspections.** Any person, firm, corporation or governmental agency may secure supplemental inspections of conveyances by paying to the department a fee of \$235.00 per day plus the standard per diem and mileage allowed by the department to its inspectors. [Statutory Authority: RCW 70.87.030. 82-12-005 (Order 82-18), § 296-86-070, filed 5/20/82; Order 76-37, § 296-86-070, filed 12/3/76; Order 74-36, § 296-86-070, filed 10/1/74; Order 70-11, § 296-86-070, filed 9/18/70, effective 10/21/70.]

**WAC 296-86-075 Reinspection fees.** No fee shall be charged for the yearly inspection or for the initial inspection after installation or alteration. If, however, the conveyance does not meet the requirements of the department, and if another inspection is required to confirm compliance by the person having control over the conveyance with the regulations of the department, then an inspection fee of \$35 per conveyance to be inspected shall be charged for the reinspection, and if there is still failure to comply with the rules of the department, a fee of \$40 shall be charged for every conveyance requiring a further reinspection. These fees are in addition to the fees charged under WAC 296-86-020 and must be paid before issuance of an operating permit. The department may waive the reinspection fee where, through no fault of the requesting person or agency, or of the person or agency responsible for payment of the reinspection fee, reinspection is not possible; or for other reasons that in justice or equity obviate the necessity of payment of the reinspection fee. [Statutory Authority: RCW 70.87.030. 82-12-005 (Order 82-18), § 296-86-075, filed 5/20/82; Order 76-37, § 296-86-075, filed 12/3/76; Order 72-2, § 296-86-075, filed 2/25/72.]

**WAC 296-86-080 Fee for inspection of regular elevators being used as temporary personnel elevators.** The fee for the inspection and testing of regular elevators for use as temporary personnel elevators shall be \$60.00. [Statutory Authority: RCW 70.87.030. 82-12-005 (Order 82-18), § 296-86-080, filed 5/20/82; Order 76-37, § 296-86-080, filed 12/3/76; Order 70-11, § 296-86-080, filed 9/18/70, effective 10/21/70.]

### Chapter 296-87 WAC

#### SAFETY REQUIREMENTS FOR WORKMEN'S CONSTRUCTION ELEVATORS

WAC	
296-87-010	Hoistway construction.
296-87-020	Guide rail brackets and building supports.
296-87-030	Hoistway enclosure.
296-87-040	Hoistway doors.

296-87-050	Landing platform.
296-87-060	Car operating and terminal stopping devices and electrical protective devices.
296-87-070	Car safeties.
296-87-080	Ropes, rope connections, data and record.
296-87-090	Car frames and platforms.
296-87-100	Capacity posting.
296-87-110	Platform size.
296-87-120	Maintenance inspection and test periods.
296-87-130	Car and counterweight buffers.

**WAC 296-87-010 Hoistway construction.** (1) The hoistway construction forming the supports for the machinery and guide rails shall be designed and installed to support the loads specified. Overhead beams, floors, and their supports shall be designed for not less than the sum of the following loads:

(a) The load resting on the beams and supports which shall include the complete weight of the machine sheaves, controller, governor and any other equipment together with that portion, if any, of the machine room floor supported thereon.

(b) Twice the sum of the tensions in all wire ropes passing over sheaves or drums supported by the beams with rated load in the car.

(2) Foundations, beams and floors for machinery and sheaves not located directly over the hoistway. For machines and sheaves located below or at the sides of the hoistway, the foundation for the machine and sheave beams and their supports shall be designed to withstand the following loads:

(a) The foundation shall support the total weight of the machine, sheaves and other equipment, and the floor, if any.

(b) The sheave beams and the foundation bolts shall withstand twice the vertical component of the tensions in all hoisting ropes passing over sheaves or drums on the foundation or beams, less the weight of the machine or sheaves.

(c) The sheave beams and the foundation bolts shall withstand twice the horizontal component, if any, of the tensions in all hoisting ropes passing over sheaves or drums on the foundation or beams.

(d) The foundation shall withstand twice the overturning moment, if any, developed by the tension in all the hoisting ropes passing over sheaves or drums on the foundation or beams. [Order 70-11, § 296-87-010, filed 9/18/70, effective 10/21/70.]

**WAC 296-87-020 Guide rail brackets and building supports.** The building construction forming the supports for the guide rails and guide rail brackets shall be of such a design as to:

(1) Safely withstand the application of the car or counterweight safety when stopping the car and its rated load or the counterweight.

(2) Withstand the forces imposed by the class of loading. Where necessary the building construction shall be reinforced to provide adequate support for the guide rails.

(3) Each elevator tower shall be anchored to the building at not to exceed thirty foot vertical intervals, or if guy wires are used, such guys shall be not less than

one-half inch wire rope and terminal fastening be tagged PERSONNEL ELEVATOR—DO NOT REMOVE. [Order 70-11, § 296-87-020, filed 9/18/70, effective 10/21/70.]

**WAC 296-87-030 Hoistway enclosure.** (1) Hoistways or towers located inside of buildings shall be enclosed to the full height and width on all sides where no entrances occur, and shall be constructed as specified in WAC 296-87-030(3).

(2) Hoistway or towers located outside or adjacent to buildings shall be enclosed on all four sides at their lowest landing to a height of ten feet, and to a height of ten feet throughout the entire height where entrances occur, and shall be constructed as specified in WAC 296-87-030(3).

(3) Hoistway enclosures shall be constructed of solid or openwork material conforming to the following requirements:

(a) Openwork material shall reject a ball one and one-half inches in diameter.

(b) Metal enclosures shall be made of wire at least No. 16 steel wire gage or of expanded metal at least No. 16 U.S. gage.

(c) Wood enclosures shall be installed without openings.

(d) Hoistway enclosures shall be so supported and braced that when subjected to a pressure of one hundred pounds applied horizontally at any point the deflection shall not exceed one inch. [Order 70-11, § 296-87-030, filed 9/18/70, effective 10/21/70.]

**WAC 296-87-040 Hoistway doors.** (1) For hoistways or towers located inside of buildings the hoistway door shall guard the full height and width of the openings, and shall be so constructed as to withstand one hundred pounds applied at right angles to the center of the door without causing the door to break or be permanently deformed. Each hoistway door shall be equipped with an approved combination of electric contact and mechanical lock.

(2) For hoistways or towers located outside of buildings the hoistway door shall be not less than six feet six inches in height and shall protect the full width of the opening and shall be of strength and design conforming to the hoistway construction. Each hoistway door shall be equipped with an approved combination of electric contact and mechanical lock. [Order 70-11, § 296-87-040, filed 9/18/70, effective 10/21/70.]

**WAC 296-87-050 Landing platform.** The landing platform from all hoistways or towers to the building shall be constructed to provide a safety factor of three based on the capacity of the elevator and shall be provided with adequate handrails. [Order 70-11, § 296-87-050, filed 9/18/70, effective 10/21/70.]

**WAC 296-87-060 Car operating and terminal stopping devices and electrical protective devices.** (1) The operation shall be by car switch or constant pressure push button and shall be so arranged that the elevator car can

be operated from within the car only. It shall also be equipped with an emergency stop switch located within or adjacent to the car operating panel.

(2) The travel control cable shall be attached from within the hoistway and securely fastened to the car. The control cable can be of the suspended type, retractable type, or coiled in a suitable container at the base of the tower.

(3) Terminal and final limits switches shall be installed at the upper and lower landings. These may be mounted on the car or in the hoistway operated by cams attached to the car or in the hoistway.

(4) Phase reversal and failure protection. Elevators having polyphase alternating current power supply shall be provided with means to prevent the starting of the elevator motor if,

(a) The phase rotation is in the wrong direction, or

(b) There is a failure of any phase.

(5) Main Line Contactor. A contactor shall be installed in addition to the direction switches which will cut off main line current to the motor and apply the brake when any of the final terminal stopping devices operate.

(6) A fused disconnect switch of adequate size shall be installed and connected into the power supply line to the controller and be accessible at the lower terminal landing.

(7) Where the hoistway is exposed to the weather the electrical control equipment, fixtures and switches shall be weatherproof.

(8) Machinery and control equipment shall be protected from the weather, falling debris and from access by unauthorized persons. Spaces containing elevator driving machine and control equipment shall be provided with adequate lighting.

(9) All electric elevators shall be equipped with effective brakes that are released electrically and applied by springs. The brakes shall be designed to have a capacity sufficient to hold the car at rest with its rated load, and shall be mounted on the main driving shaft of the machine.

(10) The maximum speed allowable shall be three hundred feet per minute. [Order 70-11, § 296-87-060, filed 9/18/70, effective 10/21/70.]

**WAC 296-87-070 Car safeties.** (1) The car of every elevator shall be provided with car safeties. The safety device shall be capable of stopping and sustaining the entire car with its rated load in the event of a free fall or overspeed.

(2) A speed governor shall be installed on all elevators and shall be so designed that it will actuate the car safeties before the car attains a speed of one hundred and forty percent of the rated speed. If a governor rope is used, it shall be not less than three-eighths inch in diameter and shall be of iron or steel material.

(3) There shall be a switch provided on the car actuated by the setting of the safeties that will remove the electric power from the driving machine motor and brake. [Order 70-11, § 296-87-070, filed 9/18/70, effective 10/21/70.]

**WAC 296-87-080 Ropes, rope connections, data and record.** (1) Elevator cars shall be of the tractor drive type suspended by steel wire ropes or approved rack and gear. If wire ropes are used, only iron (low carbon steel) or steel wire ropes with fibre cores, having the commercial classification of "elevator wire rope," shall be used for the suspension of elevator cars and for the suspension of counterweights.

(2) The minimum number of hoisting ropes used shall be three.

(3) Hoisting and counterweight wire ropes may be attached to cars and counterweights by means of approved clamps and wire rope thimbles or by approved special fastening devices. Where clamps are used, the fastening shall conform to the following:

(a) Clamps shall not be of the U-bolt type.

(b) Both members of the clamps shall be provided with seats conforming to the lay of the rope.

(c) Clamps shall be drop forgings.

(d) The ropes to be clamped shall be passed around metal thimbles having not less than the following dimensions and fastened by at least the number of clamps specified with not less than the spacing indicated in the following table.

Dia. of Wire Rope	Inside Width of Thimble	Length of Thimble In.	Min. No. of Clamps	Min. Spacing of Clamps
1/2	1 1/2	2 3/4	3	3
5/8	1 3/4	3 1/4	3	3 3/4
3/4	2	3 3/4	4	4 1/2
7/8	2 1/4	4 1/4	4	5 1/4
1	2 1/2	4 1/2	4	6

[Order 70-11, § 296-87-080, filed 9/18/70, effective 10/21/70.]

**WAC 296-87-090 Car frames and platforms.** (1) Every elevator suspended by wire ropes shall have a car frame consisting of a crosshead, uprights (stiles) and a plank located approximately at the middle of the car platform. Car frames suspended by wire ropes or cantilevered rack and gear shall be guided on each guide rail by upper and lower guiding members attached to the frame. The frame and its guiding member shall be designed to withstand the forces resulting under the loading conditions for which the elevator is designed.

(2) Every elevator car shall have a platform consisting of a nonperforated floor attached to a platform frame supported by the car frame and extending over the entire area within the car enclosure. The platform frame members and the floor shall be designed to withstand the forces developed under the loading conditions for which the elevator is designed and installed.

(3) Materials used in the construction of car frames and platforms shall be made of steel. The platform stringers shall be made of steel or of wood.

(4) The car shall be completely enclosed with metal except where entrances occur. The car shall have a top sufficiently strong to support three hundred pounds applied at any point.

[Title 296 WAC—p 1430]

(5) A door or gate shall be provided at each entrance of the car. Each door or gate shall be equipped with an electric contact, and for cars equipped with doors away from the building or structure, a positive mechanical type lock shall be installed to prevent opening except at designated landings.

(6) Doors and gates and their guides, guide shoes, tracks, and hangers shall be so designed, constructed, and installed that when the fully closed door or gate is subjected to a force of seventy-five pounds applied on an area of one foot square at right angles to and approximately at the center of the door or gate, it will not deflect beyond the line of the car sill. When subjected to a force of two hundred and fifty pounds, similarly applied, doors and gates shall not break nor be permanently deformed, and shall not be displaced from their guides or tracks.

(7) Gates shall be constructed of metal and shall be of a design which will reject a ball two inches in diameter.

(8) Doors or gates shall guard the full width and height of the car entrance opening. [Order 70-11, § 296-87-090, filed 9/18/70, effective 10/21/70.]

**WAC 296-87-100 Capacity posting.** Every elevator shall be provided with a capacity plate and a data plate permanently and securely fastened in place. Capacity plates shall be located in a conspicuous place inside the car. Data plates shall be attached to the car crosshead. The height of the letters and figures shall be not less than one inch for capacity plates and one inch for data plates. Capacity plates shall indicate the rated load of the elevator in pounds. [Order 70-11, § 296-87-100, filed 9/18/70, effective 10/21/70.]

**WAC 296-87-110 Platform size.** (1) Elevators shall not exceed five thousand pounds capacity and shall not exceed a speed of three hundred feet per minute, unless specifically authorized by the department of labor and industries for each installation.

(2) Maximum inside net platform areas for the various rated loads.

Rated Load (lbs.)	Square Feet
1,000	13.25
1,200	15.6
1,500	18.9
1,800	22.1
2,000	24.2
2,500	29.1
3,000	33.7
3,500	38.0
4,000	42.2
5,000	50.0

[Order 70-11, § 296-87-110, filed 9/18/70, effective 10/21/70.]

**WAC 296-87-120 Maintenance inspection and test periods.** (1) A full load overspeed safety test shall be performed before the elevator is put into operation and

each time the elevator is moved to a new location a full load overspeed test and inspection shall be mandatory and approved by a state inspector.

(2) Periodic maintenance shall be made by an experienced elevator mechanic at not more than thirty days, or thirty shifts, whichever occurs first. Once each shift the equipment shall be inspected by the operator to determine that the equipment is in a proper operating condition. The erection and dismantling of any personnel elevator shall be under the direct supervision of a person experienced in this type of work. [Order 70-11, § 296-87-120, filed 9/18/70, effective 10/21/70.]

**WAC 296-87-130 Car and counterweight buffers.** An oil or spring buffer shall be provided for the car and counterweights except cars in excess of two hundred feet per minute shall require oil buffers. [Order 70-11, § 296-87-130, filed 9/18/70, effective 10/21/70.]

### Chapter 296-88 WAC SAFETY RULES FOR GRAIN ELEVATOR OPERATIONS

#### WAC

296-88-001	Foreword.
296-88-010	Scope and application.
296-88-020	Purpose.
296-88-030	General requirements.
296-88-040	Entering storage type bins.
296-88-050	Entering silo type bins.
296-88-060	Inspection of shovel equipment.
296-88-070	Railroad car safety.
296-88-080	Manlifts.
296-88-090	Fumigation.
296-88-100	Insecticides and disinfectants.
296-88-110	Structural requirements and safeguards.
296-88-120	Reference material.
296-88-130	Glossary.

**WAC 296-88-001 Foreword.** (1) These regulations are adopted by the state of Washington, department of labor and industries in accordance with applicable statute requirements and provisions. A public hearing was held in Olympia, Washington, on November 24, 1964.

(2) The effective date of these regulations is January 2, 1965. [Foreword, effective 1/2/65.]

**WAC 296-88-010 Scope and application.** These regulations shall apply to those persons employed in grain handling, storage and related employment in conjunction with grain elevator operations, where applicable and when employment is governed by the provisions of the state of Washington industrial insurance and medical aid acts (Title 51 RCW). [Rules (part), effective 1/2/65.]

**WAC 296-88-020 Purpose.** These regulations are to be considered minimum safety requirements for this type of operation and shall be used as a guide by employers and employees to adopt such safe means, methods and processes which will assist in the reduction of injuries and accidents within this type of operation. [Rules (part), effective 1/2/65.]

**WAC 296-88-030 General requirements.** (1) **Conveyor crossovers.** Workmen shall cross moving belts or open conveyors only at bridges or crossovers constructed for that purpose.

(2) Starting of conveyor belts. Conveyor belts shall not be started until all persons are in the clear. When the full length of the belts cannot be observed by the operator, an adequate warning system shall be employed and the operator shall give a timely warning prior to the activation of such belts.

(3) **Lockout of electrical switches.** A lockout system shall be used to lock control switches in the "off" position when repair work or adjustments are being made to machinery or equipment except when motion is required for adjustment. When motion is required, it shall be started only by the direction of the person making such adjustments. Locks shall be removed only by the person who placed the lock or by someone to whom he has given permission to remove the lock.

(4) **Smoking areas.** Smoking shall be done only at designated locations on the premises and "no smoking" signs shall be conspicuously posted about the premises.

(5) **Welding and burning.** Welding and burning shall, whenever possible, be done in a designated area or room where such work can be done safely. Permission to weld or burn outside the designated area must be received from the responsible supervisor of that area. The supervisor shall, to the best of his ability, determine that the area is free of fire or explosion hazard and shall require that safe methods and procedures be used to accomplish the work intended.

(6) **Floor openings.** In any area and on any surface where workmen work or use as a walkway surface, all floor openings shall be kept covered when not in use or shall be guarded by a standard safeguard on all exposed sides.

(7) **Bin control valves.** The control valves for all bins shall be placed in such a manner and position that they are easily and readily accessible.

(8) **Mobile equipment.** Mobile equipment used for raising and dumping grain into hoppers or bins shall be equipped with windshield and adequate windshield wiper. This rule shall not apply to machines used exclusively to push grain into floor openings.

(9) **Sweeping around conveyor belts.** Workmen shall not be allowed or required to sweep, scrape or perform similar work under moving conveyor belts unless adequate clearance is provided so that work can be performed without contact of the equipment or workmen with the belt.

(10) **Working alone.** Workmen shall not be required to perform extrahazardous work in isolated areas where they are beyond the visible or audible range of other workmen except where procedures are established where the workman is in reasonably frequent contact with others or when a reporting procedure has been prearranged.

(11) **Working in moving grain.** Workmen shall not work in moving grain where there is a possibility of being covered by sliding or shifting of the grain or where they may be pulled down or covered by the movement of

grain into or out of bins or structures. [§ I, Rules 1.010—1.110, effective 1/2/65.]

**WAC 296-88-040 Entering storage type bins.** Any workman preparing to enter a bin at the top shall first inspect such bin to ascertain that it is safe and no grain is hung up. When entering, the workman shall wear an approved safety belt with lifeline attached. At least one other person shall tend the lifeline and observe the person in the bin constantly. [§ II, Rule 2.010, effective 1/2/65.]

**WAC 296-88-050 Entering silo type bins.** (1) **Notification of bin entry and clearing.** The weighman and basementmen shall be notified by the supervisor that a workman is entering a bin prior to his entry and shall inform the person entering that they have been notified. No grain shall be directed into such bin until they are again notified that the bin has been cleared of workmen.

(2) **Setting of distribution equipment.** On bins with movable or selective distribution systems the turnheads, spouts and tripper shall be set for bins other than those in which workmen are working.

(3) **Bins with fixed spouts.** When workmen are required to enter bins with fixed distribution or fill spouts, the equipment carrying grain to such bin shall be locked or tagged out or some effective means provided to insure that no grain will be directed into such bin while a person is in the bin. [§ III, Rules 3.010—3.030, effective 1/2/65.]

**WAC 296-88-060 Inspection of shovel equipment.** (1) **Inspection of equipment.** Before starting shoveling operations, all equipment such as eye bolts, slings, sheaves and clevises shall be inspected by a competent person.

(2) **Make adjustments after power is off on shovel.** Power must be completely shut off on shovels before any adjustments are made to the shovel, cables, slings, sheaves or associated equipment.

(3) **Adjustment of equipment in hopper area.** The hopper must be closed or the belt connected to the operation positively stopped prior to the adjusting of shovels, cables, slings or sheaves in the hopper area. [§ IV, Rules 4.010—4.030, effective 1/2/65.]

**WAC 296-88-070 Railroad car safety.** (1) **Railroad car doors.** The workman shall inspect the railroad car door to determine that it is properly tracked prior to opening or closing the door. Bars longer than thirty-six inches shall not be used to open stuck doors. Nylon or plastic material shall not be used to pull doors open. When a mechanical means is used to open stuck doors, workmen shall stand in clear in case door should fall off the track.

(2) **Approach ladders properly.** Workmen shall not jump to or from the ladders of railroad cars.

(3) **Loading bulk grain in cars.** Workmen shall not be allowed in railroad cars while bulk grain is pouring into the cars except to turn spouts or trim the car and then

only when they are wearing proper protective equipment and being observed by another workman.

(4) **Railroad car pullers.** The hook of a car puller shall be placed on the frame of the car. Placing the hook on braces or on the ladder is prohibited. The use of plastic, nylon or synthetic ropes for pulling cars is prohibited.

(5) **Blocks for railroad cars.** When cars must be blocked, a car block with a handle or lumber thirty-six inches long or longer shall be used.

(6) **Placing hooks on railroad cars.** Car puller hooks shall not be placed on a railroad car while the car is moving. The hook shall not be attached to the car while the hook is being moved in the forward direction by the car puller.

(7) **Find safe place to stand.** Workmen shall always be alert to the possibility of the cable or hook breaking when a car is being pulled, and shall position themselves where there is the least chance of being struck by the hook or cable, if either should break.

(8) **Warning system associated with moving of cars.** A clearly audible warning system shall be employed when cars are being moved by car pullers or locomotives, and when the person responsible for the moving does not have assurance that the area is clear, and it is safe to move the car or cars. [§ V, Rules 5.010—5.080, effective 1/2/65.]

**WAC 296-88-080 Manlifts.** Installation, operation, use and maintenance of manlifts shall be in accordance with the safety standards for manlifts as adopted by the safety division, department of labor and industries. [See chapters 296-82, 296-83 and 296-84 WAC.] [§ VI, Rule 6.010, effective 1/2/65.]

**WAC 296-88-090 Fumigation.\*** (1) **Training and instruction required for applicator.** Only properly trained and instructed personnel shall handle and apply fumigant.

(2) **Posting of fumigation notice in advance.** No person shall space fumigate any building without giving at least twenty-four hours written posted notice.

(3) **Where notices required to be posted.** Notices shall be posted at all doors and any other entrances or exits of the building to be space fumigated.

(4) **Warning notices.** Notices warning persons that an area or building is being space fumigated shall be of red letters of at least two inches high on a white background. The notice shall also include the type of fumigant to be used and approximate time the space fumigation process will commence.

(5) **Fumigation of silo type bins.** No person shall fumigate any silo type bin without first sealing the lower end, installing the proper warning sign on the grain control outlet and notifying all workmen who work below such bin. After the fumigants have been applied and the top sealed, a warning notice shall also be posted at the top entrance.

(6) **Examine area prior to fumigation.** The fumigator shall immediately prior to fumigation, cause a careful examination to be made of all parts of the place to be

fumigated, and the surrounding area endangered by the fumigation, to see that no persons remain therein.

(7) **Building or structure to be sealed.** All cracks, crevices, openings and apertures in the walls, ceilings and floors shall be sealed in such manner as to confine the fumigant exclusively to the building, tank or spaces.

(8) **Fumigator to declare area safe.** All buildings, tanks or places that have been fumigated shall be securely sealed and locked. Prior to the opening of any area for normal work, a person who has been properly trained and instructed shall investigate, test and declare the area safe for entry.

(9) **Safe methods of handling fumigated grain.** When grain has been fumigated, it must be aerated or equally effective means must be taken to assure that no workman will be exposed to a concentration of the material which will cause him harm.

(10) **Protective equipment and clothing.** While fumigating or working in a fumigated area, every person shall wear an approved type of gas mask and clothing suitable for protection from the particular gas or fumes used, until a person who is properly trained and instructed, declares the area is safe for normal entry.

(11) **Applying liquid fumigants to moving grain.** The application of liquid fumigants to grain being carried on belts, conveyors or legs, is prohibited where other workmen are in the vicinity or within a confined space that workmen may be working in or passing through. [§ VII, Rules 7.010—7.110, effective 1/2/65.]

\*NOTE: Where the requirements of this section cannot be strictly adhered to in wood constructed crib elevators, other methods shall be used which will afford equal safety protection for the workmen.

**WAC 296-88-100 Insecticides and disinfectants.** (1) **Examine area and warn of danger.** Persons applying insecticides and disinfectants shall cause a careful examination of all areas to be affected and inform or warn any persons of the danger, immediately prior to the commencement of the operation.

(2) **Avoid skin contact.** Persons shall not allow insecticides or disinfectants to come in contact with their skin. [§ VIII, Rules 8.010 and 8.020, effective 1/2/65.]

**WAC 296-88-110 Structural requirements and safeguards.** (1) **Walkways.** All walkways shall be constructed of a minimum of two inch by ten inch planks or materials of equivalent strength and shall be at least twenty inches wide. Planks shall be supported at least every eight feet, and if other materials are used, they shall be adequately supported. When walkways are elevated more than four feet above the ground or floor, standard guardrails and toeboards shall be installed.

(2) **Escape ladder.** All grain elevators shall have an outside escape ladder installed. It shall extend from the top of the structure to within ten feet of the ground. Such ladder shall be built in accordance with the requirements outlined in the general safety standards [chapter 296-25 WAC]. A safe access to such ladder shall be provided in the form of walkways, landing or whatever is needed.

(3) **Deluge shower.** Deluge type showers shall be provided in the immediate vicinity where practical, when caustics, corrosives or skin irritants are being used. When showers are not practical, first aid materials shall be available which will counteract the action of the materials being used.

(4) **Flames or heating elements.** Exposed element type electric heaters, open flame heaters, hot plates or similar type equipment shall not be used in areas where dust or other materials may cause a fire or explosion.

(5) **Guards for portable augers.** All portable augers to which workmen may be exposed to the hazards created by the moving parts, shall be guarded with a standard safeguard.

(6) **Safety belts and lifelines.** Workmen shall be provided with and shall wear safety belts and lifelines when working from suspended scaffolds or bosuns chairs at a height or more than eight feet.

(7) **Removal of injured workman.** A safe means shall be provided for the removal of an injured workman from all elevated areas of the structure. If possible, this shall be accomplished by the use of stairways, elevators or carriers. If a doubt arises over whether a certain method is safe, the department may require a demonstration and make a decision based upon their observations. [§ IX, Rules 9.010—9.070, effective 1/2/65.]

**WAC 296-88-120 Reference material.** Any person handling or using fumigants, insecticides or disinfectants shall refer to the warning labels and instructions given for such material as included in Appendix 3 of "Standards Relating to Precautionary Labeling of Hazardous Substances Used in Places of Employment." [See WAC 296-64-400 et seq.] [Rules (part), effective 1/2/65.]

**WAC 296-88-130 Glossary.** (1) **Fumigant.** The term "fumigant" means and includes any substance which by itself or in combination with any other substance emits or liberates a gas, fume or vapor used for the destruction or control of insects, fungi, vermin, germs, rodents, or other pests, and is distinguished from insecticides and disinfectants which are essentially effective in the solid or liquid phases.

(2) **Insecticides and disinfectants.** The terms "insecticides and disinfectants" are essentially effective in the solid or liquid form for the destruction or control of insects, fungi, vermin, germs, rodents or other pests. [Rules (part), effective 1/2/65.]

## Chapter 296-89 WAC

### SAFETY REQUIREMENTS FOR BOAT LAUNCHING ELEVATORS

WAC	
296-89-010	Definitions.
296-89-020	Car or platform enclosures.
296-89-030	Electric wiring.
296-89-040	Brakes.
296-89-050	Car operating and terminal stopping devices and electrical protective devices.
296-89-060	Cables.
296-89-070	Hoistway gates and doors.

296-89-080 Hoistway enclosures.

**WAC 296-89-010 Definitions.** (1) Boat launching elevator shall mean a boat launching device equipped with a car or platform which moves in guides in a substantially vertical direction and serves one or more floors or landings of a boat launching structure and a beach or water surface, and is used for the carrying or handling of boats in which people ride.

(2) Boat launching structure shall mean any structure which houses and supports any boat launching elevator. [Order 70-11, § 296-89-010, filed 9/18/70, effective 10/21/70.]

**WAC 296-89-020 Car or platform enclosures.** All boat launching elevator cars or platforms shall be enclosed to a height of at least six feet from the floor on all sides where there are no hoistway doors or gates with solid panel or openwork which will reject a two inch ball. [Order 70-11, § 296-89-020, filed 9/18/70, effective 10/21/70.]

**WAC 296-89-030 Electric wiring.** (1) All electric wiring used in conjunction with boat launching elevators shall be in rigid metal conduit except the traveling cable required between a terminal stopping switch mounted on the car or platform and the hoistway, which shall be of the flexible nonmetallic moisture-retardent and flame-retardent type.

(2) All electrical outlets, switches, junction boxes and fittings used in conjunction with boat launching devices shall be of the weather-proof type. [Order 70-11, § 296-89-030, filed 9/18/70, effective 10/21/70.]

**WAC 296-89-040 Brakes.** All electric boat launching elevators shall be equipped with effective brakes that are released electrically and applied by springs. The brakes shall be designed to have a capacity sufficient to hold the elevator at rest with its rated load. [Order 70-11, § 296-89-040, filed 9/18/70, effective 10/21/70.]

**WAC 296-89-050 Car operating and terminal stopping devices and electrical protective devices.** (1) All electric boat launching elevators shall be equipped with a bottom terminal stopping switch which is operated by a float or other approved means and the necessary traveling cable attached to the car or platform.

(2) All electric boat launching elevators shall be equipped with a top terminal stopping switch located in the hoistway which is operated by a cam attached to the car, or by other approved means.

(3) All boat launching elevators having winding drum machines shall be equipped with a final stopping switch located on and operated directly by the driving machine. This final stopping switch shall not be driven by a chain, rope or belt.

(4) All boat launching elevators driven by a polyphase alternating current motor shall be equipped with the following approved relays:

(a) Reverse phase relay. A device which will prevent starting of the driving machine motor if the phase rotation is in the wrong direction, or if there is a failure in any phase.

(b) Main line relay. A relay or contact which will automatically interrupt the power to the driving machine motor and brake and cause the brake to be applied in event of operation of any of the safety devices.

(5) Operating switches for electric boat launching elevators shall be of the key-operated continuous pressure type located outside of the hoistway and within sight of the car or platform.

(6) Hand rope controls shall not be used for any boat launching elevator. [Order 70-11, § 296-89-050, filed 9/18/70, effective 10/21/70.]

**WAC 296-89-060 Cables.** The hoisting cables of all boat launching elevators shall be reshackled or refastened at the load end every twelve months. [Order 70-11, § 296-89-060, filed 9/18/70, effective 10/21/70.]

**WAC 296-89-070 Hoistway gates and doors.** (1) All boat launching elevators shall be provided with hoistway entrance protection at every landing, except the beach or water surface landings, which shall comply with or be equivalent to the following minimum requirements.

(a) A full-bodied, balanced type safety gate which guards the full width of the hoistway opening and comes within two inches of the landing threshold at all points.

(b) Gate bodies shall be not less than forty-two inches in height above the threshold at the top landing and not less than sixty-six inches in height above the threshold at intermediate landings.

(c) Gates shall be constructed of metal or wood and shall be capable of withstanding a lateral pressure two hundred fifty pounds at any point without breaking or being permanently deformed, and without displacing the gate body from its guides or tracks.

(d) Openings in safety gate bodies of grille, lattice or other open work shall be of a design that will reject a two inch ball.

(2) All hoistway safety gates of a boat launching elevator shall be equipped with an approved combination electric contact and mechanical lock. [Order 70-11, § 296-89-070, filed 9/18/70, effective 10/21/70.]

**WAC 296-89-080 Hoistway enclosures.** Boat launching elevator hoistway protection equal to and complying with all of the dimensional and pressure requirements of hoistway safety gates shall be provided on all other sides of the hoistway that are adjacent to a dock area platform, walkway or ramp. [Order 70-11, § 296-89-080, filed 9/18/70, effective 10/21/70.]

**Chapter 296-90 WAC**  
**SAFETY REQUIREMENTS FOR CANTILEVER**  
**HOISTS**

**WAC**

296-90-010	Material hoist platforms.
296-90-020	Guard rails.
296-90-030	Tower construction.
296-90-040	Hoisting machines.
296-90-050	Car platform enclosure.
296-90-060	Landing platforms.
296-90-070	No rider posting.
296-90-080	Maintenance, inspection and test periods.
296-90-090	Compliance with codes.

**DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS**  
**CHAPTER**

296-90-100	Annual fee. [Order 71-7, § 296-90-100, filed 6/17/71.] Repealed by Order 74-36, filed 10/1/74.
------------	--

**WAC 296-90-010 Material hoist platforms.** (1) Material hoist platforms shall be substantially constructed and of sufficient strength with a factor of safety of five for the rated load capacity.

(2) Maximum overhang shall be four feet at either or both ends of the platform or other device for longer material which is approved by the department of labor and industries. All overhang loads shall be within the rated capacity of hoist and shall be securely fastened to the platform.

(3) Provide suitable blocking and cleats on all platforms when wheelbarrows or other rolling equipment are transported to hold them securely in place and shall be properly positioned for safe removal. [Order 71-7, § 296-90-010, filed 6/17/71.]

**WAC 296-90-020 Guard rails.** A standard guard rail, forty-two inches in height, with an intermediate rail shall be installed at ground level, around the perimeter of the hoist platform. Minimum distance from the hoist platform shall be twenty-four inches; maximum distance shall be forty-eight inches. Guard rails shall comply with standard requirements. A bar or gate shall be installed on the access side and shall be closed when the hoist is in motion. [Order 71-7, § 296-90-020, filed 6/17/71.]

**WAC 296-90-030 Tower construction.** (1) Material hoist towers erected outside of buildings shall be constructed of strong, sound material and of ample strength with a factor of safety of five to carry the loads intended.

(2) All splices and/or extensions shall be so constructed as to provide a safety factor of five.

(3) The overhead framework of all towers shall be of sufficient strength to take the total load of all sheaves, car and material to be hoisted with a factor of safety of five.

(4) Foundations for hoist towers shall be sufficiently large to spread the hoist load so that it will not exceed the safe bearing capacity of the soil on which it stands. Foundations shall be level.

(5) Hoist towers shall be erected plumb, square at the corners and sufficiently braced to make them rigid and stable. Bracing and/or cables shall be installed at no more than thirty foot intervals.

(6) When extremely high hoist towers are to be erected, and it is not practical to fully secure this tower by means of bracing or guys, they shall be built in sections, by erecting the lower section to an altitude to suffice for immediate needs, and extending it upward when the construction work has progressed sufficiently to make it possible to provide a support or bracing for the tower.

(7) The hoist shall be properly positioned to provide safe access to the hoist platform, for the material to be hoisted.

(8) The towers shall be securely guyed and well anchored. The guys shall be securely clamped to "dead men" of sufficient size and well buried. [Order 71-7, § 296-90-030, filed 6/17/71.]

**WAC 296-90-040 Hoisting machines.** (1) All gearing on hoisting machines shall be enclosed. If electrical equipment is used, it shall be effectively grounded.

(2) Hoisting machines shall be protected against the weather and falling objects by a substantial covering.

(3) Guards shall be provided to prevent persons coming in contact with hoisting cables.

(4) Brake drums shall be kept free of oil or grease, as it prevents the brake from holding the load.

(5) Hoisting machines shall be of ample capacity and equipped with brakes capable of sustaining one hundred and fifty percent of rated load for stopping and sustaining the maximum load in any position. [Order 71-7, § 296-90-040, filed 6/17/71.]

**WAC 296-90-050 Car platform enclosure.** When transporting loose material, every hoist platform shall be enclosed to a height of at least forty-two inches above the platform where no access is necessary with solid panel or open framework which will reject a two inch ball. [Order 71-7, § 296-90-050, filed 6/17/71.]

**WAC 296-90-060 Landing platforms.** (1) Access platforms of ample size and strength with railings and toeboards shall be built at each level where men work and constructed with a safety factor of three.

(2) Standard railing and toeboards shall be placed on the open sides of runways connecting the tower to the structure and a bar or a gate provided at all openings into the tower and constructed with a safety factor of three. [Order 71-7, § 296-90-060, filed 6/17/71.]

**WAC 296-90-070 No rider posting.** Workmen shall not be allowed to ride on material hoists and a sign prohibiting such practice shall be posted on the crossbar of the platform and on the shaftway enclosure at each floor opening. [Order 71-7, § 296-90-070, filed 6/17/71.]

**WAC 296-90-080 Maintenance, inspection and test periods.** (1) All hoisting equipment shall be frequently inspected, and brakes, gears and operating levers kept in

perfect working condition. Records shall be maintained of all inspections and/or tests.

(2) A static test of 110% of the hoist rated capacity shall be performed annually.

(3) A "no load" test shall be performed annually to determine that broken cable safeties function properly. [Order 71-7, § 296-90-080, filed 6/17/71.]

**WAC 296-90-090 Compliance with codes.** (1) Twin hoists when used for personnel and material shall comply with the personnel elevator code.

(2) Twin tower hoists used for material only, shall comply with cantilever hoist code. [Order 71-7, § 296-90-090, filed 6/17/71.]

### Chapter 296-91 WAC

#### SAFETY REGULATIONS FOR CASKET LIFTS IN MORTUARIES

##### WAC

296-91-010	Scope.
296-91-020	Machine rooms and machinery spaces.
296-91-030	Equipment in machine rooms.
296-91-040	Electrical wiring, pipes and ducts in elevator hoistways and machine rooms.
296-91-050	Pits.
296-91-060	Protection of hoistway landing openings.
296-91-070	Hangers, guides and guide shoes for hoistway doors.
296-91-080	Location of hoistway doors.
296-91-090	Hoistway doors and door locking devices.
296-91-100	Protection of spaces below hoistways.
296-91-110	Car doors or gates.
296-91-120	Car enclosures.
296-91-130	Car frames and platforms.
296-91-140	Car frames and platform connections.
296-91-150	Capacity and loading.
296-91-160	Driving machine and sheaves.
296-91-170	Material and grooving for sheaves and drums.
296-91-180	Driving machine brakes.
296-91-190	Terminal stopping devices.
296-91-200	Ropes, rope connections, data and record.
296-91-210	Hydraulic elevators.
296-91-220	Valves, supply piping and fittings.
296-91-230	Stopping devices.
296-91-240	Operating devices.

**WAC 296-91-010 Scope.** This code applies to hoisting and lowering mechanisms equipped with cars which move in guides in a substantially vertical direction, the cars of which have a net inside area not exceeding twenty-eight square feet and a total internal height not exceeding four feet, and the width not to exceed three and one-half feet. The platform shall consist of a series of rollers and which are used exclusively for carrying caskets.

Hoistways, hoistway enclosures and related construction which is in substantial compliance with Part 1, section 100 of the American Standard Safety Code for Elevators, Dumbwaiters, Escalators and Moving Walks A17.1-1965 shall be deemed to meet the requirements of these regulations. [Order 71-16, § 296-91-010, filed 12/7/71.]

**WAC 296-91-020 Machine rooms and machinery spaces.** Machines and their control equipment may be

located inside the hoistway enclosure at the top or bottom without intervening enclosures or platforms. Machines and control equipment located outside the hoistway shall be enclosed in enclosures of incombustible material not less than six feet high. If of openwork material, the enclosure shall reject a ball two inches in diameter with a self-closing and locking door, except that control equipment located outside the hoistway may be enclosed in a metal cabinet equipped with a self-closing and locking door to prevent access by unauthorized persons. Permanent electric lighting shall be provided in all machine rooms and machinery spaces. [Order 71-16, § 296-91-020, filed 12/7/71.]

**WAC 296-91-030 Equipment in machine rooms.** Only machinery and equipment required for the operation of the elevator shall be permitted in the elevator machine room. [Order 71-16, § 296-91-030, filed 12/7/71.]

**WAC 296-91-040 Electrical wiring, pipes and ducts in elevator hoistways and machine rooms.** (1) Only such electrical wiring raceways and cables used directly in connection with the elevator may be installed inside the hoistway.

(2) Pipes or ducts conveying gases, vapors or liquids and not used in connection with the elevator shall not be installed in any hoistway, machine room or machinery space.

(3) Machinery and sheave beams, supports and foundations shall comply with Section 105 of the American Standard Safety Code for Elevators, Dumbwaiters, Escalators and Moving Walks A17.1-1965. [Order 71-16, § 296-91-040, filed 12/7/71.]

**WAC 296-91-050 Pits.** Pits are not required. [Order 71-16, § 296-91-050, filed 12/7/71.]

**WAC 296-91-060 Protection of hoistway landing openings.** The size and location of door openings shall conform to the following:

(1) Size of openings. The width and height of door openings shall not exceed the width and height of the elevator car by more than one inch in each dimension.

EXCEPTION: One door opening may be of sufficient size to permit installing and removing the car, but shall be not more than four feet nine inches in height.

(2) Location of door opening. The bottom of the door opening shall be not less than twenty-four inches above the floor. [Order 71-16, § 296-91-060, filed 12/7/71.]

**WAC 296-91-070 Hangers, guides and guide shoes for hoistway doors.** Hoistway doors shall be so hung and guided that the doors will not be displaced from their guides or tracks when in normal service nor when the doors are subjected to a constant horizontal force of two hundred and fifty pounds applied at right angles to and approximately the center of the door or to the center of each door section where multisection doors are used. [Order 71-16, § 296-91-070, filed 12/7/71.]

**WAC 296-91-080 Location of hoistway doors.** Hoistway doors shall be so located that the distance from the hoistway face of the doors to the edge of the hoistway landing sill measured from the face of the door section nearest to the car shall be not more than two and one-half inches. [Order 71-16, § 296-91-080, filed 12/7/71.]

**WAC 296-91-090 Hoistway doors and door locking devices.** Hoistway doors shall be provided which will guard the full height and width of the openings and shall be provided with a combination mechanical locks and electric contacts. [Order 71-16, § 296-91-090, filed 12/7/71.]

**WAC 296-91-100 Protection of spaces below hoistways.** Where the space below the hoistway is used for a passageway or is occupied by persons, or if unoccupied is not secured against unauthorized access, the cars and their counterweights shall be provided with safeties which may be operated as a result of the breaking of the suspension means and which may be of the inertia type without governors. [Order 71-16, § 296-91-100, filed 12/7/71.]

**WAC 296-91-110 Car doors or gates.** (1) There shall be not more than two entrances to the car.

(2) Each entrance shall be provided with a car door or gate which when in fully closed position shall protect the full width and height of the car entrance opening.

(a) Collapsible type gates shall, when extended (closed position), reject a ball four and one-half inches in diameter. [Order 71-16, § 296-91-110, filed 12/7/71.]

**WAC 296-91-120 Car enclosures.** (1) Extent of enclosures. Elevator car shall be permanently enclosed on all sides and the top.

(2) Securing of enclosures. The enclosure shall be securely fastened to the car platform and so supported that it cannot loosen or become displaced in ordinary service.

(3) Deflection of enclosure walls. The enclosure walls shall be of such strength and so designed and supported that when subjected to a pressure of seventy-five pounds applied horizontally at any point on the walls of the enclosure, the deflection will not reduce the running clearance to exceed one inch.

(4) Car top enclosure. Top of car enclosure shall be so designed and installed as to be capable of sustaining a load of three hundred pounds on any square area two feet on a side and one hundred pounds applied at any point. Simultaneous application of these loads is not required. [Order 71-16, § 296-91-120, filed 12/7/71.]

**WAC 296-91-130 Car frames and platforms.** (1) Every elevator suspended by wire ropes shall have a car frame consisting of a crosshead, uprights (stiles), and a plank located approximately at the middle of the car platform and in no case farther from the middle than one-eighth of the distance from front of the platform.

(2) Guiding members. Car frames shall be guided on each guide rail by upper and lower guiding members attached to the frame.

(3) Materials for car frames and platform frames. Car frames and outside members of platform shall be made of steel. [Order 71-16, § 296-91-130, filed 12/7/71.]

**WAC 296-91-140 Car frames and platform connections.** Connections between members of car frames and platform shall be riveted, bolted or welded and shall conform to the following:

(1) Bolts. Bolts where used through sloping flanges of structural members shall have boltheads of the tipped head type or shall be fitted with beveled washers.

(2) Nuts. Nuts used on sloping flanges of structural members shall seat on beveled washers.

(3) Welding. Welding of parts upon which safe operation depends shall be done in accordance with the appropriate standards established by the American Welding Society. [Order 71-16, § 296-91-140, filed 12/7/71.]

**WAC 296-91-150 Capacity and loading.** (1) Driving machines, car and counterweight suspension means and overhead beams and supports shall be designed and installed to sustain the car with a structural capacity load based on the inside net platform area as indicated in Table No. 207.1 of the American Standard Safety Code for Elevators, Dumbwaiters, Escalators and Moving Walks A17.1-1965.

(2) Capacity plate. A metal plate shall be fastened in a conspicuous place in the car and shall give the rated load in letters and figures not less than one-fourth inch high stamped, etched or raised on the surface of the plate. [Order 71-16, § 296-91-150, filed 12/7/71.]

**WAC 296-91-160 Driving machine and sheaves.** Types of power driving machines permitted. Driving machines shall be one of the following types:

- (1) Drum.
- (2) Traction.
- (3) Plunger.

[Order 71-16, § 296-91-160, filed 12/7/71.]

**WAC 296-91-170 Material and grooving for sheaves and drums.** Material and grooving for sheaves and drums shall:

- (1) Be of metal finished grooves.
- (2) Have a pitch diameter not less than forty times the diameter of the rope. [Order 71-16, § 296-91-170, filed 12/7/71.]

**WAC 296-91-180 Driving machine brakes.** The elevator driving machine shall be equipped with a friction brake applied by a spring or springs and released electrically. The brake shall be designed to have a capacity sufficient to hold the car at rest with its rated load. [Order 71-16, § 296-91-180, filed 12/7/71.]

**WAC 296-91-190 Terminal stopping devices.** (1) Upper and lower normal stopping devices shall be provided at the top and bottom of hoistway.

(2) Final terminal stopping devices shall be provided and arranged to cause the electric power to be removed from the elevator driving machine motor and brake after the car has passed a terminal landing but so that under normal operating conditions it will not function when the car is stopped by the normal terminal stopping device.

(3) Elevators having traction machines shall have final terminal stopping switches located in the hoistway and operated by cams attached to the car.

(4) Elevators having winding-drum machines shall have final terminal stopping switches located on and operated by the driving machine, which shall not be driven by chain, rope or belt. Also, stopping switches shall be installed in the hoistway that are operated by cams attached to the car or counterweights.

(5) All elevators having winding-drum machines shall have a slack rope device with an electric switch of the enclosed manually reset type which will cause the electric power to be removed from the driving machine motor and brake if the hoisting ropes become slack. [Order 71-16, § 296-91-190, filed 12/7/71.]

**WAC 296-91-200 Ropes, rope connections, data and record.** (1) Elevator cars shall be suspended by steel wire ropes. Only iron (low carbon steel) or steel wire ropes with fibre cores, having the commercial classification of "elevator wire rope" shall be used for the suspension of elevator cars and for the suspension of counterweights.

(2) The minimum number of hoisting ropes shall be three one-half inch ropes for traction elevators and two one-half inch ropes for drum type elevators.

(3) Fastenings shall be:

(a) By individual tapered babbitted rope sockets or,

(b) By other types of rope fastenings that meet the approval of the enforcing agency.

(4) The rope socket shall be of a type which will develop at least eighty percent of the braking strength of the strongest rope to be used in such fastenings and U-bolt type rope clips (clamps) shall not be used for load line fastenings. [Order 71-16, § 296-91-200, filed 12/7/71.]

**WAC 296-91-210 Hydraulic elevators.** (1) Shall be of the plunger type.

(2) The plunger shall be securely attached to the car platform.

(3) Plungers composed of more than one section shall have the joints designed and constructed to carry in tension the weight of all plunger sections below the joints.

(4) Plungers shall be provided with solid metal stops to prevent the plunger from traveling beyond the limits of the cylinder. Stops shall be so designed and constructed as to stop the plunger from maximum speed in the "up" direction under full pressure without damage to the hydraulic system.

(5) Means shall be provided to collect any oil leakage. [Order 71-16, § 296-91-210, filed 12/7/71.]

[Title 296 WAC—p 1438]

**WAC 296-91-220 Valves, supply piping and fittings.** (1) Valves, piping and fittings shall not be subjected to working pressures exceeding those recommended by the manufacturer for the type of service for which they are used.

(2) Piping shall be so supported as to eliminate undue stresses at joints and fittings particularly at any section of the line subject to vibration.

(3) A shut-off valve shall be installed in the pit.

(4) Each pump shall be equipped with a relief valve conforming to the following requirements:

(a) Type and location. The relief valve shall be located between the pump and the check valve and shall be of such type and so installed in a by-pass connection that the valve cannot be shut off from the hydraulic system.

(b) Setting. The relief valve shall be pre-set to open at a pressure not greater than one hundred and twenty-five percent of the working pressure at the pump.

EXCEPTION: No relief valve is required for centrifugal pump driven by induction motors providing the shut-off or maximum pressure which the pump can develop is not greater than one hundred thirty-five percent of the working pressure at pump.

(c) Check valve. A check valve shall be provided and shall be so installed that it will hold the elevator car with rated load at any point when the pump stops or the maintained pressure drops below the minimum operating pressure. [Order 71-16, § 296-91-220, filed 12/7/71.]

**WAC 296-91-230 Stopping devices.** (1) Normal stopping devices shall be installed at the top and bottom of the hoistway operated by cams attached to the car.

(2) Final terminal stopping devices are not required.

(3) Anti-creep leveling devices are not required. [Order 71-16, § 296-91-230, filed 12/7/71.]

**WAC 296-91-240 Operating devices.** The operation of the elevator shall be from outside the hoistway only and shall be of the constant pressure or automatic types. [Order 71-16, § 296-91-240, filed 12/7/71.]

## Chapter 296-92 WAC

### SAFETY RULES GOVERNING WHEELCHAIR LIFTING DEVICES

#### WAC

296-92-010	Definitions.
296-92-020	Location, travel and speed.
296-92-030	Guards and ramps.
296-92-040	Supports.
296-92-050	Frames, platforms and capacity.
296-92-060	Controls and electrical equipment.
296-92-070	Public assembly and institutional installations.
296-92-080	Nonskid surfacing.
296-92-090	Installation permits and acceptance inspections.
296-92-100	Submission of plans for installation.
296-92-110	Operation and maintenance manuals.

**WAC 296-92-010 Definitions.** (1) These rules apply to an electric or hydraulic vertical elevating device used to raise or lower a person in a wheelchair from one

level to another, hereinafter in these rules referred to as a device. The device shall be restricted to two levels and shall serve not more than two landings and not to exceed eight feet. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-92-010, filed 12/10/80.]

**WAC 296-92-020 Location, travel and speed.** A device may be installed adjacent to a porch, at the end of a ramp or inside of a building.

The rated speed of a device shall not exceed 30 feet per minute. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-92-020, filed 12/10/80.]

**WAC 296-92-030 Guards and ramps.** (1) All exposed equipment on a device shall be guarded to protect against accidental contact which could cause bodily injury.

(2) An approved guard shall be provided on any side of the platform which is not guarded as provided in subsection 3.

(3) A metal guard not less than 1/8 inch thick and 6 inches high shall be provided the full width of the platform to prevent a wheelchair from rolling off the lower access end of the platform when in use. The guard may be actuated automatically by movement from the landing.

(4) A ramp shall be provided, as required, for access to and from the platform and shall safely carry the load. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-92-030, filed 12/10/80.]

**WAC 296-92-040 Supports.** (1) The assembled unit of a lifting device shall be supported and maintained in place so as to prevent any part from becoming loose or displaced.

(2) Adequate support shall be provided to maintain the device in a level position.

(3) The framework shall be securely anchored in place to the foundation of the device. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-92-040, filed 12/10/80.]

**WAC 296-92-050 Frames, platforms and capacity.**

(1) The frame of a device shall be constructed of metal.

(2) The platform shall not exceed 3 feet wide by 5 feet long.

(3) The rated capacity shall be not less than 350 pounds.

(4) A production model shall be subjected to a static load test to establish that all components of the device will withstand stresses of five times the rated load of the device to insure a factor of safety of at least five. A registered, professional engineer shall certify the safety factor and affix his signature and seal to the certification.

(5) All welding shall be in accordance with standards established by the American Society of Mechanical Engineers. These standards may be purchased from the American Society of Mechanical Engineers, United Engineering Center, 345 East Forty-Seventh Street, New York, New York 10017.

(6) Means shall be provided on vertically traveling devices to prevent access below the platform when it is in a raised position; or the platform shall have equipment which will open an electric contact in the control circuit and thus stop the down travel of the platform if the platform is obstructed in its downward travel by a force of not more than four pounds. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-92-050, filed 12/10/80.]

**WAC 296-92-060 Controls and electrical equipment.** (1) The operating control shall be of the constant pressure type.

(2) A disconnecting means shall be provided that is not accessible to the general public.

(3) Electrical wiring shall comply with the National Electrical Code.

(4) A slack cable switch shall be provided where applicable.

(5) An upper terminal stopping switch shall be provided to stop a device at the upper terminal landing.

(6) A lower terminal stopping switch shall be provided to stop a device at the lower terminal landing. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-92-060, filed 12/10/80.]

**WAC 296-92-070 Public assembly and institutional installations.** (1) In addition to the requirements of WAC 296-92-010 to 296-92-070, a device installed in a place of public assembly or in an institution shall be equipped with the following:

(a) A permanent, weatherproof enclosure when exposed to the outside elements.

(b) An operating control of the constant pressure keyed type. Only authorized persons shall have access to the keys. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-92-070, filed 12/10/80.]

**WAC 296-92-080 Nonskid surfacing.** Related surfacing on which a wheelchair rolls when using a device shall be of the nonskid type. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-92-080, filed 12/10/80.]

**WAC 296-92-090 Installation permits and acceptance inspections.** (1) An installation permit shall be obtained before a device is installed. Installation shall be by a qualified contractor licensed by the state of Washington.

(2) An acceptance inspection shall be made by an elevator inspector before the device is operated by the owner or user. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-92-090, filed 12/10/80.]

**WAC 296-92-100 Submission of plans for installation.** Plans shall be supplied to the elevator section and shall include the following:

(1) Construction of an upper terminal ramp or dock-like landing of adequate strength and rigidity, with substantial handrails on each side for access to and from the device.

(2) A self-closing gate or door shall be installed at the terminal landings with electric contact with mechanical lock to prevent entrance when the device is not at that landing.

(3) The horizontal surface of the landings upon which a wheelchair rolls shall be so constructed as to safely carry the weight.

(4) A terminal landing shall be permanently fastened in place. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-92-100, filed 12/10/80.]

**WAC 296-92-110 Operation and maintenance manuals.** (1) The manufacturers shall provide an operational manual for each device describing the function and operation of the components, including instructions for correct use of the device.

(2) The manufacturer shall provide a maintenance manual for each device, including recommended maintenance procedures as follows:

(a) Types of lubricants required and frequency of application.

(b) Definition and measurement to determine excessive wear.

(c) Recommended frequency of service to specific components. [Statutory Authority: RCW 70.87.030. 81-01-034 (Order 80-26), § 296-92-110, filed 12/10/80.]

## Chapter 296-100 WAC

### SAFETY REQUIREMENTS FOR MATERIAL HOISTS

#### WAC

296-100-010	Material hoist platforms.
296-100-020	Inside material hoist shaftways.
296-100-030	Outside hoisting towers.
296-100-040	Hoisting machines.

**WAC 296-100-010 Material hoist platforms.** (1) Material hoist platforms shall be substantially constructed and of sufficient strength with a factor of safety of five for the rated load and capacity.

(2) Overhead protective covering of planking or heavy wire mesh shall be provided on the cross-head of every material hoist platform to prevent objects falling on the workmen when loading or unloading the hoist.

(3) The protection on the cross-head shall be made in sections and each section hinged, so they may be raised when hoisting long material.

(4) When using a hoist for long material, the several pieces of the material shall be securely fastened together, and made fast to the hoist so that no part of the load can fall or project beyond the sides of the hoist.

(5) Provide suitable blocking and cleats on all platforms when wheelbarrows or other rolling equipment are transported to hold them securely in place.

(6) Workmen shall not be allowed to ride on material hoists and a sign prohibiting such practice shall be

posted on the cross bar of the platform or on the shaftway enclosure at each floor opening.

(7) The platforms of every hoist shall be enclosed on all sides where openings are not to be left with toeboards and a heavy wire screen enclosure formed of number sixteen U.S. gauge wire, one and one-half inch mesh. [Order 70-11, § 296-100-010, filed 9/18/70, effective 10/21/70.]

#### **WAC 296-100-020 Inside material hoist shaftways.**

(1) All material hoist shaftways erected inside buildings shall preferably be enclosed tightly their entire height. When this is not practicable, the sides of shaftway not used for entrance shall be enclosed on each floor to a height of at least eight feet with wire netting formed of not less than number sixteen U.S. gauge wire, one and one-half inch mesh, or enclosed with wooden slats spaced vertically not more than four inches apart, with a toeboard placed around all sides except at the entrance.

(2) When two material shaftways are erected side by side, similar protection shall be placed between them.

(3) The enclosure shall extend at least two feet in front of the shaftway unless the entrances are protected with gates.

(4) All entrances into the shaftway shall be protected by hinges or pivoted bars or gates.

If bars are used, they shall not be less than two by three inches in section, placed at a height of not less than three feet nor more than four feet above the floor and located not nearer than two feet from the shaftway.

The bar shall be bolted to one side of the enclosure frame by a single bolt on which the bar may swing, and a slot provided at the opposite side to receive the end of the bar when it is lowered to a horizontal position. A hook or wooden button shall be provided to hold the bar up out of the way while loading or unloading the hoist.

If a gate is used, it shall be located not nearer than six inches from the front of the shaftway, at least five and one-half feet high, and the bottom not more than two inches off the floor.

(5) The guide rails of all hoists shall be kept rigid and in perfect alignment at all times.

(6) The guide rails shall be of sound lumber or steel of adequate uniform size to provide a firm track.

(7) Overhead sheave beams and their supports shall be of good sound timber or steel of strength and stiffness with a factor of safety of five to support the combined live and dead loads imposed.

(8) Protective covering of planking or heavy wire netting shall be provided above the overhead work of all hoists to prevent objects falling down the shaftway. [Order 70-11, § 296-100-020, filed 9/18/70, effective 10/21/70.]

**WAC 296-100-030 Outside hoisting towers.** (1) Material hoist towers erected outside of buildings shall be constructed of strong, sound material and of ample strength with a factor of safety of five to carry the loads intended.

(2) Foundations for hoist towers shall be sufficiently large to spread the hoist load so that it will not exceed

the safe bearing capacity of the soil on which it stands. Foundations shall be level.

(3) Hoist towers shall be erected plumb, square at the corners and sufficiently braced to make them rigid and stable.

(4) All splicing material on posts shall be not less than two inches in thickness, four feet long, and shall be spiked or bolted to at least two adjacent sides of the posts. All splices shall be staggered.

(5) An approved ladder securely fastened to the tower shall extend its entire height.

(6) Hoist towers shall be securely guyed and well anchored.

(7) The guys shall be securely clamped to "dead men" of sufficient size and well buried.

(8) Platforms of ample size and strength with railings and toeboards shall be built at each level where men work.

(9) Hoist towers shall be enclosed on all sides to a height of eight feet at lower landing with wire screen enclosure formed of number sixteen U.S. gauge wire, and one and one-half inch mesh, or other suitable material, securely fastened to the tower structure to prevent access to the space under any hoist platform.

(10) The overhead framework of all towers shall be of sufficient strength to take the total load of all sheaves, car and material to be hoisted with a factor of safety of five.

(11) When extremely high hoist towers are to be erected, and it is not practical to fully secure this tower by means of bracing or guys, they shall be built in sections, by erecting the lower section to an altitude to suffice for immediate needs, and extending it upward when the construction work has progressed sufficiently to make it possible to provide a support or bracing for the tower.

(12) Standard railing and toeboards shall be placed on the open sides of runways connecting the tower to the structure, and a bar or gate provided at all openings into the tower. [Order 70-11, § 296-100-030, filed 9/18/70, effective 10/21/70.]

**WAC 296-100-040 Hoisting machines.** (1) All gearing on hoisting machines shall be enclosed. If electrical equipment is used, it shall be effectively grounded.

(2) Hoisting machines shall be of ample capacity and equipped with brakes capable of sustaining one hundred and fifty percent of rated load for stopping and sustaining the maximum load in any position.

(3) Hoisting machines shall be protected against the weather and falling objects by a substantial covering.

(4) All hoisting equipment shall be frequently inspected, and brakes, gears and operating levers kept in perfect working condition.

(5) Guards shall be provided to prevent persons coming in contact with hoisting cables.

(6) Brake drums shall be kept free of oil or grease, as it prevents the brake from holding the load. [Order 70-11, § 296-100-040, filed 9/18/70, effective 10/21/70.]

## Chapter 296-104 WAC

## BOARD OF BOILER RULES—SUBSTANTIVE

## WAC

296-104-001	Promulgation.
296-104-002	Approval by director.
296-104-010	Definitions.
296-104-015	Board meetings.
296-104-020	Administration—Filing requirements before installation.
296-104-025	Administration—Owner to notify chief inspector in case of accident.
296-104-030	Administration—Penalty for operation of unsafe boilers or unfired pressure vessels.
296-104-035	Administration—Inspectors to have no other interests.
296-104-040	Administration—Inspectors to submit reports.
296-104-045	Administration—Insurance companies to notify the chief inspector of new, canceled or suspended risks.
296-104-050	Administration—Examination for inspector.
296-104-055	Examination fees.
296-104-060	Commissions as inspectors.
296-104-065	Administration—Reciprocal commissions.
296-104-100	Inspection—Frequency of inspections.
296-104-105	Inspection—Notification of inspection.
296-104-110	Inspection—Inspectors to notify the chief inspector of defective boilers or unfired pressure vessels.
296-104-115	Inspection—Defective conditions disclosed at time of external inspection.
296-104-120	Inspection—Condemned boilers or unfired pressure vessel.
296-104-125	Inspection—Certificate fees.
296-104-130	Inspection—Validity of inspection certificate.
296-104-135	Inspection—Restamping of boilers and unfired pressure vessels.
296-104-140	Inspection—State stamp.
296-104-145	Inspection of systems.
296-104-150	Inspection of systems—Unfired steam boilers.
296-104-155	Inspection of systems—Preparation for internal inspection.
296-104-160	Inspection of systems—Boilers or unfired pressure vessels improperly prepared for inspection.
296-104-165	Inspection of systems—Removal of covering to permit inspection.
296-104-170	Inspection of systems—Shop inspections.
296-104-200	Standards for new construction.
296-104-201	Inspection of systems—Standard for water chillers.
296-104-205	Inspection of systems—Nonstandard regulations.
296-104-210	Inspection of systems—Special designs and/or great pressures.
296-104-215	Inspection of systems—Nonstandard boilers and unfired pressure vessels.
296-104-220	Inspection of systems—Nonstandard second hand boilers or unfired pressure vessels.
296-104-225	Inspection of systems—Reinstalled boiler or unfired pressure vessel.
296-104-230	Inspection of systems—Hot water supply boilers and tanks.
296-104-235	Inspection of systems—Safety relief valves.
296-104-240	Inspection of systems—Unfired pressure vessels fabricated of pipe or pipe fittings.
296-104-245	Inspection of systems—Oil heaters.
296-104-255	Inspection of systems—Clearance at top of boilers.
296-104-260	Inspection of systems—Clearance at front, back and sides.
296-104-265	Inspection of systems—Low water cut-offs and water feeding devices.
296-104-270	Inspection of systems—Explosion doors.
296-104-285	Unfired pressure vessels in places of public assembly.
296-104-300	New installations—Ladders and runways.
296-104-305	New installations—Exits from boiler rooms.
296-104-310	New installations—Discharge from safety valves, blow offs and drains.
296-104-315	New installations—Blow off tanks.
296-104-320	New installations—Underground installations.

296-104-325	New installations—Supports.
296-104-330	New installations—Pressure reducing valves.
296-104-400	Existing installations—Stamping of existing boilers and unfired pressure vessels.
296-104-405	Existing installations—Existing boiler or unfired pressure vessels.
296-104-410	Existing installations—Noncode steel heating boilers.
296-104-415	Existing installations—Noncode cast iron boilers.
296-104-500	Repairs—Major repairs.
296-104-505	Repairs—Repairs by fusion welding.
296-104-510	Repairs—Riveted patches.
296-104-515	Repairs—Safety devices.
296-104-520	Repairs—Lap seam crack.
296-104-525	Repairs—Hydrostatic pressure tests.
296-104-530	Repairs—Air or vapor testing.
296-104-600	General requirements—Conditions not covered by these rules.
296-104-700	Inspection fees—Certificate fees—Expenses.

#### DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER

296-104-250	Inspection of systems—Hot water heating systems. [Part IV, § 11, filed 3/23/60.] Repealed by 78-03-057 (Order 78-3), filed 2/22/78. Statutory Authority: RCW 70.79.030.
296-104-275	Inspection of systems—Hydro-pneumatic tanks. [Part IV, § 16, filed 3/23/60.] Repealed by 78-03-057 (Order 78-3), filed 2/22/78. Statutory Authority: RCW 70.79.030.
296-104-280	Inspection of systems—Electric steam generators. [Part IV, § 17, filed 3/23/60.] Repealed by 78-03-057 (Order 78-3), filed 2/22/78. Statutory Authority: RCW 70.79.030.

**WAC 296-104-001 Promulgation.** The following rules and regulations apply to all boilers and unfired pressure vessels except those exempt under section 8, chapter 32, Laws of 1951 (RCW 70.79.080). Boilers and unfired pressure vessels listed under section 9, chapter 32, Laws of 1951 (RCW 70.79.090) are exempt from inspection and fees, but shall comply with all rules for construction, installation, repairs and general requirements.

The following rules and regulations were formulated in accordance with the law and are hereby promulgated. Date: December 18, 1958. [Promulgation, filed 3/23/60.]

**WAC 296-104-002 Approval by director.** The following rules and regulations are hereby approved. They have the force and effect of law in accordance with section 5, chapter 32, Laws of 1951 (RCW 70.79.050).

Date: December 24, 1958

Department of Labor and Industries,  
Jerry Hagan, Director.

[Approval, filed 3/23/60.]

**Reviser's note:** Each rule to follow will have in its bracketed history note the date of its filing with the code reviser's office.

For the effective date of various rules, note the application thereto of RCW 70.79.050.

**WAC 296-104-010 Definitions.** (1) "Director" shall mean the director of the department of labor and industries.

(2) "Board of boiler rules" shall mean the board created by law and empowered to make, alter, amend, and interpret rules and regulations for the safe and proper

construction, installation, repair, and use of boilers and for the proper construction, installation, and repair of unfired pressure vessels in this state.

(3) "Chief inspector" shall mean the chief boiler inspector appointed under RCW 70.79.100.

(4) "Deputy inspector" shall mean a deputy inspector of boilers and unfired pressure vessels appointed by the chief boiler inspector of Washington under the provisions of RCW 70.79.120.

(5) "Special inspector" shall mean an inspector holding a Washington commission, who is regularly employed by an insurance company authorized to insure against loss from explosion of boilers and unfired pressure vessels in this state, or who is continuously employed by any company operating unfired pressure vessels in this state for the purpose of making inspections of unfired pressure vessels used or to be used by such company.

(6) "Inspector" shall mean the chief boiler inspector, a deputy inspector, or a special inspector.

(7) "Certificate of competency" shall mean a certificate issued to a person who has passed an examination prescribed by the board of boiler rules.

(8) "Department" as used herein shall mean the department of labor and industries of the state of Washington.

(9) "Owner" or "user" shall mean a person, firm, or corporation owning or operating any boiler or unfired pressure vessel within the state.

(10) "ASME Code" shall mean the boiler and pressure vessel code of the American Society of Mechanical Engineers with amendments and interpretations thereto made and approved by the council of the society which have been regularly adopted by the board of boiler rules in accordance with the provisions of RCW 70.79.030.

(11) "Existing installations" shall mean any boiler or unfired pressure vessel constructed, installed, placed in operation, or contracted for before January 1, 1952.

(12) "Approved" shall mean approved by the chief boiler inspector as evidenced by his issuance of an inspection certificate.

(13) "Standard boiler or unfired pressure vessel" shall mean a boiler or unfired pressure vessel which bears the ASME stamp.

(14) "Nonstandard boiler or unfired pressure vessel" shall mean a boiler or unfired pressure vessel that does not bear the ASME stamp.

(15) "Boiler" shall mean a closed vessel used for heating water or liquid or for generating steam or vapor by the direct application of heat.

(16) "Direct application of heat" shall mean the firing of any fuel, solid, liquid, or gaseous, including electrical elements of any description.

(17) "Power boiler" shall mean a boiler used to produce steam or vapor at a pressure exceeding 15 lbs. per square inch gage, or a boiler used for heating water or liquid to a pressure exceeding 160 psi. or to a temperature exceeding 250°F.

(18) "Low pressure heating boiler" shall mean a boiler operated at a pressure not exceeding 15 lbs. per square inch gage steam, or at a pressure not exceeding

160 lbs. per square inch and a temperature not exceeding 250°F. for water.

(19) "Hot water supply boiler" shall mean a low pressure boiler used to heat water to a temperature not exceeding 200°F.

(20) "Unfired steam boiler" shall mean a pressure vessel in which steam is generated by an indirect application of heat.

(21) "Unfired pressure vessel" shall mean a closed vessel in which pressure is obtained from an external source, or from an indirect application of heat, including steam or hot water coils, converters or heat exchangers.

(22) "Reinstalled boiler or unfired pressure vessel" shall mean a boiler or unfired pressure vessel removed from its original setting and reerected at the same location or at a new location without change of ownership.

(23) "Second hand boiler or unfired pressure vessel" shall mean a boiler or unfired pressure vessel of which both the location and ownership have changed after primary use.

(24) "Condemned boiler or unfired pressure vessel" shall mean a boiler or unfired pressure vessel that has been inspected and declared unsafe or disqualified by legal requirements by an inspector who has applied a stamping or marking designating its condemnation.

(25) "Internal inspection" shall mean an inspection made when a boiler or unfired pressure vessel is shut down and handholes, manholes, or other inspection openings are open or removed for inspection of the interior.

(26) "External inspection" shall mean an inspection made while a boiler or unfired pressure vessel is in operation and includes the inspection and demonstration of controls and safety devices.

(27) "Place of public assembly" shall mean a building used in whole or in part for occupation by persons for such purposes as worship, hospitals, education, instruction, entertainment, amusement, or waiting transportation.

(28) "Fusion welding" shall mean a process of welding metals in a molten, or molten and vaporous state, without the application of mechanical pressure or blows. Such welding may be accomplished by the oxy-acetylene or oxy-hydrogen flame or by the electric arc. Thermit welding shall be classified as fusion welding.

(29) "Major repair" shall mean one upon which the strength of a boiler or unfired pressure vessel depends.

(30) "Agriculture purposes" shall mean any act performed on a farm in production of crops or livestock, and shall include the storage of such crops and livestock in their natural state, but shall not be construed to include the processing or sale of crops or livestock.

(31) "Attendant" shall mean the person in charge of the operation of a boiler or unfired pressure vessel.

(32) "Automatic operation of a boiler" shall mean full control of feed water and fuel in order to maintain the pressure and temperature constant within the limits set. Controls must be such that the operation follows the demand without interruption. Manual restart may be required when the burner is off because of low water, flame failure, or power failure.

(33) "Alteration" is a structural modification of, or a departure from an original design or existing construction.

(34) "Repair" is a restoration of any damaged or impaired part to an effective and safe condition. [Order 72-11, § 296-104-010, filed 7/7/72; Part I, filed 3/23/60.]

**WAC 296-104-015 Board meetings.** The board of boiler rules shall hold its regular meetings on the third Tuesday of January, March, May, September and November of each year at the hour of 10 a.m. at the Office of the Chief Boiler Inspector, 300 West Harrison Street, Seattle, Washington. [Order 72-11, § 296-104-015, filed 7/7/72.]

**WAC 296-104-020 Administration—Filing requirements before installation.** Manufacturers data reports on boilers and pressure vessels as required by the provisions of the ASME Code and the National Board of Boiler and Pressure Vessel Inspectors shall be filed by the owner or his agent with the chief inspector before installation. When the boilers or pressure vessel are of special design or construction not covered by the ASME Code (unless otherwise exempted by the rules and regulations), the proposed owner or user shall apply to the chief inspector in writing for permission to install such boilers or pressure vessels and shall supply such details of design and construction as may be required by the chief inspector and his approval shall be secured before construction is started. When used or second hand boilers or pressure vessels are to be installed, the owner or user shall similarly apply and secure approval before starting installation. [Order 74-37, § 296-104-020, filed 11/8/74; Part II, § 1, filed 3/23/60.]

**WAC 296-104-025 Administration—Owner to notify chief inspector in case of accident.** When an accident occurs which serves to render a boiler or unfired pressure vessel inoperative, the owner or user shall immediately notify the chief inspector, and submit a detailed report of the accident. In case of serious accident, such as explosion, notice shall be given immediately by telephone, telegraph, or messenger and neither the boiler or unfired pressure vessel nor any parts thereof shall be removed or disturbed before and inspection has been made by the chief inspector, deputy inspector or special inspector, unless for the purpose of saving life. The inspector making the investigation and inspection shall report to the chief inspector as soon as possible. [Part II, § 2, filed 3/23/60.]

**WAC 296-104-030 Administration—Penalty for operation of unsafe boilers or unfired pressure vessels.** If upon inspection a boiler or unfired pressure vessel is found to be in such condition that it is unsafe to operate, the inspection certificate shall be suspended by the inspector. Any person, firm, partnership, or corporation causing such objects to be operated without a valid certificate of inspection shall be subject to the provisions of RCW 70.79.310. [Part II, § 3, filed 3/23/60.]

**WAC 296-104-035 Administration--Inspectors to have no other interests.** Inspectors commissioned by the state of Washington shall not be engaged in the sale of any article or device related to boilers or unfired pressure vessels and shall devote their full time to inspection work. [Part II, § 4, filed 3/23/60.]

**WAC 296-104-040 Administration--Inspectors to submit reports.** Inspectors shall submit reports of inspections of boilers and pressure vessels on appropriate forms as approved by the chief inspector. Reports of inspections shall be submitted within thirty days of inspection. Requests for variance from regular inspection date shall be in writing. When hazardous conditions are discovered during any inspection remedial action shall be initiated at once and reported to the chief inspector. [Order 74-37, § 296-104-040, filed 11/8/74; Part II, § 5, filed 3/23/60.]

**WAC 296-104-045 Administration--Insurance companies to notify the chief inspector of new, canceled or suspended risks.** All insurance companies shall notify the chief inspector within thirty days of all boiler or unfired pressure vessel risks written, canceled, not renewed or suspended because of unsafe conditions. [Part II, § 6, filed 3/23/60.]

**WAC 296-104-050 Administration--Examination for inspector.** Examination for certificate of competency as inspector of boilers shall be held at the office of the chief boiler inspector for the state of Washington, or at any location to be selected by the board, four times each year, namely, the first Wednesday of the months of March, June, September and December. Special examinations will be held when considered necessary by the board.

Applicants for examination shall have had at least three years practical experience in the construction, maintenance, repair or operation of high pressure boilers or unfired pressure vessels as a mechanical engineer, steam engineer or boiler maker, or shall have had at least three years experience as an inspector of high pressure boilers. A credit of two years of the required experience will be given to applicants holding a mechanical engineering degree from a recognized college of engineering.

Application for examination for certificate of competency shall be in writing upon a form to be furnished by the director stating the school education of the applicant, a list of his employers, his period of employment and position held with each employer. Applications containing willful falsification or untruthful statements shall be rejected. If the applicant's history and experience meet with the approval of the board of boiler rules, he shall be given a written examination dealing with the construction, installation, operation, maintenance and repair of boilers and unfired pressure vessels and their appurtenance, and the applicant shall be accepted or rejected on the merits of this examination. If the applicant is successful in meeting the requirements of the examining board, a certificate of competency will be issued by

the chief inspector. After the expiration of ninety days, an applicant who fails to pass the examination will be permitted to take another written examination, and his acceptance or rejection will be determined by the board on the basis of this examination. [Statutory Authority: RCW 70.79.030, 78-03-057 (Order 78-3), § 296-104-050, filed 2/22/78; Part II, § 7, filed 3/23/60.]

**WAC 296-104-055 Examination fees.** A fee of forty dollars will be charged for each applicant taking the examination for a certificate of competency or any examination sponsored by the National Board of Boiler and Pressure Vessel Inspectors. If an applicant fails to pass the examination this fee shall be good for one year during which a reexamination may be taken. Checks for examination fees shall be made payable to the state treasurer. [Statutory Authority: RCW 70.79.030 and 70.79.330, 82-24-025 (Order 82-36), § 296-104-055, filed 11/23/82, effective 1/1/83; Order 74-37, § 296-104-055, filed 11/8/74; Part II, § 8, filed 3/23/60.]

**WAC 296-104-060 Commissions as inspectors.** Upon the request of any company authorized to insure and insuring against loss from explosion of boilers and pressure vessels in this state, or upon the request of any company operating pressure vessels in this state, the chief inspector shall issue a commission as a special inspector and an identifying commission card to any inspector actively engaged in boiler or pressure vessel inspection in this state if the inspector is employed by the requesting company and if the inspector has passed the written examination and holds a certificate of competency as set forth in WAC 296-104-050. The fee for the commission is twenty-five dollars. The commission shall be held at the home office of the employing company. Inspectors shall carry identifying commission cards while they are inspecting. A commission shall be valid for one year and may be renewed annually at the request of the employing company for a fee of ten dollars. The employing company shall return the commission and the identifying commission card at once to the chief inspector when the inspector to whom the commission was issued is no longer in its employ, or at the request of the chief inspector. The department may suspend or revoke a certificate of competency and commission issued to an inspector upon ten days notice to the inspector and to the inspector's employer for incompetency or untrustworthiness; for wilful falsification of any matter or statement contained in his application, or in the report of any inspection, or in any other application, or in the report of any inspection; or for other sufficient reason. The holder of a certificate of competency is entitled to a hearing before the board before the revocation or suspension of the certificate of competency. A person whose commission has been suspended, except for untrustworthiness, may apply to the board for reinstatement. A person whose commission has been revoked, except for untrustworthiness, may apply to the board to take a new examination for a commission after ninety days from the date of the revocation. [Statutory Authority: RCW 70.79.030 and 70.79.330, 82-24-025

(Order 82-36), § 296-104-060, filed 11/23/82, effective 1/1/83; Order 74-37, § 296-104-060, filed 11/8/74; Part II, § 9, filed 3/23/60.]

**WAC 296-104-065 Administration--Reciprocal commissions.** Upon the request of a boiler insurance company authorized to insure and insuring against loss from explosion of boilers and pressure vessels in this state, a commission as a special inspector shall be issued by the chief inspector to an inspector in the employ of such company provided the inspector has had the experience prescribed in RCW 70.79.130 and holds a certificate of competency or commission issued by a state which has adopted one or more sections of the ASME Code and which holds a written examination equivalent to that required by the state of Washington and a national board commission. Application for a reciprocal commission shall be made on a form to be furnished by the chief inspector, and shall be accompanied by a photostatic copy of the applicant's commission and certificate of competency. [Statutory Authority: RCW 70.79.030, 78-03-057 (Order 78-3), § 296-104-065, filed 2/22/78; Order 74-37, § 296-104-065, filed 11/8/74; Part II, § 10, filed 3/23/60.]

**WAC 296-104-100 Inspection--Frequency of inspections.** Power boilers shall be inspected annually both internally and externally while not under pressure, and annually externally while under pressure.

Low pressure heating boilers shall be inspected externally biennially. Where construction permits, they shall in addition be inspected internally at the same time.

Unfired pressure vessels shall be inspected externally biennially. Where subject to corrosion and construction permits they shall in addition be inspected internally biennially.

Unfired pressure vessels not subject to internal corrosion shall be inspected externally biennially. [Part III, § 1, filed 3/23/60.]

**WAC 296-104-105 Inspection--Notification of inspection.** The owner or user shall prepare each boiler and unfired pressure vessel for internal inspection and shall prepare for and apply a hydrostatic pressure test whenever necessary on the date specified by the inspector, which date shall not be less than seven days after the date of notification. [Part III, § 2, filed 3/23/60.]

**WAC 296-104-110 Inspection--Inspectors to notify the chief inspector of defective boilers or unfired pressure vessels.** If an inspector, upon inspection of a boiler or unfired pressure vessel or any of their appurtenances finds that they do not comply with the Washington state boiler and unfired pressure vessels law rules and regulations, he shall immediately notify the chief inspector and submit a report of the defects. [Part III, § 3, filed 3/23/60.]

**WAC 296-104-115 Inspection--Defective conditions disclosed at time of external inspection.** If upon an

external inspection there is evidence of a leak or crack, enough of the covering of the boiler or unfired pressure vessel shall be removed to satisfy the inspector in order that he may determine as to the safety of the boiler or unfired pressure vessel, or if the covering cannot be removed at the time, he may order the operation of the boiler or unfired pressure vessel stopped until such time as the covering can be removed and proper examination made. [Part III, § 4, filed 3/23/60.]

**WAC 296-104-120 Inspection--Condemned boilers or unfired pressure vessel.** Any boiler or unfired pressure vessel having been inspected and declared unsafe by the inspector, shall be stamped by the inspector with an arrowhead stamp having an overall length of 1/2 inch and width of 3/8 inch on either side of the letter "X" and the letter "W," as shown by the following facsimile, which will designate a condemned boiler or unfired pressure vessel. [Part III, § 5, filed 3/23/60.]

**WAC 296-104-125 Inspection--Certificate fees.** If upon inspection a boiler or unfired pressure vessel is found to be suitable for use and to conform to these rules and regulations, the owner or user shall pay directly to the chief inspector fees as scheduled in RCW 70.79.290. Inspections are not complete until the certificate of inspection is posted.

If the owner or user of each boiler or unfired pressure vessel required to be inspected refuses to allow an inspection to be made, or refuses to pay the above fee, the certificate of inspection shall be suspended by the chief inspector until the owner or user complies with the requirements. [Part III, § 6, filed 3/23/60.]

**WAC 296-104-130 Inspection--Validity of inspection certificate.** An inspection certificate, issued in accordance with RCW 70.79.290, shall be valid until expiration unless some defect or condition affecting the safety of the boiler or unfired pressure vessel is disclosed: *Provided, however,* That a certificate issued for a boiler or unfired pressure vessel inspected by a special inspector shall be valid only if the boiler or unfired pressure vessel for which it was issued continues to be insured by a duly authorized insurance company or operated by a duly authorized company. [Part III, § 7, filed 3/23/60.]

**WAC 296-104-135 Inspection--Restamping of boilers and unfired pressure vessels.** When the stamping on a boiler or unfired pressure vessel becomes indistinct the inspector shall instruct the owner or user to have it restamped. Request for permission to restamp the boiler or unfired pressure vessel shall be made to the chief inspector and proof of the original stamping shall accompany the request authorized by the chief inspector. Restamping authorized by the chief inspector shall be done only by an inspector, and shall be identical with the original stamping except that it will not be required to restamp the ASME symbol. Notice of completion of

such restamping shall be filed with the chief boiler inspector by the inspector who stamped the boiler or unfired pressure vessel together with a facsimile of the stamping applied. [Part III, § 8, filed 3/23/60.]

**WAC 296-104-140 Inspection--State stamp.** Upon completion of the installation, all boilers and unfired pressure vessels shall be inspected by the chief inspector, a deputy inspector, or a special inspector. At the time of this inspection, each boiler or unfired pressure vessel shall be stamped with a serial number of the state of Washington followed by the letter "W," said letter and figures to be not less than 5/16 in. in height. The stamping shall not be concealed by lagging or paint and shall be exposed at all times. A metal tag 1 inch by 3 inches minimum, with the state number stamped thereon may be used where construction does not permit a direct stamp on the boiler or unfired pressure vessel.

Data sheets properly filled in and signed shall be made available at the time of first inspection.

Washington special numbers when assigned by the chief inspector shall be preceded by the letters: WS. [Order 73-1, § 296-104-140, filed 3/22/73; Part III, § 9, filed 3/23/60.]

**WAC 296-104-145 Inspection of systems.** A group of unfired pressure vessels operating as a single unit such as the vessels in a refrigeration system, evaporators, ironers and paper machines shall be classed as a single unit and shall be given one number, designating the different vessels of the unit as a-b-c, etc. The inspector's report shall cover all pressure vessels in the system. One certificate shall be issued for the unit. Certificate charge shall be as outlined in RCW 70.79.290, for each vessel of the system. [Part III, § 10, filed 3/23/60.]

**WAC 296-104-150 Inspection of systems--Unfired steam boilers.** Unfired steam boilers operating at pressures of 50 psi or more shall be inspected as power boilers. Unfired steam boilers operating at less than 50 psi shall be inspected as unfired pressure vessels. [Part III, § 11, filed 3/23/60.]

**WAC 296-104-155 Inspection of systems--Preparation for internal inspection.** The owner or user shall prepare a boiler for internal inspection in the following manner:

(a) Water shall be drawn off and the boiler thoroughly washed.

(b) All manhole and handhole plates and wash-out plugs and water column connections shall be removed, the furnace and combustion chambers thoroughly cooled and cleaned.

(c) All grates of internally fired boilers shall be removed.

(d) At each annual inspection brickwork shall be removed as required by the inspector in order to determine the condition of the boiler headers, furnace, supports, or other parts.

(e) The steam gage shall be removed for testing.

(f) Any leakage of steam or hot water into the boiler shall be cut off by disconnecting the pipe or valve at the most convenient point.

(g) The low water cutout shall be disassembled to such a degree as the inspector shall require. [Part III, § 12, filed 3/23/60.]

**WAC 296-104-160 Inspection of systems--Boilers or unfired pressure vessels improperly prepared for inspection.** If a boiler or unfired pressure vessel has not been properly prepared for an internal inspection, or the owner or user fails to comply with the requirements for hydrostatic test as set forth in these rules, the inspector may decline to make the inspection or test and the certificate of inspection shall be withheld until the owner or user complies with the requirements.

Unfired pressure vessels shall be prepared for inspection to the extent deemed necessary by the inspector. [Part III, § 13, filed 3/23/60.]

**WAC 296-104-165 Inspection of systems--Removal of covering to permit inspection.** If the boiler or unfired pressure vessel is jacketed so that the longitudinal seams of shells, drums, or domes cannot be seen, enough of the jacketing, setting wall, or other form of casing or housing shall be removed so that the size of the rivets, pitch of the rivets, and other data necessary to determine the safety of the boiler or unfired pressure vessel may be obtained provided such information cannot be determined by other means. [Part III, § 14, filed 3/23/60.]

**WAC 296-104-170 Inspection of systems--Shop inspections.** Shop inspections shall be as outlined in the applicable sections of the ASME Code. Only inspectors holding a national board commission and a commission issued by the state of Washington shall make shop inspections in this state. [Statutory Authority: RCW 70.79.030, 78-03-057 (Order 78-3), § 296-104-170, filed 2/22/78; Part III, § 15, filed 3/23/60.]

**WAC 296-104-200 Standards for new construction.** The standards for new construction are the 1980 edition of the ASME Boiler and Pressure Vessel Code, ANSI B31.3 for oil and chemical plants, and ANSI B31.1 for other nonnuclear construction, with all addenda made to each code before November 1, 1982. The 1980 code as applicable may be used on and after the date of issue and becomes mandatory twelve months after adoption by the board as defined in RCW 70.79.050(2). The board recognizes that the ASME Code states that new editions of the code become mandatory on issue and that subsequent addenda become mandatory six months after the date of issue. Also, in circumstances such as nuclear systems the time period for addenda becoming mandatory is defined in the Code of Federal Regulations. [Statutory Authority: RCW 70.79.030 and 70.79.330, 82-24-025 (Order 82-36), § 296-104-200, filed 11/23/82, effective 1/1/83. Statutory Authority: RCW 70.79.030, 82-05-003 (Order 82-2), § 296-104-200, filed 2/4/82; 81-12-012 (Order 81-10), § 296-104-200, filed 5/28/81; 81-01-114 (Order 80-28), § 296-

104-200, filed 12/24/80; 80-05-065 (Order 80-7), § 296-104-200, filed 4/23/80; 79-05-054 (Order 79-7), § 296-104-200, filed 4/30/79; 78-10-096 (Order 78-19), § 296-104-200, filed 10/3/78; Order 77-23, § 296-104-200, filed 11/8/77; Order 77-9, § 296-104-200, filed 5/26/77; Order 75-35, § 296-104-200, filed 10/29/75; Order 74-37, § 296-104-200, filed 11/8/74; Order 73-1, § 296-104-200, filed 3/22/73; Order 72-17, § 296-104-200, filed 9/28/72; Order 72-11, § 296-104-200, filed 7/7/72; Part IV, § 1, filed 3/23/60.]

**WAC 296-104-201 Inspection of systems--Standard for water chillers.** Pressure vessels that serve to transport water as part of a system that produces chilled water shall be constructed in accordance with the standards contained in the 1978 edition of the Safety Code for Mechanical Refrigeration published by the American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc., a member of the American National Standards Institute. The Safety Code for Mechanical Refrigeration shall apply to pressure vessels in place of the ASME Code adopted in WAC 296-104-200 only if the vessels meet the following criteria:

(1) The vessel serves to transport water as part of a system that produces chilled water.

(2) The vessel is part of a system that circulates water in such a way that water in the system returns to the vessel in a continuous recycling process.

(3) The water transported by the vessel does not come into direct contact with refrigerant or similar heat exchange media.

(4) The water transported by the vessel cannot exceed 135°F. in temperature, and the pressure exerted by the water on the vessels never exceeds 300 psig.

(5) The vessel, in performing its normal functions, does not serve as a storage tank for water or any other substance. [Statutory Authority: RCW 70.79.030. 80-14-015 (Order 80-12), § 296-104-201, filed 9/23/80.]

**WAC 296-104-205 Inspection of systems--Non-standard regulations.** Those boilers and unfired pressure vessels that are not considered to be within the jurisdiction of the ASME code and those of special design and construction require a special certificate, section VIII, U-1, and section 1, power boilers preamble of the ASME Code. [Part IV, § 2, filed 3/23/60.]

**WAC 296-104-210 Inspection of systems--Special designs and/or great pressures.** Prints and calculations shall be supplied for special designs or construction, and for vessels designed for working pressure in excess of 3,000 psi. Upon approval a Washington special number will be assigned by the chief inspector. The installation will be subject to the regular annual inspection in the case of boilers, and biennial inspection in the case of unfired pressure vessels. [Order 73-1, § 296-104-210, filed 3/22/73; Part IV, § 3, filed 3/23/60.]

**WAC 296-104-215 Inspection of systems--Non-standard boilers and unfired pressure vessels.** Nonstandard boilers and unfired pressure vessels may be used

provided they have not been moved from their original setting since January 1, 1952, or ownership has not changed since January 1, 1952. [Part IV, § 4, filed 3/23/60.]

**WAC 296-104-220 Inspection of systems--Non-standard second hand boilers or unfired pressure vessels.** Nonstandard, second hand boilers or unfired pressure vessels cannot be used in this state. [Part IV, § 5, filed 3/23/60.]

**WAC 296-104-225 Inspection of systems--Reinstalled boiler or unfired pressure vessel.** In any case where a stationary boiler or unfired pressure vessel is moved and reinstalled, the fittings and appliances must comply with the latest edition of the ASME Code. [Part IV, § 6, filed 3/23/60.]

**WAC 296-104-230 Inspection of systems--Hot water supply boilers and tanks.** Hot water supply boilers and tanks for operation below all of the following limitations; 200,000 btu input, 200°F. temperature, 160 psi pressure, and 120 gal. capacity, shall be tested as follows:

One boiler or tank of each design and size taken from the manufacturer's stock at random, shall be subjected to a hydrostatic test in the presence of an inspector holding a national board commission. The boiler or tank shall withstand a pressure of 300 psi without leaks or excessive distortion. Samples shall be taken from the longitudinal seam and tests made as outlined in Section IX ASME Code for root and face bends and reduced tensile coupons. Upon successfully passing the above tests, a maximum allowable working pressure of 150 psi will be allowed for all boilers or tanks constructed to identical specifications. The company name, serial number, working pressure, and energy input shall be stamped or marked in a permanent manner on each boiler or tank. A retest shall be made at the inspector's discretion or by the request of the chief inspector. Hot water supply boilers or tanks for operation exceeding any of the above limitations shall be constructed in accordance with the ASME Code. [Order 74-37, § 296-104-230, filed 11/8/74; Part IV, § 7, filed 3/23/60.]

**WAC 296-104-235 Inspection of systems--Safety relief valves.** The boilers and tanks covered by WAC 296-104-230 shall be protected by the installation of ASME code relief valves with trial levers, set pressure not to exceed 160 psi. Relief valves shall be installed on top of tank or on outlet piping as close as possible to the boiler or tank, with a minimum of fittings and no valves intervening. The outlet of the relief valve shall be run full size to a safe place. [Statutory Authority: RCW 70.79.030. 78-03-057 (Order 78-3), § 296-104-235, filed 2/22/78; Part IV, § 8, filed 3/23/60.]

**WAC 296-104-240 Inspection of systems--Unfired pressure vessels fabricated of pipe or pipe fittings.** Pressure vessels may be constructed of pipe or pipe fittings,

the material complying with the specifications in the applicable sections of the ASME Code. When the part has significant duties other than transportation of a liquid, gas, or other material, such as storage, catch basin, scrubber, snubber, absorber, or pulsating dampener, it shall be deemed to be an unfired pressure vessel and shall conform to the rules governing the design, construction, inspection, and stamping of unfired pressure vessels. [Part IV, § 9, filed 3/23/60.]

**WAC 296-104-245 Inspection of systems—Oil heaters.** Steam or hot water oil heaters shall be so designed and constructed that in the event of failure of any part, oil cannot enter the boiler water. [Statutory Authority: RCW 70.79.030. 78-03-057 (Order 78-3), § 296-104-245, filed 2/22/78; Part IV, § 10, filed 3/23/60.]

**WAC 296-104-255 Inspection of systems—Clearance at top of boilers.** When boilers are replaced or new boilers installed in either existing or new buildings, a minimum clearance as specified below shall be provided between the top of boiler proper and ceiling:

(1) Power boilers having a steam generating capacity in excess of 5,000 pounds per hour or having a heating surface in excess of 1,000 sq. ft. or input in excess of 5,000,000 btu per hour. Clearance shall be ..... 7 feet.

(2) Low pressure boilers which exceed any one of the following limits: 5,000,000 btu input; 5,000 lbs. steam per hour capacity or 1,000 sq. ft. heating surface; and power boilers which do not exceed any of the following limits: 5,000,000 btu input; 5,000 lbs. steam per hour capacity or 1,000 sq. ft. heating surface; and all boilers with manholes on top of boiler except those described in paragraph (1) above ..... 3 feet.

(3) Low pressure boilers which do not exceed the above limits and miniature boilers..... 2 feet.  
[Part IV, § 12, filed 3/23/60.]

**WAC 296-104-260 Inspection of systems—Clearance at front, back and sides.** When boilers are replaced or new boilers installed in either existing or new buildings, minimum clearance and ventilation shall be provided as specified below:

(1) Minimum clearance at sides and back between boiler casing and boiler room wall . 1 1/2 feet

(2) Clearance in front and back shall be sufficient for operation, maintenance, and repair.

(3) Permanent means of ventilation shall be required proportionate to the requirements of the fires and room temperature. [Part IV, § 13, filed 3/23/60.]

**WAC 296-104-265 Inspection of systems—Low water cut-offs and water feeding devices.** All automatically fired steam, vapor, or hot water boilers excepting boilers having a constant attendant who has no other duties while the boiler is in operation, shall be equipped

with an automatic low-water cut-off and an automatic water feeding device. These may be incorporated in one body or may be separate devices. Designs embodying a float and float bowl shall have a vertical straight-away valve drain pipe at lowest point in the water equalizing pipe connection by which the bowl and equalizing pipe can be flushed and the device tested. Immersion units shall be designed so that they may be readily tested at frequent intervals. [Part IV, § 14, filed 3/23/60.]

**WAC 296-104-270 Inspection of systems—Explosion doors.** Explosion doors, if used and if located in setting walls within seven feet of the firing floor or operating platform shall be provided with substantial deflectors to divert the blast. [Part IV, § 15, filed 3/23/60.]

**WAC 296-104-285 Unfired pressure vessels in places of public assembly.** Unfired pressure vessels in places of public assembly shall be exempt from the rules of this chapter when they do not exceed 1 1/2 cubic feet in volume and have a safety valve setting of 150 psi, or less; or when they are less than 6 inches in diameter, and do not exceed 5 cubic feet in volume regardless of pressure. [Statutory Authority: RCW 70.79.030. 78-03-057 (Order 78-3), § 296-104-285, filed 2/22/78.]

**WAC 296-104-300 New installations—Ladders and runways.** When the boiler controls, valves, manholes, or casing openings are over ten feet from the fireroom floor, a fireproof runway or platform shall be provided, with handrails, at a convenient level for the purpose of affording safe access to the boiler. When runway or platform is more than twelve feet in extent, at least two means of exit shall be provided, each exit to be remotely located from the other. The provisions of this paragraph are mandatory for power boilers and are recommended for low pressure boilers. [Part V, § 1, filed 3/23/60.]

**WAC 296-104-305 New installations—Exits from boiler rooms.** Boiler rooms containing a boiler or a combination of boilers of over 2,000 square feet of heating surface shall have two means of exit, each remotely located from the other. Each elevation shall have at least two means of egress, each remotely located from the other. At least one means of exit, in case of a difference in elevation, shall be by ramp or stairway of standard design. [Part V, § 2, filed 3/23/60.]

**WAC 296-104-310 New installations—Discharge from safety valves, blow offs and drains.** The discharge from safety valves, blow offs and drains shall be located to prevent injury to personnel or property. The discharge from safety valves on boilers of 5,000 pounds of steam per hour capacity of single or multiple units shall be extended outside of building. [Part V, § 3, filed 3/23/60.]

**WAC 296-104-315 New installations—Blow off tanks.** Blow off tanks, if of metal, shall be designed in accordance with the "National Board Blowoff Equipment" standards, 1973 edition. [Statutory Authority:

RCW 70.79.030. 78-03-057 (Order 78-3), § 296-104-315, filed 2/22/78; Part V, § 4, filed 3/23/60.]

**WAC 296-104-320 New installations--Underground installations.** Where necessary to install a vessel underground, it shall be enclosed in a concrete or masonry pit with removable cover so that inspection of the entire shell and heads of the vessel can be made. [Part V, § 5, filed 3/23/60]

**WAC 296-104-325 New installations--Supports.** Each boiler or unfired pressure vessel shall be supported by masonry or structural supports of sufficient strength and rigidity to safely support the vessel and its contents. There shall be no excessive vibration in either the vessel or its connecting piping. [Part V, § 6, filed 3/23/60.]

**WAC 296-104-330 New installations--Pressure reducing valves.** (1) Where pressure reducing valves are used one or more relief or safety valves shall be provided on the low pressure side of the reducing valve in case the piping or equipment on the low pressure side does not meet the requirement for the full initial pressure. The relief or safety valves shall be located adjoining to or as close as possible to the reducing valve. Proper protection shall be provided to prevent injury or damage caused by the escaping steam from the discharge of relief or safety valves if vented to the atmosphere. The combined discharge capacity of the relief valves shall be such that the pressure rating of the lower pressure piping or equipment shall not be exceeded in case the reducing valve sticks open.

(2) The use of hand-controlled bypasses around reducing valves is permissible. The bypass if used around a reducing valve shall not be greater in capacity than the reducing valve unless the piping or equipment is adequately protected by relief valves or meets the requirements of the high pressure system. It is mandatory that a pressure gauge as well as a relief valve be installed on the low pressure side of a reducing valve. [Part V, § 7, filed 3/23/60.]

**WAC 296-104-400 Existing installations--Stamping of existing boilers and unfired pressure vessels.** Each existing boiler and unfired pressure vessel shall be identified by a serial number of the state of Washington. The number will be assigned by the chief inspector and applied by an authorized inspector. The stamping shall be kept free of paint and lagging so that it will be plainly visible and easily read by the inspectors. Stamp shall be as outlined in WAC 296-104-060. [Part VI, § 1, filed 3/23/60.]

**WAC 296-104-405 Existing installations--Existing boiler or unfired pressure vessels.** The maximum allowable working pressure shall be determined by the following formula:

$$\frac{TS \times t \times E}{R \times FS} = M A W P$$

(1983 Ed.)

TS = as given in ASME Code, when material cannot be identified use 55,000 for steel and 45,000 for wrought iron.

t = the thinnest part determined by actual measurement.

E = efficiency of longitudinal joint or ligament, whichever is the least, determined by the rules and formula in the ASME Code.

R = radius of largest course in inches.

FS = the minimum for boilers shall be 5; for reinstated or second hand boilers, 6; for boilers with longitudinal lap seams, 8 (age limit for such boilers 30 years, may then be used at 15 psi provided they can otherwise pass inspection).

The minimum for unfired pressure vessels shall be 4 when less than 20 years old, 4 1/2 when over 20 years old. [Part VI, § 2, filed 3/23/60.]

**WAC 296-104-410 Existing installations--Noncode steel heating boilers.** The maximum allowable working pressure for noncode steel heating boilers shall be 15 psi steam. For hot water service the allowable working pressure shall be computed from the formula in WAC 296-104-405, maximum 160 psi. [Part VI, § 3, filed 3/23/60.]

**WAC 296-104-415 Existing installations--Noncode cast iron boilers.** The maximum allowable working pressure for noncode cast iron boilers shall be 15 psi steam or 30 psi water. [Part VI, § 4, filed 3/23/60.]

**WAC 296-104-500 Repairs--Major repairs.** Where a major repair is necessary, an inspector shall be called for consultation and advice as to the best method of making such repair: After such repair is made it shall be subject to the approval of the inspector. Repairs to all boilers, unfired pressure vessels, and their appurtenances shall conform to the rules contained in the National Board Inspection Code wherever they apply. In all cases the material and workmanship shall comply with the rules contained in the appropriate sections of the ASME Code. [Part VII, § 1, filed 3/23/60.]

**WAC 296-104-505 Repairs--Repairs by fusion welding.** When repairs are to be made wherein fusion welding is to be used, permission shall be obtained from the chief inspector, a deputy inspector, or a special inspector and the welding shall be done in accordance with the rules given in the applicable sections of the ASME Code. [Part VII, § 2, filed 3/23/60.]

**WAC 296-104-510 Repairs--Riveted patches.** In applying riveted patches the design of the patch and method of installation is subject to approval of the inspector. [Part VII, § 3, filed 3/23/60.]

**WAC 296-104-515 Repairs--Safety devices.** All boilers and unfired pressure vessels shall be safeguarded by safety valves or safety relief valves as specified in the

[Title 296 WAC--p 1449]

latest edition of the ASME Code. Rupture discs are acceptable where they apply. Repairing of noncode relief or safety valves shall not be allowed.

The resetting and restamping of safety devices shall be done by a qualified manufacturer or repair shop. Qualification to be by a national board inspector. Resetting while on the boiler or unfired pressure vessel shall be in the presence of an authorized national board inspector. [Part VII, § 4, filed 3/23/60.]

**WAC 296-104-520 Repairs--Lap seam crack.** The shell or drum of a boiler or unfired pressure vessel in which a lap seam crack is discovered along a longitudinal riveted joint shall be immediately discontinued from use. If the boiler or unfired pressure vessel is not more than 15 years of age, a complete new course of the original thickness may be installed at the discretion of the inspector (and after approval of the chief inspector). Patching is prohibited. By "lap seam crack" is meant the typical crack frequently found in lap seams, extending parallel to the longitudinal joint and located either between or adjacent to rivet holes. [Part VII, § 5, filed 3/23/60.]

**WAC 296-104-525 Repairs--Hydrostatic pressure tests.** (1) A hydrostatic pressure test, when applied to boilers or unfired pressure vessels of riveted or welded construction, shall not exceed one and one-half times the maximum allowable working pressure. During the hydrostatic pressure test, the safety valve or valves shall be removed or each valve disc shall be held down by a testing clamp and not by applying additional load to the spring with the compression screw. It is suggested that the minimum temperature of the water used to apply a hydrostatic test be not less than 70°F., but the maximum temperature shall not exceed 160°F.

(2) Note: When hydrostatic test is to be applied to existing installations the pressure shall be as follows:

(a) For all cases involving the question of tightness the pressure shall be equal to the release pressure of the safety valve or valves having the highest release setting.

(b) For all cases involving the question of safety, the pressure shall be equal to one and one-half times the maximum allowable working pressure. [Part VII, § 6, filed 3/23/60.]

**WAC 296-104-530 Repairs--Air or vapor testing.** Testing by air or vapor at pressures in excess of 15 lbs. shall not be undertaken without special permission. [Part VII, § 7, filed 3/23/60.]

**WAC 296-104-600 General requirements--Conditions not covered by these rules.** (1) In any condition not covered by these rules, the latest edition of the ASME Code for design, construction, and installation shall apply.

(2) Should any section, subsection, sentence, clause, phrase, provision or exemption of these rules be declared unconstitutional or invalid for any reason, such invalidity

shall not affect the remaining portion or provisions hereof. [Part VIII, § 1, filed 3/23/60.]

**WAC 296-104-700 Inspection fees--Certificate fees--Expenses.** The following fees shall be paid by, or on behalf of, the owner or user upon the completion of the inspection. The inspection fees apply to inspections made by inspectors employed by the state and include the certificate fee:

Heating boilers:	Internal	External
Cast iron--All sizes	25.00	20.00
All other boilers less than 500 sq. ft.	30.00	20.00
500 sq. ft. to 2500 sq. ft.	50.00	25.00
Each additional 2500 sq. ft. of total heating surface, or any portion thereof	20.00	10.00

Power boilers:	Internal	External
Less than 100 sq. ft.	25.00	20.00
100 sq. ft. to less than 500 sq. ft.	30.00	20.00
500 sq. ft. to 2500 sq. ft.	50.00	25.00
Each additional 2500 sq. ft. of total heating surface, or any portion thereof	20.00	10.00

Pressure vessels:		
Automatic utility hot water supply heaters per RCW 70.79.090		12.00
All other pressure vessels:		
Square feet shall be determined by multiplying the length of the shell by its diameter.	Internal	External
Less than 15 sq. ft.	20.00	15.00
15 sq. ft. to less than 50 sq. ft.	30.00	15.00
50 sq. ft. to 100 sq. ft.	35.00	20.00
For each additional 100 sq. ft. or any portion thereof	10.00	5.00

Certificate of inspection fees: For objects inspected by a special inspector employed by an authorized insurance company or user owner, the certificate of inspection fee is \$10.00 per object.

Nonnuclear shop inspections, field construction inspections, and special inspection services:

For each hour or part of an hour up to 8 hours	30.00
For each hour or part of an hour in excess of 8 hours	45.00

Nuclear shop inspections, nuclear field construction inspections, and nuclear triennial shop survey and audit:

For each hour or part of an hour up to 8 hours	45.00
For each hour or part of an hour in excess of 8 hours	70.00

Nonnuclear triennial shop survey and audit:

When state is authorized inspection agency:	
For each hour or part of an hour up to 8 hours	30.00
For each hour or part of an hour in excess of 8 hours	45.00
When insurance company is authorized inspection agency:	
For each hour or part of an hour up to 8 hours	45.00
For each hour or part of an hour in excess of 8 hours	70.00

## Expenses shall include:

Travel time and mileage: The department shall charge for its inspectors' travel time from their offices to the inspection sites and return. The travel time shall be charged for at the same rate as that for the inspection, audit, or survey. The department shall also charge 20 cents per mile or the actual cost of purchased transportation.

Hotel and meals: Actual cost.

Reinspection fee: Same as the fee for the previous inspection during which discrepancies were reported. The fee will be charged only if the discrepancies are not corrected before the reinspection. The fee shall not exceed \$25.00.

Washington state specials: For each vessel to be considered by the board for a Washington state special certificate, a fee of \$300.00 must be paid to the department before the board meets to consider the vessel. The board may, at its discretion, prorate the fee when a number of vessels that are essentially the same are to be considered.

[Statutory Authority: RCW 70.79.030 and 70.79.330. 82-24-025 (Order 82-36), § 296-104-700, filed 11/23/82, effective 1/1/83; Order 77-23, § 296-104-700, filed 11/8/77; Emergency Order 77-22, § 296-104-700, filed 11/8/77.]

### Chapter 296-115 WAC SAFETY REQUIREMENTS FOR PASSENGER VESSELS

## WAC

296-115-001	Foreword.
296-115-005	Scope and application.
296-115-010	Appeal of decisions.
296-115-015	Definitions applicable to all sections of this chapter.
296-115-025	Vessel inspection and licensing.
296-115-030	Master's examination and licensing.
296-115-035	Specific inspection requirements.
296-115-040	Construction and arrangement.
296-115-050	General requirements.
296-115-060	Operations.
296-115-070	Rules of navigation.
296-115-100	Violations and setting of penalties.
296-115-120	Fee schedule.

**WAC 296-115-001 Foreword.** This chapter is adopted to implement chapter 88.04 RCW as revised in 1979. The purpose of these rules is to set reasonable guidelines and requirements to provide for the safety and health of passengers and crew on board passenger vessels. It is intended that these rules will be at least as effective as the rules adopted by the United States Coast Guard. This chapter is therefore adopted in cooperation with the United States Coast Guard. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-115-001, filed 11/13/80.]

**WAC 296-115-005 Scope and application.** (1) This chapter shall apply to vessels for hire that carry seven or

more passengers when the vessels are operated in inland waters within the jurisdiction of the state of Washington. These rules shall not apply to vessels in the navigable waters of the United States subject to the jurisdiction of the United States Coast Guard.

(2) Pursuant to chapter 88.04 RCW, the director of the department of labor and industries shall administer this chapter. The director is authorized to use the services of the marine dock section to administer this chapter.

(3) All rules adopted by the United States Coast Guard pertaining to inland water passenger vessel service and navigation on inland waters shall be directly applicable and administered as a part of this chapter unless they conflict with specific provisions of this chapter or chapter 88.04 RCW.

(4) Special consideration. In applying the provisions of this section, the director may allow departures from the specific requirements when special circumstances or arrangements warrant such departures. (46 CFR 175.25-1) [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-115-005, filed 11/13/80.]

**WAC 296-115-010 Appeal of decisions.** (1) Any person aggrieved by a decision of the marine dock section may appeal the decision to the director within twenty working days after receipt of the decision.

(2) The director shall give the chief of the marine dock section notice of the appeal and shall give the chief ten working days to comment in writing. At the discretion of the director, an informal conference may be held with all affected parties invited to participate.

(3) The director shall issue a determining order within twenty working days of the receipt of the appeal or within ten working days following conclusion of an informal conference. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-115-010, filed 11/13/80.]

**WAC 296-115-015 Definitions applicable to all sections of this chapter.**

**NOTE:** Meaning of words. Unless the context indicates otherwise, words used in this chapter shall have the meaning given in this section.

(1) "Approved" - approved by the director; however, if a provision of this chapter states that approval by an agency or organization other than the department such as Underwriters' Laboratories or the United States Coast Guard is required, then approval by the specified authority shall be accepted.

(2) "Authorized person" - a person approved or assigned by the employer to perform a specific type of duty or duties or be at a specific location or locations at the workplace.

(3) "Competent person" - one who is capable of identifying existing and predictable hazards in the surroundings or working conditions that are unsanitary,

hazardous, or dangerous to employees, and who has authorization to take prompt action to eliminate them.

(4) "Confined or enclosed space" – any space having a limited means of egress that is subject to the accumulation of toxic or flammable contaminants or has an oxygen deficient atmosphere. Confined or enclosed spaces include, but are not limited to, storage tanks, process vessels, bins, boilers, ventilation or exhaust ducts, tunnels, pipelines and open top spaces more than four feet in depth, such as pits, tubs, vaults, and vessels.

(5) "Defect" – any characteristic or condition that tends to weaken or reduce the strength of the tool, object, or structure of which it is a part.

(6) "Department" – the department of labor and industries.

(7) "Director" – the director of the department of labor and industries, or his designated representative.

(8) "Employer" – any person, firm, corporation, partnership, business trust, legal representative, or other business entity that operates a passenger vessel for hire in this state and employs one or more employees or contracts with one or more persons, the essence of which is the personal labor of such persons. Any person, partnership, or business entity that has no employees, and is covered by the Industrial Insurance Act shall be considered both an employer and an employee.

(9) "Equipment" – all machinery, devices, tools, facilities, safeguards, and protective construction used with construction operations.

(10) "Hazard" – a condition, potential or inherent, that is likely to cause injury, death, or occupational disease.

(11) "Hazardous substance" – a substance that, because it is explosive, flammable, poisonous, corrosive, oxidizing, irritating, or otherwise harmful, is likely to cause death or injury, including all substances listed on the USCG hazardous materials list.

(12) "Inspection" – the examination of vessels by the director or an authorized representative of the director.

(13) "Marine dock section" – the chief and staff of the marine dock section, department of labor and industries.

(14) "Passenger vessel" – a watercraft capable of carrying seven or more passengers for hire and licensed for such service.

(15) "Passenger for hire" – a person (other than master, crew or persons employed) who is carried aboard a vessel for valuable consideration whether directly or indirectly flowing to the owner, charterer, agent or any other person interested in the vessel.

(16) "Port" – left hand side of a vessel as one faces the bow.

(17) "Starboard" – right hand side of a vessel as one faces the bow.

(18) "Steam vessel" – any vessel propelled by machinery.

(19) "Qualified" – one who, by possession of a recognized degree, certificate, or professional standing, or who by extensive knowledge, training, and experience, has successfully demonstrated the ability to solve problems relating to the subject matter, the work, or the project.

(20) "Safety factor" – the ratio of the ultimate breaking strength of a member or piece of material or equipment to the actual working stress or safe load when in use.

(21) "Safety and health standard" – a standard that requires the adoption or use of one or more practices, means, methods, operations, or processes reasonably necessary or appropriate to provide safe or healthful employment and places of employment.

(22) "Shall" – the provision of the standard is mandatory.

(23) "Should" – recommended.

(24) "Substantial" – constructed of such strength, of such material, and of such workmanship, that the object referred to will withstand all normal wear, shock, and usage.

(25) "Standard safeguard" – a device intended to remove a hazard incidental to the machine, appliance, tool, or equipment to which the device is attached.

Standard safeguards shall be constructed of either metal, wood, other suitable material, or a combination of these. The final determination of the sufficiency of any safeguard rests with the director.

(26) "Suitable" – that which fits, or has the qualities or qualifications to meet a given purpose, occasion, condition, function, or circumstance.

(27) "Under way" – a vessel is not at anchor, or made fast to the shore, or aground.

(28) "United States Coast Guard rules of navigation" – rules for inland waters, CG 323 and 169 as now adopted or hereafter legally amended by the United States Coast Guard. (46 CFR)

(29) "Working day" – a calendar day, except Saturdays, Sundays, and legal holidays as set forth in RCW 1.16.050, as now or hereafter amended. The time within which an act is to be done under the provisions of this chapter shall be computed by excluding the first working day and including the last working day.

(30) "Workman," "personnel," "man," "person," "employee," and other terms of like meaning, unless the context indicates otherwise – an employee of an employer who is employed in the business of his employer whether by way of manual labor or otherwise and every person in this state who is engaged in the employment of or who is working under an independent contract the essence of which is his personal labor for an employer whether by manual labor or otherwise.

(31) Abbreviations used in this chapter:

(a) "CFR" – Code of Federal Regulations.

(b) "USCG" – United States Coast Guard. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-115-015, filed 11/13/80.]

#### WAC 296-115-025 Vessel inspection and licensing.

(1) The department shall inspect all vessels to ensure they are safe and seaworthy at least once each year. The department may also inspect a vessel if requested to do so by the owner, operator, or master of the vessel, and after an explosion, fire, or accident involving the vessel.

(2) The department may inspect a vessel upon receipt of a complaint from any person or, in the discretion of the department, at any other time.

(3) The department shall charge the owner of a vessel a fee for each inspection. This fee shall be determined by the director. (See WAC 296-115-120 for fee schedule.)

(4) After the department has inspected a vessel and it is satisfied the vessel is safe and seaworthy, the department shall issue a certificate of inspection for that vessel. The certificate shall be valid for one year after the date of inspection.

(5) The certificate shall set forth the date of the inspection, the names of the vessel and the owner, the number of lifeboats and life preservers required, the number of passengers allowed, and any other information the department may by rule require.

(6)(a) If at any time a vessel is found to be not safe or seaworthy, or not in compliance with the provisions of this chapter, the department may refuse to issue a certificate of inspection until the deficiencies have been corrected and may cancel any certificate of inspection currently issued.

(b) The department shall give the owner of the vessel a written statement of the reasons the vessel was found to be unsafe, unseaworthy, or not in compliance with the provisions of this chapter, including a specific reference to the statute or rule with which the vessel did not comply.

(7) An inspector of the department may, upon the presentation of his or her credentials to the owner, master, operator, or agent in charge of a vessel, board the vessel without delay to make an inspection. The inspector shall inform the owner, master, operator, or agent in charge that his or her intent is to inspect the vessel.

(8) During the inspection, the inspector shall have access to all areas of the vessel. The inspector may question privately the owner, master, operator, or agent in charge of the vessel, or any crew member of or passenger on the vessel.

(9) If any person refuses to allow an inspector to board a vessel for an inspection, or refuses to allow access to any areas of the vessel, the department may request a warrant from the superior court for the county in which the vessel is located. The court shall grant the warrant:

(a) If there is evidence that the vessel has sustained a fire or an explosion or has been involved in an accident;

(b) If there is evidence that the vessel is not safe or seaworthy; or

(c) Upon a showing that the inspection furthers a general administrative plan for enforcing the safety requirements of the act.

(10) The owner or master of a vessel shall post the certificate of inspection behind glass in a conspicuous area of the vessel.

(11) No person shall operate a passenger vessel if the vessel does not have a valid certificate of inspection. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-115-025, filed 11/13/80.]

**WAC 296-115-030 Master's examination and licensing.** (1) The registered owner of passenger vessels for hire will be responsible to require a United States Coast Guard operator's license for the master or operator of each vessel. A physical examination will be required.

(2) The department shall penalize any person who acts as a master or operator on a vessel without having first received a United States Coast Guard license, or without having a valid license in his or her possession, or upon a vessel or class of vessels not specified in the license.

(3) The department may recommend suspension or revocation of a license to the United States Coast Guard for intemperance, incompetency, or a negligent, reckless, or willful disregard for duty. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-115-030, filed 11/13/80.]

**WAC 296-115-035 Specific inspection requirements.** (1) Drydocking or hauling out.

Each vessel subject to the provisions in this section shall be drydocked or hauled out at intervals not to exceed sixty months and the underwater hull and appendages, propellers, shafting, stern bearings, rudders, through-hull fittings, sea valves and strainers shall be examined to determine that these items are in satisfactory condition. Refer to 46 CFR 176.15.

(2) At the annual inspection the marine dock inspector shall view the vessel afloat and conduct the following tests and inspections of the hull:

(a) Hull exterior and interior, bulkheads, and weather deck.

(b) Examine and test by operation all watertight closures in the hull, decks, and bulkheads.

(c) Inspect all railings and bulwarks and their attachment to the hull.

(d) Inspect weathertight closures above the weather deck and drainage or water from exposed decks and superstructure. Refer to 46 CFR 176.25-5.

(3) At the annual inspection the marine dock inspector shall examine and test the following items:

(a) Main propulsion machinery.

(b) Engine starting system.

(c) Engine control mechanisms.

(d) Auxiliary machinery.

(e) Fuel systems.

(f) Sea valves and bulkhead closure valves.

(g) Bilge and drainage systems.

(h) Electrical system, including circuit protection. Refer to 46 CFR 176.25-10 and 176.25-15.

(4) Lifesaving and fire extinguishing equipment. At each annual inspection the marine dock inspector shall inspect the life saving and fire extinguishing equipment for serviceability. Refer to 46 CFR 176.25-20 and 176.25-25.

(5) Miscellaneous systems and equipment. At each annual inspection the marine dock inspector shall inspect and test the vessel's steering apparatus, ground tackle, navigation lights, sanitary facilities, pressure vessels, and

any other equipment aboard the vessel for serviceability and safety. Refer to 46 CFR 176.25-35, 176.25-40, and 176.25-45. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-115-035, filed 11/13/80.]

**WAC 296-115-040 Construction and arrangement.**

(1) Application.

(a) The requirements of this section shall apply to all vessels contracted for construction on or after June 7, 1979.

(b) Vessels constructed before the effective date of this chapter shall be brought into substantial compliance with the requirements of this section. Where deviation exists and strict compliance is impractical, the director may grant a temporary variance to allow a modification or a permanent variance if the intent of subsection (1)(c) of this section is met.

(c) The intent of the regulations in this part is to provide for a sound, seaworthy vessel, reasonably fit for the service it is intended to provide, and to ensure that the materials, scantlings, fastenings, and workmanship meet this intent. Primary consideration shall be given to the provision of a seaworthy hull, protection against fire, means of escape in case of casualty, guards and rails in hazardous places, ventilation of closed spaces, and necessary facilities for passengers and crew.

(2) Hull structure.

(a) In general, compliance with the standards of the United States Coast Guard rules for small passenger vessels or with the standards of a recognized classification society will be considered satisfactory evidence of the structural adequacy of a vessel. Refer to 46 CFR 177.10.

(b) Special consideration will be given by the director to materials or structural requirements not contemplated by the standards of a recognized classification society.

(3) Watertight integrity and subdivision.

(a) All vessels carrying more than forty-nine passengers shall have a collision bulkhead and watertight bulkheads (or sufficient air tankage or other internal flotation) so the vessel will remain afloat (with positive stability) with any one main compartment flooded.

(b) All watertight bulkheads required by this part shall be of substantial construction so as to be able to remain watertight with water to the top of the bulkhead.

(c) Watertight bulkheads shall extend intact to the bulkhead deck. Penetrations shall be kept to a minimum and shall be watertight.

(d) The weather deck on a flush deck vessel shall be watertight and shall not obstruct overboard drainage.

(e) Cockpits shall be watertight except that companionways may be fitted if they are provided with watertight coamings and weathertight doors. Also, ventilation openings may be provided if they are situated as high in the cockpit as possible and the opening height does not exceed two inches.

(f) Cockpits shall be self-bailing. The scuppers installed for this purpose shall be located so as to be effective considering probable list and trim.

(g) Well decks shall be watertight. Freeing ports may be installed if the provisions of 46 CFR 178.30 are followed.

(h) On vessels operating on protected waters, hatches may be weathertight. All hatches shall be provided with covers capable of being secured.

(i) The number of openings in the vessel's sides below the weather deck shall be kept to a minimum.

(j) Any openings in a vessel's sides, such as portlights, shall comply with 46 CFR 178.40.

(4) Stability.

(a) All vessels subject to the provisions of this section shall have a stability test, except that the director may dispense with the requirements for a test if he deems that a test is not required, on the basis of sufficient evidence provided by the owner that the vessel's stability is satisfactory for the service for which it is intended. Refer to 46 CFR 179.05-1.

(b) A letter stating that the vessel has met the stability requirements of this part shall be posted in the pilot-house of each vessel. Refer to 46 CFR 179.20. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-115-040, filed 11/13/80.]

**WAC 296-115-050 General requirements.** (1) Application.

(a) The following rules are applicable to all vessels operated within the scope of this chapter.

(b) Where an existing vessel does not comply with a particular requirement of this section, the director may grant a temporary variance to allow time for modifications to be made.

(c) Where an existing vessel does not exactly comply with a specific requirement contained herein but the degree of protection afforded is judged to be adequate for the service in which the vessel is used, the director may grant a permanent variance.

(2) Lifesaving equipment. Where equipment required by this section is required to be of an approved type, the equipment is required to be approved by the USCG. Refer to 46 CFR 180.05.

(3) Lifesaving equipment required.

(a) All vessels carrying passengers shall carry life floats or buoyant apparatus for all persons on board.

(b) All life floats or buoyant apparatus shall be international orange in color.

(c) In the case of vessels operating not more than one mile from land, the director may permit operation with reduced amounts of life floats or buoyant apparatus, when, in his opinion, it is safe to do so.

(d) Lifeboats, life rafts, dinghies, dories, skiffs, or similar type craft may be substituted for the required life floats or buoyant apparatus if the substitution is approved by the director.

(e) Life floats, buoyant apparatus, or any authorized substitute shall have the following equipment:

(i) A life line around the sides at least equivalent to 3/8-inch manila, festooned in bights of at least three feet, with a seine float in the center of each bight.

(ii) Two paddles or oars not less than four feet in length.

(iii) A painter of at least thirty feet in length and of at least two-inch manila or the equivalent. Refer to 46 CFR 180.10.

(f) All vessels shall have an approved adult type life preserver for each person carried, with at least ten percent additional of a type suitable for children.

(g) Life preservers shall be stowed in readily accessible places in the upper part of the vessel, and each life preserver shall be marked with the vessel's name. Refer to 46 CFR 180.25.

(h) All vessels shall carry at least one life ring buoy of an approved type with sixty feet of line attached.

(i) The life ring buoy shall be carried in a readily accessible location and shall be capable of being cast loose at any time. Refer to 46 CFR 180.30.

#### (4) Fire protection.

(a) The general construction of a vessel shall minimize fire hazards. Refer to 46 CFR 177.10-5.

(b) Internal combustion engine exhausts, boiler and galley uptakes, and similar sources of ignition shall be kept clear of and suitably insulated from woodwork or other combustible material.

(c) Lamp, paint, and oil lockers and similar storage areas for flammable or combustible liquids shall be constructed of metal or lined with metal.

(5) Fire protection equipment. Equipment required by this section, when required to be of an approved type, shall be of a type approved by the USCG or other agency acceptable to the director. Refer to 46 CFR 181.05.

#### (6) Fire pumps.

(a) All vessels carrying more than forty-nine passengers shall carry an approved power fire pump, and all other vessels shall carry an approved hand fire pump. These pumps shall be provided with a suitable suction and discharge hose. These pumps may also serve as bilge pumps.

(b) Vessels required to have a power fire pump shall also have a fire main system, including fire main, hydrants, hose, and nozzles. The fire hose may be a good commercial grade garden hose of not less than 5/8 inch size. Refer to 46 CFR 181.10.

#### (7) Fixed fire extinguishing system.

(a) All vessels powered by internal combustion engines using gasoline or other fuel having a flashpoint of 110°F or lower, shall have a fixed fire extinguishing system to protect the machinery and fuel tank spaces.

(b) This system shall be an approved type using carbon dioxide and have a capacity sufficient to protect the space.

(c) Controls for the fixed system shall be installed in an accessible location outside the space protected. Refer to 46 CFR 181.20.

(8) Fire axe. All vessels shall have one fire axe located in or near the pilothouse. Refer to 46 CFR 181.35-1.

#### (9) Portable fire extinguishers.

(a) All vessels shall have a minimum number of portable fire extinguishers of an approved type. The number required shall be determined by the director.

(b) Portable fire extinguishers shall be inspected at least once a month. Extinguishers found defective shall be serviced or replaced.

(c) Portable fire extinguishers shall be serviced at least once a year. The required service shall consist of discharging and recharging foam and dry chemical extinguishers and weighing and inspecting carbon dioxide extinguishers.

(d) Portable fire extinguishers shall be hydrostatically tested at intervals not to exceed those specified in WAC 296-24-59007 (4)(c) and Table L-3.

(e) Portable fire extinguishers of the vaporizing liquid type such as carbon tetrachloride and other toxic vaporizing liquids are prohibited and shall not be carried on any vessel.

(f) Portable fire extinguishers shall be mounted in brackets or hangers near the space protected. The location shall be marked in a manner satisfactory to the director. Refer to 46 CFR 181.30.

#### (10) Means of escape.

(a) Except as otherwise provided in this section, all vessels shall be provided with not less than two avenues of escape from all general areas accessible to the passengers or where the crew may be quartered or normally employed. The avenues shall be located so that if one is not available the other may be. At least one of the avenues should be independent of watertight doors.

(b) Where the length of the compartment is less than twelve feet, one vertical means of escape will be acceptable under the following conditions:

(i) There is no source of fire in the space, such as a galley stove or heater and the vertical escape is remote from the engine and fuel tank space; or

(ii) The arrangement is such that the installation of two means of escape does not materially improve the safety of the vessel or those aboard.

#### (11) Ventilation.

(a) All enclosed spaces within the vessel shall be properly vented or ventilated. Where such openings would endanger the vessel under adverse weather conditions, means shall be provided to close them.

(b) All crew and passenger space shall be adequately ventilated in a manner suitable to the purpose of the space. Refer to 46 CFR 117.20-5.

#### (12) Crew and passenger accommodations.

(a) Vessels with crew members living aboard shall have suitable accommodations.

(b) Vessels carrying passengers shall have fixed seating for the maximum number of passengers permitted to be carried.

(c) Fixed seating shall be installed with spacing to provide for ready escape in case of fire or other casualty.

(d) Fixed seating shall be installed as follows, except that special consideration may be given by the director if escape over the side can be readily through windows or other openings in the way of the seats:

(i) Aisles not over fifteen feet long shall be not less than twenty-four inches wide.

(ii) Aisles over fifteen feet long shall be not less than thirty inches wide.

(iii) Where seats are in rows the distance from seat front to seat front shall be not less than thirty inches.

(e) Portable or temporary seating may be installed but shall be arranged in general as provided for fixed seating. Refer to 46 CFR 177.25 and 177.30.

(13) Toilet facilities and drinking water.

(a) Vessels shall be provided with toilets and wash basins as specified in WAC 296-24-12007 and 296-24-12009, except that in the case of vessels used exclusively on short runs of approximately thirty minutes or less, the director may approve other arrangements.

(b) All toilets and wash basins shall be fitted with adequate plumbing. Facilities for men and women shall be in separate compartments, except in the case of vessels carrying forty-nine passengers and less, the director may approve other arrangements.

(c) Potable drinking water shall be provided for all passengers and crew. The provisions of WAC 296-24-12005 shall apply.

(d) Covered trash containers shall be provided in passenger areas. Refer to 46 CFR 177.30-5 and 7.

(14) Rails and guards.

(a) Except as otherwise provided in this section, rails or equivalent protection shall be installed near the periphery of all weather decks accessible to passengers and crews. Where space limitations make deck rails impractical, such as at narrow catwalks in the way of deckhouse sides, hand grabs may be substituted.

(b) Rails shall consist of evenly spaced courses. The spacing shall not be greater than twelve inches except as provided in subdivision (f) of this subsection. The lower rail courses may not be required where all or part of the space below the upper rail course is fitted with a bulwark, chain link fencing, wire mesh or the equivalent.

(c) On passenger decks of vessels engaged in ferry or excursion type operation, rails shall be at least forty-two inches high. The top rail shall be pipe, wire, chain, or wood and shall withstand at least two hundred pounds of side loading. The space below the top rail shall be fitted with bulwarks, chain link fencing, wire mesh, or the equivalent.

(d) On vessels in other than passenger service, the rails shall be not less than thirty-six inches high, except that where vessels are used in special service, the director may approve other arrangements, but in no case less than thirty inches.

(e) Suitable storm rails or hand grabs shall be installed where necessary in all passageways, at deckhouse sides, and at ladders and hatches where passengers or crew might have normal access.

(f) Suitable covers, guards, or rails shall be installed in the way of all exposed and hazardous places such as gears or machinery. (See WAC 296-24-150 for detailed requirements.) Refer to 46 CFR 177.3.

(15) Machinery installation. (Refer to 46 CFR 182.)

(a) Propulsion machinery. (Refer to 46 CFR 182.05.)

(i) Propulsion machinery shall be suitable in type and design for the propulsion requirements of the hull in which it is installed. Installations meeting the requirements of the USCG or other classification society will be considered acceptable to the director.

(ii) Installations using gasoline as a fuel shall meet the requirements of 46 CFR 182.15.

(iii) Installations using diesel fuel shall meet the requirements of 46 CFR 182.20.

(b) Auxiliary machinery and bilge systems. (Refer to 46 CFR 182.10 and 182.25.)

(i) All vessels shall be provided with a suitable bilge pump, piping and valves for removing water from the vessel.

(ii) Vessels carrying more than forty-nine passengers shall have a power operated bilge pump. The source of power shall be independent of the propulsion machinery. Other vessels shall have a hand operated bilge pump, but may have a power operated pump if it is operated by an independent power source.

(c) Steering apparatus and miscellaneous systems. (Refer to 46 CFR 182.30.)

(i) All vessels shall be provided with a suitable steering apparatus.

(ii) All vessels shall be provided with navigation lights and shapes, whistles, fog horns, and fog bells as required by law and regulation.

(iii) All vessels shall be equipped with a suitable number of portable battery lights.

(d) Electrical installations. The electrical installations of all vessels shall be at least equal to 46 CFR 183, or as approved by the director. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-115-050, filed 11/13/80.]

**WAC 296-115-060 Operations.** (1) This section shall apply to all passenger vessel operations within the scope of this chapter.

(2) Notice of casualty. (Refer to 46 CFR 185.15.)

(a) The owner or person in charge of any vessel involved in a marine accident or casualty involving any of the following shall report the incident immediately to the department.

(i) Damage to property in excess of one thousand five hundred dollars.

(ii) Major damage affecting the seaworthiness or safety of the vessel.

(iii) Loss of life or an injury to a person that incapacitates the person for more than seventy-two hours.

(b) The report shall be in writing to the director and upon receipt of the report the director may request an investigation by a marine dock inspector.

(3) Miscellaneous operating requirements. (Refer to 46 CFR 185.20.)

(a) In the case of collision, accident, or other casualty involving a vessel the operator, shall, so far as he can do so without serious danger to his own vessel or persons aboard, render any necessary assistance to other persons affected by the collision, accident, or casualty to save them from danger. He shall also give his name and address and the name of his vessel to any person injured and to the owner of any property damaged.

(b) The person in charge of the vessel shall see that the provisions of the certificate of inspection are strictly adhered to. This shall not be construed as limiting the

person in charge from taking any action in an emergency that he deems necessary to help vessels in distress or to prevent loss of life.

(c) Persons operating vessels shall comply with the provisions of the USCG rules of the road for inland waters. (Refer to USCG publication 169.)

(d) The operator of a vessel shall test the vessel's steering gear, signaling whistle, controls, and communication system before getting under way for the day's operation.

(e) Vessels using fuel having a flashpoint of 110°F or lower shall not take on fuel when passengers are on board.

(f) All vessels shall enforce "no smoking" provisions when fueling. Locations on the vessel where flammable or combustible liquids are stored shall be posted "no smoking."

(g) All vessels shall prepare and post emergency check-off lists in a conspicuous place accessible to crew and passengers, covering the following:

- (i) Man overboard.
- (ii) Fire.

(h) The persons in charge shall conduct emergency drills to ensure that the crew is familiar with their duties in an emergency.

(i) The carriage of hazardous substances is prohibited on vessels. However, the director may authorize a vessel to carry specific types and quantities of hazardous substances if he deems it necessary.

(j) All areas accessible to passengers or crew shall be kept in a clean and sanitary condition. All walking surfaces shall be free of slipping or tripping hazards and in good repair.

(4) First-aid training. There shall be present or available on all passenger vessels, at all times, a person holding a valid certificate of first-aid training from the department of labor and industries, United States Bureau of Mines, or the American Red Cross, or equivalent training that can be verified by documentary evidence. A valid first-aid certificate is one that is less than three years old.

(5) First-aid equipment. A first-aid kit or first-aid room shall be provided on all passenger vessels. The size and quantity of first-aid supplies or equipment required shall be determined by the number of persons normally dependent upon each kit or equipment. The first-aid kit or supplies shall be in a weatherproof container with individually sealed packages for each type of item. The first-aid station or kit location shall be posted or on the container. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-115-060, filed 11/13/80.]

**WAC 296-115-070 Rules of navigation.** (1) Application. The following rules shall be observed in navigating all steam vessels on the waters within the jurisdiction of the state, excepting the waters which are under the jurisdiction of the United States.

(2) When two steam vessels are meeting, end on, or nearly end on, so as to involve risk of collision, each shall

alter her course to starboard, so that each may pass on the port side of the other.

(3) When two steam vessels are crossing so as to involve risk of collision, the vessel that has the other on her own starboard side shall keep out of the way of the other.

(4) When a steam vessel and a sailing vessel are proceeding in such directions as to involve risk of collision, the steam vessel shall keep out of the way of the sailing vessel.

(5) When, by any of these rules, one of two vessels is to keep out of the way, the other shall keep her course and speed.

(6) Every steam vessel, when approaching another steamboat or small boat or vessel of any kind, so as to involve the risk of collision, shall slacken her speed, or if necessary, shall stop and reverse her engine, and every steam vessel shall, when in a fog, go at a moderate speed.

(7) Any steam vessel overtaking another steam vessel shall keep out of the way of the overtaken steam vessel.

(8)(a) When steam vessels are running in the same direction, and the vessel that is astern desires to pass on the starboard hand of the vessel ahead, she shall give one short blast of the steam whistle, as a signal of the desire, and if the vessel ahead answers with one blast, she shall direct her course to starboard; or if she desires to pass on the port side of the vessel ahead, she shall give two short blasts of the steam whistle as a signal of the desire, and if the vessel ahead answers with two blasts, shall direct her course to port. If the vessel ahead does not think it safe for the vessel astern to attempt to pass at that point, she shall immediately signify it by giving several short and rapid blasts of the steam whistle, not less than four, and under no circumstances shall the vessel astern attempt to pass the vessel ahead until they have reached a point where it can be safely done, when the vessel ahead shall signify her willingness by blowing the proper signals. The vessel ahead shall in no case attempt to cross the bow or crowd upon the course of the passing vessel.

(b) Every vessel coming up with another vessel from any direction more than two points abaft her beam, that is, in such a position with reference to the overtaken vessel that at night she would be unable to see either of that vessel's side lights, shall be deemed to be an overtaking vessel; and no subsequent alteration of the bearing between the two vessels shall make the overtaking vessel a crossing vessel within the meaning of the rules in this part, or relieve her of the duty of keeping clear of the overtaken vessel until she is finally past and clear.

(c) As by day the overtaking vessel cannot always know with certainty whether she is forward of or abaft this direction from the other vessel she should, if in doubt, assume that she is an overtaking vessel and keep out of the way.

(9)(a) When two steam vessels are approaching each other at right angles or obliquely so as to involve risk of collision, other than when one steam vessel is overtaking another, the steam vessel that has the other on her own port side shall hold her course and speed; and the steam

vessel that has the other on her own starboard side shall keep out of the way of the other by directing her course to starboard so as to cross the stern of the other steam vessel or, if necessary to do so, slacken her speed, stop, or reverse.

(b) If from any cause the conditions covered by this situation prevent immediate compliance with each other's signals, the misunderstanding or objection shall be at once made apparent by blowing the danger signal, and both steam vessels shall be stopped and backed if necessary, until signals for passing with safety are made and understood.

(10) When two steam vessels are approaching each other, and if the courses of the steam vessels are so far on the starboard side of each as not to be considered by the operators as meeting end on, or nearly so, or if the steam vessels are approaching each other, in such manner that passing to the right as in subsection (2) of this section is deemed unsafe by the operator of either steam vessel, the operator first deciding shall give two short and distinct blasts on his steam whistle, which the operator of the other steam vessel shall answer promptly by two blasts of his steam whistle, and they shall pass on the starboard side of each other.

(11) When two steam vessels are approaching each other and the operator of either steam vessel fails to understand the course or intention of the other, whether from the signals being given, answered erroneously, or from other cause, the operator in doubt shall immediately signify it by giving several short and rapid blasts of the whistle, not less than four, and if the vessels have approached within five hundred yards of each other, both shall be immediately slowed to a speed barely sufficient for steerageway until the proper signals are given, answered and understood, or until the boats have passed each other.

(12) When a steam vessel is running in a fog or thick weather the operator shall give a long blast of the whistle at intervals not exceeding one minute.

(13) Distress signals. When a vessel is in distress and requires assistance from other vessels or from the shore the following signal shall be used or displayed by her, either together or separately.

(a) In the daytime – a continuous sounding with any fog-signal apparatus, or firing a gun.

(b) At night – flames on the vessel as from a burning tar barrel or oil barrel, a continuous sounding with any fog-signal apparatus, or firing a gun.

(14) In construing these provisions, due regard must be had to all the dangers of navigation, and to any special circumstances that may exist, rendering a departure from these provisions necessary to avoid immediate danger.

(15) Every steam vessel that is under sail and not under steam is to be considered a sailing vessel, and every vessel propelled by machinery, whether under sail or not, is to be considered a steam vessel.

(16) All steam vessels shall conform to and obey other rules and regulations prescribed by the United States Coast Guard that are not inconsistent with these rules.

(17) Lights. Every steam vessel, when navigating between sunset and sunrise, shall carry the following lights:

(a) At the foremast head, a bright white light that is visible, on a dark night with a clear atmosphere, for at least two miles; that shows a uniform and unbroken light over an arc of the horizon of twenty points of the compass; and that throws the light ten points on each side of the vessel from right ahead to two points abaft the beam on either side.

(b) On the starboard side a green light that is visible, on a dark night with a clear atmosphere, for at least two miles; that shows a uniform and unbroken light over an arc of the horizon of ten points of the compass; and that throws the light from right ahead to two points abaft the beam on the starboard side.

(c) On the port side a red light that is visible, on a dark night with a clear atmosphere, for at least two miles; that shows a uniform and unbroken light over an arc of the horizon of ten points of the compass; and that throws the light from right ahead to two points abaft the beam on the port side. The green and red lights shall be fitted with inboard screens, projecting at least three feet forward from the lights, to prevent them from being seen across the bow.

(d) A vessel when underway, if not otherwise required by these rules to carry one or more lights visible from aft, shall carry at her stern a white light that shows an unbroken light over an arc of the horizon of twelve points of the compass; that shows the light six points from right aft on each side of the vessel; and that is visible for at least two miles. The light shall be carried as nearly as practicable on the same level as the side lights. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-115-070, filed 11/13/80.]

**WAC 296-115-100 Violations and setting of penalties.** (1) Violations of the mandatory provisions of this chapter shall be subject to penalty. The amount of the penalty will be assessed in accordance with the guidelines and fixed schedules contained herein.

(2) Fixed schedule penalties.

(a) Failure to display certificate of inspection as required: Fifty dollars to owner of the vessel.

(b) Operation of vessel in passenger service without a valid certificate of inspection: To owner of vessel, two hundred dollars per violation; to person who operates vessel, one hundred dollars per violation.

(c) Operation of vessel in passenger service while not in possession of valid USCG operator's license: One hundred dollars per violation to owner of vessel. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-115-100, filed 11/13/80.]

**WAC 296-115-120 Fee schedule.**

ANNUAL CERTIFICATE OF INSPECTION FEE

Passenger vessels up to 30 ft. long	-----	\$ 55.00
Passenger vessels 30 ft. long to 50 ft. long	--	\$ 67.50
Passenger vessels 50 ft. long and over	-----	\$ 87.50

Additional inspection service when required will be at the rate of \$25.00 per hour, plus travel and per diem. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-115-120, filed 11/13/80.]

## Chapter 296-116 WAC PILOTAGE RULES

### WAC

- 296-116-010 Time and place of meeting.
- 296-116-020 Special meeting.
- 296-116-030 Emergency meeting.
- 296-116-050 Records.
- 296-116-060 Personnel.
- 296-116-070 Collection of fees.
- 296-116-075 Qualifications for pilot applicants.
- 296-116-080 Licensing of pilots.
- 296-116-081 Rest period.
- 296-116-082 Limitations on new pilots.
- 296-116-085 Association bylaws.
- 296-116-110 Details and requirements of renewal application.
- 296-116-120 Physical requirements.
- 296-116-130 Period of incapacitation.
- 296-116-140 Limitations.
- 296-116-150 Registration of operators.
- 296-116-170 Pilotage station.
- 296-116-185 Tariffs, and pilotage rates for the Grays Harbor pilotage district.
- 296-116-200 Duties of pilots.
- 296-116-205 Vessel certification.
- 296-116-2051 Vessel certification form.
- 296-116-300 Pilotage rates for the Puget Sound pilotage district.
- 296-116-320 Retirement fund contribution.
- 296-116-330 Marine pilot—Trip insurance.
- 296-116-35001 Exemption from provisions of WAC 197-10-800.

### DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER

- 296-116-040 Quorum defined. [Statutory Authority: RCW 88.16.035 and 88.16.155. 78-09-057 (Order 78-2, Resolution 78-2), § 296-116-040, filed 8/23/78; Order 2-68, § 296-116-040, filed 11/1/68; § 4, effective 11/25/58.] Repealed by 80-03-081 (Order 79-6, Resolution 79-6), filed 3/4/80. Statutory Authority: RCW 88.16.035.
- 296-116-090 Examination of pilots (Puget Sound and adjacent inland waters). [Order 76-12, § 296-116-090, filed 4/22/76; Order 74-33, § 296-116-090, filed 7/10/74; Order 69-4, § 296-116-090, filed 7/18/69; Order 2-68, § 296-116-090, filed 11/1/68; § 9, effective 11/25/58.] Repealed by 80-03-081 (Order 79-6, Resolution 79-6), filed 3/4/80. Statutory Authority: RCW 88.16.035.
- 296-116-095 Examination of pilots (Grays Harbor or Willapa Bay). [Order 76-12, § 296-116-095, filed 4/22/76; Order 73-6, § 296-116-095, filed 5/11/73; Order 2-68, § 296-116-095, filed 11/1/68; Rule 2-67 (part), filed 8/3/67, effective 9/5/67; Emergency Rule 1-67, filed 6/8/67.] Repealed by 80-03-081 (Order 79-6, Resolution 79-6), filed 3/4/80. Statutory Authority: RCW 88.16.035.
- 296-116-100 Details and requirements of new applications (Puget Sound and adjacent inland waters). [Order 76-12, § 296-116-100, filed 4/22/76; Order 74-33, § 296-116-100, filed 7/10/74; Order 69-4, § 296-116-100, filed 7/18/69; Order 2-68, § 296-116-100, filed 11/1/68; § 10, subsection 2, filed 7/18/61, 10/23/61, remainder of § 10, effective 11/25/58.] Repealed by 80-03-081 (Order 79-6, Resolution 79-6), filed 3/4/80. Statutory Authority: RCW 88.16.035.

- 296-116-105 Details and requirements of new applications (Grays Harbor or Willapa Bay). [Order 76-12, § 296-116-105, filed 4/22/76; Order 73-6, § 296-116-105, filed 5/11/73; Order 2-68, § 296-116-105, filed 11/1/68.] Repealed by 80-03-081 (Order 79-6, Resolution 79-6), filed 3/4/80. Statutory Authority: RCW 88.16.035.
- 296-116-160 Mileage on Puget Sound and adjacent inland waters. [Order 73-6, § 296-116-160, filed 5/11/73; Order 2-68, § 296-116-160, filed 11/1/68; § 16, effective 11/25/58.] Repealed by 80-03-081 (Order 79-6, Resolution 79-6), filed 3/4/80. Statutory Authority: RCW 88.16.035.
- 296-116-180 Tariffs, Puget Sound and adjacent inland waters. [Order 2-68, § 296-116-180, filed 11/1/68; § 18, effective 11/25/58.] Repealed by 80-03-081 (Order 79-6, Resolution 79-6), filed 3/4/80. Statutory Authority: RCW 88.16.035.
- 296-116-190 Hearings. [Order 2-68, § 296-116-190, filed 11/1/68.] Repealed by 80-03-081 (Order 79-6, Resolution 79-6), filed 3/4/80. Statutory Authority: RCW 88.16.035.
- 296-116-210 Annual report. [Order 2-68, § 296-116-210, filed 11/1/68; § 21, effective 11/25/58.] Repealed by 80-03-081 (Order 79-6, Resolution 79-6), filed 3/4/80. Statutory Authority: RCW 88.16.035.
- 296-116-220 Effective date and validity. [Order 2-68, § 296-116-220, filed 11/1/68; § 22, effective 11/25/58.] Repealed by 80-03-081 (Order 79-6, Resolution 79-6), filed 3/4/80. Statutory Authority: RCW 88.16.035.
- 296-116-310 Puget Sound pilots transportation schedule. [Order 77-18, § 296-116-310, filed 9/20/77, effective 11/1/77; Order 76-24, § 296-116-310, filed 7/22/76; Order 73-8, § 296-116-310, filed 6/20/73 and Emergency Order 73-10, filed 7/19/73, effective 8/14/73; Order 70-7, § 296-116-310, filed 7/16/70; 7/25/67; 2/18/64.] Repealed by 80-03-081 (Order 79-6, Resolution 79-6), filed 3/4/80. Statutory Authority: RCW 88.16.035.
- 296-116-350 Tariff, Grays Harbor and Willapa Bay pilots. [Order 71-4, § 296-116-350, filed 5/11/71, effective 6/15/71; Order 2-67 (part), filed 8/3/67, effective 9/5/67; Emergency Rule 1-67, filed 6/8/67.] Repealed by Order 75-1, filed 1/14/75.
- 296-116-351 Pilotage rates for Grays Harbor and Willapa Bay pilotage district. [Statutory Authority: RCW 88.16.035. 79-05-023 (Order 79-2, Resolution 79-2), § 296-116-351, filed 4/17/79; Statutory Authority: RCW 88.16.005 and 88.16.035. 79-02-030 (Order 79-1, Resolution 79-1), § 296-116-351, filed 1/19/79; 78-02-008 (Order 78-1), § 296-116-351, filed 1/6/78, effective 2/10/78; Order 75-1, § 296-116-351, filed 1/14/75.] Repealed by 80-03-081 (Order 79-6, Resolution 79-6), filed 3/4/80. Statutory Authority: RCW 88.16.035.

**WAC 296-116-010 Time and place of meeting.** The regular monthly meeting of the board of pilotage commissioners shall be on the second Thursday of each month at 9:00 a.m. at Pier 52, Seattle, Washington in the offices of the Washington state ferries unless another time and place has been designated by the chairperson at the last previous meeting. If the aforementioned day falls on a holiday, the meeting shall take place on the following Thursday at the same hour. [Statutory Authority: RCW 88.16.035 and 88.16.155. 78-09-057 (Order 78-2, Resolution 78-2), § 296-116-010, filed 8/23/78; Order 2-68, § 296-116-010, filed 11/1/68; § 1, effective 11/25/58.]

**WAC 296-116-020 Special meeting.** A special meeting of the board of pilotage commissioners may be

called by the chairperson, or by any two members of the board, by serving notice, in writing, upon all other members of the board not less than five days prior to the meeting date. The notice calling a special meeting shall state the purpose for which the meeting is called and the date, hour and place of such meeting and shall be in conformance with the provisions of chapter 42.30 RCW. [Statutory Authority: RCW 88.16.035 and 88.16.155. 78-09-057 (Order 78-2, Resolution 78-2), § 296-116-020, filed 8/23/78; Order 2-68, § 296-116-020, filed 11/1/68; § 2, effective 11/25/58.]

**WAC 296-116-030 Emergency meeting.** An emergency meeting may be called by the chairperson, or by any two members of the board without notification whenever an accident of any importance, such as stranding, collision or the like, shall occur to any vessel while utilizing the services of a state licensed pilot, for the purpose of making an investigation into the cause of such accident. The findings of such an emergency meeting shall be submitted to the board for appropriate action at the next regular monthly meeting. [Statutory Authority: RCW 88.16.035 and 88.16.155. 78-09-057 (Order 78-2, Resolution 78-2), § 296-116-030, filed 8/23/78; Order 2-68, § 296-116-030, filed 11/1/68; § 3, effective 11/25/58.]

**WAC 296-116-050 Records.** The board of pilotage commissioners shall keep accurate records of the minutes of the meetings, records of pilots' earnings, mileage piloted, accident reports, licenses, applications for licenses, examinations for licenses, and any and all other records deemed necessary by the board. [Order 2-68, § 296-116-050, filed 11/1/68; § 5, effective 11/25/58.]

**WAC 296-116-060 Personnel.** The board shall employ the necessary personnel for the conduct of its business following the personnel practices and salary schedules of the Washington state ferries. [Statutory Authority: RCW 88.16.035 and 88.16.155. 78-09-057 (Order 78-2, Resolution 78-2), § 296-116-060, filed 8/23/78; Order 2-68, § 296-116-060, filed 11/1/68; § 6, effective 11/25/58.]

**WAC 296-116-070 Collection of fees.** All pilots shall pay an annual license fee of eight hundred dollars for every year in which they perform any pilotage services. If a licensed pilot does not perform pilotage services during a calendar year, his fee for that year shall be reduced to four hundred dollars upon application to the board. The board of pilotage commissioners shall receive all fees for licenses or for other purposes and make proper accounting of same and transmit all such funds to the pilotage account. [Statutory Authority: RCW 88.16.035. 82-24-010 (Order 82-8, Resolution No. 82-8), § 296-116-070, filed 11/18/82; 79-11-063 (Order 79-5, Resolution 79-5), § 296-116-070, filed 10/18/79. Statutory Authority: RCW 88.16.035 and 88.16.155. 78-09-057 (Order 78-2, Resolution 78-2), § 296-116-070, filed 8/23/78; Order 2-68, § 296-116-070, filed 11/1/68; § 7, effective 11/25/58.]

**WAC 296-116-075 Qualifications for pilot applicants.** Under the authority of RCW 88.16.090 pilot applicants must meet one of the following additional qualifications before taking the Washington state pilotage examination for either the Grays Harbor or Puget Sound pilotage districts:

(1) One year of service as master of ocean or coastwise vessels while holding a license as master ocean steam or motor vessels any gross tons; or

(2) One year of service as master of coastwise steam or motor vessels while holding a license as a master of coastwise steam or motor vessels any gross tons; or

(3) Two years of service as master of freight or towing vessel, while holding a license as a master of freight and towing vessels not more than 1000 gross tons; or

(4) Two years of service as master on lakes, bays, and sounds while holding a license as master on lakes, bays, and sounds any gross tons; or

(5) Three years of experience as a member of an organized professional pilots association, during which period the candidate was actively engaged in piloting while holding a minimum license as a master freight or towing vessel not more than 1000 gross tons; or

(6) Two years service as a chief officer on ocean or coastwise vessels of not less than 1000 gross tons while holding a license as master ocean steam or motor vessel any gross tons; or

(7) Two years service as commanding officer of U.S. government vessels of not less than 1000 gross tons, and holding a license as master ocean steam or motor vessel any gross tons.

Note: (All licenses referred to in sections (1)-(7) shall be licenses for inspected vessels).

[Statutory Authority: RCW 88.16.090. 82-15-026 (Order 82-6, Resolution No. 82-6), § 296-116-075, filed 7/14/82.]

**WAC 296-116-080 Licensing of pilots.** (1) No person shall be licensed by the board unless he has applied for a pilotage license and successfully completed: (a) The pilotage examination; (b) familiarization trips required by the board; and (c) the pilotage training program, if applicable.

The majority of the entire board shall pass on the licensing of a pilot and licenses shall be signed by the chairperson. All applicants shall have and display a United States Government Masters License and a first class United States endorsement without restrictions on that license to pilot in whichever pilotage district the applicant desires a license. In addition all applicants shall have and display an endorsement to their masters license issued by the United States Coast Guard certifying competence as a radar observer.

(2) Prior to commencing familiarization trips, and the pilot training program, if applicable, an applicant must pass a written and oral examination given and graded by the board. The board shall hold examinations at such times as will ensure the maintenance of an efficient and competent pilotage service. Notice of the examination shall be published four months in advance by one paid

advertisement in a major newspaper and written notice to one radio station, one television station, United Press International, and the Associated Press, as well as all pilots licensed by the board and all operators registered with the board. The board may, in an emergency, call for an immediate examination of applicants who have an application on file with the board.

(a) The examination may be taken by all qualified applicants who:

(i) Have had a license application on file with the board for at least one month prior to the examination. (This requirement may be waived upon the showing of good cause;)

(ii) Have tendered an examination fee of one hundred dollars which will be applied to his first year license fee if successful and shall be returned to the applicant if he is unable to sit for the examination; and

(iii) Have had a physical examination by a physician designated by the board not more than thirty days prior to the examination to determine his physical fitness to be a pilot.

(b) The examination shall be in compliance with RCW 88.16.090 and shall consist of questions covering, but not limited to, the following subjects as they pertain to the pilotage district for which the examination is being given:

(i) Rules of the road as set forth in United States Government Publications;

(ii) Aids to navigation;

(iii) Courses, distances, and distance past abeam at change-of-course points, course points within channels, waterways, and navigable tributaries within the pilotage district for which the examination is being given;

(iv) Cable crossing areas;

(v) Dredged channel widths and depths;

(vi) Bridge signals - width, regulations, and closed periods;

(vii) Ship handling, docking and undocking problems, use of towboats and anchors, and seamanship;

(viii) Vessel traffic system regulations where applicable;

(ix) Ranges for determining compass error;

(x) Channel ranges;

(xi) Engine and rudder order commands for United States and foreign merchant vessels and United States naval vessels;

(xii) Operation and use of marine radar, including rapid plotting techniques;

(xiii) Calculation of currents and tides;

(xiv) Pier, wharf, or terminal locations and berth numbers; dock or pier headings, lengths, and minimum depths of water alongside;

(xv) Prohibited areas, restricted areas, and explosive anchorages;

(xvi) Use of navigational and bridge instruments;

(xvii) Anchorage locations;

(xviii) Duties of pilot;

(xix) Relationship between pilot and master;

(xx) Location and meaning of storm warning signals;

(xxi) Meaning of one and two flag signals;

(xxii) United States government public health quarantine regulations;

(xxiii) Harbor regulations;

(xxiv) Washington State Pilotage Act and rules of the board of pilotage commissioners;

(xxv) Chart knowledge, including chart symbols and abbreviations as set forth in the latest department of commerce NOS (National Ocean Survey) Chart No. 1.

(3) After successful completion of the examination, the board shall determine the number of familiarization trips which the applicant will have to make pursuant to RCW 88.16.090. Familiarization trips are ship movements over specified routes on which the applicant observes the route and the actions of the licensed pilot on board.

(4) After passing the examination, applicants for the Puget Sound pilotage district must enter and successfully complete a familiarization and training program. In this program applicants shall be required to pilot vessels under the supervision of Puget Sound pilots with more than five years experience. After every such assignment the supervisory pilots shall fill out, on a form provided by the board, an evaluation of the applicant's performance. After completion of the training period, the board shall evaluate the applicant's performance in shiphandling skills on the basis of these forms and other relevant information and decide whether the applicant should be licensed. Dependent on the applicant's experience level and grade of license, applicants in this training program shall pilot under such supervision for a minimum period of four months and seventy-five assignments and a maximum period of six months and one hundred assignments. Some or all of the familiarization trips required by RCW 88.16.090(7) may, at the board's discretion, be combined with trips during which the applicant is piloting the vessel under the supervision of a licensed pilot. [Statutory Authority: RCW 88.16.090. 82-15-028 (Order 82-7, Resolution No. 82-7), § 296-116-080, filed 7/14/82; 81-21-019 (Order 81-4, Resolution 81-4), § 296-116-080, filed 10/13/81. Statutory Authority: RCW 88.16.035. 80-03-081 (Order 79-6, Resolution 79-6), § 296-116-080, filed 3/4/80; 79-11-063 (Order 79-5, Resolution 79-5), § 296-116-080, filed 10/18/79; 79-05-023 (Order 79-2, Resolution 79-2), § 296-116-080, filed 4/17/79; Order 75-8, § 296-116-080, filed 3/10/75; Order 73-6, § 296-116-080, filed 5/11/73; Order 2-68, § 296-116-080, filed 11/1/68; § 8, effective 11/25/58.]

**WAC 296-116-081 Rest period.** (1) Pilots shall observe rest period requirements as set out in RCW 88.16.103 as now or hereafter amended. For purposes of applying this rule an assignment shall begin at the pilot's dispatched departure time if the pilot is on board, regardless of when the ship actually sails. The assignment ends when the pilot leaves the vessel. Travel time shall not be included in an assignment. [Statutory Authority: RCW 88.16.035. 79-05-023 (Order 79-2, Resolution 79-2), § 296-116-081, filed 4/17/79; Order 73-6, § 296-116-081, filed 5/11/73.]

**WAC 296-116-082 Limitations on new pilots.** The initial license issued by the board to a pilot applicant shall not authorize such pilot to perform pilotage services on any vessel of a size of 25,000 gross tons or more for the first year that such licensee becomes an active pilot. During the second year of piloting under an initial license the pilot may perform pilotage on vessels in excess of 25,000 gross tons if such pilotage does not include the docking or undocking of the vessel. The initial license shall contain the above limitations and the date of the commencement and expiration of such periods of limitation. [Statutory Authority: RCW 88.16.035, 80-03-081 (Order 79-6, Resolution 79-6), § 296-116-082, filed 3/4/80.]

**WAC 296-116-085 Association bylaws.** The association of pilots for the Puget Sound pilotage district, together with the association of pilots for the Grays Harbor pilotage district, shall maintain on file with the commission a current copy of their respective association bylaws and amendments. Hereafter they shall file with the commission each new amendment adopted by their respective groups in order that the board may be kept informed of association acts and activities. [Statutory Authority: RCW 88.16.035, 82-13-087 (Order 82-10-049, Resolution No. 82-10-049), § 296-116-085, filed 6/23/82; Order 76-12, § 296-116-085, filed 4/22/76.]

**WAC 296-116-110 Details and requirements of renewal application.** All applications for renewal of licenses shall be submitted in writing to the board at least thirty days prior to the expiration date of the license, and be accompanied by a certified check payable to the state treasurer in the amount of the annual license fee. All applicants for renewal of licenses shall be required to display their currently applicable United States government license with radar endorsement issued by the United States Coast Guard. [Statutory Authority: RCW 88.16.035, 80-03-081 (Order 79-6, Resolution 79-6), § 296-116-110, filed 3/4/80; Order 2-68, § 296-116-110, filed 11/1/68; § 11, effective 11/25/58.]

**WAC 296-116-120 Physical requirements.** (1) In order to determine the physical fitness of persons to continue to serve as licensed pilots under the provisions of the pilotage act, all licensed pilots shall be required to pass a general physical examination annually within forty-five days prior to the date their annual state pilot license fee is due. As part of this examination pilots shall have completed on a form provided by the board a detailed report of physical examination. This form shall be prepared by the pilot and the examining physician and shall be submitted to the board along with a letter from the physician stating whether and under what conditions the pilot is capable of providing pilotage service. The detailed report of physical examination is a confidential record which will be used only by the board and will not be available for public inspection. Such examination shall be obtained at the expense of the licensed pilots from a physician or physicians designated in advance by

the board. The secretary of the board shall give each pilot reasonable written notice of the date when any such physical examination becomes due and shall specify the name of the physicians then approved by the board to conduct such physical examination.

(2) The physical examination required of all pilots shall demonstrate that he is in all respects physically fit to perform his duties as a pilot. The examination shall assure that one's abilities as a pilot will not be impaired by eyesight, hearing or other bodily function and shall include examination of the pilot's eyes (including tests for color blindness, depth perception, night vision, disease, field of vision and reflexes); ears; heart; blood pressure; blood components; pulse; speech capabilities; history of diseases (including diabetes, cancer, arthritis, arrhythmia, asthma, bronchitis, emphysema, ulcers, alcoholism and other illnesses) and any other type of information which the physician feels is relevant.

(3) In the case of renewal of license as pilot, should the pilot be temporarily physically incapacitated at the time his license is due to be renewed, the commission shall not revoke such license until a further physical examination to be given at the expiration of three months. This procedure shall be carried on until it is evident that the pilot is permanently incapacitated; provided further, that no pilot shall be carried on the inactive list for longer than one year if disabled. Any pilot who is physically incapacitated shall not serve as a pilot during such period of incapacitation. [Statutory Authority: RCW 88.16.035 and 88.16.090(6), 80-16-005 (Resolution 79-5), § 296-116-120, filed 10/23/80. Statutory Authority: RCW 88.16.035, 79-11-063 (Order 79-5, Resolution 79-5), § 296-116-120, filed 10/18/79; Order 73-6, § 296-116-120, filed 5/11/73; Order 2-68, § 296-116-120, filed 11/1/68; § 12, effective 11/25/58.]

**WAC 296-116-130 Period of incapacitation.** (1) Any pilot who is physically incapacitated as a pilot for a period of ninety days or more shall not return to service as an active pilot until he has passed a physical examination by a physician designated by the board.

(2) In the event a pilot fails to pass such physical examination, he shall have the right to a further examination by a medical commission composed of the board's physician, a physician selected by the pilot, and a third physician to be selected by these two physicians. [Statutory Authority: RCW 88.16.035, 80-03-081 (Order 79-6, Resolution 79-6), § 296-116-130, filed 3/4/80; Order 2-68, § 296-116-130, filed 11/1/68; § 13, effective 11/25/58.]

**WAC 296-116-140 Limitations.** [Order 2-68, § 296-116-140, filed 11/1/68.]

**WAC 296-116-150 Registration of operators.** All ship owners, operators and agents of owners and operators whose vessels are subject to the pilotage act must register with the board and keep the board advised of any change of name or address. [Order 2-68, § 296-116-150, filed 11/1/68; § 15, effective 11/25/58.]

**WAC 296-116-170 Pilotage station.** Port Angeles is hereby declared the location of the pilotage station for Puget Sound and adjacent inland waters and tariffs shall be assessed accordingly. Boundary pilotage shall apply on ships going to and coming from all British Columbia ports. [Order 2-68, § 296-116-170, filed 11/1/68; § 17, effective 11/25/58.]

**WAC 296-116-185 Tariffs, and pilotage rates for the Grays Harbor pilotage district.** The following rates shall become effective on August 1, 1983:

**CLASSIFICATION OF PILOTAGE SERVICE RATE**

Piloting of vessels in the inland waters and tributaries of Grays Harbor:

Each vessel shall be charged according to its draft and tonnage. The draft charges shall be \$31.35 per meter (or \$9.56 per foot) and the tonnage charge shall be \$.10 per net registered ton. The minimum net registered tonnage charge is \$350.00. The charge for an extra vessel (in case of tow) is \$200.00.

**Boarding fee:**

Per each boarding/deboarding from a boat..... \$150.00

**Harbor shifts:**

For each shift from dock to dock, dock to anchorage, anchorage to dock, or anchorage to anchorage ..... 250.00  
Delays per hour ..... 60.00  
Cancellation charge (pilot only) ..... 100.00  
Cancellation charge (pilot boat only)..... 300.00

**Travel allowance:**

Boarding or deboarding a vessel off Grays Harbor entrance ..... 50.00  
Pilot when traveling to an outlying port to join a vessel or returning through an outlying port from a vessel which has been piloted to sea shall be paid \$350.00 for each day or fraction thereof, and the travel expense incurred.

**Bridge transit:**

Charge for each bridge transited ..... 110.00

**Miscellaneous:**

The balance of amounts due for pilotage rates not paid within 60 days of invoice will be assessed at 1 1/2% per month late charge. At least a four hour notice shall be given for an arrival, sailing, or change of ETA or ETD.

[Statutory Authority: RCW 88.16.035(4). 83-15-012 (Order 83-3, Resolution No. 83-3), § 296-116-185, filed 7/12/83; 82-08-016 (Order 82-1, Resolution No. 82-1), § 296-116-185, filed 3/29/82; 81-07-009 (Order 81-1, Resolution 81-1), § 296-116-185, filed 3/6/81; 80-03-081 (Order 79-6, Resolution 79-6), § 296-116-185, filed 3/4/80; Order 2-68, § 296-116-185, filed 11/1/68.]

**WAC 296-116-200 Duties of pilots.** (1) In any case where a vessel in charge of a state licensed pilot shall go aground, collide with another vessel, or dock, or shall meet with any casualty, or be injured or damaged in any way, the said pilot shall, within ten days thereafter, make written report thereof to said board, and the board of pilotage commissioners may thereupon, either with or without complaint being made against the said pilot, investigate the matter reported upon. In any case of apparent damage being sustained or caused by a vessel under his charge, the pilot shall file his written report as soon as possible after returning to shore. It is important that the board be promptly advised of the facts in all cases of accident, without delay.

(2) Pilots will report to the pilot office and to the aids to navigation officer of the U.S. Coast Guard, all changes in lights, range lights, buoys, and any dangers to navigation that may come to their knowledge.

(3) Any pilot who shall fail, neglect or refuse to make a report to the board of pilotage commissioners as required by the pilotage laws of the state, or by these rules and regulations, for a period of ten days after the date when the said report is required to be made, shall be subject to having his license suspended at the discretion of the board, and if he fails to report for a period of thirty days the board may, at its discretion, revoke his license.

(4) Pilots when so notified in writing shall report in person to the board, at any meeting specified in such notice.

(5) Any pilot summoned to testify before the pilotage board shall appear in accordance with such summons and shall make answer, under oath, to any question put to him which deals with any matter connected with the pilot service, or of the pilotage waters over which he is licensed to act. He shall be entitled to have his attorney or advisor present during any such appearance and testimony.

(6) Any pilot who shall absent himself from his pilotage duties or district for a period of sixty days without permission of the board of pilotage commissioners shall be liable to suspension or to the forfeiture of his license.

(7) A pilot on boarding a ship, if required by the master thereof, shall exhibit his license, or photostatic copy thereof.

(8) When a pilot licensed under this act is employed on an enrolled ship, the same rules and regulations shall apply as pertain to registered ships.

(9) Any state licensed pilot assigned to pilot a vessel entering, leaving, or shifting berths under its own power in any of the waters subject to the provisions of chapter 88.16 RCW shall before assuming pilotage obligations

for such vessel obtain assurance from the master that the vessel meets all requirements for safe navigation and maneuvering. In addition, the pilot shall obtain assurance that the ship's officers will maintain navigation procedures by all navigational aids available to insure that the vessel's position is known at all times. If the pilot in his professional judgment considers the vessel to be incapable of safe navigation and maneuvering due to performance limitations, he shall refuse to assume the obligations of pilotage for such vessel until such limitations have been corrected and shall promptly notify the pilot's control station and the chairman of the board of pilotage commissioners of such action. [Order 73-6, § 296-116-200, filed 5/11/73; Order 2-68, § 296-116-200, filed 11/1/68; § 20, effective 11/25/58.]

**WAC 296-116-205 Vessel certification.** (1) Upon boarding a vessel in the Puget Sound pilotage district or Grays Harbor pilotage district, a pilot shall request on the form provided in WAC 296-116-2051 that the master of the vessel certify that: (a) The engine room is properly staffed, able to maneuver, and all related equipment is in good order; (b) there are no defects listed against the ship by the United States Coast Guard which would prevent it from sailing; (c) the vessel is not leaking oil; (d) the vessel is experiencing no propulsion or maneuvering difficulties.

If the master is unable to certify that all of the above conditions are met, he shall be asked to certify that the United States Coast Guard captain of the port has been notified of said deficiencies and has authorized the vessel to proceed.

If the master is unable or unwilling to certify that either of the above are the case, the pilot shall not offer pilotage services to said vessel. Instead, the pilot shall disembark from the vessel as soon as practicable, immediately inform the captain of the port of the conditions and circumstances by the best possible means and forward a written report to the board of pilotage commissioners no later than 24 hours after disembarking from the vessel. Any Washington licensed pilot who offers pilotage services to a vessel on which the master has failed to make a certification required by this section shall be subject to the penalties provided in RCW 88.16.100 and 88.16.150.

(2) Upon boarding vessels in either the Puget Sound pilotage district or the Grays Harbor pilotage district, the pilot shall also request to see the vessel's SOLAS certificate, and the Federal Maritime Commission certificate of financial responsibility.

The pilot shall also inspect the following of the ship's equipment and conditions and indicate their suitability:

VHF radio, channels 13, 14; radar; gyrocompass; rudder angle indicator; whistle; wheelhouse staffed by an officer and helmsman, one of whom speaks English; local, up-to-date charts; and wheelhouse to engine room communications.

(3) The form appearing in WAC 296-116-2051 shall be used by pilots and masters in complying with the above requirements.

(4) Forms completed by masters and pilots which indicate that the vessel is in compliance and nondeficient shall be forwarded to the offices of the board of pilotage commissioners where they will be retained for a period of at least six months. Forms indicating a vessel not in compliance or deficient and forms upon which either the master or the pilot have failed to make the required certification shall be forwarded to the board of pilotage commissioners and retained for a period of at least twelve months. [Statutory Authority: RCW 88.16.035. 82-13-087 (Order 82-10-049, Resolution No. 82-10-049), § 296-116-205, filed 6/23/82; 79-11-063 (Order 79-5, Resolution 79-5), § 296-116-205, filed 10/18/79. Statutory Authority: RCW 88.16.035 and 88.16.155. 78-09-057 (Order 78-2, Resolution 78-2), § 296-116-205, filed 8/23/78.]

**WAC 296-116-300 Pilotage rates for the Puget Sound pilotage district.** These rates shall become effective on August 1, 1983, or as soon thereafter as provided in RCW 34.04.040.

CLASSIFICATION	RATE
Ship Length overall (LOA) Charges:	per LOA rate schedule in this section
Boarding Fee: Per each boarding/deboarding at the Port Angeles Pilot station.	\$24.00
Harbor Shift - Live Ship (Seattle Port)	LOA Zone I
Harbor Shift - Live Ship (Other than Seattle Port)	LOA Zone I
Harbor Shift - Dead Ship	Double LOA Zone I
Dead Ship Towing Charge: LOA of tug + LOA of tow + beam of tow Any tow exceeding seven hours, two pilots are mandatory. Harbor shifts shall constitute and be limited to those services in moving vessels from dock to dock, from anchorage to dock, from dock to anchorage, or from anchorage to anchorage in the same port after all other applicable tariff charges for pilotage services have been recognized as payable.	Double LOA Zone
Waterway and Bridge Charges: Ships up to 90' beam: A charge of \$122.00 shall be in addition to bridge fees for any vessel movements both inbound and outbound required to transit south of Spokane Street Bridge in Seattle, south of Eleventh Street Bridge in any of the Tacoma waterways, in Port Gamble, or in the Snohomish River. Any vessel movements required to transit through bridges shall have an additional charge of \$58.00 per bridge.	
Ships 90' beam and/or over: A charge of \$164.00 shall be in addition to bridge fees for any vessel movements both inbound and outbound required to transit south of Spokane Street Bridge in Seattle and south of Eleventh	

CLASSIFICATION

RATE

Street Bridge in any of the Tacoma waterways. Any vessel movements required to transit through bridges shall have an additional charge of \$115.00 per bridge. (The above charges shall not apply to transit of vessels from Shilshole Bay to the limits of Lake Washington.)	
In a case where two pilots are employed for a single vessel waterway or bridge transit, a second pilot charge shall be levied in the amount of a harbor shift only.	
Compass Adjustment	163.00
Radio Direction Finder Calibration	163.00
Launching Vessels	244.00
Trial Trips, 6 hours or less (Minimum \$392.00)	66.00 per hr.
Trial Trips, over 6 hours (two pilots)	130.00 per hr.
Shilshole Bay - Salmon Bay	95.00
Salmon Bay - Lake Union	76.00
Lake Union - Lake Washington (plus LOA zone from Webster Point)	95.00
Cancellation Charge	LOA Zone I
Cancellation Charge - Port Angeles (When pilot is ordered and vessel proceeds without stopping for pilot.)	LOA Zone I
Docking Delay after Anchoring: Applicable Harbor Shift rate to apply, plus \$66.00 per hour standby. No charge if delay is 60 minutes or less. If the delay is more than 60 minutes, charge is \$66.00 for every hour or fraction thereof.	66.00
Sailing Delay	66.00 per hour
No charge if delay is 60 minutes or less. If the delay is more than 60 minutes, charge is \$66.00 for every hour or fraction thereof.	
Slow-Down - \$66.00 per hour for all time in excess of time spent in that particular transit for that speed of advance normal for vessel that is slowed.	66.00 per hour
Super Ships - Additional charge to LOA zone mileage of \$0.0406 a gross ton for all gross tonnage in excess of 20,000 gross tons up to 50,000 gross tons. In excess of 50,000 gross tons, the charge shall be \$0.0486 per gross ton.	
Delayed Arrival Port Angeles (When pilot is ordered and vessel does not arrive within two hours without notification of change of ETA.)	66.00 per hour
Transportation to vessels on Puget Sound:	
March Point or Anacortes	\$ 96.00
Bangor	56.00
Bellingham	106.00
Bremerton	29.00
Cherry Point	125.00
Dupont	56.00
Edmonds	20.00
Everett	36.00
Ferndale	115.00
Manchester	44.00
Mukilteo	35.00
Olympia	72.00
Point Wells	20.00
Port Gamble	51.00
Port Townsend (Indian Island)	73.00
Semiahmoo (Blaine)	131.00
Tacoma	37.00
Tacoma Smelter	42.00
Winslow	29.00

- (a) Interport shifts: Transportation paid to and from both points.
- (b) Intraharbor shifts: Transportation to be paid both ways. If intraharbor shift is cancelled on or before scheduled reporting time, transportation paid one way only.
- (c) Cancellation: Transportation both ways unless notice of cancellation is received prior to scheduled reporting time in which case transportation need only be paid one way.
- (d) Any new facilities or other seldom used terminals, not covered above, shall be based on mileage x \$1.40 per mile.

Delinquent payment charge: 1% per month after 60 days from first billing.

Non Use of Pilots: Ships taking and discharging pilots without using their services through all Puget Sound and adjacent inland waters shall pay full pilotage fees on the LOA zone mileage basis from Port Angeles to destination, from place of departure to Port Angeles, or for entire distance between two ports on Puget Sound and adjacent inland waters.

**LOA Rate Schedule**

The following rate schedule is based upon distances furnished by National Oceanic and Atmospheric Administration, computed to the nearest half-mile and includes retirement fund contributions.

LOA	ZONE	ZONE	ZONE	ZONE	ZONE	ZONE
	I	II	III	IV	V	VI
	Intra Harbor	0-30 Miles	31-50 Miles	51-75 Miles	76-100 Miles	101 Miles & Over
Up to 449	115	179	311	466	629	818
450 - 459	117	183	314	474	637	821

Statutory Authority: RCW 88.16.035(4). 79-07-033 (Order 79-4, Resolution 79-4), § 296-116-300, filed 6/19/79. Statutory Authority: Chapter 88.16 RCW and 1977 ex. sess. c 337, §§ 1 and 4. 78-02-008 (Order 78-1), § 296-116-300, filed 1/6/78, effective 2/10/78; Order 77-18, § 296-116-300, filed 9/20/77, effective 11/1/77; Order 76-24, § 296-116-300, filed 7/22/76; Order 75-3, § 296-116-300, filed 2/10/75; Order 74-2, § 296-116-300, filed 1/8/74; Order 73-8, § 296-116-300, filed 6/20/73 and Emergency Order 73-10, filed 7/19/73, effective 8/14/73; Order 70-7, § 296-116-300, filed 7/16/70; 7/25/67; 2/18/64; 10/29/62; 12/28/60; 3/23/60.]

**WAC 296-116-320 Retirement fund contribution.** The tariffs include \$750 per month or \$9000 per year for each full-time pilot and \$375 per month or \$4500 per year for each half-time pilot as a retirement fund contribution. [Statutory Authority: RCW 88.16.035. 83-05-049 (Order 83-2, Resolution No. 83-2), § 296-116-320, filed 2/16/83; 82-13-087 (Order 82-10-049, Resolution No. 82-10-049), § 296-116-320, filed 6/23/82; 80-03-081 (Order 79-6, Resolution 79-6), § 296-116-320, filed 3/4/80. Statutory Authority: Chapter 88.16 RCW and 1977 ex. sess. c 337, §§ 1 and 4. 78-02-008 (Order 78-1), § 296-116-320, filed 1/6/78, effective 2/10/78; Order 77-18, § 296-116-320, filed 9/20/77, effective 11/1/77; Order 76-24, § 296-116-320, filed 7/22/76; Order 76-12, § 296-116-320, filed 4/22/76; Order 73-8, § 296-116-320, filed 6/20/73 and Emergency Order 73-10, filed 7/19/73, effective 8/14/73; Order 70-7, § 296-116-320, filed 7/16/70; 7/25/67.]

**WAC 296-116-330 Marine pilot--Trip insurance.** (1) Upon boarding a vessel in the Puget Sound or Grays Harbor pilotage district, the pilot shall present to the master a special contract or tariff containing the following terms and provisions:

(a) The rates and charges named in this tariff do not include marine insurance insuring the vessel, its owners, agents, or operators from the consequences of negligence or errors in the judgment of the particular pilots supplying the services. Upon reasonable notice from the vessel, its master, owners, agents, or operator, the pilots, parties hereto, will provide such insurance on a "trip" basis to the value of the vessel and its cargo, the premium of which will be assessed in addition to the rates and charges specified herein.

The election of the vessel, its master, owners, agents, or operators not to request pilots, parties hereto, to procure such insurance and to elect to have the pilots, parties hereto, perform services on the rates and charges specified herein shall constitute a binding and irrevocable agreement on the part of the vessel, its master, owners, agents, or operators to the terms and conditions of the following:

It is understood and agreed, and is the essence of the contract under which the services of the pilot are tendered to the vessel, its master, and owners, that:

(i) The services rendered hereunder are rendered by a pilot duly and regularly licensed by the state of Washington pursuant to chapter 88.16 RCW, or with respect to domestic vessels, a state pilot who holds a valid license issued by the federal government;

(ii) Such services are advisory in nature only, the master of the vessel remaining at all times in full command of the vessel;

(iii) The services of the pilot are accepted on the express understanding that the master, owners, and operators covenant and agree to indemnify and hold harmless the pilot in respect to any liability including but not limited to suits or actions directly against the pilot by third parties by reason of errors or omissions of

the pilot in the performance of pilotage services; excepting, however, such personal liability and rights over as may arise by reason of the wilful misconduct or gross negligence of the pilots; and

(iv) The fees charged for the services rendered by the pilot under this agreement have been computed and are assessed in accordance with and based upon the above stipulations and the regulations governing pilot tariffs adopted by the board of pilotage commissioners pursuant to chapter 88.16 RCW. [Statutory Authority: RCW 88.16.117. 83-03-037 (Order 83-1, Resolution No. 83-1), § 296-116-330, filed 1/17/83.]

**WAC 296-116-35001 Exemption from provisions of WAC 197-10-800.** The board of pilotage commissioners of the state of Washington has reviewed its authorized activities and found substantially all of them to be exempt from the provisions of chapter 197-10 WAC, with the exception of authority supplied by the 1975 legislature to the commission respecting additional tug shaft horsepower equivalencies which is a part of the "tug escort" 1975 amendments by chapter 125, Laws of 1975 1st ex. sess.

There is presently no intent to exercise this authority. Additionally, said act is currently under constitutional challenge. Thus, the commission indicates its intent that if, and when, any authority should be exercised pursuant to this provision, it would do so consistent with the guidelines contained within chapter 197-10 WAC insofar as practicable. (The referenced chapter being the regulations developed by the council on environmental policy.) [Order 76-14, § 296-116-350 (codified WAC 296-116-35001), filed 5/6/76.]

**DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER**

296-125-025	Conditions governing issuance of permits. [Order 74-9, § 296-125-025, filed 3/13/74, effective 4/15/74; Order 71-5, § 296-125-025, filed 5/26/71, effective 7/1/71; Section D, filed 9/18/63; Rules (part), filed 3/12/60.] Repealed by Order 76-15, filed 5/17/76.
296-125-035	Working conditions. [Section F, filed 9/18/63; Rules (part), filed 3/23/60.] Repealed by Order 71-5, filed 5/26/71, effective 7/1/71.
296-125-040	Issuance of permit. [Order 71-5, § 296-125-040, filed 5/26/71, effective 7/1/71; Section G, filed 9/18/63; Rules (part), filed 3/23/60.] Repealed by Order 76-15, filed 5/17/76.

296-125-045 Denial of permit. [Order 71-5, § 296-125-045, filed 5/26/71, effective 7/1/71; Section H, filed 9/18/63.] Repealed by Order 76-15, filed 5/17/76.

**WAC 296-125-010 Applicability.** Unless exempted by Washington state or federal law, every employer who employs one or more minor workers on and after the effective date of these regulations must previously have obtained a valid permit to employ minors from the state division of industrial relations, department of labor and industries. [Order 76-15, § 296-125-010, filed 5/17/76; Order 74-9, § 296-125-010, filed 3/13/74, effective 4/15/74; Order 71-5, § 296-125-010, filed 5/26/71, effective 7/1/71; Section A, filed 9/18/63; Rules (part), filed 3/23/60.]

**WAC 296-125-015 Definitions.** For the purpose of this order:

(1) A "minor" is a person of either sex who is under the age of 18 years.

(2) "Employ" means to engage, suffer or permit to work.

(3) "Employee" means any minor employed by an employer.

(4) "Employer" means any person, association, partnership, private or public corporation who employs or exercises control over the wages, hours or working conditions of a minor.

(5) "Division" means industrial relations division, Washington state of department of labor and industries. [Order 76-15, § 296-125-015, filed 5/17/76; Order 74-9, § 296-125-015, filed 3/13/74, effective 4/15/74; Order 71-5, § 296-125-015, filed 5/26/71, effective 7/1/71; Section B, filed 9/18/63; Rules (part), filed 3/23/60.]

**WAC 296-125-020 Filing of application for permits to employ minors.** Prior to the employment of one or more minors, each employer shall file with the division or its authorized agent an application for a permit to employ minors within a specified work place. When validated by the signature of the division's supervisor of employment standards, such a permit will authorize the employer to employ any number of minor workers in the specified work place in accordance with the conditions established below. [Order 76-15, § 296-125-020, filed 5/17/76; Order 71-5, § 296-125-020, filed 5/26/71, effective 7/1/71; Section C, filed 9/18/63; Rules (part), filed 3/23/60.]

**WAC 296-125-023 Posting.** At least one copy of a valid permit to employ minors must be posted in plain view of all employees within the confines of the work place specified in the permit. [Order 76-15, § 296-125-023, filed 5/17/76.]

**WAC 296-125-027 Hours of work, meals and rest periods for minors.** (1) Minors under age 16 may not be employed during school hours (except by special permission from school officials as outlined in RCW 28A.27-.010 and 28A.27.090) nor before 7 a.m. nor after 7 p.m.

during the school year, nor after 9 p.m. during the summer vacation season.

(2) Minors under age 16 may not be employed more than three hours per day on school days, nor more than 18 hours per week during school weeks.

(3) No minor shall be employed more than eight hours per day nor more than five days in any one week. Minors employed past 8 p.m. in service occupations must be supervised by a responsible adult who is required to be on the premises.

(4) No minor shall be employed on consecutive nights, both of which precede a school day, unless working no later than 9:00 p.m.

(5) No minor shall be employed more than five hours without a meal period of at least 30 minutes.

(6) Every minor employee shall be given a rest period of at least 10 minutes in every 4-hour period of employment, except as otherwise provided in WAC 296-126-092. [Order 76-15, § 296-125-027, filed 5/17/76.]

**WAC 296-125-030 Prohibited and hazardous employment.** (1) The following employments are prohibited for all minors, unless specifically permitted in the text of the hazardous occupations orders in nonagricultural occupations of the child labor provisions of the Federal Fair Labor Standards Act, as now or hereafter amended.

(a) Occupations in or about plants or establishments manufacturing or storing explosives or articles containing explosive components.

(b) Occupations involving regular driving of motor vehicles. Occasional driving is permissible if: The minor has a valid state driver's license for the type of driving involved; driving is restricted to daylight hours, vehicle gross weight is under 6,000 pounds; the minor has completed a state-approved driver education course; and seat belts are provided in the vehicle and the minors have been instructed to use them.

(c) All mining operations.

(d) Logging occupations and occupations in the operation of any sawmill, lath mill, shingle mill, or cooper-age-stock mill.

(e) Occupations involving operation of power-driven wood-working machines, power-driven metal-forming punching and shearing machines, power-driven bakery machines, power-driven paper products machines, circular saws, band-saws and guillotine shears, elevators and other power-driven hoisting apparatus.

(f) Occupations involving potential exposure to radioactive substances and to ionizing radiations.

(g) Occupations involving slaughtering, meat-packing or processing and rendering.

(h) Occupations involving wrecking, demolition and shipbreaking operations.

(i) All roofing operations.

(j) Occupations involving excavations.

(k) Occupations involving manufacturing of brick, tile and kindred products.

(2) The following types of work are prohibited for all minors:

(a) Work involving operation of or working in proximity to earth-moving machines, cranes, garbage compactors or other heavy equipment of similar nature.

(b) Work in establishments or work places being picketed during the course of a labor dispute.

(c) Work as a nurses' aide, unless the minor is a student in a bona fide nursing training program or has successfully completed such a program.

(d) Work as a maid or bell-hop in motels or hotels, unless the minor is accompanied by a responsible adult whenever the work requires the minor to enter assigned guest rooms.

(e) Work as a canvasser or peddler from house to house.

(f) Work in shooting galleries, penny arcades, sauna-massage parlors or body painting studios. [Order 77-32, § 296-125-030, filed 12/30/77; Order 76-15, § 296-125-030, filed 5/17/76; Order 74-9, § 296-125-030, filed 3/13/74, effective 4/15/74; Order 71-5, § 296-125-030, filed 5/26/71, effective 7/1/71; Section E, filed 9/18/63; Rules (part), filed 3/23/60.]

**WAC 296-125-033 Special restrictions for minors under the age of 16.** Employment of minors under age 16 is subject to the following additional restrictions. They are prohibited from working:

(1) In any manufacturing occupation.

(2) In any processing operations (such as filleting of fish, dressing poultry, cracking nuts, commercial processing, canning, freezing or drying of foods, laundering as performed by commercial laundries and dry cleaning).

(3) In work rooms or work places where goods are manufactured, mined or otherwise processed.

(4) In any public messenger service.

(5) In occupations connected with transportation, warehouse and storage, communications and public utilities, or construction. (Office or sales work related to these occupations is permitted if none of the minor's work is performed on the transportation media or construction site.)

(6) In occupations requiring operation or tending of any power-driven machinery or hoisting apparatus.

(7) In the following specific areas of retail, food service or gasoline service station operations:

(a) Work performed in or about boiler or engine rooms.

(b) Maintenance or repair work.

(c) Outside window washing or other work requiring worker to be positioned at higher than ground level.

(d) Cooking and baking.

(e) Operating, setting up, adjusting, cleaning, oiling or repairing power-driven food slicers and grinders, food choppers and cutters and bakery-type mixers.

(f) Work in freezers, meat coolers and all work in preparing meats for sale. (Wrapping, sealing, labeling, weighing, pricing and stocking are permitted if work is performed away from meat-cutting and preparation areas.)

(g) Loading and unloading goods to or from trucks, railroad cars or conveyors. [Order 76-15, § 296-125-033, filed 5/17/76.]

**WAC 296-125-043 Minimum wages for minors.** (1) Every employer shall pay to each of his or her minor employees not less than one dollar and seventy-five cents per hour, whether computed on an hourly, commission, piecework or other basis, except as may be otherwise provided under this chapter.

(2) These minimum wage provisions shall not apply to handicapped minors for whom special handicapped minor work permits have been issued as provided in RCW 49.12.110. The handicapped rate therein shall be set at a rate designed to adequately reflect the individual's earning capacity.

(3) These minimum wage provisions shall not apply when a minor student is in a work place to carry out an occupational training experience assignment directly supervised on the premises by a school official or an employer under contract with a school and when no appreciable benefit is rendered to the employer by the presence of the minor student. [Order 76-15, § 296-125-043, filed 5/17/76.]

**WAC 296-125-050 Recordkeeping.** The employer shall be responsible for obtaining and keeping on file the following information concerning each minor employee:

(1) Proof of age by means of a copy of one of the following: Birth certificate; driver's license, baptismal record; Bible record; insurance policy at least one year old indicating birth date; or witnessed statement of parent or guardian.

(2) Personal data relating to the minor, including: Name and address and sex.

(3) Description of employment: Earliest and latest hours of employment; descriptions of specific meal and rest periods; and complete description of duties.

(4) Parental authorization for employment by signature of parent or guardian on a form provided by the division.

(5) School authorization for employment during any part of the school year, on a form provided by the division.

(6) The employer shall make any or all of the above information available to the division or any of its authorized agents upon request. [Order 76-15, § 296-125-050, filed 5/17/76; Order 71-5, § 296-125-050, filed 5/26/71, effective 7/1/71; Section I, filed 9/18/63; Rules (part), filed 3/23/60.]

**WAC 296-125-055 Revocation of permits.** The division or its authorized agent may revoke any employer's permit to employ minors upon a showing that the conditions of its issuance are not being met, or that other conditions exist which are detrimental to the health, safety or welfare of the minor. [Order 76-15, § 296-125-055, filed 5/17/76; Order 71-5, § 296-125-055, filed 5/26/71, effective 7/1/71; Section J, filed 9/18/63; Rules (part), filed 3/23/60.]

**WAC 296-125-060 Variances.** Variances permitting specific employment of minors in occupations prohibited by these rules may be granted in accordance with procedures outlined in WAC 296-126-130. [Order 76-15, § 296-125-060, filed 5/17/76.]

### Chapter 296-126 WAC

#### STANDARDS OF LABOR FOR THE PROTECTION OF THE SAFETY, HEALTH AND WELFARE OF EMPLOYEES FOR ALL OCCUPATIONS SUBJECT TO CHAPTER 49.12 RCW

##### WAC

296-126-001	Applicability.
296-126-002	Definitions.
296-126-010	Minimum wages—Adults.
296-126-020	Minimum wages—Minors.
296-126-021	Minimum wages—Commissions and piecework.
296-126-022	Gratuities.
296-126-023	Payment interval.
296-126-025	Deductions.
296-126-040	Statements furnished.
296-126-050	Employment records.
296-126-060	Minor work permits.
296-126-070	Prohibited action.
296-126-080	Posting of order.
296-126-090	Hours.
296-126-092	Meal periods—Rest periods.
296-126-094	General duty—Working conditions.
296-126-096	Lifting.
296-126-098	Wearing apparel.
296-126-130	Variance.
296-126-140	Appeal procedures.
296-126-200	Applicability.
296-126-202	Definitions.
296-126-204	Minimum wage.
296-126-206	Limitation on number of employees paid in Counselor I and Counselor II rates.
296-126-208	Premium pay for resident counselor staff occupations.
296-126-210	Board, lodging, and other services.
296-126-212	Travel expenses.
296-126-214	Records.

296-126-218	Work permits.
296-126-220	Minors' occupations.
296-126-222	Sanitation and safety.
296-126-224	Wearing apparel.
296-126-226	Penalties.

**Reviser's note:** For industrial welfare committee appeal procedures, see also chapter 296-129 WAC.

**WAC 296-126-001 Applicability.** These standards, adopted pursuant to the authority of chapter 49.12 RCW as amended by chapter 16, Laws of 1973 2nd ex. sess., shall apply to any person employed in any industry or occupation within the state of Washington, unless:

(1) Exempted by the provisions of chapter 49.12 RCW (newspaper vendors or carriers, domestic or casual labor in or about private residences, agricultural labor as defined in RCW 50.04.150, as now or hereafter amended, and sheltered workshops, are all exempt from these provisions);

(2) Otherwise exempted in rules and regulations adopted by the industrial welfare committee of the state of Washington;

(3) Exempted by a variance issued under the provisions in WAC 296-126-130;

(4) Such person is an employee of the state or any political subdivision, or municipal corporation to the extent that these rules conflict with any statute, rule or regulation adopted under the authority of the appropriate legislative body. [Order 74-9, § 296-126-001, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-002 Definitions.** (1) "Employer" means any person, firm, corporation, partnership, business trust, legal representative, or other business entity which engages in any business, industry, profession, or activity in this state and employs one or more employees, unless exempted by chapter 49.12 RCW or these rules.

(2) "Employee" means an employee who is employed in the business of his employer whether by way of manual labor or otherwise. This definition is not intended, for purposes of these regulations, to include: Any individual registered as a volunteer with a state or federal volunteer program or any person who performs any assigned or authorized duties for an educational, religious, governmental or nonprofit charitable corporation by choice and receives no payment other than reimbursement for actual expenses necessarily incurred in order to perform such volunteer services; any individual employed in a bona fide executive, administrative or professional capacity or in the capacity of commissioned outside salesperson; nor is it intended to include independent contractors where said individuals control the manner of doing the work and the means by which the result is to be accomplished.

(3) "Employ" means to engage, suffer or permit to work.

(4) "Adult" means any person of either sex, eighteen years of age or older.

(5) "Minor" means any person of either sex under eighteen years of age.

(6) "Student learner" means a person enrolled in a bona fide vocational training program accredited by a national or regional accrediting agency recognized by the United States Office of Education, or authorized and approved by the Washington state commission for vocational education, who may be employed part time in a definitely organized plan of instruction.

(7) "Learner" means a worker whose total experience in an authorized learner occupation is less than the period of time allowed as a learning period for that occupation in a learner certificate issued by the director pursuant to regulations of the department of labor and industries.

(8) "Hours worked" shall be considered to mean all hours during which the employee is authorized or required by the employer to be on duty on the employer's premises or at a prescribed work place.

(9) "Conditions of labor" shall mean and include the conditions of rest and meal periods for employees including provisions for personal privacy, practices, methods and means by or through which labor or services are performed by employees and includes bona fide physical qualifications in employment, but shall not include conditions of labor otherwise governed by statutes and rules

and regulations relating to industrial safety and health administered by the department.

(10) "Committee" shall mean the industrial welfare committee as provided by law. The committee's secretary is the supervisor of employment standards in care of the Department of Labor and Industries, General Administration Building, Olympia, Washington 98504. [Order 76-15, § 296-126-002, filed 5/17/76; Order 74-9, § 296-126-002, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-010 Minimum wages--Adults.** Except where a higher minimum wage is required by Washington state or federal law, (1) every employer shall pay to each of his or her adult employees wages at a rate of not less than one dollar and eighty cents per hour, and effective January 1, 1975, not less than two dollars per hour, whether computed on an hourly commission, piecework or other basis, except as may be otherwise provided by law or regulation.

(2) These provisions shall not apply to outside commissioned salespersons; or to trainees, learners, student learners, apprentices or handicapped persons for whom special certificates or special permits have been issued as set forth in RCW 49.12.110. These special rates shall be computed as follows: Learners — 85% of the applicable minimum wage; student-learner — 75% of the applicable minimum rate; handicapped — at a rate designed to reflect adequately the individual's earning capacity. [Order 74-9, § 296-126-010, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-020 Minimum wages--Minors.** Except where a higher minimum wage is required by Washington state or federal law, (1) every employer shall pay to each of his or her minor employees wages at a rate of not less than one dollar and sixty cents per hour, and beginning the calendar year of 1975 not less than one dollar and seventy-five cents per hour, whether computed on an hourly, commission, piecework or other basis, except as may be otherwise provided under this chapter.

(2) These provisions shall not apply to handicapped minors for whom special handicapped minor work permits have been issued as provided in RCW 49.12.110. The handicapped rate therein shall be set at a rate designed to adequately reflect the individual's earning capacity. [Order 74-9, § 296-126-020, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-021 Minimum wages--Commissions and piecework.** Where employees are paid on a commission or piecework basis, wholly or partially, (1) the amount earned on such basis in each work-week period may be credited as a part of the total wage for that period; and

(2) The total wages paid for such period shall be computed on the hours worked in that period resulting in no less than the applicable minimum wage rate. [Order 74-9, § 296-126-021, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-022 Gratuities.** For the purposes of these regulations, gratuities received by employees shall not be considered a part of the minimum wage. [Order 74-9, § 296-126-022, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-023 Payment interval.** All wages due shall be paid at no longer than monthly intervals to each employee on established regular pay days except that wages for no more than the last seven calendar days may be withheld from the pay period covered for inclusion in the next pay period for bookkeeping purposes. [Order 74-9, § 296-126-023, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-025 Deductions.** Except as otherwise provided by law, no employer shall make any deduction from the wage of an employee:

(1) For any cash shortage, walkout (failure of customer to pay), breakage, or loss of equipment, unless it can be shown that the shortage, walkout, breakage or loss was caused by a dishonest or willful act of the employee.

(2) For acceptance of a bad check, unless it can be shown that the employee accepted such a check in violation of procedures previously made known to him or her by the employer.

(3) For any cash shortage from a cash register, drawer or portable depository provided for that purpose, unless the employee has sole access to the cash and has participated in the cash accounting at the beginning of his or her shift and again at the end of said shift. Where a portable cash depository is in use the employer shall provide for periodic withdrawals of cash receipts during the shift to prevent large accumulations of cash. [Order 74-9, § 296-126-025, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-040 Statements furnished.** Every employer shall furnish to each employee at the time of payment of wages an itemized statement showing the pay basis (i.e., hours or days worked), rate or rates of pay, gross wages and all deductions therefrom for that pay period. [Order 74-9, § 296-126-040, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-050 Employment records.** (1) Every employer shall keep for at least five years a record of the name, address, and occupation of each employee, dates of employment, rate or rates of pay, amount paid each pay period to each such employee and the hours or days worked.

(2) Every employer shall make the record described in subsection (1) available to the employee, upon request, at any reasonable time.

(3) Every employer shall, upon written request by the employee, furnish within ten working days of the request to each employee who is discharged a signed written statement, setting forth the reasons for such discharge and the effective date thereof. [Order 74-9, § 296-126-050, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-060 Minor work permits.** No minor shall be employed in any occupation or industry unless

the employer shall have on file during the period of employment an unexpired work permit issued pursuant to section 15, chapter 16, Laws of 1973 2nd ex. sess., and regulations implementing said section in chapter 296-125 WAC. Such permit will not be issued except upon presentation of such evidence of age as is required by the industrial welfare committee. [Order 74-9, § 296-126-060, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-070 Prohibited action.** No employer shall discharge or in any other way discriminate against or penalize any employee who seeks information or a hearing concerning variance requests by an employer or information concerning employment standards, or who has filed a complaint alleging a violation of any employment standard. [Order 74-9, § 296-126-070, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-080 Posting of order.** The employer shall keep posted a current copy of these regulations in a form provided by the department. The poster shall be positioned in a readily accessible location and within plain view in each work site where an employee or employees are employed. [Order 74-9, § 296-126-080, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-090 Hours.** Any employee who feels the number of hours or other matters relating to overtime employment are detrimental to the health, safety or welfare of the employee may request the department of labor and industries to make an investigation following which the department will issue findings and conclusions. Whenever the circumstances are found to be detrimental to the health, safety or welfare of the employee, the industrial welfare committee may adopt additional or revised employment standards. [Order 76-15, § 296-126-090, filed 5/17/76.]

**WAC 296-126-092 Meal periods--Rest periods.** (1) Employees shall be allowed a meal period of at least 30 minutes which commences no less than two hours nor more than five hours from the beginning of the shift. Meal periods shall be on the employer's time when the employee is required by the employer to remain on duty on the premises or at a prescribed work site in the interest of the employer.

(2) No employee shall be required to work more than five consecutive hours without a meal period.

(3) Employees working three or more hours longer than a normal work day shall be allowed at least one 30-minute meal period prior to or during the overtime period.

(4) Employees shall be allowed a rest period of not less than 10 minutes, on the employer's time, for each 4 hours of working time. Rest periods shall be scheduled as near as possible to the midpoint of the work period. No employee shall be required to work more than three hours without a rest period.

(5) Where the nature of the work allows employees to take intermittent rest periods equivalent to 10 minutes

for each 4 hours worked, scheduled rest periods are not required. [Order 76-15, § 296-126-092, filed 5/17/76.]

**WAC 296-126-094 General duty--Working conditions.** It shall be the responsibility of every employer to maintain conditions within the work place environment that will not endanger the health, safety or welfare of employees. All facilities, equipment, practices, methods, operations and procedures shall be reasonably adequate to protect employees' health, safety and welfare. [Order 76-15, § 296-126-094, filed 5/17/76.]

**WAC 296-126-096 Lifting.** Where weights in excess of 20 pounds are to be lifted, carried, pushed or pulled as a normal part of an employee's responsibility:

(1) The lifting, carrying, pushing or pulling duties shall be made known to the prospective employee at the time of recruitment, initial employment or reassignment to a lifting job.

(2) Instruction shall be given such employees on proper lifting techniques in accordance with instructions provided or approved by the department of labor and industries.

(3) Assurance that adequate instructions in weight lifting techniques have been given as provided in (2) shall be furnished the committee or its authorized agent upon request. [Order 76-15, § 296-126-096, filed 5/17/76.]

**WAC 296-126-098 Wearing apparel.** (1) The employer shall provide for adequate safekeeping of employees' clothing worn to and from the work place, but not worn on duty.

(2) Whenever an employer requires the employees to wear a uniform or other article of wearing apparel of a specific style or color, it must be furnished by the employer. Usual and customary wearing apparel in conformance to a general dress standard need not be furnished by the employer. [Order 76-15, § 296-126-098, filed 5/17/76.]

**WAC 296-126-130 Variance.** (1) Upon written application from an employer, a variance from any standard herein may be granted by the industrial welfare committee for good cause shown as authorized by section 8, chapter 16, Laws of 1973 2nd ex. sess. The employer shall give notice to the employees or their representative so that they may submit their written views to the committee on any variance request.

(2) The committee may afford the applicant and any involved employee, or their representatives, the opportunity for oral presentation whenever circumstances of the particular application warrant such additional procedure.

(3) Temporary variance valid for not more than thirty calendar days may be issued by the committee for good cause where immediate action is necessary and warranted pending further review by the committee.

(4) "Good cause" shall mean, but not be limited to, those situations in which the employer finds that his circumstance warrants an alternative procedure and where

he is able to demonstrate to the committee that such alternative would not have a harmful effect on the health, safety and welfare of the employees involved. [Order 74-9, § 296-126-130, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-140 Appeal procedures.** (1) Any person, firm, or corporation feeling aggrieved by any action taken or decision made by an officer or employee of the department, in enforcement of this law (chapter 49-.12 RCW) or these standards may appeal such action or decision by filing written notice within thirty days of such action or decision with the committee's secretary, in care of the Department of Labor and Industries, General Administration Building, Olympia, Washington 98504. A copy of said appeal shall be sent to all other parties to the proceeding by the appealing party. A certification as to the service of said notice upon all other parties shall be filed in the office of the committee's secretary. The notice of appeal shall suspend such action or decision pending the determination by the committee. Detailed regulations concerning appeal procedures are contained in chapter 296-129 WAC.

(2) The appealing person, firm or corporation may elect an informal appeal by filing a letter within thirty days of the action or decision by the officer or employee of the department, which letter shall set forth a simple, clear and concise statement of the matter appealed from and the reasons for the appeal. This will then be acted upon without the need of any further submitted briefs. The committee will permit any other party concerned with the appeal to submit similarly a short concise letter stating their respective position on the issues raised by the appeal. The committee reserves the right to dispose of these informal appeals without hearing argument. The committee may either determine the same on the merits, or call for further hearings in the matter consistent with the intent of these regulations and the applicable law wherever appropriate.

(3) The committee shall review the record, accept and consider written briefs, formal or informal, and may hear oral arguments where deemed appropriate. The committee decision shall be final and binding upon all parties subject to judicial review pursuant to chapter 34.04 RCW, the Administrative Procedure Act.

(4) The general practice and procedural rules for the committee in WAC 296-010-010, et seq., as now or hereafter amended, shall be applicable unless otherwise provided for by these rules, chapter 296-126 WAC, or by express ruling of the committee. [Order 74-9, § 296-126-140, filed 3/13/74, effective 4/15/74.]

**WAC 296-126-200 Applicability.** WAC 296-126-200 through 296-126-226 shall apply to persons employed in counselor staff occupations in organized seasonal recreational camps as herein defined. [Statutory Authority: RCW 49.12.091, 78-03-004 (Order 78-1), § 296-126-200, filed 2/3/78.]

**WAC 296-126-202 Definitions.** (1) "Department" shall mean the department of labor and industries.

(2) "Committee" shall mean the industrial welfare committee of the department of labor and industries.

(3) "Organized camps," as used herein, shall refer to established resident group camps, which are established and maintained for recreation, education, vacation, or religious purposes, for use by organized groups wherein the activities are conducted on a closely supervised basis, and where day-to-day living facilities, including food and lodging, are provided either free-of-charge or by payment of fee.

(4) "Employ" means to engage, suffer, or permit to work.

(5) "Employee" shall mean any person who is employed in a counselor staff occupation in an organized seasonal recreational camp as herein defined.

(6) "Employer" means any person, association, partnership, private or public corporation who employs or exercises control over wages, hours, or working conditions of one or more employees.

(7) "Minor" shall mean any person under eighteen years of age.

(8) "Counselor staff occupations" shall include all work involving duties primarily relating to guidance, instruction, supervision, and care of campers in organized camps, whether such work involves direct charge of, or responsibility for, such activities, or merely assistance to persons in charge; but shall not include preseason training courses. Counselor staff occupations include, but are not limited to: Head counselor, assistant head counselor, specialist counselor or instructor (such as swimming counselor, arts and crafts counselor, etc.), group or division leader, camp parent, teacher, supervising counselor, senior counselor, counselor, general counselor, bunk counselor, assistant counselor, junior counselor, counselor aide, and kitchen helpers working no more than 27 hours in a given work week.

(9) "Resident counselor staff" shall mean staff who receive lodging and meals from the employer.

(10) "Nonresident counselor staff" shall mean staff who do not receive lodging and meals from the employer.

(11) "Counselor I," "Counselor II," and "Counselor III," shall be defined for purposes of this standard as follows: "Counselor I" is one never before employed in any counselor staff occupations; "Counselor II" is one who has had at least one season's employment in a counselor staff occupation; "Counselor III" is one who has had at least three seasons of employment in a counselor staff occupation.

(12) "Season of employment" is defined as a period of not less than six weeks, nor more than 12 weeks in any one calendar year, except that counselors employed less than six weeks in any one season may accumulate their employment experience from year to year to meet the minimum requirements for counselor grade. [Statutory Authority: RCW 49.12.091, 78-03-004 (Order 78-1), § 296-126-202, filed 2/3/78.]

**WAC 296-126-204 Minimum wage.** Except as otherwise provided by chapter 49.46 RCW: (1) The minimum wage for kitchen helpers working in excess of

27 hours per week, camp cooks, and all employees other than counselor staff, shall be no less than \$2.00 per hour for employees 18 years of age or older, and no less than \$1.75 for employees under age 18.

(2) Minimum wage rates for counselor staff occupations shall be as follows:

MINIMUM WEEKLY RATE

	Nonresident Employee (6-day week)	Resident Employee (6-day week)
COUNSELOR III	\$66.00	\$51.00
COUNSELOR II	45.00	30.00
COUNSELOR I	36.00	21.00

(3) The minimum daily wage rate for resident or nonresident counselor staff shall be prorated from the six-day basis.

(4) Minimum wage provisions shall not apply to resident campers under the age of 18 who are engaged in an in-training program, which provides prepared instructions and supervision by qualified counselor staff, and which requires no more than 24 on-duty hours weekly. Such resident campers shall (a) carry no responsibility for other campers and no bunk responsibility, except as a defined part of the training program and (b) shall not enter such a program unless their parents or guardians sign an authorization, which includes an outline of the program and a description of the duties and responsibilities involved. [Statutory Authority: RCW 49.12.091. 78-03-004 (Order 78-1), § 296-126-204, filed 2/3/78.]

**WAC 296-126-206 Limitation on number of employees paid in Counselor I and Counselor II rates.** In any week, an employer may pay the Counselor I rate to no more than 30 percent of the total number of employees in counselor staff occupations. Furthermore, the total number of employees paid at the Counselor I and Counselor II rates may not exceed 80 percent of the total staff. In small camps (40 campers or under) where the above percentage limitations may be unworkable, the supervisor of employment standards shall have authority to make reasonable adjustments of these limitations upon a showing that the above limitations will work a hardship. [Statutory Authority: RCW 49.12.091. 78-03-004 (Order 78-1), § 296-126-206, filed 2/3/78.]

**WAC 296-126-208 Premium pay for resident counselor staff occupations.** At termination of employment, a resident counselor staff member shall be entitled to premium payment of an additional 25 percent of the staff member's weekly rate of pay for each week of employment, unless he or she received 24 hours per week off-duty, 12 hours of which must have been in sequence. The 24 hours off-duty time need not have been accumulated in any one week. [Statutory Authority: RCW 49.12.091. 78-03-004 (Order 78-1), § 296-126-208, filed 2/3/78.]

**WAC 296-126-210 Board, lodging, and other services.** The minimum wage rates of resident counselor staff shall be subject to no charge by an employer for lodging or meals furnished by the employer or for any other services furnished in connection with camp business within reason. [Statutory Authority: RCW 49.12.091. 78-03-004 (Order 78-1), § 296-126-210, filed 2/3/78.]

**WAC 296-126-212 Travel expenses.** The employer shall pay the fare or make transportation available for any counselor staff member who is required or permitted to supervise, or assist in supervising, campers in transit. [Statutory Authority: RCW 49.12.091. 78-03-004 (Order 78-1), § 296-126-212, filed 2/3/78.]

**WAC 296-126-214 Records.** Records showing the names of employees, dates of employment, wages paid, and days worked by them shall be kept by every employer for a period of at least three years and available for inspection by the representatives of the industrial welfare committee of the department of labor and industries at all reasonable times. [Statutory Authority: RCW 49.12.091. 78-03-004 (Order 78-1), § 296-126-214, filed 2/3/78.]

**WAC 296-126-216 Agreements.** All employees must enter into a written agreement with the camp administration setting forth the remuneration, room and board, special services provided, and the nature of the work assignment as counselors and leaders. Resident camper parental authorizations and employee agreements are to be kept on file for a three-year period. [Statutory Authority: RCW 49.12.091. 78-03-004 (Order 78-1), § 296-126-216, filed 2/3/78.]

**WAC 296-126-218 Work permits.** No minor shall be employed until the employer has applied for and received a permit to employ minors from the department of labor and industries, and has obtained a parental authorization and proof of age document for each minor employee. [Statutory Authority: RCW 49.12.091. 78-03-004 (Order 78-1), § 296-126-218, filed 2/3/78.]

**WAC 296-126-220 Minors' occupations.** No minor worker shall be employed in any occupation which the department of labor and industries, through the industrial welfare committee, shall declare to be particularly hazardous for minors under the age specified in the minor work permit regulation, chapter 296-125 WAC. [Statutory Authority: RCW 49.12.091. 78-03-004 (Order 78-1), § 296-126-220, filed 2/3/78.]

**WAC 296-126-222 Sanitation and safety.** (1) All places of employment shall be maintained in a sanitary condition in conformity with the requirements for sanitation for camps set by the health services division, department of social and health services and/or the Washington Industrial Safety and Health Act (WISHA).

(2) All places of employment shall be maintained in a safe condition in conformity with the WISHA standards

of the department of labor and industries, division of industrial safety and health.

(3) First aid requirements of the WISHA standards of the department of labor and industries shall be met. In addition, the provision of an infirmary with the full-time services of a physician and/or registered nurse is recommended for camps operated by one organized group for more than two weeks.

(4) Transportation shall be available at all times for use in case of an emergency and shall be of a nature to render reasonable comfort to an injured person.

(5) If preemployment physical examinations, including preventive inoculations, recommended by public health authorities are required of employees, such examinations shall not be at the expense of the employee.

(6) No employee shall be required or permitted to lift or carry excessive weights. Where weights in excess of 20 pounds are to be lifted, carried, pushed, or pulled as a normal part of an employee's responsibility:

(i) The lifting, carrying, pushing or pulling duties shall be made known to the prospective employee at the time of recruitment, initial employment or reassignment to a lifting job.

(ii) Instruction shall be given such employees on proper lifting techniques in accordance with instructions provided or approved by the department of labor and industries.

(iii) Assurance that adequate instruction in weight lifting techniques have been given as provided in (ii) shall be furnished the committee or its authorized agent upon request.

(7) Employee assignments to counseling duties shall be in keeping with the employee's maturity, knowledge, and skills. The health and welfare of the employee shall be considered in the determination of adequate counselor staff-camper ratios. Personnel should be selected on the basis of standards currently prescribed in the American Camping Association Resident Camp standards. [Statutory Authority: RCW 49.12.091, 78-03-004 (Order 78-1), § 296-126-222, filed 2/3/78.]

**WAC 296-126-224 Wearing apparel.** Whenever an employer requires the employees to wear a uniform or other article of wearing apparel of a specific style or color, it must be furnished by the employer. Usual and customary wearing apparel in conformance to a general dress standard need not be furnished by the employer. [Statutory Authority: RCW 49.12.091, 78-03-004 (Order 78-1), § 296-126-224, filed 2/3/78.]

**WAC 296-126-226 Penalties.** The department shall investigate the complaint of any individual alleging that these standards have been violated. Any employer employing any person in violation of these standards shall upon conviction thereof be punished in accordance with RCW 49.12.170, which states as follows: "Any employer employing any person for whom a minimum wage or standards, conditions, and hours of labor have been specified, at less than said minimum wage, or under

standards, or conditions of labor or at hours of labor prohibited by the rules and regulations of the committee; or violating any other of the provisions of this 1973 amendatory act, shall be deemed guilty of a misdemeanor, and shall, upon conviction thereof, be punished by a fine of not less than twenty-five dollars nor more than one thousand dollars." [Statutory Authority: RCW 49.12.091, 78-03-004 (Order 78-1), § 296-126-226, filed 2/3/78.]

**Chapter 296-127 WAC  
PREVAILING WAGE**

**WAC**

296-127-010	Definitions.
296-127-011	Time for determining prevailing wage.
296-127-017	Notice of wage determinations.
296-127-020	Interpretation of locality.
296-127-021	Apprentice worker.
296-127-030	Irrigation district exemption.
296-127-040	Statement of intent to pay prevailing wages.
296-127-045	Affidavit of wages paid.
296-127-060	Director of department of labor and industries to arbitrate disputes—General provisions.
296-127-061	Requests for arbitration.
296-127-062	Conduct of arbitration hearing.

**WAC 296-127-010 Definitions.** (1) "Department" means the department of labor and industries.

(2) "Director" means the director of the department of labor and industries or his duly authorized deputy or representative.

(3) "Industrial statistician" means the industrial statistician of the department of labor and industries, industrial relations division.

(4) "Assistant director" means the supervisor of industrial relations for the department of labor and industries or his duly authorized deputy or representative. [Statutory Authority: RCW 39.12.015, 39.12.060 and House Bill 795, 1982 1st ex.s. c 38, 82-18-041 (Order 82-28), § 296-127-010, filed 8/27/82.]

**WAC 296-127-011 Time for determining prevailing wage.** The department will use the date bids are due as the effective date for determining prevailing wages provided the contract is awarded within 60 days after bids are due. If the contract is not awarded within 60 days after bids are due, the department will determine the prevailing wage on the date the contract is awarded. If the contract is not awarded pursuant to bids, the department will determine the prevailing wage on the date the contract is awarded. [Statutory Authority: RCW 39.12.015, 39.12.060 and House Bill 795, 1982 1st ex.s. c 38, 82-18-041 (Order 82-28), § 296-127-011, filed 8/27/82.]

**WAC 296-127-017 Notice of wage determinations.** Current prevailing wage data will be furnished by the industrial statistician upon request. Please mail the request to:

Industrial Statistician  
 Department of Labor and Industries  
 Employment Standards Division  
 General Administration Building  
 Olympia, Washington 98504 MS AX31r  
 (Telephone: (206) 753-4019)

[Statutory Authority: RCW 39.12.015, 39.12.060 and House Bill 795, 1982 1st ex.s. c 38. 82-18-041 (Order 82-28), § 296-127-017, filed 8/27/82.]

**WAC 296-127-020 Interpretation of locality.** The department interprets the definition of "locality" contained in RCW 39.12.010(2), "wherein the physical work is being performed," as the actual work site. For example, if materials are prefabricated in a county other than the county wherein the public works project is to be completed, the wage for the prefabrication shall be the prevailing wage for the county where the physical work of prefabrication is actually performed. Standard items for sale on the general market are not subject to the requirements of chapter 39.12 RCW. [Statutory Authority: RCW 39.12.015, 39.12.060 and House Bill 795, 1982 1st ex.s. c 38. 82-18-041 (Order 82-28), § 296-127-020, filed 8/27/82.]

**WAC 296-127-021 Apprentice worker.** Any apprentice employed on public works projects for whom an apprentice agreement is registered and approved by the state apprenticeship council pursuant to chapter 49.04 RCW within 60 days of hiring may be considered an apprentice and paid the applicable prevailing hourly rate for an apprentice of that trade for all hours worked. [Statutory Authority: RCW 39.12.015, 39.12.060 and House Bill 795, 1982 1st ex.s. c 38. 82-18-041 (Order 82-28), § 296-127-021, filed 8/27/82.]

**WAC 296-127-030 Irrigation district exemption.** Contracts awarded by irrigation districts for the reclamation or development of waste or undeveloped lands are not covered by the prevailing wage law, pursuant to RCW 39.04.010. Any work, construction alteration, repair or improvement that is not solely for the reclamation or development of waste or undeveloped land is covered by the prevailing wage laws and therefore subject to all the laws and regulations contained in and adopted pursuant to chapter 39.12 RCW. [Statutory Authority: RCW 39.12.015, 39.12.060 and House Bill 795, 1982 1st ex.s. c 38. 82-18-041 (Order 82-28), § 296-127-030, filed 8/27/82.]

**WAC 296-127-040 Statement of intent to pay prevailing wages.** (1) All statements of intent to pay prevailing wages submitted to the industrial statistician of the department shall be accompanied by a fee of \$12.50 for each statement. Fees shall be made payable to the department of labor and industries.

(2) Any agency, division, or department of the state of Washington which through agreement with the department certifies statements of intent for its own contracts shall provide to the industrial statistician each month the

number of statements of intent certified and quarterly shall send a fee of \$10.00 for each statement of intent to pay prevailing wages it has certified. This fee shall be sent to the industrial statistician and be made payable to the department of labor and industries. [Statutory Authority: RCW 39.12.015, 39.12.060 and House Bill 795, 1982 1st ex.s. c 38. 82-18-041 (Order 82-28), § 296-127-040, filed 8/27/82.]

**WAC 296-127-045 Affidavit of wages paid.** (1) All affidavits of wages paid submitted to the industrial statistician of the department shall be accompanied by a fee of \$12.50 for each affidavit of wages paid. All fees shall be made payable to the department of labor and industries.

(2) Any agency, division, or department of the state of Washington which through agreement with the department certifies affidavits of wages paid for its own contracts shall provide to the industrial statistician each month the number of affidavit of wages paid it has certified and quarterly shall send a fee of \$10.00 for each affidavit of wages paid it has certified. This fee shall be sent to the industrial statistician and be made payable to the department of labor and industries. [Statutory Authority: RCW 39.12.015, 39.12.060 and House Bill 795, 1982 1st ex.s. c 38. 82-18-041 (Order 82-28), § 296-127-045, filed 8/27/82.]

**WAC 296-127-060 Director of department of labor and industries to arbitrate disputes—General provisions.**

(1) The contract executed between a public authority and the successful bidder or contractor and all of his subcontractors shall contain a provision that in case any dispute arises as to what are the prevailing rates of wages for a specific trade, craft or occupation and such dispute cannot be adjusted by the parties in interest, including labor and management representatives, the matter shall be referred for arbitration to the director, and his decision shall be final, conclusive, and binding on all parties involved in the dispute.

(2) In exercising his authority to hear and decide disputes the director shall consider among other things, timeliness, the nature of the relief sought, matters of undue hardship or injustice, or public interest. A "timely" request for arbitration is one received within 30 days after the contract has been awarded.

(3) Any party in interest who is seeking a modification or other change in a wage determination under RCW 39.12.015, and who has requested the industrial statistician to make such modification or other change and the request has been denied, after appropriate reconsideration by the assistant director shall have a right to petition for arbitration of the determination.

(a) For purpose of this section, the term "party in interest" is considered to include, without limitation:

(i) Any contractor, or an association representing a contractor, who is likely to seek or to work under a contract containing a particular wage determination, or any worker, laborer or mechanic, or any council of unions or any labor organization which represents a laborer or

mechanic who is likely to be employed or to seek employment under a contract containing a particular wage determination, and

(ii) Any public agency concerned with the administration of a proposed contract or a contract containing a particular wage determination issued pursuant to chapter 39.12 RCW.

(b) For good cause shown, the director may permit any party in interest to intervene or otherwise participate in any proceeding held by the director. A petition to intervene or otherwise participate shall be in writing, and shall state with precision and particularity:

(i) The petitioner's relationship to the matters involved in the proceedings, and

(ii) The nature of the presentation which he would make. Copies of the petition shall be served on all parties or interested persons known to be participating in the proceeding, who may respond to the petition. Appropriate service shall be made of any response. [Statutory Authority: RCW 39.12.015, 39.12.060 and House Bill 795, 1982 1st ex.s. c 38. 82-18-041 (Order 82-28), § 296-127-060, filed 8/27/82.]

**WAC 296-127-061 Requests for arbitration.** (1) The petition for arbitration (original and four copies) shall be filed with Director, Department of Labor and Industries, General Administration Building, Olympia, Washington 98504. In addition, copies of the petition shall be served personally or by mail upon each of the following:

- (a) The public agency or agencies involved,
- (b) The industrial statistician, and
- (c) Any other person (or the authorized representatives of such person) known to be interested in the subject matter of the petition.

(2) The director shall under no circumstances request any administering agency to postpone any contract performance because of the filing of a petition. This is a matter which must be resolved directly with the administering agency by the petitioner or other party in interest.

(3) A petition for arbitration of a wage determination shall:

- (a) Be in writing and signed by the petitioner or his counsel (or other authorized representative), and
- (b) Identify clearly the wage determination, location of project or projects in question, and the agency concerned, and
- (c) State that the petitioner has requested reconsideration of the wage determination in question and describe briefly the action taken in response to the request, and
- (d) Contain a short and plain statement of the grounds for review, and
- (e) Be accompanied by supporting data, views, or arguments, and
- (f) Be accompanied by a filing fee of \$75.00. Fees shall be made payable to the department of labor and industries. [Statutory Authority: RCW 39.12.015, 39.12.060 and House Bill 795, 1982 1st ex.s. c 38. 82-18-041 (Order 82-28), § 296-127-061, filed 8/27/82.]

**WAC 296-127-062 Conduct of arbitration hearing.**

(1) Interested persons other than the petitioner shall have a reasonable opportunity as specified by the director in particular cases to submit to the director written data, views, or arguments relating to the petition. Such material (original and four copies) shall be filed with the Director, Department of Labor and Industries, General Administration Building, Olympia, Washington 98504 and be accompanied by a filing fee of \$35.00. Fees shall be made payable to the department of labor and industries. Copies of any such material shall be served on the petitioner and other interested persons.

(2) Each party in interest shall have the right to appear in person or by or with counsel or other qualified representatives in any proceeding before the director. If all parties agree, oral testimony may be waived and arguments submitted in writing.

(3) Upon his own initiative or upon motion of any interested person or party, the director may consolidate in any proceeding or concurrently consider two or more appeals which involve substantially the same persons or parties, or issues which are the same or closely related, if he finds that such consolidation or concurrent review will contribute to an efficient review and to the ends of justice, and it will not unduly delay consideration of any such appeals.

(4) The director shall prescribe the time and place for hearing. The director shall schedule the hearing within 45 days of the request. For good cause shown, the director may allow a continuance at the request of a party in interest.

(a) With respect to any proceeding before him, the director may upon his own initiative or upon the request of any interested person or party direct the interested persons or parties to appear before the director at a specified time and place in order to simplify the issues presented or to take up any other matters which may tend to expedite or otherwise facilitate the disposition of the proceeding.

(b) All papers submitted to the director under this section shall be filed with the Department of Labor and Industries, General Administration Building, Olympia, Washington 98504. An original and four copies of all papers shall be submitted. Service under this part shall be by the filing party or interested person; service may be personal or may be by mail. Service by mail is complete on mailing.

(5) The final disposition shall be by the director.

(a) The director may decline review of any case whenever in his judgment a review would be inappropriate or because of the lack of timeliness, the nature of the relief sought, or other reasons.

(b) The director shall decide the case upon the basis of all relevant matter contained in the entire record before him but the director may utilize his experience, technical competence, and specialized knowledge in evaluating the evidence.

(c) Upon reasonable notice to the parties or interested persons, the director may vary the procedures specified in this part in particular cases.

(6) The director may allow all parties a period of ten days for filing post-hearing briefs prior to closing the record and concluding the hearing.

(7) The director shall issue a written decision within 30 days of the conclusion of the hearing. A copy shall be sent to each party in interest. [Statutory Authority: RCW 39.12.015, 39.12.060 and House Bill 795, 1982 1st ex.s. c 38. 82-18-041 (Order 82-28), § 296-127-062, filed 8/27/82.]

## Chapter 296-128 WAC MINIMUM WAGES

### WAC

#### RECORDKEEPING PROVISIONS

- 296-128-010 Records required.
- 296-128-015 Definitions of workday and workweek.
- 296-128-020 Term for keeping records.
- 296-128-025 Place for keeping records and availability for inspection.
- 296-128-030 Petitions for exceptions.

#### HANDICAPPED WORKERS

- 296-128-050 Applicability of this regulation.
- 296-128-055 Definition.
- 296-128-060 Application for certificate.
- 296-128-065 Conditions for granting a certificate.
- 296-128-070 Issuance of certificate.
- 296-128-075 Terms of certificate.
- 296-128-080 Renewal of certificate.
- 296-128-085 Review.
- 296-128-090 Amendment of this regulation.

#### EMPLOYMENT OF LEARNERS

- 296-128-100 Authority.
- 296-128-105 Definitions.
- 296-128-110 Application for learner certificate.
- 296-128-115 Procedure for action upon an application.
- 296-128-120 Conditions governing issuance of learner certificates.
- 296-128-125 Terms and conditions of employment under learner certificates.
- 296-128-130 Records to be kept by employers of learners.
- 296-128-135 Amendment and revocation of learner certificate.
- 296-128-140 Supplemental regulations.
- 296-128-145 Reconsideration and review.
- 296-128-150 Procedure for amendment.

#### STUDENT LEARNERS

- 296-128-175 Applicability of the regulation.
- 296-128-180 Definitions.
- 296-128-185 Application for certificate.
- 296-128-190 Procedure for action upon application.
- 296-128-195 Conditions governing issuance of special student learner certificate.
- 296-128-200 Terms and conditions of special student learner certificate.
- 296-128-205 Term of special certificate.
- 296-128-210 Review.
- 296-128-215 Amendment of this regulation.

#### APPRENTICES

- 296-128-225 Employment of apprentices at subminimum wages.
- 296-128-230 Definition of apprentice.
- 296-128-235 Registration of apprenticeship agreement.
- 296-128-240 Procedure for issuing certificates authorizing employment of apprentices at subminimum wages.
- 296-128-245 Terms of special certificate.
- 296-128-250 Hearing procedure.

#### EMPLOYMENT OF STUDENT WORKERS

- 296-128-275 Applicability.
- 296-128-280 Definitions.

- 296-128-285 Filing applications.
- 296-128-290 Issuing or denying certificates.
- 296-128-295 Conditions governing issuance of certificates.
- 296-128-300 Data required on certificate.
- 296-128-305 Wage rate.
- 296-128-310 Records.
- 296-128-315 Amending and revoking certificates.
- 296-128-400 Minors.
- 296-128-500 Purpose.
- 296-128-510 Executive.
- 296-128-520 Administrative.
- 296-128-530 Professional.
- 296-128-540 Outside salesman.
- 296-128-550 Regular rate of pay.
- 296-128-560 Compensating time off in lieu of overtime pay.

### DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER

- 296-128-410 Counselor staff occupations in organized seasonal recreational camps—Women and minors. [Industrial Welfare Order 11-63, filed 9/13/63; Minimum Wage and Welfare Order 54, filed 3/23/60.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-415 Food processing industry—Women and minors. [Industrial Welfare Order 5-62, filed 11/25/64; Minimum Wage and Welfare Order 51, filed 3/23/60.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-420 Fresh fruit and vegetable packing industry—Women and minors. [Industrial Welfare Order 6-62, filed 11/25/64; Minimum Wage and Welfare Order 52, filed 3/23/60.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-425 General amusement and recreation industry—Women and minors. [Industrial Welfare Order 8-62, filed 11/25/64; Minimum Wage Order 45-A, filed 3/23/60.] Repealed by Order 77-32, filed 12/30/77. Later promulgated, see chapter 296-125 WAC.
- 296-128-430 Health care industry—Women and minors. [Industrial Welfare Order 68-3, filed 5/8/68, effective 7/15/68; Industrial Welfare Order 10-62, filed 11/25/64; Minimum Wage Order 46, filed 3/23/60.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-435 Laundry, dry-cleaning and dye works industry—Women and minors. [Industrial Welfare Order 3-62, filed 11/25/64; Minimum Wage and Welfare Order 48, filed 3/23/60.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-440 Manufacturing industry and general working conditions—Women and minors. [Industrial Welfare Order 2-62, filed 11/25/64; Minimum Wage and Welfare Order 50, filed 3/23/60.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-445 Mercantile industry, wholesale and retail—Women and minors. [Order 71-5, § 296-128-445, filed 5/26/71, effective 7/1/71, Mercantile Industrial Welfare Order 1-71; Industrial Welfare Order 1-62, filed 11/25/64; Minimum Wage Order 44, filed 3/23/60.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4451 Applicability. [Order 71-5, § 296-128-4451, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4452 Definitions. [Order 71-5, § 296-128-4452, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4453 Minimum wages. [Order 71-5, § 296-128-4453, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-

- 32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4454 Deductions. [Order 71-5, § 296-128-4454, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4455 Statements furnished. [Order 71-5, § 296-128-4455, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4456 Records. [Order 71-5, § 296-128-4456, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4457 Meal and rest periods. [Order 71-5, § 296-128-4457, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4458 Working conditions. [Order 71-5, § 296-128-4458, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4459 Uniforms. [Order 71-5, § 296-128-4459, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-446 Minor work permits. [Order 71-5, § 296-128-446, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4461 Posting of order. [Order 71-5, § 296-128-4461, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4462 Separability. [Order 71-5, § 296-128-4462, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4463 Penalties. [Order 71-5, § 296-128-4463, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-450 Office workers—Women and minors. [Industrial Welfare Order 13-63, filed 11/25/64; Minimum Wage Order 43, filed 3/23/60; Statement of interpretation of applicability of Industrial Welfare Committee Order 13-63, office workers, filed 11/25/64.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-455 Personal service industry—Women and minors. [Industrial Welfare Order 4-62, filed 11/25/64.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-460 Public housekeeping industrial—Women and minors. [Order 71-5 (Industrial Welfare Order No. 9-71), § 296-128-460, filed 5/26/71, effective 7/1/71; Industrial Welfare Order 9-62, filed 11/25/64; Minimum Wage Order 46, filed 3/23/60.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4601 Applicability. [Order 71-5, § 296-128-4601, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4602 Definitions. [Order 71-5, § 296-128-4602, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4603 Minimum wages. [Order 71-5, § 296-128-4603, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4604 Deductions. [Order 71-5, § 296-128-4604, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4605 Statements furnished. [Order 71-5, § 296-128-4605, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4606 Records. [Order 71-5, § 296-128-4606, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4607 Meals and lodging. [Order 71-5, § 296-128-4607, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4608 Meal and rest periods. [Order 71-5, § 296-128-4608, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4609 Working conditions. [Order 71-5, § 296-128-4609, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-461 Uniforms. [Order 71-5, § 296-128-461, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4611 Minor work permits. [Order 71-5, § 296-128-4611, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4612 Posting of order. [Order 71-5, § 296-128-4612, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4613 Separability. [Order 71-5, § 296-128-4613, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-4614 Penalties. [Order 71-5, § 296-128-4614, filed 5/26/71, effective 7/1/71.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-465 Telephone and telegraph industry—Women and minors. [Industrial Welfare Order 12-63, filed 11/25/64; Minimum Wage and Welfare Order 53, filed 3/23/60.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.
- 296-128-470 Theatrical amusement and recreation industry—Women and minors. [Industrial Welfare Order 7-62, filed 11/25/64; Minimum Wage Order 45, filed 3/23/60.] Repealed by Order 77-32, filed 12/30/77. Later promulgation, see chapter 296-125 WAC.

## RECORDKEEPING PROVISIONS

**WAC 296-128-010 Records required.** For all employees who are subject to RCW 49.46.020, employers shall be required to keep and preserve payroll or other records containing the following information and data with respect to each and every employee to whom said section of said act applies: (1) Name in full, and on the same record, the employee's identifying symbol or number if such is used in place of name on any time, work, or payroll records. This shall be the same name as that used for Social Security record purposes;

(2) Home address;

(3) Occupation in which employed;

(4) Date of birth if under 18;

(5) Time of day and day of week on which the employee's workweek begins. If the employee is part of a workforce or employed in or by an establishment all of whose workers have a workweek beginning at the same

time on the same day, a single notation of the time of the day and beginning day of the workweek for the whole workforce or establishment will suffice. If, however, any employee or group of employees has a workweek beginning and ending at a different time, a separate notation shall then be kept for that employee or group of employees;

(6) Hours worked each workday and total hours worked each workweek (for purposes of this section, a "workday" shall be any consecutive 24 hours);

(7) Total daily or weekly straight-time earnings or wages; that is, the total earnings or wages due for hours worked during the workday or workweek, including all earnings or wages due during any overtime worked, but exclusive of overtime excess compensation;

(8) Total overtime excess compensation for the workweek; that is, the excess compensation for overtime worked which amount is over and above all straight-time earnings or wages also earned during overtime worked;

(9) Total additions to or deductions from wages paid each pay period. Every employer making additions to or deductions from wages shall also maintain a record of the dates, amounts, and nature of the items which make up the total additions and deductions;

(10) Total wages paid each pay period;

(11) Date of payment and the pay period covered by payment;

(12) Employer may use symbols where names or figures are called for so long as such symbols are uniform and defined. [Regulation 294.7.001 (part), filed 12/30/60.]

**WAC 296-128-015 Definitions of workday and workweek.** (1) A workweek is a fixed and regularly recurring period of 168 hours or seven consecutive 24 hour periods. It may begin on any day of the week and any hour of the day, and need not coincide with a calendar week.

(2) A workday is a fixed and regularly recurring period of 24 hours. It may begin at any hour of a calendar day and must begin at the same time each calendar day. [Regulation 294.7.001 (part), filed 12/30/60.]

**WAC 296-128-020 Term for keeping records.** Unless otherwise specifically authorized by the director all records required under WAC 296-128-010 shall be kept for a period of at least three years. [Regulation 294.7.001 (part), filed 12/30/60.]

**WAC 296-128-025 Place for keeping records and availability for inspection.** Each employer shall keep the records required by this regulation safe and accessible at the place or places of employment or at one or more established central recordkeeping offices where such records are customarily maintained and all such records shall be open at any time to inspection and transcription by the director and his duly authorized representative. [Regulation 294.7.001 (part), filed 12/30/60.]

**WAC 296-128-030 Petitions for exceptions.** (1) **Submission of petitions for relief.** Any employer or group of employers who, due to peculiar conditions under which he or they must operate, desires authority to maintain records in a manner other than required in this regulation, or to be relieved of preserving certain records for the period specified in the regulation, may submit a written petition to the director setting forth the authority desired and the reasons therefor.

(2) **Action on petitions.** If, on review of the petition and after completion of any necessary investigation supplementary thereto, the director shall find that the authority prayed for, if granted, will not hamper or interfere with enforcement of the provisions of the act or any regulation or orders issued thereunder, he may then grant such authority but limited by such conditions as he may determine are requisite, and subject to subsequent revocation. Where the authority granted hereunder is sought to be revoked for failure to comply with the conditions determined by the director to be requisite to its existence, the employer or groups of employers involved shall be notified in writing of the facts constituting such failure and afforded an opportunity to achieve or demonstrate compliance.

(3) **Compliance after submission of petitions.** The submission of a petition or the delay of the director in acting upon such petition shall not relieve any employer or group of employers from any obligations to comply with all the requirements of the regulations in this part applicable to him or them. However the director shall give notice of the denial of any petition with due promptness. [Regulation 294.7.001 (part), filed 12/30/60.]

## HANDICAPPED WORKERS

**WAC 296-128-050 Applicability of this regulation.** This regulation is issued pursuant to RCW 49.46.060, Washington minimum wage and hour law, which authorized the director of the department of labor and industries, to the extent necessary in order to prevent curtailment of opportunities for employment, to issue special certificates for employment of individuals whose earning capacity is impaired by age or physical or mental deficiency or injury at wages lower than the minimum wage applicable under RCW 49.46.020. Such certificates shall be subject to the conditions prescribed in this regulation. [§ 1, Regulation 294.6.005, filed 12/30/60.]

**WAC 296-128-055 Definition.** "Handicapped worker" means an individual whose earning capacity is impaired by age or physical or mental deficiency or injury for the work he is to perform. [§ 2, Regulation 294.6.005, filed 12/30/60.]

**WAC 296-128-060 Application for certificate.** (1) Application for a certificate authorizing the employment of handicapped workers shall be made upon forms made available by the director or his authorized representatives.

(2) The application shall set forth, among other things, the nature of the disability, a description of the occupation at which the handicapped worker is to be employed, and the wage the employer proposes to pay the handicapped worker per hour. The nature of the disability must be set out in detail.

(3) The application shall be signed jointly by the employer and the handicapped worker for whom such application is being made, except as otherwise authorized by the director or his authorized representative. [§ 3, Regulation 294.6.005, filed 12/30/60.]

**WAC 296-128-065 Conditions for granting a certificate.** (1) If the application is in proper form and sets forth facts showing:

(a) A subminimum wage is necessary to prevent curtailment of the handicapped worker's opportunities for employment;

(b) the handicap impairs the earning capacity of the worker for the work he is to perform, a certificate may be issued.

(2) The director or his authorized representative may require the submission of additional information to that shown on the application and may require the handicapped worker to take a medical examination where it is deemed necessary in order to determine whether or not the issuance of a certificate is justified. [§ 4, Regulation 294.6.005, filed 12/30/60.]

**WAC 296-128-070 Issuance of certificate.** If the application and other available information indicate that the requirements of this regulation are satisfied, the director or his authorized representative shall issue a certificate. Otherwise he shall deny a certificate. If issued, copies of the certificate shall be mailed to the employer and the handicapped worker and if denied, the employer and the handicapped worker shall be given written notice of the denial. [§ 5, Regulation 294.6.005, filed 12/30/60.]

**WAC 296-128-075 Terms of certificate.** (1) A certificate shall specify, among other things, the name of the handicapped worker, the name of the employer, the occupation in which the handicapped worker is to be employed, the authorized subminimum wage rate and the period of time during which such wage rate may be paid.

(2) A certificate shall be effective for a period to be designated by the director or his authorized representative and a handicapped worker employed under such certificate may be paid subminimum wages only during the effective period of the certificate.

(3) The wage rate set in the certificate shall be fixed at a figure designed to reflect adequately the handicapped worker's earning capacity. No wage rate shall be fixed at less than 75 percent of the applicable minimum wage under RCW 49.46.020 unless, after investigation a lower rate appears to be clearly justified.

(4) Any money received by a handicapped worker by reason of any state or federal pension or compensation program for handicapped persons shall not be considered

as offsetting any part of the wage or remuneration due the handicapped worker by the employer.

(5) The worker or trainee shall be paid not less than one and one-half times the regular rate for hours worked in excess of 40 in the workweek or 8 in the workday.

(6) The terms of any certificate, including the subminimum wage rate specified therein, may be amended by the director or his authorized representative upon written notice to the parties concerned, if the facts justify such amendment. [§ 6, Regulation 294.6.005, filed 12/30/60.]

**WAC 296-128-080 Renewal of certificate.** Application for renewal of any certificate shall be filed in the same manner as an original application. If such application has been filed prior to the expiration date of the certificate, the certificate shall remain in effect until the application for renewal has been granted or denied. [§ 7, Regulation 294.6.005, filed 12/30/60.]

**WAC 296-128-085 Review.** Any person aggrieved by any action of the director or his authorized representative taken pursuant to this regulation may, within 15 days after notice of such action has been mailed, file with the director a petition for review of the action complained of, setting forth grounds for seeking such review. If reasonable grounds exist, the director or his authorized representative may grant such review and to the extent deemed appropriate afford all interested persons an opportunity to be heard on such review. [§ 8, Regulation 294.6.005, filed 12/30/60.]

**WAC 296-128-090 Amendment of this regulation.** Any person desiring revision of any of the terms of this regulation may submit in writing to the director a petition setting forth the changes desired and the reasons for proposing them. If the director believes that reasonable cause for amendment of this regulation is set forth he will schedule a hearing in accordance with RCW 49.46-.080. [§ 9, Regulation 294.6.005, filed 12/30/60.]

## EMPLOYMENT OF LEARNERS

**WAC 296-128-100 Authority.** This regulation is promulgated in accordance with RCW 49.46.060. [§ 1, Regulation 294.6.003, filed 3/23/60.]

**WAC 296-128-105 Definitions.** As used in this regulation: (1) A "learner" is a worker whose total experience in an authorized learner occupation is less than the period of time allowed as a learning period for that occupation in a learner certificate issued pursuant to these regulations.

(2) An "experienced worker" is a worker whose total experience in an authorized learner occupation is at least equal to the period of time allowed as a learning period for that occupation in a learner certificate issued pursuant to these regulations.

(3) "Experienced worker available for employment" means an experienced worker residing within the area

from which the employer customarily draws its labor supply or within a reasonable commuting distance of such area, and who is willing and able to accept employment with the employer; or an experienced worker residing outside of the area from which the employer customarily draws its labor supply, who has in fact made himself available for employment. [§ 2, Regulation 294.6.003, filed 3/23/60.]

**WAC 296-128-110 Application for learner certificate.** (1) Whenever the employment of learners at wages lower than the minimum wage applicable under RCW 49.46.020 is believed necessary to prevent curtailment of opportunities for employment by a specified employer, an application for a certificate authorizing the employment of such learners at subminimum wage rates may be filed by the employer with the director of the department of labor and industries or his authorized representative.

(2) Application must be made on the official form provided by the department and furnish all information called for on said form.

(3) Separate application must be made with respect to each establishment or place of business operated by the applicant and in which he desires to employ learners at subminimum wage rates. [§ 3, Regulation 294.6.003, filed 3/23/60.]

**WAC 296-128-115 Procedure for action upon an application.** (1) Upon receipt of an application for a learner certificate or renewal of such certificate the director or his authorized representative shall consider all relevant facts and, subject to the conditions specified in WAC 296-128-120, shall issue or deny a learner certificate or, in appropriate circumstances, provide an opportunity to interested parties to present their views on the application prior to granting or denying a learner certificate.

(2) If a learner certificate is granted, notice of such fact and the terms of the certificate shall be posted at the employer's place of business for 15 days after receipt thereof and any interested person may file with the director written requests for reconsideration or review. Such application should set forth the applicant's interest in the review and the reasons he seeks review.

(3) If a learner certificate is denied, notice of such denial shall be mailed to the employer and it shall be without prejudice to the subsequent filing of an application. [§ 4, Regulation 294.6.003, filed 3/23/60.]

**WAC 296-128-120 Conditions governing issuance of learner certificates.** The following conditions shall govern the issuance of a special certificate authorizing the employment of learners at subminimum wage rates: (1) An adequate supply of qualified experienced workers is not available for employment; the experienced workers presently employed in occupations in which learners are requested, are afforded an opportunity for full time employment; learners are available for employment; and the granting of a certificate is necessary to prevent curtailment of employment opportunities.

(2) Reasonable efforts have been made to obtain experienced workers, including the placement of an order with the employment security office of the state of Washington.

(3) The issuance of a learner certificate will not tend to create unfair competitive labor cost advantages nor have the effect of impairing or depressing wage or working standards established for experienced workers for work of a like or comparable character in the industry.

(4) Abnormal labor conditions such as a strike, lock-out or other similar condition do not exist at the place of business for which a learner certificate is requested.

(5) There are no serious outstanding violations of the provisions of learner certificates previously issued to the employer, nor have there been any serious violations of the Washington Minimum Wage and Hour Act which provide reasonable grounds to believe that the terms of a certificate may not be complied with.

(6) The occupation or occupations in which learners are to receive training require a sufficient degree of skill to necessitate an appreciable training period.

(7) Learners shall be afforded every reasonable opportunity for continued employment upon completion of the learning period.

(8) Unless otherwise specified in the learner certificate, a learning program shall not exceed 480 hours of employment, and the total hours worked in any establishment by learners shall not exceed 10 percent of the total hours normally worked by experienced workers in such establishment: *Provided*, That where less than 10 experienced workers are employed by an employer, a learner certificate may authorize the employment of learners for a maximum of 40 hours per week under a bona fide learner program. [§ 5, Regulation 294.6.003, filed 3/23/60.]

**WAC 296-128-125 Terms and conditions of employment under learner certificates.** (1) A learner certificate, if issued, shall specify, among other things:

(a) The number or proportion of learners authorized to be employed on any one day;

(b) The occupations in which learners may be employed;

(c) The subminimum wage rates permitted for each learner occupation during the authorized learning period; which shall not be less than 85 percent of the minimum wage specified in RCW 49.46.020, as it may be amended, unless otherwise specified in the certificate;

(d) The learning period for each authorized learner occupation;

(e) The effective and expiration dates of the certificate.

(2) A learner certificate may be issued for a period of not longer than one year. A renewal certificate will not be issued without a clear showing that conditions set forth in WAC 296-128-120 still prevail.

(3) Learners hired pursuant to a learner certificate prior to the date on which such certificate expires may be continued in employment at the authorized subminimum wage rate for the duration of their authorized

learning period even though the certificate expired before the learning period is completed.

(4) A copy of the learner certificate shall be posted by the employer during its effective period in a conspicuous place in the department where learners are to be employed.

(5) No learner shall be hired under a learner certificate if, at the time the employment begins, experienced workers capable of equaling the performance of a worker of minimum acceptable skill are available for employment.

(6) No learner shall be hired under a learner certificate while abnormal labor conditions exist such as a strike, lock-out, or other similar conditions in the place of business for which a learner certificate has been issued.

(7) The number of hours of previous employment in a learner occupation for which the learner has been hired must be deducted from the authorized learning period if within the three years immediately preceding the hiring of such learner he has been employed in the learner occupation for less than the total number of hours authorized as a learning period and shall also be deducted from the authorized learning period all hours spent in pertinent training in a vocational training school on the occupation for which the learner has been employed.

(8) No provision of any learner certificate will excuse noncompliance with higher standards applicable to learners which may be established under any other state law, federal law, or trade union agreement.

(9) Unless otherwise specified in the learner certificate a learning program shall not exceed 480 hours of employment and the total hours worked in any establishment by learners shall not exceed 10 percent of the total hours normally worked by experienced workers in such establishment: *Provided*, That where less than 10 experienced workers are employed by an employer a learner certificate may authorize the employment of learners for a maximum of 40 hours per week under a bona fide learner program. [§ 6, Regulation 294.6.003, filed 3/23/60.]

**WAC 296-128-130 Records to be kept by employers of learners.** The director or his authorized representative may specify additional records to be kept by employers of learners as a condition to compliance with the learner certificate. [§ 7, Regulation 294.6.003, filed 3/23/60.]

**WAC 296-128-135 Amendment and revocation of learner certificate.** The director may amend or revoke a learner certificate when it is necessary by reason of changes in these regulations, or where the employer has violated its terms, or where the certificate was obtained by misleading or false statements, or where changed conditions warrant it in the opinion of the director. [§ 8, Regulation 294.6.003, filed 3/23/60.]

**WAC 296-128-140 Supplemental regulations.** (1) Upon application of any person or persons, representing any industry or branch thereof, or upon his own motion,

the director, if he deems it advisable, may, after appropriate and timely notice to interested parties, cause a hearing to be held to determine the need for employment of learners at wages lower than the minimum wage applicable under RCW 49.46.020 in order to prevent curtailment of employment opportunities in any industry or branch thereof; and if such need is found to exist, determine the occupations which require a learning period and the limitations as to wages, time, number, proportion, and length of learning period. Such hearing shall be held before the director or his duly authorized representative. Following such hearing the director may, by supplemental regulations, prescribe the conditions under which special certificates shall be issued for the employment of learners in such industry or branch thereof, if he finds that there is a need therefor to prevent curtailment of opportunities for employment.

(2) At such hearing the director may cause to be brought before him or his authorized representative any witness whose testimony he deems material to the subject matter before him. [§ 9, Regulation 294.6.003, filed 3/23/60.]

**WAC 296-128-145 Reconsideration and review.** (1) Any person aggrieved by the action of the director or his authorized representative denying or granting a learner certificate may within 15 days after mailing of notice of such action file a written request for reconsideration with the director.

(2) A request for a reconsideration shall be accompanied by a statement of the additional evidence which the applicant believes may materially affect the decision.

(3) A request for review shall be granted where reasonable grounds are set forth in the request and if such review is granted all interested persons shall be afforded an opportunity to be heard. [§ 10, Regulation 294.6.003, filed 3/23/60.]

**WAC 296-128-150 Procedure for amendment.** The director may at any time upon his own motion or upon written request of any interested persons setting forth reasonable grounds therefor amend or revoke any of the terms of this regulation or of any supplemental regulations promulgated in accordance with WAC 296-128-140 after hearing as provided in RCW 49.46.080. [§ 11, Regulation 294.6.003, filed 3/23/60.]

## STUDENT LEARNERS

**WAC 296-128-175 Applicability of the regulation.** This regulation is issued in accordance with RCW 49.46.060, to provide for the employment under special certificates of student learners at wages less than the minimum provided in RCW 49.46.020, in order to prevent curtailment of opportunities for employment. Such certificates shall be subject to the terms and conditions hereinafter set forth. [§ 1, Regulation 294.6.004, filed 3/23/60.]

**WAC 296-128-180 Definitions.** (1) A "student learner" is a student who is receiving instruction in an

accredited school, college, or university, and who is employed on a part-time basis in a bona fide vocational training program, or in a job-training program established by an accredited school and approved by the director of the department of labor and industries.

(2) A "bona fide vocational training program" is one authorized and approved by the state board of vocational education and provides for part-time employment which may be scheduled for part of the workday or workweek, for alternating weeks or for other limited periods during the year, supplemented by and integrated with a definitely organized plan of instruction designed to teach technical knowledge or related industrial information given as a regular part of the student learner's course by an accredited school, college, or university. [§ 2, Regulation 294.6.004, filed 3/23/60.]

**WAC 296-128-185 Application for certificate.** (1) Whenever the employment of a student learner at wages lower than the minimum wage applicable under RCW 49.46.020 is believed necessary to prevent curtailment of opportunities for employment, an application for a special certificate authorizing the employment of such student learner at subminimum wages shall be filed by the employer with the director of the department of labor and industries or his authorized representative.

(2) Application shall be on forms furnished by the department of labor and industries and must be signed by the employer, an appropriate school official and the student learner. Such application shall, among other things, show: The nature of the training program; the total number of workers employed by the employer; the number and hourly wage rate of experienced workers employed in the occupation in which the student learner is to be trained; the hourly wage rate or progressive wage schedule which the employer proposes to pay the student learner; the age of the student learner; the period of employment training at subminimum wages; the number of hours of employment training a week; the number of hours of school instruction a week. [§ 3, Regulation 294.6.004, filed 3/23/60.]

**WAC 296-128-190 Procedure for action upon application.** (1) Upon receipt of application for the employment of a student learner the director or his authorized representative shall either issue a special certificate or deny the application. To the extent deemed necessary the director or his authorized representative may provide an opportunity to interested persons to be heard on the application prior to granting or denying it.

(2) If a special certificate is issued it shall be mailed to the employer and a copy of it shall be mailed to the school official who signs the application. [§ 4, Regulation 294.6.004, filed 3/23/60.]

**WAC 296-128-195 Conditions governing issuance of special student learner certificate.** The following conditions must be satisfied before a special certificate may be issued authorizing employment of student learners at subminimum wages: (1) Any training program under

which the student learner will be employed must be a bona fide vocational training program as defined in WAC 296-128-180 or be a part of a job-training program established by the governing body of the school and approved by the director of the department of labor and industries.

(2) The employment of the student learner at subminimum wages must be necessary to prevent curtailment of opportunities for employment.

(3) The occupation for which the student learner is receiving preparatory training must require a sufficient degree of skill to necessitate a substantial learning period.

(4) The employment of a student learner must not have the effect of displacing a worker employed in the establishment in which the student learner is to be employed.

(5) The employment of the student learner at subminimum wages must not tend to impair or depress the wage rates or working standards established for experienced workers for work of a like or comparable nature.

(6) The issuance of such a certificate must not tend to prevent the development of apprenticeships or must not impair established apprenticeship standards in the occupation or industry involved. [§ 5, Regulation 294.6.004, filed 3/23/60.]

**WAC 296-128-200 Terms and conditions of special student learner certificate.** (1) The special student learner certificate if issued shall specify among other things: (a) The name of the student learner; (b) the name and address of the employer; (c) the name of the school which provides the related school instruction; (d) the occupation in which the student is to be trained; (e) the maximum number of hours of employment training in any one week at a specified subminimum wage rate; (f) the number of hours per week in which the student is engaged in his school training program; (g) the effective and expiration dates of the certificate.

(2) The subminimum wage rate shall be not less than 75 percent of the minimum wage provided in RCW 49.46.020.

(3) Unless otherwise authorized by the director or his authorized representative the number of hours of employment training each week at subminimum wages pursuant to certificate, when added to the hours of school instruction shall not exceed 40 hours: *Provided, however,* That when school is not in session on any school day or school week, the student learner may work a number of hours in addition to the weekly number of hours of employment training authorized by the certificate, provided that the hours do not exceed 8 in such day or 40 in such week.

(4) Unless otherwise authorized by the director or his authorized representative the total number of hours worked by all student learners employed by an employer shall not exceed 10 percent of the total hours worked by all regular employees of said employer in the establishment in which such student learners are employed. [§ 6, Regulation 294.6.004, filed 3/23/60.]

**WAC 296-128-205 Term of special certificate.** A special student learner certificate may be issued for a period not to exceed the length of one school year unless the director finds that a longer period is justified by extraordinary circumstances. [§ 7, Regulation 294.6.004, filed 3/23/60.]

**WAC 296-128-210 Review.** Any person aggrieved by the action of the director or his authorized representative in denying or granting a special student learner certificate may within 15 days after the mailing of notice of such action file a written request for review which will be granted where such request sets forth reasonable grounds therefor. To the extent the director or his authorized representative deems it necessary he shall afford all persons interested in said review an opportunity to be heard. [§ 8, Regulation 294.6.004, filed 3/23/60.]

**WAC 296-128-215 Amendment of this regulation.** Any person desiring revision of any of the terms of this regulation may submit in writing to the director a petition setting forth the changes desired and the reasons for proposing them. If the director believes that reasonable cause for amendment of this regulation is set forth he will schedule a hearing in accordance with RCW 49.46-.080. [§ 9, Regulation 294.6.004, filed 3/23/60.]

## APPRENTICES

**WAC 296-128-225 Employment of apprentices at subminimum wages.** The director or his authorized representative, to the extent necessary to prevent curtailment of employment opportunities, shall issue special certificates to employers or apprenticeship committees as defined in RCW 49.04.040 authorizing the employment of apprentices in skilled trades at wages lower than the minimum wage applicable under RCW 49.46.020, subject to the limitations and conditions set forth in this regulation. [§ 1, Regulation 294.6.002, filed 12/30/60.]

**WAC 296-128-230 Definition of apprentice.** The term "apprentice" shall mean a person at least 16 years of age who is covered by a written agreement registered with the Washington state apprenticeship council providing for not less than 4,000 hours of reasonably continuous employment for such person, and for his participation in an approved schedule of work experience through employment which should be supplemented by 144 hours per year of related technical instruction. [§ 2, Regulation 294.6.002, filed 12/30/60.]

**WAC 296-128-235 Registration of apprenticeship agreement.** Before an apprentice may be employed at subminimum wages, the employer or apprenticeship committee shall have submitted an apprenticeship agreement for registration with the director of apprenticeship or the apprenticeship council of the department of labor and industries. [§ 3, Regulation 294.6.002, filed 12/30/60.]

**WAC 296-128-240 Procedure for issuing certificates authorizing employment of apprentices at subminimum wages.** (1) Upon being informed by the director of apprenticeship that such apprenticeship agreement has been accepted for registration in accordance with RCW 49.04.030, and that such agreement calls for employment of apprentices at subminimum wages, the director, or his authorized representative, may issue a special certificate in accordance with WAC 296-128-225. Otherwise, he shall deny the special certificate.

(2) The special certificate, if issued, shall be mailed to the employer or apprenticeship committee and a copy shall be mailed to the apprentice. If the certificate is denied, the employer or apprenticeship committee will be so notified by mail.

(3) A special certificate will not be issued where there are serious outstanding violations involving an employer for whom a special certificate is being requested, or where there are any serious outstanding violations of a certificate previously issued, or where there have been any serious violations of the act which provide reasonable grounds to conclude that the terms of a certificate may not be complied with, if issued. [§ 4, Regulation 294.6.002, filed 12/30/60.]

**WAC 296-128-245 Terms of special certificate.** (1) Each special certificate shall specify the conditions and limitations under which it is granted, including the name of the apprentice, the skilled trade in which he is to be employed, the subminimum wage rates and the periods of time during which such wage rates may be paid.

(2) The terms of any special certificate, including the wages specified therein may be amended for cause. [§ 5, Regulation 294.6.002, filed 12/30/60.]

**WAC 296-128-250 Hearing procedure.** The director or his authorized representative may conduct an investigation, which may include a hearing, prior to issuing or denying an application for special certificate. To the extent he deems appropriate, the director, or his authorized representative, may provide an opportunity for other interested persons to be heard prior to granting or denying an apprentice certificate. [§ 6, Regulation 294.6.002, filed 12/30/60.]

## EMPLOYMENT OF STUDENT WORKERS

**WAC 296-128-275 Applicability.** The regulations hereinafter set forth are issued pursuant to RCW 49.46-.060 to provide for the employment by educational institutions under special certificates of student workers as learners at wages lower than the minimum wage applicable under RCW 49.46.020. Such certificates shall be subject to the terms and conditions hereinafter set forth. [§ 1, Regulation 294.6.001, filed 3/23/60.]

**WAC 296-128-280 Definitions.** As used in the regulations: (1) A "student worker" is a student who is receiving instruction in a bona fide educational program in an educational institution and who is employed on a part-time basis by the educational institution from

which the student is receiving his instruction, for the purpose of enabling the student to defray part of his school expenses.

(2) "Department" means department of labor and industries.

(3) "Director" means director of department of labor and industries.

(4) "Supervisor" means supervisor of wage and hour division of the department of labor and industries. [§ 2, Regulation 294.6.001, filed 3/23/60.]

**WAC 296-128-285 Filing applications.** Whenever the employment of student workers as learners at wages lower than the minimum wage applicable under RCW 49.46.020 is believed necessary to prevent curtailment of opportunities for employment in a specified educational institution, applications for special certificates authorizing the employment of such student workers as learners at subminimum wage rates may be filed by an appropriate official of the educational institution with the director, supervisor, or duly authorized representative of the wage and hour division of the department of labor and industries on official forms furnished by the department. [§ 3, Regulation 294.6.001, filed 3/23/60.]

**WAC 296-128-290 Issuing or denying certificates.** Upon receipt of an application for the employment of student workers as learners, the director or his authorized representative shall issue or deny a special certificate authorizing employment of student workers. To the extent he deems appropriate, the director or his authorized representative may provide an opportunity to other interested persons to present data and views on the application prior to granting or denying a student worker certificate. If a student worker certificate is granted, it shall be mailed to the educational institution. If a student worker certificate is denied, notice of such denial shall be mailed to the educational institution and such denial shall be without prejudice to the filing of any subsequent application. [§ 4, Regulation 294.6.001, filed 3/23/60.]

**WAC 296-128-295 Conditions governing issuance of certificates.** The following conditions shall govern the issuance of a special certificate authorizing the employment of student workers as learners by an educational institution at subminimum wage rates: (1) The employment of the student workers at subminimum wages authorized by the certificate must be necessary to prevent curtailment of opportunities for employment in a specified educational institution.

(2) The issuance of the student worker certificate will not tend to create unfair competitive labor cost advantages nor have the effect of impairing or depressing wage or working standards established for experienced workers for work of a like or comparable character in the industry or community.

(3) The occupations to be filled by the student workers shall not be in the production of goods or services which would be sold in competition with privately owned

businesses, nor in enterprises operated by the educational institution in competition with privately owned businesses.

(4) There have been no serious outstanding violations of the provisions of a student workers certificate previously issued to the educational institution, nor have there been any serious violations of the act which provide reasonable grounds to conclude that the terms of a student worker certificate may not be complied with, if issued. [§ 5, Regulation 294.6.001, filed 3/23/60.]

**WAC 296-128-300 Data required on certificate.** The student worker certificate, if issued, shall specify, among other things: (1) The name and address of the educational institution employing the student workers;

(2) The occupations in which the student workers are employed;

(3) The number of student workers to be employed in any one day;

(4) The authorized subminimum wage rate to be paid for each occupation;

(5) The effective and expiration dates of the certificate. [§ 6, Regulation 294.6.001, filed 3/23/60.]

**WAC 296-128-305 Wage rate.** The subminimum wage rate shall be not less than 75 percent of the minimum wage rate established by RCW 49.46.020, as it may be amended. [§ 7, Regulation 294.6.001, filed 3/23/60.]

**WAC 296-128-310 Records.** In addition to any other records required by reason of the Washington Minimum Wage and Hour Act, the educational institution shall keep and maintain the following records specifically relating to student workers employed at subminimum wage rates: (1) Each student worker employed under a student worker certificate shall be designated as such on the payroll records kept by the institution, with each student worker's occupation and rate of pay being shown.

(2) The records required including a copy of any special certificate issued, shall be kept and made available for inspection at all times for at least three years from the effective date of the certificate. [§ 8, Regulation 294.6.001, filed 3/23/60.]

**WAC 296-128-315 Amending and revoking certificates.** The director of the department of labor and industries or his authorized representative may amend the provisions of a student worker certificate or he may revoke such certificate where it is shown to his satisfaction that its provisions have not been complied with. [§ 9, Regulation 294.6.001, filed 3/23/60.]

**WAC 296-128-400 Minors.** (1) **Applicability of order.** This order shall apply to all minors employed in any industry or establishment in the state of Washington who are not expressly covered by another minimum wage and welfare order issued by the industrial welfare committee, except: Minors employed:

(a) By common carrier railroads, sleeping car companies and freight or express companies subject to regulations of federal law.

(b) In agricultural labor.

(c) In domestic work or chores performed in or about private residences.

(d) In a vocational education, work experience or apprentice training program, when such program is properly supervised by school personnel or in accordance with written agreements and approved training schedules.

(e) Directly by a telephone or telegraph company. This order shall not apply to newspaper vendors and newspaper carriers.

(2) Definitions. For the purpose of this order:

(a) A "minor" is a person of either sex under the age of eighteen years.

(b) The term "employee" shall mean any minor who is employed to work in any industry or establishment in the state of Washington other than those expressly excluded by the foregoing paragraphs.

(c) The term "employer" shall mean any person, association, corporation, co-partnership, or municipal corporation, engaged in any industry or establishment covered by this order and who (or which) employs any minor covered by this order.

(d) The term "agricultural labor" shall mean employment.

(i) On a farm, in the employ of any person in connection with the cultivating of the soil, or in connection with raising or harvesting any agricultural or horticultural commodity, including raising, shearing, feeding, caring for, training and management of livestock, bees, poultry, and furbearing animals and wildlife, or in the employ of the owner or tenant or other operator of a farm in connection with the operation, management, conservation, improvement, or maintenance of such farm and its tools and equipment; or

(ii) In handling, planting, packing, packaging, grading, storing, or delivering to storage or to a market or to a carrier for transportation to market, any agricultural or horticultural commodity; but only if such service is performed as an incident to ordinary farming operations, or, in the case of fruits and vegetables in their raw and natural state, as an incident to the preparation of such fruits and vegetables for market. The provisions of this paragraph shall not be deemed to be applicable with respect to services performed in connection with commercial canning or commercial freezing or any other commercial processing which changes the character of the product from its raw and natural state or in connection with any agricultural or horticultural commodity after its delivery to a terminal market for distribution for consumption.

(3) **Minimum wages.** (a) Minimum wages for all minors covered by this order, in the state of Washington shall be fifty cents per hour, regardless of the manner in which they are computed, except when another order (or orders) issued by the industrial welfare committee of the state of Washington provides a different minimum.

(b) Whenever the administrator of the wage and hour division of the United States department of labor shall issue a certificate or certificates permitting the employment of learners, apprentices, messengers, and handicapped workers, at wage rates below the minimums herein fixed, the payment of wages in accordance with such permits shall not constitute a violation of this order.

(4) **Hours.** (a) No minor shall be employed more than five hours without a meal period, on the employee's time, of at least thirty minutes.

(b) There shall be a rest period on the employer's time of ten minutes in every four-hour period of employment.

(c) Minors 14 and 15 years of age shall not be employed more than eight hours in any one day or six days in any one week. In computing the hours, one-half the total attendance hours in school shall be included. When school is not in session said minors shall not be employed more than forty hours in any one week.

(d) Minors 16 and 17 years of age shall not be employed more than eight hours in any one day or six days in any one week except in seasonal industries or in cases of emergency.

(e) Minors 14 and 15 years of age shall not be permitted to work after the hours of 7:00 p.m. or before 6 a.m. (pacific standard time), unless such employment is specifically authorized by the terms of this order, or by a permit specifically authorizing such employment issued by the industrial welfare committee of the state department of labor and industries, or its duly designated agent for the issuance of such permit.

(f) Minor boys 14 and 15 years of age may be issued permits to work in approved amusement industries not more than six days a week and not later than 7:00 p.m. (pacific standard time).

(g) Minors 16 and 17 years of age attending school may be employed after 7:00 p.m. (pacific standard time) for such hours not exceeding eight hours in any one day, and in such employments, as shall be specifically authorized in the individual permits issued to each minor, when upon investigation by the supervisor of women and minors in industry the conditions of employment are found not detrimental to the welfare of the minors or their school program. Such permits shall not be issued to girls unless satisfactory assurance is given the industrial welfare committee of the state department of labor and industries or its authorized agent that such minors are to be safely conveyed to their homes.

(5) **Work permits and proof of age certificates.** (a) No minor shall be employed in any occupation covered by this order unless the employer has on file during the period of employment an unexpired work certificate or permit issued by the industrial welfare committee of the state department of labor and industries or its duly designated agent for the issuance of such permit. Such permit will not be issued except upon presentation of such evidence of age as is required by the industrial welfare committee.

(b) The issuance of a certificate or permit to work shall not authorize or excuse a violation of the state of Washington compulsory school attendance law, and shall not be issued to any minor legally required to attend

school when school is in session except with the approval of the school authorities.

(6) **Employment prohibited to all minors.** (a) No minor shall be employed in any occupation which the state department of labor and industries, through its industrial welfare committee, shall upon due notice and hearing find and by order declare to be particularly hazardous for the employment of minors under the ages specified in such order as detrimental to their health or morals.

(b) No minor shall be permitted to work in any of the following occupations:

(i) In any place where intoxicating liquor is served in the same room.

(ii) As driver or helper on state licensed motor vehicles in traffic congested areas.

(iii) In operating, tending or in dangerous proximity to dangerous power driven machinery.

(iv) In connection with the commercial operation of a 35 millimeter projection machine in a motion picture theatre or public building.

(v) To give signals to engineers in logging operations, or to receive and forward signals.

(vi) As an engineer, or within dangerous proximity to any cables, rigging or hazardous machinery.

(7) **Employment prohibited to all minor girls.** No minor girl shall be employed as:

(a) A shaker in a laundry, except on hand towels, handkerchiefs, napkins and similar small articles.

(b) In or in connection with a barber shop.

(c) A canvasser or peddler from house to house.

(d) An elevator operator.

(e) A clerk selling cigars or tobacco.

(f) A hotel messenger.

(g) A cabaret performer.

(h) In shooting galleries, penny arcades, bowling alleys.

(i) A public messenger (i.e., one whose services are available to the public for hire), except that girls 16 and 17 years of age will be permitted as building messengers in buildings within a radius of three blocks from one another.

(8) **Employment entirely prohibited to minors under 16 years of age.** Minors under sixteen years of age shall not be permitted to operate machinery in connection with processing or manufacturing plants.

(9) **Employments prohibited to minors under 14 years of age.** Minors under fourteen years of age shall not be employed in the following occupations unless such employment is specifically authorized by a permit issued by a judge of the superior court of the state of Washington:

(a) In stock room work in warehouses.

(b) As clerks in mercantile establishments.

(c) In offices as errand or office maintenance workers.

(d) In cafes as bus boys or dishwashers or helpers.

(e) As service station attendants.

(f) In other occupations which the industrial welfare committee, after due notice and hearing, shall have determined to be hazardous or detrimental to the welfare of the minor.

(10) **Employment of minors 14 to 18 years of age.** Minors 14 to 18 years of age may be employed in any

occupation or industry except where such employment is expressly prohibited by this order or by statute of the state of Washington, provided that all the conditions and requirements of this order are complied with.

(11) **Working conditions.** (a) All places where minors are employed shall be maintained in a safe and sanitary condition. The requirements for safety, sanitation and first aid shall be in conformity with the safety standards, rules and regulations as adopted by the division of safety of the department of labor and industries.

(b) Every room in which minors are employed shall be adequately heated and ventilated, and supplied with adequate natural or artificial light in accordance with the general safety standards of the department of labor and industries.

(c) Each such room shall be provided with a smooth, tight floor, which can be kept clean and sanitary. Where wet processes are employed, the floors must be adequately drained so that there will be no unreasonable depth of liquid at any point. Where floors are wet, wooden racks or grating of an adequate height shall be provided at such points.

(d) Toilet rooms shall be provided for women and female minors sufficiently separated and isolated to insure privacy, which rooms shall be maintained in a sanitary condition, adequately lighted, heated and ventilated. A sufficient number of wash bowls or sink space shall be located either within the toilet room or adjacent to the toilet room. Any wash bowls or sinks not so located shall be installed in an approved location. Sufficient soap and either individual or paper towels shall be provided.

(e) Employers shall provide for adequate keeping of employee's outer clothing during working hours, and for their work clothes during nonworking hours. When the occupation requires a change of clothing, a suitable space adequately heated shall be provided where employees may make such change in privacy.

(f)(i) A suitable rest room for women and female minors shall be provided, and shall be properly ventilated and heated.

(ii) An adequate cloak room shall be provided.

(iii) An adequate lunch room furnished with tables and chairs, and facilities for heating water shall be provided: *Provided, however,* That where less than ten women and female minors are regularly employed, the supervisor of women and minors in industry, upon application and showing, may permit a modified compliance with the foregoing part of this section or any part of the same.

(g) No female minor shall be required or permitted to lift or carry an excessive weight.

(h) No female minor shall be knowingly employed for a period of four weeks before confinement for pregnancy or four weeks thereafter.

(12) **Records.** Records showing the name of minors employed, dates of employment, wages paid and the hours worked by them, shall be kept by the employer and available for inspection by the representatives of the industrial welfare committee of the state department of labor and industries at all reasonable times.

(13) **Posting of order.** The employer shall post a copy of this order in all places where minor workers are employed.

(14) **Separability.** If the application of any provision of this order, or any section, subsection, subdivision, sentence, clause, phrase, word or portion of this order shall be held invalid or unconstitutional, the remaining provisions thereof shall not be affected thereby but shall continue to be given full force and effect as if the part so held invalid or unconstitutional had not been included therein.

(15) **Penalties.** The supervisor of women and minors in industry shall investigate the complaint of any individual alleging that this order has been violated. Any person employing a minor in violation of this order shall upon conviction thereof be punished in accordance with the applicable laws of the state of Washington, RCW 49.12.170, now states as follows: "Any person employing a woman or minor for whom a minimum wage or standard conditions of labor have been specified, at less than said minimum wage, or under conditions of labor prohibited by order of the committee; or violating any other of the provisions of RCW 49.12.010 through 49.12.180, shall be deemed guilty of a misdemeanor, and shall, upon conviction thereof, be punished by a fine of not less than twenty-five dollars nor more than one hundred dollars." [Minimum Wage and Welfare Order No. 49, filed 3/23/60.]

**WAC 296-128-500 Purpose.** This regulation is adopted in accordance with chapter 49.46 RCW to define the terms "bona fide executive, administrative, or professional capacity or in the capacity of outside salesman" and to establish a procedure for computing overtime pay. [Order 76-5, § 296-128-500, filed 2/24/76.]

**WAC 296-128-510 Executive.** The term "individual employed in a bona fide executive . . . capacity" in RCW 49.46.010 (5)(c) shall mean any employee:

(1) Whose primary duty consists of the management of the enterprise in which he is employed or of a customarily recognized department or subdivision thereof; and

(2) Who customarily and regularly directs the work of two or more other employees therein; and

(3) Who has the authority to hire or fire other employees or whose suggestions and recommendations as to the hiring or firing and as to the advancement and promotion or any other change of status of other employees will be given particular weight; and

(4) Who customarily and regularly exercises discretionary powers; and

(5) Who does not devote more than 20 percent, or, in the case of an employee of a retail or service establishment who does not devote as much as 40 percent, of his hours worked in the work week to activities which are not directly and closely related to the performance of the work described in paragraphs (1) through (4) of this section: *Provided*, That this paragraph (5) shall not apply in the case of an employee who is in sole charge or an independent establishment or a physically separated

branch establishment, or who owns at least a 20 percent interest in the enterprise in which he is employed; and

(6) Who is compensated for his services on a salary basis at a rate of not less than \$155 per week exclusive of board, lodging, and other facilities: *Provided*, That an employee who is compensated on a salary rate of not less than \$250 per week (exclusive of board, lodging, or other facilities), and whose primary duty consists of the management of the enterprise in which he is employed or of a customarily recognized department or subdivision thereof, and includes the customary and regular direction of the work of two or more other employees therein, shall be deemed to meet all of the requirements of this section. [Order 76-5, § 296-128-510, filed 2/24/76.]

**WAC 296-128-520 Administrative.** The term "individual employed in a bona fide . . . administrative . . . capacity" in RCW 49.46.010 (5)(c) shall mean any employee:

(1) Whose primary duty consists of the performance of office or non-manual field work directly related to management policies or general business operations of his employer or his employer's customers; or

(2) The performance of functions in the administration of a school system, or educational establishment or institution, or of a department or subdivision thereof, in work directly related to the academic instruction or training carried on therein; and

(3) Who customarily and regularly exercises discretion and independent judgment; and

(a) Who regularly and directly assists a proprietor, or an employee employed in a bona fide executive or administrative capacity (as such terms are defined in this regulation), or

(b) Who performs under only general supervision work along specialized or technical lines requiring special training, experience or knowledge, or

(c) Who executes under only general supervision special assignments and tasks; and

(4) Who does not devote more than 20 percent, or, in the case of an employee of a retail or service establishment who does not devote as much as 40 percent of his hours worked in the work week to activities which are not directly and closely related to the performance of the work described in paragraphs (1) through (3) of this section; and

(a) Who is compensated for his services on a salary or fee basis at a rate of not less than \$155 per week exclusive of board, lodging, or other facilities; or

(b) Who, in the case of academic administrative personnel is compensated for his services as required by paragraph (4)(a) of this section, or on a salary basis which is at least equal to the entrance salary for teachers in the school system, educational establishment, or institution by which he is employed: *Provided*, That an employee who is compensated on a salary or fee basis at a rate of not less than \$250 per week (exclusive of board, lodging, or other facilities), and whose primary duty consists of the performance of office or non-manual work directly related to management policies or general business operations of his employer or his employer's

customers; which includes work requiring the exercise of discretion and independent judgment, shall be deemed to meet all of the requirements of this section. [Order 76-5, § 296-128-520, filed 2/24/76.]

**WAC 296-128-530 Professional.** The term "individual employed in a bona fide . . . professional capacity" in RCW 49.46.010 (5)(c) shall mean any employee:

(1) Whose primary duty consists of the performance of work:

(a) Requiring knowledge of an advanced type in a field of science or learning customarily acquired by a prolonged course of specialized intellectual instruction and study, as distinguished from a general academic education and from an apprenticeship, and from training in the performance of routine mental, manual, or physical processes, or

(b) Original and creative in character in a recognized field of artistic endeavor (as opposed to work which can be produced by a person endowed with general manual or intellectual ability and training), and the result of which depends primarily on the intention, imagination, or talent of the employee; or

(c) Teaching, tutoring, instructing, or lecturing in the activity of imparting knowledge and who is employed and engaged in this activity as a teacher in the school system or educational establishment or institution by which he is employed; and

(2) Whose work requires the consistent exercise of discretion and judgment in its performance; and

(3) Whose work is predominantly intellectual and varied in character (as opposed to routine mental, manual, mechanical or physical work) and is of such a character that the output produced or the result accomplished cannot be standardized in relation to a given period of time; and

(4) Who does not devote more than 20 percent of his hours worked in the work week to activities which are not an essential part of and necessarily incident to the work described in paragraphs (1) through (3) of this section; and

(5) Who is compensated for his services on a salary or fee basis at a rate of not less than \$170 per week exclusive of board, lodging, or facilities: *Provided*, That this paragraph (5) shall not apply in the case of an employee who is the holder of a valid license or certificate permitting the practice of law, medicine, or dentistry and who is actually engaged in the practice thereof: *Provided*, That an employee who is compensated on a salary or fee basis at a rate of not less than \$250 per week (exclusive of board, lodging, or other facilities), and whose primary duty consists of the performance of work either requiring knowledge of an advanced type in a field of science or learning, which includes work requiring the consistent exercise of discretion and judgment, or requiring invention, imagination, or talent in a recognized field of artistic endeavor, shall be deemed to meet all of the requirements of this section. [Order 76-5, § 296-128-530, filed 2/24/76.]

**WAC 296-128-540 Outside salesman.** The term "individual employed in the capacity of outside salesman" in RCW 49.46.010 (5)(c) shall mean any employee:

(1) Who is employed for the purpose of and who is customarily and regularly engaged away from his employer's place or places of business, as well as on the premises (where the employee regulates his own hours and the employer has no control over the total number of hours worked) in the following alternative activities:

(a) In making sales; including any sale, exchange, contract to sell, consignment for sale, shipment for sale or other disposition; or

(b) In obtaining orders or contracts for services or for the use of facilities for which a consideration will be paid by the client or customer; or

(c) In demonstrating products or equipment for sale; or

(d) In the sale of services and performance of the service sold when the compensation to the employee is computed on a commission basis; and

(2) Whose hours of work of a nature other than that described in (1)(a), (b), (c) and (d) of this section do not exceed 20 percent of the hours worked in the work week by nonexempt employees of the employer: *Provided*, That work performed incidental to and in conjunction with the employee's own outside sales or solicitations, including incidental deliveries and collections, shall not be regarded as nonexempt work; and

(3) Who is compensated by the employer on a guaranteed salary, commission or fee basis and who is advised of his status as "outside salesman." [Order 76-5, § 296-128-540, filed 2/24/76.]

**WAC 296-128-550 Regular rate of pay.** The regular rate of pay shall be the hourly rate at which the employee is being paid, but may not be less than the established minimum wage rate. Employees who are compensated on a salary, commission, piece rate or percentage basis, rather than an hourly wage rate, unless specifically exempt, are entitled to one and one-half times the regular rate of pay for all hours worked in excess of 40 per week. The overtime may be paid at one and one-half times the piecework rate during the overtime period, or the regular rate of pay may be determined by dividing the amount of compensation received per week by the total number of hours worked during that week. The employee is entitled to one and one-half times the regular rate arrived at for all hours worked in excess of 40 per week. [Order 76-5, § 296-128-550, filed 2/24/76.]

**WAC 296-128-560 Compensating time off in lieu of overtime pay.** The provisions of chapter 49.46 RCW requiring one and one-half times the regular rate of pay for hours worked in excess of 40 per week does not apply to any person who requests compensating time off in lieu of overtime pay. Therefore, compensating time may be as agreed upon by the employer and the individual employee at the request of the employee, but may not be imposed by the employer in lieu of overtime pay upon

any employee who has not so requested such compensating time off. [Order 76-5, § 296-128-560, filed 2/24/76.]

**INDUSTRIAL WELFARE COMMITTEE APPEAL**  
**PROCEDURES**

## WAC

- 296-129-020 Appeal briefs.  
296-129-030 Appeal briefs—Contents.  
296-129-040 Record on appeal.

**Reviser's note:** For standards of labor for the protection of the safety, health and welfare of employees for all occupations subject to chapter 49.12 RCW, see also chapter 296-126 WAC.

**WAC 296-129-020 Appeal briefs.** Appeal briefs may be filed in the office of the committee's secretary by the respective parties to the appeal on their own behalf or by someone representing them thirty days following the filing of the notice of appeal. Any party to the appeal filing an appeal brief may request that the hearing of oral arguments upon the appeal be held before the committee. The time, place and date for hearing oral arguments, when granted, shall be scheduled after the expiration of the time for filing briefs and the notice sent to all parties to the appeal where such an oral argument is deemed desirable by the committee. [Order 74-9, § 296-129-020, filed 3/13/74, effective 4/15/74.]

**WAC 296-129-030 Appeal briefs—Contents.** An appeal brief, if filed, shall consist of the following:

(1) Statement of the case. A brief statement of the nature of the case which is the subject of the appeal and a clear and concise statement of the facts appropriate to an understanding of the nature of the controversy.

(2) Assignments of error. Each error relied upon and served with the notice of appeal shall be clearly pointed out. Whenever error is assigned to any finding of fact or conclusion of the department employee, so much of the finding or conclusion claimed to be erroneous should be set out verbatim in the brief.

(3) Appellant's brief should set forth and discuss the authorities in support of the position of the appellant and shall be designed and arranged to address the assignments of error and the issues arising therefrom.

(4) Respondent's brief should contain argument and discussion in opposition to the assignments of error of the appellant, and/or in support of the decision or rulings of the departmental employee or agent. [Order 74-9, § 296-129-030, filed 3/13/74, effective 4/15/74.]

**WAC 296-129-040 Record on appeal.** Upon receipt of a copy of the notice of appeal, whether informal or formal, the departmental employee or agent shall promptly cause to be prepared and forwarded to the office of the secretary of the committee the record on appeal which shall include a transcript of the proceedings of any hearing that may have been held by said employee or agent, the originals of all exhibits or documentary evidence received by the employee during the course

of any hearing and any other papers or evidence before the employee relied upon in arriving at the decision. All exhibits shall be appropriately and plainly marked for reference. In addition, the employee shall certify in the appropriately titled case the record on appeal as containing all evidence, matters and things coming before said employee at any hearing relied upon in making his findings, conclusions, decisions and any remedial order. A copy of the record on appeal, or any portion thereof, may be obtained by any party to the appeal on payment to the employee of the reasonable cost per page. [Order 74-9, § 296-129-040, filed 3/13/74, effective 4/15/74.]

**CHAPTER**

- 296-132-070 Supervisor. [Order 70-1, § 296-132-070, filed 3/10/70.] Repealed by Emergency and Permanent Order 70-13, filed 12/1/70, effective 1/1/71.  
296-132-075 Rule temporary. [Order 70-1, § 296-132-075, filed 3/10/70.] Repealed by Emergency and Permanent Order 70-13, filed 12/1/70, effective 1/1/71.

- 296-132-165 Rule temporary. [Order 70-1, § 296-132-165, filed 3/10/70.] Repealed by Emergency and Permanent Order 70-13, filed 12/1/70, effective 1/1/71.
- 296-132-300 Unfair labor practice—Who may file. [Order 70-1, § 296-132-300, filed 3/10/70.] See WAC 296-132-301.
- 296-132-305 Filing of charges. [Order 70-1, § 296-132-305, filed 3/10/70.] See WAC 296-132-306.
- 296-132-310 Investigation. [Order 70-1, § 296-132-310, filed 3/10/70.] See WAC 296-132-311.
- 296-132-315 Remedies. [Order 70-1, § 296-132-315, filed 3/10/70.] See WAC 296-132-316.
- 296-132-320 Rules temporary. [Order 70-1, § 296-132-320, filed 3/10/70.] Repealed by Emergency and Permanent Order 70-13, filed 12/1/70, effective 1/1/71.

**WAC 296-132-005 Purpose.** These rules are adopted to aid the department, its authorized agents, and interested parties in proceedings under chapter 41.56 RCW, as amended, hereinafter referred to as the act. The department and its authorized agents may waive any requirements of these rules unless a party shows that it would be prejudiced by said waiver. [Order 70-1, § 296-132-005, filed 3/10/70.]

**WAC 296-132-010 Policy.** The policy of the state being primarily to promote peace in labor relations, nothing in these rules shall be construed to prevent the department and its authorized agents, consistent with the intent and purpose of the act, from using its best efforts to adjust any dispute arising between public employees and public employers. [Order 70-1, § 296-132-010, filed 3/10/70.]

**WAC 296-132-015 Construction.** These rules shall be liberally construed to effectuate the purposes and provisions of the act. [Order 70-1, § 296-132-015, filed 3/10/70.]

**WAC 296-132-050 General.** Any terms used herein that are defined in the act shall have the meaning set forth therein. [Order 70-1, § 296-132-050, filed 3/10/70.]

**WAC 296-132-055 Petitioner.** "Petitioner" shall mean any person or body who invites the department to intervene in an attempt to resolve differences which may arise under the act. [Order 70-1, § 296-132-055, filed 3/10/70.]

**WAC 296-132-060 Authorized agent.** "Authorized agent" of the department shall mean the director, the supervisor of industrial relations, a labor mediator, or hearing officer specifically authorized by the director to conduct specific proceedings under the act. Under ordinary circumstances, a labor mediator shall conduct all proceedings under the act. [Order 70-1, § 296-132-060, filed 3/10/70.]

**WAC 296-132-065 Labor organization, lawful organization.** In order to qualify as labor organization as referred to in RCW 41.56.010, or lawful organization as referred to in RCW 41.56.030, an organization: (1) Upon request by the authorized agent, or any party of

interest, must produce authentic records of how, when, and by whom the organization was formed.

(2) Must have a constitution and/or bylaws which plainly show the purposes of the organization is consistent with the requirements of the act and is available to all members.

(3) The constitution and/or bylaws must provide:

(a) An approved method of nomination and election of officers in accordance with parliamentary procedure, for terms not to exceed four years.

(b) An approved method of financial recordkeeping and a financial audit at least once a year, which is made available to all members.

(c) That at least four regular meetings must be held each year with adequate notice of same to all members.

(d) That a specific minimum number of members must be present to form a quorum before any organizational business may be transacted. [Order 70-1, § 296-132-065, filed 3/10/70.]

**WAC 296-132-100 Initiation.** Application to the department to resolve disagreement regarding the selection of a bargaining representative shall be by petition on such form or forms as may be provided by the department and must be accompanied by individual signed and dated authorization cards or letters from at least thirty percent of the employees in the proposed bargaining unit. Any written petition, however, may be accepted by the department provided it contains substantially the same information required by the department's forms. [Order 73-26, § 296-132-100, filed 12/10/73; Order 70-1, § 296-132-100, filed 3/10/70.]

**WAC 296-132-105 Filing of petition.** The petition (application) for certification, decertification, or amendment of certification must be filed either (1) with the Supervisor of Industrial Relations, Department of Labor and Industries, General Administration Building, Olympia, Washington 98504; or (2) in the event the public employer is situated in western Washington, with the West Side Labor Mediator, Department of Labor and Industries, 300 West Harrison St., Seattle, Washington 98119, and in the event the public employer is situated in eastern Washington, with the East Side Labor Mediator, Department of Labor and Industries, North 1322 Post St., Spokane, Washington 99201. [Order 73-26, § 296-132-105, filed 12/10/73; Order 70-1, § 296-132-105, filed 3/10/70.]

**WAC 296-132-110 Contents of petition—General.** Petitions shall contain the following: (1) A statement as to whether the petition is filed by a public employee organization, public employee, or a public employer.

(2) The name and address of the public employer. [Order 70-1, § 296-132-110, filed 3/10/70.]

**WAC 296-132-115 Contents of petition—Filed by public employees.** When filed by a public employee organization, or a public employee, petition for certification or amendment of certification shall, additionally, contain: (1) A description of the bargaining unit which

the petitioner claims to be appropriate; a statement as to whether there is any disagreement between the parties as to the nature and scope of the bargaining unit; and a statement that the petitioner is authorized to represent at least thirty percent of the employees within the claimed bargaining unit.

(2) The names and addresses of any other persons or labor organizations, known to the petitioner, who claim to represent any employees in the alleged appropriate unit, the expiration dates and brief descriptions of the contracts, if any, covering the employees in such unit.

(3) The number of employees in the alleged appropriate unit.

(4) A statement that the employer declines to recognize the petitioner as the representative, or that the public employer is about to recognize another organization as an exclusive bargaining representative.

(5) The name, affiliation, if any, and the address of the petitioner.

(6) Whether a work stoppage or picketing is in progress at the establishment involved and, if so, the approximate number of employees participating, and the date such work stoppage or picketing commenced.

(7) Any other relevant facts. [Order 73-26, § 296-132-115, filed 12/10/73; Order 70-1, § 296-132-115, filed 3/10/70.]

**WAC 296-132-120 Contents of petition--Filed by public employer.** When filed by a public employer, the petition for certification or amendment of certification shall contain: (1) A brief statement setting forth that one or more individuals or labor organizations has presented to the petitioner a claim to be recognized as the exclusive bargaining representative of all employees in the unit claimed to be appropriate; a description of such unit; the number of employees in the unit; and a statement as to whether the petitioner agrees or disagrees as to the nature or scope of such requested bargaining unit.

(2) The name or names, affiliation, if any, and addresses of individuals or labor organizations known to the petitioner making such claim for recognition.

(3) A statement whether the petitioner has contracts with any labor organization or other representatives of employees and, if so, their expiration date.

(4) Whether a work stoppage or picketing is in progress at the establishment involved and, if so, the approximate number of employees participating, and the date such work stoppage or picketing commenced.

(5) Any other relevant facts. [Order 73-26, § 296-132-120, filed 12/10/73; Permanent and Emergency Order 70-13, § 296-132-120, filed 12/1/70, effective 1/1/71; Order 70-1, § 296-132-120, filed 3/10/70.]

**WAC 296-132-125 Intervention.** Any third party having a legitimate interest in any proceedings may file a petition of intervention setting forth facts sufficient to establish such interest and requesting that the department resolve contested factual matters in its favor. For purposes of third-party intervention, "legitimate interest" means the intervenor must be able to prove it is

authorized to represent at least ten percent of the employees within a proposed bargaining unit. An intervening organization's showing of legitimate interest shall be made either prior to, or during the course of any hearing that may be held. Any organization which has a signed, valid collective bargaining agreement encompassing the proposed bargaining unit, or any portion thereof, shall be considered to have a legitimate interest in any proceedings upon presentation of same. [Order 73-26, § 296-132-125, filed 12/10/73; Order 70-1, § 296-132-125, filed 3/10/70.]

**WAC 296-132-130 Initial action.** Upon the filing of any petition an authorized agent shall confer with and may hold informal conferences with the known interested parties in an attempt to ascertain the facts. The authorized agent shall encourage the parties to agree upon the appropriate bargaining unit and a suitable method by which representation is to be determined. Whenever the authorized agent shall determine that the parties are unable to agree upon a suitable method or upon the appropriate bargaining unit, but in any event not more than thirty days after the filing of the petition, and he is unable to settle the controversy without hearing, he shall conduct a hearing to resolve such matters and he shall notify the parties of the time and place of such a hearing in writing at least six days, excluding Saturdays, Sundays and legal holidays, in advance thereof. [Order 70-1, § 296-132-130, filed 3/10/70.]

**WAC 296-132-135 Petition--Amendments or withdrawal.** At any time prior to issuance of a written notice of election or examination of the first authorization card, for the purpose of resolving the issue of representation, a petitioning party may amend or withdraw its petition at the discretion of the authorized agent. [Order 70-1, § 296-132-135, filed 3/10/70.]

**WAC 296-132-140 Decertification.** Decertification petition must be accompanied by individual, signed and dated statements from at least thirty percent of the employees in the existing bargaining unit to the effect that they no longer wish to be represented by the current bargaining representative. The petition must be timely filed whereupon an election will be conducted by the department in compliance with RCW 41.56.070 to determine whether or not the employees within the bargaining unit wish to be represented by the bargaining representative. [Order 73-26, § 296-132-140, filed 12/10/73.]

**WAC 296-132-145 Severance.** Any labor organization may timely file a petition to sever a unit of employees from an existing bargaining unit, accompanied by individual, signed bargaining authorization cards from at least thirty percent of the employees in the proposed bargaining unit. If the petitioned-for unit is found to be appropriate, the department shall conduct an election in accordance with RCW 41.56.070. In passing upon petitions to sever a unit of employees or departmental units from an existing bargaining unit, the Department shall

apply the same principles and standards to all public employers on a case-by-case basis after consideration of the elements set forth in RCW 41.56.060 and all relevant facts, including but not limited to a determination of: (1) Whether the proposed unit consists of employees having a unique community of interest separate from employees in the existing unit;

(2) Whether the proposed unit consists of employees having a functionally distinct and separate identity from other employees in the existing unit;

(3) Whether a tradition of separate representation exists and, in addition,

(4) Whether severance would unduly disrupt the stability of labor relations with the employer. [Order 73-26, § 296-132-145, filed 12/10/73.]

**WAC 296-132-150 Determination of nature and scope.** Whenever a question arises concerning the determination of an appropriate bargaining unit, it shall be disposed of as provided by RCW 41.56.060. Employees not employed on a regular basis, but subject to call, shall not be included within any bargaining unit, but part-time regularly employed employees shall be included within an appropriate bargaining unit. [Permanent and Emergency Order 70-13, § 296-132-150, filed 12/1/70, effective 1/1/71; Order 70-1, § 296-132-150, filed 3/10/70.]

**WAC 296-132-151 Unit clarification.** Whenever a disagreement occurs on whether or not positions are to be included or excluded from the bargaining unit, the public employer or the bargaining representative may petition the department to conduct a representation hearing to resolve the matter. In making this determination the department shall be guided by the criteria set forth in RCW 41.56.030 and RCW 41.56.060. [Order 73-26, § 296-132-151, filed 12/10/73.]

**WAC 296-132-152 Union membership.** An employee who has been excluded from a bargaining unit may voluntarily join and remain a member of the labor organization which represents such bargaining unit: *Provided*, The employee shall not serve on the organization's negotiating committee nor shall the employee be permitted to participate, on behalf of the labor organization, in any matters pertaining to labor relations with the public employer. [Order 73-26, § 296-132-152, filed 12/10/73.]

**WAC 296-132-155 Special election.** A special election may be conducted to ascertain the wishes of employees as to their desires to be included within or excluded from a specified bargaining unit. Such election shall be conducted by secret ballot. [Order 70-1, § 296-132-155, filed 3/10/70.]

**WAC 296-132-160 List of employees.** The public employer shall furnish to the department a current list of all employees in a proposed or agreed-upon bargaining unit. The list of employees must be submitted prior to or as a first order of business of any scheduled hearing. The

list of employees and their addresses shall be made available upon request to any organization meeting the requirements of RCW 41.56.070. [Order 73-26, § 296-132-160, filed 12/10/73; Order 70-1, § 296-132-160, filed 3/10/70.]

**WAC 296-132-200 Selection of representation method.** Once the nature and scope of a bargaining unit have been determined, by agreement or otherwise, the authorized agent shall within thirty days proceed with resolution of the issue of representation. [Order 70-1, § 296-132-200, filed 3/10/70.]

**WAC 296-132-205 Two or more organizations.** In the event two or more eligible organizations petition to be certified as the exclusive bargaining representative of a bargaining unit, the authorized agent shall resolve the issue of representation by conducting an election in accordance with RCW 41.56.070. [Order 70-1, § 296-132-205, filed 3/10/70.]

**WAC 296-132-210 Examination of membership rolls.** If, in the opinion of the authorized agent, conducting an election would unnecessarily and unduly delay the bargaining proceedings with little likelihood of altering the determination of representation, he may resolve the issue of representation by examination of authentic organization membership rolls. [Order 70-1, § 296-132-210, filed 3/10/70.]

**WAC 296-132-215 Use of authorization cards.** If, in the opinion of the authorized agent, conducting an election would unnecessarily and unduly delay the bargaining proceedings with little likelihood of altering the determination of representation, he may resolve the issue of representation by examination of acceptable organization bargaining authorization cards. [Order 70-1, § 296-132-215, filed 3/10/70.]

**WAC 296-132-220 Authorization cards--Acceptability.** In order to be acceptable as evidence of representation, individual authorization cards must be signed and dated by the employee expressing an intent to be represented by a specific bargaining representative. A card signed and dated by an employee less than sixty days prior to the date on which examination of cards for representation purposes commences shall continue prime facie evidence of continuation of such authorization. A card signed and dated six months or more prior to the date on which examination of cards for representation purposes commences shall be considered invalid and not acceptable for representation purposes. In the event cards dated more than sixty days prior to the date such examination commences are necessary to establish evidence of representation, then the authorized agent will certify, as an exclusive bargaining representative, only such organization which evidences representation authority by sixty per centum of the employees of the bargaining unit. [Order 70-1, § 296-132-220, filed 3/10/70.]

**WAC 296-132-225 Conduct of election.** In the event a representation election is conducted for the purposes of certification, the following rules will apply: (1) Notice of election shall be given to all interested parties, and shall be prominently posted by the employer, no less than six days prior to opening of the polls. Such notice shall contain: The date, hours and place of election; a list of employees eligible to vote; and a description of the bargaining unit: *Provided*, That any challenge to the composition of a bargaining unit agreed to between the employer and a labor organization must be filed with the department no less than seventy-two hours before the opening of the polls and must be supported by at least thirty percent of the employees in the unit in order to effect a stay by the department of the election process.

(2) An employee shall be deemed eligible to vote in an election for the certification of an exclusive bargaining representative of the employees of an appropriate bargaining unit who is regularly employed within the bargaining unit, either full or part-time, and who is in the employ of the public employer within fourteen days prior to the date of the issuance of the notice of election and on the date of election.

(3) Each of the interested parties may designate one person as an observer at the polls. Unless otherwise stipulated by the interested parties, observers must be non-supervisory employees of the public employer.

(4) Any observer or the authorized agent, for good cause, may challenge an employee's eligibility to vote. Challenged ballots shall be folded, placed in a sealed envelope with the name of the voter plainly written on the outside. Challenged ballots will not be considered unless they might affect the results of the election, in which case the authorized agent shall investigate and determine the eligibility to vote of the persons whose ballots are challenged. Challenged ballots which are disallowed will be destroyed. Challenged ballots which are allowed will be counted. The names of the persons whose ballots are challenged shall be made a part of the record of the election proceedings.

(5) Ballots may not be tallied until after the posted time for the closing of the polls unless all eligible voters have cast their ballot.

(6) In any election where there are only two choices on the ballot, an organization shall be certified if it receives a majority of the votes cast. [Order 73-26, § 296-132-225, filed 12/10/73; Order 70-1, § 296-132-225, filed 3/10/70.]

**WAC 296-132-226 Central filing--Arbitration and fact-finding.** In order to establish a central file relating to the determinations of fact-finding and arbitration panels under the provisions of chapter 41.56 RCW, each panel appointed pursuant to the provisions of chapters 59 and 131, Laws of 1973 shall provide the director with a true copy of its findings of fact, recommendations and/or decisions. [Order 73-26, § 296-132-226, filed 12/10/73.]

**WAC 296-132-250 Certification.** Except as specifically otherwise provided in special cases set forth in

WAC 296-132-220, the authorized agent will certify, as an exclusive bargaining representative, only an organization which on the date such issue is resolved is authorized to represent a majority of the employees of the bargaining unit. A copy of such certification will be mailed to all interested parties within ten days. [Order 70-1, § 296-132-250, filed 3/10/70.]

**WAC 296-132-255 Noncertification.** In the event a party seeking certification does not represent a majority of the employees of a bargaining unit, the authorized agent will dismiss any petition seeking such certification and will notify all parties thereof. [Order 70-1, § 296-132-255, filed 3/10/70.]

**WAC 296-132-260 Time extensions.** By mutual written agreement of the parties, any of the time limits set forth in sections 3 and 4, chapter 131, Laws of 1973, may be extended. Any such agreed-upon time extension shall not constitute a waiver of either party's rights under the act. [Order 73-26, § 296-132-260, filed 12/10/73.]

**WAC 296-132-265 Bypass of steps.** The parties, under sections 3 and 4, chapter 131, Laws of 1973, by mutual written agreement may bypass mediation and go directly to fact-finding, or may bypass both mediation and fact-finding and go directly to arbitration, or may bypass fact-finding and go directly to arbitration from mediation. [Order 73-26, § 296-132-265, filed 12/10/73.]

**WAC 296-132-301 Unfair labor practices--Who may file.** Any public employer or public employee, or any labor organization representing a public employee may file an unfair labor practice charge with the department of labor and industries, alleging one or more of the unfair labor practices set forth in RCW 41.56.140 or 41.56.150. [Order 73-26, § 296-132-301, filed 12/10/73; Permanent and Emergency Order 70-13, § 296-132-301, filed 12/1/70, effective 1/1/71.]

**WAC 296-132-302 Unfair labor practice presumed--Change of conditions during bargaining.** During the course of collective bargaining between a public employer and a bargaining representative under the authority and procedures of chapter 41.56 RCW and following the expiration of the collective bargaining agreement, an unfair labor practice will be presumed to exist under either RCW 41.56.140, or 41.56.150, if either the public employer or the bargaining representative make any changes in existing wages, hours of employment or other conditions of employment without the consent of the other party, but any such consent shall not prejudice the rights of either party under chapter 41.56 RCW or these rules. [Order 73-26, § 296-132-302, filed 12/10/73.]

**WAC 296-132-306 Filing of charges.** Unfair labor practice charges shall be filed on such form or forms

provided by the department and shall contain the following: (1) The name and address of the public employer.

(2) The name and address of the party or organization filing the charge.

(3) A statement as to the basis of the charge which shall be specific as to facts, names, addresses, dates and places. [Permanent and Emergency Order 70-13, § 296-132-306, filed 12/1/70, effective 1/1/71.]

**WAC 296-132-311 Investigation.** Upon receipt of an unfair labor practice charge, the department shall conduct an investigation to determine whether or not the charges have merit. If it is found that the charges have merit, a complaint shall be issued and a hearing scheduled in accordance with RCW 41.56.170. If it is found that the charges do not have merit, the unfair labor practice charge shall be dismissed and the principals named in such charge shall be notified in writing of such dismissal and the reasons for the dismissal. [Permanent and Emergency Order 70-13, § 296-132-311, filed 12/1/70, effective 1/1/71.]

**WAC 296-132-316 Remedies.** Appropriate remedial orders which may be issued by the department include, but shall not be limited to: (1) Immediate reinstatement of an employee, with back pay, who has been wrongfully discharged for union activity.

(2) Immediate reinstatement of an employee to his or her former position, wages and schedule if it is shown that discriminatory changes were made because of union activity.

(3) Certification of a bargaining representative regardless of the results of an election if it is shown that unfair practices resulted in the loss of the election provided it can be shown the bargaining representative did represent a majority of unit prior to the commission of the unfair practices.

(4) Failure to certify a bargaining representative regardless of the results of an election if it is shown that unfair practices resulted in gaining enough votes to win the election.

(5) A new election may be ordered where it is shown that unfair practices effected the outcome. [Permanent and Emergency Order 70-13, § 296-132-316, filed 12/1/70, effective 1/1/71.]

**WAC 296-132-350 Appeal procedure.** Any employer, employee, bargaining representative, labor organization or other person or organization who was a party in a proceeding before an authorized agent and aggrieved by any action taken or decision made by an authorized agent may appeal such action taken or decision to the director of the department of labor and industries by filing a notice of appeal to the director of the department of labor and industries, the authorized agent and all other parties to the proceeding within thirty days of the date such action or decision was taken. Certification of such service shall be filed in the office of the director. The notice of appeal shall suspend such action or decision pending the determination of the appeal by the

director unless in the discretion of the director the action or decision of the authorized agent could settle the issue. The director shall review the record and written briefs on appeal filed by the respective parties and may hear oral arguments regarding the issues on appeal. The director shall decide the issues raised by the appeal and shall notify all parties in writing of his decision. The decision of the director in the absence of an appeal in superior court pursuant to the Administrative Procedure Act shall be final at the expiration of thirty days from the date of filing of such decision: *Provided*, That any appeal containing issues related to the findings of a fact-finding panel or the findings, recommendations or conclusions of an arbitration panel rendered under the authority of chapter 131, Laws of 1973, or the findings, recommendations or conclusions of an arbitration panel rendered under the authority of chapter 59, Laws of 1973, will not be subject to review and decision under this section. [Order 73-26, § 296-132-350, filed 12/10/73; Order 70-1, § 296-132-350, filed 3/10/70.]

**WAC 296-132-360 Appeal briefs.** Appeal briefs shall be filed in the office of the director by the respective parties to the appeal thirty days following the filing of the notice of appeal. Any party to the appeal filing an appeal brief may request that a hearing of oral arguments upon the appeal be held before the director. Parties to the appeal not filing an appeal brief will not be granted oral hearing of arguments before the director nor permitted to present oral arguments to the director at any hearing that may be held for the presentation of arguments on appeal. The time and place for hearing oral arguments, when requested, shall be scheduled after the expiration of the time for filing briefs and the notice of any such hearings shall be sent to all parties to the appeal. [Order 73-26, § 296-132-360, filed 12/10/73.]

**WAC 296-132-370 Appeal briefs--Contents.** An appeal brief shall consist of the following: (1) Statement of the case: A brief statement of the nature of the case which is the subject of the appeal and a clear and concise statement of the facts appropriate to an understanding of the nature of the controversy.

(2) Assignments of error: Each error relied upon and served with the notice of appeal shall be clearly pointed out. No alleged error of the authorized agent will be considered unless the same be definitely pointed out in the appellant's brief. Whenever error is assigned to any findings of fact or conclusion of the authorized agent, so much of the findings or conclusions claimed to be erroneous shall be set out verbatim in the brief.

(3) Appellant's brief shall set forth and discuss the authorities in support of the position of the appellant and shall be designed and arranged to address the assignments of error and the issues arising therefrom.

(4) Respondent's brief shall contain argument and discussion in opposition to the assignments of error of the appellant, and/or in support of the decision or rulings of the authorized agent. [Order 73-26, § 296-132-370, filed 12/10/73.]

**WAC 296-132-380 Record on appeal.** Upon receipt of a copy of the notice of appeal, the authorized agent shall promptly cause to be prepared and forwarded to the office of the director the record on appeal which shall include a transcript of the proceedings of any hearing held by the authorized agent, the originals of all exhibits or documentary evidence admitted or rejected by the authorized agent during the course of the hearing and any other papers or evidence before the authorized agent relied upon in arriving at his decision. All exhibits shall be appropriately and plainly marked for reference. In addition, the authorized agent shall certify in the appropriately titled case the record on appeal as containing all the evidence, matters and things coming before the authorized agent at the hearing, relied upon in making his findings, conclusions, decision and any remedial order. A copy of the record on appeal, or any portion thereof, may be obtained by any party to the appeal on payment to the authorized agent of the reasonable cost per page. [Order 73-26, § 296-132-380, filed 12/10/73.]

**WAC 296-133-010 Intent and purpose.** These rules are adopted pursuant to the authority of section 8, chapter 156, Laws of 1972 ex. sess., (hereinafter referred to as the "act") as supplementary to the act for

the purpose of providing rules of procedure to aid and assist the department of labor and industries, its authorized agents, and interested parties in proceedings under the act. The department of labor and industries, (hereinafter referred to as "department") and its authorized agents may waive any requirements of these rules, unless a party shows that it would be prejudiced by such waiver or unless the rule to be waived involves a mandatory provision of the act. [Order 72-13, § 296-133-010, filed 7/31/72.]

**WAC 296-133-020 Policy.** It is the policy of the department to expedite the settlement of labor disputes between health care activities and their employees and to promote peace in labor relations and nothing in these rules should be construed to prevent the department and its authorized agents, where not inconsistent with the intent and purpose of the act, from using its best efforts to adjust through conciliation any labor dispute arising between employers, employees or employee organizations subject to the provisions of the act. [Order 72-13, § 296-133-020, filed 7/31/72.]

**WAC 296-133-030 Construction.** These rules shall be liberally construed to effectuate the purposes and provisions of the act. [Order 72-13, § 296-133-030, filed 7/31/72.]

**WAC 296-133-040 General.** Any terms used in these rules that are defined in the act shall have the same meaning as set forth therein. [Order 72-13, § 296-133-040, filed 7/31/72.]

**WAC 296-133-050 Petitioner.** "Petitioner" shall mean any person, employer or employee association authorized to request the department to take action under the provisions of the act or these rules. [Order 72-13, § 296-133-050, filed 7/31/72.]

**WAC 296-133-060 Authorized agent.** "Authorized agent" of the department shall mean the director, the supervisor of industrial relations, a labor mediator or a hearing officer specifically authorized by the director to conduct proceedings under the act. [Order 72-13, § 296-133-060, filed 7/31/72.]

**WAC 296-133-070 Employee association or organization—Qualifications.** In order to qualify as an employee association as referred to in section 3 of the act, any such organization or association:

(1) Upon request by the authorized agent, or any party of interest, must produce authentic records of how, when and by whom the organization was formed.

(2) Shall have a written constitution and/or bylaws which plainly indicates that one of the primary purposes of the organization or association is to represent employees in labor relations matters with employers and is consistent with the requirements of the act and is available for review by any member.

(3) The constitution and/or bylaws must provide:

(a) An approved, customary or recognized method for the nomination and election of officers in accordance

with accepted parliamentary procedures, the terms of such officers not to exceed four years.

(b) An approved method of financial record keeping and a financial audit at least once a year, which audit is available to any member for review.

(c) That at least four regular meetings must be held each year with adequate notice of meetings to all members.

(d) That a specific and reasonable minimum number of members or a percentage of the membership must be present to form a quorum before any organization business may be transacted at regular or special meetings. [Order 72-13, § 296-133-070, filed 7/31/72.]

**WAC 296-133-080 Bargaining representative--Selection of--Petition.** Applications to the department regarding the selection of a bargaining representative to represent employees of a bargaining unit of an employer shall be by petition on such form or forms as may be provided by the department. A written petition may be accepted by the department if the petition contains substantially the same information required by the forms provided by the department. [Order 72-13, § 296-133-080, filed 7/31/72.]

**WAC 296-133-090 Filing of petition.** The petition for certification, decertification or amendment of certification of the representative of a bargaining unit must be filed either:

(1) With the Supervisor, Division of Industrial Relations, Department of Labor and Industries, General Administration Building, Olympia, Washington 98504; or

(2) If the health care activity is situated in western Washington with the Labor Mediator, Division of Industrial Relations, Department of Labor and Industries, 300 West Harrison Street, Seattle, Washington 98119; or

(3) If the health care activity is situated in eastern Washington with the Labor Mediator, Division of Industrial Relations, Department of Labor and Industries, North 1322 Post Street, Spokane, Washington 99207. [Order 72-13, § 296-133-090, filed 7/31/72.]

**WAC 296-133-100 Contents of petition--General.** Petitions for the certification, decertification, or amendment of certification of an employee representative of a bargaining unit shall contain the following:

(1) A statement as to whether the petition is filed by a health care activities employee organization, a health care activities employee or a health care activities employer. [Order 72-13, § 296-133-100, filed 7/31/72.]

**WAC 296-133-110 Contents of petition filed by employee or employee organization.** Petitions for certification decertification or amendment of certification filed by a health care activities employee organization or a health care activities employees, shall contain:

(1) A description of the bargaining unit which the petitioner claims to be appropriate, a statement as to whether there is any disagreement between the petitioner and interested parties as to the nature and scope

of the proposed bargaining unit; and statement that the petitioner is authorized to represent at least thirty percent of the employees within the proposed bargaining unit.

(2) The names and addresses of any persons or employee organizations, known to the petitioner, who claim to represent any employees in the proposed appropriate bargaining unit; the expiration dates and brief descriptions of any collective bargaining agreements which may be in effect between an employer and an employee organization covering all or a portion of the employees in the proposed bargaining unit.

(3) The number and job titles of the employees in the proposed bargaining unit.

(4) A statement that the employer declines to recognize the petitioner as the employee representative, or that the health care activities employer is about to recognize another employee organization as the exclusive bargaining representative or the presently recognized or certified employee organization is no longer the representative of the employees in the proposed bargaining unit.

(5) The name, affiliation, if any, and the address of the petitioner.

(6) Whether a work stoppage or picketing is in progress at the health care activity and, if so, the approximate number of employees participating and the date that such work stoppage or picketing commenced.

(7) Any other relevant factual information.

(8) A specific statement of the relief or remedy that the petitioner seeks the department to invoke. [Order 72-13, § 296-133-110, filed 7/31/72.]

**WAC 296-133-120 Contents of petition filed by employer.** Petitions for certification or amendment of certification of a bargaining representative filed by a health care activities employer, shall contain:

(1) A factual statement setting forth that one or more individuals or employee organizations has presented to the petitioner a claim to be recognized as the exclusive bargaining representative of all employees in a bargaining unit claimed to be appropriate; the job titles of the employees of such bargaining unit; the number of employees in such unit; and a statement of reasons as to whether the petitioner agrees or disagrees as to the nature or scope of such requested bargaining unit.

(2) The name or names, affiliation, if any, and addresses of individuals or employee organizations known to the petitioner making such claim for recognition as to the exclusive bargaining representative of employees in the health care activity.

(3) A statement regarding whether the petitioner has contracts with any employee organization or other representatives of employees, and if so, the expiration dates of such agreements.

(4) A statement as to whether or not a work stoppage or picketing is in progress at the health care activity involved, and if so, the approximate number of employees participating, and the date such work stoppage or picketing commenced.

(5) A statement of other relevant facts.

(6) A statement regarding the remedy or relief the petitioner requests the department to invoke. [Order 72-13, § 296-133-120, filed 7/31/72.]

**WAC 296-133-130 Intervention.** Any third party having a legitimate interest in any proceedings commenced under the act may file a petition seeking intervention in such proceedings setting forth facts sufficient to establish such interests and setting forth in such petition the remedy or relief the petitioner seeks the department to invoke.

For the purposes of third party intervention, "legitimate interest" means that the petitioner must allege in the petition for intervention and be prepared to prove if requested that it is authorized to represent at least thirty percent of the employees within a proposed bargaining unit before leave to intervene may be granted. Any employee organization which has a signed, valid collective bargaining agreement encompassing the proposed bargaining unit or any portion thereof shall be considered to have a legitimate interest upon presentation to the department of an executed authentic copy of such collective bargaining agreement. [Order 72-13, § 296-133-130, filed 7/31/72.]

**WAC 296-133-140 Conferences--Notice of hearing.** Upon the filing of petition for certification, decertification or amendment of certification of an exclusive bargaining representative of employees and the determination of an appropriate bargaining unit, an authorized agent shall confer with and may hold informal conferences with the known interested parties in an effort to ascertain the agreed upon facts of the controversy. The authorized agent shall encourage the parties to agree upon an appropriate bargaining unit within the limitations of the act. Whenever the authorized agent shall determine that the parties are unable to agree upon an appropriate bargaining unit, and is unable to settle the controversy without hearing, a hearing shall be conducted. Notice of such hearing, with the time and place of such hearing, shall be given to all parties by mail at least six days prior to the date of hearing, excluding Saturdays, Sundays and legal holidays. Within a reasonable time following the determination of an appropriate bargaining unit, the authorized agent shall provide for a bargaining representation election in accordance with the provisions of section 3 of the act and as further provided in these rules. [Order 72-13, § 296-133-140, filed 7/31/72.]

**WAC 296-133-150 Petition--Amendments or withdrawals.** At any time prior to the issuance of the written notice of a bargaining representation election, a petitioning party may, subject to the discretion of the authorized agent, amend or withdraw his petition. [Order 72-13, § 296-133-150, filed 7/31/72.]

**WAC 296-133-160 Unit determinations--Considerations.** Whenever the department is called upon to make a determination of an appropriate bargaining unit within a health care activity, within the limitations of

the act, the department shall consider the duties, skills and working conditions of the health care activities employees; the history of collective bargaining by the health care activities employees and their bargaining representative within the proposed bargaining unit and in the health care industry; the extent of organization among the health care activities employees; the desires of such employees and the affect of the proposed bargaining unit upon the efficiency of administration of the health care activity. [Order 72-13, § 296-133-160, filed 7/31/72.]

**WAC 296-133-170 Representation questions--Timeliness.** The department will not consider any question of representation within any bargaining unit or subdivision thereof in any health care activity within which in the preceding twelve-month period a valid election has been held. Nor will the department entertain any petition giving rise to the question of representation within any bargaining unit or portion thereof with a health care activity having a collective bargaining agreement in effect, except during the period not more than ninety nor less than sixty days prior to the expiration date of any such agreement. A collective bargaining agreement which contains a provision for automatic renewal or extension of the agreement or which is effective for a term of more than three years shall not be deemed to be a valid collective bargaining agreement for the purposes of this section. [Order 72-13, § 296-133-170, filed 7/31/72.]

**WAC 296-133-180 Employee lists.** Health care activities employers shall furnish a current list of the names and addresses of all employees in a proposed or agreed upon bargaining unit prior to any scheduled representation hearing. The lists of such employees shall be available upon request to any organization which has been qualified under these rules and meeting the requirements of section 3 of the act. [Order 72-13, § 296-133-180, filed 7/31/72.]

**WAC 296-133-190 Authorization cards--Acceptability.** In order to be acceptable as evidence of representation for the purposes of the thirty percent requirements of section 3 of the act, individual authorization cards must be signed and dated by the employee expressing his intention to be represented by a specific bargaining representative. A card signed and dated six months or more prior to the date on which examination of cards for representation purposes commences shall be considered invalid and not acceptable for representation purposes. [Order 72-13, § 296-133-190, filed 7/31/72.]

**WAC 296-133-200 Conduct of election.** In the event a representation election is conducted for the purposes of certification, the following rules shall apply:

(1) Notice of election shall be given to all interested parties, and shall be prominently posted by the employer at a place or places within the health care services facility reasonably accessible to all employees. Notices of election shall be sent by mail to all interested parties no

less than ten days prior to the date of the election excluding Saturdays, Sundays and legal holidays. Notices of election shall contain the following information; the date of election, hours and place of election, a list of employees eligible to vote, a description of the bargaining unit and a listing of employee organizations from which eligible employees may choose by ballot as well as a choice that such employees do not wish to be represented by any bargaining representative.

(2) Employee shall be deemed eligible to vote in an election for the certification of an exclusive bargaining representative of the employees of an appropriate bargaining unit who are regularly employed within the bargaining unit, either full or part time, and who are in the employ of the employer within fourteen days prior to the date of the issuance of the notice of election and on the date of election, except, supervisors as defined in section 2, subsection 5 of the act, and guards as defined in section 2, subsection 6 of the act, unless the bargaining unit is exclusively devoted to employees serving in the capacity of guards. Employees otherwise eligible to vote in a certification election may be permitted to vote by absentee ballot upon the filing of an affidavit with the authorized agent indicating that such person is eligible to vote in the certification election and that by reason of physical incapacity will be unable to be present at the balloting place on the date of election. The casting of ballots in a representation election by proxy will not be permitted.

(3) Each of the interested parties may designate one person as observer at the polls. Unless otherwise stipulated by the interested parties, observers must be nonsupervisory employees of the health care activities employer.

(4) Any observer, or the authorized agent, for good cause may challenge any employee's eligibility to vote. A challenged ballot shall be placed in an envelope bearing no identifying marks. It shall be placed in another envelope upon which shall be written the name of the employee desiring to cast a ballot, the reasons for which the ballot was challenged, by whom it was challenged, the polling place at which it was challenged, and the envelope shall be sealed and initialed by the authorized agent.

(5) The challenged ballots previously placed in separate envelopes shall be placed in a sealed envelope marked "challenged ballots" and sent along with the tally sheet to the authorized agent. The challenged ballots shall not be opened or counted unless the counting of such ballots might affect the results of the election. If the challenged ballots might affect the results of the election, the authorized agent shall conduct an investigation into and if requested conduct a formal hearing on the validity of the challenges made. If it is concluded that the challenge was properly made, that ballot shall be excluded from the count. Otherwise, such ballot shall be counted as cast.

(6) Ballots may not be tallied until after the time for the closing of the polls unless all eligible voters have cast their ballot.

(7) Within five days after the tally of the ballots has been furnished, any party may file with the authorized agent an original and three copies of objections to the conduct of the election, or conduct affecting the results of the election, which shall contain a short factual statement of the reasons for the objections. Such filing must be timely, whether or not the challenged ballots are sufficient in number to affect the results of the election. Copies of such objections shall immediately be served by mail upon the other parties by the party filing them. If objections are filed to the conduct of the election, or conduct affecting the result of the election, the authorized agent shall investigate such objections. If the objections to the conduct of the election were sustained and the objections would affect the results of the election, the authorized agent, if requested by one of the interested parties, shall conduct a formal hearing. [Order 72-13, § 296-133-200, filed 7/31/72.]

**WAC 296-133-210 Run-off election procedure.**

Where more than one employee organization is on the ballot, and neither of the three or more choices receives votes from a majority of the votes cast in the election, a run-off election shall be held. The run-off ballot shall contain the two choices which receive the largest and second largest number of votes. [Order 72-13, § 296-133-210, filed 7/31/72.]

**WAC 296-133-220 Certification.** If no timely objections are filed, the authorized agent will certify, as an exclusive bargaining representative, the employee organization which receives votes from a majority of the employees who vote in the election or any run-off election or will certify that no employee organization receive votes from a majority of the employees who voted in the election or any run-off election. A copy of such certification shall be mailed to all interested parties within ten days of certification, along with a certification of the results of the election. [Order 72-13, § 296-133-220, filed 7/31/72.]

**WAC 296-133-230 Unfair labor practices--Who may file.** Any employee or employee organization or a health care activities employer may file in writing an unfair labor practice charge with the department of labor and industries, alleging an unfair labor practice as set forth in the applicable provisions of sections 4 and 5 of the act: *Provided*, That this section and other sections of these rules relating to unfair labor practice charges, shall not be construed to prohibit an employee, an employee organization or an employer from instituting court proceedings as authorized under section 7 of the act without first having exhausted the remedies provided by these rules, except, in those cases in which an employee, an employee organization or an employer requests the director of labor and industries to exercise the authority invested in him to institute court proceedings to seek relief from the commission of an unfair labor practice. Any decision by a court rendered upon the merits of an unfair labor practice charge pursuant to a legal action instituted under the authority of section 7

shall be deemed res judicata and a bar to maintaining proceedings under this section and other sections of these rules relating to unfair labor practice charges. [Order 72-13, § 296-133-230, filed 7/31/72.]

**WAC 296-133-240 Filing of charges.** Unfair labor practice charges shall be filed on such form or forms provided by the department and shall contain the following:

- (1) The name and address of the health care activities employer.
- (2) The name and address of the person or organization who is filing the charges.
- (3) The statement as to the basis of the charge which shall be specific as to facts, names, addresses, dates and places.
- (4) A statement as to whether or not the complainant has instituted legal proceedings under the authority of section 7 of the act seeking relief from the alleged commission of an unfair labor practice.
- (5) The unfair labor practice charges shall be verified under oath in substantially the following form:

-----, being first sworn on oath, deposes and says: That he is the complainant named in the foregoing unfair labor practice charges, that he has read the unfair labor practice charges, knows the contents thereof and believes the same to be true and correct to the best of his knowledge and belief.

-----  
(Signature of Complainant)

Subscribed and sworn to before me on this day of ----- 1972.

[Order 72-13, § 296-133-240, filed 7/31/72.]

**WAC 296-133-250 Actionable charges--Dismissals.** Upon receipt of an unfair labor practice charge, the department shall determine whether or not the complainant has alleged actionable charges of unfair labor practices under the provisions of the act. If the department finds that actionable charges have been alleged by the complainant, the department may give notice of not less than three days to the parties to the controversy that an informal hearing conference will be held at which conference testimony and evidence will be taken under oath to determine whether such charges are factually meritorious or frivolous. If the charges are found to be actionable charges and the evidence obtained at the informal hearing conference discloses that the charges are made in good faith and give rise to substantial questions of fact or law, the department shall issue a complaint and schedule the matter for hearing. If the informal hearing conference discloses that the unfair labor practice charges are frivolous and not made in good faith and do not give rise to substantial questions of fact or

law, the unfair labor practice charges shall be dismissed and those persons or organizations named in such charges shall be notified in writing of such dismissal and the reasons for the dismissal. If the department finds that actionable charges have not been alleged under the provisions of the act, the unfair labor practice charges shall be dismissed and those persons or organizations named in such charges shall be notified in writing of such dismissal and the reasons for the dismissal. [Order 72-13, § 296-133-250, filed 7/31/72.]

**WAC 296-133-260 Remedial orders.** Remedial orders may be issued by the department which shall afford an appropriate remedy or relief consistent with the provisions of the act and the findings and conclusions of the authorized agent, which may include the prominent posting of such remedial orders within the health care activity at such place or places reasonably accessible to all employees for periods of time not to exceed six months. [Order 72-13, § 296-133-260, filed 7/31/72.]

**WAC 296-133-270 Extensions of time.** Whenever in these rules provision is made for the conducting of a hearing by the authorized agent for the purpose of taking testimony and evidence after the giving of a notice of the time and place of such hearing, the authorized agent may upon his own motion change the time for such hearing to a later date and change the place for such hearing. In addition, any party to the hearing process may upon written application to the authorized agent upon the basis of good cause shown in such application be granted an extension of time and a change of the date or place or both for such hearing which is reasonably convenient to the parties. [Order 72-13, § 296-133-270, filed 7/31/72.]

**WAC 296-133-280 Impasse-determination.** Whenever either a health care activities employer or the exclusive bargaining representative of the bargaining unit of such health care activity are of the opinion that an impasse has arisen between the parties in the process of collective bargaining, either party may request the department in writing to determine whether an impasse exists in the collective bargaining process.

For the purpose of these rules and supplementary to section 9 of the act, an impasse in the collective bargaining process will be presumed to have been reached when the parties have not agreed upon a collective bargaining contract and an issue or issues remain upon which neither party is willing to agree, nor make in good faith concessions or make further concessions in good faith, nor agree upon any good faith proposal nor make further proposals in good faith for the settlement of any issue remaining unresolved.

For the purpose of these rules and supplementary to the act, the terms "collective bargaining" means the performance of the mutual obligations of the employer and the bargaining representative of the employees to meet at reasonable times, to confer in good faith with respect to wages, hours and other terms and conditions of employment, or the negotiations of an agreement, or

any question arising thereunder, and the execution of a written contract incorporating any agreement reached, but such obligation does not compel either party to agree to a proposal or require the making of a concession.

In any case in which the department is requested to determine whether an impasse has been reached in the collective bargaining process, the authorized agent shall request the parties representing the employer, and the parties representing the exclusive bargaining representative in the negotiations to meet and confer with the authorized agent for the purpose of an informal hearing conference to enable a determination of the facts to be made as to whether an impasse has been reached in the collective bargaining process. For that purpose the authorized agent may take evidence and testimony under oath. If the authorized agent determines that an impasse has been reached in the collective bargaining process, he shall forthwith enter findings and conclusions forming the basis of his belief that an impasse has been reached and setting forth therein the specific issues remaining unresolved between the parties which constitute the impasse accompanied by an order declaring an impasse and ordering the parties to forthwith choose and impanel a board of arbitrators pursuant to the provisions of section 9 of the act. Which order shall further require the parties to furnish copies of the authorized agent's findings and conclusions and order declaring an impasse to each member of the panel of arbitrators for their guidance upon the subject of the issues remaining unresolved constituting the impasse.

If an impasse is found not to have been reached in the process of collective bargaining, the authorized agent shall enter findings and conclusions and order the parties to resume the process of collective bargaining. [Order 72-13, § 296-133-280, filed 7/31/72.]

**WAC 296-133-290 Administrative appeals to the director.** Any employer or employee of a health care activity or employee organization or other person or organization who was a party in the proceeding before the authorized agent and aggrieved by any action taken or decision made by any authorized agent may appeal such action or decision to the director of the department of labor and industries by filing a notice of such appeal with the director of the department of labor and industries and the authorized agent within thirty days of such action or decision. The notice of appeal shall be accompanied by a concise numbered statement of the assignments of error which are to be relied upon and are the subject of the appeal. Copies of the notice of appeal and assignments of error shall be served upon all parties to the proceeding before the authorized agent. Proof of such service shall be filed in the office of the director. The notice of appeal may in the discretion of the director suspend such action or decision of the authorized agent pending the determination of the appeal by the director. The director shall review the record and written briefs on appeal filed by the respective parties and may bear oral argument regarding the issues on appeal. The

director shall decide the issues raised by the appeal and shall notify all parties in writing of his decision. The decision of the director in the absence of an appeal to the superior court pursuant to the Administrative Procedure Act shall be final at the expiration of thirty days from the date of filing of such decision. [Order 72-13, § 296-133-290, filed 7/31/72.]

**WAC 296-133-300 Appeal briefs.** Typewritten memoranda of authority or appeal briefs shall be filed in the office of the director by the respective parties to the appeal thirty days following the filing of the notice of appeal. Any party to the appeal filing an appeal brief may request that a hearing of oral arguments upon the appeal be held before the director. Parties to the appeal not filing an appeal brief will not be granted oral hearing of arguments before the director nor permitted to present oral arguments to the director at any hearing that may be held for the presentation of arguments on appeal. The time and place for hearing oral arguments, when requested, will be fixed at the expiration of the time for filing briefs and notice of any such hearing will be sent to all parties to the appeal. [Order 72-13, § 296-133-300, filed 7/31/72.]

**WAC 296-133-310 Appeal briefs--Contents.** In addition to the cover or title pages of the brief and any index, appeal briefs shall consist of the following subdivisions, titled with distinctive type and in the order indicated:

(1) Statement of the case. Under this heading the following shall be included: A brief statement of the nature of the case which is the subject of the appeal and a clear and concise statement of the facts appropriate to an understanding of the nature of the controversy, with page references to the record on appeal.

(2) Assignments of error. Each error relied upon and served with the notice of appeal shall be clearly pointed out and discussed under the appropriately designed headings. No alleged error of the authorized agent will be considered unless the same be definitely pointed out in the assignments of error in the appellant's brief. Whenever error is assigned to any findings of fact or conclusion of the authorized agent, so much of the findings or conclusions claimed to be erroneous shall be set out verbatim in the brief.

(3) Argument of counsel for appellant shall set forth and discuss the authorities in support of the position of the appellant and shall be appropriately designed and arranged for discussion and argument of the assignments of error and the issues arising out of such assignments of error with references where appropriate to the record on appeal.

(4) Argument of counsel for respondent. The brief of respondent on appeal need not contain a subdivision containing the assignments of error on appeal, but in the argument of counsel for respondent there shall be directed, under appropriately titled sections, argument and discussion in opposition to the assignments of error of the appellant, or in support of the decision of rulings of

the authorized agent and where appropriate with supporting references to the pages of the record on appeal. [Order 72-13, § 296-133-310, filed 7/31/72.]

**WAC 296-133-320 Record on appeal.** Upon receipt of a copy of the notice of appeal, the authorized agent shall promptly cause to be prepared and forwarded to the office of the director the record on appeal which shall include, a transcript of the proceedings of any hearing held by the authorized agent, the originals of all exhibits or documentary evidence admitted in evidence or rejected in evidence by the authorized agent and any other papers or evidence before the authorized agent relied upon in arriving at his decision. All exhibits shall be appropriately and plainly marked for reference. In addition the authorized agent shall certify in the appropriately titled case the record on appeal as containing all of the evidence, matters and things coming before the authorized agent at the hearing, or relied upon in making his findings, conclusions, decision and any remedial order. A copy of the record on appeal, or any portion thereof, may be obtained by any party to the appeal upon payment to the authorized agent of the reasonable cost per page. [Order 72-13, § 296-133-320, filed 7/31/72.]

- 296-150A-010 Administration—Authority for factory-built housing and commercial structures code. [Order 77-8, § 296-150A-010, filed 4/29/77; Order 74-15, § 296-150A-010, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-015 Application and scope. [Order 77-8, § 296-150A-015, filed 4/29/77; Order 74-15, § 296-150A-015, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-020 Department services. [Order 77-8, § 296-150A-020, filed 4/29/77; Order 74-15, § 296-150A-020, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-025 Conditions of reciprocity. [Order 77-8, § 296-150A-025, filed 4/29/77; Order 74-15, § 296-150A-025, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-026 Acceptance from out-of-state jurisdictions. [Order 77-8, § 296-150A-026, filed 4/29/77; Order 74-15, § 296-150A-026, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-027 Educational. [Order 77-8, § 296-150A-027, filed 4/29/77; Order 74-15, § 296-150A-027, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-050 Definitions—General. [Order 77-8, § 296-150A-050, filed 4/29/77; Order 74-15, § 296-150A-050, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.

- 296-150A-315 Construction requirements. [Order 77-8, § 296-150A-315, filed 4/29/77; Order 74-15, § 296-150A-315, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-320 Electrical requirements. [Order 77-8, § 296-150A-320, filed 4/29/77; Order 75-5, § 296-150A-320, filed 3/5/75; Order 74-15, § 296-150A-320, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-325 Mechanical requirements. [Order 77-8, § 296-150A-325, filed 4/29/77; Order 74-15, § 296-150A-325, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-330 Plumbing requirements. [Order 77-8, § 296-150A-330, filed 4/29/77; Order 74-15, § 296-150A-330, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-333 Handicap standards. [Order 77-8, § 296-150A-333, filed 4/29/77.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-335 Code research and materials evaluation service. [Order 74-15, § 296-150A-335, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-400 Enforcement and administration—Enforcement. [Order 77-8, § 296-150A-400, filed 4/29/77; Order 74-15, § 296-150A-400, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-405 Equipment and systems. [Order 74-15, § 296-150A-405, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-410 Department disapproval of listed or labeled equipment and systems. [Order 74-15, § 296-150A-410, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-415 Alternates and equivalents. [Order 74-15, § 296-150A-415, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-417 Prohibited notice. [Order 77-8, § 296-150A-417, filed 4/29/77.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-420 Inspections. [Order 77-8, § 296-150A-420, filed 4/29/77; Order 74-15, § 296-150A-420, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-423 Compliance control programs (CC). [Order 77-8, § 296-150A-423, filed 4/29/77; Order 74-15, § 296-150A-423, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-424 Factory-built—Compliance control (FB-CC). [Order 77-8, § 296-150A-424, filed 4/29/77; Order 74-15, § 296-150A-424, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-425 Local enforcement agency—Compliance control (LEA-CC). [Order 74-15, § 296-150A-425, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-430 Local enforcement agency application. [Order 74-15, § 296-150A-430, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-435 The local enforcement agency. [Order 74-15, § 296-150A-435, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-440 The local enforcement agency responsibility. [Order 77-8, § 296-150A-440, filed 4/29/77; Order 74-15, § 296-150A-440, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-445 Manufacturer compliance control (M-CC). [Order 74-15, § 296-150A-445, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-450 Independent inspection agency compliance control (IIA-CC). [Order 74-15, § 296-150A-450, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-500 Design plan approval—General. [Order 77-8, § 296-150A-500, filed 4/29/77; Order 74-15, § 296-150A-500, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-505 Design plan approval application. [Order 74-15, § 296-150A-505, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-506 Design plan types and descriptions. [Order 77-15, § 296-150A-506, filed 8/19/77; Order 74-15, § 296-150A-506, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-510 Engineering and test procedures. [Order 74-15, § 296-150A-510, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-515 Design plan requirements. [Order 77-15, § 296-150A-515, filed 8/19/77; Order 74-15, § 296-150A-515, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-516 Technical report. [Order 74-15, § 296-150A-516, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-520 Live loads. [Order 77-15, § 296-150A-520, filed 8/19/77; Order 74-15, § 296-150A-520, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-521 Plastic DWV piping. [Order 77-15, § 296-150A-521, filed 8/19/77; Order 74-15, § 296-150A-521, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-525 Manufacturing in more than one location. [Order 74-15, § 296-150A-525, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-530 Out-of-state applicant. [Order 77-8, § 296-150A-530, filed 4/29/77; Order 74-15, § 296-150A-530, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-535 Nonconforming application and plans. [Order 74-15, § 296-150A-535, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-540 Manufacturers evidence of department approval. [Order 74-15, § 296-150A-540, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-545 Design plan approval expiration. [Order 77-15, § 296-150A-545, filed 8/19/77; Order 74-15, § 296-150A-545, filed 4/30/74.] Repealed by 82-12-004

- (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-550 Revocation of approval. [Order 74-15, § 296-150A-550, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-555 Changes to approved plans. [Order 77-15, § 296-150A-555, filed 8/19/77; Order 74-15, § 296-150A-555, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-560 Transfer of approvals. [Order 77-15, § 296-150A-560, filed 8/19/77; Order 74-15, § 296-150A-560, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-565 Change of name or address. [Order 74-15, § 296-150A-565, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-570 Discontinuance of manufacturer. [Order 74-15, § 296-150A-570, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-575 Existing approvals. [Order 74-15, § 296-150A-575, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-580 Compliance. [Order 77-15, § 296-150A-580, filed 8/19/77; Order 74-15, § 296-150A-580, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-585 Contingency. [Order 77-8, § 296-150A-585, filed 4/29/77.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-590 Field erection. [Order 74-15, § 296-150A-590, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-595 Proprietary material. [Order 74-15, § 296-150A-595, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-600 Insignia—Insignia required. [Order 77-8, § 296-150A-600, filed 4/29/77; Order 74-15, § 296-150A-600, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-605 Application for insignia. [Order 77-15, § 296-150A-605, filed 8/19/77; Order 74-15, § 296-150A-605, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-606 Notification to local enforcement agency. [Order 77-8, § 296-150A-606, filed 4/29/77; Order 74-15, § 296-150A-606, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-610 Alteration or conversion. [Order 77-8, § 296-150A-610, filed 4/29/77; Order 74-15, § 296-150A-610, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-615 Denial of insignia. [Order 74-15, § 296-150A-615, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-620 Insignia removal. [Order 77-15, § 296-150A-620, filed 8/19/77; Order 74-15, § 296-150A-620, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-625 Lost or damaged insignia. [Order 74-15, § 296-150A-625, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-630 Custom building. [Order 74-15, § 296-150A-630, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-640 Unauthorized use. [Order 74-15, § 296-150A-640, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-650 Unit identification. [Order 74-15, § 296-150A-650, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-675 Components. [Order 74-15, § 296-150A-675, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-680 Components application. [Order 77-15, § 296-150A-680, filed 8/19/77; Order 74-15, § 296-150A-680, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-685 Components approval. [Order 74-15, § 296-150A-685, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-690 Components testing. [Order 74-15, § 296-150A-690, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-695 Components fees and production reports. [Order 77-8, § 296-150A-695, filed 4/29/77; Order 74-15, § 296-150A-695, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-700 Fee schedule. [Order 77-8, § 296-150A-700, filed 4/29/77; Order 74-15, § 296-150A-700, filed 4/30/74.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.
- 296-150A-710 Department application forms. [Order 77-15, § 296-150A-710, filed 8/19/77.] Repealed by 82-12-004 (Order 82-19), filed 5/20/82. Statutory Authority: RCW 43.22.475 and 43.22.480.

**WAC 296-150A-005 Application and scope. (1)**

This chapter implements the provisions of RCW 43.22-.450 through 43.22.490, which cover the construction and approval of factory-built structures.

(2) This chapter applies to:

- (a) Factory-built structures;
- (b) Components; and

(c) Equipment and installations intended to be used in factory-built structures and components. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-005, filed 5/20/82.]

**WAC 296-150A-011 Enforcement.** The department administers and enforces the provisions of this chapter. An officer, agent, or employee of the department may enter any premises, during working hours or at other reasonable times, where structures or components are manufactured, sold, leased, or offered for sale or lease. He or she may examine a manufacturer's compliance control and production records, and may inspect any construction, equipment, or installations to ensure that the manufacturer is complying with this chapter. If necessary to make a proper inspection, he or she may require a manufacturer, dealer, distributor, or consumer to

remove part of the structure or component. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-011, filed 5/20/82.]

**WAC 296-150A-016 Definitions.** For the purposes of this chapter:

(1) "Alteration" means the replacement, addition, modification, or removal of any equipment or installations that affect the construction, structural members, fire safety, or occupancy classification, or the plumbing, heating, or electrical systems, of a structure or component.

The following are not alterations unless they are made to repair damage caused by fires, floods, or wrecks in transit or during installation:

- (a) Repairs with approved parts;
  - (b) Modification of a listed fuel-burning appliance in accordance with the terms of its listing;
  - (c) Replacement of equipment with similar equipment; and
  - (d) Adjustment and maintenance of equipment.
- (2) "Approved" means approved by the department.
- (3) "Audit" means an inspection to examine for compliance a manufacturer's production and compliance control procedures.

(4) "Building site" means a tract, parcel, or subdivision of land on which a structure is or will be installed.

(5) "Compliance control" means the plan and method for ensuring that the manufacture, fabrication, assembly, or erection of structures, components, and installations, and the storing, handling, and use of materials, complies with this chapter.

(6) "Component" means a discrete element that is:

- (a) Designed to be installed in a structure;
- (b) Manufactured as a unit; and
- (c) Designed for a particular function or group of functions.

A component may be a floor, wall panel, roof panel, plumbing wall, electrical service wall, heating assembly, or similar assemblies. "Component" includes service cores, but does not include roof trusses.

(7) "Consumer" means a person, firm, corporation, agency, or governmental body, other than a manufacturer or dealer, that buys or leases a structure for his, her, or its own use.

(8) "Custom structure" means a one-of-a-kind structure.

(9) "Dealer" means a person, company, or corporation authorized to engage in the business of leasing, selling, offering for sale or lease, buying, or trading structures.

(10) "Department" means the Washington state department of labor and industries.

(11) "Design option" means a design that a manufacturer may use as an option to its design plan.

(12) "Design plan" means a plan for construction of a structure or component.

(13) "Equipment" means all materials, appliances, devices, fixtures, fittings, or accessories used in the manufacture, assembly, installation, or alteration of structures and components.

(14) "Factory-built structure" means a structure that is designed for occupation or use, or is occupied or used by persons; and that complies with the Uniform Building Code. "Factory-built structure" includes factory-built housing and commercial structures.

(15) "Independent inspection agency" means an organization that is in the business of inspecting structures, components, or equipment.

(16) "Insignia" means a label, stamp, or tag issued by the department to indicate that the structure or component bearing the insignia complies with this chapter.

(17) "Install" means to erect, construct, assemble, or set in place a structure, component, or piece of equipment at a building site or in another structure or building.

(18) "Labeled" means bearing the department's insignia or a label of approval from a testing or listing agency.

(19) "Lease" means an oral or written contract for the use, possession, or occupancy of property. It includes rent.

(20) "Listed" means that a piece of equipment, a component, or an installation appears in a list published by an approved testing or listing agency.

(21) "Listing agency" means an organization that is in the business of approving equipment or installations.

(22) "Local enforcement agency" means a city or county agency that enforces laws or ordinances governing the construction and installation of structures and components.

(23) "Manufacturing" means making, fabricating, forming, or assembling a structure, component, equipment, or installation.

(24) "Structure" means a factory-built structure that is entirely or substantially prefabricated or assembled at a factory or a place other than the building site on which the structure will be installed.

(25) "System" means a part of a structure or component that is designed to serve a particular function, such as a structural, plumbing, electrical, heating, or mechanical system.

(26) "Testing agency" means an organization that is in the business of testing equipment, installations, or systems. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-016, filed 5/20/82.]

**WAC 296-150A-021 Insignia of approval--In general.** (1) A manufacturer of a structure or component that is intended to be sold, leased, or used in Washington must obtain an insignia for each structure or component before it sells, leases, or allows the use of the structure or component.

(2) A manufacturer need not obtain an insignia for a component or structure if:

(a) The structure or component is manufactured in Washington but the manufacturer has designated it for delivery, and delivered it to, a purchaser in another state;

(b) The structure or component is delivered in Washington, but is purchased by a common carrier,

shipped by the seller via the purchaser, carried under a bill of lading, and the structure or component is transported to a destination in another state;

(c) The structure or component is delivered in Washington, but is purchased from a dealer or manufacturer in another state for use outside this state, and the purchaser transports the structure or component from Washington to a point outside Washington within 30 days of the date of delivery. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-021, filed 5/20/82.]

**WAC 296-150A-024 Filing a design plan.** (1)(a) A manufacturer of a component or structure must file with the department a design plan for the structure or component. The department will not grant an insignia unless the design plan is filed.

(2)(a) The application must include:

(i) A completed application form. The manufacturer may obtain a form from the department.

(ii) An application for approval of a compliance control manual, if necessary. (See WAC 296-150A-051.)

(iii) One complete set of design plans, specifications, engineering data, and test results, plus one additional complete set for each location at which the manufacturer will manufacture the structure or component.

(iv) The filing fee for the design plan (see WAC 296-150A-990).

(b) If a manufacturer is from out of state, the application must also include a statement from the manufacturer that it agrees to submit to the department annually the names and addresses of all Washington dealers and distributors for the manufacturer's product. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-024, filed 5/20/82.]

**WAC 296-150A-030 Requirements for design plans.**

(1) General requirements. A design plan must include plan and elevation views of the structure or component, and the specifications, engineering data, and test results necessary for a complete evaluation of the design. A manufacturer may submit the specifications, engineering data, and test results separately from the drawings.

If the specifications, engineering data, and test reports are not included on the plan drawings, they must be fastened together. The cover sheet of the plan must note that the documents are part of the plan.

The plan and elevation views for the design plan must be drawn to scale on uniformly sized standard drawing sheets. The applicant must submit prints of the drawings; the department will not accept originals.

The applicant must provide, on the cover or face sheet of the design plan, information that describes the plan, including the plan designation, description of design options, sheet numbers, and titles. The cover sheet should also have space for the department to insert the plan number and the approval date.

The plan must indicate where the manufacturer will affix the insignia to the structure or component. A plan

that covers three or more modules must have a "key" drawing to show the arrangement of the modules.

(2) A design plan for factory-built structures, other than one- and two-family dwellings, must be accompanied by a plot plan or side measurements that show the location of the building on the property, the dimensions of the property lines, the dimensions to other buildings on the property, and the fire zone classification.

(3) Specific requirements. The department has numerous specific requirements for design plans. When an applicant intends to file a design plan, it should specify the kind of structure or component it intends to manufacture, and the kind of design plan it intends to submit. The department will send the applicant a copy of the specific requirements. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-030, filed 5/20/82.]

**WAC 296-150A-035 Engineering analysis and test procedures.** (1) When a manufacturer must show that a structural design, method of construction, installation, or piece of equipment is adequate to fulfill its intended function, the manufacturer must submit to the department information on and the results of an engineering analysis or a physical test.

(2) If the manufacturer does an engineering analysis of the design, method, installation, or equipment, the analysis must be made in accordance with generally established principles of engineering and must be signed by an architect or professional engineer licensed in Washington.

(3) If the manufacturer tests the design, method, installation, or equipment, the tests must be performed by a testing agency or an architect or professional engineer licensed in Washington.

Test reports must contain the following items:

(a) A description of the method or standards that applied to the test;

(b) A description and drawings of the item tested;

(c) A description of the test set-up;

(d) A description of the procedure used to load the item for, and to measure, each condition;

(e) Test data (and graphs, where applicable), including pertinent observations of the characteristics and behavior of the item tested;

(f) Engineering data; and

(g) Analysis, comments, and conclusion.

(4) The results of the tests or analyses must be in writing and must identify the design plan to which the results relate. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-035, filed 5/20/82.]

**WAC 296-150A-040 Department check of the design plan.** The department shall check a design plan for compliance with this chapter. If the design plan does not comply with this chapter, the department shall notify the applicant in writing of the deficiencies in the plan. The applicant may resubmit a corrected design plan pursuant to WAC 296-150A-045.

If the department does not find any areas in which the design plan does not comply with this chapter, the department will send the applicant a letter stating the applicant's manufacturer number and the plan number for the design plan. The applicant may begin construction of the structure or component upon receipt of the letter from the department.

The applicant must keep a copy of the design plan at each location at which it is building the structure or component described by the design plan. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-040, filed 5/20/82.]

**WAC 296-150A-045 Resubmittal of corrected design plan.** An applicant who has been notified of deficiencies in its design plan may correct the plan and resubmit it within 90 days after it receives the notice. If the applicant does not meet this deadline, the department may treat the resubmittal as a new application for the design plan.

Each resubmittal must include the minimum resubmittal fee set out in WAC 296-150A-990. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-045, filed 5/20/82.]

**WAC 296-150A-051 Application for approval of a compliance control manual.** (1) A manufacturer of a component must apply, and a manufacturer of a factory-built structure may apply, to the department for approval of a compliance control manual. The application must include:

(a) A completed application form. The manufacturer may obtain a form from the department.

(b) One copy of the compliance control manual plus one additional copy for each location at which the manufacturer will build the structure or component. The copies must be printed on substantial 8 1/2 by 11 inch paper and must be fastened together.

(c) An outline of the compliance control procedure.

(d) The name of the corporate officer, partner, or manager who is responsible for the compliance control program and for maintaining the inspection records for each unit.

(e) An application fee.

(2) If the department has previously approved a compliance control manual for the manufacturer, the manufacturer need not submit copies of the manual with the application.

(3) When the manufacturer asks the department for an application form, it should inform the department of what kind of product it intends to manufacture. The department will send the manufacturer the specific requirements for the compliance control manual. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-051, filed 5/20/82.]

**WAC 296-150A-055 Changes to a design plan or an approved compliance control manual.** If a manufacturer wants to change its design plan or compliance control manual, or a change is required because the department

has amended the rules in this chapter, the manufacturer must file the new design plan pursuant to WAC 296-150A-024, or apply for approval of the new compliance control manual pursuant to WAC 296-150A-051.

If the manufacturer must change the design plan or compliance control manual to comply with changes in this chapter, the manufacturer may continue to manufacture its product under the old design plan or compliance control manual for 90 days after the changes in this chapter become effective. The manufacturer should submit its new design plan or compliance control manual within 30 days after the change takes effect to ensure that the department will have time to examine and approve the plan or manual. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-055, filed 5/20/82.]

**WAC 296-150A-060 Renewal of a design plan.** (1) The filing of a design plan expires 12 months after the date the department notifies the manufacturer that it may begin building structures or components pursuant to the plan.

(2) A manufacturer must apply to the department for renewal of the design plan each year at least one month before the filing expires to ensure that the department will have time to examine the design plan. The manufacturer may obtain an application for renewal of plan filing from the department. The manufacturer must submit:

(a) A completed application form; and

(b) The renewal fee required by WAC 296-150A-990. The renewed plan must be identical to the original design plan, except that the manufacturer may change the model name or designation. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-060, filed 5/20/82.]

**WAC 296-150A-065 Trade secrets.** The department will keep confidential all material, design plans, specifications, engineering data, test results, compliance control manuals, and other design information that a manufacturer submits to the department. The department will release this information to public scrutiny only if ordered to do so by a court, or if otherwise required by law. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-065, filed 5/20/82.]

**WAC 296-150A-070 Applications for inspection and insignia for factory-built structures and components.**

(1) Inspections in general. A manufacturer of factory-built structures or components must apply to the department for inspections of its products. The department will not issue an insignia for a unit until it has completed inspecting the unit.

The manufacturer may obtain an inspection application form from the department. It must submit the form and an application fee. The department must receive the application at least five days before the proposed date of the inspection.

A manufacturer need not apply to the department for inspection if the department has approved an independent inspection agency, a local enforcement agency, or the manufacturer itself to inspect its products. See WAC 296-150A-080.

Each unit of the manufacturer's product must have a specific serial number to ensure that the department has inspected each unit. The manufacturer must have the design plan and, if applicable, the approved compliance control manual at the location at which it is manufacturing the product. A manufacturer with a compliance control manual must provide a control card or other compliance control document for each unit.

(2) The department shall generally inspect each factory-built structure and component twice. The department shall make an "OK to cover" inspection of a unit before the electrical, plumbing, mechanical, heating, and structural systems are covered or sealed during the construction. After the unit is completed, the department shall make a "final" inspection. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-070, filed 5/20/82.]

**WAC 296-150A-075 Applications for insignia for factory-built structures and components.** The manufacturer of a factory-built structure or component must apply to the department for an insignia for each unit. The manufacturer may obtain an application form from the department. The manufacturer must submit with the application a fee for each insignia. The department will give an insignia to a manufacturer for installation on a unit if it has received the application and fees, and if the final inspection reveals that the unit complies with this chapter. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-075, filed 5/20/82.]

**WAC 296-150A-080 Inspections at a manufacturer's plant by a local enforcement agency, an independent inspection agency, or the manufacturer.** (1) A manufacturer who wants to be inspected by a local enforcement agency or an independent inspection agency may ask the agency to inspect it. The local enforcement agency or independent inspection agency may do so if it obtains approval from the department.

If the department approves of the agency, it shall by contract allow the agency to perform the inspections. The contract shall require the agency to comply with and enforce the requirements of this chapter, and shall list all manufacturers that the agency may inspect. The parties may amend the contract at any time to add or delete a manufacturer. The manufacturer may obtain the departmental insignia from the agency instead of the department.

(2) A manufacturer may contract with the department to inspect its own products. The contract shall require the manufacturer to comply with and enforce the requirements of this chapter and the manufacturer's compliance control manuals. The contract shall specify the management procedures by which the manufacturer

will assure that the inspections are carried out, and shall designate the officer, partner, or owner who is responsible for the inspections.

(3) The department shall audit the agency's or manufacturer's inspections to ensure they are complying with the contract and this chapter. If the agency or manufacturer is not complying with the contract or this chapter, the department may require the agency or manufacturer to allow the department to perform the inspections. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-080, filed 5/20/82.]

**WAC 296-150A-085 Other inspections by the department.** (1) A person must ask the department to inspect a structure or component if:

(a) The person is selling, leasing, or offering for sale or lease a structure or component that does not bear an insignia and is required to bear an insignia;

(b) The person is altering or has altered the component, or the structure before or during installation of the structure on the building site; or

(c) The department has issued a correction notice and a reinspection is necessary.

(2) An applicant for an inspection must submit an application on forms supplied by the department at least five working days before the desired date of inspection. The applicant must submit with the application an application fee pursuant to WAC 296-150A-990.

(3) For any inspection, the applicant must provide to the department the design plans, specifications, engineering data, and test results on request. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-085, filed 5/20/82.]

**WAC 296-150A-090 Action after inspection.** After an inspection, if the structure or component meets the requirements of this chapter, and the applicant submits completed insignia application forms, insignia fees, and inspection fees, the department shall issue an insignia for the structure or component. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-090, filed 5/20/82.]

**WAC 296-150A-095 Inspection of factory-built structures after installation at the building site.** (1) A manufacturer, dealer, or owner must obtain the approval of the local enforcement agency for each installation of a factory-built structure at a building site. After the department performs a final inspection of a unit, it may send a notice to the local enforcement agency that specifies what connections, standards, and items the agency should check when the unit is installed.

(2) The local enforcement agency may require the manufacturer to provide a set of design plans and specifications for the unit, and to obtain all necessary permits, before it allows the manufacturer to transport the unit to the building site.

(3) The local enforcement agency may not open for inspection any factory-built structure or component that bears the department's insignia.

(4) The local enforcement agency shall notify the department if a unit has been damaged en route to the building site, or during installation, so that the department can inspect the damage to the unit. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-095, filed 5/20/82.]

**WAC 296-150A-100 Complaint investigations.** A person may complain in writing to the department about a structure or component. The complaint should describe the items that the person feels do not comply with this chapter. The department will send a copy of the complaint to the manufacturer and the dealer. The manufacturer and dealer have 30 days to respond. The department shall base its actions on the response.

If the department decides an investigation is necessary and discovers that the unit inspected violates this chapter, the manufacturer or dealer shall pay the cost of the inspection. If the department does not discover any violations, the complainant must pay the fees. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-100, filed 5/20/82.]

**WAC 296-150A-105 Fee required if a structure or component is not ready for inspection.** If a manufacturer or person applies to the department for an inspection of a structure or component, and the structure or component is not ready to be inspected at the time or place specified in the application, the manufacturer or person must pay the department the application fee and any travel and per diem expenses. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-105, filed 5/20/82.]

**WAC 296-150A-110 Alterations.** (1) No person may alter a factory-built structure before or during the installation of the factory-built structure unless the person has first applied for and obtained the department's approval of the alternation. "Alteration" is defined in WAC 296-150A-016(1).

(2) If a person alters a structure in violation of subsection (1), the insignia affixed to the structure is void and may be confiscated by the department. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-110, filed 5/20/82.]

**WAC 296-150A-115 Application for alteration insignia and approval of alteration.** (1) If a person proposes to alter a factory-built structure before or during the installation of the factory-built structure, the person must file an application for an alteration insignia and an alteration fee with the department. The person may obtain an application form from the department.

(2) As a condition to approval of an alteration, the department may require inspections of the structure during the alteration to ensure that the alteration complies with this chapter. If the department indicates that inspections are required, the person altering the structure must apply for inspections pursuant to WAC 296-150A-085.

After the final inspection of the alteration, if the alteration complies with this chapter and the applicant has paid the inspection and insignia fees, the department shall issue an insignia for the altered structure. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-115, filed 5/20/82.]

**WAC 296-150A-120 Lost or damaged insignia.** If an insignia is lost or damaged after it is affixed to a structure or component, the manufacturer, owner, or user must notify the department in writing immediately. The manufacturer or owner must specify the manufacturer, the vehicle identification number or serial number of the structure, and the insignia number if possible. The manufacturer, owner, or user must also return a damaged insignia if possible.

The department shall replace a damaged or lost insignia on payment of the insignia replacement fee pursuant to WAC 296-150A-990. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-120, filed 5/20/82.]

**WAC 296-150A-125 Notice of violations.** If an inspection or investigation reveals that a structure or component violates this chapter, the department shall give or mail a notice of violations to the owner, dealer, manufacturer, or other person responsible for the violation. The notice of violation shall describe how the structure or component violates this chapter.

A person who receives a notice of violations must, within ten days after receipt, notify the department in writing of the action he or she has taken or will take to correct the violation. If the person has not corrected the violation within ten days after receipt of the notice, or within any other period of time allowed by the department, the department may confiscate the insignia assigned to the structure or component.

No person who has received a notice of violations may move, cause to be moved, or allow another person to move the structure or component to which the notice refers until the violations have been corrected, the corrections have been inspected and approved by the department, and the person has paid the appropriate inspection and insignia fees. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-125, filed 5/20/82.]

**WAC 296-150A-130 Prohibited sale or lease notice.** If an inspection or investigation reveals that a structure violates this chapter, the department may post the structure with a prohibited sale or lease notice. No person may sell or lease a structure that is posted with a prohibited sale or lease notice. No person may remove, cause to be removed, or allow to be removed a prohibited sale or lease notice until the violations have been corrected, the corrections have been inspected and approved by the department, and the person has paid the appropriate inspection and insignia fees.

The department may also prohibit the occupancy or use of a structure if it is not occupied or used at the time the violation is discovered. [Statutory Authority: RCW

43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-130, filed 5/20/82.]

**WAC 296-150A-135 Approval of equipment.** Equipment used in the body and frame, or the fire safety, plumbing, heating, mechanical, and electrical systems of structures and components must comply with this chapter and must be approved by the department. The department may approve equipment that is listed or labeled by an approved testing or listing agency. The department may approve equipment that is not listed or labeled if it determines that the equipment is adequate to protect health and safety.

The department may refuse to approve equipment that is listed or labeled if it determines that the equipment is not adequate to protect health and safety. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-135, filed 5/20/82.]

**WAC 296-150A-140 Department approval of listing and testing agencies, licensed professional engineers, and licensed architects.** (1) The department will consider the following information in determining whether to approve a listing or testing agency, professional engineer, or licensed architect:

- (a) The names of agents or officers;
- (b) The location of offices;
- (c) A description of services the agency, engineer, or architect furnishes or proposes to furnish;
- (d) A description of the employees' qualifications and responsibilities;
- (e) A summary of the agency's, engineer's, or architect's experience;
- (f) A description of the procedures and facilities the agency, engineer, or architect will use to evaluate a product, inspect the product manufacturer's operations and compliance control, and label the units of a product;
- (g) A description of the specific information the agency, engineer, or architect will furnish with its listings;
- (h) A description of how the agency, engineer, or architect will deal with errors in its procedures that result in defective or unacceptable products;
- (i) Proof of independence and absence of conflict of interest; and
- (j) A published directory that includes a list of product manufacturers and product information.

(2) To obtain departmental approval, a listing or testing agency, professional engineer, or licensed architect may not be under the control of a manufacturer, dealer, or supplier for the structures, components, equipment, or installations that it approves or lists.

A listing or testing agency must publish at least annually a list of the equipment, components, or installations it has approved. The listing must certify that the equipment, components, and installations have been tested and meet nationally approved standards and must specify the permissible uses for the equipment, components, and installations.

A listing agency must periodically inspect the manufacture of equipment, components, and installations that

it has approved. A testing agency must test at least annually the equipment, components, and installations it has approved. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-140, filed 5/20/82.]

**WAC 296-150A-145 Approval of alternates.** The department may approve the use of an alternative design, material, appliance, system, device, arrangement, or method of construction if this chapter does not specifically proscribe the use of the alternative, and the alternative equals or betters the quality, strength, effectiveness, fire resistance, durability, and safety of the design, material, appliance, system, device, arrangement, or method of construction required by this chapter. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-145, filed 5/20/82.]

**WAC 296-150A-150 Manufacturing in more than one location.** A manufacturer that is manufacturing its product at more than one location must notify the department in writing of each location. Manufacturers of factory-built structures must keep a design plan and may be required to keep an approved compliance control manual at each location. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-150, filed 5/20/82.]

**WAC 296-150A-155 Change of name, address, or ownership.** If a manufacturer changes its name or address, it must notify the department in writing of the change within ten days. The notice must be accompanied with the appropriate fee.

If a manufacturer changes ownership, the new owner must notify the department in writing within ten days. The notice must be accompanied with the appropriate fee. The new owner need not file its design plan if it continues to manufacture the product in accordance with a previously filed design plan. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-155, filed 5/20/82.]

**WAC 296-150A-160 Discontinuance of a product line.** When a manufacturer discontinues producing a product that it is manufacturing pursuant to a design plan, the manufacturer must notify the department in writing within ten days and must return all insignia issued to the manufacturer for that product. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-160, filed 5/20/82.]

**WAC 296-150A-170 Reciprocal agreements.** In accordance with RCW 43.22.485, the director has examined the statutes and rules of several states and finds that the statutes and rules provide construction standards that are equal to those of Washington, and that the states enforce their statutes and rules. The department has entered into reciprocal agreements with those states. The department has all reciprocal agreements on file at the factory-assembled structures section. The public

may inspect and copy the agreements during regular business hours. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-170, filed 5/20/82.]

**WAC 296-150A-300 Construction standards for factory-built structures.** Factory-built structures must comply with the following codes, except where a state law supersedes a code provision.

(1)(a) The design and fabrication of factory-built structures must comply with the Uniform Building Code, Appendix (except for chapter 35), and Standards (1979 editions). The "building official" mentioned in the Uniform Building Code means the assistant director of the department's building and construction safety inspection services division or his or her authorized representative.

(b) Live loading designs must comply with the Uniform Building Code. Live loading for roofs must comply with Section 2305(d), Snow Loads, and may not be less than 25 pounds per square foot.

(2) Electrical equipment, installations, and systems in or on factory-built housing and commercial structures must comply with the National Electrical Code (1981 edition) published by the National Fire Protection Association, as amended by chapter 19.28 RCW and the rules adopted under that chapter.

(3) Mechanical equipment, installations, and systems in or on factory-built housing and commercial structures must comply with the Uniform Mechanical Code (1979 edition) published by the International Association of Plumbing and Mechanical Officials, including Appendix B of chapter 22 and the standards.

(4)(a) Plumbing equipment, installations, and systems in or on factory-built housing and commercial structures must comply with the Uniform Plumbing Code (1979 edition) published by the International Association of Plumbing and Mechanical Officials. The code, however, shall not apply to gas piping, water heaters, or vents for water heaters.

(b) A manufacturer may not use plastic drain, waste, or vent pipe for laundries, laundromats, cleaners, service stations, repair garages, restaurants, snack bars, hospitals, nursing homes, medical clinics, manufacturing plants, factories, assembly buildings, theatres, or schools, or other buildings used for education, unless the pipes will carry only domestic sewage.

(5) All factory-built structures that are not residential dwellings must comply with the rules adopted pursuant to RCW 19.27.030(5), which requires manufacturers to make buildings and facilities accessible to and usable by the physically handicapped and elderly persons.

(6) All factory-built structures must comply with the Washington State Energy Code set by chapter 51-12 WAC as of March 1, 1982. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-300, filed 5/20/82.]

## HEARINGS

**WAC 296-150A-800 Hearings--Public hearing.** Any public hearing relating to any code, standards, or regulations relating to chapter 157 or modifications considered for adoption by the department shall comply with the requirements of the A.P.A. for the state of Washington. [Order 74-15, § 296-150A-800, filed 4/30/74.]

**WAC 296-150A-805 Board of appeals.** In cases where the interpretation of the applicable code and application of the standards, rules and regulations herein prescribed as in dispute, or in doubt, the board of appeals hereinafter provided for shall, upon application of any interested person, firm or corporation, determine the methods of construction, installation and/or material, device, appliances or equipment to be used in the particular case submitted for its decision.

In case any decision under this chapter is required by a board of appeals, the director of labor and industries shall designate and appoint such board which shall consist of six members who are qualified by experience and training to pass upon matters pertaining to the construction of factory-built housing and commercial structures. Such appointments to be confirmed by the factory-built housing and commercial structures advisory board. The building official shall be an ex officio member and shall act as secretary of the board. In case of inability of any member appointed to act in any matter, the director of labor and industries shall appoint some other person qualified under this chapter in the place of such person. A majority of the members of such board shall constitute a quorum to transact any business or decide any matters submitted to such board; and decisions and rulings of the board shall be made by majority vote of the appeals board members present. The decision of the board in all matters submitted to it shall be final, conclusive, and binding on all parties. The board shall adopt reasonable rules and regulations for conducting its investigations and shall render all decision and findings in writing to the building official with a duplicate copy to the appellant. Each member of the board shall be paid while in session a per diem of \$25.00 and shall receive in addition thereto necessary traveling expenses which per diem and expenses shall be paid out of the deposit required in case of an appeal; or if such deposit be returned to the appellant as herein provided, or be insufficient for that purpose, such per diem and expenses shall be paid out of the budget of the factory-built housing and commercial structures section, upon vouchers approved by the director of labor and industries.

Any person, firm or corporation desiring a ruling or decision of the board of appeals on any question of interpretation of the rules, regulations and standards, or proper application of the rules, regulations and standards prescribed by this chapter shall, in writing, notify the director of labor and industries of such desire and shall accompany the notice with a certified check payable to the director of labor and industries in the sum of

\$150.00; such notice shall specify the ruling or interpretation desired and the contention of such person, firm or corporation as to the proper interpretation or application on the question on which a ruling or decision is desired; and in event the board of appeals shall determine that the contention of the applicant for decision or ruling was proper, the certified check shall be returned to such applicant; otherwise the same shall be used insofar as necessary in paying the expenses and per diem of the members of the board of appeals in connection with such matter; and any portion of said \$150.00 not used in paying the per diem and expenses of said board in said case shall, by the director of labor and industries, be paid into the factory-built housing-commercial structures fund. [Order 77-8, § 296-150A-805, filed 4/29/77; Order 74-15, § 296-150A-805, filed 4/30/74.]

### GOVERNOR'S ADVISORY BOARD ADMINISTRATIVE RULES

**WAC 296-150A-815 Foreword.** The factory-built housing-commercial structures law, chapter 43.22 RCW, establishes the governor appointed factory-built housing and commercial structures advisory board and fixes its administrative responsibilities. The advisory board's principle function is to assist the director of labor and industries in adopting and promulgating reasonable rules and regulations in furtherance of health, safety and property by assuring that all factory-built housing and commercial structures are structurally sound and that the plumbing, heating, electrical and other components thereof are reasonably safe. It is understood that WAC 296-150A-805 contains the procedure for the appointment of a board of appeals by the director of labor and industries which may include individual members of the factory-built housing and commercial structures advisory board. However, the advisory board itself will not function as a board of appeals nor will it render decisions concerning the application or interpretation of any adopted rules and regulations to any person, firm or corporation engaged in the business of constructing factory-built and commercial structures.

The primary purpose of the following rules is to provide a uniform procedure whereby persons, firms or corporations interested in communicating with the department of labor and industries on any subject matter relative to rules or regulations which should be adopted, amended or repealed for factory-built housing and commercial structures in the state of Washington, or relative to the operation of the factory-built housing-commercial structures section of such department may be heard. [Order 74-15, § 296-150A-815, filed 4/30/74.]

**WAC 296-150A-820 Definitions.** Whenever used in these rules, the words:

**Board:** Shall mean the Washington state factory-built housing and commercial structures advisory board appointed by the governor pursuant to our RCW 43.22.475.

**Department:** Shall mean the department of labor and industries of the state of Washington.

**Director:** Shall mean the director of the department of labor and industries.

**Regular meeting:** Shall mean the quarterly meetings held by the board on the third Thursday of the first month of each calendar quarter, being January, April, July and October.

**Special meeting:** Shall mean any meeting of the board called by the chairman thereof or the director and held at times other than the regular meetings. [Order 74-15, § 296-150A-820, filed 4/30/74.]

**WAC 296-150A-825 Officers.** The officers shall consist of the chairman, vice chairman, and secretary of the board. The chairman shall serve a one-year term, and shall have previously served as vice chairman of the board. In the event that a previous vice chairman is not available to serve as chairman the rules will be suspended and a special election held to fill the office of chairman from the membership of the board. The building official shall serve as an ex officio member and shall act as secretary of the board. [Order 74-15, § 296-150A-825, filed 4/30/74.]

**WAC 296-150A-830 Internal management.** The board shall adopt written rules of procedure for its internal management which shall include "Roberts Rules or Order, Revised," copies of which rules of procedure shall be made available to interested persons on written request. [Order 74-15, § 296-150A-830, filed 4/30/74.]

**WAC 296-150A-835 Duties.** 1. The board shall study proposed rules and regulations submitted to it by the director or by the factory-built housing-commercial structures section of the department and shall make recommendations to the director concerning their adoption and promulgation.

2. The board shall further develop and submit for consideration to the director administrative procedures, organizational plans and rules relating to improving the functions of the factory-built housing-commercial structures section.

3. The board shall at each regular or special meeting consider any written proposals made by any persons, firms or corporations for new rules or regulations or for amendments to or repeal of existing factory-built housing-commercial structures rules or regulations, or for changes in administrative procedures of the factory-built housing-commercial structures section provided such proposals are submitted in writing to the secretary of the board at least fifteen days prior to any such meeting so that the same may be properly included on the agenda for such a meeting. [Order 74-15, § 296-150A-835, filed 4/30/74.]

**WAC 296-150A-840 Hearings.** Any person, firm or corporation desiring to be heard on any subject matter relative to rules or regulations which should be adopted,

amended or repealed for factory-built housing and commercial structures construction in the state of Washington, or relative to the operation of the factory-built housing-commercial structures section of such department at any regular meeting of the board shall present a written request to that effect to the secretary of the board at least fifteen days prior to the next regular meeting, setting forth a summary of any and all proposals on which the hearing is requested. [Order 74-15, § 296-150A-840, filed 4/30/74.]

**WAC 296-150A-845 Appearance and practice before the board.** No person may appear in a representative capacity before the board other than the following:

1. Attorneys-at-law duly qualified and entitled to practice before the supreme court of the state of Washington.

2. Attorneys-at-law duly qualified and entitled to practice before the highest court of record of any other state, if the attorneys-at-law of the state of Washington are permitted to appear in a representative capacity before administrative agencies of such other state, and if not otherwise prohibited by Washington state law.

3. A bona fide owner, officer, partner, or full-time employee of an individual, firm, association, organization, partnership or corporation who appears for such individual, firm, association, organization, partnership or corporation, or a person (other than an attorney-at-law as provided in subparagraph 1 and 2 above) appointed in writing to represent an individual, firm, association, organization, partnership or corporation. [Order 74-15, § 296-150A-845, filed 4/30/74.]

**WAC 296-150A-850 Solicitation of business unethical.** It shall be unethical for persons acting in a representative capacity before the board to solicit business by circulars, advertisements, or by personal communication or interviews not warranted by personal relations, provided that such representatives may publish or circulate business cards. It is equally unethical to procure business by solicitors of any kind. [Order 74-15, § 296-150A-850, filed 4/30/74.]

**WAC 296-150A-855 Standards of ethical conduct.** All persons appearing in proceedings before the board in a representative capacity shall conform to the standards of ethical conduct required of attorneys before the courts of Washington. If any such person does not conform to such standards, the board may decline to permit such person to appear in a representative capacity in any proceeding before the board. [Order 74-15, § 296-150A-855, filed 4/30/74.]

**WAC 296-150A-860 Appearance by former employee.** No former employee of the board or member of the attorney general's staff may at any time after severing his employment with the board or the attorney general appear, except with the written permission of the board in a representative capacity on behalf of other parties in any proceeding wherein he previously took an

active part as a representative of the board. [Order 74-15, § 296-150A-860, filed 4/30/74.]

**WAC 296-150A-865 Former employee as expert witness.** No former employee of the board shall at any time after severing his employment with the board appear, except with the written permission of the board, as an expert witness on behalf of other parties in any proceeding wherein he previously took an active part in the investigation as representative of the board. [Order 74-15, § 296-150A-865, filed 4/30/74.]

**WAC 296-150A-870 Computation of time.** In computing any period of time prescribed or allowed by the board rules, by order of the board or by any applicable statute, the day of the act, event, or default after which the designated period of time begins to run is not to be included. The last day of the period so computed is to be included. [Order 74-15, § 296-150A-870, filed 4/30/74.]

**WAC 296-150A-875 Administrative Procedure Act.** All proceedings regarding supplemental rules and regulations shall comply, where applicable, with the provisions of the Administrative Procedure Act chapter 34.04 RCW, and any amendments thereto. [Order 74-15, § 296-150A-875, filed 4/30/74.]

## HEARINGS

**WAC 296-150A-950 Hearing on aggrievances.** A person who is aggrieved by an order, notice, or decision of the department under this chapter may request a hearing. The request must be in writing and must describe briefly the cause of the grievance.

The director of the department may hear the matter, or may assign the hearing to his or her representative. The department shall notify the complainant of the time, date, and place for the hearing. The hearing shall be held no later than 30 days after the department receives the request for the hearing. If the complainant fails to appear at the scheduled hearing, the department may dismiss the matter.

Upon conclusion of the hearing, the director or his or her representative shall notify the petitioner in writing of his or her decision in the matter. [Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-950, filed 5/20/82.]

## FEES

### WAC 296-150A-990 Fees.

- |   |          |
|---|----------|
| (1) Initial manufacturer filing fee:      | \$ 35.00 |
| (2) (a) Fee for filing a design plan:     | \$100.00 |
| (b) Fee for resubmittal of a design plan: | \$ 50.00 |
| (3) Design plan renewal fees.             |          |

- |   |  |
|---|--|
| <p>(a) Renewal of an unexpired and unrevoked design plan: \$ 35.00</p> <p>(b) Renewal of an expired or revoked design plan: \$100.00</p> <p>(4) Fee for transfer of design plan approval to a different manufacturer: \$140.00</p> <p>(5) Fees related to compliance control programs.</p> <p>(a) Fee for filing a component compliance control manual: \$ 14.00</p> <p>(b) Fee for filing a factory-built structure compliance control manual: \$350.00</p> <p>(c) Fee for resubmittal of a factory-built structure compliance control manual: \$140.00</p> <p>(d) Fee for revisions to a factory-built structure compliance control manual: \$ 14.00<br/>per page up to \$ 70.00 maximum.</p> <p>(e) Transfer of approval of a factory-built structure compliance control manual: \$125.00</p> <p>(6) Fee for inspections and other services performed by the department: \$50.00 minimum plus \$25.00 for every half-hour or fraction of a half-hour over one hour.</p> <p>(7) Insignia fees.</p> <p>(a) For each single section factory-built structure, or for the first section of a multiple section factory-built structure: \$140.00</p> <p>(b) For each additional section of a multiple section factory-built structure: \$ 14.00</p> <p>(c) For each service core: \$ 70.00</p> <p>(d) For each component other than a service core: \$ 14.00</p> | <p>(e) For each reissuance of a factory-built structure insignia: \$ 35.00</p> <p>(f) For each alteration insignia: \$ 14.00</p> <p>(8) Fee for a notification to a local enforcement agency: \$ 21.00</p> <p>(9) Travel fees and expenses. If a manufacturer or other person outside the state of Washington requests an inspection or other technical service outside the state, the manufacturer must pay the travel expenses of the department's employees. The expenses shall be calculated pursuant to the following list:</p> <p>(a) Surface travel, per mile: \$ .185</p> <p>(b) Air travel: Cost of air fare based published rates.</p> <p>(c) Hourly charge for travel time: \$ 35.00 per half-hour or fraction of a half-hour.</p> <p>(d) Expenses include, but are not limited to, car rental, parking lot charges, and personal expenses. Personal expenses, including food, lodging, and per diem, shall be calculated pursuant to the allowances set by the Washington state office of financial management.</p> <p>(10) Fee for change in manufacturer's name, address, or ownership: \$ 21.00</p> |
|---|--|

[Statutory Authority: RCW 43.22.440, 43.22.475 and 43.22.480. 82-12-040 (Order 82-20), § 296-150A-990, filed 5/28/82. Statutory Authority: RCW 43.22.475 and 43.22.480. 82-12-004 (Order 82-19), § 296-150A-990, filed 5/20/82.]

- 296-150B-810 Drainage—Location of drain outlets.
- 296-150B-813 Drainage—Cap or plug.
- 296-150B-817 Drainage—Clearance from drain outlet.
- 296-150B-820 Drainage—Drainage systems materials.
- 296-150B-950 Hearing on grievances.
- 296-150B-990 Fees.

**WAC 296-150B-005 Application and scope.** (1) This chapter implements the provisions of RCW 43.22-.340 through 43.22.445, which cover the construction and approval of mobile homes, commercial coaches, and recreational vehicles. The purpose of this chapter is to combine under one heading all applications, procedures, requirements, and codes relating to mobile homes, commercial coaches, and recreational vehicles. Many of the applications and procedures are the same for each kind of structure; occasionally, they will differ. These rules specify when a person must follow a procedure other than the general procedure.

(2) This chapter applies to:

(a) Mobile homes, commercial coaches, and recreational vehicles manufactured after 1 January 1968, other

than mobile homes labeled by the Department of Housing and Urban Development (HUD) after 15 June 1976. HUD-labeled mobile homes are governed by the Federal Mobile Home Standards in 24 CFR Part 3280 and 24 CFR Part 3282 until they are sold or leased to a dealer, distributor, or consumer;

(b) Alterations to the plumbing, heating, or electrical systems, or to the body or frame of a mobile home not labeled by HUD, commercial coach, or recreational vehicle, regardless of the date of manufacture;

(c) Alterations to the plumbing, heating, or electrical systems, or to the body or frame, of a HUD-labeled mobile home after the manufacturer has sold the mobile home to a dealer, distributor, or consumer;

(d) Components; and

(f) Equipment and installations intended to be used in mobile homes, commercial coaches, recreational vehicles, and components. [Statutory Authority: RCW 43-22.340. 82-09-053 (Order 82-13), § 296-150B-005, filed 4/16/82.]

**WAC 296-150B-010 Enforcement.** The department administers and enforces the provisions of this chapter. Pursuant to approval by HUD, it also administers and enforces the Federal Mobile Home Law by acting as a production Inspection Primary Inspection Agency (PIA) and as the State Administrative Agency (SAA).

An officer, agent, or employee of the department may enter any premises, during working hours or at other reasonable times, where structures or components are manufactured, sold, leased, or offered for sale or lease. He or she may examine a manufacturer's quality control and production records, and may inspect any construction, equipment, or installations to ensure that the manufacturer is complying with this chapter. If necessary to make a proper inspection, he or she may require a manufacturer, dealer, distributor, or consumer to remove part of the structure or component. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-010, filed 4/16/82.]

**WAC 296-150B-015 Definitions.** For the purposes of this chapter:

(1) "Alteration" means the replacement, addition, modification, or removal of any equipment or installations that affect the construction, structural members, fire safety, or occupancy classification, or the plumbing, heating, or electrical systems, of a structure or component.

The following are not alterations unless they are made to repair damage caused by fires, floods, or damage in transit or during installation.

(a) Repairs with approved parts;

(b) modification of a listed fuel-burning appliance in accordance with the terms of its listing;

(c) replacement of equipment with similar equipment; and

(d) adjustment and maintenance of equipment.

(2) "Approved" means approved by the department.

(3) "Anchoring system" means a system of straps, cables, turnbuckles, bolts, fasteners, or other approved

components that secures a mobile home to ground anchors or to other approved fastening devices.

(4) "Audit" means an inspection to examine for compliance a manufacturer's production and quality control procedures.

(5) "Building site" means a tract, parcel, or subdivision of land, including a mobile home park, on which a structure other than a recreational vehicle is or will be installed.

(6) "Component" means a discrete element that is:

(a) Designed to be installed in a structure;

(b) manufactured as a unit; and

(c) designed for a particular function or group of functions. "Component" includes service cores.

(7) "Consumer" means a person, firm, corporation, agency, or governmental body, other than a manufacturer or dealer, that buys or leases a structure for his, her, or its own use.

(8) "Custom structure" means a one-of-a-kind structure.

(9) "Dealer" means a person, company, or corporation authorized to engage in the business of leasing, selling, offering for sale or lease, buying, or trading structures.

(10) "Department" means the department of labor and industries.

(11) "Design option" means a design that a manufacturer may use as an option to its design plan.

(12) "Design plan" means a plan for construction of a structure or component.

(13) "Equipment" means all materials, appliances, devices, fixtures, fittings, or accessories used in the manufacture, assembly, installation, or alteration of structures and components.

(14) "Footing" means the portion of a foundation system that transmits loads from a mobile home to the soil.

(15) "Foundation fascia" means the materials that enclose the entire perimeter of a mobile home and form a plane between the exterior wall of the mobile home and the ground.

(16) "Foundation system" means the footings, piers, caps, and shims that support a mobile home.

(17) "HUD" means the federal Department of Housing and Urban Development.

(18) "Independent inspection agency" means an organization that is in the business of inspecting structures, components, or equipment.

(19) "Insignia" means a label, stamp, or tag issued by the department to indicate that the structure or component bearing the insignia complies with this chapter or the HUD mobile home standards.

(20) "Install" means to erect, construct, assemble, or set in place a structure, component, or piece of equipment at a building site or in another structure or building.

(21) "Labeled" means bearing the department's insignia, HUD's insignia, or a label of approval from a testing or listing agency.

(22) "Lease" means an oral or written contract for the use, possession, or occupancy of property. It includes rent.

(23) "Listed" means that a piece of equipment, a component, or an installation appears in a list published by an approved testing or listing agency.

(24) "Listing agency" means an organization that is in the business of approving equipment or installations.

(25) "Local enforcement agency" means a city or county agency that enforces laws or ordinances governing the construction and installation of structures and components.

(26) "Main frame" means the structural component on which the structure may be mounted.

(27) "Manufacturing" means making, fabricating, forming, or assembling a structure, service core, component, equipment, or installation.

(28) "Mobile home" means a structure, transportable in one or more sections, that, in the traveling mode, is eight body feet or more in width or thirty-two body feet or more in length, or, when erected on site, is three hundred twenty or more square feet, and that is built on a permanent chassis and designed to be used as a dwelling with or without a permanent foundation when connected to the required utilities, and includes the plumbing, heating, air-conditioning, and electrical systems contained therein. "Mobile home" shall include any structure that meets all the requirements of this paragraph except the size requirements and with respect to which the manufacturer voluntarily files a certification required by HUD and complies with the standards established by HUD.

(29) "Ordinance" means the part of a code adopted by this chapter that prescribes an item other than a method of construction, such as room sizes, floor plans, lighting, ventilation, ceiling heights, and exits.

(30) "Pier" means the part of the mobile home foundation system between the footing and the floor frame or floor joist, excluding caps and shims.

(31) "Quality control" means the plan and method for ensuring that the manufacture, fabrication, assembly, or erection of structures, components, and installations, and the storing, handling, and use of materials, complies with this chapter.

(32) "Recreational vehicle" means a motor home, travel trailer, truck camper, or camping trailer that is:

(a) With or without motive power;

(b) built on a single chassis;

(c) designed for human habitation in an emergency or for recreation; and

(d) has a living area of less than 220 square feet.

The living area excludes built-in spaces such as wardrobes, closets, cabinets, kitchen units and fixtures, and bath or toilet rooms.

(33) "Structure" means a mobile home, commercial coach, or recreational vehicle that is entirely or substantially prefabricated or assembled at a factory or a place other than the building site on which the structure will be installed.

(34) "System" means a part of a structure or component that is designed to serve a particular function, such as a structural, plumbing, electrical, heating, or mechanical system.

(35) "Testing agency" means an organization that is in the business of testing equipment, installations, or systems. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-015, filed 4/16/82.]

**WAC 296-150B-020 Insignia of approval—In general.** (1)(a) A manufacturer of a structure or component that is intended to be sold, leased, or used in Washington must obtain an insignia for each structure or component before it sells, leases, or allows the use of the structure or component.

(b) A person who has altered or intends to alter a structure must obtain a new insignia before it offers for sale, sells, or leases the structure.

(c) A person who brought a structure or component into Washington from another state must obtain an insignia before he or she uses, sells, or leases the structure or component, unless the structure or component has been used outside the state for at least six months.

(2) A manufacturer need not obtain an insignia for a component or structure, except for HUD mobile homes, if:

(a) The structure or component is manufactured in Washington but the manufacturer has designated it for delivery, and delivered it to, a purchaser in another state;

(b) the structure or component is delivered in Washington, but is purchased by a common carrier, shipped by the seller via the purchaser, carried under a bill of lading, and the structure or component is transported to a destination in another state;

(c) the structure or component is delivered in Washington, but is purchased from a dealer or manufacturer in another state for use outside this state, and the purchaser transports the structure or component from Washington to a point outside Washington within 30 days of the date of delivery. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-020, filed 4/16/82.]

**WAC 296-150B-025 Application for approval of a design plan.** (1)(a) A manufacturer of a component or structure, except for HUD mobile homes, must obtain the department's approval of a design plan for the structure or component. The department will not grant an insignia unless the design plan is approved.

(2)(a) The application must include:

(i) A completed application form. The manufacturer may obtain a form from the department.

(ii) An application for approval of a quality control manual, if necessary. (See WAC 296-150B-050.)

(iii) One complete set of design plans, specifications, engineering data, and test results, plus one additional complete set for each location at which the manufacturer will manufacture the structure or component.

(iv) The filing fee and the minimum fee for examining the design plan (see WAC 296-150B-990).

(b) If a manufacturer is from out of state, the application must also include a statement from the manufacturer that it agrees to submit to the department annually

the names and addresses of all Washington dealers and distributors for the manufacturer's product.

(3) A manufacturer of mobile homes, pursuant to HUD's rules, must have a Design Approval Primary Inspection Agency (DAPIA) check its design plan instead of applying for approval with the department. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-025, filed 4/16/82.]

**WAC 296-150B-030 Requirements for design plans.**

(1) General requirements. A design plan must include plan and elevation views of the structure or component, and the specifications, engineering data, and test results necessary for a complete evaluation of the design. A design plan for a recreational vehicle need not include an elevation view or structural data. A manufacturer may submit the specifications, engineering data, and test results separately from the drawings.

If the specifications, engineering data, and test reports are not included on the plan drawings, they must be fastened together. The cover sheet of the plan must note that the documents are part of the plan.

The plan and elevation views for the design plan must be drawn to scale on uniformly sized standard drawing sheets. The applicant must submit prints of the drawings; the department will not accept originals.

The applicant must provide, on the cover or face sheet of the design plan, information that describes the plan, including the plan designation, description of design options, sheet numbers, and titles. The cover sheet should also have space for the department to insert the plan number and the approval date.

The plan must indicate where the manufacturer will affix the insignia to the structure or component. A plan that covers three or more modules must have a "key" drawing to show the arrangement of the modules.

(2) If a manufacturer is applying for approval of a design plan for a commercial coach, the manufacturer must designate the occupancy class of the commercial coach pursuant to the occupancy classifications given in the Uniform Building Code.

(3) Specific requirements. The department has numerous specific requirements for design plans. When an applicant asks for an application form for approval of its design plan, it should specify the kind of structure or component it intends to manufacture, and the kind of design plan it intends to submit. The department will send the applicant a copy of the specific requirements. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-030, filed 4/16/82.]

**WAC 296-150B-035 Engineering analysis and test procedures.** (1) When a manufacturer must show that a structural design, method of construction, installation, or piece of equipment is adequate to fulfill its intended function, the manufacturer must submit to the department information on and the results of an engineering analysis or a physical test.

(2) If the manufacturer does an engineering analysis of the design, method, installation, or equipment, the

analysis must be made in accordance with generally established principles of engineering and must be signed by an architect or professional engineer licensed in Washington.

(3) If the manufacturer tests the design, method, installation, or equipment, the tests must be performed by a testing agency or must be directed, witnessed, and evaluated by an approved architect or professional engineer licensed in Washington.

Test reports must contain the following items:

(a) A description of the method or standards that applied to the test;

(b) A description and drawings of the item tested;

(c) A description of the test set-up;

(d) A description of the procedure used to load the item for, and to measure, each condition;

(e) Test data (and graphs, where applicable), including pertinent observations of the characteristics and behavior of the item tested;

(f) Engineering data; and

(g) Analysis, comments, and conclusion.

(4) The results of the tests or analyses must be in writing and must identify the design plan to which the results relate. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-035, filed 4/16/82.]

**WAC 296-150B-040 Department approval of the design plan.** (1) The department shall approve a design plan if it complies with this chapter. If the department approves a design plan, it will return an approved copy of the plan to the applicant. The applicant must keep a copy of the approved plan at each location at which it is building the structure or component described by the design plan.

(2) If the design plan does not comply with this chapter, the department shall notify the applicant in writing of the deficiencies in the plan. The applicant may resubmit a corrected design plan pursuant to WAC 296-150B-045. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-040, filed 4/16/82.]

**WAC 296-150B-045 Resubmittal of corrected design plan.** An applicant who has been notified of deficiencies in its design plan may correct the plan and resubmit it within 90 days after it receives the notice. If the applicant does not meet this deadline, the department may treat the resubmittal as a new application for approval of the design plan.

Each resubmittal must include the minimum resubmittal fee set out in WAC 296-150B-990. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-045, filed 4/16/82.]

**WAC 296-150B-050 Application for approval of a quality control manual.** (1) A manufacturer of a recreational vehicle or commercial coach must apply, and a manufacturer of a component may apply, to the department for approval of a quality control manual. The application must include:

(a) A completed application form. The manufacturer may obtain a form from the department.

(b) One copy of the quality control manual plus one additional copy for each location at which the manufacturer will build the structure or component. The copies must be printed on substantial 8 1/2 by 11 inch paper and must be fastened together.

(c) An outline of the quality control procedure.

(d) The name of the corporate officer, partner, or manager who is responsible for the quality control program and for maintaining the inspection records for each unit.

(e) An application fee.

(2) If the department has previously approved a quality control manual for the manufacturer, the manufacturer need not submit copies of the manual with the application.

(3) When the manufacturer asks the department for an application form, it should inform the department of what kind of product it intends to manufacture. The department will send the manufacturer the specific requirements for the quality control manual. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-050, filed 4/16/82.]

**WAC 296-150B-055 Changes to an approved design plan or quality control manual.** If a manufacturer wants to change its design plan or quality control manual, or a change is required because the department has amended the rules in this chapter, the manufacturer must apply for approval of the new design plan pursuant to WAC 296-150B-025, or the new quality control manual pursuant to WAC 296-150B-050.

If the manufacturer must change the design plan or quality control manual to comply with changes in this chapter, the manufacturer may continue to manufacture its product under the old design plan or quality control manual for 90 days after the changes in this chapter become effective. The manufacturer should submit its new design plan or quality control manual within 30 days after the change takes effect to ensure that the department will have time to examine and approve the plan or manual. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-055, filed 4/16/82.]

**WAC 296-150B-060 Expiration of design plan approval.** (1) Approval of a design plan expires 12 months after the date the department approves the plan.

(2) A manufacturer must apply to the department for renewal of the design plan approval at least two months before the approval expires to ensure that the department will have time to examine and approve the application. The manufacturer may obtain an application for renewal of plan approval from the department. The manufacturer must submit:

(a) A completed application form; and

(b) the renewal fee required by WAC 296-150B-990. The renewed plan must be identical to the original design plan, except that the manufacturer may change the model name or designation.

(3) If a manufacturer allows a design plan approval to expire, it must return all unused insignia issued to the manufacturer for the product covered by the expired design plan. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-060, filed 4/16/82.]

**WAC 296-150B-065 Trade secrets.** The department will keep confidential all material, design plans, specifications, engineering data, test results, quality control manuals, and other design information that a manufacturer submits to the department. The department will release this information to public scrutiny only if ordered to do so by a court. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-065, filed 4/16/82.]

**WAC 296-150B-070 Applications for HUD insignia for mobile homes.** A manufacturer of mobile homes may apply to the department for HUD insignias for its mobile homes. The manufacturer may obtain an application for insignia from the department. The manufacturer must submit with the application a fee for the insignias. Upon receipt of the application and the fee, the department will send the insignias to the manufacturer. The manufacturer must notify the department immediately of any changes in the information it provided under this section. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-070, filed 4/16/82.]

**WAC 296-150B-075 Applications for inspection and insignia for commercial coaches, recreational vehicles, and components.** (1) Inspections in general. A manufacturer of commercial coaches, recreational vehicles, or components must apply to the department for inspections of its products. The department will not issue an insignia for a unit until it has completed inspecting the unit.

The manufacturer may obtain an inspection application form from the department. It must submit the form and an application fee. The department must receive the application at least five days before the proposed date of inspection.

A manufacturer need not apply to the department for inspection if the department has approved an independent inspection agency, a local enforcement agency, or the manufacturer itself to inspect its products. See WAC 296-150B-085.

Each unit of the manufacturer's product must have a specific serial number to ensure that the department has inspected each unit. The manufacturer must have the approved design plan and, if applicable, the approved quality control manual at the location at which it is manufacturing the product. A manufacturer with a quality control manual must provide a control card or other quality control document for each unit.

(2) The department shall generally inspect each commercial coach and component twice. The department shall make an "ok to cover" inspection of a unit before

the electrical, plumbing, mechanical, heating, and structural systems are covered or sealed during the construction. After the unit is completed, the department shall make a "final" inspection.

If a commercial coach is built to a simple design, the department may choose to make only a final inspection of the commercial coach.

(3) The department may inspect a recreational vehicle either before or after it has been completed. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-075, filed 4/16/82.]

**WAC 296-150B-080 Applications for insignia for commercial coaches, recreational vehicles, and components.** The manufacturer of a commercial coach, recreational vehicle, or component must apply to the department for an insignia for each unit. The manufacturer may obtain an application form from the department. The manufacturer must submit with the application a fee for each insignia. The department will give an insignia to a manufacturer for installation on a unit if it has received the application and fees, and if the final inspection reveals that the unit complies with this chapter. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-080, filed 4/16/82.]

**WAC 296-150B-085 Inspections at a manufacturer's plant by a local enforcement agency, an independent inspection agency, or the manufacturer.** (1) This section applies to manufacturers of components and factory-built structures.

(2) A manufacturer who wants to be inspected by a local enforcement agency or an independent inspection agency may ask the agency to inspect it. The local enforcement agency or independent inspection agency may do so if it obtains approval from the department.

If the department approves of the agency, it shall by contract allow the agency to perform the inspections. The contract shall require the agency to comply with and enforce the requirements of this chapter, and shall list all manufacturers that the agency may inspect. The parties may amend the contract at any time to add or delete a manufacturer. The manufacturer may obtain the departmental insignia from the agency instead of the department.

(3) A manufacturer may contract with the department to inspect its own products. The contract shall require the manufacturer to comply with and enforce the requirements of this chapter and the manufacturer's quality control manuals. The contract shall specify the management procedures by which the manufacturer will assure that the inspections are carried out, and shall designate the officer, partner, or owner who is responsible for the inspections.

(4) The department shall audit the agency's or manufacturer's inspections to ensure they are complying with the contract and this chapter. If the agency or manufacturer is not complying with the contract or this chapter, the department may require the agency or manufacturer to allow the department to perform the inspections.

[Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-085, filed 4/16/82.]

**WAC 296-150B-090 Other inspections by the department.** (1) A person must ask the department to inspect a structure or component if:

(a) The person is selling, leasing, or offering for sale or lease a structure or component that does not bear an insignia and is required to bear an insignia;

(b) The person is altering or has altered the structure or component; and

(c) The department has issued a correction notice and a reinspection is necessary.

(2) An applicant for an inspection must submit an application on forms supplied by the department at least five working days before the desired date of inspection. The applicant must submit with the application an application fee pursuant to WAC 296-150B-990.

(3) For any inspection, the applicant must provide to the department the design plans, specifications, engineering data, and test results on request. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-090, filed 4/16/82.]

**WAC 296-150B-095 Action after inspection.** After an inspection, if the structure or component meets the requirements of this chapter, and the applicant submits completed insignia application forms, insignia fees, and inspection fees, the department shall issue an insignia for the structure or component. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-095, filed 4/16/82.]

**WAC 296-150B-100 Inspection of commercial coaches after installation at the building site.** (1) A manufacturer, dealer, or owner must obtain the approval of the local enforcement agency for each installation of a commercial coach at a building site. After the department performs a final inspection of a unit, it may send a notice to the local enforcement agency that specifies what connections, standards, and items the agency should check when the unit is installed.

(2) The local enforcement agency may require the manufacturer to provide a set of design plans and specifications for the unit, and to obtain all necessary permits, before it allows the manufacturer to transport the unit to the building site.

(3) The local enforcement agency may not open for inspection any commercial coach or component that bears the department's insignia.

(4) The local enforcement agency shall notify the department if a unit has been damaged en route to the building site, or during installation, so that the department can inspect the damage to the unit. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-100, filed 4/16/82.]

**WAC 296-150B-105 Complaint investigations.** A person may complain in writing to the department about a structure or component. The complaint should describe the items that the person feels do not comply with this

chapter. The department will send a copy of the complaint to the manufacturer and the dealer. The manufacturer and dealer have 30 days to respond. The department shall base its actions on the response.

If the department decides an investigation is necessary and discovers that the unit inspected violates this chapter, the manufacturer or dealer shall pay the cost of the inspection. If the department does not discover any violations, the complainant must pay the fees. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-105, filed 4/16/82.]

**WAC 296-150B-110 Fee required if a structure or component is not ready for inspection.** If a manufacturer or person applies to the department for an inspection of a structure or component, and the structure or component is not ready to be inspected at the time or place specified in the application, the manufacturer or person must pay the department the application fee and any travel and per diem expenses. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-110, filed 4/16/82.]

**WAC 296-150B-115 Alterations.** (1) No person may alter a mobile home, commercial coach, or recreational vehicle unless the person has first applied for and obtained the department's approval of the alteration. "Alteration" is defined in WAC 296-150B-015(1).

(2) If a person alters a structure in violation of subsection 1, the insignia affixed to the structure is void and may be confiscated by the department. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-115, filed 4/16/82.]

**WAC 296-150B-120 Application for alteration insignia and approval of alteration.** (1) If a person proposes to alter a structure, the person must file an application for an alteration insignia and an alteration fee with the department. The person may obtain an application form from the department.

(2) As a condition to approval of an alteration, the department may require inspections of the structure during the alteration to ensure that the alteration complies with this chapter. If the department indicates that inspections are required, the person altering the structure must apply for inspections pursuant to WAC 296-150B-090.

After the final inspection of the alteration, if the alteration complies with this chapter and the applicant has paid the inspection and insignia fees, the department shall issue an insignia for the altered structure. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-120, filed 4/16/82.]

**WAC 296-150B-125 Identification of commercial coaches and recreational vehicles.** (1) Each commercial coach or recreational vehicle manufactured, sold, leased, or offered for sale or lease in Washington shall bear a permanently affixed identification label that contains the following information:

(a) The name of the manufacturer;

- (b) The month and year of manufacture;
- (c) The vehicle identification number;
- (d) The manufacturer's assigned identification number; and
- (e) Where applicable, the plan approval number.

(2) The identification label shall be permanently attached either on the forward half of the left side of the exterior wall of the commercial coach or recreational vehicle, not less than six inches above the floor line, or in proximity to the insignia. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-125, filed 4/16/82.]

**WAC 296-150B-130 Lost or damaged insignia.** If an insignia is lost or damaged after it is affixed to a structure or component, the manufacturer, owner, or user must notify the department in writing immediately. The manufacturer or owner must specify the manufacturer, the vehicle identification number or serial number of the structure, and the insignia number if possible. The manufacturer, owner, or user must also return a damaged insignia if possible.

The department shall replace a damaged or lost insignia on payment of the insignia replacement fee pursuant to WAC 296-150B-990. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-130, filed 4/16/82.]

**WAC 296-150B-135 Notice of noncompliance.** If an inspection or investigation reveals that a structure or component violates this chapter, the department shall give or mail a notice of violations to the owner, dealer, manufacturer, or other person responsible for the violation. The notice of violation shall describe how the structure or component violates this chapter.

A person who receives a notice of violations must, within ten days after receipt, notify the department in writing of the action he or she has taken or will take to correct the violation. If the person has not corrected the violation within ten days after receipt of the notice, or within any other period of time allowed by the department, the department may confiscate the insignia assigned to the structure or component.

No person who has received a notice of violations may move, cause to be moved, or allow another person to move the structure or component to which the notice refers until the violations have been corrected, the corrections have been inspected and approved by the department, and the person has paid the appropriate inspection and insignia fees. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-135, filed 4/16/82.]

**WAC 296-150B-140 Prohibited sale or lease notice.** If an inspection or investigation reveals that a structure violates this chapter, the department may post the structure with a prohibited sale or lease notice. No person may sell or lease a structure that is posted with a prohibited sale or lease notice. No person may remove, cause to be removed, or allow to be removed a prohibited sale or lease notice until the violations have been

corrected, the corrections have been inspected and approved by the department, and the person has paid the appropriate inspection and insignia fees.

The department may also prohibit the occupancy or use of a structure if it is not occupied or used at the time the violation is discovered. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-140, filed 4/16/82.]

**WAC 296-150B-145 Approval of equipment.** Equipment used in the body and frame, or the fire safety, plumbing, heating, mechanical, and electrical systems of structures and components must comply with this chapter and must be approved by the department. The department may approve equipment that is listed or labeled by an approved testing or listing agency. The department may approve equipment that is not listed or labeled if it determines that the equipment is adequate to protect health and safety.

The department may refuse to approve equipment that is listed or labeled if it determines that the equipment is not adequate to protect health and safety. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-145, filed 4/16/82.]

**WAC 296-150B-150 Department approval of listing and testing agencies, licensed professional engineers, and licensed architects.** (1) The department will consider the following information in determining whether to approve a listing or testing agency, professional engineer, or licensed architect:

- (a) The names of agents or officers;
- (b) The location of offices;
- (c) A description of services the agency, engineer, or architect furnishes or proposes to furnish;
- (d) A description of the employees' qualifications and responsibilities;
- (e) A summary of the agency's, engineer's, or architect's experience;
- (f) A description of the procedures and facilities the agency, engineer, or architect will use to evaluate a product, inspect the product manufacturer's operations and quality control, and label the units of a product;
- (g) A description of the specific information the agency, engineer, or architect will furnish with its listings;
- (h) A description of how the agency, engineer, or architect will deal with errors in its procedures that result in defective or unacceptable products;
- (i) Proof of independence and absence of conflict of interest; and
- (j) A published directory that includes a list of product manufacturers and product information.

(2) To obtain departmental approval, a listing or testing agency, professional engineer, or licensed architect may not be under the control of a manufacturer, dealer, or supplier for the structures, components, equipment, or installations that it approves or lists.

A listing or testing agency must publish at least annually a list of the equipment, components, or installations it has approved. The listing must certify that the

equipment, components, and installations have been tested and meet nationally approved standards and must specify the permissible uses for the equipment, components, and installations.

A listing agency must periodically inspect the manufacture of equipment, components, and installations that it has approved. A testing agency must test at least annually the equipment, components, and installations it has approved. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-150, filed 4/16/82.]

**WAC 296-150B-155 Approval of alternates.** The department may approve the use of an alternative design, material, appliance, system, device, arrangement, or method of construction if this chapter does not specifically proscribe the use of the alternative, and the alternative equals or betters the quality, strength, effectiveness, fire resistance, durability, and safety of the design, material, appliance, system, device, arrangement, or method of construction required by this chapter. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-155, filed 4/16/82.]

**WAC 296-150B-160 Manufacturing in more than one location.** A manufacturer that is manufacturing its product at more than one location must notify the department in writing of each location. A manufacturer of structures must keep an approved design plan and an approved quality control manual at each location. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-160, filed 4/16/82.]

**WAC 296-150B-165 Change of name or address.** If a manufacturer changes its name or address, it must notify the department in writing of the change within ten days. The notice must be accompanied with the appropriate fee. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-165, filed 4/16/82.]

**WAC 296-150B-175 Change of ownership.** If a manufacturer changes ownership, the new owner must notify the department in writing within ten days. The notice must be accompanied with the appropriate fee. The new owner need not submit a new application for design plan approval if it continues to manufacture the product in accordance with previously approved design plans. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-175, filed 4/16/82.]

**WAC 296-150B-180 Reciprocal agreements.** In accordance with RCW 43.22.400, the director has examined the statutes and rules of several states and finds that the statutes and rules provide construction standards that are equal to those of Washington, and that the states enforce their statutes and rules. The department has entered into reciprocal agreements with those states. The department has all reciprocal agreements on file at the factory-assembled structures section. The public may inspect and copy the agreements during regular

business hours. [Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-180, filed 4/16/82.]

**WAC 296-150B-185 Reciprocal agreement for recreational vehicles.** The department has entered into a contract with the National Conference of States on Building Codes and Standards, Inc. (NCSBCS) by which NCSBCS administers a reciprocal program between states for recreational vehicles. The states entering into the reciprocal agreements meet and enforce the standards prescribed by this state. The department, by this rule, accepts in this state all recreational vehicles manufactured in the states that are parties to the NCSBCS recreational vehicle reciprocal program. Recreational vehicles manufactured in other states may continue to obtain Washington state insignia by complying with the construction standards and inspection requirements of this chapter. [Statutory Authority: RCW 43.22.340 and 43.22.400. 83-12-014 (Order 83-13), § 296-150B-185, filed 5/24/83.]

**WAC 296-150B-200 General installation requirements for mobile homes.** (1) All mobile homes shall be installed in compliance with the national manufactured housing procedural and enforcement regulations in subparts F and I of 24 C.F.R. Part 3282 adopted as of April 1, 1982, which are incorporated into these rules by this reference.

(2) A HUD-labeled mobile home shall also be installed in compliance with the mobile home manufacturer's installation recommendations. The recommendations must be approved by HUD. The manufacturer shall send two copies of its approved installation recommendations to the purchaser of the mobile home. The copies shall be in the home and available at the time of inspection.

A mobile home not labeled by HUD shall also be installed in accordance with installation recommendations provided by a professional engineer or architect licensed in Washington.

(3) To the extent that the installation of a mobile home is not covered by a manufacturer's, engineer's, or architect's recommendations, the mobile home shall comply with the installation requirements set out in WAC 296-150B-225 through 296-150B-255.

(4) No person, firm, partnership, corporation, or other entity may install a mobile home unless he, she, or it owns the mobile home, is a licensed mobile home dealer, or is a contractor registered under chapter 18.27 RCW.

(5) In those areas that are (a) recognized as flood plains by the Washington state department of ecology or the Federal Emergency Management Agency, or (b) hazardous because of the probability of earthquakes, ground slides, avalanches, or high winds, the local jurisdictions may set requirements that are necessary to lessen the hazards. [Statutory Authority: RCW 43.22.350 and 43.22.440. 83-01-018 (Order 82-37), § 296-150B-200, filed 12/6/82. Statutory Authority: RCW 43.22.440. 82-09-059 (Order 82-12), § 296-150B-200, filed 4/19/82.]

**WAC 296-150B-205 Installation permits.** The owner or the installer of a mobile home must obtain an installation permit from the local enforcement agency before it installs a mobile home that will be used as a residence on a building site. The applicant shall include with the application for the permit the permit fee set by the local enforcement agency. A dealer may not deliver a mobile home until it has verified that the owner or the installer has obtained an installation permit for the mobile home. [Statutory Authority: RCW 43.22.350 and 43.22.440. 83-01-018 (Order 82-37), § 296-150B-205, filed 12/6/82. Statutory Authority: RCW 43.22.440. 82-09-059 (Order 82-12), § 296-150B-205, filed 4/19/82.]

**WAC 296-150B-210 Inspections.** (1) The installer shall request an inspection after all aspects of the installation, other than installation of the foundation facia, have been completed. The local enforcement agency will, if it accepts responsibility for inspections under WAC 296-150B-220, inspect the installation within five business days after it receives the request. If the inspection is not completed within five business days, the tenant or owner may occupy the mobile home at his or her own risk. Occupancy before inspection does not imply approval.

(2) The local enforcement agency shall approve the installation of a mobile home, and allow the mobile home to be occupied if the installation complies with the installation requirements of this chapter and the conditions of the installation permit.

(3) If the installation does not comply with the installation requirements of this chapter and the conditions of the installation permit, the local enforcement agency shall provide the installer with a list of corrections that the installer must make. The list of corrections shall state a date by which the corrections must be completed. The local enforcement agency shall reinspect the installation after the corrections are completed. If the items that require correction do not endanger the health or safety of the occupants, or substantially affect the habitability of the mobile home, the local enforcement agency may permit the owner of the mobile home to occupy it. [Statutory Authority: RCW 43.22.350 and 43.22.440. 83-01-018 (Order 82-37), § 296-150B-210, filed 12/6/82. Statutory Authority: RCW 43.22.440. 82-09-059 (Order 82-12), § 296-150B-210, filed 4/19/82.]

**WAC 296-150B-215 Requirements of local jurisdictions.** Local jurisdictions may enforce their regulations that govern the installation of mobile homes if the regulations do not conflict with the installation requirements of this chapter. [Statutory Authority: RCW 43.22.440. 82-09-059 (Order 82-12), § 296-150B-215, filed 4/19/82.]

**WAC 296-150B-220 Inspection by local jurisdictions or other agents.** RCW 43.22.440 authorizes the department to inspect installations and to enforce the

law to the extent necessary. RCW 43.22.440 also authorizes the department to appoint agents to inspect and enforce the law. The department believes that local jurisdictions best know the level of inspections and enforcement necessary in their jurisdictions. Accordingly, upon written notice from a local jurisdiction that the local jurisdiction will inspect and enforce the mobile home installation requirements, the department will authorize the local jurisdiction to do so. If the local jurisdiction does not want to inspect and enforce the installation requirements itself, but believes that inspection and enforcement are necessary in its jurisdiction, the department will upon a petition from the local jurisdiction appoint another agent to inspect and enforce the requirements in that jurisdiction. The department will not itself inspect installations of mobile homes or enforce the installation requirements.

If a dispute concerning an installation requirement of this chapter arises between any person or business and a local jurisdiction or other agent of the department, the dispute may be submitted to the mobile home, commercial coach, and recreational vehicle advisory board for its opinion as to the proper interpretation of the requirement. [Statutory Authority: RCW 43.22.350 and 43.22.440. 83-01-018 (Order 82-37), § 296-150B-220, filed 12/6/82. Statutory Authority: RCW 43.22.440. 82-09-059 (Order 82-12), § 296-150B-220, filed 4/19/82.]

**WAC 296-150B-225 Building site preparation.** A mobile home may not be installed at a building site unless the ground at the site has adequate compaction and load-bearing ability to meet the support requirements of WAC 296-150B-230. The installer or, if the building site is in a mobile home park, the park owner must ensure that the ground on which a mobile home is to be installed has been improved as necessary to provide a proper base for the mobile home and that the area beneath the mobile home has adequate drainage. [Statutory Authority: RCW 43.22.350 and 43.22.440. 83-01-018 (Order 82-37), § 296-150B-225, filed 12/6/82. Statutory Authority: RCW 43.22.440. 82-09-059 (Order 82-12), § 296-150B-225, filed 4/19/82.]

**WAC 296-150B-230 Foundation system footings.**

(1) Footings shall be constructed of:

(a) Solid concrete or an approved alternate that is at least 3 1/2 inches thick by 16 inches square; or

(b) Two 8-inch by 16-inch by 4-inch solid concrete blocks that are laid with their joint parallel to the main frame longitudinal member.

(2) Footings shall be:

(a) Evenly bedded and leveled;

(b) Placed on firm, undisturbed, or compacted soil that is free of organic material;

(c) Centered in a line directly under the main frame longitudinal members on both sides of a mobile home; and

(d) Spaced not more than 8 feet apart, and not more than 2 feet from the ends of the main frame. A closer spacing may be required, depending on the load-bearing capacity of the soil.

(3) A mobile home with more than one section must have center line blocking at end walls and at any other point of connection of the sections of the mobile home that are a ridgebeam bearing support. Blocking is also required at both ends of a door opening that is 6 feet or more wide in an exterior wall.

(4) If a mobile home requires footings on its exterior perimeter, the footings shall be installed below the frost line. Footings for the main frame longitudinal members must be recessed only if frost heave is likely to occur.

(5) Footings shall be constructed so that seventy-five percent of the area under the mobile home has at least 18 inches clearance between the bottom of the main chassis members and the ground level. The area beneath furnace cross-overs and fireplaces, however, must always have at least 18 inches clearance. At no point under the mobile home may clearance be less than 12 inches. [Statutory Authority: RCW 43.22.350 and 43.22.440. 83-01-018 (Order 82-37), § 296-150B-230, filed 12/6/82. Statutory Authority: RCW 43.22.440. 82-09-059 (Order 82-12), § 296-150B-230, filed 4/19/82.]

**WAC 296-150B-235 Foundation system piers.** An installer must build and position piers and load-bearing supports or devices to distribute the required loads evenly. An installer may use manufactured piers or load-bearing supports or devices that are listed or approved for the intended use, or may build piers that comply with the following requirements. All blocks must be concrete blocks.

(1) A pier may be made of a single stack of 8-inch by 8-inch by 16-inch blocks if the blocks are not stacked more than three blocks high. A pier made of a single stack of blocks shall be installed at a right angle to the main frame longitudinal member and shall be capped with no more than two 2-inch by 8-inch by 16-inch wood blocks or one 4-inch by 8-inch by 16-inch concrete block.

(2) A pier may be made of a double stack of 8-inch by 8-inch by 16-inch blocks if the blocks are not stacked more than 5 blocks high. Each row of blocks in such a pier shall be stacked at right angles to the abutting rows of blocks. A wood block must be of hem-fir, douglas fir, or spruce pine fir. The pier shall be capped with two 2-inch by 8-inch by 16-inch wood or concrete blocks. The pier shall be installed so that the joint between the cap blocks is at right angles to the main frame longitudinal member.

(3) A pier may be made with more than five rows of blocks if the stacked blocks are filled with 2000 psi concrete or mortar. A licensed architect or professional engineer must approve a foundation system that includes a pier that is higher than 72 inches (9 blocks) high, or in which more than 20 percent of the piers exceed 40 inches (5 blocks) high.

(4) All blocks shall be set with the cores placed vertically. [Statutory Authority: RCW 43.22.350 and 43.22.440. 83-01-018 (Order 82-37), § 296-150B-235, filed 12/6/82. Statutory Authority: RCW 43.22.440. 82-09-059 (Order 82-12), § 296-150B-235, filed 4/19/82.]

**WAC 296-150B-240 Foundation system plates and shims.** An installer may fill a gap between the top of a pier and the main frame with a wood plate that is not more than 2 inches thick and two opposing wedge-shaped shims that are not more than 2 inches thick. Wood plates and shims must be of hem-fir, douglas fir, or spruce pine fir. A shim shall be at least 4 inches wide and 6 inches long. The installer shall fit the shim properly and drive it tight between the wood plate or pier and the main frame to ensure that the mobile home is level and properly supported at all load-bearing points. A block that abuts a wedge-shaped shim shall be solid. [Statutory Authority: RCW 43.22.440. 82-09-059 (Order 82-12), § 296-150B-240, filed 4/19/82.]

**WAC 296-150B-245 Foundation facia.** A mobile home shall have an approved foundation facia around its entire perimeter. The wood of the facia shall be at least 3 inches from the ground unless it is pressure-treated wood. Metal fasteners shall be galvanized, stainless steel, or other corrosion-resistant material. Ferrous metal members in contact with the earth, other than those that are galvanized or stainless steel, shall be coated with an asphaltic emulsion.

A mobile home that is installed on a nonrecessed site and that has a metal foundation facia shall have ventilation openings with a net area of at least 1-1/2 square inches per linear foot. A mobile home that has been installed on a recessed site or that has a foundation facia that is not made of metal shall have ventilation openings in the foundation facia with a net area of at least 1 1/2 square feet for each 25 linear feet of facia. The openings shall be designed to provide cross ventilation on at least two approximately opposite sides of the mobile home. The installer shall locate the openings as close to the corners of the mobile home as practical, and shall cover the openings with corrosion-resistant wire mesh or louvers.

Dryer vents and hot water tank pressure relief valves shall exhaust on the exterior of the foundation facia. The facia for each section of a mobile home shall have an opening of at least 18 inches by 24 inches, with a cover of metal or pressure treated wood, to allow access to the crawl space. The foundation facia must be installed within thirty days after the mobile home is occupied. [Statutory Authority: RCW 43.22.350 and 43.22.440. 83-01-018 (Order 82-37), § 296-150B-245, filed 12/6/82. Statutory Authority: RCW 43.22.440. 82-09-059 (Order 82-12), § 296-150B-245, filed 4/19/82.]

**WAC 296-150B-250 Anchoring systems.** A local jurisdiction may require a single-section or multiple-section mobile home to have an anchoring system. Such an anchoring system may be less than or equal to the following requirements.

(1) Components of the anchoring system shall have a resistance to weather deterioration that is at least equivalent to that of a zinc coating that is not less than 0.3 ounces per square foot of coated surface. Cut edges of zinc-coated strapping do not need to be coated.

(2) An installer shall install, preload, and adjust a ground anchor in accordance with the anchor manufacturer's instructions. The installer must supply a copy of the instructions to the department or the local enforcement agency, as appropriate. A ground anchor, when installed, must be able to resist a working load of 3,150 pounds in the direction of the tie plus a 50 percent overload (4,725 pounds total) without failure. Failure occurs if the point of connection of a vertical tie to an anchor is withdrawn more than 2 inches at 3,150 pounds, or when the point of connection of a diagonal tie is moved more than 4 inches horizontally when a load of 3,150 pounds is applied at 45 degrees from the horizontal. Ground anchors shall be marked with the manufacturer's identification and model number in a location that is visible after the anchor is installed. The manufacturer of a ground anchor must provide instructions with each anchor that specify the kinds of soil for which the anchor is suitable.

(3) If concrete slabs or continuous footings are used to transfer the anchoring loads to the ground, the following requirements apply:

(a) Steel rods cast in concrete shall be able to resist the loads and corrosion as specified for ground anchors.

(b) A deadman anchor may be used in place of a listed anchor. It shall be constructed of solid concrete at least 6 inches in diameter and 2 feet long; reinforced with two #4 deformed steel rods; and installed at least 5 feet below the surface of the ground.

(c) A concrete slab may be used in place of a ground anchor if it provides holding strength equal to that required for ground anchors.

(4) Ties shall be of cable, strapping, or other approved materials. Ties shall be fastened to ground anchors and drawn tight with turnbuckles, yoke fasteners, or other approved tensioning devices.

Tension devices shall end in clevis, forged, or welded eyes. Hook ends are not permitted. Tension devices shall be designed to prevent self-disconnection if the tie becomes slack. Cable tie eyes shall be secured with two U-bolt cable clamps or an approved equivalent.

Tie materials must resist a working load of 3,150 pounds with no more than 2 percent elongation, and must withstand a 50 percent overload (4,725 pounds total).

Ties shall connect the ground anchor to the main frame longitudinal member. Ties may not connect to steel outrigger beams that fasten to the main frame, unless the manufacturer's installation instructions specifically approve the connection.

Diagonal ties must lie at least 40 degrees from the vertical. Vertical ties must be substantially vertical. If a vertical tie is not substantially vertical, the anchor must be placed outboard of the tie's connection to the main frame.

A cable frame tie shall be connected to the main frame by a 5/8 inch drop forged closed eye bolt through a hole drilled in the center of the I-beam web, or by an approved alternative. The installer shall reinforce the web if necessary to maintain the strength of the I-beam.

The installer shall space the ties as evenly as practical, and shall locate a tie within 8 feet of each end of the mobile home. The installer may attach two or more ties to a single ground anchor if the anchor can carry the total required load. The installer shall install vertical ties at each detached corner of a clerestory roof and of add-on sections of expandable mobile homes.

As a minimum, the installer shall install the following number of ties for each I-beam or other main frame longitudinal member:

Length of Home (feet) (excluding hitch)	Number of Vertical Ties	Number of Diagonal Ties
32-54	2	3
55-73	2	4

Multiple section mobile homes require only diagonal ties. Vertical ties are not required. [Statutory Authority: RCW 43.22.350 and 43.22.440. 83-01-018 (Order 82-37), § 296-150B-250, filed 12/6/82. Statutory Authority: RCW 43.22.440. 82-09-059 (Order 82-12), § 296-150B-250, filed 4/19/82.]

**WAC 296-150B-255 Assembly.** (1) Sections of a multiple section mobile home shall be aligned, closed, and securely fastened at the required points along the ridge beam, endwalls, and floor line. Heat ducts, electrical connections, and other fixtures and connections required between sections of a mobile home shall be properly installed. The floor of the mobile home shall be level within the tolerances given in the following table.

Tolerances may not exceed the following amounts (L equals the clear span between supports, twice the length of a cantilever):

Floor:	L/240
Roof and ceiling:	L/180
Headers, beams, girders (vertical load):	L/180
Walls and partitions:	L/180

(2) The installer shall provide adequate clearance to ensure that the cross-over heat duct does not touch the ground and is not compressed. The installer shall insulate the cross-over duct at the intersection. The installer shall insulate and seal areas of potential air leaks to ensure that the mobile home is air-tight, and shall seal areas of potential water leaks with metal flashing or trim, if required, and with putty tape or other approved caulking to ensure the mobile home is watertight.

(3) The water pipe connection to the mobile home shall have a main shut off valve in compliance with 24 CFR 3280.609(b) adopted as of April 1, 1982. In all other respects, utility connections to the mobile home, including water, sewer, electricity, and gas, shall comply with local codes. Accessory structures attached to or located next to a home, such as awnings, carports, garages, porches, or steps, shall be constructed in conformance with local codes. [Statutory Authority: RCW 43.22.440. 82-09-059 (Order 82-12), § 296-150B-255, filed 4/19/82.]

**WAC 296-150B-300 Construction requirements for mobile homes.** Alterations and repairs to mobile homes

made after sale to a dealer shall comply with this section.

(1) Subject to the exceptions in subsections 2 and 3, mobile homes must comply with the 1977 edition of the Standard for Mobile Homes, as adopted by the National Fire Protection Association (NFPA) and approved by the American National Standards Institute (ANSI) in ANSI/NFPA 501B 1977.

(2) Mobile homes need not comply with Chapter 1, 1-2 Definitions Common to Chapters 1-5 (see WAC 296-150-015).

(3) Mobile homes must comply with the following provisions of ANSI/NFPA 501B 1977, as amended. Chapter 4, Section 4-6.3.5 Installation of Solid Fuel-Burning Fireplaces and Fireplace Stoves. Subsection (A)1. is amended to read: "A listed factory-built chimney designed to be attached directly to the fireplace or fireplace stove shall be used. The listed factory-built chimney shall be equipped with and contain as part of its listing a termination device and a spark arrester." Subsection (A)3. is amended to read: "The combustion air inlet shall conduct the air directly into the fire chamber and shall be designed to prevent material from the hearth dropping into the area beneath the mobile home." [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-300, filed 2/2/82.]

**WAC 296-150B-305 Standards for recreational vehicles.** (1) Subject to the exceptions in subsection (2), recreational vehicles must comply with the 1977 edition of the Standard for Recreational Vehicles, as adopted by the National Fire Protection Association (NFPA) and approved by the American National Standards Institute (ANSI) ANSI/NFPA 501C (1977 edition).

(2) Recreational vehicles need not comply with the following provision of ANSI/NFPA 501C 1977.

(a) Delete Section 4-7.6.4 and exceptions No. 1 and No. 2 of Chapter 4, Electrical Systems. See WAC 296-150B-310.

(b) Delete the note in Section 3-6.2.2 in Chapter 3, Heating/Air Conditioning, and add the following exception:

A fuel-burning refrigerator may be installed to meet the above requirements using panels provided by the recreational vehicle manufacturer if the refrigerator manufacturer furnishes the necessary vents and grills as specified by the listing requirements and the refrigerator is equipped with the necessary means to ensure the integrity of the separation of the combustion system when the refrigerator is removed for field service and reinstalled.

(c) Delete Section 4-4.1 from Chapter 4, Electrical Systems. See WAC 296-150B-315. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-305, filed 2/2/82.]

**WAC 296-150B-310 Construction requirements for recreational vehicles—Power-supply assembly.** In accordance with Sections 4-7.6.4 and 4-7.4.4 of Chapter 4 of ANSI/NFPA 501C 1977, any recreational vehicle with a rating that exceeds 30 amperes, 120 volts, shall

use an approved, listed, and appropriately rated 120/240 volt power-supply assembly. However, if a recreational vehicle has a dual power supply source that consists of a generator and a power-supply cord, the recreational vehicle must comply with Section 4-7.8 of Chapter 4 of ANSI/NFPA 501C 1977. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-310, filed 2/2/82.]

**WAC 296-150B-315 Construction standards for recreational vehicles—Low voltage circuits.** (1) All low-voltage circuits furnished and installed by a recreational vehicle manufacturer are subject to this chapter, except for battery circuits of 24 volts or less if they

(a) Are installed in a recreational vehicle that has no electrical circuits other than battery circuits of 24 volts or less; and

(b) Are used exclusively for the following purposes:

(i) To illuminate lights when the recreational vehicle contains no systems, such as plumbing or heating systems, other than the battery-powered electrical system; or

(ii) To supply power for running lights, taillights, stoplights, electrical braking, or ignition.

(2) The metal frame or chassis of a recreational vehicle may be used as the return path for exterior lighting circuits. Terminals for connection to the frame or chassis shall be of the solderless kind and shall be approved for the size and kind of wire used. Mechanical connections to the frame or chassis shall be made secure. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-315, filed 2/2/82.]

**WAC 296-150B-400 Definitions.** The following definitions shall apply to WAC 296-150B-400 through 296-150B-820.

(1) "Ceiling height" means the clear vertical distance from the finished floor to the finished ceiling.

(2) "Dead load" means the weight of all permanent construction including walls, floors, roof, partitions, and fixed service equipment.

(3) "Diagonal tie" means a tie intended primarily to resist horizontal or shear forces and which may secondarily resist vertical, uplift, and overturning forces.

(4) "Dormitory" means a room designed to be occupied by more than two guests.

(5) "Dwelling unit" means one or more habitable rooms that are designed to be occupied by one family with facilities for living, sleeping, cooking, eating and sanitation.

(6) "Exit" means a continuous and unobstructed means of egress to a public way.

(7) "Gross floor area" means the net floor area within the enclosing walls of a room in which the ceiling height is not less than five feet.

(8) "Guest room" means a room used or intended to be used by a guest for sleeping purposes. Every one hundred square feet of superficial floor area in a dormitory shall be considered to be a guest room.

(9) "Habitable room" means a room or enclosed floor space arranged for living, eating, food preparation, or

sleeping purposes (not including bathrooms, toilet compartment, laundries, pantries, foyers, hallways and other accessory floor spaces).

(10) "Interior finish" means the surface material of walls, fixed or movable partitions, ceilings and other exposed interior surfaces affixed to the commercial coach structure, including any material such as paint or wallpaper. Interior finish does not include decorations or furnishings that are not affixed to the commercial coach structure.

(11) "Live load" means the weight superimposed by the use and occupancy of the commercial coach, including wind load and snow load, but not including dead load.

(12) "Occupancy" means the purpose for which a commercial coach is designed to be used.

(13) "Perimeter blocking" means supports placed under exterior walls.

(14) "Shear wall" means a wall designed and constructed to transfer lateral loads.

(15) "Tiedown" means a device designed to anchor a commercial coach to ground anchors.

(16) "Wind load" means the lateral or vertical pressure or uplift due to wind blowing in any direction.

(17) "Window" means a glazed opening on the exterior of a structure, including glazed doors. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-400, filed 2/2/82.]

**WAC 296-150B-403 Minimum requirements.** (1) The design and construction of a commercial coach shall conform with the provisions of WAC 296-150B-400 through 296-150B-820. Requirements for any size, weight, or quality of material modified by the terms of "minimum," "not less than," "at least," and similar expressions are minimum standards. The manufacturer or installer may exceed these standards provided such deviation does not result in any inferior installation or defeat the purpose and intent of the standard.

(2) All construction methods and installations shall conform with this chapter and accepted engineering practices, provide minimum health and safety to the occupants of commercial coaches and the public, and demonstrate acceptable workmanship reflecting journeyman quality of work of the various trades.

(3) When a habitable room is part of a commercial vehicle, the habitable room(s) shall meet egress, ventilation, interior finish, automatic smoke detectors and applicable plumbing, mechanical, and electrical requirements. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-403, filed 2/2/82.]

**WAC 296-150B-407 Structural analysis.** The strength and rigidity of the components, equipment, and integrated structure shall be determined by engineering analysis or by suitable load tests pursuant to WAC 296-150B-473. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-407, filed 2/2/82.]

**WAC 296-150B-410 Standards for equipment and installations.** Standards for equipment and installations are listed in WAC 296-150B-530. Equipment and installations conforming to these standards or to other approved standards shall be considered acceptable by the department when listed or labeled and installed in accordance with the requirements of this chapter and the conditions of their approval, except where otherwise provided in this chapter. All equipment shall be clearly labeled to indicate compliance with applicable standards. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-410, filed 2/2/82.]

**WAC 296-150B-413 Structural design--Requirements.** Each commercial coach shall be designed and constructed as a completely integrated structure capable of sustaining the design load requirements of this chapter and shall be capable of transmitting these loads to stabilizing devices without causing an unsafe deformation or abnormal internal movement of the structure or its structural parts. The commercial coach shall be capable of withstanding the adverse effects of transportation shock and vibration, both as an integrated structure and to its parts. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-413, filed 2/2/82.]

**WAC 296-150B-417 New materials and methods.** (1) Any new material or method of construction not provided for in this standard and any material or method of questioned suitability, proposed for use in the manufacture of the structure, shall nevertheless conform in performance to the requirements of this standard.

(2) Unless based on accepted engineering design for the use indicated, all new commercial coach materials, equipment systems or methods of construction not provided for in this standard shall be subjected to the tests specified in subsection (4).

(3) Allowable design stress. The design stresses of all materials shall conform to accepted engineering practice. The use of materials not identified as to strength or stress grade shall be limited to the minimum allowable stresses under accepted engineering practice.

(4) Alternate test procedures. In the absence of listed and prescribed standards, the manufacturer shall develop or cause to be developed necessary tests, suitable to the department, to demonstrate the structural properties and the significant characteristics of the method employed. The tests shall be made by an approved testing agency or by a licensed professional engineer or architect. Copies of the test results shall be submitted to the department for approval. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-417, filed 2/2/82.]

**WAC 296-150B-420 Design dead loads.** Design dead loads shall be the actual dead load supported by the structural assembly under consideration. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-420, filed 2/2/82.]

**WAC 296-150B-423 Design live loads.** The design live loads shall be as specified in WAC 296-150B-427, 296-150B-430, 296-150B-440, 296-150B-450, 296-150B-463, and 296-150B-473 and shall be considered to be uniformly distributed. The roof live load shall not be considered as acting simultaneously with the wind load, and the roof and the floor live loads shall not be considered as resisting the overturning moment due to wind. The roof live load and the floor live load shall be considered to act both simultaneously and separately in order to determine the critical design loading for stresses and deflections. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-423, filed 2/2/82.]

**WAC 296-150B-427 Standard wind.** When a commercial coach is not designated "hurricane and wind-storm-resistant," the commercial coach and each wind resisting part and portion thereof shall be designed for the following wind loads:

- Horizontal ..... 15 lb/ft<sup>2</sup>  
(1 day load duration)
- Vertical upward ..... 9 lb/ft<sup>2</sup>  
(1 day load duration)
- Vertical downward... (see WAC 296-150B-430  
Roof loads)

For exposures in areas where records or experience indicate that the commercial coach will be subjected to wind loads in excess of the above loads, the coach shall be designed for the loads to which it will be subjected. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-427, filed 2/2/82.]

**WAC 296-150B-430 Roof loads.** Flat, curved, and pitched roofs shall be designed to sustain all loadings as follows:

- (1) All dead loads plus a minimum unit live load of 30 lb/ft<sup>2</sup> (2 months load duration).
- (2) A vertical net uplift load of 9 lb/ft<sup>2</sup> (1 day load duration). [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-430, filed 2/2/82.]

**WAC 296-150B-433 Snow loads.** For exposures in areas where snow records or experience indicate that the commercial coach will be subjected to snow loads in excess of 30 lb/ft<sup>2</sup>, the roof shall be designed for the loads to which it will be subjected. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-433, filed 2/2/82.]

**WAC 296-150B-437 Posting design loads.** The manufacturer shall post the loads the commercial coach has been designed for as follows:

- Roof live load ..... \_\_\_\_\_ psf
- Floor live load ..... \_\_\_\_\_ psf
- Wind load ..... \_\_\_\_\_ psf

Design loads shall be posted on the exterior of the commercial coach. The design loads shall be shown on a label securely affixed to the rear of the vehicle on the lower left hand corner of the exterior wall not less than

six inches above the floor line or on the exterior wall immediately adjacent to the main door not less than six inches above floor line. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-437, filed 2/2/82.]

**WAC 296-150B-440 Design load deflection.** When a structural assembly is subjected to total design live loads, the deflection for structural framing members shall not exceed the following:

- Floor ..... L/240
- Roof and ceiling ..... L/180  
(see WAC 296-150B-470)
- Headers, beams, girders..... L/180  
(vertical loads only)
- Walls and partitions..... L/180

L = The clear span between supports or two times the length of a cantilever.

[Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-440, filed 2/2/82.]

**WAC 296-150B-443 Fastening of structural systems.** Roof framing shall be securely fastened to wall framing, walls to floor structure and floor structure to chassis to secure and maintain continuity between the floor and chassis, so as to resist wind uplift, overturning and sliding as imposed by design loads in WAC 296-150B-427. Directions for setup and anchorage shall accompany all commercial coaches. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-443, filed 2/2/82.]

**WAC 296-150B-447 Instructions.** The manufacturer shall provide printed instructions with each commercial coach specifying the following:

- (1) The location and required capacity of stabilizing devices, (tiedowns, piers, blocking, etc.) on which the design is based.
- (2) Devices and methods to be used in connecting all components and systems including, but not limited to, roofs, walls, floors, frames and utilities.
- (3) Leveling, including releveling. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-447, filed 2/2/82.]

**WAC 296-150B-450 Walls.** The walls shall be of sufficient strength to withstand the load requirements set out in WAC 296-150B-427, 296-150B-430, and 296-150B-433 without exceeding the deflections specified in WAC 296-150B-440. The connections between the bearing walls, floor, and roof framework members shall be fabricated to provide support for the material used to enclose the commercial coach and to provide for transfer of all lateral and vertical loads to the floor and chassis. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-450, filed 2/2/82.]

**WAC 296-150B-453 Drilling or notching of wood wall structural members.** Except where substantiated by engineering designs, studs shall not be notched or drilled.

[Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-453, filed 2/2/82.]

**WAC 296-150B-457 Firestopping.** Firestopping shall be provided in commercial coaches to cut off all concealed draft openings in all stud walls and partitions, including furred spaces, so placed that the maximum vertical dimension of any concealed space is not over eight feet. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-457, filed 2/2/82.]

**WAC 296-150B-460 Interior walls and partitions.** Interior walls and partitions shall be constructed with structural capacity adequate for the intended purpose and shall be capable of resisting a horizontal load of not less than five pounds per square foot without exceeding the deflections specified in WAC 296-150B-440. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-460, filed 2/2/82.]

**WAC 296-150B-463 Floors.** (1) Floor assemblies shall be designed in accordance with accepted engineering practice standards to support a minimum uniform and concentrated live load, in accordance with WAC 296-150B-537 and 296-150B-540, plus the dead load of the materials. In addition (but not simultaneously), floors and floor sheathing shall be able to support a 200-pound concentrated load on a one-inch diameter disc at the most critical location with a maximum deflection not to exceed one-eighth inch relative to the floor framing. The floor sheathing shall be able to support a 600-pound concentrated load on a one-inch diameter disc at the most critical location. Joists of more than six inches depth shall be stabilized against overturning from superimposed loads as follows: At ends by solid blocking not less than two-inch thickness by full depth of joist, or by connecting to a continuous header not less than two-inch thickness and not less than the depth of the joist with connecting device; at eight-foot maximum intermediate spacing by solid blocking or by wood cross-bridging of not less than one inch by three inches, metal cross-bridging of equal strength, or by other approved methods.

(2) Wood floors or subfloors in kitchens, bathrooms (including toilet compartments), laundry rooms, water heater compartments, and any other areas subject to excessive moisture shall be moisture resistant or shall be made moisture resistant by sealing or by an overlay of nonabsorbent material applied with water-resistant adhesive. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-463, filed 2/2/82.]

**WAC 296-150B-467 Drilling or notching of wood joist structural members.** Except where substantiated by engineering design, notches on the ends of joists shall not exceed one-fourth the joist depth. Holes bored in joists shall not be within 2 inches of the top or bottom of the joist, and the diameter of any such hole shall not exceed one-third of the depth of the joist. Notches in the top or bottom of the joists shall not exceed one-sixth the depth and shall not be located in the middle third of the span.

Joists in transverse floor framing systems, which do not have perimeter blocking, shall not be drilled or notched without substantiation by engineering design or approved tests. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-467, filed 2/2/82.]

**WAC 296-150B-470 Roof trusses.** All roof truss construction shall be first approved by a licensed professional engineer or architect and subsequently approved by the department. Roof trusses shall be tested as directed in ANSI/NFPA 501B-1977, Appendix to chapter 2. Initial certification tests shall be performed using certified minimum quality of materials (lowest of the grade) and workmanship.

Any one of the three following options may be used in production:

(1) Stress graded materials must be used in the manufacture of rafters and trusses.

(2) Nongraded materials may be used if each truss is tested in an approved testing jig at the manufacturer's site with a load equivalent to full design load. (1.75 times the full design load sustained for 12 hours.)

(3) The manufacturer shall employ an approved testing agency to certify the rafter and truss construction and to test the rafters and trusses as to required loads. The testing agency is to prepare an approved quality control program and to test the rafters and trusses in accordance with sound testing procedures.

(4) When requested by the department, representative trusses taken from the production line shall be tested and a report furnished to the department by the approved testing agency or a licensed architect or civil or structural engineer. Unless there are apparent problems with the trusses, the frequency of these tests shall not exceed two times per year per design.

(5) The manufacturer shall be required to maintain an acceptable quality level not to exceed 1% using acceptable sampling procedures. (The acceptable quality level is defined as the maximum percentage of defective units.)

(6) All test reports are to be stamped, signed, and dated by a licensed professional engineer. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-470, filed 2/2/82.]

**WAC 296-150B-473 Structural load test.** Structural assemblies or subassemblies tested for qualification shall sustain the design dead load (see WAC 296-150B-420), plus the superimposed design live loads (see WAC 296-150B-423) equal to 1.75 times the required live loads for a period of 12 hours without failure, unless otherwise specified in this chapter. Failure shall be considered rupture, fracture, or residual deflection which is greater than the limits set in WAC 296-150B-440. An assembly or subassembly to be tested shall be representative of the minimum quality of materials of the group of assemblies or subassemblies as ordinarily manufactured. Each test assembly, component or subassembly shall be identified as to type and quality or grade of material. Structural load tests or other tests based on

nationally recognized standards may be approved. Submit the test procedure to the department for approval before proceeding with the tests. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-473, filed 2/2/82.]

**WAC 296-150B-477 Roof coverings.** (1) General. The roof covering shall be securely fastened in an approved manner to the supporting roof construction and shall provide weather protection for the commercial coach and the occupants. All roof decks shall be designed with sufficient slope or camber to assure adequate drainage, or shall be designed to support maximum loads including possible ponding of water due to deflection. The roof covering shall be installed in accordance with the manufacturer's instructions and as approved by the department.

(2) Construction. All roofs shall be so framed and tied into the framework and supporting walls as to form an integral part of the commercial coach. All trusses shall be laterally braced.

(3) Roofing membranes shall be of sufficient rigidity to prevent deflection that would permit ponding of water or separation of seams due to snow and wind, or erection or transportation forces.

(4) Cutting of roof framework members for passage of electrical, plumbing, or mechanical systems shall not be allowed except where substantiated by engineering analysis.

(5) Electrical, plumbing, or mechanical systems shall not penetrate the roofing membrane unless the penetration point is adequately sealed. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-477, filed 2/2/82.]

**WAC 296-150B-480 Flame-spread limitations and combustibility.** (1) The surface flame-spread rating of interior finish materials shall not exceed the following when tested by the Standard Method of Test for Surface Burning Characteristics of Building Materials, ASTM E84. Testing shall be by an approved testing agency.

(a) The interior finish of all walls and partitions shall have a flame-spread rating not exceeding 200 except as otherwise specified in this section. The flame-spread limitation shall not apply to molding, trim, windows, doors or series of doors not exceeding 4 feet in width, and permanently attached decorative items such as pictures or accent panels constituting not more than 10 percent of the aggregate wall surface in any room or space nor more than 32 square feet in surface area, whichever is less.

(b) All ceiling interior finish shall have a flame-spread rating not exceeding 200, excluding molding and trim 2 inches or less in width.

(c) Furnace and water heater spaces shall be enclosed by walls, ceiling, and doors having an interior finish with a flame-spread rating not exceeding 200.

(d) Combustible kitchen cabinet doors, countertops, exposed bottoms, and end panels shall not exceed a flame-spread rating of 200. Cabinet rails, stiles, mullions, and toe strips are exempted.

(e) Exposed interior finishes adjacent to the cooking range shall have a flame-spread rating not exceeding 50. Adjacent surfaces are the exposed vertical surfaces between the range top height and the overhead cabinets or ceiling and within 6 horizontal inches of the cooking range.

(f) Finish surfaces of plastic bath tubs, shower units and tub or shower doors shall not exceed a flame-spread rating of 200.

(2) Combustibility. The exposed wall adjacent to the cooking range, as defined in subsection (1)(e), shall be surfaces with 5/16 inch gypsum board or material having equivalent fire protective properties. At furnace and water heater spaces, all openings for pipes and vents shall be tight-fitted or firestopped. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-480, filed 2/2/82.]

**WAC 296-150B-483 Kitchen cabinet protection.** The bottom and sides of combustible kitchen cabinets over cooking ranges or tops including a space of 6 inches from the edge of the burners shall be protected with at least 1/4 inch thick asbestos millboard covered with not less than 26 gage sheet metal (.017 stainless steel, .024 aluminum or .020 copper) or equivalent protection. The protective metal over the range shall form a hood with not less than a 3-inch eyebrow (measuring horizontally from face of cabinet). The hood shall be centered over and shall be at least as wide as the cooking range or top. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-483, filed 2/2/82.]

**WAC 296-150B-487 Carpeting.** (1) Surface flammability of carpets and rugs shall at least meet the Department of Commerce Standard DOCHF 1 test.

(2) Carpeting shall not be used under a heat-producing appliance.

(3) Carpet and carpet pads shall not be installed in concealed spaces subject to excessive moisture such as under plumbing fixtures.

(4) Carpet and carpet pads shall not be installed beneath the bottom plate of shear, bearing, or exterior walls. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-487, filed 2/2/82.]

**WAC 296-150B-490 Undervehicle closure material.** Undervehicle closure material and method of construction shall be such as to resist damage that would permit penetration of the underside of the commercial coach by air, water, rodents, insects, or dust. The closure material shall be listed and installed as follows:

(1) Fibrous material (with or without patches) shall meet or exceed the level of 48 inch-pounds of puncture resistance as tested by the Beach Puncture Test in accordance with ASTM designation D 781-68.

(2) The material shall be installed in accordance with installation instructions furnished by the supplier of the material.

(3) The material shall be suitable for patches and the patch life shall be equivalent to the material life. Patch

installation instructions shall be included in the commercial coach manufacturer's instructions. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-490, filed 2/2/82.]

**WAC 296-150B-497 Bathroom.** Each bathroom shall be provided with artificial light and with external windows or doors having not less than 1/2 square feet of fully openable glazed area, except where a mechanical ventilation system capable of producing a change of air every 12 minutes is provided. Any mechanical ventilation system shall exhaust directly to the outside of the commercial coach. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-497, filed 2/2/82.]

**WAC 296-150B-500 Glass and glazed openings.** (1) Application. The provisions of this section shall apply to the installation of glass or glazed openings including hazardous locations as indicated in WAC 296-150B-533.

(2) Standards and identification. Safety-glazing materials shall meet the requirements of American National Standards Institute (ANSI) Standard Z-97, 1-1975.

(3) Louvered windows. Plate, float, sheet or patterned glass in jalousies and louvered windows shall be not thinner than nominal 3/16-inch and no more than 40 inches in length. Exposed edges shall be smooth.

(4) Wind loads and glass area limitations. Exterior glass and glazing shall be capable of withstanding a wind load pressure of 20 pounds per square foot acting inward or outward.

(5) Glazing and hazardous locations. For safety glazing installed in hazardous locations such as sliding glass doors, storm doors, exit and entrance doors, and fixed glass panels located within 18 inches of the floor or equivalent surface, shower or tub enclosures or their doors to a height of 6 feet above the fixture floor shall meet the requirements set forth in WAC 296-150B-533. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-500, filed 2/2/82.]

**WAC 296-150B-503 Fire warning equipment--Automatic smoke detectors.** (1) General. At least one listed smoke detector (which may be a single station smoke detector) shall be installed in each commercial coach to protect each separate bedroom. Smoke detectors shall meet the requirements of the Standard for Single and Multiple Station Smoke Detectors of the Underwriters Laboratories Inc. (UL 217-1976).

(2) Smoke detector location. A smoke detector shall be installed in the hallway or space communicating with the bedroom, and shall be mounted, where possible, between the living area and the first bedroom door on an interior wall. Where such mounting cannot be achieved due to limited interior wall space, the smoke detector shall be located as close as practical to the first bedroom door on an interior wall. Commercial coaches having bedrooms separated by one or a combination of common use areas (such as a kitchen, dining room, living room,

or family room, but not a bathroom or utility room) shall have at least two smoke detectors, one smoke detector protecting each bedroom.

(3) Installation. Smoke detectors shall be installed on an interior wall of the commercial coach. The top of the detector shall be 5 to 7 inches from the ceiling. The smoke detector mounting shall be attached to an electrical outlet box and the detector shall be permanently wired into a general purpose electrical circuit. There shall be no switches in the circuits to the detectors other than the circuit breaker serving the circuits.

(4) The commercial coach manufacturer shall provide a copy of the testing and maintenance instructions supplied by the manufacturer of the smoke detector for the information of the consumer and users of the commercial coach. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-503, filed 2/2/82.]

**WAC 296-150B-507 Room and hallway sizes.** (1) Rooms designed for sleeping purposes shall have a minimum gross square foot floor area as follows:

One person .....	50
Two persons .....	70
Each person in excess of two .....	50

(2) Every habitable room shall have a minimum ceiling height of not less than 7 feet.

(3) No habitable room, except a kitchen, shall be less than five feet in any clear horizontal dimension.

(4) Each toilet compartment shall be a minimum of 30 inches in width and have at least 21 inches of clear space in front of each toilet.

(5) Hallways shall have a minimum horizontal dimension of 32 inches. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-507, filed 2/2/82.]

**WAC 296-150B-510 Handicap standards.** When applicable, a commercial coach shall comply with the standards set by the Washington state building code in RCW 19.27.030(5) requiring buildings and facilities to be accessible to and usable by physically handicapped and elderly persons. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-510, filed 2/2/82.]

**WAC 296-150B-513 Light and ventilation.** Habitable rooms shall be provided with exterior windows or doors having a total glazed area of not less than 10 percent of the floor area. An area equivalent to not less than 5 percent of the floor area shall be available for unobstructed ventilation. Glazed areas need not be openable where a mechanical ventilation system is provided and is capable of producing a change of air in the room(s) every thirty minutes with not less than one-fifth of the air supply taken from outside the commercial coach. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-513, filed 2/2/82.]

**WAC 296-150B-517 Exit facilities.** (1) Commercial coaches shall have a minimum of two exterior doors

located remote from each other and so arranged as to provide a means of unobstructed travel to the outside of the commercial coach.

(2) Exterior doors shall be constructed for exterior use and in no case provide less than a 35-inch wide by 79-inch high clear opening (36" x 80" door). Each swinging exterior door shall have a key-operated lock that has a deadlocking latch. A deadlock with a passage set installed below the deadlock may be used as an acceptable alternate for each exterior door. The locking mechanism of the lock shall be engaged or disengaged by the use of a lever, knob, button, handle, or other device from the side from which egress is to be made when the commercial coach is occupied. Locks shall not require the use of a key for operation from the inside.

(3) The department may grant a variance to the two door and/or the minimum door size and locking mechanism requirements for special commercial coach usage or conditions. A commercial coach that is 24 feet or less in length and 14 feet or less in width needs only one exit door, unless it has a sleeping area.

(4) Every room designed expressly for sleeping purposes, unless it has an exit door, shall have at least one outside window which can be opened from the inside without the use of tools to provide a clear opening of not less than 22 inches in its smallest dimension and 5 square feet in area with the bottom of the opening not more than 3 feet above the floor.

Where a screen or storm window is required to be removed from this window to permit emergency egress, it shall be readily removable without requiring the use of tools. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-517, filed 2/2/82.]

**WAC 296-150B-520 Weather resistance.** Exterior covering shall be of moisture and weather-resistant materials attached with corrosion-resistant fasteners to resist wind and rain deterioration. Electro-plated, electro-deposited zinc, electro-galvanized, etc. staples shall not be considered as qualifying as corrosion resistant. Metal covering shall be of corrosion-resistant materials. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-520, filed 2/2/82.]

**WAC 296-150B-523 Windstorm protection.** (1) Provisions for support and anchoring systems. Each commercial coach shall have provisions for support and anchoring systems that, when properly designed and installed, will resist overturning and lateral movement of the commercial coach as imposed by the respective design loads, and shall be designed by a licensed professional engineer or architect.

(2) The manufacturer of each commercial coach is required to make provision for the support and anchoring systems but is not required to provide the anchoring equipment or stabilizing devices.

(3) The manufacturer shall provide printed instructions with each commercial coach specifying the location and required capacity of stabilizing devices on which the design is based.

(4) The provisions made for anchoring systems shall be based on the following design criteria for single-wide commercial coaches:

(a) The minimum number of ties required per side shall be in accordance with WAC 296-150B-527.

(b) Ties shall be as evenly spaced as practicable along the length of the commercial coach with not more than 8 feet open-end spacing on each end.

(c) When continuous straps are provided as vertical ties, such ties shall be positioned at rafters and studs. Where a vertical tie and diagonal tie are located at the same place, both ties may be connected to a single ground anchor, provided that the anchor used is capable of carrying both loadings.

(d) Add-on sections of expandable commercial coaches shall have provisions for vertical ties at the exposed ends.

(5) Double-wide commercial coaches require only the diagonal ties specified in the following table. These shall be placed along the outer side walls.

(6) Protection shall be provided at sharp corners where the anchoring system requires the use of external cables or straps. Protection shall also be provided to minimize damage to roofing or siding by the cable or strap.

(7) Anchoring equipment shall be capable of resisting an allowable working load equal to or exceeding 3,150 pounds and shall be capable of withstanding a 50 percent overload (4,725 pounds total) without failure of either the anchoring equipment or the attachment point on the commercial coach.

(8) Anchoring equipment exposed to weathering shall have a resistance to weather deterioration at least equivalent to that provided by a coating of zinc on steel of not less than 0.30 ounces per square foot of surface coated.

(a) Slit or cut edges of zinc-coated steel strapping do not need to be zinc-coated.

(b) Type 1, Class B, Grade 1 steel strapping, 1 1/4 inches wide and 0.035 inch thick, conforming with Federal Specification QQ-S-781-G, is judged to conform with the provisions of this paragraph. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-523, filed 2/2/82.]

**WAC 296-150B-527 Table--Ties required per side of single width commercial coach.**

**Number of Ties Required Per Side of Single Width<sup>1</sup> Commercial Coaches**

This table is based on a minimum working load per anchor of 3,150 pounds with a 50 percent overload (4,725 pounds total).

Length of Commercial Coach (Feet) <sup>2,4</sup>	Hurricane Resistive	Hurricane Resistive	Non-Hurricane Resistive	Non-Hurricane Resistive
	No. of Vertical Ties	No. of Diagonal Ties <sup>3</sup>	No. of Vertical Ties	No. of Diagonal Ties <sup>3</sup>
32-40	2	4	2	3
41-46	2	4	2	3
47-49	2	5	2	3
50-54	3	5	2	3
55-58	3	5	2	4
59-64	3	6	2	4
65-70	3	6	2	4
71-73	3	7	2	4
74-84	4	7	2	5

- (1) Double-width commercial coaches require only the diagonal ties specified in column 3 or 5, and these shall be placed along the outer side walls.
- (2) Length of commercial coach (as used in this table) means length excluding draw bar.
- (3) Diagonal ties in this method shall deviate at least 40° from a vertical direction.
- (4) In commercial coaches less than 32' long, the number of ties shall be according to engineering analysis approved by the department.

[Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-527, filed 2/2/82.]

**WAC 296-150B-533 Table--Glazing in hazardous locations.**

**GLAZING IN THE FOLLOWING SPECIFIC HAZARDOUS LOCATIONS SHALL MEET THE FOLLOWING REQUIREMENTS:**

Specific Hazardous Locations	Size of Individual Glazed Area	Requirements <sup>2</sup>
Glazing in exit and entrance doors	Over 6 sq. ft.	Each glazed area shall pass the requirements of ANSI Standard Z97.1-1975 if not protected by a protective grille <sup>1</sup> firmly attached to stiles on each exposed side.
Glazing in storm doors	Over 2 sq. ft.	Each glazed area shall pass the requirements of ANSI Standard Z97.1-1975 if not protected by a protective grille <sup>1</sup> firmly attached to stiles on each exposed side.

Specific Hazardous Locations	Size of Individual Glazed Area	Requirements <sup>2</sup>
Glazing in sliding exterior doors	All Sizes	Each glazed area shall pass the requirements of ANSI Standard Z97.1—1975.
Glazing in all unframed doors (swinging)	All Sizes	Each glazed area shall be fully tempered glass and pass the requirements of ANSI Standard Z97.1—1975.
Glazing in shower doors and tub enclosures	All Sizes	Each glazed area shall pass the test requirements of ANSI Standard Z97.1—1975 except Section 4.3.
Other fixed glazed panels located within 12 inches on either side of exit and entrance doors	Over 18 inches	Each glazed area within 18 inches of the floor shall pass the requirements of ANSI Standard Z97.1—1975 unless the glazed area is protected by a barrier within 12 inches immediately in front of the glazing.

<sup>1</sup>Shall be constructed and attached in such a manner so as to prevent human impact from being transmitted to glass surface.

<sup>2</sup>Annealed glass less than single strength in thickness shall not be used. If short dimension is larger than 24 inches, annealed glass must be double strength or thicker.

[Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-533, filed 2/2/82.]

**WAC 296-150B-537 Table--Minimum uniformly distributed live loads.**

MINIMUM UNIFORMLY DISTRIBUTED LIVE LOADS

Occupancy or Use	Live Load psf
Apartments (see Residential)	
Assembly halls and other places of assembly:	
Fixed seating	50
Movable seating and other areas	100
Corridors (same as occupancy served except as indicated)	
Dining rooms and restaurants	100
Dwellings (see Residential)	

Occupancy or Use	Live Load psf
Hospitals	
Operating rooms	60
Private rooms	40
Wards	40
Hotels (see Residential)	
Libraries	
Reading rooms	60
Stack rooms	150
Manufacturing or Storage	
Light	125
Heavy	250
Office Units	
Offices (including job shacks)	50
Lobbies	100
Residential	
Multifamily units:	
Private apartments	40
Public rooms	100
Corridors	80
Single family units	40
Schools	
Classrooms	40
Corridors	80
Stores	
Retail	75
Theaters	
Aisles, corridors and lobbies	100

[Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-537, filed 2/2/82.]

**WAC 296-150B-540 Table--Concentrated live loads.**

CONCENTRATED LIVE LOADS

Location	Loads in pounds*
Office floors (except 8' and 10' wide units)	2,000
Schools and 10' wide office floors	1,000

\*Uniformly distributed over a 2 1/2 foot square area placed anywhere on the floor without the uniform live load present.

[Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-540, filed 2/2/82.]

**WAC 296-150B-543 Interior privacy.** A commercial coach interior door, when provided with a privacy lock, shall have a privacy lock that has an emergency release on the outside to permit entry when lock has been locked by a locking knob, lever, button, or other locking device on the inside. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-543, filed 2/2/82.]

**WAC 296-150B-547 Interior passage.** Commercial coach interior doors having passage hardware shall open from either side by a single movement of the hardware mechanism. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-547, filed 2/2/82.]

**WAC 296-150B-550 Electrical--General.** Electrical equipment and installations in or on a commercial coach shall be installed in accordance with requirements of the National Electrical Code, 1981 Edition, unless otherwise specifically exempted or required by these rules. The provisions of this section are also applicable to the alteration or conversion of electrical equipment and installations in any commercial coach bearing or required to bear a department insignia of approval. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-550, filed 2/2/82.]

**WAC 296-150B-553 Definitions.** Definitions contained in the National Electrical Code, 1981 Edition, and the following definitions shall apply to the commercial coach standards.

(1) Converter means a device that changes electrical energy from one form to another, as from alternating current to direct current.

(2) Feeder assembly means the overhead or under-chassis feeder conductor, including the grounding conductor, together with the necessary fittings and equipment or a power-supply cord approved for mobile home use, designed to deliver energy from the source of electrical supply to the distribution panelboard within a commercial coach.

(3) Low voltage means an electromotive force rated at 24 volts or less, supplied from a transformer, converter, or battery.

(4) N.E.C. means the National Electrical Code, 1981 Edition. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-553, filed 2/2/82.]

**WAC 296-150B-557 Low-voltage systems--Low-voltage circuits.** (1) Low-voltage circuits furnished and installed by the commercial coach manufacturer are subject to these rules, except that commercial coaches containing only battery circuits of 24 volts or less supplying energy exclusively for the following are not subject to this section:

(a) Illuminating lights when the commercial coach contains no other systems such as plumbing, heating, or electrical over 24 volts; and

(b) Circuits supplying running lights, taillights, stop lights, electrical braking, or vehicle ignition systems.

(2) Low-voltage wiring materials.

(a) Copper or copper-clad aluminum conductors shall be used for low-voltage circuits.

(b) The insulation of low-voltage conductors used in battery and direct current circuits shall be rated at least 60°C.

(c) Conductors furnished and installed by the commercial coach manufacturer shall have a minimum of 30 mils thermoplastic insulation or equal.

(d) The insulation of outdoor or under-chassis wire shall be moisture and heat resistant, type THW or equivalent.

(e) Single-wire, low-voltage conductors shall be of the stranded type.

(3) Low-voltage wiring methods.

(a) Conductors shall be protected against physical damage and shall be secured.

(b) Conductors shall be spliced or joined with approved splicing devices or by brazing, welding, or soldering with a fusible metal or alloy. Soldered splices shall first be so spliced or joined as to be mechanically and electrically secure without solder and then soldered. All splices, joints and free ends of conductors shall be covered with an insulation equivalent to that on the conductors.

(c) Low-voltage circuits shall be physically separated by at least a 1/2 inch gap or other approved means, from wiring of circuits in excess of 24 volts. This may be accomplished by clamping, routing, or equivalent means that ensure permanent total separation.

(4) Battery installations. Storage batteries subject to the provisions of this standard shall be securely attached to the commercial coach and installed in an area vapor-tight to the interior and ventilated directly to the exterior of the commercial coach. When batteries are installed in a compartment, the compartment shall be ventilated with openings of not less than 2 square inches at the top and 2 square inches at the bottom. Batteries shall not be installed in a compartment containing spark or flame producing equipment, except that they may be installed in an engine generator compartment if the only charging source is from the engine generator.

(5) Overcurrent protection.

(a) Low-voltage circuit wiring shall be protected by overcurrent protective devices rated not in excess of the ampacity of the conductors, as follows:

Wire Size	Area Cir. Mils	Ampacity	Wire Type
18	1620	6	Stranded only
16	2580	8	Stranded only
14	4110	15	Stranded or solid
12	6530	20	Stranded or solid
10	10380	30	Stranded or solid

(b) Circuit breakers or fuses shall be of an approved type, including automotive types. Fuseholders shall be clearly marked with maximum fuse size. For further information, see Society of Automotive Engineers (SAE) Standard J 554a-1973 and Underwriters' Laboratories, Inc. Standard 275B-1973.

(c) Higher current-consuming direct-current appliances such as pumps, compressors, heater blowers, and similar motor-driven appliances shall be installed in accordance with the manufacturer's instructions.

(d) The overcurrent protective device shall be installed in an accessible location on the commercial coach as close as practical to the point where the power supply connects to the vehicle circuits. If located outside the commercial coach, the device shall be protected against weather and physical damage.

(6) Switches shall be rated at not less than the connected load. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-557, filed 2/2/82.]

**WAC 296-150B-560 Wiring materials--Combination electrical systems.** (1) General. Vehicle wiring suitable for connection to a battery or direct current supply source shall be permitted to be connected to a 115-volt source if the entire wiring system and equipment are rated and installed in full conformity with requirements of this section covering 115-volt electrical systems. Circuits fed from alternating current transformers shall not supply direct current appliances.

(2) Voltage converters (115-volt alternating current to low-voltage direct current). The 115-volt alternating current side of voltage converters, other than those supplied as an integral part of a listed appliance, shall be wired in full conformity with the provisions of this section for 115-volt electrical systems. All converters and transformers shall be listed and shall be used within their marked electrical ratings.

(3) Dual-voltage fixtures or appliances. Fixtures or appliances having both 115-volt and low-voltage connections shall be listed or approved for dual voltage.

(4) Autotransformers shall not be used.

(5) Receptacles and plug caps. When a commercial coach is equipped with a 120-volt or 120/240-volt alternating current system and a low-voltage system, receptacles and plug caps of the low-voltage system shall differ in configuration from those of the 120- or 120/240-volt system.

(6) Identification. When a commercial coach equipped with a battery or direct current system has an external connection for low-voltage power, the receptacle shall have a configuration that will not accept 120-volt power. The commercial coach shall have permanently affixed on the outside wall adjacent to the point of entrance of the power supply conductors a label that reads:

THIS CONNECTION IS FOR LOW-VOLTAGE BATTERY  
OR DIRECT CURRENT ONLY. DO NOT CONNECT TO  
120 OR 240 VOLTS AC.

[Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-560, filed 2/2/82.]

**WAC 296-150B-563 Generator installations--Mounting.** (1) Generators shall be mounted in such a manner as to be effectively bonded to the commercial coach chassis.

(2) Generator protection. Equipment shall be installed to ensure that the generator is disconnected when the vehicle is energized from an outside source and to ensure that the outside source is disconnected when the vehicle is energized by the generator. The generator field shall be protected by appropriately rated, listed equipment.

(3) Installation of generators. Internal combustion driven generator units (subject to the provisions of this chapter) shall be secured in place to avoid displacement from vibration and road shock and shall be installed in a compartment that is vaportight to the interior of the vehicle. (See WAC 296-150B-557(4) for battery installations.)

(4) Ventilation of generator compartments. Compartments accommodating internal combustion driven generator units shall be provided with approved ventilation in accordance with instructions provided by the manufacturer of the generator unit.

(5) Location of internal combustion engine generator exhaust. Exhaust from generator internal combustion engines shall not terminate within 3 feet of the commercial coach gasoline tank filler spout inlet.

(6) Supply conductors. Supply conductors from the generator(s) to the junction box (having a blank cover) on the compartment wall shall be of the stranded type installed in flexible conduit. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-563, filed 2/2/82.]

**WAC 296-150B-567 Branch circuit and feeder calculations.** Branch circuit and feeder calculations shall be determined in accordance with Article 220 of the National Electrical Code. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-567, filed 2/2/82.]

**WAC 296-150B-570 Disconnecting means and branch circuit protective equipment--General.** (1) The branch circuit equipment shall be permitted to be combined with the disconnecting means as a single assembly. Such a combination shall be permitted to be designated as a distribution panelboard. If a fused distribution panelboard is used, the maximum fuse size for the mains shall be plainly marked with lettering at least 1/4-inch high and visible when fuses are changed.

See Article 110-22 of the National Electrical Code concerning identification of each disconnecting means and each service, feeder or branch circuit at the point where it originated and type marking needed.

(2) Plug fuses and fuseholders shall be tamper-resistant, Type "S," enclosed in dead-front fuse panelboards.

(3) Disconnecting means. A single disconnecting means shall be provided in each commercial coach consisting of a circuit breaker or a switch and fuses and their accessories installed in a readily accessible location

near the point of entrance of the supply cord or conductors into the commercial coach. The main circuit breakers or fuses shall be plainly marked "main." This equipment shall contain a solderless type of grounding connector or bar for the purposes of grounding with sufficient terminals for all grounding conductors. The neutral bar termination of the grounded circuit conductors shall be insulated.

(4) The disconnecting equipment shall have a rating suitable for the connected load. The distribution equipment, either circuit breaker or fused type, shall be located a minimum of 24 inches from the bottom of such equipment to the floor level of the commercial coach. The main circuit breakers or switches shall be plainly marked "main." There shall be a label attached to the panelboard stating:

This Panelboard shall be connected by a Feeder Assembly having Overcurrent Protection rated at not more than ----- Amperes.

The correct ampere rating shall be marked in the blank space.

(5) Branch circuit distribution equipment shall be installed in each commercial coach and shall include overcurrent protection for each branch circuit consisting of either circuit breakers or fuses.

(6) The branch circuit overcurrent devices shall be rated:

- (a) Not more than the circuit conductors; and
- (b) not more than 150 percent of the rating of a single appliance rated ten amperes or more; but
- (c) not more than the overcurrent protection rating marked on the motor operated appliance.

A device not approved for branch circuit protection, such as a thermal cutout or motor overload protective device, shall not be considered as the overcurrent device protecting the circuit.

(7) A 20-ampere fuse or circuit breaker shall be considered adequate protection for fixture leads, cords for portable appliances and No. 14 AWG (American Wire Gauge) tap conductors, not over six feet long, for recessed lighting fixtures.

(8) If more than one outlet or load is on a branch circuit, a 15-ampere receptacle shall be considered protected by a 20-ampere fuse or circuit breaker.

(9) When circuit breakers are provided for branch circuit protection, 240-volt circuits shall be protected by two-pole common or companion trip circuit breakers. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-570, filed 2/2/82.]

**WAC 296-150B-573 Power supply--Feeder assembly equipment.** A commercial coach shall be provided with feeder assembly equipment, installed by the manufacturer in accordance with the National Electrical Code and the provisions of this chapter. The assembly shall consist of either:

(1) One overhead assembly containing the required number of insulated color-coded feeder conductors, one of which shall be a grounding conductor; or

(2) One undervehicle assembly consisting of conduit running from the commercial coach branch circuit panelboard to the underside of the commercial coach. Conduit shall be sized in accordance with the National Electrical Code; or

(3) Other installations approved by the department. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-573, filed 2/2/82.]

**WAC 296-150B-577 Identification of feeder assembly connection.** (1) Each commercial coach equipped with a 120-volt electrical system shall have permanently affixed on the outside wall adjacent to the point of entrance of the feeder assembly, a label that reads:

THIS CONNECTION IS FOR 110-125 VOLT AC SERVICE. DO NOT CONNECT HIGHER VOLTAGE.

(2) Each commercial coach equipped with a 120/240-volt AC electrical system shall have permanently affixed on the outside wall, adjacent to the point of entrance of the supply assembly or permanently installed feeders, a label that reads:

THIS CONNECTION IS FOR 120/240 VOLT AC ----- AMPERE SERVICE.

The correct service rating shall be stamped in the blank space.

(3) Each commercial coach equipped with a 480/277-volt electrical system shall have permanently affixed on the outside wall, adjacent to the point of entrance of the supply assembly or permanently installed feeders, a label that reads:

THIS CONNECTION IS FOR 480/277 VOLT AC ----- AMPERE SERVICE.

The correct service rating shall be stamped in the blank space. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-577, filed 2/2/82.]

**WAC 296-150B-580 Wiring methods--Wiring of expandable or multiple units.** (1) Where circuits in expandable or multiple units are designed to be energized from one main panelboard, permanent-type wiring methods and materials shall be used for connecting the units to each other.

(2) Commercial coaches may have individual branch circuit panelboards installed in each unit subject to the requirements of WAC 296-150B-570, 296-150B-573 and 296-150B-577 of this chapter. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-580, filed 2/2/82.]

**WAC 296-150B-583 Under-chassis wiring.** Outdoor or under-chassis wiring (120/240 volts) exposed to moisture and mechanical damage shall be protected by rigid metal conduit, electrical metallic tubing or liquid-tight flexible metal conduit. The conductors shall be NMC, RW, TW or equivalent, subject to the requirements of WAC 296-150B-550. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-583, filed 2/2/82.]

**WAC 296-150B-587 Rodent resistance.** All exterior openings around wiring, conduit, cable boxes, and equipment shall be sealed to resist the entrance of rodents. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-587, filed 2/2/82.]

**WAC 296-150B-590 Electrical equipment--Lighting fixtures.** Combustible walls or ceiling finish, exposed between the edge of a fixture, canopy, or pan and an outlet box shall be covered with noncombustible material. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-590, filed 2/2/82.]

**WAC 296-150B-593 Equipment mounting.** Electrical equipment shall be securely mounted to prevent displacement during transit. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-593, filed 2/2/82.]

**WAC 296-150B-597 Outdoor outlets, fixtures, air cooling equipment, etc.** (1) Outdoor fixtures and equipment shall be listed for outdoor use. Outdoor receptacle or convenience outlets shall be of a gasketed-cover type for use in wet locations. A disconnecting means shall be located in sight of the equipment.

(2) A commercial coach designed to energize heating and/or air-conditioning equipment located outside the commercial coach shall have permanently affixed, adjacent to the point of connection, a label that reads:

"THIS CONNECTION IS FOR ----- PHASE AIR-  
CONDITIONING EQUIPMENT RATED AT NOT MORE  
THAN ----- AMPERES, AT ----- VOLTS,  
60 HERTZ."

The correct voltage and ampere rating shall be given. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-597, filed 2/2/82.]

**WAC 296-150B-600 Grounding--General.** Grounding of both electrical and nonelectrical metal parts in a commercial coach shall be through connection to a grounding bus in the commercial coach distribution panel. The grounding bus shall be grounded through the green-colored conductor in the supply cord or the feeder wiring to the service ground in the service-entrance equipment located adjacent to the commercial coach location. Neither the frame of the commercial coach nor the frame of any appliance shall be connected to the neutral conductor in the commercial coach.

(1) Insulated neutral.

(a) The grounded circuit conductor (neutral) shall be insulated from the grounding conductors and from equipment enclosures and other grounded parts. The grounded (neutral) circuit terminals in the distribution panels and in ranges, clothes dryers, counter-mounted cooking units and wall-mounted ovens shall be insulated from the equipment enclosure. Bonding screws, straps or buses in the distribution panel or in appliances shall be removed and discarded.

(b) Connections of ranges and clothes dryers with 115/230 v, 3-wire ratings shall be made with 4-conductor cord and 3-pole, 4-wire grounding-type plugs or by Type AC metalclad cable or individual conductors enclosed in flexible metal conduit.

Type NM or Type SE cable shall not be used to connect a range or a dryer. This shall not prohibit the use of Type NM or Type SE cable between the branch circuit overcurrent protective device and a junction box or range or dryer receptacle.

For 115-v rated devices, a 3-conductor cord and 2-pole, 3-wire grounding-type plug shall be permitted.

(2) Equipment grounding means.

(a) The green-colored grounding wire in the supply cord or permanent feeder wiring shall be connected to the grounding bus in the distribution panel or disconnecting means.

(b) In the electrical system, all exposed metal parts, enclosures, frames, lamp fixture canopies, etc., shall be effectively bonded to the grounding terminal or enclosure of the distribution panel.

(c) Cord-connected appliances shall be grounded by means of an approved cord with grounding conductor and grounding-type attachment plug.

(3) Bonding of noncurrent-carrying metal parts.

(a) All exposed noncurrent-carrying metal parts that may become energized shall be effectively bonded to the grounding terminal or enclosure of the distribution panelboard. A bonding conductor shall be connected between each distribution panelboard and an accessible terminal on the chassis.

(b) Grounding terminals shall be of the solderless type and approved as pressure-terminal connectors recognized for the wire size used. The bonding conductor shall be solid or stranded, insulated or bare and shall be No. 8 copper minimum or equal. The bonding conductor shall be routed so as not to be exposed to physical damage.

(c) Metallic gas, water and waste pipes and metallic air circulating ducts shall be considered bonded if they are connected to the terminal on the chassis (see (3)(a) of this section) by clamps, solderless connectors or by suitable grounding-type straps.

(d) Any metallic roof and exterior covering shall be considered bonded if (i) the metal panels overlap one another and are securely attached to the wood or metal frame parts by metallic fasteners, and (ii) if the lower panel of the metallic exterior covering is secured by metallic fasteners at a cross-member of the chassis by two metal straps per commercial coach unit or section at opposite ends. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-600, filed 2/2/82.]

**WAC 296-150B-603 Switch and receptacle plates.** Metallic faceplates shall be used only with grounding-type devices or grounded metallic outlet boxes. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-603, filed 2/2/82.]

**WAC 296-150B-607 Dielectric strength test.** (1) The wiring of each commercial coach shall be subjected to a 1-minute, 900-volt, dielectric strength test (with all

switches closed) between live parts (including neutral) and the commercial coach ground. Alternatively, the test may be performed at 1,080 volts for 1 second. This test shall be performed after branch circuits are complete and after fixtures or appliances are installed. However, fixtures and appliances that are listed shall not be required to withstand the dielectric strength test.

(2) Each commercial coach designed with a 480-volt electrical system shall be subjected to a one-minute 1,275-volt dielectric strength test between current-carrying conductors and the coach ground. Alternatively, the test may be performed at 1,500 volts for one second.

(3) Low-voltage circuit conductors in each commercial coach shall withstand the applied potential without electrical breakdown of a one-minute, 500-volt or a one-second, 600-volt dielectric strength test. The potential shall be applied between live and grounded conductors.

The test may be performed on running light circuits before the lights are installed provided the vehicle's outer covering and interior cabinetry has been secured. The braking circuit may be tested before being connected to the brakes provided the wiring has been completely secured. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-607, filed 2/2/82.]

**WAC 296-150B-610 Mechanical--General.** Mechanical equipment and installations in or on a commercial coach shall be installed in accordance with the requirements of this chapter and the conditions of the mechanical equipment approval or listing. The provisions of this chapter are also applicable to the alteration or conversion of mechanical equipment and installations in any commercial coach bearing or required to bear a department insignia of approval. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-610, filed 2/2/82.]

**WAC 296-150B-613 Mechanical--Definitions.** The following definitions shall apply to this chapter.

(1) Absorber (adsorber) means that part of the low side of an absorption system used for absorbing (adsorbing) vapor refrigerant.

(2) Absorption system means a refrigerating system in which the gas evolved in the evaporator is taken up by an absorber or adsorber.

(3) Absorption unit means a factory-built assembly designed to produce refrigeration for comfort cooling or comfort heating by the application of heat.

(a) A direct absorption unit is a unit in which the refrigerant evaporator is in direct contact with the air to be conditioned.

(b) An indirect absorption unit is a unit in which the refrigerant evaporator is not in direct contact with the air to be conditioned.

(4) Accessible means when applied to a fixture, connection, appliance, or equipment, having access thereto but which may require the removal of an access panel, door, or similar obstruction.

(5) Air-conditioning or comfort-cooling equipment means equipment intended or installed to treat air to control its temperature, humidity, cleanliness, or distribution to meet the requirements of the conditioned space.

(6) Air-handling unit means a blower or fan used to distribute conditioned air to a room or space.

(7) Anti-flooding device means a primary safety control which causes the liquid fuel flow to be shut off upon a rise in fuel level or upon receiving excess fuel, and that operates before a hazardous discharge of fuel can occur.

(8) Appliance compartment means a room having a floor area not in excess of twice the largest plan area of the appliance or appliances contained therein plus the clearances required in this chapter.

(9) Automatic pilot device means a device employed with gas-burning equipment that will either automatically shut off the gas supply to the burner being served or automatically actuate, electrically or otherwise, a gas shut-off device when the pilot flame is extinguished.

(10) Automatic pump (oil lifter) means a pump, not an integral part of the oil-burning appliance, that automatically pumps oil from the supply tank and delivers the oil by gravity under a constant head to an oil-burning appliance.

(11) Btu means British Thermal Unit, which is the quantity of heat required to raise the temperature of one pound of water one degree Fahrenheit.

(12) Btuh means British Thermal Units per Hour.

(13) Burner means a device for the final conveyance of fuel or a mixture of fuel and air to the combustion zone.

(14) Chimney, factory-built means a chimney consisting entirely of factory-made parts, each designed to be assembled with the others without requiring field construction.

(15) Class O air ducts means a duct of materials and connectors having a fire-hazard classification of zero.

(16) Class I air ducts means a duct of materials and connectors having a flame-spread rating of not over 25 without evidence of continued progressive combustion and a smoke-developed rating of not over 50.

(17) Class II air ducts means a duct of materials and connectors having a flame-spread rating of not over 50 without evidence of continued progressive combustion and a smoke-developed rating of not over 50 for the inside surface and not over 100 for the outside surface.

(18) Clearance means the distance between the appliance, chimney, vent, or chimney or vent connector or plenum and the nearest surface.

(19) Combustible material means a material adjacent to or in contact with heat-producing appliances, vent connectors, chimneys, or steam and hot water pipes, made of or surfaced with wood, compressed paper, plant fibers, or other materials that will ignite and burn. Such material shall be considered combustible even though flameproofed, fire-retardant treated, or plastered.

(20) Compressor means a specific machine, with or without accessories, for compressing a given refrigerant vapor.

(21) Compressor unit means a condensing unit less the condenser and liquid receiver.

(22) Condenser means a vessel or arrangement of pipe or tubing in which vaporized refrigerant is liquefied by the removal of heat.

(23) Condensing unit means a specific refrigerating machine combination for a given refrigerant, consisting of one or more power-driven compressors, condensers, liquid receivers (when required), and the regularly furnished accessories.

(24) Connector-gas appliance means a flexible or semi-rigid connector listed as conforming to ANSI Standard Z21.24, Metal Connectors for Gas Appliances, used to convey fuel gas, three feet or less in length (six feet or less for gas ranges), between a gas outlet and a gas appliance in the same room with the outlet.

(25) Duct means a conduit or passageway for conveying air to or from heating, cooling, air conditioning, or ventilation equipment, but not including the plenum.

(26) Evaporator means that part of the system in which liquid refrigerant is vaporized to produce refrigeration.

(27) Expansion coil means an evaporator constructed of pipe or tubing.

(28) Fuel gas piping system means the arrangement of piping, tubing, fittings, connectors, valves, and devices designed and intended to supply or control the flow of fuel gas to an appliance.

(29) Fuel oil piping system means the arrangement of piping, tubing, fittings, connectors, valves, and devices designed and intended to supply or control the flow of fuel oil to an appliance.

(30) Gas means fuel gas, such as natural gas, manufactured gas, undiluted liquefied petroleum gas (vapor phase only), liquefied petroleum air-gas mixtures, or mixtures of these gases that would ignite in the presence of oxygen.

(31) Gas clothes dryer means a device used to dry wet laundry by means of heat derived from the combustion of fuel gases. Dryer classifications are as follows:

(a) Type 1. Factory-built package, multiple produced. Primarily used in family living environment. May or may not be coin-operated for public use. Usually the smallest unit physically and in function output.

(b) Type 2. Factory-built package, multiple produced. Used in business with direct intercourse of the function with the public. May or may not be operated by public or hired attendant. May or may not be coin-operated. Not designed for use in individual family living environment. May be small, medium or large in relative size.

(32) Gas refrigeration means a gas-burning appliance that is designed to extract heat from a suitable chamber.

(33) Gas-supply connection means the terminal end or connection to which a gas-supply connector is attached.

(34) Gas vents means factory-built vent piping and vent fittings listed by an approved testing agency that are assembled and used in accordance with the terms of their listings, for conveying flue gases to the outside atmosphere.

(a) Type-B gas vent. A gas vent for venting gas appliances with draft hoods and other gas appliances listed for use with Type-B gas vents.

(b) Type-BW gas vent. A gas vent for venting listed gas-fired vented wall furnaces.

(35) Heating appliance means an appliance for comfort heating of a commercial coach or for water heating.

(36) Heat-producing appliance means all heating and cooking appliances and all fuel burning appliances.

(37) High side means the parts of a refrigerating system under condenser pressure.

(38) Input rating means the maximum fuel-burning capacity of any warm-air furnace, recessed heater, or burner expressed in British Thermal Units per Hour.

(39) Liquefied petroleum gases (LPG) means any material that is composed predominantly of propane, propylene, butanes (normal butane or isobutane), and butylenes, or any mixture of them.

(40) Low side means the parts of a refrigerating system under evaporator pressure.

(41) Plenum means an air compartment that is part of an air-distributing system to which one or more ducts are connected.

(a) A furnace-supply plenum is a plenum attached directly to, or an integral part of, the air-supply outlet of the furnace.

(b) A furnace-return plenum is a plenum attached directly to or an integral part of, the return inlet of the furnace.

(42) Quick-disconnect device means a hand-operated device that provides a means for connecting and disconnecting a gas supply or connecting gas systems and that is equipped with an automatic means to shut off the gas supply when the device is disconnected.

(43) Readily accessible means having direct access without the necessity of removing any panel, door, or similar obstruction.

(44) Refrigerant means a substance used to produce refrigeration by its expansion or vaporization.

(45) Refrigerating system means a combination of interconnected refrigerant-containing parts constituting one closed refrigerant circuit in which a refrigerant is circulated for the purpose of extracting heat.

(46) Roof jack means that portion of a commercial coach heater flue or vent assembly, including the cap, insulating means, flashing, and ceiling plate, located in and above the roof of a commercial coach.

(47) Sealed absorption system means a unit system for Group 2 refrigerants only in which all refrigerant-containing parts are made permanently tight by welding or brazing against refrigerant loss.

(48) Sealed combustion system appliance means an appliance that by its inherent design is constructed so that all air supplied for combustion, the combustion system of the appliance, and all products of combustion are completely isolated from the atmosphere of the space in which it is installed.

(49) Self-contained system means a complete factory-made and factory-tested system in a suitable frame or enclosure that is fabricated and shipped in one or more sections and in which no refrigerant-containing

parts are connected in the field other than by companion or block valves.

(50) Unit system means a self-contained system that has been assembled and tested prior to its installation and that is installed without connecting any refrigerant-containing parts. A unit system may include factory-assembled companion or block valves.

(51) Vent connector means a pipe for conveying products of combustion from a fuel-burning appliance to a vent.

(52) Water heater means an appliance for heating water for domestic purposes other than for space heating. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-613, filed 2/2/82.]

**WAC 296-150B-617 LPG equipment and installations—Construction of containers.** Containers shall be constructed and marked in accordance with the specifications for LPG containers of the U.S. Department of Transportation (DOT) or the Rules for Construction of Unfired Pressure Vessels, Section VIII, Division 1, ASME Boiler and Pressure Vessel Code. ASME containers shall have a design pressure of not less than 312.5 psig.

(1) Container supply systems shall be arranged for vapor withdrawal only.

(2) Container openings for vapor withdrawal shall be located in the vapor space when the container is in service or shall be provided with a suitable internal withdrawal tube which communicates with the vapor space in or near the highest point in the container when it is mounted in service position, with the commercial coach on a level surface. Containers shall be permanently and legibly marked in a conspicuous manner on the outside to show the correct mounting position and the position of the service outlet connection. The method of mounting in place shall be such as to minimize the possibility of an incorrect positioning of the container. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-617, filed 2/2/82.]

**WAC 296-150B-620 Location of LPG containers and systems.** (1) LPG containers shall not be installed, nor shall provisions be made for installing or storing any LPG container, even temporarily, inside any commercial coach except for listed, completely self-contained hand torches, lanterns, or similar equipment with containers having a maximum water capacity of not more than 2 1/2 pounds (approximately one pound LPG capacity).

(2) Containers, control valves and regulating equipment, when installed, shall be mounted on the "A" frame of the commercial coach, or installed in a compartment that is vapor-tight to the inside of the commercial coach and accessible only from the outside. The compartment shall be ventilated at top and bottom to facilitate diffusion of vapors. The compartment shall be ventilated with two vents having an aggregate area of not less than two percent of the floor area of the compartment and shall open unrestricted to the outside atmosphere. The required vents shall be equally

distributed between the floor and ceiling of the compartment. If the lower vent is located in the access door or wall, the bottom edge of the vent shall be flush with the floor level of the compartment. The top vent shall be located in the access door or wall with the bottom of the vent not more than 12 inches below the ceiling level of the compartment. All vents shall have an unrestricted discharge to the outside atmosphere. Access doors or panels of compartments shall not be equipped with locks or require special tools or knowledge to open.

(3) Permanent and removable fuel containers shall be securely mounted to prevent jarring loose, slipping, or rotating and the fastenings shall be designed and constructed to withstand static loading in any direction equal to twice the weight of the tank and attachments when filled with fuel, using a safety factor of not less than four based on the ultimate strength of the material to be used. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-620, filed 2/2/82.]

**WAC 296-150B-623 LPG container valves and accessories.** (1) Valves in the assembly of a two-cylinder system shall be arranged so that replacement of containers can be made without shutting off the flow of gas to the appliance. This provision is not to be construed as requiring an automatic change-over device.

(2) Shutoff valves on the containers shall be protected in transit, in storage, and while being moved into final use as follows:

(a) By setting into a recess of the container to prevent possibility of their being struck if container is dropped upon a flat surface, or,

(b) By ventilated cap or collar, fastened to the container, capable of withstanding a blow from any direction equivalent to that of a 30-pound weight dropped four feet. Construction shall be such that the blow will not be transmitted to the valve.

(3) Regulators shall be connected directly to the container shutoff valve outlets or mounted securely by means of a support bracket and connected to the container shutoff valve or valves with listed high-pressure connections. If the container is permanently mounted, the connector shall be as required above or with a listed semi-rigid tubing connector. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-623, filed 2/2/82.]

**WAC 296-150B-627 LPG safety devices.** (1) DOT containers shall be provided with safety-relief devices as required by the regulations of the U.S. Department of Transportation. ASME containers shall be provided with relief valves in accordance with Subsection 221 of the Standard for the Storage and Handling of Liquefied-Petroleum Gases (NFPA No. 58-1976). Safety-relief valves shall have direct communication with the vapor space of the vessel.

(2) The delivery side of the gas-pressure regulator shall be equipped with a safety-relief device set to a discharge at a pressure not less than two times and not more than three times the delivery pressure of the regulator.

(3) Systems mounted on the "A" frame assembly shall be so located that the discharge from the safety-relief devices shall be into the open air and not less than three feet horizontally from any opening into the commercial coach below the level of such discharge. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-627, filed 2/2/82.]

**WAC 296-150B-630 LPG system enclosure and mounting.** (1) Housings and enclosures shall be designed to provide proper ventilation at least equivalent to that specified in WAC 296-150B-620(2).

(2) Doors, hoods, domes, or portions of housings and enclosures required to be removed or opened for replacement of containers shall incorporate means for clamping them firmly in place and preventing them from working loose during transit.

(3) Provisions shall be incorporated in the assembly to hold the containers firmly in position and prevent their movement during transit.

(4) Containers shall be mounted on a substantial support or a base secured firmly to the commercial coach chassis. Neither the container nor its support shall extend below the commercial coach frame. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-630, filed 2/2/82.]

**WAC 296-150B-633 LPG system design and service line pressure.** Systems shall be of the vapor-withdrawal type. Gas, at a pressure not over 14 inches water column (1/2 psi) shall be delivered from the system into the gas supply connection. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-633, filed 2/2/82.]

**WAC 296-150B-637 Electrical equipment.** All electrical equipment installed in conjunction with gas equipment shall be listed for the purpose intended. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-637, filed 2/2/82.]

**WAC 296-150B-640 Gas piping systems--General.** The requirements of this section shall govern the installation of all fuel gas piping attached to any commercial coach. Gas delivered into the gas supply system shall be at a pressure not exceeding 14 inch water column (1/2 psi). None of the requirements listed in this section shall apply to the piping supplied as a part of an appliance. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-640, filed 2/2/82.]

**WAC 296-150B-643 Piping design.** Commercial coaches requiring fuel gas for any purpose shall be equipped with a gas-piping system that is designed for LPG only, combination LPG and natural gas, or natural gas. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-643, filed 2/2/82.]

**WAC 296-150B-647 Materials.** All materials used for the installation, extension, alteration, or repair of any gas-piping system shall be new and free from defects or internal obstructions. It shall not be permissible to repair

defects in gas piping or fittings. Inferior or defective materials shall be removed and replaced with acceptable material. The system shall be made of materials having a melting point of not less than 1,450°F (789°C), except as provided in WAC 296-150B-670. They shall consist of one or more of the following materials:

(1) Steel or wrought-iron pipe shall comply with ANSI Standard B36.10-1975 for Wrought-Steel and Wrought-Iron Pipe. Threaded brass pipe in iron pipe sizes may be used.

(2) Fittings for gas piping shall be wrought iron, malleable iron, steel or brass (containing not more than 75 percent copper).

(3) Copper tubing shall be annealed type, Grade K or L, conforming to the Specifications for Seamless Copper Water Tube (ASTM B88-76), or shall comply with the Specifications for Seamless Copper Tube for Air Conditioning and Refrigeration Field Service, ASTM B280-76. When used on systems designed for natural gas, such tubing shall be internally tinned.

(4) Steel tubing shall have a minimum wall thickness of 0.032 inch for tubing of 1/2 inch diameter and smaller and 0.049 inch for diameters 1/2 inch and larger. Steel tubing shall be constructed in accordance with ASTM Specification for Electric-Resistance-Welded Coiled Steel Tubing for Gas and Fuel Oil Lines (ASTM A539-73), and shall be externally corrosion protected. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-647, filed 2/2/82.]

**WAC 296-150B-650 Expandable or multiple commercial coaches.** Where gas piping is to be installed in more than one portion of an expandable or multiple commercial coach, the design and construction shall be as follows:

(1) There shall be only one point of crossover which shall be readily accessible from the exterior of the commercial coach.

(2) The connector between units shall be a listed flexible connector for exterior use, sized in accordance with WAC 296-150B-653.

(3) Protective caps or plugs shall be permanently attached to the coach by means of a metal chain and used to seal the system when not in use. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-650, filed 2/2/82.]

**WAC 296-150B-653 System sizing--Gas pipe sizing.** Gas piping systems shall be sized so that the pressure drop to any appliance inlet connection from any gas supply connection, when all appliances are in operation at maximum capacity, is not more than 0.5 inch water column as determined on the basis of test or in accordance with WAC 296-150B-667. The natural gas supply connection shall be not less than the size of the gas piping but shall be not smaller than 3/4 inch nominal pipe size. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-653, filed 2/2/82.]

**WAC 296-150B-657 Sizing and capacity of gas piping.** In order to determine the size of piping to be

used in designing a gas piping system, the following factors must be considered:

- (1) Allowable loss in pressure from the commercial coach gas supply connection to appliance.
- (2) Maximum gas consumption to be provided.
- (3) Length of piping.
- (4) Type of gas. [Statutory Authority: RCW 43.22-340. 82-04-060 (Order 82-4), § 296-150B-657, filed 2/2/82.]

**WAC 296-150B-660 Description of tables.** (1) The quantity of gas to be provided at each outlet shall be determined directly from the manufacturer's Btu input rating of the appliance that will be installed.

(2) Capacities for combustion of LPG and natural gas at low pressures (0.5 psig or less) in thousands of Btu per hour for different sizes and lengths are shown in the table in WAC 296-150B-667 for iron pipe or equivalent rigid pipe and for semi-rigid tubing. WAC 296-150B-667 is based upon a pressure drop of 0.5 inch water column. In using the table, no additional allowance is necessary for an ordinary number of fittings.

(3) Capacities in thousands of Btu per hour of undiluted liquefied petroleum gases based on a pressure drop of 0.5 inch water column for different sizes and lengths are shown in the table in WAC 296-150B-667 for iron pipe or equivalent rigid pipe and for semi-rigid tubing. In using this table, no additional allowance is necessary for an ordinary number of fittings.

(4) For any gas piping system, for special gas appliances or for conditions other than those covered by WAC 296-150B-667, such as longer runs, greater gas demands or greater pressure drops, the size of each gas piping system shall be determined by standard engineering methods acceptable to the department. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-660, filed 2/2/82.]

**WAC 296-150B-663 Use of capacity tables.** To determine the size of each section of gas piping in a system within the range of the capacity tables, proceed as follows:

(1) Determine the gas demand of each appliance to be attached to the piping system. When the table in WAC 296-150B-667 is to be used to select the piping size, calculate the gas demand in terms of thousands of Btu for each piping system outlet.

(2) Measure the length of piping from the gas supply connection to the most remote outlet in the commercial coach.

(3) In the appropriate capacity table, select the column showing the measured length or the next longer length if the table does not give the exact length. This is the only length used in determining the size of any section of gas piping.

(4) Use this same vertical column to locate ALL gas demand figures for this particular system of piping.

(5) Starting at the most remote outlet, find in the vertical column just selected the gas demand for that

outlet. If the exact figure or demand is not shown, choose the next larger figure below in the column.

(6) Opposite this demand figure, in the first column at the left, will be found the correct size of gas piping.

(7) Proceed in a similar manner for each outlet and each section of gas piping. For each section of piping, determine the total gas demand supplied by that section.

— Example of piping system design:

Determine the required pipe size of each section and outlet of the piping system, with a designated pressure drop of 0.5 inch water column.

OUTLET A	WATER HEATER	30,000 BTUH
OUTLET B	REFRIGERATOR	3,000 BTUH
OUTLET C	RANGE	73,000 BTUH
OUTLET D	FURNACE	136,000 BTUH

**SOLUTION:**

(1) The length of pipe from the gas supply inlet to the most remote outlet (A) is 60 feet. This is the only distance used.

(2) Using the column marked 60 feet in the table:

Outlet A, supplying 30,000 BTUH, requires 3/8" iron pipe.

Outlet B, supplying 3,000 BTUH, requires 1/4" iron pipe.

Section 1, supplying outlets A and B, or 33,000 BTUH, requires 3/8" iron pipe.

Outlet C, supplying 73,000 BTUH, requires 3/4" iron pipe.

Section 2, supplying outlets A, B and C, or 106,000 BTUH, requires 3/4" iron pipe.

Outlet D, supplying 136,000 BTUH, requires 3/4" iron pipe.

Gas Supply Connection, Section 3, supplying outlets A, B, C and D, or 242,000 BTUH, requires 1" iron pipe.

[Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-663, filed 2/2/82.]

**WAC 296-150B-667 Table—Iron pipe and tubing sizes.**

#### PART I

Maximum Capacity of Different Sizes of Pipe and Tubing in Thousands of Btu's Per Hour of Natural Gas For Gas Pressures of 0.5 Psig or Less and a Maximum Pressure Drop of 1/2 Inch Water Column

**PART I(A)****Iron Pipe Sizes**

I.D.	Length in Feet									
	10	20	30	40	50	60	70	80	90	100
1/4"	43	29	24	20	18	16	15	14	13	12
3/8"	95	65	52	45	40	36	33	31	29	27
1/2"	175	120	97	82	73	66	61	57	53	50
3/4"	360	250	200	170	151	138	125	118	110	103
1"	680	465	375	320	285	260	240	220	215	195

**PART I(B)****Tubing**

O.D.	Length in Feet									
	10	20	30	40	50	60	70	80	90	100
3/8"	27	18	15	13	11	10	9	9	8	8
1/2"	56	38	31	26	23	21	19	18	17	16
5/8"	113	78	62	53	47	43	39	37	34	33

[Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-667, filed 2/2/82.]

**WAC 296-150B-670 Joints and installation--Joints for gas pipe.** All pipe joints in the piping system, unless welded or brazed, shall be threaded joints that comply with ANSI Standard Pipe Threads (Except Dryseal) B2.1-1968. Right and left nipples or couplings shall not be used. Unions, if used, shall be of ground joint type. The material used for welding or brazing pipe connections shall have a melting temperature in excess of 1,000°F (537°C). [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-670, filed 2/2/82.]

**WAC 296-150B-673 Joints in gas tubing systems.** Tubing joints shall be made with either a single or double flare of the proper degree, as recommended by the tubing manufacturer, by means of listed gas tubing fittings, or by being brazed with material having a melting point exceeding 1,000°F (537°C). [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-673, filed 2/2/82.]

**WAC 296-150B-677 Concealed tubing.** Tubing shall not be run inside walls, floors, partitions, or roofs. Where tubing passes through walls, floors, partitions, roofs, or similar installations, the tubing shall be protected by the use of weather resistant grommets that snugly fit both the tubing and the hole through which the tubing passes. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-677, filed 2/2/82.]

**WAC 296-150B-680 Pipe-joint compound.** Screw joints shall be made tight with listed pipe-joint compound that is insoluble in liquefied petroleum gas. The pipe-joint compound shall be applied to the male threads only. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-680, filed 2/2/82.]

**WAC 296-150B-683 Concealed joints.** Piping or tubing joints shall not be located in any floor, wall partition, or similar concealed construction space. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-683, filed 2/2/82.]

**WAC 296-150B-687 Hangers and supports.** All gas piping shall be adequately supported by galvanized or equivalently protected metal straps or hangers at intervals of not more than four feet, except where adequate support and protection is provided by structural members. Solid-iron pipe gas-supply connections shall be rigidly anchored to a structural member within six inches of the supply connections. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-687, filed 2/2/82.]

**WAC 296-150B-690 Electrical ground.** Gas piping shall not be used for an electrical ground. [Statutory

Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-690, filed 2/2/82.]

**WAC 296-150B-693 Identification of gas supply connections.** A label shall be permanently attached on the outside of the exterior wall of the commercial coach adjacent to the gas supply connection which reads (as appropriate) either:

**LP-Gas System**

This gas piping system is designed for use of liquefied petroleum gas only.

DO NOT CONNECT NATURAL GAS TO THIS SYSTEM.

CONTAINER SHUTOFF VALVES SHALL BE CLOSED DURING TRANSIT.

When connecting to lot outlet, use a listed gas supply connector for vehicles rated at

- 100,000 Btuh  
or more  
 250,000 Btuh

Before turning on gas, make certain all gas connections have been made tight, all appliance valves are turned off, and any unconnected outlets are capped.

After turning on gas, test gas piping and connections to appliances for leakage with soapy water or bubble solution, and light all pilots.

or

**Combination LP-Gas and Natural Gas System**

This gas piping system is designed for use of either liquefied petroleum gas or natural gas.

**NOTICE:** BEFORE TURNING ON GAS, BE CERTAIN APPLIANCES ARE DESIGNED FOR THE GAS CONNECTED AND ARE EQUIPPED WITH CORRECT ORIFICES. SECURELY CAP THIS INLET WHEN NOT CONNECTED FOR USE.

When connecting to lot outlet, use a listed gas supply connector for vehicles rated at

- 100,000 Btuh  
or more  
 250,000 Btuh

Before turning on gas, make certain all gas connections have been made tight, all appliance valves are turned off, and any unconnected outlets are capped.

After turning on gas, test gas piping and connections to appliances for leakage with soapy water or bubble solution, and light all pilots.

The appropriate Btuh input rating shall be marked.

[Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-693, filed 2/2/82.]

**WAC 296-150B-697 Gas piping system openings.** All openings in the gas piping system shall be closed

[Title 296 WAC—p 1548]

gas-tight with threaded pipe plugs or pipe caps. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-697, filed 2/2/82.]

**WAC 296-150B-700 Appliance connections.** All interior gas-burning appliances shall be connected to the gas piping system with materials as provided in WAC 296-150B-647 or with listed gas appliance connectors. Listed appliance connectors, if used, shall not be run through walls, floors, ceilings, or partitions. Listed appliance connectors shall also not be run through cabinets or cupboards unless protected or positioned to minimize mechanical damage. Where a listed connector is used, only one connector may be used to serve a single appliance. Connectors with aluminum exterior surfaces shall not be used outdoors. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-700, filed 2/2/82.]

**WAC 296-150B-703 Valves.** (1) A shutoff valve shall be installed in the fuel piping outside of each gas appliance but inside the commercial coach structure, and upstream of the union or connector, in addition to any valve on the appliance. The shutoff valve shall be located within 6 feet of a cooking appliance and within 3 feet of any other appliance. A shutoff valve may serve more than one appliance if located as required above.

(2) Shutoff valves used in connection with gas piping shall be of a type designed and listed for use on LPG. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-703, filed 2/2/82.]

**WAC 296-150B-707 Testing for leakage--Before appliances are connected.** The piping system shall stand a pressure of at least six inches mercury or three PSI gage for a period of not less than ten minutes without showing any drop in pressure. Pressure shall be measured with a mercury manometer or slope gage calibrated so as to be read in increments of not greater than one-tenth pound or an equivalent device. The source of pressure shall be isolated before the pressure tests are made. Before a test is begun, the temperature of the ambient air and of the piping shall be approximately the same and constant air temperature shall be maintained throughout the test. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-707, filed 2/2/82.]

**WAC 296-150B-710 After appliances are connected.** After gas appliances have been connected, the gas-piping system shall be subjected to a pressure test with the burner valves closed. The test shall consist of air at not less than ten inches nor more than 14 inches pressure of water column (six to eight ounces), the system shall hold this pressure for a period of not less than 10 minutes with no perceptible leakage. Before beginning the test, the temperature of the gas-piping system and the test air shall be equalized and maintained throughout the test.

Appliance shut-off valves ahead of listed gas cooking appliances may be closed for the performance of this

test. When the test is satisfactorily performed in this manner, these valves shall be opened and, while the system is under pressure, the appliance connectors shall be tested with an approved leak detector or approved bubble solution. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-710, filed 2/2/82.]

**WAC 296-150B-713 Rodent resistance.** All exterior openings around piping, ducts, plenums, or vents shall be sealed to resist the entrance of rodents. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-713, filed 2/2/82.]

**WAC 296-150B-717 Oil piping systems--General.** The requirements of this section shall govern the installation of all liquid fuel piping attached to any commercial coach. None of the requirements listed in this section shall apply to the piping in the appliances. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-717, filed 2/2/82.]

**WAC 296-150B-720 Oil piping systems--Expandable or multiple commercial coaches.** When a commercial coach is composed of two or more units or includes expandable rooms, the oil-piping system shall be located only in the unit containing the oil-supply connection. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-720, filed 2/2/82.]

**WAC 296-150B-723 Oil piping systems--Materials.** All materials used for the installation, extension, alteration, or repair of any oil piping system shall be new and free from defects or internal obstructions. The system shall be made of materials having a melting point of not less than 1,450°F (789°C), except as provided in WAC 296-150B-730. They shall consist of one or more of the following materials:

(1) Steel or wrought-iron pipe shall comply with American National Standard for Wrought-Steel or Wrought-Iron Pipe, B36.10-1975. Threaded copper or brass pipe in iron pipe sizes may be used.

(2) Fittings for oil piping shall be wrought iron, malleable iron, steel, or brass (containing not more than 75 percent copper).

(3) Copper tubing shall be annealed type, Grade K or L, conforming to the Specifications for Seamless Copper Water Tube (ASTM B88-76); or shall comply with the specifications for Seamless Copper Tube for Air Conditioning and Refrigeration Field Service, ASTM B280-76.

(4) Steel tubing shall have a minimum wall thickness of 0.032 inch for diameters up to 1/2 inch and 0.049 inch for diameters of 1/2 inch and larger. Steel tubing shall be constructed in accordance with the Specification for Electric-Resistance Welded Coiled Steel Tubing for Gas and Fuel Oil Lines (ASTM A539-73) and shall be externally corrosion protected. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-723, filed 2/2/82.]

**WAC 296-150B-727 Oil piping systems--Size of oil piping.** The minimum size of all fuel-oil tank piping connecting outside tanks to the appliance shall be no smaller than three-eighth-inch OD copper tubing or one-fourth-inch ips. If No. 1 fuel oil is used with a listed automatic pump (fuel lifter), copper tubing shall be sized as specified by the pump manufacturer. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-727, filed 2/2/82.]

**WAC 296-150B-730 Oil piping systems--Joints for oil piping.** All pipe joints in the piping system, unless welded or brazed, shall be threaded joints which comply with American National Standard for Pipe Threads (Except Dryseal), B2.1-1968. The material used for brazing pipe connections shall have a melting temperature in excess of 1,000°F (537°C). [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-730, filed 2/2/82.]

**WAC 296-150B-733 Oil piping systems--Tubing joints.** Tubing joints shall be made with either a single or double flare of the proper degree, as recommended by the tubing manufacturer, by means of listed tubing fittings or brazed with material having a melting point exceeding 1,000°F (537°C). [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-733, filed 2/2/82.]

**WAC 296-150B-737 Oil piping systems--Pipe-joint compound.** Threaded joints shall be made tight with listed pipe joint compound which shall be applied to the male threads only. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-737, filed 2/2/82.]

**WAC 296-150B-740 Oil piping systems--Couplings.** Pipe couplings and unions shall be used to join sections of threaded pipe. Right and left nipples or couplings shall not be used. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-740, filed 2/2/82.]

**WAC 296-150B-743 Oil piping systems--Grade of piping.** Fuel oil piping installed in conjunction with gravity feed systems to oil heating equipment shall slope in a gradual rise upward from a central location to both the oil tank and the appliance in order to eliminate air locks. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-743, filed 2/2/82.]

**WAC 296-150B-747 Oil piping systems--Strap hangers.** All oil piping shall be adequately supported by galvanized or equivalently protected metal straps or hangers at intervals of not more than 4 feet, except where adequate support and protection is provided by structural members. Solid-iron-pipe oil supply connections shall be rigidly anchored to a structural member within 6 inches of the supply connections. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-747, filed 2/2/82.]

**WAC 296-150B-750 Oil piping systems--Testing for leakage.** Before setting the system in operation, tank installations and piping shall be checked for oil leaks with fuel oil of the same grade that will be burned in the appliance. No other material shall be used for testing fuel oil tanks and piping. Tanks shall be filled to maximum capacity for the final check for oil leakage. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-750, filed 2/2/82.]

**WAC 296-150B-753 Appliances--Heat-producing.** General. (1) Heat-producing appliances and vents, roof jacks, and chimneys necessary for their installations in commercial coaches shall be listed or certified by a nationally recognized testing agency for use in mobile homes or commercial coaches. Air conditioning units and combination air conditioning and heating units shall be listed or certified by a nationally recognized testing agency for the application for which the unit is intended.

(2) Fuel-burning heat-producing appliances and refrigeration appliances, except ranges and ovens, shall be of the vented type and vented to the outside.

(3) Fuel-burning appliances shall not be converted from one fuel to another fuel unless converted in accordance with the terms of their listing and the appliance manufacturer's instructions.

(4) Gas-fired absorption comfort-cooling units shall meet all the requirements of American National Standard for Gas-Fired Absorption Summer Air Conditioning Appliances (ANSI Z21.40.1-1973).

(5) Mechanical comfort-cooling units shall meet all the requirements of the Standard for Unitary Air-Conditioning Equipment (ARI Standard 210-74).

(6) Direct refrigerating systems serving any air conditioning or comfort-cooling system installed in a commercial coach shall employ a type of refrigerant that ranks no lower than Group 5 in the Underwriters' Laboratories, Inc. "Classification of Comparative Life Hazard of Various Chemicals." [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-753, filed 2/2/82.]

**WAC 296-150B-757 Appliances--Installation.** (1) The installation of each appliance shall conform to the terms of its listing and the manufacturer's instructions. The installer shall leave the manufacturer's instructions attached to the appliance. Every appliance shall be secured in place to avoid displacement.

(2) All fuel-burning appliances, except ranges, ovens, illuminating appliances, clothes dryers, solid fuel-burning fireplaces and solid fuel-burning fireplace stoves, shall be installed to provide for the complete separation of the combustion system from the interior atmosphere of the commercial coach. Combustion air inlets and flue gas outlets shall be listed or certified as components of the appliance. The required separation may be obtained by:

(a) The installation of direct vent system (sealed combustion system) appliances, or

(b) The installation of appliances within enclosures so as to separate the appliance combustion system and

venting system from the interior atmosphere of the commercial coach. There shall not be any door, removable access panel or other opening into the enclosure from the inside of the commercial coach. Any opening for ducts, piping, wiring, etc., shall be sealed.

(3) A forced air appliance and its return-air system shall be designed and installed so that negative pressure created by the air-circulating fan cannot affect its or another appliance's combustion air supply or act to mix products of combustion with circulating air.

(4) The air circulating fan of a furnace installed in an enclosure with another fuel-burning appliance shall be operable only when any door or panel covering an opening in the furnace fan compartment or in a return air plenum or duct is in the closed position. This subsection does not apply if both appliances are direct vent system (sealed combustion system) appliances.

(5) If a warm air appliance is installed within an enclosure to conform to subsection (2)(b), each warm-air outlet and each return air inlet shall extend to the exterior of the enclosure. Ducts, if used for that purpose, shall not have any opening within the enclosure and shall end at a location exterior to the enclosure.

(6) Cooling coils installed as a portion of, or in connection with, any forced-air furnace shall be installed on the downstream side unless the furnace is specifically otherwise listed.

(a) A cooling coil shall not be located in the air discharge duct or plenum of any forced-air furnace unless such furnace is listed for use with a cooling coil or listed for operation at not less than 0.5 inch water column external static pressure.

(b) If a cooling coil is installed within a forced-air furnace, the coil shall be listed for use with that furnace in the manner so installed or be approved for such use. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-757, filed 2/2/82.]

**WAC 296-150B-760 Appliances--Venting, ventilation, and combustion air.** (1) The venting required by WAC 296-150B-753(2) shall be accomplished by:

(a) An integral vent system listed or certified as part of the appliance; or

(b) a venting system consisting entirely of listed components, including a roof jack, installed in accordance with the terms of the appliance listing and the appliance manufacturer's instructions (see WAC 296-150B-757(2)).

(2) Venting and combustion air systems shall be installed in accordance with the following:

(a) Components shall be securely assembled and properly aligned using the method shown in the appliance manufacturer's instructions.

(b) Draft hood connectors shall be firmly attached to draft hood outlets or flue collars by sheet metal screws or by an equivalent means.

(c) Every joint of a vent, vent connector, exhaust duct, and combustion air intake shall be secure and in alignment.

(3) Venting systems shall not terminate underneath a commercial coach.

(4) Venting system terminations shall be not less than three feet from any motor-driven air intake discharging into habitable areas.

(5) The area in which cooking appliances are located shall be ventilated by a metal duct which may be single wall, not less than 12.5 square inches in cross-sectional area (minimum dimension shall be two inches) located above the appliances and terminating outside the commercial coach, or by listed mechanical ventilating equipment that is installed in accordance with the terms of listing and the manufacturer's instructions. Gravity or mechanical ventilation shall be installed within a horizontal distance of not more than ten feet from the vertical front of the appliances. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-760, filed 2/2/82.]

**WAC 296-150B-763 Appliances--Clearance--general.** (1) Information on clearances, input rating, lighting, and shut-down shall be attached to the appliances with the same permanence as the nameplate and so located that it is easily readable when the appliance is properly installed.

(2) Each fuel-burning appliance shall bear permanent marking designating the types of fuel for which it is listed.

(3) Every appliance shall be accessible for inspection, service, repair, and replacement without removing permanent construction. Sufficient room shall be available to enable the operator to observe the burner, control, and ignition means while starting the appliance.

(4) Heat-producing appliances shall be so located that no doors, drapes, or other such material can be placed or swung closer to the front of the appliance than the clearances specified on the labeled appliances.

(5) Clearances between heat-producing appliances and adjacent surfaces shall not be less than specified in the terms of their listing. Clearance spaces shall be framed in or guarded to prevent creation of storage space.

(6) Operating instructions shall be provided with appliances. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-763, filed 2/2/82.]

**WAC 296-150B-767 Safety devices--Water heater relief valves.** (1) All water heaters shall be installed with approved and listed fully automatic valve or valves designed to provide temperature and pressure relief.

(2) Any temperature relief valve or combined pressure and temperature relief valve installed for this purpose shall have the temperature sensing element immersed in the hottest water within the upper 6 inches of the tank. It shall be set to start relieving at a pressure of 150 psi or the rated working pressure of the tank, whichever is lower, and at or below a water temperature of 210°F.

(3) Relief valves shall be provided with full-sized drains that shall be directed downward and shall discharge beneath the commercial coach. Drain lines shall be of a material listed for hot water distribution and shall drain fully by gravity, shall not be trapped, and

shall not have their outlets threaded. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-767, filed 2/2/82.]

**WAC 296-150B-770 Air duct material for circulating air supply system.** Supply ducts shall be made from galvanized steel, tin-plated steel, or aluminum, or shall be listed Class 0, Class 1, or Class 2 air ducts. Class 2 air ducts shall be located at least 3 feet from the furnace bonnet or plenum. A duct system integral with the structure shall be of durable construction that can be demonstrated to be equally resistant to fire and deterioration. Ducts constructed from sheet metal shall be in accordance with Table H-3.

Class 1 air ducts shall have a flame-spread rating of not over 25 without evidence of continual progressive combustion and a smoke-developed rating of not over 50. Class 2 air ducts shall have a flame-spread rating of not over 50 without evidence of continued progressive combustion and a smoke-developed rating of not over 50 for the inside surface material and not over 100 for the outside surface material.

Minimum Metal Thickness for Ducts\*

Duct Type	Diameter or 14 inches or less	Width over 14 inches
Round . . . . .	0.013 in.	0.016 in.
Enclosed Rectangular . . . . .	0.013 in.	0.016 in.
Exposed Rectangular . . . . .	0.016 in.	0.019 in.

\*When "nominal" thicknesses are specified, 0.003 inch shall be added to these "minimum" metal thicknesses.

[Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-770, filed 2/2/82.]

**WAC 296-150B-773 Sizing of air ducts.** Ducts shall be designed so that when a labeled forced-air furnace is installed and operated continually at its normal input rating in the commercial coach, with all registers in full open position, the static pressure measured in the duct plenum shall not exceed that shown in the table in WAC 296-150B-777 or exceed that shown on the label of the appliance. When an air-cooler coil is installed between the furnace and the duct plenum, the total static pressure between the furnace and the coil shall not exceed that shown on the label of the furnace. The minimum dimension of any branch duct shall be at least 1 1/2 inches, and of any main duct, 2 1/2 inches. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-773, filed 2/2/82.]

**WAC 296-150B-777 Airtightness of air supply duct systems.** An air supply duct system shall be considered substantially airtight when the static pressure in the duct system, with all registers sealed and with the furnace air circulator at high speed, is at least 80 percent of the

static pressure measured in the furnace casing, with its outlets sealed and the furnace air circulator operating at high speed. For the purpose of this section and WAC 296-150B-783, pressures shall be measured with a water manometer or equivalent device calibrated to read in increments not greater than 1/10 inch water column.

Maximum Allowable Static Pressures in Supply Duct Systems

Input to Forced-Air Furnace Btu/hr.	External Static Pressure Inches Water Column Measured at the Furnace Outlet	
	Temperature of Outlet Air Determined by Function of Limit Control	
	Above 165°F	165°F or Less
55,000 and under	0.10	0.20
Over 55,000 to 80,000	0.12	0.24
Over 80,000 to 100,000	0.15	0.30

[Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-777, filed 2/2/82.]

**WAC 296-150B-780 Air ducts--Expandable or multiple commercial coach connections.** (1) An expandable or multiple commercial coach may have ducts of the heating system installed in the various units. The points of connection must be so designed and constructed that when the commercial coach is fully expanded or coupled, the resulting duct joint will conform to the requirements of this chapter.

(2) Installation instructions for supporting the cross-over duct from the commercial coach shall be provided for onsite installation. The duct shall not be in contact with the ground. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-780, filed 2/2/82.]

**WAC 296-150B-783 Air ducts--Return air systems.** Provisions shall be made to permit the return of circulating air from all rooms and living spaces except toilet rooms, to the circulating air supply inlet of the furnace.

(1) Duct material. Return ducts and any diverting dampers contained therein shall be in accordance with the following:

(a) Portions of return ducts directly above the heating surfaces or closer than 2 feet from the outer jacket or casing of the furnace shall be constructed of metal in accordance with the table in WAC 296-150B-770 or shall be listed Class 0 or Class 1 air ducts.

(b) Return ducts, except as required by (1)(a), shall be constructed of one-inch (nominal) wood boards (flame-spread classification of not more than 200), other suitable material no more flammable than one-inch board, or in accordance with the table in WAC 296-150B-770.

(c) The interior of combustible ducts shall be lined with noncombustible material at points where there might be danger from incandescent particles dropped through the register or furnace such as directly under floor registers and the bottom of vertical ducts or directly under furnaces having a bottom return.

(2) The cross-sectional area of the return air duct shall not be less than 2 square inches for each 1,000 Btu per hour input rating of the appliance. Dampers shall not be placed in any return air duct, except that a diverting damper may be placed in a combination fresh air intake and return air duct so arranged that the required cross-sectional area will not be reduced at all possible positions of the damper.

(3) Permanent uncloseable openings. Living areas not served by return air ducts or closed off from the return opening of the furnace by doors, sliding partitions, or other means shall be provided with permanent uncloseable openings in the doors or separating partitions to allow circulated air to return to the furnace. The openings may be grilled or louvered. The net free area of each opening shall be not less than 1 square inch for every 5 square feet of total living area closed off from the furnace by the door or partition serviced by that opening. Undercutting doors connecting the closed-off space may be used as a means of providing return air area. However, in the event that doors are undercut, they shall be undercut a minimum of 2 inches and no more than 2 1/2 inches and no more than one-half of the free air area so provided shall be counted as return air area. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-783, filed 2/2/82.]

**WAC 296-150B-787 Air ducts--Joints and seams.** Joints and seams of ducts shall be securely fastened and made substantially airtight. Slip joints shall have a lap of at least 1 inch and shall be individually fastened. Tape or caulking compound may be used for sealing mechanically secure joints. Where used, tape or caulking compound shall not be subject to deterioration under long exposures to temperatures up to 200°F. and to conditions of high humidity, excessive moisture, or mildew. Ducts shall be securely supported. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-787, filed 2/2/82.]

**WAC 296-150B-790 Air ducts--Registers or grills.** Fittings connecting the registers or grills to the duct system shall be constructed of metal or material that complies with the requirements of Class 1 or 2 ducts under Underwriters' Laboratories, Inc. Standard for Air Ducts, UL181-1974. Registers or grills shall be constructed of metal or conform with the following:

(1) Be made of a material classified 94VE-0 or 94VE-1 when tested as described in Underwriters' Laboratories, Inc. Standard for Tests for Flammability of Plastic Materials for Parts in Devices and Appliances, UL94-1976.

(2) Floor register or grills shall resist without structural failure a 200 lb. concentrated load on a 2-inch diameter disc applied to the most critical area of the

exposed face of the register or grill. For this test the register or grill is to be at a temperature of not less than 165°F. and is to be supported in accordance with the manufacturer's instructions. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-790, filed 2/2/82.]

**WAC 296-150B-793 Air ducts--Duct and plenum insulation.** Every heating and cooling duct and plenum shall be installed in accordance with the following:

(1) Air supply ducts that are not within the coach insulation having a thermal insulation (R) factor of at least 4 shall be insulated.

(2) Supply ducts within the coach but not within the insulation described in subsection (1) shall be insulated with rigid insulation having a thermal insulation (R) factor not less than 3 with a continuous vapor barrier having a perm rating of not more than 1.0.

(3) Supply ducts exposed directly to outside air, such as under chassis crossover ducts, shall be insulated with material having a thermal insulation (R) of not less than 4.0 with a continuous vapor barrier having a perm rating of not less than 1.0.

(4) Aluminum foil used as a vapor barrier shall be at least 2 mils in thickness. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-793, filed 2/2/82.]

**WAC 296-150B-797 Plumbing--Definitions.** Definitions contained in the Uniform Plumbing Code, 1979 Edition, and the following definitions shall apply to this chapter:

(1) Drain outlet means the discharge end of the commercial coach main drain to which a drain connector may be attached.

(2) Main drain means the principal artery of the commercial coach drainage system to which drainage branches may be connected.

(3) Uniform Plumbing Code (UPC) means the 1979 edition, as published by the International Association of Plumbing and Mechanical Officials.

(4) Water-supply connection means the fitting or point of connection of the commercial coach water distribution system designed for connection to a water connector. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-797, filed 2/2/82.]

**WAC 296-150B-800 Plumbing--General.** Plumbing fixtures, equipment, and installations in commercial coaches shall conform to the provisions of the Uniform Plumbing Code, 1979 Edition, except part 1, unless specifically exempted or required by this section. The provisions of this chapter are also applicable to the alteration or conversion of plumbing equipment and installations in any commercial coach bearing or required to bear a department insignia of approval. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-800, filed 2/2/82.]

**WAC 296-150B-803 Plumbing--Location of water-supply connections.** (1) Each commercial coach

equipped with a water distribution system shall have a water-supply connection that shall terminate within 18 inches of the outside wall of the commercial coach.

(2) Water-supply connections shall be equipped with a watertight cap or plug that shall be permanently attached to the vehicle. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-803, filed 2/2/82.]

**WAC 296-150B-807 Plumbing--Tub and shower enclosures.** Wall surfacing for tub and shower enclosures shall meet the following requirements:

(1) The wall covering material must have an exposed surface that is impervious to water; the substrate material must be resistant to deterioration from exposure to high humidity and temporary water leakage.

(a) The complete wall assembly, including the wall covering substrate, shall be capable of withstanding a uniform load of five pounds per square foot applied perpendicular to the surface. The deflection, under load, shall not exceed 1/180 of the height of the wall, for the assembly; or 1/240 the distance between framing members, for the wall covering substrate.

(b) Surface finish. The exposed surface must meet the minimum requirements of the American Hardboard Association PS59-73, Prefinished Hardboard Paneling, Class 1, as certified by the panel manufacturer.

(c) Size. The minimum thickness of the material shall be 1/8" nominal. The width shall be sufficient to give a continuous unbroken surface from corner to corner or the end of the tub in a corner installation. In an installation incorporating a shower, the unbroken surface must continue to a height of at least 6' above the floor of the shower.

(d) Type. The substrate material shall also meet the requirements of the appropriate standard:

(i) Hardboard shall be of high strength and water resistance to meet Commercial Standard CS-251-63 or AHA PS 58-73, either standard or tempered.

(ii) Softwood plywood must meet U.S. Product Standard P.S. 1-74, including exterior type glue line and grade A face veneer "suitable for painting."

(iii) Hardwood plywood must meet U.S. Product Standard P.S. 51-71 Type I glue line and sound grade face veneer.

(iv) Other materials not meeting subsections (d)(i), (d)(ii), or (d)(iii) above, shall meet the requirements of this chapter and the appropriate product standard, industry standard, commercial standard, or federal specification.

(2) Installation. The material must be installed in conformance with this chapter and the application instructions provided by the material manufacturer. In case of conflict, this chapter shall take precedence.

(a) Framing. Wood framing shall be spaced not more than 16" o.c. Blocking shall be 1" x 3" or equal, installed horizontally at height to match rim of the tub or shower pan. All corners shall have sufficient framing members for attachment of corner moldings.

(b) Fastening. All edges and ends of panel shall occur on framing members. Panels shall be applied to wood

framing members using water resistant, nonhard setting adhesive. Adhesive shall be applied to the face of all framing members except locations where panel edges fall beneath applied moldings. Panels may also be applied over solid backing using an adhesive.

Fasteners, if necessary, shall be used only in locations where they will be covered by applied moldings and shall be used on not more than two adjacent edges. No other interior fasteners or fixtures, other than required functional plumbing fixtures, shall penetrate the face of the panel. Openings for these plumbing fixtures must be sealed with caulk.

(c) Corners and edges. All corners and edges must be caulked or sealed against moisture penetration. A nonhard setting sealant material must be used with applied moldings. Fastening of moldings to framing shall not be greater than 6" o.c. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-807, filed 2/2/82.]

**WAC 296-150B-810 Drainage--Location of drain outlets.** (1) Each commercial coach equipped with plumbing fixtures or equipment shall have only one drain outlet, which shall terminate within 18 inches of the outside wall of the commercial coach.

(2) A multiple commercial coach may have more than one drain outlet when approved by the department. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-810, filed 2/2/82.]

**WAC 296-150B-813 Drainage--Cap or plug.** Drain outlets shall be equipped with a watertight cap or plug that shall be permanently attached to the vehicle. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-813, filed 2/2/82.]

**WAC 296-150B-817 Drainage--Clearance from drain outlet.** The drain outlet and couplers shall be provided with a minimum clearance of three inches in any direction from all parts of the structure or appurtenances and with not less than 18 inches unrestricted clearance directly in front of the drain outlet. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-817, filed 2/2/82.]

**WAC 296-150B-820 Drainage--Drainage systems materials.** Plastic drain-waste-vent piping shall be permitted for domestic sewage as defined in the Uniform Plumbing Code. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-820, filed 2/2/82.]

**WAC 296-150B-950 Hearing on grievances.** A person who is aggrieved by an order, notice, or decision of the department under this chapter may request a hearing. The request must be in writing and must describe briefly the cause of the grievance.

The director of the department may hear the matter, or may assign the hearing to his or her representative. The department shall notify the complainant of the time, date, and place for the hearing. The hearing shall be

held no later than 30 days after the department receives the request for the hearing. If the complainant fails to appear at the scheduled hearing, the department may dismiss the matter.

Upon conclusion of the hearing, the director or his or her representative shall notify the petitioner in writing of his or her decision in the matter. [Statutory Authority: RCW 43.22.340. 82-04-060 (Order 82-4), § 296-150B-950, filed 2/2/82.]

#### WAC 296-150B-990 Fees.

- |   |                                  |
|---|----------------------------------|
| (1) Initial manufacturer filing fee:  | \$ 25.00                         |
| (2) Fees for application for design plan approval. The fees listed in this subsection cover the application filing fee and one hour of examination time. The applicant will be required to pay for examination time beyond the base hours pursuant to the fees set in subsection (6). |                                  |
| (a) Fee for application for commercial coach, recreational vehicle, or component design plan approval:  | \$ 70.00                         |
| (b) Fees for resubmittals of a design plan for a commercial coach, recreational vehicle, or component:  | \$ 50.00                         |
| (3) Design plan renewal fees.   |                                  |
| (a) Renewal of an unexpired and unrevoked commercial coach or recreational vehicle design plan or related group of plans:   | \$ 30.00                         |
| (b) Renewal of an expired or revoked design plan:   | 100% of fee for new design plan. |
| (4) Fee for transfer of design plan approval to a different manufacturer:   | \$100.00                         |
| (5) Fee for filing a commercial coach,  |                                  |

recreational vehicle, or component quality control manual:	\$ 10.00	coach, or recreational vehicle insignia:	\$ 10.00
(6)(a) Fee for inspections, examinations of design plans, and other technical services performed by the department; other than inspections, examinations, and services for a HUD-labeled mobile home before it is sold or leased to a consumer:	\$50.00 minimum plus \$25.00 for every half-hour or fraction of a half-hour over one hour.	(g) For each alteration insignia:	\$ 25.00
(b) Fee for inspections, examinations, and other technical services performed by the department for a HUD-labeled mobile home before it is sold or leased to a consumer:	\$32.00 minimum plus \$16.00 for every half-hour or fraction of a half-hour over one hour.	(8) Fee for each notification to a local enforcement agency:	\$ 15.00
(7) Insignia fees.		(9) Travel fees and expenses. If a manufacturer or other person requests an inspection or other technical service outside the state, the manufacturer must prepay the travel expenses of the department's employees on an estimated basis to be corrected after the inspections are completed. The department will not charge for travel expenses incurred for inspections or other services performed in Washington. The expenses shall be calculated pursuant to the following list:	
(a) For each recreational vehicle:	\$ 20.00	(a) Surface travel, per mile:	\$ .185
(b) For each single width commercial coach, or for the first section of a multiple section commercial coach:	\$ 15.00	(b) Air travel:	Cost of air fare based on published rates.
(c) For each additional section of a multiple section commercial coach:	\$ 10.00	(c) Hourly charge for travel time:	\$25.00 per half-hour or fraction of a half-hour.
(d) For each service core:	\$ 50.00	(d) Expenses: Expenses include, but are not limited to, car rental, parking lot charges, and personal expenses. Personal expenses, including food, lodging, and per diem, shall be calculated pursuant to the allowances and costs set by the Washington	
(e) For each component other than a service core:	\$ 10.00		
(f) For each reissuance of a mobile home, commercial			

State Office of Financial Management.

- (10) Fee for change in manufacturer's or dealer's name, address, or ownership: \$ 15.00

[Statutory Authority: RCW 43.22.350 and 43.22.440. 83-01-018 (Order 82-37), § 296-150B-990, filed 12/6/82. Statutory Authority: RCW 43.22.440, 43.22.475 and 43.22.480. 82-12-040 (Order 82-20), § 296-150B-990, filed 5/28/82. Statutory Authority: RCW 43.22.340. 82-09-053 (Order 82-13), § 296-150B-990, filed 4/16/82.]

### Chapter 296-155 WAC

## SAFETY STANDARDS FOR CONSTRUCTION WORK

#### Subchapters

- Part A General safety and health provisions.  
(WAC 296-155-001 through 296-155-040)
- Part B Occupational health and environmental control.  
(WAC 296-155-100 through 296-155-170)
- Part C Personal protective and life saving equipment.  
(WAC 296-155-200 through 296-155-240)
- Part D Fire protection and prevention.  
(WAC 296-155-250 through 296-155-280)
- Part E Signs, signals, and barricades.  
(WAC 296-155-300 through 296-155-315)
- Part F Material handling, storage, use and disposal.  
(WAC 296-155-325 through 296-155-34920)
- Part G Tools—Hand and power.  
(WAC 296-155-350 through 296-155-375)
- Part H Welding and cutting.  
(WAC 296-155-400 through 296-155-420)
- Part I Electrical.  
(WAC 296-155-425 through 296-155-455)
- Part J Ladders and scaffolding.  
(WAC 296-155-475 through 296-155-48519)
- Part K Floor and wall openings and stairways.  
(WAC 296-155-500 through 296-155-510)
- Part L Cranes, derricks, hoists, elevators, and conveyors.  
(WAC 296-155-525 through 296-155-59920)
- Part M Motor vehicles, mechanized equipment, and marine operations.  
(WAC 296-155-600 through 296-155-630)
- Part N Excavation, trenching, and shoring.  
(WAC 296-155-650 through 296-155-66505)
- Part O Concrete, concrete forms and shoring.  
(WAC 296-155-675 through 296-155-695)
- Part P Steel erection.  
(WAC 296-155-700 through 296-155-720)
- Part Q Tunnels and shafts, caissons, cofferdams, and compressed air.  
(WAC 296-155-725 through 296-155-74501)
- Part R Miscellaneous construction requirements.  
(WAC 296-155-750 through 296-155-770)
- Part S Demolition.

- Part T Blasting and the use of explosives.  
(WAC 296-155-850 through 296-155-920)
- Part U Power distribution and transmission lines. (Reserved)
- Part V Rollover protective structures and overhead protection.  
(WAC 296-155-950 through 296-155-965)

**Reviser's note:** Chapter 296-40 WAC entitled "Safety standards—Construction work," were repealed by Order 74-26, filed May 7, 1974 upon the effective date of this chapter also filed by Order 74-26, on

May 7, 1974. The effective date of this order is hereby declared to be June 6, 1974.

### Part A

## GENERAL SAFETY AND HEALTH PROVISIONS

### WAC

- 296-155-001 Foreword.
- 296-155-003 Subsections, subdivisions, items, subitems, and segments.
- 296-155-005 Purpose and scope.
- 296-155-006 Equipment approval by nonstate agency or organization.
- 296-155-007 Incorporation of standards of national organization.
- 296-155-008 Incorporation of standards of federal agency.
- 296-155-010 Variance and procedure.
- 296-155-012 Definitions applicable to all sections of this chapter.
- 296-155-015 Education and first-aid standards.
- 296-155-020 Housekeeping.
- 296-155-030 Acceptable certifications.
- 296-155-035 General requirements.
- 296-155-040 Safe place standards.

**WAC 296-155-001 Foreword.** (1) This chapter has been compiled with the purpose of consolidating all division of industrial safety and health construction safety standards into one chapter of the Washington Administrative Code, by the promulgation of the standards contained herein. It is also the intent that the safety standards of the Washington state department of labor and industries, will be at least as effective as those adopted by the U.S. Department of Labor and administered by the Occupational Safety and Health Administration as published in the Code of Federal Regulations. The division of industrial safety and health is incorporating many of the preexisting construction safety standards and adding new standards under this chapter.

(2) Attention is called to the fact that certain Washington state standards contain standards and/or regulations applicable to all industries. These include, but are not limited to: The code for boilers and pressure vessels; the code for pressure piping; the general industrial safety and health standards; the general occupational health standards; regulations of the department of social and health services. [Order 76-29, § 296-155-001, filed 9/30/76; Order 74-26, § 296-155-001, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-003 Subsections, subdivisions, items, subitems, and segments.** (1) That portion of section numerology appearing after the chapter designation appears in either a three digit or a five digit format (e.g. 296-24-330 and 296-24-30002). The final two digits of the section number are implied decimal extensions of the first three digits and represent a further division of the three digit enumeration.

(2) Sections of this chapter may be divided into subsections (1), (2), (3), etc., which may in turn be divided into subdivisions (a), (b), (c), etc., which may be further divided into items (i), (ii), (iii), etc., which may be further divided into subitems (A), (B), (C), etc., which may be further divided into segments (aa), (bb), (cc), etc., all according to the following hierarchy, e.g.

Sections	296-24-330 and
	296-24-33002

- Subsections (1)
- (2)
- Subdivisions (a)
- (b)
- Items (i)
- (ii)
- Subitems (A)
- (B)
- Segments (aa)
- (bb)

[Order 74-26, § 296-155-003, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-005 Purpose and scope.** (1) The standards included in this chapter apply throughout the state of Washington, to any and all work places subject to the Washington Industrial Safety and Health Act (chapter 49.17 RCW), where construction, alteration, demolition, and/or maintenance and repair work, including painting and decorating, is performed. These standards are minimum safety requirements with which all industries must comply when engaged in the above listed types of work.

(2) When a provision of this chapter conflicts with a provision of any chapter of another vertical safety standard applying to the employers' specific type of work place, the provision of the vertical safety standard of specific application shall prevail. If a provision of this chapter conflicts with a provision of the general safety and health standard (chapter 296-24 WAC) or the general occupational health standard (chapter 296-62 WAC), the provision of this chapter shall prevail. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-155-005, filed 11/13/80; Order 76-29, § 296-155-005, filed 9/30/76; Order 74-26, § 296-155-005, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-006 Equipment approval by nonstate agency or organization.** Whenever a provision of this chapter states that only that equipment or those processes approved by an agency or organization other than the department of labor and industries, such as the Underwriters Laboratories or the Bureau of Mines, shall be utilized, that provision shall be construed to mean that approval of such equipment or process by the designated agency or group shall be prima facie evidence of compliance with the provisions of this chapter. [Order 74-26, § 296-155-006, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-007 Incorporation of standards of national organization.** Whenever a provision of this chapter incorporates by reference a national code or portion thereof which has been adopted by and is currently administered by another state agency, compliance with those provisions adopted and administered by such other state agency, if from a more recent edition of such national code, will be deemed to be prima facie evidence

of compliance with the provisions of this chapter. [Order 74-26, § 296-155-007, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-008 Incorporation of standards of federal agency.** (1) Whenever a provision of this chapter incorporates therein provisions of the Code of Federal Regulations (CFR) and changes thereto, or any other regulations adopted by an agency of the federal government, that provision of this chapter shall be construed to mean that compliance with such regulations shall be prima facie evidence of compliance with the provisions of this chapter.

(2) Whenever a provision of this chapter incorporates therein provisions of the Code of Federal Regulations, the provisions so incorporated shall be those in effect on the date of effectiveness of this chapter, unless the content of the incorporating section specifies otherwise. [Order 76-29, § 296-155-008, filed 9/30/76; Order 74-26, § 296-155-008, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-010 Variance and procedure.** Realizing that conditions may exist in operations under which certain state standards will not have practical application, the director of the department of labor and industries or his authorized representative may, pursuant to this section, sections eight or nine of the Washington Industrial Safety and Health Act (chapter 80, Laws of 1973, RCW 49.17.080 and 49.17.090) and appropriate administrative rules of this state and the department of labor and industries and upon receipt of application and after adequate investigation by the department, permit a variation from these requirements when other means of providing an equivalent measure of protection are afforded. Such variation granted shall be limited to the particular case or cases covered in the application for variance and may be revoked for cause. The order granting a variance shall be conspicuously posted on the premises and shall remain posted during the time it is in effect. All requests for variances from safety and health standards included in this chapter, shall be made in writing to the director of the department of labor and industries at Olympia, Washington, or his duly authorized representative, the supervisor of safety, division of industrial safety and health, department of labor and industries, Olympia, Washington. [Order 74-26, § 296-155-010, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-012 Definitions applicable to all sections of this chapter.**

NOTE: Unless the context indicates otherwise, words used in this chapter shall have the meaning given in this section. Certain parts of this chapter contain definitions as they apply to that particular part.

(1) "Approved" means approved by the director of the department of labor and industries or his authorized representative: *Provided, however*, that should a provision of this chapter state that approval by an agency or organization other than the department of labor and industries is required, such as Underwriters' Laboratories

or the bureau of mines, the provisions of WAC 296-155-006 shall apply.

(2) "Authorized person" means a person approved or assigned by the employer to perform a specific type of duty or duties or be at a specific location or locations at the workplace.

(3) "Competent person" means one who is capable of identifying existing and predictable hazards in the surroundings or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective action to eliminate them.

(4) "Confined or enclosed space" means any space having a limited means of egress, which is subject to the accumulation of toxic or flammable contaminants or has an oxygen deficient atmosphere. Confined or enclosed spaces include, but are not limited to, storage tanks, process vessels, bins, boilers, ventilation or exhaust ducts, sewers, underground utility vaults, tunnels, pipelines, and open top spaces more than 4 feet in depth such as pits, tubs, vaults, and vessels.

(5) "Construction work" shall mean and include all or any part of excavation, construction, erection, alteration, repair, demolition, and dismantling, of buildings and other structures and all operations in connection therewith; the excavation, construction, alteration and repair of sewers, trenches, caissons, conduits, pipe lines, roads and all operations pertaining thereto; the moving of buildings and other structures, and to the construction, alteration, repair, or removal of wharfs, docks, bridges, culverts, trestles, piers, abutments or any other construction, alteration, repair or removal work related thereto.

(6) "Defect" means any characteristic or condition which tends to weaken or reduce the strength of the tool, object, or structure of which it is a part.

(7) "Department" means the department of labor and industries.

(8) "Designated person" means "authorized person" as defined in subsection (2) of this section.

(9) "Director" means the director of the department of labor and industries, or his designated representative.

(10) "Division" means the division of industrial safety and health of the department.

(11) "Employer" means any person, firm, corporation, partnership, business trust, legal representative, or other business entity which engages in any business, industry, profession, or activity in this state and employs one or more employees or who contracts with one or more persons, the essence of which is the personal labor of such person or persons and includes the state, counties, cities, and all municipal corporations, public corporations, political subdivisions of the state, and charitable organizations: *Provided*, that any person, partnership, or business entity not having employees, and who is covered by the industrial insurance act shall be considered both an employer and an employee.

(12) "Equipment" means all machinery, devices, tools, facilities, safeguards, and protective construction used in connection with construction operations.

(13) "Hazard" means that condition, potential or inherent, which is likely to cause injury, death, or occupational disease.

(14) "Hazardous substance" means a substance which, by reason of being explosive, flammable, poisonous, corrosive, oxidizing, irritating, or otherwise harmful, is likely to cause death or injury.

(15) "Maintenance" means the work of keeping a building, machine, roadway, etc., in a state of good repair.

(16) "Part" means a major division, of this chapter, relating to a specific topic or topics and containing various sections, subsections, etc.

(17) "Qualified" means one who, by possession of a recognized degree, certificate, or professional standing, or who by extensive knowledge, training, and experience, has successfully demonstrated his ability to solve or resolve problems relating to the subject matter, the work, or the project.

(18) "Repair" means to restore a building, machine, roadway, etc., to an original state after damage or decay.

(19) "Safety factor" means the ratio of the ultimate breaking strength of a member or piece of material or equipment to the actual working stress or safe load when in use.

(20) "Safety and health standard" means a standard which requires the adoption or use of one or more practices, means, methods, operations, or processes reasonably necessary or appropriate to provide safe or healthful employment and places of employment.

(21) "Shall" means that the provision(s) of the standard are mandatory.

(22) "Substantial" means constructed of such strength, of such material, and of such workmanship, that the object referred to will withstand all normal wear, shock and usage.

(23) "Standard safeguard" means a device designed and constructed with the object of removing the hazard of accident incidental to the machine, appliance, tool, building, or equipment to which it is attached.

Standard safeguards shall be constructed of either metal or wood or other suitable material or a combination of these. The final determination of the sufficiency of any safeguard rests with the director of the department of labor and industries through the division of industrial safety and health.

(24) "Suitable" means that which fits, or has the qualities or qualifications to meet a given purpose, occasion, condition, function, or circumstance.

(25) "Supervisor" means the supervisor of the division of industrial safety and health.

(26) "Working day" means a calendar day, except Saturdays, Sundays, and legal holidays as set forth in RCW 1.16.050, as now or hereafter amended, and for the purposes of the computation of time within which an act is to be done under the provisions of this chapter, shall be computed by excluding the first working day and including the last working day.

(27) "Workmen," "personnel," "man," "person," "employee," and other terms of like meaning, unless the

context of the provision containing such term indicates otherwise, mean an employee of an employer who is employed in the business of his employer whether by way of manual labor or otherwise and every person in this state who is engaged in the employment of or who is working under an independent contract the essence of which is his personal labor for an employer whether by manual labor or otherwise.

(28) "Work place" means any plant, yard, premises, room, or other place where an employee or employees are employed for the performance of labor or service over which the employer has the right of access or control, and includes, but is not limited to, all work places covered by industrial insurance under Title 51 RCW, as now or hereafter amended.

(29) Abbreviations used in this chapter:

(a) "ANSI" means American National Standards Institute.

(b) "API" means American Petroleum Institute.

(c) "ASA" means American Standards Association.

(d) "ASAE" means American Society of Agricultural Engineers.

(e) "ASHRE" means American Society of Heating and Refrigeration Engineers.

(f) "ASME" means American Society of Mechanical Engineers.

(g) "ASTM" means American Society of Testing and Materials.

(h) "AWS" means American Welding Society.

(i) "BTU" means British thermal unit.

(j) "BTUH" means British thermal unit per hour.

(k) "CFM" means cubic feet per minute.

(l) "CFR" means Code of Federal Register.

(m) "CGA" means Compressed Gas Association.

(n) "CIE" means Commission Internationale de l'Eclairage.

(o) "DOT" means department of transportation.

(p) "FRP" means fiberglass reinforced plastic.

(q) "GPM" means gallons per minute.

(r) "ICC" means Interstate Commerce Commission.

(s) "ID" means inside diameter.

(t) "LPG" means liquefied petroleum gas.

(30) Additional abbreviations used in this chapter:

(a) "MCA" means Manufacturing Chemist Association.

(b) "NBFU" means National Board of Fire Underwriters.

(c) "NEMA" means National Electrical Manufacturing Association.

(d) "NFPA" means National Fire Protection Association.

(e) "NTP" means normal temperature and pressure.

(f) "OD" means outside diameter.

(g) "PSI" means pounds per square inch.

(h) "PSIA" means pounds per square inch absolute.

(i) "PSIG" means pounds per square inch gauge.

(j) "RMA" means Rubber Manufacturers Association.

(k) "SAE" means Society of Automotive Engineers.

(l) "TFI" means The Fertilizer Institute.

(m) "TSC" means Trailer Standard Code.

(n) "UL" means Underwriters' Laboratories, Inc.

(o) "USASI" means United States of America Standards Institute.

(p) "USC" means United States Code.

(q) "USCG" means United States Coast Guard.

(r) "WAC" means Washington Administrative Code.

(s) "WISHA" means Washington Industrial Safety and Health Act of 1973. [Order 74-26, § 296-155-012, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-015 Education and first-aid standards.** It shall be the duty of every employer to comply with such standards and systems of education for safety as shall be, from time to time, prescribed for such employer by the director of labor and industries through the division of industrial safety and health or by statute. Refer to WAC 296-155-100 through 296-155-135 for additional requirements. [Order 74-26, § 296-155-015, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-020 Housekeeping.** (1) During the course of construction, alteration, or repairs, form and scrap lumber with protruding nails, and all other debris, shall be kept cleared from work areas, passageways, and stairs, in and around buildings or other structures.

(2) Combustible scrap and debris shall be removed at regular intervals during the course of construction. Safe means shall be provided to facilitate such removal.

(3) Containers shall be provided for the collection and separation of waste, trash, oily and used rags, and other refuse. Containers used for garbage and other oily, flammable, or hazardous wastes, such as caustics, acids, harmful dusts, etc., shall be equipped with covers. Garbage and other waste shall be disposed of at frequent and regular intervals. [Order 74-26, § 296-155-020, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-030 Acceptable certifications.** (1) Pressure vessels. Current and valid certification by an insurance company or regulatory authority shall be deemed as acceptable evidence of safe installation, inspection, testing of pressure vessels provided by the employer.

(2) Boilers. Boilers provided by the employer shall be deemed to be in compliance with the requirements of this section when evidence of current and valid certification by an insurance company or regulatory authority attesting to the safe installation, inspection, and testing is presented.

(3) Other requirements. Regulations prescribing specific requirements for other types of pressure vessels and similar equipment are contained in Parts D and M of this chapter. [Order 74-26, § 296-155-030, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-035 General requirements.** (1) The use of any machinery, tool, material, or equipment which is not in compliance with any applicable requirements of this chapter is prohibited. Such machine, tool, material, or equipment shall either be identified as unsafe by tagging or locking the controls to render them

inoperable or shall be physically removed from its place of operation.

(2) The employer shall permit only those employees qualified by training or experience to operate equipment and machinery.

(3) Employees shall use safeguards provided for their protection.

(4) Loose or ragged clothing, scarfs or ties shall not be worn while working around moving machinery.

(5) When it is necessary for employees to work above other employees, those working underneath shall be notified, and when employees are put to work underneath other employees, those working overhead shall be notified.

(6) Employees shall report to their employers the existence of any unsafe equipment or method or any other hazard which, to their knowledge is unsafe and where such unsafe equipment or method or other hazard exists in violation of this chapter it shall be corrected.

(7) Nothing herein contained shall prevent the use of existing equipment during its lifetime provided it shall be properly safeguarded, maintained in good condition, be in conformity with applicable safety and health standards, and shall conform to safety factors for the material used, as herein provided. [Order 74-26, § 296-155-035, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-040 Safe place standards.** (1) Each employer shall furnish to each of his employees a place of employment free from recognized hazards that are causing or likely to cause serious injury or death to his employees.

(2) Every employer shall require safety devices, furnish safeguards, and shall adopt and use practices, methods, operations, and processes which are reasonably adequate to render such employment and place of employment safe. Every employer shall do every thing reasonably necessary to protect the life and safety of employees.

(3) No employer shall require any employee to go or be in any employment or place of employment which is hazardous to the employee.

(4) No employer shall fail or neglect:

(a) To provide and use safety devices and safeguards.

(b) To adopt and use methods and processes reasonably adequate to render the employment and place of employment safe.

(c) To do every thing reasonably necessary to protect the life and safety of employees.

(5) No employer, owner, or lessee of any real property shall construct or cause to be constructed any place of employment that is hazardous to the employee.

(6) No person shall do any of the following:

(a) Remove, displace, damage, destroy or carry off any safety device, safeguard, notice, or warning, furnished for use in any employment or place of employment.

(b) Interfere in any way with the use thereof by any other person.

(c) Interfere with the use of any method or process adopted for the protection of any employee, including himself, in such employment, or place of employment.

(d) Fail or neglect to do every thing reasonably necessary to protect the life and safety of employees.

(7) The use of intoxicants or debilitating drugs while on duty is prohibited. Employees under the influence of intoxicants or drugs shall not be permitted in or around worksites. This subsection (7) shall not apply to employees taking prescription drugs or narcotics as directed and prescribed by a physician, provided such use does not endanger the employee or others. [Order 74-26, § 296-155-040, filed 5/7/74, effective 6/6/74.]

## Part B

### OCCUPATIONAL HEALTH AND ENVIRONMENTAL CONTROL

#### WAC

296-155-100	Management's responsibility.
296-155-105	Employee's responsibility.
296-155-110	Accident prevention program.
296-155-115	Safety bulletin board.
296-155-120	First-aid training and certification.
296-155-125	First-aid kit.
296-155-130	First-aid station.
296-155-135	First-aid room.
296-155-140	Sanitation.
296-155-145	Occupational noise exposure.
296-155-150	Ionizing radiation.
296-155-155	Nonionizing radiation.
296-155-160	Gases, vapors, fumes, dusts, and mists.
296-155-165	Illumination.
296-155-170	Ventilation.

#### WAC 296-155-100 Management's responsibility.

(1) It shall be the responsibility of management to establish and supervise:

(a) A safe and healthful working environment.

(b) An accident prevention program as required by these standards.

(c) Training programs to improve the skill and competency of all employees in the field of occupational safety and health.

(d) A system for reporting and recording accidents that will fulfill requirements of chapter 296-27 WAC.

(2) Employees required to handle or use poisons, caustics, and other harmful substances shall be instructed regarding the safe handling and use, and be made aware of the potential hazards, personal hygiene, and personal protective measures required.

(3) In job site areas where harmful plants or animals are present, employees who may be exposed shall be instructed regarding the potential hazards, and how to avoid injury, and the first aid procedures to be used in the event of injury.

(4) Employees required to handle or use flammable liquids, gases, or toxic materials shall be instructed in the safe handling and use of these materials and made aware of the specific requirements contained in Parts B, D, and other applicable parts of this standard.

(5)(a) All employees required to enter into confined or enclosed spaces shall be instructed as to the nature of the hazards involved, the necessary precautions to be taken, and in the use of protective and emergency

equipment required. The employer shall comply with any specific regulations that apply to work in dangerous or potentially dangerous areas.

(b) For purposes of subdivision (a) of this subdivision, "confined or enclosed space" means any space having a limited means of egress, which is subject to the accumulation of toxic or flammable contaminants or has an oxygen deficient atmosphere. Confined or enclosed spaces include, but are not limited to, storage tanks, process vessels, bins, boilers, ventilation or exhaust ducts, sewers, underground utility vaults, tunnels, pipelines, and open top spaces more than 4 feet in depth such as pits, tubs, vaults, and vessels. [Order 76-6, § 296-155-100, filed 3/1/76; Order 74-26, § 296-155-100, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-105 Employee's responsibility.** (1) Employees shall coordinate and cooperate with all other employees in an attempt to eliminate accidents.

(2) Employees shall study and observe all safety standards governing their work.

(3) Employees shall apply the principles of accident prevention in their daily work and shall use proper safety devices and protective equipment as required by their employment or employer.

(4) Employees shall properly care for all personal protective equipment.

(5) Employees shall make a report, on the day of the incident, to their immediate supervisor, of each industrial injury or occupational illness, regardless of the degree of severity. [Order 74-26, § 296-155-105, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-110 Accident prevention program.**

(1) An accident prevention program, wherein there is equitable management-employee participation, shall be established in all establishments, industrial plants, or operations.

(2) It shall be the responsibility of the employer to initiate and maintain such accident prevention programs as may be necessary to comply with this part. The division may be contacted for assistance in initiating and maintaining an effective accident prevention program.

(3) All accident prevention programs shall be tailored to the needs of the particular operation.

(4) Employer and employee representatives, as elected, delegated or appointed, shall attend and actively take part in frequent and regular safety committee meetings.

(5) Accident prevention programs shall provide for employer-employee safety meetings and frequent and regular safety inspections of jobsites, materials, equipment, and operating procedures.

(6) Frequency of safety meetings and safety inspections shall be determined by the employer.

(7) Safety inspections shall be administered by competent personnel as designated by the employer.

(8) A record of safety activities, such as inspections and meetings, shall be maintained by the employer for a period covering the previous twelve months and shall be

made available, upon request, to noncompliance representatives of the department. [Order 74-26, § 296-155-110, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-115 Safety bulletin board.** There shall be installed and maintained in every fixed establishment (the place where employees regularly report to work) employing eight or more persons, a safety bulletin board sufficient in size to display and post safety bulletins, newsletters, posters, accident statistics and other safety educational material. [Order 74-26, § 296-155-115, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-120 First-aid training and certification.** The purpose of this section is to assure that all employees of this state can be afforded quick and effective first-aid attention in the event that an injury occurs on the job. The means of achieving this purpose is to assure the presence of personnel trained in first-aid procedures at or near those places where employees are working. Compliance with the provisions of this section may require the presence of more than one first-aid trained person.

(1) From the Revised Code of Washington (RCW 51.36.030) "Every employer . . . shall cooperate with the department in training one or more employees in first aid to the injured."

(2) There shall be present or available at all work sites, at all times, a person or persons holding a valid certificate of first aid training from the department of labor and industries, U.S. Bureau of Mines, the American Red Cross, or equivalent training that can be verified by documentary evidence. (A valid first aid certificate is one which is less than three years old.)

(3) Compliance with the requirements of subsection (2) of this section may be achieved as follows:

(a) All foremen, supervisors, or persons in direct charge of crews working in physically dispersed operations, shall have a valid first-aid certificate: *Provided*, That if the duties or work of the foreman, supervisor or person in direct charge of a crew, is absent from the crew, another person holding a valid first-aid certificate shall be present. For the purposes of this section, a crew shall mean a group of two or more employees working at a work site separate and remote from the main office or fixed work place (such as occurs in construction, logging, etc.)

(b) In fixed establishments, all foremen, supervisors, or persons in direct charge of a group or groups of employees shall have a valid first-aid certificate: *Provided*, That in fixed establishments where the foreman, supervisor, or person in charge has duties which require his absence from the work site of the group, another person holding a valid first-aid certificate shall be present or available to the group.

**NOTE:** In emergencies, foremen will be permitted to work up to 30 days without having the required certificate, providing an employee in the crew or another foreman in the immediate work area has the necessary certificate.

(c) In fixed establishments organized into distinct departments or equivalent organizational units such as department stores, large company offices, etc., a person or persons holding the valid first-aid certificate shall be available at all times employees are working within that department.

(d) In small businesses, offices or similar types of fixed workplaces, compliance with the requirements of subsection (2) of this section may be achieved by having a number of such small businesses, offices, etc., combined into a single unit for the purpose of assuring the continued presence or availability of a person or persons holding a valid first-aid training certificate.

A plan for combining a number of small businesses etc., into such a group shall be submitted to the safety education section of the division of industrial safety and health for approval. That section is also available for assisting employers who wish to develop such a plan. Criteria for approval by the division include:

(i) The businesses within the group must not be widely dispersed;

(ii) The person or persons holding the first-aid certificates, their usual places of work, their work phone numbers, and other appropriate information shall be posted in each establishment which is a member of the group, in a place which can reasonably be expected to give notice to employees of that establishment;

(iii) First-aid kits must be available as required by WAC 296-24-065, of the general safety and health standards.

(7) Those employers who believe that establishments for which they are responsible are proximate enough to a fixed location of professional medical services, such as a hospital, clinic, etc. and wish to be exempted from the requirements of this section, may apply to the department for a variance from these provisions according to RCW 49.17.080, 49.17.090, and the general safety and health standards WAC 296-24-010.

(8) Industrial first-aid course instructors will, upon request, be furnished by the division of industrial safety and health, department of labor and industries.

(9) A basic first-aid course recognized by the division of industrial safety and health, department of labor and industries requires instruction involving student participation in exercises involving the following:

- Bleeding control and bandaging.
- Practical methods of artificial respiration, including mouth to mouth and mouth to nose resuscitation.
- Closed chest massage.
- Burns, scalds.
- Sunstroke, heat exhaustion.
- Frostbite, freezing.
- Strains, sprains, hernias.
- Fractures, dislocations.
- Proper transportation of injured.
- Bites, stings.

Subjects covering specific health hazards likely to be encountered by coworkers of first-aid students enrolled

in the course. [Order 74-26, § 296-155-120, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-125 First-aid kit.** (1) All employers who employ men and women covered by the act shall furnish first-aid kits as required by the division of industrial safety and health, department of labor and industries, (RCW 51.36.030).

(2) First-aid supplies shall be readily accessible when required by this section.

(3) In the absence of readily accessible first-aid supplies such as first-aid kits, first-aid stations, first-aid rooms or their equivalent, all crew trucks, power shovels, cranes, locomotives, loaders, dozers, logging trucks, speeders, freight trucks and similar equipment shall be equipped with not less than a ten package first-aid kit.

(4) All crew vehicles used for transporting workers shall be equipped with not less than a ten package first-aid kit. When more than five employees are being transported on any one trip, the kit shall be increased in size to comply with a 16-, 24-, or 36-package kit depending upon the number of personnel normally being transported.

(5) At least one first-aid kit shall be available on construction jobs, line crews, and other transient or short duration jobs.

(6) The size and quantity of first-aid kits, required to be located at any site, shall be determined by the number of personnel normally dependent upon each kit as outlined in the following table:

Number of Personnel Normally Assigned To Worksite	Minimum First Aid Supplies Required At Worksite
1 - 50 persons	First-Aid kit
1 - 5	10 package Kit
6 - 15	16 package kit
16 - 30	24 package kit
31 - 50	36 package kit
51 - 200	First-aid Station
51 - 75	One 36 and one 10 package kit
76 - 100	One 36 and one 16 package kit
101 - 150	One 36 and one 24 package kit
151 - 200	Two 36 package kits
Over 200 persons	First-aid Room
	Refer to WAC 296-24-070

(7) Employers shall establish a procedure to ensure that first-aid kits and required contents are maintained in a serviceable condition.

(8) First-aid kits shall contain at least the following items, in a weatherproof container with individual sealed packages for each type of item:

#### 10 Package Kit

- 1 Pkg. adhesive bandages, 1" (16 per pkg.)
- 1 Pkg. bandage compress, 4" (1 per pkg.)
- 1 Pkg. scissors\* and tweezers (1 each per pkg.)
- 1 Pkg. triangular bandage, 40" (1 per pkg.)
- 1 Pkg. antiseptic soap or pads (3 per pkg.)
- 5 Pkgs. of consulting physician's choice\*\*

#### 16 Package Kit

- 1 Pkg. absorbent gauze, 24" x 72" (1 per pkg.)
- 1 Pkg. adhesive bandages, 1" (16 per pkg.)
- 2 Pkgs. bandage compresses, 4" (1 per pkg.)
- 1 Pkg. eye dressing (1 per pkg.)
- 1 Pkg. scissors\* and tweezers (1 each per pkg.)
- 2 Pkgs. triangular bandages, 40" (1 per pkg.)
- 1 Pkg. antiseptic soap or pads (3 per pkg.)
- 7 Pkgs. of consulting physician's choice\*\*

#### 24 Package Kit

- 2 Pkgs. absorbent gauze, 24" x 72" (1 per pkg.)
- 2 Pkgs. adhesive bandages, 1" (16 per pkg.)
- 2 Pkgs. bandage compresses, 4" (1 per pkg.)
- 1 Pkg. eye dressing (1 per pkg.)
- 1 Pkg. scissors\* and tweezers (1 each per pkg.)
- 6 Pkgs. triangular bandages, 40" (1 per pkg.)
- 1 Pkg. antiseptic soap or pads (3 per pkg.)
- 9 Pkgs. of consulting physician's choice\*\*

#### 36 Package Kit

- 4 Pkgs. absorbent gauze, 24" x 72" (1 per pkg.)
- 2 Pkgs. adhesive bandages, 1" (16 per pkg.)
- 5 Pkgs. bandage compresses, 4" (1 per pkg.)
- 2 Pkgs. eye dressing (1 per pkg.)
- 1 Pkg. scissors\* and tweezers (1 each per pkg.)
- 8 Pkgs. triangular bandages, 40" (1 per pkg.)
- 1 Pkg. antiseptic soap or pads (3 per pkg.)
- 13 Pkgs. of consulting physicians choice\*\*

\*Scissors shall be capable of cutting 2 layers or [of] 15 oz. cotton cloth or its equivalent.

\*\*First-aid kits shall be maintained at the ten, sixteen, twenty-four or thirty-six package level. In the event the consulting physician chooses not to recommend items, the department shall be contacted for recommended items to complete the kit.

(9) When practical, a poster shall be fastened and maintained either on or in the cover of each first-aid kit and at or near all phones plainly stating, the phone numbers of available doctors, hospitals, and ambulance services within the district of the worksite.

(10) Where the eyes or body of any person may be exposed to injurious chemicals and/or materials, suitable facilities for quick drenching or flushing of the eyes and body shall be provided, within the work area, for immediate emergency use.

(11) When required by the department, two wool blankets or two fire retardant blankets, capable of supporting 250 pounds each, and a stretcher shall be available in addition to first-aid kits. [Order 74-26, § 296-155-125, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-130 First-aid station.** (1) First-aid stations shall be located as close as practicable to the highest concentration of personnel.

(2) First-aid stations shall be well marked and available to personnel during all working hours.

(3) One person holding a valid first-aid certificate shall be responsible for the proper use and maintenance of the first-aid station.

(4) First-aid stations shall be equipped with a minimum of two first-aid kits, the size of which shall be dependent upon the number of personnel normally employed at the worksite. One first-aid kit may be a permanent wall-mounted kit, but in all cases the station shall be equipped with at least one portable first-aid kit.

(5) When required by the department, the station shall be equipped with two wool blankets, or two fire retardant blankets capable of supporting 250 pounds each, and a stretcher in addition to first-aid kits.

(6) A roster, denoting the telephone numbers and addresses of doctors, hospitals and ambulance services available to the worksite, shall be posted at each first-aid station. [Order 74-26, § 296-155-130, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-135 First-aid room.** Refer to the general safety and health standards, WAC 296-24-070. [Order 74-26, § 296-155-135, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-140 Sanitation.** (1) Potable water. (a) An adequate supply of potable water shall be provided in all places of employment.

(b) Portable containers used to dispense drinking water shall be capable of being tightly closed, and equipped with a tap. Water shall not be dipped from containers.

(c) Any container used to distribute drinking water shall be clearly marked as to the nature of its contents and not used for any other purpose.

(d) The common drinking cup is prohibited.

(e) Where single service cups (to be used but once) are supplied, both a sanitary container for the unused cups and a receptacle for disposing of the used cups shall be provided.

(f) All water containers used to furnish drinking water shall be thoroughly cleaned at least once each week or oftener as conditions require.

(2) Nonpotable water. (a) Outlets for nonpotable water such as water for industrial or firefighting purposes only, shall be identified by signs meeting the requirements of Part E of this chapter, to indicate clearly that the water is unsafe and is not to be used for drinking, washing, or cooking purposes.

(b) There shall be no cross-connection, open or potential, between a system furnishing potable water and a system furnishing nonpotable water.

(3) Toilets at construction jobsites. (a) Toilets shall be provided for employees according to the following table:

TABLE B-1

Number of Employees	Minimum Number of Facilities
1 - 20	1 toilet seat and 1 urinal
21 - 60	2 toilet seats and 2 urinals
61 - 70	3 toilet seats and 3 urinals
71 - 120	4 toilet seats and 4 urinals
121 - 150	5 toilet seats and 5 urinals
151 - 180	
Over 180	1 toilet seat and 1 urinal for each additional 40 employee or any fraction thereof.

NOTE: The prime contractor shall ensure the above toilet requirements are met.

(b) Under temporary field conditions not covered by subdivision (c) or (d) of this subsection, provisions shall be made to assure not less than one toilet facility is available.

(c) Job sites, not provided with a sanitary sewer, shall be provided with one of the following toilet facilities unless prohibited by local codes:

(i) Privies (where their use will not contaminate ground or surface water), for specifications refer to the general safety and health standards, WAC 296-24-13003;

(ii) Caustic chemical toilets, for specifications refer to the general safety and health standards WAC 296-24-13005;

(iii) Recirculating toilets, for specifications refer to the general safety and health standards WAC 296-24-13011;

(iv) Combustion toilets, for specifications refer to the general safety and health standards WAC 296-24-13009;

(v) Noncaustic chemical toilets, the following specifications shall pertain:

(A) A noncaustic chemical toilet shall be a self-contained unit equipped with a waste receiving chemical holding container.

(B) Rooms, buildings, or shelters housing noncaustic chemical toilets shall be of sound construction and easy to clean, and shall provide shelter and privacy. The toilet rooms shall be ventilated to the outside and adequately lighted, and all openings into the toilet room shall be covered with 16-mesh screen.

(C) Noncaustic chemical toilets shall be serviced on a regular schedule. Servicing shall include the use of a disinfectant for cleaning urinal and seat, removing waste from container, recharging container with an odor controlling chemical and installing an adequate supply of toilet tissue.

(D) Service must be performed in accordance with local codes by approved servicing organizations. Waste shall be disposed of or discharged in accordance with requirements of local health department regulations.

(E) Toilets shall be furnished on every third floor of multi-story worksites and shall be furnished to be within 200 feet horizontally of all employees.

(F) Portable containers for high-rise, tunnel or other nonaccessible work areas. A complete unit, i.e. seats and urinal with waste container should conform to regular unit standards except an enclosure is not required where an adequate shield or enclosure is provided in which the unit may be placed. The unit shall be returned to a convenient location on ground level in order to be serviced by a servicing company.

(G) Waste containers shall be fabricated from impervious materials, e.g. plastic, steel, fiberglass or their equal. Containers shall be water tight and capable of containing the chemical waste in a sanitary manner and the container shall be fitted to the building in a manner so as to prevent insects from entering from the exterior of the building. Containers shall be adequate in size to be used by the number of persons according to the schedule for minimum requirements without filling the container to more than half of its volume before regular schedule for servicing.

(H) Removal of waste shall be handled in a clean and sanitary manner by means of a vacuum hose and received by a leakproof tank truck. All valves on the tank shall be leak-proof.

(I) Provisions shall be made so service trucks have a clear approach and convenient access to the toilets which are to be serviced.

(J) Disposal of waste from tank trucks must be in accordance with local health department requirements. In the absence of provisions by local health departments, waste must be disposed of through municipal or district sanitary sewage systems. Municipal or area sanitary sewage district shall provide sewage disposal locations and facilities which are adequate and convenient for duly authorized toilet service organizations.

(d) The requirements of this section for sanitation facilities shall not apply to mobile crews having transportation readily available to nearby toilet facilities.

(4) Food handling. All employees' food service facilities and operations shall meet the applicable laws, ordinances, and regulations of the jurisdictions in which they are located.

(5) Temporary sleeping quarters. When temporary sleeping quarters are provided, they shall be heated, ventilated, and lighted.

(6) Washing facilities. The employer shall provide adequate washing facilities for employees engaged in the application of paints, coating, herbicides, or insecticides, or in other operations where contaminants may be harmful to the employees. Such facilities shall be in near proximity to the worksite and shall be so equipped as to enable employees to remove such substances. [Order 74-26, § 296-155-140, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-145 Occupational noise exposure.** Employees shall be protected against the effects of exposure to noise and shall be provided in accordance with WAC 296-62-09011. [Statutory Authority: RCW 49-17.040 and 49.17.050. 83-15-017 (Order 83-19), §

296-155-145, filed 7/13/83, effective 9/12/83; Order 76-29, § 296-155-145, filed 9/30/76; Order 74-26, § 296-155-145, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-150 Ionizing radiation.** (1) In construction and related activities involving the use of sources of ionizing radiation, the pertinent provisions of the Atomic Energy Commission's Standards for Protection Against Radiation, relating to protection against occupational radiation exposure, shall apply.

(2) Any activity which involves the use of radioactive material or x-ray, whether or not under license from the Atomic Energy Commission, shall be performed by competent persons specially trained in the proper and safe operation of such equipment. In the case of materials used under commission license, only persons actually licensed, or competent persons under direction and supervision of the licensee shall perform such work. [Order 74-26, § 296-155-150, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-155 Nonionizing radiation.** (1) Only qualified and trained employees shall be assigned to install, adjust, and operate laser equipment.

(2) Proof of qualification of the laser equipment operator shall be available and in possession of operator at all times.

(3) Employees, when working in areas in which a potential exposure to direct or reflected laser light greater than 0.005 watts (5 milliwatts) exists, shall be provided with antilaser eye protection devices specified in Part C of this chapter.

(4) Areas in which lasers are used shall be posted with standard laser warning placards.

(5) Beam shutters or caps shall be utilized, or the laser turned off, when laser transmission is not actually required. When the laser is left unattended for a substantial period of time, such as during lunch hour, overnight, or at change of shifts, the laser shall be turned off.

(6) Only mechanical or electronic means shall be used as a detector for guiding the internal alignment of the laser.

(7) The laser beam shall not be directed at employees.

(8) When it is raining or snowing, or when there is dust or fog in the air, and it is impracticable to cease laser system operation, employees shall be kept out of range of the area of source and target during such weather conditions.

(9) Laser equipment shall bear a label to indicate maximum output.

(10) Employees shall not be exposed to light intensities in excess of:

(a) Direct staring: 1 micro-watt per square centimeter;

(b) Incidental observing: 1 milliwatt per square centimeter;

(c) Diffused reflected light: 2 1/2 watts per square centimeter.

(11) Laser unit in operation shall be set up above the heads of the employees, when possible.

(12) Employees shall not be exposed to microwave power densities in excess of 10 milliwatts per square centimeter. [Order 74-26, § 296-155-155, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-160 Gases, vapors, fumes, dusts, and mists.** (1) Exposure of employees to inhalation, ingestion, skin absorption, or contact with any material or substance at a concentration above those specified in the general occupational health standards, WAC 296-62-07515 shall be avoided.

(2) To achieve compliance with (1) of this section, administrative or engineering controls must first be implemented whenever feasible. When such controls are not feasible to achieve full compliance, protective equipment or other protective measures shall be used to keep the exposure of employees to air contaminants within the limits prescribed in WAC 296-62-07515. Any equipment and technical measures used for this purpose must first be approved for each particular use by a competent industrial hygienist or other technically qualified person. Whenever respirators are used, their use shall comply with WAC 296-155-220.

(3) Subsections (1) and (2) of this section do not apply to the exposure of employees to airborne asbestos dust. Whenever any employee is exposed to airborne asbestos dust, the requirements of the general occupational health standards, WAC 296-62-07517 shall apply. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-155-160, filed 11/30/83; Order 74-26, § 296-155-160, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-165 Illumination.** (1) General. Construction areas, ramps, runways, corridors, offices, shops, and storage areas shall be lighted to not less than the minimum illumination intensities listed in Table B-3 while any work is in progress:

**TABLE B-3**

MINIMUM ILLUMINATION  
INTENSITIES IN FOOT-CANDLES

Foot-Candles	Area or operation
5	General construction area lighting.
3	General construction area, concrete placement, excavation and waste areas, accessways, active storage areas, loading platforms, refueling, and field maintenance areas.
5	Indoors: Warehouses, corridors, hallways, and exitways.

TABLE B-3

MINIMUM ILLUMINATION  
INTENSITIES IN FOOT-CANDLES

Foot-Candles	Area or operation
5	Tunnels, shafts, and general underground work areas: (Exception: Minimum of 10 foot-candles is required at tunnel and shaft heading during drilling, mucking, and scaling. Bureau of Mines approved cap lights shall be acceptable for use in the tunnel heading.)
10	General construction plant and shops (e.g., batch plants, screening plants, mechanical and electrical equipment rooms, carpenter shops, rigging lofts and active storerooms, barracks or living quarters, locker or dressing rooms, mess halls, and indoor toilets and workrooms).
30	First aid rooms, infirmaries, and offices.

(2) Other areas. For areas or operations not covered above, refer to the general occupational health standards, WAC 296-62-09003, for recommended values of illumination. [Order 74-26, § 296-155-165, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-170 Ventilation.** (1) General. Whenever hazardous substances such as dusts, fumes, mists, vapors, or gases exist or are produced in the course of construction work, their concentrations shall not exceed the limits specified in WAC 296-155-160(1). When ventilation is used as an engineering control method, the system shall be installed and operated according to the requirements of this section.

(2) Local exhaust ventilation. Local exhaust ventilation when used as described in (1) shall be designed to prevent dispersion into the air of dusts, fumes, mists, vapors, and gases in concentrations causing harmful exposure. Such exhaust systems shall be so designed that dusts, fumes, mists, vapors, or gases are not drawn through the work area of employees.

(3) Design and operation. Exhaust fans, jets, ducts, hoods, separators, and all necessary appurtenances, including refuse receptacles, shall be so designed, constructed, maintained and operated as to ensure the required protection by maintaining a volume and velocity of exhaust air sufficient to gather dusts, fumes, vapors, or gases from said equipment or process, and to convey them to suitable points of safe disposal, thereby preventing their dispersion in harmful quantities into the atmosphere where employees work.

(4) Duration of operations. (a) The exhaust system shall be in operation continually during all operations which it is designed to serve. If the employee remains in

the contaminated zone, the system shall continue to operate after the cessation of said operations, the length of time to depend upon the individual circumstances and effectiveness of the general ventilation system.

(b) Since dust capable of causing disability is, according to the best medical opinion, of microscopic size, tending to remain for hours in suspension in still air, it is essential that the exhaust system be continued in operation for a time after the work process or equipment served by the same shall have ceased, in order to ensure the removal of the harmful elements to the required extent.

NOTE: For the same reason, employees wearing respiratory equipment should not remove same immediately until a clear atmosphere has been established.

(5) Disposal of exhaust materials. The air outlet from every dust separator, and the dusts, fumes, mists, vapors, or gases collected by an exhaust or ventilating system shall discharge to the outside atmosphere. Collecting systems which return air to work area may be used if concentrations which accumulate in the work area air do not result in harmful exposure to employees. Dust and refuse discharged from an exhaust system shall be disposed of in such a manner that it will not result in harmful exposure to employees. [Order 74-26, § 296-155-170, filed 5/7/74, effective 6/6/74.]

## Part C

PERSONAL PROTECTIVE AND LIFE SAVING  
EQUIPMENT

## WAC

296-155-200	General requirements.
296-155-201	Definitions applicable to this chapter.
296-155-205	Head protection.
296-155-210	Hearing protection.
296-155-212	Foot protection.
296-155-215	Eye and face protection.
296-155-220	Respiratory protection.
296-155-225	Safety belts, lifelines, and lanyards.
296-155-230	Safety nets.
296-155-235	Working over or adjacent to water.
296-155-240	Sterilization of protective equipment.

**WAC 296-155-200 General requirements.** (1) Application. (a) Protective equipment, including personal protective equipment for eyes, face, head, and extremities, protective clothing, respiratory devices, and protective shields and barriers, shall be used, and maintained in a sanitary and reliable condition wherever it is necessary by reason of hazards of processes or environment, chemical hazards, radiological hazards, or mechanical irritants encountered in a manner capable of causing injury or impairment in the function of any part of the body through absorption, inhalation or physical contact.

(b) Employee owned equipment. Where employees provide their own protective equipment, the employer shall be responsible to assure its adequacy, including proper maintenance and sanitation of such equipment.

(c) Design. All personal protective equipment shall be of safe design and construction for the work to be performed.

(2) Construction personnel shall comply with plant or job safe practice and procedures, peculiar to particular industries and plants, relating to protective equipment and procedures when engaged in construction work in such plants.

(3) The employer is responsible for requiring the wearing of appropriate personal protective equipment in all operations where there is an exposure to hazardous conditions or where this part indicates a need for using such equipment to reduce the hazards to the employees.

(4) Where there is a danger of contact with moving parts of machinery, or the work process is such that a similar hazard exists:

(a) The clothing of employees shall fit closely about the body.

(b) Dangling neck wear, bracelets, wristwatches, rings, or similar articles shall not be worn by employees.

(c) Cranial and facial hair shall be completely confined or cut short.

(5) Employees, whose duties are regularly performed in areas and under circumstances when they are exposed to the danger of moving vehicles, shall wear work vests of highly visible materials, or equivalent distinguishing apparel.

NOTE: For additional personal protective and life saving equipment requirements, refer to the general safety and health standards, WAC 296-24-075 through 296-24-092.

[Order 76-29, § 296-155-200, filed 9/30/76; Order 74-26, § 296-155-200, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-201 Definitions applicable to this chapter.** (1) "Contaminant" means any material which by reason of its action upon, within, or to a person is likely to cause physical harm.

(2) "Lanyard" means a rope, suitable for supporting one person. One end is fastened to a safety belt or harness and the other end is secured to a substantial object or a safety line.

(3) "Lifeline" means a rope, suitable for supporting one person, to which a lanyard or safety belt (or harness) is attached.

(4) "O.D." means optical density and refers to the light refractive characteristics of a lens.

(5) "Radiant energy" means energy that travels outward in all directions from its source.

(6) "Safety belt" means a device, usually worn around the waist which, by reason of its attachment to a lanyard and lifeline or a structure, will prevent a worker from falling. [Order 76-6, § 296-155-201, filed 3/1/76.]

**WAC 296-155-205 Head protection.** (1) Employees working in areas where there is a possible danger of head injury from impact, or from falling or flying objects, or from electrical shock and burns, shall be protected by protective helmets.

(a) Helmets for the protection of employees against impact and/or penetration of falling and flying objects

shall meet the specifications contained in American National Standards Institute, Z89.1-1969, Safety Requirements for Industrial Head Protection.

(b) Helmets for the head protection of employees exposed to high voltage electrical shock and burns shall meet the specifications contained in American National Standards Institute, Z89.2-1971.

(2) Caps with metal buttons or metal visors shall not be worn around electrical hazards. [Order 74-26, § 296-155-205, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-210 Hearing protection.** The hearing protection requirements of the general occupational health standards, chapter 296-62 WAC, shall apply. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-155-210, filed 11/30/83; Order 74-26, § 296-155-210, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-212 Foot protection.** (1) Substantial footwear, made of leather or other equally firm material, shall be worn by employees in any occupation in which there is a danger of injury to the feet through falling or moving objects, or from burning, scalding, cutting, penetration, or like hazard.

(a) The soles and heels of such footwear shall be of a material that will not create a slipping hazard.

(b) Footwear that has deteriorated to a point where it does not provide the required protection shall not be used.

(2) Calks or other suitable footwear, which will afford reasonable protection from slipping, shall be worn while working on logs, poles, pilings, or similar round timbers. [Order 74-26, § 296-155-212, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-215 Eye and face protection.** (1) General. (a) Employees shall use eye and face protection equipment when machines or operations present potential eye or face injury from physical, chemical, or radiation agents.

(b) Eye and face protection equipment required by this part shall meet the requirements specified in American National Standards Institute, Z87.1-1968, Practice for Occupational and Educational Eye and Face Protection.

(c) Employees whose vision requires the use of corrective lenses in spectacles, when required by this regulation to wear eye protection, shall be protected by goggles or spectacles of one of the following types:

(i) Spectacles whose protective lenses provide optical correction;

(ii) Goggles that can be worn over corrective spectacles without disturbing the adjustment of the spectacles.

(iii) Goggles that incorporate corrective lenses mounted behind the protective lenses.

(d) Face and eye protection equipment shall be kept clean and in good repair. The use of this type equipment with structural or optical defects shall be prohibited.

(e) Table C-1 shall be used as a guide in the selection of face and eye protection for the hazards and operations noted.

TABLE C-1

EYE AND FACE PROTECTION SELECTION GUIDE

1. GOGGLES, flexible fitting, regular ventilation
2. GOGGLES, flexible fitting, hooded ventilation
3. GOGGLES, cushioned fitting, rigid body
- \*4. SPECTACLES, metal frame, with sideshields
- \*5. SPECTACLES, plastic frame with sideshields
- \*6. SPECTACLES, metal-plastic frame, with sideshields
- \*\*7. WELDING GOGGLES, eyecup type, tinted lenses (illustrated)
- 7A. CHIPPING GOGGLES, eyecup type, clear safety lenses (not illustrated)
- \*\*8. WELDING GOGGLES, coverspec type tinted lenses (illustrated)
- 8A. CHIPPING GOGGLES, coverspec type, clear safety lenses (not illustrated)
- \*\*9. WELDING GOGGLES, coverspec type, tinted plate lens
10. FACE SHIELD (available with plastic or mesh window)
11. WELDING HELMETS

\*Nonside shield spectacles are available for limited hazard use requiring only frontal protection.

\*\*See Table C-2 in (2) of this section, Filter lens shade numbers for protection against radiant energy.

APPLICATIONS		
OPERATION	HAZARDS	RECOMMENDED PROTECTORS: Underscored Numbers Signify Preferred Protection
ACETYLENE-BURNING ACETYLENE-CUTTING ACETYLENE-WELDING	SPARKS, HARMFUL RAYS, MOLTEN METAL, FLYING PARTICLES	<u>7</u> , <u>8</u> , <u>9</u>
CHEMICAL HANDLING	SPLASH, ACID BURNS, FUMES	<u>2</u> , <u>10</u> (For severe exposure add <u>10</u> over 2)
CHIPPING	FLYING PARTICLES	<u>1</u> , <u>3</u> , <u>4</u> , <u>5</u> , <u>6</u> , <u>7A</u> , <u>8A</u>
ELECTRIC (ARC) WELDING	SPARKS, INTENSE RAYS, MOLTEN METAL	<u>9</u> , <u>11</u> (11 in combination with 4, 5, 6, in tinted lenses, advisable)
FURNACE OPERATIONS	GLARE, HEAT, MOLTEN METAL	<u>7</u> , <u>8</u> , <u>9</u> (For severe exposure add <u>10</u> )
GRINDING-LIGHT	FLYING PARTICLES	<u>1</u> , <u>3</u> , <u>4</u> , <u>5</u> , <u>6</u> , <u>10</u>
GRINDING-HEAVY	FLYING PARTICLES	<u>1</u> , <u>3</u> , <u>7A</u> , <u>8A</u> (For severe exposure add 10)
LABORATORY	CHEMICAL SPLASH, GLASS BREAKAGE	<u>2</u> (10 when in combination with 4, 5, 6)
MACHINING	FLYING PARTICLES	<u>1</u> , <u>3</u> , <u>4</u> , <u>5</u> , <u>6</u> , <u>10</u>
MOLTEN METALS	HEAT, GLARE, SPARKS, SPLASH	<u>7</u> , <u>8</u> (10 in combination with <u>4</u> , <u>5</u> , <u>6</u> , in tinted lenses)
SPOT WELDING	FLYING PARTICLES, SPARKS	<u>1</u> , <u>3</u> , <u>4</u> , <u>5</u> , <u>6</u> , <u>10</u>

(2) Protection against radiant energy. (a) Selection of shade numbers for welding filter. Table C-2 shall be used as a guide for the selection of the proper shade numbers of filter lenses or plates used in welding. Shades more dense than those listed may be used to suit the individual's needs.

TABLE C-2

FILTER LENS SHADE NUMBERS FOR PROTECTION AGAINST RADIANT ENERGY

Welding Operation	Shade number
Shielded metal-arc welding 1/16-, 3/32-, 1/8-, 5/32-inch diameter electrodes . . . .	10
Gas-shielded arc welding (nonferrous) 1/16-, 3/32-, 1/8-, 5/32-inch diameter electrodes . . . . .	11
Gas-shielded arc welding (ferrous) 1/16-, 3/32-, 1/8-, 5/32-inch diameter electrodes . . . . .	12

TABLE C-2

FILTER LENS SHADE NUMBERS FOR PROTECTION AGAINST RADIANT ENERGY

Welding Operation	Shade number
Shielded metal-arc welding 3/16-, 7/32-, 1/4-inch diameter electrodes	12
5/16-, 3/8-inch diameter electrodes	14
Atomic hydrogen welding	10-14
Carbon-arc welding	14
Soldering	2
Torch brazing	3 or 4
Light cutting, up to 1 inch	3 or 4
Medium cutting, 1 inch to 6 inches	4 or 5
Heavy cutting, over 6 inches	5 or 6
Gas welding (light), up to 1/8-inch	4 or 5
Gas welding (medium), 1/8-inch to 1/2-inch	5 or 6
Gas welding (heavy), over 1/2-inch	6 or 9

(b) Laser protection. (i) Employees whose occupation or assignment requires exposure to laser beams in excess of 5 milliwatts of power shall wear suitable laser safety goggles which will protect for the specific wavelength of the laser and be of optical density (O.D.) adequate for the energy involved. Table C-3 lists the maximum power or energy density for which adequate protection is afforded by glasses of optical densities from 5 through 8.

TABLE C-3

SELECTING LASER SAFETY GLASS

INTENSITY	ATTENUATION	
	Optical density (O.D.)	Attenuation factor
CW maximum power density (watts/cm <sup>2</sup> )		
10 <sup>-2</sup>	5	10 <sup>5</sup>
10 <sup>-1</sup>	6	10 <sup>6</sup>
1.0	7	10 <sup>7</sup>
10.0	8	10 <sup>8</sup>

Output levels falling between lines in this table shall require the higher optical density.

(ii) All protective goggles shall bear a label identifying the following data:

- (a) The laser wavelengths for which use is intended;
- (b) The optical density of those wavelengths.
- (c) The visible light transmission. [Order 74-26, § 296-155-215, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-220 Respiratory protection.** General. In emergencies, or when controls required by Part B of this chapter either fail or are inadequate to prevent harmful exposure to employees, appropriate respiratory protective devices shall be provided by the employer and shall be used in accordance with WAC 296-62-071. [Statutory Authority: RCW 49.17.040 and 49.17.050.

83-15-017 (Order 83-19), § 296-155-220, filed 7/13/83, effective 9/12/83; Order 74-26, § 296-155-220, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-225 Safety belts, lifelines, and lanyards.**

NOTE: When temporary floors, staging, ladders, scaffolds or safety nets are provided, structural steel erectors (connectors) need not wear safety belts when the use of safety belts may provide an additional hazard. Follow-up steel erectors such as "bolters," "riveters," etc., are not exempt from this provision and must wear safety belts and lanyards and be tied off at all times, except when provided with a safety net.

(1) Where workers are employed 25 feet or more above the floor, ground, or water surface, and it is impracticable to provide temporary floors, staging, ladders, or scaffolds, safety nets or safety belts and life lines shall be provided and used.

(2) Lifelines, safety belts, and lanyards shall be used only for employee safeguarding. Any lifeline, safety belt, or lanyard actually subjected to in-service loading, as distinguished from static load testing, shall be immediately removed from service and shall not be used again for employee safeguarding.

(3) Lifelines shall be secured to an anchorage or structural member capable of supporting a minimum dead weight of 5,400 pounds, and shall extend below the operation a sufficient distance to permit a safe landing.

(4) Lifelines used on rock-scaling operations, or in areas where the lifeline may be subjected to cutting or abrasion, shall be a minimum of 7/8-inch wire core manila rope. For all other lifeline applications, a minimum of 3/4-inch manila or equivalent, with a minimum breaking strength of 5,400 pounds, shall be used.

(5) Safety belt lanyard shall be a minimum of 1/2-inch nylon, or equivalent, with a maximum length to provide for a fall of no greater than 6 feet. The rope shall have a nominal breaking strength of 5,400 pounds.

(6) All safety belt and lanyard hardware shall be drop forged or pressed steel, cadmium plated in accordance with type 1, Class B plating specified in Federal Specification QQ-P-416. Surface shall be smooth and free of sharp edges.

(7) All safety belt and lanyard hardware assemblies shall be capable of withstanding a tensile loading of 4,000 pounds without cracking, breaking, or taking a permanent deformation.

(8) No employee shall enter a gas main, sewer, sewer flue, duct, tunnel, or other similar place without first notifying the foreman of his intention to do so. He shall wear a safety belt with lifeline attached, when conditions require it, the line being held by a fellow worker stationed at the opening through which he enters. In such cases signals shall be agreed upon, and failure of the worker to respond to a signal shall be sufficient cause for immediate investigation. [Order 76-29, § 296-155-225, filed 9/30/76; Order 74-26, § 296-155-225, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-230 Safety nets.** (1) Safety nets shall be provided when workplaces are more than 25 feet above the ground or water surface, or other surface where the use of ladders, scaffolds, catch platforms, temporary floors, safety lines, or safety belts are impractical.

(2) Where safety net protection is required by this part, operations shall not be undertaken until the net is in place and has been tested. The manufacturer's current certification of testing shall satisfy the requirements of this subsection.

(3) (a) Nets shall extend 8 feet beyond the edge of the work surface where employees are exposed and shall be installed as close under the work surface as practical but in no case more than 25 feet below such work surface. Nets shall be hung with sufficient clearance to prevent user's contact with the surfaces or structures below. Such clearances shall be determined by impact load testing.

(b) It is intended that only one level of nets be required for bridge construction.

(4) The mesh size of nets shall not exceed 6 inches by 6 inches. All new nets shall meet accepted performance standards of 17,500 foot-pounds minimum impact resistance as determined and certified by the manufacturers, and shall bear a label of proof test. Edge ropes shall provide a minimum breaking strength of 5,000 pounds.

(5) Forged steel safety hooks or shackles shall be used to fasten the net to its supports.

(6) Connections between net panels shall develop the full strength of the net. [Order 74-26, § 296-155-230, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-235 Working over or adjacent to water.** (1) When an employee is employed under conditions which expose him to a risk of drowning, he shall wear a U.S. Coast Guard approved life saving device, unless it can be shown that conditions, such as shallow water, are such that flotation would not be achieved.

(2) Prior to and after each use, the buoyant life saving device shall be inspected for defects which would alter their strength or buoyancy. Defective units shall not be used.

(3) Ring buoys with at least 90 feet of line shall be provided and readily available for emergency rescue operations. Distance between ring buoys shall not exceed 200 feet.

(4) At least one lifesaving skiff shall be immediately available at locations where employees are working over or adjacent to water. Each skiff, or skiffs, shall:

(a) Be suitable for conditions where used.

(b) Be equipped with oar locks securely attached to gunwales, oars, one boat hook, and one cork ring buoy with fifty feet of suitable line attached.

(5) Whenever boats or skiffs cannot be used, due to swift currents, life lines close to the water surface shall be provided and, wherever practicable, a line shall be stretched across the stream with tag lines.

(6) Where workers are transported by boat or barge, only such number of persons shall be carried that can be

safely accommodated on fixed seats. Capacity showing number of persons shall be plainly marked on vessel.

(7) All workers shall be provided with a U.S. Coast Guard approved buoyant life saving device while transported in open boats and/or barges, and where deemed necessary by the department, workers shall wear same while in transport. [Order 74-26, § 296-155-235, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-240 Sterilization of protective equipment.** Goggles, gloves, respirators and other protectors shall not be interchanged among employees for use unless they have been thoroughly cleaned since last use. [Order 74-26, § 296-155-240, filed 5/7/74, effective 6/6/74.]

## Part D

### FIRE PROTECTION AND PREVENTION

#### WAC

296-155-250	Definitions applicable to this part.
296-155-260	Fire protection.
296-155-265	Fire prevention.
296-155-270	Flammable and combustible liquids.
296-155-275	Liquefied petroleum gas (LP-gas).
296-155-280	Temporary heating devices.

**WAC 296-155-250 Definitions applicable to this part.** (1) "Approved" for the purpose of this part, means equipment that has been listed or approved by a nationally recognized testing laboratory such as Factory Mutual Engineering Corp., or Underwriters' Laboratories, Inc., federal agencies such as Bureau of Mines or U.S. Coast Guard, which issue approvals for such equipment, or the department of labor and industries.

(2) "Closed container" means a container so sealed by means of a lid or other device that neither liquid nor vapor will escape from it at ordinary temperatures.

(3) "Combustible liquid" means any liquid having a flashpoint at or above 100°F. (37.8°C.). Combustible liquids shall be divided into two classes as follows:

(a) "Class II liquids" shall include those with flashpoints at or above 100°F. (37.8°C.) and below 140°F. (60°C.), except any mixture having components with flashpoints of 200°F. (93.3°C.) or higher, the volume of which make up 99 percent or more of the total volume of the mixture.

(b) "Class III liquids" shall include those with flashpoints at or above 140°F. (60°C.). Class III liquids are subdivided into two subclasses:

(i) "Class IIIA liquids" shall include those with flashpoints at or above 140°F. (60°C.) and below 200°F. (93.3°C.), except any mixture having components with flashpoints of 200°F. (93.3°C.), or higher, the total volume of which make up 99 percent or more of the total volume of the mixture.

(ii) "Class IIIB liquids" shall include those with flashpoints at or above 200°F. (93.3°C.). This section does not cover Class IIIB liquids. Where the term "Class III liquids" is used in this section, it shall mean only Class IIIA liquids.

(c) When a combustible liquid is heated for use to within 30°F. (16.7°C.) of its flashpoint, it shall be handled in accordance with the requirements for the next lower class of liquids.

(4) "Combustion" means any chemical process that involves oxidation sufficient to produce light or heat.

(5) "Fire brigade" means an organized group of employees that are knowledgeable, trained, and skilled in the safe evacuation of employees during emergency situations and in assisting in fire fighting operations.

(6) "Fire resistance" means so resistant to fire that, for specified time and under conditions of a standard heat intensity, it will not fail structurally and will not permit the side away from the fire to become hotter than a specified temperature. For purposes of this part, fire resistance shall be determined by the Standard Methods of Fire Tests of Building Construction and Materials, NFPA 251-72.

(7) "Flammable" means capable of being easily ignited, burning intensely or having a rapid rate of flame spread.

(8) "Flammable liquid" means any liquid having a flashpoint below 100°F. (37.8°C.), except any mixture having components with flashpoints of 100°F. (37.8°C.) or higher, the total of which make up 99 percent or more of the total volume of the mixture. Flammable liquids shall be known as Class I liquids. Class I liquids are divided into three classes as follows:

(a) Class IA shall include liquids having flashpoints below 73°F. (22.8°C.) and having a boiling point below 100°F. (37.8°C.).

(b) Class IB shall include liquids having flashpoints below 73°F. (22.8°C.) and having a boiling point at or above 100°F. (37.8°C.).

(c) Class IC shall include liquids having flashpoints at or above 73°F. (22.8°C.) and below 100°F. (37.8°C.).

(9) "Flashpoint" means the minimum temperature at which a liquid gives off vapor within a test vessel in sufficient concentration to form an ignitable mixture with air near the surface of the liquid, and shall be determined as follows:

(a) For a liquid which has a viscosity of less than 45 SUS at 100°F. (37.8°C.), does not contain suspended solids, and does not have a tendency to form a surface film while under test, the procedure specified in the Standard Method of Test for Flashpoint by Tag Closed Tester (ASTM D-56-70) shall be used.

(b) For a liquid which has a viscosity of 45 SUS or more at 100°F. (37.8°C.), or contains suspended solids, or has a tendency to form a surface film while under test, the Standard Method of Test for Flashpoint by Pensky-Martens Closed Tester (ASTM D-93-71) shall be used, except that the methods specified in Note 1 to section 1.1 of ASTM D-93-71 may be used for the respective materials specified in the note.

(10) "Liquified petroleum gases" "LPG" and "LP Gas" mean and include any material which is composed predominantly of any of the following hydrocarbons, or mixtures of them, such as propane, propylene, butane (normal butane or isobutane), and butylenes.

(11) "Portable tank" means a closed container having a liquid capacity more than 60 U.S. gallons, and not intended for fixed installation.

(12) "Safety can" means an approved closed container, of not more than 5 gallons capacity, having a flash-arresting screen, spring-closing lid and spout cover and so designed that it will safely relieve internal pressure when subjected to fire exposure.

(13) "Vapor pressure" means the pressure, measured in pounds per square inch (absolute), exerted by a volatile liquid as determined by the "Standard Method of Test for Vapor Pressure of Petroleum Products (Reid Method)," (ASTM D-323-68). [Order 74-26, § 296-155-250, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-260 Fire protection.** (1) General requirements. (a) The employer shall be responsible for development of a fire protection program to be followed throughout all phases of construction and demolition work, and he shall provide for firefighting equipment as specified in this part. As fire hazards occur, there shall be no delay in providing necessary equipment.

(b) Access to all available firefighting equipment shall be maintained at all times.

(c) All firefighting equipment, provided by the employer, shall be conspicuously located.

(d) All firefighting equipment shall be periodically inspected by a competent person, and maintained in operating condition. Defective equipment shall be immediately replaced.

(e) As warranted by the project, the employer shall provide a trained and equipped firefighting organization (fire brigade) to assure adequate protection to life.

(2) Water supply. (a) A temporary or permanent water supply, of sufficient volume, duration, and pressure, required to properly operate firefighting equipment shall be made available as soon as combustible materials accumulate.

(b) Where underground water mains are to be provided, they shall be installed, completed, and made available for use as soon as practicable.

(3) Portable firefighting equipment. (a) A fire extinguisher, rated not less than 2A, shall be provided for each 3,000 square feet of a combustible building area, or major fraction thereof. Travel distance from any point of the protected area to the nearest fire extinguisher shall not exceed a horizontal distance of 100 feet.

**NOTE:** One 55-gallon open drum of water with two fire pails may be substituted for a fire extinguisher having a 2A rating.

(b) A 1/2-inch diameter garden-type hose line, not to exceed 100 feet in length and equipped with a nozzle, may be substituted for a 2A-rated fire extinguisher, provided it is capable of discharging a minimum of 5 gallons per minute with a minimum hose stream range of 30 feet horizontally. The garden-type hose lines shall be mounted on conventional racks or reels. The number and location of hose racks or reels shall be such that at least one hose stream can be applied to all points in the area.

(c) One or more fire extinguishers, rated not less than 2A, shall be provided on each floor. In multistory buildings, where combustibles are present, at least one fire extinguisher shall be located adjacent to a stairway.

(d) Extinguishers and water drums, subject to freezing, shall be protected from freezing.

(e) A fire extinguisher, rated not less than 10B, shall be provided within 50 feet of wherever more than 5 gallons of flammable or combustible liquids or 5 pounds of flammable gas are being used on the jobsite. This requirement does not apply to the integral fuel tanks of motor vehicles.

(f) Carbon tetrachloride and other toxic vaporizing liquid fire extinguishers are prohibited.

(g) Portable fire extinguishers shall be inspected periodically and maintained in accordance with Maintenance and Use of Portable Fire Extinguishers, NFPA No. 10A-1972 and the general safety and health standards, WAC 296-24-59007.

(h) Fire extinguishers which have been listed or approved by a nationally recognized testing laboratory, shall be used to meet the requirements of this part.

**NOTE:** One hundred feet, or less, of 1-1/2 inch hose, with a nozzle capable of discharging water at 25 gallons or more per minute, may be substituted for a fire extinguisher rated not more than 2A in the designated area provided that the hose line can reach all points in the area.

(i) If fire hose connections are not compatible with local firefighting equipment, the contractor shall provide adapters, or equivalent, to permit connections.

(j) During demolition involving combustible materials, charged hose lines, supplied by hydrants, water tank trucks with pumps, or equivalent, shall be made available.

(4) Fixed firefighting equipment. (a) Sprinkler protection. (i) If the facility being constructed includes the installation of automatic sprinkler protection, the installation shall closely follow the construction and be placed in service as soon as applicable laws permit following completion of each story.

(ii) During demolition or alterations, existing automatic sprinkler installations shall be retained in service as long as reasonable. The operation of sprinkler control valves shall be permitted only by properly authorized persons.

**NOTE:** Modification of sprinkler systems to permit alterations or additional demolition should be expedited so that the automatic protection may be returned to service as quickly as possible. Sprinkler control valves shall be checked daily at close of work to ascertain that the protection is in service.

(b) Standpipes. In all structures in which standpipes are required, or where standpipes exist in structures being altered, they shall be brought up as soon as applicable laws permit, and shall be maintained as construction progresses in such a manner that they are always ready for fire protection use. The standpipes shall be provided

with Siamese fire department connections on the outside of the structure, at the street level, which shall be conspicuously marked. There shall be at least one standard hose outlet at each floor.

(5) Fire alarm devices. (a) An alarm system, e.g., telephone system, siren, etc., shall be established by the employer whereby employees on the site and the local fire department can be alerted for an emergency.

(b) The alarm code and reporting instructions shall be conspicuously posted at phones and at employee entrances.

(6) Fire cutoffs. (a) Fire walls and exit stairways, required for the completed buildings, shall be given construction priority. Fire doors, with automatic closing devices, shall be hung on openings as soon as practicable.

(b) Fire cutoffs shall be retained in buildings undergoing alterations or demolition until operations necessitate their removal. [Order 76-6, § 296-155-260, filed 3/1/76; Order 74-26, § 296-155-260, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-265 Fire prevention.** (1) Ignition hazards. (a) Electrical wiring and equipment for light, heat, or power purposes shall be installed in compliance with the requirements of the National Electrical Code, NFPA 70-1971; ANSI C1-1971 (Rev. of 1968), and the requirements of Part I of this chapter.

(b) Internal combustion engine powered equipment shall be so located that exhausts are well away from combustible materials. When exhausts are piped to outside the building under construction, a clearance of at least 6 inches shall be maintained between such piping and combustible material.

(c) Smoking shall be prohibited at or in the vicinity of operations which constitute a fire hazard, and shall be conspicuously posted: "No smoking or open flame."

(d) Portable battery powered lighting equipment, used in connection with the storage, handling, or use of flammable gases or liquids, shall be of the type approved for the hazardous locations.

(e) The nozzle of air, inert gas, and steam lines or hoses, when used in the cleaning or ventilation of tanks and vessels that contain hazardous concentrations of flammable gases or vapors, shall be bonded to the tank or vessel shell. Bonding devices shall not be attached or detached in hazardous concentrations of flammable gases or vapors.

(f) Workers shall not take open lights or open flames near or in an open sewer manhole, gas main, conduit or other similar place until the absence of explosive or harmful gases has been assured. Open lights or flames shall not be carried into areas and enclosures where flammable vapors or exposed low flash point solvents exist. Only approved and suitable protected lights shall be used.

(2) Temporary buildings. (a) No temporary building shall be erected where it will adversely affect any means of exit.

(b) Temporary buildings, when located within another building or structure, shall be of either noncombustible

construction or of combustible construction having a fire resistance of not less than 1 hour.

(c) Temporary buildings, located other than inside another building and not used for the storage, handling, or use of flammable or combustible liquids, flammable gases, explosives, or blasting agents, or similar hazardous occupancies, shall be located at a distance of not less than 10 feet from another building or structure. Groups of temporary buildings, not exceeding 2,000 square feet in aggregate, shall, for the purpose of this part, be considered a single temporary building.

(3) Open yard storage. (a) Combustible materials shall be piled with due regard to the stability of piles and in no case higher than 20 feet.

(b) Driveways between and around combustible storage piles shall be at least 15 feet wide and maintained free from accumulation of rubbish, equipment, or other articles or materials. Driveways shall be so spaced that a maximum grid system unit of 50 feet by 150 feet is produced.

(c) The entire storage site shall be kept free from accumulation of unnecessary combustible materials. Weeds and grass shall be kept down and a regular procedure provided for the periodic cleanup of the entire area.

(d) When there is a danger of an underground fire, that land shall not be used for combustible or flammable storage.

(e) Method of piling shall be solid wherever possible and in orderly and regular piles. No combustible material shall be stored outdoors within 10 feet of a building or structure.

(f) Portable fire extinguishing equipment, suitable for the fire hazard involved, shall be provided at convenient, conspicuously accessible locations in the yard area. Portable fire extinguishers, rated not less than 2A, shall be placed so that maximum travel distance to the nearest unit shall not exceed 100 feet.

(4) Indoor storage. (a) Storage shall not obstruct, or adversely affect, means of exit.

(b) All materials shall be stored, handled, and piled with due regard to their fire characteristics.

(c) Noncompatible materials, which may create a fire hazard, shall be segregated by a barrier having a fire resistance of at least 1 hour.

(d) Material shall be piled to minimize the spread of fire internally and to permit convenient access for fire-fighting. Stable piling shall be maintained at all times. Aisle space shall be maintained to safely accommodate the widest vehicle that may be used within the building for fire-fighting purposes.

(e) Clearance of at least 36 inches shall be maintained between the top level of the stored material and the sprinkler deflectors.

(f) Clearance shall be maintained around lights and heating units to prevent ignition of combustible materials.

(g) A clearance of 24 inches shall be maintained around the path of travel of fire doors unless a barricade is provided, in which case no clearance is needed. Material shall not be stored within 36 inches of a fire door

opening. [Order 74-26, § 296-155-265, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-270 Flammable and combustible liquids.** (1) General requirements. (a) Only approved containers and portable tanks shall be used for storage and handling of flammable and combustible liquids. Approved metal safety cans shall be used for the handling and use of flammable liquids in quantities greater than one gallon, except that this shall not apply to those flammable liquid materials which are highly viscid (extremely hard to pour), which may be used and handled in original shipping containers. For quantities of one gallon or less, only the original container or approved metal safety cans shall be used for storage, use, and handling of flammable liquids.

(b) Flammable or combustible liquids shall not be stored in areas used for exits, stairways, or normally used for the safe passage of people.

(2) Indoor storage of flammable and combustible liquids. (a) No more than 25 gallons of flammable or combustible liquids shall be stored in a room outside of an approved storage cabinet. For storage of liquid petroleum gas, see WAC 296-155-275.

(b) Quantities of flammable and combustible liquid in excess of 25 gallons shall be stored in an acceptable or approved cabinet meeting the following requirements:

(i) Acceptable wooden storage cabinets shall be constructed in the following manner, or equivalent: The bottom, sides, and top shall be constructed of an exterior grade of plywood at least 1 inch in thickness, which shall not break down or delaminate under standard fire test conditions. All joints shall be rabbeted and shall be fastened in two directions with flathead wood screws, when more than one door is used, there shall be a rabbeted overlap of not less than 1 inch. Steel hinges shall be mounted in such a manner as to not lose their holding capacity due to loosening or burning out of the screws when subjected to fire. Such cabinets shall be painted inside and out with fire retardant paint.

(ii) Approved metal storage cabinets will be acceptable.

(iii) Cabinets shall be labeled in conspicuous lettering, "Flammable—Keep fire away."

(c) Not more than 60 gallons of flammable or 120 gallons of combustible liquids shall be stored in any one storage cabinet. Not more than three such cabinets may be located in a single storage area. Quantities in excess of this shall be stored in an inside storage room.

(d) (i) Inside storage room shall be constructed to meet the required fire-resistive rating for their use. Such construction shall comply with the test specifications set forth in Standard Methods of Fire Test of Building Construction and Material, NFPA 251-1972.

(ii) Where an automatic extinguishing system is provided, the system shall be designed and installed in an approved manner. Openings to other rooms or buildings shall be provided with noncombustible liquid-tight raised sills or ramps at least 4 inches in height, or the floor in the storage area shall be at least 4 inches below the surrounding floor. Openings shall be provided with

approved self-closing fire doors. The room shall be liquid-tight where the walls join the floor. A permissible alternate to the sill or ramp is an open-grated trench, inside of the room, which drains to a safe location. Where other portions of the building or other buildings are exposed, windows shall be protected as set forth in the Standard for Fire Doors and Windows, NFPA No. 80-1970, for Class E or F openings. Wood of at least 1-inch nominal thickness may be used for shelving, racks, dunnage, scuffboards, floor overlay and similar installations.

(iii) Materials which will react with water and create a fire hazard shall not be stored in the same room with flammable or combustible liquids.

(iv) Storage in inside storage rooms shall comply with Table D-2 following:

TABLE D-2

Fire protection provided	Fire resistance	Maximum size	Total allowable quantities gals./sq. ft./floor area
Yes	2 hrs.	500 sq. ft.	10
No	2 hrs.	500 sq. ft.	4
Yes	1 hr.	150 sq. ft.	5
No	1 hr.	150 sq. ft.	2

NOTE: Fire protection system shall be sprinkler, water spray, carbon dioxide or other system approved by a nationally recognized testing laboratory for this purpose.

(v) Electrical wiring and equipment located in inside storage rooms shall be approved for Class 1, Division 1, Hazardous locations. For definition of Class 1, Division 1, Hazardous locations, see WAC 296-155-455.

(vi) Every inside storage room shall be provided with either a gravity or a mechanical exhausting system. Such system shall commence not more than 12 inches above the floor and be designed to provide for a complete change of air within the room at least 6 times per hour. If a mechanical exhausting system is used, it shall be controlled by a switch located outside of the door. The ventilating equipment and any lighting fixtures shall be operated by the same switch. An electric pilot light shall be installed adjacent to the switch if flammable liquids are dispensed within the room. Where gravity ventilation is provided, the fresh air intake, as well as the exhausting outlet from the room, shall be on the exterior of the building in which the room is located.

(vii) In every inside storage room there shall be maintained one clear aisle at least 3 feet wide. Containers over 30 gallons capacity shall not be stacked one upon the other.

(viii) Flammable and combustible liquids in excess of that permitted in inside storage rooms shall be stored

outside of buildings in accordance with (3) of this section.

(3) Storage outside buildings. (a) Storage of containers (not more than 60 gallons each) shall not exceed 1,100 gallons in any one pile or area. Piles or groups of containers shall be separated by a 5-foot clearance. Piles or groups of containers shall not be nearer than 20 feet to a building.

(b) Within 200 feet of each pile of containers, there shall be a 12-foot-wide access way to permit approach of fire control apparatus.

(c) The storage area shall be graded in a manner to divert possible spills away from buildings or other exposures, or shall be surrounded by a curb or earth dike at least 12 inches high. When curbs or dikes are used, provisions shall be made for draining off accumulations of ground or rain water, or spills of flammable or combustible liquids. Drains shall terminate at a safe location and shall be accessible to operation under fire conditions.

(d) Outdoor portable tank storage. (i) Portable tanks shall not be nearer than 20 feet from any building. Two or more portable tanks, grouped together, having a combined capacity in excess of 2,200 gallons, shall be separated by a 5-foot-clear area. Individual portable tanks exceeding 1,100 gallons shall be separated by a 5-foot-clear area.

(ii) Within 200 feet of each portable tank, there shall be a 12-foot-wide access way to permit approach of fire control apparatus.

(e) Storage areas shall be kept free of weeds, debris, and other combustible material not necessary to the storage.

(f) Portable tanks, not exceeding 660 gallons, shall be provided with emergency venting and other devices, as required by chapters III and IV of NFPA 30-1972, The Flammable and Combustible Liquids Code.

(g) Portable tanks, in excess of 660 gallons, shall have emergency venting and other devices, as required by chapters II and III of the Flammable and Combustible Liquids Code, NFPA 30-1972.

(4) Fire control for flammable or combustible liquid storage. (a) At least one portable fire extinguisher, having a rating of not less than 20-B units, shall be located outside of, but not more than 10 feet from, the door opening into any room used for storage of more than 60 gallons of flammable or combustible liquids.

(b) At least one portable fire extinguisher having a rating of not less than 20-B units shall be located not less than 25 feet, nor more than 75 feet, from any flammable liquid storage area located outside.

(c) When sprinklers are provided, they shall be installed in accordance with the Standard for the Installation of Sprinkler Systems, NFPA 13-1972.

(d) At least one portable fire extinguisher having a rating of not less than 20-B:C units shall be provided on all tank trucks or other vehicles used for transporting and/or dispensing flammable or combustible liquids.

(5) Dispensing liquids. (a) Areas in which flammable or combustible liquids are transferred at the same time, in quantities greater than 5 gallons from one tank or

container to another tank or container, shall be separated from other operations by 25-foot distance or by construction having a fire-resistance of at least 1 hour. Drainage or other means shall be provided to control spills. Adequate natural or mechanical ventilation shall be provided to maintain the concentration of flammable vapor at or below 10 percent of the lower flammable limit.

(b) Transfer flammable liquids from one container to another shall be done only when containers are electrically interconnected (bonded).

(c) Flammable or combustible liquids shall be drawn from or transferred into vessels, containers, or tanks within a building or outside only through a closed piping system, from safety cans, by means of a device drawing through the top, or from a container, or portable tanks, by gravity or pump, through an approved self-closing valve. Transferring by means of air pressure on the container or portable tank is prohibited.

(d) The dispensing units shall be protected against collision damage.

(e) Dispensing devices and nozzles for flammable liquids shall be of an approved type.

(6) Handling liquids at point of final use. (a) Flammable liquids shall be kept in closed containers when not actually in use.

(b) Leakage or spillage of flammable or combustible liquids shall be disposed of promptly and safely.

(c) Flammable liquids shall be used only where there are no open flames or other sources of ignition within 50 feet of the operation, unless conditions warrant greater clearance.

(7) Service and refueling areas. (a) Flammable or combustible liquids shall be stored in approved closed containers, in tanks located underground, or in above-ground portable tanks.

(b) The tank trucks shall comply with the requirements covered in the Standard for Tank Vehicles for Flammable and Combustible Liquids, NFPA No. 385-1971.

(c) The dispensing hose shall be an approved type.

(d) The dispensing nozzle shall be an approved automatic-closing type without a latch-open device.

(e) Underground tanks shall not be abandoned.

(f) Clearly identified and easily accessible switch(es) shall be provided at a location remote from dispensing devices to shut off the power to all dispensing devices in the event of an emergency.

(g) (i) Heating equipment of an approved type may be installed in the lubrication or service area where there is no dispensing or transferring of flammable liquids, provided the bottom of the heating unit is at least 18 inches above the floor and is protected from physical damage.

(ii) Heating equipment installed in lubrication or service areas, where flammable liquids are dispensed, shall be of an approved type for garages, and shall be installed at least 8 feet above the floor.

(h) There shall be no smoking or open flames in the areas used for fueling, servicing fuel systems for internal

combustion engines, receiving or dispensing of flammable or combustible liquids.

(i) Conspicuous and legible signs prohibiting smoking shall be posted.

(j) The motors of all equipment being fueled shall be shut off during the fueling operation.

(k) Each service or fueling area shall be provided with at least one fire extinguisher having a rating of not less than 20BC located so that an extinguisher will be within 75 feet of each pump, dispenser, underground fill pipe opening, and lubrication or service area. [Order 74-26, § 296-155-270, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-275 Liquefied petroleum gas (LP-gas).** (1) Approval of equipment and systems. (a) Each system shall have containers, valves, connectors, manifold valve assemblies, and regulators of an approved type.

(b) All cylinders shall meet the department of transportation specification identification requirements published in 49 CFR Part 178, Shipping Container Specifications.

(2) Welding on LP-gas containers. Welding is prohibited on containers.

(3) Container valves and container accessories. (a) Valves, fittings, and accessories connected directly to the container, including primary shut off valves, shall have a rated working pressure of at least 250 p.s.i.g. and shall be of material and design suitable for LP-gas service.

(b) Connections to containers, except safety relief connections, liquid level gauging devices, and plugged openings, shall have shutoff valves located as close to the container as practicable.

(4) Safety devices. (a) Every container and every vaporizer shall be provided with one or more approved safety relief valves or devices. These valves shall be arranged to afford free vent to the outer air with discharge not less than 5 feet horizontally away from any opening into a building which is below such discharge.

(b) Shutoff valves shall not be installed between the safety relief device and the container, or the equipment or piping to which the safety relief device is connected, except that a shutoff valve may be used where the arrangement of this valve is such that full required capacity flow through the safety relief device is always afforded.

(c) Container safety relief devices and regulator relief vents shall be located not less than 5 feet in any direction from air openings into sealed combustion system appliances or mechanical ventilation air intakes.

(5) Dispensing. (a) Filling of fuel containers for trucks or motor vehicles from bulk storage containers shall be performed not less than 10 feet from the nearest masonry-walled building, or not less than 25 feet from the nearest building or other construction and, in any event, not less than 25 feet from any building opening.

(b) Filling of portable containers or containers mounted on skids from storage containers shall be performed not less than 50 feet from the nearest building.

(6) Requirements for appliances. (a) LP-gas consuming appliances shall be approved types.

(b) Any appliance that was originally manufactured for operation with a gaseous fuel other than LP-gas, and is in good condition, may be used with LP-gas only after it is properly converted, adapted, and tested for performance with LP-gas before the appliance is placed in use.

(7) Containers and regulating equipment installed outside of buildings or structures. containers shall be upright upon firm foundations or otherwise firmly secured. The possible effect on the outlet piping of settling shall be guarded against by a flexible connection or special fitting.

(8) Containers and equipment used inside of buildings or structures. (a) When operational requirements make portable use of containers necessary, and their location outside of buildings or structures is impracticable, containers and equipment shall be permitted to be used inside of buildings or structures in accordance with subdivisions (b) through (k) of this subsection.

(b) "Containers in use" means connected for use.

(c) Systems utilizing containers having a water capacity greater than 2 1/2-pounds (nominal 1 pound LP-gas capacity) shall be equipped with excess flow valves. Such excess flow valves shall be either integral with the container valves or in the connections to the container valve outlets.

(d) Regulators shall be either directly connected to the container valves or to manifolds connected to the container valves. The regulator shall be suitable for use with LP-gas. Manifolds and fittings connecting containers to pressure regulator inlets shall be designed for at least 250 p.s.i.g. service pressure.

(e) Valves on containers having water capacity greater than 50 pounds (nominal 20 pounds LP-gas capacity) shall be protected from damage while in use or storage.

(f) Aluminum piping or tubing shall not be used.

(g) Hose shall be designed for a working pressure of at least 250 p.s.i.g. Design, construction, and performance of hose, and hose connections shall have their suitability determined by listing by a nationally recognized testing agency. The hose length shall be as short as practicable. Hoses shall be long enough to permit compliance with spacing provisions of subdivisions (a) through (m) of this subsection, without kinking or straining, or causing hose to be so close to a burner as to be damaged by heat.

(h) Portable heaters, including salamanders, shall be equipped with an approved automatic device to shut off the flow of gas to the mainburner, and pilot if used, in the event of flame failure. Such heaters, having inputs above 50,000 BTU per hour, shall be equipped with either a pilot, which must be lighted and proved before the main burner can be turned on, or an electrical ignition system.

NOTE: The provisions of this subdivision do not apply to portable heaters under 7,500 BTU per hour input when used with containers having a maximum water capacity of 2 1/2 pounds.

(i) Container valves, connectors, regulators, manifolds, piping, and tubing shall not be used as structural supports for heaters.

(j) Containers, regulating equipment, manifolds, pipe, tubing, and hose shall be located to minimize exposure to high temperatures or physical damage.

(k) Containers having a water capacity greater than 2 1/2 pounds (nominal 1 pound LP-gas capacity) connected for use shall stand on a firm and substantially level surface and, when necessary, shall be secured in an upright position.

(l) The maximum water capacity of individual containers shall be 245 pounds (nominal 100 pounds LP-gas capacity).

(m) For temporary heating, heaters (other than integral heater-container units) shall be located at least 6 feet from any LP-gas container. This shall not prohibit the use of heaters specifically designed for attachment to the container or to a supporting standard, provided they are designed and installed so as to prevent direct or radiant heat application from the heater onto the containers. Blower and radiant type heaters shall not be directed toward any LP-gas container within 20 feet.

(n) If two or more heater-container units, of either the integral or nonintegral type, are located in an unpartitioned area on the same floor, the container or containers of each unit shall be separated from the container or containers of any other unit by at least 20 feet.

(o) When heaters are connected to containers for use in an unpartitioned area on the same floor, the total water capacity of containers, manifolded together for connection to a heater or heaters, shall not be greater than 735 pounds (nominal 300 pounds LP-gas capacity). Such manifolds shall be separated by at least 20 feet.

(p) Storage of containers awaiting use shall be in accordance with subsections (10) and (11) of this section.

(9) Multiple container systems. (a) Valves in the assembly of multiple container systems shall be arranged so that replacement of containers can be made without shutting off the flow of gas in the system. This provision is not to be construed as requiring an automatic change-over device.

(b) Heaters shall be equipped with an approved regulator in the supply line between the fuel cylinder and the heater unit. Cylinder connectors shall be provided with an excess flow valve to minimize the flow of gas in the event the fuel line becomes ruptured.

(c) Regulators and low-pressure relief devices shall be rigidly attached to the cylinder valves, cylinders, supporting standards, the building walls, or otherwise rigidly secured, and shall be so installed or protected from the elements.

(10) Storage of LPG containers. Storage of LPG within building is prohibited.

(11) Storage outside of buildings. (a) Storage outside of buildings, for containers awaiting use, shall be located from the nearest building or group of buildings, in accordance with Table D-3:

TABLE D-3

Quantity of LP-gas stored:	Distance (feet)
500 lbs. or less _____	0
501 to 6,000 lbs. _____	10
6,001 to 10,000 lbs. _____	20
Over 10,000 lbs. _____	25

(b) Containers shall be in a suitable ventilated enclosure or otherwise protected against tampering, or possible damage by vehicular traffic.

(12) Fire protection. Storage locations shall be provided with at least one approved portable fire extinguisher having a rating of not less than 20-B:C. [Order 76-29, § 296-155-275, filed 9/30/76; Order 74-26, § 296-155-275, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-280 Temporary heating devices.** (1) Ventilation. (a) Fresh air shall be supplied in sufficient quantities to maintain the health and safety of workers. Where natural means of fresh air supply is inadequate, mechanical ventilation shall be provided.

(b) When heaters are used in confined spaces, special care shall be taken to provide sufficient ventilation in order to ensure proper combustion, maintain the health and safety of workers, and limit temperature rise in the area.

(2) Clearance and mounting. (a) Temporary heating devices shall be installed to provide clearance to combustible material not less than the amount shown in Table D-4.

(b) Temporary heating devices, which are listed for installation with lesser clearances than specified in Table D-4, may be installed in accordance with their approval.

TABLE D-4

Heating appliances	Minimum clearance, (inches)		
	Sides	Rear	Chimney connector
Room heater, circulating type _____	12	12	18
Room heater, radiant type _____	36	36	18

(c) Heaters not suitable for use on wood floors shall not be set directly upon them or other combustible materials. When such heaters are used, they shall rest on suitable heat insulating material or at least 1-inch concrete, or equivalent. The insulating material shall extend beyond the heater 2 feet or more in all directions.

(d) Heaters used in the vicinity of combustible tarpaulins, canvas, or similar coverings shall be located at least 10 feet from the coverings. The coverings shall be securely fastened to prevent ignition or upsetting of

the heater due to wind action on the covering or other material.

(3) Stability. Heaters, when in use, shall be set horizontally level, unless otherwise permitted by the manufacturer's markings.

(4) Oil-fired heaters. (a) Flammable liquid-fired heaters shall be equipped with a primary safety control to stop the flow of fuel in the event of flame failure. Barometric or gravity oil feed shall not be considered a primary safety control.

(b) Heaters designed for barometric or gravity oil feed shall be used only with the integral tanks.

(c) Heaters specifically designed and approved for use with separate supply tanks may be directly connected for gravity feed, or an automatic pump, from a supply tank.

(5) Salamanders. (a) Coverage. The use of solid fuel salamanders is prohibited in buildings and on scaffolds.

(b) General requirements. (i) All solid fuel salamanders shall be designed and constructed for use with solid fuel, that is, coal or coke.

(ii) Solid fuel salamanders shall be equipped with a cover designed as part of the unit, to prevent spillage of burning material in case of tipover.

(iii) Salamanders shall be assembled in accordance with the instructions issued by the manufacturer.

(iv) The safeguards engineered into the product shall be maintained and any replacement shall be equivalent thereto.

(v) Salamanders shall be stored in such a manner as to prevent deterioration or damage to the unit.

(c) Operation. (i) Manufacturers' instructions shall be followed by the user.

(ii) Each time a salamander is placed in operation it shall be checked to insure that it is functioning properly. Its operation shall be checked periodically thereafter.

(iii) When concentrations of carbon monoxide attain quantities greater than 50 parts per million (0.005 percent) to air volume at employee breathing levels, the salamander shall be extinguished unless additional natural or mechanical ventilation is provided to reduce the carbon monoxide content to permissible limits.

(iv) Tests for presence of carbon monoxide shall be made by a qualified person within 1 hour after the start of each shift and at least every 3 hours thereafter. If concentrations of carbon monoxide reach 30 parts per million to air volume, tests shall be made more frequently to determine if there is a continuing increase of carbon monoxide concentration.

(v) Records of all tests including the date, time, results obtained, and person making tests, shall be maintained for the duration of the project.

(vi) No persons shall be permitted to be within the area being heated by the salamanders except under the following circumstances: When tending the salamanders; when testing the atmosphere; or in emergency situations.

(vii) No employee shall be permitted to enter the heated area until notification is given to another person located outside. Periodic checks shall be made to ensure the health and safety of employees entering the heated area.

(viii) When a salamander is being used, the responsibility for its operation and maintenance shall be assigned to a qualified employee.

(ix) Salamanders shall not be moved, handled, or serviced while hot or burning, or while component parts are hot to the touch.

(x) Salamanders, when in use, shall be set level with the horizontal unless otherwise permitted by the manufacturer's markings. Salamanders shall be designed so as not to tip over when placed on a surface inclined 25° to the horizontal.

(xi) If equivalent protection and safety is afforded by alternative design, the 25° limitation may be reduced.

(xii) Salamanders not suitable for use on wood floors shall not be set directly upon them or other combustible materials. When such salamanders are used they shall rest on suitable insulating material or at least 1-inch concrete or equivalent. The insulating material shall extend beyond the salamander 2 feet or more in all directions.

(xiii) Salamanders used in the vicinity of tarpaulins, canvas, or similar coverings shall be located a safe distance from coverings and other combustible materials. The coverings shall be securely fastened to prevent ignition of the covering or upsetting of the salamanders due to wind action on the covering or other material.

(xiv) Salamanders in use shall be protected to prevent flame extinguishment.

(d) Ventilation. (i) Fresh air shall be supplied in sufficient quantities to maintain the health and safety of employees. Where natural means for fresh air supply is inadequate, mechanical ventilation shall be provided. Particular attention shall be given to confined spaces and pockets where heat and fumes may accumulate and employees may be present (roof areas, peaks, basement).

(ii) When salamanders are used in confined spaces, special care shall be taken to provide sufficient ventilation in order to assure proper combustion, maintain the health and safety of employees, and limit temperature rise in the area.

(e) Fueling. (i) Salamanders shall be refueled only by a person trained in such operations.

(ii) Only a 1 day's supply of heater fuel shall be stored inside a building in the vicinity of the salamander. General fuel storage shall be outside the structure.

(iii) All fuel storage shall be maintained a minimum of 25 feet from source of ignition.

(f) Maintenance. (i) The user shall comply with the maintenance instructions as provided by the manufacturer.

(ii) Equipment showing evidence of deterioration or damage that constitutes a safety or health hazard shall be removed from service.

(iii) Salamander repairs shall be performed in accordance with the manufacturer's recommendations, and replacement parts shall be equal to, the equivalent of, or the same as the original salamander equipment. [Order 76-29, § 296-155-280, filed 9/30/76; Order 74-26, § 296-155-280, filed 5/7/74, effective 6/6/74.]

## Part E

### SIGNS, SIGNALS, AND BARRICADES

#### WAC

296-155-300	Accident prevention signs and tags.
296-155-305	Signaling.
296-155-310	Barricades.
296-155-315	Definitions applicable to this part.

**WAC 296-155-300 Accident prevention signs and tags.** (1) General. Signs and symbols required by this section shall be visible at all times when work is being performed, and shall be removed or covered promptly when the hazards no longer exist.

(2) Danger signs. (a) Danger signs (see Figure E-1) shall be used only where an immediate hazard exists.

(b) Danger signs shall have red as the predominating color for the upper panel; black outline on the borders; and a white lower panel for additional sign wording.

(3) Caution signs. (a) Caution signs (see Figure E-2) shall be used only to warn against potential hazards or to caution against unsafe practices.

(b) Caution signs shall have yellow as the predominating color; black upper panel and borders; yellow lettering of "caution" on the black panel; and the lower yellow panel for additional sign wording. Black lettering shall be used for additional wording.

FIGURE E-1

FIGURE E-2

(4) Exit signs. (a) Every exit sign shall have the word "exit" in plainly legible letters not less than 6 inches high, with the principal strokes of letters not less than three-fourths-inch wide.

(b) Every exit sign shall be distinctive in color and shall provide contrast with decorations, interior finish, or other signs.

(5) Safety instruction signs. Safety instruction signs, when used, shall be white with green upper panel with white letters to convey the principal message. Any additional wording on the sign shall be black letters on the white background.

(6) Directional signs. Directional signs, other than automotive traffic signs specified in (7) of this section, shall be white with a black panel and a white directional symbol. Any additional wording on the sign shall be black letters on the white background.

(7) Traffic signs. (a) Construction areas shall be posted with legible traffic signs at points of hazard.

(b) All traffic control signs or devices used for protection of construction workers shall conform to American National Standards Institute D6.1-1971, Manual on Uniform Traffic Control Devices for Streets and Highways as amended by the Washington state department of highways (M24-OT (HT)).

(8) Accident prevention tags. (a) Accident prevention tags shall be used as a temporary means of warning employees of an existing hazard, such as defective tools, equipment, etc. They shall not be used in place of, or as a substitute for, accident prevention signs.

(b) Specifications for accident prevention tags similar to those in Table E-1 shall apply.

(i) Additional rules. American National Standards Institute (ANSI) Z35.1-1968, Specifications for Accident Prevention signs, and Z35.2-1968, Specifications for Accident Prevention Tags, contain rules which are additional to the rules prescribed in this section. The employer shall comply with ANSI Z35.1-1968 and Z35.2-1968 with respect to rules not specifically prescribed in this Part.

TABLE E-1

White	Black and Red	Danger
Yellow	Black	Caution
White	Black	Out of Order- Do Not Use

[Order 74-26, § 296-155-300, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-305 Signaling.** (1) Flagman. (a) When operations are such that signs, signals, and barricades do not provide the necessary protection on or adjacent to a highway or street, flagmen or other appropriate traffic controls shall be provided.

(b) Signaling directions by flagmen shall conform to American National Standards Institute D6.1-1971, Manual on Uniform Traffic Control Devices for Streets and Highways, as amended by the Washington state department of highways. (M24-01 (HT).)

(c) Hand signaling by flagmen shall be by use of sign paddles at least 18 inches in diameter with series "C" letters at least 6 inches high. When hand signaling is done in periods of darkness, the sign paddles must be reflectorized or illuminated as required by ANSI D6.1-1971, manual on uniform traffic control devices. The "STOP" side of the paddle shall have a red background with white lettering. When a paddle has a "SLOW" side, the background shall be orange and the lettering black. Colors shall conform to ANSI D6.1-1971.

(d) Flagmen shall wear a red or orange warning garment while flagging. Warning garments worn at night shall be of reflectorized material.

(e) Flagmen shall complete a Washington state approved flagging course, or the equivalent, prior to being assigned duties as a flagman.

**NOTE:** Personnel that have not completed a flagging course may be assigned duties as flagmen only during emergencies when a sudden, generally unexpected, set of circumstances demands immediate attention.

[Order 76-6, § 296-155-305, filed 3/1/76; Order 74-26, § 296-155-305, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-310 Barricades.** Barricades for protection of employees shall conform to the portions of the American National Standards Institute D6.1-1971, Manual on Uniform Traffic Control Devices for Streets and Highways, as amended by the Washington state department of highways, (M24-01 (HT)), relating to barricades. [Order 74-26, § 296-155-310, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-315 Definitions applicable to this part.** (1) "Barricade" means an obstruction to deter the passage of persons or vehicles.

(2) "Signs" are the warnings of hazard, temporarily or permanently affixed or placed, at locations where hazards exist.

(3) "Signals" are moving signs, provided by workers, such as flagmen, or by devices, such as flashing lights, to warn of possible or existing hazards.

(4) "Tags" are temporary signs, usually attached to a piece of equipment or part of a structure, to warn of existing or immediate hazards. [Order 76-6, § 296-155-315, filed 3/1/76.]

- 296-155-34919 Table F-19.
- 296-155-34920 Table F-20.

**WAC 296-155-325 General requirements for storage.** (1) General. (a) All materials stored in tiers shall be stacked, racked, blocked, interlocked, or otherwise secured to prevent sliding, falling or collapse.

(b) Maximum safe load limits of floors within buildings and structures, in pounds per square foot, shall be conspicuously posted in all storage areas, except for floor or slab on grade. Maximum safe loads shall not be exceeded.

(c) Aisles and passageways shall be kept clear to provide for the free and safe movement of material handling equipment or employees. Such areas shall be kept in good repair.

(d) When a difference in road or working levels exist, means such as ramps, blocking, or grading shall be used to ensure the safe movement of vehicles between the two levels.

(2) Material storage. (a) Material stored inside buildings under construction shall not be placed within 6 feet of any hoistway or inside floor openings, nor within 10 feet of an exterior wall which does not extend above the top of the material stored.

(b) Employees required to work on stored material in silos, hoppers, tanks, and similar storage areas shall be equipped with lifelines and safety belts meeting the requirements of WAC 296-155-225, Part C.

(c) Noncompatible materials shall be segregated in storage.

(d) Bagged materials shall be stacked by stepping back the layers and cross-keying the bags at least every 10 bags high.

(i) When cement and lime is delivered in paper bags they shall be carefully handled to prevent the bags bursting.

(ii) Cement and lime bags shall not be piled more than ten bags high except when stored in bins or enclosures built for the purpose of storage.

(iii) When bags are removed from the pile, the length of the pile shall be kept at an even height, and the necessary step backs every five bags maintained.

(iv) Persons handling cement and lime bags shall wear goggles and tight neck and arm bands.

(v) Persons shall be warned against wearing clothing that has become hard and stiff with cement.

(vi) Persons shall be instructed to report any susceptibility of their skin to cement and lime burns.

(vii) A hand cream or vaseline and eye wash shall be provided and kept ready for use to prevent burns.

(viii) Lime shall be stored in a dry place to prevent a premature slacking action that may cause fire.

(e) Materials shall not be stored on scaffolds or runways in excess of supplies needed for immediate operations.

(f) Brick stacks shall not be more than 7 feet in height. When a loose brick stack reaches a height of 4 feet, it shall be tapered back 2 inches in every foot of height above the 4-foot level.

(i) Brick shall never be stacked, for storage purposes, on scaffolds or runways.

(ii) When delivering brick on scaffolds inside the wall lines in wheelbarrows, they shall be dumped toward the inside of the building and not toward the wall.

(iii) Blocks shall always be stacked and not thrown in a loose pile.

(g) When masonry blocks are stacked higher than 6 feet, the stack shall be tapered back one-half block per tier above the 6-foot level.

(i) When blocks are stacked inside a building, the piles shall be so distributed as not to overload the floor on which they stand.

(ii) Blocks shall not be dropped or thrown from an elevation or delivered through chutes.

(h) Lumber:

(i) Used lumber shall have all nails withdrawn before stacking.

(ii) Lumber shall be stacked on level and solidly supported sills.

(iii) Lumber shall be so stacked as to be stable and self-supporting.

(iv) Lumber stacks shall not exceed 20 feet in height provided that lumber to be handled manually shall not be stacked more than 16 feet high.

(v) All stored lumber shall be stacked on timber sills to keep it off the grounds. Sills shall be placed level on solid supports.

(vi) Cross strips shall be placed in the stacks when they are stacked more than four feet high.

(i) Structural steel, poles, pipe, bar stock, and other cylindrical materials, unless racked, shall be stacked and blocked so as to prevent spreading or tilting.

(i) Persons handling reinforcing steel shall wear heavy gloves.

(ii) When bending of reinforcing steel is done on the job, a strong bench shall be provided, set up on even dry ground or a floor for the persons to work on.

(iii) Structural steel shall be carefully piled to prevent danger of members rolling off or the pile toppling over.

(iv) Structural steel shall be kept in low piles, consideration being given to the sequence of use of the members.

(v) Corrugated and flat iron shall be stacked in flat piles, with the piles not more than four feet high and spacing strips shall be placed between each bundle.

(j) Sand, gravel and crushed stone. Stock piles shall be frequently inspected to prevent their becoming unsafe by continued adding to or withdrawing from the stock.

(i) If material becomes frozen, it shall not be removed in a manner that would produce an overhang. [Order 74-26, § 296-155-325, filed 5/7/74, effective 6/6/74.]

#### **WAC 296-155-330 Rigging equipment for material handling. (1) General.**

(a) Rigging equipment for material handling shall be inspected prior to use on each shift and as necessary during its use to ensure that it is safe. Defective rigging equipment shall be removed from service.

(b) Rigging equipment shall not be loaded in excess of its recommended safe working load, as prescribed in Tables F-1 through F-20 in this part.

(c) Rigging equipment, when not in use, shall be removed from the immediate work area so as not to present a hazard to employees.

(d) Special custom design grabs, hooks, clamps, or other lifting accessories, for such units as modular panels, prefabricated structures and similar materials, shall be marked to indicate the safe working loads and shall be proof-tested prior to use to 125 percent of their rated load.

(2) Alloy steel chains.

(a) Welded alloy steel chain slings shall have permanently affixed durable identification stating size, grade, rated capacity, and sling manufacturer.

(b) Hooks, rings, oblong links, pear-shaped links, welded or mechanical coupling links, or other attachments, when used with alloy steel chains, shall have a rated capacity at least equal to that of the chain.

(c) The use of job or shop hooks and links, or make-shift fasteners, formed from bolts, rods, etc., or other such attachments, shall be prohibited.

(d) Rated capacity (working load limit) for alloy steel chain slings shall conform to the values shown in Table F-1.

(e) Whenever wear at any point of any chain link exceeds that shown in Table F-2, the assembly shall be removed from service.

(f) If at any time any three foot length of chain is found to have stretched one-third the length of a link it shall be discarded.

(g) The practice of placing bolts or nails between two links to shorten chains is prohibited.

(h) Splicing broken chains by inserting a bolt between two links with the heads of the bolt and the nut sustaining the load, or passing one link through another and inserting a bolt or nail to hold it, is prohibited.

(i) Wherever annealing of chains is attempted, it shall be done in properly equipped annealing furnaces and under the direct supervision of a competent person.

(3) Wire rope.

(a) Table F-3 through F-14 shall be used to determine the safe working loads of various sizes and classifications of improved plow steel wire rope and wire rope slings with various types of terminals. For sizes, classifications, and grades not included in these tables, the safe working load recommended by the manufacturer for specific, identifiable products shall be followed, provided that a safety factor of not less than 5 is maintained.

(b) Protruding ends of strands in splices on slings and bridles shall be covered or blunted.

(c) Wire rope shall not be secured by knots.

(d) The following limitations shall apply to the use of wire rope:

(i) An eye splice made in any wire rope shall have not less than three full tucks.

NOTE: This requirement shall not preclude the use of another form of splice or connection which can be shown to be as efficient and which is not otherwise prohibited.

(ii) Except for eye splices in the ends of wires and for endless rope slings, each wire rope used in hoisting or lowering, or in pulling loads, shall consist of one continuous piece without knot or splice.

(iii) Wire rope shall not be used, if in any length of eight diameters, the total number of visible broken wires exceeds 10 percent of the total number of wires, or if the rope shows other signs of excessive wear, corrosion, or defect.

(e) When U-bolt wire rope clips are used to form eyes, Table F-20 shall be used to determine the number and spacing of clips.

(f) When used for eye splices, the U-bolt shall be applied so that the "U" section is in contact with the dead end of the rope.

(g) Eyes in wire rope bridles, slings or bull wires shall not be formed by wire rope clips or knots.

NOTE: See Table F-20 for number of clamps and spacing requirements.

**CORRECT METHOD OF ATTACHING WIRE ROPE CLIPS**

U-Bolt of all clips on dead end of rope

(4) Natural rope, and synthetic fiber.

(a) General. When using natural or synthetic fiber rope slings, Tables F-15, F-16, F-17 and F-18 shall apply.

(b) All splices in rope slings provided by the employer shall be made in accordance with fiber rope manufacturers' recommendations.

(i) In manila rope, eye splices shall contain at least three full tucks, and short splices shall contain at least

six full tucks (three on each side of the centerline of the splice).

(ii) In layed synthetic fiber rope, eye splices shall contain at least four full tucks, and short splices shall contain at least eight full tucks (four on each side of the centerline of the splice).

(iii) Strand end tails shall not be trimmed short (flush with the surface of the rope) immediately adjacent to the full tucks. This precaution applies to both eye and short splices and all types of fiber rope. For fiber ropes under 1-inch diameter, the tails shall project at least six rope diameters beyond the last full tuck. For fiber ropes 1-inch diameter and larger, the tails shall project at least 6 inches beyond the last full tuck. In applications where the projecting tails may be objectionable, the tails shall be tapered and spliced into the body of the rope using at least two additional tucks (which will require a tail length of approximately six rope diameters beyond the last full tuck).

(iv) For all eye splices, the eye shall be sufficiently large to provide an included angle of not greater than 60° at the splice when the eye is placed over the load or support.

(v) Knots shall not be used in lieu of splices.

(vi) All fibre rope used for hoisting purposes or for the support of scaffolds, or any part thereof, shall be of high grade Manila hemp (abaca). Fibre rope used for the support of scaffolds, or any part thereof, except rope used for lashing or tying purposes, shall be not less than 3/4-inch in diameter.

(vii) The maximum safe working load for fibre rope shall not exceed 1/6 of the maximum strength as shown in the following table:

**STRENGTH OF HIGH GRADE MANILA (ABACA) ROPE  
COMMON LAY THREE STRAND**

Approximate Diameter in inches	Circumference in inches	Safe Load in Pounds
3/16 (6 yarns)	1/2	98
1/4 (6 yarns)	3/4	116
5/16 (6 yarns)	1	200
3/8 (12 yarns)	1 1/8	241
7/16 (15 yarns)	1 1/4	291
15/32 (18 yarns)	1 3/8	350
1/2 (21 yarns)	1 1/2	408
9/16	1 3/4	526
5/8	2	666
3/4	2 1/4	816
13/16	2 1/2	983
7/8	2 3/4	1,166
1	3	1,366
1 1/16	3 1/4	1,683
1 1/8	3 1/2	1,833
1 1/4	3 3/4	2,083
1 5/16	4	2,365

Approximate Diameter in inches	Circumference in inches	Safe Load in Pounds
1 3/8	4 1/4	2,666
1 1/2	4 1/2	2,916

NOTE: This table is based on data contained in the U.S. Department of Commerce circular of the Bureau of Standards, No. 324.

(5) Synthetic webbing (nylon, polyester, and polypropylene).

(a) The employer shall have each synthetic web sling marked or coded to show:

- (i) Name or trademark of manufacturer.
- (ii) Rated capacities for the type of hitch.
- (iii) Type of material.

(b) Rated capacity shall not be exceeded.

(6) Shackles and hooks.

(a) Table F-19 shall be used to determine the safe working loads of various sizes of shackles, except that higher safe working loads are permissible when recommended by the manufacturer for specific, identifiable products, provided that a safety factor of not less than 5 is maintained.

(b) The manufacturer's recommendations shall be followed in determining the safe working loads of the various sizes and types of specific and identifiable hooks. All hooks for which no applicable manufacturer's recommendations are available shall be tested to twice the intended safe working load before they are initially put into use. The employer shall maintain a record of the dates and results of such tests.

(c) Hooks shall not be modified by welding and/or drilling unless written approval by the manufacturer has been received.

(7) Slings.

(a) When slings are provided as a part of the hoisting equipment, every precaution shall be taken to keep them in a serviceable condition.

(i) Cable slings shall be frequently inspected and oiled.

(ii) Slings shall not be left where they can be damaged by traffic or form stumbling hazards.

(iii) Blocks or heavy bagging shall be used at corners of the load to protect the sling from sharp bending.

(b) When a load is lifted by a multiple rope sling the sling shall be so arranged that the strain can be equalized between the ropes.

(i) When using a sling with both ends engaged in the hoisting block, the sling shall be adjusted so as to equalize the stress.

(ii) Slings shall be placed on the load at safe lifting angles.

(8) Material handling—General.

(a) When necessary to store building material on public thoroughfares, care shall be exercised to see that

it is so piled or stacked as to be safe against collapse or falling over.

(b) Material shall be so located as not to interfere with, or present a hazard to employees, traffic or the public. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-08-115 (Order 79-9), § 296-155-330, filed 7/31/79; Order 76-29, § 296-155-330, filed 9/30/76; Order 74-26, § 296-155-330, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-335 Disposal of waste materials.** (1)

Whenever materials are dropped more than 20 feet to any point lying outside the exterior walls of the building, an enclosed chute of wood, or equivalent material, shall be used. For the purpose of this subsection, an enclosed chute is a slide, closed in on all sides, through which material is moved from a high place to a lower one.

(2) When debris is dropped through holes in the floor without the use of chutes, the area onto which the material is dropped shall be completely enclosed with barricades not less than 42 inches high and not less than 20 feet back from the projected edge of the opening above. Signs warning of the hazard of falling materials shall be posted at each level. Removal shall not be permitted in this lower area until debris handling ceases above.

(3) All scrap lumber, waste material, and rubbish shall be removed from the immediate work area as the work progresses.

(4) Disposal of waste material or debris by burning shall comply with local fire regulations.

(5) All solvent waste, oily rags, and flammable liquids shall be kept in fire resistant covered containers until removed from the worksite. [Order 74-26, § 296-155-335, filed 5/7/74, effective 6/6/74.]

Part G

TOOLS--HAND AND POWER

- WAC 296-155-350 General requirements.
- 296-155-355 Hand tools.
- 296-155-360 Power-operated hand tools.
- 296-155-365 Abrasive wheels and tools.

- 296-155-370 Woodworking tools.
- 296-155-375 Jacks—Lever and ratchet, screw, and hydraulic.

WAC 296-155-350 General requirements. (1) Condition of tools. All hand and power tools and similar equipment, whether furnished by the employer or the employee, shall be maintained in a safe condition.

(2) Guarding. (a) When power operated tools are designed to accommodate guards, they shall be equipped with such guards when in use.

(b) Belts, gears, shafts, pulleys, sprockets, spindles, drums, fly wheels, chains, or other reciprocating, rotating or moving parts of equipment shall be guarded if such parts are exposed to contact by employees or otherwise create a hazard. Guarding shall meet the requirements as set forth in American National Standards Institute, B15.1-1953 (R1958), Safety Code for Mechanical Power-Transmission Apparatus.

(3) Personal protective equipment. Employees using hand and power tools and exposed to the hazard of falling, flying, abrasive, and splashing objects, or exposed to harmful dusts, fumes, mists, vapors, or gases shall use the particular personal protective equipment necessary to protect them from the hazard. All personal protective equipment shall meet the requirements and be maintained according to Parts B and C of this chapter.

(4) Switches. (a) Scope. This subsection does not apply to concrete vibrators, concrete breakers, powered tampers, jack hammers, rock drills, and similar hand operated power tools.

(b) All hand-held powered platen sanders, grinders with wheels 2-inch diameter or less, routers, planers, laminate trimmers, nibblers, shears, scroll saws, and jigsaws with blade shanks one-fourth of an inch wide or less may be equipped with only a positive "on-off" control.

(c) All hand-held powered drills, tappers, fastener drivers, horizontal, vertical, and angle grinders with wheels greater than 2 inches in diameter, disc sanders, belt sanders, reciprocating saws, saber saws, and other similar operating powered tools shall be equipped with a momentary contact "on-off" control and may have a lock-on control provided that turn-off can be accomplished by a single motion of the same finger or fingers that turn it on.

(d) All other hand-held powered tools, such as circular saws, chain saws, and percussion tools, shall be equipped with a constant pressure switch that will shut off the power when the pressure is released.

(e) Disconnect switches. All fixed power driven tools shall be provided with a disconnect switch that can either be locked or tagged in the off position.

(f) Self-feed. Automatic feeding devices shall be installed on machines whenever the nature of the work will permit. Feeder attachments shall have the feed rolls or other moving parts covered or guarded so as to protect the operator from hazardous points. [Order 74-26, § 296-155-350, filed 5/7/74, effective 6/6/74.]

WAC 296-155-355 Hand tools. (1) Employers shall not issue or permit the use of unsafe hand tools.

(2) Wrenches, including adjustable, pipe, end, and socket wrenches shall not be used when jaws are sprung or worn to the point that slippage occurs.

(3) Combination "axe-hammers," with handles exceeding 16 inches in length, shall not be used to drive nails or spikes.

(4) Impact tools, such as drift pins, wedges, and chisels, shall be kept free of mushroomed heads.

(5) The wooden handles of tools shall be kept free of splinters or cracks and shall be kept tight in the tool. [Order 74-26, § 296-155-355, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-360 Power-operated hand tools.** (1) Electric Power-operated tools. (a) Electric power operated tools shall either be of the approved double-insulated type or grounded in accordance with Part I of this chapter.

(b) The use of electric cords for hoisting or lowering tools shall not be permitted.

(2) Pneumatic power tools. (a) Pneumatic power tools shall be secured to the hose or whip by some positive means to prevent the tool from becoming accidentally disconnected.

(b) Safety clips or retainers shall be securely installed and maintained on pneumatic impact (percussion) tools to prevent attachments from being accidentally expelled.

(c) All pneumatically driven nailers, staplers, and other similar equipment provided with automatic fastener feed, shall have a safety device on the muzzle to prevent the tool from ejecting fasteners, unless the muzzle is in contact with the work surface.

**EXCEPTION:** Pneumatic nailers or staplers utilizing "fine wire" brads or staples do not require a muzzle contact safety device, provided:

(1) The overall weight of the fastening device does not exceed the weight of standard 18 gauge wire, 1-1/2 inches long.

(2) The operator and any other person within 12 feet of the point of operation wear approved eye protection.

**NOTE:** The normal maximum diameter tolerance for manufacturing standard 18 gauge wire is .045 inches.

(d) Compressed air shall not be used at the nozzle for cleaning purposes except where reduced to less than 30 p.s.i. and then only with effective chip guarding and personal protective equipment which meets the requirements of Part C of this chapter.

**NOTE:** The 30 p.s.i. requirement does not apply for concrete form, mill scale and similar cleaning purposes.

(e) The manufacturer's safe operating pressure for hoses, pipes, valves, filters, and other fittings shall not be exceeded.

(f) The use of hoses for hoisting or lowering tools shall not be permitted.

(g) All hoses exceeding 1/2-inch inside diameter shall have a safety device at the source of supply or branch line to reduce pressure in case of hose failure.

(h) Airless spray guns of the type which atomize paints and fluids at high pressures (1,000 pounds or more per square inch) shall be equipped with automatic or visible manual safety devices which will prevent pulling of the trigger to prevent release of the paint or fluid until the safety device is manually released.

(i) In lieu of the above, a diffuser nut which will prevent high pressure, high velocity release, while the nozzle tip is removed, plus a nozzle tip guard which will prevent the tip from coming into contact with the operator, or other equivalent protection, shall be provided.

(3) Fuel powered tools. (a) All fuel powered tools shall be stopped while being refueled, serviced, or maintained, and fuel shall be transported, handled, and stored in accordance with Part D of this chapter.

(b) When fuel powered tools are used in enclosed spaces, the applicable requirements for concentrations of toxic gases and use of personal protective equipment as outlined in Parts B and C of this chapter shall apply.

(4) Hydraulic power tools. (a) The fluid used in hydraulic powered tools shall be fire resistant fluid approved under schedule 30 of the Bureau of Mines, U.S. Department of the Interior, and shall retain its operating characteristics at the most extreme temperatures to which it will be exposed.

(b) The manufacturer's safe operating pressures for hoses, valves, pipes, filters, and other fittings shall not be exceeded.

(5) Powder-actuated tools. (a) Only employees who have been trained in the operation of the particular tool in use, and certified in accordance with WAC 296-24-662 through 296-24-66225, shall be allowed to operate a powder-actuated tool.

(b) The tool shall be tested each day before loading to see that safety devices are in proper working condition. The method of testing shall be in accordance with the manufacturer's recommended procedure.

(c) Any tool found not in proper working order, or that develops a defect during use, shall be immediately removed from service and not used until properly repaired.

(d) Personal protective equipment shall be in accordance with Part C of this chapter.

(e) Tools shall not be loaded until just prior to the intended firing time. Neither loaded nor empty tools are to be pointed at any employees. Hands shall be kept clear of the open barrel end.

(f) Loaded tools shall not be left unattended.

(g) Fasteners shall not be driven into very hard or brittle materials including, but not limited to, cast iron, glazed tile, surface-hardened steel, glass block, live rock, face brick, or hollow tile.

(h) Driving into materials easily penetrated shall be avoided unless such materials are backed by a substance that will prevent the pin or fastener from passing completely through and creating a flying missile hazard on the other side.

(i) No fastener shall be driven into a spalled area caused by an unsatisfactory fastening.

(j) Tools shall not be used in an explosive or flammable atmosphere.

(k) All tools shall be used with the correct shield, guard, or attachment recommended by the manufacturer.

(l) Powder-actuated tools used by employees shall meet all other applicable requirements of American National Standards Institute, A10.3-1970, Safety Requirements for Explosive-Actuated Fastening Tools.

(m) In addition to subdivisions (a) through (l) of this subsection, WAC 296-24-662 through 296-24-66225, safety requirements for explosive-actuated fastening tools, shall apply. [Order 76-29, § 296-155-360, filed 9/30/76; Order 76-6, § 296-155-360, filed 3/1/76; Order 74-26, § 296-155-360, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-365 Abrasive wheels and tools.** (1) Power. All grinding machines shall be supplied with sufficient power to maintain the spindle speed at safe levels under all conditions of normal operation.

(2) Guarding. Grinding machines shall be equipped with safety guards in conformance with the requirements of American National Standards Institute, B7.1-1970, Safety Code for the Use, Care and Protection of Abrasive Wheels.

(3) Use of abrasive wheels. (a) Floor stand and bench mounted abrasive wheels, used for external grinding, shall be provided with safety guards (protection hoods). The maximum angular exposure of the grinding wheel periphery and sides shall be not more than 90°, except that when work requires contact with the wheel below the horizontal plane of the spindle, the angular exposure shall not exceed 125°. In either case, the exposure shall begin not more than 65° above the horizontal plane of the spindle. Safety guards shall be strong enough to withstand the effect of a bursting wheel.

(b) Floor and bench-mounted grinders shall be provided with work rests which are rigidly supported and readily adjustable. Such work rests shall be kept at a distance not to exceed one-eighth inch from the surface of the wheel.

(c) Cup type wheels used for external grinding shall be protected by either a revolving cup guard or a band type guard in accordance with the provisions of the American National Standards Institute, B7.1-1970, Safety Code for the Use, Care, and Protection of Abrasive Wheels. All other portable abrasive wheels used for external grinding, shall be provided with safety guards (protection hoods) meeting the requirements of subdivision (e) of this subsection except as follows:

(i) When the work location makes it impossible, a wheel equipped with safety flanges, as described in subdivision (f) of this subsection, shall be used.

(ii) When wheels 2 inches or less in diameter which are securely mounted on the end of a steel mandrel are used.

(d) Portable abrasive wheels used for internal grinding shall be provided with safety flanges (protection flanges) meeting the requirements of subdivision (f) of this subsection, except as follows:

(i) When wheels 2 inches or less in diameter which are securely mounted on the end of a steel mandrel are used;

(ii) If the wheel is entirely within the work being ground while in use.

(e) When safety guards are required, they shall be so mounted as to maintain proper alignment with the wheel, and the guard and its fastenings shall be of sufficient strength to retain fragments of the wheel in case of accidental breakage. The maximum angular exposure of the grinding wheel periphery and sides shall not exceed 180°.

(f) When safety flanges are required, they shall be used only with wheels designed to fit the flanges. Only safety flanges, of a type and design and properly assembled so as to ensure that the pieces of the wheel will be retained in case of accidental breakage, shall be used.

(g) All abrasive wheels shall be closely inspected and ring-tested before mounting to ensure that they are free from cracks or defects.

(h) Grinding wheels shall fit freely on the spindle and shall not be forced on. The spindle nut shall be tightened only enough to hold the wheel in place.

(i) All employees using abrasive wheels shall be protected by eye protection equipment in accordance with the requirements of part C of this chapter, except when adequate eye protection is afforded by eye shields which are permanently attached to the bench or floor stand.

(4) Other requirements. All abrasive wheels and tools used by employees shall meet other applicable requirements of American National Standards Institute, B7.1-1970, Safety Code for the Use, Care and Protection of Abrasive Wheels. [Order 74-26, § 296-155-365, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-370 Woodworking tools.** (1) Speeds. The operating speed shall be etched or otherwise permanently marked on all circular saws over 20 inches in diameter or operating at over 10,000 peripheral feet per minute. Any saw so marked shall not be operated at a speed other than that marked on the blade. When a marked saw is retensioned for a different speed, the marking shall be corrected to show the new speed.

(2) Guarding. All portable, hand held power-driven circular saws shall be equipped with guards above and below the base plate or shoe. The upper guard shall cover the saw to the depth of the teeth, except for the minimum arc required to permit the base to be tilted for bevel cuts. The lower guard shall cover the saw to the depth of the teeth, except for the minimum arc required to allow proper retraction and contact with the work. When the tool is withdrawn from the work, the lower guard shall automatically and instantly return to the covering position.

(3) All woodworking tools and machinery shall meet other applicable requirements of American National Standards Institute, 01.1-1971, Safety Code for Woodworking Machinery.

(a) The control switch on all stationary radial arm saws shall be placed at the front of the saw or table and

shall be properly recessed or hooded to prevent accidental contact.

(b) A firm level working area shall be provided at the front of all stationary radial arm saws. The area shall be kept free of all stumbling hazards.

(c) A push stick or similar device shall be used for pushing short material through power saws.

(4) Personal protective equipment. All personal protective equipment required for use shall conform to Part C of this chapter. [Order 74-26, § 296-155-370, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-375 Jacks--Lever and ratchet, screw, and hydraulic.** (1) General requirements. (a) The manufacturer's rated capacity shall be legibly marked on all jacks and this capacity shall not be exceeded.

(b) All jacks shall have a positive stop to prevent over-travel.

(c) Specially designed jacks constructed for specific purposes shall meet the approval of the division of Industrial Safety and Health before being placed in service.

(d) Control parts shall be so designed that the operator will not be subjected to hazard.

(2) Lift slab construction. (a) Hydraulic jacks used in lift slab construction shall have a safety device which will cause the jacks to support the load in any position in the event the jack malfunctions.

(b) If lift slabs are automatically controlled, a device shall be installed which will stop the operation when the 1/2-inch leveling tolerance is exceeded.

(3) Blocking. When it is necessary, to provide a firm foundation, the base of the jack shall be blocked or cribbed. Where there is a possibility of slippage of the metal cap of the jack, a wood block shall be placed between the cap and the load. [Order 74-26, § 296-155-375, filed 5/7/74, effective 6/6/74.]

## Part H

### WELDING AND CUTTING

#### WAC

296-155-400	Gas welding and cutting.
296-155-405	Arc welding and cutting.
296-155-410	Fire prevention.
296-155-415	Ventilation and protection in welding, cutting, and heating.
296-155-420	Welding, cutting, and heating in way of preservative coatings.

**WAC 296-155-400 Gas welding and cutting.** (1) Transporting, moving, and storing compressed gas cylinders. Valve protection caps shall be in place and secured.

(b) When cylinders are hoisted, they shall be secured on a cradle, slingboard, or pallet. They shall not be hoisted or transported by means of magnets or choker slings.

(c) Cylinders shall be moved by tilting and rolling them on their bottom edges. They shall not be intentionally dropped, struck, or permitted to strike each other violently.

(d) When cylinders are transported by powered vehicles, they shall be secured in a vertical position.

(e) Valve protection caps shall not be used for lifting cylinders from one vertical position to another. Bars shall not be used under valves or valve protection caps to pry cylinders loose when frozen. Warm, not boiling, water shall be used to thaw cylinders loose.

(f) Unless cylinders are firmly secured on a special carrier intended for this purpose, regulators shall be removed and valve protection caps put in place before cylinders are moved.

(g) A suitable cylinder truck, chain, or other steady-ing device shall be used to keep cylinders from being knocked over while in use.

(h) When a job is finished, when cylinders are empty or when cylinders are moved at any time, the cylinder valve shall be closed.

(i) Compressed gas cylinders shall be secured in an upright position at all times except, if necessary, for short periods of time while cylinders are actually being hoisted or carried.

(2) Placing cylinders. (a) Cylinders shall be kept far enough away from the actual welding or cutting operation so that sparks, hot slag, or flame will not reach them. When this is impractical, fire resistant shields shall be provided.

(b) Cylinders shall be placed where they cannot become part of an electrical circuit. Electrodes shall not be struck against a cylinder to strike an arc.

(c) Fuel gas cylinders shall be placed with valve end up whenever they are in use. They shall not be placed in a location where they would be subject to open flame, hot metal, or other sources of artificial heat.

(d) Cylinders containing oxygen or acetylene or other fuel gas shall not be taken into confined spaces.

(3) Treatment of cylinders. (a) Cylinders, whether full or empty, shall not be used as rollers or supports.

(b) No person other than the gas supplier shall attempt to mix gases in a cylinder. No one except the owner of the cylinder or person authorized by him, shall refill a cylinder. No one shall use a cylinder's contents for purposes other than those intended by the supplier. All cylinders used shall meet the department of transportation requirements, Specification for Cylinders, (49 CFR Part 178, Subpart C).

(c) No damaged or defective cylinder shall be used.

(4) Use of fuel gas. The employer shall thoroughly instruct employees in the safe use of fuel gas, as follows:

(a) Before a regulator to a cylinder valve is connected, the valve shall be opened slightly and closed immediately. (This action is generally termed "cracking" and is intended to clear the valve of dust or dirt that might otherwise enter the regulator.) The person cracking the valve shall stand to one side of the outlet, not in front of it. The valve of a fuel gas cylinder shall not be cracked where the gas would reach welding work, sparks, flame, or other possible sources of ignition.

(b) The cylinder valve shall always be opened slowly to prevent damage to the regulator. For quick closing, valves on fuel gas cylinders shall not be opened more than 1 1/2 turns. When a special wrench is required, it shall be left in position on the stem of the valve while the cylinder is in use so that the fuel gas flow can be

shut off quickly in case of an emergency. In the case of manifolded or coupled cylinders, at least one such wrench shall always be available for immediate use. Nothing shall be placed on top of a fuel gas cylinder, when in use, which may damage the safety device or interfere with the quick closing of the valve.

(c) Fuel gas shall not be used from cylinders through torches or other devices which are equipped with shutoff valves without reducing the pressure through a suitable regulator attached to the cylinder valve or manifold.

(d) Before a regulator is removed from a cylinder valve, the cylinder valve shall always be closed and the gas released from the regulator.

(e) If, when the valve on a fuel gas cylinder is opened, there is found to be a leak around the valve stem, the valve shall be closed and the gland nut tightened. If this action does not stop the leak, the use of the cylinder shall be discontinued, and it shall be properly tagged and removed from the work area. In the event that fuel gas should leak from the cylinder valve, rather than from the valve stem, and the gas cannot be shut off, the cylinder shall be properly tagged and removed from the work area. If a regulator attached to a cylinder valve will effectively stop a leak through the valve seat, the cylinder need not be removed from the work area.

(f) If a leak should develop at a fuse plug or other safety device, the cylinder shall be removed from the work area.

(5) Fuel gas and oxygen manifolds. (a) Fuel gas and oxygen manifolds shall bear the name of the substance they contain in letters at least 1-inch high which shall be either painted on the manifold or on a sign permanently attached to it.

(b) Fuel gas and oxygen manifolds shall be placed in safe, well ventilated, and accessible locations. They shall not be located within enclosed spaces.

(c) Manifold hose connections, including both ends of the supply hose that lead to the manifold, shall be such that the hose cannot be interchanged between fuel gas and oxygen manifolds and supply header connections. Adapters shall not be used to permit the interchange of hose. Hose connections shall be kept free of grease and oil.

(d) When not in use, manifold and header hose connections shall be capped.

(e) Nothing shall be placed on top of a manifold, when in use, which will damage the manifold or interfere with the quick closing of the valves.

(6) Hose. (a) Fuel gas hose and oxygen hose shall be easily distinguishable from each other. The contrast may be made by different colors or by surface characteristics readily distinguishable by the sense of touch. Oxygen and fuel gas hoses shall not be interchangeable. A single hose having more than one gas passage shall not be used.

(b) When parallel sections of oxygen and fuel gas hose are taped together, not more than 4 inches out of 12 inches shall be covered by tape.

(c) All hose in use, carrying acetylene, oxygen, natural or manufactured fuel gas, or any gas or substance which may ignite or enter into combustion, or be in any

way harmful to employees, shall be inspected at the beginning of each working shift. Defective hose shall be removed from service.

(d) Hose which has been subject to flashback, or which shows evidence of severe wear or damage, shall be tested to twice the normal pressure to which it is subject, but in no case less than 300 p.s.i. Defective hose, or hose in doubtful condition, shall not be used.

(e) Hose couplings shall be of the type that cannot be unlocked or disconnected by means of a straight pull without rotary motion.

(f) Boxes used for the storage of gas hose shall be ventilated.

(g) Hoses, cables, and other equipment shall be kept clear of passageways, ladders and stairs.

(7) Torches. (a) Clogged torch tip openings shall be cleaned with suitable cleaning wires, drills, or other devices designed for such purpose.

(b) Torches in use shall be inspected at the beginning of each working shift for leaking shutoff valves, hose couplings, and tip connections. Defective torches shall not be used.

(c) Torches shall be lighted by friction lighters or other approved devices, and not by matches or from hot work.

(8) Regulators and gauges. Oxygen and fuel gas pressure regulators, including their related gauges, shall be in proper working order while in use.

(9) Oil and grease hazards. Oxygen cylinders and fittings shall be kept away from oil or grease. Cylinders, cylinder caps and valves, couplings, regulators, hose, and apparatus shall be kept free from oil or greasy substances and shall not be handled with oily hands or gloves. Oxygen shall not be directed at oily surfaces, greasy clothes, or within a fuel oil or other storage tank or vessel.

(10) Additional rules. For additional details not covered in this Part, applicable portions of American National Standards Institute, Z49.1-1967, Safety in Welding and Cutting, shall apply. [Order 74-26, § 296-155-400, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-405 Arc welding and cutting.** (1) Manual electrode holders. (a) Only manual electrode holders which are specifically designed for arc welding and cutting, and are of a capacity capable of safely handling the maximum rated current required by the electrodes, shall be used.

(b) Any current-carrying parts passing through the portion of the holder which the arc welder or cutter grips in his hand, and the outer surfaces of the jaws of the holder, shall be fully insulated against the maximum voltage encountered to ground.

(2) Welding cables and connectors. (a) All arc welding and cutting cables shall be of the completely insulated, flexible type, capable of handling the maximum current requirements of the work in progress, taking into account the duty cycle under which the arc welder or cutter is working.

(b) Only cable free from repair or splices for a minimum distance of 10 feet from the cable end to which the

electrode holder is connected shall be used, except that cables with standard insulated connectors or with splices whose insulating quality is equal to that of the cable are permitted.

(c) When it becomes necessary to connect or splice lengths of cable one to another, substantial insulated connectors of a capacity at least equivalent to that of the cable shall be used. If connections are effected by means of cable lugs, they shall be securely fastened together to give good electrical contact, and the exposed metal parts of the lugs shall be completely insulated.

(d) Cables in need of repair shall not be used. When a cable, other than the cable lead referred to in subdivision (b) of this subsection, becomes worn to the extent of exposing bare conductors, the portion thus exposed shall be protected by means of rubber and friction tape or other equivalent insulation.

(3) Ground returns and machine grounding. (a) A ground return cable shall have a safe current carrying capacity equal to or exceeding the specified maximum output capacity of the arc welding or cutting unit which it services. When a single ground return cable services more than one unit, its safe current-carrying capacity shall equal or exceed the total specified maximum output capacities of all the units which it services.

(b) Pipelines containing gases or flammable liquids, or conduits containing electrical circuits, shall not be used as a ground return. For welding on natural gas pipelines, the technical portions of regulations issued by the Department of Transportation, Office of Pipeline Safety, Minimum Federal Safety Standards for Gas Pipelines shall apply. (49 CFR Part 192, Subpart C.)

(c) When a structure or pipeline is employed as a ground return circuit, it shall be determined that the required electrical contact exist at all joints. The generation of an arc, sparks, or heat at any point shall cause rejection of the structures as a ground circuit.

(d) When a structure or pipeline is continuously employed as a ground return circuit, all joints shall be bonded, and periodic inspections shall be conducted to ensure that no condition of electrolysis or fire hazard exists by virtue of such use.

(e) The frames of all arc welding and cutting machines shall be grounded either through a third wire in the cable containing the circuit conductor or through a separate wire which is grounded at the source of the current. Grounding circuits, other than by means of the structure, shall be checked to ensure that the circuit between the ground and the grounded power conductor has resistance low enough to permit sufficient current to flow to cause the fuse or circuit breaker to interrupt the current.

(f) All ground connections shall be inspected to ensure that they are mechanically strong and electrically adequate for the required current.

(4) Operating instructions. Employers shall instruct employees in the safe means of arc welding and cutting as follows:

(a) When electrode holders are to be left unattended, the electrodes shall be removed and the holders shall be

so placed or protected that they cannot make electrical contact with employees or conducting objects.

(b) Hot electrode holders shall not be dipped in water; to do so may expose the arc welder or cutter to electric shock.

(c) When the arc welder or cutter has occasion to leave his work or to stop work for any appreciable length of time, or when the arc welding or cutting machine is to be moved, the power supply switch to the equipment shall be opened.

(d) Any faulty or defective equipment shall be reported to the supervisor.

(e) Other requirements, as outlined in Article 630, National Electrical Code, NFPA 70-1971; ANSI CI-1971 (Rev. of 1968), Electric Welders, shall be followed when applicable.

(5) Shielding. Whenever practicable, all arc welding and cutting operations shall be shielded by noncombustible or flameproof screens which will protect employees and other persons working in the vicinity from the direct rays of the arc. [Order 74-26, § 296-155-405, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-410 Fire prevention.** (1) When practical, objects to be welded, cut, or heated shall be moved to a designated safe location or, if the objects to be welded, cut, or heated cannot be readily moved, all movable fire hazards in the vicinity shall be taken to a safe place, or otherwise protected.

(2) If the object to be welded, cut, or heated cannot be moved and if all the fire hazards cannot be removed, positive means shall be taken to confine the heat, sparks, and slag, and to protect the immovable fire hazards from them.

(3) No welding, cutting, or heating shall be done where the application of flammable paints, or the presence of other flammable compounds, or heavy dust concentrations creates a hazard.

(4) Suitable fire extinguishing equipment shall be immediately available in the work area and shall be maintained in a state of readiness for instant use.

(5) When the welding, cutting, or heating operation is such that normal fire prevention precautions are not sufficient, additional personnel shall be assigned to guard against fire while the actual welding, cutting, or heating operation is being performed, and for a sufficient period of time after completion of the work to ensure that no possibility of fire exists. Such personnel shall be instructed as to the specific anticipated fire hazards and how the firefighting equipment provided is to be used.

(6) When welding, cutting, or heating is performed on walls, floors, and ceilings, since direct penetration of sparks or heat transfer may introduce a fire hazard to an adjacent area, the same precautions shall be taken on the opposite side as are taken on the side on which the welding is being performed.

(7) For the elimination of possible fire in enclosed spaces as a result of gas escaping through leaking or improperly closed torch valves, the gas supply to the torch

shall be positively shut off at some point outside the enclosed space whenever the torch is not to be used or whenever the torch is left unattended for a substantial period of time, such as during the lunch period. Overnight and at the change of shifts, the torch and hose shall be removed from the confined space. Open end fuel gas and oxygen hoses shall be immediately removed from enclosed spaces when they are disconnected from the torch or other gas-consuming device.

(8) Except when the contents are being removed or transferred, drums, pails, and other containers, which contain or have contained flammable liquids, shall be kept closed. Empty containers shall be removed to a safe area apart from hot work operations or open flames.

(9) Drums, containers, or hollow structures which have contained toxic or flammable substances shall, before welding, cutting, or heating is undertaken on them, either be filled with water or thoroughly cleaned of such substances and ventilated and tested. For welding, cutting and heating on steel pipelines containing natural gas, the pertinent portions of regulations issued by the Department of Transportation, Office of Pipeline Safety, Minimum Federal Safety Standards for Gas Pipelines, shall apply. (49 CFR Part 192, Subpart C.)

(10) Before heat is applied to a drum, container, or hollow structure, a vent or opening shall be provided for the release of any built-up pressure during the application of heat. [Order 74-26, § 296-155-410, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-415 Ventilation and protection in welding, cutting, and heating.** (1) Mechanical ventilation. For purposes of this section, mechanical ventilation shall meet the following requirements:

(a) Mechanical ventilation shall consist of either general mechanical ventilation systems or local exhaust systems.

(b) General mechanical ventilation shall be of sufficient capacity and so arranged as to produce the number of air changes necessary to maintain welding fumes and smoke within safe limits, as defined in Part B of this chapter.

(c) Local exhaust ventilation shall consist of freely movable hoods intended to be placed by the welder or burner as close as practicable to the work. This system shall be of sufficient capacity and so arranged as to remove fumes and smoke at the source and keep the concentration of them in the breathing zone within safe limits as defined in Part B of this chapter.

(d) Contaminated air exhausted from a working space shall be discharged into the open air or otherwise clear of the source of intake air.

(e) All air replacing that withdrawn shall be clean and respirable.

(f) Oxygen shall not be used for ventilation purposes, comfort cooling, blowing dust from clothing, or for cleaning the work area.

(2) Welding, cutting, and heating in confined spaces.

(a) Except as provided in subdivision (b) of this subsection and subdivision (b) of subsection (3) of this section, either general mechanical or local exhaust ventilation

meeting the requirements of subsection (1) of this section shall be provided whenever welding, cutting, or heating is performed in a confined space.

(b) When sufficient ventilation cannot be obtained without blocking the means of access, employees in the confined space shall be protected by air line respirators in accordance with the requirements of Part C of this chapter, and an employee on the outside of such a confined space shall be assigned to maintain communication with those working within it and to aid them in an emergency.

(3) Welding, cutting, or heating of metals of toxic significance. (a) Welding, cutting, or heating in any enclosed spaces involving the metals specified in this subsection shall be performed with either general mechanical or local exhaust ventilation meeting the requirements of subsection (1) of this section:

(i) Zinc-bearing base or filler metals or metals coated with zinc-bearing materials.

(ii) Lead base metals;

(iii) Cadmium-bearing filler materials;

(iv) Chromium-bearing metals or metals coated with chromium-bearing materials.

(b) Welding, cutting, or heating in any enclosed spaces involving the metals specified in this subdivision shall be performed with local exhaust ventilation in accordance with the requirements of subsection (1) of this section, or employees shall be protected by air line respirators in accordance with the requirements of Part C of this chapter.

(i) Metals containing lead, other than as an impurity, or metals coated with lead-bearing materials;

(ii) Cadmium-bearing or cadmium-coated base metals;

(iii) Metals coated with mercury-bearing metals;

(iv) Beryllium-containing base or filler metals. Because of its high toxicity, work involving beryllium shall be done with both local exhaust ventilation and air line respirators.

(c) Employees performing such operations in the open air shall be protected by filter-type respirators in accordance with the requirements of Part C of this chapter, except that employees performing such operations on beryllium-containing base or filler metals shall be protected by air line respirators in accordance with the requirements of Part C of this chapter.

(d) Other employees exposed to the same atmosphere as the welders or burners shall be protected in the same manner as the welder or burner.

(4) Inert-gas metal-arc welding. (a) Since the inert-gas metal-arc welding process involves the production of ultra-violet radiation of intensities of 5 to 30 times that produced during shielded metal-arc welding, the decomposition of chlorinated solvents by ultraviolet rays, and the liberation of toxic fumes and gases, employees shall not be permitted to engage in, or be exposed to the process until the following special precautions have been taken:

(i) The use of chlorinated solvents shall be kept at least 200 feet, unless shielded, from the exposed arc, and surfaces prepared with chlorinated solvents shall be

thoroughly dry before welding is permitted on such surfaces.

(ii) Employees in the area not protected from the arc by screening shall be protected by filter lenses meeting the requirements of Part C of this chapter. When two or more welders are exposed to each other's arc, filter lens goggles of a suitable type, meeting the requirements of Part C of this chapter shall be worn under welding helmets. Hand shields to protect the welder against flashes and radiant energy shall be used when either the helmet is lifted or the shield is removed.

(iii) Welders and other employees who are exposed to radiation shall be suitably protected so that the skin is covered completely to prevent burns and other damage by ultraviolet rays. Welding helmets and hand shields shall be free of leaks and openings, and free of highly reflective surfaces.

(iv) When inert-gas metal-arc welding is being performed on stainless steel, the requirements of subdivision (b) of subsection (3) of this section shall be met to protect against dangerous concentrations of nitrogen dioxide.

(5) General welding, cutting, and heating. (a) Welding, cutting, and heating, not involving conditions or materials described in subsections (2), (3), or (4) of this section, may normally be done without mechanical ventilation or respiratory protective equipment, but where, because of unusual physical or atmospheric conditions, an unsafe accumulation of contaminants exists, suitable mechanical ventilation or respiratory protective equipment shall be provided.

(b) Employees performing any type of welding, cutting, or heating shall be protected by suitable eye protective equipment in accordance with the requirements of Part C of this chapter. [Order 74-26, § 296-155-415, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-420 Welding, cutting, and heating in way of preservative coatings.** (1) Before welding, cutting, or heating is commenced on any surface covered by a preservative coating whose flammability is not known, a test shall be made by a competent person to determine its flammability. Preservative coatings shall be considered to be highly flammable when scrapings burn with extreme rapidity.

(2) Precautions shall be taken to prevent ignition of highly flammable hardened preservative coatings. When coatings are determined to be highly flammable, they shall be stripped from the area to be heated to prevent ignition.

(3) Protection against toxic preservative coatings: (a) In enclosed spaces, all surfaces covered with toxic preservatives shall be stripped of all toxic coatings for a distance of at least 4 inches from the area of heat application, or the employees shall be protected by air line respirators, meeting the requirements of Part C of this chapter.

(b) In the open air, employees shall be protected by a respirator, in accordance with requirements of Part C of this chapter.

(4) The preservative coatings shall be removed a sufficient distance from the area to be heated to ensure that the temperature of the unstripped metal will not be appreciably raised. Artificial cooling of the metal surrounding the heating area may be used to limit the size of the area required to be cleaned. [Order 74-26, § 296-155-420, filed 5/7/74, effective 6/6/74.]

## Part I ELECTRICAL

### WAC

296-155-425	Definitions applicable to this part.
296-155-430	General requirements.
296-155-435	Grounding and bonding.
296-155-440	Equipment installation and maintenance.
296-155-450	Battery rooms and battery charging.
296-155-455	Hazardous locations.

**WAC 296-155-425 Definitions applicable to this part.** (1) The definition of "approved" as set forth in WAC 296-155-012(1) shall apply.

(2) "Bonding jumper" means a conductor to assure the required electrical conductivity between metal parts required to be electrically connected.

(3) "Branch circuits" mean that portion of a wiring system extending beyond the final overcurrent device protecting the circuit. (A device not approved for branch circuit protection, such as thermal cutout or motor overload protective device, is not considered as the overcurrent device protecting the circuit.)

(4) "Circuit breaker" means a device designed to open and close a circuit by manual means, and to open the circuit automatically on a predetermined overload of current, without injury to itself when properly applied within its rating.

(5) "Exposed" (as applied to live parts) means that a live part can be inadvertently touched or approached nearer than a safe distance by a person. This term applies to parts not suitably guarded, isolated, or insulated.

(6) "Ground" means a conducting connection, whether intentional or accidental, between an electrical circuit or equipment and earth, or to some conducting body which serves in place of the earth.

(7) "Grounded" means connected to earth or to some conducting body which serves in place of the earth.

(8) "Hazard" means to include casualty, fire, and shock when applicable.

(9) "Isolated" means not readily accessible to personnel unless special means of access are used.

(10) "Raceway" means any channel for loosely holding wires or cables in interior work which is designed expressly and used solely for this purpose. Raceways may be of metal, wood, or insulating material, and the term includes wood and metal moldings consisting of a backing and capping, and also metal ducts into which wires are to be pulled.

(11) "Shock hazard" means to exist at an accessible part in a circuit between the part and ground, or other accessible parts if the potential is more than 42.4 volts peak and the current through a 1,500-ohm load is more than 5 milliamperes.

(12) "Weatherproof" means so constructed or protected that exposure to the weather shall not interfere with successful operation. [Order 74-26, § 296-155-425, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-430 General requirements.** (1) All electrical work, installations, and wire capacities shall be in accordance with pertinent provisions of the National Electrical Code, NFPA 70-1971; ANSI C1-1971 (Rev. of 1968), and the National Electrical Safety Code, National Bureau of Standards, Part 4 (ANSI C2.4) unless otherwise provided by standards of this chapter.

(2) Applicability. The standards of this part apply only to electrical installations used on the jobsite, both temporary and permanent.

(3) Protection of employees. (a) No employer shall permit an employee to work in such proximity to any part of an electric power circuit that he may contact the same in the course of his work unless the employee is protected against electric shock by deenergizing the circuit and grounding it or by guarding it by effective insulation or other equally effective means.

(b) Before work is begun the employer shall ascertain by inquiry or direct observation, or by instruments, whether any part of an electric power circuit, exposed or concealed, is so located that the performance of the work may bring any person, tool, or machine into physical or electrical contact therewith. The employer shall post and maintain proper warning signs where such circuit exists. He shall advise his employees of the location of such lines, the hazards involved and the protective measures to be taken.

(4) Passageways and open spaces. Suitable barriers or other means shall be provided to ensure that workspace for electrical equipment will not be used as a passageway during periods when energized parts of electrical equipment are exposed.

(5) Workspace around equipment. Sufficient space shall be provided and maintained in the area of electrical equipment to permit ready and safe operation and maintenance of such equipment. When parts are exposed, the minimum clearance for the workspace shall be not less than 6 1/4 feet high, nor less than a radius of 3 feet wide, and there shall be clearance sufficient to permit at least a 90° opening of all doors or hinged panels. All working clearances shall be maintained in accordance with Article 110-16, National Electrical Code, NFPA 70-1971; ANSI C1-1971 (Rev. of 1968).

(6) Load ratings. In existing installations no changes in circuit protection shall be made to increase the load in excess of the load rating of the circuit wiring, as specified in National Electric Code, NFPA 70-1971; ANSI C1-1971 (Rev. of 1968), Article 310.

(7) Lockout and tagging of circuits. (a) Equipment or circuits that are deenergized shall be rendered inoperative and have tags attached at all points where such equipment or circuits can be energized.

(b) Controls that are to be deactivated during the course of work on energized or deenergized equipment or circuits shall be tagged.

(c) Tags shall be placed to identify plainly the equipment or circuits being worked on.

(8) Ground-fault protection. (a) Notwithstanding the provisions of subsections (1) through (7) of this section, the requirement in section 210-7 of the 1971 National Electric Code (NFPA 70-1971; ANSI C1-1971) that all 15- and 20-ampere receptacle outlets on single-phase circuits for construction sites have approved ground-fault circuit protection for personnel does not apply. In lieu thereof, the employer shall use either ground-fault circuit interrupters as specified in subsection (8)(b) of this section or an assured equipment grounding conductor program as specified in subsection (8)(c) of this section, to protect employees on construction sites. These requirements are in addition to any other requirements for equipment grounding conductors.

(b) Ground-fault circuit interrupters. All 120-volt, single-phase, 15- and 20-ampere receptacle outlets on construction sites, which are not a part of the permanent wiring of the building or structure and which are in use by employees, shall have approved ground-fault circuit interrupters for personnel protection. Receptacles on a two-wire, single-phase portable or vehicle-mounted generator rated not more than 5kW, where the circuit conductors of the generator are insulated from the generator frame and all other grounded surfaces, need not be protected with ground-fault circuit interrupters.

(c) Assured equipment grounding conductor program. The employer shall establish and implement an assured equipment grounding conductor program on construction sites covering all cord sets, receptacles which are not a part of the permanent wiring of the building or structure, and equipment connected by cord and plug which are available for use or used by employees. This program shall comply with the following minimum requirements:

(i) A written description of the program, including the specific procedures adopted by the employer, shall be available at the jobsite for inspection and copying by the director and any affected employee.

(ii) The employer shall designate one or more competent persons (as defined in WAC 296-155-012(3)) to implement the program.

(iii) Each cord set, attachment cap, plug and receptacle of cord sets, and any equipment connected by cord and plug, except cord sets and receptacles which are fixed and not exposed to damage, shall be visually inspected before each day's use for external defects, such as deformed or missing pins or insulation damage, and for indication of possible internal damage. Equipment found damaged or defective may not be used until repaired.

(iv) The following tests shall be performed on all cord sets, receptacles which are not a part of the permanent wiring of the building or structure, and cord- and plug-connected equipment required to be grounded:

(A) All equipment grounding conductors shall be tested for continuity and shall be electrically continuous.

(B) Each receptacle and attachment cap or plug shall be tested for correct attachment of the equipment grounding conductor. The equipment grounding conductor shall be connected to its proper terminal.

(v) All required tests shall be performed:

(A) Before first use;

(B) Before equipment is returned to service following any repairs;

(C) Before equipment is used after any incident which can be reasonably suspected to have caused damage (for example, when a cord set is run over); and

(D) At intervals not to exceed 3 months, except that cord sets and receptacles which are fixed and not exposed to damage shall be tested at intervals not exceeding 6 months.

(vi) The employer may not make available or permit the use by employees of any equipment which has not met the requirements of subsection (8)(c) of this section.

(vii) Tests performed as required in this subsection shall be recorded. This test record shall identify each receptacle, cord set, and cord- and plug-connected equipment that passed the test, and shall indicate the last date it was tested or the interval for which it was tested. This record shall be kept by means of logs, color coding, or other effective means, and shall be maintained until replaced by a more current record. The record shall be made available on the jobsite for inspection by the director and any affected employee. [Order 77-20, § 296-155-430, filed 10/18/77; Order 77-12, § 296-155-430, filed 7/11/77; Order 74-26, § 296-155-430, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-435 Grounding and bonding.** (1)

Portable and/or cord and plug-connected equipment. (a) The noncurrent-carrying metal parts of portable and/or plug-connected equipment shall be grounded.

(b) Portable tools and appliances protected by an approved system of double insulation, or its equivalent, need not be grounded. Where such an approved system is employed, the equipment shall be distinctively marked.

(2) Fixed equipment. Exposed noncurrent-carrying metal parts of fixed electrical equipment, including motors, generators, frames and tracks of electrically operated cranes, electrically driven machinery, etc., shall be grounded.

(3) Effective grounding. The path from circuits, equipment, structures, and conduit or enclosures to ground shall be permanent and continuous; have ample carrying capacity to conduct safely the currents liable to be imposed on it; and have the impedance sufficiently low to limit the potential above ground and to result in the operation of the overcurrent devices in the circuit.

(4) Ground resistance. Driven rod electrodes shall, where practicable, have a resistance to ground not to exceed 25 ohms. Where the resistance is not as low as 25 ohms, two or more electrodes connected in parallel shall be used.

(5) Testing of grounds. Grounding circuits shall be checked to ensure that the circuit between the ground and the grounded power conductor has a resistance which is low enough to permit sufficient current to flow to cause the fuse or circuit breaker to interrupt the current.

(6) Extension cords. Extension cords used with portable electric tools and appliances shall be of three-wire type.

(7) Bonding. (a) Conductors used for bonding and grounding stationary and moveable equipment shall be of ample size to carry the anticipated current.

(b) When attaching bonding and grounding clamps or clips, a secure and positive metal-to-metal contact shall be made. Such attachments shall be made before closures are opened and material movements are started and shall not be broken until after material movements are stopped and closures are made.

(8) Temporary wiring. All temporary wiring shall be effectively grounded in accordance with the National Electrical Code, NFPA No. 70-1971 or ANSI C1-1971.

(9) Construction site. Precautions shall be taken to make any necessary open wiring inaccessible to unauthorized personnel.

(10) Temporary lighting. (a) Temporary lights shall be equipped with guards to prevent accidental contact with the bulb, except that guards are not required when the construction of the reflector is such that the bulb is deeply recessed.

(b) Temporary lights shall be equipped with heavy duty electric cords with connections and insulation maintained in safe condition. Temporary lights shall not be suspended by their electric cords unless cords and lights are designed for this means of suspension. Splices shall have insulation equal to that of the cable.

(c) Working spaces, walkways, and similar locations shall be kept clear of cords so as not to create a hazard to employees.

(d) Portable electric lighting used in moist and/or other hazardous locations, as for example, drums, tanks, and vessels shall be operated at a maximum of 12 volts. [Order 74-26, § 296-155-435, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-440 Equipment installation and maintenance.** (1)

Flexible cable and cords. (a) Receptacles for attachment plugs shall be approved, concealed contact type with a contact for extending ground continuity and shall be so designed and constructed that the plug may be pulled out without leaving any live parts exposed to accidental contact.

(b) Where different voltages, frequencies, or types of current (a.c. or d.c.) are to be supplied by portable cords, receptacles shall be of such design that attachment plugs used on such circuits are not interchangeable.

(c) Attachment plugs or other connectors supplying equipment at more than 300 volts shall be of the skirted type or otherwise so designed that arcs will be confined.

(d) Attachment plugs for use in work areas shall be so constructed that they will endure rough use and be equipped with a suitable cord grip to prevent strain on the terminal screws.

(e) Flexible cord shall be used only in continuous lengths without splice, except suitable molded or vulcanized splices may be used where properly made, and the

insulation shall be equal to the cable being spliced and wire connections soldered.

(f) Trailing cables shall be protected from damage.

(g) Splices in trailing cable shall be mechanically strong components and insulated to retain the mechanical and dielectric strength of the original cable.

(h) Cable passing through work areas shall be covered or elevated to protect it from damage which would create a hazard to employees.

(i) Handlamps of the portable type shall be of the molded composition or other type approved for the purpose. Brass-shell, paper-lined lampholders shall not be used. Handlamps shall be equipped with a handle and a substantial guard over the bulb and attached to the lampholder or the handle.

(j) Worn or frayed electric cables shall not be used.

(k) Extension cords shall be protected against accidental damage as may be caused by traffic, sharp corners, or projections and pinching in doors or elsewhere.

(l) Extension cords shall not be fastened with staples, hung from nails, or suspended by wire.

(2) Overcurrent protection. (a) Overcurrent protection shall be provided by fuses or circuit breakers for each feeder and branch circuit, and shall be based on the current-carrying capacity of the conductors supplied and the power load being used.

(b) No overcurrent device shall be placed in any permanently grounded conductor, except where the overcurrent device simultaneously opens all conductors of the circuit or for motor running protection.

(c) When fuses are installed or removed with one or both terminals energized, special tools insulated for the voltage shall be used.

(3) Switches, circuit breakers, and disconnecting means. (a) Each disconnecting means for motors and appliances, and each service feeder or branch circuit at the point where it originates, shall be legibly marked to indicate its purpose unless located and arranged so the purpose is evident.

(b) Disconnecting means shall be located or shielded so that employees will not be injured.

(c) Boxes for disconnecting means shall be securely and rigidly fastened to the surface upon which they are mounted and fitted with covers.

(d) Boxes and disconnecting means installed in damp or wet locations shall be waterproof to the extent that water does not enter or accumulate.

(4) Transformers. (a) Energized transformers and other related electrically energized equipment over 150 volts to ground shall be protected so as to prevent accidental contact with any person. Protection shall be provided by individual integrated housing or by an enclosure, such as an electrical substation fence, which accommodates a group of such equipment. Metallic enclosures shall be grounded.

(b) Access to energized equipment covered by subdivision (a) of this subsection shall be secured by lock or other fasteners requiring the use of tools to open them.

(c) Signs indicating danger and prohibiting unauthorized access shall be conspicuously displayed on the housing or other enclosure around the equipment.

(d) Transformers mounted on utility poles at a height of more than 12 feet from the ground are exempt from the requirements of this subsection.

(5) Welding and cutting equipment. Welding and cutting equipment shall meet the requirements specified in Parts D and H of this chapter. [Order 74-26, § 296-155-440, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-450 Battery rooms and battery charging.** (1) General requirements. (a) Batteries of the nonseal type shall be located in enclosures with outside vents or in well ventilated rooms, so arranged as to prevent the escape of fumes, gases, or electrolyte spray into other areas.

(b) Ventilation shall be provided to ensure diffusion of the gases from the battery to prevent the accumulation of an explosive type mixture.

(c) Racks and trays shall be substantial and treated to be resistant to the electrolyte.

(d) Floors shall be of acid resistant construction or be protected from acid accumulations.

(e) Face shields, aprons, and rubber gloves shall be worn by workers handling acids or batteries.

(f) Facilities for quick drenching of the eyes and body shall be provided within 25 feet of the work area for emergency use.

(g) Facilities shall be provided for flushing and neutralizing spilled electrolyte, for fire protection, for protecting charging apparatus from damage by trucks, and for adequate ventilation for dispersal of fumes from gassing batteries.

(2) Charging. (a) Battery charging installations shall be located in areas designated for that purpose.

(b) When charging batteries, the vent caps shall be kept in place to avoid electrolyte spray. Care shall be taken to assure that vent caps are functioning. [Order 74-26, § 296-155-450, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-455 Hazardous locations.** (1) General. For the purpose of this section, hazardous locations are defined as follows:

(a) Class I locations—Class I locations are those in which flammable gases or vapors are or may be present in quantities sufficient to produce explosive or ignitable mixtures.

(b) Class II locations—Class II locations are those which are hazardous because of the presence of combustible dust.

(c) Class III locations—Class III locations are those which are hazardous because of the presence of easily ignitable fibers or flyings, but in which such fibers or flyings are not likely to be in suspension in air in quantities sufficient to produce ignitable mixtures.

(d) See the National Electrical Code, NFPA 70-1971; ANSI C1-1971 (Rev. of 1968) for further definition of divisions 1 and 2 for each class.

(2) All components and utilization equipment used in a hazardous location shall be chosen from among those listed by a nationally recognized testing laboratory, such as Underwriters' Laboratories, Inc., or Factory Mutual

Engineering Corp., except custom-made components and utilization equipment.

(3) Equipment approved for a specific hazardous location shall not be installed or intermixed with equipment approved for another specific hazardous location.

(4) Employer shall ensure that all wiring components and utilization equipment are maintained as vapor, dust, or fiber tight as contemplated by their approvals. There shall be no loose or missing screws, gaskets, threaded connections, or other impairments to this tight condition. [Order 74-26, § 296-155-455, filed 5/7/74, effective 6/6/74.]

#### DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS SUBCHAPTER

296-155-48501	Figure J-1. [Order 76-29, Figure J-1 (codified as WAC 296-155-48501), filed 9/30/76; Order 74-26, § 296-155-485 (part), Figure J-1, filed 5/7/74, effective 6/6/74.] Repealed by 82-08-026 (Order 82-10), filed 3/30/82. Statutory Authority: RCW 49.17-.040 and 49.17.050.
296-155-48502	Figure J-2. [Order 76-29, Figure J-2 (codified as WAC 296-155-48502), filed 9/30/76; Order 74-26, § 296-155-485 (part), Figure J-2, filed 5/7/74, effective 6/6/74.] Repealed by 82-08-026 (Order 82-10), filed 3/30/82. Statutory Authority: RCW 49.17-.040 and 49.17.050.

**WAC 296-155-475 Definitions.** (1) "Ladders" (a) "cleats" means ladder crosspieces of rectangular cross section placed on edge on which a person may step in ascending or descending.

(b) "Single cleat ladder" means one which consists of a pair of side rails, usually parallel, but with flared side rails permissible, connected together with cleats that are joined to the side rails at regular intervals.

(c) "Double cleat ladder" means one that is similar to a single cleat ladder, but is wider, with an additional center rail which will allow for two-way traffic for workers in ascending and descending.

(2) "Scaffolding" (a) "bearer" means a horizontal member of a scaffold upon which the platform rests and which may be supported by ledgers.

(b) "Boatswain's chair" means a seat supported by slings attached to a suspended rope, designed to accommodate one employee in a sitting position.

(c) "Brace" means a tie that holds one scaffold member in a fixed position with respect to another member.

(d) "Bricklayers' square scaffold" means a scaffold composed of framed wood squares which support a platform, limited to light and medium duty.

(e) "Built-up scaffold" means a rigidly constructed scaffold, built up where it is going to be used and dismantled when its purpose has been accomplished.

(f) "Carpenters' bracket scaffold" means a scaffold consisting of wood or metal brackets supporting a platform.

(g) "Coupler" means a device for locking together the component parts of a tubular metal scaffold. (The material used for the couplers shall be of a structural type, such as a dropforged steel, malleable iron, or structural grade aluminum.)

(h) "Crawling board or chicken ladder" means a plank with cleats spaced and secured at equal intervals, for use by a worker on roofs, not designed to carry any material.

(i) "Double pole or independent pole scaffold" means a scaffold supported from the base by a double row of uprights, independent of support from the walls and constructed of uprights, ledgers, horizontal platform bearers, and diagonal bracing.

(j) "Float or ship scaffold" means a scaffold hung from overhead supports by means of ropes and consisting of a substantial platform having diagonal bracing underneath, resting upon and securely fastened to two parallel plank bearers at right angles to the span.

(k) "Standard guardrail" means a rail that will be constructed to provide a smooth surfaced top rail a distance of not more than 42 inches or less than 36 inches above the walking surface. An intermediate rail shall be installed half way between the walking surface and the top of the top rail.

The anchoring of posts and framing of members for railings of all types shall be of such construction that the completed structure shall be capable of withstanding a load of at least 200 pounds applied in any direction at any point on the top rail.

**NOTE:** Where 2 x 4 inch lumber is used for rails and posts, upright posts spaced at intervals not exceeding 8 feet will achieve the 200 pounds loading criteria.

(l) "Heavy duty scaffold" means a scaffold designed and constructed to carry a working load not to exceed 75 pounds per square foot.

(m) "Horse scaffold" means a scaffold for light or medium duty, composed of horses supporting a work platform.

(n) "Interior hung scaffold" means a scaffold suspended from the ceiling or roof structure.

Engineering Corp., except custom-made components and utilization equipment.

(3) Equipment approved for a specific hazardous location shall not be installed or intermixed with equipment approved for another specific hazardous location.

(4) Employer shall ensure that all wiring components and utilization equipment are maintained as vapor, dust, or fiber tight as contemplated by their approvals. There shall be no loose or missing screws, gaskets, threaded connections, or other impairments to this tight condition. [Order 74-26, § 296-155-455, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-475 Definitions.** (1) "Ladders" (a) "cleats" means ladder crosspieces of rectangular cross section placed on edge on which a person may step in ascending or descending.

(b) "Single cleat ladder" means one which consists of a pair of side rails, usually parallel, but with flared side rails permissible, connected together with cleats that are joined to the side rails at regular intervals.

(c) "Double cleat ladder" means one that is similar to a single cleat ladder, but is wider, with an additional center rail which will allow for two-way traffic for workers in ascending and descending.

(2) "Scaffolding" (a) "bearer" means a horizontal member of a scaffold upon which the platform rests and which may be supported by ledgers.

(b) "Boatswain's chair" means a seat supported by slings attached to a suspended rope, designed to accommodate one employee in a sitting position.

(c) "Brace" means a tie that holds one scaffold member in a fixed position with respect to another member.

(d) "Bricklayers' square scaffold" means a scaffold composed of framed wood squares which support a platform, limited to light and medium duty.

(e) "Built-up scaffold" means a rigidly constructed scaffold, built up where it is going to be used and dismantled when its purpose has been accomplished.

(f) "Carpenters' bracket scaffold" means a scaffold consisting of wood or metal brackets supporting a platform.

(g) "Coupler" means a device for locking together the component parts of a tubular metal scaffold. (The material used for the couplers shall be of a structural type, such as a dropforged steel, malleable iron, or structural grade aluminum.)

(h) "Crawling board or chicken ladder" means a plank with cleats spaced and secured at equal intervals, for use by a worker on roofs, not designed to carry any material.

(i) "Double pole or independent pole scaffold" means a scaffold supported from the base by a double row of uprights, independent of support from the walls and constructed of uprights, ledgers, horizontal platform bearers, and diagonal bracing.

(j) "Float or ship scaffold" means a scaffold hung from overhead supports by means of ropes and consisting of a substantial platform having diagonal bracing underneath, resting upon and securely fastened to two parallel plank bearers at right angles to the span.

(k) "Standard guardrail" means a rail that will be constructed to provide a smooth surfaced top rail a distance of not more than 42 inches or less than 36 inches above the walking surface. An intermediate rail shall be installed half way between the walking surface and the top of the top rail.

The anchoring of posts and framing of members for railings of all types shall be of such construction that the completed structure shall be capable of withstanding a load of at least 200 pounds applied in any direction at any point on the top rail.

**NOTE:** Where 2 x 4 inch lumber is used for rails and posts, upright posts spaced at intervals not exceeding 8 feet will achieve the 200 pounds loading criteria.

(l) "Heavy duty scaffold" means a scaffold designed and constructed to carry a working load not to exceed 75 pounds per square foot.

(m) "Horse scaffold" means a scaffold for light or medium duty, composed of horses supporting a work platform.

(n) "Interior hung scaffold" means a scaffold suspended from the ceiling or roof structure.

(o) "Ladder jack scaffold" means a light duty scaffold supported by brackets attached to ladders.

(p) "Leaning horse scaffold" means scaffold planks resting on two half horses supported by two legs on the ground with the point of the bearer resting against a solid portion of a structure.

(q) "Ledgers (stringer)" mean a horizontal scaffold member which extends from post to post and which supports the putlogs or bearers forming a tie between the posts.

(r) "Light duty scaffold" means a scaffold designed and constructed to carry a working load not to exceed 25 pounds per square foot.

(s) "Manually propelled mobile scaffold" means a portable rolling scaffold supported by casters.

(t) "Masons' adjustable multiple-point suspension scaffold" means a scaffold having a continuous platform supported by bearers suspended by wire rope from overhead supports, so arranged and operated as to permit the raising or lowering of the platform to desired working positions.

(u) "Maximum rated load" means the total of all loads including the working load, the weight of the scaffold, and such other loads as may be reasonably anticipated for which the scaffold is designed.

(v) "Medium duty scaffold" means a scaffold designed and constructed to carry a working load not to exceed 50 pounds per square foot.

(3) Additional definitions for "scaffolding":

(a) "Midrail" means a rail approximately midway between the guardrail and platform, secured to the uprights erected along the exposed sides and ends of platforms.

(b) "Needle beam scaffold" means a light duty scaffold consisting of needle beams supporting a platform.

(c) "Outrigger scaffold" means a scaffold supported by outriggers or thrustouts projecting beyond the wall or face of the building or structure, the inboard ends of which are secured inside or on the roof of such building or structure.

(d) "Plasters-lathers scaffold" means a tubular welded scaffold erected for, and used primarily by, the plasterer and lather trades.

(e) "Putlog" means a scaffold member upon which the platform rests.

(f) "Roofing or bearer bracket" means a bracket used in slope roof construction, having provisions for fastening to the roof or supported by ropes fastened over the ridge and secured to some suitable object.

(g) "Runner" means the lengthwise horizontal bracing or bearing members or both.

(h) "Scaffold" means any temporary elevated platform and its supporting structure used for supporting workers or materials, or both.

(i) "Single-point adjustable suspension scaffold" means a manually or power-operated unit designed for light duty use, supported by a single wire rope from an overhead support so arranged and operated as to permit the raising or lowering of the platform to desired working positions.

(j) "Single-pole scaffold" means platforms resting on putlogs or cross beams, the outside ends of which are supported on ledgers secured to a single row or posts or uprights, and the inner ends of which are supported on or in a wall.

(k) "Stone setters' adjustable multiple-point suspension scaffold" means a swinging type scaffold having a platform supported by hangers suspended at four points so as to permit the raising or lowering of the platform to the desired working position by the use of hoisting machines.

(l) "Suspended scaffold" means a scaffold supported from above, the platform of which is supported at more than two points by steel wire cables suspended from overhead outriggers which are anchored to the steel or concrete frame of the building. It is equipped with a hoisting drum or machine so the platform can be raised or lowered.

(m) "Toeboard" means a standard toeboard and shall be 4 inches minimum in vertical height from its top edge to the level of the floor, platform, runway, or ramp. It shall be securely fastened in place and have not more than 1/4-inch clearance above floor level. It may be made of any substantial material, either solid, or with openings not over 1 inch in greatest dimension.

(n) "Tube and coupler scaffold" means an assembly consisting of tubing which serves as posts, bearers, braces, ties, and runners, a base supporting the posts, and special couplers which serve to connect the uprights and to join the various members.

(o) "Tubular welded frame scaffold" means a sectional panel or frame metal scaffold substantially built up of prefabricated welded sections which consists of posts and horizontal bearer with intermediate members.

(p) "Two-point suspension scaffold (swinging scaffold)" means a scaffold, the platform of which is supported by hangers (stirrups) at two points, suspended from overhead supports so as to permit the raising or lowering of the platform to the desired working position by tackle or hoisting machines.

(q) "Window jack scaffold" means a scaffold, the platform of which is supported by a bracket or jack which projects through a window opening.

(r) "Working load" means the load imposed by persons, materials, and equipment. [Order 76-6, § 296-155-475, filed 3/1/76; Order 74-26, § 296-155-475, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-480 Ladders. (1) General requirements.**

(a) All applicable rules for design, construction, maintenance, operation, testing, and use of ladders contained in WAC 296-24-780 through 296-24-81013 of the general safety and health standards shall be complied with.

(b) Except where either permanent or temporary stairways or suitable ramps or runways are provided, ladders described in this Part shall be used to give safe access to all elevations.

(c) The use of ladders with broken or missing rungs or steps, broken or split side rails, or other faulty or defective construction is prohibited. When ladders with such defects are discovered, they shall be immediately withdrawn from service. Inspection of metal ladders shall include checking for corrosion of interiors of open end hollow rungs.

(d) Manufactured portable wood ladders provided by the employer shall be in accordance with the provisions of the American National Standards Institute, A14.1-1968, Safety Code for Portable Wood Ladders.

(e) Portable metal ladders shall be of strength equivalent to that of wood ladders. Manufactured portable metal ladders provided by the employer shall be in accordance with the provisions of the American National Standards Institute, A14.2-1972, Safety Code for Portable Metal Ladders.

(f) Fixed ladders shall be in accordance with the provisions of the American National Standards Institute, A14.3-1956, Safety Code for Fixed Ladders.

(g) Feet of portable ladders shall be placed on a substantial base, and the area around the top and bottom of the ladder shall be kept clear.

(h) Portable ladders shall be used at such a pitch that the horizontal distance from the top support to the foot of the ladder is about one-quarter of the working length of the ladder (the length along the ladder between the foot and the top support). Ladders shall not be used in a horizontal position as platforms, runways, or scaffolds.

(i) Ladders shall not be placed in passageways, doorways, driveways, or any location where they may be displaced by activities being conducted on any other work, unless protected by barricades or guards.

(j) The side rails shall extend not less than 36 inches above the landing. When this is not practical, grab rails, which provide a secure grip for an employee moving to or from the point of access, shall be installed.

(k) Portable straight ladders in use shall be tied, blocked, equipped with safety shoes or otherwise secured to prevent their being displaced.

(l) Portable metal ladders shall not be used for electrical work or where they may contact electrical conductors.

(m) Unless otherwise stated, all lumber sizes shall be nominal.

(n) When working from a ladder over 25 feet from the ground or floor, the ladder shall be secured at both top and bottom.

(o) No type of work shall be performed on a ladder over 25 feet from the ground or floor that requires the use of both hands to perform the work, unless a safety belt is worn and the safety lanyard is secured to the ladder.

(p) Work, such as sandblasting or spray painting, that requires wearing eye protection, respirators, and handling of pressure equipment, shall be limited to not over 30 feet from the ground or floor while working on a ladder.

(2) Job-made ladders.

(a) Job-made ladders shall be constructed for intended use.

(b) If a ladder is to provide the only means of access or exit from a working area for twenty-five or more employees, or simultaneous two-way traffic is expected, a double cleat ladder shall be installed.

(c) Double cleat ladders shall not exceed 24 feet in length.

(d) Single cleat ladders shall not exceed 30 feet in length between supports (base and top landing). If ladders are to connect different landings, or if the length required exceeds this maximum length, two or more separate ladders shall be used, offset with a platform between each ladder. Guardrails and toeboards shall be erected on the exposed sides of the platforms.

(e) The width of single cleat ladders shall be at least 15 inches, but not more than 20 inches between rails at the top.

(f) It is preferable that side rails be continuous. If splicing is necessary to attain the required length however, the splice must develop the full strength of a continuous side rail of the same length.

(g) 2-inch by 4-inch lumber shall be used for side rails of single cleat ladders up to 16 feet long; 3-inch by 6-inch lumber, or the equivalent, shall be used for single cleat ladders from 16 to 30 feet in length.

(h) 2-inch by 4-inch lumber shall be used for side and middle rails of double cleat ladders up to 12 feet in length; 2-inch by 6-inch lumber for double cleat ladders from 12 to 24 feet in length.

(i) 1-inch by 4-inch lumber shall be used for cleats of single and double cleat ladders.

(j) Cleats shall be inset into the edges of the side rails one-half inch, or filler blocks shall be used on the rails between the cleats. The cleats shall be secured to each rail with three 10d common wire nails or other fasteners of equivalent strength. Cleats shall be uniformly spaced, 12 inches top-to-top.

(k) Side rails shall be parallel or flared top to bottom by not more than one-quarter of an inch for each 2 feet of ladder.

(l) Wood side rails of ladders having cleats shall be not less than 1-1/2 inches thick and 3-1/2 inches deep (2 inches by 4 inches nominal) when made of Group 2 or Group 3 woods (see Table J-18). Wood side rails of Group 4 wood (see Table J-18) may be used in the same cross-section of dimensions for cleat ladders up to 20 feet in length. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-08-115 (Order 79-9), § 296-155-480, filed 7/31/79; Order 76-29, § 296-155-480, filed 9/30/76; Order 76-6, § 296-155-480, filed 3/1/76; Order 74-26, § 296-155-480, filed 5/7/74, effective 6/6/74.]

[Order 76-29, Table J-18 (codified as WAC 296-155-48090), filed 9/30/76; Order 76-6, Table J-18, filed 3/1/76. Formerly 296-155-480 (part).]

**WAC 296-155-485 Scaffolding.** (1) General requirements.

(a) All applicable rules for design, construction, maintenance, operation, testing, and use of scaffolds contained in chapter 296-24 WAC, "General safety and health standards," shall apply within the construction industry. (See WAC 296-24-825 through 296-24-84013.)

(b) Scaffolds shall be erected in accordance with requirements of this section.

(c) The footing or anchorage for scaffolds shall be sound, rigid, and capable of carrying the maximum intended load without settling or displacement. Unstable objects such as barrels, boxes, loose brick, or concrete blocks, shall not be used to support scaffolds or planks.

(d) No scaffold shall be erected, moved, dismantled, or altered except under the supervision of competent persons.

(e) Guardrails and toeboards shall be installed on all open sides and ends of platforms more than 10 feet above the ground or floor, except needle beam scaffolds and floats. Scaffolds 4 feet to 10 feet in height, having a minimum horizontal dimension in either direction of less than 45 inches, shall have standard guardrails and toeboards installed on all open sides and ends of the scaffold platform.

(f) Where persons are required to work or pass under the scaffold, scaffolds shall be provided with a screen between the toeboard and the guardrail, extending along the entire opening, consisting of No. 18 gauge U.S. Standard wire 1/2-inch mesh, or the equivalent.

(g) Scaffolds and their components shall be capable of supporting without failure at least 4 times the maximum intended load.

(h) Any scaffold including accessories such as braces, brackets, trusses, screw legs, ladders, etc. damaged or weakened from any cause shall be immediately repaired or replaced.

(i) All load-carrying timber members of scaffold framing shall be a minimum of 1,500 fiber (stress grade) construction grade lumber. All dimensions are nominal sizes as provided in the American Lumber Standards, except that where rough sizes are noted, only rough or undressed lumber of the size specified will satisfy minimum requirements.

(j) All planking shall be scaffold grades, or equivalent, as recognized by approved grading rules for the species of wood used. The maximum permissible spans for 2- x 10-inch or wider planks shall be as shown in Table J-1.

(k) The maximum permissible span for 1 1/4- x 9-inch or wider plank of full thickness shall be 4 feet with medium duty loading of 50 p.s.f.

(l) All planking or platforms shall be overlapped (minimum 12 inches), or secured from movement and the platform shall be a minimum of two 2-inch by 10-inch planks in width or a minimum of 18 inches.

(m) An access ladder or equivalent safe access shall be provided.

(n) Scaffold planks shall extend over their end supports not less than 6 inches nor more than 12 inches.

(o) The poles, legs, or uprights of scaffolds shall be plumb, and securely and rigidly braced to prevent swaying and displacement.

(p) Overhead protection shall be provided for persons on a scaffold exposed to overhead hazards.

(q) Slippery conditions on scaffolds shall be eliminated as soon as possible after they occur.

(r) No welding, burning, riveting, or open flame work shall be performed on any staging suspended by means of fiber or synthetic rope. Only treated or protected fiber or synthetic ropes shall be used for or near any work involving the use of corrosive substances or chemicals. Specific requirements for boatswain's chairs and float or ship scaffolds are contained in subsections (12) and (23) of this section.

(s) Wire, synthetic, or fiber rope used for scaffold suspension shall be capable of supporting at least 6 times the rated load.

(t) The use of shore or lean-to scaffolds is prohibited.

(2) Wood pole scaffolds.

(a) Scaffold poles shall bear on a foundation of sufficient size and strength to spread the load from the pole over a sufficient area to prevent settlement. All poles shall be set plumb.

(b) Where wood poles are spliced, the ends shall be squared and the upper section shall rest squarely on the lower section. Wood splice plates shall be provided on at least two adjacent sides and shall be not less than 4 feet in length, overlapping the abutted ends equally, and have the same width and not less than the cross-sectional area of the pole. Splice plates or other materials of equivalent strength may be used.

(c) Independent pole scaffolds shall be set as near to the wall of the building as practicable.

(d) All pole scaffolds shall be securely guyed or tied to the building or structure. Where the height or length exceeds 25 feet, the scaffold shall be secured at intervals not greater than 25 feet vertically and horizontally.

(e) Putlogs or bearers shall be set with their greater dimension vertical, and long enough to project over the ledgers of the inner and outer rows of poles at least 3 inches for proper support.

(f) Every wooden putlog on single pole scaffolds shall be reinforced with a 3/16- x 2-inch steel strip, or

equivalent, secured to its lower edge throughout its entire length.

(g) Ledgers shall be long enough to extend over two pole spaces. Ledgers shall not be spliced between the poles. Ledgers shall be reinforced by bearing blocks securely nailed to the side of the pole to form a support for the ledger.

(h) Diagonal bracing shall be provided to prevent the poles from moving in a direction parallel with the wall of the building, or from buckling

(i) Cross bracing shall be provided between the inner and outer sets of poles in independent pole scaffolds. The free ends of pole scaffolds shall be cross braced.

(j) Full diagonal face bracing shall be erected across the entire face of pole scaffolds in both directions. The braces shall be spliced at the poles. The inner row of poles on medium and heavy duty scaffolds shall be braced in a similar manner.

(k) Platform planks shall be laid with their edges close together so the platform will be tight with no spaces through which tools or fragments of material can fall.

(l) Where planking is lapped, each plank shall lap its end supports at least 12 inches. Where the ends of planks abut each other to form a flush floor, the butt joint shall be at the centerline of a pole. The abutted ends shall rest on separate bearers. Intermediate beams shall be provided where necessary to prevent dislodgment of planks due to deflection, and the ends shall be secured to prevent their dislodgment.

(m) When a scaffold materially changes its direction, the platform planks shall be laid to prevent tipping. The planks that meet the corner putlog at an angle shall be laid first, extending over the diagonally placed putlog far enough to have a good safe bearing, but not far enough to involve any danger from tipping. The planking running in the opposite direction at an angle shall be laid so as to extend over and rest on the first layer of planking.

(n) When moving platforms to the next level, the old platform shall be left undisturbed until the new putlogs or bearers have been set in place, ready to receive the platform planks.

(o) All wood pole scaffolds 60 feet or less in height shall be constructed and erected in accordance with Tables J-2 to J-8. If they are over 60 feet in height, they shall be designed by a qualified engineer competent in this field, and it shall be constructed and erected in accordance with such design.

(3) Tube and coupler scaffolds.

(a) A light duty tube and coupler scaffold shall have all posts, bearers, runners, and bracing of nominal 2-inch O.D. steel tubing. The posts shall be spaced no more than 6 feet apart by 10 feet along the length of the scaffold. Other structural metals when used must be designed to carry an equivalent load. No dissimilar metals shall be used together.

(b) A medium duty tube and coupler scaffold shall have all posts, runners, and bracing of nominal 2-inch O.D. steel tubing. Posts spaced not more than 6 feet apart by 8 feet along the length of the scaffold shall have bearers of nominal 2 1/2-inch O.D. steel tubing.

Posts spaced not more than 5 feet apart by 8 feet along the length of the scaffold shall have bearers of nominal 2-inch O.D. steel tubing. Other structural metals, when used, must be designed to carry an equivalent load. No dissimilar metals shall be used together.

(c) A heavy duty tube and coupler scaffold shall have all posts, runners, and bracing of nominal 2-inch O.D. steel tubing, with the posts spaced not more than 6 feet by 6 feet-6 inches. Other structural metals, when used, must be designed to carry an equivalent load. No dissimilar metals shall be used together.

(d) Tube and coupler scaffolds shall be limited in heights and working levels to those permitted in Tables J-8, J-9 and J-10. Drawings and specifications of all tube and coupler scaffolds above the limitations in Tables J-8, J-9 and J-10 shall be designed by a qualified engineer competent in this field.

(e) All tube and coupler scaffolds shall be constructed and erected to support four times the maximum intended loads, as set forth in Tables J-8, J-9 and J-10, or as set forth in the specifications by a licensed professional engineer competent in this field.

(f) Posts shall be accurately spaced, erected on suitable bases, and maintained plumb.

(g) Runners shall be erected along the length of the scaffold, located on both the inside and the outside posts at even height. Runners shall be interlocked to the inside and the outside posts at even heights. Runners shall be interlocked to form continuous lengths and coupled to each post. The bottom runners shall be located as close to the base as possible. Runners shall be placed not more than 6 feet-6 inches on centers.

(h) Bearers shall be installed transversely between posts and shall be securely coupled to the posts bearing on the runner coupler. When coupled directly to the runners, the coupler must be kept as close to the posts as possible.

(i) Bearers shall be at least 4 inches but not more than 12 inches longer than the post spacing or runner spacing.

(j) Cross bracing shall be installed across the width of the scaffold at least every third set of posts horizontally and every fourth runner vertically. Such bracing shall extend diagonally from the inner and outer runners upward to the next outer and inner runners.

(k) Longitudinal diagonal bracing on the inner and outer rows of poles shall be installed at approximately a 45° angle from near the base of the first outer post upward to the extreme top of the scaffold. Where the longitudinal length of the scaffold permits, such bracing shall be duplicated beginning at every fifth post. In a similar manner, longitudinal diagonal bracing shall also be installed from the last post extending back and upward toward the first post. Where conditions preclude the attachment of this bracing to the posts, it may be attached to the runners.

(l) The entire scaffold shall be tied to and securely braced against the building at intervals not to exceed 30 feet horizontally and 26 feet vertically.

(4) Tubular welded frame scaffolds.

(a) Metal tubular frame scaffolds, including accessories such as braces, brackets, trusses, screw legs, ladders, etc., shall be designed, constructed, and erected to safely support four times the maximum rated load.

(b) Spacing of panels or frames shall be consistent with the loads imposed.

(c) Scaffolds shall be properly braced by cross bracing or diagonal braces, or both, for securing vertical members together laterally, and the cross braces shall be of such length as will automatically square and aline vertical members so that the erected scaffold is always plumb, square, and rigid. All brace connections shall be made secure.

(d) Scaffold legs shall be set on adjustable bases or plain bases placed on mud sills or other foundations adequate to support the maximum rated load.

(e) The frames shall be placed one on top of the other with coupling or stacking pins to provide proper vertical alinement of the legs.

(f) Where uplift may occur, panels shall be locked together vertically by pins or other equivalent suitable means.

(g) To prevent movement, the scaffold shall be secured to the building or structure at intervals not to exceed 30 feet horizontally and 26 feet vertically.

(h) Maximum permissible spans or planking shall be in conformity with (1)(j) of this section.

(i) Drawings and specifications for all frame scaffolds over 125 feet in height above the base plates shall be designed by a registered professional engineer.

(5) Manually propelled mobile scaffolds.

(a) When freestanding mobile scaffold towers are used, the height shall not exceed four times the minimum base dimension.

(b) Casters shall be properly designed for strength and dimensions to support four times the maximum intended load. All casters shall be provided with a positive locking device to hold the scaffold in position.

(c) Scaffolds shall be properly braced by cross bracing and horizontal bracing conforming with subsection (4)(c) of this section.

(d) Platforms shall be tightly planked for the full width of the scaffold except for necessary entrance opening. Platforms shall be secured in place.

(e) A ladder or stairway shall be provided for proper access and exit and shall be affixed or built into the scaffold and so located that when in use it will not have a tendency to tip the scaffold. A landing platform must be provided at intervals not to exceed 35 feet.

(f) The force necessary to move the mobile scaffold shall be applied near or as close to the base as practicable and provision shall be made to stabilize the tower during movement from one location to another. Scaffolds shall only be moved on level floors, free of obstructions and openings.

(g) The employer shall not allow employees to ride on manually propelled scaffolds unless the following conditions exist:

(i) The floor or surface is within 3° of level, and free from pits, holes, or obstructions;

(ii) The minimum dimension of the scaffold base when ready for rolling, is at least one-half of the height. Outriggers, if used, shall be installed on both sides of staging;

(iii) The wheels are equipped with rubber or similar resilient tires;

(iv) All tools and materials are secured or removed from the platform before the mobile scaffold is moved.

(h) Scaffolds in use by any persons shall rest upon a suitable footing and shall stand plumb. The casters or wheels shall be locked to prevent any movement.

(i) Mobile scaffolds constructed of metal members shall also conform to applicable provisions of subsections (2), (3), and (4) of this section, depending on the material of which they are constructed.

(6) Elevating and rotating work platforms. Applicable requirements of American National Standards Institute A92.2-1969, Vehicle Mounted Elevating and Rotating Work Platforms, shall be complied with for such equipment, as required by the provisions of WAC 296-155-580.

(7) Outrigger scaffolds.

(a) Outrigger beams shall extend not more than 6 feet beyond the face of the building. The inboard end of outrigger beams, measured from the fulcrum point to anchorage point, shall be not less than 1 1/2 times the outboard end in length. The beams shall rest on edge, the sides shall be plumb, and the edges shall be horizontal. The fulcrum point of the beam shall rest on a secure bearing at least 6 inches in each horizontal dimension. The beam shall be secured in place against movement and shall be securely braced at the fulcrum point against tipping.

(b) The inboard ends of outrigger beams shall be securely anchored either by means of struts bearing against sills in contact with the overhead beams or ceiling, or by means of tension members secured to the floor joists underfoot, or by both if necessary, or by a securely fastened solid body counterweight. (Water in an open container or loose material in bags shall not be permitted.) The inboard ends of outrigger beams shall be secured against tipping and the entire supporting structure shall be securely braced in both directions to prevent any horizontal movement.

(c) Unless outrigger scaffolds are designed by a registered professional engineer competent in this field, they shall be constructed and erected in accordance with Table J-11. Outrigger scaffolds, designed by a registered professional engineer, shall be constructed and erected in accordance with such design.

(d) Planking shall be laid tight and shall extend to within 3 inches of the building wall. Planking shall be secured to the beams.

(8) Masons' adjustable multiple-point suspension scaffolds.

(a) The scaffold shall be capable of sustaining a working load of 50 pounds per square foot and shall not be loaded in excess of that figure.

(b) The scaffold shall be provided with hoisting machines that meet the requirements of Underwriters' Laboratories, Factory Mutual Engineering Corporation,

or other agency or laboratory approved by the department of labor and industries.

(c) The platform shall be supported by wire ropes, capable of supporting at least 6 times the intended load, suspended from overhead outrigger beams.

(d) The scaffold outrigger beams shall consist of structural metal securely fastened or anchored to the frame or floor system of the building or structure.

(e) Each outrigger beam shall be equivalent in strength to at least a standard 7-inch, 15.3-pound steel I-beam, at least 15 feet long, and shall not project more than 6 feet 6 inches beyond the bearing point.

(f) Where the overhang exceeds 6 feet 6 inches, outrigger beams shall be composed of stronger beams or multiple beams and be installed under the supervision of a competent person.

(g) All outrigger beams shall be set and maintained with their webs in a vertical position.

(h) A stop bolt shall be placed at each end of every outrigger beam.

(i) The outrigger beam shall rest on suitable wood bearing blocks.

(j) The free end of the suspension wire ropes shall be equipped with proper size thimbles and secured by splicing or other equivalent means. The running ends shall be securely attached to the hoisting drum and at least four turns of wire rope shall at all times remain on the drum. The use of fiber rope is prohibited.

(k) Where a single outrigger beam is used, the steel shackles or clevises with which the wire ropes are attached to the outrigger beams shall be placed directly over the hoisting drums.

(l) The scaffold platform shall be equivalent in strength to at least 2-inch planking. (For maximum planking spans, see subsection (1)(j) of this section.)

(m) When employees are at work on the scaffold and an overhead hazard exists, overhead protection shall be provided on the scaffold, not more than 9 feet above the platform, consisting of 2-inch planking, or material of equivalent strength, laid tight, and extending not less than the width of the scaffold.

(n) Each scaffold shall be installed or relocated under the supervision of a competent person.

(9) (Swinging scaffolds) two-point suspension.

(a) Two-point suspension scaffold platforms shall be not less than 20 inches nor more than 36 inches wide overall. The platform shall be securely fastened to the hangers by U-bolts or by other equivalent means.

(b) The hangers of two-point suspension scaffolds shall be made of mild steel, or other equivalent materials, having a cross-sectional area capable of sustaining 4 times the maximum rated load, and shall be designed with a support for guardrail, intermediate rail, and toeboard.

(c) When hoisting machines are used on two-point suspension scaffolds, such machines shall be of a design tested and approved by Underwriters' Laboratories, Factory Mutual Engineering Corporation, or by an agency or laboratory approved by the department of labor and industries.

(d) The roof irons or hooks shall be of mild steel, or other equivalent material, of proper size and design, securely installed and anchored. Tiebacks of 3/4-inch manila rope, or the equivalent, shall serve as a secondary means of anchorage, installed at right angles to the face of the building, whenever possible, and secured to a structurally sound portion of the building.

(e) Two-point suspension scaffolds shall be suspended by wire, synthetic or fiber ropes capable of supporting at least 6 times the rated load. All other components shall be capable of supporting at least four times the rated load.

(f) The sheaves of all blocks, consisting of at least one double and one single block, shall fit the size and type of rope used.

(g) All wire ropes, fiber and synthetic ropes, slings, hangers, platforms, and other supporting parts shall be inspected before every installation. Periodic inspections shall be made while the scaffold is in use.

(h) On suspension scaffolds designed for a working load of 500 pounds, no more than two persons shall be permitted to work at one time. On suspension scaffolds with a working load of 750 pounds, no more than three persons shall be permitted to work at one time. On suspension scaffolds with a working load of 1,000 pounds, no more than four persons shall be permitted to work at one time. Each employee shall be protected by an approved safety life belt attached to a dropline. The droplines shall be securely attached to substantial members of the structure (not scaffold), or to securely rigged lines, which will safely suspend the employee in case of a fall. In order to keep the dropline continuously attached, with a minimum of slack, to a fixed structure, the attachment point of the dropline shall be appropriately changed as the work progresses.

(i) When a multi-tiered two-point suspension scaffold is provided with safety droplines that attach to each end of the scaffold through an approved quick acting safety device, in case either or both of the main suspension lines should break, the lanyard of the safety belt shall be tied off to a substantial member of the scaffold itself or to a horizontal lifeline substantially attached to each end of the scaffold or a sliding device on the horizontal lifeline. The two additional safety droplines shall be individually suspended from roof irons, hooks, or other approved devices and shall be in the near proximity to the suspension droplines to prevent unnecessary side impact. The safety dropline shall also have a 6 to 1 safety factor.

(j) Two-point suspension scaffolds shall be securely lashed to the building or structure to prevent the scaffolds from swaying. Window cleaners' anchors shall not be used for this purpose.

(k) The platform of every two-point suspension scaffold shall be one of the following types:

(i) Ladder-type platforms. The side stringer shall be of clear straight-grained spruce or materials of equivalent strength and durability. The rungs shall be of straight-grained oak, ash, or hickory, at least 1 1/8 inch in diameter, with 7/8-inch tenons mortised into the side stringers at least 7/8-inch. The stringers shall be tied

together with the rods not less than one-quarter inch in diameter, passing through the stringers and riveted up tight against washers on both ends. The flooring strips shall be spaced not more than five-eighths inch apart except at the side rails where the space may be 1 inch. Ladder-type platforms shall be constructed in accordance with Table J-12.

(ii) Plank-type platforms. Plank-type platforms shall be composed of not less than nominal 2- x 10-inch unspliced planks, properly cleated together on the underside, starting 6 inches from each end; intervals in between shall not exceed 4 feet. The plank-type platform shall not extend beyond the hangers more than 12 inches. A bar or other effective means shall be securely fastened to the platform at each end to prevent its slipping off the hanger. The span between hangers for plank-type platforms shall not exceed 8 feet.

(iii) Beam-type platforms. Beam platforms shall have side stringers of lumber not less than 2 x 6 inches set on edge. The span between hangers shall not exceed 12 feet when beam platforms are used. The flooring shall be supported on 2- x 6-inch cross beams, laid flat and set into the upper edge of the stringers with a snug fit, at intervals of not more than 4 feet, securely nailed in place. The flooring shall be of 1- x 6-inch material properly nailed. Floor boards shall not be spaced more than one-half inch apart.

(iv) Light metal-type platforms, when used, shall be tested and listed according to Underwriters' Laboratories, Factory Mutual Engineering Corporation, or the department of labor and industries.

(10) Stone setters' adjustable multiple-point suspension scaffolds.

(a) The scaffold shall be capable of sustaining a working load of 25 pounds per square foot and shall not be overloaded. Scaffolds shall not be used for storage of stone or other heavy materials.

(b) When used, the hoisting machine and its supports shall be of a type tested and listed by Underwriters' Laboratories, Factory Mutual Engineering Corporation or the department of labor and industries.

(c) The platform shall be securely fastened to the hangers by U-bolts or other equivalent means. (For materials and spans, see item (ii) of subsection (9)(j), Plank-type Platforms and Table J-12 of this section.)

(d) The scaffold unit shall be suspended from metal outriggers, iron brackets, wire rope slings, or iron hooks.

(e) Outriggers, when used, shall be set with their webs in a vertical position, securely anchored to the building or structure and provided with stop bolts at each end.

(f) The scaffold shall be supported by wire rope capable of supporting at least 6 times the rated load. All other components shall be capable of supporting at least 4 times the rated load.

(g) The free ends of the suspension wire ropes shall be equipped with proper size thimbles, secured by splicing or other equivalent means. The running ends shall be securely attached to the hoisting drum and at least four turns of wire rope shall remain on the drum at all times.

(h) When two or more scaffolds are used on a building or structure, they shall not be bridged one to the

other; but shall be maintained at even height with platforms abutting closely.

(11) Single-point adjustable suspension scaffolds.

(a) The scaffolding, including power units or manually operated winches, shall be of a type tested and listed by Underwriters' Laboratories, Factory Mutual Engineering Corporation or the department of labor and industries.

(b) The power units may be either electrically or air motor driven.

(c) All power-operated gears and brakes shall be enclosed.

(d) In addition to the normal operating brake, all power-driven units shall have an emergency brake which engages automatically when the normal speed of descent is exceeded.

(e) The hoisting machines, cables, and equipment shall be regularly serviced and inspected.

(f) The units may be combined to form a two-point suspension scaffold. Such scaffold shall then comply with subsection (9) of this section.

(g) The supporting cable shall be vertical for its entire length, and the basket shall not be swayed nor the cable fixed to any intermediate points to change the original path of travel.

(h) Suspension methods shall conform to applicable provisions of subsections (8) and (9) of this section.

(i) For additional details not covered in this subsection applicable technical portions of American National Standards Institute, A120.1-1970, Power-Operated Devices for Exterior Building Maintenance Powered Platforms, shall be used.

(12) Boatswain's chairs.

(a) The chair seat shall not be less than 12 x 24 inches, and 1-inch thickness. The seat shall be reinforced on the underside by cleats securely fastened to prevent the board from splitting.

(b) The two fiber rope seat slings shall be of 5/8-inch diameter, reeved through the four seat holes so as to cross each other on the underside of the seat.

(c) Seat slings shall be of at least 3/8-inch wire rope when an employee is conducting a heat-producing process, such as gas welding.

(d) The employee shall be protected by a safety belt and lifeline in accordance with WAC 296-155-225. The attachment point of the lifeline to the structure shall be appropriately changed as the work progresses.

(e) The tackle shall consist of correct size ball bearing or bushed blocks and properly spliced 5/8-inch diameter first grade manila rope, or equivalent.

(f) The roof irons, hooks, or the object to which the tackle is anchored, shall be securely installed. Tiebacks, when used, shall be installed at right angles to the face of the building and securely fastened.

(13) Carpenters' bracket scaffolds.

(a) The brackets shall consist of a triangular wood frame not less than 2 x 3 inches in cross section, or of metal of equivalent strength. Each member shall be properly fitted and securely joined.

(b) Each bracket shall be attached to the structure by means of one of the following:

(i) A bolt, no less than 5/8-inch in diameter, which shall extend through to the inside of the building wall;

(ii) A metal stud attachment device;

(iii) Welding to steel tanks;

(iv) Hooking over a well-secured and adequately strong supporting member.

(c) The brackets shall be spaced no more than 8 feet apart.

(d) No more than two employees shall occupy any given 8 feet of a bracket scaffold at any one time. Tools and materials shall not exceed 75 pounds in addition to the occupancy.

(e) The platform shall consist of not less than two 2- x 10-inch planks extending not more than 12 inches or less than 6 inches beyond each end support.

(14) Bricklayers' square scaffolds.

(a) The squares shall not exceed 5 feet in width and 5 feet in height.

(b) Members shall be not less than those specified in Table J-13.

(c) The squares shall be reinforced on both sides of each corner with 1- x 6-inch gusset pieces. They shall also have diagonal braces 1 x 8 inches on both sides running from center to center of each member, or other means to secure equivalent strength and rigidity.

(d) The squares shall be set not more than 5 feet apart for medium duty scaffolds, and not more than 8 feet apart for light duty scaffolds. Bracing, 1 x 8 inches, extending from the bottom of each square to the top of the next square, shall be provided on both front and rear sides of the scaffold.

(e) Platform planks shall be at least 2 x 10-inch. The ends of the planks shall overlap the bearers of the squares and each plank shall be supported by not less than three squares.

(f) Bricklayers' square scaffolds shall not exceed three tiers in height and shall be so constructed and arranged that one square shall rest directly above the other. The upper tiers shall stand on a continuous row of planks laid across the next lower tier and be nailed down or otherwise secured to prevent displacement.

(g) Scaffolds shall be level and set upon a firm foundation.

(15) Horse scaffolds.

(a) Horse scaffolds shall not be constructed or arranged more than two tiers or 10 feet in height.

(b) The members of the horses shall be not less than those specified in Table J-14.

(c) Horses shall be spaced not more than 5 feet for medium duty and not more than 8 feet for light duty.

(d) When arranged in tiers, each horse shall be placed directly over the horse in the tier below.

(e) On all scaffolds arranged in tiers, the legs shall be nailed down or otherwise secured to the planks to prevent displacement or thrust and each tier shall be substantially cross braced.

(f) Horses or parts which have become weak or defective shall not be used.

(16) Needle beam scaffold.

(a) Wood needle beams shall be not less than 4 x 6 inches in size, with the greater dimension placed in a

vertical direction. Metal beams or the equivalent, conforming to subsections (1)(h) and (j) of this section, may be used and shall not be altered or moved horizontally while they are in use.

(b) Ropes or hangers shall be provided for supports. The span between supports on the needle beam shall not exceed 10 feet for 4- x 6-inch timbers. Rope supports shall be equivalent in strength to 1-inch diameter first-grade manila rope.

(c) The ropes shall be attached to the needle beams by a scaffold hitch or a properly made eye splice. The loose end of the rope shall be tied by a bowline knot or by a round turn and a half hitch.

(d) The scaffold hitch shall be arranged so as to prevent the needle beam from rolling or becoming otherwise displaced.

(e) The platform span between the needle beams shall not exceed 8 feet when using 2-inch scaffold plank. For spans greater than 8 feet, platforms shall be designed based on design requirements for the special span. The overhang of each end of the platform planks shall be not less than 6 inches and not more than 12 inches.

(f) When needle beam scaffolds are used, the planks shall be secured against slipping.

(g) All unattached tools, bolts, and nuts used on needle beam scaffolds shall be kept in suitable containers, properly secured.

(h) One end of a needle beam scaffold may be supported by a permanent structural member conforming to subsections (1)(h) and (j) of this section.

(i) Each employee working on a needle beam scaffold shall be protected by a safety belt and lifeline in accordance with WAC 296-155-225.

(17) Plasterers', decorators', and large area scaffolds.

(a) Plasters', lathers', and ceiling workers' inside scaffolds shall be constructed in accordance with the general requirements set forth for independent wood pole scaffolds. (See subsection (2) of this section and Tables J-5, J-6 and J-7.)

(b) All platform planks shall be laid with the edges close together.

(c) When independent pole scaffold platforms are erected in sections, such sections shall be provided with connecting runways equipped with substantial guardrails.

(18) Interior hung scaffolds.

(a) An interior hung scaffold shall be hung or suspended from the roof structure or ceiling beams.

(b) The suspending wire or fiber rope shall be capable of supporting at least 6 times the rated load. The rope shall be wrapped at least twice around the supporting members and twice around the bearers of the scaffold, with each end of the wire rope secured by at least three standard wire-rope clips properly installed.

(c) For hanging wood scaffolds, the following minimum nominal size material shall be used:

(i) Supporting bearers 2 x 10 inches on edge;

(ii) Planking 2 x 10 inches, with maximum span 7 feet for heavy duty and 10 feet for light duty or medium duty.

(d) Steel tube and coupler members may be used for hanging scaffolds with both types of scaffold designed to sustain a uniform distributed working load up to heavy duty scaffold loads with a safety factor of four.

(19) Ladder jack scaffolds.

(a) All ladder jack scaffolds shall be limited to light duty and shall not exceed a height of 20 feet above the floor or ground.

(b) All ladders used in connection with ladder jack scaffolds shall be heavy-duty ladders and shall be designed and constructed in accordance with American National Standards Institute A14.1-1968, Safety Code for Portable Wood Ladders, and A14.2-1968, Safety Code for Portable Metal Ladders. Cleated ladders shall not be used for this purpose.

(c) The ladder jack shall be so designed and constructed that it will bear on the side rails in addition to the ladder rungs, or if bearing on rungs only, the bearing area shall be at least 10 inches on each rung.

(d) Ladders used in conjunction with ladder jacks shall be so placed, fastened, held, or equipped with devices so as to prevent slipping.

(e) The wood platform planks shall be not less than 2 inches in thickness. Both metal and wood platform planks shall overlap the bearing surface not less than 12 inches. The span between supports for wood shall not exceed 8 feet. Platform width shall be not less than 18 inches.

(f) Not more than two employees shall occupy any given 8 feet of any ladder jack scaffold at any one time.

(20) Window jack scaffolds.

(a) Window jack scaffolds shall be used only for the purpose of working at the window opening through which the jack is placed.

(b) Window jacks shall not be used to support planks placed between one window jack and another or for other elements of scaffolding.

(c) Window jack scaffolds shall be provided with guardrails unless safety belts with lifelines are attached and used by the employee.

(d) Not more than one employee shall occupy a window jack scaffold at any one time.

(21) Roofing brackets.

(a) Roofing brackets shall be constructed to fit the pitch of the roof.

(b) Brackets shall be secured in place by nailing in addition to the pointed metal projections. When it is impractical to nail brackets, rope supports shall be used. When rope supports are used, they shall consist of first-grade manila of at least 3/4-inch diameter, or equivalent.

(c) A catch platform shall be installed below the working area of roofs more than 16 feet from the ground to eaves with a slope greater than 4 inches in 12 inches without a parapet. In width, the platform shall extend 2 feet beyond the protection of the eaves and shall be provided with a guardrail, midrail, and toeboard. This provision shall not apply where employees engaged in work upon such roofs are protected by a safety belt attached to a lifeline.

(22) Crawling boards or chicken ladders.

(a) Crawling boards shall be not less than 10 inches wide and 1 inch thick, having cleats 1 x 1 1/2 inches. The cleats shall be equal in length to the width of the board and spaced at equal intervals not to exceed 24 inches. Nails shall be driven through and clinched on the underside. The crawling board shall extend from the ridge pole to the eaves when used in connection with roof construction, repair, or maintenance.

(b) A firmly fastened lifeline of at least 3/4-inch diameter rope, or equivalent, shall be strung beside each crawling board for a handhold.

(c) Crawling boards shall be secured to the roof by means of adequate ridge hooks or other effective means.

(23) Float or ship scaffolds.

(a) Float or ship scaffolds shall not be used to support more than three persons and a few light tools, such as those needed for riveting, bolting, and welding. They shall be constructed as designed in subdivisions (b) through (f) of this subsection, unless substitute designs and materials provide equivalent strength, stability, and safety.

(b) The platform shall be not less than 3 feet wide and 6 feet long, made of 3/4-inch plywood, equivalent to American Plywood Association Grade B-B, Group I, Exterior, or other similar material.

(c) Under the platform, there shall be two supporting bearers made from 2- x 4-inch, or 1- x 10-inch rough, "selected lumber," or better. They shall be free of knots or other flaws and project 6 inches beyond the platform on both sides. The ends of the platform shall extend 6 inches beyond the outer edges of the bearers. Each bearer shall be securely fastened to the platform.

(d) An edging of wood not less than 3/4 x 1 1/2 inches or equivalent shall be placed around all sides of the platform to prevent tools from rolling off.

(e) Supporting ropes shall be 1-inch diameter manila rope or equivalent, free from deterioration, chemical damage, flaws, or other imperfections. Rope connections shall be such that the platform cannot shift or slip. If two ropes are used with each float, they shall be arranged so as to provide four ends which are to be securely fastened to an overhead support. Each of the two supporting ropes shall be hitched around one end of bearer and pass under the platforms to the other end of the bearer where it is hitched again, leaving sufficient rope at each end for the supporting ties.

(f) Each employee shall be protected by an approved safety lifebelt and lifeline, in accordance with WAC 296-155-225.

(24) Form scaffolds.

(a) Form scaffolds shall be constructed of wood or other suitable materials, such as steel or aluminum members of known strength characteristics. All scaffolds shall be designed and erected with a minimum safety factor of 4, computed on the basis of the maximum rated load.

(b) All scaffold planking shall be a minimum of 2- x 10-inch nominal Scaffold Grade, as recognized by approved grading rules for the species of lumber used, or equivalent material. Maximum permissible spans shall not exceed 8 feet on centers for 2- x 10-inch nominal

planking. Scaffold planks shall be either nailed or bolted to the ledgers or of such length that they overlap the ledgers at least 6 inches. Unsupported projecting ends of scaffolding planks shall be limited to a maximum overhang of 12 inches.

(c) Scaffolds shall not be loaded in excess of the working load for which they were designed.

(d) Figure-four form scaffolds:

(i) Figure-four scaffolds are intended for light duty and shall not be used to support loads exceeding 25 pounds per square foot unless specifically designed for heavier loading. For minimum design criteria, see Table J-15.

(ii) Figure-four form scaffold frames shall be spaced not more than 8 feet on centers and constructed from sound lumber, as follows: The outrigger ledger shall consist of two pieces of 1- x 6-inch or heavier material nailed on opposite sides of the vertical form support. Ledgers shall project not more than 3 feet 6 inches from the outside of the form support and shall be substantially braced and secured to prevent tipping or turning. The knee or angle brace shall intersect the ledger at least 3 feet from the form at an angle of approximately 45°, and the lower end shall be nailed to a vertical support. The platform shall consist of two or more 2- x 10-inch planks, which shall be of such length that they extend at least 6 inches beyond ledgers at each end unless secured to the ledgers. When planks are secured to the ledgers (nailed or bolted), a wood filler strip shall be used between the ledgers. Unsupported projecting ends of planks shall be limited to an overhang of 12 inches.

(e) Metal bracket form scaffolds:

(i) Metal brackets or scaffold jacks which are an integral part of the form shall be securely bolted or welded to the form. Folding type brackets shall be either bolted or secured with a locking-type pin when extended for use.

(ii) "Clip-on" or "hook-over" brackets may be used, provided the form walers are bolted to the form or secured by snap ties or shea-bolt extending through the form and securely anchored.

(iii) Metal brackets shall be spaced not more than 8 feet on centers.

(iv) Scaffold planks shall be either bolted to the metal brackets or of such length that they overlap the brackets at each end by at least 6 inches. Unsupported projecting ends of scaffold planks shall be limited to a maximum overhang of 12 inches.

(v) Metal bracket form scaffolds shall be equipped with wood guardrails, intermediate rails, toeboards, and scaffold planks meeting the minimum dimensions shown in Table J-16. (Metal may be substituted for wood, providing it affords equivalent or greater design strength.)

(f) Wooden bracket form scaffolds:

(i) Wooden bracket form scaffolds shall be an integral part of the form panel. The minimum design criteria set forth herein and in Table J-17 cover scaffolding intended for light duty and shall not be used to support loads exceeding 25 pounds per square foot, unless specifically designed for heavier loading.

(ii) Scaffold planks shall be either nailed or bolted to the ledgers or of such length that they overlap the ledgers at each end by at least 6 inches. Unsupported projecting ends of scaffold planks shall be limited to a maximum overhang of 12 inches.

(25) Pump jack scaffolds.

(a) Pump jack scaffolds shall:

(i) Not carry a working load exceeding 500 pounds; and

(ii) Be capable of supporting without failure at least four times the maximum intended load.

(iii) The manufactured components shall not be loaded in excess of the manufacturer's recommended limits.

(b) Pump jack brackets, braces, and accessories shall be fabricated from metal plates and angles. Each pump jack bracket shall have two positive gripping mechanisms to prevent any failure or slippage.

(c) The platform bracket shall be fully docked and the planking secured. Planking, or equivalent, shall conform with subsection (1) of this section.

(d) (i) When wood scaffold planks are used as platforms, poles used for pump jacks shall not be spaced more than 10 feet center to center. When fabricated platforms are used that fully comply with all other provisions of this subsection, pole spacing may exceed 10 feet center to center.

(ii) Poles shall not exceed 30 feet in height.

(iii) Poles shall be secured to the work wall by rigid triangular bracing, or equivalent, at the bottom, top, and other points as necessary, to provide a maximum vertical spacing of not more than 10 feet between braces. Each brace shall be capable of supporting a minimum of 225 pounds tension or compression.

(iv) For the pump jack bracket to pass bracing already installed, an extra brace shall be used approximately 4 feet above the one to be passed until the original brace is reinstalled.

(e) All poles shall bear on mud sills or other adequate firm foundations.

(f) Pole lumber shall be two 2 x 4's, of Douglas fir or equivalent, straight-grained, clear, free of cross-grain, shakes, large loose or dead knots, and other defects which might impair strength.

(g) When poles are constructed of two continuous lengths, they shall be two by fours, spiked together with the seam parallel to the bracket, and with 10d common nails, no more than 12 inches center to center, staggered uniformly from opposite outside edges.

(h) If two by fours are spliced to make up the pole, the splices shall be so constructed as to develop the full strength of the member.

(i) A ladder, in accordance with WAC 296-155-480, shall be provided for access to the platform during use.

(j) Not more than two persons shall be permitted at one time upon a pump jack scaffold between any two supports.

(k) Pump jack scaffolds shall be provided with standard guardrails, unless safety belts with lifelines are used by employees.

(l) When a work bench is used at an approximate height of 42 inches, the top guardrail may be eliminated, if the work bench is fully decked, the planking secured, and is capable of withstanding 200 pounds pressure in any direction.

(m) Employees shall not be permitted to use a work bench as a scaffold platform.

(26) Factory-built scaffold units. Factory-built or prefabricated scaffold units intended for assembly on the job, prefabricated plank, staging, etc., mechanical hoisting units, or other devices for use on or in connection with any type scaffolds, shall be approved by an agency or laboratory approved by the department before being used.

(27) Waler bracket scaffolds.

(a) Waler brackets shall be constructed of 1 5/8" x 1 1/2" x 3/16" angle iron minimum size, or material of equivalent strength.

(b) All steel connections shall be welded and riveted or bolted, except where detrimental to strength of materials.

(c) The maximum length of horizontal leg shall not be more than 36" between bracket hook and railing standard.

(d) A 4" x 4" x 3/16" gusset plate shall be securely welded at inside of leg angle.

(e) Nailing holes shall be provided in lower end of vertical leg for purpose of securing bracket against lifting or shifting.

(f) Waler hook or hooks shall be a minimum of 4-inch depth and be constructed of material of a strength to support a minimum of 400 pounds at extreme outer end of bracket.

(28) Ladder supported scaffolds.

(a) Box scaffolds.

(i) A step ladder scaffold, trestle scaffold, or an extension trestle scaffold shall be composed of two or more step ladders, or trestle ladders, or trestle, or extension trestle placed in line and supporting the platform in the interval or intervals, or in paralleled lines supporting stringers in the interval or intervals, upon which are supported kick plank platforms, not exceeding one platform to each bay. Such scaffolds are also known as "box scaffolds."

(ii) The number of persons working on each bay shall not exceed three at any one time.

(b) Step ladder scaffolds.

(i) Platforms more than 8 feet above the floor level shall not be supported on step ladders.

(ii) Platforms shall not be supported on the top step of a step ladder unless it is provided with stops at least one inch high at each side to prevent the plank from slipping off.

(c) Trestle ladder scaffolds.

(i) Platforms more than 16 feet above the floor level shall not be supported on trestle ladders.

(ii) The top of the trestle ladder shall be at least three steps above the level of the scaffold platform.

(iii) Where an extension trestle ladder is used to support a scaffold platform the maximum height of the platform shall be 20 feet above the floor level and the

point of support on the extension section shall not be more than 6 feet above the apex of the base section.

(d) Extension trestle scaffolds.

(i) Platforms supported on extension trestles shall not be more than 16 feet above the floor level.

(ii) Ladders shall be provided for access to extension trestle scaffolds. Workers shall not climb up or down on the extension trestle.

(iii) It shall be the individual responsibility of the supervisor and of each worker to make sure that all clamps and fastenings on the extension trestle are secure before employees are allowed to work on the scaffold.

(29) Chimney, stack and tank bracket scaffolds.

(a) General. A chimney, stack or tank bracket scaffold shall be composed of a platform supported by brackets which are hooked over a steel cable which surrounds the circumference of the chimney, stack or tank approximately in a horizontal plane. The platform shall be not less than two planks wide and be designed with a safety factor of not less than 4.

(b) All brackets shall have a mild steel suspension hook 2 inches by 1/4-inch with at least 3 inches projecting beyond the throat of the hook. Hooks shall be integral with or securely attached to the bracket.

(c) Wood spacer blocks shall be provided to hold the suspending cable away from the structure at the points where brackets are hooked on. These spacer blocks shall be not less than 2 inches by 4 inches by 12 inches.

(d) All suspending cables shall be improved plow steel 6 x 19 wire rope or equivalent. In no case shall less than 1/2-inch diameter wire rope be used.

(e) The turnbuckle used to tighten suspending cables shall be not less than 1 inch drop forged steel. The cables shall be provided with thimbles and not less than 3 U-bolt type clips at each end and be attached to the turnbuckles by means of shackles. Open hooks shall not be used.

(f) All chimney, stack and tank bracket scaffolds shall be provided with standard guard rails, intermediate rails and toeboards.

(g) For access to a chimney, stack or tank bracket scaffold, ladders or a boatswain's chair shall be used.

(h) All chimney, stack or tank brackets for scaffolds shall be welded and riveted or bolted.

(30) Scaffold platforms supported by catenary or stretch cables.

(a) When a scaffold platform is supported by cables at least 4 cables shall be used, two near each end of the scaffold.

(b) The cables shall be attached to the scaffold by means of U-bolts or the equivalent through which the cables pass.

(c) Cables shall not be tightened beyond their safe working load. A hanger or set of falls shall be used approximately every 50 feet to pick up the sag in the cable. **Part K**

**FLOOR AND WALL OPENINGS AND STAIRWAYS**  
WAC

- 296-155-500 Definitions applicable to this part.
- 296-155-505 Guardrails, handrails, and covers.
- 296-155-50501 Appendix—Roofs.
- 296-155-510 Stairways.

**WAC 296-155-500 Definitions applicable to this part.** (1) "Built-up-roofing" means a weatherproofing cover, applied over roof decks, consisting of either a liquid-applied system, a single-ply system, or a multiple-ply system. Liquid-applied systems generally consist of silicone rubber, plastics, or similar material applied by spray or roller equipment. Single-ply systems generally consist of a single layer of synthetic rubber, plastic, or similar material, and a layer of adhesive. Multiple-ply systems generally consist of layers of felt and bitumen, and may be covered with a layer of mineral aggregate.

(2) "Built-up-roofing work" means the hoisting, storage, application, and removal of built-up roofing materials and equipment, including related insulation, sheet

metal, and vapor barrier work, but not including the construction of the roof deck.

(3) "Floor hole" means an opening measuring less than 12 inches but more than 1 inch in its least dimension in any floor, roof, or platform through which materials but not persons may fall, such as a belt hole, pipe opening, or slot opening.

(4) "Floor opening" means an opening measuring 12 inches or more in its least dimension in any floor, roof, or platform, through which persons may fall.

(5) "Handrail" means a single bar or pipe supported on brackets from a wall or partition, as on a stairway or ramp, to furnish persons with a handhold in case of tripping.

(6) "Low-pitched roof" means a roof having a slope less than or equal to four in twelve.

(7) "Mechanical equipment" means all motor or human propelled wheeled equipment except for wheelbarrows and mopcars.

(8) "MSS systems" (motion-stopping-safety systems) means fall protection using the following equipment singly or in combination: Standard railings (guardrails) as described in WAC 296-155-505(6); scaffolds or platforms with guardrails as described in WAC 296-155-485; safety nets as described in WAC 296-155-230; and safety belt systems as described in WAC 296-155-225.

(9) "Nose, nosing" means that portion of a tread projecting beyond the face of the riser immediately below.

(10) "Platform" means a working space for persons, elevated above the surrounding floor or ground, such as a balcony or platform for the operation of machinery and equipment.

(11) "Rise" means the vertical distance from the top of a tread to the top of the next higher tread.

(12) "Roof" means the exterior surface on the top of a building. This does not include floors which, because a building has not been completely built, temporarily become the top surface of a building.

(13) "Runway" means a passageway for persons, elevated above the surrounding floor or ground level, such as a footwalk along shafting or a walkway between buildings.

(14) "Safety-monitoring system" means a safety system in which a competent person monitors the safety of all employees in a roofing crew, and warns them when it appears to the monitor that they are unaware of the hazard or are acting in an unsafe manner. The competent person must be on the same roof as and within visual sighting distance of the employees, and must be close enough to verbally communicate with the employees.

(15) "Stair platform" means an extended step or landing breaking a continuous run of stairs.

(16) "Stair railing" means a vertical barrier erected along exposed sides of a stairway to prevent falls of persons.

(17) "Stairs, stairways" means a series of steps leading from one level or floor to another, or leading to platforms, pits, boiler rooms, crossovers, or around machinery, tanks, and other equipment that are used more or less continuously or routinely by employees or only

occasionally by specific individuals. For the purpose of this part, a series of steps and landings having three or more rises constitutes stairs or stairway.

(18) "Standard railing" means a vertical barrier erected along exposed edges of a floor opening, wall opening, ramp, platform, or runway to prevent falls of persons.

(19) "Standard strength and construction" means any construction of railings, covers, or other guards that meets the requirements of this part.

(20) "Toeboard" means a vertical barrier at floor level erected along exposed edges of a floor opening, wall opening, platform, runway, or ramp to prevent falls of materials.

(21) "Tread width" means the horizontal distance from front to back of tread, including nosing, when used.

(22) "Unprotected side or edge" means any side or edge of a roof perimeter where there is no wall three feet (.9 meters) or more in height.

(23) "Wall opening" means an opening at least 30 inches high and 18 inches wide, in any wall or partition, through which persons may fall, such as an opening for a window, a yard-arm doorway or chute opening.

(24) "Work area" means that portion of a roof where built-up roofing work is being performed. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-13-053 (Order 81-9), § 296-155-500, filed 6/17/81; Order 74-26, § 296-155-500, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-505 Guardrails, handrails, and covers.** (1) General provisions. This part shall apply to temporary or emergency conditions where there is danger of employees or materials falling through floor, roof, or wall openings, or from stairways or runways.

(2) Guarding of floor openings and floor holes.

(a) Floor openings shall be guarded by a standard railing and toe boards or cover, as specified in subsection (6) of this section. In general, the railing shall be provided on all exposed sides, except at entrances to stairways. All vehicle service pits shall have a cover or removable type standard guardrail. When not in use, pits shall be covered or guarded. Where vehicle service pits are to be used again immediately, and the service man is within a 50 foot distance of the unguarded pit and also within line of sight of the unguarded pit, the cover or guardrail need not be replaced between uses. Where vehicle service pits are used frequently, the perimeters of the pits shall be delineated by high visibility, luminescent, skid resistant paint. Such painted delineation shall be kept clean and free of extraneous materials.

(b) Ladderway floor openings or platforms shall be guarded by standard railings with standard toe boards on all exposed sides, except at entrance to opening, with the passage through the railing either provided with a swinging gate or so offset that a person cannot walk directly into the opening.

(c) Hatchways and chute floor openings shall be guarded by one of the following:

(i) Hinged covers of standard strength and construction and a standard railing with only one exposed side.

When the opening is not in use, the cover shall be closed or the exposed side shall be guarded at both top and intermediate positions by removable standard railings;

(ii) A removable standard railing with toe board on not more than two sides of the opening and fixed standard railings with toe boards on all other exposed sides. The removable railing shall be kept in place when the opening is not in use and shall be hinged or otherwise mounted so as to be conveniently replaceable.

(d) Wherever there is danger of falling through a skylight opening, it shall be guarded by a fixed standard railing on all exposed sides or a cover capable of sustaining the weight of a 200-pound person.

(e) Pits and trap-door floor openings shall be guarded by floor opening covers of standard strength and construction. While the cover is not in place, the pit or trap openings shall be protected on all exposed sides by removable standard railings.

(f) Manhole floor openings shall be guarded by standard covers which need not be hinged in place. While the cover is not in place, the manhole opening shall be protected by standard railings.

(g) Temporary floor openings shall have standard railings.

(h) Floor holes, into which persons can accidentally walk, shall be guarded by either a standard railing with standard toe board on all exposed sides, or a floor hole cover of standard strength and construction that is secured against accidental displacement. While the cover is not in place, the floor hole shall be protected by a standard railing.

(i) Where doors or gates open directly on a stairway, a platform shall be provided, and the swing of the door shall not reduce the effective width of the platform to less than 20 inches.

(3) Guarding of wall openings.

(a) Wall openings, from which there is a drop of more than 4 feet, and the bottom of the opening is less than 3 feet above the working surface, shall be guarded as follows:

(i) When the height and placement of the opening in relation to the working surface is such that either a standard rail or intermediate rail will effectively reduce the danger of falling, one or both shall be provided;

(ii) The bottom of a wall opening, which is less than 4 inches above the working surface, regardless of width, shall be protected by a standard toe board or an enclosing screen either of solid construction or as specified in (6)(g)(ii) of this section.

(b) An extension platform, outside a wall opening, onto which materials can be hoisted for handling shall have side rails or equivalent guards of standard specifications. One side of an extension platform may have removable railings in order to facilitate handling materials.

(c) When a chute is attached to an opening, the provisions of subdivision (a) of this subsection shall apply, except that a toe board is not required.

(4) Guarding of open-sided floors, platforms, and runways.

(a) Every open-sided floor or platform 6 feet or more above adjacent floor or ground level shall be guarded by a standard railing, or the equivalent, as specified in (6)(a) of this section, on all open sides, except where there is entrance to a ramp, stairway, or fixed ladder. The railing shall be provided with a standard toe board wherever, beneath the open sides, persons can pass, or there is moving machinery, or there is equipment with which falling materials could create a hazard.

(b) Runways shall be guarded by a standard railing, or the equivalent, as specified in subsection (6) of this section, on all open sides, 4 feet or more above floor or ground level. Wherever tools, machine parts, or materials are likely to be used on the runway, a toe board shall also be provided on each exposed side.

(c) Runways used exclusively for special purposes may have the railing on one side omitted where operating conditions necessitate such omission, providing the falling hazard is minimized by using a runway not less than 18 inches wide.

(d) Where employees entering upon runways become thereby exposed to machinery, electrical equipment, or other danger not a falling hazard, additional guarding shall be provided.

(e) Regardless of height, open-sided floors, walkways, platforms, or runways above or adjacent to dangerous equipment, pickling or galvanizing tanks, degreasing units, and similar hazards, shall be guarded with a standard railing and toe board.

(5) Stairway railings and guards.

(a) Every flight of stairs having four or more risers shall be equipped with standard stair railings or standard handrails as specified below, the width of the stair to be measured clear of all obstructions except handrails:

(i) On stairways less than 44 inches wide having both sides enclosed, at least one handrail, preferably on the right side descending;

(ii) On stairways less than 44 inches wide having one side open, at least one stair railing on the open side;

(iii) On stairways less than 44 inches wide having both sides open, one stair railing on each side;

(iv) On stairways more than 44 inches wide but less than 88 inches wide, one handrail on each enclosed side and one stair railing on each open side;

(v) On stairways 88 or more inches wide, one handrail on each enclosed side, one stair railing on each open side, and one intermediate stair railing located approximately midway of the width.

(b) Winding stairs shall be equipped with a handrail offset to prevent walking on all portions of the treads having width less than 6 inches.

(6) Standard specifications.

(a) A standard railing shall consist of top rail, intermediate rail, toe board, and posts, and shall have a vertical height of 36 inches to 42 inches from upper surface of top rail to floor, platform, runway, or ramp level. Each length of lumber shall be smooth-surfaced throughout the length of the railing. The intermediate rail shall be halfway between the top rail and the floor, platform, runway, or ramp. The ends of the rails shall

not overhang the terminal posts except where such overhang does not constitute a projection hazard. Minimum requirements for standard railings under various types of construction are specified in the following items:

(i) For wood railings, the posts shall be of at least 2-inch by 4-inch stock spaced not to exceed 8 feet; the top rail shall be of at least 2-inch by 4-inch stock; the intermediate rail shall be of at least 1-inch by 6-inch stock.

(ii) For pipe railings, posts and top and intermediate railings shall be at least 1 1/2 inches nominal OD diameter with posts spaced not more than 8 feet on centers.

(iii) For structural steel railings, posts and top and intermediate rails shall be of 2-inch by 2-inch by 3/8-inch angles or other metal shapes of equivalent bending strength, with posts spaced not more than 8 feet on centers.

(iv) For wire rope railings, the top and intermediate railings shall be at least 1/2-inch fibre core rope, or the equivalent, with posts spaced not more than 8 feet on centers. The rope shall be stretched taut, so as to present a minimum deflection.

(v) The anchoring of posts and framing of members for railings of all types shall be of such construction that the completed structure shall be capable of withstanding a load of at least 200 pounds applied in any direction at any point on the top rail, with a minimum of deflection.

(vi) Railings receiving heavy stresses from employees trucking or handling materials shall be provided additional strength by the use of heavier stock, closer spacing of posts, bracing, or by other means.

(vii) Other types, sizes, and arrangements of railing construction are acceptable, provided they meet the following conditions:

(A) A smooth-surfaced top rail at a height above floor, platform, runway, or ramp level of between 36 inches and 42 inches;

(B) A strength to withstand at least the minimum requirement of 200 pounds top rail pressure with a minimum of deflection;

(C) Protection between top rail and floor, platform, runway, ramp, or stair treads, equivalent at least to that afforded by a standard intermediate rail;

(D) Elimination of overhang of rail ends unless such overhang does not constitute a hazard.

(b) A stair railing shall be of construction similar to a standard railing, but the vertical height shall be not more than 34 inches nor less than 30 inches from upper surface to top rail to surface of tread in line with face of riser at forward edge of tread.

(c) (i) A standard toe board shall be 4 inches minimum in vertical height from its top edge to the level of the floor, platform, runway, or ramp. It shall be securely fastened in place and have not more than 1/4-inch clearance above floor level. It may be made of any substantial material, either solid, or with openings not over 1 inch in greatest dimension.

(ii) Where material is piled to such height that a standard toe board does not provide protection, paneling,

or screening from floor to intermediate rail or to top rail shall be provided.

(d) (i) A standard handrail shall be of construction similar to a standard railing except that it is mounted on a wall or partition, and does not include an intermediate rail. It shall have a smooth surface along the top and both sides of the handrail. The handrail shall have an adequate handhold for any one grasping it to avoid falling. Ends of the handrail shall be constructed so as not to constitute a projection hazard.

(ii) The height of handrails shall be not more than 34 inches nor less than 30 inches from upper surface of handrail to surface of tread, in line with face of riser or to surface of ramp.

(iii) All handrails and railings shall be provided with a clearance of approximately 3 inches between the handrail or railing and any other object.

(e) Floor opening covers shall be of any material that meets the following strength requirements:

(i) Conduits, trenches, and manhole covers and their supports, when located in roadways, and vehicular aisles shall be designed to carry a truck rear-axle load of at least 2 times the maximum intended load;

(ii) The floor opening cover shall be capable of supporting the maximum intended load and so installed as to prevent accidental displacement.

(f) Skylight openings that create a falling hazard shall be guarded with a standard railing, or covered in accordance with (e)(ii) of this subsection.

(g) Wall opening protection shall meet the following requirements:

(i) Barriers shall be of such construction and mounting that, when in place at the opening, the barrier is capable of withstanding a load of at least 200 pounds applied in any direction (except upward), with a minimum of deflection at any point on the top rail or corresponding member.

(ii) Screens shall be of such construction and mounting that they are capable of withstanding a load of at least 200 pounds applied horizontally at any point on the near side of the screen. They may be of solid construction, of grill work with openings not more than 8 inches long, or of slat work with openings not more than 4 inches wide with length unrestricted.

(7) Guarding of low-pitched roof perimeters during the performance of built-up roofing work.

(a) General provisions. During the performance of built-up roofing work on low-pitched roofs with a ground to eave height greater than 16 feet (4.9 meters), employees engaged in such work shall be protected from falling from all unprotected sides and edges of the roof as follows:

(i) By the use of a motion-stopping-safety system (MSS system); or

(ii) By the use of a warning line system erected and maintained as provided in subdivision (7)(c) of this section and supplemented for employees working between the warning line and the roof edge by the use of either an MSS system or, where mechanical equipment is not being used or stored, by the use of a safety monitoring system; or

(iii) By the use of a safety monitoring system on roofs 50 feet (15.25 meters) or less in width (see WAC 296-155-50501 Appendix—Roofs), where mechanical equipment is not being used or stored.

(b) Exception. The provisions of (7)(a) of this section do not apply at points of access such as stairways, ladders, and ramps, or when employees are on the roof only to inspect, investigate, or estimate roof level conditions. Roof edge materials handling areas and materials storage areas shall be guarded as provided in subdivision (7)(e) of this section.

(c) Warning lines.

(i) Warning lines shall be erected around all sides of the work area.

(A) When mechanical equipment is not being used, the warning line shall be erected not less than six feet (1.8 meters) from the roof edge;

(B) When mechanical equipment is being used, the warning line shall be erected not less than six feet (1.8 meters) from the roof edge which is parallel to the direction of mechanical equipment operation, and not less than 10 feet (3.1 meters) from the roof edge which is perpendicular to the direction of mechanical equipment operation.

(ii) The warning line shall consist of a rope, wire, or chain, and supporting stanchions erected as follows:

(A) The rope, wire, or chain shall be flagged at not more than six foot (1.8 meters) intervals with high-visibility material;

(B) The rope, wire, or chain shall be rigged and supported in such a way that its lowest point (including sag) is no less than 34 inches (.86 meters) from the roof surface and its highest point is no more than 39 inches (1 meter) from the roof surface;

(C) After being erected, with the rope, wire, or chain attached, stanchions shall be capable of resisting, without tipping over, a force of at least 16 pounds (71 Newtons) applied horizontally against the stanchion, 30 inches (0.76 meters) above the roof surface, perpendicular to the warning line, and in the direction of the roof edge;

(D) The rope, wire, or chain shall have a minimum tensile strength of 500 pounds (227 Kilograms), and after being attached to the stanchions, shall be capable of supporting, without breaking, the loads applied to the stanchions as prescribed in subitem (7)(c)(ii)(C) of this section; and

(E) The line shall be attached at each stanchion in such a way that pulling on one section of the line between stanchions will not result in slack being taken up in adjacent sections before the stanchion tips over.

(iii) Access paths shall be erected as follows:

(A) Points of access, materials handling areas and storage areas shall be connected to the work area by a clear access path formed by two warning lines.

(B) When the path to a point of access is not in use, a rope, wire, or chain, equal in strength and height to the warning line, shall be placed across the path at the point where the path intersects the warning line erected around the work area.

(d) Mechanical equipment. Mechanical equipment may be used or stored only in areas where employees are being protected by either a warning line or an MSS system. Mechanical equipment may not be used or stored between the warning line and the roof edge unless the employees are being protected by an MSS system. Mechanical equipment may not be used or stored where the only protection provided is by a safety monitoring system.

(e) Roof edge materials handling areas and materials storage. Employees working in a roof edge materials handling or materials storage area located on a low-pitched roof with a ground to eave height greater than 16 feet (4.9 meters) shall be protected from falling by the use of an MSS system along all unprotected roof sides and edges of the area.

(i) When guardrails are used at hoisting areas, a minimum of four feet of guardrail shall be erected on each side of the access point through which materials are hoisted.

(ii) A chain or gate shall be placed across the opening between the guardrail sections when hoisting operations are not taking place.

(iii) When guardrails are used at bitumen pipe outlets, a minimum of four feet of guardrail shall be erected on each side of the pipe.

(iv) When safety belt systems are used, they shall not be attached to the hoist.

(v) When safety belt systems are used, they shall be rigged to allow the movement of employees only as far as the roof edge.

(vi) Materials may not be stored within six feet of the roof edge unless guardrails are erected at the roof edge.

(vii) Materials which are piled, grouped, or stacked shall be stable and self-supporting.

(f) Training.

(i) The employer shall provide a training program for all employees engaged in built-up roofing work so that they are able to recognize and deal with the hazards of falling associated with working near a roof perimeter. The employees shall also be trained in the safety procedures to be followed in order to prevent such falls.

(ii) The employer shall assure that employees engaged in built-up roofing work have been trained and instructed in the following areas:

(A) The nature of fall hazards in the work area near a roof edge;

(B) The function, use, and operation of the MSS system, warning line, and safety monitoring systems to be used;

(C) The correct procedures for erecting, maintaining, and disassembling the systems to be used;

(D) The role of each employee in the safety monitoring system when this system is used;

(E) The limitations on the use of mechanical equipment; and

(F) The correct procedures for the handling and storage of equipment and materials.

(iii) Training shall be provided for each newly hired employee, and for all other employees as necessary, to assure that employees maintain proficiency in the areas

listed in item (7)(f)(ii) of this section. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-13-053 (Order 81-9), § 296-155-505, filed 6/17/81; Order 76-29, § 296-155-505, filed 9/30/76; Order 74-26, § 296-155-505, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-50501 Appendix--Roofs.** This appendix serves as a guideline to assist employers in complying with the appropriate requirements of WAC 296-155-505 (7)(a). Each example shows a roof plan or plans and indicates where each roof or roof area is to be measured to determine its width. Section views or elevation views are shown where appropriate. Some examples show "correct" and "incorrect" subdivisions of irregularly shaped roofs into smaller regularly shaped areas. In all examples, the dimension selected to be the width of an area is the lesser of the two primary dimensions of the area. Example A shows that on a simple rectangular roof, width is the lesser of the two primary overall dimensions. This is also the case with roofs which are sloped toward or away from the roof center, as shown in Example B.

Many roofs are not simple rectangles. Such roofs may be broken down into subareas as shown in Example C. The process of dividing a roof area can produce many different configurations. Example C gives the general rule of using dividing lines of minimum length to minimize the size and number of the areas which are potentially less than 50 feet wide. The intent is to minimize the number of roof areas where WAC 296-155-505 (7)(a)(iii) can be applied.

Roofs which are comprised of several separate, non-continuous roof areas, as in Example D, may be considered as a series of individual roofs. Some roofs have penthouses, additional floors, courtyard openings, or similar architectural features; Example E shows how the rule for dividing roofs into subareas is applied to such configurations. Irregular, nonrectangular roofs must be considered on an individual basis, as shown in Example F.

Example A.  
RECTANGULAR SHAPED ROOFS

Example B.  
SLOPED RECTANGULAR SHAPED ROOFS

Example C.  
IRREGULARLY SHAPED ROOFS WITH RECTANGULAR SHAPED SECTIONS

Such roofs are to be divided into subareas by using dividing lines of minimum length to minimize the size and number of the areas which are potentially less than or equal to 50 feet (15.25 meters) in width, in order to limit the size of roof areas where WAC 296-155-505 (7)(a)(iii) can be applied. Dotted lines are used in the examples to show the location of dividing lines. X denotes incorrect measurements of width.

Example D.  
SEPARATE, NONCONTIGUOUS ROOF AREAS

Example F.  
IRREGULAR, NONRECTANGULAR SHAPED ROOFS

Example E.

ROOFS WITH PENTHOUSES, OPEN COURT YARDS, ADDITIONAL FLOORS, ETC.

Such roofs are to be divided into subareas by using dividing lines of minimum length to minimize the size and number of the areas which are potentially less than or equal to 50 feet (15.25 meters) in width, in order to limit the size of roof areas where WAC 296-155-505 (7)(a)(iii) can be applied. Dotted lines are used in the examples to show the location of dividing lines. X denotes incorrect measurements of width.

[Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-13-053 (Order 81-9), § 296-155-50501, filed 6/17/81.]

**WAC 296-155-510 Stairways.** (1) On all structures, two or more floors in height, stairways, ladders, or ramps shall be provided for employees during the construction period.

(2) Stairway railing and guardrails shall meet the requirements of WAC 296-155-505 (5) and (6).

(3) All parts of stairways shall be free of hazardous projections, such as protruding nails.

(4) Debris, and other loose materials, shall not be allowed on or under stairways.

(5) Slippery conditions on stairways shall be eliminated as soon as possible after they occur.

(6) Permanent steel or other metal stairways, and landings with hollow pan-type treads that are to be filled with concrete or other materials, when used during construction, shall be filled to the level of the nosing with solid material. The requirement shall not apply during the period of actual construction of the stairways themselves.

(7) Wooden treads for temporary service shall be full width.

(8) Metal landings shall be secured in place before filling.

(9) Temporary stairs shall have a landing not less than 30 inches in the direction of travel at every 12 feet of vertical rise.

(10) Stairs shall be installed at angles to the horizontal of between 30° and 50°.

(11) Rise height and tread width shall be uniform throughout any flight of stairs including any foundation structure used as one or more treads of the stairs.

(12) All stairs shall be lighted in accordance with Part B of this chapter.

(13) Spiral stairways shall not be permitted except for special limited usage and secondary access situations where it is not practical to provide a conventional stairway. [Order 74-26, § 296-155-510, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-525 Cranes and derricks.** (1) General Requirements. (a) The employer shall comply with the manufacturer's specifications and limitations applicable to the operation of any and all cranes and derricks. Where manufacturer's specifications are not available the limitations assigned to the equipment shall be based on the determinations of a qualified engineer, competent in this field and such determinations will be appropriately documented and recorded. Attachments used with cranes shall not exceed the capacity, rating, or scope recommended by the manufacturer.

(b) Rated load capacities, and recommended operating speeds, special hazard warnings, or instruction, shall be conspicuously posted on all equipment. Instructions or warnings shall be visible to the operator while he is at his control station.

(c) Hand signals to crane and derrick operators shall be those prescribed by the applicable ANSI standard for

the type of crane in use. An illustration of the signals shall be posted at the job site.

NOTE: When decals, illustrating hand signals, are available from the division or otherwise, they should be posted at the operator's station.

(d) The employer shall designate a competent person who shall inspect all machinery and equipment prior to each use, and periodically during use to make sure it is in safe operating condition. Any deficiencies shall be repaired, or defective parts replaced, before continued use.

(e) A thorough, annual inspection of the hoisting machinery shall be made by a competent person, or by a government or private agency recognized by the department. The employer shall maintain a permanent record of the dates and results of all inspections for each hoisting machine and piece of equipment.

(f) Wire rope shall be taken out of service when any of the following conditions exist:

(i) In running ropes, six randomly distributed broken wires in one lay or three broken wires in one strand in one lay;

(ii) Wear of one-third the original diameter of outside individual wires. Kinking, crushing, bird caging, or any other damage resulting in distortion of the rope structure;

(iii) Evidence of any heat damage from any cause;

(iv) Reductions from nominal diameter of more than one-sixty-fourth inch for diameters up to and including five-sixteenths inch, one-thirty-second inch for diameters three-eighths inch to and including one-half inch, three-sixty-fourths inch for diameters nine-sixteenths inch to and including three-fourths inch, one-sixteenth inch for diameter seven-eighths inch to 1 1/8 inches inclusive, three-thirty-seconds inch for diameters 1 1/4 to 1 1/2 inches inclusive;

(v) In standing ropes, more than two broken wires in one lay in sections beyond end connections or more than one broken wire at an end connection.

(vi) Wire rope safety factors shall be in accordance with American National Standards Institute B 30.5-1968 or SAE J959-1966.

(g) The foot block of every derrick shall be securely supported and firmly secured against movement in any direction. Proper shores shall be placed against the foot blocks of the derrick to take the pull of the hoisting engine.

(h) Derricks shall be operated only by authorized personnel.

(i) The top of the mast on guy derricks shall be steadied by not less than six guy cables equally spaced.

(j) On guy derricks, eyes shall be formed in the guys at the masthead end by bending back the ends of the cables and clamping the ends with at least three clamps.

(k) A tag line or guide rope shall be used on all loads that swing freely. Guide ropes or tag lines shall be held by experienced persons.

(l) Care shall be taken to guard against injury to workers, or damage to scaffolds or buildings, from swinging loads.

(m) When "dead men" are used as anchors, the cable shall be so attached that the concentrated load will not cause a shear stress on the "dead men."

(n) On stiff leg derricks where the boom is longer than the mast, care shall be taken to see that the goose-necks are fitted to the stiff legs in a manner so that there will be no undue friction on the gudgeon pin.

(o) A collar shall be placed on the gudgeon pin above the goose-neck, and a hole drilled through the collar and the gudgeon pin, through which a steel bolt shall be passed to hold the collar in position; the steel bolt shall be of sufficient size to prevent the goose-neck from shearing it off when the loaded boom is swung against the stiff leg.

(p) Double sets of bolts shall be used to fasten back legs of a stiff leg derrick.

(q) Particular attention shall be given to the weighting and anchoring of stiff leg derricks.

(r) The operator shall avoid carrying loads over people.

(s) When work is stopped or when the derrick is not in operation, the boom shall be lowered to a horizontal position or tied in place to prevent it whipping with the wind or other external force.

(t) Only authorized personnel shall make sling hitches on loads.

(u) Workers shall not be allowed to ride on loads handled by derricks.

(v) Operators shall observe signals only from duly authorized persons. Under no circumstances shall a load be moved until the signal is received from authorized personnel.

(w) Bell, whistle, electric or visual signals shall be provided in connection with all hoists and cableways where an operator is stationed at the power device. Hoist signaling devices shall be so located as to minimize the possibility of signaling accidentally and located so that they cannot be operated by a person standing on hoist or bucket.

(x) Belts, gears, shafts, pulleys, sprockets, spindles, drums, fly wheels, chains, or other reciprocating, rotating, or other moving parts or equipment shall be guarded if such parts are exposed to contact by employees, or otherwise create a hazard. Guarding shall meet the requirements of the American National Standards Institute, B 15.1-1958 Rev., Safety Code for Mechanical Power Transmission Apparatus.

(y) A minimum distance of thirty inches clearance shall be maintained between the swing radius of the greatest extension of the crane superstructure or counterweights and a stationary object, including the crane itself, while the crane is in operation. When this clearance cannot be maintained, suitable barricades or safeguards shall be used to isolate the pinch point hazard area.

(z) All exhaust pipes shall be guarded or insulated where contact by employees, in the performance of normal duties, is possible.

(2) Additional requirements.

(a) Whenever internal combustion engine powered equipment exhausts in enclosed spaces, tests shall be

made and recorded to see that employees are not exposed to unsafe concentrations of toxic gases or oxygen deficient atmospheres. (See chapter 296-62 WAC, the general occupational health standards and other applicable standards.)

(b) All windows in cabs shall be of safety glass, or equivalent, that introduces no visible distortion that will interfere with the safe operation of the machine.

(c)(i) Where necessary for rigging or service requirements, a ladder or steps shall be provided to give access to a cab roof.

(ii) On cranes, guardrails, handholds and steps shall be provided for easy access to the car and cab conforming to American National Standards Institute, B30.5-1968.

(iii) Platforms and walkways shall have anti-skid surfaces.

(d) Fuel tank filler pipe shall be located in such a position, or protected in such manner, as to not allow spill or overflow to run onto the engine, exhaust, or electrical equipment of any machine being fueled.

(i) An accessible fire extinguisher of 5BC rating, or higher, shall be available at all operator stations or cabs of equipment.

(ii) All fuels shall be transported, stored, and handled to meet the rules of Part D of this chapter. When fuel is transported by vehicles on public highways, department of transportation rules concerning such vehicular transportation are considered applicable.

(e) Except where electrical distribution and transmission lines have been deenergized and visibly grounded at point of work or where insulating barriers, not a part of or an attachment to the equipment or machinery, have been erected to prevent physical contact with the lines, equipment or machines shall be operated proximate to power lines only in accordance with the following:

(i) For lines rated 50 kV. or below, minimum clearance between the lines and any part of the crane or load shall be 10 feet;

(ii) For lines rated over 50 kV., minimum clearance between the lines and any part of the crane or load shall be 10 feet plus 0.4 inch for each 1 kV. over 50 kV., or twice the length of the line insulator, but never less than 10 feet;

(iii) In transit with no load and boom lowered, the equipment clearance shall be a minimum of 4 feet for voltages less than 50 kV., and 10 feet for voltages over 50 kV. up to and including 345 kV., and 16 feet for voltages up to and including 750 kV;

(iv) A person shall be designated to observe clearance of the equipment and give timely warning for all operations where it is difficult for the operator to maintain the desired clearance by visual means;

(v) Cage-type boom guards, insulating links, or proximity warning devices may be used on cranes, but the use of such devices shall not alter the requirements of any other regulation of this part even if such device is required by law or regulation;

(vi) Any overhead wire shall be considered to be an energized line unless and until the person owning such

line or the electrical utility authorities indicate that it is not an energized line and it has been visibly grounded;

(vii) Prior to work near transmitter tower where an electrical charge can be induced in the equipment or materials being handled, the transmitter shall be deenergized or tests shall be made to determine if electrical charge is induced on the crane.

(f) The following precautions shall be taken when necessary to dissipate induced voltage:

(i) The equipment shall be provided with an electrical ground directly to the upper rotating structure supporting the boom; and

(ii) Ground jumper cables shall be attached to materials being handled by boom equipment when electrical charge is induced while working near energized transmitters. Crews shall be provided with nonconductive poles having large alligator clips or other similar protection to attach the ground cable to the load.

(iii) Combustible and flammable materials shall be removed from the immediate area prior to operations.

(g) No modifications or additions which affect the capacity or safe operation of the equipment shall be made by the employer without the manufacturer's or a qualified engineer's written approval. If such modifications or changes are made, the capacity, operation, and maintenance instruction plates, tags, or decals, shall be changed accordingly. In no case shall the original safety factor of the equipment be reduced.

(h) The employer shall comply with Power Crane and Shovel Association, Mobile Hydraulic Crane Standard No. 2.

(i) Sideboom cranes mounted on wheel or crawler tractors shall meet the requirements of SAE J743a-1964.

(3) Crawler, locomotive, and truck cranes. (a) All jibs shall have positive stops to prevent their movement of more than 5° above the straight line of the jib and boom on conventional type crane booms. The use of cable type belly slings does not constitute compliance with this standard.

(b) All crawler, truck or locomotive cranes in use shall meet the applicable requirements for design, inspection, construction, testing, maintenance and operation as prescribed in the ANSI B30.5-1968, Safety Code for Crawler, Locomotive and Truck Cranes.

(4) Tower cranes. (a) Tower cranes shall be erected under the immediate supervision of a competent person, designated by the employer.

(b) Tower cranes shall be erected, maintained and used in accordance with the manufacturer's specifications, recommendations and procedures. All modifications shall be approved by the manufacturer and engineered by a professional engineer. The safety factors shall not be reduced by any modifications. The crane plates and charts shall be changed to reflect any modifications made.

(c) A professional engineer shall certify that the crane foundations and underlying soil are adequate support for the tower crane with its maximum overturning movement.

(d) Tower cranes shall be positioned whereby they can swing 360° without either the counterweight or jib striking any building, structure or other object, except:

(i) If the crane can strike an object or another crane, suitable limit switches shall be installed which will prohibit contact with such objects, or;

(ii) Direct voice communications shall be established between any operator of the tower crane(s) involved and a signalman so stationed where he can observe the boom and/or counterweight movement, and the object with which it may contact to warn the operator(s) of imminent danger.

(iii) A secondary means of positive communications shall be established as a back-up for possible direct voice communication failure.

NOTE: Radio communication systems without tone coded squelch are prohibited. Citizens band radios shall not be used as a means of communications for tower cranes.

(e) Prior to installing a climbing tower crane within an existing building or new construction, a structural engineer shall certify that the building is designed to withstand the torque and floor loading created by the crane to be installed.

(f) Prior to initial use, all newly erected or altered cranes shall be tested with the design rated load to insure compliance with this standard, including the following functions:

- (i) Hoisting and lowering;
- (ii) Trolley travel;
- (iii) Swing motion;
- (iv) Limit, locking and safety devices;
- (v) Crane travel where applicable; and
- (vi) Foundation and erection.

NOTE: Tower cranes erected on a new foundation shall be tested in accordance with ANSI B30.3-1975 Chapter 3-1.

(A) The test shall consist of suspending a load of not less than 100% of the rated capacity for five minutes. The load shall be suspended from the furthest point of the length of boom (jib) to be used. The results of this test shall be within the manufacturer's recommendations and/or specifications.

(B) A record of each test shall be made and signed by the person responsible for conducting the test. Such records shall be maintained on the construction site for the duration of the construction work for which it was erected and subsequently made a part of the firm's permanent equipment records. Records shall be made available to authorized representatives of the department, upon request.

(g) A capacity chart shall be furnished by each crane manufacturer which shall include a full and complete range of crane load ratings at all stated operating radii for each allowable speed and each recommended counterweight load.

(i) Such chart shall be posted in the operator's cab or at the remote control stand he may be using. In lieu of the chart at the remote control stand, a minimum of two

weight capacity signs shall be affixed to the jib or boom. The chart shall be visible and readable to the operator while he is in his normal operating position.

(h) Operating controls shall be properly marked to indicate the function of the controls in each position.

(i) An operating and maintenance manual shall be provided with each tower crane.

(j) Limit switches shall be installed and shall be kept properly adjusted. They shall be protected or isolated in a manner which will prevent unauthorized tampering. Limit switches shall provide the following functions:

(i) Safely limit the travel of the trolley to prevent it from hitting the outer end of the jib.

(ii) Limit the upward travel of the load block to prevent two-blocking.

(iii) Limit the load being lifted in a manner whereby no more than 110% of the maximum rated load can be lifted or moved.

(k) The crane shall not be used to pull vehicles of any type, remove piling, loosen form work, pull away loads which are attached to the ground or walls, or for any operation other than the proper handling of freely suspended loads.

(l) When the operator may be exposed to the hazard of falling objects, the tower crane cab and/or remote control station shall have adequate overhead protection.

(m) The operator shall be protected from the weather. If enclosed cabs are provided they shall provide clear visibility in all directions and glass shall be approved safety glass or the equivalent.

(n) Operators shall not occupy cabs of remotely-controlled stations during repositioning operations.

(o) An approved and safe means shall be provided for access to operator's cab and machinery platform.

(p) When necessary for inspection or maintenance purposes, ladders, walkways with railing or other devices shall be provided.

(q) Each tower crane shall be provided with a slewing brake capable of preventing the jib or boom from rotating in either direction and stopping the rotation of the jib or boom while loaded, when desired. Such brake shall have a holding device which, when set, will hold the jib or boom in a fixed location without additional attention of the operator. When the crane is out of operation, the jib or boom shall be pointed downwind and the slewing brake shall be released so as to permit the jib or boom to weathervane, providing the jib or boom has a clear 360 degree rotation. Where a 360 degree rotation is not provided, the jib or boom shall be pointed downwind from the prevailing wind and the slewing brake set.

(r) Each tower crane shall be provided with a braking system on the trolley capable of stopping and holding the trolley in any desired position while carrying a maximum load. This brake shall be capable of being locked in a fixed location without additional attention of the operator. An automatic brake or device shall be installed which will immediately stop and lock the trolley in position in the event of a breakage of the trolley rope.

(s) All electrical equipment shall be properly grounded and protection shall be provided against lightning.

(t) When the operator is actually operating the crane, he shall remain in a stationary position.

(u) All crane brakes shall automatically set in event of power failure. Swing brakes shall also function in this manner or be capable of being set manually.

(v) Climbing jack systems used for raising a tower crane shall be equipped with over-pressure relief valves, direct-reading pressure gauges, and pilot-operated hydraulic check valves installed in a manner which will prevent jack from retracting should a hydraulic line or fitting rupture or fail.

(w) During periods of high winds or weather affecting visibility, i.e., fog, etc., only loads shall be handled that are consistent with good safety practices. Good safety practices shall be mutually agreed upon by the operator and the person in charge of the construction job, with due consideration given to manufacturer's specifications and recommendations.

(x) Counterweights shall be securely fastened in place and shall not exceed the weight as recommended by the manufacturer for the length of jib being used. However, an amount of counterweight as recommended by the manufacturer shall be used.

(y) Tower cranes shall be inspected and maintained in accordance with the manufacturer's recommendations or more frequently if there is reason to suspect a possible defect or weakening of any portion of the structure or equipment.

(z) Guy wires, wedges, braces or other supports shall be inspected at the beginning and at midpoint of each working shift to ascertain that they are functioning as intended.

(5) Additional tower crane requirements.

(a) An approved method shall be instituted for transmitting signals to the operator. Standard hand signals for crane operations shall be used, whenever possible; however, if conditions are such that hand signals are ineffective, radio-controlled or electric-whistle signal or two-way voice communication shall be used. (See NOTE under WAC 296-155-525 (4)(d).)

(b) Tower cranes shall not be erected or raised when the wind velocity at the worksite exceeds 20 m.p.h. or that specified by the manufacturer.

(c) Tower crane operators shall be trained and experienced in tower crane operations; however, for gaining experience, persons may operate the tower crane if under the immediate supervision of an experienced operator.

(d) Adequate clearance shall be maintained between moving and rotating structures of the crane and fixed objects to allow the passage of employees without harm.

(e) Employees required to perform duties on the horizontal boom of hammerhead tower cranes shall be protected against falling by guardrails or by safety belts and lanyards attached to crane or to lifelines in conformance with Part C of this chapter.

(f) Buffers shall be provided at both ends of travel of the trolley.

(g) Cranes mounted on rail tracks shall be equipped with limit switches limiting the travel of the crane on the track and stops or buffers at each end of the tracks.

(h) All hammerhead tower cranes in use shall meet the applicable requirements for design, construction, installation, testing, maintenance, inspection, and operation as prescribed by the manufacturer.

(i) Access ladders inside the telescoping sections of tower cranes are exempt from those sections of the safety standards pertaining to cleat length and cleat spacing, but shall conform to manufacturer's recommendations and specifications.

(6) Overhead and gantry cranes. (a) The rated load of the crane shall be plainly marked on each side of the crane, and if the crane has more than one hoisting unit, each hoist shall have its rated load marked on it or its load block, and this marking shall be clearly legible from the ground or floor.

(b) Bridge trucks shall be equipped with sweeps which extend below the top of the rail and project in front of the truck wheels.

(c) Except for floor-operated cranes, a gong or other effective audible warning signal shall be provided for each crane equipped with a power traveling mechanism.

(d) All overhead and gantry cranes in use shall meet the applicable requirements for design, construction, installation, testing, maintenance, inspection, and operation as prescribed in ANSI B30.2.0-1967, Safety Code for Overhead and Gantry Cranes.

(7) Derricks. All derricks in use shall meet the applicable requirements for design, construction, installation, inspection, testing, maintenance, and operation as prescribed in American National Standard Institute B30.6-1969, Safety Code for Derricks.

(8) Floating cranes and derricks. (a) Mobile cranes mounted on barges. (i) When a mobile crane is mounted on a barge, the rated load of the crane shall not exceed the original capacity specified by the manufacturer.

(ii) A load rating chart, with clearly legible letters and figures, shall be provided with each crane, and securely fixed at a location easily visible to the operator.

(iii) When load ratings are reduced to stay within the limits for list of the barge with a crane mounted on it, a new load rating chart shall be provided.

(iv) Mobile cranes on barges shall be positively secured.

(b) Permanently mounted floating cranes and derricks. (i) When cranes and derricks are permanently installed on a barge, the capacity and limitations of use shall be based on competent design criteria.

(ii) A load rating chart with clearly legible letters and figures shall be provided and securely fixed at a location easily visible to the operator.

(iii) Floating cranes and floating derricks in use shall meet the applicable requirements for design, construction, installation, testing, maintenance, and operation as prescribed by the manufacturer.

(c) Protection of employees working on barges. The employer shall comply with the applicable requirements for protection of employees as specified in WAC 296-155-630.

(9) Mobile cranes and excavation machines. (a) In all power driven shovel operations the person in charge shall

issue instructions necessary to prevent accidents, to detect and correct unsafe acts and dangerous conditions, and to enforce all safety rules and regulations.

He shall also issue instructions on the proper method of using tools and handling material.

(b) Where the ground is soft or uneven, timbering and planking shall be used to provide firm foundation and distribute the load.

(c) In case of a breakdown, the shovel shall be moved away from the foot of the slope before repairs are made.

(d) All persons shall keep away from the range of the shovel's swing and shall not be permitted to stand back of the shovel or in line with the swing of the dipper during operation or moving of shovel.

(e) Unauthorized persons shall not be allowed on the shovel during operations, and the operator shall not converse with other persons while operating machine.

(f) The shovel dipper shall rest on the ground or on blocking during shut down periods.

(g) Shovels shall be inspected daily and all defects promptly repaired.

(h) All rubber tired mobile cranes shall be equipped with outriggers and sufficient blocking to properly stabilize crane while operating.

(i) Rubber tired mobile cranes shall be equipped with rear view mirrors.

(j) Positive boom stops shall be provided on all mobile cranes of the wheel and crawler type.

(k) Length of a crane boom and amount of counterweight shall not exceed manufacturer's rated capacity for equipment involved; except on isolated cases where permission is granted by the department.

(l) On all cranes where wedge brackets are used as terminal connections, the proper size wedge shall be used.

(m) On all mobile cranes, the hoist and boom drums shall be provided with a positive operated pawl or dog which shall be used in addition to the brake to hold the load and boom when they are suspended. Counterweight operated dogs are prohibited.

(n) Oiling and greasing shall be done under safe conditions with machine at rest, except when motion of machine is necessary.

(o) All steps, running boards, and boom ladder shall be of substantial construction and in good repair at all times.

(p) Operators shall not leave the cab while master clutch is engaged.

(q) Fire extinguishers shall be readily accessible and within reach of operator at all times.

(r) All shovel and crane cabs shall be kept clean and free of excess oil and grease on floor and machinery. Oily and greasy rags shall be disposed of immediately after use and not allowed to accumulate.

(s) Tools shall not be left on the cab floor. Spare cans of oil or fuel, and spare parts, shall not be stored in cabs, except in approved racks provided for that purpose.

(t) Mats or planking shall be used in moving shovels or cranes over soft or uneven ground.

(u) Cranes or shovels setting on steep grades shall be securely blocked or secured with a tail hold.

(v) Smoking shall be prohibited while fueling or oiling machines.

(w) Gasoline powered motors shall be stopped during refueling.

(x) Handling of movable feed line (bologna) shall be accomplished with insulated hooks and lineman's rubber gloves.

(y) Where cables cross roads they shall be elevated or placed in a trench.

(z) On all power shovels, including back-hoe types, of one-half cubic yard capacity or over, and on all dragline cranes or all-purpose cranes of the crawler or wheel type, two persons shall constitute the minimum working crew. [Order 76-29, § 296-155-525, filed 9/30/76; Order 74-26, § 296-155-525, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-530 Material hoists, personnel hoists, and elevators.** (1) General requirements. (a) The employer shall comply with the manufacturer's specifications and limitations applicable to the operation of all hoists and elevators. Where the manufacturer's specifications are not available, the limitations assigned to the equipment shall be based on the determinations of a professional engineer competent in the field.

(b) Rated load capacities, recommended operating speeds, and special hazard warning or instructions shall be posted on cars and platforms.

(c) Wire rope shall be removed from service when any of the following conditions exists:

(i) In hoisting ropes, six randomly distributed broken wires in one rope lay or three broken wires in one strand in one rope lay;

(ii) Abrasion, scrubbing, flattening, or peening, causing loss of more than one-third of the original diameter of the outside wires;

(iii) Evidence of any heat damage resulting from a torch or any damage caused by contact with electrical wires;

(iv) Reduction from nominal diameter of more than three sixty-fourths inch for diameters up to and including three-fourths inch; one-sixteenth inch for diameters seven-eighths to 1 1/8 inches; and three thirty-seconds inch for diameters 1 1/4 to 1 1/2 inches.

(d) Hoisting ropes shall be installed in accordance with the wire rope manufacturer's recommendations.

(e) The installation of live booms on hoists is prohibited.

(f) The use of endless belt-type man lifts on construction shall be prohibited.

(2) Material hoists, (a) (i) Operating rules shall be established and posted at the operator's station of the hoist. Such rules shall include signal system and allowable line speed for various loads. Rules and notices shall be posted on the car frame or crosshead in a conspicuous location, including the statement "No riders allowed."

(ii) No person shall be allowed to ride on material hoists except for the purposes of inspection and maintenance.

(b) All entrances of the hoistways shall be protected by substantial gates or bars which shall guard the full

width of the landing entrance. All hoistway entrance bars and gates shall be painted with diagonal contrasting colors, such as black and yellow stripes.

(i) Bars shall be not less than 2- by 4-inch wooden bars or the equivalent, located 2 feet from the hoistway line. Bars shall be located not less than 36 inches nor more than 42 inches above the floor.

(ii) Gates or bars protecting the entrances to hoistway shall be equipped with a latching device.

(c) Overhead protective covering of two-inch planking, 3/4-inch plywood or other solid material of equivalent strength shall be provided on the top of every material hoist cage or platform to prevent objects falling on the workers loading or unloading the hoist.

(i) The protective covering on the top of the cage or platform may be made in hinged sections that may be raised when hoisting long material.

(ii) When using a cage or platform for long material, the several pieces of the material shall be securely fastened together and made fast to the cage or platform, so that no part of the load can fall or project beyond the sides of the cage or platform.

(d) The operator's station of a hoisting machine shall be provided with overhead protection equivalent to tight planking not less than 2 inches thick. The support for the overhead protection shall be of equal strength.

(e) Hoist towers may be used with or without an enclosure on all sides. However, whichever alternative is chosen, the following applicable conditions shall be met:

(i) When a hoist tower is enclosed, it shall be enclosed on all sides for its entire height with a screen enclosure of 1/2-inch mesh, No. 18 U.S. gauge wire or equivalent, except for landing access.

(ii) When a hoist tower is not enclosed, the hoist platform or car shall be totally enclosed (caged) on all sides for the full height between the floor and the overhead protective covering with 1/2-inch mesh of No. 14 U.S. gauge wire or equivalent. The hoist platform enclosure shall include the required gates for loading and unloading. A 6-foot high enclosure shall be provided on the unused sides of the hoist tower at ground level.

(f) Car arresting devices shall be installed to function in case of rope failure.

(g) All material hoist towers shall be designed by a licensed professional engineer.

(h) All material hoists shall conform to the requirements of ANSI A10.5-1969, Safety Requirements for Material Hoists.

(3) Personnel hoists. (a) Hoist towers outside the structure shall be enclosed for the full height on the side or sides used for entrance and exit to the structure. At the lowest landing, the enclosure on the sides not used for exit or entrance to the structure shall be enclosed to a height of at least 10 feet. Other sides of the tower adjacent to floors or scaffold platforms shall be enclosed to a height of 10 feet above the level of such floors or scaffolds.

(b) Towers inside of structures shall be enclosed on all four sides throughout the full height.

(c) Towers shall be anchored to the structure at intervals not exceeding 25 feet. In addition to tie-ins, a series

of guys shall be installed. Where tie-ins are not practical the tower shall be anchored by means of guys made of wire rope at least one-half inch in diameter, securely fastened to anchorages to ensure stability.

(d) Hoistway doors or gates shall be not less than 6 feet 6 inches high and shall be provided with mechanical locks which cannot be operated from the landing side, and shall be accessible only to persons on the car.

(e) Cars shall be permanently enclosed on all sides and the top, except sides used for entrance and exit, which have car gates or doors.

(f) A door or gate shall be provided at each entrance to the car which shall protect the full width and height of the car entrance opening.

(g) Overhead protective covering of 2-inch planking, 3/4-inch plywood or other solid material of equivalent strength shall be provided on the top of every personnel hoist.

(h) Doors or gates shall be provided with electric contacts which do not allow movement of the hoist when door or gate is open.

(i) A signal device shall be installed in the elevator car and only operated by an attendant who shall give the signals for operation, when transporting workers.

(j) An electrical push button signalling device or other approved signalling system shall be provided at each floor landing connected to an annunciator in the car. The signal code shall be posted adjacent to the signal device at each and every work level and at operator's work level. All wording shall be black on a white card, in large clear letters.

(k) The elevator machine and controls shall be housed in as a protection against accidents and the weather, and the door kept locked against unauthorized entrance when operator is not in attendance.

(l) Safeties shall be capable of stopping and holding the car and rated load when traveling at governor tripping speed.

(m) Cars shall be provided with a capacity and data plate secured in a conspicuous place on the car or crosshead.

(n) Internal combustion engines shall not be permitted for direct drive.

(o) Normal and final terminal stopping devices shall be provided.

(p) An emergency stop switch shall be provided in the car and marked "stop."

(q) Ropes: (i) The minimum number of hoisting ropes used shall be three for traction hoists and two for drum-type hoists.

(ii) The minimum diameter of hoisting and counterweight wire ropes shall be 1/2-inch .

(iii) Safety factors:

MINIMUM FACTORS OF SAFETY  
FOR SUSPENSION WIRE ROPES

Rope speed in feet per minute:	Minimum factor of safety
50 .....	7.60
75 .....	7.75
100 .....	7.95
125 .....	8.10
150 .....	8.25
175 .....	8.40
200 .....	8.60
225 .....	8.75
250 .....	8.90
300 .....	9.20
350 .....	9.50
400 .....	9.75
450 .....	10.00
500 .....	10.25
550 .....	10.45
600 .....	10.70

(r) Following assembly and erection of hoists, and before being put in service, an inspection and test of all functions and safety devices shall be made under the supervision of a competent person. A similar inspection and test is required following major alteration of an existing installation. All hoists shall be inspected and tested at not more than 3-month intervals. Records shall be maintained and kept on file for the duration of the job.

(s) All personnel hoists used by employees shall be constructed of materials and components which meet the specifications for materials, construction, safety devices, assembly, and structural integrity as stated in the American National Standard A10.4-1963, Safety Requirements for Workmen's Hoists. The requirements of this subdivision do not apply to cantilever type personnel hoists.

(t) Wire rope shall be taken out of service when any of the following conditions exist:

(i) In running ropes, six randomly distributed broken wires in one lay or three broken wires in one strand in one lay;

(ii) Wear of one-third the original diameter of outside individual wires. Kinking, crushing, bird caging, or any other damage resulting in distortion of the rope structure;

(iii) Evidence of any heat damage from any cause;

(iv) Reductions from nominal diameter of more than three-sixty-fourths inch for diameters to and including three-fourths inch, one sixteenth inch for diameter seven-eighths inch to 1 1/8 inches inclusive, three-thirty-seconds inch for diameters 1 1/4 to 1 1/2 inches inclusive;

(v) In standing ropes, more than two broken wires in one lay in sections beyond end connections or more than one broken wire at an end connection.

(u)(i) Personnel hoists used in bridge tower construction shall be approved by a registered professional engineer and erected under the supervision of a qualified engineer competent in this field.

(ii) When a hoist tower is not enclosed, the hoist platform or car shall be totally enclosed (caged) on all sides for the full height between the floor and the overhead protective covering with 3/4-inch mesh of No. 14 U.S. gauge wire or equivalent. The hoist platform enclosure shall include the required gates for loading and unloading.

(iii) These hoists shall be inspected and maintained on a weekly basis. Whenever the hoisting equipment is exposed to winds exceeding 35 miles per hour it shall be inspected and put in operable condition before reuse.

(4) Permanent elevators under the care and custody of the employer and used by employees for work covered by this act shall comply with the requirements of American National Standards Institute, A17.1-1971, and inspected in accordance with A17.2-1960 with addenda A17.2a-1965, A17.2b-1967.

NOTE: For additional information refer to chapter 296-90 WAC, safety requirements for cantilever hoists and chapter 296-100 WAC, safety requirements for material hoists.

[Order 74-26, § 296-155-530, filed 5/7/74, effective 6/6/74.]

**WAC 296-155-535 Base-mounted drum hoists.** (1) General requirements. (a) Exposed moving parts such as gears, projecting screws, setscrews, chain, cables, chain sprockets, and reciprocating or rotating parts, which constitute a hazard, shall be guarded.

(b) All controls used during the normal operation cycle shall be located within easy reach of the operator's station.

(c) Electric motor operated hoists shall be provided with:

(i) A device to disconnect all motors from the line upon power failure and not permit any motor to be re-started until the controller handle is brought to the "off" position;

(ii) Where applicable, an overspeed preventive device;

(iii) A means whereby remotely operated hoists stop when any control is ineffective.

(d) All base-mounted drum hoists in use shall meet the applicable requirements for design, construction, installation, testing, inspection, maintenance, and operation, as prescribed by the manufacturer.
