

## Chapter 296-43 WAC

HEATING INSTALLATIONS—CABLE, RADIANT,  
SOIL, ETC.

## WAC

296-43-010	Heating cables—General.
296-43-020	Heating cables—Maximum wattage and temperature.
296-43-030	Heating cables—Permissible installation methods in buildings.
296-43-040	Heating cables—Thermal insulation.
296-43-050	Heating cables—Elements installed in tanks, troughs, or pipe lines containing liquids.
296-43-060	Heating element in soil or sand.
296-43-070	Heating element imbedded in driveways.

**WAC 296-43-010 Heating cables—General.** Heating cables or wires designed for use in low temperature heating applications, i.e., soil, water, plaster, walls and ceilings, floors, etc., shall conform to the provisions of the N.E.C. Article 422 as applicable and to the following specifications: (1) The units shall be manufactured in such continuous lengths that the maximum temperature of the element does not exceed 100 degrees C. or the maximum safe working temperature of the insulating material covering the element. Whichever is the lower temperature shall be considered the maximum permissible working temperature of the element.

(2) The insulation on the element shall equal that specified for equivalent 600 v. combined Type TW and TH or RW and RH conductor insulation and, in addition, shall meet the following requirements:

(a) Permissible maximum water absorption shall not exceed .015 grams per sq. in. of surface in distilled water at 70 degree C. in 7 days.

(b) Maximum safe operating temperature of the insulation shall not be less than 70 degrees C.

(c) It shall be suitable for the purpose intended and approved by the Washington state electrical inspection department as such.

(d) Samples for testing: The manufacturer shall submit suitable samples to the Washington state inspection department for inspection and testing as required.

(e) Marking: Each unit shall be provided with permanent labels or markings at the factory.

(i) These labels shall be placed not more than 3 in. from the terminal on each end and shall include the makers' name and the normal rating in volts and amperes; or, volts and watts.

(ii) 120 volt labels shall be bright metal or white in color. 240 v. labels shall be colored red.

(f) Units shall be installed in their complete lengths as supplied by the factory. Units from which a label or labels are missing will be considered shortened and will not be approved until such time as the installing contractor shall provide proof, by connecting suitable test meters into the circuits with which the inspector, at his convenience, may satisfy himself that the element is suitable for the purpose intended.

(g) Heating element units shall not be covered until clearance has been received from the local inspecting authority.

(h) Lead covered heating elements shall not be permitted in direct contact with plaster, concrete or similar

materials capable of causing crystallization and/or checking of the lead sheath, unless protected by a suitable covering of chemically inert material.

(i) All control equipment must be of approved type and of suitable rating for the use intended. [Rules (part), filed 4/3/61.]

**WAC 296-43-020 Heating cables—Maximum wattage and temperature.** (1) In contact with combustible material. Maximum wattage of the element shall not exceed 3 watts per lineal foot or maximum temperature of 60 degrees C. (140 degrees F.) when in direct contact with combustible material or applied over existing ceilings.

(2) Imbedded in cement. Maximum wattage of the element shall not exceed 4 watts per lineal foot or maximum temperature of 80 degrees C. (194 degrees F.) when imbedded in cement, plaster or similar noncombustible, heat-diffusing material. [Rules (part), filed 4/3/61.]

**WAC 296-43-030 Heating cables—Permissible installation methods in buildings.** Wiring to the elements shall conform to the National Electrical Code and to the following conditions:

(1) **Terminals.**

(a) Termination of radiant heating elements shall be with solderless lugs, binding posts, or similar compression terminals.

(b) Terminal boxes for radiant heating elements, where they are terminated in junction boxes and also for the circuit wires with which they are connected, shall be protected by asbestos, glass, or similar noncombustible sleeving to a point at least 18 in. from the terminal.

(c) Not more than 3 in. of element per lead shall be permitted inside the terminal box and not more than two heating element leads shall be terminated in any 1-gang terminal box.

(d) The use of metal raceways for terminating radiant heating cables is permissible providing 6 in. clearance is maintained between points where elements enter the raceways, and, that the elements are terminated as provided in subsections (1)(b) and (1)(c) above.

(e) Where nonheating leads, at least 2 ft. in length, from the element are provided by the factory requirements of subsections (1)(b), (1)(c) and (1)(d) above may be waived, providing that the number of wires per box shall comply with section 3705 of the N.E.C.

(2) **Imbedded in plaster.** Heating elements, when imbedded in plaster, shall conform to the following provisions:

(a) Adjacent turns shall be not less than 1 in. apart and secured suitably by insulated staples, adhesive tape, patching plaster, plaster of paris, or other suitable means of attachment, as approved by the local inspecting authority, on not less than 2 ft. centers.

(b) Nonmetallic insulating tape shall be used where the element crosses metal reinforcing on rock plaster board and similar lath substitutes, when the heating element is applied directly to the lath base. (Where possible, nonmetallic reinforcing should be substituted to

avoid the hum that is occasionally generated in the reinforcing while the current is on.)

(c) When heating element is used on a surface employing metal lath base, a brown coat shall be applied sufficient to completely cover the metal lath before the element is applied; and, adhesive tape, patching plaster, plaster of paris, or other suitable means of attachment be used to secure the element in place.

(d) Heating element shall only be applied to fire resistant plaster bases.

(3) **Imbedded in concrete floors.** Heating elements imbedded in concrete floors shall conform to the following provisions:

(a) Adjacent turns shall not be less than 1 in. apart and shall be held securely in place by suitable frames or spreaders while the concrete topping is applied.

(b) Heating cables shall maintain at least 1 in. clearance between the element and adjacent metallic pipe or similar conductors imbedded in the slab.

(c) Suitable rigid conduit risers shall be provided for terminating elements imbedded in concrete floors unless raceways or other adequate means are provided for protecting the elements where they leave the slab.

(d) Insulating sleeves shall be placed over the element from the point where it enters the slab through the conduit to the terminating box, unless nonheating leads, not less than 2 ft. long, are provided with the element by the factory.

(e) Suitable insulating bushings shall be used to separate the leads or elements where they enter the conduit in the slab.

(4) **Magnesite, terrazzo, tile and similar floors and walls.**

(a) Shall conform to the provisions of sections 1, 2, and 3 as applicable.

(b) Heating cables may be attached to the surface of the underlayment where magnesite or terrazzo floors are installed.

Upper: Heating cable applied to plaster board ceiling ready for plaster. Note clearance between metal lath and heating cable.

Lower: Heating cable applied to plaster board wall. Note that elements run vertically to allow plasterer to apply the brown coat parallel to the cable.

(5) Linoleum, asphalt tile and similar floor coverings may be placed over heating elements on wood floors providing the element is first covered with 3/8 in. of magnesium oxychloride or equal fire resistant underlayment.

(6) Existing ceilings.

(a) Heating elements placed over existing ceilings shall be suitably secured thereto conforming to the provisions of WAC 296-43-020(1), and 296-43-030 (1), (2), and (3) as applicable.

(b) Wood lath shall be covered with asbestos paper, gypsum board or similar fire resistant material before the element is applied to the ceiling.

(c) Heating elements shall not be applied over insulating board type of lath such as celotex, insulite, firtex, and similar materials. Where this type of material is used, the element should be secured to the under face of the ceiling and covered with plaster or fire resistant board of a noninsulating type.

(d) Elements crossing ceiling joints shall be enclosed in split loom or folded glass tape to protect the element.

(7) Gypsum board, plaster lath and similar heat conducting fire resistant materials may have the heating element applied directly thereto.

(8) Ceilings of combustible material; i.e., wood veneer, tempered hardboard and similar heat conducting materials shall first be covered by asbestos paper, gypsum board, or similar fire resistant material.

(9) Pads containing heating elements for placing heating elements in spaces over existing ceilings or in walls or floors which are otherwise inaccessible, shall conform to the provisions of WAC 296-43-010 (1), (2), 296-43-020(1), 296-43-030 (6), (7), (8), and 296-43-040 as applicable, and the following specifications:

(a) The pads shall be of fire resistant, nonconducting material.

(b) The pads shall rigidly secure the element in such a manner that it will be impossible for the adjacent turns of the element to touch.

(i) The leads shall be suitably secured to the pad in a manner which provides permanent adequate separation between the leads.

(ii) The leads shall be covered with an insulating sleeve from the pad to the termination of the heating part of the element.

(iii) All connections must be accessible. [Rules (part), filed 4/3/61.]

**WAC 296-43-040 Heating cables—Thermal insulation.** Thermal insulation placed over heating elements or in contact therewith shall be noncorrosive, noncombustible, nonconducting material as provided in section 3249 of the N.E.C. [Rules (part), filed 4/3/61.]

**WAC 296-43-050 Heating cables—Elements installed in tanks, troughs, or pipe lines containing liquids.** Elements installed in tanks, troughs or pipe lines containing liquids shall be provided with suitable insulating terminating bushings and terminal boxes at the points where the element enters and leaves the tank, trough, or pipe line. Elements so installed shall be secured in a manner maintaining at least 1 in. clearance between turns. [Rules (part), filed 4/3/61.]

**WAC 296-43-060 Heating element in soil or sand.** (1) Heating element in soil or sand shall be so spaced that the minimum distance between adjacent turns is not less than 1 in.

(2) Heating elements shall never be placed directly in peat moss or similar material of an insulating nature. Where peat moss or similar material is used, the element shall be protected by a layer of at least 1 in. over and 1 in. under the element, of a heat conducting material such as sand.

(3) Suitable drains for condensation shall be provided at the bottom of all boxes used in greenhouse or hotbed wiring.

(4) Where open wiring is used in greenhouses and hotbeds, the use of nonmetallic boxes and covers is recommended as provided in section 3716 of the N.E.C. [Rules (part), filed 4/3/61.]

**WAC 296-43-070 Heating element imbedded in driveways.** Heating elements imbedded in driveways shall conform to the provisions of WAC 296-43-010,

296-43-020 and 296-43-030(3), as applicable. [Rules (part), filed 4/3/61.]

### Chapter 296-44 WAC

#### SAFETY STANDARDS—ELECTRICAL CONSTRUCTION CODE

##### WAC

296-44-005	Preface.
296-44-010	Definitions of special terms.
296-44-013	Purpose and scope of rules.
296-44-016	Applicability of rules—General.
296-44-019	Applicability of rules—To construction and reconstruction of lines.
296-44-022	Applicability of rules—Restoration of clearances.
296-44-025	Applicability of rules—Lines constructed prior to these rules.
296-44-028	Applicability of rules—Reconstruction or alteration.
296-44-031	Applicability of other standards.
296-44-034	Design, construction and maintenance.
296-44-037	Limiting conditions specified.
296-44-040	Waiving of rules.
296-44-043	Exemptions or modifications.
296-44-046	Emergency.
296-44-049	Saving clause.
296-44-052	Cooperation to avoid conflicts.
296-44-055	Joint use of poles.
296-44-058	Rules covering methods of protective grounding of circuits, equipment, and lightning arresters for stations, lines, and utilization equipment—Scope.
296-44-061	Rules covering methods of protective grounding of circuits, equipment, and lightning arresters for stations, lines, and utilization equipment—Point of attachment of grounding conductor.
296-44-064	Grounding conductor.
296-44-067	Ground connections.
296-44-070	Method.
296-44-073	Ground resistance.
296-44-076	Separate grounding conductors and grounds.

#### INSTALLATION AND MAINTENANCE OF ELECTRIC SUPPLY STATIONS AND EQUIPMENT

296-44-079	Protective arrangements of stations and substations—Scope of the rules.
296-44-082	Protective arrangements of stations and substations—General requirements.
296-44-085	Protective arrangements of stations and substations— Illumination.
296-44-088	Protective arrangements of stations and substations— Floors, floor openings, passageways, stairs.
296-44-091	Protective arrangements of stations and substations— Exits.
296-44-094	Protective arrangements of stations and substations— Fire-fighting apparatus.
296-44-097	Protective arrangements of stations and substations— Oil-filled apparatus.
296-44-100	Protective arrangements of equipment—General requirement.
296-44-103	Protective arrangements of equipment—Inspections.
296-44-106	Protective arrangements of equipment—Guarding shaft ends, pulleys, and belts, and suddenly moving parts.
296-44-109	Protective arrangements of equipment—Protective grounding.
296-44-112	Protective arrangements of equipment—Guarding live parts.
296-44-115	Protective arrangements of equipment—Working space about electric equipment.
296-44-118	Protective arrangements of equipment—Hazardous locations.
296-44-121	Protective arrangements of equipment—Shielding of equipment from deteriorating agencies.

296-44-124	Protective arrangements of equipment— Identification.
296-44-127	Rotating equipment (this includes generators, motors, motor-generators, and converters)—Speed-control and stopping devices.
296-44-130	Rotating equipment (this includes generators, motors, motor-generators, and converters)—Guards for live parts.
296-44-133	Rotating equipment (this includes generators, motors, motor-generators, and converters)—Grounding machine frames.
296-44-136	Rotating equipment (this includes generators, motors, motor-generators, and converters)—Deteriorating agencies.
296-44-139	Rotating equipment (this includes generators, motors, motor-generators, and converters)—Motors.
296-44-142	Storage batteries—General.
296-44-145	Storage batteries—Isolation.
296-44-148	Storage batteries—Ventilation.
296-44-151	Storage batteries—Insulation.
296-44-154	Storage batteries—Racks and trays.
296-44-157	Storage batteries—Floors.
296-44-160	Storage batteries—Wiring in battery rooms.
296-44-163	Storage batteries—Guarding live parts in battery rooms.
296-44-166	Storage batteries— Illumination for battery rooms enclosing batteries of the nonsealed type.
296-44-169	Transformers, induction regulators, rheostats, ground detectors, and similar equipment—Current-transformer secondary circuits.
296-44-172	Transformers, induction regulators, rheostats, ground detectors, and similar equipment—Grounding secondary circuits of instrument transformers.
296-44-175	Transformers, induction regulators, rheostats, ground detectors, and similar equipment—Grounding transformer cases.
296-44-178	Transformers, induction regulators, rheostats, ground detectors, and similar equipment—Location and arrangement of power transformers.
296-44-181	Transformers, induction regulators, rheostats, ground detectors, and similar equipment—Resistance devices.
296-44-184	Transformers, induction regulators, rheostats, ground detectors, and similar equipment—Ground detectors.
296-44-187	Conductors—Electrical protection.
296-44-190	Conductors—Precaution against mechanical and thermal damage.
296-44-193	Conductors—Isolation.
296-44-196	Conductors—Guarding conductors.
296-44-199	Conductors—Guarding in hazardous locations.
296-44-202	Conductors—Taping ends and joints.
296-44-205	Conductors—Wiring for illumination.
296-44-208	Fuses, circuit-breakers, switches, and controllers— Accessible and indicating.
296-44-211	Fuses, circuit-breakers, switches, and controllers—Oil switches.
296-44-214	Fuses, circuit-breakers, switches, and controllers— Where switches are required.
296-44-217	Fuses, circuit-breakers, switches, and controllers— Switches or other grounding devices.
296-44-220	Fuses, circuit-breakers, switches, and controllers— Capacity of switches and disconnectors.
296-44-223	Fuses, circuit-breakers, switches, and controllers— Where fuses or automatic circuit-breakers are required.
296-44-226	Fuses, circuit-breakers, switches, and controllers— Disconnection of fuses before handling.
296-44-229	Fuses, circuit-breakers, switches, and controllers— Arcing or suddenly moving parts.
296-44-232	Fuses, circuit-breakers, switches, and controllers— Grounding noncurrent-carrying metal parts.
296-44-235	Fuses, circuit-breakers, switches, and controllers— Guarding live parts of switches, fuses, and automatic circuit-breakers.
296-44-238	Switchboards—Location and accessibility.
296-44-241	Switchboards—Material and illumination.

296-44-244	Switchboards—Necessary equipment.	296-44-379	Line insulators—Electrical strength of insulators in strain position.
296-44-247	Switchboards—Arrangement and identification.	296-44-382	Line insulators—Ratio of flash-over to puncture voltage.
296-44-250	Switchboards—Spacings and barriers against short-circuit.	296-44-385	Line insulators—Test voltages.
296-44-253	Switchboards—Switchboard grounding.	296-44-388	Line insulators—Factory tests.
296-44-256	Switchboards—Guarding live parts on switchboards.	296-44-391	Line insulators—Selection of insulators.
296-44-259	Switchboards—Instrument cases.	296-44-394	Line insulators—Protection against arcing.
296-44-262	Lightning arresters—Location.	296-44-397	Line insulators—Compliance with WAC 296-44-394 at crossings.
296-44-265	Lightning arresters—Connecting wires.	296-44-400	Miscellaneous requirements—Supporting structures for overhead lines.
296-44-268	Lightning arresters—Grounding frames and cases of lightning arresters.	296-44-403	Miscellaneous requirements—Tree trimming.
296-44-271	Lightning arresters—Guarding live and arcing parts.	296-44-406	Miscellaneous requirements—Guying.
<b>INSTALLATION AND MAINTENANCE OF ELECTRIC SUPPLY AND COMMUNICATION LINES</b>			
296-44-274	Nature of rules—Minimum requirements.	296-44-409	Miscellaneous requirements—Insulators in guys attached to poles and towers.
296-44-277	General requirements applying to overhead and underground lines—Design and construction.	296-44-412	Miscellaneous requirements—Span-wire insulators.
296-44-280	General requirements applying to overhead and underground lines—Installation and maintenance.	296-44-415	Miscellaneous requirements—Overhead conductors.
296-44-283	General requirements applying to overhead and underground lines—Accessibility.	296-44-418	Miscellaneous requirements—Equipment on poles.
296-44-286	General requirements applying to overhead and underground lines—Inspection and tests of lines and equipment.	296-44-421	Miscellaneous requirements—Protection for exposed overhead communication lines.
296-44-289	General requirements applying to overhead and underground lines—Isolation and guarding.	296-44-424	Miscellaneous requirements—Circuits of one class used exclusively in the operation of circuits of another class.
296-44-292	General requirements applying to overhead and underground lines—Grounding of circuits and equipment.	296-44-427	Miscellaneous requirements—Overhead electric railway construction.
296-44-295	General requirements applying to overhead and underground lines—Arrangement of switches.	296-44-430	Rules for underground lines (see also WAC 296-44-424 (2)(b))—Location.
296-44-298	Relations between various classes of lines—Relative levels.	296-44-433	Rules for underground lines (see also WAC 296-44-424 (2)(b))—Construction of duct and cable systems.
296-44-301	Relations between various classes of lines—Avoidance of conflict.	296-44-436	Rules for underground lines (see also WAC 296-44-424 (2)(b))—Construction of manholes.
296-44-304	Relations between various classes of lines—Joint use of poles by supply and communication circuits.	296-44-439	Rules for underground lines (see also WAC 296-44-424 (2)(b))—Location of cables.
296-44-307	Relations between various classes of lines—Separate pole lines.	296-44-442	Rules for underground lines (see also WAC 296-44-424 (2)(b))—Protection and separation of conductors buried in earth.
296-44-310	Clearances—General.	296-44-445	Rules for underground lines (see also WAC 296-44-424 (2)(b))—Protection of conductors in duct systems and manholes.
296-44-313	Clearances—Horizontal clearances of supporting structures from other objects.	296-44-448	Rules for underground lines (see also WAC 296-44-424 (2)(b))—Guarding of live parts in manholes.
296-44-316	Clearances—Vertical clearance of wires above ground or rails.	296-44-451	Rules for underground lines (see also WAC 296-44-424 (2)(b))—Construction at risers from underground.
296-44-319	Clearances—Wire-crossing clearances.	296-44-454	Rules for underground lines (see also WAC 296-44-424 (2)(b))—Identification of conductors.
296-44-322	Clearances—Clearances of conductors of one line from other conductors and structures.	296-44-457	Rules for underground lines (see also WAC 296-44-424 (2)(b))—Identification of apparatus connected in multiple.
296-44-325	Clearances—Minimum line conductor clearances and separations at supports.	<b>INSTALLATION AND MAINTENANCE OF ELECTRIC UTILIZATION EQUIPMENT</b>	
296-44-328	Clearances—Climbing space.	296-44-460	Installation and maintenance of electric utilization equipment—General requirements—Scope.
296-44-331	Clearances—Working space.	296-44-463	Installation and maintenance of electric utilization equipment—General requirements.
296-44-334	Clearances—Vertical separation between line conductors, cables, and equipment located at different levels on the same pole or structure.	296-44-466	Installation and maintenance of electric utilization equipment—Reference to other codes.
296-44-337	Clearances—Clearances of vertical and lateral conductors from other wires and surfaces on the same support.	296-44-469	Installation and maintenance of electric utilization equipment—Grounding.
296-44-340	Grades of construction—General.	296-44-472	Installation and maintenance of electric utilization equipment—Working spaces about electric equipment.
296-44-343	Grades of construction—Application of grades of construction to different situations.	296-44-478	Installation and maintenance of electric utilization equipment—Guarding or isolating live parts.
296-44-346	Grades of construction—Grades of construction for conductors.	296-44-481	Installation and maintenance of electric utilization equipment—Hazardous locations.
296-44-349	Grades of construction—Grades of supporting structures.	296-44-484	Installation and maintenance of electric utilization equipment—Protection by disconnection.
296-44-352	Loading for grades B, C, and D—General loading map.	296-44-487	Installation and maintenance of electric utilization equipment—Identification of equipment.
296-44-355	Loading for grades B, C, and D—Conductor loading.	296-44-490	Conductors—Electrical protection.
296-44-358	Loading for grades B, C, and D—Loads upon line supports.	296-44-493	Conductors—Protective covering.
296-44-361	Strength requirements—Preliminary assumptions.	296-44-496	Conductors—Identification of conductors and terminals.
296-44-364	Strength requirements—Grades B and C construction.		
296-44-367	Strength requirements—Grade D construction.		
296-44-370	Strength requirements—Grade N construction.		
296-44-373	Line insulators—Application of rule.		
296-44-376	Line insulators—Material and marking.		

296-44-499	Conductors—Guarding and isolating conductors.	296-44-625	Portable appliances, cables and connectors, and insect eliminators (not including those for communication systems)—Insulation.
296-44-502	Conductors—Guarding in damp or hazardous locations.	296-44-628	Portable appliances, cables and connectors, and insect eliminators (not including those for communication systems)—Grounding of frames.
296-44-505	Conductors—Precautions against excessive inductance and eddy currents.	296-44-631	Portable appliances, cables and connectors, and insect eliminators (not including those for communication systems)—Cable connectors.
296-44-508	Conductors—Splicing and taping.	296-44-634	Portable appliances, cables and connectors, and insect eliminators (not including those for communication systems)—Identified conductors, cords, and connectors.
296-44-511	Conductors—Uninsulated conductors.	296-44-637	Portable appliances, cables and connectors, and insect eliminators (not including those for communication systems)—Use of portables and pendants.
296-44-514	Fuses, circuit-breakers, switches and controllers—General requirements for switches.	296-44-640	Portable appliances, cables and connectors, and insect eliminators (not including those for communication systems)—Portable outdoor equipment of more than 750 volts between conductors.
296-44-517	Fuses, circuit-breakers, switches and controllers—Hazardous locations.	296-44-643	Portable appliances, cables and connectors, and insect eliminators (not including those for communication systems)—Insect eliminators.
296-44-520	Fuses, circuit-breakers, switches and controllers—Where switches are required.	296-44-646	Electrically operated industrial locomotives, cars, cranes, hoists, and elevators—Guarding live and moving parts.
296-44-523	Fuses, circuit-breakers, switches and controllers—Character of switches and disconnectors.	296-44-649	Electrically operated industrial locomotives, cars, cranes, hoists, and elevators—Grounding noncurrent-carrying parts.
296-44-526	Fuses, circuit-breakers, switches and controllers—Disconnection of fuses and thermal cut-outs before handling.	296-44-652	Electrically operated industrial locomotives, cars, cranes, hoists, and elevators—Control of energy supply to cars, cranes, and industrial locomotives.
296-44-529	Fuses, circuit-breakers, switches and controllers—Arcing or suddenly moving parts.	296-44-655	Control of movement of industrial locomotives, cars, cranes, and elevators.
296-44-532	Fuses, circuit-breakers, switches and controllers—Grounding noncurrent-carrying metal parts.	296-44-658	Control of movement of industrial locomotives, cars, cranes, and elevators—Subway and car lighting.
296-44-535	Fuses, circuit-breakers, switches and controllers—Guarding live parts.	296-44-661	Telephone and other communication apparatus on circuits exposed to supply lines or lightning—Protective requirements.
296-44-538	Fuses, circuit-breakers, switches and controllers—Inclosed air-break switches (not including snap switches).	296-44-664	Telephone and other communication apparatus on circuits exposed to supply lines or lightning—Guarding current-carrying parts.
296-44-541	Fuses, circuit-breakers, switches and controllers—Control equipment.	296-44-667	Telephone and other communication apparatus on circuits exposed to supply lines or lightning—Grounding.
296-44-544	Switchboards and panelboards—Accessibility and convenient attendance.		
296-44-547	Switchboards and panelboards—Location and illumination.		
296-44-550	Switchboards and panelboards—Arrangement and identification.		
296-44-553	Switchboards and panelboards—Spacing, barriers and covers.		
296-44-556	Switchboards and panelboards—Grounding frames.		
296-44-559	Switchboards and panelboards—Guarding current-carrying parts.		
296-44-562	Switchboards and panelboards—Fuses on switchboards.		
296-44-565	Switchboards and panelboards—Panelboards.		
296-44-568	Motors and motor-driven machinery—Control devices.		
296-44-571	Motors and motor-driven machinery—Hazardous locations.		
296-44-574	Motors and motor-driven machinery—Deteriorating agencies.	296-44-670	RADIO AND T.V. INSTALLATIONS
296-44-577	Motors and motor-driven machinery—Guards for live parts.	296-44-670	Rules for radio and T.V. installations—Scope.
296-44-580	Motors and motor-driven machinery—Grounding machine frames.	296-44-673	Classification of radio stations.
296-44-583	Motors and motor-driven machinery—Protecting moving parts.	296-44-676	Antenna and counterpoise installation—Application of rules.
296-44-586	Electric furnaces, storage batteries, transformers, and lightning arresters—Protection from burns.	296-44-679	Antenna and counterpoise installation—General requirements.
296-44-589	Electric furnaces, storage batteries, transformers, and lightning arresters—Grounding of furnace frames.	296-44-682	Antenna and counterpoise installation—Locations to be avoided.
296-44-592	Electric furnaces, storage batteries, transformers, and lightning arresters—Guarding live parts.	296-44-685	Antenna and counterpoise installation—Ordinary construction of antenna systems.
296-44-595	Electric furnaces, storage batteries, transformers, and lightning arresters—Storage batteries.	296-44-688	Antenna and counterpoise installation—Special construction of antenna systems.
296-44-598	Electric furnaces, storage batteries, transformers, and lightning arresters—Transformers.	296-44-691	Antenna and counterpoise installation—Guarding of antennas.
296-44-601	Electric furnaces, storage batteries, transformers, and lightning arresters—Lightning arresters.	296-44-694	Antenna and counterpoise installation—Supply circuits as antennas or grounds.
296-44-604	Lighting fixtures and signs—Fixtures.	296-44-697	Lead-in conductors—Application of rules.
296-44-607	Lighting fixtures and signs—Receptacle for convenience outlet.	296-44-700	Lead-in conductors—Material.
296-44-610	Lighting fixtures and signs—Exposed live parts.	296-44-703	Lead-in conductors—Size.
296-44-613	Lighting fixtures and signs—Signs.	296-44-706	Lead-in conductors—Installation of lead-in conductor.
296-44-616	Lighting fixtures and signs—Connectors for signs.	296-44-709	Construction at building entrance—Application of rules.
296-44-619	Lighting fixtures and signs—Lamps in series circuits.	296-44-712	Construction at building entrance—Entrance.
296-44-622	Lighting fixtures and signs—Safe access to arc lamps.	296-44-715	Construction at building entrance—Creepage and air-gap distance.
		296-44-718	Construction at building entrance—Mechanical protection of bushings.
		296-44-721	Protective devices—Application of rules.
		296-44-724	Protective devices—Receiving stations.

296-44-727	Protective devices—Low-power transmitting stations.
296-44-730	Protective and operating grounding conductors—Application of rules.
296-44-733	Protective and operating grounding conductors—General.
296-44-736	Protective and operating grounding conductors—Material and size.
296-44-739	Protective and operating grounding conductors—Installation of grounding conductors.
296-44-742	Grounds and ground connections—Application of rules.
296-44-745	Grounds and ground connections—Grounds.
296-44-748	Grounds and ground connections—Attachment to pipes.
296-44-751	Grounds and ground connections—Attachment to driven pipes, rods, or buried plates.
296-44-754	Connection to power supply lines—Application of rules.
296-44-757	Connection to power supply lines—Receiving stations and low-power transmitting stations.
296-44-760	Batteries—Application of rules.
296-44-763	Batteries—Care in handling.
296-44-766	Batteries—Portable batteries.
296-44-850	Pole lines that overbuild or underbuild existing pole lines.
296-44-855	High potential lines overbuilding telephone, telegraph, or signal wires.
296-44-860	Crossings over railroads, street railroads, telephone, telegraph, signal or other power lines—General requirements.
296-44-865	Crossings over railroads, street railroads, telephone, telegraph, signal or other power lines—Loads.
296-44-870	Crossings over railroads, street railroads, telephone, telegraph, signal or other power lines—Factors of safety.
296-44-875	Crossings over railroads, street railroads, telephone, telegraph, signal or other power lines—Working unit stresses.
296-44-880	Crossings over railroads, street railroads, telephone, telegraph, signal or other power lines—Clearance.

**WAC 296-44-005 Preface.** (1) The purpose of these rules and regulations is to formulate, for the state of Washington, uniform requirements for electrical construction and installations, the application of which shall insure adequate service and secure safety to persons engaged in the construction, installation, maintenance, operation, or use of electrical lines and equipment and to the public in general.

(2) These rules and regulations, however, are not to be considered as conflicting or superseding existing statutes relating to electrical construction and installations as contained in chapter 19.29 RCW.

(3) The first rules for electrical construction, of the state of Washington, were adopted as chapter 130, Laws of 1913 (chapter 19.29 RCW). During the period that

these rules have had their application very few changes were made; however the industry witnessed tremendous development and manufacture of new materials and apparatus, use of new methods of installation, and advancement of the industry generally.

(4) In order to keep the rules for electrical and communications utilities abreast of the times it was apparent to all interested parties that a review of the present rules was mandatory in order to reflect in rules the progress which has been made and at the same time to make such revisions that practice has shown desirable and necessary for service and for the protection and safety of the workmen and the public in general. In order to accomplish this revision, and realizing that such a revision is concerned with many technical matters including consideration of controversial matters, a committee composed of representatives of the electrical and communication utilities and labor was appointed to review and discuss the proposed changes, keeping in mind that codes of practice of this type, of necessity include compromises between conflicting aims and that the rules must be compatible to both industry and labor.

(5) These rules provide a standard of safety both to the workmen and to the public. They contribute materially to the standard of service rendered by the utilities, and also afford a means of coordination between different types of lines, such as power and communications.

(6) Rules in this code which are to be regarded as mandatory are characterized by the use of the word "shall." Where a rule is of an advisory nature it is indicated by the use of the word "should." Other practices which are considered desirable and not intended to be mandatory are stated as recommendations. It is realized that conditions may exist which necessitate departures from such recommendations. [Preface (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-010 Definitions of special terms.** (1) "Administrative authority" means the department of labor and industries through the supervisor of the division of safety.

(2) "Alive or live" means electrically connected to a source of potential difference, or electrically charged so as to have a potential different from that of the earth. The term "live" is sometimes used in place of the term "current-carrying," where the intent is clear, to avoid repetitions of the longer term.

(3) "Appliance" means current-consuming equipment, fixed or portable; for example, heating, cooking, and small motor-operated equipment.

(4) "Arm or crossarm" means a horizontal support attached to poles or structures generally at right angles to the conductor supported.

(5) "Arm, buck" means a crossarm used to change the direction of all or part of the conductors on the line arm immediately above or below. A buck arm is generally placed at right angles to the line arm.

(6) "Arm, clearance" means a crossarm supporting conductors installed on a pole of another line for the purpose of maintaining the prescribed clearances of

these rules which, if the other line did not exist, could be maintained without such clearance arm.

(7) "Automatic" means self-acting, operating by its own mechanism when actuated by some impersonal influence - as, for example, a change in current strength; not manual, without personal intervention. Remote control that requires personal intervention is not automatic, but manual.

(8) "Bridge" means a structure which is used primarily for foot, vehicular or train traffic as distinguished from those which span certain areas and support signals or wires and which are classed as supporting poles, towers or structures.

(9) "Cable" means a stranded conductor (single conductor cable) or a combination of conductors insulated from one another (multiple-conductor cable).

(10) "Cable vault." (See definition of "manhole.")

(11) "Catenary construction" is that type of construction where an auxiliary wire or messenger is used to assist in supporting in desired alignment trolley contact wire, cables or large conductors that are incapable of supporting themselves in this desired alignment.

(12) "Circuit" means a conductor or system of conductors through which an electric current is intended to flow.

(13) "Circuit breaker" means a device designed to open under abnormal conditions a current-carrying circuit without injury to itself. The term as used in this code applies only to the automatic type designed to trip on a predetermined overload of current.

(14) "Circuits, railway signal" means those supply and communication circuits used primarily for supplying energy for controlling the operation of railway block signals, highway crossing signals, interlocking apparatus and their appurtenances.

(15) "Circuits, supply" means those circuits which are used for transmitting a supply of electrical energy.

(16) "Climbing space" means the space reserved along the surface of a pole or structure to permit ready access for linemen to equipment and conductors located on the pole or structure.

(17) "Common neutral system" is a system in which one conductor is used as the neutral for 2 or more different circuits; one conductor is used as the neutral for both primary and secondary circuits of a distribution system.

(18) "Common use" means simultaneous use by two or more utilities of the same kind.

(19) "Conductor" means a metallic conducting material, usually in the form of a wire or cable, suitable for carrying an electric current. Does not include bus bars.

(20) "Conductor, grounding" means a conductor which is used to connect the equipment or the wiring system with a grounding electrode or electrodes.

(21) "Conductor, lateral" means a conductor extending in a general horizontal direction and usually at an angle of approximately 90 degrees to the direction of the line conductors.

(22) "Conductor, line" means one of the wires or cables carrying electric current, supported by poles, towers,

or other structures, but not including vertical or lateral connecting wires.

(23) "Conductors, open" means conductors separately and individually supported.

(24) "Conductors, unprotected" means supply conductors not covered by a "suitable protective covering," grounded metal conduit, grounded metal sheath or shield, or impregnated fiber.

(25) "Conductor, vertical" means, in pole wiring work, a wire or cable extending in an approximately vertical direction.

(26) "Conflict, antenna" means that an antenna or its guy wire is at a higher level than a supply or communication conductor and approximately parallel thereto, provided the breaking of the antenna or its support will be likely to result in contact between the antenna or guy wire and the supply or communication conductor.

(27) "Conflict, conductor" means that a conductor is so situated with respect to a conductor of another line at a lower level that the horizontal distance between them is less than the sum of the following values:

(a) Five feet.

(b) One-half the difference of level between the conductors concerned.

(c) The value required in Tables 6, 7, or 8 (WAC 296-44-325) for horizontal separation between conductors on the same support for the highest voltage carried by either conductor concerned. (See illustration at end of this section.)

(28) "Conflict, structure" (as applied to a pole line) means that the line is so situated with respect to a second line that the overturning (at the ground line) of the first line will result in contact between its poles or conductors and the conductors of the second line, assuming that no conductors are broken in either line. [See illustration at end of this section.]

**Exceptions:** Lines are not considered as conflicting under the following conditions:

(a) Where one line crosses another.

(b) Where two lines are on opposite sides of a highway, street, or alley and are separated by a distance not less than 60 percent of the height of the taller pole line and not less than 20 feet.

(29) "Current-carrying part" means a conducting part intended to be connected in an electric circuit to a source of voltage. Noncurrent-carrying parts are those not intended to be so connected.

(30) "Dead" means free from any electric connection to a source of potential difference and from electric charge; not having a potential different from that of the earth. The term is used only with reference to current-carrying parts which are sometimes alive.

(31) "Dead end" means the act, point or equipment used to transfer the mechanical tension in conductors from the conductors to noncurrent-carrying parts of a structure used to support the conductors and still maintain the insulating requirements of the conductors dead-ended.

(32) "Device" means a unit of an electric wiring system which is intended to carry but not consume electric energy.

(33) "Disconnecter" means a switch which is intended to open a circuit only after the load has been thrown off by some other means.

(34) "Districts, loading" means those areas in which the specified loadings of these rules apply and are known as "heavy," "medium," and "light" loading districts.

(35) "Districts, rural" means all places not urban, usually in the country, but in some cases within city limits.

(36) "District, urban" means thickly settled areas (whether in cities or suburbs) or where congested traffic often occurs. A highway, even though in the country, on which the traffic is often very heavy, is considered as urban.

(37) "Division of safety" means the division of safety of the department of labor and industries.

(38) "Duct" means (in underground work) a single tubular runway for underground cables.

(39) "Electrical supply station" means any building, room, or separate space within which electric-supply equipment is located and the interior of which is accessible, as a rule, only to properly qualified persons.

**Note:** This includes generating stations and substations and generator, storage-battery, and transformer rooms, but excludes manholes and isolated-transformer vaults on private premises. (See definition of "transformer vault.")

(40) "Electrode, grounding" means a suitable metallic conducting material (generally copper or copper clad) imbedded in the earth and used for maintaining ground potential on conductors connected to it and for dissipating into the earth such electric current as may be impressed upon it.

(41) "Equipment" means a general term including fittings, devices, appliances, fixtures, apparatus, and the like, used as a part of, or in connection with, an electric installation.

(42) "Equipment, electric supply" means equipment which produces, modifies, regulates controls, or safeguards a supply of electric energy. Similar equipment, however, is not included where used in connection with signaling systems under the following conditions;

(a) Where the voltage does not exceed 150 volts.

(b) Where the voltage is between 150 and 550 volts, and the power transmitted does not exceed 3.2 kilowatts.

(43) "Equipment, utilization" means equipment, devices, and connected wiring which utilize electric energy for mechanical, chemical, heating, lighting, testing, or similar purposes and are not a part of supply equipment, supply lines, or communication lines.

(44) "Explosion-proof" means capable of withstanding without injury and without transmitting flame to the outside any explosion of gas which may occur within.

(45) "Exposed":

(a) "Applied to circuits" or lines means in such a position that in case of failure of supports or insulation contact with another circuit or line may result.

(b) "Applied to equipment" means that an object or device can be inadvertently touched or approached nearer than a safe distance by any person. It is applied to objects not suitably guarded or isolated.

(46) "Externally operable" means capable of being operated without exposing the operator to contact with live parts.

**Note:** This term is applied to equipment, such as a switch, that is inclosed in a case or cabinet.

(47) "Ground connection" means the equipment used in establishing a conducting path between an electric circuit or equipment and earth. A ground connection consists of a ground conductor, a ground electrode and the earth (soil, rock, etc.) which surrounds the electrode.

(48) "Grounded" means connected to earth by a ground connection or by an unintentional conducting path.

(49) "Grounded, effectively" means permanently connected to earth through a ground connection of sufficiently low impedance and having sufficient current-carrying capacity to prevent the building up of voltages which may result in undue hazard to connected equipment or to persons.

(50) "Grounded, system" means a system of conductors in which at least one conductor or point (usually the middle wire, or neutral point of transformer or generator windings) is intentionally grounded, either solidly or through a current-limiting device.

(51) "Guarded" means covered, shielded, fenced, inclosed, or otherwise protected, by means of suitable covers or casings, barrier rails or screens, mats or platforms, to remove the liability of dangerous contact or approach by persons or objects to a point of danger.

(52) "Guy" means a tension member (a solid wire or stranded wires) used to withstand an otherwise unbalanced force on a pole, crossarm, or other overhead line structure.

(53) "Guy, anchor" means a guy which has its lower anchorage in the earth and includes a sidewalk or ground guy.

(54) "Guy, overhead (span)" means a guy extending from a pole, crossarm, or structure to a pole, crossarm, or structure.

(55) "Handhole" means an opening in an underground system into which workmen reach, but do not enter.

(56) "Identification" means, for the purpose of these rules, to identify or identification, shall mean that method of coloring, lettering, numbering, marking or maintaining in any certain position in relation to other objects, the same wire, cable pipe, circuit, phases, or other material objects throughout the installation.

(57) "Inclosed" means surrounded by a case which will prevent accidental contact of a person with live parts. A solid inclosure means one which will neither admit accumulations of flyings or dust, nor transmit sparks or flying particles to the accumulations outside.

(58) "Insulated" means separated from other conducting surfaces by a dielectric substance or air space permanently offering a high resistance to the passage of

current and to disruptive discharge through the substance or space.

**Note:** When any object is said to be insulated, it is understood to be insulated in suitable manner for the conditions to which it is subjected. Otherwise, it is, within the purpose of these rules, uninsulated. Insulating coverings of conductors is one means for making the conductors insulated.

(59) "Insulating" (where applied to the covering of a conductor, or to clothing, guards, rods, and other safety devices) means that a device, when interposed between a person and current-carrying parts, protects the person making use of it against electric shock from the current-carrying parts with which the device is intended to be used; the opposite of conducting.

(60) "Isolated" means that an object is not readily accessible to persons unless special means for access are used.

(61) "Isolation by elevation" means elevated sufficiently so that persons may safely walk underneath.

(62) "Joint use" means simultaneous use by two or more kinds of utilities.

(63) "Lightning arrester" means a device which has the property of reducing the voltage of a surge applied to its terminals, is capable of interrupting follow current if present, and restores itself to its original operating conditions.

(64) "Lines."

(a) Communication lines means the conductors and their supporting or containing structures which are located outside of buildings and are used for public or private signal or communication service, and which operate at not exceeding 400 volts to ground or 750 volts between any two points of the circuit, and the transmitted power of which does not exceed 150 watts. When operating at less than 150 volts no limit is placed on the capacity of the system.

**Note:** Telephone, telegraph, railroad-signal, messenger-call, clock, fire or police-alarm and other systems conforming with the above are included.

Lines used for signaling purposes, but not included under the above definition, are considered as supply lines of the same voltage and are to be so run.

Exception is made under certain conditions for communication circuits used in the operation of supply lines. (See WAC 296-44-424(1).)

(b) "Communication lines, minor" means communication lines carrying not more than two circuits used mainly for local telephone or telegraph service, or for police or fire-alarm service.

(c) "Electric supply" means those conductors and their necessary supporting or containing structures which are located entirely outside of buildings and are used for transmitting a supply of electric energy.

Does not include open wiring on buildings, in yards or similar locations where spans are less than 20 feet, and all the precautions required for stations or utilization equipment, as the case may be, are observed.

Railway signal lines of more than 400 volts to ground are always supply lines within the meaning of these rules, and those of less than 400 volts may be considered as supply lines, if so run and operated throughout.

(65) "Low voltage protection" means the effect of a device operative on the reduction or failure of voltage to cause and maintain the interruption of power supply to the equipment protected.

(66) "Low voltage release" means the effect of a device operative on the reduction or failure of voltage to cause the interruption of power supply to the equipment, but not preventing the reestablishment of the power supply on return of voltage.

(67) "Maintenance" means the work done on any line or any element of any line for the purpose of extending its life (excepting the replacement of the supporting poles or structures) and includes the replacement, for any reason, of crossarms, pins, insulators, wires, cables, messengers, etc., but does not contemplate the addition of elements (excepting pole stubs and guy wires) which will change the identity of the structure.

(68) "Manhole" (more accurately termed splicing chamber or cable vault) means an opening in an underground system which workmen or others may enter for the purpose of installing cables, transformers, junction boxes, and other devices, and for making connections and tests.

(69) "Manual" means capable of being operated by personal intervention.

(70) "Messenger" means stranded wire which generally is not a part of the conducting system, its primary function being to support wires or cables of the conducting system; sometimes called "suspension strand."

(71) "Minor tracks" means railway tracks included in the following list:

(a) Spurs less than 2,000 feet long and not exceeding two tracks in the same span.

(b) Branches on which no regular service is maintained or which are not operated during the winter season.

(c) Narrow-gage tracks or other tracks on which standard rolling stock cannot, for physical reasons, be operated.

(d) Tracks used only temporarily for a period not exceeding 1 year.

(e) Tracks not operated as a public utility, such as industrial railways used in logging, mining, etc.

(72) "Multi-grounded system" means a system in which the neutral conductor is grounded at many places.

(73) "Objectionable flow of current," in grounding conductors, means any measurable amount of current flowing to earth which can be attributed to inadequately or improperly installed metallic return to sources of supply.

(74) "Open wire" means a conductor or pair of conductors separately supported above the surface of the ground.

(75) "Panelboard" means a single panel, or a group of panel units designed for assembly in the form of a single panel, including buses and with or without switches and/or automatic overcurrent-protective devices for the

control of light, heat, or power circuits of small individual as well as aggregate capacity; designed to be placed in a cabinet or cut-out box placed in or against a wall or partition, and accessible only from the front. (See definition of "switchboard.")

(76) "Pole face" means that side of the pole on which crossarms are attached, or which is so designated by the utilities owning or operating the pole.

(77) "Qualified" means familiar with the construction and operation of the apparatus and the hazards involved.

(78) "Raceway" means any channel for loosely holding wires or cables in interior work, which is designed expressly and used solely for this purpose. Raceways may be of metal, wood, or insulating material, and the term includes wood and metal moldings consisting of a backing and capping, and also metal ducts into which wires are to be pulled.

(79) "Racks, vertical (secondary racks)" for the purpose of these rules shall include individual supports in rack configuration used for the support of conductors of 0 to 750 volts.

(80) "Reconstruction" means replacement of any portion of an existing installation by new equipment or construction. Does not include ordinary maintenance replacements.

(81) "Risers" means conductors which extend below the ground line and are generally installed on the surfaces of poles.

(82) "Sag":

(a) "Apparent sag at any point" means the departure of the wire at the particular point in the span from the straight line between the two points of support of the span, at 60°F, with no wind loading.

(b) "Apparent sag of a span" means the maximum departure of the wire in a given span from the straight line between the two points of support of the span, at 60°F, with no wind loading.

(c) "Final unloaded sag" means the sag of a conductor after it has been subjected for an appreciable period to the loading prescribed for the loading district in which it is situated, or equivalent loading, and the loading removed.

(d) "Initial unloaded sag" means the sag of a conductor prior to the application of any external load.

(e) "Maximum total sag" means the total sag at the midpoint of the straight line joining the two points of support of the conductor.

(f) "Total sag" means the distance measured vertically from any point of a conductor to the straight line joining its two points of support, under conditions of ice loading equivalent to the total resultant loading for the district in which it is located.

(g) "Unloaded sag of a conductor at any point in a span" means the distance measured vertically from the particular point in the conductor to a straight line between two points of support, without any external load.

(83) "Service" means the conductors and equipment for delivering electric energy from the secondary distribution or street main, or other distribution feeder, or from the transformer to the wiring system of the premises served.

(84) "Service drops" means the conductors strung between a pole line and a building or structure.

(85) "Span length" means the horizontal distance between two adjacent supporting points of a conductor.

(86) "Span wire" means a wire or cable used as an auxiliary support for wires, cables, or other equipment. As applied to trolley construction, it means a wire or cable used to support laterally, or which is attached to wires which support laterally, trolley contact conductors and appurtenances in electrical contact therewith, including wires commonly referred to as cross-span wires, bracket-span wires, pull-offs, trolley strain guys, dead ends, etc.

(87) "Splicing chamber." (See definition of "manhole.")

(88) "Substantial" means so constructed and arranged as to be of adequate strength and durability for the service to be performed under the prevailing conditions.

(89) "Supervisor" means the supervisor of the division of safety.

(90) "Switch" means a device for opening and closing or for changing the connection of a circuit. In these rules, a switch will always be understood to be manually operated, unless otherwise stated.

(91) "Switchboard" means a large single panel, frame, or assembly of panels, on which are mounted (on the face, or back, or both) switches, fuses, busses, and usually instruments.

(92) "Tags" means "men at work" tags of distinctive appearance, indicating that the equipment or lines so marked are being worked on.

(93) "Tension":

(a) "Final unloaded conductor tension" means the longitudinal tension in a conductor after the conductor has been stretched by the application for an appreciable period, and subsequent release, of the loadings of ice and wind, and temperature decrease, assumed for the loading district in which the conductor is strung (or equivalent loading).

(b) "Initial conductor tension" means the longitudinal tension in a conductor prior to the application of any external load.

(94) "Transformer vault" means an isolated inclosure either above or below ground with fire-resistant walls, ceiling, and floor, in which transformers and related equipment are installed, and which is not continuously attended during operation.

(95) "Voltage of a circuit" means the highest effective voltage between any two conductors of the circuit concerned.

**Exception:** Voltage of a grounded multiwire circuit, not exceeding 750 volts between any two conductors, means the highest effective voltage between any wire of the circuit and that point or conductor of the circuit which is grounded.

If one circuit is directly connected to another circuit of higher voltage (as in the case of an autotransformer), both are considered as of the higher voltage, unless the circuit of lower voltage is effectively grounded, in which case its voltage is not determined by the circuit of higher

voltage. Direct connection implies electric connection as distinguished from connection merely through electromagnetic or electrostatic induction.

(96) "Voltage to ground of":

(a) A "grounded circuit" means the highest effective voltage between any conductor of the circuit and that point or conductor of the circuit which is grounded.

(b) An "ungrounded circuit" means the highest effective voltage between any two conductors of the circuit concerned.

A "conductor of":

(a) A "grounded circuit" means the highest effective voltage between such conductor and that point or conductor of the circuit which is grounded.

(b) An "ungrounded circuit" means the highest effective voltage between such conductor and any other conductor of the circuit concerned.

(97) "Wire gages": The American Wire Gage (AWG), otherwise known as Brown & Sharpe (B&S), is the standard gage for copper, aluminum, and other conductors, excepting steel, for which the Steel Wire Gage (Stl. WG) is used throughout these rules.

(98) "Working space, lateral" means the space reserved for working between conductor levels outside the climbing space, and to its right and left.

Conductor Conflict

Structure Conflict

[§ 1, filed 3/23/60, effective 12/1/58.]

**WAC 296-44-013 Purpose and scope of rules.** (1) **Purpose.** Purpose of these rules is to formulate, for the state of Washington, uniform requirements for electrical installations, the application of which shall insure adequate service and secure safety to persons engaged in the construction, maintenance, operation, or use of electrical lines and equipment and to the public in general.

(2) **Scope.** These rules are not intended as complete construction specifications but embody only the requirements which are considered most important from the standpoint of safety and service. Construction shall be according to accepted good practice for local conditions in all particulars not specified in these rules. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-016 Applicability of rules—General.** These rules will apply to:

- (1) All overhead electrical supply and communications lines and equipment located outside of buildings.
- (2) Underground lines and equipment.
- (3) Stations and substations.
- (4) Radio installations.
- (5) All other electrical installations which come under the jurisdiction of the electrical utility inspectors of the division of safety, department of labor and industries.
- (6) The installation and maintenance of electric utilization equipment. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-019 Applicability of rules—To construction and reconstruction of lines.** These rules apply to all such lines and extensions constructed after the adoption of these rules and shall become applicable also to such lines now existing or any portion thereof whenever they are reconstructed.

(1) **Reconstruction.** The reconstruction of an element of a line requires that all elements subordinate to the reconstructed element meet the requirements of these

rules. For the purpose of these rules, reconstruction will be construed to mean: "Replacement of any portion of an existing installation by new equipment or construction," except:

(a) **Service drops.** Service drops may be added to existing plant without necessitating changes in the circuit or line from which they originate.

(b) **Conductors.** Conductors or circuits added to crossarms installed prior to the effective date of these rules will not be required to afford greater ground clearances than the ground clearance provided by conductors of the same or higher voltage classification which are already in place on such arms.

All other clearances except ground clearances with which such added conductors or circuits are concerned shall be in accordance with these rules.

(c) **Subordinate element.** An element (such as a cross-arm, conductor, transformer or other equipment) added to a pole, tower, or structure, shall meet all the requirements of these rules but does not require any change in like elements already existing except where the added element is related in buckarm construction to an existing arm, in which case all construction on the related arms shall meet the requirements of these rules. A crossarm, pole, tower, or other structure to which any subordinate element is added shall meet the strength safety factor requirements specified in these rules.

(2) Replacement of poles, towers, or other structures. The replacement of poles, towers, or other structures is considered to be reconstruction and requires adherence to all strength and clearance requirements of these rules. The clearances of the spans adjacent to the new support need not be changed but the new support shall be such that when the adjacent support is replaced, the span between will meet all the requirements of these rules. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-022 Applicability of rules—Restoration of clearances.** The restoration of clearances originally established prior to the effective date of these rules, where the original clearance has been reduced by additional sagging or other causes, is not considered to be reconstruction and the reestablished clearance shall conform to the requirements of the rules in effect at the time that the original clearance was established. The changing of clearance for any other purpose is reconstruction and clearances so changed shall comply with these rules where they apply to reconstruction. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-025 Applicability of rules—Lines constructed prior to these rules.** These rules shall not apply to the use of existing electrical installations during their lifetime provided they are maintained in good condition and in accordance with the applicable safety factor requirements and the rules in effect at the time they were installed, and provided that reconstruction shall conform to the rules as herein provided. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-028 Applicability of rules—Reconstruction or alteration.** In the interest of safety, the supervisor may order the reconstruction or alteration of existing lines or equipment. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-031 Applicability of other standards.** If the regulations herein contained fail to provide a rule governing a particular situation, but separately accepted standards of the state of Washington do provide an applicable rule, then the rule of the safety standards here listed shall prevail.

General safety standards

Safety standards for construction work

National Electrical Code

Rules and regulations for installing electric wires and equipment

Electrical workers safety rules

Communication workers safety rules. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-034 Design, construction and maintenance.** Electrical supply and communication systems shall be of suitable design and construction for their intended use, regard being given to the conditions under which they are to be operated, and shall be maintained in a condition which will enable the furnishing of safe, proper and adequate service. The owners and employees of such systems shall at all times exercise due care to reduce to a minimum the hazard of accidental injury, to their own or fellow employees, to the public and other utilities, due to their installations.

All construction shall be done in such a manner that the operations of other utilities will be interfered with as little as possible and no conditions unusually dangerous to workmen, pedestrians or others shall be established. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-037 Limiting conditions specified.** The requirements specified in these rules as to spacing, clearance, and strength of construction are limiting conditions expressed as minimum or maximum value as indicated. In cases where two or more requirements establish limiting conditions, the most stringent conditions shall be met, thus providing compliance with other applicable conditions. Greater strength of construction and more ample spacing and clearances than herein specified may be desirable in some cases and may be provided accordingly if other requirements are not violated in so doing. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-040 Waiving of rules.** These rules are intended to apply to all electrical installations except as modified or waived by the supervisor of the division of safety. They are intended to be modified or waived wherever any rules are shown to be impracticable, such as involving expense not justified by the protection secured; provided equivalent or safer construction is secured in other ways. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-043 Exemptions or modifications.** If in a particular case or a special type of construction, exemption from or modification of any of the requirements herein is desired, the supervisor of the division of safety shall consider an application for such exemption or modification when accompanied by a full statement of conditions existing and the reasons why such exemption or modification is asked and is believed to be justifiable, and shall render a decision. It is to be understood that unless otherwise ordered, any exemption or modification so granted shall be limited to the particular case or the special type of construction covered by the application. Other methods of construction and installation than those specified in these rules may be used as experiments to obtain information if done with the permission of the supervisor.

It may sometimes be necessary to modify or waive certain rules in cases of temporary installations or installations which are soon to be discarded or reconstructed. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-046 Emergency.** In cases of emergency or pending a decision of the supervisor of the division of safety, the person responsible for the installation may decide as to modification or waiver of any rule, subject to review by the supervisor, but shall first notify all parties directly concerned in advance of construction. Such emergency construction shall be brought into conformity with the rules, at the earliest possible date. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-049 Saving clause.** The supervisor of the division of safety reserves the right to suspend any of the provisions of these rules in specific cases when such a change is in the interest of safety.

Compliance with these rules is not intended to relieve any utility from statutory requirements. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-052 Cooperation to avoid conflicts.** Any party contemplating construction or reconstruction which would create a conflict with a line of another party shall notify the party or parties owning or operating the other line, in advance of such construction, giving full information as to the location and character of the proposed construction, and the parties concerned shall cooperate with a view of avoiding, or, if this is impracticable, of minimizing the hazard. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-055 Joint use of poles.** (1) Joint use of poles shall be given consideration by all interested parties where construction or reconstruction is involved and where used it shall be subject to the appropriate grade of construction as specified in these rules. Nothing herein shall be construed as requiring joint use of the same poles, or as granting authority for the use of any poles without the owner's consent.

(2) Each party should definitely designate its space requirements on joint poles, which space shall not be occupied without consent, by equipment of any other party. [§ 2 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-058 Rules covering methods of protective grounding of circuits, equipment, and lightning arresters for stations, lines, and utilization equipment—Scope.** (1) The following rules apply to the grounding of all lightning arresters except those on communication circuits, and of all circuits, equipment, or wire raceways when the grounding is intended to be a permanent and effective protective measure.

(2) They do not apply to the grounded return of electric railways, nor to the grounding of lightning protection wires which are independent of electric circuits or equipment. These rules do not require that grounding shall be done, but cover the methods for protective grounding. The rules requiring grounding, in accordance with the methods specified below, are included under the various parts of this code. [§ 9 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-061 Rules covering methods of protective grounding of circuits, equipment, and lightning arresters for stations, lines, and utilization equipment—Point of attachment of grounding conductor.** (1) **Direct-current distribution systems.** Direct-current systems which are to be grounded shall have the grounding connection made at one or more supply stations but not at individual services and not elsewhere on interior wiring. In three-wire direct-current systems the ground connections shall be made on the neutral.

(2) **Alternating-current distribution systems.** In alternating-current systems the ground connection shall be made at the building service or near the transformer (or transformers) either by direct ground connection (through water-piping system or artificial ground, see WAC 296-44-067) or by the use of a system ground wire to which are connected the grounded conductors of many secondary mains and which is itself effectively grounded at intervals that will fulfill, for any secondary utilizing the system ground wire, the resistance and current-carrying requirements of these rules.

If the secondaries of transformers are supplying a common set of mains, fuses, if installed, shall be located only at such points as not to cause the loss of the ground connections after any fuses in the transformer circuits or mains have been blown.

Alternating-current secondary circuits supplied from a transformer outside the building shall not be grounded inside buildings except at the service entrance.

In single-phase, three-wire systems the ground shall be on the neutral conductor. In two-wire single-phase and in two- or three-phase systems the ground shall be made at that point of the system which brings about the lowest voltage from ground of unguarded current-carrying parts of connected devices. Where one phase of a two- or three-phase system is used for lighting, that phase should be grounded and at the neutral conductor, if one is used.

In the absence of direct grounds at all building services, ground connections shall be made to the grounded neutral or other grounded conductor of a secondary system supplying more than one utilization equipment, at intervals that will fulfill the resistance requirements of WAC 296-44-073(1).

(3) **Current in grounding conductor.** Grounds shall be so arranged that under normal conditions of service there will be no objectionable flow of current over the grounding conductor.

The temporary currents set up under accidental conditions, while the grounding conductors are performing their intended protective functions, are not to be considered as objectionable.

If an objectionable flow of current occurs over a grounding conductor, due to the use of multiple grounds, (1) one or more of such grounds shall be abandoned, or (2) their location shall be changed, or (3) the continuity of the conductor between the grounding connections shall be suitably interrupted, or (4) other means satisfactory to the administrative authority shall be taken to limit the current.

(4) **Equipment and wire raceways.** Metal boxes, cabinets and fittings, or noncurrent-carrying metal parts of other fixed equipment, if metallically connected to grounded cable armor or metal raceway, are considered to be grounded by such connection. Where the metal enclosure of a wiring system is used as part of the protective grounding, the electrical continuity of the enclosure shall be assured.

For conduit, armored cable, or metal raceways the ground connection shall be as near as practicable to the point where the conductors in the raceway system concerned received their supply.

(5) **Service conduit.**

When the service conduit is grounded, its grounding wire shall be run directly from it to the ground connection. The interior conduit, armored cable, or metal raceways, if well bonded to the service conduit, grounded as provided in this rule, needs no additional ground connection. [§ 9 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-064 Grounding conductor.** (1) **Material and continuity.** In all cases the grounding conductor shall be of copper or of other metal which will not corrode excessively under the existing conditions and, if practicable, shall be without joint or splice. If joints are unavoidable they shall be so made and maintained as to conform to the resistance requirements of WAC 296-44-073.

In no case shall a fuse or automatic circuit-breaker be inserted in the grounding conductor or connection except in a ground connection from equipment where its operation will result in the automatic disconnection from all sources of energy of the circuit leads connected to equipment so grounded; no switch shall be so inserted except in plain sight, provided with distinctive marking and effectively isolated from unqualified persons. (See also WAC 296-44-061(2) par. 2.)

For lightning arresters and ground detectors the grounding conductor shall be as short and straight as practicable and free from sharp bends.

(2) **Size and capacity.** The grounding conductor shall conform to the following:

(a) For direct-current circuits. A grounding conductor for a direct-current supply system shall have a current-carrying capacity not less than that of the largest conductor supplied by the system and in no case less than that of No. 8 copper.

(b) For alternating-current circuits. A grounding conductor for an alternating-current system shall have a current-carrying capacity not less than one-fifth that of the conductor to which it is attached and in no case less than that of No. 8 copper.

(c) For instrument transformers. The grounding conductor for instrument cases and secondary circuits of instrument transformers shall not be smaller than No. 12 if of copper or, if of other metal, shall have equivalent current-carrying capacity.

(d) For lightning arresters. The grounding conductor or conductors shall have a current capacity sufficient to insure continuity and continued effectiveness of the ground connection under conditions of excess current caused by or following discharge of the arrester. No individual grounding conductor shall have less conductance than No. 6 (0.162-inch) copper wire.

(e) For raceways and equipment. The current-carrying capacity of grounding conductors for equipment, raceways, cable armor, and other metal enclosures for wires, when provided with overcurrent protection, shall be sufficient to provide adequate draining of fault current during the time required for the protective device to operate. Where connected to artificial electrodes, the grounding conductor need not be larger than No. 6 copper wire or its equivalent. If no fuse or automatic circuit-breaker is provided, the capacity of the grounding conductor shall be determined by the design and operating conditions of the circuit, but shall not be smaller than No. 8.

(f) For portable and pendent equipment. For grounding portable or pendent equipment, the conductors to which are protected by fuses or circuit-breakers rated or set at not exceeding 15 amperes, No. 18 copper wire may be used. For grounding portable or pendent equipment protected at more than 15 amperes, see preceding paragraph.

(3) **Mechanical protection and guarding against contact.** Where exposed to mechanical injury, the grounding conductor shall be protected by substantial conduit or other guard. Guards for lightning-arrester grounding conductors shall be of nonmagnetic material unless the grounding conductor is electrically connected to both ends of the guard.

If the resistance of the ground connection is in excess of three ohms, the grounding conductor, except in rural districts, shall be protected and guarded by being enclosed in insulating conduit or molding to protect persons from injury by coming in contact with it.

**Note:** Such a high resistance may exist where artificial grounds are necessarily permitted in lieu of the

preferable grounds to buried metallic water-piping systems.

Mechanical protection and insulating guards should extend for a distance of not less than 8 feet above any ground, platform, or floor from which grounding conductors are accessible to the public.

**Note:** Insulating mechanical protection is advisable for single arrester grounds, even when the connection is made to a water-piping system, and has therefore a low resistance, since a single connection is liable to be accidentally broken.

Even where ground connections have a resistance not exceeding that specified in WAC 296-44-073 and no guard is therefore provided (or as an additional protection to persons even where guards are used), artificial grounds may be arranged to minimize the potential gradient along the surface of the earth by use of radial connecting wires underneath the earth surface or by other suitable means.

A grounding conductor for a circuit shall be guarded as required for current-carrying conductors of the circuit.

**Exception 1:** A grounding conductor for a circuit having at least two ground connections, where such conductor is entirely outside buildings and has strength and current capacity not less than No. 8 (0.1285-inch) copper wire.

**Exception 2:** In stations substantial bare ground buses may be used.

(4) **Underground.** Wires used for grounding conductors, if laid underground, shall, unless otherwise mechanically protected, be laid slack to prevent their being readily broken, and shall have joints carefully painted or otherwise protected against corrosion.

(5) **Common grounding conductor for circuits, metal raceways, and equipment.** The grounding conductor of an interior wiring system may be used also as the grounding conductor for equipment, conduit, and other metal raceways or enclosures for conductors, including service conduit or cable sheath and service equipment, provided such grounding conductor meets the current-carrying-capacity requirements for service raceways, as specified in subsection 2 above; and provided further, that the secondary distribution circuit supplying the interior wiring system has at least one additional ground at the transformer or elsewhere. [§ 9 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-067 Ground connections.** (1) The ground connection shall be permanent and effective, and be made as indicated below, but always to water-piping systems, if available.

(2) **Piping systems.** For circuits, equipment, and arresters at supply stations, connections shall be made to all available active metallic underground water-piping systems between which no appreciable difference of potential normally exists, if the pipe is of sufficient capacity, and to one such system if appreciable differences of

potential do exist between them. At other places connections shall be made to at least one such system, if available. Gas piping should be avoided for circuit grounding wherever practicable.

**Note:** The protective grounding of electric circuits and equipment to waterpipe systems in accordance with these rules should always be permitted, since such grounding offers the most effective protection to life and property and is not injurious to the piping systems.

Ground connections from circuits should not be made to jointed piping within buildings except water piping.

(3) **Alternate methods.** Where underground metallic piping systems are not available, other methods which will secure the desired permanence and conductance may be permitted. In many cases metal well casings, and similar buried metal structures of considerable extent will be available and may be used in lieu of extended buried water-piping systems.

In some cases ground connection may be made to the steel frame of a building containing the grounded circuits or equipment, to which frames of machines and other noncurrent-carrying surfaces should also then be connected. In such cases the building frame should be itself well grounded by effective connection to the ground. This may require artificial grounding for steel-frame buildings supported on masonry or concrete footings.

(4) **Made electrodes.** If resort must be had to made (buried or driven) electrodes their number should be determined by the following requirements:

(a) Not more than one such ground is required for lightning arresters, except where needed for large current capacity.

(b) At least two grounds are required for low-voltage alternating-current distribution circuits at transformers or elsewhere, except as specified in paragraph (c) following.

(c) Where no part of the circuit or equipment protected can be reached by persons while they are standing on the ground or damp floors, or by persons while touching any metallic piping to which the grounding conductor is not effectively connected, a single made electrode may be used even if its resistance exceeds that specified in WAC 296-44-073. In such cases it is desirable to provide guards for the grounding conductor in accordance with WAC 296-44-064(3) wherever it is otherwise accessible.

(5) **Grounds to railway returns.** Protective ground connections should not be made to railway negative-return circuits when other effective means of grounding are available, except ground connections from electric-railway lightning arresters. When ground connections are of necessity made to the grounded track return of electric railways, they shall be made in such a manner as not to afford a metallic connection (as indirectly through a grounded neutral with multiple grounds) between the railway return and the other grounded conducting bodies (such as buried piping and cable sheaths).

**Note:** This rule does not prohibit the making of drainage connections (which are not protective grounds) between piping systems and railway negative-return circuits for the prevention of electrolysis.

Multiple protective ground connections from other circuits to railway returns should be avoided; and where multiple artificial grounds are made on such other circuits near such railway returns, they should be so arranged as to prevent the flow of any considerable current in and between such connections, which flow would reduce their effectiveness, or otherwise cause damage. [Rule 93C (codified as subsection (4)), filed 10/30/64, effective 12/1/64; Subsections A through D (codified as (1), (2), (3), (4) and (5)), filed 3/23/60, effective 12/1/58; Rule 93C, § 9 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-070 Method.** (1) **Piping.** The point of attachment of a grounding conductor to a water-piping system shall be on the street side of the water meter, or on a cold-water pipe of adequate current-carrying capacity, as near as practicable to the water-service entrance to the building or near the equipment to be grounded, and shall be accessible except by special permission. If the point of attachment is not on the street side of the water meter, the water-piping system shall be made electrically continuous by bonding together all parts between the attachment and the pipe entrance which are liable to become disconnected, as at meters and service unions. If water meters are located outside buildings or in concrete pits within buildings where piping connections are embedded in concrete flooring, the ground connections may be made on the building side of the meters. Gas-piping systems within buildings shall not be used for purposes of this rule where water pipes are readily available. Gas piping may serve as the grounding electrode for fixtures located at a considerable distance from water piping. Where gas piping is so used it shall be bonded to the water-piping system at the point of entrance of water piping. (See WAC 296-44-067(2).)

(2) **Ground clamps.** The ground connection to metallic-piping systems shall be made by means of an approved clamp firmly bolted to the pipe after all rust and scale have been removed, or by means of a brass plug which has been tightly screwed into a pipe fitting or, where the pipe is of sufficient thickness, screwed into a hole in the pipe itself, or by other equivalent means.

The grounding conductor shall be attached to the clamp or to the plug by means of solder or by an approved solderless connector. The point of connection shall be as readily accessible as practicable.

**Note:** With bell-and-spigot-joint pipe it may be necessary to connect to several lengths where circuits or equipment of large current capacity are being grounded.

(3) **Contact surfaces.** If conduit, couplings, or fittings having protective coating of nonconducting material, such as enamel, are used, such coating shall be thoroughly removed from threads of both couplings and conduit and such surfaces of fittings where the conduit

or ground clamp is secured, in order to obtain the requisite good connection. Grounded pipes shall be free from rust, scale, etc., at the place of attachment of ground clamp. Conduits, other metal raceways, and the armor of cables shall be securely fastened in outlet boxes, junction boxes, and cabinets, so as to secure good electrical connection.

In ice houses, packing plants, etc., where a great deal of moisture is present and where conduits are attached to metal cabinets, cut-out, pull, or junction boxes, compensators, etc., by means of lock nuts and bushings, these conduits should be bonded together.

(4) **Made electrode grounds.** Where made electrodes are used, they shall, as far as practicable, be embedded below permanent moisture level. Made electrodes shall be of materials or combinations of materials which shall not corrode excessively under the existing conditions.

Buried-plate electrodes shall present not less than two square feet of surface to exterior soil. Electrodes of plate copper shall be at least 0.06 inch in thickness. Electrodes of iron or steel plates shall be at least one-quarter inch in thickness.

Electrodes of iron or steel pipe shall be galvanized and not less than one-half inch (nominal size). Electrodes of rods of steel or iron shall be at least five-eighths inch minimum cross-sectional dimension. Approved rods of nonferrous materials or their approved equivalent used for electrodes shall be not less than one-half inch in diameter. Driven electrodes of pipes or rods, if of less than standard commercial length, shall preferably be of one piece, and, except where rock bottom is encountered, shall be driven to a depth of at least eight feet regardless of size or number of electrodes used. Such pipes or rods shall have clean metal surfaces and shall not be covered with paint, enamel, or other poorly conducting materials.

Made electrodes may be wire attached to the pole previous to the setting of the pole. The wire shall be of copper or of other metals which will not corrode excessively under the existing conditions and shall have a continuous bare or exposed length below ground level of not less than twelve feet, shall extend to the bottom of the pole, and shall be not smaller than No. 6. [Subsection D (codified as (4)), filed 10/30/64, effective 12/1/64; Subsections A through C (codified as (1), (2), (3)), § 9 (part), filed 3/23/60, effective 12/1/58; Rule 94D, § 9 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-073 Ground resistance.** (1) **Limits.** The combined resistances of the grounding wire and the connection with the ground shall not exceed 3 ohms for water-pipe connections nor 25 ohms for artificial (buried or driven) grounds. Where it is impracticable to obtain, with one electrode, artificial-ground resistance as low as 25 ohms, this requirement shall be waived, and two or more electrodes, at least 6 feet apart, shall be provided.

(2) **Checking.** The resistance of station grounds should be checked when made.

**Note:** With artificial grounds this check may be made by measuring the voltage between the grounded point of the circuit or the grounded frame of the equipment, or

the grounded point of the lightning arrester, and an auxiliary metal reference rod or pipe driven into the ground, while a measured current is flowing through the ground connection and any exposed metal piping or other artificial ground not less than 20 feet distant.

If the station ground is to water piping, the check may be made with current flowing through the water piping and some independent piping system or artificial ground not less than 20 feet distant.

The auxiliary rod or pipe should be at least 10 feet from any artificial ground or piping systems through which the measured current is made to flow.

(3) All ground connections shall be inspected periodically. Ground connections on distribution circuits should, when installed, be tested for resistance unless multiple grounding is used. [§ 9 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-076 Separate grounding conductors and grounds.** (1) **Grounding conductors.** Grounding conductors from equipment and circuits of each of the following classes, if required by these rules, shall be run separately to the ground or to a sufficiently heavy grounding bus or system ground cable which is well connected to ground at more than one place, except as provided in subsection (3) of this section and in WAC 296-44-415(3).

(a) Lightning arresters.

(b) Secondaries connected to low-voltage lighting or power circuits, except that if a secondary distribution system has multiple grounds, utilization equipment and wire enclosures may use the same grounding conductor.

(c) Secondaries of current and potential instrument transformers having primary voltages of more than 750 volts, and cases of instruments on these secondaries.

(d) Frames of direct-current railway equipment and of equipment operating in excess of 750 volts.

(e) Frames of utilization equipment or wire raceways other than covered by item (d), except as provided in item (b).

(f) Lightning rods.

(2) **Electrodes.** Where conditions require more than one made electrode ground, separate grounding conductors as well as separate grounding electrodes shall be used except that a single grounding conductor may be connected to a group of electrodes which have been bonded together for the purpose of lowering the resistance to ground of the group. This does not prohibit the bonding together of these separate made electrodes or groups of electrodes near the ground level.

(3) **Interconnection of primary arrester and secondary neutral.**

(a) Solid interconnection. The grounding conductor of a lightning arrester protecting a transformer which supplies a secondary distribution system may be interconnected with the grounded conductor of such secondary distribution system, provided that in addition to the direct grounding connection at the arrester either:

(i) The secondary has elsewhere a grounding connection to a continuous metallic underground water piping system; or

(ii) The secondary neutral (which may or may not be common with the primary neutral) has at least four ground connections in each mile of line in addition to a ground connection at each individual service.

(b) Interconnection through spark gap. Where the secondary is not grounded as in item 1, interconnection, if made, shall be through a spark gap having a 60-cycle breakdown voltage of at least twice the primary circuit voltage but not necessarily more than 15 kilovolts, and there shall be at least one other ground on the grounded conductor of the secondary that is at least 20 feet distant from the lightning-arrester grounding electrode. [Subsection B (codified as (2)), filed 10/30/64, effective 12/1/64; Subsections A and B (codified as (1) and (3)), § 9 (part), filed 3/23/60, effective 12/1/58; Rule 96B, § 9 (part), filed 3/23/60, effective 12/1/58.]

#### INSTALLATION AND MAINTENANCE OF ELECTRIC SUPPLY STATIONS AND EQUIPMENT

**WAC 296-44-079 Protective arrangements of stations and substations—Scope of the rules.** The following rules apply to the electric supply equipment of indoor and outdoor stations and substations. Provided the equipment is in separate rooms or enclosures, under control of properly qualified persons and accessible only to such persons, they also apply to similar equipment, including generators, motors, storage batteries, transformers, lightning arresters, etc., if installed in factories, mercantile establishments, vehicles, or elsewhere.

Similar equipment under control of properly qualified persons, and accessible only to such persons, is exempted under the following conditions: (1) If the voltage does not exceed 150 volts to ground.

(2) If the voltage is not more than 550 volts between conductors, and the power utilized does not exceed 3,200 watts. [§ 10 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-082 Protective arrangements of stations and substations—General requirements.** (1) **Enclosure of rooms and spaces.** Rooms and spaces shall be so arranged with fences, screens, partitions, or walls as to prevent entrance of unauthorized persons or interference by them with equipment inside, and entrances not under observation of an authorized attendant shall be kept locked. Signs prohibiting entrance to unauthorized persons shall be displayed at entrances.

(2) **Rooms and spaces.** All rooms or spaces in which electric supply equipment is installed shall comply with the following requirements:

(a) Fireproof construction. They shall be, as far as practicable, noncombustible.

(b) Storage and manufacturing processes. They shall be used neither for the storage of material nor for manufacturing processes causing hazard to electrical operators, except those materials or processes attendant upon the production or distribution of a supply of electric energy.

(c) Hazardous conditions. They shall be free from combustible dust or flyings, inflammable gas, or acid fumes, in dangerous quantities. (For battery rooms, see

WAC 296-44-142 through 296-44-166; for auxiliary equipment in hazardous locations, see WAC 296-44-121.)

(d) Ventilation. They should be well ventilated.

(e) Moisture and weather. They should be dry. In outdoor stations or in wet tunnels or subways, all live parts of equipment should be enclosed in weather-proof cases, unless the equipment is suitably designed to withstand the prevailing atmospheric conditions.

(3) **Rotating machinery.** Rotating machinery shall be installed upon suitable supports or foundations and if necessary secured in place. [§ 10 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-085 Protective arrangements of stations and substations—illumination.** (1) **Under normal conditions.** Rooms and spaces where electric apparatus or machinery is located shall have means for artificial illumination at intensities not less than given in Table 1. The means of illumination shall be maintained ready for use at all times.

TABLE 1.—Illumination intensities\*

Location	Minimum* Footcandles
Switchboard instruments, gages, switches, etc . . . . .	3
Switchboards with no exposed live parts . . . . .	1
Storage-battery room . . . . .	1
Generating room, boiler room, pump room . . . . .	3
Stairways and passageways where there is moving machinery, exposed live parts, hot pipes, etc. (measured at floor level) . . . . .	3
Any traversed space (measured at floor level) . . . . .	1

\*The values are to be measured at working surfaces, except as stated.

For industrial interiors see Washington state general safety standards.

**Note:** It is not intended that this rule should require permanent lighting in switch cells and similar small spaces occupied by electric apparatus where permanent lighting is impracticable. The code of lighting factories, mills, and other work places includes general standards of illumination required from the point of view of safety.

(2) **Emergency source.** A separate emergency source of illumination, from an independent generator, storage battery, gas main, lanterns (the latter two should never be used in battery rooms), or other suitable source, shall be provided in every station where an attendant is located.

(3) **Fixtures and pendants.** Arrangements of permanent fixtures and plug receptacles shall be such that portable cords need not be brought into dangerous proximity to live or moving apparatus. All lamps shall be arranged to be controlled, replaced, or trimmed from safely accessible places.

Pendant conductors shall not be installed where they can be readily moved so as to bring them in contact with live parts of electric supply equipment.

(4) **Attachment plugs.** Portable conductors shall be attached to fixed wiring only through separable attachment plugs which will disconnect all poles by one operation. (See WAC 296-44-625 et seq., for portables and pendants.) [§ 10 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-088 Protective arrangements of stations and substations—Floors, floor openings, passageways, stairs.** (1) **Floors.** Floors shall have even surfaces and afford secure footing. Projecting nails, loose boards, uneven or greasy wood floors, and slippery floors should be avoided.

**Note:** Otherwise slippery floors or stairs should be provided with antislip treads.

(2) **Passageway.** Passageways (including stairways) and working spaces shall be unobstructed, and (except such as are used solely for infrequent inspection, construction, and repair) shall, where possible, provide at least 6.5 feet of headroom. (See WAC 296-44-115 for working space.)

(3) **Railings.** All floor openings over 18 inches deep and raised platforms over 4 feet high shall be provided with suitable railings.

Except for loading platforms, such rails are recommended where height exceeds 18 inches, especially where they are adjacent to live or moving parts or the working space on the platform is restricted.

(4) **Stair guards.** All stairways consisting of four or more risers shall be provided with handrails.

For very long and steep stairs occasional landings or turns are recommended.

(5) **Continuity.** The heads of permanent ladders shall be provided with guards such as gates or sliding pipe sections whenever the heading breaks the continuity of a railing adjacent to working space.

For very long ladders occasional landings, turns, or safety loops are recommended.

(6) **Floor toe boards.** All floor openings over 6 feet deep, and the edges of all raised platforms over 6 feet high, shall, where possible, be provided with suitable toe boards.

(7) **Stair toe boards.** Toe boards shall, where practicable, be arranged at back of stairway treads where over exposed live or moving parts or over working spaces, passageways, or other stairways. [§ 10 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-091 Protective arrangements of stations and substations—Exits.** (1) **Clear exits.** Each room or space and each working space about equipment shall have suitable means of exit which shall be kept clear of all obstructions.

(2) **Double exits.** If the plan of the room or space and the character and arrangement of equipment are such that an accident would be liable to close or make inaccessible a single exit, as in the case of long narrow

rooms, platforms, passageways, spaces behind switchboards, or wire and pipe tunnels, a second exit shall be provided. [§ 10 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-094 Protective arrangements of stations and substations--Fire-fighting apparatus.** (1) **Fire extinguishers.** Adequate approved fire-extinguishing appliances shall be conveniently located and conspicuously marked. Any such appliances which have not been listed by Underwriters' Laboratories, Inc. for use on live parts should be plainly and conspicuously marked with a warning to that effect.

(2) **Temperature conditions.** Fire extinguishers shall not be installed in locations subject to conditions of high or low temperature which will reduce their effectiveness.

**Note:** Carbon-tetrachloride extinguishers are not adversely affected by temperatures between 60°C (140°F.) and minus 40°C (-40°F). [§ 10 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-097 Protective arrangements of stations and substations--Oil-filled apparatus.** For the purposes of these rules oil-filled apparatus is divided into three classes each of which requires different treatment: (1) Oil switches and circuit-breakers, (2) transformers, induction regulators, etc., and (3) lightning arresters. The necessary safety precautions depend largely on whether they are located in buildings or outdoors.

(1) **Oil switches or circuit-breakers.** Oil switches or circuit-breakers and their transformers, regulators, reactors, or other associated equipment should be separated from other apparatus by adequate fire-resistant barriers, or otherwise adequately isolated.

Where switches or switch compartments are constructed to prevent an appreciable amount of oil being thrown outside of the compartment, exterior drainage or storage systems are not necessary.

If located outdoors, they should be adequately isolated.

If located near building walls, these should be of fire-resistant construction and should have doors or windows so located and arranged that burning oil is not liable to pass through them to inflammable material or apparatus.

**Note:** It should be recognized that oil-switch or circuit-breaker failures may depend upon the size and rupturing capacity of the switch or circuit-breaker and the short-circuit duty that may be required of it. The short-circuit current depends on the generating capacity supplying the system on which the switch or circuit-breaker is used as modified by the current-limiting characteristics of the system or by special apparatus installed for that purpose. By "generating capacity" is meant all of the apparatus contributing to the short-circuit current.

(2) **Transformers, induction regulators, etc., containing a liquid that will burn.** If transformers, induction regulators, etc., are in buildings, floors and floor drains should

be so arranged that oil will quickly collect in a suitable drainage or storage system provided for the purpose either inside or outside of the building as may be advisable. If the apparatus contains large quantities of oil, each unit or group should preferably be placed in a separate fireproof compartment suitably ventilated.

If located outdoors, they should be adequately isolated. Provision should be made for quickly draining away to a safe distance any oil that may be spilled. This may be done by ditches and drains or the oil may be absorbed and danger of spreading removed by paving the yard around the transformers or other devices with cinders or other absorbent material to a depth of several inches.

If located in buildings, transformer tanks containing large quantities of oil shall, where practicable, be so arranged that approved firequenching material may be introduced above the oil inside the tank or in the surrounding compartment, except where tanks are completely filled with oil or where the space above the oil is filled with an inert gas.

(3) **Transformers, induction regulators, etc., containing a liquid that will not burn.** If in buildings, transformers, induction regulators, etc., filled with a liquid that will not burn should comply with WAC 296-44-178.

(4) **Lightning arresters.** If located in buildings, lightning arresters containing oil should be separated from other equipment by fire walls adequate to completely isolate them in case of fire.

If located outdoors, they should be adequately isolated. Provision for quickly draining away oil should be made as indicated for transformers in (2) above. [§ 10 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-100 Protective arrangements of equipment--General requirement.** All electric supply equipment shall be of such construction and so installed and maintained as to reduce the life hazard as far as practicable. [§ 11 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-103 Protective arrangements of equipment--Inspections.** (1) **Regular equipment.** Electric supply equipment shall comply with these safety rules when placed in service, and shall thereafter be periodically cleaned and inspected. Defective equipment shall be put in good order or permanently disconnected. Defective wiring, when hazardous, shall be repaired or removed.

(2) **Idle equipment.** Infrequently used equipment or wiring maintained for future service should be thoroughly inspected before use to determine its fitness for service.

(3) **Emergency equipment.** Equipment or wiring maintained for emergency service should be periodically inspected and, where necessary, tested to determine its fitness for service.

(4) **New equipment.** New equipment should be thoroughly inspected before being put in service. [§ 11 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-106 Protective arrangements of equipment—Guarding shaft ends, pulleys, and belts, and suddenly moving parts.** (1) **Transmission machinery.** This code is supplemented by the general safety standards of Washington, which specify methods for safeguarding pulleys, belts and other equipment used in the mechanical transmission of power.

(2) **Suddenly moving parts.** Parts of equipment which move suddenly in such a way that persons in the vicinity are liable to be injured by being struck, such as handles and levers of circuit-breakers, shall be guarded or isolated. [§ 11 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-109 Protective arrangements of equipment—Protective grounding.** (1) **Grounding method.** All grounding which is intended to be a permanent and effective protective measure, such as lightning arrester grounding, grounding of circuits, equipment, or wire raceways, shall be made in accordance with the methods specified in WAC 296-44-058 through 296-44-076, methods of protective grounding.

(2) **Protective grounding or isolation of noncurrent-carrying metal parts.** All electric supply equipment, if operating at more than 150 volts to ground, or if in hazardous or damp locations, regardless of voltage, shall have the exposed noncurrent-carrying parts, such as frames of generators and switchboards, cases of transformers, lightning arresters and switches, and operating levers, permanently grounded or isolated.

It is recommended that exposed noncurrent-carrying parts of electric apparatus operating at 150 volts or less to ground be permanently grounded.

It is recommended that all metallic guards (including rails, screens, etc.) about electric supply equipment should be permanently grounded. Except in hazardous or damp locations, exposed noncurrent-carrying parts of equipment operating at more than 150 volts to ground may be left ungrounded and either isolated, or guarded, or provided with insulating mats as required for live parts at the same voltage. Such isolation, guarding, or mats should be so arranged that persons cannot inadvertently touch these parts while also touching a grounded surface.

(3) **Grounding equipment during repairs.** Electric equipment or conductors normally operating at more than 750 volts between conductors on or about which work is occasionally done while separated from a source of electric energy by switches or disconnectors only, shall be provided with some means, such as switches, connectors, or readily accessible ground conductor for grounding them. (See electrical workers safety rules; chapter 296-45 WAC.) [§ 11 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-112 Protective arrangements of equipment—Guarding live parts.** (1) **Where required.**

(a) Guards shall be provided for all parts exceeding 300 volts to ground unless the boundary of the guard zone around the part has a vertical clearance of more than 7 feet 6 inches for voltages up to 7,500, and 8 feet 6 inches for voltages of more than 7,500, above any permanent supporting surface for workmen, or a horizontal clearance of more than 3 feet from the nearest edge of any such surface, or both. This includes parts exposed through windows, wall openings, etc.

**Exception:** Guards need not be provided where it is necessary to permit routine inspection of rotating equipment as required under operating conditions.

**Note:** The rule applies to the electric parts energized or considered available for service in temporary or partially completed installations, as well as to permanent installations.

**Definitions:** The guard zone means the space of minimum clearance from guards to electric parts where guards may be installed by workmen without definite engineering design. The radius of this zone varies with the voltage as specified in column 4 of Table 2. (See electrical workers safety rules for working clearances about live parts; chapter 296-45 WAC.)

"Permanent supporting surface for workmen" includes floors, platforms, or structures used regularly and frequently by workmen for inspections and maintenance near live adjacent parts, runways, ladders, stairways, etc.

(b) Parts over or near frequently traveled passageways through which material may be carried, or in or near spaces such as corridors, storerooms, boiler rooms, etc., used for nonelectrical work, should, where practicable, be guarded or given clearances in excess of those specified such as may be necessary to secure reasonable safety. The guards should be substantial; should, where practicable, completely shield or enclose without openings the parts; and when in spaces used for nonelectrical work should be removable only by means of tools or keys.

(c) Parts of indeterminate potential, such as telephone wires exposed to induction from high-tension lines, ungrounded neutral connections, ungrounded frames, ungrounded parts of lightning arresters, ungrounded instrument cases connected directly to the high-voltage circuit, etc., shall be classified and, where practicable, guarded on the basis of the maximum voltage which may be present.

(2) **Strength of guards.** Guards shall be sufficiently strong and shall be supported rigidly and securely enough to prevent them from being displaced or dangerously deflected by a man slipping or falling against them.

TABLE 2.—Minimum clearances from live parts

Voltage between phases	2		3		4
	Minimum vertical clearance of unguarded parts		Minimum horizontal clearance of unguarded parts		Minimum clearance from guards to parts. Radius of guard zone
	Feet	Inches	Feet	Inches	Inches
600	7	8	3	2	2
2,300	7	9	3	3	3
6,600	7	10	3	4	4
11,000	9	0	3	6	6
22,000	9	3	3	9	9
33,000	9	6	4	0	12
44,000	9	10	4	4	16
66,000	10	5	4	11	23
88,000	11	0	5	6	30
110,000	11	7	6	1	37
132,000	12	2	6	8	44
230,000	15	0	9	0	72
345,000	17	0	12	0	96

Note: Interpolate for intermediate values.

The clearances in column 4 of this table are not a requirement for definite engineering design of either apparatus or guards, but are solely for the guidance of workmen installing guards, without such design.

For example, the minimum clearances in the table above are not intended to refer to the clearances between live parts and the walls of the cells, compartments, or similar enclosing structures. They do not apply to the clearances between bus bars and supporting structures, nor to clearances between the blade of a disconnecting switch and its base.

For the relation of the above clearance tables to the manufacture of electric apparatus, see discussion of subsection (1) of this section.

### (3) Types of guards.

(a) Location or isolation. Parts having clearance equal to or greater than specified in (a) above are guarded by location. Parts are guarded by isolation when all entrances to enclosed spaces, runways, ladders etc., are kept locked or warning signs posted at all entrances, in which case no other permanent guards need be supplied.

(b) Grounded metal cable sheaths. These are suitable guards except where exposed to mechanical injury. Where so exposed metal conduit or other suitable guards should be provided.

(c) Railings. Railings are not substitutes for complete guards, and if used shall be located at a horizontal distance of at least 3 feet (and preferably not more than 4 feet) from the nearest point of guard zone, which is less than 7 1/2 feet above the floor.

(d) Shields or enclosures. Guards inside of the guard zone or less than 4 inches outside, shall completely enclose the parts from contact up to the heights listed in column 2 of Table 2. They shall not be closer to the live parts than listed in column 4 of Table 2, except when suitable insulating material is used with circuits of less

than 7,500 volts. (See note under Table 2.) If more than 4 inches outside of the guard zone, the guards need not extend more than 7 1/2 feet above the floor. Covers or guards, which must at any time be removed while the parts they guard are alive, should be arranged so that they can not readily be brought in contact with live parts.

(e) Insulating covering on conductors or parts. The insulating covering on parts exceeding 750 volts to ground shall not be considered a protection. For parts less than 750 volts, positive barriers, enclosures, or similar arrangements are preferable, but in dry places where not exposed to mechanical injury, varnished-cloth tape, or other insulation suitable for the voltage involved may be used as a guard. The taping over connections shall be of a type and thickness suitable for the voltage involved. Friction tape is not acceptable as the sole protection.

**Exception:** On circuits not exceeding 7,500 volts between phases, when other guarding is impracticable, insulation suitable for the voltage involved may be used back of switchboards or in equivalent sheltered locations. Insulating mats or platforms shall be provided so that an operator can not readily touch the insulating covering without standing on the mats.

(f) Mats. Suitable insulating mat placed so that a person cannot inadvertently come in contact with the live parts without standing on the mat may be used in the following cases:

(i) Parts less than 750 volts to ground exposed at switchboards, switches, or on rotating machinery.

(ii) Disconnect switches less than 7,500 volts between phases mounted on back of switchboards or in similar sheltered locations when barriers are placed between each blade so as to extend beyond the disconnected parts in any position. Other means of guarding may be used where convenient.

(iii) Ungrounded frames of existing high-voltage series generators.

(iv) As provided for in paragraphs (3)(e), and (3)(h), of this rule, mats should be of rubber or other suitable insulating material. In dry locations they may be of wood fastened with wood pins, cork matting, or heavy (1/4-inch) linoleum laid without joints and without metal fastenings. A "nonslip" surface should be maintained, and the mats should be laid and maintained so as to reduce the tripping hazard to a minimum.

**Note:** Beveled edges will help in many cases.

(g) Parts below supporting surfaces for persons. The supporting surfaces above live parts shall be without openings. Toe boards at least 6 inches high shall be provided at all edges.

(h) Special rules for plug-type switchboards. A mat is a suitable guard when placed so that the operator must stand on it when operating the plugs. Suitable guards on handles of all plugs shall be provided.

(4) Parts of less than 300 volts to ground. It is recommended that live parts of more than 150 volts to ground be enclosed or guarded when in exposed locations. [§ 11 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-115 Protective arrangements of equipment—Working space about electric equipment.** (1) **Where required.** Adequate and readily accessible working space with secure footing shall be maintained about all electric parts or equipment which require adjustment or examination if exposed while in service.

(2) **Width of working space.** The horizontal clearance from the farthest edge of the working space to the nearest live part of more than 300 volts to ground, exposed after removing guards, shall be not less than 3 feet plus the guard zone radius as given in column 4 of Table 2. (If the live parts are on only one side, column 3 of Table 2 gives the minimum permissible value for the total width of the free space.) See also WAC 296-44-088(2), for head room.

(3) **Elevated parts.** Clearance about normally elevated or isolated parts requiring occasional adjustment should be provided so the men need not come within the danger zone (see electrical workers safety rules; chapter 296-45 WAC), around adjacent energized parts, unless guarded in accordance with WAC 296-44-112 to 296-44-118, inclusive. [§ 11 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-118 Protective arrangements of equipment—Hazardous locations.** (1) **Enclosure of arcing and heating parts.** In locations where inflammable gas or inflammable flyings normally exist in dangerous quantities, all parts where sparking, arcing, or dangerous heating is liable to occur, shall be enclosed so as to reduce the hazards as far as practicable.

This inclosure shall be by one of the following methods:

(a) By placing in separate compartments or rooms.

(b) By using nonabsorptive, noncombustible casings of the solidly enclosed type when inflammable dust or flyings are present.

(c) By using nonabsorptive, noncombustible, explosion-proof casings when inflammable gas exists in dangerous quantities.

(2) **Grounding.** The metal frames and other exposed noncurrent-carrying metal parts of equipment in these locations shall be permanently grounded as specified in WAC 296-44-058 through 296-44-076. [§ 11 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-121 Protective arrangements of equipment—Shielding of equipment from deteriorating agencies.** Suitable shields or enclosures shall be provided to protect exposed current-carrying parts, insulation of leads or electric devices or equipment where susceptible to injury by being installed directly under rotating equipment or in other locations where dripping oil, excessive moisture, steam, vapors, or similar agents exist. (For battery rooms see WAC 296-44-160.) [§ 11 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-124 Protective arrangements of equipment—Identification.** (1) **Equipment in general.** Electric supply equipment shall be suitably identified when necessary for safety. The identification may be by

position, color, number, name plate, label, design, or other means, but the method of identification chosen shall be uniform throughout any one system. (See WAC 296-44-220(1) for switches.)

The voltage and intended use shall be shown if important.

Identification marks should not, if avoidable, be placed on removable covers or casings, such as instrument covers and disconnect compartment doors, where the interchanging of these removable parts might lead to accident.

(2) **Generators and motors.** Every generator, motor, transformer, or other piece of apparatus shall be provided with a name plate giving maker's name, the rating, normal full-load speed for rotating equipment, and the voltage. [§ 11 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-127 Rotating equipment (this includes generators, motors, motor-generators, and converters)—Speed-control and stopping devices.** (1) **Speed limits for prime movers.** Prime movers driving generating equipment shall be provided with automatic speed-limiting devices, where harmful overspeed can otherwise occur, in addition to their governors, if necessary, as with some types of steam turbines.

(2) **Stops for rotating equipment.** Stopping devices, such as switches or valves which can be operated from locations convenient to machine operators, shall be provided for prime movers or motors driving generating equipment.

Devices which operate in such a way that the development of defects or their becoming inoperative will stop the units protected, should be used where practicable.

Controls to be used in emergency for machinery and electric equipment should be so located as to permit operation with a minimum of danger during such emergency. (See WAC 296-44-223 for fuses and circuit-breakers.)

(3) **Speed limit for motors.** Machines of the following types shall be provided with speed-limiting devices unless their inherent characteristics or the load and the mechanical connection thereto are such as to safely limit the speed, or unless the machine is always under the manual control of a qualified operator:

(a) Separately excited direct-current motors.

(b) Series motors.

(c) Motor-generators and converters which can be driven at excessive speed from the direct-current end, as by a reversal of current or decrease in load.

**Note:** The required limitation of speed may be obtained by the use of a relay, centrifugal switch, or other similar device which will cut off the supply of energy when excessive speed is attained.

(4) **Low-voltage or under-voltage protection.** All motors so employed or arranged that an unexpected starting of the motor is a hazard, except those with an emergency use, and where the opening of the circuit may cause a special hazard, such as exciter or condenser-pump motors, shall be equipped with low-voltage protection which instantaneously or after a predetermined

delay will automatically cause and maintain the interruption of the motor circuit when the voltage falls below an operating value.

(5) **Adjustable-speed motors.** Adjustable-speed motors, if controlled by means of field regulation, shall be so equipped and connected that the field cannot be weakened sufficiently to permit a dangerous speed.

(6) **Protection of control circuits.** Where speed-limiting or stopping devices are electrically operated, the control circuits by which such devices are actuated shall be in conduit or otherwise suitably protected from mechanical injury, in accordance with WAC 296-44-190. [§ 12 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-130 Rotating equipment (this includes generators, motors, motor-generators, and converters)—Guards for live parts.** (1) **Guards on rotating equipment.** Guards complying with WAC 296-44-112 shall be provided.

(2) **Access to live parts.** Where necessary, steps and handrails shall be installed on or about large machines to afford ready access to live parts which must be examined or adjusted during operation.

(3) **Frame switches.** Where switches are installed on the frames of generating equipment for the purpose of reducing inductive voltage in generator and converter field coils they shall be suitably constructed or guarded to prevent passers-by from inadvertently coming in contact with the live parts, to protect persons handling them, and to prevent their being accidentally opened or closed.

(4) **Arcing shields.** Suitable shields or barriers other than rails shall be provided where practicable to prevent arcing on large commutators or any other parts of moving apparatus from injuring persons in the vicinity, as in the case of narrow working spaces located immediately above or beside such equipment.

**Exception:** Twenty-five-cycle apparatus of less than 150 volts to ground is exempted.

It is recommended that where suitable shields have not been installed, goggles should be available. [§ 12 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-133 Rotating equipment (this includes generators, motors, motor-generators, and converters)—Grounding machine frames.** (1) **Grounding machine frames.** All frames of rotating electric equipment shall be permanently grounded except as permitted below and in WAC 296-44-109.

(2) **Coupled machines.** Where two or more machines, either of which operates at more than 150 volts to ground, are mechanically coupled together and the operator can touch the frames of more than one at a time, the frames of all such shall be permanently grounded or bonded together electrically.

(3) **Auxiliaries.** Exciters and auxiliary circuits electrically connected to generators or other machines of more than 750 volts to ground (with frames ungrounded) shall be installed, protected, and identified as machines and circuits of the same voltage as that of the machine for

which they are auxiliaries. [§ 12 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-136 Rotating equipment (this includes generators, motors, motor-generators, and converters)—Deteriorating agencies.** (1) **Protection required.** Suitable shields or enclosures shall be provided to protect exposed current-carrying parts, insulation of leads, balance coils, or other electric devices belonging to motors and generating equipment where installed directly under equipment or in other locations where dripping oil, excessive moisture, steam, vapors, or similar injurious agents exists.

(2) **Grounding.** The metal frames and other exposed noncurrent-carrying metal parts of equipment in these locations shall be permanently grounded. [§ 12 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-139 Rotating equipment (this includes generators, motors, motor-generators, and converters)—Motors.** (1) **Control.** If the starting is caused automatically (not manually) as, for example, by a float switch, or if the starting device or control switch is not located close to the motor and all parts of the machinery operated, the starting arrangement shall be designed so that it can positively be kept open by means of locks or equivalent devices.

(2) **Motors in hazardous locations.** Motors with their auxiliary equipment, at which sparking or arcing or high temperature is liable to occur, if in rooms normally containing explosives, inflammable gas, or inflammable flyings, shall be so installed as to reduce the hazard by enclosure in an adequately ventilated separate compartment, by solidly enclosed or explosion-proof type of equipment, or when to be protected against flyings only, by partitioning off a space or by a suitable boxing.

(3) **Motors exposed to dust.** Motors should be protected from dust. Enclosed-type motors are recommended in dusty places, being preferable to boxing.

(4) **Motors on wooden floors.** Where practicable, motors permanently located on wooden floors should be provided with suitable drip pans. [§ 12 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-142 Storage batteries—General.** (1) The provisions of this section are intended to apply to all stationary installations of storage batteries using acid or alkali as electrolyte, consisting of cells connected in series, with a nominal voltage in excess of 50 volts, and connected for service where so installed. (For exception, see WAC 296-44-148(2).)

(2) Nominal battery voltage shall be calculated on the basis of 2.0 volts per cell for lead-acid type and 1.2 volts per cell for alkali type. "End" or "emergency" cells, held in reserve for connection into circuit only to maintain voltage during discharge, are not included in calculating nominal battery voltage.

(3) Two types of cell construction are recognized in this section, viz:

(a) The sealed type in which the only passage for the escape of gases from the interior of the cell is provided

by a vent of effective spray-trap design adapted to trap and return to the cell, particles of liquid entrained in the escaping gases.

(b) The nonsealed type, in which gases escaping from the cell may carry entrained particles of liquid into the surrounding atmosphere.

**Caution:** Smoking, or the use of open flames, or of tools which may generate sparks, should be avoided except when cells are not actively gassing and when prior ventilation has been ample. Sparks from frictional or static electricity should be avoided as they may ignite the gas if discharged close to its source, as at the vent of a sealed-type cell during overcharging. The electrolyte of storage batteries, and spray containing electrolyte, are somewhat corrosive, particularly when concentrated by evaporation, and contact with body or clothes should be avoided. [§ 13 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-145 Storage batteries—Isolation.** Storage batteries should be so located as to be not accessible to other than properly qualified persons. [§ 13 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-148 Storage batteries—Ventilation.** (1) **Diffusion of gases.** Provision should be made for sufficient diffusion of the gases from the battery to prevent the accumulation of an explosive mixture.

(2) **Nonsealed type.** Batteries of the nonsealed type shall be located in separate rooms or enclosures so arranged as to prevent the escape into other rooms of objectionable quantities of electrolyte spray. This applies also to batteries of the nonsealed type not exceeding 50 volts nominal voltage if the capacity at the 8-hour discharge rate exceeds 5 kw-hrs. [§ 13 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-151 Storage batteries—Insulation.** Cells of the nonsealed type shall be supported by suitable insulators such as glass, glazed porcelain, or oil type, or may be grouped and supported on glass or other suitable insulating trays.

Cells of the alkali type in jars of conducting material shall be supported singly, or in groups assembled in nonconducting trays, on porcelain or other suitable insulators.

Cells of the sealed type in containers of insulating material require no additional insulation except as follows: Cells in rubber or composition containers if the total voltage exceeds 150 volts, or cells in glass jars if the total voltage exceeds 250 volts, should preferably be sectionalized into groups not exceeding these voltages, and such groups shall be mounted on trays or racks supported by suitable insulators such as glass, glazed porcelain, or oil type. [§ 13 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-154 Storage batteries—Racks and trays.** (1) **Racks.** Racks, as required in this section, refer to frames designed to support cells or trays. They shall be substantial and made of:

(a) Wood, so treated as to be resistant to deteriorating action by the electrolyte; or

(b) Metal, so treated as to be resistant to deteriorating action by electrolyte and provided with insulating members directly supporting the cell; or with suitable insulating material on conducting members; or

(c) Other similar suitable construction.

Design of battery rack shall provide for earthquake shock common to the area.

(2) **Trays.** Trays refer to frames such as crates or shallow boxes usually of wood or other insulating material so constructed or treated as to be resistant to deteriorating action by the electrolyte. [§ 13 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-157 Storage batteries—Floors.** It is recommended that the floors of battery rooms in which large batteries comprised of cells in lead-lined wood tanks are installed be of acid-resistant material, or be painted with acid-resistant paint, or otherwise be protected, where acid is likely to drop and accumulate. [§ 13 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-160 Storage batteries—Wiring in battery rooms.** Wiring shall be in accordance with the requirements of the National Electrical Code (storage batteries). [§ 13 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-163 Storage batteries—Guarding live parts in battery rooms.** (1) **Guarding.** The arrangement of cells and connections shall be such that any two current-carrying parts between which a voltage exceeding 50 volts exists shall be properly guarded if the parts are otherwise so exposed that persons are liable to make accidental contact with both at the same time.

(2) **Bare conductors.** No bare conductor of more than 150 volts to ground shall be placed in any passageway, unless guarded or isolated by elevation.

(3) **Details of guards.** Required guards shall comply with WAC 296-44-112. [§ 13 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-166 Storage batteries—Illumination for battery rooms enclosing batteries of the nonsealed type.** (1) **Type of lamp.** Storage-battery rooms, in addition to daylight which is desirable when available, should be lighted only by incandescent electric lamps in keyless porcelain or composition sockets, controlled from outside the battery room if practicable.

It is recommended that portable lamps be used only in keyless sockets enclosed in holders provided with substantial guards to prevent lamp breakage and be provided with "hard-service" cord.

(2) **Heating appliances.** Heating appliances with open flames or exposed incandescent resistors shall not be installed. [§ 13 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-169 Transformers, induction regulators, rheostats, ground detectors, and similar equipment—Current-transformer secondary circuits.** (1)

**Short-circuiting.** Secondary circuits of current transformers, including constant-current and instrument transformers, shall be provided with means (such as permanent connections for jumpers) for short-circuiting them which can be readily connected while the primary is energized and which are so arranged as to permit the removal of any instrument or other device from such circuits without opening the circuits.

(2) **Protection when of more than 7,500 volts.** Where primaries are of more than 7,500 volts, secondary circuits unless otherwise adequately protected from injury or contact of persons, shall be in permanently grounded conduit. [§ 14 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-172 Transformers, induction regulators, rheostats, ground detectors, and similar equipment—Grounding secondary circuits of instrument transformers.** The secondary circuits of all instrument transformers shall be permanently grounded unless the circuits are installed, guarded, and plainly identified as required for the secondary circuits of transformers, in accordance with WAC 296-44-187.

**Note:** This will sometimes require marking to distinguish such a circuit from others with which it is associated, but which are protected by ground connections. [§ 14 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-175 Transformers, induction regulators, rheostats, ground detectors, and similar equipment—Grounding transformer cases.** The metal case or exposed frame of each transformer, reactor, induction regulator, and similar equipment, which is located where dampness or inflammable gas normally exists, or which is connected to a circuit operating at more than 150 volts to ground, shall be permanently grounded.

**Exception:** Exception is permissible in accordance with WAC 296-44-109(2), in locations free from inflammable gas, where the entire transformer is isolated or guarded as required for the highest-voltage circuit connected with the transformer, and is plainly and conspicuously identified as of that voltage. [§ 14 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-178 Transformers, induction regulators, rheostats, ground detectors, and similar equipment—Location and arrangement of power transformers.** If located outdoors, transformers shall be installed in accordance with paragraph (1), (2), or (3) below; if located indoors, or in sidewalk vaults communicating with the interior of the building, they shall be installed in accordance with paragraph (4), (5), or (6) below.

(1) **On poles.** Transformers may be mounted on a pole or on a pole structure, in compliance with WAC 296-44-274 through 296-44-457.

(2) **On walls.** If permitted by local authority, a transformer may be mounted on the exterior wall of a building, in compliance with WAC 296-44-274 through 296-44-457.

(3) **Enclosed.** A transformer may be mounted in an outdoor enclosure such that unauthorized persons cannot

readily come in contact with any part of the casing or wiring.

(4) **Indoors, combustible liquid.** A transformer immersed in a liquid that will burn, and located in a station, should be provided with sills to confine any escaping liquid, or with suitable arrangements for draining. If located in a building used for other than station purposes, and the amount of such liquid is considerable, the transformer should be placed in a suitable transformer vault which is ventilated. Such a vault shall be accessible to authorized persons only.

(5) **Indoors, incombustible liquid.** A transformer rated in excess of 25 kva and immersed in a liquid that will not burn shall be furnished with a pressure-relief vent. If installed inside a building used for other than station purposes and not well-ventilated, (1) the transformer shall be furnished with a means for absorbing any gases generated by arcing inside the case, or (2) the pressure-relief vent shall be connected to a chimney or flue which will carry such gases outside the building.

(6) **Indoors, other types.** Other types of transformers, such as air-cooled transformers, or small transformers (25 kva or less) immersed in a liquid that will not burn, may be installed in stations or, if properly enclosed or guarded, in buildings used for other than station purposes. [§ 14 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-181 Transformers, induction regulators, rheostats, ground detectors, and similar equipment—Resistance devices.** Rheostats shall be not less than 1 foot from combustible material or separated therefrom by a slab or panel of noncombustible, nonabsorptive material of suitable thickness, not less than one-half inch, somewhat larger than the rheostat, and secured in place by bolts independently of the rheostat supports.

Rheostats or resistance devices shall not be placed where spattering molten metal due to high temperature in the rheostat may fall upon inflammable material or spaces frequently occupied by persons.

Rheostats or resistance devices exposed to excessive dust or flyings should preferably be installed in suitable cabinets or equipped with dustproof side and face plates. (For installation in hazardous locations, see WAC 296-44-118.) [§ 14 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-184 Transformers, induction regulators, rheostats, ground detectors, and similar equipment—Ground detectors.** Every station supply circuits which are not permanently grounded in accordance with WAC 296-44-058 through 296-44-076 shall be provided with one or more reliable means of ground detection which can be applied to determine the existence of a ground on any such circuit extending outside the station. [§ 14 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-187 Conductors—Electrical protection.** (1) **Over-current protection required.** Conductors shall be suitable for the location, use, and voltage. Conductors shall be protected against excessive heating by

the design of the system or by suitable fuses or automatic circuit-breakers except as provided in WAC 296-44-223.

Automatic circuit-breakers may be set so as to interrupt the circuits only on excessive short-circuits, if constant attendance is provided and protection is thus also afforded by manual operation.

(2) **Fuses in grounded conductors.** Conductors normally grounded for the protection of persons shall be arranged without fuses or automatic circuit-breakers interrupting their continuity between the source of electrical supply and the point at which the ground conductor is attached, unless the circuit-breaker opens all conductors of the circuit with one operation.

(3) **Circuits exposed to higher voltages.** If exposed through transformer windings or outdoor circuits to higher voltages, circuits of less than 750 volts shall be isolated or grounded unless in suitable cable with grounded metal sheath, placed in grounded conduit or other suitable duct, or identified and guarded as required for conductors of the highest voltage to which they are exposed. [§ 15 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-190 Conductors—Precaution against mechanical and thermal damage.** (1) **Protection against injury.** Where exposed to mechanical injury suitable casing, armor, or other means shall be employed to prevent injury or disturbance to conductors, their insulation, or supports.

(2) **Flame proofing.** Where conductors with insulating coverings are closely grouped and any one is liable to damage from near-by conductors (as sometimes on the rear of switchboards or in cableways), they shall have a substantial flameproof outer covering.

(3) **Protection against contact.** Large conductors liable to be torn from their supports by the forces to which they are subjected (as by the magnetic fields produced) shall be so supported they they cannot come in contact with the surfaces along which they are run if uninsulated or with other conductors and equipment.

**Note:** This applies in particular to generator leads and conductors liable to large short-circuit currents.

(4) **Conductors between generators and outside lines.** Conductors between generators and outside lines shall be accessible and supported on approved noncombustible, nonabsorptive insulators or placed in approved cable, metal conduit, tile, or other fireproof ducts.

(5) **High temperatures.** Insulated conductors exposed to excessive temperatures shall have insulation which remains effective and does not rapidly deteriorate under such conditions. [§ 15 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-193 Conductors—Isolation.** All conductors of more than 750 volts to ground, and ungrounded bare conductors of more than 300 volts to ground, shall be isolated by elevation or guarded in accordance with WAC 296-44-112, so that no person can inadvertently come in contact with them; provided that

busses and bus structures and line connections thereto may be installed in accordance with WAC 296-44-115, in suitable locations specially arranged for such purposes. [§ 15 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-196 Conductors—Guarding conductors.** (1) **Metal-sheathed cable outlets of more than 750 volts between conductors.** The insulation of the several conductors of multiple-conductor cable, where leaving the metal sheath at outlets, shall be thoroughly protected from mechanical injury, moisture, and electrical strains by means of a pothead or equivalent method.

(2) **Form of guards.** Guards shall comply with WAC 296-44-112. [§ 15 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-199 Conductors—Guarding in hazardous locations.** (1) **Conduit or metal sheath.** Conductors in locations where inflammable gas normally exists shall be in metal conduit or metal-sheathed cable. All fittings and outlets of such conduit and cable shall be electrically and mechanically continuous with the conduit or metal sheath, and the conduit shall be sealed to prevent entrance of gases.

**Note:** This rule does not apply to conductors of large cross section which obviously cannot be placed in conduit such as copper bars connecting large cells with end-cell switches.

(2) **Insulating supports.** Conductors in damp locations, if neither in conduit nor in waterproof metal sheaths in other suitable ducts, shall be effectively isolated and supported on a suitable type of insulator. [§ 15 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-202 Conductors—Taping ends and joints.** Ends and joints of insulated conductors, unless otherwise adequately guarded, shall have equal insulating covering with other portions of the conductor. [§ 15 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-205 Conductors—Wiring for illumination.** Wiring installed for the illumination of the station should be installed and protected as required for similar utilization equipment and conductors in WAC 296-44-460 through 296-44-664. [§ 15 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-208 Fuses, circuit-breakers, switches, and controllers—Accessible and indicating.** (1) **Arrangement.** All switches, fuses, automatic circuit-breakers, starting rheostats, and other control devices shall be readily and safely accessible to authorized persons, unless remotely controlled. They shall be so arranged or marked as to identify the equipment controlled by them, and (except fuses) shall indicate whether they are open or closed.

(2) **Accidental closing.** Switches shall be so installed as to minimize the danger of accidental operation, and where practicable so that gravity cannot close them; such switches as may tend to close by gravity shall be

provided with a proper latch or stop block to prevent accidental closing. Where practicable, the blades of knife switches should be dead when the switches are open. [§ 16 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-211 Fuses, circuit-breakers, switches, and controllers--Oil switches.** Oil circuit-breakers and oil switches shall, wherever practicable, be isolated from other types of switches and other electric apparatus to conform to WAC 296-44-097(1).

Remote control of switches and circuit-breakers shall be used on circuits of more than 7,500 volts, or when they may be subject to large short-circuit values.

**Note:** Remote control may be of a mechanical, electrical, or other type. It is not intended to prohibit the use of switches and circuit-breakers operated manually by means of levers or poles from a remote position. (See note in WAC 296-44-097(1), for conditions usually applying to electrical systems.) [§ 16 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-214 Fuses, circuit-breakers, switches, and controllers--Where switches are required.** Suitable disconnectors, switches, or circuit-breakers which may be manually operated shall be inserted in all leads to all supply equipment and all outgoing supply circuits, except as listed below.

**Exception 1:** Where two or more pieces of electric supply equipment or supply lines are operated as a single unit, no switch is necessarily required between them.

**Exception 2:** Switches are not required in transformer vaults except as may be deemed necessary by the engineer in charge to meet operating requirements.

**Exception 3:** Switches are not required in leads to instrument transformers.

**Exception 4:** Switches are not required in grounded conductors.

**Note:** In most cases the switch called for should be capable of opening the circuit under loads. In some cases, as between generators and transformer banks used with them, disconnectors only would be required. [§ 16 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-217 Fuses, circuit-breakers, switches, and controllers--Switches or other grounding devices.** It is recommended that switches or other suitable means be provided, where practicable, to facilitate short-circuiting and grounding equipment or lines for which the operating rules (see electrical workers safety rules) require grounding to protect workmen. (See WAC 296-44-109(3).) [§ 16 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-220 Fuses, circuit-breakers, switches, and controllers--Capacity of switches and disconnectors.**

(1) **Suitability.** Switches used otherwise than as disconnectors shall be of suitable voltage and ampere rating for the circuit on which they are installed and shall be marked with the current which they can safely

interrupt. Disconnectors shall be of suitable voltage and ampere rating for the circuit on which they are installed.

It is recommended that disconnectors be marked with warning against opening when carrying load. Where a group of disconnectors is contained in one room or compartment, a single conspicuous sign may be sufficient.

(2) **Locking.** Remotely controlled switches, oil switches, and disconnectors shall be so arranged that they can be secured in the open position or plainly tagged to prevent careless closing while work is being done on equipment controlled by them.

It is important that the control circuit be tagged or provided with a positive disconnecting means near the apparatus to prevent accidental operation of the mechanism.

For switches and disconnectors the accidental opening of which may cause hazard, similar arrangements are desirable for retaining them in closed position.

Locking is recommended rather than blocking wherever parts of equipment are remote from the point of control.

(3) **Air break.** Unless a switch operating on a circuit between 750 and 7,500 volts makes an air break, it is recommended that there shall be installed between it and the source of energy supply a suitable air- or oil-break disconnector or equivalent device having an air or oil gap suitable for the operating voltage of the circuit. An air-break switch or air-break disconnector shall be inserted in each conductor between electric supply equipment or lines and sources of energy of more than 7,500 volts, if the equipment or lines may have to be worked on without protective grounding while the sources may be alive. (For lightning arresters see WAC 296-44-265.)

(4) **Alinement.** Knife switches shall maintain such alinement under service conditions that they can be closed with a single unhesitating motion. [§ 16 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-223 Fuses, circuit-breakers, switches, and controllers--Where fuses or automatic circuit-breakers are required.** All circuit leads to motors, constant-potential generators, transformer primaries, and station auxiliaries, and all outgoing circuits shall be protected from excessive current by suitable fuses or automatic circuit-breakers, except as indicated below.

Fuses and automatic circuit-breakers may be omitted from the following: (1) A motor-driven generator, rotary converter, or rectifier not used for railway service and not operated in parallel with other machines or batteries if the supply leads to such apparatus are already protected by fuses or automatic circuit-breakers.

(2) Grounded conductors.

(3) Circuits for field excitation.

(4) Leads of alternating-current generators.

(5) Leads connecting two or more pieces of electric supply equipment operated as a single unit.

(6) Circuits supplying interconnected three-wire systems of direct-current distribution.

(7) Leads of series transformers.

(8) Leads of potential transformers or other circuits the opening of which may cause greater hazard to life or property through interruption of service. [§ 16 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-226 Fuses, circuit-breakers, switches, and controllers—Disconnection of fuses before handling.** Fuses in circuits of more than 150 volts to ground or more than 60 amperes shall be arranged in one of the following ways: (1) So that the fuses are necessarily disconnected from all sources of electric energy before they can be touched.

(2) So that the fuses can be disconnected from all sources of electric energy by a suitable switch.

(3) So that the fuses can be conveniently handled by means of insulating handles or portable tools provided for the purpose.

**Exception:** Circuits of less than 150 volts to ground and less than 60 amperes capacity are exempted from the provisions of this rule.

The use of insulating gloves and mats is permissible on circuits not exceeding 750 volts. [§ 16 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-229 Fuses, circuit-breakers, switches, and controllers—Arcing or suddenly moving parts.** (1) **Protection from burns.** Fuses and circuit-breakers shall, as far as possible, be so designed, located, or shielded that persons will not be burned by their operation.

(2) **Protection against moving parts.** Handles or levers of circuit-breakers and similar parts which may move suddenly, in such a way that persons in the vicinity are liable to be injured by being struck by them, shall be guarded or isolated. [§ 16 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-232 Fuses, circuit-breakers, switches, and controllers—Grounding noncurrent-carrying metal parts.** Exposed noncurrent-carrying metal parts of switch and fuse cases, levers, and other similar parts to which leakage is liable to occur from live parts, and thereby create a hazard, shall be permanently grounded in accordance with WAC 296-44-109.

**Exception:** Minor parts, such as ferrules of knife switches, which are not liable to become alive, are excepted. [§ 16 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-235 Fuses, circuit-breakers, switches, and controllers—Guarding live parts of switches, fuses, and automatic circuit-breakers.** Switches, fuses, and automatic circuit-breakers shall be isolated or guarded in accordance with WAC 296-44-112 and 296-44-115. [§ 16 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-238 Switchboards—Location and accessibility.** (1) **General location.** Switchboards shall be so placed that the operator will not be endangered by any live or moving parts of machinery or equipment located near the board.

They shall be so placed as to reduce to a minimum the danger of communicating fire to adjacent combustible material.

(2) **Spaces about boards.** The space back of the board shall be kept clear of rubbish and shall not be used for storage.

(3) **Accessibility.** Switchboards shall be accessible to authorized operators from both sides when the connections are on the back (see WAC 296-44-115 for working space), but may be placed against a wall when operating at not more than 750 volts between conductors with the wiring entirely on the face.

(4) **Arrangements.** Switchboards shall have all switches so arranged that the points of control are readily accessible to the operator. Instruments, relays, and other devices requiring reading or adjustments shall be so placed that work can be readily performed from the working space. [§ 17 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-241 Switchboards—Material and illumination.** (1) **Material.** Switchboards shall be made of noncombustible material and be kept free from moisture.

(2) **Illumination.** Sufficient illumination shall be provided both for the front and rear of the switchboard so that the switchboard may be readily operated and instruments conveniently read. [§ 17 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-244 Switchboards—Necessary equipment.** Switchboards which control generating equipment or outgoing supply circuits shall (except in substations without regular attendance) be equipped with such instruments as are necessary to show operating conditions. (See WAC 296-44-184 for ground detectors.) [§ 17 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-247 Switchboards—Arrangement and identification.** Connections, wiring, and equipment of switchboards and panelboards shall be arranged in an orderly manner, and all switches, fuses, and circuit-breakers shall be plainly marked, labeled, or arranged, so as to afford ready means for identifying circuits or equipment supplied through them, in accordance with WAC 296-44-124. [§ 17 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-250 Switchboards—Spacings and barriers against short-circuit.** (1) **Bare parts.** Switchboards shall have the number of bare parts at different potentials on any panel reduced to a minimum, and these parts shall be effectively separated. Protection or separation of such parts by suitable barriers is recommended where the voltage exceeds 750 between conductors.

Such parts, including bus bars, should be so located, or provided with such insulating coverings or barriers, that parts at different potentials will not be readily short-circuited by tools or other conducting objects.

(2) **Fuses.** Fuses shall be so located as to minimize the danger, in removing or replacing them, of short-circuiting parts at different potentials by the fuses or by the hands of the operator. [§ 17 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-253 Switchboards—Switchboard grounding.** (1) **Frames.** Switchboard frames and noncurrent-carrying parts shall be permanently grounded under the conditions and with the exceptions noted in WAC 296-44-109.

**Exception 1.** Parts of switchboards, such as name plates, screws, and similar small parts which are not liable to become alive, except under very unusual circumstances, are not considered as coming under the rule and may be left ungrounded.

**Exception 2.** Switchboards electrically connected to other equipment which operate with undergrounded frames may be installed, protected, and identified as equipment of the same voltage. Mats shall be provided in accordance with WAC 296-44-112 (3)(f).

(2) **Circuit worked on.** Where protective grounds are occasionally required on circuits for the protection of workmen, a permanent ground connection shall be provided, and also suitable means for effectively and readily connecting the parts being grounded to the ground connection, in accordance with WAC 296-44-109(c). [§ 17 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-256 Switchboards—Guarding live parts on switchboards.** (1) **Guards.** Live parts of switchboards shall be guarded in accordance with WAC 296-44-112.

(2) **Plug-type switchboards.** Plug-type switchboards shall, except while connections are being changed, have no current-carrying part exposed on face of boards; and, if practicable, they and their plug connectors shall be so arranged where the operating voltage exceeds 150 as to have all current-carrying parts guarded so long as they are alive, even while connections are being changed.

(3) **Exposed parts of more than 7,500 volts.** No switchboard shall have current-carrying parts of more than 7,500 volts exposed (unguarded) unless these parts are effectively isolated by elevation, except at times when occasionally left exposed by removal of covers or entrance into enclosures, such as switch and instrument-transformer cells or compartments, which are ordinarily unoccupied by persons. For such parts, if exposed while alive for any purpose (including busses and disconnectors in compartments), working space shall be provided complying with the requirements under WAC 296-44-115. [§ 17 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-259 Switchboards—Instrument cases.** If mounted on switchboards, metal cases of instruments (unless isolated by elevation) operating at more than 750 volts between conductors shall be grounded or enclosed in suitable covers which are either of grounded metal or

of insulating material. [§ 17 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-262 Lightning arresters—Location.** (1) **Where required.** Suitable precautions should be taken to protect station equipment against excessive lightning which might enter from associated overhead lines.

**Exception:** Precautions need not be taken in locations where thunderstorms are infrequent at all seasons of the year.

**Note:** Protection against lightning can be obtained in several ways, such as ground wires, graded insulation, arresters, capacitors, protector tubes, spark gaps, etc.

(2) **Indoors.** Lightning arresters with auxiliaries, if installed inside of buildings shall be located well away from all other equipment, passageways, and combustible parts of buildings. If of a type containing oil, they should be installed in accordance with WAC 296-44-097. [§ 18 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-265 Lightning arresters—Connecting wires.** Grounding wires shall be run as directly as possible and be of low impedance and ample current capacity. (See WAC 296-44-058 through 296-44-076 for methods of protective grounding.)

Kinks and coils in the wires between the arresters and the outdoor lines shall be avoided as far as possible. [§ 18 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-268 Lightning arresters—Grounding frames and cases of lightning arresters.** All noncurrent-carrying metal parts of arresters shall be grounded, unless effectively isolated by elevation or guarded as required for live parts of the voltage of the circuit to which the arrester is connected, and suitably identified as of that voltage, in accordance with WAC 296-44-109. [§ 18 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-271 Lightning arresters—Guarding live and arcing parts.** (1) **Protection from contact or arcing.** All current-carrying parts of arresters on circuits of more than 750 volts, unless effectively isolated by elevation, shall be adequately guarded to protect persons from inadvertent contact with them, or from injury by arcing, in accordance with WAC 296-44-112.

(2) **Making adjustments.** Lightning arresters, unless provided with disconnectors which are always open before work is done on the arresters, shall be so arranged that necessary adjustments are possible (without approach to current-carrying parts) through the use of permanently grounded mechanisms or suitable insulating appliances. Where charging or adjusting must be done with arresters alive, permanently grounded mechanisms or suitable insulating appliances shall always be provided.

(3) **Insulation of attachments.** All choke coils, gap electrodes, or other attachments, inherent to the lightning protective equipment, shall have an insulation from

the ground or other conductors equal at least to the insulation demanded at other points of the circuit in the station. [§ 18 (part), filed 3/23/60, effective 12/1/58.]

### INSTALLATION AND MAINTENANCE OF ELECTRIC SUPPLY AND COMMUNICATION LINES

**WAC 296-44-274 Nature of rules—Minimum requirements.** The rules state the minimum requirements for spacing, clearances, and strength of construction. More ample spacing and clearances or greater strength of construction may be provided if other requirements are not neglected in so doing.

**Note:** Some of these minimum values are exceeded in much existing construction; service requirements frequently call for stronger supports and higher factors of safety than the minimum requirements of these rules. [§ 20 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-277 General requirements applying to overhead and underground lines—Design and construction.** All electric supply and communication lines and equipment shall be of suitable design and construction for the service and conditions under which they are to be operated. [§ 21 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-280 General requirements applying to overhead and underground lines—Installation and maintenance.** All electric supply and communication lines and equipment shall be installed and maintained so as to reduce hazards to life as far as practicable. [§ 21 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-283 General requirements applying to overhead and underground lines—Accessibility.** All parts which must be examined or adjusted during operation shall be arranged so as to be readily accessible to authorized persons by the provision of adequate climbing spaces, working spaces, working facilities, and clearances between conductors. [§ 21 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-286 General requirements applying to overhead and underground lines—Inspection and tests of lines and equipment. (1) When in service.**

(a) Initial compliance with rules. Lines and equipment shall comply with these safety rules upon being placed in service.

(b) Inspection. Lines and equipment shall be systematically inspected from time to time by the person responsible for the installation.

(c) Tests. Lines and equipment shall be subjected, when necessary, to tests which will determine their fitness for service.

(d) Record of defects. Any defects revealed by inspection, if not promptly corrected, shall be reported.

(e) Remedying defects. Defective lines and equipment shall be put in good order or effectively disconnected.

(2) **When out of service.**

(a) Lines infrequently used. Supply lines and equipment infrequently used shall be inspected to see that they are in safe condition for service.

(b) Lines temporarily out of service. Lines temporarily out of service shall be maintained in such condition that a hazard will not be created.

(c) Lines permanently abandoned. Lines permanently abandoned shall be removed or maintained in a safe condition.

**Note:** Overhead service drops to consumers are often disconnected without removal when the service is discontinued. This is considered good practice when it is undesirable to remove the service drop entirely. [§ 21 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-289 General requirements applying to overhead and underground lines—Isolation and guarding.**

(1) **Current-carrying parts.** To promote safety to the general public and to employees not authorized to approach conductors and other current-carrying parts of electric supply lines, such parts shall be arranged so as to provide adequate clearance from the ground or other space generally accessible, or shall be provided with guards so as to isolate them effectively from accidental contact by such persons.

(2) **Noncurrent-carrying parts.** Metal fixtures and similar noncurrent-carrying parts, where liable to become charged to more than 300 volts to ground, and frames, cases and hangers of equipment shall be guarded from accidental contact by unauthorized persons or shall be 8 ft. or more above the ground. Grounding is permitted by WAC 296-44-292(2) as an alternative to isolation or guarding. [§ 21 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-292 General requirements applying to overhead and underground lines—Grounding of circuits and equipment. (1) Methods.** The methods to be used for effective grounding for lightning arresters of supply lines, for circuits, for equipment and for wire raceways are given in WAC 296-44-058 through 296-44-076.

(2) **Parts to be grounded.** Metal lamp posts shall be effectively grounded. Cable sheaths and metal conduits shall be effectively grounded if less than 8 ft. above ground.

Metal fixtures and similar noncurrent-carrying parts, where liable to be charged to more than 300 volts to ground, and frames, cases and hangers of equipment shall be effectively grounded if they are not isolated or guarded as provided by WAC 296-44-289(2).

(3) **Use of ground as part of circuit.** Supply circuits shall not be designed to use the ground normally as the sole conductor for any part of the circuit. [§ 21 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-295 General requirements applying to overhead and underground lines—Arrangement of switches. (1) Accessibility.** All switches shall be readily accessible to authorized persons.

(2) **Indicating open or closed position.** All switches shall indicate clearly whether they are open or closed.

(3) **Locking.** Pole-top switches accessible to unauthorized persons shall have provision for locking in both open and closed positions, and locks shall be provided.

(4) **Uniform position.** The handles or control mechanism for all switches throughout any system shall have so far as practicable the same position when open and a uniformly different position when closed, in order to minimize operating errors. Where it is advisable to depart from this practice, the switches should be marked so as to minimize the liability to mistakes in operation.

(5) **Fault current protection of operating handles.** Pole-top switches when mounted on other than grounded metal structures shall have their operating handles insulated and isolated from the base of the switch by wood or other adequate insulated sections in operating rod, or the operating handle shall be so arranged that persons operating the handle will be protected by adequately grounded areas that will prevent his body from becoming a path for fault currents traveling to ground due to break-down of switch. [§ 21 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-298 Relations between various classes of lines--Relative levels.** (1) **Standardization of levels.** The levels at which different classes of conductors are to be located shall be standardized where practicable for any given community by agreement of the utilities concerned.

**Note:** This practice facilitates the extension of lines and promotes the safety of the public and workers by permitting the relative levels and required clearances to be readily obtained on jointly or commonly used poles as well as at crossings and conflicts.

(2) **Relative levels--Supply and communication conductors.**

(a) Preferred levels. Where supply and communication conductors cross each other or are in conflict, or are located on the same poles or towers, the supply conductors shall preferably be carried at the higher level.

**Exception:** This does not apply to trolley feeders which may be located for convenience approximately at the level of the trolley contact conductor.

**Note:** Supply lines generally use larger conductors than communication lines so there is less liability of contact between the two if the supply conductors are located in the upper position. This relative location also avoids the necessity of workmen on communication conductors passing through supply conductors and working above them and avoids the necessity of increasing the grade of construction required for communication conductors.

(b) Minor extensions. In localities where the practice of placing conductors of communication circuits for public use above supply conductors has been generally established, minor extensions may be made in either system, keeping the conductors in the same relative position. These extensions shall be made only by permission of the recognized administrative authority.

(c) Special construction for supply circuits, the voltage of which is 550 volts or less and carrying power not in excess of 3,200 watts. Where all circuits are owned or operated by one party or where cooperative consideration determines that the circumstances warrant and the necessary coordinating methods are employed, single-phase alternating-current or two-wire direct-current circuits carrying a voltage of 550 volts or less between conductors, with transmitted power not in excess of 3,200 watts, when involved in the joint use of poles with communication circuits, may be installed in accordance with footnote 8(3) of Table 1 in WAC 296-44-316(1) and footnote (1) of Table 11 in WAC 296-44-334 (1)(a), under the following conditions:

(i) That such supply circuits are of wire having a good grade of commercial double-braid weatherproof covering not smaller than No. 8 AWG medium hard-drawn copper or its equivalent in strength, and the construction otherwise conform with the requirements for supply circuits of the same class.

(ii) That the supply circuits be placed on the end and adjacent pins of the lowest through signal crossarm and that a 30-inch climbing space be maintained from the ground up to a point at least 24 inches above the supply circuits. The supply circuits shall be rendered conspicuous by the use of insulators of different form or color from others on the pole line or by stenciling the voltage on each side of the crossarm between the pins carrying each supply circuit, or by indicating the voltage by means of metal characters.

(iii) That there shall be a vertical clearance of at least 2 feet between the crossarm carrying these supply circuits and the next crossarm above. The other pins on the crossarm carrying the supply circuits may be occupied by communication circuits used in the operation or control of a signal system or other supply system if owned, operated and maintained by the same company operating the supply circuits.

(iv) That such supply circuits shall be equipped with arresters and fuses installed in the supply end of the circuit and where the signal circuit is alternating current, the protection shall be installed on the secondary side of the supply transformer. The arresters shall be designed so as to break down at approximately twice the voltage between the wires of the circuit, but the break-down voltage of the arrester need not be less than 1,000 volts. The fuses shall have a rating not in excess of approximately twice the maximum operating current of the circuit, but their rating need not be less than 10 amperes. The fuses likewise shall in all cases have a rating of at least 600 volts, and where the supply transformer is a step-down transformer, shall be capable of opening the circuit successfully in the event the transformer primary voltage is impressed upon them.

(v) Such supply circuits when enclosed in effectively grounded metal-sheathed cable, or other cables carried on effectively grounded messenger, may be carried on a pole below communication attachments, with not less than 2 ft. vertical separation between the supply cable and the lowest communication crossarm. Communication circuits other than those used in connection with the

operation of the supply circuits shall not be carried in the same cable with such supply circuits.

(vi) Where such supply conductors are carried below communication conductors, transformers and other apparatus associated therewith shall be attached only to the sides of the crossarm in the space between and at no higher level than, such supply wires.

(vii) Lateral runs of such supply circuits carried in a position below the communication space shall be protected through the climbing space by wood molding or equivalent covering, or shall be carried in multiple-conductor cable having a suitable substantial insulating covering, and such lateral runs shall be placed on the under side of the crossarm.

**(3) Relative levels—Supply lines of different voltage classifications (as classified in Table 11).**

(a) At crossings or conflicts. Where supply conductors of different voltage classifications cross each other or are in conflict, the higher-voltage lines shall preferably be carried at the higher level.

(b) On poles used only by supply conductors. Where supply conductors of different voltage classifications are on the same poles, relative levels shall be as follows:

(i) Where all circuits are owned by one utility, the conductors of higher voltages shall preferably be placed above those of lower voltage.

**Note:** These relative levels will often avoid the necessity of increasing the grade of construction for crossarms, pins, and conductor fastenings of the lower-voltage conductors.

(ii) Where different circuits are owned by separate utilities, the circuits of each utility may be grouped together and one group of circuits may be placed above the other group provided that the circuits in each group are located so that those of higher voltage are at the higher levels and the clearances of Table 11 (WAC 296-44-334) are maintained. [§ 22 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-301 Relations between various classes of lines—Avoidance of conflict.** Two parallel pole lines, either of which carries supply conductors, shall where practicable be so separated from each other that neither conflicts with the other. If this is impracticable, then the conflicting line or lines shall be built of the grade of construction required by WAC 296-44-340 through 296-44-349 for a conflicting line or the two lines shall be combined in a single pole line. [§ 22 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-304 Relations between various classes of lines—Joint use of poles by supply and communication circuits. Conditions under which joint use is desirable.** In the case of local or distribution circuits along the same highway or similar right of way, where, under the provisions of WAC 296-44-340 through 296-44-349 applying to joint use, grade C construction or less would be required, joint use is generally preferable to separate pole lines (except sometimes in rural districts) unless the

number of conductors is very large or the character of the circuits makes joint use undesirable.

Where circuits other than those mentioned above are involved, the choice between joint use of poles and separate pole lines shall be determined through cooperative consideration, by the utilities concerned, of all the factors involved, including the character of circuits, the total number and weight of conductors, tree conditions, number and location of branches and service drops, availability of right of way, etc. Where such joint use is mutually agreed upon, it shall be subject to the appropriate grade of construction as specified in WAC 296-44-340 through 296-44-349. Where such joint use is not employed, separate lines as specified in WAC 296-44-307 shall be used.

In any event, joint use is preferable to separate lines where it would be impracticable to avoid an overbuilt conflict with separate lines. [§ 22 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-307 Relations between various classes of lines—Separate pole lines.** Where two separate pole lines are to be used, one of which carries supply conductors and the other communication conductors, they shall be separated, if practicable, so that neither conflicts with the other, but if within conflicting distance, they shall be separated as far as practicable and shall be built of the grade of construction required by WAC 296-44-340 through 296-44-349. [§ 22 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-310 Clearances—General. (1) Application.** This section covers all clearances, including separations and climbing spaces, involving poles and wires. Clearances of lamps from pole surfaces, from spaces accessible to the general public, and height above ground are covered in WAC 296-44-418(3).

(2) **Constant-current circuits.** The clearances for constant-current circuits shall be determined on the basis of their nominal full-load voltage.

(3) **Metal-sheathed supply cables.** As far as clearances are concerned, effectively grounded continuous metal-sheathed supply cables of all voltages and any supply cables supported on effectively grounded messengers, are classified the same as open supply wires of 0 to 750 volts between conductors.

(4) **Neutral conductors.** Neutral conductors of supply circuits shall have the same clearances as the phase wires of the circuit with which they are associated, except that neutral conductors which are effectively grounded throughout their length and associated with circuits of over 750 volts between conductors may have the same clearances as circuits of 0 to 750 volts between conductors.

(5) **Maintenance of clearances.** The clearances required by this section shall be maintained at not less than the specified values. [§ 23 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-313 Clearances—Horizontal clearances of supporting structures from other objects.** Poles,

towers, and other supporting structures and their guys and braces shall have the following horizontal clearances from other objects. The clearance shall be measured between the nearest parts of the objects concerned.

(1) **From fire hydrants.** Not less than 3 feet.

Recommendation: Where conditions permit, a clearance of not less than 4 feet is recommended. (See Appendix, WAC 296-44-88001 through 296-44-88011.)

(2) **From street corners.** Poles and towers should not be set so far from street corners as to make necessary the use of flying taps inaccessible from the poles.

(3) **From curbs.** Not less than 6 inches measured to the street side of the curb. (See Appendix, WAC 296-44-88001 through 296-44-88011.)

(4) **From railroad tracks.** Where railroad tracks are paralleled or crossed by overhead lines, the poles shall, if practicable, be located not less than 12 feet from the nearest track rail. (See Appendix, WAC 296-44-88001 through 296-44-88011.)

**Exception 1:** At sidings a clearance of not less than 7 feet may be allowed, provided sufficient space for a driveway be left where cars are loaded or unloaded.

**Exception 2:** Supports for overhead trolley contact conductors may be located as near their own track rail as conditions require. If very close, however, permanent screens on cars will be necessary to protect passengers.

**Exception 3:** Where necessary to provide safe operating conditions which require an uninterrupted view of signals, signs, etc., along tracks, the parties concerned shall cooperate in locating poles to provide the necessary clearance where practicable. [§ 23 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-316 Clearances--Vertical clearance of wires above ground or rails.** The vertical clearance of all wires above ground in generally accessible places or above rails shall be not less than the following: (1) **Basic clearances.** The clearances in Table 1 apply under the following conditions:

(a) Temperatures of 60°F, no wind, with final unloaded sag in the wire, or with initial unloaded sag in cases where wires are maintained approximately at initial unloaded sags.

(b) Span lengths not greater than the following:

Loading district	Span lengths
	Feet
Heavy . . . . .	175 <sup>1</sup>
Medium . . . . .	250 <sup>1</sup>
Light . . . . .	350

<sup>1</sup>150 feet in heavy-loading district and 225 feet in medium-loading district for 3-strand conductors, each wire of which is 0.09 inch or less in diameter.

(c) Voltages 0 to 50,000 volts between conductors.

(d) Fixed supports for the conductor or wire. (For other conditions, see subsection (2) of this section.)

**TABLE 1.—Minimum vertical clearance of wires above ground or rails**

(All voltages are between wires unless otherwise stated. Supply wires include trolley feeders)

Nature of ground or rails underneath wires	Guys; messengers; communication, span, and lightning protection wires; effectively grounded continuous metal-sheath cable of all voltages	Open supply line wires, arc wires and service drops			Trolley contact conductors and associated span or messenger wires <sup>1</sup>	
		0 to 750 volts	750 to 15,000 <sup>14</sup> volts	15,000 to 50,000 volts	0 to 750 volts to ground	Exceeding 750 volts to ground

**WHERE WIRES CROSS OVER**

	Feet	Feet	Feet	Feet	Feet	Feet
Track rails of railroads (except electrified railroads using overhead trolley conductors) handling freight cars on top of which men are permitted <sup>2 16</sup> . . . . .	27 <sup>3</sup>	15	27 <sup>3</sup>	28 <sup>3</sup>	30	22 <sup>4</sup> 22 <sup>4</sup>
Track rails of railroads (except electrified railroads using overhead trolley conductors) not included above <sup>2</sup> . . . . .	18	18	20	22	18 <sup>5</sup>	20 <sup>5</sup>
Public streets, alleys or roads in urban or rural districts . . . . .	18 <sup>6</sup>	13	18	20	22	18 <sup>5</sup> 20 <sup>5</sup>
Driveways to residence garages . . . . .	10	10	20	22	18 <sup>5</sup>	20 <sup>5</sup>
Spaces or ways accessible to pedestrians only . . . . .	13 <sup>7</sup>	13 <sup>8</sup>	15	17	16 <sup>9</sup>	18 <sup>9</sup>

**WHERE WIRES RUN ALONG, AND WITHIN THE LIMITS OF PUBLIC HIGHWAYS OR OTHER PUBLIC RIGHTS-OF-WAY FOR TRAFFIC**

Streets or alleys in urban districts . . . . .	18 <sup>10</sup>	11	13	18 <sup>10</sup>	20	22	18 <sup>5</sup>	20 <sup>5</sup>
Roads in rural districts . . . . .	14 <sup>10</sup>	11	12	15 <sup>10</sup>	18	20	18 <sup>5</sup>	20 <sup>5</sup>

<sup>1</sup>Where subways, tunnels or bridges require it, less clearances above ground or rails than required by table 1 may be used locally. The trolley contact conductor should be graded very gradually from the regular construction down to the reduced elevation.

<sup>2</sup>For wire crossings over railways handling only cars considerably lower than ordinary freight cars, the clearance may be reduced by an amount equal to the difference in height between the highest car handled and the highest ordinary freight car, but the clearance shall not be reduced below that required for street crossings.

<sup>3</sup>This clearance may be reduced to 25 feet where paralleled by trolley contact conductor on the same street or highway.

<sup>4</sup>In communities where 21 feet has been established, this clearance may be continued if carefully maintained. The elevation of the contact conductor should be the same in the crossing and next adjacent spans (see WAC 296-44-427 (4)(b), for conditions which must be met where uniform height above rail is impracticable).

<sup>5</sup>In communities where 16 feet has been established for trolley contact conductors 0 to 750 volts to ground, or 18 feet for trolley contact conductors exceeding 750 volts, or where local conditions make it impracticable to obtain the clearance given in the table, these reduced clearances may be used if carefully maintained.

<sup>6</sup>If a communication service drop, or a guy which is effectively insulated against the highest voltage to which it is exposed, up to 8,700 volts, crosses a street, alley or road, the clearance may be reduced to 16 feet at the side of the traveled way.

<sup>7</sup>This clearance may be reduced to the following values:

	Feet
(1) For communication conductors of circuits limited to 160 volts to ground, and communication cables . . . . .	8
(2) For conductors of other communication circuits . . . . .	10
(3) For guys . . . . .	8

<sup>8</sup>This clearance may be reduced to the following values:

	Feet
(1) Supply wires (except trolley contact wires) limited to 300 volts to ground . . . . .	12
(2) Supply wires (except trolley contact wires) limited to 150 volts to ground and located at entrances to buildings . . . . .	10
(3) Where supply circuits of 550 volts or less, with transmitted power of 3,200 watts or less, are run along fenced (or otherwise guarded) private rights-of-way in accordance with the provisions specified in WAC 296-44-298 (2)(c) . . . . .	10

<sup>9</sup>Trolley contact conductors for industrial railways when not along or crossing over roadways may be placed at a less height if suitably guarded.

<sup>10</sup>Where a pole line along a road is located relative to fences, ditches, embankments, etc., so that the ground under the line will never be traveled except by pedestrians, this clearance may be reduced to the following values:

	Feet
(1) Communication conductors limited to 160 volts to ground, and communication cables . . . . .	8
(2) Conductors of other communication circuits . . . . .	10

<sup>11</sup>No clearance from ground is required for anchor guys not crossing streets, driveways, roads, or pathways, nor for anchor guys provided with traffic guards and paralleling sidewalk curbs.

<sup>12</sup>This clearance may be reduced to 13 feet for communication conductors where no part of the line overhangs any part of the highway which is ordinarily traveled, and where it is unlikely that loaded vehicles will be crossing under the line into a field.

<sup>13</sup>Where communication wires or cables cross over or run along alleys, this clearance may be reduced to 15 feet.

<sup>14</sup>A conductor which is effectively grounded throughout its length and is associated with a circuit of over 750 volts between conductors may have the clearances specified for open supply wires of 0 to 750 volts.

<sup>15</sup>This value may be reduced to 25 feet for guys and for cables carried on messengers.

<sup>16</sup>Adjacent to overhead bridges which restrict the practice of permitting men on top of cars, these clearances may be reduced, within the restricted area, by mutual agreement between the parties at interest, but in no case shall the wires or cables be at levels below the under surface of the bridge. (See Figure 1 in Appendix, page 165.)

(2) **Increased clearances.** Greater clearances than specified in Table 1, subsection (1) this section shall be provided where required by paragraphs (a), (b), and (c) below. Increases are cumulative where more than one apply.

**Exception:** Increased clearances are not required for trolley contact conductors, for guys, or for cable supported by messenger.

(a) Spans longer than specified in subsection (1)(b) of this section. In applying the following rules, the "point of crossing" in the case of roads, streets, alleys and driveways is considered to be the edge of the traveled

way farthest from the nearer support of the crossing span. In the case of a railroad crossing, it is the track rail which is farthest from the nearer support of the crossing span. In other situations it is the location under the conductors of any topographical feature which is the determinant of the clearance.

(i) Where point of crossing occurs at point of maximum total sag of the conductor.

(A) General. For spans exceeding the limits specified in subsection (1)(b) of this section, above, the clearance specified in Table 1 shall be increased by 0.1 foot for each 10 feet of the excess of span length over such limits. See (c) below.

(B) Railroad crossings. For spans exceeding the limits specified in subsection (1)(b) of this section, above, the clearance specified in Table 1 shall be increased by the following amounts for each 10 feet by which the crossing span length exceeds such limits. See (c) below.

Loading district	Amount of increase per 10 feet	
	Large conductors	Small <sup>1</sup> conductors
Heavy and medium . . . . .	0.15	0.30
Light . . . . .	.10	.15

<sup>1</sup>A small conductor is a conductor having an over-all diameter of metallic material equal to or less than the following values:

Material	Outside diameter of conductor	
	Solid	Stranded
	Inches	Inches
All copper . . . . .	0.160	0.250
Other than all copper . . . . .	.250	.275

(C) Limits. The maximum additional clearance need not exceed the following percentages of the "maximum sag increase" for the conductor concerned:

Loading district	Percentage
Heavy . . . . .	75
Medium . . . . .	85
Light . . . . .	75

The "maximum sag increase" to which these percentages apply is the arithmetic difference between final unloaded sag at 60°F, no wind, and the maximum total sag under the entire conductor loading of WAC 296-44-355 for the loading district concerned, or under 120°F, no wind, whichever sag is the greater, computed for the span length for which such difference is greatest.

(ii) Where point of crossing is not at point of maximum total sag of the conductor. Under these conditions the required clearance may be obtained by multiplying

the clearance determined by subsections (1) and (2)(a)(i) of this section by the following factors, but in no case shall the clearance be less than required by Table 1:

Distance from nearer support of crossing span to point of crossing in percentage of crossing span length	Factors
5	0.85
10	.88
15	.91
20	.94
25	.96
30	.98
35	.99
40 to 50	1.00

Interpolate for intermediate values

(b) Voltages exceeding 50,000 volts between conductors. For these voltages the clearances given in Table 1 of this section shall be increased at the rate of 0.5 inch for each 1,000 volts of the excess.

(c) Conductors supported by suspension-type insulators at crossings over track rails. The clearances shall be increased by such an amount that the values specified in Table 1 of this section will be maintained in case of a broken conductor in either adjoining span, if the conductor is supported as follows:

(i) At one support by suspension-type insulators in a suspended position, and at the other support by insulators which are not free to swing (including semistrain-type insulators).

(ii) At one support by strain insulators, and at the other support by semistrain-type insulators.

(d) Methods of avoiding this increase of clearance. Any of the following construction methods will avoid the necessity for the increase in clearance required by subsection (2)(c) of this section.

(i) Suspension-type insulators in a suspended position at both supports.

(ii) Semistrain-type insulators at both supports.

(iii) Arrangement of insulators so that they are restrained from displacement toward the crossing.

(3) **Supply pole wiring at underground risers.** Supply wires connecting to underground systems shall not be run open closer to the ground than is indicated by Table 2:

TABLE 2.—Clearance above ground for open supply wiring.

(See Appendix, WAC 296-44-88001 through 296-44-88011.)

Location on pole	Voltage between conductors		
	0 to 750 volts	750 to 15,000 volts	More than 15,000 volts
	Feet	Feet	Feet
Side of pole adjacent to vehicular traffic.....	14	16	18
Side of pole not adjacent to vehicular traffic .....	8	11	13

[§ 23 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-319 Clearances—Wire-crossing clearances.** The clearance between any two wires crossing each other and carried on different supports shall not be less than the following: (1) **Basic clearances.** The clearances given in Table 3 below apply under the following conditions:

(a) Temperature of 60°F, no wind, with the upper conductor or wire at its final unloaded sag and the lower conductor or wire at its initial unloaded sag.

(b) Span lengths not greater than the following for the upper conductor or wire:

Loading district	Span lengths
	Feet
Heavy .....	175 <sup>1</sup>
Medium.....	250 <sup>1</sup>
Light .....	350

<sup>1</sup>150 feet in heavy loading district and 225 feet in medium loading district for 3-strand conductors, each wire of which is 0.09 inch or less in diameter.

- (c) Voltages 0 to 50,000 volts between conductors.
- (d) Fixed supports for the upper conductor or wire.

TABLE 3.—Wire-crossing clearances

(See Fig. 2 in Appendix, WAC 296-44-88002.)

(All voltages are between wires except for trolley contact conductors where voltages are to ground)

The insertion of a given clearance in italics indicates that in general the lines operating at the voltage named above this clearance should not cross over the lines at the voltage to the left of the clearance in italics.

Nature of wires crossed over	Open supply wires 0 to 750 volts; supply cables, all voltages, having effectively grounded continuous metal sheaths or messengers; messengers associated with such cables		Open supply wires and service drops <sup>6</sup>		Guys, span wires, lightning-protection wires	
	Communication wires, including cables and messengers	Line wires	Service drops	750 to 8,700		8,700 to 50,000
				volts		volts
Feet	Feet	Feet	Feet	Feet	Feet	
Communication, including cables and messengers . . . . .	2 <sup>2</sup>	4 <sup>9 3</sup>	2 <sup>9</sup>	4 <sup>7</sup>	6 <sup>10</sup>	2 <sup>2</sup>
Supply cables, all voltages, having effectively grounded continuous metal sheaths or messengers; messengers associated with such cables . . . . .	4	2	2	2	4	2
Open supply wires:						
0 to 750 volts . . . . .	4	2	2	2	4	2
750 to 8,700 volts . . . . .	4	2	4	2	4	4
8,700 to 50,000 volts . . . . .	6	4	6	4	4	4
Trolley contact conductors . . . . .	4 <sup>4</sup>	4 <sup>4 5</sup>	4 <sup>4</sup>	6	6	4 <sup>4</sup>
Guys, span wires, lightning-protection wires, service drops 0 to 750 volts . . . . .	2 <sup>2 8</sup>	2	2	4	4	2 <sup>1 2</sup>

<sup>1</sup>Completely insulated sections of guys attached to supporting structures having no conductor of more than 8,700 volts may have less than this clearance from each other.

<sup>2</sup>The clearance of communication conductors and their guy, span, and messenger wires from each other in locations where no other classes of conductors are involved may be reduced by mutual consent of the parties concerned, subject to the approval of the regulatory body having jurisdiction, except for the fire-alarm wires and wires used in the operation of railroads, or where one set of conductors is for public use and the other used in the operation of supply systems.

<sup>3</sup>Except where neutral conductors of primary supply circuits are concerned, a clearance of 2 feet may be permitted where the supply conductor is above the communication conductor, provided the crossing is not within 6 feet of any pole concerned in the crossing and the voltage to ground does not exceed 300 volts. (See note 9.)

<sup>4</sup>Trolley-contact conductors of more than 750 volts should have at least 6 feet clearance. This clearance should also be provided over lower-voltage trolley-contact conductors unless the crossover conductors are beyond reach of a trolley pole leaving the trolley-contact conductor or are suitably protected against damage from trolley poles leaving the trolley-contact conductor.

<sup>5</sup>Trolley feeders are exempt from this clearance requirement for trolley-contact conductors if they are of the same nominal voltage and of the same system.

<sup>6</sup>A conductor which is effectively grounded throughout its length and is associated with a circuit of over 750 volts between conductors

may have the clearances specified for open supply wires of 0 to 750 volts.

<sup>7</sup>This clearance shall be increased to 6 feet where the supply wires cross over a communication line within 6 feet horizontally of a communication pole.

<sup>8</sup>This clearance shall be increased to 4 feet where communication cables cross over open supply service wires.

<sup>9</sup>Where a 2-foot clearance is required at 60°F, and where conditions are such that the sag in the upper conductor would increase more than 1.5 feet at the crossing point under the applicable loading of rule 251, the 2-foot clearances shall be increased by the amount of sag increase less 1.5 feet.

<sup>10</sup>Multigrounded wye circuits not exceeding 8,700 volts to ground may have a 4-foot clearance if the lowest supply wire at the crossing under conditions of 60°F, no wind, and final unloaded sag is not lower than a straight line joining the points of support of the highest communication conductor, provided it is not within 6 feet horizontally of a communication pole.

(2) **Increased clearances.** Greater clearances than given in Table 3, above, shall be provided under the following conditions. The increases in (a), (b) and (c) below are cumulative where more than one are applicable.

(a) Crossing spans longer than specified in subsection (1)(b) of this section. Under these conditions the clearances specified in Table 3 shall be increased as follows:

(i) Where the crossing occurs at the point of maximum total sag in the upper conductor, the clearances of Table 3 shall be increased by the following amounts for each 10 feet by which the crossing span length exceeds the limits specified in subsection (1)(b) of this section:

Loading district	Amount of increase per 10 feet	
	Large conductors	Small <sup>1</sup> conductors
	Feet	Feet
Heavy and medium . . . . .	0.15	0.30
Light . . . . .	.10	.15

<sup>1</sup>A small conductor is a conductor having an over-all diameter of metallic material equal to or less than the following values:

Material	Outside diameter of conductor	
	Solid	Stranded
	Inches	Inches
All copper . . . . .	0.160	0.250
Other than all copper . . . . .	.250	.275

The maximum additional clearance need not exceed the following percentages of the "maximum sag increase" for the conductor concerned:

Loading district	Percentage
Heavy . . . . .	75
Medium . . . . .	85
Light . . . . .	75

The "maximum sag increase" to which these percentages apply is the arithmetic difference between final unloaded sag at 60°F, no wind, and the maximum total sag under the entire conductor loading of WAC 296-44-355 for the loading district concerned, or under 120°F, no wind, whichever sag is the greater, computed for the span length for which such difference is greatest.

(ii) If the crossing point is located elsewhere than at the point of maximum total sag in the upper span, the required clearance may be obtained by multiplying the clearance determined in subsection (1) and (2)(a)(i) of this section by the following factors, but in no case shall the clearance be less than required by Table 3.

Distance from nearer support of crossing span to point of crossing in percentage of crossing span length	Factors for basic clearance of—	
	4 feet	6 feet
5 .....	0.35	0.47
10 .....	.47	.58
15 .....	.60	.68
20 .....	.71	.78
25 .....	.82	.85
30 .....	.90	.92
35 .....	.96	.98
40 to 50 .....	1.00	1.00

Interpolate for intermediate values.

(b) Voltages exceeding 50,000 volts between conductors. For these voltages the clearances given in Table 3 (this section) shall be increased at the rate of 0.5 inch for each 1,000 volts of the excess.

(c) Conductors supported by suspension-type insulators at crossings over communication wires. For such conductors the clearance shall be increased by such an amount that the values specified in Table 3 (this section) will be maintained in case of a broken conductor in either adjacent span, provided such conductor is supported as follows:

(i) At one support by suspension-type insulators in a suspended position, and at the other support by insulators not free to swing (including semistrain-type insulators).

(ii) At one support by a strain insulator, and at the other support by a semistrain-type insulator.

(d) Methods of avoiding this increase of clearance. Any of the following construction methods will avoid the necessity for the increase in clearance required by subsection (2)(c) above:

(i) Suspension-type insulators in a suspended position at both supports.

(ii) Semistrain-type insulators at both supports.

(iii) Arrangement of insulators so that they are restrained from displacement toward the crossing. [§ 23 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-322 Clearances—Clearances of conductors of one line from other conductors and structures.**

(1) **Clearances from conductor of another line.** The clearance in any direction between any conductor of one line and any conductor of a second and conflicting line shall be not less than the largest value required by (a), (b), or (c) below at 60°F, no wind:

(a) Four feet.

(b) The values required by WAC 296-44-325 (1)(b)(i)(A) or (B) for separation between conductors on the same support.

(c) The apparent sag of the conductor having the greater sag, plus 0.2 inch per kilovolt of the highest voltage concerned.

**Exception:** In situations where supply-line conductors only are involved, the clearance required by (c) above need not be greater than the value required by WAC 296-44-319 (1) and (2), for a center-span crossing, assuming the conductor having the larger sag swinging through an arc of 45° from the vertical.

(2) **Clearances from supporting structures of another line.** Conductors of any line passing near a pole or similar supporting structure of a second line, without being attached thereto, shall have clearances from any part of such structure not less than the larger value required by either (a) or (b) below at 60°F, no wind:

(a) Three feet for all voltages over 750 volts.

(b) The values required by WAC 296-44-325 (1)(b)(A) and (B) for separation between similar conductors on the same support, increased by 1 inch for each 2 feet of the distance from the supporting structure of the second line to the nearest supporting structure of the first line. The climbing space on the structure of the second line shall in no case be reduced by a conductor of the first line.

(3) **Clearances from buildings.**

(a) General. Conductors shall be arranged and maintained so as to hamper and endanger firemen as little as possible in the performance of their duties.

(b) Ladder space. Where buildings exceed three stories (or 50 feet) in height, overhead lines shall be arranged where practicable so that a clear space or zone at least 6 feet wide will be left, either adjacent to the building or beginning not over 8 feet from the building, to facilitate the raising of ladders where necessary for fire fighting.

**Exception:** This requirement does not apply where it is the unvarying rule of the local fire departments to exclude the use of ladders in alleys or other restricted places which are generally occupied by supply lines.

(c) Open supply conductors attached to buildings. Where the permanent attachment of open supply conductors of any class to buildings is necessary for an entrance, such conductors shall meet the following requirements:

(i) Conductors of more than 300 volts to ground shall not be carried along or near the surface of the building unless they are guarded or made inaccessible.

(ii) Clearance of wires from building surface shall be not less than those required in Table 9 (WAC 296-44-325 (1)(c)(i)) for clearance of conductors from pole surfaces. (See Fig. 1 in Appendix, WAC 296-44-88001.)

(d) Conductors passing by or over buildings.

(i) Minimum clearances. Unguarded or accessible supply conductors carrying voltages in excess of 300 volts between conductors shall not come closer to any building or its attachments (balconies, platforms, etc.) than listed below, except that this rule should not be interpreted as restricting the installation of a trolley contact conductor over the approximate center line of the track it serves.

(A) Spans 0 to 150 feet. For spans of 0 to 150 feet, the clearances shall be as given in Table 4.

**TABLE 4.—Clearances of Supply Conductors From Buildings**

Voltage of supply conductors	Horizontal clearance		Vertical clearance	
	Feet		Feet	
300 to 8,700	3		8	
8,700 to 15,000	8		8	
15,000 to 50,000	10		10	
Exceeding 50,000	10 plus 0.4 inch per kv in excess	10 plus 0.4 inch per kv in excess		

(B) Spans exceeding 150 feet. Where span lengths exceed 150 feet, the increased clearances required by WAC 296-44-316 (2)(a) shall be provided.

**Exception:** These increased clearances are not required where the voltage of the supply conductors is from 300 to 8,700 volts between conductors.

(ii) Guarding of supply conductors. Supply conductors of 300 volts or more between conductors shall be properly guarded by grounded conduit, barriers, or otherwise, under the following conditions:

(A) Where the clearances set forth in Table 4 (subsection (3)(d)(i)(A)) cannot be obtained.

(B) Where such supply conductors are placed near enough to windows, verandas, fire escapes, or other ordinarily accessible places, to be exposed to contact by persons.

**Note:** Supply conductors in grounded metal-sheathed cable are considered to be guarded within the meaning of this rule. (See Fig. 1 in Appendix, WAC 296-44-88001.)

**(4) Clearances from bridges.**

(a) Clearances of conductors from bridges. Supply conductors not installed in grounded conduit or metal-sheath cable, which pass under, over, or near a bridge shall have clearances therefrom not less than given in Table 5.

(b) Guarding trolley-contact conductors located under bridges.

(i) Where guarding is required. Guarding is required where the trolley-contact conductor is located so that a trolley pole leaving the conductor can make simultaneous contact between it and the bridge structure.

**TABLE 5.—Clearances From Bridges**

(See Fig. 1 in appendix.)

Voltages	Readily accessible portions (other than traveled ways <sup>1</sup> ) of any bridge, including wing walls or bridge attachments		From ordinarily inaccessible portions <sup>2</sup> of bridges (other than brick, concrete, or masonry) and from abutments	
	For conductors attached to bridge <sup>3</sup>	For conductors not attached to bridge	For conductors attached to bridge <sup>3 5</sup>	For conductors not attached to bridge <sup>4 5</sup>
	Feet	Feet	Feet	Feet
0 to 2500	3.0	3.0	0.5	3.0
Over 2,500 to 5,000	3.0	3.0	1.0	3.0
Over 5,000 to 8,700	3.0	3.0	3.0	3.0
Over 8,700 to 15,000	5.0	5.0	5.0	5.0
Over 15,000 to 25,000	7.5	7.5	7.5	7.5
Over 25,000 to 35,000	7.5	9.0	7.5	9.0
Over 35,000 to 50,000	7.5	12.0	7.5	12.0
Exceeding 50,000	Add 0.4 inch per kv in excess			

**Footnotes to Table 5.**

<sup>1</sup>Where over traveled ways on or near bridges, the clearances of WAC 296-44-316 apply.

<sup>2</sup>Bridge seats of steel bridges carried on masonry, brick, or concrete abutments which require frequent access for inspection shall be considered as readily accessible portions.

<sup>3</sup>Conductors should have clearance not less than given in this column, where practicable.

<sup>4</sup>Conductors should have the clearances given in this column increased as much as practicable.

<sup>5</sup>Where conductors passing under bridges are adequately guarded against contact by unauthorized persons and can be deenergized for maintenance of the bridge, clearances of the conductors from the bridge, at any point, may have the clearances specified in Table 9 for clearance from surfaces of crossarms plus one-half the final unloaded sag of the conductor at that point.

(ii) Nature of guarding. Guarding shall consist of a substantial inverted trough of nonconducting material located above the conductor, or of other suitable means of preventing contact between the trolley pole and the bridge structure. [Tables 4 and 5, filed 10/30/64, effective 12/1/64; § 23 (part), Tables 4 and 5, filed 3/23/60, effective 12/1/58.]

**WAC 296-44-325 Clearances—Minimum line conductor clearances and separations at supports.** (1) Separation between conductors on pole lines.

(a) Application of rule.

(i) Multiconductor wires or cables. Cables, and duplex, triple or paired conductors supported on insulators or messengers, whether single or grouped, are for the purposes of this rule considered single conductors even though they may contain individual conductors not of the same phase or polarity.

(ii) Conductors supported by messengers or span wires. Clearances between individual wires or cables supported by the same messenger, or between any group and its supporting messenger, or between a trolley feeder, supply conductor, or communication conductor, and

their respective supporting span wires, are not subject to the provisions of this rule.

(iii) Measurement of clearances. The clearances and separations stated may be measured from the center of the supporting insulator instead of from the conductor itself.

(b) Horizontal separations between line conductors.

(i) Fixed supports: Line conductors attached to fixed supports shall have horizontal separations from each other not less than the larger value required by either (1) or (2) below for the situation concerned.

**Exception 1:** The pin spacing at buckarm construction may be reduced as specified in WAC 296-44-328(6), to provide climbing space.

**Exception 2:** The pin spacing at bridge fixtures may be reduced as specified in subsection (3) of this section.

**Exception 3:** These clearances do not apply where conductors have insulating covering adequate for the voltage concerned.

(A) Minimum horizontal separation between line conductors of the same or different circuits. Separations shall not be less than given in Table 6.

**TABLE 6.**—Minimum horizontal separation at supports between line conductors of the same or different circuits.

(See Fig. 6.A - 9.A in Appendix, WAC 296-44-88005.)  
(All voltages are between conductors except for railway feeders, which are to ground)

Class of circuit	Separation	Notes
	Inches	
Communication conductors.....	6	Preferable minimum. Does not apply at conductor transportation points. Permitted where pin spacings less than 6 inches have been in regular use. Does not apply at conductor transportation points.
	3	
Railway feeders: 0 to 750 volts, No. 4/0 or larger.....	6	Where 10- to 12-inch separation has already been established by practice, it may be continued, subject to the provisions of subsection (1)(b)(i)(B) of this section for conductors having apparent sags not over 3 feet and for voltages not exceeding 8,700.
	12	
Other supply conductors: 0 to 750 volts..... 750 to 5,000 volts.... 5,000 to 33,000 volts.....	12	
	10	
	22*	

Class of circuit	Separation	Notes
	Inches	
	For all conductors of more than 33,000 volts add for each 1,000 volts in excess of 33,000 volts . . . .	
	0.4	

\*On dead ends and buck arms only this distance can be reduced to 18 inches.

(B) Separations according to sags. The separation at the supports of conductors of the same or different circuits of grades B, or C shall in no case be less than the values given by the following formulas, at 60°F, no wind. The requirements of subsection (1)(b)(i)(A) of this section apply if they give a greater separation than this rule.

For line conductors smaller than No. 2 AWG:

$$\text{Separation} = 0.3 \text{ inch per kilovolt} + 7 \sqrt{(S/3)} - 8.$$

For line conductors of No. 2 AWG or larger:

$$\text{Separation} = 0.3 \text{ inch per kilovolt} + 8 \sqrt{S/12}.$$

S is the apparent sag in inches of the conductor having the greater sag, and the separation is in inches.

**TABLE 7.**—Separation in inches required for line conductors smaller than No. 2 AWG

Voltage between conductors	Sag (in inches)						
	36	48	72	96	120	180	240
2,400	14.5	20.5	28.5	35.0	40.5	51.5	60.0
7,200	16.0	22.0	30.0	36.5	42.0	52.5	61.5
13,200	18.0	24.0	32.0	38.5	43.5	54.5	63.5
23,000	21.0	27.0	35.0	41.5	46.5	57.5	66.5
34,500	24.5	30.5	38.5	44.5	50.5	61.0	70.0
46,000	28.0	34.0	42.0	48.0	53.5	64.5	73.0
69,000	40.5	48.5	55.0	60.5	71.0	80.0	

**TABLE 8.**—Separation in inches required for line conductors No. 2 AWG or larger

Voltage between conductors	Sag (in inches)						
	36	48	72	96	120	180	240
2,400	14.5	16.5	20.5	23.5	26.0	31.5	36.5
7,200	16.0	18.0	22.0	25.0	27.5	33.0	38.0
13,200	18.0	20.0	23.5	26.5	29.5	35.0	39.5
23,000	21.0	23.0	26.5	29.5	32.0	38.0	42.5
34,500	24.0	26.5	30.0	33.0	35.5	41.5	46.0

Voltage between conductors—	Sag (in inches)						
	36	48	72	96	120	180	240
46,000 .....	27.5	30.0	33.5	36.5	39.0	45.0	49.5
69,000 .....	36.5	40.5	43.5	46.0	51.5	56.5	

(ii) Suspension insulators not restrained from movement. Where suspension insulators are used and are not restrained from movement, the conductor separation shall be increased so that one string of line insulators may swing transversely through an angle of thirty degrees from a vertical position without reducing the values given in (i) above.

(C) Clearances in any direction from line conductors to supports, and to vertical or lateral conductors, span or guy wires, attached to the same support.

(i) Fixed supports. Clearances shall be not less than given in Table 9.

**TABLE 9.**—Minimum clearance in any direction from line conductors to supports, and to vertical or lateral conductors, span or guy wires attached to the same support. (See 6.A - 9.A in Appendix, WAC 296-44-88005.)

(All voltages are between conductors)

Clearance of line conductors from—	Communication lines—		Supply lines		
	In general	On jointly used poles	0 to 8,700 volts		Exceeding 8,700 volts add for each 1,000 volts of excess
			In general	On jointly used poles	
	Inches	Inches	Inches	Inches	Inches
Vertical and lateral conductors:					
Of same circuit ..	3	3	3	3	0.25
Of other circuits ..	3	3	6 <sup>6</sup>	6 <sup>6</sup>	.4
Span and guy wires attached to same pole:					
General .....	3 <sup>8</sup>	6 <sup>1 8</sup>	6	6	.4
When parallel to line .....	3 <sup>8</sup>	6 <sup>1 8</sup>	12 <sup>1</sup>	12 <sup>1</sup>	.4
Lightning-protection wires parallel to line .....	2 5	2 5	2 5	2 5	.4
Surfaces of cross-arms .....	3 <sup>3</sup>	3 <sup>3</sup>	3	3	.25
Surfaces of poles ...	3 <sup>3</sup>	5 <sup>3</sup>	3 <sup>7</sup>	5 <sup>4 7</sup>	.25

<sup>1</sup>For guy wires, if practicable. For clearances between spar wires and communication conductors, WAC 296-44-334 (5)(c).

<sup>2</sup>Clearance shall not be less than the separation required by Table 6 or subsection (1)(b)(i)(B) of this section between two line conductors of the voltage concerned.

<sup>3</sup>Communication conductors may be attached to supports on the sides or bottoms of crossarms or surfaces of poles with less clearance, if at least 40 inches from any supply line conductor of less than 8,700 volts and at least 60 inches from any supply line conductor of more than 8,700 volts carried on the same pole.

<sup>4</sup>This clearance applies only to supply conductors carried on cross-arms below communication conductors, on joint poles. Where supply conductors are above communication conductors the clearance shall be at least 3 inches.

<sup>5</sup>For the purpose of applying the above table, the voltage of lightning-protection wires shall be considered as being the voltage to ground of the associated supply conductors.

<sup>6</sup>For supply circuits of 0 to 750 volts, this clearance may be reduced to 3 inches.

<sup>7</sup>A neutral conductor which is effectively grounded throughout its length and is associated with supply circuits may be attached directly to the pole surface.

<sup>8</sup>Guys and messengers may be attached to the same strain plates or to the same through-bolts.

(ii) Suspension insulators not restrained from movement. Where suspension insulators are used and are not restrained from movement, the conductor clearances from surfaces of supports, from span or guy wires, or from vertical or lateral conductors shall be such that the values of clearances required by (i) above will be maintained with an insulator swing of thirty degrees from the vertical position.

(d) Conductor separation—Vertical racks. (See Appendix at end of this chapter.) Conductors or cables may be carried on vertical racks or separate brackets other than wood placed vertically at one side of the pole and securely attached thereto, if all the following conditions are met:

(i) The voltage between conductors shall be not more than 750 volts, except that cables having effectively grounded continuous metal sheath may carry any voltage.

(ii) Conductors shall be of the same material or materials.

(iii) Vertical spacing between conductors of 0 to 300 volts shall be not less than 8 inches, except for busses and service takeoffs, where the spacing may be reduced to 4 inches. (See Table 9, subsection (1)(c) of this section for necessary clearances from pole surfaces.) (See Appendix at end of this chapter.)

(iv) Vertical spacing between conductors of 300 to 750 volts shall be not less than 12 inches, except for busses and service takeoffs, where spacing may be reduced to 8 inches. (See Appendix at end of this chapter.)

**Exception:** The above conditions shall not permit supply circuits of 0 to 750 volts to occupy the same arm with circuits of over 750 volts except on substation structures and transformer banks.

(e) Separation between supply circuits of different voltage classifications on the same crossarm. Supply circuits of any one voltage classification as given in Table 11 (WAC 296-44-334 (1)(a)) may be maintained on the same crossarm with supply circuits of the next consecutive voltage classification only under the following conditions:

(i) If they occupy pin positions on opposite sides of the pole.

(ii) If in bridge-arm or side-arm construction they are separated by a distance of not less than the climbing

space required for the higher voltage concerned and provided for in WAC 296-44-328.

(iii) If series lighting or similar supply circuits are ordinarily dead during periods of work on or above the crossarm concerned.

(iv) If the two circuits concerned are communication circuits used in the operation of supply lines, and supply circuits of less than 8,700 volts, and are owned by the same utility, provided they are installed as in (i) or (ii) above.

**Exception:** The above conditions shall not permit supply circuit of 0 to 750 volts to occupy the same arm with circuits of over 750 volts except on substation structures and transformer banks.

(2) **Separation between conductors attached to buildings.** Separation of wires from each other shall be not less than those required in Table 6 (subsection (1)(b)(i)(A)) for separation of conductors from each other as supports.

**Exception:** Conductors on vertical racks or separate brackets other than wood placed vertically meeting the requirements of subsection (1)(d) of this section may have the separations specified in that rule.

(3) **Separation between conductors attached to bridges.** Supply conductors attached to bridges and supported at frequent intervals may have less separation at supports than required by subsection (1)(b)(i)(A) and (B). The separation shall be not less than the clearance between supply conductors and the surfaces of poles or crossarms required by subsection (1)(c)(i), or less than the following:

Span length:	Separation inches
0 to 20 feet.....	6
20 to 50 feet.....	9

[Subsections (1)(b)(ii) and (1)(c)(ii), filed 10/30/64, effective 12/1/64; § 23 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-328 Clearances--Climbing space. (1) Location and dimensions.** (a) A climbing space having the horizontal dimensions specified in subsection (5) of this section shall be provided past any conductors, crossarms, or other parts.

(b) The climbing space shall be provided on all poles and structures.

(c) The climbing space shall extend vertically past any conductor or other part between levels above and below the conductor as specified in subsections (5), (6), (7), and (8) of this section. The position of the climbing space shall be maintained for at least 40 inches above and below any limiting conductor level and where the limiting conductor levels are separated 6 feet or more, the climbing space may be rotated by not more than 1/4 of the distance around the pole between any such levels.

Where the climbing space is on the face or back of the pole, this space may be considered as in either quadrant to the right or left for the purpose of interpreting this rule. (See Appendix at end of this chapter.)

(d) The climbing space shall include not less than one quadrant nor more than one-half of the pole cross-section.

(2) **Portions of supporting structures in climbing space.** Portions of the pole or structure when included in one side or corner of the climbing space, are not considered to obstruct the climbing space, providing that such inclusion into the climbing space does not exceed 25% of the total area of the specified climbing space. Where such a condition exists, additional space shall be added to the original spacing to compensate for the loss of clearances.

(3) **Crossarm location relative to climbing space.** All single crossarms should be located on the same face and side of the pole to avoid unnecessarily obstructing the climbing space through the different conductor levels. One arm of sets of double crossarms protruding into the climbing space shall not be considered as an obstruction in the climbing space. (See Appendix at end of this chapter.)

(4) **Location of supply and communication apparatus relative to climbing space.** Transformers, regulators, lightning arresters, fuse mountings, switches, service brackets, communication terminal cans, and service drop hooks and other attachments shall be mounted outside the climbing space. Pole steps shall be placed so that they do not interfere with the climbing space. (See Appendix at end of this chapter.)

(5) **Climbing space through conductors on crossarms.** (See Appendix at end of this chapter.)

(a) Conductors of same voltage classification on same crossarm. Climbing space between conductors shall be of the horizontal dimensions specified in Table 10 below, and shall be provided both along and across the line, and shall be projected vertically not less than 40 inches above and below the limiting conductors. Where communication conductors are above supply conductors of more than 8,700 volts, the climbing space shall be projected vertically at least 60 inches above the highest supply conductor. (See Appendix at end of this chapter.)

**Exception 1:** This rule does not apply if it is the unvarying practice of the employer concerned to prohibit employees from ascending beyond the conductors of the given line, unless the line is killed.

(b) Conductors of different voltage classifications on same crossarm. The climbing space shall be that required by Table 10 below for the highest voltage of any conductor bounding the climbing space. The climbing space shall extend vertically to the limits specified in paragraph (a) above, and the exception thereto.

(c) Horizontal climbing-space dimensions.

**TABLE 10.**—Minimum horizontal dimensions of climbing space

Character of conductors adjacent to climbing space	Horizontal dimensions of climbing space (inches)				
	Voltage of conductors		On poles used solely by—		On jointly used poles
	To ground	Between wires	Communication conductors	Supply conductors	Supply conductors above communication conductors
Communication conductors . . .	0 to 150 . . . . .		No re-quire-ment.		<sup>2</sup> No re-quire-ment.
	Exceed-ing 150.		24 recom-mended.		<sup>2</sup> 24 recom-mended.
Supply conductors . . .	Less than 300.			24	24 . . . . . 30.
	300 to . . . . .	8,700 . . . . .		30	30 . . . . . 30
		8,700 to 15,000 . . . . .		36	36 . . . . . 30.
		Exceed-ing 15,000		More than <sup>3</sup> 36.	More than <sup>3</sup> 36. . . . . More than <sup>3</sup> 36.

<sup>1</sup>This relation of levels is not, in general, desirable and should be avoided where practicable.

<sup>2</sup>Climbing space shall be the same as required for the supply conductors immediately above, with a maximum of 30 inches, except that a climbing space of 16 inches across the line may be employed for communication cables or conductors where the only supply conductors at a higher level are secondaries (0 to 750 volts between conductors) supplying airport or airway marker lights or crossing over the communication line and attached to the pole top or to a pole-top extension fixture. (See Appendix, WAC 296-44-88001 through 296-44-88011.)

(6) **Climbing space on buckarm construction.** The full width of climbing space shall be maintained on buckarm construction and shall extend vertically in the same position at least 40 inches (or 60 inches where required by subsection (5)(a)) above and below any limiting conductor.

Method of providing climbing space on buckarm construction. With circuits of less than 5,000 volts and span lengths not exceeding 150 feet and sags not exceeding 15 inches for wires of No. 2 and larger sizes, or 30 inches for wires smaller than No. 2, a six-pin crossarm having pin spacing of 14 1/2 inches may be used to provide a 30-inch climbing space on one corner of a junction pole by omitting the pole pins on all arms, and inserting pins midway between the remaining pins so as to give a spacing of 7 1/4 inches, provided that each conductor on the end of every arm is tied to the same side of its insulator, and that the spacing on the next pole is not less than 14 1/2 inches. (See Appendix at end of this chapter.)

(7) **Climbing space past vertical conductors.** One vertical run or riser incased in suitable conduit or other protective covering not over 2 inches outside diameter

and securely attached to the surface of the pole or structure and/or a ground wire attached to the surface of the pole, are allowed in the climbing space. It is recommended that this practice be avoided whenever practical.

(8) **Climbing space near ridge-pin conductors.** The climbing space specified in subsection (5)(c) shall be provided above the top crossarm to the ridge-pin conductor but need not be carried past it. [§ 23 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-331 Clearances--Working space.** (1) **Location of working spaces.** Working spaces shall be provided on the climbing face of the pole at each side of the climbing space.

(2) **Dimensions of working spaces.**

(a) Along the crossarm. The working space shall extend from the climbing space to the outmost pin position on the crossarm.

(b) Perpendicular to the crossarm. The working space shall have the same dimension as the climbing space (see WAC 296-44-328(5)). This dimension shall be measured from the face of the crossarm.

(c) Vertically. The working space shall have a height not less than that required by WAC 296-44-334 for the vertical separation of line conductors carried at different levels on the same support.

(3) **Location of vertical and lateral conductors relative to working spaces.** The working spaces shall not be obstructed by vertical or lateral conductors. Such conductors shall be located on the opposite side of the pole from the climbing side or on the climbing side of the pole at a distance from the crossarms at least as great as the width of climbing space required for the highest-voltage conductors concerned. Vertical conductors enclosed in suitable conduit may be attached on the climbing side of the pole, in compliance with WAC 296-44-328(7).

(4) **Location of buckarms relative to working spaces.** Buckarms may be used under any of the following conditions, provided the climbing space is maintained. Climbing space may be obtained as in WAC 296-44-328(6). (See Appendix at end of this chapter.)

(a) Standard height of working space. Lateral working space of the height required by Table 11 (WAC 296-44-334 (1)(a)) may be provided between the buckarms and adjacent line arms to which conductors on the buckarms are not attached.

Method of meeting requirements. This may be accomplished by increasing the spacing between the line crossarm gains.

(b) Reduced height of working space. Buckarms may be inserted at reduced spacing when the conductors on the buckarms are attached to conductors on one adjacent linearm as follows: Where wires are of 0 to 750 volts spacing may be reduced to 12 inches; where wires are of 750 to 15,000 volts spacing may be reduced to 18 inches. [§ 23 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-334 Clearances--Vertical separation between line conductors, cables, and equipment located at different levels on the same pole or structure.** All line

conductors, cables, or equipment located at different levels on the same pole or structure shall have the vertical separations set forth below. (1) **Vertical separation between horizontal crossarms.** Crossarms supporting line conductors shall be spaced in accordance with Table 11. Vertical separations between crossarms shall be measured from center to center.

(a) Basic separations. The separations given in the following Table 11 are for crossarms carrying conductors of 0 to 50,000 volts between conductors attached to fixed supports. (See Appendix at end of this chapter.)

(b) Increased separations for voltages exceeding 50,000 volts between conductors. For voltages greater than 50,000 volts between conductors the clearances of Table 11 shall be increased at the rate of 0.4 inch per 1,000 volts of the excess. (See Appendix at end of this chapter.)

**TABLE 11.—Vertical separation of crossarms carrying conductors**

(All voltages are between conductors) (See Appendix, WAC 296-44-88001 though 296-44-88011.)

Conductors usually at lower levels	Supply conductors; preferably at higher levels				
	Open wires, 0 to 750 volts; cables, all voltages, having effectively grounded continuous metal sheath or messenger			15,000 to 50,000 volts	
	750 to 8,700 volts	8,700 to 15,000 volts	Same utility	Different utilities	
	Feet	Feet	Feet	Feet	Feet
Communication conductors:					
General . . . . .	4 <sup>1 2</sup>	4	7	—	7
Used in operation of supply lines . . . . .	2	3	4	7	7
Supply conductors:					
0 to 750 volts . . . . .	2	3 <sup>3</sup>	7 <sup>5 6</sup>	7 <sup>5</sup>	7
750 volts to 5,000 volts . . . . .	—	2 <sup>3</sup>	7 <sup>6</sup>	7	7
5,000 volts to 8,700 volts . . . . .	—	2 <sup>3</sup>	4	4	7
8,700 volts to 15,000 volts:					
If worked on alive with long-handled tools, and adjacent circuits are neither killed nor covered with shields or protectors . . . . .	—	—	4	4	6

If not worked on alive except when adjacent circuits (either above or below) are killed or covered by shields or protectors, or by the use

Conductors usually at lower levels	Supply conductors; preferably at higher levels				
	Open wires, 0 to 750 volts; cables, all voltages, having effectively grounded continuous metal sheath or messenger			15,000 to 50,000 volts	
	750 to 8,700 volts	8,700 to 15,000 volts	Same utility	Different utilities	
	Feet	Feet	Feet	Feet	Feet
of long-handled tools not requiring linemen to go between live wires . . . . .	—	—	2	4 <sup>4</sup>	4 <sup>4</sup>
Exceeding 15,000 volts, but not exceeding 50,000 volts . . . . .	—	—	—	4 <sup>4</sup>	4 <sup>4</sup>

<sup>1</sup>Where supply circuits of 550 volts or less, with transmitted power of 3,200 watts or less, are run below communication circuits in accordance with WAC 296-44-298 (2)(c), the clearance may be reduced to 2 feet.

<sup>2</sup>In localities where the practice has been established of placing on jointly used poles, crossarms carrying supply circuits of less than 300 volts to ground and crossarms carrying communication circuits at a vertical separation less than specified in the table, such existing construction may be continued until the said poles are replaced provided that—

The minimum separation between existing crossarms is not less than 2 feet, and that—

Extensions to the existing construction shall conform to the clearance requirements specified in Table 11.

When communication conductors are all in cable, a supply crossarm carrying only wires of not more than 300 volts to ground may be placed at not less than 2 feet above the point of attachment of the cable to the pole provided that—

The nearest supply wire on such crossarm shall be at least 30 inches horizontally from the center of the pole, and that—

The cable be placed so as not otherwise to obstruct the climbing space.

<sup>3</sup>Where conductors are operated by different utilities, a minimum vertical spacing of 4 feet is required.

<sup>4</sup>These values do not apply to adjacent crossarms carrying phases of the same circuit or circuits.

<sup>5</sup>This value may be reduced to 4 feet where secondary vertical-rack construction is used on one side or face of pole, or on two sides where conductors are deadened, only. Service contacts are permitted in addition.

<sup>6</sup>A primary buck arm not less than 8 feet long supporting not more than 2 conductors in the end pin positions or one lateral primary conductor dead-ended on the pole, may be placed in the 7 foot spacing provided that this spacing is not reduced to less than 5 feet.

(2) **Vertical separation between line conductors on horizontal crossarms.** (See Appendix at end of this chapter.) Where line conductors are supported on horizontal crossarms spaced as required in subsection (1); the vertical separation between such conductors shall be not less than the following:

(a) Where conductors on the crossarm are of the same voltage classification. Under these conditions, the vertical separation required by Table 11 may be reduced as follows:

Where crossarm separation required by table 11 is—	Separation between conductors may be reduced to—
2 feet .....	16 inches
3 feet .....	28 inches
4 feet .....	40 inches
6 feet .....	60 inches
7 feet .....	70 inches

(b) Where conductors of different voltage classifications are on same crossarm. Under these conditions, the vertical separation between conductors on adjacent crossarms shall be that required by Table 11 (subsection (1)(a)) above for the highest voltage classification concerned.

(c) Conductors of different sags on same support.

(i) Variation in clearance. Line conductors supported at different sags shall have vertical spacings at the supporting structures so adjusted that the minimum spacing at any point in the span, at 60°F, no wind, shall not be reduced more than 25 percent from that required at the supports by WAC 296-44-325 (1)(b)(i)(A) and (B) and this section.

(ii) Readjustment of sags. Sags should be readjusted when necessary to accomplish the foregoing, but not reduced sufficiently to conflict with the requirements of WAC 296-44-364 (6)(d). In cases where conductors of different sizes are strung to the same sag for the sake of appearance or to maintain unreduced clearance throughout storms, the chosen sag should be such as will keep the smallest conductor involved in compliance with the sag requirements of WAC 296-44-364(6)(d).

(3) **Separation in any direction.** The separation in any direction between conductors of the same or different voltage classification when carried on the same structure, but on crossarms which are not horizontal, shall be not less than the values given in Table 11 (this section) for vertical separation. The separation in any direction shall not in any case be less than the horizontal separation specified in WAC 296-44-325 (1)(b)(i)(A) and (B).

(4) **Vertical separation for line conductors not carried on crossarms.** The vertical separation between conductors not carried on crossarms shall be the same as required in subsection (2)(a) of this section, for conductors on crossarms.

**Exception:** Conductors on vertical racks or separate brackets other than wood placed vertically meeting the requirements of WAC 296-44-325 (1)(d) may have separations as specified in that rule.

(5) **Vertical separation between conductors and non-current-carrying metal parts of equipment.**

(a) Equipment. For the purpose of measuring separations under this rule, "equipment" shall be taken to

mean noncurrent-carrying metal parts of equipment, including metal supports for cables or conductors, and metal supply-crossarm braces which are attached to metal crossarms or are less than 1 inch from transformer cases or hangers which are not effectively grounded.

(b) Separations in general. Vertical separations between supply conductors and communication equipment, between communication conductors and supply equipment, and between supply and communication equipment shall be as follows, except as provided in (c), below:

Supply voltage between conductors	Vertical separation
	Inches
0 to 8,700.....	40
Exceeding 8,700 .....	60 <sup>1</sup>

<sup>1</sup>Transformer cases and associated hangers and supply cables, when effectively grounded, may have a separation of 40 inches.

(c) Separations for span wires and brackets. Span wires or brackets for lamps or trolley contact conductors shall have at least the vertical separations from communication equipment set forth below:

- From open communication conductors on crossarms:
  - Span wire or brackets above crossarm . 20 inches<sup>1</sup>
  - Span wire or bracket below crossarm . . 2 feet
- From messenger wires carrying communication cables..... 1 foot
- From terminal box of communication cables, if practicable..... 1 foot<sup>2</sup>
- From communication brackets, bridle wire rings, or drive hooks..... 2 inches

<sup>1</sup>This may be reduced to 12 inches for either span wires or metal parts of lamp brackets at points 40 inches or more from the pole surface.

<sup>2</sup>Where it is not practicable to obtain a clearance of 1 foot from terminal boxes of communication cables, all metal parts of terminals shall have the greatest practicable separation from fixtures or span wires, including all supporting screws and bolts of both attachments. (See Figure 6.A-9.A in Appendix, WAC 296-44-88005.)

**Exception:** If lamp brackets are effectively grounded, these separations do not apply.

[§ 23 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-337 Clearances—Clearances of vertical and lateral conductors from other wires and surfaces on the same support.** Vertical and lateral conductors shall have the clearances and separations required by this rule from other conductors, wires, or surfaces on the same support.

**Exception 1:** This rule does not prohibit the placing of supply circuits of the same or next voltage classification

in the same iron pipe, if each circuit or set of wires be incased in a metal sheath.

**Exception 2:** This rule does not prohibit the placing of paired communication conductors in rings attached directly to the pole or to messenger.

**Exception 3:** This rule does not prohibit placing grounding conductors, neutral conductors which are effectively grounded throughout their length and associated with supply circuits, metal sheathed supply cables or conductors enclosed in conduit, directly on the pole.

**Exception 4:** This rule does not prohibit placing supply circuits of 550 volts or less and not exceeding 3,200 watts and properly insulated, in the same cable with control circuits with which they are associated.

(1) **Location of vertical or lateral conductors relative to climbing spaces, working spaces, and pole steps.** Vertical or lateral conductors shall be located so that they do not obstruct climbing spaces, or lateral working spaces between line conductors at different levels, or interfere with the safe use of existing pole steps.

**Exception:** This rule does not apply to vertical runs incased in suitable conduit or other protective covering. (See WAC 296-44-328(7).)

(2) **Conductors not in conduit.** Conductors not incased in conduit shall have the same clearances from conduits as from other surfaces of structures.

(3) **Mechanical protection near ground.** Where within 8 feet of ground, all vertical conductors, cables, and grounding wires shall be protected by a covering which gives suitable mechanical protection. For grounding wires from lightning arresters, the protective covering specified above shall be of wood molding, or other insulating material giving equivalent protection.

**Exception 1:** This covering may be omitted from armored cables or cables installed in a grounded metal conduit.

**Exception 2:** This covering may be omitted from vertical runs of communication cables or conductors.

**Exception 3:** This covering may be omitted from grounding wires in rural districts having triplebraid weather-proof covering, or where such grounding wire is one of a number of grounding wires used to provide multiple grounds.

**Exception 4:** This covering may be omitted from wires which are used solely to protect poles from lightning.

(4) **Requirements for vertical and lateral supply conductors on supply line poles or within supply space on jointly used poles.**

(a) General clearances. In general, clearances shall be not less than the values specified in Table 12.

TABLE 12.—General clearances.

(All voltages are between conductors)

Clearance of vertical and lateral conductors	Clearance for highest voltage concerned in the clearance	
	0 to 8,700 volts	Exceeding 8,700 volts, add the following for each 1,000 in excess
	Inches	Inches
From surfaces of supports . . . . .	3	0.25
From span, guy, or messenger wires . . .	6	.4
From line conductors rigidly supported on fixed supports, such conductors being of—		
Same circuit . . . . .	3	.25
Different circuits . . . . .	6	.4
From line conductors not rigidly supported on fixed supports . . . . . <sup>1</sup>	1	1

<sup>1</sup>The clearances shall be increased beyond the values given above from line conductors on fixed supports (see WAC 296-44-325 (1)(b)(ii), and (1)(c)(ii)).

(b) Special cases. The following requirements apply only to portions of a pole which workmen ascend while the conductors in question are alive:

(i) Side-arm construction. Vertical conductors in metal-sheathed cables and grounding wires may be run without insulating protection from supply line conductors on poles used only for supply lines and employing side-arm construction on the side of the pole opposite to the line conductors if climbing space is provided on the line-conductor side of the pole.

(ii) On insulators. Vertical and lateral conductors of less than 8,700 volts between conductors if on poles used only for supply lines may be run in multiple-conductor cables having suitable substantial insulating covering, if such cable is held taut on standard insulators supported on pins or brackets and is arranged so that the cable is held at a distance of approximately 5 inches from the surface of the pole and from any pole step.

(iii) Conductors to street lamps. On poles used only for supply lines, open wires may be run from the supply line arm directly to the head of a street lamp, provided the clearances of Table 12 are obtained and the open wires are substantially supported at both ends.

(iv) Conductors of less than 300 volts. Vertical or lateral secondary supply conductors of not more than 300 volts to ground may be run in multiple-conductor cable attached directly to the pole surface or to cross-arms in such a manner as to avoid abrasion at the point of attachment. Each conductor of such cable which is not effectively grounded, or the entire cable assembly, shall have an insulating covering required for a conductor of at least 1,000 volts.

(v) Other conditions. If open wire conductors are within 4 feet of the pole, vertical conductors where within a zone of 4 feet above and below such line conductors of not more than 8,700 volts between conductors, or where within a zone of 6 feet above and below such line conductors of more than 8,700 volts between conductors, shall be run in one of the following ways:

(A) So as to clear the pole center by not less than 15 inches if the vertical conductors are of 8,700 volts less between conductors, or 20 inches if more than 8,700 volts;

(B) Enclosed in insulating conduit, or in metal conduit or cable protected by an insulating covering;

(C) Conductors with triple-braid weather-proof or equivalent covering and covered by wood molding.

Methods (B) and (C) apply also to lateral runs and to grounding conductors, except that conductors for grounding lightning-protection wires are not required to be covered within 6 feet above or below circuits of 15,000 volts or more.

**(5) Requirements for vertical and lateral communication conductors on communication line poles or within the communication space on jointly used poles.**

(a) Clearances from wires. The clearances and separations of vertical and lateral conductors from other conductors (except those in the same ring run) and from guy, span, or messenger wires shall be 3 inches.

(b) Clearances from pole and crossarm surfaces. Vertical and lateral insulated communication conductors may be attached direct to a pole or crossarm. They shall have a vertical clearance of at least 40 inches from any supply conductors (other than vertical runs or lamp leads) of 8,700 volts or less between conductors, or 70 inches if more than 8,700 volts between conductors.

**Exception:** These clearances do not apply where the supply circuits involved are those carried in the manner specified in WAC 296-44-298 (2)(C).

**(6) Requirements for vertical supply conductors passing through communication space on jointly used poles.** Vertical supply conductors, including grounding wires, which pass through communication line space on jointly used poles shall be installed as follows:

(a) Metal-sheathed supply cables. Metal-sheathed supply cables shall be covered as follows:

(i) Extent of covering. covering shall extend from the lowest points of such cables up to 40 inches or more above the highest communication conductors.

(ii) Nature of covering. The covering shall consist of wood molding or other suitable insulating material at points higher than 8 feet above the ground.

**Exception 1:** Metal pipe may be used throughout, under the following conditions:

On poles where there are no trolley attachments and the metal pipe is effectively grounded, no insulating covering is required.

On poles where there are trolley attachments or where the metal pipe is not effectively grounded, the pipe shall be covered with wood molding or other suitable insulating material from a point six feet below the lowest communication wire or trolley attachment to a point 40

inches above the highest communication wire or trolley attachment.

**Exception 2:** No insulating covering is required over supply secondary multi-conductor cables attached directly to the pole surface in accordance with the requirements of subsection (6)(b)(iii).

**Exception 3:** Where there are no trolley attachments on the pole, no insulating covering is required over supply cables having effectively grounded lead sheath, or supply cables, having effectively grounded metal sheath of other types where mutually agreed to by the parties concerned.

(b) Supply conductors. Supply conductors shall be installed in one of the following ways:

(i) In conduit. Conductors of all voltages may be enclosed in the same way and to the same extent as required in 1 above for metal-sheathed cables.

(ii) On pins and insulators. Vertical and lateral conductors of street-lighting circuits and service leads of less than 750 volts to ground may be run on the street side of the pole in multiple-conductor cable having suitable substantial insulating covering if such cable is held taut on standard insulators supported on pins or brackets and arranged so that the cable shall be held at a distance of approximately 5 inches away from the surface of the pole or from any pole steps.

(iii) Installed on the pole surface. Secondary supply conductors of not more than 300 volts to ground may be run in multiple-conductor cables attached directly to the pole surface in such a manner as to avoid abrasion at the points of attachment. In the case of aerial services, the point where such cables leave the pole shall be at least 40 inches above the highest, or 40 inches below the lowest, communication attachment. Each conductor of such cable which is not effectively grounded shall be insulated for a potential of at least 1,000 volts.

(iv) Suspended from supply crossarm. Lamp leads of street lighting circuits may be run from supply crossarms directly to a street lamp bracket or luminaire under the following conditions:

(A) The vertical run shall consist of paired wires or multiple-conductor cable securely attached at both ends to suitable brackets and insulators.

(B) The vertical run shall be held taut at least 40 inches from the surface of the pole (through the communication space), at least 12 inches beyond the end of any communication crossarm by which it passes, and at least 6 inches from communication drop wires.

(C) Insulators attached to lamp brackets for supporting the vertical run shall be capable of meeting, in the position in which they are installed, the same flashover requirements as the luminaire insulators.

(D) Each conductor of the vertical run shall be No. 10 AWG or larger.

(c) Supply grounding wires. Supply grounding wires shall be covered with wood molding or other suitable insulating covering to the extent required for metal-sheathed cables in subsection (6)(a) above.

**Exception:** If there are no trolley attachments on the pole, insulating covering is not required for a grounding conductor which is metallically connected to a conductor which forms part of an effective grounding system.

(d) Separation from through bolts. Vertical runs of supply conductors shall be separated from the ends of through bolts associated with communication line equipment by one-eighth of the circumference of the pole where practicable, but in no case less than 2 inches.

(7) **Requirements for vertical communication conductors passing through supply space on jointly used poles.** All vertical runs of communication conductors passing through supply space shall be installed as follows:

(a) Metal-sheathed communication cables. Vertical runs of metal-sheath communication cables shall be covered with wood molding, or other suitable insulating material, where they pass trolley feeders or other supply-line conductors. This insulating covering shall extend from a point 40 inches above the highest trolley feeders, or other supply conductors, to a point 6 feet below the lowest trolley feeders or other supply conductors, but need not extend below the top of any mechanical protection which may be provided near the ground.

**Exception:** Communication cables may be run vertically on the pole through space occupied by railroad-signal supply circuits in the lower position, as permitted in WAC 296-44-298 (2)(c), without insulating covering within the supply space.

(b) Communication conductors. Vertical runs of insulated communication conductors shall be covered with wood molding, or other suitable insulating material, to the extent required for metal-sheathed communication cables in (7)(a) above, where such conductors pass trolley feeders or other supply conductors.

**Exception:** Communication conductors may be run vertically on the pole through space occupied by railroad-signal supply circuits in the lower position, as permitted in WAC 296-44-298 (2)(c), without insulating covering within the supply space.

(c) Communication grounding conductors. Vertical communication grounding conductors shall be covered with wood molding or other insulating material between points at least 6 feet below and 40 inches above any trolley feeders or other supply line conductors by which they pass.

**Exception:** Communication grounding conductors may be run vertically on the pole through space occupied by railroad-signal supply circuits in the lower position, as permitted in WAC 296-44-298 (2)(c) without insulating covering within the supply space.

(d) Separation from through bolts. Vertical runs of communication conductors shall be separated from the ends of through bolts associated with supply-line equipment by one-eighth of the circumference of the pole where practicable, but in no case less than 2 inches. [§ 23 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-340 Grades of construction—General.** For the purpose of "strength requirements," sections (WAC 296-44-361 et seq.) and "line insulators," sections (WAC 296-44-373 et seq.) of this code, conductors and their supporting structures are classified under the grades specified in this section on the basis of the relative hazard existing. [§ 24 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-343 Grades of construction—Application of grades of construction to different situations.**

(1) **Supply cables.** For the purposes of these rules, supply cables are divided into two classes as follows:

(a) Specially installed cables. In this class are included metal-sheathed supply cables installed in accordance with WAC 296-44-361 (7)(a).

**Note:** Such cables are sometimes permitted to have a lower grade of construction than open-wire supply conductors of the same voltage.

(b) Other cables. In this class are included all other supply cables.

**Note:** Such cables are required to have the same grade of construction as open-wire supply conductors of the same voltage.

(2) **Two or more conditions.** In any case where two or more conditions affecting the grade of construction exist, the grade of construction used shall be the highest one required by any of the conditions.

(3) **Order of grades.** For supply and communication conductors and supporting structures, the relative order of grades is B, C, and N, grade B being the highest. Where grades D and N are specified for communication lines, grade D is the higher.

**Note:** Grade D cannot be directly compared with grades B and C, but subsection (4)(c)(iii) below provides for cases where these two conditions are present.

(4) **At crossings.**

(a) Grade of upper line. Conductors and supporting structures of a line crossing over another line shall have the grade of construction specified in subsection (4)(c) below and WAC 296-44-346 and 296-44-349.

(b) Grade of lower line. Conductors and supporting structures of a line crossing under another line need only have the grades of construction which would be required if the line at the higher level were not there.

(c) Multiple crossing.

(i) Where a line crosses in one span over two other lines. The grade of construction of the uppermost line shall be not less than the highest grade which would be required of either one of the lower lines if it crossed the other lower line.

**Example:** If a 2,300-volt line crosses in the same span over a communication line and a direct-current trolley contact conductor of more than 750 volts, the 2,300-volt line is required to comply with grade B construction at the crossing. This is a double crossing and introduces a greater hazard than where the upper supply line crosses the communication line only.

(ii) Where one line crosses over a span in another line, which span is in turn involved in a second crossing. The grade of construction for the highest line shall be not less than that required for the next lower line.

**Exception:** This requirement does not apply when the two upper lines are of such a nature and have such circuit protection that the danger of causing a break in the lower of these two lines by mechanical or electrical contact is eliminated.

(iii) Where communication conductors cross over supply conductors and railroad tracks in the same span. The grades of construction shall be in accordance with Table 13.

**Recommendation:** It is recommended that the placing of communication conductors above supply conductors at crossing, conflicts, or on jointly used poles, be avoided unless the supply conductors are trolley contact conductors and their associated feeders.

**TABLE 13.**—Grades of construction for communication conductors crossing over railroad tracks and supply lines

When crossing over—	Communication conductor grades
Railroad tracks and supply lines of 0 to 750 volts to ground, or specially installed supply cables of all voltages.....	D
Railroad tracks and supply lines exceeding 750 volts to ground.....	B

**(5) Conflicts.**

(a) How determined. Where two lines are adjacent (except at crossing spans) the distance between them and the relative heights above ground of poles and of conductors of each line determine whether conflict exists, and, if so, whether the conflict is a structure conflict (see definition) or a conductor conflict (see definition), or both.

(b) Conductor conflict. At conductor conflicts, the grade of construction of the conflicting conductor shall

be as required by subsection (4)(c) above and WAC 296-44-346.

(c) Structure conflict. At structure conflicts, the grade of construction of the conflicting structure shall be as required by WAC 296-44-349. [§ 24 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-346 Grades of construction—Grades of construction for conductors.** The grades of construction required for conductors of all classes in different situations are given in Tables 14 and 15. For the purpose of these tables certain classes of circuits are treated as follows: (1) **Status of constant-current circuits.** The grade of construction for a constant-current supply circuit involved with a communication circuit and not in specially installed cable shall be based on either its current rating or on the open-circuit voltage rating of the transformer supplying such circuit, as set forth in Tables 14 and 15. In all other cases the grade of construction for a constant-current circuit shall be based on its nominal full-load voltage.

(2) **Status of railway feeders and trolley contact conductors.** In determining grades of construction where railway feeders and trolley-contact conductors are involved, they shall be considered as other supply conductors of the same voltage.

**Exception:** Direct-current trolley circuits exceeding 750 volts to ground where crossing over, conflicting with, or on jointly used poles with and above communication circuits, shall have the grades of construction specified in Table 14 for direct-current railway feeders.

(3) **Status of communication circuits used exclusively in the operation of supply lines.** In determining grades of construction where communication circuits used exclusively in the operation of supply lines are concerned, they shall be considered as ordinary communication circuits when run as such (see WAC 296-44-424(1)(c)) and as supply circuits when run as such (see WAC 296-44-424(1)(d)).

**Exception:** Communication circuits located below supply circuit with which they are used shall not require such supply circuits to meet any rules for grade of construction other than that the sizes of such supply conductors shall be not less than required for grade C (see WAC 296-44-364 (6)(b)).

TABLE 14.—Grades of construction for supply conductors alone, at crossings, at conflicts, or on same poles with other conductors

(All voltages are between wires except as indicated. Corresponding voltages to grounded neutral of grounded circuits are shown in parentheses. In applying the table to two-wire grounded circuits use the "to neutral" voltage.)

Conductors, Tracks and Right of Ways at Lower Levels	Supply Conductors at Higher Levels		Constant-potential supply conductors other than direct current railway feeders												Constant current supply conductors				Direct current railway feeders				Communication conductors used exclusively in the operation of, and run as, supply lines

a. The words "open" and "cable" appearing in the headings have the following meanings as applied to supply conductors: "Cable" means the specially installed cables described in WAC 296-44-343 (1)(a). "Open" means open wire and also supply cables not "specially installed."

b. Where lines are located so that they can fall outside the fenced right of way into urban districts, the construction shall comply with the grades specified for lines not on fenced right of ways for corresponding voltages.

c. If circumstances within a given area warrant it, supply conductors need only meet the requirements of grade C construction if the supply circuits are so constructed, operated, and maintained that such circuits will be promptly deenergized, both initially and following subsequent breaker operations, in the event of a contact with lower supply conductors or other grounded objects.

d. Grade N construction may be used, if crossing over or conflicting with, supply services only.

e. If the wires are service drops, they may have grade N sizes and sags as set forth in Tables 28 and 29 (WAC 296-44-370(5)).

f. Grade N construction may be used where the communication conductors consist only of not more than 1 insulated twisted-pair or parallel-lay conductor, or where 2 or more such insulated conductors are involved and these consist of service drops not grouped together in a single run.

g. The supply conductors need only meet the requirements of grade C construction if both of the following conditions are fulfilled:

(1) The supply and communication circuits are so constructed, operated and maintained that the supply circuits will be promptly deenergized, both initially and following subsequent breaker operations, in the event of a contact with the communication plant.

(2) The voltage and current impressed on the communication plant in the event of a contact with the supply conductors are not in excess of the safe operating limit of the communication protective devices.

h. Grade C construction applies to any supply cable on jointly used poles if carried above communication attachments and supported on an effectively grounded messenger.

i. Grade C construction may be used if the open-circuit voltage of the transformer supplying the circuit does not exceed 2,900 volts.

\*Rules 242A, 242B and 242C are now codified as subsections (1), (2), and (3) of WAC 296-44-346.

(4) **Status of fire-alarm conductors.** In determining grades of construction where fire-alarm conductors are concerned, they shall be considered as other communication circuits.

**Exception:** Fire-alarm conductors shall always meet grade D where the span length is from 0 to 150 feet, and grade C where the span length exceeds 150 feet.

(5) **Status of neutral conductors of supply circuits.** Supply-circuit neutral conductors, which are effectively grounded throughout their length and are not located above supply conductors of more than 750 volts to ground, shall have the same grade of construction as supply conductors of not more than 750 volts to ground, except that they need not meet any insulation requirements. Other neutral conductors shall have the same grade of construction as the phase conductors of the supply circuits with which they are associated.

**TABLE 15.—Grades of construction for communication conductors alone, or in upper position at crossings, at conflicts, or on joint poles**

(All voltages are to ground, which, for ungrounded circuits, means the highest voltage between any two conductors.)

	Communication conductors at higher levels <sup>1</sup>	Communication conductors, rural or urban, open or cable, including communication conductors run as such, but used exclusively in the operation of supply lines

Communication conductors, open or cable, used exclusively in the operation of supply lines		B, C, or N <sup>6</sup>	
Communication conductors, open or cable, urban or rural, major or minor		N	

<sup>1</sup>It is recommended that the placing of communication conductors above supply conductors at crossings, conflicts, or on jointly used poles be avoided, unless the supply conductors are trolley-contact conductors and their associated feeders.

<sup>2</sup>The words "open" and "cable" appearing in the headings have the following meaning as applied to supply conductors: "Cable" means the specially installed cables described in WAC 296-44-343 (1)(a). "Open" means open wire and also supply cables not specially installed.

<sup>3</sup>Where constant-current circuits are in specially installed cable, they are considered on the basis of the nominal full-load voltage.

<sup>4</sup>Grade C construction may be used if the open-circuit voltage of the transformer supplying the circuit does not exceed 2,900 volts.

<sup>5</sup>See WAC 296-44-346(2).

<sup>6</sup>See WAC 296-44-346(3).

[§ 24 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-349 Grades of construction—Grades of supporting structures.** (1) **Pole or towers.** The grade of construction shall be that required for the highest grade of conductors supported.

**Exception 1:** The grade of construction of jointly used poles, or poles used only by communication lines, need not be increased merely because of the fact that communication wires carried on such poles cross over trolley contact conductors of 0 to 750 volts to ground.

**Exception 2:** Poles carrying grade C or D fire-alarm conductors, where alone, or where concerned only with other communication conductors, need meet only the requirements of grade N.

**Exception 3:** Poles carrying supply service loops of 0 to 750 volts to ground shall have at least the grade of construction required for supply line conductors of the same voltage.

**Exception 4:** Where communication lines cross over supply conductors and a railroad in the same span and grade B is required by WAC 296-44-343 (4)(c)(iii) for the communication conductors, due to the presence of railroad tracks, the grade of the poles or towers shall be D.

**Exception 5:** At structure conflicts, even though no conductor conflict exists, the grade of construction which would be required by WAC 296-44-346, if the conductors were in conflict, shall be applied to the pole or tower.

**Note:** This requirement may result in a higher grade of construction for the pole or tower than for the conductors carried thereon.

**Exception 6:** In the case where a structure conflict does not exist, but any conductor is in conductor conflict, the grade of construction of the pole or tower is not required to meet the conductor grade due to the conductor conflict.

(2) **Crossarms.** The grade of construction shall be that required for the lightest grade of conductors carried by the crossarm concerned.

**Exception 1:** The grade of construction of crossarms carrying only communication conductors need not be increased merely because of the fact that such conductors cross over trolley-contact conductors of 0 to 750 volts to ground.

**Exception 2:** Crossarms carrying grade C or D fire-alarm conductors, where alone or where concerned with other communication conductors, need meet only the requirements for grade N.

**Exception 3:** Crossarms carrying supply service loops of 0 to 750 volts to ground shall have at least the grade of construction required for supply line conductors of the same voltage.

**Exception 4:** Where communication lines cross over supply conductors and a railroad in the same span and grade B is required by WAC 296-44-343 (4)(c)(iii) for the communication conductors due to the presence of railroad tracks, the grade of the crossarm shall be D.

(3) **Pins, insulators, and conductor fastenings.** The grade of construction shall be that required for the conductor concerned.

**Exception 1:** The grade of construction of pins, insulators, and conductor fastenings carrying only communication conductors need not be increased merely because of the fact that such conductors cross over trolley-contact conductors of 0 to 750 volts to ground.

**Exception 2:** In the case of grade C or D fire-alarm conductors where alone, or where concerned only with other communication conductors, pins, insulators, and conductor fastenings need meet only the requirements for grade N.

**Exception 3:** In the case of supply service loops of 0 to 750 volts to ground, pins, insulators, and conductor fastenings shall have at least the same grade of construction as required for supply-line conductors of the same voltage.

**Exception 4:** Where communication lines cross over supply conductors and a railroad in the same span, and grade B is required by WAC 296-44-343 (4)(c)(iii) for the communication conductors due to the presence of

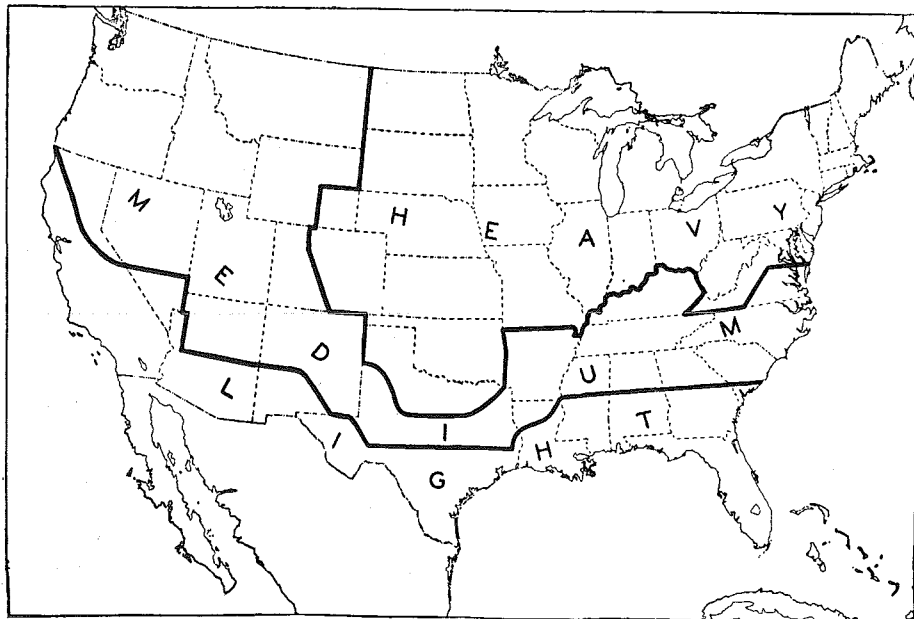

railroad tracks, the grade of pins, insulators, and conductor fastenings shall be D.

**Exception 5:** In case communication conductors are required to meet grade B or C, the insulators need meet only the requirements for mechanical strength for these grades. [§ 24 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-352 Loading for grades B, C, and D—General loading map.** Three general degrees of loading due to weather conditions are recognized and are designated as heavy, medium, and light loading. The map in Figure 1 shows the districts in the United States in which these loadings are normally applicable. It is recognized that loadings in certain areas in each of the loading districts are greater, and in some cases may be less, than those specified for the districts. Any variation in the general loadings specified should be based on factual weather and experience data for the local area involved.

**Note:** The localities in the different groups are classed according to the relative prevalence of high wind velocity and thickness of ice which accumulates on wires, light loading being, in general, for places where little, if any, ice ever accumulates on wires.

Where high wind velocities are frequent in a given place the loading for that place may be classed as heavy, even though ice does not accumulate to any greater extent than at some other place having less severe winds which has been classed as a medium loading district.

[§ 25 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-355 Loading for grades B, C, and D—Conductor loading.** The loading on conductors shall be assumed to be the resultant loading per foot equivalent to the vertical load per foot of the conductor, ice-covered where specified, combined with the transverse

loading per foot due to a transverse, horizontal wind pressure upon the projected area of the conductor, ice-covered where specified, to which equivalent resultant shall be added a constant. In the tabulation below are

the values for ice, wind, temperature, and constants which shall be used to determine the conductor loading.

	Loading district		
	Heavy	Medium	Light
Radial thickness of ice (in.) . . . . .	0.50	0.25	0
Horizontal wind pressure in pounds per square foot . . . . .	4	4	9
Temperature (°F) . . . . .	0	+15	+30
Constant to be added to the resultant in pounds per foot:			
For bare conductors of copper, steel, copper alloy, copper-covered steel, and combinations thereof . . . . .	0.29	0.19	0.05
For bare conductors of aluminum (with or without steel reinforcement) . . . . .	.31	.22	.05
For weather-proof and similar covered conductors (all materials) . . . . .	.31	.22	.05

**Note:** Since heavy ice does not often form on conductors in a heavy wind, the transverse loading assumed is deemed sufficient for the purpose, but is not sufficient to represent the vertical (or combined) load which is imposed on conductors by the heavy deposits of ice which frequently form in comparatively still air. In order to apply a total loading to conductors representing more nearly the conditions encountered in practice, constants have been added to the conductor loading which make no substantial change in the conductor loading specified in the fourth edition of this code.

Where cables are concerned, the specified loadings shall be applied to both cable and messenger.

In applying loadings to bare stranded conductors, the coating of ice shall be considered as a hollow cylinder touching the outer strands. [§ 25 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-358 Loading for grades B, C, and D—Loads upon line supports.** (1) **Assumed vertical loading.** The vertical loads upon poles, towers, foundations, crossarms, pins, insulators, and conductor fastenings shall be their own weight plus the superimposed weight which they support, including all wires and cables, ice-coated in heavy and medium loading districts, together with the effect of any difference in elevation of supports. The radial thickness of ice shall be computed only upon wires, cables, and messengers, and shall be taken as the following:

- Heavy loading district (H), 0.50 inch of ice.
- Medium loading district (M), 0.25 inch of ice.
- Light loading district (L), no ice.

Ice is assumed to weigh 57 pounds per cubic foot.

**Note:** The weight of ice upon supports is ignored for the sake of simplicity.

(2) **Assumed transverse loading.** In computing the stresses in poles, towers, and side guys the loading shall be taken as one of the following according to climatic conditions of the locality concerned.

(a) **Heavy loading (H).** A horizontal wind pressure, at right angles to the direction of the line, of 4 pounds per square foot upon the projected area of cylindrical surfaces of all supported conductors and messengers, when covered with a layer of ice 0.5 inches in radial thickness and on surfaces of the poles and towers without ice covering, shall be called heavy loading. (See (d) and (e) following.)

For supporting structures carrying more than 10 wires, not including cables supported by messengers, where the pin spacing does not exceed 15 inches, the transverse load shall be calculated on two-thirds of the total number of such wires with a minimum of 10 wires.

(b) **Medium loading (M).** A horizontal wind pressure at right angles to the direction of the line, of 4 pounds per square foot upon the projected area of cylindrical surfaces of all supported conductors and messengers when covered with a layer of ice 0.25 inch in radial thickness and on the surfaces of the poles and towers without ice covering, shall be called medium loading. (See (d) and (e) following.)

For supporting structures carrying more than 10 wires, not including cables supported by messengers, where the pin spacing does not exceed 15 inches, the transverse load shall be calculated on two-thirds of the total number of such wires with a minimum of 10 wires.

(c) **Light loading (L).** A horizontal wind pressure at right angles to the direction of the line of 9 pounds per square foot upon the projected area of cylindrical surfaces of all supported conductors and messengers, poles and towers without ice covering, shall be called light loading. (See (d) and (e) following.)

(d) **Trolley-contact conductors.** When a trolley-contact conductor is supported on a pole it shall be included in the computation of the transverse load on the structure.

(e) **Flat surfaces.** For flat surfaces the assumed unit wind pressure shall be increased by 60 percent. Where latticed structures are concerned, the actual exposed area of one lateral face shall be increased by 50 percent to allow for the pressure on the opposite face; this total, however, need not exceed the pressure which would occur on a solid structure of the same outside dimensions. The results obtained by more exact calculations may be substituted for the values obtained by this simple rule.

(f) **At angles (combined longitudinal and transverse loading).** Where a change in direction of wires occurs, the loading upon the structure, including guys, shall be assumed to be a resultant load equal to the vector sum of the transverse wind load given in (a), (b), or (c) above and the resultant load imposed by the wires due to their change in direction. In obtaining these loadings, a wind direction shall be assumed which will give the maximum resultant load, proper reduction being made in loading to account for the reduced wind pressure on the wires resulting from the angularity of the application of the wind to the wires.

(3) **Assumed longitudinal loading.**

(a) **Change in grade of construction.** The longitudinal loading upon supporting structures, including poles, towers, and guys at ends of sections required to be of grade

B construction, when located in lines of lower than grade B construction, shall be taken as an unbalanced pull in the direction of the higher grade section equal to the pull of two-thirds of the conductors supported thereon which are smaller than No. 2 AWG, the conductor loading to be that given in WAC 296-44-355, and such two-thirds of the conductors being selected so as to produce the maximum stress in the supports.

If the application of the above results in a fractional part of a conductor, the nearest whole number shall be used. In no case shall the assumed unbalanced pull on the supporting structure be less than the maximum loaded tension in any two of the conductors carried (including overhead ground wires), such two conductors being selected so as to produce the maximum stress in the supports.

(b) Jointly used poles at crossings over railroads or communication lines. Where a joint line crosses over a railroad or a communication line and grade B is required for the crossing span, the tension in the communication conductors of the joint line may be considered as limited to one-half their breaking strength, provided they are smaller than No. 8 Stl. WG, if of steel, or No. 6 AWG, if of copper, regardless of how small the initial sags of the communication conductors at 60°F.

(c) Dead-ends. The longitudinal loading upon supporting structures shall be taken as an unbalanced pull equal to the tensions of all conductors and messengers (including overhead ground wires), under the conditions of conductor loading specified in WAC 296-44-355.

(d) Communication conductors on unguyed supports at railroad crossings. The longitudinal loading shall be assumed equal to an unbalanced pull in the direction of the crossing of all open-wire conductors supported, the pull of each conductor being taken as 50 percent of its ultimate strength in the heavy loading district, 33-1/3 percent in the medium loading district, and 22 1/4 percent in the light loading district.

**(4) Average span lengths.**

(a) General. The calculated transverse loads upon poles, towers, and crossarms, except as provided in (b) below, shall be based upon the average span length of a section of line that is reasonably uniform as to height, number of wires, grade, and span length. In no case shall the average value taken be less than 75 percent or more than 125 percent of the actual average of the two spans adjacent to the structure concerned.

(b) Crossings. In the case of crossings over railroads or communication lines (other than minor communication lines) the actual lengths of the two spans adjacent to the two structures concerned shall be used.

**(5) Simultaneous application of loads.**

(a) When calculating transverse strength, the assumed transverse and vertical loads shall be taken as acting simultaneously.

(b) In calculating longitudinal strength, the assumed longitudinal loads shall be taken without consideration of the vertical or transverse loads. [§ 25 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-361 Strength requirements--Preliminary assumptions.** It is recognized that deformation, deflection, or displacement of parts of the structure will, in some cases, change the effects of the loads assumed. In the calculation of stresses, however, no allowance shall be made for such deformation, deflection, or displacement of supporting structures (including poles, towers, guys, crossarms, pins, conductor fastenings, and suspension insulators) unless the methods used to evaluate them have been approved by the administrative authority. [§ 26 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-364 Strength requirements--Grades B and C construction. (1) Poles and towers.** The strength requirements for poles and towers may be met by the structures alone or with the aid of guys or braces.

(a) Average strength of three poles. A pole (single-base structure) not individually meeting the transverse strength requirements will be permitted when reinforced by a stronger pole on each side, if the average strength of the three poles meets the transverse strength requirements, and the weak pole has not less than 75 percent of the required strength.

An extra pole inserted in a normal span for the purpose of supporting a service loop may be ignored, if desired, in the calculation of the strength of the line.

**Exception:** In the case of crossings over railroads or communication lines (other than minor communication lines), the actual strengths of the crossing poles shall be used.

(b) Reinforced-concrete poles. Reinforced-concrete poles shall be of such material and dimensions as to withstand, for vertical and transverse strength, the loads assumed in WAC 296-44-358 (1) and (2), and for longitudinal strength the loads in WAC 296-44-358(3), without exceeding the following percentages of their ultimate strength at the ground line for unguyed poles, or at the point of guy attachment for guyed poles. (Where guys are used, see subsection (3) of this section.)

	Percentage of ultimate strength for reinforced-concrete poles	
	Grade B	Grade C
For transverse strength (when installed)	25	37.5
For longitudinal strength (at all times):		
In general.....	100	No requirement
At dead-ends.....	50	75.0

(c) Steel supporting structures. In the design of steel structures, the term "overload capacity factor" referred to in Table 16 is to be interpreted in such a manner that the completed structure, if tested, shall support without permanent deflection the maximum loading to which it will be subjected as specified in WAC 296-44-352 through 296-44-358, multiplied by the factors given in Table 16. The absence of permanent set on the structure indicates that no part has been stressed beyond the yield point. Allowance should be made for bolt slip.

Steel supports, steel towers, and metal poles shall be designed and constructed so as to meet the following requirements:

(i) Vertical and transverse strength. The completed structure shall be so designed and of sufficient strength as to provide overload capacity factors specified in Table 16 under the vertical and transverse loading specified in WAC 296-44-358(1) and 296-44-358 (2)(a) to (2)(e), inclusive.

(ii) Longitudinal strength. *Grade B.* The completed structure shall be so designed and of sufficient strength as to provide overload capacity factors specified in Table 16 under the longitudinal loading specified in WAC 296-44-358(3).

*Grade C.* No longitudinal strength requirements except at dead-ends.

(iii) Minimum strength. Steel structures shall have strength sufficient to withstand, with an overload capacity factor of 1.1, a transverse load on the structures without conductors, equal to six times the specified wind pressure.

(iv) Strength at angles in a line. At an angle in a line having supports of steel poles or towers, the strength of the support shall be sufficient to withstand a combination of the transverse and longitudinal loadings specified in WAC 296-44-358 (2)(f). For Grade B the transverse load shall be multiplied by 1.54, and for Grade C by 2.00, before combining with the load arising from change in direction of conductors. The allowable overload capacity factor at dead-ends given in Table 16 shall be provided for the total load thus computed.

**TABLE 16.**—Minimum overload capacity factors of completed structures

(Based on yield point of steel)

	Overload capacity factors	
	Grade B	Grade C
Vertical strength . . . . .	1.27	1.10
Transverse strength . . . . .	2.54	2.20
Longitudinal strength:		
At crossings—		
In general . . . . .	1.10	No requirement.
At dead-ends . . . . .	1.65	1.10
Elsewhere—		
In general . . . . .	1.00	No requirement.
At dead-ends . . . . .	1.65	1.10

(v) Thickness of steel. The thickness of metal in members of steel poles or towers shall be not less than the following:

**TABLE 17.**—Thickness of steel

	Thickness of main members of crossarms and legs	Thickness of other members
	Inches	Inches
For localities where experience has shown deterioration of protective covering is rapid . . . . .	1/4	3/16
For other localities . . . . .	3/16	1/8

(vi) Unsupported length of compression members. The ratio of L, the unsupported length of a compression member, to R, the least radius of gyration of the member, shall not exceed the following (these figures do not apply to the complete structure):

**TABLE 18.**—L/R for compression members

Kind of compression member	L/R
Leg members . . . . .	150
Other members having figured stresses . . . . .	200
Secondary members without figured stresses . . . . .	250

(vii) General construction features. Steel poles or towers, including parts of footings above ground, shall be constructed so that all parts are accessible for inspection, cleaning, and painting, and so that pockets are not formed in which water can collect.

**Recommendation:** Unless sample structures, or similar ones, have been tested to assure the compliance of structures in any line with these requirements, it is recommended that structures be designed to have a computed strength at least 10 percent greater than that required by these rules.

(viii) Protective covering or treatment. All iron or steel poles, towers, or supporting structures shall be protected by galvanizing, painting, or other treatment which will effectively retard corrosion. Such protective covering shall be adequately maintained.

(d) Wood poles. Wood poles shall be of such material and dimensions as to meet the following requirements (where guys are used, see subsection (3) of this section):

(i) Transverse strength. Wood poles shall withstand the transverse and vertical loads assumed in WAC 296-44-358(1) and 296-44-358 (2)(a) to (2)(d), inclusive, without exceeding at the ground line for unguyed poled, or at the point of guy attachment for guyed poled, the appropriate percentages of their ultimate stress given in Table 20.

(ii) Longitudinal and dead-end strength. The longitudinal and dead-end strength of wood poles shall be such that they will withstand the appropriate longitudinal loading specified in WAC 296-44-358(3), without exceeding, at the ground line for unguyed poles or at the point of guy attachment for guyed poles, the following percentages of the applicable ultimate fiber stress given in Table 19.

	Percentage of ultimate fiber stress for wood poles	
	Grade B	Grade C
Longitudinal:		
When installed . . . . .	75 <sup>1</sup>	No requirement.
At replacement . . . . .	100	Do.
Dead-ends:		
When installed . . . . .	50 <sup>1</sup>	75 <sup>1</sup>
At replacement . . . . .	75	100

<sup>1</sup>Where supply lines alone are involved and built for a fixed period of temporary service not exceeding 5 years the prescribed percentage of fiber stress at installation may be increased, provided the percentage of ultimate fiber stress required at replacement is not exceeded during the life of the line.

**Exception 1:** At a Grade B crossing, in a straight section of line, wood poles of approximately round cross section, complying with the transverse strength requirements of subsection (1)(d)(i), without the use of transverse guys, shall be considered as having the required longitudinal strength. This exception does not modify the requirements of this rule for dead-ends.

**Exception 2:** At a Grade B crossing of a supply line over a highway and a communication line in the same span, where there is an angle in the supply line, wood poles of approximately round cross section shall be considered as having the required longitudinal strength if all of the following conditions obtain:

1. The angle is not over 20 degrees.
2. The corner pole is guyed in the plane of the resultant of the conductor tensions on both sides of the corner pole; the tension in this guy not to exceed 50 percent of its ultimate strength under the loading of WAC 296-44-358 (2)(f).

**Exception 3:** The corner pole has sufficient strength to withstand, without guys, the transverse loading of WAC 296-44-358 (2)(a), (b) or (c), which would exist if there were no angle at that pole, without exceeding 25 percent of its ultimate stress when installed, or 37 1/2 percent at replacement.

(iii) Ultimate fiber stress. Different kinds of wood poles are considered as having the ultimate fiber stresses given in Table 19.

**TABLE 19.**—Ultimate fiber stresses of wood poles

Kind of wood	Ultimate fiber stress
	lb./sq. in.
Creosoted southern pine . . . . .	7,400
Douglas fir . . . . .	7,400
Lodgepole pine . . . . .	6,600
Chestnut . . . . .	6,000
Western red cedar . . . . .	5,600
Cypress . . . . .	5,000
Northern white cedar . . . . .	3,600
Redwood . . . . .	3,600
Western Larch . . . . .	8,400

When values for ultimate stresses of cypress and redwood have been approved as standard by the American Standards Association, such values shall be used in place of those given above.

(iv) Allowable percentages of ultimate stress. The allowable percentages of ultimate stress of treated and untreated poles to withstand vertical and transverse loads are given in Table 20, except as modified in the following paragraph.

At crossings where Grade B construction is required, if the supply line is not maintained throughout (or between and including the nearest guyed points on each side of the crossing) so that the poles will not be stressed at any time in excess of 50 percent of their ultimate stress under the transverse loading assumed in WAC 296-44-358(2), the crossing poles, if unguyed, shall be of such strength that they will withstand the transverse loading assumptions of WAC 296-44-358 (2)(a), (b) or (c), without exceeding 16 2/3 percent of their ultimate stress at installation or 25 percent at replacement. If the crossing poles are side guyed, such guys shall meet the requirements of subsection (3)(e) of this section.

**TABLE 20.**—Allowable percentages of ultimate stress for treated or untreated wood poles under vertical and transverse loading

	When installed	At replacement
Grade B . . . . .	25.0	37.5
Grade C:		
At crossings . . . . .	37.5	75.0
Elsewhere . . . . .	50.0	75.0

(v) Freedom from defects. Wood pole shall be of suitable and selected timber free from observable defects that would decrease their strength or durability.

(vi) Minimum pole sizes. Wood poles shall have a nominal top circumference of not less than 15 inches.

(vii) Spliced and stub-reinforced poles. Spliced poles shall not be used at crossings, conflicts, or joint-use sections requiring Grades B or C construction.

Except at crossings over major railroad tracks, the use of stub reinforcements that develop the required strength of the pole is permitted, provided the pole above the ground is in good condition and is of sufficient size to develop its required strength.

(e) Transverse-strength requirements for structures where side guying is required, but can only be installed at a distance.

**Grade B.** In the case of structures where, because of very heavy or numerous conductors or relatively long spans, the transverse-strength requirements of this section can not be met except by the use of side guys or special structures, and it is physically impracticable to employ side guys, the transverse-strength requirements may be met by side-guying the line at each side of, and as near as practicable to, the crossing or other transversely weak structure, and with a distance between such side-guyed structures of not over 800 feet, provided that:

(i) The side-guyed structures for each such section of 800 feet or less shall be constructed to withstand the calculated transverse load due to wind on the supports and ice-covered conductors, on the entire section between the side-guyed structures.

(ii) The line between such side-guyed structures shall be substantially in a straight line and the average length of span between the side-guyed structures shall be not in excess of 150 feet.

(iii) The entire section between the transversely strong structures shall comply with the highest grade of construction concerned in the given section, except as to the transverse strength of the intermediate poles or towers.

**Grade 3.** The above provision is not applicable to Grade C.

(f) Longitudinal-strength requirements for sections of higher grade in lines of a lower grade of construction.

(i) Methods of providing longitudinal strength.

**Grade B.** The longitudinal-strength requirements for sections of line of higher grade in lines of a lower grade (for assumed longitudinal loading, see WAC 296-44-358 (3)(a)) are usually met by placing supporting structures of the required longitudinal strength at either end of the higher-grade section of the line. Where this is impracticable, the supporting structures of the required longitudinal strength may be located one or more span lengths away from the section of higher grade, within 500 feet on either side and with not more than 800 feet between the longitudinally strong structures, provided such structures and the line between them meet the requirements as to transverse strength and stringing of conductors, of the highest grade occurring in the section, and provided that the line between the longitudinally strong structures is approximately straight or suitably guyed.

The requirements may also be met by distributing the head guys over two or more structures on either side of the crossing, such structures and the line between them complying with the requirements for the crossing as to transverse strength and as to conductors and their fastenings.

Where it is impracticable to provide the longitudinal strength, the longitudinal loads shall be reduced by increasing the conductor sags. This may require greater conductor separations. (See WAC 296-44-325 (1)(b)(i).)

**Grade C.** The above provision is not applicable to Grade C.

(ii) Flexible supports.

**Grade B.** When supports of the section of higher grade are capable of considerable deflection in the direction of the line, as with wood or concrete poles, or some types of metal poles and towers, it may be necessary to increase the normal clearances specified in WAC 296-44-310 through 296-44-337, or to provide head guys or special reinforcement to prevent such deflection.

So-called flexible steel towers or frames, if used at such locations, shall be adequately reinforced to meet the requirements of subsection (1)(c)(ii) of this section.

When the situation is one involving an isolated crossing of higher grade in a line of lower-grade construction,

then the structure shall, when practicable, be head-guyed or otherwise reinforced to prevent reduction in the clearances required in WAC 296-44-310 through 296-44-337.

**Grade C.** The above provision is not applicable to Grade C.

(g) Strength at angles in a line. At an angle in the line, the strength of a pole at the ground line, if not guyed, or at the point of guy attachment if guyed, shall be sufficient to withstand a combination of the transverse and longitudinal loadings specified in WAC 296-44-358 (2)(f). For Grade B the transverse load shall be multiplied by 2.0 and for Grade C by 1.5, before combining with the load arising from change in direction of conductors. The allowable percentage of ultimate stress at dead-ends given in subsection (1)(d)(ii) of this section shall not be exceeded for the total load thus computed.

(2) Foundations.

(a) Use of foundations.

(i) Wood and reinforced-concrete poles. No special foundation construction is generally required.

(ii) Steel poles or towers. Steel poles or towers set in earth shall be suitably protected against injurious corrosion at and below the ground line.

(b) Strength of foundations.

(i) Steel supports. The foundations and footings shall be so designed and constructed as to withstand the stresses due to the loads assumed in WAC 296-44-358. Steel parts shall withstand these loads with the overload capacity factors specified in Table 16. Since in many localities the soil and climatic conditions are such as to alter the strength of foundations considerably from time to time, there should usually be provided a considerable margin of strength in foundations above that which (by calculation) will just withstand the loads under the assumption of average conditions of climate and soil.

(ii) Wood and concrete poles. Foundations and settings for unguied poles shall be such as to withstand the loads assumed in WAC 296-44-358 (1), (2), and (3).

(3) Guys.

(a) General. The general requirements for guys are covered under "miscellaneous requirements" (see WAC 296-44-400 through 296-44-427).

(b) For poles in insecure earth. Where crossing poles are set in insecure earth the transverse strength requirements should, where practicable, be met by the use of side guys or braces.

(c) On steel structures. The use of guys to obtain compliance with these requirements is regarded as generally undesirable. When guys are necessarily used, the steel supports or towers, unless capable of considerable deflection, shall be regarded as taking all of the load up to their allowable working load, and the guys shall have sufficient strength to take the remainder of the assumed maximum load. (See subsection (1)(f)(ii) of this section for flexible supports.)

(d) On wood or concrete poles. When guys are used to meet the strength requirements for wood or concrete poles, they shall be considered as taking the entire load in the direction in which they act, the poles acting as

struts only. Frequently the use of shorter spans or larger poles will permit the omission of guys at crossings.

(e) Strength of guys.

(i) Guys, when required, shall be of such material and dimensions as will withstand the transverse loads assumed in WAC 296-44-358 (2)(a) to 296-44-358 (2)(e), inclusive, and the longitudinal load assumed in WAC 296-44-358(3), without exceeding the following percentages of their ultimate strength:

	Percentage of ultimate strength	
	Grade B	Grade C
For transverse strength (when installed)	37.50	50.00
For longitudinal strength (at all times):		
In general.....	100.00	No requirement.
At dead-ends.....	66.67 <sup>1</sup>	87.50 <sup>1</sup>

<sup>1</sup>If deflection of supporting structures is taken into account in the computation, 66 2/3 percent shall be reduced to 60 percent and 87 1/2 percent shall be reduced to 75 percent.

(ii) At an angle in the line, the strength of a transverse guy or guys shall be sufficient to withstand the combination of transverse and longitudinal loadings specified in WAC 296-44-358 (2)(f). The transverse load shall be multiplied by 1.78 for both grades B and C before combining with the load arising from the change in direction of conductors. The allowable percentage of ultimate strength at dead-ends given in (i) above shall not be exceeded for the total load thus computed.

(4) Crossarms.

(a) Vertical strength. Crossarms shall, when installed, withstand the vertical loads specified in WAC 296-44-358(1) without the stress under these loads exceeding 50 percent of the assumed ultimate stress of the material. Metal crossarms, when used on wood poles to support electric-supply conductors, shall be grounded.

**Exception:** For built up steel crossarms on steel structures, see Table 16 for minimum overload capacity factors.

(b) Bracing. Crossarms shall be securely supported by bracing, if necessary, so as to support safely all other loads to which they may be subjected in use, including linemen working on them. Any crossarm or buckarm shall be capable of supporting a vertical load of 225 pounds at either extremity in addition to the weight of the conductors. This rule shall not apply to the top crossarm on poles used solely for communication circuits.

(c) Longitudinal strength.

(i) General. Crossarms shall withstand any unbalanced longitudinal loads to which they are exposed, with a limit of unbalanced tension where conductor pulls are normally balanced, of 700 pounds at the outer pin.

(ii) At dead-ends and at ends of higher-grade construction in line of lower grade.

**Grade B.** Wood crossarms shall be of sufficient strength to withstand at all times, without exceeding their ultimate stresses, an unbalanced pull equal to the

tension in all supported conductors under the assumed conductor loading given in WAC 296-44-355. Steel arms shall withstand this load with the overload capacity factor for longitudinal loads given in Table 16.

**Grade C.** The above provisions do not apply to Grade C.

(iii) At ends of transversely weak sections.

**Grade B.** The crossarms connected to the structure at each end of the transversely weak section, such as described in subsection (1)(e) of this section, shall be such as to withstand at all times without exceeding their ultimate stresses, under the conductor loading prescribed in WAC 296-44-355, an unbalanced load equivalent to the combined pull in the direction of the transversely weak section of all the conductors supported.

**Grade C.** The above provision does not apply to Grade C.

(iv) Methods of meeting subsections (4)(c)(ii) and (iii) of this section.

**Grade B.** Where conductor tensions are limited to a maximum of 2,000 pounds per conductor, double wood crossarms fitted with spacing bolts equipped with spacing nuts and washers, pipe spacers, or similar construction, or with spacing blocks or plates, will be considered as meeting the strength requirements in (ii) and (iii) preceding.

**Grade C.** The above provisions do not apply to Grade C.

(d) Dimensions of crossarms of selected yellow pine or fir. The cross-sectional dimensions of selected yellow pine or fir crossarms shall be not less than the values of Table 21.

TABLE 21.—Crossarm cross sections

Number of pins	Grade B	Grade C	
		Supply	Communication
		Inches	Inches
2 or 4.....	3 by 4	2 3/4 by 3 3/4	.....
6 or 8.....	3 1/4 by 4 1/4	3 by 4	.....
6.....	.....	.....	2 3/4 by 3 3/4
10.....	.....	.....	3 by 4

(e) Double crossarms or brackets.

**Grade B.** Where pin-type construction is used, two points of support shall be provided for each conductor by means of double crossarms or double brackets at each crossing structure, at ends of joint use or conflict sections, at dead-ends, and at corners where the angle of departure from a straight line exceeds 20 degrees.

**Exception:** Where communication cables or conductors cross below supply conductors and are attached to the same pole, the above does not apply unless another condition which requires double pins and fastenings for the supply conductors is involved.

**Grade C.** The above provision applies to Grade C where supply conductors of more than 5,000 volts between wires (or of more than 2,900 volts to ground in the case of grounded neutral circuits) cross over minor communication lines at locations such that the supply pole is more than 6 feet from the nearest communication

conductor, unless other means of providing equivalent safety and stress are agreed to be the parties involved.

(f) Location. In general, crossarms should be maintained at right angles to the axis of the pole and to the direction of the attached conductors. At crossings, crossarms should be attached to that face of the structure away from the crossing, unless special bracing or double crossarms are used.

(5) Pins and conductor fastenings.

(a) Longitudinal strength.

(i) General. Pins and ties or other conductor fastenings shall have sufficient strength to withstand an unbalanced tension in the conductor, up to a limit of 700 pounds per pin or fastening.

(ii) At dead-ends and at ends of higher-grade construction in line of lower grade.

**Grade B.** Pins and ties or other conductor fastenings connected to the structure at each end of the higher-grade section shall be of sufficient strength to withstand at all times without exceeding their ultimate strength, an unbalanced pull due to the conductor loading specified in WAC 296-44-355.

**Grade C.** The above provisions do not apply to Grade C.

(iii) At ends of transversely weak sections.

**Grade B.** Pins and ties or other conductor fastenings connected to the structure at each end of the transversely weak section as described in subsection (1)(e) of this section shall be such as to withstand at all times without exceeding their ultimate strength under the conductor loading prescribed in WAC 296-44-355, the unbalanced pull in the direction of the transversely weak section of the conductor supported.

**Grade C.** The above provisions do not apply to Grade C.

(iv) Method of meeting subsections (5)(a)(ii) and (5)(a)(iii) of this section.

**Grade B.** Where conductor tensions are limited to 2,000 pounds and such conductors are supported on pin insulators, double pins, and ties or equivalent fastenings will be considered to meet the requirements of (ii) and (iii) preceding.

**Grade C.** The above provision does not apply to Grade C.

(b) Sharp edges on fastenings. Tie wires, fastenings, or supports shall have no sharp edges or burrs at contacts with the conductors.

(c) Height of pin. The height of the pin and the conductor fastenings and the material and cross section of the pin should be chosen so as to afford the required strength.

**Note:** The method of attaching conductors by suitable ties to single pin-type insulators mounted on 1 1/2 by 9 inch wood pins of locust or equivalent wood will usually provide strength up to 1,000 pounds conductor tension with the conductor 3.5 inches above the crossarm. Steel pins may afford greater strength, both for the pins and for the crossarms.

**Grade B.** Where pin-type construction is used, two points of support shall be provided for each conductor by

means of double pins and conductor fastenings at each crossing structure, at ends of joint use or conflict sections, at dead-ends, and at angles where the angle of departure from a straight line exceeds 20 degrees.

**Exception:** Where communication cables or conductors cross below supply conductors and are attached to the same pole, the above does not apply unless another condition which requires double pins and fastenings for the supply conductors is involved.

**Grade C.** The above provision applies to Grade C where supply conductors of more than 5,000 volts between wires (or of more than 2,900 volts to ground in the case of grounded neutral circuits) cross over minor communication lines at locations such that the supply pole is more than 6 feet from the nearest communication conductor, unless other means of providing equivalent safety and strength are agreed to be the parties involved.

(6) Open supply conductors.

(a) Material. Conductors shall be of material or combinations of materials which will not corrode excessively under the prevailing conditions.

**Recommendation:** It is recommended that hard-drawn or medium-hard-drawn copper wire (conforming to the specifications of the American Society for Testing Materials) be used instead of soft in new construction where bare wire or cable is used, especially for sizes smaller than No. 2.

(b) Minimum sizes of supply conductors. Supply conductors, both bare and covered, shall have an ultimate strength and an over-all diameter of metallic conductor not less than that of medium-hard-drawn copper of the gage size AWG shown in Table 22, except that conductors made entirely of bare or galvanized iron or steel shall have an over-all diameter not less than Stl. WG of the gage sizes shown.

**Exception 1:** At railroad crossings, for stranded conductors, other than those in which a central core wire is entirely covered by the outside wires, any individual wire of such a stranded conductor containing steel shall be not less than 0.100 inch in diameter if copper-covered and not less than 0.115 inch in diameter if otherwise protected or if bare.

**Exception 2:** Supply service leads of 0 to 750 volts to ground may have the sizes set forth in WAC 296-44-370(5).

**Exception 3:** Where the short-span method of construction is employed in accordance with subsection 11, of this section, the conductor sizes and sags herein specified are not required.

TABLE 22.—Minimum over-all conductor sizes

Grade of construction	Gage size <sup>1</sup>
B .....	6
C .....	8

<sup>1</sup>For No. 6 and No. 8 medium-hard-drawn copper wire the nominal diameters are 0.1620 and 0.1285 inch, and the minimum values of breaking load are 1,010 and 643.9 pounds, respectively. For steel wire gage the nominal diameters are 0.192 inch for No. 6 and 0.162 inch for No. 8.

(c) Lightning protection wires. Lightning-protection wires paralleling the line conductors shall be regarded in respect to size, material, and stringing requirements as supply conductors with which they are associated.

(d) Sags and tensions. Conductor sags shall be such that, under the assumed loading of WAC 296-44-355 for the district concerned, the tension of the conductor shall be not more than 60 percent of its ultimate strength. Also the tension at 60°F, without external load, shall not exceed the following percentage of the conductor ultimate strength:

**Exception:** In the case of conductors having a cross section of a generally triangular shape, such as cables composed of three wires, the final unloaded tension of 60°F. shall not exceed 30 percent of the ultimate strength of the conductor.

**Note:** The above limitations are based on the use of recognized methods for avoiding fatigue failures by minimizing chafing and stress concentration. If such practices are not followed, lower tensions should be employed.

(e) Splices and taps.

**Grade B.** Splices shall as far as practicable be avoided in the crossing and adjacent spans. If it is impracticable to avoid such splices, they shall be of such a type and so made as to have a strength substantially equal to that of the conductor in which they are placed. Taps shall be avoided in the crossing span where practicable, but if required shall be of a type which will not impair the strength of the conductors to which they are attached.

**Grade C.** The above does not apply to Grade C.

(f) Trolley contact conductors. In order to provide for wear, no trolley contact conductor shall be installed of less size than No. 0, if of copper, or No. 4, if of silicon bronze.

(7) Supply cables.

(a) Specially installed supply cables. Cables having effectively grounded continuous metal sheath or armor, where located on jointly used poles, or where located on other poles and having a grade of construction less than that required for open wire supply lines of the same voltage, shall meet the requirements of (i), (ii), (iii), and (iv) below.

(i) Messengers. Messengers shall be stranded and of corrosion-resistant material, and shall not be stressed beyond 60 percent of their ultimate strength under the loadings specified in WAC 296-44-355.

(ii) Grounding of cable sheath and messenger. Each section of cable between splices shall be suitably and permanently bonded to the messenger wire at not less than two places. The messenger wire shall be grounded at the ends of the line and at intermediate points not

exceeding 800 feet apart. (See WAC 296-44-058 through 296-44-076 for method.)

(iii) Cable splices. Splices in the cable shall be made so that their insulation is not materially weaker than the remainder of the cable. The sheath or armor at the splice shall be made electrically continuous.

(iv) Cable insulation. The conductors of the cable shall be insulated so as to withstand a factory potential test of at least twice the operating voltage at operating frequency applied continuously for 5 minutes between conductors and between any conductor and the sheath or armor.

(b) Other supply cables. The following requirements apply to all supply cables not included in (a) above.

(i) Messenger. The messenger shall be of corrosion-resistant material, and shall not be stressed beyond 60 percent of its ultimate strength under the loadings specified in WAC 296-44-355.

(ii) Cable. There are no strength requirements for cables supported by messengers.

(8) **Open-wire communication conductors.** Open-wire communication conductors in Grade B or C construction shall have the sizes and sags given in subsections (6)(b) and (d) for supply conductors of the same grade.

**Exception:** Where open-wire communication conductors in spans of 150 feet or less are above supply circuits of 5,000 volts or less between conductors, Grade C sizes and sags may be replaced by Grade D sizes and sags, except that where the supply conductors are trolley-contact conductors of 0 to 750 volts to ground, No. 12 wire may be used for spans of 0 to 100 feet, and No. 9 steel wire may be used for spans of 125 to 150 feet.

(9) **Communication cables.**

(a) Metal-sheathed communication cables. There are no strength requirements for such cables supported by messengers.

(b) Messenger. The messenger shall be of corrosion-resistant material, and shall not be stressed beyond 60 percent of its ultimate strength under the loadings specified in WAC 296-44-355.

(10) **Paired communication conductors.**

(a) Paired conductors supported on messenger.

(i) Use of messenger. A messenger of corrosion-resistant material may be used for supporting paired conductors in any location, but is only required for paired conductors crossing over trolley-contact conductors of more than 7,500 volts to ground.

(ii) Sag of messenger. Messenger used for supporting paired conductors required to meet Grade B construction because of crossing over trolley-contact conductors shall meet the sag requirements for Grade D messengers.

(iii) Size and sag of conductors. There are no requirements for paired conductors when supported on messenger.

(b) Paired conductors not supported on messenger.

(i) Above supply lines.

**Grade B.** Sizes and sags shall be not less than those required by subsections (6)(b) and (d) for supply conductors of similar grade.

**Grade C.** Sizes and sags shall be not less than the following:

**Spans 0 to 100 feet.** No sag requirements. Each conductor shall be of corrosion-resistant material, and shall have an ultimate strength of not less than 170 pounds.

**Spans 100 to 150 feet.** Sizes and sags shall be not less than required for Grade D communication conductors.

**Spans exceeding 150 feet.** Sizes and sags shall be not less than required for Grade C supply conductors. (See subsection (6)(d).)

(ii) Above trolley-contact conductors.

**Grade B.** Sizes and sags shall be not less than the following:

**Spans 0 to 100 feet.** No size requirements. Sags shall be not less than for No. 8 AWG hard-drawn copper. (See subsection (6)(d).)

**Spans exceeding 100 feet.** Each conductor shall be of corrosion-resistant material, and shall have an ultimate strength of not less than 170 pounds. Sags shall be not less than for No. 8 AWG hard-drawn copper. (See subsection (6)(d).)

**Grade C.** Sizes and sags shall be as follows:

**Spans 0 to 100 feet.** No requirements.

**Spans exceeding 100 feet.** No sag requirements. Each conductor shall be of corrosion-resistant material, and shall have an ultimate strength of not less than 170 pounds.

(11) **Short-span crossing construction.** Where supply lines cross over railways or communication lines by the short-span method the requirements for Grade B or C conductor sags and sizes are waived in so far as such grades are required by the crossing, provided that an effectively grounded guard arm is installed at each cross-over support in such a manner as to prevent conductors which break in either adjoining span from swinging back into the conductors crossed over, or in the case of a railroad crossing into the space between the crossing supports.

**Note:** The short-span method of crossing requires the cross-over span to be of such a height that a conductor breaking in that span cannot come within 15 feet of the ground or rails at a railroad crossing or make contact with any wires crossed over at a wire crossing.

This character of construction is facilitated where the cross-over supports can be placed quite near together and in the case of wire crossings where the span crossed over is at a minimum elevation above ground.

(12) **Cradles at supply-line crossing.** Cradles should not be used.

**Note:** It is less expensive and better to build the supply line strong enough to withstand extreme conditions than to build a cradle of sufficient strength to catch and hold the supply line if it falls.

(13) **Protective covering or treatment for metal work.** All hardware, including bolts, washers, guys, anchor

rods, and similar parts of material, subject to injurious corrosion under the prevailing conditions, shall be protected by galvanizing, painting, or other treatment which will effectively retard corrosion. [§ 26 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-367 Strength requirements—Grade D construction. (1) Poles.**

(a) Strength of unguayed poles. Unguayed poles, except as provided in subsection (1)(h), shall withstand the vertical and transverse loads specified in WAC 296-44-358 (1) and (2), and the longitudinal loads specified in WAC 296-44-358 (3)(d), without exceeding the following percentages of their ultimate stress:

	Percentages of ultimate stress
For transverse loads:	
When installed . . . . .	25.0
At replacement . . . . .	37.5
For longitudinal loads:	
When installed . . . . .	75.0
At replacement . . . . .	100.0

(b) Strength of guyed poles. Where poles are guyed, the poles shall be considered as acting as struts, resisting the vertical component of the tension in the guy, calculated as in subsection (3), combined with the vertical load.

(c) Strength requirements for poles where guying is required, but can only be installed at a distance. Where on account of physical conditions it is impracticable to guy or brace the crossing poles as specified in subsection (3), the requirements there given may be met by head-guying and side-guying the line as near as practicable to the crossing, but at a distance not exceeding 500 feet from the nearest crossing pole, provided that the line is approximately straight and that a stranded steel wire or other standard strand of strength equivalent to that of the head guy is run between the two guyed poles, being attached to the guyed poles at the point at which the head guys are attached, this wire being securely attached to every pole between the guyed poles.

(d) Pole locations at crossings. Where communication lines cross over railroads, the poles shall be located as follows:

(i) The poles supporting the crossing span and the adjacent spans should be located in a straight line, if practicable. Where the poles supporting the crossing span and the adjacent spans are not in line, guying shall be placed to take care of the unbalanced load.

(ii) The crossing span shall, where practicable, not exceed 100 feet in the heavy loading district, 125 feet in the medium loading district, and 150 feet in the light loading district.

(e) Freedom from defects. Wood poles shall be of suitable and selected timber free from observable defects that would decrease their strength or durability.

(f) Minimum pole size. Wood poles shall have a nominal circumference of not less than 15 inches.

(g) Spliced and stub-reinforced poles. Spliced poles shall not be used at grade D crossings. At crossings over minor railroad tracks, the use of stub-reinforcements that develop the required strength of the pole is permitted, provided the pole above the ground line is in good condition and is of sufficient size to develop its required strength.

(h) Poles located at crossings over spur tracks. Where a communication line paralleling a railroad track on the right-of-way of the railroad crosses a spur or stub track without any change in the general direction of line, the transverse strength requirements for grade D construction may be met without the use of side guys, provided the pole is not stressed beyond one-third of its ultimate stress. No requirements for longitudinal strength are made if the conductor tensions are balanced. Where conductor tensions are not balanced, due to a small angle in the line at one or both poles, or to dead-ending any of the wires, either guys or braces capable of withstanding such unbalanced tensions shall be installed.

(2) **Pole settings.** Foundations and settings for unguyed poles shall be such as to withstand the loads assumed in WAC 296-44-358 (1), (2), and (3).

(3) **Guys.**

(a) General. The general requirements for guys are covered under "miscellaneous requirements" (WAC 296-44-400 through 296-44-427).

(b) Where used. Side guys or braces shall be used on poles supporting the crossing span to withstand the loads put upon them in accordance with the conditions specified in WAC 296-44-358(2). Head guys shall be installed in accordance with Table 23.

**Exception 1:** Side guys are not required where the crossing poles have the transverse strength specified in section (1)(a) without the reduction for conductor shielding specified in WAC 296-44-358 (2)(a) and (2)(b).

**Exception 2:** Head guys are not required where the crossing poles have the longitudinal strength specified in subsection (1)(a), or where they carry a cable supported on 6,000-pound or stronger messenger.

**Exception 3:** Where a line crossing a railroad changes direction more than 10 degrees at either crossing support, the side guy within the angle may be omitted and the head guy, if required shall be placed in the direction of the adjacent span unless the angle of turn is greater than 60 degrees.

**Exception 4:** Guying may be omitted where communication lines cross over spur or stub tracks as provided in subsection (1)(h).

**Exception 5:** This rule does not apply to crossing poles under the special conditions set forth in subsection (1)(c).

**TABLE 23.—Strength (in pounds) of head guys required for loading districts indicated.<sup>1</sup>**

(Combinations of standard-size guys may be used)

70	16,000	16,000	20,000	20,000	26,000
80	16,000	20,000	20,000	26,000	30,000

<sup>1</sup>This table is based on ultimate or breaking strength of guys equal to seven-sixths of the nominal strengths shown in the table and a wire load of 50 percent No. 8 BWG iron and 50 percent No. 9 AWG copper with an average pull of 408.75 pounds per wire.

No guy will be required for cable, since the messenger serves as a head guy.

(c) Guys used for transverse strength. Side guys used in straight sections of line shall be considered as taking

the entire load in the direction in which they act, without exceeding 37.5 percent of their ultimate strength.

(d) Guys used for longitudinal strength.

(i) Direction of head guys. Where head guys are required, they shall be installed in the direction away from the crossing.

(ii) Size and number of head guys. Guys, if required for various open-wire loads, shall be in accordance with Table 23.

(e) Maintenance. Guys and anchors shall be maintained so that the guys carry the load.

(4) Crossarms.

(a) Material. Wood crossarms supporting the crossing span shall be of yellow pine, fir, or other suitable timber.

(b) Minimum size.

(i) Wood crossarms. Wood crossarms shall have a cross section not less than the following:

Maximum number of wires to be carried	Nominal length		Nominal cross section (Inches)
	Feet	Inches	
2	1	4 1/2	2 5/16 by 3 5/16
4	3	4 1/2	2 5/16 by 3 5/16
6	6	0	2 3/4 by 3 3/4
10	8	6	2 3/4 by 3 3/4
10	10	0	3 by 4
12 <sup>1</sup>	10	0	3 1/4 by 4 1/4
16 <sup>2</sup>	10	0	3 1/4 by 4 1/4

<sup>1</sup>Where crossarms are bored for 1/2-inch steel pins, 3-inch by 4 1/4-inch crossarms may be used.

<sup>2</sup>Permitted in medium and light loading districts only.

(ii) Steel or iron crossarms. Galvanized or painted iron or steel crossarms of strength equal to wood crossarms may be used.

(c) Double crossarms. Crossarms and insulators shall be double on the crossing poles. The crossarms shall be held together with properly fitted spacing blocks or bolts placed immediately adjoining the outside pins. Spacing blocks or spacing bolts are not required for two-pin crossarms.

(5) Brackets and racks. Wood brackets may be used only if used in duplicate or otherwise designed so as to afford two points of support for each conductor. Single metal brackets, racks, drive hooks or other fixtures may be used if designed and attached in such manner as to withstand the full dead-end pull of the wires supported.

(6) Pins.

(a) Material. Insulator pins shall be of steel, wrought iron, malleable cast iron, or locust or equivalent wood.

(b) Strength. Insulator pins shall have sufficient strength to withstand the loads to which they may be subjected.

(c) Size.

(i) Wood pins. Wood pins shall be sound and straight-grained with a diameter of shank not less than 1 1/4 inches.

(ii) Metal pins. Steel or iron pins shall have diameter of shank not less than 1/2 inch.

(7) Insulators. Each insulator shall be of such pattern, design, and material that when mounted it will withstand without injury and without being pulled off the

pin, the ultimate strength of the conductor attached to the insulator.

(8) Attachment of conductor to insulator. The conductor shall be securely tied to each supporting insulator.

(9) Conductors.

(a) Material. Conductors shall be of material or combinations of materials which will not corrode excessively under the prevailing conditions.

(b) Size. Conductors of the crossing span, if of hard-drawn copper or galvanized steel, shall have sizes not less than specified in (i) and (ii) below. Conductors of material other than the above shall be of such size and so strung as to have a mechanical strength not less than that of the sizes of copper conductors given in (i) and (ii) below.

(i) Spans not exceeding 150 feet. The sizes in Table 24 apply for all loading districts.

TABLE 24.—Minimum wire sizes

(AWG for copper; Stl. WG for steel)

Conductor	Spans of	
	125 feet or less	Spans 125 to 150 feet
Copper, hard-drawn	10	9
Steel, galvanized:		
In general	10	8
In rural districts of arid regions	12	10

(ii) Spans exceeding 150 feet. If spans in excess of 150 feet are necessary, the size of conductors specified above or the sags of the conductors shall be correspondingly increased.

(c) Paired conductors without messengers. Paired wires without a supporting messenger shall be eliminated as far as practicable and where used shall meet the following requirements:

(i) Material and strength. Each conductor shall be of material which will not corrode excessively under the prevailing conditions and shall have an ultimate strength of not less than 170 pounds.

(ii) Limiting span lengths. Paired wires shall in no case be used without a supporting messenger in spans longer than 100 feet in the heavy loading district, 125 feet in the medium loading district, and 150 feet in the light loading district.

(d) Sags. Table 25 specifies the recommended sags for wires shown in Table 24.

TABLE 25.—Stringing sags

HEAVY AND MEDIUM LOADING DISTRICTS

Length of span	Temperature					
	100°F	80°F	60°F	40°F	20°F	0°F
Feet	in.	in.	in.	in.	in.	in.
70	5.7	4.4	3.4	2.7	2.2	1.8
75	6.4	5.1	4.0	3.1	2.5	2.1
80	7.4	5.8	4.5	3.5	2.9	2.4
85	8.4	6.6	5.1	4.0	3.2	2.7
90	9.4	7.3	5.7	4.5	3.6	3.0

**TABLE 25.—Stringing sags**

140	22.6	17.7	13.7	10.8	8.8	7.3
150	26.0	20.3	15.8	12.4	10.1	8.4

LIGHT LOADING DISTRICT

Length of span	110°F	100°F	80°F	60°F	40°F	20°F	10°F
Feet	in.	in.	in.	in.	in.	in.	in.
80	5.5	5.0	4.2	3.4	2.8	2.4	2.2
85	6.2	5.7	4.7	3.9	3.2	2.7	2.5
90	7.0	6.4	5.3	4.3	3.6	3.0	2.8
95	7.8	7.1	5.8	4.8	4.0	3.4	3.1
100	8.6	7.9	6.5	5.3	4.4	3.7	3.5
110	10.4	9.5	7.8	6.5	5.4	4.5	4.2
120	12.4	11.3	9.3	7.7	6.4	5.4	5.0
130	14.6	13.3	11.0	9.0	7.5	6.3	5.9
140	16.9	15.4	12.7	10.5	8.7	7.3	6.8
150	19.4	17.7	14.6	12.0	10.0	8.4	7.8

(e) Splices and taps. Splices shall as far as practicable be avoided in the crossing and adjacent spans. If it is impracticable to avoid such splices, they shall be of such a type and so made as to have a strength substantially equal to that of the conductor in which they are placed.

Taps shall be avoided in the crossing span where practicable, but if required shall be of a type which will not impair the strength of the conductors to which they are attached.

**(10) Messengers.**

(a) Minimum size.

(i) Spans not exceeding 150 feet. Table 26 gives the minimum sizes of galvanized steel-strand messenger to be used for supporting different sizes of cables:

**TABLE 26.—Minimum sizes of messenger**

Size of cable in weight per foot	Messenger (nominal breaking load)
	Pounds
Less than 2.25 pounds	6,000
2.25 to 5 pounds	10,000
Exceeding 5 and less than 8.5 pounds	16,000

(ii) Spans exceeding 150 feet. For spans exceeding 150 feet or for heavier cables a proportionately larger messenger or other proportionately stronger means of support shall be used.

(b) Sags and tensions. Multiple-conductor cables and their messengers shall be so suspended that when they are subjected to the loading prescribed in WAC 296-44-355, the tension in the messenger will not exceed 60 percent of its ultimate strength.

(11) **Inspection.** (See WAC 296-44-286.) [§ 26 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-370 Strength requirements—Grade N construction.** (1) **Poles and towers.** Poles used for lines for which neither Grade B, C or D is required shall be of such initial size and so guyed or braced, where necessary, as to withstand safely the loads to which they may be subjected, including linemen working on them. Such poles and stubs on state and federal highways shall be located as far as practicable from the traveled portion of such highways. The number of crossings over such highways should be kept to a minimum. Such poles and stubs located within falling distance of the traveled portion of such highways, or so located that their failure would permit wires, cables, guys, or other equipment to fall into the traveled portion of the highway, or would reduce the clearances specified in Table 1 over the traveled portion of such highways, shall be periodically inspected and maintained in safe condition.

(2) **Guys.** The general requirements for guys are covered under "miscellaneous requirements" (WAC 296-44-400 through 296-44-427).

(3) **Crossarm strength.** Crossarms shall be securely supported, by bracing if necessary, so as to support safety loads to which they may be subjected in use, including linemen working on them. Any crossarm, or buckarm, shall be capable of supporting a vertical load of 225 pounds at either extremity, in addition to the weight of the conductors.

**Note:** Double crossarms are generally used at crossings, unbalanced corners, and dead-ends, in order to permit conductor fastenings at two insulators, and so prevent slipping, although single crossarms might provide sufficient strength. To secure extra strength, double crossarms are frequently used, and crossarm guys are sometimes used.

**(4) Supply-line conductors.**

(a) **Material.** All supply-line conductors shall be of material or combinations of materials which will not corrode excessively under the prevailing conditions.

(b) **Size.** Supply-line conductors shall be not smaller than the following:

**TABLE 27.**—Grade N minimum sizes for supply-line conductors

(AWG for copper and aluminum; Stl. WG for steel)

	Urban and rural	
	Urban	Rural
Soft copper .....	6	8
Medium or hard-drawn copper .....	8	8
Steel .....	9	9
Urban and rural		
	Spans 150 feet or less	Spans exceeding 150 feet
Stranded aluminum:		
Not reinforced .....	1	0
Steel-reinforced .....	6	4

**Recommendation:** It is recommended that, except as modified in WAC 296-44-364(6)(b), these minimum sizes for copper and steel not to be used in spans longer than 150 feet for the heavy-loading district, and 175 feet for the medium and light-loading districts.

**(5) Supply services.**

(a) Material. All supply service conductors shall be of material or combinations of materials which will not corrode excessively under the prevailing conditions.

(b) Size of open-wire services.

(i) Not over 750 volts between conductors. Supply-service leads of not over 750 volts between conductors shall be not smaller than required by (A) or (B) below:

(A) Spans not exceeding 150 feet. Sizes shall be not smaller than specified in Table 28.

**TABLE 28.**—Minimum sizes of service leads carrying 750 volts or less

(All voltages are between conductors except trolley-contact conductors where voltages are to ground)

(AWG for copper; Stl. WG for steel)

Situation	Copper wire		Steel wire
	Soft-drawn	Medium or hard-drawn	
Alone .....	10	12	12
Concerned with communication conductors	10	12	12
Over supply conductors of—			
0 to 750 volts .....	10	12	12
750 to 8,700 volts <sup>1</sup> .....	8	10	12
Exceeding 8,700 volts <sup>1</sup> .....	6	8	9
Over trolley-contact conductors—			
0 to 750 volts ac or dc .....	8	10	12
Exceeding 750 volts ac or dc .....	6	8	9

<sup>1</sup>Installation of service leads of not more than 750 volts above supply lines of more than 750 volts should be avoided where practicable.

(B) Spans exceeding 150 feet. Sizes shall be not smaller than required for Grade C. (WAC 296-44-364(6)(b).)

(ii) Exceeding 750 volts between conductors. Sizes of supply-service leads of more than 750 volts between conductors shall be not less than required for supply-line conductors of the same voltage.

(c) Sag, open-wire services.

(i) Not over 750 volts between conductors. Supply service leads of not over 750 volts between conductors shall have sags not less than shown in Table 29.

**TABLE 29.**—Sags for open-wire services

Span lengths	Sag
	Inches
100 or less .....	12.
100 to 125 .....	18.
125 to 150 .....	27.
Exceeding 150 .....	Grade C sags.

(ii) Exceeding 750 volts between conductors. Supply service leads of more than 750 volts between conductors shall comply as to sags with the requirements for supply line conductors of the same voltage.

(d) Cabled services. Supply service leads may be grouped together in a cable, provided the following requirements are met:

(i) Size. The size of each conductor shall be not less than required for leads of separate conductors (subsection (5)(b)).

(ii) Sag. The sag of the cable should be not less than required for leads of separate conductors (subsection (5)(c)).

(iii) Insulation. The insulation should be sufficient to withstand twice the normal operating voltage.

(6) **Lightning-protection wires.** Lightning-protection wires paralleling the line conductors shall be regarded, in respect to size and material requirements, as supply conductors.

(7) **Trolley-contact conductors.** In order to provide for wear, no trolley-contact conductors shall be installed of less size than No. 0, if of copper, or No. 4, if of silicon bronze.

(8) **Cradles at supply-line crossing.** Cradles should not be used.

**Note:** It is less expensive and better to build the supply line strong enough to withstand extreme conditions than to build a cradle of sufficient strength to catch and hold the supply line if it falls.

(9) **Communication conductors.** There are no specific requirements for Grade N communication line conductors or service drops. [§ 26 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-373 Line insulators--Application of rule.** These requirements apply only to supply lines in situations where Grade B construction is required. (See WAC 296-44-346(5), for insulation requirements for neutral conductors.) [§ 27 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-376 Line insulators--Material and marking.** Insulators for operation on supply circuits at voltages of 2,300 and above shall be of porcelain, made by the wet process or one equally suitable as regards electrical and mechanical properties, or other material which will give equally good results in respect to mechanical and electrical performance and durability. They should be marked by the maker with his name, trademark, or identification number so applied as not to reduce the electrical or mechanical strength of the insulator. [§ 27 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-379 Line insulators--Electrical strength of insulators in strain position.** Where insulators are used in a strain position they shall have not less electrical strength than the insulators generally used on the line when under the normal mechanical stresses imposed by the loadings specified in WAC 296-44-352 through 296-44-358. [§ 27 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-382 Line insulators--Ratio of flash-over to puncture voltage.** Insulators shall be designed so that their dry flash-over voltage is not more than 75 percent of their puncture voltage at a frequency of 60 cycles per second. [§ 27 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-385 Line insulators--Test voltages.** Insulators when tested under the current specifications of the American Standard Association shall not flash over at values less than given in Table 30.

**TABLE 30.—Test-voltage requirements**

(For application see rules 275 and 278)

Nominal voltage between conductors	Minimum test dry flash-over voltage of insulators	Nominal voltage between conductors	Minimum test dry flash-over voltage of insulators
750	5,000	46,000	125,000
2,400	20,000	69,000	175,000
7,200	40,000	115,000	315,000
13,200	55,000	138,000	390,000
23,000	75,000	161,000	445,000
34,500	100,000	230,000	640,000

(Interpolate for intermediate values.)

[§ 27 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-388 Line insulators--Factory tests.** Each insulator or insulating part thereof for use on circuits operating at voltages in excess of 15,000 volts shall be subjected to a routine dry flash-over test at the factory for a period of 3 minutes at a frequency of 60 cycles per second or to any other test sanctioned by good modern practice, such as high-frequency tests. [§ 27 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-391 Line insulators--Selection of insulators.** (1) **Insulators for constant-current circuits.** Insulators for use on constant-current circuits shall be determined on the basis of the nominal full-load voltage of the circuit.

(2) **Insulators for single-phase circuits directly connected to three-phase circuits.** Insulators used on single-phase circuits directly connected to three-phase circuits (without intervening isolating transformers) shall have a flash-over voltage not less than that required for the insulators on the three-phase circuits.

(3) **Insulators for nominal voltages between conductors.** In selecting insulators of the test voltage to be used for any nominal voltage between conductors, consideration shall be given to the conditions under which the line will operate as follows:

(a) Where the system is of moderate extent, in open country, subject to intermittent rains and moderate lightning, insulators having flash-over values not less than given in Table 30 shall be used.

(b) Where operating conditions are more severe than set forth in (a) above, due to extent of system, prevalence of exceptionally severe lightning, bad atmospheric conditions (caused by chemical fumes, smoke, cement dust, salt fog, or other foreign matter), or to a long, dry season with heavy dust accumulation followed by moisture, insulators having a higher flash-over than given in Table 30 or other equally effective means of increasing insulation shall be used. The increase is to be determined by local conditions and experience. [§ 27 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-394 Line insulators--Protection against arcing.** In installing the insulators and conductors, such precautions as are sanctioned by good modern practice shall be taken to prevent, as far as possible any arc from forming or to prevent any arc which might be formed from injuring or burning any parts of the supporting structures, insulators or conductors which might render the conductors liable to fall. [§ 27 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-397 Line insulators--Compliance with WAC 296-44-394 at crossings.** Construction in accordance with any one of the methods ((1) to (7)) given below will be considered as a means of meeting the requirements of WAC 296-44-394 above, provided that insulators having a flash-over not less than required by WAC 296-44-391 (3)(a) or (3)(b) are used, and in no case having a lower flash-over than insulators generally used in adjacent sections of the line.

**Exception:** If the insulator hardware on the structure is grounded at crossings and is not grounded on the adjacent parts of the line, construction in accordance with (1) or (2) below should be followed, or other equally effective means employed.

The use of grounded construction at crossings only should in general be avoided.

(1) The use of a protective device such as a gap, protector tube, lightning arrester, or the like, on or adjacent

to the insulator, which is effective in suppressing the power arc or in holding it clear of the insulator, conductor, supporting structure, and hardware.

(2) The use of protective gaps or other voltage-limiting devices on structures adjacent to crossing structures, if such devices limit the voltage to not more than 80 percent of the flash-over value of the insulators on the crossing structures.

(3) The use of circuit protection by fast-clearing fuses or circuit-breakers. Fuses, or breakers in combination with their relays, shall be considered "fast-clearing" if they interrupt fault currents within one-fifth second (12 cycles at 60 cycles per second).

(4) The use of one or more overhead ground wires installed at a higher level than the phase wires on not less than five consecutive spans, including two adjacent spans on each side of the crossing span, provided the ground wire is effectively grounded at structures adjacent to crossing structures.

Such overhead ground wires shall not be grounded at crossing structures unless such structures are inherently grounded or unless the ground wires are grounded at each of the two supporting structures on both sides of and adjacent to the crossing structures. In this latter case the down leads from the overhead ground wires shall be suitably offset from the crossing structures or otherwise arranged so as not to appreciably increase the probability of lightning flash-over from the overhead ground wire and its connections to the phase wires and other current-carrying parts.

(5) The use of insulators with ungrounded pins or supporting insulator attachments carried on wood arms.

(6) The use of insulators having a flash-over 25 percent greater than those employed on adjacent sections of the line, but not less than 25 percent greater than the values in Table 30.

(7) If the insulator supports on the crossing structure and on adjacent sections of the line are grounded, the use of insulator strings with higher flash-over voltage at crossing supports than on the adjacent sections, as follows:

(a) If the adjacent parts of the line have five or less units – one extra unit at the crossing.

(b) If the adjacent parts of the line have six or more units – two extra units at the crossing.

(c) Insulation equivalent to that provided by (a) or (b). [§ 27 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-400 Miscellaneous requirements—Supporting structures for overhead lines. (1) Poles and towers.**

(a) Rubbish. Poles and towers shall be placed, guarded, and maintained so as to be exposed as little as practicable to brush, grass, rubbish, or building fires.

(b) Guarding poles.

(i) Protection against mechanical injury. Where poles and towers are exposed to abrasion by traffic or to other damage which would materially affect their strength, they shall be protected by guards.

(ii) Protection against climbing. On closely latticed poles or towers carrying supply conductors exceeding

300 volts to ground, either guards or warning signs shall be used, except as follows:

**Exception 1:** Where the right-of-way is completely fenced.

**Exception 2:** Where the right-of-way is not completely fenced, provided the poles or towers are not adjacent to roads, regularly traveled thoroughfares, or places where people frequently gather, such as schools or public playgrounds.

(c) Warning signs.

(i) On poles or towers. For warning signs on poles or towers, see subsection (1)(b)(ii).

(ii) On bridge fixtures. Structures attached to bridges for the purpose of supporting conductors shall be plainly marked with the name, initials, or trade-mark of the utility responsible for the attachment and, in addition, where the voltage exceeds 750 volts to ground, by the following sign or its equivalent:

"Danger—Do Not Touch"

(d) Pole steps. All poles along which shall be run vertically any wire or cable used to conduct or carry a voltage of over two hundred fifty volts may be provided with steps, and no steps shall be placed nearer the ground than seven feet.

(e) Identification of poles. Poles, towers and other supporting structures on which are maintained electric conductors shall be so constructed, located, marked, or numbered as to facilitate identification by employees authorized to work thereon. Date of installation of such structures shall be recorded where practicable by the owner.

Wood poles shall bear markings by which the depth of setting can be determined.

(f) Obstructions. All poles should be kept free from posters, bills, tacks, nails, growing vines, and other unnecessary obstructions, such as through bolts not properly trimmed. (See Figure 11 in Appendix.)

(2) Crossarms.

(a) Location. In general crossarms should be maintained at right angles to the axis of the pole and to the direction of the attached conductors, and at crossings should be attached to that face of the structure away from the crossing, unless special bracing or double crossarms are used.

**Note:** Double crossarms are generally used at crossings, unbalanced corners, and dead-ends in order to permit conductor fastenings at two insulators and so prevent slipping, although single crossarms might provide sufficient strength. To secure extra strength, double crossarms are frequently used and crossarm guys are sometimes used.

(b) Bracing. Crossarms shall be securely supported, by bracing if necessary, so as to support safely loads to which they may be subjected, including linemen working on them. Any crossarm or buckarm shall be capable of supporting a vertical load of 225 pounds at either extremity in addition to the weight of the conductors.

This rule shall not apply to the top crossarm on poles used solely for communication circuits. [§ 28 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-403 Miscellaneous requirements—Tree trimming.** (1) **General.** Where trees exist near supply-line conductors, they shall be trimmed, if practicable, so the neither the movement of the trees nor the swinging or increased sagging of conductors in wind or ice storms or at high temperatures will bring about contact between the conductors and the trees.

**Exception:** For the lower-voltage conductors, where trimming is difficult, the conductor may be protected against abrasion and against grounding through the tree by interposing between it and the tree a sufficiently nonabsorptive and substantial insulating material or device.

(2) **At wire crossings and railroad crossings.** The crossing span and the next adjoining spans shall be kept free, as far as practicable, from overhanging or decayed trees which might fall into the line. [§ 28 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-406 Miscellaneous requirements—Guying.** (1) **Where used.** When the loads to be imposed on poles, towers, or other supporting structures are greater than can be safely supported by the poles or towers alone, additional strength shall be provided by the use of guys, braces or other adequate construction.

Guys shall be used also, where necessary, wherever conductor tensions are not balanced, as at corners, angles, dead-ends, and changes of grade of construction.

**Note:** This is to prevent undue increase of sags in adjacent spans as well as to provide sufficient strength for those supports on which the loads are considerably unbalanced.

(2) **Strength.** The strength of the guy shall meet the requirements of WAC 296-44-361 through 296-44-367 for the grade of construction that applies.

When guys are used with wood or other poles or towers capable of considerable deflection before failure, the guys shall be able to support the entire load in the direction in which they act, the pole acting simply as a strut.

(3) **Point of attachment.** The guy should be attached to the structure as near as practicable to the center of the conductor load to be sustained, but for voltages exceeding 8,700 volts between conductors, the insulation afforded by wood crossarms and poles should not be reduced any more than is necessary.

(4) **Guy fastenings.** Guys should be stranded and where attached to anchor rods should be protected by suitable guy thimbles or their equivalent. Cedar and other softwood poles around which any guy having a strength of 10,000 pounds or more is wrapped should be protected by the use of suitable guy shims and, where there is a tendency for the guy to slip off the shim, guy hooks or other suitable means of preventing this action

should be used. Shims are not necessary in the case of supplementary guys, such as storm guys.

(5) **Guy guards.** The ground end of all guys attached to ground anchors exposed to traffic shall be provided with a substantial and conspicuous wood or metal guard not less than 8 feet long.

**Recommendation:** It is recommended that in exposed or poorly lighted locations such guards be painted white or some other conspicuous color.

(6) **Insulating guys from metal poles.** Where anchors would otherwise be subject to electrolysis, guys attached to metal poles or structures and not containing guy insulators should be insulated from the metal pole or structure by suitable blocking.

(7) **Anchor rods.** Anchor rods shall be installed so as to be in line with the pull of the attached guy when under load, except in rock or concrete. The anchor rod shall have an ultimate strength in the eye and shank equal to that required of the guy.

The anchor rod eye shall extend above ground when installed.

(8) **Grounding.** The anchored end of guys attached to wood poles carrying circuits of more than 15,000 volts shall be effectively grounded (see section 9 for method) wherever this part of the guy has a clearance of less than 8 feet to ground.

**Exception 1:** This does not apply to guys in rural districts.

**Exception 2:** This does not apply if the guy contains an insulator which will meet the requirements of WAC 296-44-409 (1)(b) for the highest voltage liable to be impressed on it. [§ 28 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-409 Miscellaneous requirements—Insulators in guys attached to poles and towers.** (1) **Properties of guy insulators.**

(a) **Material.**

(i) **Grade B.** Guy insulators shall be made by the wet-porcelain process or a process equally suitable as regards electrical and mechanical properties.

(ii) **Grade C, D, and N.** No requirements are made for material.

(b) **Electrical strength.** Guy insulators shall have a dry flash-over voltage at least double the normal voltage and a wet flash-over voltage at least as high as the normal line voltage between conductors.

(c) **Mechanical strength.** Guy insulators shall have a mechanical strength at least equal to that required of the guys in which they are installed.

(2) **Use of guy insulators.**

(a) **One insulator.** An insulator shall be located in each guy which is attached to a pole or structure carrying any supply conductors of more than 300 volts to ground and not more than 15,000 volts between conductors, or in any guy which is exposed to such voltages. This guy insulator shall be located at least 8 feet above the ground.

**Exception 1:** A guy insulator is not required where the guy is grounded under the conditions set forth in (d) following.

**Exception 2:** A guy insulator is not required if the guy is attached to a pole on private right-of-way carrying no supply circuits whose voltage exceeds 550 volts or whose transmitted power exceeds 3,200 watts.

**Exception 3:** A guy insulator is not required if all supply conductors are in a cable having a grounded metal sheath or supported by a grounded messenger.

(b) Two insulators. Where a guy attached to any pole carrying communication or supply conductors or both, is carried over or under any overhead supply conductor of more than 300 volts to ground and where hazard would otherwise exist, two or more guy insulators shall be placed so as to include the exposed section of the guy between them as far as possible. Neither insulator shall be within 8 feet of the ground.

**Exception:** These insulators are not required where the guy is grounded under the conditions set forth in (d) following.

(c) Relative location of insulators in guys located one above the other. Where guys in which it is necessary to install insulators are so arranged that one crosses or is above another, insulators shall be so placed that in case any guy sags down upon another the insulators will not become ineffective.

(d) Grounding of guys. Insulators are not required in guys under the following conditions:

(i) Where the guy is electrically connected to grounded steel structures.

(ii) Where the guy is electrically connected to an effectively grounded line conductor which is a common or multi-grounded neutral for supply lines over 5000 volts, and lines of 750 to 5000 volts are not carried on the same pole or structure.

(iii) Where the guy is effectively grounded and used solely for support of communication lines.

(iv) Where the anchor guy is attached to a pole on private right-of-way carrying no supply circuits whose voltage exceeds 550 volts. [§ 28 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-412 Miscellaneous requirements—Span-wire insulators.** (1) **Mechanical strength.** Span-wire insulators shall have a mechanical strength at least equal to that required of the span wire in which they are installed.

(2) **Use of span-wire insulators.** All span wires, including bracket span wires, shall have a suitable strain insulator (in addition to an insulated hanger if used) inserted between each point of support of the span wire and the lamp or trolley-contact conductor supported, except that single insulation, as provided by an insulated hanger, may be permitted when the span wire or bracket is supported on wood poles supporting only trolley, railway feeder, or communication conductors used in the operation of the railway concerned. In case insulated

hangers are not used, the strain insulator shall be located so that in the event of a broken span wire the energized part of the spanwire cannot be reached from the ground.

**Exception:** This rule does not apply to insulated feeder taps used as span wires. [§ 28 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-415 Miscellaneous requirements—Overhead conductors.** (1) **Identification.** All conductors of electric-supply and communication lines shall be arranged to occupy definite positions throughout, as far as practicable, and shall be constructed, located, marked, numbered, or attached to distinctive insulators or cross-arms, so as to facilitate identification by employees authorized to work thereon. This does not prohibit systematic transposition of conductors.

(2) **Branch connections.**

(a) **Accessibility.** Connections of branches to supply circuits, service loops, and equipment in overhead construction shall be readily accessible to authorized employees. When possible, connections shall be made at poles or other structures.

(b) **Clearance.** Branch connections shall be supported and placed so that swinging or sagging cannot bring them in contact with other conductors or interfere with the safe use of pole steps, or reduce the climbing or lateral working space.

(3) **Common neutral.** Primary and secondary circuits may utilize a single conductor as a common neutral if such conductor has at least four ground connections in each mile of line, exclusive of individual service grounds. [§ 28 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-418 Miscellaneous requirements—Equipment on poles.** (1) **Identification.** All equipment of electric-supply and communication lines shall be arranged to occupy definite positions throughout, as far as practicable, or shall be constructed, located, marked, or numbered so as to facilitate identification by employees authorized to work thereon.

(2) **Location.** Transformers, regulators, lightning arresters, and switches, when located below conductors or other attachments, shall be mounted outside of the climbing space.

(3) **Street lighting equipment.**

(a) **Clearances from pole surface.** All exposed metal parts of lamps and their supports, unless effectively insulated from the current-carrying parts, shall be maintained not less than 20 inches from the surface of wood poles, except where lamps are located at pole tops.

(b) **Clearances above ground.** Street lamps shall be mounted not less than the following heights above ground:

Over walkways . . . . . 10 feet  
Over roadways . . . . . 15 feet

(c) **Horizontal clearance.** Arc and incandescent lamps in series circuits should have at least 3 feet horizontal clearance from windows, porches, and other spaces accessible to the general public.

(d) Material of suspension. The lowering rope or chain for lighting units arranged to be lowered for examination or maintenance shall be of a material and strength designed to withstand climatic conditions and to sustain the lighting unit safely. The lowering rope or chain, its supports, and fastenings shall be examined periodically.

(e) Insulators in suspension ropes. When street lamps are supported by span wires, such metallic ropes or chains shall be so arranged so that they do not establish a metallic conducting path around the span wire sectionalizing insulators.

(f) Arc-lamp disconnectors. A suitable device shall be provided by which each arc-lighting unit on series circuits of more than 300 volts to ground may be safely and entirely disconnected from the circuit before the lamp is handled, unless the lamps are always worked on from suitable insulating stools, platforms, or tower wagons, or handled with suitable insulating tools, and treated as under full voltage of the circuit concerned.

(g) Grounding lamp posts. Metal lamp posts shall be effectively grounded.

**(4) Transformers.**

(a) Position on poles.

(i) Transformers installed on poles or other structures shall be placed so as to provide adequate climbing and working space.

(ii) Cases and tanks of transformers supported on arms or poles, except on multiple pole rack construction, shall be not less than 17 feet above the ground in areas accessible to vehicles and not less than 10 feet above ground in other areas.

(iii) Where practicable, transformers shall be mounted between primary and secondary supply conductors connected to the transformer and secondary wires may pass along the side of the transformer tank below the level of the primary leads.

(iv) Transformers should not be installed on supply line junction or corner poles which require primary buckarm construction.

(b) Grounding.

(i) The neutral conductor of all single phase, two phase or three phase transformer secondary windings, shall be grounded where the maximum voltage between the ground and any secondary circuit conductor will not exceed 150 volts. Where the maximum voltage between the ground and any secondary circuit conductor will, when one secondary conductor is grounded, exceed 150 volts to ground, grounding shall be permitted.

(ii) Transformer secondary ground connections shall be provided at the transformer pole or at a pole adjacent to the transformer pole or shall be connected to an effectively grounded neutral.

(c) Cutouts and disconnecting devices. Transformer cutouts, fuses, disconnects or switches shall be located so that they are readily operable from climbing and working spaces. [§ 28 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-421 Miscellaneous requirements—  
Protection for exposed overhead communication lines. (1)**

[Title 296 WAC—p 920]

**Open wire.** Communication lines for public use and fire-alarm lines shall be treated as follows, if at any point they are exposed to supply (including trolley) lines of more than 400 volts to ground:

(a) At stations for public use they shall be protected by one of the methods specified in WAC 296-44-661 through 296-44-667.

(b) Elsewhere they shall be isolated by elevation or otherwise guarded so as to be inaccessible to the public.

(2) **Metal-sheathed cables.** Metal-sheathed cables and messengers shall be isolated or grounded in conformity with the general requirements of WAC 296-44-277 through 296-44-295. [§ 28 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-424 Miscellaneous requirements—  
Circuits of one class used exclusively in the operation of  
circuits of another class.** (1) Overhead communication circuits used exclusively in the operation of supply circuits.

(a) Choice of method. Communication circuits used exclusively in the operation of supply lines may be run either as ordinary communication circuits or as supply circuits under the conditions specified in (c) and (d) of this rule, respectively. After selection of the type of communication-circuit construction and protection for any section which is isolated, or is separated by transformers, such construction and protection shall be consistently adhered to throughout the extent of such isolated section of the communication system.

(b) Guarding. Communication circuits used in the operation of supply lines shall be isolated by elevation or otherwise guarded at all points so as to be inaccessible to the public.

(c) Where ordinary communication-line construction may be used. Communication circuits used in the operation of supply lines may be run as ordinary communication conductors under the following conditions:

(i) Where such circuits are below supply conductors in the operation of which they are used (including high-voltage trolley feeders) at crossings, conflicts, or on commonly used poles, provided:

(A) Such communication circuits occupy a position below all other conductors or equipment at crossings, conflicts, or on commonly used poles.

(B) Such communication circuits and their connected equipment are adequately guarded and are accessible only to authorized persons.

(ii) Where such circuits are below supply conductors in the operation of which they are used and are above other supply or communication conductors at wire crossings, conflicts, or on the same poles, provided the communication circuits are protected by fuseless lightning arresters, drainage coils, or other suitable devices to prevent the communication circuit voltage from normally exceeding 400 volts to ground.

**Note:** The grades of construction for communication conductors with inverted levels apply.

(d) Where supply-line construction must be used. Communication circuits used in the operation of supply

lines shall comply with all requirements for the supply lines with which they are used, where they do not comply with the provisos of subsections (c)(i) or (c)(ii) above.

**Exception 1:** If the voltage of the supply conductors concerned exceeds 8,700 volts between conductors, the communication conductors, need only meet the requirements for supply conductors of 5,000 to 8,700 volts between conductors.

**Exception 2:** Where the supply conductors are required to meet Grade C, the size of the communication conductors may be the same as for Grade D (see WAC 296-44-367 (9)(b)) for spans up to 150 feet.

(2) **Supply circuits used exclusively in the operation of communication circuits.** (See also WAC 296-44-430 through 296-44-457.) Circuits used for supplying power solely to apparatus forming part of a communication system may be run either in open wire or in aerial or underground cable as follows:

(a) Where run in open wire, such circuits shall have the grades of construction, clearances, insulation, etc., prescribed elsewhere in WAC 296-44-274 through 296-44-457 for supply or communication circuits of the voltage concerned.

(b) Where run in aerial or underground cable and the following requirements are met, the grades of construction, clearances, separations, locations, etc., prescribed elsewhere in WAC 296-44-274 through 296-44-457 for communication cables shall apply:

(i) Such cables are covered with effectively grounded continuous metal sheaths or are carried in metal cable rings on effectively grounded messengers.

(ii) All circuits in such cables are owned or operated by one party and are maintained only by qualified employees.

(iii) Supply circuits included in such cables are terminated at points accessible only to qualified employees.

(iv) Communication circuits brought out of such a cable, if they do not terminate in a repeater station or terminal office, shall be so protected or arranged that in the event of a failure within the cable, the voltage on these communication circuits will not exceed 400 volts to ground.

(v) Terminal apparatus for the power supply shall be arranged so that live parts are inaccessible when such supply circuits are energized. (See Fig. 11.A, in Appendix at end of this chapter.)

**Exception:** The provisions of (2)(a) and (2)(b) above, do not apply to supply circuits of 550 volts or less and which carry power not in excess of 3,200 watts, covered in WAC 296-44-298 (2)(c). [§ 28 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-427 Miscellaneous requirements--Overhead electric railway construction. (1) Trolley-conductor supports.** All overhead trolley-contact conductors shall be supported and arranged so that the breaking of a single contact conductor fastening will not allow the trolley conductor, live span wire, or current-

carrying connection to come within 10 feet (measured vertically) from the ground, or from any platform accessible to the general public.

Span-wire insulation for trolley-contact conductors shall comply with WAC 296-44-412.

(2) **High-voltage contact conductors.** Every trolley-contact conductor of more than 750 volts in urban districts where not on fences right-of-way shall be suspended so as to minimize the liability of a break and, as far as practicable, so that if broken at a single point, it can not fall within 12 feet (measured vertically) from the ground or any platform accessible to the general public.

(3) **Third rails.** Third rails shall be protected where not on fenced rights-of-way by adequate guards composed of wood or other suitable material.

(4) **Prevention of loss of contact at railroad crossings.** Trolley-contact conductors shall be arranged as set forth in either (a) or (b) following, at grade crossings with interurban or other heavy-duty or high-speed railroad systems:

(a) The trolley-contact conductor shall be provided with live trolley guards of suitable construction, or,

(b) The trolley-contact conductor shall be as far as practicable at the same height above its own track throughout the crossing span and the next adjoining spans. Where a uniform height above rail is not adhered to, the change shall be made in a very gradual manner. Where the crossing span exceeds 100 feet, catenary construction shall be used.

**Exception:** This rule does not apply where the system is protected by interlocking derails or by gates.

(5) **Guards under bridges.**

(a) Where guarding is required. Guarding is required where the trolley-contact conductor is so located that a trolley pole leaving the conductor can make simultaneous contact between it and the bridge structure.

(b) Nature of guarding. Guarding shall consist of a substantial inverted trough of nonconducting material located above the contact conductor, or other suitable means of preventing contact between the trolley pole and the bridge structure. [§ 28 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-430 Rules for underground lines (see also WAC 296-44-424 (2)(b))--Location. (1) General location.** Underground systems of electric conductors should be located so as to be subject to the least practicable disturbance. Railway tracks and underground structures, including catch basins, gas pipes, etc., should be avoided where practicable.

(2) **Ducts.** The ducts between adjacent manholes or other outlets should be laid as straight and direct as practicable.

(3) **Manholes.** Manhole openings shall be located so as to provide safe and convenient access. Manhole openings shall be not less than three feet from the nearest railway or street car tracks except by permission of the recognized administrative authority. [§ 29 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-433 Rules for underground lines (see also WAC 296-44-424 (2)(b))--Construction of duct and cable systems.** (1) **Material, size, and finish of ducts.** Ducts shall be of such material, size, mechanical strength, and finish as to facilitate the installation and maintenance of conductors or cables. Ducts shall be freed from burrs before laying and shall have clear bores.

(2) **Grading of ducts.** Where it is necessary to drain ducts the grade of the ducts shall be such as to permit proper and adequate drainage.

(3) **Settling.** Ducts should be suitably reinforced or be laid on suitable foundations of sufficient mechanical strength where necessary to protect them from settling.

(4) **Clearances.**

(a) **General.** The clearance between duct or cable systems and other underground structures paralleling them, shall be as great as practicable. The distance between the top covering of the system and the pavement surface, or other surface under which the system is constructed, shall be sufficient to protect the system from injury by traffic.

(b) **Below base of rail.** The top of all duct and cable system structures, except as hereafter specified shall generally be located at a depth of not less than 30 inches, in the case of street railways, and not less than 42 inches, in the case of steam and electric railroads, below the base of rail. Where unusual conditions exist or where proposed construction would interfere with existing construction, a greater depth than specified above may be required.

**Exception 1:** Where this is impracticable, or for other reasons, this clearance may be reduced by agreement between the parties concerned. In no case, however, shall the top of the conduit protection extend higher than the bottom of the ballast section which is subject to working or cleaning.

**Exception 2:** Where physical and chemical conditions will permit, a conduit consisting of not more than two iron pipes, not exceeding 4 inches in diameter, or two creosoted wood ducts not exceeding 6 inches square, or one or more cables of a type designed for burying directly in the earth used for communication lines, or for service supply circuits not exceeding 750 volts, may be laid in the ground beneath railroad tracks without any form of protection at a minimum depth of 18 inches below the base of the rail unless the worked ballast section of the roadbed exceeds 18 inches, in which case the conduit shall be laid below the ballast section.

(c) **Iron pipe conduit.** Where iron pipe is used as a conduit for underground cables or conductors, it shall not be laid in contact with water, gas, or steam metallic-pipe systems. Where the clearance is less than two inches, the metal conduit shall be adequately separated from other metallic-pipe systems by a barrier of suitable materials, or they shall be electrically bonded together at the point of least separation.

(5) **Separations between supply and communication duct systems.**

(a) **General.** Duct systems, including laterals, to be occupied by communication conductors for public use should be separated, where practicable, from duct systems, including laterals, for supply conductors by not less than 3 inches of concrete, 4 inches of brick masonry, or 12 inches of well-tamped earth.

**Exception 1:** Extensions may, however, be made to existing interconnected or jointly owned and jointly occupied duct systems used in common by municipalities, communication companies, or supply companies with less effective separations than above specified by permission of the recognized administrative authority.

**Exception 2:** Cables containing circuits of 550 volts or less between conductors and having a total transmitted power of not in excess of 3,200 watts, used exclusively in connection with the operation of a railway signal or supply system, may be carried in the same duct system with communication cables, if such construction is agreed to by all parties concerned, and where the communication cables are exclusively used for the operation of the railway signal or supply system, they may be carried in the same duct.

(b) **Entering manholes.** Where communication and supply conductors or cables occupy ducts terminating in the same manhole, the two classes of ducts should be separated as widely as practicable and where practicable should enter the manhole from opposite sides.

**Note:** This requirement is made so that cables can be racked alongside walls with a minimum of crosses between the two classes of conductors.

(6) **Duct entrances into manholes.** Iron-pipe conduit terminating in manholes, handholes, or other permanent openings of underground systems, shall be provided with an effective shield, bushing or other smooth outlet.

**Exception:** This does not apply to communication conductors, to supply conductors of less than 300 volts between conductors, or to armored cables of any voltage.

(7) **Sealing laterals.** Lateral ducts for service connections to buildings, through which gas or water may enter buildings or other duct systems, should be effectively plugged or cemented by the use of asphaltum, pitch, or other suitable means.

(8) **Duct arrangement for dissipation of heat.** Duct systems intended to carry supply cables of large current capacity should be arranged, where practicable, so that ducts carrying such cables will not dissipate their heat solely through other ducts. [§ 29 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-436 Rules for underground lines (see also WAC 296-44-424 (2)(b))--Construction of manholes.** (1) **Minimum strength.** The design and construction of manholes and handholes shall provide sufficient strength to sustain, with a suitable margin of safety, the loads which may reasonably be imposed on them.

(2) **Dimensions.** Manholes shall meet the following requirements where practicable:

(a) **Width.** The least horizontal inside dimension shall be not less than 3 feet 6 inches.

(b) **Height.** The vertical dimension shall be not less than 6 feet except in manholes where the opening is within 1 foot of each side of the full size of the manhole.

**Exception:** The dimensions specified in 1 and 2 above are not necessary in service boxes, handholes, or in manholes used exclusively for communication-system equipment or cables.

(c) **Working space.** Adequate and readily accessible working space shall be maintained about all electrical parts or equipment which require adjustment, examination or work of any nature done on them if exposed while in service. The horizontal clearance shall be not less than those clearances set forth in WAC 296-44-115(2). The vertical clearance shall be not less than 6 feet unless constructed in accordance with 2 above and its exception.

(3) **Drainage.** Where drainage is into sewers, suitable traps shall be provided to prevent entrance of sewer gas into manholes.

(4) **Ventilation.** Adequate ventilation to open air shall be provided for manholes from which any openings exist into subways entered by the public. Where such manholes house transformers, sectionalizing switches, or regulators; etc., the ventilator ducts shall be cleaned at necessary intervals.

(5) **Manhole openings.** No manhole shall have an opening to the outer air less than twenty-six inches in diameter, and the cover of same shall be provided with vent hole or holes equivalent to three square inches in area.

(6) **Manhole covers.** Manholes and handholes, while not being worked in, shall be securely closed by covers of sufficient strength to sustain such loads as may reasonably be imposed upon them.

(7) **Supports for cables.** Cables should be adequately supported at each manhole.

(8) **Manhole location.** Manhole openings shall, where practicable, be located so that barriers or other suitable guards can be placed to protect the opening effectively when uncovered. [§ 29 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-439 Rules for underground lines (see also WAC 296-44-424 (2)(b))—Location of cables.** (1) **Accessibility.** Cables in manholes shall be accessible to workmen and clear working space shall be maintained at all times.

(2) **Cables carrying large currents.** Cables intended to carry large currents should be located, where practicable, in outside ducts so that they will not necessarily dissipate heat solely through adjacent ducts.

(3) **Separation between conductors.**

(a) Cables of different voltages. Cables shall be arranged and supported in ducts and manholes so that those operating at higher voltages will be separated as far as practicable from those operating at lower voltages.

(b) Cables of different systems. Cables belonging to different systems, particularly supply-distribution and

communication systems, shall not be installed in the same duct.

**Exception:** This does not apply to the insulation of railway-signal supply and communication cables in the same duct, as permitted by exception 2 in WAC 296-44-433 (5)(a).

(c) Cables of supply and communication systems.

(i) **General.** Supply cables and communication cables for public use shall be maintained in separate duct systems, and particularly in separate manholes except by permission of the recognized administrative authority.

**Exception 1:** Cable extensions may be made to existing interconnected or jointly owned and jointly occupied duct systems used in common by municipalities, communication companies, or supply companies.

**Exception 2:** This does not apply where railway-signal supply and communication cables are carried in the same duct system as permitted in exception 2, WAC 296-44-433 (5)(a).

(ii) In the same manhole. Where supply cables and communication cables for public use have been permitted by administrative authority to occupy the same manhole, they shall be maintained on opposite sides of the manhole.

Where the supply and communication cables cross in these manholes, a separation of at least one foot should be maintained. [§ 29 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-442 Rules for underground lines (see also WAC 296-44-424 (2)(b))—Protection and separation of conductors buried in earth.** (1) **Separation.** The separation between buried communication and buried supply conductors or cables shall consist of not less than twelve inches of well tamped earth, four inches of brick, or three inches of concrete.

**Exception 1:** this separation and protection is not required where supply circuits having a potential of 550 volts or less between conductors and having a total transmitted power of not in excess of 3,200 watts are laid adjacent to communication cables, if all cables are used exclusively for the operation of a railway-signal or supply system, and are maintained by the same company.

**Exception 2:** This separation and protection is not required where supply circuits have a potential of 550 volts or less between conductors and are installed using insulated conductors with a neutral conductor.

**Exception 3:** This separation and protection is not required where communication and power supply conductors or cables which have a potential of over 550 volts between conductors, are buried in a common trench at the same depth with random separation under the following conditions:

(a) When a concentric neutral type power cable is used. A concentric neutral type of direct burial multiple or single conductor power cable is one designed for the

purpose using insulated conductors, the insulation being covered with a semi-conducting layer which has a concentrically applied multi-conductor bare neutral of equal current carrying capacity to the insulated conductor. This neutral to consist of not less than six wires or their equivalent with a lay of not more than eight times the cable diameter.

(b) When a spiral of continuous sheath type power cable is used with a neutral of equal conductivity to the phase wire. A spiral of continuous sheath type of direct burial multi or single conductor cable is one that has a continuous or spiral metal sheath. The conductivity may be obtained with the sheath or with a separate neutral laid not more than three inches from the cable and be not smaller than No. 4 AWG. Either the separate neutral or the sheath shall be bare and in direct contact with the earth and the two shall be interconnected.

**Exception 4:** No separation is required between communication and supply conductors or cables located beneath transformers, switch and terminal cabinets or their supporting pads or structures.

(2) **Protection at crossings of cables.** At all crossings where buried supply conductors or cables are above communication conductors or cables, the supply conductors or cables shall be protected from digging operations by concrete or creosoted wood plank or equivalent mechanical protective covering extending at least two feet in each direction from the point of crossing.

**Exception 1:** This protection is not required where supply circuits have a potential of 550 volts or less between conductors.

**Exception 2:** This protection is not required where supply conductors over 550 volts between conductors are installed in accordance with subsection (1), exception 3.

(3) **Protection of cables installed parallel.** Where buried communication and buried supply conductors or cables are installed in the same trench generally parallel to each other, the buried supply conductors or cables shall be covered with concrete or creosoted wood planking or equivalent mechanical protection, except that this covering may be omitted in the following cases:

(a) Where the voltage of the supply conductors does not exceed 550 volts between conductors.

(b) Where the supply conductors or cables are encased in a continuous metallic sheath effectively grounded.

(c) Where the supply conductors or cables are installed more than two feet horizontally from communication conductors.

(d) Where supply conductors over 550 volts between conductors are installed in accordance with subsection (1), exception 3.

(4) **Fault protection.** Where buried communication and power supply conductors of 550 volts or more between conductors are installed in the same trench without separation and in accordance with the requirements of subsection (1), the cable shall be protected by fuses capable of clearing phase to ground faults. The total

clearing time shall not exceed twelve cycles and such protection shall not reclose.

(5) **Identification of conductors.** Each company using a random burial method of the underground system shall properly identify their cable and employees of a company shall know the identification of the cable belonging to their company.

(6) **Ground protection.** Where communication and power supply conductors are buried in the same trench without separation, the following ground protection shall be provided:

(a) At each transformer and/or pedestal installation, all grounds shall be interconnected. The common neutral conductor shall be continuous. Where straight splices are required in the common neutral, only two ends of the conductors shall be joined with one connector. All interconnections to the common neutral required by this section shall be made by taps to the common neutral, including equipment neutral connections.

(b) Telephone protectors, telephone service cable shields and secondary neutrals shall be connected to a common ground at each customer's service entrance when telephone circuits are underground without separation from power conductors.

(7) **Depth of buried cables.** Where communication and power supply cables of over 550 volts between conductors are buried without separation in the same trench or without mechanical protection, the power cable shall be buried to a minimum depth of thirty inches except under railroad tracks where they shall be buried with a minimum cover of forty-two inches. In rock, a twenty-four inch minimum depth will be acceptable or a lesser depth will be accepted where an adequate means of mechanical protection is provided. [§ 29 (part), Rule 294, filed 10/30/64, effective 12/1/64; § 29 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-445 Rules for underground lines (see also WAC 296-44-424 (2)(b))—Protection of conductors in duct systems and manholes.** (1) **Protection against arcing.** A suitable fire-resistant covering should be placed on the following cables to prevent injury from arcing:

(a) Closely grouped lead-sheathed supply cables containing circuits of more than 8,700 volts, or of large current capacity operating at more than 750 volts ac or 300 volts dc.

(b) Communication cables and supply cables of large current capacity, if occupying the same side of the manhole, or if they cross each other.

(2) **Bonding.** Exposed metallic cable sheaths shall be bonded at suitable intervals with a conductor of suitable size, electrolysis conditions permitting. Supply cable sheaths need not be bonded to communication cable sheaths. [§ 29 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-448 Rules for underground lines (see also WAC 296-44-424 (2)(b))—Guarding of live parts in manholes.** (1) **Conductor joints or terminals.** Joints or terminals of conductors or cables of supply systems shall

be arranged so that there are no bare ungrounded current-carrying metal parts exposed to accidental contact within manholes or handholes.

(2) **Apparatus.** Live parts of protective, control or other apparatus installed and maintained in manholes shall be enclosed in suitable grounded cases or in cases having no exposed metallic parts. [§ 29 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-451 Rules for underground lines (see also WAC 296-44-424 (2)(b))--Construction at risers from underground.** (1) **Separation between risers of communication and supply systems.** The placing of risers for communication systems and risers for supply systems on the same pole should be avoided where practicable. Where located on streets or highways, risers should, where practicable, be placed on poles so as to be in the safest available location from the point of view of traffic damage.

The number of risers on one pole shall be so limited and the risers shall be placed so as to permit replacement of the pole upon deterioration.

(2) **Mechanical protection of conductors.** All supply conductors or cables from underground systems which connect to overhead systems shall be protected by a metal pipe or conduit which gives suitable mechanical protection up to a point not less than 8 feet above the ground and 40 inches above communication circuits for public use.

Such supply conductors or cables on the pole above this protection shall be covered with wood molding or other suitable protective material.

**Exception:** Armored cables.

(3) **Grounding of riser pipes.** Exposed metal riser pipes containing supply conductors shall be effectively grounded.

(4) **Conductor terminal construction.** The terminals of underground cables operating at more than 750 volts to ground and connecting to overhead open-wire systems shall meet the following requirements:

(a) Protection against moisture. Protection shall be provided so that moisture will not enter the cable.

(b) Insulation of conductors. Conductors shall be properly insulated from the grounded metal sheath. In addition, the conductors of multiple-conductor cable shall be properly separated and insulated from each other.

(c) Identification. When riser terminals used for different voltage classifications are identical, the terminals shall be readily identified by position.

(5) **Clearance above ground for open supply wiring.** For supply wires connecting to underground system see WAC 296-44-316(3). [§ 29 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-454 Rules for underground lines (see also WAC 296-44-424 (2)(b))--Identification of conductors.** Cables shall be permanently identified by tags

or otherwise at each manhole or other permanent opening of the underground system. Where the duct formation on opposite sides of the manhole is the same, the cables where practicable should be installed in corresponding ducts.

**Exception:** This requirement does not apply where the position of a cable, in conjunction with diagrams supplied to workmen, gives sufficient identification, or where the manhole is occupied solely by the communication cables of one utility, or of two utility companies agreeing thereto. [§ 29 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-457 Rules for underground lines (see also WAC 296-44-424 (2)(b))--Identification of apparatus connected in multiple.** Where transformers, regulators, or other similar apparatus not located in the same manhole operate in multiple, special tags, diagrams, or other suitable means shall be used to indicate that fact.

**Exception:** This requirement does not apply where disconnecting devices are provided to permit cutting such equipment completely off the system. [§ 29 (part), filed 3/23/60, effective 12/1/58.]

## INSTALLATION AND MAINTENANCE OF ELECTRIC UTILIZATION EQUIPMENT

**WAC 296-44-460 Installation and maintenance of electric utilization equipment--General requirements--**

**Scope.** (1) **Voltage limits and occupancies.** The following rules apply to electric utilization equipment between 25 and 750 volts, where accessible to other than qualified electrical operators, as in mills, factories, mercantile establishments, hotels, theaters, and other public buildings, cars and other vehicles, dwellings, and similar places. Communication equipment connected to communication lines (see definition) is exempted, except from rules under WAC 296-44-661 through 296-44-664.

(2) **Equipment of more than 750 volts.** Equipment and conductors of more than 750 volts between conductors where accessible to other than qualified electrical operators, shall (in addition to complying with the rules of WAC 296-44-460 through 296-44-664 for conductors of more than 300 volts) comply also with the rules for electrical supply stations, WAC 296-44-079 through 296-44-271, where such rules require more than the rules of WAC 296-44-460 through 296-44-664. Current-carrying parts shall be either incased in permanently grounded metal cases or conduits, or otherwise suitably guarded to prevent access (or too close approach) to such current-carrying parts by any but qualified persons.

(3) **Utilization equipment regarded as supply equipment.** Electric utilization equipment, however, as well as generating equipment, if inclosed in a separate room which is inaccessible to unqualified persons, and if when in service is under the control of a qualified person, may be installed in conformity with the rules applying to electrical supply stations (WAC 296-44-079 through

296-44-271) and in that case does not come under these rules. [§ 30 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-463 Installation and maintenance of electric utilization equipment--General requirements.** (1) **Approved equipment.** Equipment which has been subjected to examination by some properly qualified body and found to comply with the general requirements of this code, the National Electrical Code, the state of Washington "rules and regulations for installing electric wires and equipment," and other nonconflicting accepted standards which apply for any given purpose, should be used; otherwise, the approval of the department of labor and industries shall be obtained in advance.

**Note:** In order to avoid the necessity for repetition of such examinations by different examiners, frequently with inadequate facilities for such work, and to avoid the confusion which would result from conflicting reports as to the suitability of equipment examined for a given purpose, it is necessary that such examinations should be made under standard conditions, and the record made generally available through promulgation by organizations properly equipped and qualified for experimental testing, inspections of the run of goods at factories, and service-value determinations, through field inspections, and whose findings are subject to appeal to the National Bureau of Standards.

(2) **Future inspections.** Electric utilization equipment shall be installed and maintained in conformity with these safety rules. Persons in charge of equipment shall have periodic inspections of equipment and wiring made, and similar inspections shall be made by the supervising authority. [§ 30 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-466 Installation and maintenance of electric utilization equipment--Reference to other codes.** Reference is to the other properly approved codes and particularly the National Electrical Code, state of Washington rules and regulations for industrial electric wires and equipment, and applicable local codes. [§ 30 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-469 Installation and maintenance of electric utilization equipment--Grounding.** (1) **Grounding method.** Where grounding is required, all grounding of circuits, lightning arresters equipment, or wire raceways, which is intended to be a permanent and effective protective measure, shall be made in accordance with the methods specified in WAC 296-44-058 through 296-44-076.

(2) **Circuits required to be grounded.** All circuits included in WAC 296-44-460(1) shall be effectively grounded in accordance with the rules of WAC 296-44-058 through 296-44-076, except that the following are not are not required to be grounded:

**Exception 1:** Circuits on two-wire direct-current systems, provided the system is equipped with a ground detector.

**Exception 2:** Delta-connected three-phase circuits; except that such circuits when partly used for lighting shall be so arranged and grounded, that the lighting circuits will have the lowest practicable voltage to ground.

**Exception 3:** Circuits of more than 150 volts to ground.

**Note:** It is recommended that such circuits be grounded if the voltage to ground of any conductor of the circuit will not exceed 300 volts after grounding.

**Exception 4:** Electric furnace circuits. (See WAC 296-44-589.)

**Exception 5:** Electric crane circuits operating over combustible fibers.

**Exception 6:** Circuits of less than 50 volts between conductors unless run overhead between buildings, or supplied by transformers operating on circuits of more than 150 volts to ground, or by transformers operating on ungrounded circuits.

(3) **Grounding noncurrent-carrying metal parts.** Conductor armor, conductor raceways, and all equipment supplied directly by metal-incased wiring shall be grounded.

Exposed noncurrent-carrying metal parts of other fixed electric utilization equipment (such as frames of motors, cranes, cars, and switchboards, and inclosures of switches and transformers) shall be grounded under any one of the following conditions: (See WAC 296-44-058 through 296-44-076 for method of grounding, and WAC 296-44-628 for portable appliances.)

(a) If operated at more than 150 volts to ground, regardless of location.

(b) If located where exposed grounded surfaces, such as metal frames of other machines, plumbing fixtures, conducting floors or walls, exist within reach of persons while touching the metal parts under consideration. (Usually grounded surfaces within 5 feet horizontally of the parts considered and within 8 feet vertically of the floor are considered within reach.)

(c) If located where explosives, inflammable gas, or inflammable flyings normally exist in dangerous quantities, regardless of voltage.

**Exception 1:** Parts of machines, such as name plates, screws in wood, and similar small parts, and metal covers of fuses and switch bases which are thoroughly and effectively insulated, and which are not liable to become alive except under very unusual circumstances are not considered as coming under this rule and may be left ungrounded.

**Exception 2:** No ground connection need be made to expose metal frames of switchboards, motors, or lighting fixtures connected to direct-current trolley or third-rail circuits, or where accessible to qualified persons only, provided that such frames are effectively insulated from ground, and provided that the metal frames in question are so located with reference to insulating mats, floors, or platforms that persons cannot readily touch the metal

frames in question without standing on such mats, floors, or platforms.

**Exception 3:** No ground connection need be made to metal inclosures housing interior wiring conductors, provided such inclosures do not exceed 25 feet in length, are insulated from grounded piping or other grounded surfaces and are out of reach from grounded surfaces or guarded against contact by persons.

**Exception 4:** No ground connection need be made to metal pipe used for the mechanical protection of interior wiring conductors, provided each of the conductors contained are encased in a continuous nonconducting flexible tubing. [§ 30 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-472 Installation and maintenance of electric utilization equipment—Working spaces about electric equipment.** (1) **Adequate space.** Suitable working space shall be provided and maintained about all electric utilization equipment.

(2) **Dimensions.** The horizontal dimension of the working space in front of live parts shall be not less than:

(a) For parts on one side of more than 150 volts to ground and no live on grounded parts on the other side of the working space, 2.5 feet.

(b) For parts on one side of more than 150 volts to ground and live or grounded parts on the other, 4 feet.

(c) For parts on one side of less than 150 volts to ground and no live or grounded parts on the other, 1.5 feet.

(d) For parts on one side of less than 150 volts to ground and live or grounded parts on the other, 2.5 feet.

(3) **Clear spaces.** Working spaces adjacent to exposed live parts shall not be used as passageways.

(4) **Elevation of equipment.** The elevation of the equipment at least 8 feet above ordinarily accessible working platforms usually affords protection at least equivalent to that provided by the horizontal clearances of B and may be used in lieu thereof. [§ 30 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-478 Installation and maintenance of electric utilization equipment—Guarding or isolating live parts.** (1) **Inclosure or elevation.** Except as elsewhere required or permitted by this code, all bare, ungrounded live parts of electric utilization equipment, such as bus bars, conductors, and terminals, operating at more than 50 volts to ground, shall be protected by one of the following means:

(a) Inclosure, which gives access to live parts only through opening a door or cover.

(b) Guarding, as by railing, screen, or barriers which remove the liability of contact or approach.

(c) Isolation, by placing at least 8 feet above the floor line, or by removing beyond ready accessibility.

**Note:** Inclosures may consist of suitable casings or suitable insulating coverings. The continuous insulating covering of conductors should be depended upon only when the circuit is grounded in accordance with WAC

296-44-058 through 296-44-076 or is less than 300 volts to ground and entirely unexposed to leakage or induction from higher voltage circuits, and where in addition it is impracticable to install more suitable guards. It should be depended upon then only when the covering is not exposed to liability of mechanical injury, and is very substantial, thoroughly dry, and contains no noninsulating flameproofing compound or oil-soaked rubber. It is recommended that in addition to the protection afforded by such coverings the insulating mats or platforms called for in subsection (2) below be used.

Where covers, casings, or barriers must at any time be removed from the current-carrying parts which they guard, while these parts are alive, the covers, casings, or barriers, should be of insulating material, or so arranged that they cannot readily be brought in contact with the live parts.

(2) **Exception where mats and platforms are used.** Where current-carrying parts of more than 150 volts to ground must necessarily be exposed (unguarded) within 8 feet from the floor, all surrounding conducting floors and other conducting surfaces within reach shall be covered with suitable insulating platforms, mats or other insulating devices.

**Note:** Mats may be of wood, held together by wood pins, or of cork matting, linoleum, or rubber. The material and construction should be suitable for the voltage concerned and for the prevailing conditions. If subject to moisture or to accumulation of conducting dust, flyings, or chips, mats should present surfaces minimizing the hazards from these sources. [§ 30 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-481 Installation and maintenance of electric utilization equipment—Hazardous locations.** (1) **Where explosives and inflammable exist.** In locations where explosives, inflammable gas, or inflammable flyings normally exist in dangerous quantities, all parts at which high temperature, sparking, or arcing is liable to occur shall be inclosed by one of the following methods:

(a) By installing in a separate room or compartment, free from explosive material.

(b) By surrounding with an inclosure of nonabsorptive, noncombustible material capable of withstanding without injury and without transmitting flame to the outside any explosion that may occur within.

(2) **In wet places.** External parts of lighting fixtures and all other electric equipment when within eight feet of the floor in wet locations shall be constructed of nonabsorptive insulating materials or, if of metal, shall be grounded as required in WAC 296-44-469(3). [§ 30 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-484 Installation and maintenance of electric utilization equipment—Protection by disconnection.** Electric utilization equipment which will require maintenance work upon it shall have approved means of disconnecting it from all ungrounded conductors of its supply circuit.

**Note:** Every installation has a switch or switches controlling the power supply or subdividing it. These switches may be used as the required disconnecting means where readily accessible, but in many cases it is recommended that additional disconnecting means be provided for convenience and in order not to interfere with other apparatus.

(1) If the control apparatus opens all the main leads to the motor, and the pilot circuits are fused, a disconnecter only is required for connected loads in excess of 50 horsepower.

(2) If the control apparatus does not open all of the main leads to the motor, a circuit switch or other approved disconnecting means shall be used.

**Note:** By main leads to the motor is meant: dc motors – all armature circuits (not including shunt-field circuits; ac motors – all primary leads (not including the secondary leads of a slip-ring motor or the field circuit of a synchronous motor).

(3) The disconnecting means shall make all circuits of the controller and motor dead.

(4) If the disconnecting means is equipped for locking in the open position it need not be in sight of the motor.

(5) If the starter is not designed for opening the motor circuit, a circuit switch should be provided in the branch circuit of each motor. [§ 30 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-487 Installation and maintenance of electric utilization equipment—Identification of equipment.** (1) **Safety by identification.** All electric utilization equipment shall be suitably identified when added safety can be obtained thereby. (See also WAC 296-44-496, 296-44-550 and 296-44-634.)

**Note:** The identification may be by location, color, number, name plate, label, design, or other means.

(2) **Voltage and use.** The voltage and intended use shall be shown wherever it will reduce the hazard or decrease the liability of error in operation. [§ 30 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-490 Conductors—Electrical protection.** (1) **Fuses and circuit-breakers.** Each conductor (except neutral conductors, grounded conductors, grounding conductors, and conductors of circuits the opening of which may cause special hazard by the interruption of service or removal of protection) shall be protected against excessive current by a suitable fuse or other automatic circuit-breaking device or by the design of the system.

(2) **Grounded and neutral conductors.** No fuse or other automatic circuit-breaking device shall be placed in any conductor which is required to be grounded, nor in the neutral conductor of a three-wire system, except as follows:

(a) **Simultaneous opening.** If the automatic circuit-breaking device simultaneously opens all conductors of the circuit.

(3) **Switches.** Switches shall open all conductors of the circuit by one operation except as follows:

(a) The switch need not open a grounded conductor. In the case of service switches, if the switch does not interrupt the grounded conductor, other means shall be provided in the service cabinet or on the switchboard for disconnecting the grounded conductor from the interior wiring.

(b) Single-pole switches may be used in two-wire branch circuits; on grounded circuits they shall be placed in the ungrounded conductor.

(c) On three-wire systems with a grounded neutral conductor the service switch may open either outside wire independently of the other, provided the neutral cannot be opened without opening both outside wires.

(d) Electric meters and control circuits of time switches may be connected on the supply side of the service switch and fuses or circuit-breaker on alternating-current supply not exceeding 750 volts between conductors, provided no wiring or live parts are exposed and the connections are inaccessible to unauthorized persons. [§ 31 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-493 Conductors—Protective covering.**

(1) **Mechanical protection.** Where exposed to mechanical injury, suitable casing, armor or other means shall be employed to prevent injury or disturbance to conductors, their insulation, or supports.

(2) **Bare conductors.** Bare conductors shall be used only for circuits of less than 300 volts to ground where accessible to qualified persons only, or in locations where insulated conductors are not feasible, such as contact conductors, bus bars, and battery connections. Such bare conductors shall be fixed at adequate separations by the use of suitable supports. Except at the point where a permanent ground connection is made, such conductors within buildings shall be kept insulated from the ground. Bare conductors shall not be used where inflammable gases or explosives are liable to be present. (See WAC 296-44-484 and 296-44-502.) [§ 31 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-496 Conductors—Identification of conductors and terminals.** (1) **Conductors.** The grounded neutral conductor of multiwire alternating-current circuits, the grounded neutral conductor of three-wire circuits and the grounded conductor of two-wire circuits shall be so arranged as to be readily identified. This may be done by maintaining a specified relative position on open wiring or the conductors may be tagged or otherwise suitably identified if run in conduits. For rubber-covered wires (not including flexible cord or fixture wire) of size No. 6 (0.162 inch) and smaller the only allowable identification shall consist of a white or natural-gray covering. This conductor shall be run and maintained without change in polarity throughout the entire installation and connected at all fittings to marked terminals or to terminals which can be identified by their location relative to others, in order to preserve the continuity of the marking.

If the system to which the circuit is connected is a grounded system, the identified conductor shall be connected to the grounded conductor of this system. The identified conductor shall be connected to the screw shell of all lampholders.

**Exception:** Identification need not be maintained between switch and equipment controlled.

(2) **Terminals.** All devices provided with terminals for the attachment of conductors and intended for connection to more than one side of the circuit shall, unless specifically excepted, have a pair of connecting terminals properly marked for identification, unless the electrical connection between the pair of terminals intended to be connected to the grounded conductor is clearly evident.

(a) The terminals of lighting panelboards and of devices having a normal rating exceeding 30 amperes need not be marked for identification, except as required in paragraphs (e) and (f) below for polarized receptacles for attachment plugs and polarized attachment-plug caps.

(b) The terminals of utilization appliances need not be marked to indicate the proper connection to the grounded conductor. If a terminal of an utilization appliance which includes single-pole switches is marked for identification, the switches shall not be connected in the identified conductor of the circuit.

(c) The terminals of portable appliances need not be marked for identification.

(d) Devices, to the terminals of which only one side of the line is connected, need not have terminals marked for identification.

(e) Two-wire attachment-plug receptacles without screw shells, and two-wire attachment-plug caps, unless of the polarity type, need not have their terminals marked for identification. Two-wire polarized receptacles for attachment plugs and polarized attachment-plug caps shall have the terminal intended for connection to the grounded conductor marked for identification.

(f) Three-wire attachment-plug receptacles and three-wire attachment-plug caps, in which one terminal may be used for the connection of a grounding conductor, shall have such terminal identified in a manner differing from that specified in subsection (3) below. The other terminals need not be marked for identification.

(g) In the case of devices with screw shells, the identified terminal shall be the one connected to the screw shell. This does not apply to screw shells which serve as plug fuseholders.

(h) In the case of screw-shell devices with attached leads, the conductor attached to the screw shell shall have white or natural-gray finish. The outer finish of the other conductor shall be of a solid color that will not be confused with the white or natural-gray finish which is to indicate the grounded conductor.

(3) **Means of identification of terminals.** The marking of terminals shall be done by means of a metallic plated coating substantially white in color, as nickel or zinc, or the terminals may be of material substantially white in

color. The other terminals shall be of a readily distinguishable different color. [§ 31 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-499 Conductors—Guarding and isolating conductors.** Insulated conductors of more than 300 volts to ground, or open, bare, ungrounded conductors of all voltages, if less than 8 feet above the floor or working platform and accessible to unqualified persons, shall be guarded by approved screens, barriers, or inclosures. [§ 31 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-502 Conductors—Guarding in damp or hazardous locations.** (1) **Support of conductors in damp locations.** Conductors in damp locations or where exposed to corrosion, if not in waterproof conduit, or in waterproof metal sheaths in other suitable ducts, shall be effectively isolated and supported on insulators of a suitable type.

(2) **Conductors in hazardous locations.** Conductors in locations where inflammable gas normally exists shall be in grounded rigid metal conduit. All fittings and outlets for conduit shall be electrically and mechanically continuous with the conduit, and the conduit shall be sealed by the use of suitable potheads or equivalent devices to prevent entrance of gases.

Conductors in locations where inflammable flyings normally exist shall be in grounded rigid metal conduit or cable approved for the purpose. [§ 31 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-505 Conductors—Precautions against excessive inductance and eddy currents.** Supply conductors of alternating-current or direct-current circuits should not be run in separate iron conduits or on opposite sides of I beams or other iron structures or to be otherwise run so as to increase abnormally the self-inductance of the circuit.

**Note:** Such construction, by introducing large self-inductance in direct-current circuits, causes fuses to blow explosively; in alternating-current circuits it causes heating due to eddy currents in the metal. [§ 31 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-508 Conductors—Splicing and taping.** Conductors shall be so spliced or joined as to be mechanically and electrically secure without solder and, unless made with a suitable splicing device, shall then be soldered with a fusible metal or alloy. Ends and joints of insulated conductors, unless otherwise adequately guarded, shall have equal insulating covering with other portions of the conductor, and this covering shall be securely held in place. [§ 31 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-511 Conductors—Uninsulated conductors.** Uninsulated conductors may be used in the following cases under the conditions specified below: (1) As a grounded neutral service conductor, provided the secondaries of the supplying system operate at not more than 208 volts to ground and the conditions specified in

WAC 296-44-067 for a common grounding conductor are met. Except in the service drop, such an uninsulated service conductor shall be part of an approved type of service cable or shall be installed in a rigid metal raceway.

(2) As a grounding conductor for equipment, as a common grounding conductor, or as an independent circuit-grounding conductor if used where a common grounding conductor is permissible. (See WAC 296-44-058 through 296-44-076 for installation method.) [§ 31 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-514 Fuses, circuit-breakers, switches and controllers--General requirements for switches. (1) Accessibility, marking, and installation.**

(a) All switches, fuses, automatic circuit-breakers, motor starters, and other control devices shall be readily and safely accessible and shall be installed in such a manner as to minimize the danger of accidental operation.

(b) The place of operation of starters and controllers for motors, heating, and furnaces shall be within sight of the motor or equipment controlled, except where it is inaccessible to other than qualified and authorized persons, or where the controller or disconnecting means is capable of being locked in the "off" position.

**Note:** This is to minimize the hazard of starting when persons are in dangerous positions, but exception is made to permit the remote control of fans, pumps, etc., when properly isolated.

(c) Where practicable, switches shall be so installed that gravity cannot close them; and such switches as may close by gravity shall be provided with a stop block or latch to prevent accidental closing.

(d) Oil switches and oil circuit-breakers shall be marked with the following data:

- (i) Manufacturer's name and address.
- (ii) Manufacturer's type and designation number.
- (iii) Rated amperes.
- (iv) Rated volts.
- (v) Frequency if other than 60 cycles.

Such marking shall be placed on the switch or circuit-breaker and not on removable parts that may be interchanged.

(2) **Switches for special circuits.** Switches controlling emergency lighting circuits, elevator circuits, circuits in theaters, hospital operating rooms, and other circuits, the interruption of which might cause special hazard, shall be arranged so as to be accessible only to authorized persons.

(3) **Control of exit and emergency lights.** In buildings where emergency and exit lamps are installed, the control switch shall be located where it will be under competent supervision.

(4) **Control of exit lights in assembly halls.** Exit lamps and all lamps normally kept lighted in halls, corridors, and any other parts of theaters and other public assembly halls used by the audience except the general auditorium lighting, shall be supplied independently of the

stage lighting and shall be controlled from the lobby or other place convenient to the main entrance to the building. In addition to the control required by the foregoing, there may be—

(a) A switch at the main service or on the control panel of special current source.

(b) A switch located adjacent to the emergency switch, or an automatic light-actuated device approved for the purpose, to control separately those lights on the exterior of the building which are not required for illumination when there is sufficient daylight. [§ 32 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-517 Fuses, circuit-breakers, switches and controllers--Hazardous locations.** When necessary to install fuses, circuit-breakers, switches, or other control devices in locations where explosives, inflammable gas, or inflammable flyings exist, they shall be suitably protected. (See WAC 296-44-484.) Flush snap switches, if mounted in ungrounded metal boxes and located within reach of conducting floors or other conducting surfaces, shall be provided with covers of nonconducting material. (Usually grounded surfaces within 5 feet horizontally of the parts considered and within 8 feet vertically of the floor are considered within reach.) [§ 32 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-520 Fuses, circuit-breakers, switches and controllers--Where switches are required. (1) Service switches.** Suitable switches and fuses, or circuit-breakers, or equivalent devices shall be installed in all ungrounded service conductors connecting utilization installations to the main service conductors from either overhead or underground lines. If fuses are used, unless access to them is under the control of the electric service company, they shall be disconnected by opening the service switch.

Service switches and fuses, or circuit-breakers, or equivalent devices shall be readily accessible and as close as practicable to the point where the service enters the building.

Unless mounted upon a switchboard or panelboard accessible to qualified persons only, service switches, fuses, and circuit-breakers shall be inclosed. Switches shall be operable without opening the inclosure unless additional switches are provided for separate control of the individual circuits, such switches being inclosed and externally operable.

If supply is from two or more different sources, the switch or switches controlling the supply shall be so constructed or arranged that it will be impossible to connect to one source unless the other is disconnected.

**Exception:** Floating batteries or supply units or systems normally operated in parallel.

(2) **Circuit switches.** Suitable switches, circuit-breakers, or equivalent devices shall be inserted in all circuit leads to lamps, motors, transformers, storage batteries, electric furnaces, and similar utilization equipment to make possible the disconnection of all such equipment from the source of supply.

**Note:** On a branch circuit not exceeding 15 amperes or 150 volts, plug fuses are recognized as an equivalent device.

**Exception 1:** Parts or pieces of apparatus intended to operate as a unit, as a motor and its starting device, may be controlled by one switch.

**Exception 2:** The switch need not open a grounded conductor. (See WAC 296-44-490 (2) and (3).)

**Exception 3:** A group of incandescent lamps on the same branch circuit may be disconnected by one single-pole switch in the ungrounded conductor.

**Exception 4:** One switch may serve to disconnect several motors and their starting devices from the source of supply, if it complies with WAC 296-44-487.

**Note:** The use of a disconnecting means for each motor or a group of motors is a question of judgment, depending upon frequency of attention required by the motor and controller.

Single-pole switches shall not be placed in any neutral or grounded conductor. Three-way switches, or three-way and four-way switches used in combination, shall be classed as single-pole switches, and shall be so wired that only one pole of the circuit will be carried to any switch.

(3) **Fuses.** Switches shall be provided as necessary to make possible the disconnection of all fuses from the source of electrical supply before being handled, except as provided in WAC 296-44-526(2).

(4) **Switches or plugs on portables.** Switches or plug connectors shall be installed to permit the disconnection of temporary wiring, or of portable conductors from permanent or fixed wiring.

(5) **Emergency stop switches.** On equipment where the failure of any part of the operating or control circuits may create a life hazard and on equipment where there is possibility of the operator being caught or injured in the normal operation of the machine (such as rolls, mixers, beaters, etc.), an emergency stop switch shall be provided accessible to the operator in his usual working location. This switch shall be of a different color from any other switches on the operating or control panel and shall be clearly marked "emergency stop." Such switch shall not be dependent upon the action of springs for opening but shall be positively opened by the movement of the operating member itself. Springs may, however, be used to accelerate the separation of current-carrying parts. The circuit shall be so arranged that once the emergency stop switch has been operated, the equipment cannot be started without going through the normal starting sequence. [§ 32 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-523 Fuses, circuit-breakers, switches and controllers—Character of switches and disconnectors.** (1) **Capacity of switches.** Switches used otherwise than as disconnectors shall have a capacity such as to insure safe interruption, at the working voltage, of the greatest current which they will be required

to carry continuously, and shall be marked with the current and voltage for which they are rated.

(2) **Capacity of disconnectors and warning signs.** Disconnectors shall be of suitable voltage and ampere rating for the circuit in which they are installed and shall be accessible only to properly qualified persons. They shall also be protected by signs warning against opening them while carrying current in excess of the safe opening limit.

**Note:** Interlocking arrangements are desirable to prevent opening of such disconnectors under loads beyond their safe opening capacity and locking arrangements to prevent accidental opening.

(3) **Locking or blocking.** Where dependence for maintaining an open circuit as a protection for persons against unexpected starting or energizing the circuit is put on certain switches or circuit-breakers, such switches or circuit-breakers shall be so arranged that they can be locked, blocked, or otherwise secured in the "off" or "open" position. (See WAC 296-44-538 (1) and (2) and 296-44-541(12).)

**Exception:** Small-capacity snap switches, if near machines and in plain sight from all parts of the machines controlled are exempted. Switches of any size are exempted if the installation comprises only one motor, and the switch is in plain sight from all parts of the machines operated by the motor.

**Note:** Locking is to be preferred to blocking, wherever parts of the machinery driven are remote from the point of control.

(4) **Good contact.** Switches, controllers, and rheostats shall be so constructed as to make and maintain good contact. Knife switches shall maintain such alignment under service conditions that they may be closed with a single unhesitating motion.

(5) **Inclosure of switches.** Switches shall be of inclosed type unless inaccessible to other than qualified persons (see WAC 296-44-538).

(6) **Manual operation for power-operated apparatus.** It is recommended that power-operated circuit-breakers and similar switching apparatus be provided with means for readily closing them manually, and such equipment shall be provided with means for readily opening them manually. [§ 32 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-526 Fuses, circuit-breakers, switches and controllers—Disconnection of fuses and thermal cut-outs before handling.** (1) **Automatic disconnection.** Fuses in circuits of more than 150 volts to ground shall, where accessible to others than qualified electrical attendants, be so arranged that the fuses are necessarily disconnected from all sources of electric energy before they can be touched. Where the circuit voltage is less than 150 volts to ground, this protection is recommended.

**Note:** This may be accomplished by a construction in which the fuse and its exposed current-carrying connections are accessible only when disconnected from the

circuit, either by opening the fuse inclosure or by other means.

Where fuses are in locked cabinets (or otherwise made accessible only to qualified persons) sufficient protection is usually secured for all voltages if switches are provided to disconnect the fuses from all sources of electric energy.

If switches and fuses are inclosed in metal cabinets and live terminals are accessible, greater hazard to one replacing a fuse exists than if they were not so inclosed, as the live terminals are adjacent to grounded metal.

(2) **Switch ahead of the fuse.** Where fuses are not arranged so that they are necessarily disconnected from all sources of electric energy before they can be touched, switches shall be so placed or arranged that opening them will disconnect the fuses from all sources of electric energy, except service and meter switches, access to which is controlled by the electric service company. If in order to comply with the above, the supply wires must be connected to certain terminals, such terminals shall be marked "line" and the other terminals shall be marked "load," or with other appropriate designation.

Electric meters and control circuits of time switches may be connected on the supply side of the service switch and fuses or circuit breaker on alternating-current supply not exceeding 750 volts between conductors, provided no wiring or live parts are exposed and the connections are inaccessible to unauthorized persons.

(3) **Live load.** Where a fused inclosed switch, accessible to unqualified persons, is connected between a source of supply and a live load of more than 150 volts to ground, as in the charging circuit of a storage battery, switches shall be used in which the fuses are so arranged that they will be disconnected before they become accessible unless a supplementary switch is provided for disconnection of the live load from the fuses.

(4) **Thermal cut-outs.** Thermal cut-outs shall comply with the requirements for fuses in (1) and (2). [§ 32 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-529 Fuses, circuit-breakers, switches and controllers—Arcing or suddenly moving parts.** (1) **Location.** Fuses and circuit-breakers shall be so located and shielded that persons will not be burned or otherwise injured by their operation.

(2) **Suddenly moving parts.** Handles or levers of circuit-breakers and similar parts which may move suddenly in such a way that persons in the vicinity are liable to be injured by being struck by them shall be guarded or isolated. [§ 32 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-532 Fuses, circuit-breakers, switches and controllers—Grounding noncurrent-carrying metal parts.** Exposed noncurrent-carrying metal parts of switch and fuse cases, levers, and other similar parts to which leakage may occur from live parts shall be effectively grounded according to the provisions of WAC 296-44-472.

**Exception:** Small parts, such as name plates, screws, and metal covers of fuses and switch bases, which are thoroughly and effectively insulated, and which are not liable to become alive except under very unusual circumstances, are not considered as coming under the rule and may be left ungrounded. [§ 32 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-535 Fuses, circuit-breakers, switches and controllers—Guarding live parts.** (1) **Guard disks and handles.** All manual switches, except switches less than 150 volts to ground and limited by fuses or automatic circuit-breakers to 60 amperes, shall have suitable casings or guards protecting the operator from danger of contact with current-carrying parts, or shall be provided with insulating handles and suitable insulating guard disks or shields so arranged between the handles and the live parts as to prevent the hand from slipping into contact with live parts or being burned by arcing at the switches.

(2) **Inclosure.** Current-carrying parts of switches, fuses, or automatic circuit-breakers of more than 300 volts to ground shall be provided with inclosing guards, effective during ordinary operation; and if accessible to other than qualified persons, current-carrying parts of more than 150 volts to ground shall be provided with such inclosing guards.

(3) **Platforms and mats.** Where switches or fuses of more than 150 volts to ground are not guarded during ordinary operation, suitable insulating floors, mats, or platforms shall be provided on which the operator must stand while handling the switches, fuses, or automatic circuit-breakers, and (unless operators invariably wear suitable insulating gloves while handling the switches) any conducting walls or machine frames within 3.5 feet shall be provided with suitable insulating guards.

**Note:** The suitable guarding of live parts will obviate the necessity for such insulating floors and other devices, and where use of such devices is impracticable from the nature of the location or mechanical process carried on, guards should always be used.

(4) **Blades dead.** Single-throw switches shall be so connected as to have no exposed blades alive when a switch is open, if the circuit configuration will allow. [§ 32 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-538 Fuses, circuit-breakers, switches and controllers—Inclosed air-break switches (not including snap switches).** (1) **Locks for switches.** Inclosed switches, if used to comply with the requirement in WAC 296-44-484(5), 296-44-523(3), 296-44-541(8)(b), and 296-44-613(4), shall be provided with means for locking or sealing the switch in the "off" position.

(2) **Locks for disconnectors.** Inclosed disconnectors shall have provisions for locking in both open and closed positions, where accessible to unqualified persons.

(3) **Marking.** Inclosed switches shall be plainly marked to show the manufacturer's name or trade-mark, the rating of the switch in amperes and volts (ac

or dc), the open and closed positions of the switch handle, and when necessary for proper functioning, the terminals to be connected to "line" and "load." The marking of the manufacturer's name, the voltage, and the open and closed positions shall be on the outside of the case.

(4) **Operating handle.** Switches of the inclosed type shall be externally operable, and the external operating handle (if one is used) shall be of substantial construction, readily accessible, and provided with positive stops limiting its motion.

(5) **Grounding.** Inclosures and metal handles of switches shall be effectively grounded according to the provisions of WAC 296-44-472(3).

**Note:** Where a handle consists of a metal rod using the wall of the case as a bearing, and a test at rated voltage shows that the two make electrical contact, the handle will not need a separate ground connection.

(6) **Unused openings plugged.** All unused conduit and wiring openings in switch inclosures shall be effectively closed by metal plugs or plates. [§ 32 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-541 Fuses, circuit-breakers, switches and controllers—Control equipment.** (1) **Classes of inclosures.** Inclosures are classified as follows:

Class I. — A solid inclosure without slot or other opening.

Class II. — A solid inclosure except for a slot for the operating handle or openings for ventilation, or both.

Class III. — Wire mesh, perforated screens, or grillwork.

(2) **Material for inclosures.** Cast metal for inclosures whether of iron or other metal, shall be at least 1/8 inch in thickness at every point and of greater thickness at reinforcing ribs and door edges; except that die-cast metal may be not less than 3/32 inch in thickness for an area greater than 24 square inches or having any dimension greater than 6 inches, and may be not less than 1/16 inch in thickness for an area of 24 square inches or less, or having no dimension greater than 6 inches. Cast metal shall be at least 1/4 inch in thickness at threaded holes for conduit.

The minimum thickness required for sheet-metal construction varies with the size of the device. For classes I and II, protective parts of sheet metal shall be of gage not less than that given in Table 1.

**TABLE 1.—Thickness of inclosures**

Maximum volume of inclosure	Maximum area of any surface	Maximum dimension	Minimum thickness of metal—U. S. Std. Gage	
			Without supporting frame	With supporting frame or equivalent reinforcing
cu. ft.	sq. in.	in.		
3/4	—	12	20	24
1	—	18	18	20
—	360	24	16	18

**TABLE 1.—Thickness of inclosures**

Maximum volume of inclosure	Maximum area of any surface	Maximum dimension	Minimum thickness of metal—U. S. Std. Gage	
			Without supporting frame	With supporting frame or equivalent reinforcing
cu. ft.	sq. in.	in.		
—	1,200	48	14	16
—	1,500	60	12	16
—	Over 1,500	—	10	16

Wire screening used for inclosures shall conform to the following:

Maximum opening in screen	Minimum wire size steel wire gage
1/2 inch.....	No. 16
More than 1/2 inch and not more than 2 inches .	No. 12

If the opening is more than one-half inch, the inclosure shall not be less than 4 inches from any live part.

(3) **Clearances.** (a) There shall be sufficient space within the inclosure to permit uninsulated parts of wire terminals to be separated so as to prevent their coming in contact with each other. Inclosures shall be such as to permit proper wire connections to be made with adequate spacing of the terminals and ends of conductors from adjacent points of the inclosures.

(b) Exposed nonarcing current-carrying parts within the inclosures shall have an air space between them and the uninsulated part of the inclosure of at least 1/2 inch for 750 volts or less, except that in a controller or other small device rated at not more than one horsepower and 300 volts and having an inclosure adequately rigid, the spacing may be less than 1/2 inch but not less than 1/8 inch in air nor less than 1/4 inch over the surface of insulating material. Inclosures of sizes, materials, or forms not having adequate rigidity shall have greater spacing. A suitable lining of insulating material not less than 1/32 inch in thickness may be provided in lieu of the air space of 1/2 inch.

(4) **Securing covers, etc.** All inclosures and parts of inclosures, such as doors, covers, tanks, etc., shall be provided with means for firmly securing them in place. Among the available means are locks, interlocks, screws, and seals.

(5) **Rating of controller.** A controller shall have appropriate ratings of voltage, frequency, and horsepower.

(6) **Marking of controllers.**

(a) Controllers should be marked to indicate the duty for which they are designed, such as starting, intermittent, varying, continuous, etc.

(b) Controllers shall be marked with their ratings in volts and horsepower and in addition if for alternating current, the cycles and number of phases.

(c) Parts of controllers which are operated manually (controller handles, push-button stations) shall be marked, if necessary, to indicate proper operation.

(d) Every controller shall be provided with a wiring diagram and, where practicable, this diagram shall be permanently attached to the controller or its mounting. All incoming and outgoing terminals of the control equipment shall be marked to correspond with the markings on the diagram.

**Note:** It is very desirable that instruction books, tags, or cards accompany each controller installation, showing in detail how to properly repair and adjust various parts of the equipment.

(e) Field rheostats shall be marked to indicate the total ohms, volts, ampere capacity of first step, and ampere capacity of last step.

(f) A thermal cutout used as part of the control equipment shall be marked with the maximum rating of the fuse with which it can be used safely.

**(7) Guarding live parts.**

(a) Controllers and electric remote-control stations operating at 50 volts or more between conductors shall be guarded against accidental contact of persons with live parts by inclosure or guarding or location.

(b) Manual controllers and manually operated electric remote-control stations operating at more than 150 volts to ground shall be externally operable.

(c) Controllers shall be guarded against contact with live parts by conducting objects by inclosure or guarding or location. Consideration shall be given to possible hazards, from above, from cranes or other moving apparatus; from below by objects placed under the controller mounting; and from objects being carried by persons, such as pipe, tools, etc.

**(8) Protection for workmen.**

(a) Any controller installation operating at over 300 volts to ground which, for any reason, must be alive when maintenance work is being done shall comply with the following:

(i) Live parts shall be accessible only to qualified and authorized persons.

(ii) An insulating mat or platform shall be provided on which a person must stand while inspecting or working on the controller.

(iii) Any conducting surfaces within 3 1/2 feet of the controller shall be provided with insulating guards.

(b) Means shall be provided for disconnecting all ungrounded conductors from the controller, except that controllers described in subparagraph (a) above are not required to have such disconnecting means if the controller opens all ungrounded conductors to the motor. The disconnecting means may be in the same inclosure or on the same panel as the controller. If not within sight of the controller, it shall be provided with means for locking it in the open position.

(9) **Guarding arcing parts.** Controllers shall be so located or shielded as to protect operators and other persons in the vicinity from burns or eye-flash which might result from arc-rupturing parts and so as to prevent arcing to adjacent surfaces. For this latter purpose, controllers installed without inclosure, and controllers whose inclosure is built up during or after installation of the controller, shall have the air spaces (or barriers) given in

Table 2 between arc-rupturing parts and the walls of metal inclosure or other adjacent surface.

**TABLE 2.—Air spaces in controllers**

Horsepower rating	Distance from contacts in direction of blow-out				Vertical distance above contacts without blow-out				Horizontal distance from contacts and distance below contacts			
	dc and ac		dc		ac		dc and ac		dc and ac		dc and ac	
	300 volts	750 volts	300 volts	750 volts	300 volts	750 volts	300 volts	750 volts	300 volts	750 volts	300 volts	750 volts
5.....	1 3/4	3	4	1	1 3/4	3	3/4	1				
1/2

100.....	4	1	1	1	4	1	2	3				
Above 100..	1	1	1	1	1	1	1	1				

<sup>1</sup>Barrier.

**Note:** All distances to be measured from contact tips or arc horns. Voltage values given are between conductors.

(10) **Location of controller.** All points from which the motor is controlled shall be within sight of the motor unless that is impracticable, in which case there shall be means readily available to the person inspecting the motor for preventing operation of the controller.

(11) **Overcurrent protection.** Control equipment shall include an automatic device which will interrupt the electric power if the current exceeds a predetermined value. Such overload protection need not be a part of the controller but may be a separate unit. If a part of the controller, such overload protection shall conform to all applicable rules for the control equipment.

(12) **Under-voltage protection.** If the automatic re-starting of a motor on restoration of voltage may result in injury to any person under-voltage protection shall be furnished. See WAC 296-44-568(4).

(13) **Open-phase or phase-reversal protection.** If the motor operates equipment which is of such a nature that the opening of one phase of a polyphase circuit or the reversal of a phase or phases would result in possible injury to any person, means shall be provided which will prevent starting of the motor under such a condition. [§ 32 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-544 Switchboards and panelboards—Accessibility and convenient attendance.** (1) **Control arrangement.** Switchboards and panelboards shall have all switches so arranged that the means of control are readily accessible to the operator.

(2) **Location of instruments.** Instruments, relays, or other devices requiring reading or adjusting shall be so placed that work can be readily performed from the working space provided. [§ 33 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-547 Switchboards and panelboards—Location and illumination.** Switchboards shall be so placed that the persons necessarily near the board will not be endangered by machinery or equipment located near the board. Means for adequate illumination shall be provided.

Switchboards shall be made of noncombustible material and shall be kept free from moisture.

Switchboards shall be so installed and supported that they will withstand the stresses imposed by the operation of the apparatus mounted thereon, braces or other framework being installed if necessary, as covered in the general safety standards of Washington. [§ 33 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-550 Switchboards and panelboards—Arrangement and identification.** Connections, wiring, and equipment of switchboards and panelboards shall be arranged in an orderly manner and all switches, fuses, and automatic circuit-breakers shall be plainly marked, labeled, or arranged so as to afford ready means for identifying circuits or equipment supplied through them.

It is recommended that a diagram of switchboard or panelboard connections and devices be kept posted in some convenient place near such equipment. [§ 33 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-553 Switchboards and panelboards—Spacing, barriers and covers.** (1) **Separation of bare parts.** Bare parts of different potential on the front of switchboards, if accessible to unqualified persons, shall be so located or protected that they will not be readily short-circuited by tools or other objects.

(2) **Portable covers or shields.** Switchboards shall have current-carrying parts which are ordinarily isolated or guarded, but which may occasionally require adjustment or repair while alive, so arranged that suitable portable covers or shields can be effectively placed to protect workmen from contact with any neighboring live parts. [§ 33 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-556 Switchboards and panelboards—Grounding frames.** Switchboard frames and metal cabinets shall be effectively grounded, with the exception noted in WAC 296-44-472. [§ 33 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-559 Switchboards and panelboards—Guarding current-carrying parts.** (1) **Inclosure of parts at more than 150 volts to ground.** No switchboard or panelboard operating at more than 150 volts to ground shall have current-carrying parts exposed within 8 feet of the floor, unless accessible only to qualified operators. Parts of 100 to 150 volts to ground should not be accessible to unqualified persons. Locked cabinets or other inclosures may be provided where necessary to prevent such exposure. If the current-carrying parts are at any time exposed while alive, conducting floors about such

boards shall be provided with a suitable insulating platform or mat so placed that no live parts can be inadvertently touched except while standing on the platform or mat. (WAC 296-44-481 and 296-44-535.)

(2) **Inclosure of low-voltage parts.** All switchboards and panelboards should be so arranged that current-carrying parts less than 150 volts to ground and less than 5 feet above the floor are inclosed in cabinets or screens.

**Note:** This is an effective precaution against accidental short-circuit or contact by persons in the vicinity.

(3) **Plug-type boards.** Plug-type switchboards if of more than 150 volts to ground, shall have no current-carrying parts exposed on face of boards, and plug connectors shall have all current-carrying parts guarded as long as they are alive.

(4) **Dead-front boards.** Switchboards having no current-carrying parts exposed on the face (working space) shall be used in theaters and similar places where rapid handling is necessary and the attention must be given to signals or to other processes.

(5) **Theater boards.** Theater switchboards at any voltage having current-carrying parts exposed on back to passersby shall be elevated or guarded by suitable railings to prevent contact with live parts. [§ 33 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-562 Switchboards and panelboards—Fuses on switchboards.** (1) **Disconnection of fuses.** Fuses on switchboards shall be arranged in one of the following ways:

(a) So that they are necessarily disconnected from all sources of electric energy before they can be touched.

(b) So that they can be disconnected from all sources of electric energy by a switch.

(c) So that they can be conveniently handled by means of suitable insulating tools provided for the purpose.

When switchboards are accessible to unqualified persons the protection specified in (a) shall be provided if the voltage exceeds 150 volts to ground and should be provided if the voltage is less than 150 volts to ground.

(2) **Location of fuses.** Fuses shall be so located as to obviate the danger in removing or replacing them of short-circuiting other live parts. Open-link fuses shall not be installed on switchboards. [§ 33 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-565 Switchboards and panelboards—Panelboards.** (1) **Arrangement of equipment.**

(a) Location of fuses. Fuses shall be so located as to limit as far as practicable the danger of short-circuiting other live parts when removing or replacing them.

(b) Connection of plug-fuse shells. The shells of plug-fuse holders in ungrounded conductors shall be connected to the load side of the circuit on all panelboards employing plug fuses without switches in main or branch circuits.

(2) **Material.** Panelboard bases shall be made of nonabsorptive, noncombustible insulating material.

(3) **Marking.** Panelboards shall be plainly marked to show the manufacturer's name or trademark and the rating in volts and amperes. The ampere rating shall be the maximum capacity of the busses.

(4) **Protection against moisture.** Where panelboards are installed so as to be exposed to excessive moisture they shall be inclosed in weatherproof cabinets.

(5) **Hazardous locations.** Panelboards shall not be installed where hazardous conditions exist due to the presence of inflammable gas or inflammable dust or flyings, except as permitted by WAC 296-44-484.

(6) **Residences.** Panelboards in residences shall be so installed that the lowest live part exposed when the cabinet door is opened to permit operation of switches shall not be less than 4 feet from the floor. [§ 33 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-568 Motors and motor-driven machinery--Control devices.** (1) **Speed limitation.** Machines of the following types shall be provided with speed-limiting devices, unless their inherent characteristics or the load and the mechanical connection thereto are such as to safely limit the speed or unless the machine is always under the manual control of a qualified operator:

(a) Separately excited direct-current motors.

(b) Series motors.

(c) Motor-generators and converters which can be driven at excessive speed from the direct-current end as by a reversal of current or decrease in load.

**Note:** The required limitation of speed may be obtained by the use of a relay, centrifugal switch, or other similar device which will cut off the supply of energy when excessive speed is attained.

(2) **Adjustable-speed motors.** Adjustable-speed motors, if controlled by means of field regulation, shall be so equipped and connected that the field cannot be weakened sufficiently to permit a dangerous speed, and so that the motor cannot be started under weakened field unless the motor is designed for such starting.

(3) **Wiring.** Where speed-limiting devices or remote-control switches are electrically operated, the control circuits by which such devices are actuated shall be adequately guarded, by conduit or otherwise, against mechanical injury.

(4) **Under- or low-voltage protection.** Where the restarting of the motor on restoration of voltage may result in injury to any person or persons, under- or low-voltage protection shall be furnished. When the motor and driven machinery are isolated and accessible to qualified persons only, the provision of a disconnecting switch eliminates the hazard. [§ 34 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-571 Motors and motor-driven machinery--Hazardous locations.** Motors in which sparking or arcing can occur during operation shall, when in locations where explosives or inflammable gas or inflammable flying exist, be suitably protected as described in WAC 296-44-472(3) and 296-44-484. [§ 34 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-574 Motors and motor-driven machinery--Deteriorating agencies.** (1) **Inclosures.** Suitable guards or inclosures shall be provided to protect exposed current-carrying parts of motors and the insulation of motor leads where installed directly under equipment or in other locations where dripping oil, excessive moisture, steam, vapors, chemicals, or similar injurious agencies exist.

(2) **Grounding frames.** The metal frames and other exposed noncurrent-carrying metal parts of equipment in these locations shall be effectively grounded. (See WAC 296-44-472(3).) [§ 34 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-577 Motors and motor-driven machinery--Guards for live parts.** (1) **Inclosure of live parts.** Motors of more than 150 volts to ground, unless isolated by elevation at least 8 feet above the floor line, should be provided with permanent inclosures or other suitable guards so arranged as to prevent persons or conducting objects from inadvertently coming or being brought into contact with live parts or interfering with the operation of the motors.

(2) **Mats and platforms.** Suitable insulating mats or platforms of substantial construction and providing good footing shall be so placed on floors and, if necessary, on frames of machines having exposed live parts of more than 150 volts to ground that the operator or other persons in the vicinity cannot readily touch such parts unless standing on the mats, platforms, or insulating floors.

**Note:** The suitable guarding of live parts by inclosures or barriers effective during attendance or necessary adjustments of live parts will obviate the necessity for insulating mats, and where such mats are impracticable from the nature of the location or processes carried on, guards shall always be used.

Where connectors are used in motor leads, these should be provided with insulating covering equal to that on the conductors.

(3) **Steps and handrails.** Where necessary, steps and handrails should be installed on or about large machines to afford safe access to live parts which must be examined or adjusted during operation. [§ 34 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-580 Motors and motor-driven machinery--Grounding machine frames.** Where two or more machines, either of which operates at more than 150 volts to ground, are mechanically coupled together, and the operator can touch the frames of more than one at a time, the frames of all such machines shall be effectively grounded as required by WAC 296-44-472(3), unless they are bonded together electrically and surrounded by insulating mats or platforms on which persons must stand in order to touch the machine frames. If operating at more than 300 volts to ground, their frames shall always be grounded as required by WAC 296-44-472(3), and frames shall also be grounded wherever, from the nature of the location or of processes carried on, the use

or maintenance of insulating mats or platforms is impracticable. [§ 34 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-583 Motors and motor-driven machinery—Protecting moving parts.** Suitable guards or inclosures shall be arranged at each motor or motor-driven machine when necessary to prevent persons or objects from inadvertently coming in harmful contact with moving parts, including chains, belts, gears, and pulleys. [§ 34 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-586 Electric furnaces, storage batteries, transformers, and lightning arresters—Protection from burns.** (1) **Inclosure of glowing parts.** Electric furnaces and apparatus used for arc welding, where intensely glowing incandescent or arcing parts are exposed, shall be inclosed so that those parts will not be accessible or visible to unqualified persons.

(2) **Screens, hoods, goggles.** Suitable protecting screens, hoods, goggles, gloves, and other devices shall be provided for the qualified persons who must work or come near such exposed parts. (See American Standard Safety Code for the protection of the heads, eyes, and respiratory organs, ASA A2, for mechanical and optical protection.) [§ 35 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-589 Electric furnaces, storage batteries, transformers, and lightning arresters—Grounding of furnace frames.** The outside noncurrent-carrying metallic frames of furnaces shall be effectively grounded if they contain current-carrying parts connected to circuits of more than 150 volts to ground, or if the circuit within is not grounded and is exposed through transformer windings to a circuit of more than 150 volts to ground. [§ 35 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-592 Electric furnaces, storage batteries, transformers, and lightning arresters—Guarding live parts.** Except at points where necessarily left exposed (as at spot-welder contacts), current carrying parts of furnaces, welders, and control equipment of more than 150 volts to ground, shall be suitably guarded with inclosures or barrier guards. [§ 35 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-595 Electric furnaces, storage batteries, transformers, and lightning arresters—Storage batteries.** The installation of nonportable storage batteries shall be in accordance with WAC 296-44-142 through 296-44-166 of the rules for stations. [§ 35 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-598 Electric furnaces, storage batteries, transformers, and lightning arresters—Transformers.** The installation of transformers having either winding of more than 300 volts to ground shall comply with WAC 296-44-169 through 296-44-184 of the rules for stations, and if the operating voltage of any winding exceeds 750, the transformers shall be made inaccessible to

unqualified persons. [§ 35 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-601 Electric furnaces, storage batteries, transformers, and lightning arresters—Lightning arresters.** The installation of lightning arresters shall comply with the rules of WAC 296-44-262 through 296-44-271 of the rules for stations, and if the operating voltage of the circuit exceeds 750 volts between conductors, the arresters shall be inaccessible to unqualified persons.

Lightning arresters when installed for the protection of utilization equipment may be installed on supply lines or service leads either within or without the buildings or inclosures containing the equipment to be protected. They shall be installed in accordance with the rules of WAC 296-44-079 through 296-44-667 depending upon their location, whether in stations, on outdoor lines, or with utilization equipment. [§ 35 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-604 Lighting fixtures and signs—Fixtures.** (1) **Grounding.** The exposed noncurrent-carrying metal parts of all lighting fixtures, receptacle plates, and switch plates and other similar fixed electric devices shall be effectively grounded when used under the following circumstances (for exception, see WAC 296-44-472(3)):

(a) If in locations where explosives, inflammable gas, or inflammable flyings exist in dangerous quantities.

(b) If within reach of bathtubs, shower baths, plumbing fixtures, steam piping, or other grounded metal surfaces of the building. Metal pull chains used at these locations shall be provided with insulating links. (Usually grounded surfaces within 5 feet horizontally of the parts considered and within 8 feet vertically of the floor are considered within reach.)

(c) If connected to circuits operating in excess of 150 volts to ground, regardless of location.

**Exception:** Grounding is not required if the fixture, shell of socket lamp guards, etc., are made of or covered with suitable insulating material.

(2) **Polarizing lampholders.** On grounded systems the center contacts of lampholders shall be connected to the ungrounded side of the system, and the inner screw shells of the devices to the grounded side or neutral.

**Note:** This is in order to reduce the liability of breakdown of the dielectric between the inner screw shell and the grounded outer brass shell, and also to reduce the liability of injury to persons in replacing lamps. This is especially important in wiring electric signs.

[§ 36 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-607 Lighting fixtures and signs—Receptacle for convenience outlet.** Receptacles installed for the attachment of portable cords shall be of a type not suitable for use with screw-shell-base devices. [§ 36 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-610 Lighting fixtures and signs--Exposed live parts.** Electric fixtures, including lamp sockets and lamp bases, if within reach of grounded surfaces, shall be so designed and installed that no current-carrying parts will normally be exposed externally. [§ 36 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-613 Lighting fixtures and signs--Signs.** (1) **Accessibility.** Electric signs at an elevation greater than 30 feet above roadways or footways, or at an elevation above a roof greater than the distance from the edge of the roof, shall, if they require attendance while in position, be provided with substantial, safely accessible, runways, ladders, or platforms from which all replacements and other necessary adjustments can be made. Provision for supporting workmen by safety belts should be made in the construction and installation of signs so located.

These provisions do not apply where the sign is so designed and installed that all maintenance is accomplished with external lift type equipment not dependent upon the sign structure for support.

(2) **Inclosure of live parts.** Electric signs outside buildings shall have no ungrounded current-carrying parts normally exposed to contact.

(3) **Grounding of noncurrent-carrying parts.** The exposed noncurrent-carrying metal parts of signs shall be effectively grounded, unless they are insulated from ground and from other conducting surfaces and are inaccessible to unauthorized persons. This does not apply to signs of the portable incandescent lamp type.

(4) **Control.** Electric signs, other than the portable type, shall be provided with switches arranged to entirely disconnect all ungrounded supply wires of the sign, and either located within sight of the sign or arranged so that they can be locked in the open position. [§ 36 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-616 Lighting fixtures and signs--Connectors for signs.** Electric signs with changeable connections shall be so arranged that the connections can be changed manually only by approved connectors. Approved connectors shall interrupt all ungrounded conductors of the circuit. [§ 36 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-619 Lighting fixtures and signs--Lamps in series circuits.** (1) **In or on buildings.** Series lamps mounted in building or on external walls of building shall be installed only by permission of the division of safety, department of labor and industries and the local code enforcing authority.

(2) **Elevation.** Arc and incandescent lamps and other devices in series circuits, except in grounded circuits of which no part exceeds 150 volts to ground, shall be effectively isolated or suitably guarded.

**Note:** Isolation will ordinarily be deemed sufficient when a vertical clearance of 8 feet is provided from floors or other ordinarily accessible places within buildings, of 10 feet from footways outside buildings, and of

15 feet from roadways. Horizontal clearance from windows, porches, and other spaces accessible to the general public should be not less than 3 feet.

(3) **Suspension of lamps.** Lamps shall be securely supported, and the hanger, rope, chain, or other means of support shall be regularly and systematically inspected. All metal cable or chain supports for lamps shall be effectively insulated from the lamp or shall be permanently grounded. Metal chains or metal cables and other conducting parts used for lowering lamps in series circuits shall be grounded or interrupted by a suitable strain insulator, the minimum height of which from the floor or ground shall be 8 feet, whether the lamp is in position or lowered. [§ 36 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-622 Lighting fixtures and signs--Safe access to arc lamps.** A suitable device shall be provided by which each arc lamp or other device on series circuits may be safely and entirely disconnected from the circuit before it is handled, unless the lamps are accessible only to properly qualified persons, worked on only from suitable insulating stools, platforms, or tower wagons, and treated always as under the full voltage of the circuit concerned. [§ 36 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-625 Portable appliances, cables and connectors, and insect eliminators (not including those for communication systems)--Insulation.** Portable appliances and devices shall be provided with an adequate dielectric (complying with the standardization rules of the American Institute of Electrical Engineers) interposed between ungrounded current-carrying parts and those external surfaces which persons can touch.

**Exception:** Toasters, grills, or other heating appliances in which the current-carrying parts at high temperature are necessarily exposed are exempted. (WAC 296-44-592.)

In locations where the dielectric is exposed to mechanical injury it shall be suitably protected. [§ 37 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-628 Portable appliances, cables and connectors, and insect eliminators (not including those for communication systems)--Grounding of frames. Grounding noncurrent-carrying metal parts.** Portable appliances and devices operating on circuits of more than 150 volts to ground, shall have their exposed metal frames grounded except (1) motors, if guarded. The exposed metal frames of portable appliances and devices used in hazardous locations as listed in WAC 296-44-481(1), shall be effectively grounded, regardless of the voltage of the circuit. The effective grounding of exposed metal frames of portable appliances and devices (especially when used in locations such as bathrooms, laundries, etc., under conditions where persons may easily touch grounded surfaces at the same time as the appliance or device) is recommended.

**Note:** Such grounding may be obtained by the use of a three-wire portable cord with the portable appliance or device, one wire being used for the grounding conductor and the connectors being properly designed so that wrong connections cannot be made by the user of the device. Safety may be accomplished and the need for grounding eliminated in many cases by insulating the metal frame from contact by persons, or by isolation of the device.

It is recommended that in industrial establishments portable lamps which are to be used in conductive locations, be operated at 32 volts or less between conductors through the use of step-down transformers, thus obviating the need for grounding such portable equipment. [§ 37 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-631 Portable appliances, cables and connectors, and insect eliminators (not including those for communication systems)—Cable connectors.** (1) **Break all conductors.** Where used with portable conductors, it is recommended that connectors be used which necessarily disconnect both or all poles from the live source of energy when the circuit is opened.

(2) **Design of connectors.** Connectors shall be so constructed (with guards when necessary) that the person using them cannot inadvertently come in contact with live parts, or be burned by arcing when interrupting the largest current for which they are rated or marked.

Separable connectors should be so designed that the plugs will not fit receptacles rated for larger currents than the plugs.

(3) **Live parts of connectors.** The end of a separable connector which is left alive, or the two ends of a separable connector where both are connected to live circuits (as in battery charging), shall have live parts suitably guarded.

(4) **Strain relief.** Where connectors are attached to portable cables, suitable means shall be provided for relieving the terminal connections of cable from strains. [§ 37 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-634 Portable appliances, cables and connectors, and insect eliminators (not including those for communication systems)—Identified conductors, cords, and connectors.** (1) **Portable appliances and devices.** Where portable appliances and devices have cases designed to be grounded and the connecting cable is provided with a separate grounding conductor for this purpose (see WAC 296-44-628), such grounding conductor and the corresponding parts of connectors shall have suitable identification, so that the grounding conductor in fixed wiring and portable cable will always be connected to the proper terminals of the connectors. Identification of an equipment grounding conductor of a portable cable may be the absence of insulating covering, but if an individual covering is provided for this conductor it shall be finished to show a green color.

**Note:** If portable cable containing a conductor identified as provided above is not available, the identifying

color may be applied to one of the insulated conductors of the cable where the conductor is exposed at terminals.

(2) **Separable connectors.** Separable connectors shall be so constructed that wrong connection between the two parts is impossible. [§ 37 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-637 Portable appliances, cables and connectors, and insect eliminators (not including those for communication systems)—Use of portables and pendants.**

(1) **Voltage limit of portables.** Portable and pendent conductors shall not be installed or used on circuits operating at more than 300 volts to ground, unless they are accessible only to qualified persons. In such cases they shall be of a type suited to the voltage and conditions.

In car houses and similar locations where service at low voltage is not available and where necessary to use low-voltage pendent or portable lamps or other equipment in series with lamps on trolley circuits, the equipment should be used only with great caution and be placed preferably on the grounded side of the circuit concerned.

(2) **Use of fixed receptacles for portables.** Where portable conductors are required, fixed receptacles shall be provided at safely accessible points. (See WAC 296-44-607.)

(3) **Hazardous locations.** Where exposed to dampness or corrosive influences, portable conductors shall be of a type specially suited, and where exposed to inflammable gas or flyings, they shall be so protected or isolated by elevation that they cannot be readily damaged. In the latter case connectors shall be so arranged as not to be exposed to accidental opening by persons handling the portable conductors or devices. Portable lamps in locations where explosives or inflammable gases are normally present shall be incased in vapor-proof globes with suitable mechanical guards.

Portable lamps in damp places shall be equipped with socket and approved handle of nonabsorptive insulating material, gasket guard, and approved cord.

(4) **Strain relief.** Portable and pendent conductors shall be so installed that no strain is placed on the terminal connections and shall have no joints except at suitable fittings.

(5) **Worn and defective portables.** The use of worn or defective portable and pendent conductors should be avoided because of the danger to users by wire strands piercing the insulation or becoming exposed through abrasion of the covering. [§ 37 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-640 Portable appliances, cables and connectors, and insect eliminators (not including those for communication systems)—Portable outdoor equipment of more than 750 volts between conductors.** (1) **Scope.** This rule is intended to apply to equipment supplied through portable cable and used for such outdoor surface work as well-drilling, strip mining, quarrying, dredging, shoveling, and log sawing.

(2) **Cables.**

(a) Insulation. Cables, wiring, and electric equipment shall be insulated for not less than line-to-line voltage.

(b) Trailing cables.

(i) Trailing cables used for connecting an electric supply to mining machines, dredges, shovels, and similar equipment shall be of sturdy construction and suitable for the intended service.

(ii) It is recommended that trailing cables be in continuous lengths. If splices are made they should be equivalent mechanically and electrically to the cable in which they are made.

(iii) The individual conductors of trailing cables shall be so connected to equipment and to the source of supply as to give solid and firm connections without injury to the cable and so that the cables cannot be inadvertently disconnected. Such connections shall be weather-proof and there shall be no exposed current-carrying parts.

(3) **Relays.** Each complete metallic circuit (not separated by insulation as in transformers) shall be equipped with a relay which shall operate on occurrence of ground fault on the circuit to deenergize the faulty circuit or equipment.

(4) **Grounding.** Machinery frames shall be effectively grounded in the manner required by WAC 296-44-058 through 296-44-076.

(5) **Impedors.** If it is desired to provide protection during the interval of time the fault current exists, the use of an impedor connected between the transformer secondary neutral and the grounding point is recommended. The value of this impedor should be such that the voltage which may occur between the machinery frame and ground will not exceed 100 volts. [§ 37 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-643 Portable appliances, cables and connectors, and insect eliminators (not including those for communication systems)—Insect eliminators.** Electric insect eliminators shall be of such low current output as not be a hazard to persons or property, or they shall be installed and guarded or isolated in accordance with WAC 296-44-469(3) and 296-44-478(1). [§ 37 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-646 Electrically operated industrial locomotives, cars, cranes, hoists, and elevators—Guarding live and moving parts.** (1) **Guarding and isolation.** All current-carrying parts accessible to unqualified persons which are connected to circuits of more than 150 volts to ground shall be so isolated or guarded that no person can inadvertently come in contact with them.

(2) **Conductors.** All conductors of more than 150 volts to ground in locations accessible to the public shall be run in conduit, suitable cable, metal molding, or flame-proof and waterproof nonmetallic ducts the exposed metallic parts of which shall be effectively grounded.

(3) **Elevators hoistways.** Electric conductors installed in or under an elevator or counterweight hoistway shall, except for flexible cables connecting the car with the fixed wiring, be incased in metal conduits or suitable cable and shall be securely fastened to the hoistway. No

electrical conduit or cable, except such as is used to furnish or control power, light, heat, or signals for the elevator or hoistway, shall have any opening, terminal, outlet, or junction within the hoistway, but shall be continuous between outlets or terminals situated entirely outside the hoistway.

**Note:** It is not intended to prohibit the interruption of long runs for the purpose of supporting or pulling in conductors, and pull boxes may be installed for this purpose.

All live parts of electric apparatus in elevator hoistways shall be protected against accidental contact by suitable inclosing casings or coverings, and all such casings or coverings which are made of metal shall be effectively grounded.

No part of any electric circuit having a rated system or circuit voltage in excess of 750 volts dc or 550 volts ac shall be used for any control or operating circuit. No signaling push buttons shall be used in circuits of more than 300 volts to ground. Circuits of higher rated system or circuit voltage may, however, be used in machine rooms or penthouses for the operation of motors, provided that all operating and signal wiring is thoroughly insulated from such power circuits and all machine frames and handropes are effectively grounded.

The maximum system or circuit voltage permitted in the operating devices of automatic-operation elevators having operating devices in the car and at landings shall be 300 volts to ground.

(4) **Material for guards.** Guards required by WAC 296-44-478 and subsection (1) of this section for the current-carrying parts of unisolated electric equipment, such as controllers, motors, transformers, fuses, circuit-breakers, switches, and other devices, shall consist of cabinets, casings, or shields of effectively grounded metal or of substantial insulating material, or of a combination of the two. All metallic parts, such as conduits, apparatus cases, etc., which are liable to become charged shall be effectively grounded when so located that unqualified persons may come in contact with them.

(5) **Apparatus insulated and grounded.** On passenger cars, apparatus, such as air-compressor motors, having insulated nongrounded mountings, shall be located where passengers are not liable to come in contact with them, as on the exterior of the car body. The air lines from nongrounded air compressors shall be provided with insulating joints in the line, insulating joints to be located in a substantially vertical pipe run in such a manner as to insulate from the motor all pipe or exposed apparatus with which passengers or crew may come in contact. Such pipe and apparatus shall be grounded.

(6) **Collector wires and third rail.** Except on fenced right-of-way or other locations to which only qualified persons are admitted, trolley or crane collector wires and third rails, whether indoors or out, shall be so isolated by elevation (see WAC 296-44-112 and 296-44-310 through 296-44-337) or be provided with suitable guards so arranged that persons cannot inadvertently touch the current-carrying parts while in contact with

the ground or with conducting material connected to the ground.

At locations where unqualified persons are especially exposed to possible contact, warning signs shall be provided.

Trolley-contact conductors, indoors, shall be so supported that, in case of a single break, the lower end of the broken wire will not come within 8 feet of the floor.

**Note:** Damp wood, concrete floors, and metal parts of crane cabs are considered as connected to ground.

(7) **Arcing or suddenly moving parts.** All such parts of electric equipment, including fuses and the handles and arc chutes of circuit-breakers, shall be so isolated or guarded that the liability of persons being struck or burned by sparking, flashing, or movement during operation, is avoided.

(8) **Removable headlights.** Headlight frames shall not be used as conductors and portable headlights shall be wired for double plug connections. All coupler connections shall be so designed and wired that when the coupler is pulled apart there will be no exposed live parts. [§ 38 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-649 Electrically operated industrial locomotives, cars, cranes, hoists, and elevators—Grounding noncurrent-carrying parts.** (1) **Frames.** All noncurrent-carrying metal parts of electric equipment shall be effectively grounded or protected by effectively grounded guards or covers. In electric cars all steam or hot-water heating devices accessible to the public shall also be grounded.

**Note:** The ground connection through well-bonded track rails will be considered satisfactory for equipment on cars and cranes.

(2) **Portable equipment.** The metallic parts of portable cranes, derricks, hoists, and similar equipment on which wires, cables, chains, or other conducting objects are maintained shall be provided with an effective protective ground (see WAC 296-44-058 through 296-44-076), where operated in the vicinity of supply lines of more than 150 volts to ground, whether the cranes or similar equipment are themselves electrically operated or not.

On the booms of cranes and derricks mounted on the tracks of railways with overhead trolley-contact conductors, an insulated barrier should be provided which will prevent contact of conducting parts with the overhead wire if the boom is raised against it.

(3) **Guarding parts on car roofs.** Metal parts of car which extend above the car roof (such as whistles or smoke pipes, heater expansion tanks, and metal ventilators) shall either be grounded or insulated or guarded by substantial guards or screens insulated from ground.

If insulated, the insulating joint shall be located immediately below the car roof. Insulating joints in air pipes shall be installed in a substantially vertical run of pipe. [§ 38 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-652 Electrically operated industrial locomotives, cars, cranes, hoists, and elevators—Control**

**of energy supply to cars, cranes, and industrial locomotives.** (1) **Disconnecting means.** Readily accessible means shall be provided whereby all conductors and equipment, except lightning arresters, located in or on industrial locomotives, cars, or cranes, can be disconnected entirely from the source of energy at a point as near as possible to the trolley or other current collectors; except on such equipments where the current collectors can be readily removed from the trolley or third rail.

(2) **Main switch or circuit-breaker.** A circuit-breaker or switch, capable of interrupting the circuit under heavy loads, and readily controlled by the operator, shall be provided, unless the current collectors can be safely removed, under heavy loads, from the trolley or third rail.

(3) **Disconnecter for third-rail collector.** Where current supply is from two sources (such as overhead trolley and third rail) disconnecting switches shall be provided as follows:

(a) On a public right-of-way, a double-throw switch shall be provided in current-collector cable so arranged that when current supply is from either source, the current-collector cable from the other source is disconnected.

(b) On a private right-of-way, a single-throw switch shall be provided in cable to third-rail collectors so that these may be deenergized when the current supply is from the overhead trolley. [§ 38 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-655 Control of movement of industrial locomotives, cars, cranes, and elevators.** (1) **Locking or removable handles.** Means shall be provided whereby the operator (whether motorman or elevator attendant) can prevent the starting of the equipment by unauthorized persons while he is absent from his post.

**Note:** Removable reverse levers or controller handles and locked doors to the operator's cab or elevator hoistway are among the most effective means.

(2) **Location of controllers.** The car control lever of passenger elevators should be located so that the operator can readily face the principal car opening. For cars and traveling cranes, the car control should be so located that the operator can readily see in the direction of travel.

It is recommended that the control levers of traveling cranes be located in the same relative position each to the other in all the cages of cranes.

(3) **Limit switch.** A limit switch shall be provided for the upper limit of travel of crane hoists and for both upper and lower limits of travel for elevators. Limit switches shall be at least 4 feet above lowest floor level in garages and other buildings where inflammable gases may be present.

(4) **Reverse-phase relays.** Polyphase alternating-current motors operating freight or passenger elevators or cranes that are dependent upon phase relation for their direction of rotation shall be provided with a device such as a relay, which will prevent starting any motor if the phase rotation is in the wrong direction. In the case of

cranes this device may be inserted ahead of the runway feeders.

Exception is made in the case of a control having an operating device for the reversing switches which automatically changes its direction of operation when a change in phase rotation is made in the power circuit. [§ 38 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-658 Control of movement of industrial locomotives, cars, cranes, and elevators--Subway and car lighting.** Subways and similar locations used for passenger transportation where artificial illumination is indispensable shall be lighted throughout their entire length by a system independent of the current for electric traction where such is used. It is recommended that passenger cars operated in such locations and lighted normally from the railway circuit shall be equipped with an auxiliary system of emergency lighting. [§ 38 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-661 Telephone and other communication apparatus on circuits exposed to supply lines or lightning--Protective requirements.** (1) **General requirements.** Where telephone or other communication apparatus (not included under (2) below) which must be handled by persons is permanently connected (not including portable telephones) to overhead communication circuits exposed to either lightning, supply lines of more than 400 volts to ground, or induction of more than 150 volts between terminals of the communication equipment and ground from supply circuits under normal conditions, provisions against shock to persons handling apparatus, shall be made by one of the following methods:

(a) The use of suitable protective devices such as fuses and arresters operating at 750 volts to ground and, for conditions of unusual exposure, additional devices such as auxiliary arresters, neutralizing transformers, drainage coils or insulating transformers.

(b) The grounding of all exposed noncurrent-carrying metal parts and the suitable guarding of all ungrounded current-carrying parts. (See WAC 296-44-664.)

(c) The arrangement of apparatus in such a way that persons using it will be obliged to stand on a suitably insulated platform in a suitably insulated booth, or on other insulating surfaces. (This method may be used only where apparatus is accessible to none but authorized persons.)

(2) **Fire and police alarm boxes.** Such signaling devices as fire and police alarm and associated test boxes, if connected to overhead communication circuits exposed to lightning or to supply lines of more than 400 volts to ground, should have the accessible noncurrent-carrying metal parts effectively grounded wherever the character of service gives valid objection to the use of arresters or transformers on the signal circuit.

Fire alarm boxes connected to overhead circuits, if not protected by arresters, should be provided with suitable insulating material between the circuit within and the exposed frame and operating hook, this insulation to be capable of withstanding the highest voltage of the supply

circuits to which the fire alarm circuit is exposed up to 7,500 volts.

Police alarm boxes, where connected to overhead police alarm circuits, should be protected by arresters, operating at not more than 750 volts, placed in the connecting leads outside the box. [§ 39 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-664 Telephone and other communication apparatus on circuits exposed to supply lines or lightning--Guarding current-carrying parts.** (1) **Current-carrying parts.** Telephone or other communication apparatus which is permanently located outdoors or where exposed to corrosive fumes or dampness (such as may occur in subways, cellars, basements, laundries, stables, etc.) shall be so arranged that all ungrounded current-carrying parts are so guarded as to be suitably protected against the prevailing atmospheric conditions.

The inclosing cases of communication apparatus provide suitable guards if substantially built of metal or insulating material.

(2) **Receiver cords.** Receiver cords where required to be guarded shall be guarded by shields of effectively grounded metal (such as metal armor) or of nonabsorptive insulating material (such as flexible insulating tubing) or suitable insulating coverings for the individual conductors. (See WAC 296-44-661 (1)(b).)

(3) **Shields for portable cords.** Where no protective device is installed the shields of portable cords shall always be of grounded metal or of special insulating material suitable to withstand the voltage of the highest-voltage supply circuit to which the communication circuit is exposed up to 7,500 volts. [§ 39 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-667 Telephone and other communication apparatus on circuits exposed to supply lines or lightning--Grounding.** The ground connections for outside installations of cable protectors employed solely to prevent electrical damage to the cable need not conform with the requirements of this rule.

(1) **Methods.** Arresters and, where required, exposed noncurrent-carrying metal parts shall be grounded in the following manner:

(a) The grounding conductor shall preferably be of copper (or other material which will not corrode excessively under the prevailing conditions of use) and shall be not less than No. 18 (0.040 inch) in size, and where within buildings shall be covered with a suitable insulation.

If necessary to guard the grounding conductor from mechanical damage (on poles or where a grounding conductor on the outside of building walls is near a roadway, sidewalk, or pathways, thus exposing it to tampering by unauthorized persons), it shall be protected for a distance of 8 feet from the ground by a wooden molding or by conduit of nonmagnetic material.

(b) The grounding conductor shall preferably be connected to a cold-water pipe. In the absence of a water pipe, connection may be made to a continuous underground metallic gas-piping system, to metallic structures

when effectively grounded, or to a ground rod or pipe driven into permanently damp earth. If a gas-pipe electrode is used, connection shall be made between the gas meter and the street main. Steam or hot-water pipes should not be used for ground connections. Driven rods or driven pipes used as ground connections for protectors shall not be also used as ground connections for electric-supply circuits or electric apparatus. The requirement of separate driven rods or pipes for protectors and for electric supply circuit grounding, or the use of other separate grounds, does not prohibit bonding together such grounds where such bonding seems desirable. Where water or gas pipes are used for a ground connection, attachment to such pipes shall not be made at the same point as attachments to electric-supply circuits or equipment.

(2) **Connecting grounding conductor or pipes.** Grounding conductors shall be attached to pipes by means of suitable ground clamps; the entire surface of the pipe to be covered by the clamp shall be thoroughly cleaned.

(3) **Connecting grounding conductors to driven rod or pipe or other metallic structure.** Grounding conductors shall be so attached to the rod, pipe or metallic structure as to give reliable connection, both mechanically and electrically, and in such a manner as to prevent excessive corrosion when the joint is buried in the earth. [§ 39 (part), filed 3/23/60, effective 12/1/58.]

## RADIO AND T.V. INSTALLATIONS

**WAC 296-44-670 Rules for radio and T.V. installations--Scope.** The rules of WAC 296-44-670 through 296-44-766 apply to radio-transmitting and receiving installations, including antennas, counterpoise wires, lead-in conductors, grounding conductors, grounding connections, protective devices, and batteries. The rules do not apply to mobile or portable installations of any type, nor to equipment and coupling wires used for coupling carrier-current equipment to supply-line conductors. In case the installation is covered by more than one rule, the superior requirement shall apply.

Community television antenna and distribution systems shall conform to construction and clearance requirements for communications cables and/or wires as provided for in other parts of the code.

The term "radio stations" shall include television station transmitter, receiver, their antennas and distribution systems. [§ 50, filed 3/23/60, effective 12/1/58.]

**WAC 296-44-673 Classification of radio stations.** For the purpose of these rules, radio stations are classified as follows: (1) **Receiving stations.**

(2) **Transmitting stations.** The power rating of transmitter shall be the rating authorized by the federal communications commission or other authorized federal regulatory body in granting construction permits and licenses. For the purpose of this code, transmitting stations are divided into three groups as follows:

(a) Low power. Transmitting stations having a licensed operating power less than 100 watts output and a

maximum plate supply voltage (dc or rms ac) less than 750 volts.

(b) Medium power. Transmitting stations not classified as low power or high power.

(c) High power. Transmitting stations having a licensed operating power output greater than 1,000 watts or a maximum plate supply voltage (dc or rms ac) greater than 5,000 volts.

**Note:** In the case of amateur stations, the classification under these rules shall be determined by the voltage used on the plate of the last tube of the transmitter.

[§ 51, filed 3/23/60, effective 12/1/58.]

**WAC 296-44-676 Antenna and counterpoise installation--Application of rules.** These rules apply as follows: (1) **Outdoor antennas of all classes of stations (as defined in WAC 296-44-673 (1) and (2)).** There are no requirements for indoor antennas, except that they shall meet the requirements for clearance from the conductors of other systems specified in WAC 296-44-706(3). In general, transmitting antennas should not be located indoors.

(2) **Counterpoise wires.**

(3) **Ground-system wires.** There are no requirements for the ground-system wires of an antenna. [§ 52 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-679 Antenna and counterpoise installation--General requirements. (1) Antennas.**

(a) Antennas of receiving stations. Such antennas shall comply with the requirements for the construction of communication lines for public use in similar situations, as given in WAC 296-44-274 through 296-44-457.

(b) Antennas of transmitting stations. Such antennas shall comply with the requirements for the construction of supply lines for public use in comparable situations and for the voltage concerned, as given in WAC 296-44-274 through 296-44-457.

(2) **Counterpoise wires.** Counterpoise construction shall conform to the requirements for that of the associated antenna as regards location and clearances with respect to conductors of other systems. [§ 52 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-682 Antenna and counterpoise installation--Locations to be avoided. (1) Medium and high-power transmitting stations.** The following situations shall be avoided in erecting the antenna, counterpoise, and guy-wire systems of medium and high-power transmitting stations:

(a) Attachment of any wires of the systems to poles which carry the conductors of any electric supply or communication circuits.

(b) Crossings (above or below) or conflicts of any of the wires of the systems with the conductors of any electric supply or communication circuits.

(c) Crossing over streets, highways, or the tracks of any railroad.

(2) **Receiving and low-power transmitting stations.**

(a) In relation to circuits of more than 250 volts – the following situations shall be avoided in erecting the antenna, counterpoise, and guy-wire systems of receiving and low-power transmitting stations, except for the equipment of public utilities attached to their own poles:

(i) Attachment of any wires of the systems to poles which carry electric supply or communication circuits of more than 250 volts to ground.

(ii) Crossings (above or below) or conflicts of any of the wires of the systems with the conductors of any electric supply or communication circuits of more than 250 volts to ground.

(b) In relation to circuits of less than 250 volts – the following situations should be avoided whenever possible in erecting the antenna, counterpoise, and guy-wire systems of receiving and low-power transmitting stations, except for the equipment of public utilities attached to their own poles:

(i) Attachment of any wires of the systems to poles carrying the conductors of electric supply or communication circuits, none of which exceeds 250 volts to ground.

(ii) Crossings or conflicts of any wires of the systems with the conductors of any electric supply or communication circuits of less than 250 volts to ground.

(iii) Crossing over streets, highways, or the tracks of any railroad. [§ 52 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-685 Antenna and counterpoise installation—Ordinary construction of antenna systems.** If all of the situations listed in WAC 296-44-682 are avoided, antenna systems should be constructed in accordance with this section. If any of the situations of WAC 296-44-682(2)(b), are not avoided, antenna systems shall be constructed in accordance with WAC 296-44-688. (1) **Antenna conductors.**

(a) **Material.** Antenna conductors should be of copper, copper-covered steel, bronze, or other corrosion-resistant material of adequate strength.

(b) **Size.** Antenna conductor sizes should be not less than given in Table 1.

**TABLE 1.—Antenna conductor sizes—ordinary construction**

Material	Receiving and low-power transmitting			Medium and high-power transmitting		
	Span length			Span length		
	Less than 35 feet	35 to 150 feet	Exceeding 150 feet	Less than 35 feet	35 to 150 feet	Exceeding 150 feet
	AWG No.	AWG No.	AWG No.	AWG No.	AWG No.	AWG No.
Copper:						
Soft-drawn . . . . .	19	14	8	14	7	—
Medium-drawn . . . . .	19	14	10	14	8	—
Hard-drawn . . . . .	19	14	12	14	10	8

[Title 296 WAC—p 944]

**TABLE 1.—Antenna conductor sizes—ordinary construction**

Material	Receiving and low-power transmitting			Medium and high-power transmitting		
	Span length			Span length		
	Less than 35 feet	35 to 150 feet	Exceeding 150 feet	Less than 35 feet	35 to 150 feet	Exceeding 150 feet
	AWG No.	AWG No.	AWG No.	AWG No.	AWG No.	AWG No.
Bronze, copper-covered steel, or other high-strength, corrosion-resistant material . . .	19	14	14	14	12	10

(c) **Strength.** The conductor sizes listed in Table 1 provide for minimum strength without loading. In localities subject to glaze, ice, sleet, or snowstorms, comprised in the heavy- and medium-loading districts, additional strength should be provided. (See WAC 296-44-352.) In determining the loading, the effect of lead-in conductors and the loading thereon should be included.

**(2) Antenna insulators.**

(a) **Material.** Insulators should be of noncombustible material.

(b) **Dielectric strength.**

(i) **Receiving and low-power transmitting stations.** No requirements.

(ii) **Medium and high-power transmitting stations.** Insulators should meet the requirements of WAC 296-44-385 for the voltage developed on the antenna at the points of insulator attachment.

(c) **Mechanical strength.** Insulators should have a breaking strength not less than that of the smallest conductor which would be permitted by Table 1.

**(3) Antenna supports.**

(a) **Strength of supports.** All supporting structures should be so constructed as to carry the vertical, longitudinal, and transverse loads. They should be so erected that they are not dependent in general on the antenna for stability. Guys or braces may be used to obtain the necessary strength to withstand the longitudinal and transverse loads. Where the stability of the support is solely dependent on the guys, these should be led out in at least three approximately equally spaced directions from the support. In determining the loads, the storm-loading map given with WAC 296-44-352 should be employed; also the effect of the lead-in conductors and the load thereon should be included.

**Exception:** If ice-melting arrangements are regularly utilized, ice loading may be disregarded.

(b) **Guys.** Guys should be of galvanized steel, copper covered steel, bronze or other corrosion-resistant material and should be of adequate size, and in any case not less than the equivalent of No. 14 AWG solid wire. They should be firmly attached to adequate anchors or to structures which will furnish a substantial anchorage.

Where guys may be exposed to mechanical damage they should be provided with guards. Guys associated with antennas of transmitting stations where accessible to unauthorized persons shall be grounded or contain insulators complying with WAC 296-44-409.

(c) Roof supports. Antenna supports erected on roofs should be of substantial construction and, where necessary, shall be arranged to distribute the load over the roof.

(d) Chimneys. The attachment of antennas or antenna supports to chimneys shall be avoided where such attachment might overload the chimney.

(e) Grounding metal supports on roofs. Metal supporting poles or masts extending more than 10 feet above the supporting building shall be permanently and effectively grounded in conformance with the requirements of WAC 296-44-730 through 296-44-739, except poles or masts which themselves are used as antennas.

(f) Trees. Where antennas or guys are attached to trees, the location and method of attachment shall be such that swaying of the tree in the wind will not cause undue stress in the antenna conductors.

(4) **Strength of attachment of antennas to supports.** The means used for attaching the antenna to the support shall be such as to withstand a load that will break the conductor itself. The use of a strain hook which will release the wire before it breaks is permissible if the circumstances of a particular installation warrant it.

(5) **Minimum clearance above ground and roofs.**

(a) Spans 150 feet or less in length. Antenna conductors in approximately horizontal spans shall have clearances above ground and roofs not less than given in Table 2. These clearances do not apply to vertical antennas or vertical leadins.

TABLE 2.—Minimum antenna clearances above ground or roof

Location	Receiving and low-power antennas Feet	Medium and high-power antennas Feet
Above roofs .....	8	8
Along road in rural districts .....	15	28
Above streets and roadways .....	18	28
Above roadways to residence garages .....	10	12
Above spaces or ways normally accessible to pedestrians only .....	10	12

(b) Spans exceeding 150 feet in length. For such spans the above clearances shall be increased by 0.1 foot for each 10 feet in excess of 150 feet. [§ 52 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-688 Antenna and counterpoise installation—Special construction of antenna systems.** Where any of the situations of WAC 296-44-682 (2)(b)(i), (ii), and (iii), are not avoided, the construction shall meet such of the following rules as may apply: (1) **Recommendation against locating antennas in situations**

**where special construction is required.** It is strongly recommended that the installation of antennas in these special situations be avoided.

**Note:** If such locations are employed, it must be recognized that special hazards are introduced and that great care is necessary in the construction and maintenance of antennas to avoid contact with supply or communication conductors and to avoid the reduction of clearance over highways or railroad tracks.

(2) **Attachment to poles carrying conductors of electric supply or communication circuits of less than 250 volts to ground.** The attachment to such poles shall be made in such a manner and at such a location on the pole as not to interfere with the operation or maintenance of the electric supply or communication circuits, and to provide a clearance of at least 40 inches below the conductors and equipment of the electric supply or communication circuits. The antenna conductor, counterpoise, or guy wires preferably should be attached below the foreign circuit attachments.

**Exception:** These requirements do not apply in the case of outdoor installations of radio equipment and antennas where the electric supply or communication circuits terminate in the radio equipment.

(3) **Crossings over or conflicts with electric supply or communication circuits of less than 250 volts to ground.** In such locations the antenna conductors, counterpoise, or guy wires shall be constructed in accordance with the provisions of WAC 296-44-685, and, in addition, a clearance of 6 feet shall be maintained at the crossing or throughout the conflicting section.

(4) **Crossings under electric supply or communication circuits of less than 250 volts to ground.** In such locations the antenna conductors, counterpoise, or guy wires shall be constructed in accordance with the provisions of WAC 296-44-685, and, in addition, they shall be so constructed as to insure the maintenance of at least 2 feet from a communication conductor and of 4 feet from an electric supply conductor.

**Note:** It should be noted that for relatively long spans on the electric supply or communication circuit, the increase in sag with ice and wind loading is considerably more than for short spans, and allowances should be made accordingly when determining the clearance under fair-weather conditions.

(5) **Crossings over streets, highways, or railway tracks.** In such locations the antenna conductors, counterpoise, or guy wires shall be constructed in accordance with the provisions of WAC 296-44-685 and, in addition, shall meet the requirements of WAC 296-44-274 through 296-44-457 for the strength and sag of conductors, strength of supports, and clearance above the roadway applicable to communication lines in such locations. Where the requirements of WAC 296-44-685 differ from those of WAC 296-44-274 through 296-44-457, the requirements of WAC 296-44-274 through 296-44-457 shall control. [§ 52 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-691 Antenna and counterpoise installation—Guarding of antennas.** Antennas for transmitting stations except those of the shunt-excited, grounded-base type shall be installed so as not to be readily accessible to unauthorized persons. [§ 52 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-694 Antenna and counterpoise installation—Supply circuits as antennas or grounds.** Electric supply circuits shall not be employed as receiving antennas or as operating grounds through a conductive connection. They may be so used if suitable capacitors having a dielectric strength sufficient to withstand seven times the normal supply-circuit voltage and a capacitance of not more than 0.1 microfarad are inserted between the apparatus and each wire of the supply circuit. [§ 52 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-697 Lead-in conductors—Application of rules.** The requirements of this section apply to lead-in conductors (including radio-frequency transmission lines) of receiving stations and low-power transmitting stations. Lead-in conductors of medium and high power transmitting stations shall meet such of the requirements of WAC 296-44-079 through 296-44-271, supply stations, as apply for the voltages concerned. [§ 53 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-700 Lead-in conductors—Material.** Lead-in conductors shall be of copper, bronze, copper-covered steel, or other corrosion-resistant material. [§ 53 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-703 Lead-in conductors—Size.** The size of the lead-in conductor should not be less than that specified in Table 1, the span length being taken as the distance from the point of attachment to the antenna to the first building attachment. Where the lead-in conductors are attached to intermediate supports, the maximum span shall be considered. [§ 53 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-706 Lead-in conductors—Installation of lead-in conductor.** (1) **From antenna to first building attachment.** This section of the lead-in wire shall conform to the requirements as specified in WAC 296-44-680 and 296-44-688 for antennas similarly located.

(2) **From first building attachment to building entrance.** This section of the lead-in conductor shall be installed and maintained so that it cannot swing closer to the open conductors of communication supply, or lightning-rod systems than the following distances.

Communication or supply circuits of 0 to	
750 volts . . . . .	2 feet
Supply circuits exceeding 750 volts . . . . .	10 feet
Lightning-rod systems . . . . .	6 feet

**Exception:** The 2-foot clearance from communication or supply circuits of less than 750 volts may be reduced to not less than 4 inches if the lead-in conductor is separated from other conductors by a continuous and firmly

fixed nonconductor which will maintain permanent separation. This nonconductor shall be in addition to any insulating covering on the wires.

Lead-in conductors of low-power transmitting stations shall be firmly mounted on insulating supports so as to clear by at least 3 inches the surface of the building. If the lead-in has an effectively grounded metal sheath, it may be attached directly to the surface and treated as a grounding conductor with respect to clearance and other requirements.

**(3) From building entrance to set.**

**(a) Receiving stations.**

(i) Lead-in conductors shall be securely fastened in a workman-like manner.

(ii) Clearance between lead-in conductor and any supply conductor not in conduit shall not be less than 4 inches.

**Exception 1:** This 4-inch clearance does not apply if a firmly fixed nonconductor such as a porcelain tube affords a permanent separation. This nonconductor shall be in addition to any insulating covering on the wires.

**Exception 2:** This 4-inch clearance does not apply where the lead-in terminates in an outlet box which is also occupied by the conductors of another system, provided such outlet box is equipped with a barrier of sheet steel not less than No. 16 U.S. Standard Gage or a barrier of fire-resistant insulating material rigidly fastened to the box or its cover, or other device which assures positive separation between the lead-in conductors and the conductors of the other system.

**(b) Low-power transmitting stations.**

(i) Lead-in conductors shall be securely fastened to suitable insulators which provide a clearance of at least 2 inches to the nearest surface.

(ii) Clearance between lead-in conductor and any supply wire shall be at least 4 inches.

(iii) Lead-in conductors shall be installed and protected to prevent persons from readily coming into accidental contact with them.

**Exception:** If the lead-in has an effectively grounded metal sheath, it may be treated as a grounding conductor and attached directly to any surface.

[§ 53 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-709 Construction at building entrance—Application of rules.** The requirements of this section apply to construction at receiving stations and low-power transmitting stations. Construction at building entrance of medium- and high-power transmitting stations shall meet such of the requirements of WAC 296-44-079 through 296-44-271, supply stations, as may apply for the voltage concerned. [§ 54 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-712 Construction at building entrance—Entrance.** (1) **Receiving stations.** Lead-in conductors for receiving stations shall be either insulated or

surrounded by a grounded metallic sheath where they enter the building.

(2) **Low-power transmitting stations.** Lead-in conductors for low-power transmitting stations, where not installed with a grounded metallic sheath, shall enter the building by one of the following methods:

(a) Through a rigid, noncombustible, nonabsorptive insulating tube or bushing;

(b) Through a drilled window pane; and

(c) Through an opening provided for the purpose in which the entrance conductors are firmly secured so as to provide a clearance of at least 2 inches. If the lead-in conductor is inclosed in an effectively grounded metal sheath, no further insulation is necessary. [§ 54 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-715 Construction at building entrance—Creepage and air-gap distance.** The entrance bushing or window pane mentioned in WAC 296-44-712 shall, in the case of low-power transmitting stations, afford a creepage and air-gap distance from extraneous bodies of not less than 2 inches. There is no requirement under this title for receiving stations. [§ 54 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-718 Construction at building entrance—Mechanical protection of bushings.** Entrance bushings of porcelain or other fragile material at low-power transmitting stations shall be protected where exposed to mechanical injury. [§ 54 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-721 Protective devices—Application of rules.** The requirements of this section apply to protective devices for receiving stations and low-power transmitting stations. Protective devices for medium and high-power stations shall meet such of the requirements of WAC 296-44-079 through 296-44-271, supply stations, as may apply for the voltages concerned. [§ 55 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-724 Protective devices—Receiving stations.** (1) **Lightning arrester.** Each lead-in conductor of a receiving station using an outdoor antenna shall be provided with a lightning arrester which will operate at a voltage of 750 volts or less.

**Exception:** If the lead-in conductor is protected by a continuous effectively grounded metal sheath, the lightning arrester may be omitted.

(2) **Location.** The lightning arrester may be located outside or inside the building as near as practicable to the point of entrance and convenient to a ground. The arrester shall not be placed in the immediate vicinity of easily ignitable material nor in a location exposed to dust, inflammable gases, or flyings of combustible materials. [§ 55 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-727 Protective devices—Low-power transmitting stations.** (1) **Protective device.** Lead-in conductors of low-power transmitting stations shall be equipped with a grounding switch, lightning arrester,

horn gap, or other suitable means for lightning protection. If no conducting path between the antenna and ground is provided in the connected equipment, means shall be provided to drain static charge from the antenna system.

**Exception:** Where the antenna itself is directly grounded, other forms of protection against lightning and static charge may be omitted.

(2) **Location.** The protective device may be located either outside or inside the building. The device should be placed in the most direct line between the lead-in conductor and the point where the grounding connection is made. The device shall not be placed in the immediate vicinity of easily ignitable material nor in a location exposed to dust, inflammable gases, or flyings of combustible material. [§ 55 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-730 Protective and operating grounding conductors—Application of rules.** The requirements of this section apply to grounding conductors of receiving stations and low-power transmitting stations. Grounding conductors of medium and high-power transmitting stations shall meet such requirements of WAC 296-44-058 through 296-44-071, grounding, and WAC 296-44-079 through 296-44-271, supply stations, as apply. [§ 56 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-733 Protective and operating grounding conductors—General.** The protective grounding conductor may be used also as the operating grounding conductor. [§ 56 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-736 Protective and operating grounding conductors—Material and size.** (1) **Receiving stations.** Material. No requirements.

(a) Operating grounding conductor. No requirements.

(b) Protective grounding conductor. This conductor shall be not smaller than No. 14 AWG. copper and not smaller than the lead-in conductor.

(2) **Low-power transmitting stations.** The operating and protective grounding conductors of low-power transmitting stations shall be not smaller than No. 14 AWG. copper, and not smaller than the lead-in conductor. [§ 56 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-739 Protective and operating grounding conductors—Installation of grounding conductors.** (1) **Method of running.**

(a) Grounding conductors shall be run in as straight a line as practicable from the set or the protective device to a good effective ground as specified in WAC 296-44-742 through 296-44-751.

(b) Grounding conductors may be run either inside or outside of the building.

**Recommendation:** It is recommended that the protective grounding conductor for low-power transmitting stations be run outside of the building.

(2) **Mechanical protection.** Grounding conductors shall be guarded against mechanical injury.

(3) **Insulation.** Grounding conductors may be of insulated or bare wire and need not be run on insulating supports.

(4) **Fuse not to be used.** No fuse shall be included in the circuit between the lightning arrester and the protective ground. [§ 56 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-742 Grounds and ground connections—Application of rules.** The requirements of this section apply to protective grounds and ground connections for receiving stations and to operating and protective grounds and ground connections of low-power transmitting stations. There are no requirements for operating grounds or ground connections for receiving stations. Grounds and ground connections for medium and high-power transmitting stations shall meet such requirements of WAC 296-44-058 through 296-44-076, grounding, and WAC 296-44-079 through 296-44-271, supply stations, as apply. [§ 57 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-745 Grounds and ground connections—Grounds.** (1) **Cold-water pipes.** Cold-water pipes shall preferably be used for grounds where such pipes are available and are connected or bonded to an extensive underground piping system or to a metallic well casing. An outlet pipe from a water tank fed by a street water main or a driven well may be used provided such outlet pipe is adequately bonded to the inlet pipe connected to the street water main or to the well casing.

(2) **Gas pipes.** In the absence of cold-water pipes, an extensive underground gas piping system may be used provided the grounding-conductor connection is made between the gas meter and the street main.

(3) **Steam and hot-water pipes.** Steam and hot-water pipes shall not be used for grounds.

(4) **Metallic structures.** A metallic structure may be used as a ground, if effectively grounded.

(5) **Artificial grounds.** In the absence of underground piping systems, driven pipes or rods or buried plates may be used. Steel or iron pipes or rods shall be galvanized or copper-coated. [§ 57 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-748 Grounds and ground connections—Attachment to pipes.** Grounding conductors shall be attached to pipes by means of suitable ground clamps which will not fail because of corrosion or cause corrosion of the pipe, or by other means which will insure a good mechanical and electrical connection. The entire surface of the pipe to be covered by the clamp shall be thoroughly cleaned. Connections to such pipes shall not be made at the same point as used for grounding electric supply or communication circuits or equipment. [§ 57 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-751 Grounds and ground connections—Attachment to driven pipes, rods, or buried plates.**

The grounding conductor shall be attached to the rod, buried plate, or other body so as to give a reliable connection both mechanically and electrically. This connection shall be made so that it will not fail through corrosion even when the joint is buried in the earth. Driven pipes or rods or buried plates used as grounding electrodes shall not be used also as grounding electrodes for electric supply or communication circuits or equipment. This requirement, however, does not prohibit the bonding together of the grounds of these several services where such bonding seems desirable. Where an effective station ground has been established by bonding together a group of such driven pipes or rods or buried plates, connection may be made thereto even though this ground is also used for other services. [§ 57 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-754 Connection to power supply lines—Application of rules.** The requirements of this section shall apply to connecting devices for receiving stations and low-power transmitting stations. Connecting devices for medium and high-power transmitting stations shall meet such requirements of WAC 296-44-079 through 296-44-271, supply stations, as may apply. [§ 58 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-757 Connection to power supply lines—Receiving stations and low-power transmitting stations.** Devices used in connection with power supply lines and methods of wiring employed at receiving stations and low-power transmitting stations shall be in accordance with the rules covering permanent or portable fixtures, devices, and appliances of WAC 296-44-625 through 296-44-643. [§ 58 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-760 Batteries—Application of rules.** The requirements of this section apply to batteries for receiving stations and transmitting stations of low and medium power. Large permanently installed batteries with a nominal voltage in excess of 50 volts, and batteries for high-power transmitting stations shall conform to WAC 296-44-142 through 296-44-166, rules for stations. [§ 59 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-763 Batteries—Care in handling.** Care shall be used in handling batteries in order to avoid contact with terminals having a high enough difference of potential to cause shock. [§ 59 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-766 Batteries—Portable batteries.** (1) **Ventilation.** Storage batteries shall be located where there is adequate ventilation.

(2) **Precautions.** Smoking, or the use of open flames, or of tools which may generate sparks, should be avoided except when cells are not actively gassing and when prior ventilation has been ample. Sparks from frictional or static electricity should be avoided, as they may ignite the gas if discharged close to its source, as at the vent of a sealed-type cell during overcharging. The electrolyte

of storage batteries, and spray containing electrolyte, are somewhat corrosive, particularly when concentrated by evaporation, and contact with body or clothes should be avoided.

Do not handle live parts of batteries or their connections unless adequate precautions are taken to avoid shock. [§ 59 (part), filed 3/23/60, effective 12/1/58.]

**WAC 296-44-850 Pole lines that overbuild or underbuild existing pole lines.** No company shall construct a pole line which will overbuild or underbuild the existing pole lines of any company without first giving such company fifteen days' notice in writing or receiving the permission of the company affected: *Provided*, That this rule shall not apply to wires crossing over or under existing wires at an angle in excess of fifteen degrees: *Provided further*, That this rule shall only apply when either the existing or the proposed line is to be operated at a potential in excess of 5,000 volts. [Rule 34, filed 8/3/61.]

**WAC 296-44-855 High potential lines overbuilding telephone, telegraph, or signal wires.** Wires or cables carrying electricity at a potential of 750 volts or more, overbuilding telephone, telegraph, or signal wires shall have a minimum size of wire No. 6 B & S gauge annealed copper or its equivalent in strength: *Provided further*, That this rule shall only apply when either the existing or the proposed line is to be operated at a potential in excess of 5,000 volts. [Rule 35, filed 8/3/61.]

**WAC 296-44-860 Crossings over railroads, street railroads, telephone, telegraph, signal or other power lines—General requirements.** All wires or cables carrying electric current shall be run, placed, erected and maintained on crossings over railroads, street railroads, telephone, telegraph, signal or other power lines, in accordance with the following specifications: (1) Location: The poles, or towers, shall be located as far as practicable from inflammable material or structures.

(2) The poles, or towers, supporting the crossing span, and the adjoining span on each side preferable shall be in a straight line.

(3) Power wires or cables shall cross above the telegraph, telephone, and similar wires wherever practicable.

(4) Cradles or overhead bridges shall not be used.

(5) Crossing spans shall have a maximum length of 150 feet, except by permission of the commission,\* and the difference in length of the crossing and adjoining spans generally shall not be more than fifty percent of the length of the crossing span.

(6) Clearance: Poles shall not be located less than twelve feet from the nearest rail of mainline track, nor less than six feet from the nearest rail of sidings, except by permission of the commission.\* At loading sidings sufficient space shall be left for a driveway.

(7) The separation of conductors supported by pin insulators shall not be less than:

Line voltage	Separation
Not exceeding 750 volts . . . . .	10 inches
Exceeding 750 volts but not exceeding 7,500 . . . . .	12 inches
Exceeding 7,500 volts but not exceeding 15,000 . . . . .	22 inches
Exceeding 15,000 volts but not exceeding 27,000 . . . . .	30 inches
Exceeding 27,000 volts but not exceeding 35,000 . . . . .	36 inches
Exceeding 35,000 volts but not exceeding 47,000 . . . . .	45 inches
Exceeding 47,000 volts but not exceeding 70,000 . . . . .	60 inches

**Note 1.**—This requirement does not apply to wires of the same phase or polarity between which there is no difference of potential.

**Note 2.**—The separation of conductors in series arc or incandescent circuits where the potential is not in excess of 10,000 volts need not exceed 12 inches.

(8) When supported by insulators of the disc or suspension type, the wire in the crossing span and the next adjoining spans shall be so attached to the insulators that a break in the span next adjoining the crossing span will not reduce the clearance specified more than twenty-five percent.

\*Public service commission abolished. Duties devolve upon director of labor and industries, RCW 43.22.050.

(9) Conductors: The normal mechanical tension in the conductors generally shall be the same in the crossing span and in the adjoining span on each side.

(10) The conductors shall not be spliced in the crossing span, nor in the adjoining span on either side when there are more than two spans between crossings.

(11) The method of supporting the conductors at the poles, or towers, shall be such as to hold the wires, under maximum loading, to the supporting structures, in case of broken insulators, or wires broken or burned at the insulator, without allowing an amount of slip which would materially reduce the clearance specified.

(12) Crossarms: Double crossarms shall be used on the poles or towers supporting crossing spans having a potential in excess of 15,000 volts where the strength of the conductor is less than that of No. 2 B. & S. gauge annealed copper.

(13) Guys: Wooden poles supporting crossing spans having a length of one hundred and twenty-five feet or more, and the next adjoining poles shall be headguyed away from the crossing span in all cases where the potential is in excess of 15,000 volts.

(14) Strain insulators shall not be used in guying steel structures, and are not required on wooden poles if the guy is effectually grounded, except within the incorporated limits of any city or town as provided in RCW 19.29.010(11).

(15) Clearing: The space around the poles, or towers, shall be kept free from inflammable material, underbrush and grass.

(16) Temperature: In the computation of stresses and clearances, and in erection, provision shall be made for a variation in temperature from minus 20 degrees Fahrenheit to plus 120 degrees Fahrenheit. A suitable modification in the temperature requirements shall be made for regions in which the above limits would not fairly represent the extreme range of temperature. [Rule 36, subsections 1-16, filed 8/3/61.]

**WAC 296-44-865 Crossings over railroads, street railroads, telephone, telegraph, signal or other power lines--Loads.**

(1) The conductors shall be considered as uniformly loaded throughout their length, with a load equal to the resultant of the dead load plus the weight of a layer of ice one-half inch in thickness, and a wind pressure of 8.0 pounds per square foot on the ice-covered diameter, at a temperature of 0 degrees Fahrenheit.

(2) The weight of ice shall be assumed as 57 pounds per cubic foot (0.033 pounds per cubic inch).

(3) Insulators, pins, and conductor attachments shall be designed to withstand, with the designated factor of safety, the tension in the conductors under the maximum loading.

(4) The poles, or towers, shall be designed to withstand, with the designated factor of safety, the combined stress from their own weight, the wind pressure on the pole, or tower, and the above wire loading on the crossing span and the next adjoining span on each side. The wind pressure on the poles, or towers, shall be assumed at 13 pounds per square foot on the projected area of solid or close structures, and on one and one-half times the projected area of latticed structures.

(5) The poles, or towers, shall also be designed to withstand the loads specified in subsection (4) above combined with the unbalanced tension of:

2 broken wires for poles, or towers, carrying 5 wires or less.

3 broken wires for poles, or towers, carrying 6 to 10 wires.

4 broken wires for poles, or towers, carrying 11 or more wires.

(6) Crossarms shall be designed to withstand the loading specified in subsection (4) above combined with the unbalanced tension of one wire broken at the pin farthest from the pole.

(7) The poles, or towers, may be permitted a reasonable deflection under the specified loading, provided that such deflection does not reduce the clearances specified more than 25 percent, or produce stresses in excess of those specified in WAC 296-44-875. [Rule 36, subsections 17-23, filed 8/3/61.]

**WAC 296-44-870 Crossings over railroads, street railroads, telephone, telegraph, signal or other power lines--Factors of safety.**

(1) The ultimate unit stresses divided by the allowable unit stress shall be not less than the following:

Wires and cables . . . . .	2
Pins . . . . .	2
Insulators, conductor attachments and guys . . . . .	3
Wooden poles and crossarms . . . . .	3
Structural steel . . . . .	3
Reinforced concrete poles and crossarms . . . . .	4
Foundations . . . . .	2

(2) Insulators: Each insulator shall be subjected to a dry flash over test for five consecutive minutes at the following test voltages:

Line voltage	Test voltage
Less than 30,000 . . . . .	3 times line voltage
Exceeding 30,000 but not exceeding 50,000 . . . . .	2 1/2 times line voltage
Exceeding 50,000 . . . . .	2 1/4 times line voltage

Each insulator shall further be so designed that, with excessive potential, at rated frequency, failure will first occur by flash over and not by puncture.

(3) Each separate part of a built-up insulator shall be subjected to its dry flash over test for five consecutive minutes. The minimum test voltage for each given part of a built-up insulator shall be the potential difference across such part when the assembled insulator is subjected to test as specified in subsection (2) above.

(4) Each insulator shall be subjected to a wet flash over test, under a precipitation of water of one-fifth of an inch per minute, at an inclination of forty-five degrees to the axis of the insulator at the following test voltages:

Line voltage	Test voltage
Less than 30,000 . . . . .	2 times line voltage
Exceeding 30,000 . . . . .	1 3/4 times line voltage

(5) Test voltage above 35,000 volts shall be determined by the A.I.E.E. Standard Spark-Gap Method.

(6) Test voltages below 35,000 volts shall be determined by transformer ratio.

(7) Conductors: The conductors shall be of copper, aluminum or other noncorrodible material or of steel covered with such noncorrodible material.

(8) Conductors shall be of such mechanical strength that when subjected to the most severe loading conditions specified in WAC 296-44-865(1), the tension will not exceed fifty percent of the ultimate strength of the conductor and that under the maximum deflection from such loading the clearances specified will not be reduced.

(9) Insulators for use on lines operated at a potential in excess of 5,000 volts shall be of porcelain or such other material and design that the insulator will have a mechanical strength equivalent to a porcelain insulator, conforming in dielectric strength to subsections 2-6 above.

(10) Strain insulators for guys shall have an ultimate strength of not less than twice that of the guy in which placed. Strain insulators for guys shall not flash over at the line voltage under a precipitation of one-fifth of an inch per minute, at an inclination of forty-five degrees to the axis of the insulator.

**Note:** This only applies in the case of guys placed in observance of WAC 296-44-860(13).

(11) Pins: For voltage of 15,000 and over, insulator pins shall be of steel, wrought iron, malleable iron, or other approved metal or alloy, and shall be galvanized or otherwise protected from corrosion: *Provided*, That cast iron pins having a minimum diameter of 1/2 inch need not be galvanized or otherwise specially protected from corrosion.

(12) Guys: Guys shall be galvanized or copper-covered stranded steel cable, not less than 1/4 inch in diameter, or galvanized rolled rods of equivalent tensile strength.

**Note:** This only applies in the case of guys placed in observance of WAC 296-44-860(13).

(13) Guys to the ground shall connect to a galvanized anchor rod, extending at least one foot above the ground level.

**Note:** This only applies in the case of guys placed in observance of WAC 296-44-860(13).

(14) Wooden poles: Wooden poles supporting conductors operated at a potential in excess of 7,500 volts shall be of selected timber, peeled, free from defects which would decrease their strength or durability, not less than seven inches minimum diameter at the top, and meeting the requirements as specified in WAC 296-44-865 (4) and (5) and subsection (1) of this section. [Rule 36, subsections 24-37, filed 8/3/61.]

**WAC 296-44-875 Crossings over railroads, street railroads, telephone, telegraph, signal or other power lines--Working unit stresses.** Obtained by dividing the ultimate breaking strength by the factors of safety given in WAC 296-44-870(1).

(1) Structural steel:	Lbs. Per Sq. In.

L equals length in inches.  
D equals least side, or diameter, in inches.

**Note 1:** In lieu of the above construction, power lines may be carried on poles of such length and spaced at such distances that a wire breaking at any point in the crossing span will swing clear of wire leads below and not come within ten feet of the ground at the highest point.

**Note 2:** Drop wires from a pole to the patrons' premises or wires crossing over same need not conform to the foregoing specifications except as covered by the following note.

**Note 3:** Telephone and telegraph lines, and telephone and power drops or service wires must be placed below power wires carrying 750 volts or more, or otherwise must maintain the same standard of strength as the wires they cross or are above.

**Note 4:** Only the construction last in point of time so run, placed, erected or maintained shall be held to be in violation of the provisions of this rule.

[Rule 36, subsections 38-41, filed 8/3/61.]

**WAC 296-44-880 Crossings over railroads, street railroads, telephone, telegraph, signal or other power lines--Clearance.**

CLEARANCE	Rails of Railroads	Buildings	Telephone, Telegraph and Signal wires	Power Lines 750 Volts and less, Except Trolley wires
The following clearances shall be maintained in all crossing spans

WAC 296-44-88001 Figure 1—Ground wire clearance.

GROUND AND WIRE CLEARANCES

Fig. 1

NOTE: Above clearances are subject to local ordinances and laws.  
 State highways are governed by franchise.  
 For voltages above 50 kv – Basic clearance at 50 kv plus 0.5 ins. per kv in excess of 50 kv.

WAC 296-44-88004 Illustration--Working space.

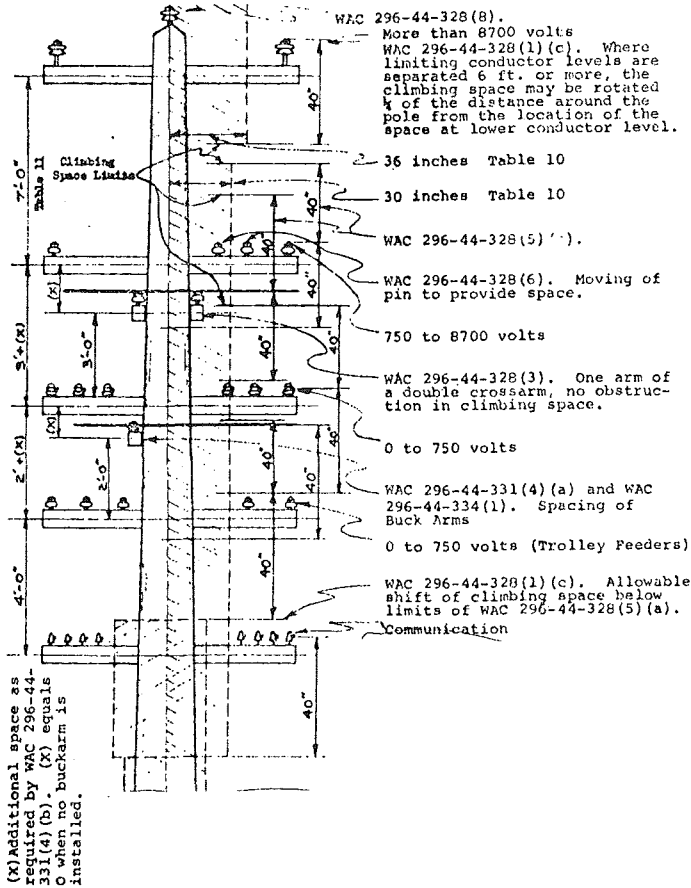

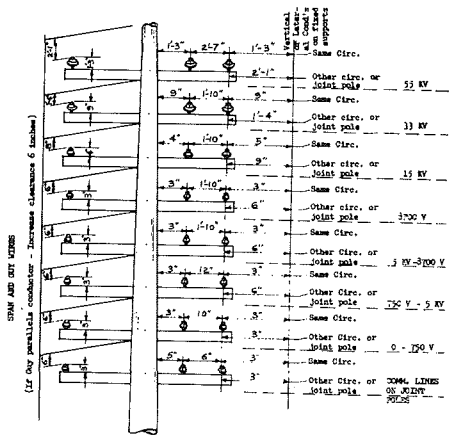

Illustration of Minimum Crossarm Spacing and Minimum Climbing and Working Spaces

NOTE: The climbing space at communication conductors shall be the same as required for supply conductors immediately above, with a maximum of 30". (Footnote 2 - Table 10) The climbing space of supply conductors shall be that required by Table 10 for the highest voltage conductor bounding the climbing space and where this voltage level is 40" or less above or below the next lower voltage level than the larger space shall be required. (The vertical separation of conductors on standard pin supports are the regular points for reference.)

[Illustration, (codified as WAC 296-44-88004), filed 3/23/60, effective 12/1/58.]

WAC 296-44-88005 Figures 6.A - 9.A--Clearances.

Fig 6.A - 9.A

MINIMUM CLEARANCES BETWEEN CONDUCTORS AND FROM CONDUCTORS TO GUYS, SURFACES OF POLES, CROSSARMS, VERTICAL OR LATERAL CONDUCTORS ATTACHED TO FIXED SUPPORTS.

These clearances graphically represented are basic minimums and are not intended to represent absolute allowable clearances under these rules.

Note: If suspension insulators are not restrained from movement, these clearances are to be maintained with insulator swing of 45° on steel supports or 30° on wooden supports.

Interpolation: For vertical and lateral conductors of over 8700 volts OF THE SAME CIRCUIT - 3 ins. plus 0.25 in. for each 1000 volts. OF OTHER CIRCUITS - 6 ins. plus 0.4 in. for each 1000 volts.

[Figures 6.A - 9.A, (codified as WAC 296-44-88005), filed 3/23/60, effective 12/1/58.]

WAC 296-44-88006 Figure--Climbing space.

WAC 296-44-328(3) A single cross arm at any conductor level is considered as an obstruction in the climbing space. WAC 296-44-328(4).

WAC 296-44-328 (1)(c) "A"—"B"—"C"—& "D" Pole quadrants of the dimensions specified in Table #10 for the voltage of the conductor concerned.

If climbing space is located in quadrant "B", then it may be rotated to quadrant "A" or "C" in any 6 ft. conductor separation.

"E" Climbing space on back of pole and may be shifted to quadrants "A" or "B" at 40 inches below limiting conductor levels, or to "C" or "D" in any 6 ft. conductor spacing by the shortest path.

WAC 296-44-331(4) Location of buckarms in relation to linearms.

Note: Conductors supported in standard 29 1/2 in. pin spaces which conflict with the climbing space requirements shall be considered in compliance with the 30 in. climbing space as specified in WAC 296-44-328.

[Figure, (codified as WAC 296-44-88006), filed 3/23/60, effective 12/1/58.]

WAC 296-44-88007 Illustration—Climbing space.

Note: The following application of these rules will be made when secondary racks installed according to WAC 296-44-325 (1)(d) are involved.

- (1) Secondary racks will be considered the same as crossarms for the application of Table 11 and dimensions as per WAC 296-44-334(1) will apply.
- (2) The top and bottom conductors will be the limiting conductors as per WAC 296-44-

328 (5)(a).

[Illustration, (codified as WAC 296-44-88007), filed 3/23/60, effective 12/1/58.]

WAC 296-44-88008 Illustration—Climbing space.

WAC 296-44-88010 Figure 11.A—Minimum vertical separation between horizontal crossarms.

Fig. 11.A

Minimum vertical separation between horizontal crossarms of the same utility and communication circuits.

REF. WAC 296-44-334 - Table 11  
 EXCEPTION: See WAC 296-44-334 (1)(a), Table 11-Footnote 6.

WHERE CONDUCTORS ARE OF THE SAME VOLTAGE CLASSIFICATION

Where crossarm separation is:	Separation between conductors may be reduced to:
2 Ft.	16 ins.
3 Ft.	28 ins.
4 Ft.	40 ins.
6 Ft.	60 ins.
7 Ft.	70 ins.

[Figure 11.A, (codified as WAC 296-44-88010), filed 3/23/60, effective 12/1/58.]

WAC 296-44-88011 Illustration—Climbing space—Location and spacing of crossarms.

"D" Cut gains for the location and spacing of crossarms.  
 "E" Back of pole. Preferred location of climbing space.

- 296-45-67505 Briefing.
- 296-45-67507 Signals.
- 296-45-67509 Slings and tag lines.
- 296-45-67511 Cargo hooks.
- 296-45-67513 Personal protective equipment.
- 296-45-67515 Wearing apparel.
- 296-45-67517 Loose gear and objects.
- 296-45-67519 Housekeeping.
- 296-45-67521 Operator's responsibility.
- 296-45-67523 Hooking and unhooking loads.
- 296-45-67525 Static charge.
- 296-45-67527 Load permitted.
- 296-45-67529 Visibility.
- 296-45-67531 Signal systems.
- 296-45-67533 Approaching the helicopter.
- 296-45-67535 In helicopter.
- 296-45-67537 Sling and rigging.
- 296-45-67539 Personnel.
- 296-45-67541 Fires.
- 296-45-67543 General.
- 296-45-090 Industrial hygiene. [§ III, Rules 3.5 through 3.7, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-110 Tools—General. [§ IV, Rules 4.1 through 4.7, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-120 Tools—Inspection of tools. [§ IV, Rules 4.8 and 4.9, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-130 Tools—Storage of tools and materials. [§ IV, Rule 4.10, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-140 Tools—Hand tools—Using metal objects. [§ IV, Rules 4.11 and 4.12, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-150 Tools—Ladders. [§ IV, Rules 4.13 through 4.27, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-160 Tools—Scaffolds. [§ IV, Rule 4.28, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-170 Tools—Guards and barriers. [§ IV, Rule 4.29, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-180 Tools—Grounding equipment. [§ IV, Rules 4.30 and 4.31, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-190 Tools—Hot line tools. [§ IV, Rules 4.32 and 4.33, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-200 Tools—Switch stick. [§ IV, Rules 4.34 and 4.35, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-210 Tools—Climbing equipment. [§ IV, Rules 4.36 through 4.39, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-220 Protective devices—Rubber protective equipment. [§ IV, Rules 4.40 through 4.51, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-230 Equipment—Soldering equipment. [§ IV, Rules 4.52 through 4.55, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-240 Equipment—Fire extinguishers. [§ IV, Rule 4.56, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-250 Wearing apparel. [§ 296-45-250, filed 1/3/68; § IV, Rules 4.57 through 4.61, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-260 Transportation—Motor vehicle and trailer operations law. [§ IV, Rule 4.62, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-270 Transportation—Safety practices. [§ 296-45-270, filed 1/3/68; § IV, Rules 4.63 through 4.69, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-280 Employee qualifications. [§ V, Rule 5.1, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-290 Work required of foreman. [§ V, Rule 5.2, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-300 Number of men required to do work safely. [§ V, Rules 5.3 through 5.5, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-310 Replacing or pulling fuses. [§ V, Rules 5.6 through 5.8, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-320 Electric utility employee operated motor cranes, "A" frames, aerial lift equipment, hole digger, winches, etc. [§ V, Rule 5.9, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-330 Working on or near energized lines or equipment. [§ V, Rules 5.10 through 5.15, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.

**DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER**

- 296-45-010 General. [§ 296-45-010, filed 1/3/68; § I, Rules 1.1 through 1.9, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-020 Causes of accident. [§ I, Rule 1.10, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-030 Safety. [§ I, Rule 1.11, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-040 Definitions. [§ I, Rules 1.12 through 1.29, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-050 Employer's responsibility. [§ II, Rules 2.1 through 2.11, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-060 Foreman's responsibility. [§ II, Rules 2.12 through 2.23, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-070 Employees' responsibility. [§ II, Rules 2.24 through 2.31, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-080 First aid. [§ III, Rules 3.1 through 3.4, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.

- 296-45-340 Stringing or removing wires. [§ V, Rule 5.16, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-350 Temporary guard poles and structures. [§ V, Rule 5.17, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-360 Safe working practices. [§ V, Rules 5.18 through 5.46, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-370 Overhead lines—Working above energized circuits over 5 KV. [§ V, Rules 5.47 through 5.50, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-380 Overhead lines—Using hot line tools. [§ V, Rules 5.51 through 5.54, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-390 Overhead lines—Strength of spans and their supports. [§ V, Rules 5.55 and 5.56, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-400 Overhead lines—Foreign operations. [§ V, Rule 5.57, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-410 Overhead lines—Tree trimming. [§ V, Rule 5.58, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-420 Overhead lines—Foreign attachments and placards. [§ V, Rule 5.59, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-430 Substations and generating plants—General. [§ V, Rules 5.60 through 5.64, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-440 Maintenance of clearance. [§ V, Rule 5.65, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-450 Number of men required to work safely. [§ V, Rule 5.66, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-460 Safe working practices. [§ V, Rules 5.67 through 5.78, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-470 Clearances. [§ VI, Rules 6.1 through 6.13, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-480 Grounding. [§ VI, Rules 6.14 through 6.25, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-490 Underground maintenance—General. [§ VII, Rule 7.1, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-500 Underground maintenance—Working in manholes. [§ VII, Rules 7.2 through 7.7, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-510 Underground maintenance—Guarding manholes and street openings. [§ VII, Rules 7.8 through 7.12, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-520 Underground maintenance—Use of tools and equipment. [§ VII, Rules 7.13 through 7.17, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-530 Underground maintenance—Pulling U.G. cable. [§ VII, Rule 7.18, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-540 Underground maintenance—Testing. [§ VII, Rules 7.19 through 7.21, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-550 Underground maintenance—Fishing conduit or ducts. [§ VII, Rule 7.22, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-560 Underground maintenance—Working in elevated position. [§ VII, Rule 7.23, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-570 Underground maintenance—Grounding U.G. power conductors and equipment. [§ VII, Rules 7.24 through 7.27, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-580 Trolley maintenance. [§ VII, Rules 7.28 through 7.40, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-590 Aerial manlift equipment. [§ 296-45-590, filed 1/3/68; § VIII, Rules 8.1 through 8.10, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.
- 296-45-600 Conclusion. [Matter following Rule 8.10, filed 3/23/60, effective 2/3/56.] Repealed by Order 76-38, filed 12/30/76.

#### WAC 296-45-650 Electrical workers safety rules—

**Foreword.** The purpose of this chapter is to make the workplace of electrical employees as free from recognized hazard as is reasonably possible. The observance of these rules may in some instances require that speed and work performance be subordinated to the safety of employees. Since the purpose of these rules is the safety of employees, it is expected that those employees engaged in the work for which these rules are intended will, in good faith, adhere to the provisions of this chapter. This chapter is not intended to be a complete description of the work to be done nor is it complete in the sense that additional or unusual hazards may not exist for which there is no regulation or rule. In the event a hazard exists which is not contemplated by this chapter, it is expected that the foreman and employees will in good faith mutually discuss the particular hazard and arrive at a method of performing the work with the greatest degree of safety.

The department of labor and industries is the sole and paramount administrative agency responsible for the administration and interpretation of this chapter and the Washington Industrial Safety and Health Act of 1973. If there exists a question as to the meaning of any provision of this chapter, such question must first be directed to the department of labor and industries and its authorized representatives.

Experience has proven that the majority of injuries and deaths are preventable. Most injuries and deaths are not due to defective equipment but are due to failure on the part of the employees and those in authority to observe safety rules and failure to use safety devices. In the last analysis, this chapter is a compilation of experience and common sense. Electrical safety requires that the work be properly planned, executed by the use of good judgment and under the direction of intelligent supervision. [Order 76-38, § 296-45-650, filed 12/30/76.]

**WAC 296-45-65003 Scope and application.** (1) The work for which this chapter is enacted is a specialized type of construction work and, insofar as it is specialized, such operations, procedures and work require a particular type of rule or regulation which is generally embodied within this chapter. The purpose of this chapter shall be to avoid those hazards peculiar to the industry, the purpose for which this chapter is designed, and this chapter shall include employees and employers whose business and work include power distribution and transmission lines. The standards apply to all such construction work of an electrical nature regardless of the general nature of the business. The criterion for application of this chapter shall be the nature of the particular

work to be or which is being performed. That work which is intended to be encompassed within the provisions of the mandatory and recommended provisions of this chapter shall include that work, conditions, practices, means, operations and processes performed at or on power distribution and transmission line installations, regardless of location, whether such installation for power distribution is (are) above ground or below ground, and shall include such adjacent and supporting structures as are fairly encompassed by these regulations.

Generally, the nature of the work will be such that industrial insurance premiums could reasonably be said to be reportable; (as of the effective date of this chapter) under WAC 296-17-521 (Class 5-8); WAC 296-17-522 (Class 6-1); and WAC 296-17-539 (Class 13-1). This guideline applies insofar as said class either directly or indirectly is related to the construction, erection, maintenance, repair, alteration, or other operation involving power distribution and transmission lines.

(2) Communication lines and work directed communication lines as defined in chapter 296-32 WAC (safety rules for tele-communications) are subject to the provisions of chapter 296-32 WAC and are not encompassed within the scope of this chapter.

(3) These standards shall apply to installations under the exclusive control of electric utilities used for the purpose of communications or metering, or for generation, control, transformation, transmission, and distribution of electric energy, which are located in buildings used exclusively by the electric utilities for such purposes, or located outdoors on property owned or leased by the electric utilities or on public highways, streets, roads, etc., or outdoors by established rights on private property.

(4) Operation, conditions, work methods and other work related situations or activities not specifically covered by this chapter are subject to the rules and regulations of chapter 296-24 WAC, general safety and health standards; chapter 296-62 WAC, general occupational health standards; chapter 296-155 WAC, safety standards for construction work; and, insofar as applicable to employee safety and health, chapter 19.29 RCW. Additionally, operations, conditions, work methods and other work related situations or activities may be subject to additional rules and regulations depending upon the nature of the work being performed.

(5) Under certain circumstances, an employer may obtain a variance from the director of the department of labor and industries or his authorized representative. Until such time as a variance is granted, the employer and employees must comply with the mandatory provisions of this chapter. The procedure and requirements for variances are found in WAC 296-350-200 through 296-350-280.

(6) These rules shall not apply to the use of existing electrical installations during their lifetime, provided they are maintained in good condition and in accordance with the applicable safety factor requirements and the

rules in effect at the time they were installed, and provided that reconstruction shall conform to the rules as herein provided.

(7) Any rule, regulation or standard contained within this chapter, if subject to interpretation, shall be interpreted so as to achieve employee safety, which is the ultimate purpose of this chapter.

(8) Should a rule or standard contained within this chapter conflict, in any manner, with a standard or rule contained within a general (horizontal) chapter, the standard or rule contained herein shall apply so long as the work being done is electrical work involving power distribution and transmission lines. Should a standard or rule contained within this chapter conflict, in any manner, with a standard or rule contained within a specialized (vertical) chapter (one which applies to a particular type of work), the standard or rule contained herein shall apply as long as the work being performed involves power distribution and transmission lines as hereinbefore defined. Should there be a conflict between two or more standards or rules contained within this chapter, the standard or rule which affords the worker greater safety shall apply.

(9) Neither the promulgation of these rules, nor anything contained in these rules shall be construed as affecting the relative status or civil rights or liabilities between employers and their employees and/or the employees of others and/or the public generally; nor shall the use herein of the words "duty" and "responsibility" or either, import or imply liability other than provided for in the industrial insurance and safety laws of the state of Washington, to any person for injuries due to negligence predicated upon failure to perform or discharge any such "duty" or "responsibility," but failure on the part of the employees, foreman, or employer to comply with any compulsory rule may be cause for the department of labor and industries to take action in accordance with the industrial insurance and safety laws.

(10) "Shall" and "must" as used in this chapter make the provisions mandatory. "Should," "may," or "it is recommended" are used to indicate the provisions are not mandatory but are recommended.

(11) If any section, subsection, phrase, or provisions of this chapter or part thereof should be held invalid by any court for any reason, such invalidity shall not in any way affect the validity of the remainder of this chapter, unless such decision renders the remainder of the provision unintelligible, or changes the meaning of such other provision or provisions.

(12) When the language used in this chapter indicates that it is the responsibility, duty, or obligation of the foreman or other employee, it shall also be the employer's responsibility, obligation, and duty.

Whenever this chapter refers to the provisions of another safety and health standard or statute affecting safety and health, such reference refers to the statute or code in effect at the time the work is being performed. [Order 76-38, § 296-45-65003, filed 12/30/76.]

**WAC 296-45-65005 Definitions.** These definitions are applicable to chapter 296-45 WAC.

(1) "Aerial manlift equipment." All types of equipment such as extended towers, boom-mounted cages or baskets, and truck-mounted ladders. This equipment is primarily designed to place personnel and equipment aloft to work on elevated structures and equipment.

(2) "Apprentice." An employee who is being trained to be a journeyman.

(3) "Approved." Meets or exceeds the recognized standards of safety within the industry.

(4) "Approved protectors." Gloves worn over rubber insulating gloves which are of such material or substance and so constructed as to protect the rubber gloves from abrasions, lacerations, or other physical damage which might otherwise occur to rubber gloves. Approved protectors must conform to the standards which are recognized by the industry.

(5) "Automatic circuit recloser." A self-controlled device for automatically interrupting and reclosing an alternating current circuit with a predetermined sequence of opening and reclosing followed by resetting, hold closed, or lockout operation.

(6) "Barrier." A physical obstruction which is intended to prevent contact with energized lines or equipment.

(7) "Barricade." A physical obstruction such as tapes, screens, or cones intended to warn and limit access to a hazardous area.

(8) "Belts." (a) "Lineman's body belt." A waist belt of approved material with a front buckle, two "D" rings for attaching safety straps and multiple loop strap for holding tools.

(b) "Strap." An adjustable leather, web, nylon, or other approved material in various lengths which permit free use of both hands in circling of post, pole, girder, etc. The safety strap permits the employee to assume a safe working position.

(c) "Construction belt." A strong leather, web, or other approved material belt at least 1 3/4 inches wide that may be equipped with fixed or adjustable "D" rings for attaching safety straps or lanyards.

(d) "Lanyard." A flexible line or strap of high tensile strength with snap hooks at one or both ends. They serve as safety straps or tail lines for use with belts or harness.

(9) "Bond." An electrical connection from one conductive element to another for the purpose of minimizing potential differences or providing adequate conductivity for fault current or for mitigation of leakage current and electrolytic action.

(10) "Bushing." An insulating structure including a through conductor, or providing a passageway for such a conductor, with provision for mounting on a barrier, conducting or otherwise, for the purpose of insulating the conductor from the barrier and conducting current from one side of the barrier to the other.

(11) "Cable." A conductor with insulation, or a stranded conductor with or without insulation and other coverings (single-conductor cable) or a combination of conductors insulated from one another (multiple-conductor cable).

(12) "Cable sheath." A protective covering applied to cables. A cable sheath may consist of multiple layers of which one or more is conductive.

(13) "Circuit." A conductor or system of conductors through which an electric current is intended to flow.

(14) "Clearance (operating power lines and equipment)." The certification by the proper authority that a specified line or piece of equipment is deenergized, that the proper precautionary measures have been taken and the line or equipment is being turned over to the employee.

(15) "Climbing space." The vertical space reserved along the side of poles or structures to permit ready access to equipment and conductors located on poles or structures.

(16) "Communication lines." The conductors and their supporting or containing structures which are used for public or private signal or communication service: *Provided*, That such lines operate at potentials not exceeding 400 volts to ground or 750 volts between any two points of the circuit: *Provided further*, That the transmitted power does not exceed 150 watts. When operating at less than 150 volts, no limit is placed on the capacity of the system.

Communication lines generally include telephone, telegraph, cable antenna TV, railroad signal, data, clock, fire, police alarm, community television antenna, or other similar systems conforming with the above. Lines used for signaling purposes, but not included under the above definition, are considered as supply lines of the same voltage and are to be so run.

(17) "Conductor." Any material, usually in the form of a wire, cable, or bus bar which is approved for carrying an electric current.

(18) "Conductor shielding." An envelope which encloses the conductor of a cable and provides an equipotential surface in contact with the cable insulation.

(19) "Current-carrying part." A conducting part intended to be connected in an electric circuit to a source of voltage. Noncurrent-carrying parts are those not intended to be so connected.

(20) "De-energized (or dead)." Free from any electrical connection to a source of potential difference and from electrical charges. "Dead" is used only with reference to current-carrying parts which are sometimes alive or energized.

(21) "Designated or authorized employee." A qualified person delegated to perform specific duties under the conditions existing.

(22) "Effectively grounded." Intentionally connected to earth through a ground connection or connections of sufficiently low impedance and having sufficient current-carrying capacity to prevent the buildup of voltages which may result in undue hazard to connected equipment or to persons.

(23) "Electric line truck." Any vehicle used to transport men, tools, and material, which serves as a traveling workshop for electric power line construction and maintenance work. It may be equipped with a boom and

auxiliary equipment for setting poles, digging holes, and elevating material and/or workers.

(24) "Electric supply lines." Those conductors used to transmit electric energy together with necessary supporting and containing structures. Signal lines of more than 400 volts to ground are always electric supply lines if they are installed and used as electric supply lines.

(25) "Emergency." An unforeseen occurrence endangering life, limb, or property.

(26) "Enclosed." Surrounded by a case, cage, fence or otherwise which will protect the contained equipment and prevent accidental contact of a person with live parts.

(27) "Energized, alive, or live." Electrically connected to a source of potential difference or electrically charged so as to have a potential different from that of the earth or different from that of adjacent conductors or equipment. Electrical connections of less than 100 volts are not considered energized. Communication or signal lines as defined in this chapter are not considered energized.

(28) "Equipment." A general term which includes fittings, devices, appliances, fixtures, apparatus, and comparable equipment used as part of, or in connection with, an electrical power transmission and distribution system, or utility communication systems over 400 volts.

(29) "Exposed." Not isolated or guarded.

(30) "Fault current." As used in this chapter means the current that flows in an electrical system because of a defect in the circuit induced accidentally or otherwise.

(31) "Fixed ladder." A ladder which is permanently secured to a structure.

(32) "Foreman or man-in-charge." The person directly in charge of workers doing the work, regardless of title.

(33) "Foreign operation." Any business or work being performed which does not come within the mandatory scope and application of this chapter; an operation which would otherwise be subject to the provisions of this chapter may be subject to the provisions of another chapter in the event the employees performing the particular work were not competent as defined within the provisions of this chapter.

(34) "Guarded." Protected by personnel, covered, fenced, or enclosed by means of approved casings, barrier rails, screens, mats, platforms, or other approved devices in accordance with standard barricading techniques designed to prevent dangerous approach or contact by persons or conductive objects.

(35) "Ground" (reference). That conductive body, usually earth or a system ground, to which an electric potential is referenced.

(36) "Ground" (as a noun). A conductive connection, whether intentional or accidental, by which an electric circuit or equipment is connected to reference ground.

(37) "Ground" (as a verb). The connecting or establishment of a connection, whether by intention or accident, of an electric circuit or equipment to reference ground.

(38) "Grounding." For the purpose of these rules, means the act of placing shorts and grounds on de-energized conductors and equipment.

(39) "Grounding electrode (ground electrode)." A conductor embedded in the earth, used for maintaining ground potential on conductors connected to it, and for dissipating into the earth current conducted to it.

(40) "Grounding electrode resistance." The resistance of the grounding electrode to earth.

(41) "Grounding electrode conductor (grounding conductor)." A conductor used to connect equipment or the grounded circuit of a wiring system to a grounding electrode.

(42) "Grounded conductor." A system or circuit conductor which is intentionally grounded.

(43) "Grounded system." A system of conductors in which at least one conductor or point (usually the middle wire, or neutral point of transformer or generator windings) is intentionally grounded either solidly or through a current-limiting device (not a current-interrupting device).

(44) "Groundman." A member of crew working on ground under direction of foreman.

(45) "Hotline tools and ropes." Those tools and ropes which are specifically designed for work on energized high voltage lines and equipment.

(46) "Insulated." Separated from other conducting surfaces by a dielectric substance including air space offering a high resistance to the passage of current. When any object is said to be insulated, it is understood to be insulated in an approved manner for the conditions to which it is subjected. Insulated covering of conductors is one means of making the conductor insulated.

(47) "Insulation (as applied to cable)." That which is relied upon to insulate the conductor from other conductors or conducting parts or from ground.

(48) "Insulation shielding." An envelope which encloses the insulation of a cable and provides an equipotential surface in contact with cable insulation.

(49) "Isolated." An object that is not readily accessible to persons unless special means of access are used.

(50) "Manhole." A subsurface enclosure which personnel may enter and which is used for the purpose of installing, operating, and maintaining equipment and/or cable.

(51) "Neutral." A system in which one conductor is used as the neutral for one or more circuits; one conductor may be used as the neutral for both primary and secondary circuits of a distribution system.

(52) "Pole." Any device used to support a power distribution or transmission line. The pole may be made of any substance including wood, concrete, metal, is usually cylindrical in shape and comparatively slender. It is the upright standard to which is affixed part of the power distribution and transmission line system as defined in this chapter.

(53) "Portable ladder." As used in this chapter means a ladder capable of being moved by hand or manually and one which is usually moved into position by hand.

(54) "Power dispatcher (load dispatcher or system operator)." A person who has been designated by the employer as having authority over switching and clearances of high voltage lines and station equipment.

(55) "Protective devices." Those devices such as rubber gloves, rubber blankets, line hose, rubber boots, or other insulating devices, which are specifically designed for the protection of employees.

(56) "Public highway." For the purpose of these rules shall include every way, land, road, street, boulevard, and every other way or place in the state open as a matter of right to public vehicular travel, both inside and outside the limits of cities and towns, regardless of ownership.

(57) "Pulling tension." The longitudinal force exerted on a cable during installation.

(58) "Qualified person or qualified employee." A person who is familiar with the construction of, or operation of such lines and/or equipment that concerns his position and who is fully aware of the hazards connected therewith, or, one who has passed a journeyman's examination for the particular branch of the electrical trades with which he may be connected.

(59) "Secured ladder." A ladder which is not capable of being dislodged from the top by lateral, or jerking motion(s).

(60) "Sheath." As applied to tools carried in lineman's tool belt shall mean a sheath that effectively covers the tool and prevents such tool from falling from the belt.

(61) "Switch." A device for opening and closing or changing the connection of a circuit. In these rules, a switch is understood to be manually operable, unless otherwise stated.

(62) "Tag." A system or method of identifying circuits, systems, or equipment for the purpose of alerting employees and others that the circuit, system, or equipment is being worked on.

(63) "Rubber." Any goods, equipment, or tool made out of either natural or synthetic rubber.

(64) "Unstable material." Earth material, other than running, that because of its nature or the influence of other conditions, cannot be depended upon to remain in place without extra support, such as would be furnished by a system of shoring.

(65) "Vault." An enclosure into which personnel may enter and used for the purpose of installing, operating, or maintaining equipment and cable.

(66) "Voltage." The effective (rms) potential difference between any two conductors or between a conductor and ground. Voltages are expressed in nominal values. The nominal voltage of a system or circuit is the value assigned to a system or circuit of a given voltage class for the purpose of convenient designation. The operating voltage of the system may vary above or below this value.

(67) "Voltage of an effectively grounded circuit." The voltage between any conductor and ground unless otherwise indicated.

(68) "Voltage of a circuit not effectively grounded." The voltage between any two conductors. If one circuit is directly connected to and supplied from another circuit of higher voltage (as in the case of an auto-transformer), both are considered as of the higher voltage, unless the circuit of lower voltage is effectively

grounded, in which case its voltage is not determined by the circuit of higher voltage. Direct connection implies electric connection as distinguished from connection merely through electromagnetic or electrostatic induction. Low voltage includes voltages from 100 to 750 volts. High voltage shall mean those voltages of 751 volts to 230,000. Extra high voltage means any voltage over 230,000 volts. Where the words "high voltage" are used in this chapter it shall include extra high voltage, unless otherwise specified. [Order 76-38, § 296-45-65005, filed 12/30/76.]

#### **WAC 296-45-65009 Employer's responsibility. (1)**

The employer shall provide and maintain the necessary protective devices specified in these rules and require the employees to use them properly.

(2) There shall be installed and maintained in every fixed establishment employing eight or more persons a safety bulletin board of a size to display and post safety bulletins, newsletters, posters, accident statistics and other safety educational material. It is recommended that safety bulletin boards be painted green and white.

(3) The employer shall require the foremen to observe and enforce all safety rules and shall furnish a copy of the electrical workers' safety rules to each employee who is covered by these rules.

(4) The employer shall appoint only competent workers to supervise other employees and those appointed shall be responsible for the safety of the employees under their supervision.

(5) The employer shall hold safety meetings at least once a month, which meetings shall be held at a reasonable time and place as selected by the employer. The employer shall require all employees subject to provisions of this chapter to attend said meetings: *Provided*, That employees whose presence is otherwise required by reason of an emergency or whose function is such that they cannot leave their station or cease their work without serious detriment to the service provided, such as dispatcher, may be excused from such meeting under those circumstances.

Minutes shall be kept of each safety meeting and retained for a period of one year.

(6) The employer or a representative(s) designated by him shall investigate all accidents or injuries of a serious nature and, where possible, take the proper remedial steps to prevent the occurrence of similar accidents.

(7) The employer shall furnish instructions stating the proper procedure in event of an emergency, which shall include the names of those individuals to be notified and methods of contacting them.

(8) The employer shall provide and make available to all employees accident report and safety suggestion forms.

(9) In the case of fatal accident, immediate notice shall be given by the employer or his authorized representative either by telephone or telegraph (collect) to the department of labor and industries, division of industrial safety and health, Olympia, Washington, or any of its branch offices. All such notices shall include time, place, and date of the accident and the employer's name.

(10) Nothing contained within this chapter shall prohibit an employer or his authorized representative from disciplining employees for failure to comply with the provisions of this or any other safety code. [Order 76-38, § 296-45-65009, filed 12/30/76.]

**WAC 296-45-65011 Foreman's responsibility.** (1) Every foreman shall understand these and any other applicable safety rules and comply therewith. Foremen shall require all employees under their direction or supervision to read this chapter and the provisions contained therein and require every employee subject to this chapter to be able to apply this chapter and any provision of this chapter on a day-to-day basis.

(2) Foremen shall inform employees under their supervision or direction of the type and voltage of circuits on or near which the employees are to work.

(3) Foremen shall require all employees under their supervision to properly use safety devices and equipment, including barricades, warning flags or signs, or any other device called for to protect employees. [Order 76-38, § 296-45-65011, filed 12/30/76.]

**WAC 296-45-65013 Foreman-employee responsibility.** (1) An employee shall protect his climbing and working space at all times if the conductors are so spaced that in climbing or working he will be, or where it is possible to come within, the minimum required distances specified in these rules.

(2) Foremen or supervisors shall in good faith consider verbal or written reports of hazardous conditions and shall, as soon as practicable, investigate and remedy same if warranted.

(3) When hazards are reported by employees, foremen and others having authority shall accept the report in a cooperative manner, and in no case shall an employee be reprimanded or penalized for reporting hazards or potential hazards.

(4) Foremen shall require all employees under their supervision to keep their belts, spurs, and straps in good working condition. When straps and belts are in poor condition or defective, they shall not be used.

(5) Before leaving a jobsite, foremen shall correct or arrange to give warning of any condition which might result in injury to employees.

(6) No employee shall be permitted or allowed to remain on the jobsite when under the influence of any intoxicating beverage or controlled substance or substances: *Provided*, That if an employee is taking prescription medication under the direction of a practicing physician and such prescription does not interfere with the safe performance of the work assigned, such employee may be permitted to work.

(7) No intoxicating beverages or controlled substances shall be consumed on the jobsite other than prescription medication as set forth above. [Order 76-38, § 296-45-65013, filed 12/30/76.]

**WAC 296-45-65015 Work required of foremen.** (1) A foreman cannot properly supervise the work and look

out for the safety of employees under his direction if required to work as a foreman and a lineman at the same time.

(2) Foremen should be constantly alert and shall not be required to serve in such dual capacity, except in crews of not more than two linemen, in which case they may work as one of the linemen.

(3) In crews of two linemen or less, each lineman may have a groundman but, if additional linemen or groundmen are added to the crew, the foreman shall confine his activities to supervising the work, as exhibited below:

Type of Crew	Minimum Requirements
2 linemen	One lineman as man-in-charge.
2 linemen plus 1 groundman	One lineman as man-in-charge or climbing foreman.
2 linemen plus 2 groundmen	One lineman as man-in-charge or climbing foreman.
2 linemen plus any combination of 3 linemen or groundmen	One nonclimbing foreman.

[Order 76-38, § 296-45-65015, filed 12/30/76.]

**WAC 296-45-65017 Employee's responsibility.** (1) Employees shall not engage in horseplay or scuffling while on the job or jobsite and the employer shall not permit horseplay or scuffling while on the jobsite or otherwise in the course of employment.

(2) During such time as any employee is working on or near any energized line or energized equipment in excess of 750 volts there shall be no talking or communication other than that which is absolutely necessary and essential for the safe and proper performance of the work. Should there be communication or talk from a person other than an employee, the work shall stop until such time as the distraction ceases.

(3) Employees shall report any hazardous or potentially hazardous condition, operation, means, or work in a constructive manner and shall not engage in personality conflicts.

(4) Neither the employer nor the employees shall throw or permit anything to be thrown from elevated position(s) or poles to the ground or lower level, nor shall anything be thrown from the ground or lower level to an elevated position, whether that elevated position is on a pole, aerial manlift or otherwise.

(5) Employees shall report all injuries, regardless of severity, to the employer or designated representative. Report forms furnished by the employer should be used. [Order 76-38, § 296-45-65017, filed 12/30/76.]

**WAC 296-45-65019 First aid.** In addition to complying with the first aid provisions as found in WAC 296-24-060 through 296-24-073, all employees whose

duties require them to work on energized wires, equipment, or to climb poles or related structures, shall take an approved course in controlling bleeding and cardio-pulmonary resuscitation, and

(1) All linemen shall be instructed in pole-top rescue and become and remain proficient in its application.

(2) It is recommended that all employees receive basic first aid training.

(3) Safety suggestion forms should, where possible, be used for suggesting the elimination of hazardous conditions and such reported suggestions shall be retained by the employer or his authorized representative. [Order 76-38, § 296-45-65019, filed 12/30/76.]

**WAC 296-45-65021 Tools and protective equipment.** (1) Protective equipment. (a) Rubber protective equipment shall be in accordance with the provisions of the American National Standards Institute (ANSI), ANSI J6 series as revised in 1971, as follows:

Item	Standard
Rubber Insulating Gloves	J6.6-1971 Edition
Rubber Matting for Use Around Electrical Apparatus	J6.7-1971 Edition
Rubber Insulating Blankets	J6.4-1971 Edition
Rubber Insulating Hoods	J6.2-1971 Edition
Rubber Insulating Line Hose	J6.1-1971 Edition
Rubber Insulating Sleeves	J6.5-1971 Edition

(b) No protective equipment or material other than rubber shall be used: *Provided*, That such other nonconductive equipment may be used if it provides equal or better (dielectric) electrical and mechanical protection than rubber protective equipment: *Provided*, That the employer obtain before placing in service, manufacturer's data or other data to demonstrate that such nonrubber protective equipment provided equal or better electrical and mechanical protection than approved rubber equipment.

(c) Protective equipment shall not be used at voltages in excess of that for which the manufacturer has supplied data to the employer demonstrating that it is fit for such voltages.

(d) No protective equipment shall be modified, altered, or used for purposes other than those for which it is designed unless and until the manufacturer has, in writing, agreed or suggested that there be such modification, alteration, or use.

(e) High voltage rubber gloves shall have and pass a minimum dielectric test of at least 10,000 volts.

(f) Each rubber glove before it is used shall be inspected for defects and an approved air test performed. If, upon inspection, rubber gloves are either defective or appear to be defective, they shall not be used.

(g) Before being placed in service, all rubber protective equipment shall be numbered and records kept for test purposes and assignment.

(h) Rubber protective equipment shall not be used unless it has been dielectrically tested within six months and bears marking or identification of the date of the dielectric test: *Provided*, That all rubber gloves and rubber sleeves which are in service must be dielectrically tested every three months and shall not be used unless they have been tested within three months and bear marking or identification of the date of the last dielectric test.

(i) Whenever any rubber protective equipment is dielectrically tested, such testing shall be performed by a person or persons familiar with the testing procedure and in a facility which meets the recognized standards in the industry for such testing. All rubber gloves that are in service shall be tested at a voltage twice the amount for which such rubber equipment is used. Whenever a dielectric test is conducted, the rubber protective equipment shall also be visually inspected in detail for defects.

(j) Approved protectors shall be worn at all times over rubber gloves. Inner liners may be worn if desired.

(k) Rubber gloves when not in use shall be carried in an approved bag provided and designed for that purpose. It shall be provided by the employer and made available to the employees.

(l) Approved rubber gloves and carrying bag shall be assigned to each employee who works with, or is exposed to energized parts.

(m) Rubber protective equipment shall not be vulcanized or patched.

(n) A compartment or box shall be provided on each electric line truck, which box or compartment shall be used for storing rubber protective equipment. No equipment shall be stored in said compartment or box which can or could cause damage to the rubber equipment or goods placed in the compartment or box. Additionally, a separate container or compartment shall be provided for rubber blankets.

(o) Line hose shall not be doubled on themselves at any time. All blankets before storage must be wiped clean and rolled, not folded, before being placed in the container or box.

(p) Protective line equipment of material other than rubber shall be kept clean and visually inspected before each use.

(q) If protective line equipment of material other than rubber is found to be substantially defective or unsuitable for the purpose for which it is designed and intended, said protective line equipment shall not be used for personal protection of employees as may be required in Table 1 of this chapter. Said protective line equipment shall be marked defective but may be otherwise used unless the defect or damage to said protective line equipment creates additional safety hazards.

(r) Line hose or similar type of equipment shall not be used on voltages in excess of 15,000 volts as measured from phase to phase unless the manufacturer specifies otherwise.

(s) All protective hats shall be in accordance with the specifications of ANSI Z89.2-1971 Edition Industrial Protective Helmets for Electrical Workers, Class B, and

shall be worn at the jobsite by employees who are exposed to overhead or electrical hazards.

(2) Personal climbing equipment. All lineman body belts, safety straps, lanyards, hooks, and other similar equipment shall comply to this chapter. This rule shall not apply to personal climbing equipment in use at the effective date of this chapter during its lifetime provided such equipment is maintained in good condition and in accordance with the applicable safety rule and requirement in effect at the time such equipment was obtained.

(a) Safety lines shall not be used for shock loading and shall be used only for emergency rescue. All safety lines shall be a minimum one-half inch diameter and three- or four-strand first grade manila or its equivalent in strength (2,650 pounds) and durability.

(b) Defective ropes shall not be used and shall be replaced.

(c) Employees, when working from a hook ladder, must either belt themselves securely to the ladder, attach themselves to the structures by means of a safety line, or belt themselves to ladder safety equipment, which shall consist of a safety rope or belting threaded through the rungs or secured to the ladder at intervals of not more than three feet.

(d) Body belts with straps or lanyards shall be worn by employees working at an elevated position such as on poles, towers, or similar structures: *Provided*, That body belts and lanyards need not be used by employees while erecting transmission towers. Body belts and straps shall be inspected each day for defects before use. Defective body belts and straps shall not be used.

(e) Safety straps shall not be placed around poles above the cross-arm except where it is not possible for the strap to slide or be slipped over the top of the pole by inadvertence of the employee. Neither end of the strap shall be allowed to hang loose or dangle while the employee is ascending or descending poles or other structures.

(f) Body belts and safety straps shall not be stored with sharp-edged tools or near sharp objects. When a body belt, safety strap and climbers are kept in the same container, they shall be stored in such a manner as to avoid cutting or puncturing the material of the body belt or safety strap with the gaffs or climbers.

(g) Employees shall not attach metal hooks or other metal devices to body belts. Leather straps or rawhide thongs shall have hardwood or fibre crossbars. Leather straps and rawhide thongs shall not have metal or other conductive crossbars on them.

(h) Climbing gaffs shall be kept properly sharpened and shall be at least 1-1/8 inches in length.

(3) Ladders. (a) Portable metal or other portable conductive ladders shall not be used on or near energized line or equipment except where nonconductive ladders present a greater electrical hazard than conductive ladders. A greater electrical hazard would be static electricity such as might be found in extra high voltage substations. All conductive or metal ladders shall be prominently marked and identified as being conductive and shall be grounded when used near energized lines or equipment.

(b) All ladders including hook type ladders used in structures shall be secured to prevent the ladder from being accidentally displaced.

(c) All ladders shall be handled and stored in such a manner as to prevent damage to the ladder.

(d) When ascending or descending a ladder, the employee shall face the ladder and have free use of both hands.

(e) All defective ladders shall be taken out of service and labeled as defective.

(f) When a ladder is being used which is not fixed or otherwise secured, there shall be an attendant to hold the ladder and watch traffic when the work is being done on streets, alleys, sidewalks, or in industrial plants or other places where there exists the possibility of accidental contact with the ladder by third persons or vehicles.

(g) When working on the ladder, employees shall, where possible, tie the top of the ladder to a substantial object to prevent falling unless the ladder is equipped with approved hooks which may be used for the same purpose.

(h) Portable ladders shall not be moved with employees on the ladder.

(i) No employee shall ascend or descend a rolling ladder while it is moving.

(j) No employee shall stand on the top two steps of a step ladder.

(k) No employee shall use a step ladder as a straight ladder.

(l) All ladders shall be of sufficient strength for the use to which they are placed.

(m) Ladders shall always be placed on a secure footing with both legs resting firmly on the lower surface.

(n) Ladders made by fastening cleats or similar devices across a single rail shall not be used.

(4) Hot line tools. (a) Only hot line tools having manufacturer's certification of withstanding the following minimum tests shall be used:

(i) 100,000 volts per foot of length for 5 minutes when the tool is made of fiberglass; or

(ii) 75,000 volts per foot of length for 3 minutes when the tool is made of wood; or

(iii) Other tests which equal or exceed (i) and (ii) of this subsection.

(b) All hot line tools shall be visually inspected each day before use. All hot line tools shall be wiped clean before being used.

(c) Defective hot line tools shall not be used and shall be marked as defective and turned in for repair or replacement.

(d) Hot line tools and ropes shall be inspected each day before use. They shall be stored and maintained and used in such a manner as to prevent damage. Hot line tools and ropes shall not be used for purposes other than line work. Wood hot sticks shall be maintained with a surface coating of varnish or other approved treatment to prevent the absorption of moisture into the stick. The maintenance, inspection, storage, and use of such equipment shall be in conformance with the methods and standards recognized by manufacturers and the industry.

(5) Measuring ropes and tapes. (a) Measuring ropes or measuring tapes which are metal or certain conductive strands shall not be used when working on or near energized lines or parts.

(6) Hand tools. (a) All power hand tool switches shall comply with the provisions of WAC 296-24-650 through 296-24-67005.

(i) Be equipped with three-wire cord having the ground wire permanently connected to the tool frame and having a means for grounding the other end of the cord except when such three-wire cord increases the hazard to the employees or where the hand held tool is double insulated and permanently labeled "double insulated."

(ii) Be connected to the power supply by means of an isolating transformer, or other isolated power supply.

(b) All hydraulic tools which are used on or around energized lines or equipment shall use nonconductive hoses having approved strength for the normal operating pressures. The provisions of WAC 296-155-360 (4)(a) and (b) are mandatory.

(c) All pneumatic tools which are used on or around energized lines or equipment shall:

(i) Have nonconducting hoses having approved strength for the normal operating pressures, and

(ii) Have an accumulator on the compressor to collect moisture.

(7) Hand axes shall not be used when working overhead.

(8) Small tools carried in body belts shall be placed so as to present the least danger of coming into accidental contact with live parts.

(9) All tools carried in workers' body belts shall be sheathed: *Provided*, That tower erectors need not comply with this rule except when working on or above electric power equipment or lines.

(10) Tools other than those which are carried in workers' body belts shall not be carried up or lowered down poles or similar structures in belts but shall be raised and lowered by means of an approved container or hand line.

(11) All tools shall be kept in good working condition and shall be properly stored. Defective tools shall be taken out of service.

(12) Tools and loose material shall not be left at the top of poles or structures.

(13) Tools shall be placed where they will not be the cause of injury due to stepping or tripping on them.

(14) The surface and surface preservation of wood tools such as ladders, pike poles, switch sticks, insulating platforms used in electrical work shall be maintained. Only transparent preservatives shall be used. Where ladders and pike poles are not used on or near energized lines and are inspected monthly by qualified inspectors, they may be painted.

(15) Scaffolds shall be constructed and used in conformance with the general safety and health standards (WAC 296-24-82503) and the safety standards for construction work (WAC 296-155-485) of the state of Washington.

(16) Wearing apparel. (a) Goggles, rubber gloves, respirators, and other such personal protective devices shall not be interchanged among employees unless they have been sanitized.

(b) Workers shall wear clothing appropriate to the season and the kind of work being performed: *Provided*, That shirts or jumpers with full length sleeves rolled down and protective hats shall be worn when working on or near live parts or while climbing poles.

(c) When working on or near energized parts, employees shall not wear loose dangling watch chains, key chains, or unnecessary metal of any type, and should not wear coats with metal zippers.

(17) When working at night, spotlights or portable lights for emergency lighting shall be provided and used as is necessary to perform work safely.

(18) Sanitary facilities. The requirements of WAC 296-24-120 through 296-24-130(13) shall be complied with.

(19) Industrial hygiene. The requirements of chapter 296-62 WAC are mandatory unless they are inconsistent with this chapter.

(20) Fire extinguishers. Employees should know the location and how to operate fire extinguishers in the worksite vicinity.

(21) Foreign attachments and placards. Nails and unauthorized attachments should be removed before climbing above such attachments. When through bolts present a hazard to climbing, they shall be trimmed to a safe length.

(22) Working near or over water. When employees are engaged in work over or near water and when the danger of drowning exists, suitable flotation protection shall be provided and worn as required by WAC 296-24-086. [Order 76-38, § 296-45-65021, filed 12/30/76.]

**WAC 296-45-65023 Clearances, operating power lines and equipment.** Clearances, directly under the control of the power dispatcher or person acting in that capacity, shall be requested and executed by observing the following rules:

(1) Employers shall designate a qualified person or persons to act in the capacity of power dispatcher, also known as load dispatcher or system operator.

(2) No switch shall be operated and no clearance tag placed or removed without an order from the power dispatcher having jurisdiction, except where standing orders or regulations have been given covering such operations.

(3) In all cases, switching orders must be given directly to the employees in charge of operating the switches by the power dispatcher who has jurisdiction and such communications *must be repeated back word for word to the speaker*. When requesting clearance on lines under the control of the power dispatcher, a person requesting the clearance shall obtain the name of the dispatcher to whom the request was made and the dispatcher shall obtain the name of the person requesting the clearance; and assure himself that the person is qualified to receive such a clearance.

(4) Should it become necessary for a person holding a clearance to leave the job, he shall relinquish his clearance to the dispatcher and a new clearance shall be taken by another qualified person.

(a) In the event of an occurrence which renders it impossible to contact the individual who had a clearance on a given circuit or piece of equipment, that clearance may be released only by the next higher available official who is familiar with the work and has jurisdiction over the circuit or equipment.

(5) The dispatcher shall order clearance tags printed on red cardboard, or equivalent, not less than 2-1/4 inches by 4-1/2 inches, attached to all switches opened or checked open to provide clearance on any line or equipment for employees to work thereon.

(6) Clearance tags attached to substation control devices and to line switches beyond the switchyard of any substation; indicating the limits of the clearance involved; shall state the designation of the switch opened or checked open and tagged; the name of the person to whom the clearance is to be issued; the date and time the switch was opened or checked open; the name of the dispatcher ordering the switching and tagging; and the name of the person doing the switching and tagging.

(7) Clearance tags attached to airbreak switches opened within a substation shall indicate clearly that the line or equipment is cleared for employees to work thereon.

(8) In cases where more than one person will require clearance on the lines or parts of equipment, the power dispatcher must order complete sets of clearance tags for each person requesting clearance.

(9) When two or more crews are engaged in work at any one location on account of emergency or for other reasons, the proper authority may designate one of the foremen to act as foreman of the combined crews for the purpose of obtaining clearances only.

(10) To meet unforeseen conditions, it will be permissible to tag isolated switches for the dispatcher and issue clearances against this tag. In tagging out inter-utility tie lines, the open switches on the foreign end of the line shall be tagged for the foreign dispatcher requesting the outage who will issue clearances to individuals of his organization against this tag.

(11) No work shall be performed on lines or equipment until the power dispatcher in control of such lines or equipment has clearly granted the clearance. The power dispatcher shall never grant a clearance on lines or equipment before all necessary protective tags are applied, and his own records of such clearance are clear and complete. Before considering any line or equipment to be de-energized, the power dispatcher shall assure himself that all switches which could possibly energize the line or equipment in question have been opened, all phases checked open, the switches tagged and, if possible, locked in the open position.

(12) Metal-clad, draw-out switchgear of over 750 volts in which the physical separation of the disconnecting parts is not visible may be used to clear a line or equipment, provided the switchgear is equipped with:

(a) A positive positioning means to insure that the disconnecting contacts are separated;

(b) An isolating shutter which moves into place between the separated contact for circuit isolation; and

(c) A mechanically-connected indicating means to show that the shutter is in place.

(13) In all other cases, only a visible break of all phases shall be regarded as clearing a line or equipment.

(14) Where two or more 5000-volt (or higher) lines are on the same pole or bus structure, arrangements must be made for simultaneous clearances on all such lines unless the person who requested the clearance specifically states that less will be sufficient.

(15) In giving a clearance, the power dispatcher shall make certain that the man to whom the clearance is given is fully aware of the extent or the limits of his clearance.

(16) The person or persons to whom a clearance has been given shall make certain that all protective grounding or short-circuiting devices installed by him or persons under his direction are removed before clearing the line or equipment to the dispatcher for service.

(17) After receiving notification from the dispatcher that the necessary switching has been done, the person making the request shall take the following precautionary steps before any employee comes in direct contact with the circuit or equipment:

(a) The circuit or equipment shall be tested by generally accepted methods to make certain that it is de-energized.

(b) The circuit or equipment shall be grounded and shorted as prescribed in this section.

(18) No person shall make contact with a circuit or equipment that has not been taken out of service to be worked on until he has the circuit or equipment cleared and tagged by himself or is working directly under the supervision of one who has the circuit or equipment cleared and tagged for himself.

(19) No tag shall be removed and no lines or equipment energized until the clearance has been released to the dispatcher.

(20) There shall be a tag used on any switch, regardless of the voltage or type of construction, where workers are likely to be endangered by the closing of such switch and/or where the switch is not directly visible to the employee protected by the open switch. [Order 76-38, § 296-45-65023, filed 12/30/76.]

**WAC 296-45-65025 Grounding.** (1) When a line which is energized or which may be energized at over 750 volts is removed from service for the purpose of work thereon, the lines shall be considered and worked on as energized until such line is cleared, tagged and grounded.

(2) Grounding equipment. (a) Grounding equipment shall be available for use when working on deenergized circuits or parts.

(b) Grounding equipment itself shall be of approved carrying capacity to actuate protective devices such as oil circuit breakers, relays, without destroying the ground equipment itself.

(c) If the work is on new construction, definitely known to be dead and not cut into any point where it is possible for anyone to energize it by mistake, the grounding rule is not compulsory but is advisable when the lines extend a considerable distance.

(3) Preliminary grounding. Preliminary grounding or other testing shall first be done to determine that the line or equipment to be grounded is deenergized.

(4) Preliminary grounding shall be done as follows:

(a) A conductor, preferably stranded copper cable, shall be attached to a reliable ground. The use of chain is prohibited.

(b) A dry hand line shall then be thrown over the wires to be grounded, attached to the preliminary grounding conductor and, with all men standing in the clear, the grounding conductor may be pulled over the lines.

(c) Care must be taken that every line wire is in contact with the preliminary grounding conductor.

(d) The regular grounds shall then be placed.

(e) Preliminary grounding need not be used when the presence of other energized lines creates additional hazard through the use of preliminary ground, provided an approved test is made to ascertain that the lines to be grounded are deenergized.

(5) The following are methods of preliminary tests to determine whether a line is deenergized.

(a) A line may be buzzed out by extending the hot line tool equipment with a substantial piece of metal on the end to within a close distance of the line.

(b) Approved testers may be used in some locations, but these shall only be used and accepted as approved testers when such tester has been tested immediately before and after on another line known to be energized or other equivalent testing methods and has been proven to be in good working condition.

(6) Communication conductors. Bare wire communication conductors on power poles and structures are subject to these rules as energized lines and voltages in excess of 750 volts unless protected by insulating materials.

(7) Attaching grounds. (a) When attaching grounds, the ground end shall be attached first, and the other end shall then be attached and removed by means of insulated tools or approved devices.

(b) When removing grounds, the grounding device shall first be removed from the line or equipment by using insulated tools or other approved devices.

(c) Grounds shall be placed between work location and the sources of energy and as close as practicable to the work location, or grounds shall be placed at the work location. If work is to be performed at more than one location in a line section, the line section must be grounded and short-circuited at one location in the line section and the conductor to be worked on shall be grounded at each work location. The minimum distance shown in Table 1 shall be maintained from ungrounded conductors at the work location. Where the making of a ground is impracticable, or the condition resulting therefrom would be more hazardous than working on the lines or equipment without grounding, the grounds may

be omitted, provided that all work is done according to this chapter as if the line or equipment is energized.

(8) Testing without grounds. (a) Grounds may be temporarily removed only when necessary for testing purposes: *Provided*, That during such period of time as the grounds are removed, care shall be exercised during that test procedure.

(9) Grounding to tower shall be made with an approved tower clamp capable of conducting the anticipated fault current.

(10) A ground lead, to be attached to either a tower ground multiple ground system or driven ground, shall be capable of conducting the anticipated fault current and shall have a minimum conductance of No. 2 AWG copper.

(11) The grounding set shall be firmly connected to a reliable ground at the ground end first.

(12) Grounds shall be placed on both sides of the section of line on which work is to be done, with the following exceptions:

(a) Where visible openings, such as airbreak switches, disconnects, disconnected jumpers, etc., are within sight of the job, disconnecting the line from its source of power, and no energized high voltage line crosses over or below the line section being worked on, and no other source of feed exists to this line section. One ground installation on the side away from a visible opening may be considered to be approved protection.

(b) One ground is adequate when installed at the point where work is being performed if the line is not to be opened or if there is no source of supply beyond the ground or no possibility of contact with other energized lines.

(13) The ground set shall make firm contact with each conductor of the circuits being worked.

(14) In cases where the conductor separation at any pole or structure is so great as to make it impractical to apply shorts on all conductors, and where only one conductor is to be worked on, only that conductor which is to be worked on need be grounded.

(15) No ground shall be removed until all employees are clear of the energized wire or equipment. When removing the grounding set, it shall be disconnected from the line conductors first and lowered to a point below all energized conductors before the ground end is disconnected. [Order 76-38, § 296-45-65025, filed 12/30/76.]

**WAC 296-45-65027 General requirements.** (1) The live-line bare-handed technique is prohibited on voltages of 750 volts or more.

(2) Number of men required to do work safely. (a) Two competent electrical workers shall be required when performing work on energized high voltage lines or equipment or within the distances in Table 1. One of them shall serve principally as a standby man who shall be so located that he may physically reach the other employee in the event of an accident either with his hand or with a hot stick. The stand-by shall be so positioned as to be able to observe the other employee, his bodily movements, and verbally warn of any impending

dangers. In no case when working in pairs shall employees work simultaneously on energized wires or parts of different phases or polarity.

(b) In cases of necessity the stand-by man may temporarily assist the other employee provided that they both work on wires or parts of the same phase or polarity. Both employees shall so position themselves so that the presence of the second man does not increase the hazard.

(c) While on patrol at night and operating a motor vehicle on public highways, there shall be two employees, at least one of whom shall be a journeyman lineman or otherwise a competent or qualified employee. If repair to line or equipment is found to be of such nature as to require two linemen, work shall not proceed until additional help has been obtained provided that in cases of emergency where delay would increase the danger to life, limb, or substantial property, one employee may clear the hazard without assistance.

(3) When only one qualified employee is available and he is required to work on high voltage, these circuits shall be de-energized while the work is performed except for emergencies.

(4) The provisions of subsection (2) of this section do not apply in the following circumstances:

(a) When re-fusing circuits or equipment with a hot stick.

(b) When operating switches by means of operating handle or switch sticks.

(c) When installing or removing a hot line clamp connection with an approved hot stick on single phase line or apparatus, providing that the connection or disconnection does not interrupt or pick up a load.

(5) Initial determination. (a) Before any work is performed, the location of energized lines and their condition, the location and condition of energized equipment, the condition of the poles, the location of circuits and equipment including power communication lines, CATV and fire alarm circuits, shall be determined as shall any other particular hazard of a particular work site.

(b) No work shall be performed on energized lines or parts until the voltage of such equipment and lines is determined.

(6) Employees shall not stand on or otherwise come in contact with transformer cases or similar equipment while working on energized lines or equipment.

(7) Employees and conducting objects shall not come within the minimum distances as set forth in Table 1 of energized lines or conductors, except:

(a) When working on voltages of 5 Kv between phases or less employees may come within the distances as set forth in Table 1 if and so long as the employees are wearing approved rubber gloves, or use approved line hoses, rubber blankets, guards or barriers or similar approved protective equipment in such a manner as to protect against accidental contact, if the rubber gloves and other protective equipment is used in an approved manner.

(b) Nothing contained herein shall prevent the use of approved hot sticks on any voltage.

(8) Rubber gloves shall be worn or hot sticks used when placing protective equipment on or around energized conductors of voltages of 750 to 5,000 volts.

(9) Rubber gloves shall be worn or hot sticks used when removing tree branches, limbs, or similar objects from contact with high voltages or when such branch, branches, limbs or other conducting object is within the prohibited distance of Table 1. Rubber gloves shall be worn whenever the employee can touch or come within the prohibited distances as provided in Table 1.

(10) Employees should not wear rubber gloves while ascending or descending a pole until such time as the employee becomes so positioned that he is likely or capable of touching voltages of 750 or more.

(11) Rubber gloves, line hoses, rubber blankets, and other recognized protective equipment are barriers when used. Such barriers can be used on voltages of 5,000 or less between phases.

(12) It shall not be permissible to consider one part of a high voltage switch or disconnect as de-energized for the purpose of doing work on it if the remainder of the switch or disconnect remains energized unless approved barriers are erected which will prevent employees who are doing the work on such equipment from coming in direct contact with the energized parts.

(13) Conductor support tools such as link sticks, strain carriers, and insulator cradles may be used: *Provided*, That the clear insulation is at least as long as the insulator string or the minimum distance specified in Table 1 for the operating voltage.

(14) TABLE 1:

Voltage Range (phase to phase) Kilovolt	Minimum Working and Clear Hot Stick Distance
.75 up to 15	2 ft. 0 in.
15 up to 35	2 ft. 4 in.
35 up to 46	2 ft. 6 in.
46 up to 72.5	3 ft. 0 in.
72.5 up to 121	3 ft. 4 in.
121 up to 145	3 ft. 6 in.
145 up to 169	3 ft. 8 in.
169 up to 242	5 ft. 0 in.
242 up to 362	7 ft. 0 in. <sup>1</sup>
362 up to 552	11 ft. 0 in. <sup>1</sup>
552 up to 765	15 ft. 0 in. <sup>1</sup>

<sup>1</sup> NOTE: For these voltages of 242 and up, the minimum working distances and the minimum clear hot stick distance at the work location may be reduced when and so long as such distances are not less than the shortest distance between the energized part and grounded surface.

(15) Foreign operations. All foreign operations as defined within this chapter conducted on or near power lines or energized equipment shall maintain clearance according to the provisions of WAC 296-24-24019. [Order 76-38, § 296-45-65027, filed 12/30/76.]

**WAC 296-45-65029 Overhead lines.** (1) General.  
(a) When working on or with overhead lines, this section

shall be complied with as well as the applicable divisions of any other section.

(2) Strength of span and its support. (a) Precautions shall be taken to determine that the span and the supports thereof are of a strength so as to safely bear the weight of the employee(s) and the equipment used thereon.

(b) Before an employee climbs a pole, it shall be inspected or tested to determine that such pole is safe, both above and below the ground level. If the pole is found to be unsafe for climbing, it must be guyed or braced or otherwise supported in such a manner as to allow the employees to safely perform their work.

(c) Before moving conductors there shall be a thorough inspection for strength and good condition of the adjacent supporting poles, structures, and conductor supporting hardware. Approved safeguards shall be installed on such adjacent poles or structures as may be necessary to prevent unexpected or uncontrolled movement of these adjacent poles, structures or conductors supporting equipment or conductors.

(3) When setting, moving or removing poles using cranes, derricks, gin poles, A-frames, or similar equipment near energized lines or equipment, minimum clearances shall be maintained, as provided by Table 1 except when approved barriers or other line protecting devices have been installed.

(4) Temporary guard poles or structures. Guard poles, towers, or other guard structures installed for the purpose of protecting employees, lines, conductors or equipment during the course of construction shall be installed at the same clearance requirements as for permanent construction and with strength and safety factors as required to safely support the loads that may normally be imposed on them during their use.

(5) The safest possible working position shall be assumed before starting work in the vicinity of energized wires, lines, transformers or similar energized equipment.

(6) No work should be performed in inclement weather on high voltage equipment when conditions are such as to materially increase the hazards to the employees excepting emergency work necessary to restore service.

(7) While work is being performed overhead, tools and materials shall be placed in proper receptacles when not being used. Tools and materials shall not be thrown to or from the employees on the pole or other elevated position(s) but shall be raised and lowered by means of a handline and/or tool bag. Tools and loose materials shall not be left on poles, crossarms, ladders or other elevated structures or positions.

(8) Employees shall not work in elevated positions unless secured so as to prevent accidental falling. They shall be secured by a safety belt or other approved means except when ascending, descending or moving from one location to another while in an elevated position. Before an employee throws his weight on a belt, the employee shall determine that the snap or fasteners are properly engaged.

(9) When winches, trucks, or tractors are being used to raise poles, materials, to pull in wires, to pull slack or in any other operation, there shall be an operator at the controls unless the machinery or process is stopped.

(10) Foremen shall designate an employee to give signals when required.

(11) Raising poles, towers or fixtures in the close proximity of high voltage conductors shall be done under the supervision of a qualified employee.

(12) Employees shall not wear climbers on work where they are not required. Employees shall not continue to wear their climbers while working on the ground; except for momentary or short periods of time on the ground.

(13) After a capacitor has been disconnected from its source of supply, workers shall wait five minutes before short-circuiting and grounding them, unless the capacitor is equipped with an adequate grounding and/or short-circuiting device. Employees shall take care not to contact the terminals, jumpers, or line wires connected directly to capacitors until they have been properly short-circuited and/or grounded.

(14) After removal from service, short circuits shall remain on capacitors in storage until returned to service.

(15) Pulling or slacking shall be done only as directed by the lineman overhead while hoisting or lowering materials by means of a block.

(16) Steel cables shall not be used to raise transformers, poles or any other material except when the cable is rigged below all energized parts at a sufficient distance to prevent any possibility of the cable or conductive material being raised from contacting unguarded energized parts, unless adequately spread, guarded or clearance is maintained as provided in Table 1. The term "energized parts" in this section means wires or equipment carrying more than 300 volts.

(17) Employees shall not crawl over insulator strings but shall use a platform or other approved device to work from when making dead ends or doing other work beyond strings of insulators, at such distance that they cannot reach the work from the pole or fixture. While working on the platform or other device, they shall be secured with safety straps or a rope to prevent falling. The provision of this subsection does not apply to extra high voltage bundle conductors when the use of such equipment may produce additional hazard. Climbing over dead end assemblies is permissible only after they have been completed and pinned in the final position.

(18) When employees are working overhead, employees shall not dig or do any other work that exposes them to danger due to inattention of the work being performed overhead. Employees shall wear approved hard hats when it is necessary to be beneath overhead employees.

(19) Splicers platforms of the type commonly used for splicing or approved ladders securely hooked over or lashed to the strands may be used.

(20) When employees are required to climb through energized circuits of 2.1 KV or more, preventive measures shall be taken so as to minimize the possibility of

contact with energized lines. This may include approved spreading and guarding of the energized conductors.

(21) Methods shall be used that will effectively prevent ropes, (excepting hot line ropes) including hand lines, equipment or materials passing through the conductor level from making contact with the energized conductor or equipment of voltages of 2.1 KV or more. This may include approved spreading or guarding.

(22) All lifting equipment shall be bonded to an effective ground or it shall be considered and worked as energized and barricaded when utilized within the prohibited distance of Table 1 or if during the use of such equipment it is possible that it could come within the prohibited distance of Table 1 it shall be considered energized and barricaded. [Order 76-38, § 296-45-65029, filed 12/30/76.]

**WAC 296-45-65031 Poles and pole settings.** (1) All poles, the methods of use and installation of poles, insofar as they affect the employee safety, are subject to the relevant provisions of the electrical construction code, chapter 296-44 WAC.

(2) Pole holes shall not be left unattended or unguarded.

(3) Tag lines shall be of a nonconductive type when used in an area that will come within the prohibited distance of Table 1 or where it is possible that during use such line could come within the provisions of Table 1.

(4) Framing. During framing operations, employees shall not work under a pole or structure suspended by a crane, A-frame or similar equipment unless it is adequately supported. [Order 76-38, § 296-45-65031, filed 12/30/76.]

**WAC 296-45-65033 Transmission line construction.**

(1) Metal Tower Construction. (a) When working with unstable material, the excavation for pad or pile-type footings in excess of four feet deep shall be either sloped to the angle of repose, or shored as provided in WAC 296-155-660 and 296-155-665. Ladders shall be used for ingress and egress to a pad or pile-type footing excavation, if such excavation is in excess of four feet in depth. Employees shall not enter excavation to clear, clean or free the auger unless shoring is first installed.

(b) A designated employee shall be used in directing mobile equipment when such equipment either is or could come within the area of the fault line of the footing excavation.

(c) No employee shall be permitted to remain in the footing when equipment is being spotted for placement or being moved within an area that is likely to disturb the soil of or in the area of the excavation. This rule applies to excavation regardless of whether the excavation is shored or not.

(d) When necessary to assure the stability of mobile equipment, the location of use for such equipment shall be graded and leveled.

(e) Tower assembly shall be carried out with a minimum exposure to employees for falling objects. Employees shall not work under overhead work unless it is

required by the very process and there is no other feasible method of performing the work.

(f) During construction or assembly, guy lines shall be used to maintain and secure parts of sections in position in towers or equivalent means shall be used.

(g) Tower members and sections being assembled shall be supported by an approved method.

(2) No employees shall be permitted under a tower when it is in the process of erection or assembly, except as may be required to guide and secure the section being set.

(a) When erecting towers using hoisting equipment adjacent to energized lines or equipment, such lines or equipment shall be deenergized if practical. If the lines are not deenergized, additional caution shall be used, such as a competent qualified employee to watch in order to maintain the minimum clearance provided in Table 1.

(b) Erection cranes or similar equipment shall be set on firm, level foundations and when the equipment has outriggers, the outriggers shall be properly used.

(c) Tag lines shall be utilized to maintain control of tower sections until the section is positively secure.

(d) The load lines shall not be detached from the tower sections until the section is positively secure.

(e) Except during emergency restoration procedure, erection shall be discontinued in the event of high wind or other adverse weather conditions when such weather conditions materially increase the hazard of the work being performed.

(f) All equipment and rigging shall be regularly inspected and maintained in safe operating condition.

(g) Traffic controls shall be maintained and used when crossing highways and railways with equipment as required by the provisions of WAC 296-155-300 (7)(a) and (b).

(h) A designated employee shall be used and shall observe in order to assure that equipment being moved under or near energized lines or equipment maintains the minimum distance as required in Table 1.

(3) Stringing or removing deenergized conductors.

(a) When stringing or removing deenergized conductors, the provisions of this subdivision shall be complied with.

(b) Prior to stringing operations, there shall be a briefing with all affected employees, setting forth the plan of operation and specifying the type of equipment to be used, grounding devices and procedures to be followed, crossover methods to be employed, and the clearance authorization required, together with any other matters which the particular situation requires. Where conducting objects might contact, or come within the prohibited distance as set forth in Table 1, energized circuits, lines or where there might be a voltage build-up, the conductor being installed or removed shall be grounded first or the employee isolated or insulated.

(c) If the existing line is to be deenergized, proper clearance authorization shall be secured, and the line grounded on both sides of the crossing or the line being crossed shall be treated as energized.

(d) When crossing over energized conductors in excess of 750 volts, rope, nets or guard structures shall be installed so as to prevent accidental contact with the energized conductor(s). Where reasonably practical, the automatic reclosing feature of the circuit interrupting device shall be made inoperative.

(e) When conductors are being strung in or removed, they shall be kept under positive control to prevent accidental contact with energized circuit.

(f) Guard structures members shall be of approved dimension, strength and securely supported to meet the purpose for which they are intended.

(g) Catch-off anchors, rigging and hoists shall be of ample capacity to prevent loss of the lines.

(h) Manufacturer's load rating shall not be exceeded for stringing lines, pulling lines, sock connections, and all load-bearing hardware and accessories.

(i) Pulling lines and accessories shall be inspected prior to each use and replaced or repaired when damaged or when there is a reasonable basis to doubt the dependability of such lines or accessories. The provisions of WAC 296-155-330 (3)(d)(ii) concerning splices shall not apply to stringing and removing of deenergized conductors.

(j) Conductor grips shall not be used on wire ropes unless designed for that particular purpose.

(k) When the conductor or pulling line is being pulled (in motion) employees shall not be permitted directly under overhead operations, nor shall any employee be permitted on the crossarm.

(l) A transmission clipping crew shall have a minimum of two structures clipped in between the crew and the conductor being sagged. When working on bare deenergized conductors, clipping and tying crews shall work between grounds at all times. The grounds shall remain intact until the conductors are clipped in except on dead end structures.

(m) Except during emergency restoration procedures, work from structures shall be discontinued when there exists adverse weather conditions such as high wind or ice on the structures which would make the work more hazardous than usual.

(n) Removing, stringing and clipping operations shall be discontinued during the process of an electrical storm when such storm reasonably presents an additional hazard.

(o) Reel handling equipment, including pulling and braking machines, shall have ample capacity, operate smoothly and be leveled and aligned in accordance with the manufacturer's operating instructions.

(p) Communication between the reel tender and pulling rig operator shall be provided and maintained.

(q) Each pull shall be snubbed or dead ended at both ends before subsequent pulls.

(4) Stringing near, above, below or otherwise adjacent to energized lines. (a) Before stringing near, above, below, parallel to an existing line, there shall be a determination as to whether or not there exists a possibility of a dangerously induced voltage buildup, particularly during switching and grounding fault conditions. Where such possibility of danger does exist, employer shall

comply with provisions of subdivision (3)(a) through (3)(j) of this subsection in addition to the provisions of subsection (3) of this section unless the line is worked as energized.

(b) When stringing adjacent to or near energized lines, the tension stringing method or other methods which preclude accidental contact between the lines being pulled and any employee shall be used.

(c) All pulling and tensioning equipment shall be isolated, insulated or effectively grounded.

(d) A ground shall be installed at the tensioning reel set-up in order to ground each bare conductor, subconductor and overhead ground conductor during stringing operations.

(e) During stringing operations, each bare conductor, subconductor and overhead ground conductor shall be grounded at the first transmission structure adjacent to both the tensioning and pulling set-up and in increments so that no point is more than two miles from a ground, and

(i) The grounds shall be left in place until the conductor installation is completed.

(ii) Such grounds shall be removed as the last step of aerial cleanup.

(iii) Except for moving type grounds, the grounds shall be placed and removed with a hot stick.

(iv) Conductors, subconductors and overhead ground conductors shall be grounded at all dead-end or catch-off points.

(f) A ground shall be located at each side and within 10 feet of working areas where conductors, subconductors or overhead ground conductors are being spliced at ground level. The two ends to be spliced shall be bonded to each other.

(g) All conductors, subconductors and overhead ground conductors shall be bonded to the tower at any isolated tower where it may be necessary to complete work on the transmission line.

(h) Work on dead-end towers shall require grounding on all deenergized lines.

(i) Removal of temporary guards: Temporary guards shall not be removed until the adjacent structures have been clipped: *Provided*, The guard structures may be removed if safety slings have first been installed on adjacent tower or structure.

(j) When performing work from the structure, clipping crews and all others working on conductors, subconductors, or overhead ground conductors shall be protected by individual grounds installed at each such work location. [Order 76-38, § 296-45-65033, filed 12/30/76.]

**WAC 296-45-65035 Substations.** (1) Before work is performed on any electrically operated circuit breaker, it shall be cleared from the line and the control switch at the breaker opened. Where circuit breakers are operated by springs, solenoids or compressed air, or similar means, proper precautions shall be taken to prevent unauthorized or accidental operation of the device. This provision does not preclude repairs or adjustments that present no hazard to the employee.

(2) Disconnecting switches must be operated with approved sticks provided for that purpose unless said switches are provided with an operating mechanism having an insulated or grounded handle.

(3) Handles for manual operation of oil circuit breakers shall not be left in their sockets.

(4) Approved insulated platforms or mats shall be provided and used by employees while working on any live part of the switchboard on which any wire or appliance carries a potential in excess of 300 volts.

(5) All generators and motors having a potential of more than 300 volts shall have an approved insulated platform or mat, so arranged so as to permit the attendant to stand upon such a platform or mat when working upon live parts of such generator(s) or motor(s).

(6) Work near energized equipment. (a) When work is performed in an energized substation, authorization shall be obtained from the designated, authorized employee before work is started.

(b) When work is to be done in an energized substation, the following shall be determined prior to the commencement of work:

(i) What facilities are energized, and

(ii) What protective equipment and precautions are necessary for the safety of personnel.

(c) Extraordinary caution shall be exercised in the handling of busbars, tower steel, materials and equipment in the vicinity of energized facilities. The provisions of Table 1 shall be complied with.

(7) Barricades and barriers. (a) Barricades or barriers shall be installed to prevent accidental contact with energized lines or equipment.

(b) Where appropriate, signs indicating the hazard shall be posted on or near the barricade or barrier. These signs shall comply with the provisions of WAC 296-155-300.

(8) Control panels. (a) Work on or adjacent to energized control panels shall be performed by designated employees only.

(b) Precautions shall be taken to prevent accidental operation of relays or other devices due to jarring, vibration, or improper wiring.

(9) Mechanized equipment. (a) Use of vehicles, gin poles, cranes and other equipment in restricted or hazardous areas shall at all times be controlled by a designated employee.

(b) All mobile cranes and derricks shall be effectively grounded when being moved or operated in close proximity to energized lines or equipment, or where there exists a reasonable possibility that said equipment could accidentally move within the prohibited distance as specified in Table 1, or the equipment shall be considered energized.

(10) Storage. (a) The storage requirements of WAC 296-24-21501 through 296-24-21505 are mandatory.

(11) Fences. (a) When a substation fence must be expanded or removed for construction purposes, a temporary fence affording similar protection shall be provided and installed when the site is unattended, approved interconnection with ground shall be maintained between the temporary fence and permanent fence.

(b) All gates to all unattended substations shall be locked, except when work is in progress.

(12) Footing excavation. (a) Excavation for auger, pad and piling-type footings for structures and towers shall comply with the provisions set forth for metal tower construction. (See WAC 296-45-65033.)

(b) No employee shall enter an unsupported auger-type excavation if such excavation is in unstable material. Necessary clean-out shall be accomplished without entry. [Order 76-38, § 296-45-65035, filed 12/30/76.]

**WAC 296-45-65037 Underground.** (1) Protective barriers, or approved guards and warning signs must be erected before removing manhole covers or making excavations in places accessible to vehicular or pedestrian traffic.

(2) Whenever an opening is made in the street, it shall be properly guarded or covered until same is closed and whenever an obstruction is left in the roadway after dark, it shall be marked with approved lights, flares or similar devices.

(3) When work is to be performed in a manhole or unvented vault:

(i) No entry shall be permitted unless forced ventilation is provided or the atmosphere is found to be safe by testing for oxygen deficiency and the presence of explosive or potentially hazardous gases or fumes.

(ii) When unsafe conditions are detected, by testing or other means, the work area shall be ventilated and otherwise made safe before entry.

(iii) Provisions shall be made for a continuous supply of air as provided for in WAC 296-62-110.

(iv) When forced ventilation is not used a method of monitoring said manhole or vault so as to prevent the occurrence of oxygen deficiency due to work being performed in said manhole or vault, and to detect the presence of any explosive gases or fumes which may occur while the employees are working in said manhole or vault.

(4) When open flames are used or smoking is permitted in manholes, adequate mechanical forced air ventilation shall be used.

(5) Before using open flames in a manhole or excavation in an area where combustible gases or liquids may be present, such as near a gasoline service station, the atmosphere of the manhole or excavation shall be tested and found safe or cleared of the combustible gases or liquids prior to the entry.

(6) When work is to be performed in manholes containing any wires or appliances carrying electrical current, they shall be in a sanitary condition.

(7) A watchman shall be kept at the surface when there is any hazard to the employees in the manhole and he should not leave the manhole unwatched until such time as all employees are out and the cover has been replaced.

(8) Care shall be taken to prevent the possibility of vehicles or pedestrians coming in contact with the wires and equipment.

(9) Trenching and excavating. (a) During excavation or trenching, in order to prevent exposure of employees

to the hazards created by damage to dangerous underground facilities, efforts shall be made to determine the location of such facilities and work conducted in a manner designed to avoid damage.

(10) No work shall be permitted to be done in any manhole or subway on any energized wire, cable or appliance carrying more than 300 volts of electricity by less than two competent or qualified persons who shall at all times, while performing such work, be in the same manhole or subway in which work is being done. This rule shall not apply to work on telephone, telegraph or signal wires or cables.

(11) Trenching and excavation operations shall comply with the provisions of WAC 296-155-650 and 296-155-660.

(12) (a) Cables in manholes shall be accessible to employees and clear working space shall be maintained at all times.

(b) Where cables are not permanently identified by tags or otherwise, diagrams and information establishing positive identification and position of the cables shall be provided and supplied to the employees.

(c) Where multiple cables exist in an excavation, cables other than the one being worked on shall be physically protected when necessary.

(d) When multiple cables exist in an excavation, the cables to be worked on shall be identified by approved testing unless its identification is obvious by reason of the distinctive appearance.

(e) Before cutting into a high voltage cable or opening a high voltage splice, the cable shall be de-energized then clearance obtained, tested and then grounded in an approved manner. The cable to be worked on shall be identified by tags or equivalent means.

(f) When working on buried cables or cables in manholes, the metallic sheath continuity shall be maintained by bonding across the opening or by equivalent means.

(13) Insulated platforms or other protective devices shall be provided when work is to be done on energized wires or equipment in manholes.

(14) Tools and materials shall not be left on the ground around or near the manhole opening where they might be pushed or otherwise fall into the hole.

(15) Furnaces shall always be placed in a secure, level position on the downhill side of the manhole to avoid spillage of hot metals or compounds into the manhole.

(16) Materials shall not be thrown into or out of manholes but shall be placed in the proper receptacle and hoisted in and out by means of a rope.

(17) Pulling underground cable. When pulling cable(s) all employees shall be made aware of the hazard of being caught in the sheaves, lashings or winch gears. All employees shall stand clear of the pulling line when the pull is begun or when the line is under tension. This rule applies to all work performed by means of a winch.

(18) Fishing conduit or ducts. When fishing conduit or ducts, it shall first be determined that the fish tape or wires will not contact any energized line or equipment.

(19) WAC 296-45-65023 on clearances and WAC 296-45-65025 on grounding shall be complied with. [Order 76-38, § 296-45-65037, filed 12/30/76.]

**WAC 296-45-65038 Underground residential distribution (URD).** (1) General. (a) Each employee shall be knowledgeable of the equipment provided for their use and shall at all times use this equipment only for the purpose intended.

(b) U.R.D. cables which are properly insulated for the voltages to which they are energized shall be considered as an effective barrier to protect the employees and table one need not apply.

(i) Workers will take adequate precautions to avoid physical contact with energized U.R.D. cable by using approved procedures and/or protective devices.

(ii) When handling energized U.R.D. primary cables, the work shall be done with approved tools and/or procedures by two qualified employees.

(Exception: Switching is exempt from this rule.)

(iii) When energized terminators or load-break elbows are handled by a hot stick, there shall be two qualified employees at the scene.

(c) When energized pad-mounted transformers or similar equipment are to be left unlocked and open, they shall be attended by a qualified employee.

(d) Approved tools and procedures shall be used to remove any debris, vines, weeds, etc., from an underground system.

(e) A primary and secondary system neutral on any energized circuit shall not be opened under any circumstances except for testing.

(f) Primary and secondary neutrals shall be firmly connected and grounded before the circuit or equipment is energized.

(g) Where different phases are in the same vault, enclosures, or parked in some manner that they could be looped, these phases shall be marked or identified.

(h) Bayonet fuses:

(i) Bayonet fuses shall not be closed into suspected faults or overloads.

(ii) Submersible U.G. transformer installations will require other methods of energizing or deenergizing and bayonet fuses shall not be used for this purpose.

(iii) Bayonet fuses shall only be operated after pad-mount transformers have been properly vented.

(iv) Bayonet fuses shall only be operated in accordance with manufacturing design and rating capabilities.

(2) Opening and guarding holes. Whenever a cover is to be removed from a manhole or underground vault, or making excavations in places accessible to vehicular or pedestrian traffic, the following precautions shall be taken:

(a) Before removal or excavating, protective barriers or approved guards and warning signs shall be erected.

(b) After dark, approved lights, reflectors, or similar devices shall be used.

(c) Where permissible and practical, the truck shall also be placed to guard the work area.

(d) A blow torch or other open flame shall never be used to melt ice around a manhole or underground vault cover.

(e) Care shall be taken to prevent the possibility of vehicles coming in contact with the wires and equipment.

(3) Entering underground structures. Before entry into any manhole or underground vault, the following precautions shall be taken:

(a) Observe subsection (2), opening and guarding holes.

(b) Prior to entering an unvented underground vault or manhole, an inspection shall be made to determine if any hazardous conditions exist. Appropriate safeguards shall be applied as required prior to the performance of any work.

(c) No entry shall be permitted unless forced ventilation is provided or the atmosphere is found safe by testing for oxygen deficiency and for the presence of explosive gases or fumes.

(d) Where unsafe conditions are detected, by testing or other means, the work area shall be ventilated and/or otherwise made safe before entry.

(e) Provisions shall be made for a continuous supply of air as provided in WAC 296-62-110 through 296-62-11013.

(f) When forced ventilation is not used, a method of monitoring for oxygen deficiency and to detect the presence of any explosive gases or fumes shall be used.

(g) In any emergency when it becomes necessary for an employee to enter an underground vault where oxygen deficiency, toxic or explosive gases are present, the employee shall use approved respiratory equipment, and a safety belt to which there is attached a fire retardant life line, attended by a qualified person stationed at the underground vault opening.

(h) A watchman shall be kept at the surface when there is any hazard to the employees in the manhole and he should not leave the manhole unwatched until such time as all employees are out and the cover has been replaced.

(i) Except in emergency conditions, a ladder shall always be used when entering or leaving an underground vault.

(4) Working in manholes and underground vaults. (a) No work shall be permitted to be done in any manhole or subway on any energized wire, cable, or appliance carrying more than 300 volts of electricity by less than two qualified persons who shall at all times, while performing such work, be in the same manhole or subway in which work is being done. This rule shall not apply to work on telephone, telegraph, or signal wires or cables.

(b) Cable in manholes or underground vaults shall be accessible to employees and a clear working space (see items (1)(b)(i) and (ii) of this section) shall be maintained at all times; and/or approved protective guards, barriers, etc. when installed and maintained in compliance with the rules of the department of labor and industries shall be considered as providing adequate working clearance for cables over 5 k.v.

If a manhole and/or underground vault is determined to be unsafe by the man in charge, no work shall be

done in the manhole and/or vault until the unsafe condition is corrected or deenergized.

(c) No work shall be performed on cables or equipment unless they have been properly identified by an approved method.

(d) Tools and materials shall not be thrown into or out of manholes or underground vaults, but shall be placed in proper receptacles and hoisted in and out by means of an approved method.

(5) Working on cables. (a) Before any work is to be performed on underground cables and apparatus carrying high voltage, they shall be deenergized with the following exceptions:

(i) Replacing fuses, operating switches, closing or opening load-break elbows, when approved protective devices are used.

(ii) Work in the high-voltage compartment of pad-mounted transformers and similar equipment installed above ground, provided the work is done by approved methods.

(b) Where multiple cables exist in an excavation or manhole, cables other than the one being worked on shall be protected.

(c) Only one energized conductor shall be worked on at any one time, and protective means shall be used to insulate or isolate it from all others.

(d) Any cables to be worked on shall be identified by approved testing unless its identification is obvious by reason of the distinctive appearance, such as, tags, color, or other approved methods.

(e) Where work is to be performed on deenergized cables or equipment, the employee directly in charge of the work shall be responsible for determining that the conductors or equipment is deenergized.

(f) After conductors or equipment are cleared for work and the proper clearances have been obtained (WAC 296-45-65023) tests shall be made to determine that the conductors or equipment are deenergized.

(g) When working on underground cables, the metallic sheath continuity shall be maintained by bonding across the opening or by equivalent means.

(h) When work is to be performed in manholes containing any wires or appliances carrying electrical current, they shall be in a sanitary condition.

(i) Insulated platforms or other protective devices shall be provided when work is to be done on energized wires or equipment in manholes.

(6) Grounding. A capacitance charge can remain in the high voltage cables after it has been disconnected from the circuit and a static-type arc can occur when grounds are applied to such cables.

(a) All high voltage cables and equipment that have been energized or could become energized shall be considered as energized until such cables have been grounded.

(b) Grounding shall be done at a point as near to the work locations as possible, except where their installations or use increases the working hazard.

(c) Grounds may be removed for test purposes.

(d) When work is to be done on cables or equipment of a high-voltage underground system, precautions to

prevent back-feed shall be taken. This shall include either isolating or grounding of the secondary conductors.

(e) After testing the cable dead, approved grounding devices shall be used. They shall be first connected to a ground before being brought into contact with any de-energized conductors to be grounded. When removed they shall be removed from all circuit conductors before being disconnected from ground.

(f) After grounding the cable, if the workman is to work on cable between terminations, he must first spike the cable or use other approved methods of testing. If the cable is to be cut, it shall be cut only with approved hot cutters.

(7) Trenching and excavating. (a) During excavation or trenching, in order to prevent exposure of employees to the hazards created by damage to underground facilities, the man in charge shall make every effort to determine the location of such facilities and conduct the work in a manner designed to avoid damage.

(b) Trenching and excavating operations shall comply with the provisions of WAC 296-155-650 through 296-155-665.

(c) All employees engaged in trenching and excavation operations shall have access at the work site to codes, and/or standards, applicable to such work or shall have been trained in the application of trenching and excavation standards.

(8) Pulling cables. When fishing conduits or ducts, it shall first be determined that the fish tape or wires will not contact any energized lines or equipment.

(9) Heating materials. Furnaces shall always be placed in a secure level position on the downhill side of the manhole to avoid spillage of hot metals or compounds in the manhole and/or underground vault.

(10) Definitions. (a) Load-break elbow - a connector designed to close and interrupt current on energized circuits within the design current and voltage rating.

(b) Dead-break elbow - a connector designed to be separated and engaged on deenergized circuits only.

(c) Underground network distribution system - an underground electrical installation fed from multiple primary sources directly associated with area-wide secondary network connected into a common grid.

(d) Underground residential distribution system (URD) - an electrical installation normally fed from a single primary source which may feed one or more transformers with secondaries not connected to a common grid. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-45-65038, filed 11/30/83; 83-15-017 (Order 83-19), § 296-45-65038, filed 7/13/83, effective 9/12/83.]

**WAC 296-45-65039 Trolley maintenance, jumpering or bypassing.** (1) Energized trolley wire shall be jumpered when it is to be opened or cut.

(2) Reaching over trolley wire(s) or system(s). Linemen shall not reach over trolley wire(s) unless properly protected by line hose or rubber blanket.

(3) Reaching across sectional insulators. Linemen shall not reach across section insulator(s), insulated spacer(s) or insulated approach.

(4) Polarity on either side of sectionalizing breakers. Since the polarity on both sides of a sectionalizing insulator may be different, it is required that prior to performance of work, tests be performed with approved testing equipment to determine whether or not the polarity is the same or different on one side of the sectional insulator as compared with the other.

(5) Working on hangers. More than one truck crew shall not work on hangers attached to the same span at the same time, without rubber protection.

(6) Workers on hangers of opposite polarity. Trolley hangers and ears of opposite polarity shall not be worked on at the same time when trolley wire is energized.

(7) Checking electric switches. When electric switches are checked for operation, making it necessary to short circuit the contactor to each trolley wire, tools with insulated handles shall be used.

(8) Short circuit due to use of noninsulated or conductive long handled tools. When a hazard of short circuit exists, due to use of noninsulated or conductive long handled tools, approved protective rubber equipment shall be used as provided in this chapter.

(9) Trolley feeders. When work is to be performed on street railway trolley feeders where it is necessary for workers to work from metal or other grounded poles or fixtures or on poles or fixtures on which grounds are maintained, the feeders shall be deenergized unless the poles or fixtures are insulated before the work is started with approved protective devices in such manner that employees cannot become grounded while working on the feeders, and employees shall wear approved rubber gloves. [Order 76-38, § 296-45-65039, filed 12/30/76.]

**WAC 296-45-65041 Aerial manlift equipment.** This section applies to aerial manlift equipment as defined in WAC 296-45-65005.

(1) A daily visual inspection and operating tests shall be made in accordance with the manufacturer's recommendation by the assigned operator.

(2) Aerial manlift equipment shall be of the type designed and maintained to meet the following safety factors:

(a) Stability test. All such equipment shall meet or exceed a safety factor of one and one-half to one in all working positions, based upon the posted working load.

(b) Structural and mechanical tests. All such equipment shall meet or exceed a safety factor of 2 to 1 in all working positions, based upon the manufacturer's maximum rated capacity.

(i) The division of industrial safety and health will accept, in lieu of subdivision (b) of this section, the safety factor test data submitted by the manufacturer by a competent testing laboratory, or by a registered engineering firm. When and if there exists a reasonable doubt as to whether or not the equipment will meet the data required for stability in structural and mechanical testing, the division may require that such testing be performed on such equipment before it can be used. If the division in writing requires that the employer test its equipment or have such equipment tested, the employer

will have a reasonable time within which to secure such information as is required by this rule.

(3) Employee shall not move any such equipment in the direction of an obstructed view unless the following requirements have been met. (An obstructed view exists even though the operator is able to see to the rear by reason of a system of mirrors or a mirror.)

(i) Vehicle can be backed up only when observer signals that it is safe to do so or the driver makes a walk-around inspection prior to backing up, or

(ii) The vehicle has a reverse signal alarm audible above the surrounding noise level.

(4) Hydraulic fluids. (a) All hydraulic fluids used for the insulated section of derrick trucks, aerial lifts, and hydraulic tools which are used on or around energized lines or equipment shall be of the insulating type.

(5) Mechanical adjustment or repairs shall not be attempted or performed in the field except by a person qualified to perform such work.

(6) Malfunction or needed repairs of manlift equipment shall be reported to the employee responsible for such repairs as soon as is reasonably possible. Use of equipment which is known to be in need of repairs or is malfunctioning is prohibited when such deficiency creates an unsafe operating condition.

(7) No employee shall ride in the basket while traveling to or from jobsites.

(8) When any aerial manlift equipment is parked for operation at the jobsite, the brakes shall be set. Wheel chocks shall be used to prevent accidental movement while parked on an incline. If the aerial manlift equipment has outriggers, the outriggers shall be implanted on firm footing and all manufacturer's specifications shall be complied with.

(9) Safety check valves shall be installed in the outrigger hydraulic system which will automatically lock the outrigger in position in case of failure of the hydraulic system except when outriggers are equipped with mechanically self-locking device.

(10) The truck shall not be moved until the boom or ladder is cradled and/or fastened down, the outrigger retracted, and the power take-off disengaged, except for a short move when the truck can be moved with care and under the direction of the employee in the elevated position.

(11) Employees shall not sit or stand on the basket edge, stand on materials placed in or across the basket, or work from a ladder set inside the basket.

(12) The basket shall not be rested on a fixed object(s) so that the weight of the boom is either totally or partially supported by the basket.

(13) Neither the basket, supporting boom or ladder on aerial equipment shall come within the prohibited distance of energized high voltage conductors or equipment as set forth in Table 1 unless protective equipment is used. Special approved insulated tools, insulated fittings and insulated masts need not comply with this section.

(14) When the basket is being used in such a manner that it may contact energized high voltage lines or equipment, the vehicle shall be considered energized at

line potential and the following safe practices shall be observed unless such equipment is grounded:

(a) Approved protective devices shall be used.

(b) Before physically contacting, entering or leaving the vehicle, all employees shall make sure that the boom and basket is stationary and not in contact with energized high voltage lines or equipment.

(15) While working in aerial equipment, employees shall wear an approved safety belt attached to the boom or basket, in a secure manner.

(16) No component of aerial devices shall be operated from the ground without permission from the employee in the basket except in case of emergency.

(17) Truck driver shall remain at tower controls while workers are working on towers except when the aerial manlift equipment has been properly chocked to prevent uncontrolled movement. Tower trucks shall be equipped with a reliable signaling device between the employees working on the tower and the truck driver.

(18) Working on truck towers. Employees shall not stand on tower gates or railings. Work shall not be done from plank(s) placed on tower railings.

(19) Tower truck railings. Towers shall have standard railings and toeboards around the tower and all railings shall be constructed of wood, fiberglass or other nonmetallic material. All railings shall be a vertical height of not less than 36 inches or more than 42 inches from the floor of the platform to the upper surface of the top rail. Intermediate railings shall be midway between the floor and the underside of the top rail. Tower gates shall be so constructed as to prevent accidental opening.

(20) Tower truck decks shall be kept clear of tools, wire and other materials and tools shall be kept in proper storage area when not in use.

(21) Linemen shall not wear climbers or spurs while working on a tower truck.

(22) Employees operating controls of aerial equipment shall not stand on the ground or on separate grounded surface unless wearing rubber gloves or standing on insulated board or mat, where equipment is exposed to or operated in the near vicinity of high voltage conductors.

(23) Operating levers or controls shall be kept clear of tools, materials or obstructions.

(24) Load limits as recommended by the manufacturer of aerial manlift equipment shall not be exceeded. Shock loading of the equipment is prohibited.

(25) Employees shall not climb into or out of the basket or platform while it is elevated or change from one basket to another on dual basket equipment, except in case of emergency or when the employees involved agree that this is the safest way to perform the work. This exception shall not be used to circumvent safety rules.

(26) Employees shall not belt to adjacent poles, structures, or equipment while performing work from aerial devices.

(27) Whenever it is necessary to work beyond the guarded traffic work area, extreme care shall be exercised and all precautions taken to insure the safety of the operation and the employees.

(28) Power tools not in use shall be disconnected from external power sources.

(29) Electrical, hydraulic or air tools shall have safety switches or devices to prevent accidental operation and, in addition, a quick means of disconnecting on electrically operated equipment shall be within easy reach of the operator.

(30) Existing safety rules governing the use of hot line tools, rubber and other protective equipment and safe work practices while performing work from poles or structures shall also apply to work done from aerial manlift equipment.

(31) The basket shall be kept clean and all tools not in use shall be secured or removed.

(32) Approved warning light shall be operating when the boom leaves the cradle. This light shall be visible to approaching traffic when the boom is in position over any traveled area.

(33) A braking system, independent of the drive-line braking system, shall be installed on all aerial manlift equipment where, from the engineering standpoint, it is feasible.

(34) Safety check valves shall be installed in the hydraulic system of aerial manlift equipment to automatically lock the boom or ladder in position in case of failure to any part of the hydraulic pressure system.

(35) All aerial manlift equipment shall have both upper and lower controls (except ladder trucks need not have upper controls). The upper controls shall not be capable of rendering the lower controls inoperative. The lower controls should be located at or near the base of the aerial structure.

If the lower controls are used, the operator shall have a view of the elevated employee(s) or there shall be communication between the operator and the employee in the elevated aerial structure: *Provided*, That no employee shall be raised, lowered, or moved into or from the elevated position in any aerial manlift equipment unless there is another employee, not in the elevated aerial structure, available at the site to operate the lower controls, except as follows:

(a) Where there is a fixed method permanently attached to or part of the equipment which will permit an employee to descend from the elevated position without lowering the elevated structure, or

(b) Where there is a system which will provide operation from the elevated position in the event of failure or malfunction of the primary system.

This section shall not be interpreted as an exception to any other rule in this chapter.

(36) Controls in aerial manlift equipment shall be protected from accidental operation. Controls of the outriggers shall also be protected from accidental operation. Such protection may be by guarding or equivalent means.

(37) The manufacturer's recommended maximum load limit shall be posted at a conspicuous place near each set of controls and shall be kept in a legible condition.

(38) Side member guys on aerial ladders shall be insulated.

(39) The manufacturer's operator's instructional manual shall be kept on the vehicle.

(40) Operating instructions, proper sequence and maintenance procedures prescribed by the manufacturer for operation of the equipment shall be followed. [Order 76-38, § 296-45-65041, filed 12/30/76.]

**WAC 296-45-65043 All motor vehicle and trailer operations.** When motor vehicles and trailers are operated on public right-of-way, highways or similar areas, the equipment shall be operated and maintained in conformance with the motor vehicle code of the state of Washington, chapters 46.04 through 46.61 RCW.

(1) Whenever and wherever such motor vehicle is operated, such equipment shall have a safe functioning brake and an emergency brake. In addition, all motor vehicles and trailers shall have such equipment as is necessary for the safe operation of the vehicle(s).

(a) When traveling, employees must ride inside the vehicle and shall not ride on the sides or on the top, nor shall employees ascend or descend a motor vehicle when such vehicle is in motion.

(b) Employees shall not ride on trailers except in cases where the trailer requires an employee to steer or brake the trailer.

(c) A truck shall not be moved from place to place with the ladder erect other than when positioning the truck at a given location. This rule does not apply to approved tower or fixed ladder trucks.

(d) Warning signs, flares and other protective devices shall be used which shall conform with the requirements for road construction or maintenance as set forth in chapter 46.37 RCW.

(2) Vehicles shall be positioned as far off the driving lanes as possible, while performing emergency operations or repairs. The 4-way flashers and rotation amber lights shall be actuated. The rotating amber lights shall be visible at 360 degrees, in accordance with chapter 204-38 WAC. Safety cones shall be installed in front of and behind the vehicle. If the operation is for more than a short duration, they shall comply with traffic control procedures. [Statutory Authority: RCW 49.17.040 and 49.17.050, 82-08-026 (Order 82-10), § 296-45-65043, filed 3/30/82; Order 76-38, § 296-45-65043, filed 12/30/76.]

**WAC 296-45-65045 Material handling.** (1) Prior to unloading steel, poles, crossarms and similar materials, the load shall be thoroughly examined to determine if the load has shifted, binders or stakes have broken or the load is otherwise hazardous to employees.

(a) The hoist rope shall not be wrapped around the load. This provision shall not apply to electric construction crews when setting or removing poles.

(2) Pole handling. (a) During pole hauling operations, all loads shall be secured to prevent displacement, and a red flag shall be displayed at the trailing end of the longest pole.

(b) While loading and unloading materials, roadways shall not be blocked unless approved traffic control is used.

(c) When hauling poles during darkness, illuminated warning devices shall be attached to the trailing end of

the longest pole in accordance with the state of Washington motor vehicle code.

(3) Tag lines. When necessary to control loads, tag lines or other approved devices shall be used.

(4) Oil filled equipment. During construction or repair of oil filled equipment, the oil may be stored in temporary containers other than those required by WAC 296-155-270, such as pillow tanks.

(5) Storage of tools and materials. All tools and materials shall be stored in a safe and orderly manner in yards for equipment and other areas. [Order 76-38, § 296-45-65045, filed 12/30/76.]

**WAC 296-45-65047 Specification for linemen's belts and similar equipment.** (1) All hardware for linemen's body belts, safety straps and lanyards shall be drop forged or pressed steel and have a corrosive resistive finish tested to the American Society for Testing and Materials B117 as published in 1964 (50 hour test). Surfaces shall be smooth and free from sharp edges.

(a) All buckles shall be those guaranteed by the manufacturer as having at least a 2,000-pound tensile strength with a maximum permanent deformation no greater than one sixty-fourth inch.

(b) All "D" rings shall be those guaranteed by the manufacturer as having at least a 5,000-pound tensile strength without cracking or breaking.

(c) All snap hooks shall be those guaranteed by the manufacturer as having at least a 5,000-pound tensile strength without distortion sufficient to release the keeper.

(d) All fabric used for safety straps shall be guaranteed by the manufacturer as being capable of withstanding either AC or DC dielectric test of not less than 25,000 volts per foot "dry" for 3 minutes without visible deterioration.

(e) All fabric and leather used shall be that which has been represented by the manufacturer as having been tested for leakage current of 1 milliamperes with a potential 3,000 volts when applied to the electrodes positioned 12 inches apart.

(f) The cushion part of the body belt may be either leather or other material provided that it;

(i) Has no exposed rivets on the inside;

(ii) Is at least 3 inches in width;

(iii) Is at least five thirty-seconds inch thick, if made of leather; or have equivalent strength if made of other material.

(iv) Has pocket tabs that extend at least 1-1/2 inches down and three inches back of the inside of circle of each "D" ring for riveting on plier or tool pockets. On shifting "D" belts, this measurement for pocket tabs shall be taken when the "D" ring section is centered.

(v) A maximum of four tool loops shall be so situated on the body belt that four inches of the body belt in the center of the back, measuring from "D" ring to "D" ring, shall be free of tool loops and any other attachments.

(vi) All stitching shall be of minimum 42-pound weight nylon or equivalent thread and shall be lock stitched. Stitching parallel to an edge shall not be less

than three-sixteenths inch from edge of narrowest member caught by the thread. The use of cross-stitching on leather is prohibited. Approved copper, steel or equivalent liners shall be used around the bar of "D" rings to reduce the wear.

(vii) The keeper of snap hooks shall have a spring tension that will not allow the keeper to begin to open with a weight of 2-1/2 pounds or less, but the keeper of snap hooks shall begin to open with a weight of four pounds, when the weight is supported on the keeper against the end of the nose.

(2) Testing linemen's safety straps, body belts and lanyards shall be in accordance with the following procedure:

(a) Attach one end of the safety strap or lanyard to a rigid support, the other end shall be attached to a 250-pound canvas bag of sand;

(b) Allow the 250-pound canvas bag of sand to free fall 4 feet for (safety strap test) and 6 feet for (lanyard test), in each case stopping the fall of the 250-pound bag;

(c) Failure of the strap or lanyard shall be indicated by any breakage, or slippage sufficient to permit the bag to fall free of the strap or lanyard. The entire "body belt assembly" shall be tested using one "D" ring. A safety strap or lanyard shall be used that is capable of passing the "impact loading test" and attached as required in item (a) of this subdivision. The body belt shall be secured to the 250-pound bag of sand at a point to simulate the waist of a man and allowed to drop as stated in item (b) of this subdivision. Failure of the body belt shall be indicated by any breakage, or slippage sufficient to permit the bag to fall free of the body belt.

(d) Life lines and Lanyards shall comply with the provisions of WAC 296-155-225 (2), (3), (5) and (6). [Order 76-38, § 296-45-65047, filed 12/30/76.]

**WAC 296-45-660 Tree trimming.** The purpose of this chapter is to make the workplace free from hazard. All sections of this chapter which include WAC 296-45-660 in the section number will apply. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-13-053 (Order 81-9), § 296-45-660, filed 6/17/81.]

**WAC 296-45-66001 Electrical hazards.** (1) This section applies to tree trimming by contractors under WAC 296-17-506 (Class 1-6), tree trimming near energized power lines on utility property, governmental and privately owned systems.

(2) Definitions applicable to this section.

(a) "Aerial manlift equipment" - all types of equipment such as extended towers, boom-mounted cages or baskets and truck-mounted ladders. This equipment is primarily designed to place personnel and equipment aloft for working.

(b) "Qualified line-clearing tree trimmer" - a tree worker who through related training and on-the-job experience is familiar with the special techniques and hazards involved in line clearing.

(c) "Qualified line-clearing tree-trimmer trainee" - any worker regularly assigned to a line-clearing tree-

trimming crew and undergoing related training and on-the-job training who, in the course of such training, has demonstrated his ability to perform his duties safely at his level of training.

(d) "Tree trimming groundman" – a member of crew working on the ground under the direction of foreman or tree trimmer.

(3) First aid. In addition to complying with the first aid provisions as found in WAC 296-24-060 through 296-24-073, all employees whose duties require them to work near energized wires, or climb trees shall take an approved course in controlling bleeding and cardiopulmonary resuscitation, and be capable of aerial or tree rescue and remain proficient in its application. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-13-053 (Order 81-9), § 296-45-66001, filed 6/17/81.]

**WAC 296-45-66003 Tools and protective equipment.** All protective hats shall be in accordance with the specifications of ANSI Z89.2-1971 Edition Industrial Protective Helmets for Electrical Workers, Class B, and shall be worn at the jobsite by employees who are exposed to overhead or electrical hazards.

(1) Defective ropes shall not be used and shall be replaced.

(2) Body belts with straps, saddles or lanyards shall be worn by employees working at an elevated position. Body belts, saddles and straps shall be inspected each day for defects before use. Defective body belts, saddles and straps shall not be used.

(3) Body belts, safety straps and saddles shall not be stored with any sharp-edged tools or near sharp objects. When a body belt, saddle, safety strap and climbers are kept in the same container, they shall be stored in such a manner as to avoid cutting or puncturing the material of the body belt, saddle or safety strap with the gaffs or climbers. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-13-053 (Order 81-9), § 296-45-66003, filed 6/17/81.]

**WAC 296-45-66005 Insulated tools used for tree trimming.** (1) Only insulated tools having manufacturer's certification of withstanding the following minimum tests shall be used:

(a) 100,000 volts per foot of length for 5 minutes when the tool is made of fiberglass; or

(b) 75,000 volts per foot of length for 3 minutes when the tool is made of wood; or

(c) Other tests which equal or exceed (a) and (b) of this subsection.

(2) All insulated tools shall be visually inspected each day before use. All insulated tools shall be wiped clean before being used.

(3) Defective insulated tools shall not be used and shall be marked as defective and turned in for repair or replacement.

(4) Hand tools.

(a) All hydraulic tools which are used near energized lines or equipment shall use nonconductive hoses having approved strength for the normal operating pressures.

The provisions of WAC 296-155-360 (4)(a) and (b) are mandatory.

(b) All pneumatic tools which are used near energized lines or equipment shall:

(i) Have nonconducting hoses having approved strength for the normal operating pressures, and

(ii) Have an accumulator on the compressor to collect moisture.

(5) All tools shall be kept in good working condition and shall be properly stored. Defective tools shall be taken out of service.

(6) Wearing apparel. Goggles, hearing protection, respirators, and other such personal protective devices shall not be interchanged among employees unless they have been sanitized. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-13-053 (Order 81-9), § 296-45-66005, filed 6/17/81.]

**WAC 296-45-66007 Aerial manlift equipment.** This section applies to aerial manlift equipment as defined in WAC 296-45-65005.

(1) A daily visual inspection and operating tests shall be made in accordance with the manufacturer's recommendation by the assigned operator.

(2) Aerial manlift equipment shall be of the type designed and maintained to meet the following safety factors:

(a) Stability test. All such equipment shall meet or exceed a safety factor of one and one-half to one in all working positions, based upon the posted working load.

(b) Structural and mechanical tests. All such equipment shall meet or exceed a safety factor of 2 to 1 in all working positions, based upon the manufacturer's maximum rated capacity.

(c) The division of industrial safety and health will accept, in lieu of subdivision (b) of this section, the safety factor test data submitted by the manufacturer by a competent testing laboratory, or by a registered engineering firm. When and if there exists a reasonable doubt as to whether or not the equipment will meet the data required for stability in structural and mechanical testing, the division may require that such testing be performed on such equipment before it can be used. If the division in writing requires that the employer test its equipment or have such equipment tested, the employer will have a reasonable time within which to secure such information as is required by this rule.

(3) Employee shall not move any such equipment in the direction of an obstructed view unless the following requirements have been met. (An obstructed view exists even though the operator is able to see to the rear by reason of a system of mirrors or a mirror.)

(a) Vehicle can be backed up only when observer signals that it is safe to do so or the driver makes a walk-around inspection prior to backing up, or

(b) The vehicle has a reverse signal alarm audible above the surrounding noise level.

(4) Hydraulic fluids. All hydraulic fluids used for the insulated section of derrick trucks, aerial lifts, and hydraulic tools which are used around energized lines or equipment shall be of the insulating type.

(5) Mechanical adjustment or repairs shall not be attempted or performed in the field except by a person qualified to perform such work.

(6) Malfunction or needed repairs of manlift equipment shall be reported to the employee responsible for such repairs as soon as is reasonably possible. Use of equipment which is known to be in need of repairs or is malfunctioning is prohibited when such deficiency creates an unsafe operating condition.

(7) No employee shall ride in the basket while traveling to or from jobsites.

(8) When any aerial manlift equipment is parked for operation at the jobsite, the brakes shall be set. Wheel chocks shall be used to prevent accidental movement while parked on an incline. If the aerial manlift equipment has outriggers, the outriggers shall be used in accordance with manufacturer's specifications.

(9) Safety check valves shall be installed in the outrigger hydraulic system which will automatically lock the outrigger in position in case of failure of the hydraulic system except when outriggers are equipped with mechanically self-locking device.

(10) The truck shall not be moved until the boom or ladder is cradled and/or fastened down, the outrigger retracted, and the power take-off disengaged, except for a short move when the truck can be moved with care and under the direction of the employee in the elevated position.

(11) Employees shall not sit or stand on the basket edge, stand on materials placed in or across the basket, or work from a ladder set inside the basket.

(12) The basket shall not be rested on a fixed object(s) so that the weight of the boom is either totally or partially supported by the basket.

(13) Neither the basket, supporting boom or ladder on aerial equipment shall come within the prohibited distance of energized high voltage conductors or equipment as set forth in Table 1 unless protective equipment is installed by a qualified person.

(14) While working in aerial equipment employees shall wear an approved safety belt attached to the boom or basket, in a secure manner.

(15) No component of aerial devices shall be operated from the ground without permission from the employee in the basket except in case of emergency.

(16) Truck driver shall remain at tower controls while workers are working on towers except when the aerial manlift equipment has been properly chocked to prevent uncontrolled movement. Tower trucks shall be equipped with a reliable signaling device between the employees working on the tower and the truck driver.

(17) Operating levers or controls shall be kept clear of tools, materials or obstructions.

(18) Load limits as recommended by the manufacturer of aerial manlift equipment shall not be exceeded. Shock loading of the equipment is prohibited.

(19) A tree trimmer may climb out of a basket into a tree or from a tree back into the basket so long as he is properly tied into the tree during the entire maneuver.

(20) Employees shall not belt to trees, structures, or equipment while performing work from aerial devices.

(21) Whenever it is necessary to work beyond the guarded traffic work area, extreme care shall be exercised and all precautions taken to ensure the safety of the operation and the employees.

(22) Power tools not in use shall be disconnected from external power sources.

(23) Electrical, hydraulic or air tools shall have safety switches or devices to prevent accidental operation and, in addition, a quick means of disconnecting on electrically operated equipment shall be within easy reach of the operator.

(24) The basket shall be kept clean and all tools not in use shall be secured or removed.

(25) Approved warning light shall be operating when the boom leaves the cradle. This light shall be visible to approaching traffic when the boom is in position over any traveled area.

(26) Safety check valves shall be installed in the hydraulic system of aerial manlift equipment to automatically lock the boom or ladder in position in case of failure to any part of the hydraulic pressure system.

(27) All aerial manlift equipment shall have both upper and lower controls (except ladder trucks need not have upper controls). The upper controls shall not be capable of rendering the lower controls inoperative. The lower controls should be located at or near the base of the aerial structure.

If the lower controls are used, the operator shall have a view of the elevated employee(s) or there shall be communication between the operator and the employee in the elevated aerial structure: *Provided*, That no employee shall be raised, lowered, or moved into or from the elevated position in any aerial manlift equipment unless there is another employee, not in the elevated aerial structure, available at the site to operate the lower controls, except as follows:

(a) Where there is a fixed method permanently attached to or part of the equipment which will permit an employee to descend from the elevated position without lowering the elevated structure, or

(b) Where there is a system which will provide operation from the elevated position in the event of failure or malfunction of the primary system.

This section shall not be interpreted as an exception to any other rule in this chapter.

(28) Controls in aerial manlift equipment shall be protected from accidental operation. Controls of the outriggers shall also be protected from accidental operation. Such protection may be by guarding or equivalent means.

(29) The manufacturer's recommended maximum load limit shall be posted at a conspicuous place near each set of controls and shall be kept in a legible condition.

(30) The manufacturer's operator's instruction manual shall be kept on the vehicle. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-13-045 (Order 82-22), § 296-45-66007, filed 6/11/82. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-13-053 (Order 81-9), § 296-45-66007, filed 6/17/81.]

**WAC 296-45-66009 All motor vehicle and trailer operations.** When motor vehicles and trailers are operated on public right-of-way, highways or similar areas, the equipment shall be operated and maintained in conformance with the motor vehicle code of the state of Washington, chapters 46.04 through 46.61 RCW.

(1) Whenever and wherever such motor vehicle is operated, such equipment shall have a safe functioning brake and an emergency brake. In addition, all motor vehicles and trailers shall have such equipment as is necessary for the safe operation of the vehicle(s).

(2) When traveling, employees must ride inside the vehicle and shall not ride on the sides or on the top, nor shall employees ascend or descend a motor vehicle when such vehicle is in motion.

(3) Warning signs, flares and other protective devices shall be used which shall conform with the requirements for road construction or maintenance as set forth in chapter 46.37 RCW. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-13-053 (Order 81-9), § 296-45-66009, filed 6/17/81.]

**WAC 296-45-66011 Working in proximity to electrical hazards.** (1) Contractors shall ensure that a close inspection is made by the employee and by the foreman or supervisor in charge before climbing, entering, or working around any tree, to determine whether an electrical power conductor passes through the tree, or passes within reaching distance of an employee working in the tree.

(2) Employees engaged in trimming, removing, or clearing trees from lines shall be required to consider all overhead electrical power conductors to be energized until such energized lines have been de-energized and grounded in accordance with the system policy.

(3) Only qualified line-clearing tree trimmer or tree trimming trainee familiar with the special techniques and hazards involved in line clearing, shall be permitted to perform the work if it is found that an electrical hazard exists.

(4) During all tree working operations aloft where an electrical hazard of more than 750 volts exists, there shall be a second employee or trainee qualified in line clearance tree trimming within normal voice communication.

(5) Where tree work is performed by employees qualified in line-clearing tree trimming and trainees qualified in line-clearing tree trimming, the clearances from energized conductors given in Table 1 shall apply.

TABLE 1

Minimum Working Distances from Energized Conductors  
For Line-Clearing Tree Trimmers and Line-Clearing Tree Trimmer Trainees

Voltage Range (Phase to Phase) (kilovolts)	Minimum Working Distance
2.1 to 15.0	2 ft. 0 in.
15.1 to 35.0	2 ft. 4 in.
35.1 to 46.0	2 ft. 6 in.
46.1 to 72.5	3 ft. 0 in.
72.6 to 121.0	3 ft. 4 in.
138.0 to 145.0	3 ft. 6 in.
161.0 to 169.0	3 ft. 8 in.
230.0 to 242.0	5 ft. 0 in.
345.0 to 362.0	7 ft. 0 in.
500.0 to 552.0	11 ft. 0 in.
700.0 to 765.0	15 ft. 0 in.

(6) Branches hanging on an energized conductor may only be removed using approved insulated tools by a qualified line-clearing tree trimmer. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-13-053 (Order 81-9), § 296-45-66011, filed 6/17/81.]

**WAC 296-45-675 Rotorcraft/helicopter for power distribution and transmission line installation, construction and repair--Scope.** (1) These standards which include WAC 296-45-675 shall apply to work being done on or near any rotorcraft, helicopter crane, or similar device when such device is for power distribution and transmission line construction, alteration, repair or similar work. These standards include work practices when such equipment is being or is about to be used and shall apply to the exclusion of any other standard should such other standard be in conflict with the standards contained herein.

(2) These rules shall be interpreted where necessary to achieve the protection of employees affected by the hazards particular to the helicopter operation and shall be so interpreted as not to conflict with any federal law or regulation governing the operation or maintenance of such craft. [Order 76-38, § 296-45-675, filed 12/30/76.]

**WAC 296-45-67503 Definitions.** (1) "Cargo hooks." A device attached or suspended from an aircraft which is used to connect an external load to the aircraft through direct couplings or by lead lines. This unit has both mechanical and electrical locking/unlocking means.

(2) "Designated employees." Those employees selected or designated by the employer to work under or near helicopters who have first been instructed in hooking, unhooking, guiding and securing the load, including the signalman, all of whom have been instructed in the hazards of helicopter work and who know the provisions of this section.

(3) "Downwash." A down and outward air column from the main rotor system.

(4) "Ground personnel or crew." Those employees who are physically and mentally capable, who are familiar with the hazards of helicopter use in power distribution and transmission line work, and who know these rules and the methods of operation.

(5) "Helicopter," helicopter crane," and "rotorcraft." Those aircraft whose support in the air is derived solely from the reaction of a stream of air driven downward by propellers revolving around a vertical axis, which are designed for and capable of carrying external loads. The use of the word helicopter in these rules shall also mean helicopter crane, rotorcraft, or similar device.

(6) "Hooking and unhooking." That process by which an external load is either attached to or released from the cargo hook.

(7) "Positive guide system." A system or method of installing a load into position so that the load is capable of being released from the helicopter without being otherwise secured so that the load will remain in position permanently or until otherwise secured by physical means.

(8) "Rotors." That system of blades which rotates or revolves to supply lift or direction to the rotorcraft.

(9) "Approved rubber gloves." Rubber insulating gloves used for protection of electrical workers from electric shock while working on energized conductors and equipment.

(10) "Signalman." That member of the ground crew that is designated by an employer to direct, signal and otherwise communicate with the operator of the helicopter.

(11) "Sling line." A strap, chain, rope or the like used to securely hold something being lifted, lowered, carried or otherwise suspended.

(12) "Sock line." A rope(s), cable(s) or similar line(s) which is used to pull a conductor line from a reel or to remove existing strung conductors from poles or towers.

(13) "Static charge." A stationary charge of electricity.

(14) "Tag line." A rope or similar device used to guide or control the direction or movement of a load. [Order 76-38, § 296-45-67503, filed 12/30/76.]

**WAC 296-45-67505 Briefing.** (1) Before work or a job involving helicopters begins, there shall be a discussion between all affected employees which shall include the ground crew, signalman and pilot or operator of the helicopter. The discussion shall cover the particular hazards of the job, the methods of performing the work and the signals to be used. All employees shall, before the beginning of such work or job, understand in detail the hazards, the methods and the signals to be used and these regulations.

(2) Every employee before being allowed to work on or near helicopter(s) operating with or without load shall be advised and understand the hazards involved, the methods of performing the work, the signals being used and these regulations. [Order 76-38, § 296-45-67505, filed 12/30/76.]

**WAC 296-45-67507 Signals.** (1) The signals between the signalman and the operator of the helicopter shall be those submitted to the Federal Aviation Agency for the particular procedure or job. In the event no signals have been submitted to the Federal Aviation Administration, a system of signaling shall be used which

has been reduced to writing and which is capable of being clearly understood by all employees and others involved in the job.

(2) Should there occur a change in the hazards, method of performing the job, signals to be used, or other operating conditions during the course of any particular job, a conference shall immediately be held at which time all affected employees and others, including signalmen, groundmen, pilot(s), will be advised of such hazards or change of operation. No employee shall be permitted to work unless such employee and others fully understand the change(s) which have taken place. [Order 76-38, § 296-45-67507, filed 12/30/76.]

**WAC 296-45-67509 Slings and tag lines.** (1) Loads shall be properly slung so that there will be no slippage or shifting of the load and so that the load will not accidentally be dislodged from the helicopter.

(2) Tag lines shall be of such length as not to be capable of being accidentally drawn into or otherwise entering into the rotors.

(3) Pressed sleeves, wedged eyes, or equivalent means shall be used for all suspended loads. [Order 76-38, § 296-45-67509, filed 12/30/76.]

**WAC 296-45-67511 Cargo hooks.** (1) All electrically operated cargo hooks shall have the electrical activating device which is so designed and installed as to prevent inadvertent or accidental operation. Such cargo hooks shall be equipped with an emergency mechanical or manual control for releasing the load. The electrical control shall be a double button single hand control.

(2) No electrical cargo hook shall be used unless, prior to that day's operation, the releases are tested and functioning properly, both electrically and mechanically (manually).

(3) No employee shall be permitted to work under a hovering helicopter(s) unless the cargo hooks used comply with Federal Aviation Administration regulations governing such hooks. [Order 76-38, § 296-45-67511, filed 12/30/76.]

**WAC 296-45-67513 Personal protective equipment.** Personal protective equipment when working on, under or in the near vicinity of helicopters:

(1) All employees shall wear eye protection of such design as to prevent the likelihood of dust or other substances from contacting the eye(s) of employees.

(2) All employees shall wear hard hats which shall be secured on the employee's head by a chinstrap. [Order 76-38, § 296-45-67513, filed 12/30/76.]

**WAC 296-45-67515 Wearing apparel.** No employee shall wear clothing or apparel which is either designed to or in fact can reasonably be expected to flap or otherwise react in a similar fashion in the downwash or air disturbance of a helicopter(s). No employee shall work on, under or in the near vicinity of a helicopter while wearing such apparel or clothing which flaps or moves to the extent that it presents a hazard in that it could be caught in the moving equipment, the hoist line,

or otherwise interfere with the safe performance of the work. [Order 76-38, § 296-45-67515, filed 12/30/76.]

**WAC 296-45-67517 Loose gear and objects.** All loose gear, including lunch boxes, rope, cardboard, wire covers and similar items shall be removed or secured or otherwise made fast before the helicopter is started or allowed to approach such area. In the event the gear is not secured or fastened, it shall be removed and located outside the downwash at least 100 feet from the helicopter. [Order 76-38, § 296-45-67517, filed 12/30/76.]

**WAC 296-45-67519 Housekeeping.** All helicopter landing, loading and unloading areas shall be maintained in a neat and orderly fashion so as to reduce the likelihood of flying materials, tripping, or other hazards attendant to the work being performed. [Order 76-38, § 296-45-67519, filed 12/30/76.]

**WAC 296-45-67521 Operator's responsibility.** (1) The helicopter operator shall be responsible for the size, weight and manner in which loads are connected to the helicopter.

(a) No load shall be made if the helicopter operator believes the lift cannot safely be performed. The employer shall make certain that the operator of the helicopter is able to freely exercise his prerogative and judgment as to safe operation of the helicopter itself concerning size, weight and manner by which loads are connected.

(2) No employee shall work on, under, near or in conjunction with a helicopter whose operation does not correspond with the foregoing provisions. [Order 76-38, § 296-45-67521, filed 12/30/76.]

**WAC 296-45-67523 Hooking and unhooking loads.** No employee shall perform work under hovering helicopters: *Provided*, That qualified and capable employees may function under such craft for that limited period of time necessary to guide, secure, hook or unhook the loads. When guiding, securing, hooking or unhooking the load at elevated positions, employees shall be assisted by and use a positive positioning guide system. When under hovering helicopters at any other location, the employee shall have a safe means of ingress and egress, including readily available escape route or routes in the event of an emergency. No other work or work-related activity other than the aforementioned shall be permitted under hovering helicopters. Bolting of or otherwise permanently securing the structures is prohibited under hovering helicopters except that in the event of an unforeseen contingency of an emergency nature which represents a substantial hazard to life or property, an employee may do such work as is necessary to preserve life or protect substantial property. [Order 76-38, § 296-45-67523, filed 12/30/76.]

**WAC 296-45-67525 Static charge.** All loads shall be grounded with a grounding device capable of discharging either the actual or potential static charge before ground personnel either touch or come close enough

to touch the suspended load, or protective rubber gloves shall be worn by all ground personnel either touching the suspended load or who are likely to touch the load. [Order 76-38, § 296-45-67525, filed 12/30/76.]

**WAC 296-45-67527 Load permitted.** Weight of the external load shall not exceed the manufacturer's load limit.

(1) A helicopter shall not pull any cable, rope or similar line which is at any point attached to a fixed object other than the helicopter itself. Helicopters may pull a free-wheeling sock line so long as the end of the sock line is not tied to a reel, truck, or other fixed object. Such line cannot be tied to or otherwise secured to the roll-off reel other than by having been wrapped around such reel. [Order 76-38, § 296-45-67527, filed 12/30/76.]

**WAC 296-45-67529 Visibility.** Employees shall keep clear of and outside the downwash of the helicopters except as necessary to perform a permitted activity. Where reasonably practicable, reduced vision of the operator and ground crew shall be eliminated. [Order 76-38, § 296-45-67529, filed 12/30/76.]

**WAC 296-45-67531 Signal systems.** Communication shall be maintained between the air crew and ground personnel at all times. Such signal systems shall be understood by the air crew and the ground crew, including signalmen, prior to the hoisting of any load. There shall be constant radio and hand signals used. The signalman shall have the sole and exclusive function during periods of loading and unloading of signaling and maintaining communications with the pilot. The signalman shall be so dressed as to make his appearance distinguishable from other members of the ground crew by the operator of the craft. This may be by way of orange-colored gloves, vest, or other wearing apparel. In addition, the foreman and one top man shall also have an operating transmitter and receiver.

(1) Designated employees may come within 50 feet of the helicopter when the rotor blades are turning, but no closer, other than to enter the craft or to hook or unhook the load or do other essential functions. Other employee(s) shall not come closer than 100 feet of the craft when it is operating. [Order 76-38, § 296-45-67531, filed 12/30/76.]

**WAC 296-45-67533 Approaching the helicopter.** Whenever approaching or leaving a helicopter with blades rotating, all employees shall remain in full view of pilot or operator and remain in a crouched position if within 50 feet of the helicopter. No employee shall approach the rear of the helicopter unless directly authorized and directed by the operator of such craft to be there at that time. All employees when operating or working within 50 feet of the helicopter with blades turning are subject to the direction of the helicopter operator. No employee shall enter or leave the helicopter unless and until the place at which they enter or leave

such craft is large enough for the helicopter itself to land. [Order 76-38, § 296-45-67533, filed 12/30/76.]

**WAC 296-45-67535 In helicopter.** (1) While in the helicopter, safety belts will remain fastened at all times except when pilot or operator instructs otherwise or while entering or leaving the helicopter.

(2) No smoking in the helicopter unless otherwise permitted by the pilot.

(3) All rack cargo will be secured prior to and during takeoff and flight.

(4) All internal cargo will be secured or otherwise held.

(5) No gear shall be thrown toward or placed in front of the cockpit on or near plexiglass enclosure.

(6) No employee shall lean against or rub the plexiglass.

(7) No employee shall ride in or work under or near a helicopter with less than 15 minutes reserve fuel.

(8) No employee shall have sharp objects in his pocket while sitting in or on the helicopter.

(9) No employee shall touch any switch, knob, instrument, or other control or device in the cockpit unless specifically directed by the operator.

(10) No cargo shall be thrown into pans or cargo rack.

(11) No employee shall obscure or otherwise obstruct the pilot's ability to visually see the instruments or flight path during flight or operation.

(12) No employee shall attempt to slow or stop the rotorcraft blades by hand unless directed or instructed to do so and aided by the pilot. [Order 76-38, § 296-45-67535, filed 12/30/76.]

**WAC 296-45-67537 Sling and rigging.** (1) The sling used for the external load shall be inspected each day before use. An employee designated as rigger, who shall be capable of properly inspecting the rigging, shall inspect the sling.

(2) No sling shall be used unless it has a minimum tensile strength of four times the load which will be carried or is being carried.

(3) No sling shall be used unless upon inspection it is determined to be in good condition and capable of the work which is to be performed. [Order 76-38, § 296-45-67537, filed 12/30/76.]

**WAC 296-45-67539 Personnel.** All ground personnel shall be physically and mentally able to perform the work to which they are assigned, including being knowledgeable in these rules. There shall be a sufficient number of ground personnel so as to be able to safely guide, secure, hook and unhook the load. [Order 76-38, § 296-45-67539, filed 12/30/76.]

**WAC 296-45-67541 Fires.** Open fires shall not be permitted in any area in which said fires will be affected by the downwash of the rotors, nor shall any employee smoke in an area subject to the downdraft of the rotor. [Order 76-38, § 296-45-67541, filed 12/30/76.]

**WAC 296-45-67543 General.** No employee shall work under or in the near vicinity of helicopters unless the operator has a valid license for operating the craft, knows the signals to be used, has been present at the last briefing held and knows these rules. No employee shall work under or near such craft if the operator is under the influence of intoxicating beverages or prescription medications which affect his ability, nor shall any employee work under or near such craft if the operator is careless or engages in any negligent or reckless operation of the helicopter. [Order 76-38, § 296-45-67543, filed 12/30/76.]

### Chapter 296-46 WAC

#### SAFETY STANDARDS--INSTALLING ELECTRIC WIRES AND EQUIPMENT--ADMINISTRATIVE RULES

##### WAC

296-46-110	Foreword.
296-46-120	Workmanship.
296-46-130	Classification of occupancies.
296-46-140	Plan review for educational, health care facilities and other buildings.
296-46-150	Wiring methods for designated building occupancies.
296-46-160	Service requirements.
296-46-170	Clearance of service drop for single family or duplex residences.
296-46-180	Meter location.
296-46-190	Current transformers.
296-46-200	Service entrance conductors.
296-46-210	Service entrance cable.
296-46-220	Service equipment.
296-46-230	Service entrance.
296-46-240	Service mast.
296-46-242	Transformer neutral grounding.
296-46-244	Utility conductor limitations.
296-46-270	Metallic plumbing lines.
296-46-280	Garbage disposal, waste disposal or waste compactor appliances and dishwasher circuits.
296-46-290	Range circuit.
296-46-300	Water heaters.
296-46-335	Unfinished areas.
296-46-350	Emergency systems.
296-46-355	Mobile home connections.
296-46-360	Carnivals, circuses and traveling shows.
296-46-370	Boat moorages and similar installations.
296-46-380	Rockcrushers.
296-46-390	Woodworking plants.
296-46-420	All electrical equipment grounding.
296-46-424	Residential occupancies, ground fault circuit interrupters.
296-46-426	Bonding agricultural structures and equipment.
296-46-480	Location of pad-mounted transformers.
296-46-490	Location of total underground transformers.
296-46-495	Safe wiring labels and fees.
296-46-500	Electrical advisory board.
296-46-501	Board of electrical examiners.
296-46-535	Appearance and practice before advisory board.
296-46-540	Solicitation of business unethical.
296-46-545	Standards of ethical conduct.
296-46-550	Appearance by former employee.
296-46-555	Former employee as expert witness.
296-46-560	Computation of time.
296-46-565	Administrative Procedure Act.
296-46-590	Electric heating.
296-46-59005	Appendix A--Residential heat loss tables.
296-46-59010	Appendix B--Outdoor design temperatures.
296-46-900	Appendix C--Drawing E-103.
296-46-905	Appendix D--Drawing E-104.

296-46-910 Inspection fees.

**DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER**

- 296-46-010, 296-46-020, 296-46-030, 296-46-040, 296-46-050, 296-46-060. [Filed 9/22/60, effective 12/1/60.] Repealed by Order 69-2, filed 2/28/69, effective 4/1/69.
- 296-46-115 Definitions. [Statutory Authority: RCW 19.28.060. 81-06-037 (Order 81-5), § 296-46-115, filed 2/27/81, effective 4/1/81.] Repealed by 83-23-053 (Order 83-32), filed 11/14/83. Statutory Authority: RCW 19.28.120 and 19.28.510.
- 296-46-165 Service ampacity. [Order 72-7, § 296-46-165, filed 6/7/72.] Repealed by Order 74-43, filed 12/19/74.
- 296-46-250 Safe wiring label. [Order 69-2, § 296-46-250, filed 2/28/69, effective 4/1/69.] Repealed by 78-02-098 (Order 77-31), filed 1/31/78. Statutory Authority: RCW 19.28.060.
- 296-46-260 Direct burial cable. [Order 75-25, § 296-46-260, filed 8/4/75; Order 72-7, § 296-46-260, filed 6/7/72; Order 69-2, § 296-46-260, filed 2/28/69, effective 4/1/69.] Repealed by Order 74-43, filed 12/19/74 and later adopted, as amended, by Order 75-25, filed 8/4/75.] Repealed by 78-02-098 (Order 77-31), filed 1/31/78. Statutory Authority: RCW 19.28.060.
- 296-46-265 Conductors of different systems. [Order 74-43, § 296-265 (codified as WAC 296-46-265), filed 12/19/74.] Repealed by 78-02-098 (Order 77-31), filed 1/31/78. Statutory Authority: RCW 19.28.060.
- 296-46-310 Clothes dryers. [Order 69-2, § 296-46-310, filed 2/28/69, effective 4/1/69.] Repealed by Order 72-7, filed 6/7/72.
- 296-46-320 Electric heating. [Order 74-43, § 296-46-320, filed 12/19/74; Order 73-7, § 296-46-320, filed 5/17/73; Order 72-7, § 296-46-320, filed 6/7/72; Order 69-2, § 296-46-320, filed 2/28/69, effective 4/1/69.] Repealed by 78-02-098 (Order 77-31), filed 1/31/78. Statutory Authority: RCW 19.28.060.
- 296-46-330 Bathroom receptacles. [Order 69-2, § 296-46-330, filed 2/28/69, effective 4/1/69.] Repealed by Order 72-7, filed 6/7/72.
- 296-46-340 Recreation room. [Order 69-2, § 296-46-340, filed 2/28/69, effective 4/1/69.] Repealed by Order 74-43, filed 12/19/74.
- 296-46-400 Mobile homes. [Order 69-2, § 296-46-400, filed 2/28/69, effective 4/1/69.] Repealed by 78-02-098 (Order 77-31), filed 1/31/78. Statutory Authority: RCW 19.28.060.
- 296-46-401 License fee. [Order 71-17, § 296-46-401, filed 12/7/71.] Repealed by 78-02-098 (Order 77-31), filed 1/31/78. Statutory Authority: RCW 19.28.060.
- 296-46-40101 Administrator fees. [Order 74-43, § 296-46-401, (codified as WAC 296-46-40101), filed 12/19/74.] Repealed by 81-06-037 (Order 81-5), filed 2/27/81, effective 4/1/81. Statutory Authority: RCW 19.28.060.
- 296-46-402 Fees. [Order 75-25, § 296-46-402, filed 8/4/75; Order 74-43, § 296-46-402, filed 12/19/74; Order 71-17, § 296-36-402 (codified as WAC 296-46-402), filed 12/7/71.] Repealed by 78-02-098 (Order 77-31), filed 1/31/78. Statutory Authority: RCW 19.28.060.
- 296-46-410 Conductor termination. [Order 69-2, § 296-46-410, filed 2/28/69, effective 4/1/69.] Repealed by Order 72-7, filed 6/7/72.
- 296-46-425 Construction sites. [Order 74-43, § 296-46-425, filed 12/19/74.] Repealed by 78-02-098 (Order 77-31), filed 1/31/78. Statutory Authority: RCW 19.28.060.
- 296-46-450 Grounded neutral conductor. [Order 69-2, § 296-46-450, filed 2/28/69, effective 4/1/69.] Repealed by 78-02-098 (Order 77-31), filed 1/31/78. Statutory Authority: RCW 19.28.060.
- 296-46-460 Terminating immediately inside an outside building wall. [Order 75-25, § 296-46-460, filed 8/4/75; Order 72-7, § 296-46-460, filed 6/7/72; Order 69-2, § 296-46-460, filed 2/28/69, effective 4/1/69.] Repealed by 78-02-098 (Order 77-31), filed 1/31/78. Statutory Authority: RCW 19.28.060.
- 296-46-492 Electrical license and administrator certificate designation. [Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-492, filed 1/31/78.] Repealed by 83-23-053 (Order 83-32), filed 11/14/83. Statutory Authority: RCW 19.28.120 and 19.28.510.
- 296-46-493 Electrical contractor license and administrator certificate fees. [Statutory Authority: RCW 19.28.060 and 19.28.210. 82-18-036 (Order 82-29), § 296-46-493, filed 8/26/82. Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-493, filed 1/31/78.] Repealed by 83-23-053 (Order 83-32), filed 11/14/83. Statutory Authority: RCW 19.28.120 and 19.28.510.
- 296-46-506 Responsibilities of electrical contractors administrator certificate holders—Revocation of certificates—Appeals. [Statutory Authority: RCW 19.28.060. 81-06-037 (Order 81-5), § 296-46-506, filed 2/27/81, effective 4/1/81.] Repealed by 83-23-053 (Order 83-32), filed 11/14/83. Statutory Authority: RCW 19.28.120 and 19.28.510.
- 296-46-510 Definitions. [Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-510, filed 1/31/78; Order 74-43, § 296-46-510, filed 12/19/74.] Repealed by 81-06-037 (Order 81-5), filed 2/27/81, effective 4/1/81. Statutory Authority: RCW 19.28.060.
- 296-46-515 Officers. [Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-515, filed 1/31/78; Order 74-43, § 296-46-515, filed 12/19/74.] Repealed by 81-06-037 (Order 81-5), filed 2/27/81, effective 4/1/81. Statutory Authority: RCW 19.28.060.
- 296-46-520 Internal management. [Order 74-43, § 296-46-520, filed 12/19/74.] Repealed by 81-06-037 (Order 81-5), filed 2/27/81, effective 4/1/81. Statutory Authority: RCW 19.28.060.
- 296-46-525 Board duties. [Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-525, filed 1/31/78; Order 74-43, § 296-46-525, filed 12/19/74.] Repealed by 81-06-037 (Order 81-5), filed 2/27/81, effective 4/1/81. Statutory Authority: RCW 19.28.060.
- 296-46-530 Hearings. [Order 74-43, § 296-46-530, filed 12/19/74.] Repealed by 83-23-053 (Order 83-32), filed 11/14/83. Statutory Authority: RCW 19.28.120 and 19.28.510.
- Appendix A Residential heat loss tables. [Order 72-7, Appendix A—Residential heat loss tables, filed 6/7/72; Order 69-2, Appendix A—Electric heat loss calculation, filed 2/28/69, effective 4/1/69.] Repealed by 78-02-098 (Order 77-31), filed 1/31/78. Statutory Authority: RCW 19.28.060. Later promulgation, see WAC 296-46-59005.
- Appendix B Outdoor design temperatures—Charts. [Order 72-7, Appendix B—Outdoor design temperatures—Charts, filed 6/7/72.] Repealed by 78-02-098 (Order 77-31), filed 1/31/78. Statutory Authority: RCW 19.28.060. Later promulgation, see WAC 296-46-59010.

**Reviser's note:** The 1978 Edition of National Electrical Code (NFPA No. 70-1978) was adopted by the department of labor and industries on January 1, 1978. [Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), filed 1/31/78.]

**WAC 296-46-110 Foreword.** These rules and regulations are issued by the electrical inspection section of the department of labor and industries under the authority of chapter 19.28 RCW, Electrical Installations Law. The department is empowered by law to enforce

these rules and regulations and the National Electrical Code.

The 1981 edition, National Electrical Code, is hereby adopted by reference as part of these rules and regulations. The rules and regulations are adopted for the safety of the public and are to be used in connection with the 1981 edition of the National Electrical Code. Other codes, manuals and reference works referred to in this code will be available for inspection and review in the office of the electrical inspection section of the division of building and construction safety inspection services, Olympia, during business hours. Where there is any conflict between the rules and regulations and the National Electrical Code, the rules and regulations shall be observed.

Electrical inspectors will give information as to the meaning or application of the National Electrical Code and these rules and regulations, but will not lay out work or act as consultants for contractors, owners or users.

A copy of chapter 19.28 RCW, Electrical Installations Law, may be obtained from the department of labor and industries. [Statutory Authority: RCW 19.28.060, 81-06-037 (Order 81-5), § 296-46-110, filed 2/27/81, effective 4/1/81; 78-02-098 (Order 77-31), § 296-46-110, filed 1/31/78; Order 74-43, § 296-46-110, filed 12/19/74; Order 72-7, § 296-46-110, filed 6/7/72; Order 69-2, § 296-46-110, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-120 Workmanship.** All electrical wiring and equipment shall be installed in a neat, workmanlike manner. Where applicable nonmetallic sheath cables shall follow the lines of the building and be fastened to building structures. Unnecessary, or unnecessarily complicated wiring shall be avoided. See National Electrical Code, Article 110. [Order 72-7, § 296-46-120, filed 6/7/72; Order 69-2, § 296-46-120, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-130 Classification of occupancies.** (1) Educational occupancy means a building or that portion thereof used primarily for educational purposes.

(2) Institutional occupancy means a building or that portion thereof where persons are harbored to receive care and are incapable of self-preservation or unable to provide for their own needs and safety without assistance of another person.

(3) Health care occupancy refers to hospitals, nursing homes, psychiatric hospitals, alcoholism hospitals, alcoholism detoxification facilities, residential treatment facilities for psychiatrically impaired children and youth and such other health care occupancies where patients may be unable to provide for their own needs and safety without the assistance of another person. See the National Electrical Code, Section 517-2 for the definition of health care facilities. [Statutory Authority: RCW 19.28.060, 81-06-037 (Order 81-5), § 296-46-130, filed 2/27/81, effective 4/1/81; Order 72-7, § 296-46-130, filed 6/7/72; Order 69-2, § 296-46-130, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-140 Plan review for educational, health care facilities and other buildings.** (1) All plans for new or altered installations in educational occupancies shall be reviewed and accepted by the state electrical inspection section prior to beginning such installations. Refer plans to the Electrical Division, 1616 B. Northeast 150th, Seattle, WA 98155.

(2) Plans for new or altered electrical installations in health care occupancies and other facilities which are required to submit plans for new construction for review by the construction review unit, state department of social and health services, are to be sent directly to that unit where they will be reviewed by the department of labor and industries, electrical division.

(3) Charges for plan review of educational type buildings not including installations reviewed under subsection (2) of this section, will be based upon twenty percent of the job label fee as determined by WAC 296-46-495, plus a fee of twenty-five dollars. Review fee shall be due at time of plan submittal.

(4) Plan review for new or altered electrical installations of other types of construction may be voluntarily requested by the owner or other interested parties. The fee for such review service will be based upon an hourly rate of \$30.00 per hour or major fraction thereof. [Statutory Authority: RCW 19.28.060, 81-06-037 (Order 81-5), § 296-46-140, filed 2/27/81, effective 4/1/81; 78-02-098 (Order 77-31), § 296-46-140, filed 1/31/78; Order 74-43, § 296-46-140, filed 12/19/74; Order 72-7, § 296-46-140, filed 6/7/72; Order 69-2, § 296-46-140, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-150 Wiring methods for designated building occupancies.** (1) The fixed wiring methods for institutional, educational and health care occupancies shall be metal raceway, nonmetallic raceways encased in not less than two inches of concrete, M.I. or M.C. cable.

Exception No. 1—For signal and control circuits, open cable wiring approved for the purpose shall be permitted for Class 2 signal and control circuits as defined in Article 725 of the National Electrical Code for other than the following circuits and/or systems; nurse call systems, fire alarm systems actuated at manual stations, electric water flow alarm devices in connection with sprinkler systems, automatic fire or smoke or products of combustion devices, alarms required for systems used in the piping of nonflammable medical gases and communications systems used for issuing instructions during emergency conditions.

Exception No. 2—Open cable wiring approved for the purpose of (NFPA Bulletin No. 71) shall be permitted for Central Station Protective Systems installed and operator manned and supervised in

accordance with the latest adopted edition of the National Fire Protection Association Bulletin No. 71 in other than hospitals and nursing homes.

Exception No. 3—Clinics, dental and medical offices and like occupancies except in patient care areas.

(2) Buildings to be licensed as boarding homes, alcoholism treatment facilities (other than alcoholism hospitals and alcoholism detoxification facilities), or birthing centers shall provide a safe electrical environment. A certificate of electrical inspection shall be obtained prior to occupancy.

Buildings of such use that are more than two stories in height or have more than 3,000 square feet of floor area above the first story shall be wired in metallic raceway.

(3) Other buildings. The fixed wiring method in the following building occupancies shall be busways, metal raceways, nonmetallic raceways encased in not less than two inches of concrete, cable trays or types SNM, TC, MI, MC cables; subject to the National Electrical Code.

(a) Commercial buildings: Commercial buildings open to the public and designed, intended or used for the purpose of accommodating 200 or more persons. For determination of such population capacity, the following number of square feet per person shall be applied: For standing capacity, 3 square feet per person for such building areas as transit stations, bus depots, court rooms and like buildings; for fixed seating capacity, 6 square feet per person for such building areas as church chapels, conference rooms, multipurpose rooms and like buildings; for all other such commercial buildings, 25 square feet per person. Occupant capacity noted in Article 518 of the National Electrical Code governing those occupancies designated will not be recognized.

(b) Industrial plants: Industrial plants, except that open conductors of No. 4/0 or larger size may be installed on insulators not less than 20 feet above floor or working surface level in accordance with Article 320 of the National Electrical Code.

Exception No. 1—For signal and control circuits, other than those defined as Class 1 circuits per National Electrical Code, Sections 725-3(a) and 725-4, open cable wiring approved for the purpose shall be permitted for Class 2 signal and control circuits installed in accordance with Article 725 of the National Electrical Code.

Exception No. 2—Open cable wiring approved for the purpose (NFPA Bulletin No. 71) shall be permitted for Central Station Protective Systems installed and operator manned and supervised in accordance with the latest adopted edition of the National Fire Protection Association Bulletin No. 71.

Exception No. 3—Rigid nonmetallic conduit may be installed in areas outlined in National Electrical Code Section 300-6.

(4) Multifamily occupancy buildings (i.e., apartment buildings, hotels, motels and dormitories) of two or more stories, not including basement, shall be wired in accordance with Chapter 3 of the National Electrical Code except feeders and subfeeders in such buildings shall be wired in a raceway(s). [Statutory Authority: RCW 19-28.060. 81-06-037 (Order 81-5), § 296-46-150, filed 2/27/81, effective 4/1/81; 78-02-098 (Order 77-31), § 296-46-150, filed 1/31/78; Order 75-25, § 296-46-150, filed 8/4/75; Order 74-43, § 296-46-150, filed 12/19/74; Order 72-7, § 296-46-150, filed 6/7/72; Order 69-2, § 296-46-150, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-160 Service requirements.** The serving utility shall be consulted by the owner, his agent, or the contractor making the installation regarding service entrance location before installing equipment. Provisions for meter, attachment of service drop, or for an underground service lateral shall be made at a location acceptable to the serving utility. The point of attachment for a service drop must permit the clearances required by law. [Order 69-2, § 296-46-160, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-170 Clearance of service drop for single family or duplex residences.** Notwithstanding Section 230-24 of the National Electrical Code the following requirements shall prevail for service drop clearances for single family or duplex residences. Service drop conductors shall have a vertical clearance of not less than 8 feet from roofs over which they pass except as follows:

Exception No. 1—Where the voltage between conductors does not exceed 300 and the pitch of the roof is not less than one in three, the clearance shall not be less than 3 feet.

Exception No. 2—The clearance of service drop conductors of 300 volts or less over roofs having a pitch of less than one in three may be less than 8 feet but not less than 3 feet provided:

(a) Cable approved for such purpose is used having the ungrounded conductors insulated with rubber, thermoplastic or equivalent.

(b) The roof is not accessible by permanent convenient means.

(c) The service entrance is located so as to limit over the roof distance to the practicable minimum length with the service drop originating at a pole designated by the servicing agency. When in doubt, consult the servicing agency as to the pole designation and the electrical inspector as to the minimum practicable length.

Exception No. 3—Service drop conductors of 300 volts or less may have a minimum clearance of 18 inches from that portion of the roof over which they pass when not more than 4 feet from the point of attachment. [Order 69-2, § 296-46-170, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-180 Meter location.** Except as otherwise permitted by the serving utility, meter height shall not be more than 7 feet or less than 5 feet above finished grade or floor below the meter. The center of the meter shall be the point of reference. [Order 74-43, § 296-46-180, filed 12/19/74; Order 69-2, § 296-46-180, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-190 Current transformers.** Unless otherwise specified by the serving utility, current transformer installations for utility billing shall conform to the following.

(1) Current transformers shall be factory installed if in a custom built panel board assembly.

(2) Enclosure furnished for job installation of current transformers shall be at least 9 inches deep and of such size as to permit ready installation of the current transformers on the size of wire used. The minimum nominal size of metal cabinets for this purpose shall be as follows:

No. of C.T.	Max MCM/Leg	Enclosure Size
2	250	18" x 24"
3	250	24" x 32"
2	400	24" x 32"
3	400	30" x 32"
2	750	24" x 36"
3	750	32" x 36"

Consult serving utility regarding enclosures for use with larger conductors.

(3) Secondary instrument transformer conductors for metering will not be permitted in service raceway. [Order 69-2, § 296-46-190, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-200 Service entrance conductors.** (1) Service entrance conductors shall extend at least 18 inches from the service head to permit connection to the service drop. See National Electrical Code, Section 230-54.

(2) Service entrance conductors shall extend no more than 15 feet inside a building.

(3) Unfused code grade conductors 600 volts or less shall be installed in a metallic raceway when within the building structure. See National Electrical Code, Section 230-44. [Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-200, filed 1/31/78; Order 74-43, § 296-46-200, filed 12/19/74; Order 73-7, § 296-46-200, filed 5/17/73; Order Order 74-43, § 296-46-200, filed 12/19/74; Order 73-7, § 296-46-200,

filed 5/17/73; Order 69-2, § 296-46-200, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-210 Service entrance cable.** Service entrance cable may be used in accordance with National Electrical Code Article 338. When used for service entrances, service entrance cable shall not extend more than 18 inches inside the building. [Order 69-2, § 296-46-210, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-220 Service equipment.** Service equipment shall be readily accessible and shall not be installed in bathrooms, clothes closets, shower rooms, cupboards, attics, nor above washers, dryers or plumbed in fixtures.

Service equipment shall be readily accessible after any subsequent building additions.

Service switches and other equipment exposed to elements of the outside weather shall be rain tight type factory built for the purpose. [Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-220, filed 1/31/78; Order 72-7, § 296-46-220, filed 6/7/72; Order 69-2, § 296-46-220, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-230 Service entrance.** (1) The size of service entrance installed in a new and/or existing single family dwelling shall be calculated in accordance with the National Electrical Code, Section 220-10.

(2) Provisions of Sections 220-30 and 220-31 of the National Electrical Code, optional calculation for additional loads in existing one family dwelling occupancy or individual apartment of multi-family dwelling, will not be recognized.

(3) If any building is moved to a new location, the service entrance must at least meet calculated load requirements in accordance with paragraph (1). [Order 74-43, § 296-46-230, filed 12/19/74; Order 72-7, § 296-46-230, filed 6/7/72; Order 69-2, § 296-46-230, filed 2/28/69, effective 4/1/69.]

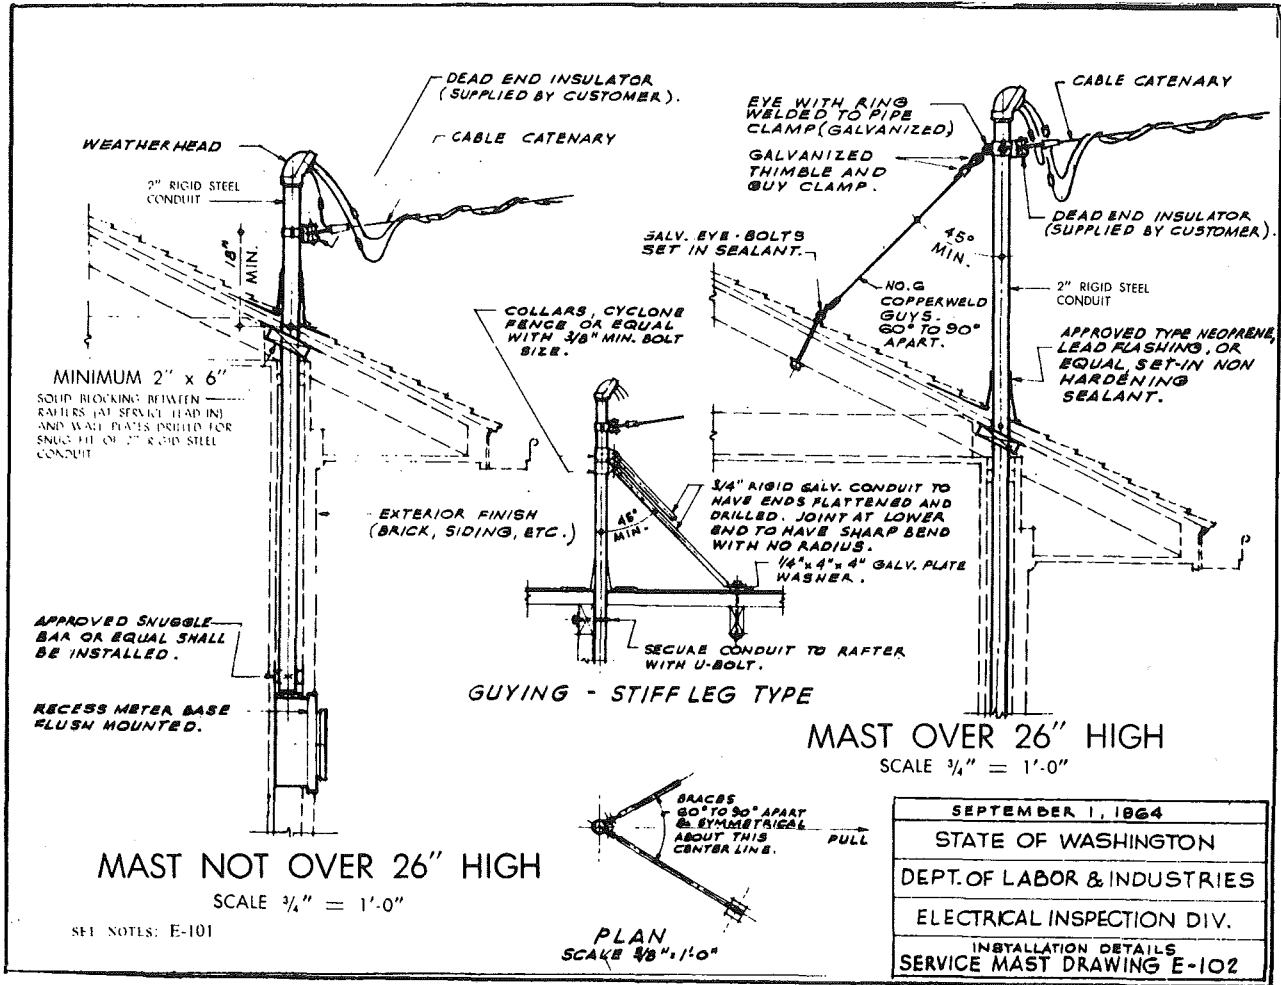

**WAC 296-46-240 Service mast.** A service entrance conduit extended through the roof to provide a means of attaching the service drop shall be no smaller than 2-inch rigid steel galvanized conduit. It shall provide a structurally sound attachment for the service drop and be equipped with a properly installed flashing at the roof line. Installation shall be in accordance with state drawings E-101 and E-102, or provide equivalent strength by other approved means.

S. F. No. 9562—OS-1 cc

APRIL 1, 1969

REVISED DRAWING E-101
STATE OF WASHINGTON
DEPT. OF LABOR & INDUSTRIES
ELECTRICAL INSPECTION DIV.
INSTALLATION DETAILS— TYPICAL CONDUIT SERVICE MAST.

[Order 69-2, § 296-46-240, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-242 Transformer neutral grounding.**  
Where services over 600 volts are supplied from multiground, neutral systems with transformer protection provided by fuses in the primary feeders as provided in the National Electrical Code, Section 450-3(a), the grounded neutral conductor shall be connected to a grounding electrode at each transformer location. Where the secondary of the transformer or transformers is grounded, the secondary ground shall be connected to the common neutral ground.

Exception No. 1—Will not apply to industrial distribution systems.

Exception No. 2—The bond between the transformer secondary neutral ground and primary common neutral may be removed if the connection causes undesirable currents or voltages.

[Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-242, filed 1/31/78.]

**WAC 296-46-244 Utility conductor limitations.** (1)  
"Termination immediately inside an outside building wall" will be interpreted to mean terminating in a junction box or a meter enclosure located in the outside wall of the structure with not more than eight feet of rigid steel or intermediate metal conduit within the framed wall. See WAC 296-45-900 (Appendix C, Drawing E-103), and WAC 296-45-905 (Appendix D, Drawing E-104).

(2) "Termination immediately inside the building lines" shall be interpreted to be a maximum of 18 inches rigid steel or intermediate metal conduit to the bottom of a J-box, C.T. or meter enclosure. See WAC 296-45-900 (Appendix C, Drawing E-103(A)), and WAC 296-45-905 (Appendix D, Drawing E-104).

(3) The identified neutral conductor of a service lateral in accordance with the preceding paragraphs may be identified with a yellow jacket.

(4) National Electrical Code, Section 230-44, will be recognized except as stated in paragraph (1) above. [Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-244, filed 1/31/78.]

**WAC 296-46-270 Metallic plumbing lines.** All metallic water lines including waste systems, shall be bonded together by approved means. See Section 250-80 of the National Electrical Code. [Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-270, filed 1/31/78; Order 69-2, § 296-46-270, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-280 Garbage disposal, waste disposal or waste compactor appliances and dishwasher circuits.** Except as otherwise provided in this section, a separate circuit of 20 ampere capacity or larger shall be provided to serve each dishwasher. One garbage disposal unit and/or one waste compactor may be supplied from a three wire circuit of 20 amperes or larger also supplying the dishwasher. If not thus supplied, each disposal or compactor appliance shall be supplied by a separate circuit of 15 amperes or larger. A separate circuit of 20 amperes or larger may supply one garbage disposal unit and one compactor unit provided no other appliances are connected to the circuit. [Order 72-7, § 296-46-280, filed 6/7/72; Order 69-2, § 296-46-280, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-290 Range circuit.** The branch circuit for a standard free standing electric range 50 amperes or less (other than wall mounted ovens or counter mounted cooking units) shall terminate in an approved flush or surface type plug-in device elevated at least 2 inches above the floor. Minimum circuit capacity for above circuits shall be 50 amperes. [Order 69-2, § 296-46-290, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-300 Water heaters.** Electric water heaters shall be provided with a circuit suitable for the load, but for those in excess of 9 amperes, the conductor shall not be smaller than 10 A.W.G. copper or equivalent with ground wire for grounding the tank as per Section 250-95, National Electrical Code.

Cover plates to thermostats and controls for water heaters must be accessible for maintenance and repair after the water heater has been installed. [Order 75-25, § 296-46-300, filed 8/4/75; Order 74-43, § 296-46-300, filed 12/19/74; Order 69-2, § 296-46-300, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-335 Unfinished areas.** Space suitable for future living areas shall have circuits terminated or accessible for future electrical rough-in in accordance with the National Electrical Code, Chapter 3. Any wall being insulated in room areas as defined in NEC 210-52 shall have rough-in wiring in place and approved before such thermal insulation is installed. [Statutory Authority: RCW 19.28.060. 81-06-037 (Order 81-5), § 296-46-335, filed 2/27/81, effective 4/1/81; Order 74-43, § 296-46-335, filed 12/19/74; Order 72-7, § 296-46-335, filed 6/7/72.]

**WAC 296-46-350 Emergency systems.** See Article 700, National Electrical Code. Emergency systems shall comply with the latest adopted edition of the National

Fire Protection Association Bulletin 101, Life Safety Code. In accordance with Section 700-12(d), National Electrical Code, separate emergency service conductors shall be provided and may be tapped on the load side of the electric utility metering equipment provided they are sufficiently separated and effectively fireproofed from the main service disconnecting means.

Emergency systems: Exit and emergency lights in places of assembly and including corridors must be installed where the seating capacity is 200 or more. The seating capacity will be determined by allowing a basis of 6 square feet per person. [Statutory Authority: RCW 19.28.060. 81-06-037 (Order 81-5), § 296-46-350, filed 2/27/81, effective 4/1/81; 78-02-098 (Order 77-31), § 296-46-350, filed 1/31/78; Order 72-7, § 296-46-350, filed 6/7/72; Order 69-2, § 296-46-350, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-355 Mobile home connections.** (1) Mobile home service equipment on private property must be placed convenient and accessible to the occupant and the serving utility.

(2) Mobile home service equipment supplying a unit in a mobile home park must be located on the assigned lot space and conveniently accessible to the occupant. Feeder length from service equipment to the mobile home as noted in NEC 550-23(d) need not be considered.

(3) Overhead feeder strikes to a mobile home shall be supported within fifteen feet of the point of attachment.

(4) Where a mobile home is served from pedestal type equipment, the bottom of the enclosure containing the disconnecting means shall be a minimum of twenty-four inches above the finish grade. [Statutory Authority: RCW 19.28.060. 81-06-037 (Order 81-5), § 296-46-355, filed 2/27/81, effective 4/1/81.]

**WAC 296-46-360 Carnivals, circuses and traveling shows.** Wiring methods shall comply with Chapter 3 of the National Electrical Code.

(1) Secondary feeders shall be a type approved for the purpose. Type "S" Cable or equal.

(2) Each concession shall be considered in a single occupancy, and a separate enclosed externally operable fused switch or circuit breaker shall be provided. [Order 69-2, § 296-46-360, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-370 Boat moorages and similar installations.** In addition to complying with Article 555, National Electrical Code, there shall be a disconnect for all services of 600 volts or less for docks, wharves, boat moorages, etc. located at the shoreline, street side of the first point of building construction in compliance with WAC 296-46-200(2). [Order 75-25, § 296-46-370, filed 8/4/75; Order 72-7, § 296-46-370, filed 6/7/72; Order 69-2, § 296-46-370, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-380 Rockcrushers.** Except when wired in an approved metallic system, rockcrushers shall be wired with approved "rough usage" flexible cable

having a grounding conductor as an integral part of the cable assembly and with approved connector bodies and caps. The grounding conductor must be brought to the main panel grounding bus or electrode. [Order 69-2, § 296-46-380, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-390 Woodworking plants.** The production areas of saw mills and commercial and industrial woodworking plants shall be wired in rigid metal conduit, intermediate metal conduit M.I. cable, MC cable, or, if not subject to mechanical injury or vibration, E.M.T. with compression ring fittings. [Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-390, filed 1/31/78; Order 69-2, § 296-46-390, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-420 All electrical equipment grounding.** All electrical equipment grounding (boxes, service and equipment and provisions for grounding receptacles, etc.) for nonmetallic cable systems, shall be completely made up at the time of rough-in. [Order 69-2, § 296-46-420, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-424 Residential occupancies, ground fault circuit interrupters.** In addition to complying with Article 210-8, National Electrical Code, there shall be a separate circuit and/or circuits limited to the bathroom(s), garage and those outdoor receptacles GFCI protected. Receptacles on the load side of the GFCI device shall be considered as being on a separate circuit. [Statutory Authority: RCW 19.28.060. 81-06-037 (Order 81-5), § 296-46-424, filed 2/27/81, effective 4/1/81; 78-02-098 (Order 77-31), § 296-46-424, filed 1/31/78; Order 75-25, § 296-46-424, filed 8/4/75.]

**WAC 296-46-426 Bonding agricultural structures and equipment.** In accordance with the National Electrical Code, Article 250, buildings housing livestock must have all metallic and conductive portions of such structures and/or equipment used in such structures bonded to a common grounding electrode. Concrete slabs shall be considered as a conductive portion of the structure. For Agricultural Buildings, see National Electrical Code, Article 547. [Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-426, filed 1/31/78; Order 74-43, § 296-46-426, filed 1/3/75.]

**WAC 296-46-480 Location of pad-mounted transformers.** (1) Definition - a pad-mounted transformer installation is an installation of an oil-filled transformer outdoors wherein all bushings, handholes, and live and operating parts are guarded by a solid metal enclosure so secured as to be available to authorized qualified personnel only. This will not prohibit the use of approved glass monitoring devices or properly baffled ventilators.

(2) Where a pad-mounted transformer is to be installed adjacent to a structure of combustible material, it shall not be closer than eight feet minimum. This eight foot separation should be measured from the nearest

metal portion of the pad-mounted transformer installation to the nearest building features required to be safeguarded. In the case of overhanging eaves or roof lines of combustible material on standard single story structure, the eight foot measurement should be made in such a way as to provide eight feet of clear space between said eaves and the nearest metal portion of the pad-mounted transformer installed outside a vertical line extended from the ends of the eaves to the ground if this distance is at least eight feet horizontally from a combustible wall. In addition, the grade of the ground at the location of the pad-mounted transformer shall be such that any oil leaking from the transformer will flow away from the building and will not form pools

**Exception:** In urban residential areas where improved alleyways are utilized, and where a pad-mounted transformer is to be installed adjacent to a structure of combustible material; it shall not be closer than two feet minimum, provided the structure is noninhabited, such as an automobile garage.

(3) Pad-mounted transformer installations shall not be made nearer than two feet, measured horizontally to a noncombustible building surface having no doors, windows or other openings closer than indicated in paragraph (2).

(4) Pad-mounted transformer installations should not be located where exposed to damage by automobiles, trucks or other mobile type of machinery. Where transformers are installed in areas subject to other than pedestrian traffic, they shall be provided with additional guarding.

(5) Pad-mounted transformer installations shall meet the requirements for being effectively grounded as provided in Section 250-51, National Electrical Code. [Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-480, filed 1/31/78; Order 69-2, § 296-46-480, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-490 Location of total underground transformers.** Enclosures for total underground transformers shall not be located within eight feet of a doorway or fire escape. Adequate space shall be maintained above the total underground transformer enclosure so that a boom may be used to lift the transformer. [Order 69-2, § 296-46-490, filed 2/28/69, effective 4/1/69.]

**WAC 296-46-495 Safe wiring labels and fees.** Inspections shall not be made nor services connected unless a safe wiring label is completely and legibly filled out and readily available.

For fee purposes:

(1) Mobile homes shall be considered as single family residences.

(2) Four or more locations for mobile homes, travel trailers or coaches shall be considered a mobile home park.

(3) Fees shall be paid in accordance with the inspection fee schedule WAC 296-46-910 (Appendix F).

[Statutory Authority: RCW 19.28.060, 78-02-098 (Order 77-31), § 296-46-495, filed 1/31/78.]

**WAC 296-46-500 Electrical advisory board.** RCW 19.28.065 creates an electrical advisory board consisting of seven members appointed by the governor. It shall be the purpose and function of the advisory board to advise the director on all matters pertaining to the enforcement of chapter 19.28 RCW including, but not limited to, standards of electrical installations, minimum inspection procedures and the adoption of rules and regulations pertaining to the electrical inspection division.

No rules and regulations shall be amended or repealed until the electrical advisory board has first had an opportunity to consider any proposed amendments or repeals and had an opportunity to make recommendations to the director.

The advisory board shall, at each regular or special meeting, consider any written proposals made by any persons, firms or corporations for new electrical rules or regulations or for amendments to or repeal of existing electrical rules or regulations or for changes in administrative procedures of the electrical inspection section provided such proposals are submitted in writing to the secretary of the advisory board at least fifteen days prior to any such meeting so that the same may be properly included on the agenda for such meeting.

While the advisory board will, upon request of the director of the department of labor and industries or the electrical inspection section thereof, aid in the administrative interpretation of the National Electrical Code and the rules and regulations covering standards for electrical installations in the state of Washington, it will not function as a board of appeal nor will it render decisions concerning the application or interpretation of any adopted rules and regulations to any person, firm or corporation engaged in the business of installing wires or equipment to convey electric current, or engaged in installing apparatus or appliances to be operated by such current.

In addition to the chairman and secretary of the advisory board as provided for by RCW 19.28.065, the advisory board shall elect from its members a vice chairman who shall perform all functions of the chairman in his absence. [Statutory Authority: RCW 19.28.060, 81-06-037 (Order 81-5), § 296-46-500, filed 2/27/81, effective 4/1/81; 78-02-098 (Order 77-31), § 296-46-500, filed 1/31/78; Order 74-43, § 296-46-500, filed 12/19/74.]

**WAC 296-46-501 Board of electrical examiners.** RCW 19.28.123 creates a board of electrical examiners consisting of nine members who are appointed by the governor. It shall be the purpose and function of the electrical examiners board to:

(1) Establish a general electrical contractors license and special electrical contractor license classification as the board deems appropriate.

(2) Establish and administer written examinations for general electrical contractors administrators license and

various specialty electrical contractors administrators license.

(3) Certify to the director of the department of labor and industries all persons who are entitled to either a general so specialty electrical contractors administrators license.

(4) Advise the director as to the need of additional electrical inspectors and compliance officers to be utilized by the director on either a full- or part-time employment basis.

(5) Determine that all sums paid out of the electrical license fund are necessary to accomplish the intent of chapter 19.28 RCW. Such determination shall be made from reports of sums expended by the department from the electrical license fund. The department shall submit the reports to the board at the board's regular meetings.

(6) Advise the department on rules and regulations of examinations of applicants for journeyman and specialty electricians certificates of competency.

(7) Coordinate with the department in the preparation of an examination for journeyman and specialty electricians certificates of competency.

(8) Conduct hearings on appeals from revocations of electricians certificates of competency.

(9) Advise the department of labor and industries on all matters relative to RCW 19.28.500 through 19.28.620.

The board of electrical examiners shall elect a chairperson and a vice chairperson from its members. The vice chairperson shall perform all functions of the chairperson in the chairperson's absence. [Statutory Authority: RCW 19.28.060, 81-06-037 (Order 81-5), § 296-46-501, filed 2/27/81, effective 4/1/81.]

**WAC 296-46-535 Appearance and practice before advisory board.** No person may appear in a representative capacity before the advisory board other than the following:

(1) Attorney at law duly qualified and entitled to practice before the supreme court of the state of Washington.

(2) Attorneys at law duly qualified and entitled to practice before the highest court of record of any other state, if the attorneys at law of the state of Washington are permitted to appear in a representative capacity before administrative agencies of such other state, and if not otherwise prohibited by Washington state law.

(3) A bona fide owner, officer, partner, or full time employee of an individual, firm, association, organization, partnership, or corporation who appears for such individual, firm, association, organization, partnership or corporation or a person (other than an attorney at law as provided in subparagraph (1) and (2) above, appointed in writing to represent an individual, firm, association, organization, partnership or corporation. [Order 74-43, § 296-46-535, filed 12/19/74.]

**WAC 296-46-540 Solicitation of business unethical.** It shall be unethical for persons acting in a representative capacity before the advisory board to solicit business

by circulars, advertisements or by personal communication or interviews not warranted by personal relations, provided that such representatives may publish or circulate business cards. It is equally unethical to procure business by solicitors of any kind. [Order 74-43, § 296-46-540, filed 12/19/74.]

**WAC 296-46-545 Standards of ethical conduct.** All persons appearing in proceedings before the advisory board in a representative capacity shall conform to the standards of ethical conduct required of attorneys before the courts of Washington. If any such person does not conform to such standards, the advisory board may decline to permit such person to appear in a representative capacity in any proceeding before the advisory board. [Order 74-43, § 296-46-545, filed 12/19/74.]

**WAC 296-46-550 Appearance by former employee.** No former employee of the advisory board or member of the attorney general's staff may at any time after severing his employment with the advisory board or the attorney general appear, except with the written permission of the advisory board, in a representative capacity on behalf of other parties in any proceeding wherein he previously took an active part as a representative of the advisory board. [Order 74-43, § 296-46-550, filed 12/19/74.]

**WAC 296-46-555 Former employee as expert witness.** No former employee of the advisory board shall at any time after severing his employment with the advisory board appear, except with the written permission of the advisory board, as an expert witness on behalf of other parties in any proceeding wherein he previously took an active part in the investigation as a representative of the advisory board. [Order 74-43, § 296-46-555, filed 12/19/74.]

**WAC 296-46-560 Computation of time.** In computing any period of time prescribed or allowed by the advisory board rules, by order of the advisory board, or by any applicable statute, the day of the act, event, or default after which the designated period of time begins to run is not to be included. The last day of the period so computed is to be included. [Order 74-43, § 296-46-560, filed 12/19/74.]

**WAC 296-46-565 Administrative Procedure Act.** All proceedings regarding supplemental rules and regulations shall comply, where applicable, with the provisions of the Administrative Procedure Act, chapter 34.04 RCW, and any amendments thereto. [Order 74-43, § 296-46-565, filed 12/19/74.]

**WAC 296-46-590 Electric heating.** (1) In accordance with the National Electrical Code, Section 215-5, where electric heating is to be installed, heat loss calculations and plans will be required whenever it appears necessary in order to assure the safe operation of the electric heating equipment or when diversity is requested.

These calculations shall be made in accordance with one of the following:

(a) WAC 296-46-59005 (Appendix A).

(b) The local serving utility heat loss calculations when based on the 1977 edition of ASHRAE GUIDE, Handbook of Fundamentals.

(c) The 1977 edition of the American Society of Heating, Refrigeration and Air Conditioning Engineers' Handbook of Fundamentals (ASHRAE 1977 Handbook of Fundamentals). Manuals and guides from National Environmental Systems Contractors Association (NESCA-Manual J. 1975).

(d) Any published heat loss tables based on ASHRAE GUIDE and approved by the department of labor and industries.

(2) The submitter of heat loss calculations shall provide satisfactory evidence in writing from the general contractor, financing institution and/or owner stipulating in the "R" value of the insulation (insulation material only) that will be installed and where it is to be located.

(3) Line voltage double circuit thermostats shall not be permitted. The department of labor and industries has the right to review and rule on the use of new line voltage controls submitted by the manufacturers.

(4) Line voltage electric heating control devices, if not approved for continuous load, shall be derated to 80 percent of rated capacity.

(5) Residential and residential multiple occupancy structures:

(a) Heat loss calculations shall be based on a minimum of 70°F. indoor temperature with an outdoor design temperature as indicated in WAC 296-46-59010 (Appendix B) or the 97 1/2 percent column of ASHRAE Standards, weather data and design conditions, except that special application justifying the use of different design temperatures may be approved.

(b) Heat loss calculations for common ceilings, walls or floors separating living spaces from garages and carports shall be considered the same as outside exposure for calculation purposes.

(c) Heat loss calculations for common interior walls and floors separating adjoining living units of multiple occupancy structures shall be based on a minimum of 10° temperature difference. Common interior ceilings separating adjoining living units of multiple occupancy structures shall be based upon a minimum of 20° temperature difference, except that radiant ceilings shall be based on a minimum of 50° temperature difference.

(d) Structures designed with unheated interior spaces adaptable for future use shall have adequate service entrance and service equipment ampacity to provide electric heat for that space. In calculating the additional capacity needed to adequately heat these spaces, insulation values shall be comparable to that which is installed in the finished spaces. (If ducts from a central system are installed for the purpose of heating an interior space adaptable for future use, the system shall be sized to include the heat loss of that space.)

(e) Electric heating equipment shall be installed to meet or exceed the calculated heat loss in all new structures and existing structures which are converted to electric heat.

The minimum demand factor of 75 percent of the installed heating capacity may be used in sizing service entrance equipment when electric service is provided through a single panel.

(f) Where electric heat is used in a supplemental or auxiliary capacity, or where electric heating is installed in garages, patios, workshops, storage areas, and other incidental applications, heat loss calculations will not be required.

(g) An automatic temperature regulating device shall be installed to provide effective control of a heated space except for bathroom heater's designed for manual switch operation.

(i) Heated space shall be interpreted to mean: An entire space which is effectively separated from another by means of partition walls and/or doors, even though small permanent openings such as pass throughs and passage ways may exist.

(ii) Effective control shall be interpreted to mean: Not more than one automatic temperature regulating device to control all heating equipment in any heated space. (Applications outlined in subdivision 5-f are excluded.) An additional control may be used for regulating the temperature in adjoining stairways and entries where necessary due to design and/or exposure conditions. Special control applications justifying deviations from the above shall be subject to approval.

(h) Heat loss shall be calculated for ductwork or piping installed in vented attics, crawl spaces and unheated garages when central electric systems are to be installed.

(i) Heat loss calculations for radiant ceilings shall be based on a minimum of 100°F. ceiling temperature.

(6) Commercial and industrial electric space heating:

(a) When required by the department of labor and industries or when diversity is requested on sizing service entrance equipment, heat loss calculations and plans shall be submitted.

(b) A minimum demand factor of 75 percent of the installed space heating capacity used exclusively for heating may be used in sizing service entrance equipment if all the following conditions are met:

(i) Heat loss calculations shall be computed in accordance with subdivision 1-b, c or d where applicable.

The indoor temperature used for the purpose of calculating heat loss may vary according to the established use factor of the spaces involved.

(ii) Subsections 2, 3 and 4 shall be complied with.

(iii) Heating capacity installed meets or exceeds the submitted heat loss calculations.

(iv) Where electric heating equipment is controlled by three or more automatic temperature regulating devices.

(v) The service entrance conductors shall not have less ampacity than the largest feeder conductor. [Statutory

Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-590, filed 1/31/78.]

**WAC 296-46-59005 Appendix A--Residential heat loss tables.**

APPENDIX A - RESIDENTIAL HEAT LOSS TABLES

NOTE: All "added insulation" values are for MATERIAL ONLY. R-Values for construction were included in the calculations deriving the watt loss factors in the following tables.

**Table 1**

**Windows and Doors**

Watt Loss Factor (Per Square Foot)

Temperature Difference	Doors

\* Based on 20° temperature difference (70° minus 50°) across ceiling area. For radiant ceiling installations use figures in parentheses, based on 50° temperature difference (100° minus 50°).

\*\* Walls and floors based on 10° temperature difference (70° minus 60°).

**Table 10**  
Infiltration

Watt Loss Factor (Per Cubic Feet of Volume)

Temperature Difference	Sunken Basement 1/2 Air Change Per Hour	2/3 Air Change* Per Hour	1 Air Change Per Hour
50°F	.13	.17	.26
55°F	.14	.19	.29
60°F	.16	.21	.32
70°F	.18	.25	.37
80°F	.21	.28	.42
90°F	.24	.32	.48

\* For rooms with weatherstripped doors and insulated glass or storm windows.

**Table 11**  
Duct Heat Loss Multipliers  
(Central Systems Only)

NOTE: It is recognized that detailed duct layouts seldom accompany floor plans; therefore, this table is based on average duct design and shall be used to estimated duct heat loss, unless calculation of duct heat loss is based in accordance with formulas outlined in manuals listed in WAC 296-46-590 (1)(b).

Duct Location	Duct Insulation*	Approximate Installed R-Value	Multiplier**
Ducts located in unconditioned spaces such as attics, vented crawl spaces and unheated garages	No Insulation	R-0	0.70
	1" duct wrap	R-3.50	0.20
	1-1/2" duct wrap	R-5.00	0.16
	2" duct wrap	R-7.00	0.10
	1" rigid duct insulation	R-4.50	0.10
	3" duct wrap	R-9.00	0.08
	4-1/2" duct wrap	R-11.00	0.06

Ducts located in conditioned space – no duct heat loss applicable.

\* Nominal thickness listed.

\*\* Multiplier assumes all joints are taped to prevent excess air loss.

Example: A house has a structure heat loss of 10,000 watts. Approximately 60% of the ductwork is located in unconditioned space and is insulated with 1-1/2" of duct wrap (R-5.0)

Refer to heat loss calculation form

- (1) Structure heat loss (SHL) = 10,000 Watts
- (2) 1-1/2" wrap duct insulation (thickness or R-value)
- (3) Duct heat loss multiplier (Table 11) DHLM – 0.16
- (4) 60% = 0.6 fraction of duct in unconditioned space
- (5) Estimated duct heat loss = SHL (1) X DHLM (3) X Fraction (4) = (10,000) X (0.16) X (0.60) = 960 Watts
- (6) Total heat loss (1 plus 5) = 10,960 Watts

**For central hydronic systems**

Calculation of piping heat loss for central hydronic systems shall be used on formulas outlined in manuals listed in WAC 296-46-590 (1)(b).

**Table 12**  
Mobile Home  
Walls  
(R=2.2) (U=.45)

Watt Loss Factor (Per Square Foot)

Temperature Difference	No Added Insulation	R-7 Added Insulation	R-8 Added Insulation	R-11 Added Insulation	R-13 Added Insulation
50°F	6.7	1.6	1.4	1.1	0.97
55°F	7.4	1.8	1.6	1.2	1.10
60°F	8.0	1.9	1.7	1.3	1.20
70°F	9.4	2.2	2.0	1.6	1.40
80°F	11.0	2.6	2.3	1.8	1.50
90°F	12.0	2.9	2.6	2.0	1.70

ceiling cable or panel heat add 30° to the temperature difference listed in WAC 296-46-59010 (Appendix B).

**Total resistance:** Is the sum of the thermal resistance of the basic construction found at the top of each table and the thermal resistance of the insulation material.

**Table 13**

Mobile Home  
Ceiling (R=2.5)

\* Floor heat loss based on mobile home having skirting around it.

**CALCULATION OF WATT LOSS FACTORS**

**FOR INSULATION R-VALUES NOT GIVEN IN TABLES**

Use the following formula:

$$\text{Watt Loss Factor} = \frac{\text{Temperature Difference}}{3.4 \times \text{Total Resistance}}$$

Where:

**Temperature difference:** Is the indoor to outdoor temperature difference listed in WAC 296-46-59010 (Appendix B), except for

Example:

A floor over vented crawl space is insulated with R-24 insulation and is located in an area with a design temperature difference of 50°F. Calculate the watt loss factor.

Solution:

Basic construction resistance (Table 6)	=	4.3
Resistance of insulation	=	24.
<hr/>		
Total resistance		28.3

$$\text{Watt Loss Factor} = \frac{\text{Temperature difference}}{3.4 \times \text{Total resistance}}$$

$$= \frac{50}{3.4 \times 28.3}$$

$$= .52 \text{ Watts/Sq. Ft.}$$

To convert BTU per hour to watts, the following formula will apply:

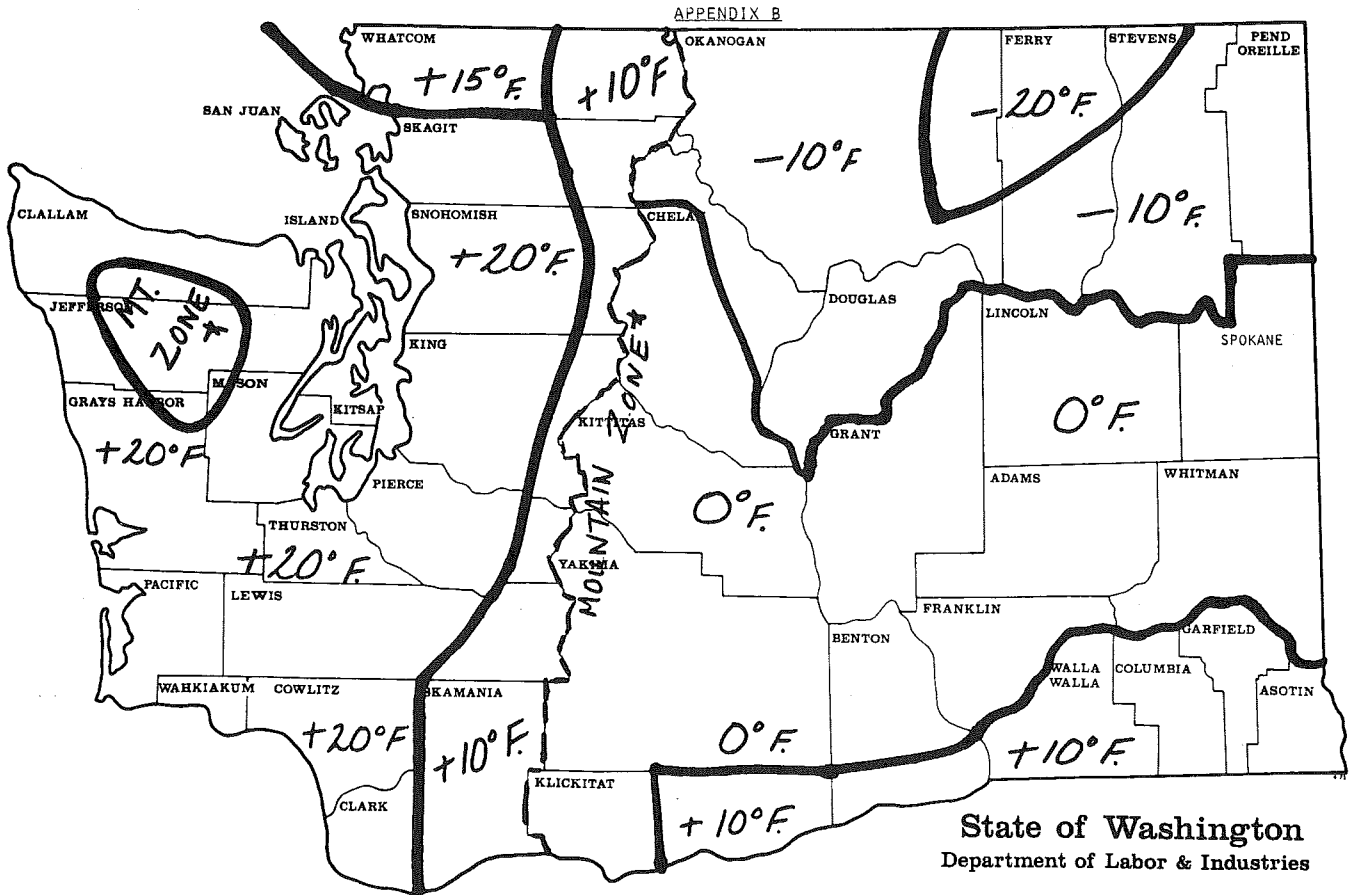

$$\text{Watts} = \frac{\text{BTUH}}{3.413}$$

$$\text{BTUH} = \text{Watts} \times 3.413$$

[Statutory Authority: RCW 19.28.060. 78-02-098 (Order 77-31), § 296-46-59005, filed 1/31/78. Formerly Appendix A.]

**WAC 296-46-910 Inspection fees.** To calculate the fees, amperage will be based on over current device.

(1) Fee for inspection of service, or feeder for a lot, berth or dwelling unit and other nonresidential structures:

- 1 - 200 AMP - \$30
- 201 - 400 AMP - \$40
- 401 - 1000 AMP - \$50
- 1001 - Over AMP - \$60

Plus each branch circuit added or altered - \$1 -  
First 200 circuits over 200 no extra fee.

A temporary construction service for lighting and power - \$30 - No charge for circuits.

- (2) In addition to the inspection fee as determined in subsection (1) of this section, the fee for feeder installations is twenty-five percent of the fee for service installations of like ampacity with a minimum fee of \$10 for each feeder when inspected at the same time on the same permit.
- (3) The fee for new circuits, circuit extensions, and circuit alterations where the service or feeder is not modified, shall be \$30 for one to four circuits inspected at the same time on the same premises under a single permit and \$1 for each additional circuit. The total fee shall be no greater than the fee for a new service of like ampacity.
- (4) To calculate the fees, the following shall be classed as separate services:
  - a. Feeders that terminate in a separate building; and
  - b. Secondaries of transformers that power burglar alarms or fire alarms, or that have a capacity greater than 600 VA.
- (5) In addition to the inspection fee of subsection (1) of this section, a fee of \$10 shall be charged for inspection of each of the following additional units when inspection is at the same location, at the same time and on the same permit:
  - a. Mobile home service in a mobile home park.
  - b. Mobile home feeder where service is existing in a mobile home park.
  - c. Each lot in a recreational vehicle park to which power is supplied.
  - d. Yard pole meter loops or similar isolated metering installations.
  - e. Each unit of transient worker housing.
  - f. Outbuilding on residential property served by a circuit(s).
  - g. Motors 10 HP or larger.
- (6) The fee for sign and outline lighting circuits is \$30 for one to four circuits inspected at the same time on the same premises under a single permit and \$1 for each additional circuit.
- (7) In addition to the service and feeder installation fees, the fee for inspecting each electrically driven irrigation machine is \$30 plus \$5 for each tower or drive motor.
- (8) The fee for a plan review request pursuant to WAC 296-46-140(1) is twenty-five percent of the electrical work permit fee as determined by WAC 296-46-495, plus a fee of \$25. The fee for a plan review request pursuant to WAC 296-46-140(2) is thirty-five percent of the electrical work permit fee as determined by WAC 296-46-495, plus a fee of \$25.

The fee for review of electrical plans voluntarily requested pursuant to WAC 296-46-140(4) is \$30 per hour or a fraction of an hour.

- (9) A fee of \$32 per hour and \$16 for each one-half hour additionally shall be paid before approval of the installation if the following services are necessary:
  - a. Trips to inspect when the permit submitter has given notice to the inspector that the work is ready for inspection when it is not, or if the submitter has given an erroneous address.
  - b. More than one additional inspection per permit to inspect corrections required by the inspector as a result of carelessness or neglect, or for improperly responding to a corrective notice.
  - c. Each trip necessary to remove a red tag from the jobsite posted because uncertified electricians were working on the jobsite.
  - d. When corrections have not been made in the prescribed time, unless an exception has been requested and granted.
- (10) The fee for emergency, standby, and resource recovery generators up to 50 KW is \$30. The fee for a generator installation larger than 50 KW that constitute the main source of power is that for the applicable services and feeders in subsections (1) and (2) of this section.
- (11) A person or business that fails to submit a fee and to obtain an electrical wiring permit for a completed electrical job before the department inspects the work must pay a double fee for the permit.
- (12) On jobs requiring partial or progress inspections, "one" inspection is allowed per \$32 of fee. Additional inspections will be at the fee in subsection (9) of this section.
- (13) Fees for carnival electrical inspections.
  - a. The department will, for \$32 per hour, inspect carnival rides, concessions, and generators before the first show of each year. This pre-season inspection is encouraged; it may save a carnival operator a large amount on inspection fees.
  - b. If a ride, concession, or generator has not had a pre-season inspection, a carnival, circus, travelling show must pay a fee of \$10 for each ride, concession, or generator to which power is supplied for the first inspection each year. An insignia of approval will be affixed to each ride, concession, and generator to indicate the year and date.
  - c. The department shall inspect a ride, concession, or generator each additional time the ride, concession, or generator is set up. For those rides, concessions, and generators that have been inspected and have insignia of approval, the fee shall be \$50 for up to the

first ten rides, concessions, or generators, and \$2 each for all additional rides, concessions, and generators. If a ride, concession, or generator has no insignia of approval, the fee for that ride, concession, or generator shall be that charged in b. of this subsection.

### Chapter 296-47 WAC

#### ELECTRICAL WIRING AND APPARATUS

**Reviser's note:** On March 29, 1961, the department of labor and industries filed with the code reviser's office the November 1959 edition of the N.B.F.U. National Electrical Code #70.

On March 31st, the code reviser received a letter from the department stating that such code was adopted by the procedure prescribed by law.

The text of the National Safety Code has been omitted from publication under the authority of RCW 34.04.050(3). Copies are available from the department of labor and industries.

##### DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER

296-49-001	Conditions of reciprocity. [Order 73-14, § 296-49-001 and 296-49-011, filed 7/31/73.] Recodified as WAC 296-48-011.
296-49-012	Agreements with out-of-state jurisdictions. [Order 73-14, § 296-49-012, filed 7/31/73.] Recodified as WAC 296-48-012.

**WAC 296-49-005 Foreword.** The state mobile home and travel trailer law, RCW 43.22.420, establishes the governor appointed mobile home and recreational vehicle advisory board and fixes its administrative responsibilities. The advisory board's principal function is to assist the director of labor and industries in adopting and promulgating reasonable rules and regulations in furtherance of safety to life and property with respect to

plumbing, heating and electrical installations, minimum inspection procedures and the adoption of rules and regulations pertaining to the manufacture of mobile homes and recreational vehicles. While the advisory board will, upon request of the director of the department of labor and industries or the mobile home and recreational vehicle section thereof, aid in the administrative interpretation of the national codes and rules and regulations covering standards for plumbing, heating and electrical installations in the state of Washington, it will not function as board of appeal nor will it render decisions concerning the application or interpretation of any adopted rules and regulations to any person, firm or corporation engaged in the business of manufacturing mobile homes or recreational vehicles.

The primary purpose of the following rules is to provide a uniform procedure whereby persons, firms or corporations interested in communicating with the department of labor and industries on any subject matter relative to rules and regulations which should be adopted, amended or repealed for plumbing, heating or electrical installations in the state of Washington or relative to the operation of the mobile home and recreational vehicle section of such department may be heard. [Order 70-3, § 296-49-005, filed 4/29/70.]

**WAC 296-49-010 Definitions.** Whenever used in these rules, the words:

**BOARD:** Shall mean the Washington state mobile home and recreational vehicle advisory board appointed by the governor pursuant to RCW 43.22.420.

**DEPARTMENT:** Shall mean the department of labor and industries of the state of Washington.

**DIRECTOR:** Shall mean the director of the department of labor and industries.

**REGULAR MEETING:** Shall mean the quarterly meetings held by the board on the last Friday of the months February, May, August and November.

**SPECIAL MEETING:** Shall mean any meeting of the board called by the chairman thereof or the director and held at times other than the regular meetings. [Order 70-3, § 296-49-010, filed 4/29/70.]

**WAC 296-49-015 Officers.** In addition to the chairman and secretary of the board, as provided for by RCW 43.22.420, the board shall elect from its members a vice chairman who shall perform all functions of the chairman in his absence. [Order 70-3, § 296-49-015, filed 4/29/70.]

**WAC 296-49-020 Internal management.** The board shall adopt written rules of procedure for its internal management which shall include, "Roberts' Rules of Order, Revised," copies of such rules of procedure shall be made available to interested persons upon written request. [Order 70-3, § 296-49-020, filed 4/29/70.]

**WAC 296-49-025 Duties.** (1) The board shall study proposed rules and regulations submitted to it by the director or by the mobile home and recreational vehicle

section of the department and shall make recommendations to the director concerning their adoption and promulgation.

(2) The board shall further develop and submit for consideration to the director administrative procedures, organizational plans and rules relating to improving the function of the mobile home and recreational vehicle section.

(3) The board shall at each regular or special meeting consider any written proposals made by any persons, firms or corporations for new rules or regulations or for changes in administrative procedures of the mobile home and recreational vehicle section provided such proposals are submitted in writing to the secretary of the board at least fifteen days prior to any such meeting so that the same may be properly included on the agenda for such meeting. [Order 70-3, § 296-49-025, filed 4/29/70.]

**WAC 296-49-030 Hearings.** Any person, firm or corporation desiring to be heard on any subject matter relative to rules or regulations which should be adopted, amended or repealed for plumbing, heating and electrical installations in the state of Washington, or relative to the operation of the mobile home and recreational vehicle section of such department at any regular meeting of the board shall present a written request to that effect to the secretary of the board at least fifteen days prior to the next regular meeting, setting forth a summary of any and all proposals on which the hearing is requested. [Order 70-3, § 296-49-030, filed 4/29/70.]

**WAC 296-49-035 Appearance and practice before board.** No person may appear in a representative capacity before the board other than the following:

(1) Attorneys at law duly qualified and entitled to practice before the supreme court of the state of Washington.

(2) Attorneys at law duly qualified and entitled to practice before the highest court of record of any other state, if the attorneys at law of the state of Washington are permitted to appear in a representative capacity before administrative agencies of such other state, and if not otherwise prohibited by Washington state law.

(3) A bona fide owner, officer, partner, or full time employee of an individual, firm, association, organization, partnership, or corporation who appears for such individual, firm, association, organization, partnership or corporation or a person (other than an attorney at law as provided in subparagraphs (1) and (2) above) appointed in writing to represent an individual, firm, association, organization, partnership or corporation. [Order 70-3, § 296-49-035, filed 4/29/70.]

**WAC 296-49-040 Solicitation of business unethical.** It shall be unethical for persons acting in a representative capacity before the board to solicit business by circulars, advertisements or by personal communication or interviews not warranted by personal relations, provided that such representatives may publish or circulate business cards. It is equally unethical to procure business by

solicitors of any kind. [Order 70-3, § 296-49-040, filed 4/29/70.]

**WAC 296-49-045 Standards of ethical conduct.** All persons appearing in proceedings before the board in a representative capacity shall conform to the standards of ethical conduct required of attorneys before the courts of Washington. If any such person does not conform to such standards, the board may decline to permit such person to appear in a representative capacity in any proceeding before the board. [Order 70-3, § 296-49-045, filed 4/29/70.]

**WAC 296-49-050 Appearance by former employee.** No former employee of the board or member of the attorney general's staff may at any time after severing his employment with the board or the attorney general appear, except with the written permission of the board, in a representative capacity on behalf of other parties in any proceeding wherein he previously took an active part as a representative of the board. [Order 70-3, § 296-49-050, filed 4/29/70.]

**WAC 296-49-055 Former employee as expert witness.** No former employee of the board shall at any time after severing his employment with the board appear, except with the written permission of the board, as an expert witness on behalf of other parties in any proceeding wherein he previously took an active part in the investigation as a representative of the board. [Order 70-3, § 296-49-055, filed 4/29/70.]

**WAC 296-49-060 Computation of time.** In computing any period of time prescribed or allowed by the board rules, by order of the board or by any applicable statute, the day of the act, event, or default after which the designated period of time begins to run is not to be included. The last day of the period so computed is to be included. [Order 70-3, § 296-49-060, filed 4/29/70.]

**WAC 296-49-065 Administrative Procedure Act.** All proceedings regarding supplemental rules and regulations shall comply, where applicable, with the provisions of the Administrative Procedure Act, chapter 34.04 RCW, and any amendments thereto. [Order 70-3, § 296-49-065, filed 4/29/70.]

**Chapter 296-50 WAC**

**SAFETY STANDARDS--MANUFACTURE OF EXPLOSIVES**

WAC	
296-50-010	Foreword.
296-50-020	Introductory.
296-50-030	Management's responsibility.
296-50-040	Employee's responsibility.

296-50-170	Powder repair shop.
296-50-180	Batch nitrator.
296-50-190	Separator and prewash operation.
296-50-200	N.G. neutralizing house and store house.
296-50-210	Acid operations.
296-50-220	Spare parts houses.
296-50-230	Nitrocotton screening and drying houses.

**WAC 296-50-010 Foreword.** These safety standards are promulgated under and by authority of RCW 49.16.010, 49.16.080, 49.16.090, 49.16.100 and 49.16.050 by hearing held at Olympia June 28, 1957 for the purpose of direction and guidance of manufacturers of explosives in order to comply with RCW 49.16.030. ". . . to render the work and place of work safe . . ." They shall become effective August 15, 1957. Attention is called to RCW 70.74.010 which reads as follows: "The term 'explosive' or 'explosives' whenever used in this act, shall be held to mean and include any chemical compound or mechanical mixture, that is commonly used or intended for the purpose of producing an explosion that contains any oxidizing and combustible units, or other ingredients in such proportions, quantities or packing, that an ignition by fire, by friction, by concussion, by percussion or by detonator or any part of the compound or mixture may cause such a sudden generation of highly heated gases that the resultant gaseous pressures are capable of producing destructive effects on contiguous objects or of destroying life and limb." [Foreword, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-020 Introductory.** For reasons of brevity the safety educational standards as set forth in the general safety standards of the state of Washington, are not reprinted here but attention is called to several educational requirements contained in the above named standards. [Introductory clause, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-030 Management's responsibility.** (1) Report directly to the division of safety, Olympia, by telephone or telegraph (collect), immediately, any accident resulting in an immediate or probable fatality.

(2) Equipment involved in an accident resulting in an immediate fatality, shall not be moved, until a representative of the division of safety investigates the accident and releases such equipment, except where removal is essential to prevent further accident. Where necessary to remove the victim such equipment may be moved only to the extent of making possible such removal.

(3) Immediately upon notification of accident, department representative shall inform employer when investigator will be available. If circumstances exist whereby investigation will be delayed, department representative may permit employer to proceed with normal job operations.

[Title 296 WAC—p 1006]

(4) Upon arrival of division of safety investigator, employer shall assign to assist the investigator, the immediate supervisor and all employees who were eye witnesses to the accident, or whoever the investigator deems necessary to complete his investigation. Each witness shall give his own version and there shall be no discriminatory action taken for anyone testifying in any investigation.

(5) To prohibit any employee from working on or being in the vicinity of any job while under the influence of or affected by intoxicants. Employers shall be responsible for the actions of any employee known to be in an intoxicated condition while on the job.

(6) Assume the responsibility of work assignment so that no member of any production or maintenance crew shall be required to work in a position or location so isolated from other members of the crew that he is not in ordinary calling distance in case of an emergency.

(7) Make sure that every man has been trained for the work he is assigned to and has been thoroughly instructed in his duties and responsibilities. [Rule 1, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-040 Employee's responsibility.** He shall not report to the job while under the influence of intoxicants and shall not use intoxicants or drugs covered by the federal narcotics act while on the job.

To advise inexperienced fellow employees of safe ways to do their work and warn them of dangers to be guarded against.

Employees shall wear, use and properly care for personal protective safety equipment issued to them and return same to employer on termination of employment.

Workmen exposed to overhead hazards shall wear approved safety hats.

Employees should wear safety shoes when their feet are exposed to hazards of falling materials.

Safety inspector plan.

Settlement of disputes (safety inspectors).

Safety committee plan.

Settlement of disputes (safety committee).

Safety educational reports.

Safety bulletin board. [Rule 2, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-050 Minimum requirements for first aid.** (1) RCW 51.36.030 provides that: "Every employer, who employs less than fifty workmen, shall keep at his plant a first aid kit equipped as required by the department with materials for first aid to his injured workmen. Every employer who employs within a radius of one-half mile of any plant or establishment fifty or more workmen, shall keep one first aid station equipped as required by the department with materials for first aid to his injured workmen, and shall cooperate with the department in training one or more employees in first aid to the injured. The maintenance of such first aid kits and stations shall be deemed to be a part of any educational standards established under the provisions of sections 7734 and 7736."\*

(2) Adequate provisions for the first aid treatment of injured persons shall be maintained at all times in every industrial establishment and on every operation covered by the act.

(3) Employers shall arrange to have as many workmen as possible take a full course in first aid training.

(4) There shall be at least one employee who has either a Red Cross, U.S. bureau of mines, or department of labor and industries current first aid certificate available during all operating hours in each plant, department or branch establishment employing less than 15 persons. (A current first aid certificate is one which is less than 3 years old.)

(5) There shall be at least two employees who have either Red Cross, U.S. Bureau of Mines, or department of labor and industries current first aid certificates available during all operating hours in each plant, department, or branch establishment employing more than 15 persons. (A current first aid certificate is one which is less than 3 years old.) [Rule 3, filed 3/23/60, effective 8/15/57.]

**\*Reviser's note:** Section 7734 above is now RCW 49.16.050. Section 7736, which was repealed by Laws of 1927, section 19, page 762, read as follows: "The educational standards for coal mines and coal mining shall be prescribed by a board hereby created to be known as the 'state mining board' consisting of two members to be appointed by the state safety board."

For later law see RCW 43.22.120 et seq. and 78.40.780 et seq.

**WAC 296-50-060 First aid kit.** (1) A first aid kit shall be available on small construction jobs, line crews, and other transient or short duration jobs. On all such operations, or at small plants or division establishments employing less than fifty workmen, there shall be a first aid kit containing the following supplies or their equals as recognized by the plant or establishment medical director or medical consultant, or by the department of labor and industries.

1 package iodine applicators (not less than 6) and 1 package antiseptic applicators (not less than 6) containing some other approved antiseptic.

1 package aromatic spirits of ammonia ampoules and 1 package of ammonia inhalants in ampoules.

1 package water soluble base burn treatment.

6 triangle bandages 40" size.

1 tourniquet - buckle type.

1 1/2" x 5 yards Z. O. adhesive (sterilized).

6 compress bandages 4" x 4" pads (sterilized and individually wrapped in water proof packages).

4 compress bandages 2" x 2" pads (sterilized and individually wrapped in water proof packages).

2 2" roller bandages (sterilized).

6 3" x 3" gauze pads (sterilized and individually wrapped).

1 package 3/4" x 1" water proof adhesive compresses (100 in package).

1 pair scissors and 1 pair tweezers.

Proper antidotes for poisons to which workers may be exposed.

1 package approved eye dressing.

A chart showing clearly the pressure points and tourniquet points of the human body shall be fastened on the inside of the cover or door of the container for ready reference.

(2) All crew trucks, power shovels, cranes, locomotives, loaders, cats, logging trucks, speeders, freight trucks and similar equipment and vehicles shall be equipped with a standard dust and moisture proof first aid kit (a moisture proof kit is one having a rubber seal around the inside of either of the closing edges to keep moisture from entering kit when closed) containing the following items:

1 package iodine applicators (not less than 6) and 1 package antiseptic applicators (not less than 6) containing some other approved antiseptic.

4 triangle bandages 40".

3 2" compress bandages.

3 4" compress bandages.

1 package 3/4" or 1" waterproof adhesive compresses (16 in package).

1 tourniquet - buckle type.

1 pair scissors and 1 pair tweezers.

1 package aromatic spirits of ammonia ampoules for internal use.

1 package ammonia inhalants in ampoules.

1 package water soluble base burn treatment.

2 packages 3" x 3" sterile gauze pads—4 to a package.

1 package 18" x 36" gauze (sterile).

1 package 36" x 36" gauze (sterile).

1 package approved eye dressing.

2 2" roller bandages (sterilized).

1 chart showing clearly the pressure points and tourniquet points of the human body shall be fastened on the inside of the cover of the container for ready reference.

(3) In addition to the first aid kit which must be kept on the equipment or at the place of work, there shall be available within the closest practicable distance from the operations (not to exceed 1/2 mile) the following items:

1 set of arm and leg splints.

2 all wool blankets (properly protected and marked).

1 stretcher.

(4) First aid instructors will, upon request, be furnished to industries by the division of safety of the department of labor and industries.

(5) All foremen, supervisors, or persons in direct charge of crews should have either a Red Cross, U.S. bureau of mines, or department of labor and industries current first aid certificate; it being understood that a certificate is void 3 years from date of issue.

(6) Workers whose injuries require the use of a stretcher or ambulance or while being transported by other means shall be accompanied to the hospital by an attendant other than the driver. This attendant shall be first aid trained if possible, and shall ride with the patient.

(7) All ambulances used to transport injured workers shall be equipped with a fracture board as approved by the department of labor and industries.

(8) All drivers of ambulances transporting workmen covered by industrial insurance shall be trained in basic and advanced first aid as approved by the department of labor and industries.

(9) Immediate and proper transportation shall be provided for injured persons requiring the same, and such transportation shall have precedence over all other transportation under the control of the firm or party upon whose operation the accident occurs.

(10) All first aid kits shall be kept filled and maintained in proper condition.

(11) When practical, a poster shall be fastened and maintained either on or in the cover of each first aid cabinet and at or near all phones plainly stating the phone numbers of all available doctors, hospitals, and ambulance service within the district of the employer.

(12) Every fixed establishment employing more than 200 persons shall have a first aid room plainly designated as such. It shall be well lighted and well ventilated, kept spotlessly clean and orderly, provided with hot and cold running water, and fully equipped at all times. There shall be either a person who has a current first aid certificate, or a trained nurse in charge of the first aid room. [Rule 4, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-070 First aid room.** (1) The minimum first aid supplies to be kept in the first aid room shall be:

1 package iodine applicators (not less than 24 in a package) and 1 package antiseptic applicators (not less than 24 in a package) containing some other approved antiseptic.

1 package aromatic spirits of ammonia ampoules and 1 package ammonia inhalants in ampoules.

2 packages water soluble base burn treatment.

6 triangle bandages 40" size.

1 tourniquet - buckle type.

1 1" x 5 yds. Z. O. adhesive (sterilized).

1 2" x 5 yds. Z. O. adhesive (sterilized).

6 compress bandages 2" x 2" pads sterilized and individually wrapped in waterproof packages.

6 compress bandages 4" x 4" pads sterilized and individually wrapped in waterproof packages.

1 package approved eye dressing.

White vaseline.

2 each of 2", 3" and 4" roller bandages (sterilized).

12 3" x 3" sterile gauze pads (individually packaged).

18" x 36" sterile gauze.

1 pair scissors, 1 pair tweezers, medicine droppers, assorted safety pins and paper drinking cups.

1 bottle rubbing alcohol and 1 package absorbent cotton.

6 finger cots.

1 set arm and leg splints.

Proper antidotes for poisons to which workers may be exposed.

A chart clearly showing pressure and tourniquet points shall be fastened on inside of cover or door of materials container.

1 stretcher and 2 all wool blankets (properly protected and marked).

1 container, dust proof, to be used solely for storage of first aid materials.

1 cot, complete with springs, mattress, blankets and 2 pillows (if both men and women are employed in the plant or establishment, privacy shall be provided).

2 hot water bottles.

1 emergency first aid kit, 24 unit size.

Some means of sterilizing tweezers shall be provided for.

(2) The foregoing minimum safety educational and first aid program, of necessity, is briefly covered, and calls for less than average safety work. It is not anticipated that there will be conflict with other existing programs or requirements. It is expected that these minimum requirements will become the basis on which a more complete program, suited to the size and the needs of the individual establishment, will be set up.

(3) Where any firm or majority group of employees of any firm finds that these educational standards cannot be adhered to in the operation involved, an application for adoption of a different plan of safety organization (on the form furnished by the department) may be filed with the division of safety, department of labor and industries. After full investigation of the operation of the firm, and consultation with the management and employees, the department may, if it is found that these educational standards cannot be complied with, approve the plan proposed or another type of plan recommended by the department (at its option) provided it conforms to the following provisions:

(a) The plan provides full management-employee participation.

(b) The plan is based on sound principles of accident prevention.

(c) The result will not be less than that provided in these educational standards.

(d) Any plan approved may be canceled on 30 days' notice by the division of safety after consultation with the management and employees.

(4) No safety program will run itself. To be successful, the wholehearted interest of the employees' group and management must not only be behind the program, but the fact must also be readily apparent to all. [Rule 5, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-080 General regulations.** (1) Smoking is positively prohibited on the plant site except in buildings designated.

(2) No matches or lighters shall be permitted in the plant area except in locations designated by management.

(3) A search of the employees for matches shall be made frequently, and at no time shall the interval between searches exceed one month.

(4) Special clothing and shoes free of metal fasteners shall be worn by all employees regularly working in buildings where explosives are handled. Powder shoes shall not be resoled. Any pockets provided should be constructed of cloth mesh.

(5) Neither the shoes or the special clothing as set forth in (4) above shall be worn off the premises but shall be left in the change room.

(6) New employee shall not handle explosives or operate any equipment in connection with the manufacture of explosives until he has received thorough instructions in accordance with established practices.

(7) Employees shall not engage in practical jokes or horseplay.

(8) All tools and brooms must be kept in their proper place when not in use.

(9) Gloves must be changed frequently.

(10) Oily rags, waste and refuse must be kept in special covered containers and contents removed to the waste quite frequently.

(11) All fire equipment such as extinguishers, hose, etc., shall be kept in good condition and inspected quarterly.

(12) All employees shall be instructed in the use of fire extinguishers and other fire apparatus.

(13) Great care shall be exercised in the handling and transportation of all explosives and acids.

(14) Any material known to be contaminated shall not be sent to the powder line.

(15) All major equipment used in connection with the manufacture of explosives shall be grounded and grounding inspected at regular intervals to be determined by management.

(16) Dope cans or buggies shall be kept covered or inverted at all times except when being filled or emptied.

(17) Breathing of fumes of oxides of nitrogen is to be avoided. Should an employee inhale a sufficient amount to cause irritation, the employee should cease work immediately and report to first aid station.

(18) Instruction shall be posted in the first aid station pertaining to the treatment of acid burns and nitric oxide vapors.

(19) Goggles shall be worn by employees grinding sulphur, and respirators shall be stand-by equipment in case of bad atmospheric conditions.

(20) All buildings used in the manufacture of explosives shall be kept clean at all times. Daily, weekly and other regular cleanup schedules shall be established.

(21) No explosives in excess of the normal house limit shall be allowed to remain in operating buildings over night.

(22) Suitable maintenance and lubricating schedules shall be set up for each piece of powder machinery.

(23) All electric switches operating equipment shall be turned off during lunch period and at termination of shift.

(24) Equipment in buildings where explosives are manufactured shall not be worked on unless switch is locked in open position, except for minor adjustments.

(25) Shield shall be provided around all acid valves.

(26) Respirators shall be washed daily and cartridges changed when once used.

(27) All safety doors and exits in the houses handling explosives shall be kept clear at all times. Two alternate exits such as chutes or outside stairways shall be provided for each floor.

(28) Rubber mats or suitable shoe cleaning devices shall be provided and used when entering and before leaving the building.

(29) Do not make any repairs to equipment or to buildings until they have been thoroughly cleaned.

(30) All tools shall be handled carefully and oil desensitizer used liberally on the parts being worked on.

(31) Extreme care shall be used by all employees in connection with the use of or repairing of acid equipment.

(32) Any unusual conditions occurring should be reported to supervision immediately.

(33) Goggles and rubber gloves should be worn when working on acid cars.

(34) Brooms should be washed frequently.

(35) Employees in powder operations shall not respond to fire alarms to fight fire in clothing contaminated with powder or nitro-cotton.

(36) Operations in all buildings when explosives are being manufactured shall be closed down when there is an electric storm in the vicinity; all light and power switches shall be pulled, and employees are to go to change house until storm is over, except N.G. line must be secured.

(37) Whenever the state explosive inspector enters the plant to inspect the powder line, arrangements shall be made previously by the inspector in setting the date and time of inspection. While the inspection is in progress, the powder line shall not operate.

(38) In order to guard against inadvertent trespasses, all explosive manufacturing plants must be enclosed on all sides by a substantial fence of at least four barbed wires with warning signs (white background - red letters) attached at 100 ft. intervals, reading as follows: EXPLOSIVES—DANGER—KEEP OUT.

If natural barriers such as rivers, lakes, high cliffs, etc., form a boundary line, no fencing shall be required. [Rules A-1 through A-38, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-090 Dope house.** (1) Clean and inspect dope screens and brushes twice each shift. Leave screens out overnight. Oil machinery once per shift.

(2) Where electro magnets are used and when ammeter shows less than 3 amperes through magnets, trouble must be corrected before continuing operation.

(3) Keep spare screen on hand at all times for replacing screens with holes, or breaks. Remove defective screen from house immediately after it is replaced.

(4) All materials for delivery to the mixing house shall be thoroughly screened. Dope which falls on the floor under the screen should be swept up and hand screened into the mixing to which it belongs.

(5) Do not send hot dopes to mixing houses. Notify foreman or supervisor if unusual temperatures exist.

(6) Never slide sulfur over floor or down chutes or drop into an empty bin. (Sulfur is subject to static electricity and friction fires and must be handled carefully.) Keep bins full at all times.

(7) Keep dope cans or buggies covered or inverted at all times except when filling or emptying. Examine buggies' interior before filling.

(8) Collect all foreign objects from screen or magnet and send to powder line foreman. Report immediately any unusual material.

(9) Keep house clean and as free of dust as possible at all times.

(10) The following tools are permitted in this building:

- Wooden or rubber mallets
- Bronze bars on thong
- Metal-clad thermometer on thong
- Aluminum scoops or
- Shovels of aluminum or wood
- Brooms and counter brushes
- Spare dope screen
- Small scales
- Wooden hoes

(11) Daily clean-up. Remove screen, clean (wash if necessary) and inspect. Leave screen out overnight. Clean scales, radiators and all interior with compressed air and brush. Brush dirt from exterior of screen and dope cans or buggies. Sweep floors and send all sweepings to waste shed when the accumulation justifies.

(12) Weekly clean-up. In addition to daily clean-up, blow and brush down ceiling, walls and equipment and clean platforms outside the house. Sweep motor room.

(13) Semiannual clean-up. Remove dopes and wash down house.

(14) Powder uniforms and shoes in accordance with WAC 296-50-080(4) must be worn by employees in this house. Goggles and respirators shall be provided for use where needed, particularly when blowing or brushing down a house.

(15) Never work on equipment without pulling switches and locking the starting equipment, except for minor repairs. Pull all electric switches at the end of operating day.

(16) Inspect screens twice each shift or oftener, reporting any holes or breaks immediately to supervisor. Remove defective screen from house for repairs immediately.

(17) Where electro magnets are used, make certain that magnet lights are on during operation of screens. Remove tramp iron from magnets twice per shift and deliver accumulation to the line foreman at regular intervals.

(18) Check grounding frequently. The safety of the powder lines is dependent on receiving supplies free of foreign materials. Do not send any material to the lines unless every reasonable precaution has been taken to eliminate contamination.

(19) Before starting repairs on equipment, such as bins, dryers and screens, adequate precautions should be taken to prevent contamination with foreign substances. Check house and equipment for loose parts after repairs are made.

(20) Keep house clean.

(21) Keep tools, brooms, implements, etc. (when not in use) in the boards, racks or paper bags provided for them.

(22) Keep materials neatly and safely piled and protected to prevent entrance of any foreign material.

(23) See that all fire-fighting equipment is maintained in adequate condition for use at all times.

(24) Keep all bearings well lubricated and free from dust accumulation.

(25) All material prepared for delivery to the powder lines must be screened through six mesh stainless steel screen.

(26) Oily waste and rags must be placed in covered cans provided for that purpose. Clean rags and waste shall be kept in separate covered cans.

(27) Keep oily waste cans outside of buildings.

(28) No welding or open lights to be used at any time in this house without it being washed down prior, and written permission by the management is required. [Rules B-1 through B-28, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-100 Dynamite mixing house.** (1) Man limit - 3 employees, except supervision and truckers, provided, however, that 5 men may be used in tray-bagging operations where open tray is used for bagging and the operation is entirely manual.

(2) Oil machines and inspect carefully before starting to see that all equipment is in proper operating condition and that no foreign material is in bowls. See that bonding is secure. Run bowls empty for a short interval.

(3) If machine is not operating satisfactorily, shut down and notify foreman.

(4) Inspect screens used over bowls carefully before starting operation and before each mixing.

(5) If powder does not appear normal or there is any indication that it will not work satisfactorily for cartridge machines, notify foreman.

(6) Clean accumulation of dopes from equipment over bowl and edge of bowl after each dope is dumped.

(7) Sweep floor after each mixing.

(8) Do not mix and hold more powder in the house than is necessary for smooth operation. Mixed powder must not be held in mixer, except under unusual circumstances.

(9) Do not clean bowl or wheels while mixer is in motion.

(10) Examine buggies interior before adding any powder.

(11) It is advisable to use a respirator while shoveling out powder or working over the bowl.

(12) Not more than one N.G. buggy shall be permitted in this house at a time.

(13) The following equipment is allowed in this building while machine is in operation:

- Wooden shovels
- Wooden hoe and wooden scraper
- Floor broom
- Whisk brooms on tongs
- Aluminum dust pan
- Wall thermometer in a case

Oil can  
 Nitro-cotton scale  
 Fibre hand scoop  
 Permissible flash light  
 Plastic bottles  
 Rubber mallet  
 Wooden box for rags and cloth

(14) All tools shall be handled carefully and oil desensitizer used liberally on the parts being worked on. Before resuming operation, all tools and pieces of equipment shall be accounted for to be certain they do not become a hazard to the operation.

(15) Daily clean-up. Remove all powder and nitro-cotton from building and wipe inside of mixer and wheels. Wipe outside of N.G. buggy before returning to neutralizing house. Brush off powder buggies and trucks, and sweep floor thoroughly, sending sweepings to waste shed. Sweep platforms, track and motor rooms.

If mixer is operated more than one shift, the floor shall be thoroughly clean at end of earlier shift, and house left in orderly condition. Motors shall be stopped. Incoming operator shall inspect bowls and equipment before starting motors.

(16) The weekly clean-up shall be established in accordance with safe practices and such clean-up shall be agreed upon by management and the state safety inspector.

(17) Management is held responsible for the strict observance of all the above rules.

(18) See that all fire-fighting equipment is maintained in adequate condition for use at any time. [Rules C-1 through C-18, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-110 Dynamite pack machine house.**

(1) Man limit - 3 employees, except supervision and truckers, provided that in cases where bag-packing and long length, large diameter cartridges are packed, 4 men shall be the limit.

(2) Before starting machine for the day or after repairs or changes, inspect it thoroughly for foreign material and see that all moving parts are oiled. Inspect inside of hopper, install stirrers and examine tamps. Operate machine empty for a short interval. It is very important that machine be accurately lined up and correctly timed.

(3) If machine is not operating satisfactorily, shut down and notify foreman. If any part of equipment is missing or tools unaccounted for, the machine must be shut down, the foreman called and all powder in the house screened, if the part is not located.

(4) Do not replace a broken shear-pin in drive shaft and restart machine until, (a) the foreman has been notified, (b) the powder has been cleaned from the hopper and sent to the waste opening house for screening and (c) you have assured yourself that machine is in satisfactory operating condition.

(5) Do not tighten tamps while machine is in motion.

(6) Keep floor clean. Remove powder from under front of machine as often as a hazard would indicate. Floor sweepings should be screened and sent to the waste house.

(7) Keep covers on buggies except when shoveling powder out, or filling with cartridged powder.

(8) Check drive to stirrers to see that there is no slippage. If it is slipping, shut down machine and notify foreman at once. Keep stirrer bearing well oiled. Applies to Starrett type of machine.

(9) No spare parts are to be kept in house, fan or motor rooms or in waste shed. Keep in parts house.

(10) The following miscellaneous equipment is allowed in house while machine is in operation:

Wooden or aluminum hoes  
 Wooden shovels  
 Wooden or aluminum floor scrapers  
 Floor brooms  
 Oil cans  
 Scale (stick count) chart  
 Aluminum dust pans on thong  
 Whisk brooms on thong  
 Wall thermometer  
 Wooden tamp on thong

(11) All tools shall be handled carefully and oil desensitizer used liberally on the parts being worked on. Before resuming operation, all tools and pieces of equipment shall be accounted for to be certain they do not become a hazard to the operation.

(12) Clean-up for machine change or repairs. All powder must be cleaned from the hopper. Clean loose powder from machine and floor and remove all powder, including waste, from the house. When changing stirrers, tamps and nipple plate, it is necessary to clean the hopper thoroughly in addition to doing the above.

For major repairs to house or machine, make clean-up as specified below for weekly clean-up.

No powder shall be delivered to building until machine operator advises that machine is ready for operation.

(13) Remove all waste and cartridged powder from buildings before starting machine clean-up. Clean powder hoppers and stirrers. Clean off all parts of machine and radiators. Remove all dry clean powder recovered to the waste house for screening. Sweep floor thoroughly and send dirty sweepings to waste shed. Leave stirrers out for operators to install on the following operating day. Sweep outside platforms and track. If the house is operated two shifts, at the end of the first shift all powder is put into hopper and worked down to the allowable limit and the floor swept. All waste and sweepings shall be removed.

(14) The weekly clean-up shall be established in accordance with safe practices and such clean-up shall be agreed upon by management and the state safety inspector.

(15) Management is responsible for the enforcement of all of the above rules.

(16) See that all fire-fighting equipment is maintained in adequate condition for use at any time. [Rules D-1 through D-16, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-120 Gelatin mixing house.** (1) Man limit - 3 employees, except supervision and truckers.

(2) Lubricate all machinery thoroughly and inspect bowls and stirrers carefully before starting up on each shift, to insure that all equipment is in good operating condition and the bowls are free of foreign material. Where figure eight type of mixer is used, house operator should check clearance of mixer paddles each morning before starting by passing the hand under and around end of paddles to determine if there is satisfactory clearance at these points. Run empty bowls for a short interval and lower and raise paddles.

(3) Dope screens above mixers. These screens shall be inspected daily and before each mixing.

(4) Shut down and notify foreman if machine is not working properly.

(5) Where figure eight mixer is used, stirrers must be locked. Lock wheels on both sides in the "up" position while digging out or dumping powder, and lock wheels on both sides in the "down" position before starting to mix. Removable covers must be in place over the mixing bowls while mixing is in operation.

(6) Floor around bowl shall be swept after each mixing and sweepings stored in a closed container and sent to the waste shed.

(7) Mixing house buggies shall be inspected for foreign material before filling from mixer.

(8) Wooden shovels or scraper should be used to remove powder from stirrers on figure eight mixer.

(9) Mixing bowl temperatures shall not exceed 130°F.

(10) Not more than one N.G. buggy shall be permitted in this house at a time. The buggy shall be removed from the house after emptying.

(11) Do not add any material; use brush or whisk broom on any object within the immediate vicinity of a figure eight mixer while it is in operation; do not take sample from bowl while it is in operation.

(12) Floors to be kept clean. Walls and equipment to be maintained reasonably free of dust.

(13) The following miscellaneous equipment is permitted in this building while machine is in operation:

- Wooden or aluminum hoes
- Wooden shovels
- Wooden or aluminum floor scrapers
- Floor brooms
- Oil cans
- Scale (stick count) chart
- Aluminum dust pans on thong
- Whisk brooms on thong
- Wall thermometer
- Wooden tamp on thong

(14) All tools shall be handled carefully and oil desensitizer used liberally on the parts being worked on. Before resuming operation, all tools and pieces of equipment shall be accounted for to be certain they do not become a hazard to the operation.

(15) Daily clean-up. Clean thoroughly with solvent the inside of bowl and stirrers. Brush off powder buggies and trucks. Wipe outside of N.G. buggy before returning to store house. Brush down outside of bowls. Sweep floors, platforms, track and motor rooms. Send all

sweepings to waste shed. It is recommended that goggles be used in clean-up operations.

If mixer is operated more than one shift, the floor shall be swept thoroughly at end of earlier shift and house left in orderly condition. Motors shall be stopped and electric switches disconnected. Incoming operator shall inspect bowls and equipment before starting motors.

(16) The weekly clean-up shall be established in accordance with safe practices and such clean-up shall be agreed upon by management and the state safety inspector.

(17) The management is held responsible for the strict observance of all of the above rules. [Rules E-1 through E-17, filed 3/23/60, effective 8/15/57.]

#### WAC 296-50-130 Gelatin cartridge machine house.

(1) Man limit - 3 employees, except supervision and truckers.

(2) Before starting machine for the day or after repairs or changes, inspect carefully to see that machine is well oiled and bowl is free of foreign material. For Starrett Stuffer type of machine, check rigidity of worms. Operate machinery empty for a short interval.

(3) If machine is not operating satisfactorily, shut down and notify foreman. Do not attempt to run powder which is too stiff.

(4) If any part of equipment is missing or tool unaccounted for, the machine must be shut down and the foreman called. Do not start it again until missing material is found or inspection of machine and powder has shown it safe to resume operations.

(5) When feeding powder into bowl, care should be exercised in keeping the hands well out of the bowl and away from worm to avoid injury.

(6) Clean tables and floor frequently, storing waste in closed containers for removal to waste shed.

(7) All tools shall be handled carefully and oil desensitizer used liberally on the parts being worked on. If removed string nipple plate nuts on a thong or aluminum wire and immerse in engine oil until plate is again assembled.

(8) Keep no spare parts in house, fan or motor houses or waste shed. Keep only in parts house.

(9) No tools are permitted in this building while the machine is running. The following miscellaneous equipment is allowed in house while machine is in operation:

- Wooden shovel
- Scale
- Cartridge chart
- Aluminum dust pan on thong
- Floor brooms
- Whisk brooms and counter brushes on thong
- Oil can
- Floor scraper
- Wall thermometer
- Brass screwdriver on counter-weight
- Hand scraper

(10) On Starrett Stuffer machine make certain that auger is secured in threaded coupling before starting

machine. Always check to see that machine is operating in proper direction so that auger will not screw out.

(11) Where Starrett Stuffer machine is used, make sure that auger, when out of place, has ample clearance between liner and check clearance between nipple plate by turning machine by hand after nipple plate is assembled.

(12) On Starrett Stuffer, always use a gasket which has been freshly lubricated with oil between nipple plate and bowl. Oil resistant synthetic rubber is preferable.

(13) All tools shall be handled carefully and oil desensitizer used liberally on the parts being worked on. Before resuming operation, all tools and pieces of equipment shall be accounted for to be certain they do not become a hazard to the operation.

(14) Daily clean-up. Remove all punched and unpunched powder from the house and cut off power to machine motor before starting the machine clean-up. Remove and clean the nipple plate and horizontal auger. Wipe inside and outside of bowl, vertical worms and inside of lower worm housing as well as possible with rags and solvent. Leave nipple off until start of next shift. Clean crimper and leave crimper head in oil overnight. Clean floor and table carefully and wipe with solvent if necessary. Send sweepings to waste shed.

(15) The weekly clean-up shall be established in accordance with safe practices and such clean-up shall be agreed upon by management and the state safety inspector.

(16) The management is responsible for the enforcement of the above rules.

(17) See that all fire-fighting equipment is maintained in adequate condition for use at any time. [Rules F-1 through F-17, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-140 Handpack house.** (1) Man limit - 3 employees, except supervision and truckers.

(2) Keep powder in buggies covered as much as possible.

(3) Keep floor and benches clean. Store sweepings in covered container and send to waste shed frequently.

(4) Spare equipment shall be stored in spare parts house. No parts shall be stored in waste shed, fan or motor rooms.

(5) The following miscellaneous equipment is allowed in this building:

- Wooden shovels
- Wooden or aluminum hoes
- Wooden tamps
- Whisk brooms on thong
- Wooden or aluminum floor scrapers
- Scale (stick count) chart
- Aluminum hand scoops
- Floor brooms

(6) At end of day, remove powder from building, clean equipment and sweep floors, platforms and track thoroughly.

(7) The management is responsible for the enforcement of the above rules.

(8) See that all fire-fighting equipment is maintained in adequate condition for use at any time. [Rules G-1 through G-8, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-150 Waste opening house.** (1) Man limit - 3 employees, except supervision and truckers.

(2) Hardwood wedges and rubber mallets shall be used to open wooden cases.

(3) Open cartridges with short knife or wooden spatula attached to long rawhide thong or opening boards.

(4) Inspect screens before use and often during the day. Clean and deliver to repairman immediately any screen found to be defective.

(5) Screen all dynamite grades, except semi-gel, by brushing through the screen. Semi-gel may be opened and rolled with an all wood rolling pin on a table to facilitate inspection for foreign material, Semi-gel may also be screened. Gelatin grades shall be unrolled and inspected.

(6) Under normal conditions full size cartridges or large pieces of powder should not be sent to the burning ground but should be cut or broken into small pieces before delivery to waste shed.

(7) The following miscellaneous equipment is allowed in this building during opening operations:

- Solid knives on thongs (or a cutting bench)
- Wooden shovels
- Wooden spatulas on thongs
- Powder screens
- Wooden floor scraper
- Scale
- Floor brooms
- Whisk brooms on thong and aluminum scoop
- Counter brush on thong
- Brass picks on thong
- Wall thermometer

(8) House shall be kept orderly and be cleaned thoroughly at end of shift.

(9) The management is held responsible for the strict observance of the above rules.

(10) See that all fire-fighting equipment is maintained in adequate condition for use at any time. [Rules H-1 through H-10, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-160 Box packing house.** (1) Man limit - 6 employees, except supervision and truckers.

(2) Paraffin temperature in the dip pot must not exceed 220 degrees F.

(3) Machines in this house shall be kept clean and the bearings oiled.

(4) No explosives in excess of the normal house limit shall be allowed to remain in building overnight.

(5) Do not handle cases roughly.

(6) Inspect cases carefully and remove all protruding nails.

(7) Keep floor swept and loose nails cleaned up.

(8) The following tools and miscellaneous equipment are permitted in this house:

- 1 Pair pliers

- 1 Screwdriver
- 1 Crescent or end wrench for nailing
- 1 Box scraper
- 1 Wire cutter
- 1 Butcher knife
- Scales
- Paraffin transfer tube
- 1 Floor scraper, aluminum
- 1 Metal-clad thermometer on thong
- 1 Oil can
- 1 Set stencils with brush and pot
- 2 Test weights - 25 lbs. and 50 lbs.
- Box lining forms
- 2 Floor brooms
- 2 Aluminum dust pans
- Or other necessary items

(9) Daily clean-up. Clean nailing machine, roller conveyor, scales and radiators each evening with appropriate tools. Scrape and sweep floor. Shut off steam in paraffin heater kettle. Remove and clean dip tank screen. Remove sludge from the dip tank, mix with sawdust and transfer to waste shed. (At plants where paraffin is pumped to dip tank, leave tank empty overnight and noon.) Sweep platforms, track and magazine cars. Clean powder buggies and replace paper in bottom. If house is operated more than one shift, the floors shall be thoroughly cleaned at end of each shift.

(10) The management is responsible for the strict observance of all the above rules. [Rules I-1 through I-10, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-170 Powder repair shop.** (1) This building is classed as an explosive building and general rules for powder apply here. Approved shoes and uniforms are required.

(2) No powder shall be brought into this building at any time.

(3) All parts shall be thoroughly cleaned of powder.

(4) Extreme care shall be taken in making repairs to any equipment having been in contact with dynamite or N.G. Careful inspection shall be made of all wooden parts before starting repairs. If they appear to be saturated with N.G., they shall be discarded and taken to the burning ground.

(5) Use engine oil liberally on tools being used and parts being repaired.

(6) Never make any repairs to a danger building or adjacent equipment while such is in operation and until you are familiar with the special rules applying to that operation.

(7) All tools, metallic parts and spare parts shall be checked into and out of explosive building before and after making repairs. Inspect thoroughly all repaired equipment before removal from this shop to operating building and spare parts storage.

(8) Keep benches clean and orderly and sweep floor often enough to keep clean.

(9) The responsibility for the observance of the above rules rests with the management. [Rules J-1 through J-9, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-180 Batch nitrator.** (1) Every nitrator shall be provided with an auxiliary power unit capable of safely disposing of N.G. in process in the event of a power failure.

(2) Employees shall be limited to three excluding supervision.

(3) The nitrator temperature must never exceed 50°F. The charge should not be dropped at a temperature lower than 32°F. (34°F. in winter) as received in the separator except for regular N.G. (100% glycerin), which should not drop below 40°F. to prevent freezing.

(4) Nitrator operator shall give his undivided attention to a charge being nitrated and when drawing charge from nitrator to separator.

(5) Nitrator charge, N.G., or waste acid shall never be sent to the next operation until proper notification has been received that the store-house is ready to receive the charge.

(6) Open, wash, and inspect nitrator interior every 3 months. [Rules K-1 through K-6, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-190 Separator and prewash operation.**

(1) No prewash or soda water shall be heated above 140°F.

(2) N.G. gutter to neutralizers must be sponged at the end of shift.

(3) All sponges must be kept in weak soda water.

(4) Rubber gloves must be worn when washing gutter and equipment.

(5) Gutters should be painted as often as necessary to maintain them in good condition.

(6) When painting tank interiors, a life belt and a gas mask (or air line respirator) shall be worn. Two attendants must be present while a man is in tank.

(7) Daily clean-up. Clean house and all equipment at end of day and oil lead work when necessary. Remove, wash and leave out overnight the glycerin distributor. Check glycerin screen. Open drain on waste acid blow case and leave open overnight. Examine all tanks and catch boxes for slums and clean if any are present.

(8) Weekly clean-up. Clean and inspect all equipment, water drains, ditch, etc. Paint catch boxes and gutters if needed. Clean glycerin heater house.

(9) Periodic clean-up. Test air and steam accumulators (monthly). Empty and clean large drowners. Clean glycerin scale tanks. At least biennially examine interior of all acid blow cases.

(10) The management is held responsible for the enforcement of all these rules. [Rules K-7 through K-16, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-200 N.G. neutralizing house and store house.** (1) Man limit - 2 employees, except supervision.

(2) Start ventilator fan and wait a few minutes before entering house.

(3) Inspect all rubber hoses on tanks and buggies daily for any signs of leakage. Replace all hose where any sign of deterioration exists.

(4) Carrying of N.G. in buckets shall be avoided as much as possible.

(5) In case of N.G. spill, sponge up N.G. into a bucket and put in catch box, wipe thoroughly with sponge and soda ash solution and clean thoroughly with N.G. Remover. Report spills to management at once.

(6) N.G. sponges must be kept in weak soda solution when not in use, and wiping rags must be kept in closed container.

(7) Sweep up or mop floor and keep house clean and tidy at all times.

(8) Wash N.G. buggies at end of day. Always leave fresh or weak soda water in N.G. buggy tanks overnight.

(9) At the end of each week the catch boxes and all equipment not containing N.G. in storage must be emptied of water and thoroughly scrubbed out and refilled with fresh water.

(10) The following is the only miscellaneous equipment allowed in this building except when it is being cleaned for repairs:

- Rubber buckets
- Sample carrier
- Hose
- Plastic or rubber covered scale
- Weights and balance
- Clock in box
- Lead pan for sample bottles
- Blue litmus paper
- 2 brooms
- Tank markers
- Brom phenol blue solution
- Thermometers
- Hydrometers
- Rubber covered flashlight on thong for wrist
- Rubber dipper
- 2 dust pans

[Rules L-1 through L-10, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-210 Acid operations.** (1) The greatest care must be observed in the handling and transportation of acids. Avoid doing things which will cause splashing.

(2) Wash acid or ammonia burns with great quantities of water over a long period of time, then report to hospital.

(3) Every employee working with acids should know the location of and how to operate the safety showers. Test them every shift and do not permit obstructions in front of them. If shower is not nearby, have bucket of water at hand for use in case of acid burns when making repairs or when operation is being carried on.

(4) Use water from drinking fountain to wash acid out of eye or use the eye cup and solution provided for this purpose. Report any accident immediately to foreman, supervisor or hospital.

(5) Nitrous fumes: Breathing of nitrous fumes is to be avoided and any man who has inhaled sufficient to cause even slight irritation should cease work immediately and report to the foreman and proceed to the plant hospital at once. He should not exert himself after exposure to the fumes because complete rest is the best first-aid

treatment to prevent serious complications. Men exposed to red fumes, even though they do not produce coughing, must follow the above rule. When it is absolutely necessary to enter an area laden with these fumes, a gas mask must be worn.

(6) Know the location and use of the gas masks for acid and ammonia fumes and use them when fumes are strong. Return any mask that has been used to laboratory for inspection and repairs.

(7) Glasses shall be worn by all employees in acid area at all times except when performing duties requiring goggles. Approved type acid goggles must be worn whenever acid or ammonia is outside, or may get out of, its normal pipe line or tank. This includes taking samples, working on valves, gaskets or pumps, measuring tanks, or carrying on any work where acid or ammonia might reasonably be expected to come in contact with the eyes.

(8) Under especially hazardous conditions, a rubber suit and helmet must be worn.

(9) Employees should wear proper clothing and "safety" shoes. Hats with brims must be worn around operations for protection against drips from overhead lines and equipment. Rubber gloves should be worn when sampling acid and handling equipment contaminated with acid and anhydrous ammonia.

(10) All ladders other than step-ladders or special ladders must be equipped with spiked feet or other approved friction feet. When used on concrete or smooth floors, plants must be placed under the spiked feet and the ladder must be securely fastened to prevent slipping. If this cannot be done, another man must hold the ladder.

(11) Repair work on acid equipment must not be started unless water is at hand. Whenever possible, acid equipment should be washed off thoroughly with fresh water before repairs are started.

(12) Before opening a line for repairs, be certain that the line is drained, all valves are closed and locked, and motors or pumps which deliver acid through the lines are locked out. Remove blanks, valve tags and motor locks when work is completed.

(13) When braking flanges in a pipe line, or removing a flange from a vessel, make sure there is no pressure on the line or vessel. Do not take all bolts out. At least two nuts must remain on two bolts in a loosened condition until the joint is broken and possible pressure released. Stand away from the flange when actually breaking the line so that if acid spurts out it will not come in contact with you.

(14) Observe the following rules before entering any acid tank: (a) Disconnect and blank off all connections, (b) wash and neutralize interior, (c) obtain permission to enter from foreman or supervisor who has inspected the tank and seen that all precautions and preparations have been made, (d) be equipped with protective clothing, goggles, gas masks, if necessary, and safety harness with line attached. Two men shall be in attendance outside tank to render assistance, if required.

(15) Always wear a gas mask when entering a brick-line tank which has been used for acid.

(16) Acid samples must be conveyed in suitable carriers and rubber gloves must be worn while taking samples.

(17) It is recommended that safety shields be in place around bonnets of valves, pipe flanges and over pumps at all times. Tighten bolts on valves and pumps frequently, and repack when necessary.

(18) Report to your foreman or supervisor at once any unsafe condition or any apparatus which is leaking acid or seems likely to become leaky. Block off entire area whenever there is an acid leak.

(19) Do not use a carbon tetrachloride fire extinguisher where it may come in contact with acid. Carbon tetrachloride and acid react to form phosgene, a poisonous gas. [Rules M-1 through M-19, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-220 Spare parts houses.** (1) No powder is to be brought into this building at any time.

(2) All powder is to be cleaned from spare parts before delivering to storage.

(3) Floors, benches, and racks shall be kept clean and in order.

(4) The following rules govern the cleaning of powder machine equipment for storage:

Parts are to be cleaned of all powder as they are removed from the machine unless special cleaning facilities are provided elsewhere. [Rules N-1 through N-4, filed 3/23/60, effective 8/15/57.]

**WAC 296-50-230 Nitrocotton screening and drying houses.** (1) Matches, torches, or other flame-producing devices are strictly prohibited in nitrocotton areas. Only nonsparking tools are permitted.

(2) The walls and floor of nitrocotton dryer building and screening building when in regular use should be washed or brushed down each week.

Hoops and nuts on nitrocotton barrels or containers must be wet with water prior to removing them and prior to placing them back on the containers, also the socket wrench used for this purpose must be wet with water.

(3) Extreme cleanliness must be maintained in all nitrocotton operations. Waste or dirty nitrocotton should never be mixed with other refuse or waste material.

(4) Dry nitrocotton is extremely hazardous and after cotton has been dried, extraordinary precautions must be observed in handling.

(5) Do not store nitrocotton in open containers.

(6) Employees whose clothing may contain or be covered with nitrocotton must not answer fire alarms, assist in fighting fires or leave plant until clothing has been changed.

(7) Under no condition is frozen nitrocotton to be opened and handled. It must be thawed before removing from drums and screening.

(8) Steel drums shall be opened outside, or at least in a place removed from the screening operation.

(9) The nitrocotton shall be taken from the drums by means of wooden tools or a fibre scoop, or brass cotton fork.

(10) All wet nitrocotton shall be screened before delivery to the drying and mixing houses.

(11) Dry nitrocotton containing less than 5% moisture shall never be screened.

(12) The drums, when emptied, must be thoroughly cleaned of all nitrocotton, both inside and out.

(13) Partially filled drums of unused nitrocotton shall be removed from screen room and carefully closed to prevent evaporation of moisture, taking the precaution of wetting clamp and drum before closing.

(14) Screened nitrocotton shall be placed in covered fibre cans, or aluminum barrels, or paper bags.

(15) The amount of nitrocotton in the screening house shall be held to a minimum and never exceed the posted limit.

(16) The screening house must be clean at all times.

(17) The following miscellaneous equipment is stored outside, in a cabinet, for opening drums before taking them into the building:

- 2 Brass socket wrenches on thong
- 1 Brass end wrench on thong
- 1 Wooden wedge
- 1 Rubber mallet

(18) Only screened nitrocotton shall be placed on the dryer.

(19) Wooden boxes, fibre cans and aluminum barrels are the only containers that may be taken into the dryer.

(20) Do not allow air temperature to exceed 135°F.

(21) Operators and visitors are not permitted to wear rubber soled shoes or overshoes in dry house.

(22) Care should be used in discharging dryer to keep friction to a minimum.

(23) Check ground connections from supporting screen under cloth.

(24) The miscellaneous equipment permitted in this house is a wooden hoe, a wooden shovel, and broom.

(25) Clean-up. The floors shall be kept clean at all times. The walls, ceilings, floors, and air ducts from the blower shall be washed at frequent intervals to prevent an accumulation.

(26) The management is held responsible for the observance of the above rules.

(27) See that all fire-fighting equipment is maintained in adequate condition for use at any time. [Rules O-1 through O-27, filed 3/23/60, effective 8/15/57.]

### Chapter 296-52 WAC

#### SAFETY STANDARDS FOR THE POSSESSION AND HANDLING OF EXPLOSIVES

##### WAC

296-52-010	Introduction.
296-52-012	Incorporation of standards of national organizations and federal agencies.
296-52-020	Purpose.
296-52-025	Variance and procedure.
296-52-027	Equipment approval by nonstate agency or organization.
296-52-030	Definitions.
296-52-040	User's (blaster's) license.
296-52-043	Use of explosives and blasting agents.

296-52-050	Transportation.
296-52-060	More stringent ordinances prevail.
296-52-080	Temporary permit for existing storage facilities.
296-52-090	Construction of magazines.
296-52-095	Storage of explosives.
296-52-100	Quantity and distance tables for storage.
296-52-110	Limit on storage quantity.
296-52-120	Quantity and distance tables for factory buildings.
296-52-140	Quantity and distance tables for separation between magazines.
296-52-150	Storage of blasting caps with other explosives prohibited.
296-52-160	License for manufacturing.
296-52-165	Blasting agents.
296-52-167	Water gel (slurry) explosives and blasting agents.
296-52-170	Storage magazine license.
296-52-180	Storage magazine license fees.
296-52-190	Dealer's license.
296-52-200	Annual inspection.
296-52-220	Purchaser's license.
296-52-230	Unlawful access to explosives.
269-52-260	Coal mining code unaffected.
296-52-270	Shipments out-of-state.
296-52-330	Explosives containers to be marked—Penalty.
296-52-350	Small arms ammunition, primers, and propellants—Transportation regulations.
296-52-360	Small arms ammunition, primers, and propellants—Separation from flammable materials.
296-52-370	Small arms ammunition, primers, and propellants—Smokeless propellants and black powder, transportation, storage and display requirements.
296-52-380	Small arms ammunition, primers, and propellants—Small arms ammunition primers, transportation, storage and display requirements.
296-52-390	Storage of ammonium nitrate.
296-52-400	Enforcement.
296-52-9001	Appendix Figure 1—Application for user's (blaster's) license.
296-52-9002	Appendix Figure 2—Request for inspection.
296-52-9003	Appendix Figure 3—Application for license to manufacture explosives.
296-52-9004	Appendix Figure 4—Application for license to operate a storage magazine for explosives.
296-52-9005	Appendix Figure 5—Application for dealer's license.
296-52-9006	Appendix Figure 6—Application for license to purchase explosives.
296-52-9007	Appendix Figure 7—Dealer's record.

**WAC 296-52-010 Introduction.** The subject code shall apply to all persons in the state of Washington and will be known as the "Safety standards for the possession and handling of explosives," hereinafter called the "Explosives Code." [Statutory Authority: Chapters 42-30 and 43.22 RCW, RCW 49.17.040, 49.17.050 and 49.17.240. 78-07-052 (Order 78-10), § 296-52-010, filed 6/28/78; Order 70-4, § 296-52-010, filed 4/29/70.]

**WAC 296-52-012 Incorporation of standards of national organizations and federal agencies.** (1) Whenever a provision of this chapter incorporates by reference a national code or portion thereof which has been adopted by and is currently administered by another state agency, compliance with those provisions adopted and administered by such other state agency, if from a more recent edition of such national code, will be deemed to be prima facie evidence of compliance with the provisions of this chapter.

(2) Whenever a provision of this chapter incorporates therein provisions of the Code of Federal Regulations (CFR) or any other regulations adopted by an agency of

the federal government, that provision of this chapter shall be construed to mean that compliance with such regulations shall be prima facie evidence of compliance with the provisions of this chapter.

(3) Whenever a provision of this chapter incorporates therein provisions of the Code of Federal Regulations, the provisions so incorporated shall be those in effect on the date of effectiveness of this chapter, unless the content of the incorporating section specifies otherwise.

(4) The above referenced information is available for your review at all labor and industries' service locations. [Order 75-41, § 296-52-012, filed 12/19/75.]

**WAC 296-52-020 Purpose.** It is the purpose of this code to implement the Washington State Explosives Act, chapter 70.74 RCW, as amended by chapter 72, Laws of 1970 2nd ex. sess. The Explosives Act shall be attached to this code, and both the act and the code shall be read and enforced jointly.

This code has been written by the division of industrial safety and health and promulgated by the department of labor and industries in accordance with RCW 70.74.020 (Explosives Act), RCW 49.16.050, 49.16.060, 49.16.070 and 49.16.080 (labor regulations).

Advance notice was mailed as required by statute and public notice given as provided in RCW 42.32.010, on February 25, 1970.

A public hearing was conducted on March 26, 1970, at Olympia.

A copy of this code was filed with the office of the code reviser on April 29, 1970, to become effective on May 29, 1970. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-02-003 (Order 81-32), § 296-52-020, filed 12/24/81; Order 70-4, § 296-52-020, filed 4/29/70.]

**WAC 296-52-025 Variance and procedure.** Realizing that conditions may exist in operations under which certain state standards will not have practical application, the director of the department of labor and industries or his authorized representative may, pursuant to this section, RCW 49.17.080 and/or 49.17.090 and appropriate administrative rules of this state and the department of labor and industries and upon receipt of application and after adequate investigation by the department, permit a variation from these requirements when other means of providing an equivalent measure of protection are afforded. Such variation granted shall be limited to the particular case or cases covered in the application for variance and may be revoked for cause. The permit for variance shall be conspicuously posted on the premises and shall remain posted during the time it is in effect. All requests for variances from safety and health standards included in this or any other chapter of Title 296 WAC, shall be made in writing to the director of the department of labor and industries at Olympia, Washington, or his duly authorized representative, the assistant director, division of industrial safety and health, department of labor and industries, Olympia, Washington. Variance application forms may be obtained from the department upon request. [Statutory

Authority: RCW 49.17.040 and 49.17.050. 82-02-003 (Order 81-32), § 296-52-025, filed 12/24/81; Order 75-41, § 296-52-025, filed 12/19/75.]

**WAC 296-52-027 Equipment approval by nonstate agency or organization.** Whenever a provision of this chapter states that only that equipment or those processes approved by an agency or organization other than the department of labor and industries, such as the Underwriters Laboratories or the Bureau of Mines, shall be construed to mean that approval of such equipment or process by the designated agency or group shall be prima facie evidence of compliance with the provision of this chapter. [Order 75-41, § 296-52-027, filed 12/19/75.]

**WAC 296-52-030 Definitions.** Definitions as used in this chapter, unless a different meaning is plainly required by the context:

(1) "Attend" shall mean the physical presence of an authorized person within the field of vision of explosives. The said attendant shall be awake, alert and not engaged in activities which may divert his attention so that in case of an emergency he can get to the explosives quickly and without interference, except for brief periods of necessary absence, during which absence simple theft of explosives is not ordinarily possible.

(2) "Authorized," "approved" or "approval" shall be held to mean authorized, approved, or approval by the department of labor and industries or other approving agency or individual as specified by the provisions of this chapter.

(3) "Blaster" shall be held to mean that qualified person in charge of and responsible for the loading and firing of a blast.

(4) "Blasting agent" shall be held to mean and include any material or mixture consisting of a fuel and oxidizer, intended for blasting, not otherwise classified as an explosive, and in which none of the ingredients are classified as an explosive, provided that the finished product, as mixed and packaged for use or shipment, cannot be detonated when unconfined by means of a No. 8 test blasting cap.

(5) "Day box" shall denote a box which is not approved as a magazine for unattended storage of explosives. Such box may be used for storage of explosives during working hours on a job site, provided that it shall always be guarded against theft, particularly in inhabited areas, and shall either be attended, locked or secured against outright lifting, as the risk demands. Caps shall be safely separated from other explosives. Such day boxes shall be marked with the word "explosives."

(6) "Dealer" shall be held to mean and include any person who purchases explosives or blasting agents for the sole purpose of resale, and not for use or consumption.

(7) "Department" shall denote the department of labor and industries.

(8) "Detonating cord" (fuse) shall mean a round, flexible cord containing a center core of high explosive.

(9) "Detonator" shall mean a blasting cap, an electric blasting cap or a delay electric blasting cap.

(10) "Director" shall denote the director of the department of labor and industries, or his designated representative.

(11) "Division" shall denote the division of industrial safety and health of the department.

(12) "Efficient artificial barricade" shall be held to mean an artificial mound or properly revetted wall of earth of a minimum thickness of not less than three feet or such other artificial barricade as approved by the department of labor and industries.

(13) "Explosive" or "explosives" whenever used in this chapter shall be held to mean and include any chemical compound or mechanical mixture that is commonly used or intended for the purpose of producing an explosion, that contains any oxidizing and combustible units, or other ingredients, in such proportions, quantities or packing, that an ignition by fire, by friction, by concussion, by percussion, or by detonation of any part of the compound or mixture may cause such a sudden generation of highly heated gases that the resultant gaseous pressures are capable of producing destructive effects on contiguous objects or of destroying life or limb. In addition, the term "explosives" shall include all material which is classified as Class A, Class B, and Class C explosives by the federal Department of Transportation: *Provided*, That for the purposes of this chapter small arms ammunition, small arms ammunition primers, smokeless powder not exceeding fifty pounds, and black powder not exceeding five pounds shall not be defined as explosives: *Provided*, That such black powder is intended to be used solely for sporting, recreational, or cultural purposes in antique firearms. Classification of explosives shall include but not be limited to the following:

NOTE: Classification of explosives is described by the U.S. Department of Transportation as follows (see 49 CFR Chapter I):

- (a) Class A explosives: (Possessing detonating hazard) dynamite, nitroglycerin, picric acid, lead azide, fulminate of mercury, black powder exceeding five pounds, blasting caps in quantities of 1001 or more, and detonating primers.
- (b) Class B explosives: (Possessing flammable hazard) propellant explosives, including smokeless propellants exceeding fifty pounds.
- (c) Class C explosives: (Including certain types of manufactured articles which contain Class A or Class B explosives, or both, as components but in restricted quantities) blasting caps in quantities of 1000 or less.

(14) "Explosive-actuated power devices" shall be held to mean any tool or special mechanized device which is actuated by explosives, but not to include propellant-actuated power devices.

(15) "Explosives manufacturing building" shall be held to mean and include any building or other structure (excepting magazines) containing explosives, in which

the manufacture of explosives, or any processing involving explosives, is carried on, and any building where explosives are used as a component part or ingredient in the manufacture of any article or device.

(16) "Explosives manufacturing plant" shall be held to mean and include all lands, with the buildings situated thereon, used in connection with the manufacturing or processing of explosives or in which any process involving explosives is carried on, or the storage of explosives thereat, as well as any premises where explosives are used as a component part or ingredient in the manufacture of any article or device.

(17) "Factory building" shall denote the same as "manufacturing building."

(18) "Forbidden or not acceptable explosives" shall be held to mean and include explosives which are forbidden or not acceptable for transportation by common carriers by rail freight, rail express, highway, or water in accordance with the regulations of the federal Department of Transportation.

(19) "Fuel" shall be held to mean and include a substance which may react with the oxygen in the air or with the oxygen yielded by an oxidizer to produce combustion.

(20) "Handling" shall denote any one or more of manufacturing, buying, selling, transporting, storing or using of explosives.

(21) "Handloader" shall be held to mean and include any person who engages in the noncommercial assembling of small arms ammunition for his own use, specifically the operation of installing new primers, powder, and projectiles into cartridge cases.

(22) "Handloader components" means small arms ammunition, small arms ammunition primers, smokeless powder not exceeding fifty pounds, and black powder as used in muzzle loading firearms not exceeding five pounds.

(23) "Highway" shall be held to mean and include any public street, public alley, or public road.

(24) "Inhabited building" shall be held to mean and include only a building regularly occupied in whole or in part as a habitation for human beings, or any church, schoolhouse, railroad station, store, or other building where people are accustomed to assemble, other than any building or structure occupied in connection with the manufacture, transportation, storage, or use of explosives.

(25) "Magazine" shall be held to mean and include any building or other structure, other than a factory building, used for the storage of explosives.

(26) "Motor vehicle" shall be held to mean and include any self-propelled automobile, truck, tractor, semi-trailer or full trailer, or other conveyance used for the transportation of freight.

(27) "Mudcap" shall be held to mean covering the required number of cartridges that have been laid on top of a boulder with a three or four inch layer of mud (free from rocks or other material which might constitute a missile hazard). Mudcapping is also commonly known as "bulldozing" and "dobyng."

(28) "Natural barricade" shall be held to mean and include any natural hill, mound, wall, or barrier composed of earth or rock or other solid material of a minimum thickness of not less than three feet.

(29) "Oxidizer" shall be held to mean a substance that yields oxygen readily to stimulate the combustion of organic matter or other fuel.

(30) "Permanent magazines" shall denote magazines that are permanently fastened to a foundation and that are left unattended. The capacity of said permanent magazines shall not exceed the limits stated in RCW 70.74.040. Permanent magazines shall be approved and licensed.

(31) "Person" shall be held to mean and include any individual, firm, copartnership, corporation, company, association, joint stock association, and including any trustee, receiver, assignee, or personal representative thereof.

(32) "Person responsible," for an explosives magazine, shall mean the legal person who actually operates the magazine and who is responsible for the proper storage, protection and removal of the explosives. The responsible person may be the owner or the lessee or the authorized operator of the magazine.

(33) "Portable magazines" also called "field" magazines shall denote magazines that are designed to be unattended and that are not permanently fastened to a foundation. Said magazines shall be so constructed or secured that they can not be readily lifted and carried away by unauthorized persons. The capacity of said portable magazines shall be limited to the amount of explosives required for efficient operation. Portable magazines shall be approved and licensed.

(34) "Possess" shall denote in this code the physical possession of explosives in one's hand, vehicle, magazine or building.

(35) "Primer" shall be held to mean a cartridge or container of explosives into which a detonator or detonating cord is inserted or attached and whose purpose is to initiate the main explosive charge.

(36) "Propellant-actuated power device" shall be held to mean and include any tool or special mechanized device or gas generator system which is actuated by a propellant or which releases and directs work through a propellant charge.

(37) "Public conveyance" shall be held to mean and include any railroad car, streetcar, ferry, cab, bus, airplane, or other vehicle which is carrying passengers for hire.

(38) "Public utility transmission system" shall mean power transmission lines over 10 KV, telephone cables, or microwave transmission systems, or buried or exposed pipelines carrying water, natural gas, petroleum, or crude oil, or refined products and chemicals, whose services are regulated by the utilities and transportation commission, municipal, or other publicly owned systems.

(39) "Purchaser" shall be held to mean any person who buys, accepts, or receives any explosives or blasting agents.

(40) "Pyrotechnics" shall be held to mean and include any combustible or explosive compositions or manufactured articles designed and prepared for the purpose of producing audible or visible effects which are commonly referred to as fireworks.

(41) "Railroad" shall be held to mean and include any steam, electric, or other railroad which carries passengers for hire.

(42) "Railroad freight car" shall denote cars that are built for and loaded with explosives and operated in accordance with DOT rules.

(43) "Semiconductive hose" means a hose with an electrical resistance high enough to limit flow of stray electric currents to safe levels, yet not so high as to prevent drainage of static electric charges to ground; hose of not more than 2 megohms resistance over its entire length and of not less than 5,000 ohms per foot meets the requirement.

(44) "Shall" means that the rule establishes a minimum standard which is mandatory. The department welcomes better or higher standards than the minimums. If extenuating circumstances make even the minimum standard impractical, supporting evidence shall be submitted in writing to the department for review and granting of a variance in accordance with WAC 296-52-025.

(45) "Small arms ammunition" shall be held to mean and include any shotgun, rifle, pistol, or revolver cartridge, and cartridges for propellant-actuated power devices and industrial guns. Military-type ammunition containing explosive bursting charges, incendiary, tracer, spotting, or pyrotechnic projectiles is excluded from this definition.

(46) "Small arms ammunition primers" shall be held to mean small percussion-sensitive explosive charges encased in a cup, used to ignite propellant powder and shall include percussion caps as used in muzzle loaders.

(47) "Smokeless propellants" shall be held to mean and include solid chemicals or solid chemical mixtures in excess of fifty pounds which function by rapid combustion.

(48) "Special industrial explosive devices" means explosive-actuated power devices and propellant-actuated power devices.

(49) "Special industrial explosives materials" means shaped materials and sheet forms and various other extrusions, pellets, and packages of high explosives, which include dynamite, trinitrotoluene (TNT), pentaerythritol tetranitrate (PETN), hexahydro-1, 3, 5-trinitro-s-triazine (RDX), and other similar compounds used for high-energy-rate forming, expanding, and shaping in metal fabrication, and for dismemberment and quick reduction of scrap metal.

(50) "Sprung holes" shall mean to spring or chamber the bottom of the drilled hole to allow room for additional explosives as a bottom load.

(51) "Trailer" shall denote semi-trailers or full trailers as defined by DOT, that are built for and loaded with explosives and operated in accordance with DOT rules.

(52) "Unclassified explosives" shall be held to mean any two components which, when mixed become capable of detonation by a No. 6 test blasting cap.

(53) "User" shall be held to mean and include any natural person, manufacturer, or blaster who acquires, purchases, or uses explosives as an ultimate consumer or who supervises such use.

(54) "Water gels or slurry explosives" comprise a wide variety of materials used for blasting. They all contain substantial proportions of water and high proportions of ammonium nitrate, some of which is in solution in the water. Two broad classes of water gels are:

(a) Those which are sensitized by a material classed as an explosive, such as TNT or smokeless powder,

(b) Those which contain no ingredient classified as an explosive; these are sensitized with metals such as aluminum or with other fuels. Water gels may be premixed at an explosives plant or mixed at the site immediately before delivery into the bore hole.

(55) "DOT specification" are regulations of the department of transportation published in 49 CFR Chapter I. [Statutory Authority: RCW 49.17.040 and 49.17.050. 81-07-048 (Order 81-4), § 296-52-030, filed 3/17/81; Order 75-41, § 296-52-030, filed 12/19/75; Order 70-4, § 296-52-030, filed 4/29/70.]

**WAC 296-52-040 User's (blaster's) license.** RCW 70.74.020, applies.

(1) The application for a user's (blaster's) license to use, blast or dispose explosives and blasting agents shall be made by means of a form substantially similar to that shown in Fig. 1, of this code. (See Appendix)

Application forms may be obtained at any of the department district offices, or from explosives dealers.

A "hand loader" as defined in RCW 70.74.010, does not require a user's license.

An applicant shall submit to the department either a certification from another state; or a certification by a public agency, corporation or blaster's school; or a resume of successful blasting experience, properly witnessed. If said certifications are not satisfactory, the department may establish an examination board which shall prepare an examination procedure for certification.

The department will issue a user's license card which shall state the limitations imposed on the licensee and shall be presented by the user to authorized persons, upon request, together with valid personal identification.

The user's license shall be valid for one year.

Request for renewal application may be made at any of the department district offices, or from explosives dealers.

(2) The request for an inspection of compounds, mixtures or materials that may become explosive due to drying out or undergoing other physical changes within the definition of RCW 70.74.020, shall be made by any possessor of suspect compounds to the chief explosives inspector by means of a form similar to that shown in Fig. 2, of this code. (See Appendix)

(3) The safety rules on using, blasting or disposing explosives in specific industries are stated in chapters listed under WAC 296-52-010. [Statutory Authority:

RCW 49.17.040 and 49.17.050. 82-02-003 (Order 81-32), § 296-52-040, filed 12/24/81; Order 70-4, § 296-52-040, filed 4/29/70.]

**WAC 296-52-043 Use of explosives and blasting agents.** (1) General provisions.

(a) While explosives are being handled or used, smoking, matches, or any other source of fire or flame shall not be allowed within 100 feet of the blast area. No person shall be allowed to handle explosives while under the influence of intoxicating liquors, narcotics, or other dangerous drugs. This rule does not apply to persons taking prescription drugs and/or narcotics as directed by a physician providing such use shall not endanger the worker or others.

(b) Original containers or Class II magazines shall be used for taking detonators and other explosives from storage magazines to the blasting area.

(c) When blasting is done in congested areas or in close proximity to a structure, railway, or highway or any other installation that may be damaged, the blast shall be covered before firing with a mat or material that is capable of preventing fragments from being thrown.

(d) Persons authorized to prepare explosive charges or conduct blasting operations shall use every reasonable precaution, including but not limited to warning signals, flags and barricades.

(e) Blasting operations shall be conducted during daylight hours whenever possible.

(f) Whenever blasting is being conducted in the vicinity of gas, electric, water, fire alarm, telephone, telegraph, and steam utilities, the user (blaster) shall notify the appropriate representatives of such utilities at least 24 hours in advance of blasting, specifying the location and intended item of such blasting. Verbal notice shall be confirmed with written notice.

(g) Due precautions shall be taken to prevent accidental discharge of electric blasting caps from current induced by radar, radio transmitters, lightning, adjacent powerlines, dust storms, or other sources of extraneous electricity. These precautions shall include:

(i) The suspension of all blasting operations and removal of persons from the blasting area during the approach and progress of an electric storm.

(ii) The posting of signs, warning against the use of mobile radio transmitters, on all roads shall be in accordance with the applicable provisions of the American National Standards Institute D6.1-1971, Manual on Uniform Traffic Control Devices for Streets and Highways, as amended by Washington State Department of Highways Manual M24-01 (HT), (February 22, 1972).

(iii) Ensuring that mobile radio transmitters which are less than 100 feet away from electric blasting caps, when the caps are in other than original containers, shall be deenergized and effectively locked.

(iv) Compliance with the recommendations of The Institute of the Makers of Explosives (IME) with regard to blasting in the vicinity of radio transmitters as stipulated in Radio Frequency Energy—A Potential Hazard

in the Use of Electric Blasting Caps, IME Publication No. 20, March 1971.

(v) When electric blasting caps are being used in blasting operations in the proximity of fixed radio transmitters, the following table of distances must be observed, unless it is determined by designated test procedures that there is not sufficient radio frequency energy present to create a hazard. The test procedure shall be to attach a No. 47 Radio Pilot Lamp in place of the cap in the blasting circuit progressively as the circuit is connected, starting with the initial hole. In the event the lamp glows, the length of the wires connecting the circuit shall be altered by adding or cutting off wire until the lamp does not glow. A radio frequency field strength meter may be used in lieu of the test lamp.

Electromagnetic radiation. Blasting operations or storage of electrical detonators shall be prohibited in vicinity of operating radio frequency (RF) transmitter stations except where the clearances given below can be observed.

Transmitter Power Except FM Mobile (Watts)	Minimum Distance (Feet)
5 - 25	100
25 - 50	150
50 - 100	220
100 - 250	350
250 - 500	450
500 - 1,000	650
1,000 - 2,500	1,000
2,500 - 5,000	1,500
5,000 - 10,000	2,200
10,000 - 25,000	3,500
25,000 - 50,000	5,000
50,000 - 100,000	7,000

Transmitter Power FM Mobile (Watts)	Minimum Distance (Feet)
1 - 10	5
10 - 30	10
30 - 60	15
60 - 250	30

(vi) When necessary to perform blasting operations at distances less than those shown in table, detonating type fuse or other approved type systems shall be used.

(h) All loading and firing shall be directed and supervised by a licensed blaster thoroughly experienced in this field. The employer shall permit only licensed persons to prepare explosives at the blasting site.

(i) All explosives shall be accounted for at all times. Explosives not being used shall be kept in a locked magazine, unavailable to persons not authorized to handle them. The employer shall maintain an inventory and use record of all explosives. Appropriate authorities shall be notified of any loss, theft, or unauthorized entry into a magazine.

(j) No fire shall be fought where the fire is in imminent danger of contact with explosives. All employees shall be removed to a safe area and the fire area guarded against intruders.

(k) Electric detonators shall be shunted until wired into the blasting circuit.

(l) Explosives shall not be handled near open flames, uncontrolled sparks or open electric circuits.

(m) Delivery and issue of explosives shall only be made by and to authorized persons and into authorized magazines or approved temporary storage or handling area.

(n) All loading and firing shall be directed and supervised by licensed persons thoroughly experienced in this field.

(o) User (blaster) qualifications:

(i) A user (blaster) shall be able to understand given written and oral orders.

(ii) A user (blaster) shall be in good physical condition and not be addicted to narcotics, intoxicants, or similar types of drugs. This rule does not apply to persons taking prescription drugs and/or narcotics as directed by a physician providing such use shall not endanger the worker or others.

(iii) A user (blaster) shall be qualified by reason of training, knowledge, or experience, in the field of transporting, storing, handling, and use of explosives, and have a working knowledge of state and local laws and regulations which pertain to explosives.

(iv) User (blaster) shall be required to furnish satisfactory evidence of competency in handling explosives and performing in a safe manner the type of blasting that will be required.

(v) The user (blaster) shall be knowledgeable and competent in the use of each type of blasting method used.

(2) Storage at use sites.

(a) Empty boxes and paper and fiber packing materials which have previously contained high explosives shall not be used again for any purpose, but shall be destroyed by burning at an approved isolated location out of doors, and no person shall be nearer than 100 feet after the burning has started.

(b) Containers of explosives shall not be opened in any magazine or within 50 feet of any magazine. In opening kegs or wooden cases, no sparking metal tools shall be used; wooden wedges and either wood, fiber or rubber mallets shall be used. Nonsparking metallic slitters may be used for opening fiberboard cases.

(c) Should cartridges or packages of explosives show signs of discoloration or deterioration, the manufacturer or the department shall be notified. Such explosives must be carefully set aside and must not be used.

(3) Loading of explosives or blasting agents.

(a) Procedures that permit safe and efficient loading shall be established before loading is started.

(b) All drill holes shall be sufficiently large to admit freely the insertion of the cartridges of explosives.

(c) Tamping shall be done only with wood rods or with approved plastic tamping poles without exposed metal parts, but nonsparking metal connectors may be

used for jointed poles. Violent tamping shall be avoided. The primer shall never be tamped.

(d) No holes shall be loaded except those to be fired in the next round of blasting. After loading, all remaining explosives and detonators shall be immediately returned to an authorized magazine.

(e) Drilling shall not be started until all remaining butts of old holes are examined for unexploded charges, and if any are found, they shall be refired before work proceeds.

(f) When a charge of explosives has been exploded in a bore hole to enlarge or "spring" it, an interval of at least two hours must be allowed to pass before an additional charge of explosives can be loaded into the hole.

NOTE: Where it is necessary to clear obstacles for the moving of equipment there may be an exception made to this rule provided the sprung hole is thoroughly wet down with water before it is loaded.

(g) No person shall be allowed to deepen drill holes which have contained explosives or blasting agents.

(h) No explosives or blasting agents shall be left unattended at the blast site, unless properly stored.

(i) Users (blasters) shall not load, store or use explosives closer than the length of the steel being used for drilling and in no event nearer than fifty feet of drilling operations.

(j) Machines and all tools not used for loading explosives into bore holes shall be removed from the immediate location of holes being loaded with explosives. Equipment shall not be operated within 50 feet of loaded holes except when equipment is needed to add burden, mats or tracking of drills out of the loading area.

(k) Powerlines and portable electric cables for equipment being used shall be kept a safe distance from explosives or blasting agents being loaded into drill holes. Cables in the proximity of the blast area shall be deenergized and locked out.

(l) Holes shall not be drilled where there is danger of intersecting a charged or misfired hole.

(m) No explosives for underground operations other than those in Fume Class 1, as set forth by the Institute of Makers of Explosives, shall be used; however, explosives complying with the requirements of Fume Class 2 and Fume Class 3 may be used if adequate ventilation has been provided.

(n) Warning signs, indicating a blast area, shall be maintained at all approaches to the blast area. The warning sign lettering shall not be less than 4 inches in height on a contrasting background.

(o) A bore hole shall never be sprung when it is adjacent to or near a hole which has been loaded.

(p) No loaded holes shall be left unattended.

(q) The user (blaster) shall keep an accurate, up-to-date record of explosives, blasting agents, and blasting supplies used in a blast and shall keep an accurate running inventory of all explosives and blasting agents stored on the operation.

(r) When loading blasting agents pneumatically over electric blasting caps, semiconductive delivery hose shall

be used and the equipment shall be bonded and grounded.

(4) Initiation of explosive charges – electric blasting.

(a) Only electric blasting caps shall be used for blasting operations in congested districts, or on highways, or adjacent to highways open to traffic, except where sources of extraneous electricity make such use dangerous. Blasting cap leg wires shall be kept short-circuited (shunted) until they are connected into the circuit for firing.

(b) Before adopting any system of electrical firing, the user (blaster) shall conduct a thorough survey for extraneous currents, and all dangerous currents shall be eliminated before any holes are loaded.

(c) In any single blast using electric blasting caps, all caps shall be of the same manufacture.

(d) Electric blasting shall be carried out by using blasting circuits or power circuits in accordance with the electric blasting cap manufacturer's recommendations.

(e) The firing line shall be checked with an approved testing device at the terminals before being connected to the blasting machine or other power source.

(f) The circuit including all caps shall be tested with an approved testing device before being connected to the firing line.

(g) When firing a circuit of electric blasting caps, care shall be exercised to ensure that an adequate quantity of delivered current is available, in accordance with the manufacturer's recommendations.

(h) Connecting wires and lead wires shall be insulated single solid wires of sufficient current-carrying capacity, and shall not be less than twenty gauge (American wire gauge) solid core insulated wire.

(i) Firing line or leading wires shall be solid single wires of sufficient current-carrying capacity, and shall be not less than fourteen gauge (American wire gauge) solid core insulated wire. Bus wires – depends on the size of the blast, fourteen gauge (American wire gauge) copper is recommended.

(j) The ends of lead wires which are to be connected to a firing device shall be shorted by twisting them together or otherwise connecting them before they are connected to the leg wires or connecting wires, and they shall be kept in the possession of the person who is doing the loading until loading is completed and the leg wires attached. Lead wires shall not be attached to the firing device until the blaster is ready to fire the shot and must be attached by the user (blaster) themselves.

(k) The ends of the leg wires on electric detonators shall be shorted in a similar manner and not separated until all holes are loaded and the loader is ready to connect the leg wires to the connecting wires or lead wires.

(l) When firing electrically, the insulation on all firing lines shall be adequate and in good condition.

(m) A power circuit used for firing electric blasting caps shall not be grounded.

(n) In underground operations when firing from a power circuit, a safety switch shall be placed at intervals in the permanent firing line. This switch shall be made so it can be locked only in the "off" position and shall be

provided with a short-circuiting arrangement of the firing lines to the cap circuit.

(o) In underground operations there shall be a "lightning" gap of at least 5 feet in the firing system ahead of the main firing switch; that is, between this switch and the source of power. This gap shall be bridged by a flexible jumper cord just before firing the blast.

(p) When firing from a power circuit, the firing switch shall be locked in the open or "Off" position at all times, except when firing. It shall be so designed that the firing lines to the cap circuit are automatically short-circuited when the switch is in the "off" position. Keys to this switch shall be entrusted only to the user (blaster).

(q) Blasting machines shall be in good condition and the efficiency of the machine shall be tested periodically to make certain that it can deliver power at its rated capacity.

(r) When firing with blasting machines, the connections shall be made as recommended by the manufacturer of the electric blasting caps used.

(s) The number of electric blasting caps connected to a blasting machine shall not be in excess of its rated capacity. Furthermore, in primary blasting, a series circuit shall contain no more caps than the limits recommended by the manufacturer of the electric blasting caps in use.

(t) The user (blaster) shall be in charge of the blasting machines, and no other person shall connect the leading wires to the machine.

(u) Users (blasters), when testing circuits to charged holes, shall use only blasting testers especially designed for this purpose.

(v) Whenever the possibility exists that a leading line or blasting wire might be thrown over a live powerline by the force of an explosion, care shall be taken to see that the total length of wires are kept too short to hit the lines, or that the wires are securely anchored to the ground. If neither of these requirements can be satisfied, a nonelectric system shall be used.

(w) In electrical firing, only the person making leading wire connections shall fire the shot. All connections shall be made from the bore hole back to the source of firing current, and the leading wires shall remain shorted and not be connected to the blasting machine or other source of current until the charge is to be fired.

(x) After firing an electric blast from a blasting machine, the leading wires shall be immediately disconnected from the machine and short-circuited.

(y) When electric blasting caps have been used, workers shall not return to misfired holes for at least thirty minutes.

(5) Use of safety fuse.

(a) A fuse that is deteriorated or damaged in any way shall not be used.

(b) The hanging of fuse on nails or other projections which will cause a sharp bend to be formed in the fuse is prohibited.

(c) Before capping safety fuse, a short length shall be cut from the end of the supply reel so as to assure a fresh cut end in each blasting cap.

(d) Only a cap crimper of approved design shall be used for attaching blasting caps to safety fuse. Crimpers shall be kept in good repair and accessible for use.

(e) No unused cap or short capped fuse shall be placed in any hole to be blasted; such unused detonators shall be removed from the working place and disposed of or properly stored.

(f) No fuse shall be capped, or primers made up, in any magazine or near any possible source of ignition.

(g) Capping of fuse and making of primers shall only be done in a place selected for this purpose and at least one hundred feet distant from any storage magazine.

(h) Fuse must be cut long enough to reach beyond the collar of the bore hole and in no case less than three feet. When shooting choker holes, not less than three feet of fuse shall be used.

(i) At least two persons shall be present when multiple cap and fuse blasting is done by hand lighting methods.

(j) Not more than 12 fuses shall be lighted by each blaster when hand lighting devices are used. However, when two or more safety fuses in a group are lighted as one by means of igniter cord, or other similar fuse-lighting devices, they may be considered as one fuse.

(k) The so-called "drop fuse" method of dropping or pushing a primer or any explosive with a lighted fuse attached is prohibited.

(l) Cap and fuse shall not be used for firing mudcap charges unless charges are separated sufficiently to prevent one charge from dislodging other shots in the blast.

(m) When blasting with safety fuses, consideration shall be given to the length and burning rate of the fuse. Sufficient time, with a margin of safety, shall always be provided for the blaster to reach a place of safety.

(n) The burning rate of the safety fuse in use at any time shall be measured, posted in conspicuous locations, and brought to the attention of all workers concerned with blasting. No fuse shall be used that burns faster than one foot in forty seconds or slower than one foot in fifty-five seconds.

(o) For use in wet places the joint between the cap and fuse shall be waterproofed with a compound prepared for this purpose.

(p) In making up primers only nonsparking skewers shall be used for punching the hole in the cartridge to insert the capped fuse.

(q) Only sufficient primers for one day's use shall be made up at one time. They shall be stored in a box type magazine in which no other explosives are stored.

(r) Any loose cartridges of explosives, detonators, primers and capped fuse unused at the end of the shift shall be returned to their respective magazines and locked up.

(6) Use of detonating cord.

(a) Care shall be taken to select a detonating cord consistent with the type and physical condition of the bore hole and stemming and the type of explosives used.

(b) Detonating cord shall be handled and used with the same respect and care given other explosives.

(c) For quantity and distance purposes detonating fuse up to 60 grains per foot should be calculated as

equivalent to 9 lbs. of high explosives per 1,000 feet. Heavier cord loads should be rated proportionately.

(d) If using a detonating type cord for blasting the double-trunk-line or loop systems shall be used.

(e) Trunk lines in multiple-row blasts shall make one or more complete loops, with crossties between loops at intervals of not over two hundred feet.

(f) All detonating cord knots shall be tight and all connections shall be kept at right angles to the trunk lines.

(g) The line of detonating cord extending out of a bore hole or from a charge shall be cut from the supply spool before loading the remainder of the bore hole or placing additional charges.

(h) Detonating cord shall be handled and used with care to avoid damaging or severing the cord during and after loading and hooking-up.

(i) Detonating cord connections shall be competent and positive in accordance with approved and recommended methods. Knot-type or other cord-to-cord connections shall be made only with detonating cord in which the explosive core is dry.

(j) All detonating cord trunklines and branchlines shall be free of loops, sharp kinks, or angles that direct the cord back toward the oncoming line of detonation.

(k) All detonating cord connections shall be inspected before firing the blast.

(l) When detonating cord millisecond-delay connectors or short-interval-delay electric blasting caps are used with detonating cord, the practice shall conform strictly to the manufacturer's recommendations.

(m) When connecting a blasting cap or an electric blasting cap to detonating cord, the cap shall be taped or otherwise attached securely along the side or the end of the detonating cord, with the end of the cap containing the explosive charge pointed in the direction in which the detonation is to proceed.

(n) Detonators for firing the trunkline shall not be brought to the loading area nor attached to the detonating cord until everything else is in readiness for the blast.

(7) Firing the blast.

(a) A code of blasting signals equivalent to Table T-1 shall be posted on one or more conspicuous places at the operation, and all employees shall be required to familiarize themselves with the code and conform to it. Danger signs shall be placed at suitable locations.

(b) All charges shall be covered with blasting mats before firing, where blasting may cause injury or damage by flying rock or debris.

(c) Before a blast is fired, a loud warning signal shall be given by the blaster in charge, who has made certain that all surplus explosives are in a safe place and all employees, vehicles, and equipment are at a safe distance, or under sufficient cover.

(d) Flagmen shall be safely stationed on highways which pass through the danger zone so as to stop traffic during blasting operations.

(e) It shall be the duty of the blaster to fix the time of blasting.

(f) Before firing an underground blast, warning shall be given, and all possible entries into the blasting area, and any entrances to any working place where a drift, raise, or other opening is about to hole through, shall be carefully guarded. The blaster shall make sure that all employees are out of the blast area before firing a blast.

TABLE T-1

WARNING SIGNAL	— A 1-minute series of long blasts 5 minutes prior to blast signal.
BLAST SIGNAL	— A series of short blasts 1 minute prior to the shot.
ALL CLEAR SIGNAL	— A prolonged blast following the inspection of blast area.

(8) Inspection after blasting.

(a) Immediately after the blast has been fired, the firing line shall be disconnected from the blasting machine, or where power switches are used, they shall be locked open or in the off position.

(b) Sufficient time shall be allowed, for the smoke and fumes to leave the blasted area before returning to the shot. An inspection of the area and the surrounding rubble shall be made by the user (blaster) to determine if all charges have been exploded before employees are allowed to return to the operation, and in tunnels, after the muck pile has been wetted down.

(9) Misfires.

(a) If a misfire is found, the user (blaster) shall provide proper safeguards for excluding all employees from the danger zone.

(b) No other work shall be done except that necessary to remove the hazard of the misfire and only those employees necessary to do the work shall remain in the danger zone.

(c) No attempt shall be made to extract explosives from any charged or misfired hole; a new primer shall be put in and the hole reblasted. If refiring of the misfired hole presents a hazard, the explosives may be removed by washing out with water or, where the misfire is under water, blown out with air.

(d) If there are any misfires while using cap and fuse, all employees shall remain away from the charge for at least one hour. Misfires shall be handled under the direction of the person in charge of the blasting.

(e) When electric blasting caps have been used, workers shall not return to misfired holes for at least thirty minutes. All wires shall be carefully traced and a search made for unexploded charges.

(f) If explosives are suspected of burning in a hole, all persons in the endangered area shall move to a safe location and no one shall return to the hole until the danger has passed, but in no case within one hour.

(g) No drilling, digging, or picking shall be permitted until all missed holes have been detonated or the authorized representative has approved that work can proceed.

(10) Underwater blasting.

(a) A user (blaster) shall conduct all blasting operations.

(b) Loading tubes and casings of dissimilar metals shall not be used because of possible electric transient currents from galvanic action of the metals and water.

(c) Only water-resistant blasting caps and detonating cords shall be used for all underwater blasting. Loading shall be done through a nonsparking metal loading tube when tube is necessary.

(d) No blast shall be fired while any vessel under way is closer than 1,500 feet to the blasting area. Those on board vessels or craft moored or anchored within 1,500 feet shall be notified before a blast is fired.

(e) No blast shall be fired while any swimming or diving operations are in progress in the vicinity of the blasting area. If such operations are in progress, signals and arrangements shall be agreed upon to assure that no blast shall be fired while any persons are in the water.

(f) Blasting flags shall be displayed.

(g) The storage and handling of explosives aboard vessels used in underwater blasting operations shall be according to provisions outlined herein on handling and storing explosives.

(h) When more than one charge is placed under water, a float device shall be attached to an element of each charge in such manner that it will be released by the firing. Misfires shall be handled in accordance with the requirements of WAC 296-52-043(9).

(11) Blasting in excavation work in pressurized air locks.

(a) Detonators and explosives shall not be stored or kept in tunnels, shafts, or caissons. Detonators and explosives for each round shall be taken directly from the magazines to the blasting zone and immediately loaded. Detonators and explosives left over after loading a round shall be removed from the working chamber before the connecting wires are connected up.

(b) When detonators or explosives are brought into an air lock, no employee except the powderman, user (blaster), lock tender and the employees necessary for carrying, shall be permitted to enter the air lock. No material, supplies, or equipment shall be brought through with the explosives.

(c) Primers, detonators and explosives shall be taken separately into pressure working chambers.

(d) The user (blaster) or powderman shall be responsible for the receipt, unloading, storage, and on-site transportation of explosives and detonators.

(e) All metal pipes, rails, air locks, and steel tunnel lining shall be electrically bonded together and grounded at or near the portal or shaft, and such pipes and rails shall be cross-bonded together at not less than 1,000-foot intervals throughout the length of the tunnel. In addition, each air supply pipe shall be grounded at its delivery end.

(f) The explosives suitable for use in wet holes shall be water-resistant and shall be Fume Class 1, or other approved explosives.

(g) When tunnel excavation in rock face is approaching mixed face, and when tunnel excavation is in mixed face, blasting shall be performed with light charges and with light burden on each hole. Advance drilling shall be performed as tunnel excavation in rock face approaches

mixed face, to determine the general nature and extent of rock cover and the remaining distance ahead to soft ground as excavation advances.

(12) Vibration and damage control. Blasting operations in or adjacent to cofferdams, piers, underwater structures, buildings, structures, or other facilities shall be carefully planned with full consideration for all forces and conditions involved.

(13) Black blasting powder shall not be used for blasting except when a desired result cannot be obtained with another type of explosive such as in quarrying certain types of dimension stone.

(14) In the use of black blasting powder:

(a) Containers shall not be opened in, or within fifty feet of any magazine; within any building in which a fuel-fired or exposed-element electric heater is in operation; where electrical or incandescent-particle sparks could result in powder ignition; or within fifty feet of any open flame.

(b) Granular powder shall be transferred from containers only by pouring.

(c) Spills of granular powder shall be cleaned up promptly with nonsparking equipment, contaminated powder shall be put into a container of water and its content disposed of promptly after the granules have disintegrated, or the spill area shall be flushed with a copious amount of water to completely disintegrate the granules.

(d) Containers of powder shall be kept securely closed at all times other than when the powder is being transferred from or into a container.

(e) Containers of powder transported by vehicles shall be in a wholly enclosed cargo space.

(f) Misfires shall be disposed of by:

(i) Washing the stemming and powder charge from the bore hole, and

(ii) Removal and disposal of the initiator as a damaged explosive.

(iii) Bore holes of shots that fire but fail to break, or fail to break promptly, shall not be recharged for at least twelve hours.

(15) No person shall store, handle, or transport explosives or blasting agents when such storage, handling, and transportation of explosives or blasting agents constitutes an undue hazard to life.

(16) It shall be unlawful for any person to abandon explosives or explosive substances. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-08-026 (Order 82-10), § 296-52-043, filed 3/30/82; 81-07-048 (Order 81-4), § 296-52-043, filed 3/17/81; Order 76-6, § 296-52-043, filed 3/1/76; Order 75-41, § 296-52-043, filed 12/19/75.]

**WAC 296-52-050 Transportation.** (1) The transportation of explosives by vehicle on public highways shall be administered by the United States Department of Transportation, CFR 49-1978, Parts 100 through 199, and the Washington state patrol under RCW 46.48.170. The following sections cover the transportation of explosives on the job site.

(a) No employee shall be allowed to smoke, carry matches or any other flame-producing device, or carry any firearms or loaded cartridges while in or near a motor vehicle transporting explosives; or drive, load, or unload such vehicle in a careless or reckless manner.

(b) Explosives shall not be carried on any vehicle while vehicle is being used to transport workers other than driver and two persons.

(c) Explosives shall be transferred from the disabled vehicle to another, only when proper and qualified supervision is provided.

(2) Transportation vehicles. Vehicles used for transporting explosives shall be strong enough to carry the load without difficulty and be in good mechanical condition. If vehicles do not have a closed body, the body shall be covered with a flameproof and moisture-proof tarpaulin or other effective protection against moisture and sparks. All vehicles used for the transportation of explosives shall have tight floors and any exposed spark-producing metal on the inside of the body shall be covered with wood or other nonsparking materials to prevent contact with packages of explosives. Packages of explosives shall not be loaded above the sides of an open-body vehicle.

(3) Vehicles shall be placarded and displayed as specified by the United States Department of Transportation, CFR 49-1978, Parts 100 through 199.

(4) (a) Each motor vehicle used for transporting explosives shall be equipped with a minimum of two extinguishers, each having a rating of at least 10-BC.

(i) Only extinguishers listed or approved by Underwriters Laboratories, Inc., or the Factor Mutual Engineering Corp. shall be deemed suitable for use on explosives-carrying vehicles.

(ii) Extinguishers shall be filled and ready for immediate use and readily available. Extinguishers shall be examined daily when being used by a competent person.

(b) A motor vehicle used for transporting explosives shall be given the following inspection to determine that it is in proper condition for safe transportation of explosives:

(i) Fire extinguishers shall be filled and in working order.

(ii) All electrical wiring shall be completely protected and securely fastened to prevent short-circuiting.

(iii) Chassis, motor, pan, and underside of body shall be reasonably clean and free of excess oil and grease.

(iv) Fuel tank and feedline shall be secure and have no leaks.

(v) Brakes, lights, horn, windshield wipers, and steering apparatus shall function properly.

(vi) Tires shall be checked for proper inflation and defects.

(vii) The vehicle shall be in proper condition in every other respect and acceptable for handling explosives.

(5) Operation of transportation vehicles.

(a) Vehicles transporting explosives shall only be driven by and be in the charge of a driver who is not less than 21 years of age, physically fit, careful, capable, reliable, able to read and write the English language, and

not addicted to the use, or under the influence of intoxicants, narcotics, or other dangerous drugs. This rule does not apply to persons taking prescription drugs and/or narcotics as directed by a physician providing such use shall not endanger the worker or others. They shall be familiar with the traffic regulations, state laws, and the provisions of this section.

(b) Except under emergency conditions, no vehicle transporting explosives shall be parked before reaching its destination, even though attended.

(c) Every motor vehicle transporting any quantity of Class A or Class B explosives shall, at all times, be attended by a driver or other attendant of the motor carrier. This attendant shall have been made aware of the class of the explosive material in the vehicle and of its inherent dangers, and shall have been instructed in the measures and procedures to be followed in order to protect the public from those dangers. He shall have been made familiar with the vehicle he is assigned, and shall be trained, supplied with the necessary means, and authorized to move the vehicle when required.

(i) For the purpose of this subdivision, a motor vehicle shall be deemed "attended" only when the driver or other attendant is physically on or in the vehicle, or has the vehicle within his field of vision and can reach it quickly and without any kind of interference; "attended" also means that the driver or attendant is awake, alert, and not engaged in other duties or activities which may divert his attention from the vehicle.

(ii) However, an explosive-laden vehicle may be left unattended if parked within a securely fenced or walled area properly barricaded with all gates or entrances locked where parking of such vehicle is otherwise permissible, or at a magazine site established solely for the purpose of storing explosives.

(d) No spark-producing metal, spark-producing tools, oils, matches, firearms, electric storage batteries, flammable substances, acids, oxidizing materials, or corrosive compounds shall be carried in the body of any motor truck and/or vehicle transporting explosives, unless the loading of such dangerous articles and the explosives comply with U.S. Department of Transportation regulations.

(e) Vehicles transporting explosives shall avoid congested areas and heavy traffic.

(f) Delivery shall only be made to authorized persons and into authorized magazines of authorized temporary storage or handling area.

(6) Transporting of explosives and blasting caps or electric blasting caps in the same vehicle. Blasting caps, blasting caps with safety fuse, blasting caps with metal clad mild detonating fuse and/or electric blasting caps may be transported in the same vehicle with other explosives, provided the following condition is complied with:

The top, lid or door, sides and bottom of each container must be of laminate construction consisting of A/C grade or better exterior plywood, solid hardwood, asbestos board or sheetrock and sheet metal. In order of arrangement, from inside to outside, the laminate must

consist of the following with the minimum thickness of each lamination as indicated: 1/4-inch plywood, 1-inch solid hardwood, 1/2-inch plywood, 1/2-inch sheetrock or 1/4-inch asbestos board, and 22-gauge sheet metal constructed inside to outside in that order.

(7) When primers are made up at a central primer house for use in high speed tunneling, the following shall apply:

(a) Only enough primers shall be made up for one day's usage.

(b) The primers shall be placed in separate containers or bins, categorized by degree of delay in such a manner so as to prevent them from physical impact.

(c) Explosives carried in the same magazine shall be separated by 1/4-inch steel, covered on each side by four inches of hardwood planking, or equivalent.

(d) Only a state approved powder car or vehicle shall be used underground.

(e) The number of primers for one round will be removed from the state approved car or vehicle at the face or heading after the drilling has been completed and the holes readied for loading. After loading the charge, the powder car or vehicle will be withdrawn from the tunnel.

(f) Wires on electric caps shall be kept shunted until wired to the bus wires.

(g) The powder car or vehicle shall be inspected daily for lights, brakes and external damage to electrical circuitry. The electrical system shall be checked weekly to detect any failures that may constitute an electrical hazard and a written record of such inspection shall be kept on file for the duration of the job.

(h) Before diesel equipment is taken underground, written permission shall be obtained from the division of industrial safety and health or its duly authorized representative. A satisfactory test on the surface, to show that the exhaust gases do not exceed the maximum percentage of allowable limits.

(i) Air measurements shall be made at least weekly in the diesel engine working area and the measurements entered in the Underground Diesel Engine Record Book.

(8) When explosives are carried to the blasting site from the main storage magazines by the blaster or helper:

(a) Special insulated containers shall be used for this purpose, either boxes or bags, one container for explosives and one for detonators.

(b) Detonators or explosives shall never be carried in pockets of clothing. (RCW 70.74.020, 70.74.160, 70.74.191, 70.74.320, 70.74.340 and 70.74.350 apply.) [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-02-003 (Order 81-32), § 296-52-050, filed 12/24/81; 81-07-048 (Order 81-4), § 296-52-050, filed 3/17/81; Order 75-41, § 296-52-050, filed 12/19/75; Order 70-4, § 296-52-050, filed 4/29/70.]

**WAC 296-52-060 More stringent ordinances prevail.** RCW 70.74.201, applies.

The relation between the enforcing agencies is clarified in WAC 296-52-400. [Order 70-4, § 296-52-060, filed 4/29/70.]

**WAC 296-52-080 Temporary permit for existing storage facilities.** RCW 70.74.010, applies.

The application for the temporary storage permit shall be made in writing. A temporary permit shall be void after August 11, 1970. [Order 70-4, § 296-52-080, filed 4/29/70.]

**WAC 296-52-090 Construction of magazines.** (1) Construction of permanent storage facilities.

(a) Definition. A Class 1 storage facility shall be a permanent structure; a building, an igloo or army-type structure, a tunnel, or a dugout. It shall be bullet-resistant, fire-resistant, weather-resistant, theft-resistant, and well ventilated.

(b) Buildings. All building type storage facilities shall be constructed of masonry, wood, metal, or a combination of these materials and shall have no openings except for entrances and ventilation. Ground around such storage facilities shall slope away for drainage.

(c) Masonry wall construction. Masonry wall construction shall consist of brick, concrete, tile, cement block, or cinder block and shall be not less than 6 inches in thickness. Hollow masonry units used in construction shall have all hollow spaces filled with well tamped coarse dry sand or weak concrete (a mixture of one part cement and eight parts of sand with enough water to dampen the mixture while tamping in place). Interior wall shall be covered with a nonsparking material.

(d) Fabricated metal wall construction. Metal wall construction shall consist of sectional sheets of steel or aluminum not less than number 14 gauge, securely fastened to a metal framework. Such metal wall construction shall be either lined inside with brick, solid cement blocks, hardwood not less than 4 inches in thickness or material of equivalent strength, or shall have at least a 6 inch sand fill between interior and exterior walls. Interior walls shall be constructed of or covered with a nonsparking material.

(e) Wood frame wall construction. The exterior of outer wood walls shall be covered with iron or aluminum not less than number 26 gauge. An inner wall of nonsparking materials shall be constructed so as to provide a space of not less than 6 inches between the outer and inner walls, which space shall be filled with coarse dry sand or weak concrete.

(f) Floors. Floors shall be constructed of a nonsparking material and shall be strong enough to bear the weight of the maximum quantity to be stored.

(g) Foundations. Foundations shall be constructed of brick, concrete, cement block, stone, or wood posts. If piers or posts are used, in lieu of a continuous foundation, the space under the buildings shall be enclosed with metal.

(h) Roof.

(i) Except for buildings with fabricated metal roofs, the outer roof shall be covered with no less than number 26-gauge iron or aluminum fastened to a 7/8 inch sheathing.

(ii) Where it is possible for a bullet to be fired directly through the roof and into the storage facility at such an angle that the bullet would strike a point below the top

of inner walls, storage facilities shall be protected by one of the following methods:

(A) A sand tray shall be located at the tops of inner walls covering the entire ceiling area, except that necessary for ventilation, lined with a layer of building paper, and filled with not less than 4 inches of coarse dry sand.

(B) A fabricated metal roof shall be constructed of 3/16 inch plate steel lined with 4 inches of hardwood or material of equivalent strength (for each additional 1/16 inch of plate steel, the hardwood or material of equivalent strength lining may be decreased one inch).

(i) Doors. All doors shall be constructed of 1/4 inch plate steel and lined with 2 inches of hardwood or material of equivalent strength. Hinges and hasps shall be attached to the doors by welding, riveting or bolting (nuts on inside of door). They shall be installed in such a manner that the hinges and hasps cannot be removed when the doors are closed and locked.

(j) Locks. Each door shall be equipped with two mortise locks; or with two padlocks fastened in separate hasps and staples; or with a combination of mortise lock and a padlock, or with a mortise lock that requires two keys to open; or a three-point lock. Locks shall be five-tumbler proof. All padlocks shall be protected with 1/4 inch steel caps constructed so as to prevent sawing or lever action on the locks or hasps.

(k) Ventilation. Except at doorways, a 2 inch air space shall be left around ceilings and the perimeter of floors. Foundation ventilators shall be not less than 4 by 6 inches. Vents in the foundation, roof, or gables shall be screened and offset.

(l) Exposed metal. No sparking metal construction shall be exposed below the top of walls in the interior of storage facilities, and all nails therein shall be blind-nailed or countersunk.

(m) Igloos, army-type structures, tunnels and dugouts. Storage facilities shall be constructed of reinforced concrete, masonry, metal or a combination of these materials. They shall have an earthmound covering of not less than 24 inches on the top, sides and rear. Interior walls and floors shall be covered with a nonsparking material. Storage facilities of this type shall also be constructed in conformity with the requirements of subsection (1), subdivisions (a), (b), (f), (i), (j), (k) and (l) of this section.

(2) Construction of portable (field) storage facilities.

(a) Definition. A Class 2 storage facility shall be a box, a trailer, a semitrailer or other mobile facility. It shall be bullet-resistant, fire-resistant, weather-resistant, theft-resistant, and well ventilated. Except as provided in subsection (3) of this section, hinges and hasps shall be attached to the covers or doors in the manner prescribed in subsection (1), subdivision (i) and the locking system shall be that prescribed in subsection (1) subdivision (j).

(b) Outdoor storage facilities. Outdoor storage facilities shall be at least one cubic yard in size and supported in such a manner so as to prevent direct contact with the ground. The sides, bottoms, tops and covers or doors shall be constructed of 1/4 inch steel and shall be lined with two inches of hardwood or material of equivalent

strength. Edges of metal covers shall overlap sides at least one inch. The ground around such storage facilities shall slope away for drainage. When unattended, vehicular storage facilities shall have wheels removed or shall be otherwise effectively immobilized by kingpin locking devices or other methods approved by the division of industrial safety and health.

NOTE: The following alternatives may be used. (All steel and wood dimensions indicated are actual thicknesses. To meet the concrete block and brick dimensions indicated, the manufacturer's represented thicknesses may be used.)

(i) Exterior of 5/8-inch steel, lined with an interior of any type of nonsparking material.

(ii) Exterior of 1/2-inch steel, lined with an interior of not less than 3/8-inch plywood.

(iii) Exterior of 3/8-inch steel, lined with an interior of two inches of hardwood.

(iv) Exterior of 3/8-inch steel, lined with an interior of three inches of softwood [of] [or] 2-1/4-inches of plywood.

(v) Exterior of 1/4-inch steel, lined with an interior of five inches of softwood or 5-1/4-inches of plywood.

(vi) Exterior of 3/16-inch steel, lined with an interior of four inches of hardwood.

(vii) Exterior of 3/16-inch steel, lined with an interior of seven inches of softwood or 6-3/4-inches of plywood.

(viii) Exterior of 3/16-inch steel, lined with an intermediate layer of three inches of hardwood and an interior lining of 3/4-inch plywood.

(ix) Exterior of 1/8-inch steel, lined with an interior of five inches of hardwood.

(x) Exterior of 1/8-inch steel, lined with an interior of nine inches of softwood.

(xi) Exterior of 1/8-inch steel, lined with an intermediate layer of four inches of hardwood and an interior lining of 3/4-inch plywood.

(xii) Exterior of any type of fire-resistant material which is structurally sound, lined with an intermediate layer of four inches solid concrete block or four inches solid brick or four inches of solid concrete, and an interior lining of 1/2-inch plywood placed securely against the masonry lining.

(xiii) Standard eight-inch concrete block with voids filled with well-tamped sand/cement mixture.

(xiv) Standard eight-inch solid brick.

(xv) Exterior of any type of fire-resistant material which is structurally sound, lined with an intermediate six-inch space filled with well-tamped dry sand or well-tamped sand/cement mixture.

(xvi) Exterior of 1/8-inch steel, lined with a first intermediate layer of 3/4-inch plywood, a second intermediate layer of 3-5/8 inches well-tamped dry sand or sand/cement mixture and an interior lining of 3/4-inch plywood.

(xvii) Exterior of any type of fire-resistant material, lined with a first intermediate layer of 3/4-inch plywood, a second intermediate layer of 3-5/8-inch well-

tamped dry sand or sand/cement mixture, a third intermediate layer of 3/4-inch plywood, and a fourth intermediate layer of two inches of hardwood or 14-gauge steel and an interior lining of 3/4-inch plywood.

(xviii) Eight-inch thick solid concrete.

(3) Class 3 storage for 1,000 or less blasting caps in a locked uninhabited building. Storage facilities for blasting caps in quantities of 1,000 or less shall have sides, bottoms, and covers constructed of number 12 gauge metal and lined with a nonsparking material. Hinges and hasps shall be attached thereto by welding. A single five-tumble proof lock shall be sufficient for locking purposes.

(4) Construction of blasting agent storage facilities.

(a) A Class 4 storage facility may be a building, an igloo, or army-type structure, a tunnel, a dugout, a box, a trailer, or a semi-trailer or other mobile facility and shall be fire-resistant, weather-resistant, theft-resistant, and ventilated. They shall be constructed of masonry, metal-covered wood, fabricated metal, or a combination of these materials. The walls and floors of such storage facilities shall be lined with a nonsparking material. The doors or covers shall be metal or solid wood covered with metal. The foundations, locks, lock protection, hinges, hasps, and interior shall be in conformity with the requirements of subsection (1), subdivisions (g), (i), (j), (k), and (l).

(b) Outdoor storage facilities. The ground around such storage facilities shall slope away for drainage. When unattended, vehicular storage facilities shall have wheels removed or otherwise effectively immobilized by kingpin locking devices or other methods approved by the division of industrial safety and health.

(5) Smoking and open flames.

Smoking, matches, open flames, and spark-producing devices shall not be permitted in, or within 50 feet of, any outdoor storage facility.

(6) Quantity and storage restrictions.

General. Explosive materials in excess of 300,000 pounds and blasting caps in excess of 20 million shall not be stored in one storage facility. Blasting caps shall not be stored with other explosive materials in the same storage facility.

(7) Construction of day box storage facilities.

(a) A temporary storage facility shall be a "day-box" or other portable magazine. It must be fire-resistant, weather-resistant, and theft-resistant. A magazine is to be constructed of not less than number 12-gauge (.1046 inches) steel, lined with at least either 1/2-inch plywood or 1/2-inch Masonite-type hardboard. Doors must overlap sides by at least one inch. Hinges and hasps are to be attached by welding, riveting or bolting (nuts on inside). One steel padlock (which need not be protected by a steel hood) having at least five tumblers and a case-hardened shackle of at least 3/8-inch diameter is sufficient for locking purposes. Explosive materials are not to be left unattended in magazines and must be removed to class 1 or 2 magazines for unattended storage.

(b) The ground around such storage facilities shall slope away for drainage.

(c) No explosive materials shall be left in such facilities if unattended. The explosive materials contained therein must be removed to licensed storage facilities for unattended storage.

(d) When used for temporary storage at a site for blasting operations, magazines shall be located away from neighboring inhabited buildings, railways, highways, and other magazines. A distance of at least one hundred and fifty feet shall be maintained between magazines and the work in progress when the quantity of explosives kept therein is in excess of 25 pounds, and at least 50 feet when the quantity of explosives is 25 pounds, or less.

(8) Cap day box.

(a) Temporary storage facilities for blasting caps in quantities of 100 or less shall have sides, bottoms and covers constructed of number 12 gauge metal and lined with a nonsparking material. Hinges and hasps shall be attached thereto by welding. A single five-tumbler proof lock shall be sufficient for locking purposes.

(b) No explosive materials shall be left in such facilities if unattended. The explosive materials contained therein must be removed to licensed storage facilities for unattended storage.

(9) Storage within magazines.

(a) Packages of explosives shall be laid flat with top side up. Black powder when stored in magazines with other explosives shall be stored separately. Black powder stored in kegs shall be stored on ends, bungs down, or on side, seams down. Corresponding grades and brands shall be stored together in such a manner that brands and grade marks show. All stocks shall be stored so as to be easily counted and checked. Packages of explosives shall be piled in a stable manner. When any kind of explosive is removed from a magazine for use, the oldest explosive of that particular kind shall always be taken first.

(b) Packages of explosives shall not be unpacked or repacked in a magazine nor within 50 feet of a magazine or in close proximity to other explosives. Tools used for opening packages of explosives shall be constructed of nonsparking materials, except that metal slitters may be used for opening fiberboard boxes. A wood wedge and a fiber, rubber, or wood mallet shall be used for opening or closing wood packages of explosives. Opened packages of explosives shall be securely closed before being returned to a magazine.

(c) Magazines shall not be used for the storage of any metal tools nor any commodity except explosives, but this restriction shall not apply to the storage of blasting agents and blasting supplies.

(d) Magazine floors shall be regularly swept, kept clean, dry, free of grit, paper, empty used packages, and rubbish. Brooms and other cleaning utensils shall not have any spark-producing metal parts. Sweepings from floors of magazines shall be properly disposed of. Magazine floors stained with nitroglycerin shall be cleaned according to instructions by the manufacturer.

(e) When any explosive has deteriorated to an extent that it is in an unstable or dangerous condition, or if nitroglycerin leaks from any explosives, then the person in

possession of such explosive shall immediately proceed to destroy such explosive in accordance with the instructions of the manufacturer. Only experienced persons shall be allowed to do the work of destroying explosives.

(f) When magazines need inside repairs, all explosives shall be removed therefrom and the floors cleaned. In making outside repairs, if there is a possibility of causing sparks or fire the explosives shall be removed from the magazine. Explosives removed from a magazine under repair shall either be placed in another magazine or placed a safe distance from the magazine where they shall be properly guarded and protected until repairs have been completed, when they shall be returned to the magazine.

(g) Smoking, matches, open flames, spark-producing devices, and firearms (except firearms carried by guards) shall not be permitted inside of or within 50 feet of magazines. The land surrounding a magazine shall be kept clear of all combustible materials for a distance of at least 25 feet. Combustible materials shall not be stored within 50 feet of magazines.

(h) Magazines shall be in the charge of a competent person at all times who shall be at least 21 years of age, and who shall be held responsible for the enforcement of all safety precautions.

(i) Explosives recovered from blasting misfires shall be placed in a separate magazine until competent personnel has determined from the manufacturer the method of disposal. Caps recovered from blasting misfires shall not be reused. Such explosives and caps shall then be disposed of in the manner recommended by the manufacturer.

(10) Magazine heating systems requirements, NFPA Code No. 495, "Manufacture, Transportation, Storage and Use of Explosive Materials, 1973." The following will apply:

(a) Magazines requiring heat shall be heated by either hot water radiant heating within the magazine building; or air directed into the magazine building over either hot water or low pressure steam (15 psig) coils located outside the magazine building.

(b) The magazine heating systems shall meet the following requirements:

(i) The radiant heating coils within the building shall be installed in such a manner that the explosive materials or their containers cannot contact the coils and air is free to circulate between the coils and the explosive materials or their containers.

(ii) The heating ducts shall be installed in such a manner that the hot air discharge from the duct is not directed against the explosive materials or their containers.

(iii) The heating device used in connection with a magazine shall have controls which prevent the ambient building temperature from exceeding 130°F.

(iv) The electric fan or pump used in the heating system for a magazine shall be mounted outside and separate from the wall of the magazine and shall be grounded.

(v) The electric fan motor and the controls for electrical heating devices used in heating water or steam

shall have overloads and disconnects, which comply with the National Electrical Code, (National Fire Protection Association, NFPA No. 70-1971). All electrical switch gear shall be located a minimum distance of 25 feet from the magazine.

(vi) The heating source for water or steam shall be separated from the magazine by a distance of not less than 25 feet when electrical and 50 feet when fuel-fired. The area between the heating unit and the magazine shall be cleared of all combustible materials.

(vii) The storage of explosive materials and their containers in the magazine shall allow uniform air circulation so temperature uniformity can be maintained throughout the explosive materials.

(11) Lighting. No lighting shall be placed or used in a storage facility of Class 1, 2, 3 or 4 except battery-activated safety lanterns.

(12) Underground storage.

(a) Explosives and related materials shall be stored in approved facilities required under the applicable provisions of WAC 296-61-280(7), (8), safety standard metal and nonmetallic mines, quarries, pits, and crushing operations.

(b) No explosives or blasting agents shall be permanently stored in any underground operation until the operation has been developed to the point where at least two modes of exit have been developed.

(c) Permanent underground storage magazines shall be at least 300 feet from any shaft, adit, or active underground working area.

(d) Permanent underground magazines containing detonators shall not be located closer than 50 feet to any magazine containing other explosives or blasting agents.

(e) Upon the approach of an electrical storm, unless a greater hazard would be created thereby, explosives at the adit or the top of any shaft leading to where persons are working shall be moved away from such location a distance equal to that required for inhabited buildings, as listed in the American table of distances for storage of explosive materials. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-08-026 (Order 82-10), § 296-52-090, filed 3/30/82; 81-07-048 (Order 81-4), § 296-52-090, filed 3/17/81; Order 75-41, § 296-52-090, filed 12/19/75; Order 70-4, § 296-52-090, filed 4/29/70.]

**WAC 296-52-095 Storage of explosives.** General provisions. (1) All Class A, Class B, Class C explosives, and special industrial explosives, and any newly developed and unclassified explosives, shall be kept in magazines which meet the requirements of this section as defined in RCW 70.74.030, 70.74.040, 70.74.050, 70.74.061, 70.74.100 and the following shall apply.

**NOTE:** RCW 70.74.297 Separate storage of components capable of detonation when mixed. Any two components which, when mixed, become capable of detonation by a number 6 cap must be stored in separate locked containers or in a licensed, approved magazine. [1972 1st ex.s. c 88 § 4.]

(2) Blasting caps, electric blasting caps, detonating primers and primed cartridges shall not be stored in the same magazine with other explosives.

(3) Ground around magazines shall slope away for drainage. The land surrounding magazines shall be kept clear of brush, dried grass, leaves, and other materials for a distance of at least 25 feet.

(4) Magazines as required by this chapter shall be of four classes as defined in WAC 296-52-090.

(5) All explosive manufacturing buildings and magazines in which explosives or blasting agents, except small arms ammunition and smokeless powder are had, kept, or stored, must be located at distances from inhabited buildings, railroads, highways, and public utility transmission systems in conformity with the following quantity and distance tables, and these tables shall be the basis on which applications for license for storage shall be made and license for storage issued, as provided in RCW 70.74.110 and 70.74.120. All distances prescribed in the following quantity and distance tables are unbaricaded, and, if there is an efficient artificial barricade or natural barricade between the explosives manufacturing building or magazine and another explosives manufacturing building or magazine, building, railroad, highway, or public utility transmission system, the distance prescribed in the following quantity and distance tables may be reduced by one-half. Blasting and electric blasting caps in strength through number 8 should be rated as one and one-half pounds of explosives per one thousand caps. Blasting and electric blasting caps of strength higher than number 8 should be computed on the combined weight of explosives.

(6) When two or more storage magazines are located on the same property, each magazine must comply with the minimum distances specified from inhabited buildings, railways, and highways, and in addition, they should be separated from each other by not less than the distances shown for "separation of magazines," except that the quantity of explosives contained in cap magazines shall govern in regard to the spacing of said cap magazines from magazines containing other explosives. If any two or more magazines are separated from each other by less than the specified "separation of magazines" distances, then such two or more magazines, as a group, must be considered as one magazine, and the total quantity of explosives stored in such group must be treated as if stored in a single magazine located on the site of any magazine of the group, and must comply with the minimum of distances specified from other magazines, inhabited buildings, railways and highways.

(7) Magazine locations and access roads shall be posted with signs reading "explosives — keep off" — so placed that a bullet passing through any sign will not strike the magazine. [Statutory Authority: RCW 49.17.040 and 49.17.050. 81-07-048 (Order 81-4), § 296-52-095, filed 3/17/81; Order 75-41, § 296-52-095, filed 12/19/75.]

**WAC 296-52-110 Limit on storage quantity.** RCW 70.74.040, applies. [Order 70-4, § 296-52-110, filed 4/29/70.]

**WAC 296-52-120 Quantity and distance tables for factory buildings.** RCW 70.74.050, applies. [Order 70-4, § 296-52-120, filed 4/29/70.]

**WAC 296-52-140 Quantity and distance table for separation between magazines.** Magazines containing blasting caps and electric blasting caps shall be separated from other magazines containing like contents, or from magazines containing explosives by distances based on the following:

(1) Blasting caps in strengths through number 8 should be rated at one and one-half pounds of explosive per one thousand caps;

(2) For strengths higher than number 8, use the total combined weight of explosives;

(3) Magazines in which explosives are kept and stored shall be detached from other structures and separated from other magazines in conformity with the quantity and distance table set forth below:

TABLE H-21

275,000	300,000	770	385

(1969 1st ex.s. c 137 § 11.)

Note 1. "Natural barricade" means natural features of the ground, such as hills, or timber of sufficient density that the surrounding exposures which require protection cannot be seen from the magazine when the trees are bare of leaves.

Note 2. "Artificial barricade" means an artificial mound or revetted wall of earth of a minimum thickness of three feet.

Note 3. "Barricaded" means that a building containing explosives is effectually screened from a magazine, building, railway, or highway, either by a natural barricade, or by an artificial barricade of such height that a straight line from the top of any sidewall of the building containing explosives to the eave line of any magazine, or building, or to a point 12 feet above the center of a railway or highway, will pass through such intervening natural or artificial barricade.

Note 4. This table applies only to the manufacture and permanent storage of commercial explosives. It is not applicable to transportation of explosives, or any handling or temporary storage necessary or incident thereto. It is not intended to apply to bombs, projectiles, or other heavily encased explosives.

(4) WAC 296-52-095(1) does not apply to:

(a) Stocks of small arms ammunition, propellant-actuated power cartridges, small arms ammunition primers in quantities of less than 750,000, smokeless propellants in quantities of less than 150 pounds or black powder, as used in muzzle loading firearms, in quantities of less than 25 pounds;

(b) Explosive-actuated power devices when in quantities less than 50 pounds net weight of explosives;

(c) Fuse lighters and fuse igniters;

(d) Safety fuses other than cordeau detonant fuses. [Order 75-41, § 296-52-140, filed 12/19/75; Order 70-4, § 296-52-140, filed 4/29/70.]

**WAC 296-52-150 Storage of blasting caps with other explosives prohibited.** RCW 70.74.100, applies. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-02-003 (Order 81-32), § 296-52-150, filed 12/24/81; Order 70-4, § 296-52-150, filed 4/29/70.]

**WAC 296-52-160 License for manufacturing.** RCW 70.74.110, applies.

The application for license for manufacturing explosives and/or blasting agents shall be made on a form substantially similar to that shown in Fig. 3, of this code.

The manufacturer's license shall be valid for one year. Request for renewal may be made at any of the department district offices.

A copy of the plan of the plant submitted with said application and approved by the department shall be kept in the plant open to inspection by the department.

The manufacturing of explosives is covered by chapters 296-50 and 296-51 WAC. [Order 70-4, § 296-52-160, filed 4/29/70.]

**WAC 296-52-165 Blasting agents.** (1) General. Unless otherwise set forth in this section, blasting agents, excluding water gels, shall be transported, stored, and used in the same manner as explosives. Water gels are covered in WAC 296-52-167.

(2) Fixed location mixing. (a) Buildings or other facilities used for mixing blasting agents shall be located, with respect to inhabited buildings, passenger railroads, and public highways, in accordance with Table H-21. In determining the distance separating highways, railroads, and inhabited buildings from potential explosions (as prescribed in Table H-21), the sum of all masses which may propagate (i.e., lie at distances less than prescribed in Table H-22) from either individual or combined donor masses are included. However, when the ammonium nitrate must be included, only 50 percent of its weight shall be used because of its reduced blast effects.

(b) Buildings used for the mixing of blasting agents shall conform to the requirements of this section.

(i) Buildings shall be of noncombustible construction or sheet metal on wood studs.

(ii) Floors in a mixing plant shall be of concrete or of other nonabsorbent materials.

(iii) All fuel oil storage facilities shall be separated from the mixing plant and located in such a manner that in case of tank rupture, the oil will drain away from the mixing plant building.

(iv) The building shall be well ventilated.

(v) Heating units which do not depend on combustion processes, when properly designed and located, may be used in the building. All direct sources of heat shall be located outside the mixing building.

(vi) All internal-combustion engines used for electric power generation shall be located outside the mixing plant building, or shall be properly ventilated and isolated by a firewall. The exhaust systems on all such engines shall be located so any spark emission cannot be a hazard to any materials in or adjacent to the plant.

(c) Equipment used for mixing blasting agents shall conform to the requirements of this subdivision.

(i) The design of the mixer shall minimize the possibility of frictional heating, compaction, and especially confinement. All bearings and drive assemblies shall be mounted outside the mixer and protected against the accumulation of dust. All surfaces shall be accessible for cleaning.

(ii) Mixing and packaging equipment shall be constructed of materials compatible with the fuel-ammonium nitrate composition.

(iii) Suitable means shall be provided to prevent the flow of fuel oil to the mixer in case of fire. In gravity flow systems an automatic spring-loaded shutoff valve with fusible link shall be installed.

(d) The provisions of this subdivision shall be considered when determining blasting agent compositions.

(i) The sensitivity of the blasting agent shall be determined by means of a No. 8 test blasting cap at regular intervals and after every change in formulation.

(ii) Oxidizers of small particle size, such as crushed ammonium nitrate prills or fines, may be more sensitive than coarser products and shall, therefore, be handled with greater care.

(iii) No hydrocarbon liquid fuel with flashpoint lower than that of No. 2 diesel fuel oil 125°F. minimum shall be used.

(iv) Crude oil and crankcase oil shall not be used.

(v) Metal powders such as aluminum shall be kept dry and shall be stored in containers or bins which are moisture-resistant or weathertight. Solid fuels shall be used in such manner as to minimize dust explosion hazards.

(vi) Peroxides and chlorates shall not be used.

(e) All electrical switches, controls, motors, and lights located in the mixing room shall conform to the requirements in WAC 296-24-950 through 296-24-955; otherwise they shall be located outside the mixing room. The frame of the mixer and all other equipment that may be used shall be electrically bonded and be provided with a continuous path to the ground.

(f) Safety precautions at mixing plants shall include the requirements of this subdivision.

(i) Floors shall be constructed so as to eliminate floor drains and piping into which molten materials could flow and be confined in case of fire.

(ii) The floors and equipment of the mixing and packaging room shall be cleaned regularly and thoroughly to prevent accumulation of oxidizers or fuels and other sensitizers.

(iii) The entire mixing and packaging plant shall be cleaned regularly and thoroughly to prevent excessive accumulation of dust.

(iv) Smoking, matches, open flames, spark-producing devices, and firearms (except firearms carried by guards) shall not be permitted inside of or within 50 feet of any building or facility used for the mixing of blasting agents.

(v) The land surrounding the mixing plant shall be kept clear of brush, dried grass, leaves, and other materials for a distance of at least 25 feet.

(vi) Empty ammonium nitrate bags shall be disposed of daily in a safe manner.

(vii) No welding shall be permitted or open flames used in or around the mixing or storage area of the plant unless the equipment or area has been completely washed down and all oxidizer material removed.

(viii) Before welding or repairs to hollow shafts, all oxidizer material shall be removed from the outside and

inside of the shaft and the shaft vented with a minimum one-half inch diameter opening.

(ix) Explosives shall not be permitted inside of or within 50 feet of any building or facility used for the mixing of blasting agents.

(3) Bulk delivery and mixing vehicles. (a) The provisions of this subsection shall apply to off-highway private operations as well as to all public highway movements.

(b) A bulk vehicle body for delivering and mixing blasting agents shall conform with the requirements of this subdivision (b).

(i) The body shall be constructed of noncombustible materials.

(ii) Vehicles used to transport bulk premixed blasting agents on public highways shall have closed bodies.

(iii) All moving parts of the mixing system shall be designed as to prevent a heat buildup. Shafts or axles which contact the product shall have outboard bearings with 1-inch minimum clearance between the bearings and the outside of the product container. Particular attention shall be given to the clearances on all moving parts.

(iv) A bulk delivery vehicle shall be strong enough to carry the load without difficulty and be in good mechanical condition.

(c) Operation of bulk delivery vehicles shall conform to the requirements of WAC 296-52-050 (2)(b). These include the placarding requirements as specified by department of transportation.

(i) The operator shall be trained in the safe operation of the vehicle together with its mixing, conveying, and related equipment. The employer shall assure that the operator is familiar with the commodities being delivered and the general procedure for handling emergency situations.

(ii) The hauling of either blasting caps or other explosives but not both, shall be permitted on bulk trucks provided that a special wood or nonferrous-lined container is installed for the explosives. Such blasting caps or other explosives shall be in DOT-specified shipping containers: See 49 CFR Chapter I.

(iii) No person shall smoke, carry matches or any flame-producing device, or carry any firearms while in or about bulk vehicles effecting the mixing transfer or down-the-hole loading of blasting agents at or near the blasting site.

(iv) Caution shall be exercised in the movement of the vehicle in the blasting area to avoid driving the vehicle over or dragging hoses over firing lines, cap wires, or explosive materials. The employer shall assure that the driver, in moving the vehicle, has assistance of a second person to guide the driver's movements.

(v) No intransit mixing of materials shall be performed.

(d) Pneumatic loading from bulk delivery vehicles into blastholes primed with electric blasting caps or other static-sensitive systems shall conform to the requirements of this subdivision.

(i) A positive grounding device shall be used to prevent the accumulation of static electricity.

(ii) A discharge hose shall be used that has a resistance range that will prevent conducting stray currents, but that is conductive enough to bleed off static buildup.

(iii) A qualified person shall evaluate all systems to determine if they will adequately dissipate static under potential field conditions.

(e) Repairs to bulk delivery vehicles shall conform to the requirements of this section.

(i) No welding or open flames shall be used on or around any part of the delivery equipment unless it has been completely washed down and all oxidizer material removed.

(ii) Before welding or making repairs to hollow shafts, the shaft shall be thoroughly cleaned inside and out and vented with a minimum one-half-inch diameter opening.

(4) Bulk storage bins. (a) The bin, including supports, shall be constructed of compatible materials, waterproof, and adequately supported and braced to withstand the combination of all loads including impact forces arising from product movement within the bin and accidental vehicle contact with the support legs.

(b) The bin discharge gate shall be designed to provide a closure tight enough to prevent leakage of the stored product. Provision shall also be made so that the gate can be locked.

(c) Bin loading manways or access hatches shall be hinged or otherwise attached to the bin and be designed to permit locking.

(d) Any electrically driven conveyors for loading or unloading bins shall conform to the requirements of WAC 296-24-950 through 296-24-955. They shall be designed to minimize damage from corrosion.

(e) Bins containing blasting agent shall be located, with respect to inhabited buildings, passenger railroads, and public highways, in accordance with Table H-21 and separation from other blasting agent storage and explosives storage shall be in conformity with Table H-22.

(f) Bins containing ammonium nitrate shall be separated from blasting agent storage and explosives storage in conformity with Table H-22.

250,000	275,000	60	216	60
275,000	300,000	64	230	60

Notes to table of recommended separation distances of ammonium nitrate and blasting agents from explosives or blasting agents:

- Note 1. These distances apply to the separation of stores only. Table H-21 shall be used in determining separation distances from inhabited buildings, passenger railways, and public highways.
- Note 2. When the ammonium nitrate and/or blasting agent is not barricaded, the distances shown in the table shall be multiplied by six. These distances allow for the possibility of high velocity metal fragments from mixers, hoppers, truck bodies, sheet metal structures, metal containers, and the like which may enclose the "donor." Where storage is in bullet-resistant magazines recommended for explosives or where the storage is protected by a bullet-resistant wall, distances, and barricade thicknesses in excess of those prescribed in Table H-21 are not required.
- Note 3. The distances in the table apply to ammonium nitrate that passes the insensitivity test prescribed in the definition of ammonium nitrate fertilizer promulgated by the National Plant Food Institute\*; and ammonium nitrate failing to pass said test shall be stored at separation distances determined by competent persons. (\*Definition and Test Procedures for Ammonium Nitrate Fertilizer, National Plant Food Institute, November 1964.)
- Note 4. These distances apply to nitro-carbo-nitrates and blasting agents which pass the insensitivity test prescribed in the U.S. Department of Transportation (DOT) regulations.
- Note 5. Earth, or sand dikes, or enclosures filled with the prescribed minimum thickness of earth or sand are acceptable artificial barricades. Natural barricades, such as hills or timber of sufficient density that the surrounding exposures which require protection cannot be seen from the "donor" when the trees are bare of leaves, are also acceptable.
- Note 6. When the ammonium nitrate must be counted in determining the distances to be maintained from inhabited buildings, passenger railways and public highways, it may be counted at one-half its actual weight because its blast effect is lower.

Note 7. Guide to use of table of recommended separation distances of ammonium nitrate and blasting agents from explosives or blasting agents.

- (a) Sketch location of all potential donor and acceptor materials together with the maximum mass of material to be allowed in that vicinity. (Potential donors are high explosives, blasting agents, and combination of masses of detonating materials. Potential acceptors are high explosives, blasting agents, and ammonium nitrate.)
- (b) Consider separately each donor mass in combination with each acceptor mass. If the masses are closer than table allowance (distances measured between nearest edges), the combination of masses becomes a new potential donor of weight equal to the total mass. When individual masses are considered as donors, distances to potential acceptors shall be measured between edges. When combined masses within propagating distance of each other are considered as a donor, the appropriate distance to the edge of potential acceptors shall be computed as a weighted distance from the combined masses:

- (i) Calculation of weighted distance from combined masses:

Let  $M_2, M_3 \dots M_n$  be donor masses to be combined.

$M_1$  is a potential acceptor mass.

$D_{12}$  is distance from  $M_1$  to  $M_2$  (edge to edge).

$D_{13}$  is distance from  $M_1$  to  $M_3$  (edge to edge),

etc.

To find weighted distance [ $D_{1(2,3 \dots n)}$ ] from combined masses to  $M_1$ , add the products of the individual masses and distances and divide the total by the sum of the masses thus:

$$D_{1(2,3 \dots n)} = \frac{M_2 \times D_{12} + M_3 \times D_{13} \dots + M_n \times D_{1n}}{M_2 + M_3 \dots + M_n}$$

Propagation is possible if either an individual donor mass is less than the tabulated distance from an acceptor or a combined mass is less than the weighted distance from an acceptor.

- (c) In determining the distances separating highways, railroads, and inhabited buildings from potential explosions (as prescribed in Table H-21), the sum of all masses which may propagate (i.e., lie at distances less than prescribed in the Table) from either individual or combined donor masses are included. However, when the ammonium nitrate must be included, only 50 percent of its weight shall be used because of its reduced blast effects. In applying Table H-21 to distances from highways, railroads, and inhabited buildings, distances are measured from the nearest edge of potentially explodable material as prescribed in Table H-21, Note 5.
- (d) When all or part of a potential acceptor comprises Explosives Class A as defined in DOT regulations, storage in bullet-resistant magazines is required. Safe distances to stores in bullet-resistant magazines may be obtained from the intermagazine distances prescribed in Table H-21.
- (e) Barricades must not have line-of-sight openings between potential donors and acceptors which permit blast or missiles to move directly between masses.
- (f) Good housekeeping practices shall be maintained around any bin containing ammonium nitrate or blasting agent. This includes keeping weeds and other combustible materials cleared within 25 feet of such bin. Accumulation of spilled product on the ground shall be prevented.

(5) Storage of blasting agents and supplies. (a) Blasting agents and oxidizers used for mixing of blasting agents shall be stored in the manner set forth in this subsection.

(i) Blasting agents or ammonium nitrate, when stored in conjunction with explosives, shall be stored in the

manner set forth in WAC 296-52-090 (1)(a) for explosives. The mass of blasting agents and one-half the mass of ammonium nitrate shall be included when computing the total quantity of explosives for determining distance requirements.

(ii) Blasting agents, when stored entirely separate from explosives, may be stored in the manner set forth in WAC 296-52-090(4)(a) or in one-story warehouses (without basements) which shall be:

- (a) Noncombustible or fire resistive;
  - (b) Constructed so as to eliminate open floor drains and piping into which molten materials could flow and be confined in case of fire;
  - (c) Weather resistant;
  - (d) Well ventilated; and
  - (e) Equipped with a strong door kept securely locked except when open for business.
- (iii) Semitrailer or full-trailer vans used for highway or onsite transportation of the blasting agents are satisfactory for temporarily storing these materials, provided they are located in accordance with Table H-21 with respect to inhabited buildings, passenger railways, and public highways and according to Table H-22 with respect to one another. Trailers shall be provided with substantial means for locking, and the trailer doors shall be kept locked, except during the time of placement and removal of stocks of blasting agents.

(b) Warehouses used for the storage of blasting agents separate from explosives shall be located as set forth in this subdivision.

(i) Warehouses used for the storage of blasting agents shall be located in accordance with the provisions of Table H-21 with respect to inhabited buildings, passenger railways, and public highways, and according to Table H-22 with respect to one another.

(ii) If both blasting agents and ammonium nitrate are handled or stored within the distance limitations prescribed in Table H-21, one-half the mass of the ammonium nitrate shall be added to the mass of the blasting agent when computing the total quantity of explosives for determining the proper distance.

(c) Smoking, matches, open flames, spark producing devices, and firearms are prohibited inside of or within 50 feet of any warehouse used for the storage of blasting agents. Combustible materials shall not be stored within 50 feet of warehouses used for the storage of blasting agents.

(d) The interior of warehouses used for the storage of blasting agents shall be kept clean and free from debris and empty containers. Spilled materials shall be cleaned up promptly and safely removed. Combustible materials, flammable liquids, corrosive acids, chlorates, or nitrates shall not be stored in any warehouse used for blasting agents unless separated therefrom by a fire resistive separation of not less than 1 hour resistance. The provisions of this subdivision shall not prohibit the storage of blasting agents together with non-explosive blasting supplies.

(e) Piles of ammonium nitrate and warehouses containing ammonium nitrate shall be adequately separated from readily combustible fuels.

(f) Caked oxidizers, either in bags or in bulk, shall not be loosened by blasting.

(g) Every warehouse used for the storage of blasting agents shall be under the supervision of a competent person who shall be not less than 21 years of age.

(6) Transportation of packaged blasting agents. (a) When blasting agents are transported in the same vehicle with explosives, all of the requirements of WAC 296-52-050 shall be complied with.

(b) Vehicles transporting blasting agents shall only be driven by and in charge of a driver at least twenty-one years of age who is capable, careful, reliable, and in possession of a valid motor vehicle operator's license. Such a person shall also be familiar with the states vehicle and traffic laws.

(c) No matches, firearms, acids, or other corrosive liquids shall be carried in the bed or body of any vehicle containing blasting agents.

(d) No person shall be permitted to ride upon, drive, load, or unload a vehicle containing blasting agents while smoking or under the influence of intoxicants, narcotics, or other dangerous drugs.

(e) It is prohibited for any person to transport or carry any blasting agents upon any public vehicle carrying passengers for hire.

(f) Vehicles transporting blasting agents shall be in safe operating condition at all times.

(g) When offering blasting agents for transportation on public highways the packaging, marking, and labeling of containers of blasting agents shall comply with the requirements of DOT.

(h) Vehicles used for transporting blasting agents on public highways shall be placarded in accordance with DOT regulations.

(7) Use of blasting agents. Persons using blasting agents shall comply with all of the applicable provisions of WAC 296-52-043. [Statutory Authority: RCW 49-17.040 and 49.17.050. 82-02-003 (Order 81-32), § 296-52-165, filed 12/24/81; Order 76-6, § 296-52-165, filed 3/1/76; Order 75-41, § 296-52-165, filed 12/19/75.]

**WAC 296-52-167 Water gel (slurry) explosives and blasting agents.** (1) General provisions. Unless otherwise set forth in this section, water gels shall be transported, stored and used in the same manner as explosives or blasting agents in accordance with the classification of the product.

(2) Types and classifications. (a) Water gels containing a substance in itself classified as an explosive shall be classified as an explosive and manufactured, transported, stored, and used as specified for "explosives" in this section, except as noted in subdivision (d).

(b) Water gels containing no substance in itself classified as an explosive and which are cap-sensitive as defined in WAC 296-52-030 under blasting agent shall be classified as an explosive and manufactured, transported, stored and used as specified for "explosives" in this section.

(c) Water gels containing no substance in itself classified as an explosive and which are not cap-sensitive as

defined in WAC 296-52-030 under blasting agent shall be classified as blasting agents and manufactured, transported, stored, and used as specified for "blasting agents" in this section.

(d) When tests on specific formulations of water gels result in department of transportation classification as a Class B explosive, bullet-resistant magazines are not required, see WAC 296-52-090 (4)(a).

(3) Fixed location mixing. (a)(i) Buildings or other facilities used for mixing water gels shall be located with respect to inhabited buildings, passenger railroads and public highways, in accordance with Table H-21.

(ii) In determining the distances separating highways, railroads, and inhabited buildings from potential explosions (as prescribed in Table H-21), the sum of all masses that may propagate (i.e., lie at distances less than prescribed in Table H-22) from either individual or combined donor masses are included. However, when the ammonium nitrate must be included, only 50 percent of its weight shall be used because of its reduced blast effects.

(b) Buildings used for the mixing of water gels shall conform to the requirements of this subdivision.

(i) Buildings shall be of noncombustible construction or sheet metal on wood studs.

(ii) Floors in a mixing plant shall be of concrete or of other nonabsorbent materials.

(iii) Where fuel oil is used all fuel oil storage facilities shall be separated from the mixing plant and located in such a manner that in case of tank rupture, the oil will drain away from the mixing plant building.

(iv) The building shall be well ventilated. Heating units that do not depend on combustion processes, when properly designed and located, may be used in the building. All direct sources of heat shall be provided exclusively from units located outside of the mixing building.

(v) All internal-combustion engines used for electric power generation shall be located outside the mixing plant building, or shall be properly ventilated and isolated by a firewall. The exhaust systems on all such engines shall be located so any spark emission cannot be a hazard to any materials in or adjacent to the plant.

(c) Ingredients of water gels shall conform to the requirements of this subdivision.

(i) Ingredients in themselves classified as Class A or Class B explosives shall be stored in conformity with WAC 296-52-095.

(ii) Nitrate-water solutions may be stored in tank cars, tank trucks, or fixed tanks without quantity or distance limitations. Spills or leaks which may contaminate combustible materials shall be cleaned up immediately.

(iii) Metal powders such as aluminum shall be kept dry and shall be stored in containers or bins which are moisture-resistant or weathertight. Solid fuels shall be used in such manner as to minimize dust explosion hazards.

(iv) Ingredients shall not be stored with incompatible materials.

(v) Peroxides and chlorates shall not be used.

(d) Mixing equipment shall comply with the requirements of this subdivision.

(i) The design of the processing equipment, including mixing and conveying equipment, shall be compatible with the relative sensitivity of the materials being handled. Equipment shall be designed to minimize the possibility of frictional heating, compaction, overloading, and confinement.

(ii) Both equipment and handling procedures shall be designed to prevent the introduction of foreign objects or materials.

(iii) Mixers, pumps, valves, and related equipment shall be designed to permit regular and periodic flushing, cleaning, dismantling, and inspection.

(iv) All electrical equipment including wiring, switches, controls, motors, and lights, shall conform to the requirements of WAC 296-24-950 through 296-24-955.

(v) All electric motors and generators shall be provided with suitable overload protection devices. Electrical generators, motors, proportioning devices, and all other electrical enclosures shall be electrically bonded. The grounding conductor to all such electrical equipment shall be effectively bonded to the service-entrance ground connection and to all equipment ground connections in a manner so as to provide a continuous path to ground.

(e) Mixing facilities shall comply with the fire prevention requirements of this subdivision.

(i) The mixing, loading, and ingredient transfer areas where residues or spilled materials may accumulate shall be cleaned periodically. A cleaning and collection system for dangerous residues shall be provided.

(ii) A daily visual inspection shall be made of the mixing, conveying, and electrical equipment to establish that such equipment is in good operating condition. A program of systematic maintenance shall be conducted on regular schedule.

(iii) Heaters which are not dependent on the combustion process within the heating unit may be used within the confines of processing buildings, or compartments, if provided with temperature and safety controls and located away from combustible materials and the finished product.

(4) Bulk delivery and mixing vehicles. (a) The design of vehicles shall comply with the requirements of this subdivision.

(i) Vehicles used over public highways for the bulk transportation of water gels or of ingredients classified as dangerous commodities, shall meet the requirements of the department of transportation and shall meet the requirements of WAC 296-52-050 and 296-52-165 of this section.

(ii) When electric power is supplied by a self-contained motor generator located on the vehicle the generator shall be at a point separate from where the water gel is discharged.

(iii) The design of processing equipment and general requirements shall conform to subsection (3)(c) and (d).

(iv) A positive action parking brake which will set the wheel brakes on at least one axle shall be provided on

vehicles when equipped with air brakes and shall be used during bulk delivery operations. Wheel chocks shall supplement parking brakes whenever conditions may require.

(b) Operation of bulk delivery and mixing vehicles shall comply with the requirements of this subdivision.

(i) The placarding requirements contained in DOT regulations apply to vehicles carrying water gel explosives or blasting agents.

(ii) The operator shall be trained in the safe operation of the vehicle together with its mixing, conveying, and related equipment. The operator shall be familiar with the commodities being delivered and the general procedure for handling emergency situations.

(iii) The hauling of either blasting caps or other explosives, but not both, shall be permitted on bulk trucks provided that a special wood or nonferrous-lined container is installed for the explosives. Such blasting caps or other explosives shall be in DOT-specified shipping containers; see 49 CFR Chapter I.

(iv) No person shall be allowed to smoke, carry matches or any flame-producing device, or carry any firearms while in or about bulk vehicles effecting the mixing, transfer, or down-the-hole loading of water gels at or near the blasting site.

(v) Caution shall be exercised in the movement of the vehicle in the blasting area to avoid driving the vehicle over or dragging hoses over firing lines, cap wires, or explosive materials. The employer shall furnish the driver the assistance of a second person to guide the driver's movements.

(vi) No intransit mixing of materials shall be performed.

(vii) The location chosen for water gel or ingredient transfer from a support vehicle into the bore hole loading vehicle shall be away from the blasthole site when the bore holes are loaded or in the process of being loaded. [Statutory Authority: RCW 49.17.040 and 49.17.050, 82-02-003 (Order 81-32), § 296-52-167, filed 12/24/81; Order 75-41, § 296-52-167, filed 12/19/75.]

**WAC 296-52-170 Storage magazine license.** RCW 70.74.120, applies.

A separate application shall be made for each and every magazine.

The application for a license to operate a permanent or portable storage magazine for explosives shall be made by the person responsible for the storage of the explosives, on a form substantially similar to that shown in Fig. 4, of this code.

The exact location of the storage magazine shall be submitted with the application, as well as, the kind and maximum quantity of explosives stored, and the distance to nearby structures and other magazines, as outlined in Fig. 4.

The said license shall be renewed annually, not later than the anniversary date.

A license fee shall be paid for one year, as shown in WAC 296-52-180, and shall accompany the application.

(1983 Ed.)

One set of two durable identification labels, showing the magazine license number, will be furnished by the department for each and every magazine with the first application.

One label shall be attached permanently to the inside of a door or lid of the magazine, and the second label shall be attached permanently and conspicuously on the outside of the magazine, least subject to damage. This license number will stay with each magazine during its life.

If said labels should be destroyed accidentally, the department will furnish new labels on request.

If the magazine is used or leased by a person other than the owner, such other person shall then be responsible for the safe operation of the magazine, and for obtaining of the license.

When the responsibility for a magazine is transferred from one person to another, the transferor shall immediately notify the department, stating the magazine license number. The transferee shall execute a new application (Fig. 4), and pay the fee for one year, based on WAC 296-52-180.

When a magazine is moved, altered or destroyed, the responsible person shall notify the department stating the magazine license number. When a magazine is altered, the alterations made shall be stated.

The moving of a magazine on a job site within a reasonable distance from its original location stated on the application is permitted without notifying the department; provided, that the new location complies with the Explosives Act and Explosives Code, and that the magazine can be quickly located for an inspection. [Order 70-4, § 296-52-170, filed 4/29/70.]

**WAC 296-52-180 Storage magazine license fees.** RCW 70.74.140, applies.

The annual license fee for operating each magazine has been established by the department and shall be as shown in the following table:

Maximum Weight (pounds) of explosives permitted in each magazine	Maximum Number of blasting caps permitted in each magazine	Annual Fee (dollars) for each magazine
200	133,000	5.00
600	400,000	10.00
1,000	667,000	15.00
2,000	1,330,000	20.00
4,000	2,670,000	25.00
6,000	4,000,000	30.00
8,000	5,230,000	35.00
10,000	6,670,000	40.00
20,000	13,330,000	45.00
Max. 300,000	Max. 200,000,000	50.00

[Order 70-4, § 296-52-180, filed 4/29/70.]

**WAC 296-52-190 Dealer's license.** (RCW 70.74.130 and 70.74.230, apply.)

(1) The application for a dealer's license to buy explosives for the sole purpose of resale shall be made by a

[Title 296 WAC—p 1039]

form substantially similar to that shown in Figure 5, of this code.

(2) The license shall be renewable annually, not later than the anniversary date.

(3) A dealer's record of all explosives purchased and sold as defined in RCW 70.74.010, shall be kept on file and a copy transmitted not later than the tenth of every month to the department, by means of a form substantially similar to that shown in Figure 7, of this code.

(4) The purchaser's license number shall be stated on said dealer's record, and the signature of the person authorized by the purchaser to physically receive the explosives.

(5) All explosives containers received by a dealer for storage, sale or use in the state of Washington, shall be stamped immediately with the said dealer's name and address.

(6) Display. No person shall sell, display or expose for sale any explosive or blasting agent on any highway, street, sidewalk, public way or public place. [Order 76-6, § 296-52-190, filed 3/1/76; Order 70-4, § 296-52-190, filed 4/29/70.]

**WAC 296-52-200 Annual inspection.** RCW 70.74.150, applies. [Order 70-4, § 296-52-200, filed 4/29/70.]

**WAC 296-52-220 Purchaser's license.** RCW 70.74.135, applies.

The application for a purchaser's license shall be made by a legal person, including public agencies, by means of a form substantially similar to that shown in Fig. 6, of this code.

Application forms may be obtained at all department district offices, and from explosives dealers.

The department will grant a purchaser's license after all legal requirements have been fulfilled.

When an order for explosives is placed in person, or by telephone, or in writing by a purchaser, the seller shall request proper authorization and identification from the purchaser and shall record the purchaser's license number.

The individual who physically receives the purchased explosives shall prove to the satisfaction of the seller that he, personally, is the purchaser, or the person authorized by the purchaser to receive said purchased explosives. Such authorization procedure shall be approved by the department. Said receiver of explosives shall identify himself properly and shall sign the seller's record with his legal signature.

If the explosives are delivered by the seller or seller's authorized agent to an explosives magazine, the license number of said magazine and the legal signature of the recipient, properly authorized and identified, shall be obtained. [Order 70-4, § 296-52-220, filed 4/29/70.]

**WAC 296-52-230 Unlawful access to explosives.** RCW 70.74.160, applies.

The unlawful entry into an explosives magazine or an actual or suspected theft of explosives shall be reported

immediately to the department and to the local law enforcement agency. [Order 70-4, § 296-52-230, filed 4/29/70.]

**WAC 296-52-260 Coal mining code unaffected.** RCW 70.74.210, applies. [Order 70-4, § 296-52-260, filed 4/29/70.]

**WAC 296-52-270 Shipments out-of-state.** RCW 70.74.230, applies. [Order 70-4, § 296-52-270, filed 4/29/70.]

**WAC 296-52-330 Explosives containers to be marked--Penalty.** RCW 70.74.300, applies.

In addition, every explosives container received by a dealer shall be marked as described in WAC 296-52-190. [Order 70-4, § 296-52-330, filed 4/29/70.]

**WAC 296-52-350 Small arms ammunition, primers, and propellants--Transportation regulations.** RCW 70.74.320, applies. [Order 70-4, § 296-52-350, filed 4/29/70.]

**WAC 296-52-360 Small arms ammunition, primers, and propellants--Separation from flammable materials.** RCW 70.74.330, applies. [Order 70-4, § 296-52-360, filed 4/29/70.]

**WAC 296-52-370 Small arms ammunition, primers, and propellants--Smokeless propellants and black powder, transportation, storage and display requirements.** RCW 70.74.340 applies. The requirements for small arms propellants (Class B) are tabulated as follows:

All such propellants shall be packed in DOT approved shipping containers.

	Maximum pounds permitted	Special Restrictions
Private residence	25 — 50 —	No restrictions In department approved strong box.
Private car	25 — 50 —	In department approved strong box.
Dealer's warehouse	150	
Dealer's display	75 —	In one pound cans.
Dealer's car	150 —	In compliance with DOT regulations.

Commercial stocks of smokeless propellants over 20 pounds and not more than 150 pounds shall be stored in portable wooden boxes having walls of at least one inch nominal thickness.

Approved magazine (As permitted by storage license)

The requirements for black powder are tabulated as follows:

All black powder shall be packed in DOT approved shipping containers.

	Maximum pounds permitted	Special Restrictions
Private residence	5	Without restrictions
Private car	5	Without restrictions
Dealer's warehouse	25	
Dealer's display	4	In one pound cans
Dealer's car	25	
Approved magazine	(As permitted by storage license)	

[Order 76-6, § 296-52-370, filed 3/1/76; Order 70-4, § 296-52-370, filed 4/29/70.]

**WAC 296-52-380 Small arms ammunition, primers, and propellants--Small arms ammunition primers, transportation, storage, and display requirements.** RCW 70.74.350, applies. The requirements for primers are tabulated, in part, as follows:

All primers shall be stored and transported in DOT approved shipping containers, separate from flammable materials.

	Maximum Number of Primers	Special Restrictions
Private residence	10,000	
Private car	25,000	
Dealer's building	750,000	In separate piles of less than 100,000
Dealer's display	10,000	
Approved magazine	(As permitted by storage license)	

[Order 76-6, § 296-52-380, filed 3/1/76; Order 70-4, § 296-52-380, filed 4/29/70.]

**WAC 296-52-390 Storage of ammonium nitrate.**

(1) Scope and definitions. (a) Except as provided in subdivision (d) of this section applies to the storage of ammonium nitrate in the form of crystals, flakes, grains, or prills including fertilizer grade, dynamite grade, nitrous oxide grade, technical grade, and other mixtures containing 60 percent or more ammonium nitrate by weight but does not apply to blasting.

(b) This section does not apply to the transportation of ammonium nitrate.

(c) This section does not apply to storage under the jurisdiction of and in compliance with the regulations of the U.S. Coast Guard (see 46 CFR Parts 146-149).

(d) The storage of ammonium nitrate and ammonium nitrate mixtures that are more sensitive than allowed by the "definition of test procedures for ammonium nitrate fertilizer" is prohibited.

(e) Nothing in this section shall apply to the production of ammonium nitrate or to the storage of ammonium nitrate on the premises of the producing plant, provided that no distinct undue hazard to the public is created.

(f) The definition and test procedures for ammonium nitrate fertilizer are those found in the bulletin, "Definition and test procedures for ammonium nitrate fertilizer," available from the National Plant Food Institute, 1700 K Street N.W., Washington, D.C. 20006. This definition limits the contents of organic materials, metals, sulfur, etc., in a product that may be classified ammonium nitrate fertilizer.

(g) The standards for ammonium nitrate (nitrous oxide grade) are those found in the "specifications, properties, and recommendations for packaging, transportation, storage, and use of ammonium nitrate," available from the Compressed Gas Association, Inc., 500 Fifth Avenue, New York, NY 10036.

(2) General provisions. (a) This subsection applies to all persons storing, having, or keeping ammonium nitrate, and to the owner or lessee of any building, premises, or structure in which ammonium nitrate is stored in quantities of 1,000 pounds or more.

(b) Approval of large quantity storage shall be subject to due consideration of the fire and explosion hazards, including exposure to toxic vapors from burning or decomposing ammonium nitrate.

(c) Storage buildings shall not have basements unless the basements are open on at least one side. Storage buildings shall not be over one story in height.

(d) Storage buildings shall have adequate ventilation or be of a construction that will be self-ventilating in the event of fire.

(e) The wall on the exposed side of a storage building within 50 feet of a combustible building, forest, piles of combustible materials and similar exposure hazards shall be of fire-resistant construction. In lieu of the fire-resistant wall, other suitable means of exposure protection such as a free standing wall may be used. The roof coverings shall be class C or better, as defined in Roof Coverings, NFPA 203M-1970.

(f) All flooring in storage and handling areas, shall be of noncombustible material or protected against impregnation by ammonium nitrate and shall be without open drains, traps, tunnels, pits, or pockets into which any molten ammonium nitrate could flow and be confined in the event of fire.

(g) The continued use of an existing storage building or structure not in strict conformity with this section may be approved in cases where such continued use will not constitute a hazard to life or adjoining property.

(h) Buildings and structures shall be dry and free from water seepage through the roof, walls, and floors.

(3) Storage of ammonium nitrate in bags, drums, or other containers. (a) Bags and containers used for ammonium nitrate must comply with specifications and standards required for use in interstate commerce (see 49 CFR Chapter I).

(b) Containers used on the premises in the actual manufacturing or processing need not comply with provisions of (3)(a).

(c) Containers of ammonium nitrate shall not be accepted for storage when the temperature of the ammonium nitrate exceeds 130°F.

(d) Bags of ammonium nitrate shall not be stored within 30 inches of the storage building walls and partitions.

(e) The height of piles shall not exceed 20 feet. The width of piles shall not exceed 20 feet and the length 50 feet except that where the building is of noncombustible construction or is protected by automatic sprinklers the length of piles shall not be limited. In no case shall the ammonium nitrate be stacked closer than 36 inches below the roof or supporting and spreader beams overhead.

(f) Aisles shall be provided to separate piles by a clear space of not less than 3 feet in width. At least one service or main aisle in the storage area shall be not less than 4 feet in width.

(4) Storage of bulk ammonium nitrate. (a) Warehouses shall have adequate ventilation or be capable of adequate ventilation in case of fire.

(b) Unless constructed of noncombustible material or unless adequate facilities for fighting a roof fire are available, bulk storage structures shall not exceed a height of 40 feet.

(c) Bins shall be clean and free of materials which may contaminate ammonium nitrate.

(d) Due to the corrosive and reactive properties of ammonium nitrate, and to avoid contamination, galvanized iron, copper, lead, and zinc shall not be used in a bin construction unless suitably protected. Aluminum bins and wooden bins protected against impregnation by ammonium nitrate are permissible. The partitions dividing the ammonium nitrate storage from other products which would contaminate the ammonium nitrate shall be of tight construction.

(e) The ammonium nitrate storage bins or piles shall be clearly identified by signs reading "ammonium nitrate" with letters at least 2 inches high.

(f) Piles or bins shall be so sized and arranged that all material in the pile is moved out periodically in order to minimize possible caking of the stored ammonium nitrate.

(g) Height or depth of piles shall be limited by the pressure-setting tendency of the product. However, in no case shall the ammonium nitrate be piled higher at any point than 36 inches below the roof or supporting and spreader beams overhead.

(h) Ammonium nitrate shall not be accepted for storage when the temperature of the product exceeds 130°F.

(i) Dynamite, other explosives, and blasting agents shall not be used to break up or loosen caked ammonium nitrate.

(5) Contaminants. (a) Ammonium nitrate shall be in a separate building or shall be separated by approved type firewalls of not less than 1 hour fire-resistance rating from storage or organic chemicals, acids, or other corrosive materials, materials that may require blasting during processing or handling, compressed flammable

gases, flammable and combustible materials or other contaminating substances, including but not limited to animal fats, baled cotton, baled rags, baled scrap paper, bleaching powder, burlap or cotton bags, caustic soda, coal, coke, charcoal, cork, camphor, excelsior, fibers of any kind, fish oils, fish meal, foam rubber, hay, lubricating oil, linseed oil, or other oxidizable or drying oils, naphthalene, oakum, oiled clothing, oiled paper, oiled textiles, paint, straw, sawdust, wood shavings, or vegetable oils. Walls referred to in this subdivision need extend only to the underside of the roof.

(b) In lieu of separation walls, ammonium nitrate may be separated from the materials referred to in item (a) of this subdivision by a space of at least 30 feet.

(c) Flammable liquids such as gasoline, kerosene, solvents, and light fuel oils shall not be stored on the premises except when such storage conforms to WAC 296-24-330, and when walls and sills or curbs are provided in accordance with items (a) or (b) of this subdivision.

(d) LP-Gas shall not be stored on the premises except when such storage conforms to WAC 296-24-475.

(e) Sulfur and finely divided metals shall not be stored in the same building with ammonium nitrate except when such storage conforms to chapter 296-52 WAC.

(f) Explosives and blasting agents shall not be stored in the same building with ammonium nitrate except on the premises of makers, distributors, and user-compounders of explosives or blasting agents.

(g) Where explosives or blasting agents are stored in separate buildings, other than on the premises of makers, distributors, and user-compounders of explosives or blasting agents, they shall be separated from the ammonium nitrate by the distances and/or barricades specified in Table H-22 of WAC 296-52-165, but by not less than 50 feet.

(h) Storage and/or operations on the premises of makers, distributors, and user-compounders of explosives or blasting agents shall be in conformity with chapter 296-52 WAC.

(6) General precautions. (a) Electrical installations shall conform to the requirements of chapter 296-46 WAC for ordinary locations. They shall be designed to minimize damage from corrosion.

(b) In areas where lightning storms are prevalent, lightning protection shall be provided. (See the Lightning Protection Code, NFPA 78-1968.)

(c) Provisions shall be made to prevent unauthorized personnel from entering the ammonium nitrate storage area.

(7) Fire protection. (a) Not more than 2,500 (2270 tonnes) tons of bagged ammonium nitrate shall be stored in a building or structure not equipped with an automatic sprinkler system. Sprinkler systems shall be of the approved type and installed in accordance with WAC 296-24-607.

(b) Suitable fire control devices such as small hose or portable fire extinguishers shall be provided throughout the warehouse and in the loading and unloading areas.

Suitable fire control devices shall comply with the requirements of WAC 296-24-592 and 296-24-602.

(c) Water supplies and fire hydrants shall be available in accordance with recognized good practices. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-02-003 (Order 81-32), § 296-52-390, filed 12/24/81; Order 76-6, § 296-52-390, filed 3/1/76; Order 75-41, § 296-52-390, filed 12/19/75; Order 70-4, § 296-52-390, filed 4/29/70.]

**WAC 296-52-400 Enforcement.** The department of labor and industries, through the division of safety, shall enforce the entire code, particularly all items affecting persons covered under Title 51 RCW, the transportation and storage of explosives not exempted under RCW 70-74.191, and the licensing required under this code.

Other law enforcement agencies, city, municipal, county, Washington state, other states and federal are obliged, under their own laws, codes, and ordinances, to enforce specific aspects of the possession and handling of explosives (RCW 70.74.201).

The division of safety shall cooperate with all other law enforcement agencies in carrying out the intent of the Explosives Code and the Explosives Act. [Order 70-4, § 296-52-400, filed 4/29/70.]

4. Kinds of explosives manufactured: -----  
 -----
5. Address of manufacturing plant: -----  
 -----
6. Reason for desiring to manufacture explosives: -----  
 -----
7. A plan of the proposed plant is attached, showing:  
 (a) manufacturing building; (b) factory building;  
 (c) storage magazines; (d) nearby railroads, highway, inhabited buildings and public utility transmission systems; (e) the distance between all of the above; (f) the maximum amounts and kinds of explosives expected in each building and magazine; and, (g) the nature of work carried on in each building and the natural and artificial barricades.  
 A copy of this plan, approved by the department, shall be kept in the plant, open to inspection by the department.
8. We assert that:  
 (a) We will abide by the Explosives Act and by the Safety Codes of the State of Washington;  
 (b) We will not sell, barter, give or dispose explosives to any person within the State of Washington who does not have a license to purchase explosives;  
 (c) We are experienced in the manufacture of the explosives listed on this application;  
 (d) We have not been convicted of a crime involving moral turpitude;  
 (e) We are not disloyal to the United States;  
 (f) The statements made in this application are true to the best of our knowledge; and,  
 (g) We will advise the Department of Labor and Industries when any of the above stated facts change.

- 296-54-99005 Appendix I--Figure 5--Standard signals for tractor logging.
- 296-54-99006 Appendix I--Figure 6--Standard signals for loading logs.
- 296-54-99007 Appendix I--Figure 7--Heel boom loading.
- 296-54-99008 Appendix I--Figure 8--Guyline loading.
- 296-54-99009 Appendix I--Figure 9--Hayrack boom loading.
- 296-54-99010 Appendix I--Figure 10--Spreader bar loading.
- 296-54-99011 Appendix I--Figure 11--Placement and number of binders.
- 296-54-99012 Appendix I--Figure 12--Standard signals for high lead logging.

**DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER**

- 296-54-001 Scope and application. [Order 72-14, § 296-54-001, filed 7/31/72, effective 9/1/72; Rules (part), filed 6/2/67, effective 7/10/67.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-003 Waiver and variance. [Order 72-14, § 296-54-003, filed 7/31/72, effective 9/1/72; Rules (part), filed 6/2/67, effective 7/10/67.] Repealed by 79-10-081

- (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-010 Definitions of terms used in the logging standards for the purpose of this chapter. [Order 76-29, § 296-54-010, filed 9/30/76; Order 72-14, § 296-54-010, filed 7/31/72, effective 9/1/72; Rules (part), filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/30/62; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-020 Introduction. [Order 72-14, § 296-54-020, filed 7/31/72, effective 9/1/72; Rules (part), filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-030 Management's responsibility. [Order 72-14, § 296-54-030, filed 7/31/72, effective 9/1/72; Rules, § I, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-040 Employee's responsibility. [Order 72-14, § 296-54-040, filed 7/31/72, effective 9/1/72; Rules, § II, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-050 through 296-54-125. Safety and first aid. [Rules (part), filed 7/6/61, 3/23/60.] Decodified. See chapter 296-25 WAC, General safety standards.
- 296-54-051 Safety educational and first aid requirements. [Order 72-14, § 296-54-051, filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-052 General requirements. [Order 72-14, § 296-54-052, filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-130 Camps. [Order 72-14, § 296-54-130, filed 7/3/72, effective 9/1/72; Rules, § IV, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-140 Railroad and truck road construction and maintenance—Railroads. [Order 72-14, § 296-54-140, filed 7/31/72, effective 9/1/72; Rules, § V (part), filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-150 Truck roads. [Order 72-14, § 296-54-150, filed 7/31/72, effective 9/1/72; Rules, § V (part), filed 6/2/67, 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-160 Transportation of crews—General requirements. [Order 72-14, § 296-54-160, filed 7/31/72, effective 9/1/72; Rules, § VI (part), filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-170 Transportation of crews by use of speeders and trailers. [Order 72-14, § 296-54-170, filed 7/31/72, effective 9/1/72; Rules, § VI (part), filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61, 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-180 Transportation of crews by motor vehicles. [Order 72-14, § 296-54-180, filed 7/31/72, effective 9/1/72; Rules, § VI (part), filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-185 Methods of crew transportation other than those specified. [Order 72-14, § 296-54-185, filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-190 Rigging. [Order 72-14, § 296-54-190, filed 7/31/72, effective 9/1/72; Rules, § VIII, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60; Addendum, filed 3/30/62.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-195 Additional requirements for portable spars and boom type yarding and loading machines. [Order 72-14, § 296-54-195, filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-200 Yarding. [Order 72-14, § 296-54-200, filed 7/31/72, effective 9/1/72; Rules, § XII, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-202 Yarding—Signal transmission, signaling equipment and related items. [Rules AB-2 through AB-11, effective 1/2/65; Rules L-4, L-5, L-6, L-16, L-22 through L-27, filed 7/6/61; Rules (part), filed 3/23/60.] Superseded by Rules, filed 6/27/67, effective 7/10/67. See WAC 296-54-350 through 296-54-393.
- 296-54-210 Tractor logging. [Order 72-14, § 296-54-210, filed 7/31/72, effective 9/1/72; Rules, § XIII, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-215 Canopy guards, barricades, seat belts, screens and other items required for industrial equipment. [Order 72-14, § 296-54-215, filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-216 Roll-over protective structures and overhead protection. [Order 72-14, § 296-54-216, filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-217 Braking systems for tractors and other mobile equipment. [Order 72-14, § 296-54-217, filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-218 Emergency steering. [Order 72-14, § 296-54-218, filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-220 Log loading. [Order 72-14, § 296-54-220, filed 7/31/72, effective 9/1/72; Rules, § XIV, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-230 Lines, blocks and shackles. [Order 72-14, § 296-54-230, filed 7/31/72, effective 9/1/72; Rules, § IX,

- filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-240 Yarding, loading, and skidding units. [Order 72-14, § 296-54-240, filed 7/31/72, effective 9/1/72; Rules, § X, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-250 New and used boiler or pressure vessels. [Rules (part), filed 7/6/61, 3/23/60.] Superseded by Rules, filed 6/27/67, effective 7/10/67. See WAC 296-54-240(9) and chapter 70.79 RCW.
- 296-54-260 Falling—Bucking. [Order 72-14, § 296-54-260, filed 7/31/72, effective 9/1/72; Rules, § VII, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-270 Moving machines. [Order 72-14, § 296-54-270, filed 7/31/72, effective 9/1/72; Rules, § XI, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-280 General requirements. [Order 76-29, § 296-54-280, filed 9/30/76; Order 72-14, § 296-54-280, filed 7/31/72, effective 9/1/72; Rules, § XIX, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-281 Water dumps. [Order 72-14, § 296-54-281, filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-282 Boom and rafting grounds. [Order 76-7, § 296-54-282, filed 3/1/76; Order 72-14, § 296-54-282, filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-284 Dry land sorting and storage. [Order 72-14, § 296-54-284, filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-286 Boats and mechanical devices on water. [Order 76-7, § 296-54-286, filed 3/1/76; Order 72-14, § 296-54-286, filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-290 Electrical logging equipment. [Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-300 Explosives. [Order 72-14, § 296-54-300, filed 7/31/72, effective 9/1/72; Rules, § XX, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-310 Railroad operations. [Order 72-14, § 296-54-310, filed 7/31/72, effective 9/1/72; Rules, § XVI, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-320 Railroad maintenance, loading or unloading. [Order 72-14, § 296-54-320, filed 7/31/72, effective 9/1/72; Rules, § XVII, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-330 Motor truck log transportation. [Order 72-14, § 296-54-330, filed 7/31/72, effective 9/1/72; Rules, § XV, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-335 Stationary log truck trailer loading. [Order 72-14, § 296-54-335, filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-340 Maintenance shops. [Order 72-14, § 296-54-340, filed 7/31/72, effective 9/1/72; Rules, § XVIII, filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-350 Signals and signal systems. [Order 72-14, § 296-54-350, filed 7/31/72, effective 9/1/72; Rules, § XXI (part), filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-360 Skidder whistle signals. [Order 72-14, § 296-54-360, filed 7/31/72, effective 9/1/72; Rules, § XXI (part), filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-370 Slackline whistle signals. [Order 72-14, § 296-54-370, filed 7/31/72, effective 9/1/72; Rules, § XXI (part), filed 6/2/67, effective 7/10/67; Rules (part), filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-380 High lead logging whistle signals. [Order 72-14, § 296-54-380, filed 7/31/72, effective 9/1/72; Rules, § XXI (part), filed 6/2/67, effective 7/10/67; Rules AB-1, effective 1/2/65; Rule Z-3, filed 7/6/61; Rules (part), filed 3/23/60.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-390 High lead whistle signal—General whistle signals. [Rules (part), filed 7/6/61, 3/23/60.] Superseded by Rules, filed 6/27/67, effective 7/10/67. For later enactment see WAC 296-54-391 through 296-54-393.
- 296-54-391 General requirements for signaling and signal equipment. [Rules, § XXI (part), filed 6/2/67, effective 7/10/67.] Repealed by omission, Order 72-14, filed 7/31/72.
- 296-54-392 Electric signal systems. [Order 72-14, § 296-54-392, filed 7/31/72, effective 9/1/72; Rules, § XXI (part), filed 6/2/67, effective 7/10/67.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-393 Radio systems used for voice communications, activation of audible signals or equipment. [Order 72-14, § 296-54-393, filed 7/31/72, effective 9/1/72; Rules, § XXI (part), filed 6/2/67, effective 7/10/67.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-39301 Form No. 157—Application for permit to operate radio signal system in designated area. [Order 72-14,

- Form No. 157 (codified as WAC 296-54-39301), filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-399 Special rigging standards. [Rules (part), filed 7/6/61, 3/23/60. Recodified from WAC 296-54-400 to avoid duplication of numbering.] Superseded by Rules, filed 6/27/67, effective 7/10/67. See WAC 296-54-190.
- 296-54-400 Radio-signaling systems—Minimum requirements. [Order 72-14, § 296-54-400, filed 7/31/72, effective 9/1/72.] Repealed by 79-10-081 (Order 79-14), filed 9/21/79. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240.
- 296-54-450 Rules and regulations of the state board of health concerning labor camps. [Rules (part), filed 7/6/61, 3/23/60.] Decodified. See WAC 296-54-130, and chapters 296-26 and 248-60 WAC.

**WAC 296-54-45001 Pulpwood logging.** (1) Application. (a) General. This section applies to pulpwood logging operations including, but not limited to the operations of felling, limbing, marking, bucking, loading, skidding, prehauling and other operations associated with the preparation and movement of pulpwood timber from the stump to the point of delivery. The provisions of this section do not apply to logging operations relating to sawlogs, veneer bolts, poles, piling and other forest products.

(b) Standards incorporated by reference. Standards covering issues of occupational safety and health which are of general application without regard to any specific industry are incorporated by reference in subsections of this section and made applicable to pulpwood logging.

(2) Definitions applicable to this section. (a) "Arch" means an extension to rear section of a vehicle used in skidding used to raise the forward part of a load clear of the ground.

(b) "Back cut" means the final cut in a felling operation made on the opposite side from the undercut.

(c) "Backfill" means excavated material used to build up a road higher than the original level.

(d) "Ballistic nylon" means a fabric of high tensile properties designed to provide protection from lacerations.

(e) "Borrow" means road construction material which is taken to another location for use. The source area is called "borrow pit."

(f) "Buck" means the process of severing a tree into sections (logs or bolts).

(g) "Choker" means a length of wire rope or chain with a loop or noose at one end used to secure trees or sections of trees for skidding.

(h) "Debark" means the action of removing bark from trees or sections of trees. Debark generally denotes mechanical means as opposed to manual peeling. Synonyms are "bark" and "barking."

(i) "Fairlead" means an arrangement of horizontal, and sometimes vertical, rollers usually mounted at the end of an arch to allow free play of wire rope during winching.

(j) "Fell" means the process of severing a tree from the stump so that it drops to the ground. Note that "fell" and "feller" are used in this standard. The terms

"fall" and "faller" are commonly used in the Western United States and they have the same meaning as "fell" and "feller."

(k) "Grade" means the slope of a surface such as a roadway. Also, the elevation of a real or planned surface or structure. (See slope.)

(l) "Guarded" means protected by a cover, shield, rail, or other device, or by location, so as to reduce the probability of injury.

(m) "Guyline" means a line used to stay or support spar trees, booms, etc.

(n) "Landing" means any area where wood is concentrated. It is also called "yard," "deck," "brow."

(o) "Lodged tree" means a tree that has not fallen to the ground after being partly or wholly separated from its stump or otherwise displaced from its natural position.

(p) "Pickaroon" means a device with a head similar to an axe but with a point rather than a blade mounted on the end of a handle which is used to assist in the lifting and placement of bolts of wood.

(q) "Prehaul" means the hauling of forest products by off-the-road vehicles, nonhighway transport, or other movement prior to highway or rail movement, where the pulpwood travels clear of the ground. The term "forward" has the same meaning.

(r) "Pulpwood" means portions of a tree cut into short (normally 4 ft.) lengths to facilitate hand handling. It is intended to be used in the making of pulp rather than any lumber or veneer type finished product.

(s) "Riprap" means rock, metal stripping, or wooden timbers used to contain and stabilize earth embankments and fills.

(t) "Root wad" means the ball of roots which extends above ground level when a tree is pushed over by wind or other means.

(3) Additional definitions. (a) "Skid" means the movement of bolts, logs, or trees by pulling or towing across the terrain. It may be accomplished by a stationary machine, a moving vehicle, or animal. The term is also called "yarding." The definitive feature is contact between the terrain and the product during movement.

(b) "Slope" is a term of measurement in percent and means the increase in height over the distance measured. An increase of 1 foot over a distance of 5 feet is expressed as a 20 percent slope (see grade).

(c) "Snag" means any dead standing tree or portion thereof remaining standing.

(d) "Spring pole" means a section of tree, sapling, limb, etc., which is, by virtue of its arrangement with relation to other material, under tension.

(e) "Undercut" means a notch cut in a tree to guide the tree in felling.

(f) "Widow maker" means an overhanging limb or section of tree which could become dislodged and drop to the ground (see also "lodged tree").

(g) "Wood hook" and "pulp hook" mean a device to be held in one hand which is fitted with a pointed section. The device is used to assist in the manual piling and handling of bolts of wood (see Pickaroon).

(4) General requirements. (a) Clothing, personal protective devices, and first aid. (i) Gloves shall be provided for use when working with wire rope in any form.

(ii) The employer shall ensure that employees exposed to the danger of foot injury due to falling or rolling pulpwood shall wear foot protection which equals or exceeds the crushing and impact specifications of ANSI Z41.1-1967.

(iii) Safety helmets of approved design in accordance with American National Standard for Safety Requirements for Industrial Head Protection, Z89.1-1969 shall be provided and worn.

(iv) Eye or face protection in accordance with American National Standard for Practice for Occupational and Educational Eye and Face Protection, Z87.1-1968 shall be provided and used where chips and sawdust or flying particles are present.

(v) Dust masks in accordance with American National Standard Practices for Respiratory Protection, Z88.2-1969 shall be provided and used where exposure exceeds the limits specified in the general occupational health standards, chapter 296-62 WAC.

(vi) Protection against the effects of noise exposure shall be provided and used when the sound levels exceed those shown in WAC 296-62-09011, Table 7, of the general occupational health standards, when measured on the A scale of a standard sound level meter at slow response.

(vii) First-aid kits in compliance with the requirements of the general safety and health standards, WAC 296-24-065, shall be provided at the work site and on all transport vehicles. In all areas where poisonous snakes may exist, snake bite kits shall be a part of the regular first-aid equipment. First-aid kits shall be regularly inspected and replenished.

(b) Handtools. (i) The employer shall be responsible for the condition of tools when furnished by him and the user shall inspect any tool prior to using it to determine that it is in proper operating condition. Defective tools shall be removed from service.

(ii) Handles shall be sound, straight and tight fitting.

(iii) Driven tools shall be dressed to remove any mushrooming.

(iv) Cutting tools shall be kept sharp and properly shaped.

(v) Wood hooks and pickaroons of good grade steel shall be used.

(vi) Tools shall be used for purposes for which they were designed.

(vii) Hand tools shall be sheathed or boxed if transported in a vehicle with personnel. If not contained in a box, the sheathed tools shall be fastened to the vehicle.

(viii) Proper storage facilities shall be provided for hand tools. Tools shall be stored in the provided location at all times when not in use.

(c) Environmental conditions. (i) All work shall terminate and employees moved to a place of safety during electrical storms and periods of high winds or when other unusual weather conditions are dangerous to personnel.

(ii) Dead, broken, or rotted limbs or trees that are a hazard (widow makers) shall be felled or otherwise removed before commencing logging operations, building roads, trails or landing, in their vicinity.

(d) Work areas. (i) All persons shall be instructed to work within the vocal range of other workers unless a procedure has been established for periodically checking their location and welfare.

(ii) All persons shall be accounted for at the end of each work day.

(iii) An approved (Underwriters' Laboratories or Factory Mutual Engineering Corp.) fire extinguisher shall be provided at locations where machines are operating and/or on each vehicle.

(iv) Fuel shall be stored only in approved (Underwriters' Laboratories or Factory Mutual Engineering Corp.) well-marked containers. The provisions of the general safety and health standards, WAC 296-24-330 through 296-24-33019, shall be applied in the storage and use of flammable fuel.

(e) Chain saw operations. (i) Chain saw operators shall be instructed to inspect saws daily to assure that all handles and guards are in place and tight, that all controls function properly and that the muffler is operative. Defective equipment shall not be used.

(ii) Chain saw operators shall be instructed to follow manufacturer's instructions as to operation and adjustment.

(iii) Chain saw operators shall be instructed to fuel the saw only in safe areas and not under conditions conducive to fire such as near persons smoking, hot engine, etc.

(iv) Chain saw operators shall be instructed to hold the saw with both hands during operation.

(v) Chain saw operators shall be instructed to start the saw at least 10 feet away from fueling area.

(vi) Chain saw operators shall be instructed to start the saw only on the ground or when otherwise firmly supported.

(vii) Chain saw operators shall be instructed to be certain of footing and to clear away brush which might interfere before starting to cut.

(viii) Chain saw operators shall be instructed not to use engine fuel for starting fires or as a cleaning solvent.

(ix) Chain saw operators shall be instructed to shut off the saw when carrying it for a distance greater than from tree to tree or in hazardous conditions such as slippery surfaces or heavy underbrush. If the operator is carrying a running saw, the saw shall be at idle speed.

(x) Chain saw operators shall be instructed to carry the saw in a manner to prevent contact with the chain and muffler.

(xi) Chain saw operators shall be instructed not to use the saw to cut directly overhead or at a distance that would require the operator to relinquish a safe grip on the saw.

(xii) Supervision shall be adequately maintained to assure that the instructions required by this chapter are followed.

(f) Stationary and mobile equipment operation. (i) Equipment operators shall be instructed as to the manufacturers' recommendations for equipment operation, maintenance, safe practices, and site operating procedures.

(ii) Equipment shall be kept free of flammable material.

(iii) Equipment shall be kept free of any material which might contribute to slipping and falling.

(iv) Engine of equipment shall be shut down during fueling, servicing, and repairs except where operation is required for adjustment.

(v) The operator shall inspect the equipment he will be operating at the start of each shift for evidence of failure or incipient failure. Equipment found to have defects which might affect the operating safety shall not be used.

(vi) The equipment operator shall walk completely around machine and assure that no obstacles or personnel are in the area before startup.

(vii) The equipment operator shall start and operate equipment only from the operator's station or from safe area recommended by the manufacturer.

(viii) A seat belt shall be provided on mobile equipment.

(ix) The equipment operator shall check all controls for proper function and response before starting working cycle.

(x) The equipment operator shall ground or secure all movable elements when not in use.

(xi) The foreman shall advise the equipment operator of the load capacity, operating speed and stability limitations of the equipment.

(xii) The equipment operator shall maintain adequate distance from other equipment and personnel.

(xiii) Where signalmen are used, the equipment operator shall operate the equipment only on signal from the designated signalman and only when signal is distinct and clearly understood.

(xiv) The equipment operator shall not operate movable elements (boom, grapple, load, etc.) close to or over personnel.

(xv) The equipment operator shall signal his intention before operation when personnel are in or near the working area.

(xvi) The equipment operator shall dismount and stand clear for all loading and unloading of his mobile vehicle by other mobile equipment. The dismounted operator shall be visible to loader operator.

(xvii) The equipment operator shall operate equipment in a manner that will not place undue shock loads on wire rope.

(xviii) The equipment operator shall not permit riders or observers on the machine unless approved seating and protection is provided.

(xix) The equipment operator shall shut down the engine when the equipment is stopped, apply brake locks and ground moving elements before he dismounts.

(xx) The equipment operator shall when any equipment is transported from one job location to another,

transport it on a vehicle of sufficient rated capacity and the equipment shall be properly secured during transit.

(xxi) When any equipment is being moved or operated in the vicinity of an electric distribution line a minimum clearance of ten feet shall be maintained between the electric distribution line and all elements of the machine.

(g) Explosives. Only trained and experienced personnel shall handle or use explosives. Usage shall comply with the requirements of chapter 296-52 WAC and chapter 70.74 RCW.

(5) Equipment protective devices—Stationary and mobile equipment. (a) Operator's manual. There shall be an operator's manual or operating instructions with each machine. It will describe operation, maintenance, and safe practices.

(b) On all mobile equipment specified in WAC 296-54-216, rollover protective structures (ROPS) shall be installed and maintained in accordance with the provisions of that section. On equipment requiring ROPS, the provisions of WAC 296-54-210, 296-54-215, 296-54-217 and 296-54-218 shall also apply.

(c) Equipment on which ROPS are not required shall be equipped with the following operator protective devices:

(i) Protective canopy. A protective canopy shall be provided for the operator of mobile equipment. It shall be so constructed as to protect the operator from injury due to falling trees or limbs, saplings or branches which might enter the compartment side areas, and snapping winch lines or other objects.

(A) The canopy shall be of adequate size so as not to impair the operator's movements.

(B) The canopy framework shall consist of at least two arches, either transverse or longitudinal. If transverse, one arch shall be installed behind the operator and one immediately in front of the operator. They shall be joined at the top by at least two longitudinal braces. There shall be two braces which shall act as deflecting guards extending from the leading edge of the forward arch to the front part of the frame of the tractor. If longitudinal arches are used, they shall be extended from behind the operator to the front part of the frame and each arch shall have an intermediate support located immediately ahead of the operator so that ingress or egress is not impeded. Regardless of the type of construction used, the fabrication and method of connecting to the tractor shall be of such design as to develop a strength equivalent to the upright members.

(C) The overhead covering shall be solid material and extend the full width of the canopy.

(D) The lower portion of cab shall be completely enclosed with solid material, except at entrances, to prevent the operator from being injured from obstacles entering the cab.

(E) The upper rear portion of cab shall be fully enclosed with open mesh material with openings of such a size as to reject the entrance of an object larger than 1 3/4 inch in diameter. It shall provide maximum rearward visibility.

(F) Open mesh shall be extended forward as far as possible from the rear corners of the cab sides so as to

give the maximum protection against obstacles, branches, etc., entering the cab area.

(G) Deflectors shall also be installed ahead of the operator to deflect whipping saplings and branches. These shall be located so as to not impede ingress or egress from the compartment.

(H) The entrance opening of the canopy shall be not less than 52 inches in vertical height.

(I) Where glass is used it shall be safety glass. An approved substitute may be used.

(aa) An additional metal screen shall be used where glass alone is not adequate operator protection.

(bb) Provision shall be made to clean glass to assure adequate visibility.

(ii) Guards. Guards shall be provided for exposed moving elements such as shafts, pulleys, belts, conveyors and gears in accordance with WAC 296-24-205 through 296-24-20527 and American National Standard Safety Code for Conveyors, Cableways, and Related Equipment, B20.1-1957. Guards shall be in place at all times machine is in operation.

(iii) Mufflers. Mufflers provided by the manufacturer or their equivalent shall be in place at all times the machine is in operation.

(iv) Guylines. Guylines shall be arranged in such manner that stresses will be imposed on not less than two guylines. Stumps used for anchoring guylines shall be carefully chosen as to position and strength. They shall be tied back if necessary. Standing trees shall not be used for this purpose.

(v) Stability and reliability. Crane and loader stability and boom reliability shall be in accordance with American National Standard Safety Code for Cranes, Derricks and Hoists Overhead and Gantry Cranes, B30.2.0-1967, and American National Standard Safety Code for Cranes, Derricks and Hoists—Crawler, Locomotive, and Truck Cranes, B30.5-1968.

(6) Pulpwood harvesting. (a) Felling, general. (i) Work areas shall be assigned such that a tree cannot fall into an adjacent work area. The recommended distance between workers is twice the height of trees being felled.

(ii) When trees may fall into public roads a flagman shall be assigned to direct traffic.

(iii) Workers shall not approach a feller closer than twice the height of trees being felled until the feller has acknowledged the signal of approach.

(iv) Lodged trees shall be pulled to the ground at first opportunity with mechanical equipment or animal.

(v) Workers shall not work under a lodged tree.

(vi) Special precautions shall be taken to prevent felling trees into powerlines.

(vii) If a tree does make contact with a powerline the power company shall be notified immediately and all personnel shall remain clear of the area until power company personnel advises that conditions are safe.

(b) Manual felling. (i) The feller shall plan a retreat path and clear the path as necessary before cut is started.

(ii) The feller shall appraise situation for dead limbs, the lean of tree to be cut, wind conditions, location of

other trees and other hazards and exercise proper precautions before cut is started.

(iii) Undercuts shall be about one-third the diameter of the tree to guide tree and reduce possibility of splitting. (Local practice where small diameter trees are felled without being undercut is acceptable if the direction of fall is controlled by the practice.)

(iv) Back or felling cut shall be parallel to the inner edge of the undercut and approximately two inches higher than the undercut.

(v) The saw shall be shut off before feller starts his retreat.

(vi) On terrain where trees are likely to slide or roll fellers shall fell trees from the uphill side and arrange to keep uphill from previously felled trees.

(c) Bucking. (i) Bucking on slopes shall be from the uphill side unless the log has been securely blocked to prevent rolling or swinging.

(ii) Spring poles and trees under stress shall be cut so that employee is clear when the tension is released. (This is accomplished by cutting under the bend.)

(iii) Trees piled for bucking shall be piled in an orderly parallel manner that minimizes hazard to employees.

(d) Limbing. Spring poles and limbs under stress shall be cut in such a manner that the employee is clear when tension is released.

(e) Mechanical debarking and delimiting. Guarding shall be provided so as to protect employees from flying chunks, logs, chips, bark, limbs, and other material and to prevent the worker from contacting moving parts.

(f) Skidding and prehauling, general. (i) Only a designated, trained operator shall operate a skid or prehaul machine.

(ii) Choker setters shall work on uphill side of log.

(iii) No passenger personnel shall ride on a prehaul vehicle, logs, pallets, skid pans or other load unless adequate seating and protection is provided except on animal powered wagons.

(iv) Chokers shall be positioned near the end of the log or tree length to allow turning of the prehaul vehicle, to prevent the penetration of the operator station and to reduce possibility of striking the wheel or track.

(v) During winching, the equipment shall be positioned so that the winch line is in alignment with the long axis of the prehaul machine.

(vi) A stuck or inoperative vehicle shall be towed. A loaded pallet shall not be pushed.

(vii) Stakes shall not be added to permit a load beyond the rated capacity of pallets and trailers.

(viii) The operator shall be instructed to be observant and cautious of height of load and vehicle when traveling under trees, limbs, and other overhead obstructions.

(g) Skidding and prehauling equipment requirements. (i) Arches, fairleads, drawbars, hitches and bumpers or fenders shall be designed and constructed to allow a minimum radius vehicle turn without the load contacting a rear tire or the rear of a track assembly.

(ii) Towed equipment such as skid pans, pallets and trailers shall be attached in such a manner as to allow a

full 90° turn, prevent overrunning of the towed vehicle, and assure control of the towed equipment.

(iii) Animal towed equipment shall be equipped with a hand brake within reach of the driver.

(iv) Prehaulers shall have a means for securely retaining pallets or pulpwood.

(v) Prehaulers shall have a means of securely retaining loader for transport when so equipped.

(vi) Provision shall be made to securely fasten and to protect all tools and material on the carrier.

(h) Personnel transport. (i) The driver shall be licensed as required by the Washington state department of motor vehicles.

(ii) Explosives or flammable liquids shall not be transported on crew vehicles except as specifically provided for in WAC 296-54-160.

(iii) Seats shall be securely fastened.

(i) Off highway truck transport. Truck drivers shall be instructed to stop their vehicles, dismount, check and tighten loose load binders, either just before or immediately after leaving a private road to enter a public road.

(j) Manual loading. (i) The carrier shall be positioned to provide a safe working clearance between carrier and pile.

(ii) Proper lifting techniques shall be used, i.e., straight back and bend knees.

(iii) The stick shall be placed in the carrier in such manner that it is or will be properly secured.

(iv) Manual handling shall be limited to a weight consistent with correct lifting practices and individual lifting capacity.

(k) Machine loading. (i) Piles shall be located to provide a safe work area.

(ii) Only the machine operator and slingman where used, shall be in the work area.

(iii) The load shall be positioned for balance and to prevent slippage or loss. Slings shall be placed to secure and balance the load.

(l) Storage. Piles shall be located and constructed in a manner to provide safe working area around them.

(m) Banding and piling bundles. (i) Steel bands used in the making of bundles shall have a 5 to 1 safety factor for the weight of the bundles and shall be free of any visible defect which might detract from their designed strength.

(ii) Bands shall be placed when bundle is close to ground.

(iii) No part of the body shall be under the bundle at any time. Bundles shall be placed on runners. Bundles may be double stacked with top end bundle one half or more back from the lower rank end bundle.

(n) Chipping (in-woods locations). (i) Access covers or doors shall not be opened until the drum or disk is at a complete stop.

(ii) Infeed and discharge ports shall be designed to prevent contact by personnel with disc, knives, or blower blades.

(o) Roads and trails, general. (i) Roads shall be maintained and hazardous conditions corrected.

(ii) Where vision is limited warnings shall be posted.

(iii) Curve radii shall be the maximum consistent with terrain.

(iv) When night work is necessary, lighting shall be provided in accordance with WAC 296-54-280.

(v) Local road standards and maximum weight of traffic expected shall be used as guides for materials, construction features and drainage.

(p) Road and trail pioneering and earthwork. (i) Banks at the borrow area shall be sloped to prevent slides.

(ii) Backfill shall be firmly compacted.

(iii) Roadside banks shall be sloped or stabilized to prevent slides.

(iv) Overhanging banks, large rocks and debris shall be removed or secured.

(v) Where riprap is used the material and design shall assure containment of material.

(vi) Trees or snags which may fall into the road shall be felled.

(q) Road and trail drainage. (i) Drainage shall be provided to prevent washouts and landslides.

(ii) Culverts shall be of adequate strength and of a size to handle maximum runoff.

(iii) Where necessary, ditches and banks shall be stabilized by vegetation, riprap, or other adequate means.

(r) Road and trail surfacing. Road surface shall be properly compacted, graded and crowned.

(s) Bridges. (i) Bridges shall be constructed in accordance with the provisions of WAC 296-54-150.

(ii) Bridges shall be decked and curbed. [Order 76-7, § 296-54-45001, filed 3/1/76; Order 74-20, § 296-54-450 (codified as WAC 296-54-45001), filed 5/6/74.]

**WAC 296-54-501 Scope and application.** The requirements of this chapter augment those requirements of the general safety standards promulgated by the department of labor and industries, division of industrial safety and health, applicable to this industry, and apply to all persons, firms, corporations or others engaged in logging operations that come within the jurisdiction of the department of labor and industries. The requirements herein contained do not apply to log handling at sawmills, plywood mills, pulp mills or other manufacturing operations governed by their own specific safety standards.

The safety requirements herein contained are not to be construed to imply that other safe work practices, procedures or methods should not be employed where such methods, means or practices may be required to prevent accidents. Both employers and employees have a duty to do whatever is reasonable and practical to avoid causing accidents. These requirements are minimum safety requirements and shall augment other safety standards developed by the department which are of a general nature and apply to all industrial operations such as those contained in the general safety standards, chapter 296-24 WAC; occupational health standards, chapter 296-62 WAC; and precautionary labeling of containers of hazardous materials, chapter 296-64 WAC, or others which may be applicable. Regulations adopted by the department concerning certain types of

equipment or conditions, such as metal and nonmetallic mines, quarries, pits and crushing operations, chapter 296-61 WAC, and possession, handling and use of explosives, chapter 296-52 WAC shall be complied with when applicable.

Some of the factors involving safe practices are use of good judgment, and the avoidance of taking chances. Accidents can be avoided in many instances by everyone conscientiously applying their knowledge of safety.

Copies of all society of automotive engineers reports (SAE) referred to in these standards are on file in all district offices of the division of industrial safety and health of the department of labor and industries, and may be reviewed by any interested person. Individuals desiring to obtain copies of such material shall arrange to do so directly from the publishers or from other sources. The division of industrial safety and health will not assume the responsibility of acquiring such material for uses other than its own needs.

**NOTE:** Safety standards for pulpwood logging are contained in a separate edition titled "Safety standards for pulpwood logging," WAC 296-54-450.

[Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-501, filed 9/21/79.]

**WAC 296-54-503 Variance.** The assistant director may, upon receipt of application and after adequate investigation by the department, permit a variation from these requirements when an approved alternate means or manner of protection is provided, which affords an equivalent measure of safety as required by the rule from which a variance is requested. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-503, filed 9/21/79.]

**WAC 296-54-505 Definitions applicable to this chapter.** (1) A-frame – a structure made of two independent columns fastened together at the top and separated by a reasonable width at the bottom to stabilize the unit from tipping sideways.

(2) Alternate communication system – a system approved by the department of labor and industries, which by voice or other media than horn or whistle, provides a safe and reliable method of communication between crew members.

(3) A side – any place of activity involving a group in the yarding and loading of logs.

(4) An operation – any place where logging or log related activities are taking place.

(5) Approved – approved by the department of labor and industries, division of industrial safety and health.

(6) Arch – any device attached to the back of a vehicle and used for raising one end of logs to facilitate movement.

(7) Authorized person – a person approved or assigned by the employer to perform a specific type of duty(s) or to be at a specific location at a certain time(s).

(8) Back line – that section of the haulback that runs between the spar tree and the corner block.

(9) Ballistic nylon – a fabric of high tensile properties designed to provide protection from lacerations.

(10) Barrier – a fence, wall or railing to prevent passage or approach.

(11) Base of tree – that portion of a natural tree not more than three feet above ground level.

(12) Bight of the line – any area where a person is exposed to a controlled or uncontrolled moving line.

(13) Binder – a hinged lever assembly for connecting the ends of a wrapper to tighten the wrapper around the load of logs or materials.

(14) Boomboat – any boat used to push or pull logs, booms, bundles, or bags, in booming ground operations.

(15) Boomscooter – a small boat, usually less than fourteen feet in length, equipped with an outboard motor, having directional pushing capabilities of 360 degrees.

(16) Brailing – when tiers of logs, poles, or piles are fastened together with a type of dogline and the ends of the side members are then fastened together for towing.

(17) Brow log – a log or a suitable substitute placed parallel to any roadway at a landing or dump to protect the carrier and facilitate the safe loading or unloading of logs, timber products, or materials.

(18) Bullbuck – the supervisor of the cutting crew.

(19) Butt welding – the practice of welding something end to end.

(20) Cable tree thinning – the selective thinning of a timber stand utilizing mobile yarding equipment specifically designed or adapted for the purpose. Such systems may be of the skyline, slackline, or modified slackline, overhead cable system.

(21) Choker – a length of wire rope with attachments for encircling the end of a log to be yarded.

(22) Chunking – the clearing of nonusable material from a specified area.

(23) Cold deck – any pile of logs which is yarded and left for future removal.

(24) Competent person – one who is capable of identifying hazards in the surrounding or working conditions which are unsanitary, hazardous or dangerous.

(25) Corner block – the first block the haulback passes through on its way to the tail block.

(26) Crew bus or vehicle – any vehicle furnished by or for the employer that will transport five or more persons.

(27) Crotch line – two short lines attached to the same ring or shackle, used for loading or unloading.

(28) Danger trees – trees with evidence of deterioration or physical damage to the root system or stem, as well as the degree and/or direction of lean. (See snag)

(29) Directional falling – a mechanical means to control the direction of falling timber.

(30) Dog line – type of line used to fasten logs or timber products together by the use of dogs.

(31) Donkey – any machine with a series of drums used to yard logs.

(32) Double ended logs – two logs end to end on the same lay.

- (33) Droplines – a short line attached to the carriage or carriage block which is used as an extension to the main line.
- (34) Drum – a mechanical device on which line is spooled or unspooled.
- (35) Dry land storage – decks of logs stored for future removal or use.
- (36) Dutchman – (a) a block used to change direction of line lead.  
(b) A method of falling timber consisting of inserting a piece of material into one side of the undercut to assist in pulling a tree against the lean or a section of the undercut can be left in a corner to accomplish the same purpose.
- (37) Experienced person – a person who has been trained and has participated in the subject process for a period of time long enough to thoroughly acquaint the person with all facets of the process.
- (38) F.O.P.S. – falling object protective structure.
- (39) Fair lead – sheaves, rolls, or a combination thereof arranged to receive a line coming from any direction for proper line spooling on to a drum.
- (40) Front end loader – a mobile machine mounted on a wheeled or tracked chassis, equipped with a grapple, tusk, bucket, or fork-lift device, and employed in the loading, unloading, stacking, or sorting of logs or materials.
- (41) Guard rail – a railing to restrain a person.
- (42) Guyline – a line used to support or stabilize a spar.
- (43) Gypsy drum – a mechanical device wherein the line is not attached to the drum and is manually spooled to control the line movement on and off the drum.
- (44) Haulback – a line used to pull the buttrigging and mainline to the logs to be yarded.
- (45) Haulback block – any block the haulback line passes through including the corner block and tailblock.
- (46) Hay rack – (a) a type of loading boom where two tongs are used and logs are suspended.  
(b) A transporting vehicle with multiple sets of bunks attached to a rigid frame usually used for hauling logs.
- (47) Hazardous falling area – the area within a circle centered on the tree being felled and having a radius not less than twice the height of that tree.
- (48) Head tree – the tree where yarding and/or loading takes place. (See spar tree)
- (49) Heel boom – a type of loading boom where one tong is used and one end of the log is pulled up against the boom.
- (50) High lead – a system of logging wherein the main line is threaded through the main line block, which is attached near the top of the spar, to obtain a lift of the logs being yarded.
- (51) Hobo log and/or hitchhiker – a free or unattached log that is picked up by a turn and is transported with the turn.
- (52) Hooktender – the worker that supervises the method of moving the logs from the woods to the landing.
- (53) Hot deck – a landing where logs are being moved.
- (54) Hydraulic jack – a mechanical device, powered by internal pressure, used to control the direction in which a tree is to be felled.
- (55) In the clear – being in a position where the possibility of harmful physical contact is minimized.
- (56) Jackstrawed – trees or logs piled in an unorderly manner.
- (57) Jagers – any projecting broken wire in a strand of cable.
- (58) Kerf – that portion of timber products taken out by the saw teeth.
- (59) Knob – a metal ferrule attached to the end of a line.
- (60) Landing – any place where logs are laid after being yarded, awaiting subsequent handling, loading, and hauling.
- (61) Lift tree – an intermediate support for skylines.
- (62) Loading boom – any structure projecting from a pivot point to guide a log when lifted.
- (63) Lodged tree – a tree leaning against another tree or object which prevents it from falling to the ground.
- (64) Log bronco – a sturdily built boat usually from twelve to twenty feet in length, used to push logs or bundles of logs in a generally forward direction in booming and rafting operations.
- (65) Log dump – a place where logs are removed from transporting equipment. It may be either dry land or water, parbuckled over a brow log or removed by machine.
- (66) Logging machine – a machine used or intended for use to yard, move, or handle logs, trees, chunks, trailers, and related materials or equipment. This shall include self-loading log trucks only during the loading and unloading process.
- (67) Logs – tree segments suitable for subsequent processing into lumber, pulpwood, or other wood products, including but not limited to poles, piling, peeler blocks and bolts.
- (68) Log stacker – a mobile machine mounted on a wheeled or tracked chassis, equipped with a frontally mounted grapple, tusk, or forklift device, and employed in the loading, unloading, stacking, or sorting of logs.
- (69) Long sticks – an overlength log that creates a hazard by exceeding the safe perimeters of the landing.
- (70) Mainline – the line attached to the buttrigging used to pull logs to the landing.
- (71) Mainline block – the block hung in the spar through which the mainline passes.
- (72) Mainline train – any train that is made up for travel between the woods and log dump.
- (73) Matchcutting – the felling of trees without using an undercut.
- (74) Mechanized falling – falling of standing timber by a self-propelled mobile wheeled or tracked machine equipped with a shear or other powered cutting device.
- (75) Mechanized feller – any such machine as described in WAC 296-54-535 and 296-54-537, and includes feller/bunchers and similar machines performing multiple functions.
- (76) Mobile log loader – a self-propelled log loading machine mounted on wheels or tracks, incorporating a

grapple-rigged Bohemian, goose neck, or straight boom fabricated structure, employed in the loading or unloading of logs by means of grapples or tongs.

(77) Mobile yarder – a logging machine mounted on wheels, tracks, or skids, incorporating a vertical or inclined spar, tower, or boom, employed in skyline, slackline, high lead, or grapple overhead cable yarding systems.

(78) Must – the same as "shall" and is mandatory.

(79) New area or setting – a location of operations when both the loading station and the yarder are moved.

(80) Pass line – a small line threaded through a block at the top of the spar to assist the high climber.

(81) Permissible (as applied to any device, equipment or appliance) – such device, equipment, or appliance has the formal approval of the United States Bureau of Mines, American Standards Association, or National Board of Fire Underwriters.

(82) Portable spar or tower – a movable engineered structure designed to be used in a manner similar to which a wood spar tree would be used.

(83) Qualified person – a person, who by possession of a recognized degree, certificate, professional standing, or by extensive knowledge, training, and experience, has successfully demonstrated ability to solve or resolve problems relating to the subject matter, the work, or the project.

(84) Reach – a steel tube or wood timber or pole connected to the truck and inserted through a tunnel on the trailer. It steers the trailer when loaded and pulls the trailer when empty.

(85) Receding line – the line on a skidder or slackline comparable to the haulback line on a yarder.

(86) Reload – an area where logs are dumped and reloaded or transferred as a unit to another mode of transportation.

(87) Rollway – any place where logs are dumped and they roll or slide to their resting place.

(88) R.O.P.S. – roll over protection structure.

(89) Rub tree – a tree used to guide a turn around a certain area.

(90) Running line – any line which moves.

(91) SAE – society of automotive engineers.

(92) Safety factor – the ratio of breaking strength to a safe working strength or loading.

(93) Safety glass – a type of glass that will not shatter when broken.

(94) Sail block – a block hung inverted on the sail guy to hold the tong block in proper position.

(95) Scaler – the person who measures the diameter and length of the logs, determines specie and grade, and makes deductions for footage calculations.

(96) Shall – a requirement that is mandatory.

(97) Shear log – a log placed in a strategic location to divert passage of objects.

(98) Shore skids – any group of timbers spaced a short distance apart on which logs are rolled.

(99) Signal person – the person designated to give signals to the machine operator.

(100) Siwash – to change the lead of a line with a physical object such as a stump or tree instead of a block.

(101) Skidder – a machine or animal used to move logs or trees to a landing.

(102) Skidding – movement of logs or trees on the surface of the ground to the place where they are to be loaded.

(103) Skyline – the line suspended between two points on which a block or carriage travels.

(104) Slackline – a form of skyline where the skyline cable is spooled on a donkey drum and can be raised or lowered.

(105) Slack puller – any weight or mechanical device used to increase the movement of a line when its own weight is inadequate.

(106) Snag – a dead standing tree or a portion thereof. (See Danger tree)

(107) Snorkel – a loading boom modified to extend its limitations for the purpose of yarding.

(108) Spar – a device rigged for highlead, skyline or slackline yarding.

(109) Spar tree – (see spar).

(110) Speeder – a small self-powered vehicle that runs on a railroad track.

(111) Spike – a long heavy nail similar to a railroad spike.

(112) Springboard – a board with an iron tip used by fallers to stand on while working above ground level.

(113) Square lead – the angle of 90 degrees.

(114) Squirrel – a weight used to swing a boom when the power unit does not have enough drums to do it mechanically.

(115) Squirrel tree – a topped tree, guyed if necessary, near the spar tree in which the counter balance (squirrel) of a tree rigged boom is hung.

(116) Stiff boom – two or more boom sticks wrapped together on which boom persons walk or work.

(117) Strap – any short piece of line with an eye or "D" in each end.

(118) Strawline – a small line used for miscellaneous purposes.

(119) Strap socket or D – a socket with a closed loop and arranged to be attached to the end of a line by the molten zinc, or an equivalent method. It is used in place of a spliced eye.

(120) Strip – a definite location of timber on which one or more cutting crews work.

(121) Swamping – the falling or cutting of brush around or along a specified place.

(122) Swifter – a piece of equipment used to tie the side sticks of a log raft together to keep the raft from spreading.

(123) Swing cut – a back cut in which the holding wood on one side is cut through.

(124) Tail block – the haulback block at the back end of the show.

(125) Tail hold – an anchor used for making fast any line or block.

(126) Tail tree – the tree at the opposite end from the head tree on which the skyline or other type rigging is hung.

(127) Tight line – when either the mainline or haulback are held and power is exerted on the other or when power is exerted on both at the same time.

(128) Tong line block – the block hung in a boom through which the tong line operates.

(129) Tongue – a device used to pull and/or steer a trailer.

(130) Topping – cutting off the top section of a standing tree prior to rigging the tree for a spar or tail tree.

(131) Tower – (see portable spar or tower).

(132) Tractor – a machine of wheel or track design used in logging.

(133) Tractor logging – the use of any wheeled or tracked vehicle in the skidding or yarding of logs.

(134) Transfer (as used in loading) – changing of logs in a unit from one mode of transportation to another.

(135) Tree jack – a grooved saddle of wood or metal rollers contained within two steel plates, attached to a tree with a strap, used as a guide for skyline, sail guy, or similar static line. It is also formed to prevent a sharp bend in the line.

(136) Tree plates – steel bars sometimes shaped as elongated J's, which are fastened near the top of a tree to hold guylines and prevent them from cutting into the tree when tightened. The hooks of the J are also used to prevent the mainline block strap from sliding down the tree.

(137) Tree pulling – a method of falling trees in which the tree is pulled down with a line.

(138) Tug – a boat, usually over twenty feet in length, used primarily to pull barges, booms of logs, bags of debris, or log rafts.

(139) Turn – any log or group of logs attached by some means to power and moved from a point of rest to a landing.

(140) "V" lead – a horizontal angle of less than 90 degrees formed by the projected lines of the mainline from the drum of the logging machine through the block or fairlead and the yarding load or turn.

(141) WAC – Washington Administrative Code.

(142) Waistline – that portion of the haulback running between the corner block and the tail block.

(143) Wrapper – a cable assembly or chain used to contain a load of logs.

(144) Wrapper rack – barrier used to protect a person while removing binders and wrappers from a loaded logging truck.

(145) Yarder – a machine with a series of drums used to yard logs. (See donkey)

(146) Yarding – the movement of logs from the place they are felled to a landing. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-505, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-505, filed 9/21/79.]

**WAC 296-54-507 Management's responsibility.** In addition to observance of the general safety and health standards:

(1) The employer shall assume the responsibility of safety training for new employees.

(2) The employer shall assume the responsibility of work assignments so that no employee shall be allowed to work in a position or location so isolated that he is not within ordinary calling distance of another employee who can render assistance in case of emergency. In any operation where cutting, yarding, loading, or a combination of these duties is carried on, there shall be a minimum of two employees who shall work as a team and shall be in visual or hearing contact with one another to allow prompt awareness of injury or cessation of work activity of one employee by the other. No employee shall be left alone for a period of time to exceed fifteen minutes without visual or hearing contact. In addition, there shall be some system of back-up communication in the near proximity to enable an employee to call for assistance in case of emergency.

**NOTE:** This does not apply to operators of motor vehicles, watchmen or certain other jobs which, by their nature, are singular employee assignments. However, a definite procedure for checking the welfare of all employees during their working hours shall be instituted and all employees so advised.

(3) The employer shall establish a method of checking the employees in from the woods at the end of each shift. Each immediate supervisor shall be responsible for his crew being accounted for. This standard also includes operators of all movable equipment.

(4) Prior to the commencement of logging operations in a new area or setting, a safety meeting shall be held and a plan shall be developed and implemented whereby management shall ascertain by direct supervision that the work is being carried out with special emphasis on safety and safe work practices.

(5) When extreme weather or other extreme conditions are such that additional hazards arise, additional precautions shall be taken to assure safe operations. If the operation cannot be made safe because of the aforementioned conditions, the work shall be discontinued until safe to resume.

(6) Danger trees within reach of landings, roads, rigging, buildings or work areas shall be either felled before regular operations begin or work shall be arranged so that employees shall not be exposed to hazards involved.

(7) Management shall ensure that intoxicating beverages and narcotics are not permitted or used by employees on or in the vicinity of the work site. Management shall cause employees under the influence of alcohol or narcotics to be removed from the work site. This requirement does not apply to employees taking prescription drugs and/or narcotics as directed by a physician providing such use shall not endanger the employee or others. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-507, filed

8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-507, filed 9/21/79.]

**WAC 296-54-509 Employee's responsibility.** (1) Employees shall coordinate and cooperate with management and other employees in an attempt to eliminate accidents.

(2) Employees shall study and observe all safe work practices governing their work.

(3) They should offer safety suggestions, wherein such suggestions may contribute to a safer work environment.

(4) Intoxicating beverages and narcotics shall not be permitted or used by employees in or around the work sites. Employees under the influence of alcohol or narcotics shall not be permitted on the work site. This rule does not apply to employees taking prescription drugs and/or narcotics as directed by a physician providing such use shall not endanger the employee or others.

(5) Employees shall conduct themselves in a workmanlike manner while on the work site. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-509, filed 9/21/79.]

**WAC 296-54-511 Personal protective equipment.** (1) General requirements.

(a) Protective equipment, including personal protective equipment for eyes, face, head, hearing and extremities, protective clothing, respiratory devices and protective shields and barriers, shall be provided, used, and maintained in a sanitary and reliable condition wherever it is necessary by reason of hazards of processes or environment, chemical hazards, radiological hazards, or mechanical irritants encountered in a manner capable of causing injury or impairment in the function of any part of the body through absorption, inhalation or physical contact.

(b) Employee owned equipment. Where employees are required to provide their own protective equipment, the employer shall be responsible to assure its adequacy, including proper maintenance and sanitation of such equipment.

(c) Design. All personal protective equipment shall be of safe design and construction for the work to be performed. All safety belts and attachments shall meet the requirements of section 3 of ANSI A10.14-1975.

(2) Eye and face protection. Protective eye and/or face equipment shall be required and worn where there is a probability of injury that can be prevented by such equipment. In such cases, employers shall make conveniently available a type of protector suitable for the work to be performed, and employees shall use such protectors. Suitable eye protectors shall be provided and worn where machines or operations present the hazard of flying objects, glare, liquids, injurious radiation, or a combination of these hazards.

(3) Respiratory protection. The respiratory protection requirements of the general occupational health standards, chapter 296-62 WAC, shall apply.

(4) Occupational head protection. Hard hats meeting the specifications contained in American National

Standards Institute (ANSI) Z89.1-1969, shall be worn by all employees involved in the logging operation or any of its related activities unless such employees are protected by F.O.P.S., cabs or canopies. Hard hats shall be maintained in serviceable condition.

(5) Personal flotation devices. Employees working on, over or along water, where the danger of drowning exists, shall be provided with and shall wear approved personal flotation devices in accordance with General safety and health standards, WAC 296-24-086.

(6) Occupational footwear.

(a) All employees whose duties require them to walk on logs or boomsticks, shall wear sharp-calked shoes, or the equivalent, except when conditions such as ice, snow, etc., render calks ineffective. When calks are ineffective and other footwear does not afford suitable protection, workers shall not be required to work on logs or boomsticks.

(b) When nonslip type shoes or boots afford a greater degree of employee protection than calk shoes, such as at scaling stations, log sorting yards, etc., then this type footwear may be worn in lieu of calk shoes providing firm ankle support and secure footing are maintained.

(7) Leg protection. Employees whose normal duties require them to operate a power saw shall wear a flexible ballistic nylon pad or pads, sewn or otherwise fastened into the trousers, or other equivalent protection, that will protect the vulnerable area of the legs.

(8) Hand protection. All employees handling lines or other rough materials where there is a reasonable possibility of hand injury, shall wear suitable gloves or other hand protection to prevent injury.

(9) Hearing protection. The hearing protection requirements of the general occupational health standards, chapter 296-62 WAC, shall apply.

(10) Protective clothing. Employees working on landings or in log sorting yards, when working on or from the ground, shall wear highly visible hard hats and/or yellow or orange vests, or similarly colored garments, to enable equipment operators to readily see them. It is recommended that such hard hats and vests or outer garments be of a luminous or reflectorized material. Employees performing duties of a flagperson shall wear a hard hat and vest or garment of contrasting colors. Warning vests and hard hats worn at night shall be of a reflectorized material. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-54-511, filed 11/30/83. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-511, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-511, filed 9/21/79.]

**WAC 296-54-513 Safety educational and first aid requirements.** See the general safety and health standards, WAC 296-24-040 through 296-24-065. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-513, filed 9/21/79.]

**WAC 296-54-515 General requirements.** (1) Emergency stops. Speed limiting devices, safety stops or emergency shut down devices or shut off valves shall be provided, with the controls so located that in the event of an emergency, the prime mover may be shut down from a safe place.

(2) Machine operators. Machine operators shall be experienced in operating the equipment they are using, except that inexperienced persons may operate the equipment to gain experience while in training and may do so only while working under immediate supervision of an experienced authorized person.

(3) Refueling vehicles. Vehicles shall not be fueled while the motors are running with the exception of helicopters, which is permitted under certain conditions. (See WAC 296-54-559(36).)

(4) Hydraulic lines. If failure of hydraulic lines would create a hazard to an equipment operator while at the operating station, safeguards shall be installed in such a manner as to eliminate the hazard. All hydraulic lines shall be maintained free of leaks and shall be shielded from damage wherever possible.

(5) Defective equipment. Equipment in need of repair shall be reported to management in writing as soon as possible and such equipment shall not be used until repairs are completed if there is a possible hazard to safety of the operator or other employees.

(6) Lock out - tag out. Procedures for lock out - tag out shall be established and implemented to prevent the accidental starting of equipment that is shut down for repairs, maintenance or adjustments.

(7) Control marking. The controls of all machines shall be marked as to their purpose in the operation of the machine.

(8) Metal objects. Metal objects driven into trees or logs shall be removed immediately after serving their intended purpose.

(9) Fire protection. An approved, fully charged and maintained, fire extinguisher shall be available at locations where machines are operating or on each vehicle.

(10) Hand tools. Hand and portable powered tools and other hand-held equipment shall be maintained and used in accordance with the general safety and health standards, WAC 296-24-650.

(11) Storage, handling and marking of fuel. Fuel shall be stored, handled and marked in accordance with WAC 296-24-330.

(12) Smoking prohibited. Smoking shall be prohibited in battery charging areas and within fifty feet of all refueling operations. Precautions shall be taken to prevent open flames, sparks or electric arcs in battery charging or refueling areas.

(13) Charging batteries. When charging batteries, the vent caps shall be kept in place to avoid electrolyte spray. Care shall be taken to ensure caps are functioning. The battery (or compartment) cover(s) shall be open to dissipate heat.

(14) Uncovered batteries. Tools and other metallic objects shall be kept away from the tops of uncovered batteries. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW.

80-11-057 (Order 80-15), § 296-54-515, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-515, filed 9/21/79.]

**WAC 296-54-517 Camps.** Rules, regulations and standards for camps shall be in accordance with WAC 296-24-125. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-517, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-517, filed 9/21/79.]

**WAC 296-54-519 Transportation of crews by motor vehicle.** (1) Seats. Anchored seats shall be provided for each person when riding in any vehicle.

(2) Seat belts. The driver of a crew vehicle shall be provided with and shall wear a seat belt at all times the crew vehicle is in motion.

(3) Barricade. After May 1, 1980, a substantial barricade shall be provided behind the driver of a crew bus or vehicle that will transport nine or more passengers. The barricade shall extend from the floor to at least a level even with the top of the driver's head.

(4) Safe entrance and exits. Adequate provisions shall be made for safe entrance and exits.

(5) Enclosed racks. When equipment or tools are carried inside the vehicle, they shall be stored in enclosed racks or boxes, which shall be properly secured to the vehicle.

(6) Vehicle to be stopped. Persons shall not enter or exit from any vehicle until the vehicle is completely stopped.

(7) Keep within vehicle. Persons shall keep all parts of the body within the vehicle.

(8) Stoves prohibited. Provisions shall be made for heat and light in the passenger portion of the vehicle. Use of stoves in vehicles is prohibited.

(9) Emergency exit. On vehicles designed to transport nine or more passengers, an emergency exit not less than six and one-half square feet in area, with the smaller dimension being not less than 18 inches, shall be placed at the back of the vehicle or near the back on the side opposite the regular entrance. The route to and egress from the exit must be unobstructed at all times.

(10) Fire extinguisher. When no fuel is transported in the crew vehicle, a minimum rated 5/BC dry chemical fire extinguisher shall be kept in the passenger compartment. When fuel is transported on the crew vehicle in accordance with subsection (14) of this section, a minimum rated 10/BC dry chemical fire extinguisher shall be kept in the passenger compartment. The extinguishing agent shall be nontoxic and preferably a noncorrosive type.

(11) Crew and emergency vehicles. Vehicles designed to transport five or more passengers shall be equipped with stretchers, two blankets, and first-aid kits. If used as a means of transporting injured persons, it shall be designed to enable persons to pass a loaded stretcher into

the vehicle. Provisions shall be made for proper securing of the stretcher.

(12) Exhaust systems. Exhaust systems shall be designed and maintained to eliminate the exposure of passengers to toxic agents.

(13) Limitation of transportation of explosives. Explosives shall not be carried on any vehicle while the vehicle is being used to transport workers other than the driver and two persons.

(14) Limitation of transportation of fuels. Fuels shall be transported or stored only in approved safety containers. Enclosed areas where fuels are carried or stored shall be vented in such a manner that a hazardous concentration of fumes cannot accumulate. All containers or drums shall be properly secured to the vehicle while being transported. Commercially built vehicles of the pickup or flatbed type with a seating capacity of not to exceed six persons may be used to carry fuels in or on the bed of such vehicles, providing such fuels are not carried in the crew compartment. Van-type vehicles may be used to carry fuels only when a vapor-proof bulkhead is installed between the passenger compartment and storage compartment. Not more than forty-two gallons of gasoline may be carried or stored in the compartment and each container shall have a capacity not exceeding seven gallons.

(15) Motor vehicle laws. Motor vehicles used as crew vehicles regularly for the transportation of workers shall be covered against the weather and equipped and operated in conformity with applicable state of Washington motor vehicle laws.

(16) Operator's license. All operators of crew vehicles shall be experienced drivers and shall possess a current valid drivers license.

(17) Daily vehicle check. Operators of crew vehicles shall check brakes and lights daily and shall keep windshields and mirrors clean.

(18) Good repair. Crew vehicles shall be maintained in good repair and safe condition.

(19) Dump trucks. Dump trucks shall only be used in an emergency to transport workers and shall be equipped with adequate safety chains or locking devices which will eliminate the possibility of the body of the truck being raised while employees are riding in the truck. Emergency shall mean any unforeseen circumstances which calls for immediate action when danger to life or danger from fire exists.

(20) Means of signaling. An effective means of signaling shall be provided for communication between the driver and the passengers being transported when they are in separate compartments.

(21) Load limit. The passenger load limit of a crew vehicle shall not exceed the seating capacity of the vehicle.

(22) Vehicle check. Crew vehicles shall be thoroughly inspected by a mechanic for defects which could create a hazardous condition for operation. Such inspections shall be carried out at least every month. Defects known to the operator shall be reported in writing to the mechanic

or person in charge. If defects are found, they shall be corrected before the vehicle is used for the transportation of crews. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-519, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-519, filed 9/21/79.]

**WAC 296-54-521 Transportation of crews by use of speeders and trailers.** (1) Braking systems. All speeders shall be equipped with two separate and independently operated braking systems either of which shall be of sufficient capacity to lock all wheels when speeder is fully loaded.

(2) Sanding methods. All speeders used for transporting crews shall be equipped with methods for sanding tracks, operative for both directions of travel.

(3) Lights, windshield wipers. Electric lights of sufficient candle power and range so that vehicle can be stopped within the range of the beam, and which will shine in the direction of travel, shall be provided on all speeders. Adequate tail lights shall be installed and maintained in good order. Automatic windshield wipers of sufficient capacity to maintain clear visibility shall be installed on all speeders.

(4) Trailers. When trailers are coupled behind speeders, they shall be equipped with two separate and independent braking systems, either shall be of sufficient capacity to lock all wheels when the trailer is fully loaded. One of these shall be power operated and shall be controlled from the speeder; the other manually operated from the trailer. One man shall be designated to operate this brake in case of emergency.

(5) Trailer coupling. All trailers shall be coupled to speeders with metal couplings and safety chains or straps of sufficient strength to withstand the impact caused by a broken coupling.

(6) Trailer not to coast. No trailer shall coast or be used as a crew car without being attached to a speeder. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-521, filed 9/21/79.]

**WAC 296-54-523 Methods of crew transportation other than those specified.** Special approval. Persons or firms desiring to transport crews by methods other than those specified in these rules shall so inform the division of industrial safety and health, department of labor and industries, so that an evaluation of that method may be made. Should the proposed method be found to afford a measure of safety acceptable to the division of industrial safety and health, department of labor and industries, a written order stating that finding shall be issued to the person or firm concerned by the division of industrial safety and health and the proposed method may be utilized. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-523, filed 9/21/79.]

**WAC 296-54-525 Railroad construction and maintenance.** (1) Construction. All construction shall be according to safe logging practice as to size of rails, ties, track accessories and methods of installing same.

(2) Rail guards. Rail guards shall be placed on main lines and spurs, consistent with type of traffic and general local conditions.

(3) Rail anchors. Rail anchors of approved design shall be installed wherever practicable.

(4) Frogs, switches and guard rail ends. Frogs, switches and ends of guard rails shall have either patent or wooden foot guard blocking installed.

(5) Slip plates. Slip plates shall be used under all switches and switch points.

(6) Wire for telephone lines. All above ground wire for permanent telegraph or telephone lines used for dispatching must be well strung on insulators and shall be clear of ground and obstruction.

(7) Insulators. Where telephone lines are strung under or near power lines, foot stools mounted on insulators in front of telephone boxes must be used, unless other protection is provided, which affords a substantially equivalent measure of safety.

(8) Trestles. Foundations, pile trestles, framed bent trestles, mud sills, or other framework of all structures shall be adequate to support the maximum imposed loads without exceeding the maximum safe working unit stresses. Such structure shall be maintained in good condition and repair and shall be inspected at least annually by a qualified person and a record maintained of inspection which shall be made available to the division of industrial safety and health on request.

(9) Wooden guard. Outside wooden guard rails shall be installed on all railroad bridges except that outside wooden rails will not be required where inside steel guard rails are used. They shall extend not less than six inches above the top of the ties and shall be bolted or spiked to ties at intervals of not more than five feet. Spacer blocks shall be used unless ties are spiked to stringers, or guard rails are dapped to avoid need for spacer blocks.

(10) Bridge ties. Regular bridge ties of not less than ten feet in length shall be used on all railroad bridges constructed after the effective date of these standards.

(11) Safety platforms. On trestles and bridges whose length exceeds two hundred fifty feet, safety platforms providing safe standing space for two persons shall be installed and spaced so that a person on the trestle or bridge is never more than one hundred twenty-five feet from a safety platform or the end of the bridge or structure.

(12) Bridges and trestles used as footways. All railroad bridges and trestles used habitually as footways shall be provided with a plank walkway not less than twelve inches wide and two inches thick, located between the rails, and shall extend from end to end of bridge or trestle.

(13) Walkway. A suitable substantial walkway not less than three feet wide with handrail shall be installed on bridges or trestles where train crews are required to

perform routine inspection or repair work on trains. Substantial platforms and handrails shall be provided where switches are located on bridges or trestles. Adequate clearance shall be allowed for the throw of the switch.

(14) Clearing right of way. All dangerous trees, snags or brush shall be cleared a safe distance from both sides of the track and any obstruction that will create a transportation hazard shall be removed.

(15) Secure footing at switches. Material shall be provided which will promote secure footing at places alongside the track where employees customarily perform duties, such as inspect loads, set brakes by hand or throw switches.

(16) Clearance between tracks. The distance between any main tracks and side track shall be such that there shall be a clearance of four feet between bunk ends and locomotive cabs.

(17) Clearances. The minimum horizontal clearances on each side of the center line of standard gauge main-line railroads shall be eight feet, and the vertical clearance shall be twenty-two feet above the top of each rail (in accordance with standard railroad engineering practices).

(18) Derailers.

(a) Derailers shall be installed and used on all landings, passing tracks and spurs where cars are left on a grade.

(b) These derails shall be located in such a manner that they will be close to standing equipment and will not operate to create a hazard to buildings and other railroad lines.

(c) Derailers shall not be located on the inside rail on a sharp curve.

(d) Derail signs shall be set on both sides of the track even with derailer.

(e) When a derailer is no longer needed, it shall be removed or rendered inoperative. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-525, filed 9/21/79.]

**WAC 296-54-527 Truck roads.** (1) Truck road grades. Truck road grades shall not be too steep for safe operation of logging or work trucks which operate over them and shall not exceed twenty percent in any case unless a positive means of lowering trucks is provided.

(2) Truck road surfaces.

(a) Truck roads shall be of sufficient width and evenness to insure the safe operation of equipment.

(b) Hazards such as broken planking, deep holes, large rocks, logs, etc., which prevent the safe operation of equipment, shall be immediately corrected.

(c) Road width. On blind curves, truck roads shall be of sufficient width for two trucks to pass, or some type of signal system shall be maintained or speed limited to such that the vehicle can be stopped in one-half the visible distance.

(3) Safe roadways. All danger trees shall be felled a safe distance back from the roadway. Rocks, which present a hazard, shall be cleared from banks. Brush and other materials that obstruct the view at intersections or

on sharp curves shall be cleared. (This subsection is applicable only to those portions of roads under direct control of the employer.)

(4) Bridges. All structures shall be adequate to support the maximum imposed loads without exceeding the maximum safe working unit stresses. All bridges shall have an adequate number of reflectors to clearly define the entrance to the bridge. All structures shall be maintained in good condition and repair and shall be inspected at least annually by a qualified authorized person and a record maintained of each inspection, which shall be made available to the division of industrial safety and health, department of labor and industries on request.

(5) Shear rails. Shear rails shall be installed on both outside edges of bridges. The shear rails must be securely fastened and made of material capable of withstanding the impact generated by contact with the wheels of a loaded vehicle. The top of shear rails shall be not less than fifteen inches above the bridge surface. Bridges in use prior to the effective date of these regulations with outside shear rails of a minimum of ten inches high or center type shear rails of not less than five inches high are permissible until such time repairs are needed.

(6) Control of dust on logging roads. Measures shall be instituted which will minimize dust to such degree that visibility will not be reduced beyond the point where an operator can safely operate a vehicle. Vehicle operators shall govern the speed of vehicles by road conditions.

(7) Fenders. Pneumatic-tired equipment shall be equipped with fenders as described in the Society of Automotive Engineers Technical Report J321a. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-527, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-527, filed 9/21/79.]

#### **WAC 296-54-529 Falling and bucking--General.**

(1) Before starting to fall or buck any tree or snag, the cutter shall survey the area for possible hazards and proceed according to safe practices. Snags which are unsafe to cut shall be blown down with explosives or felled by other safe methods.

(2) Workers shall not approach a faller within reach of the trees being felled unless a signal has been given and acknowledged by the faller that it is safe to approach.

(3) Before falling or bucking any tree, sufficient work area shall be swamped and an adequate escape path shall be made. An escape path shall be used as soon as the tree or snag is committed to fall, roll or slide.

(4) Warning to be given. Fallers shall give timely and adequate warning prior to falling each tree; such warning shall be given with the saw motor at idle or shut off. Persons in the area shall give response to the faller and shall also notify him when they are in the clear.

(5) A competent person, properly experienced in this type of work, shall be placed in charge of falling and bucking operations. Inexperienced workers shall not be

allowed to fall timber or buck logs unless working under the direct supervision of an experienced worker.

(6) Snags that have loose bark in the area of the proposed cut shall have the bark removed before being felled. When a snag has elevated loose bark which cannot be removed, the buddy system shall be used to watch for and give warning of falling bark or other hazards.

(7) Tools of fallers and buckers, such as axes, sledges, wedges, saws, spring boards, etc., must be maintained in safe condition. Case hardened or battered sledges and wedges shall not be used. All tools shall be used for their intended purposes.

(8) Trees shall not be felled if the falling tree can endanger any worker or strike any line or any unit in the operation.

(9) When practical, strips shall be laid out so cutters face out into opening when starting strip, and all trees shall be felled into the open whenever conditions permit.

(10) Trade leaners. Cutters shall not fall into another strip; leaners on the line shall be traded.

(11) When there is danger from kickback of a sapling, the same must be either undercut or felled.

(12) Cutters shall place an adequate undercut and leave sufficient holding wood to insure the tree will fall in the intended direction. When required, mechanical means shall be used to accomplish this objective.

(13) Cutters shall be careful their chopping range is unobstructed.

(14) Cutters shall confer with their supervisor regarding a safe manner of performing the work and in unusually hazardous situations shall not proceed with the work until their method has been approved by their supervisor.

(15) The person in charge of cutting crews shall regularly inspect the work of the cutting crews and shall be responsible for seeing the work is performed in a proper and safe manner.

(16) Common sense and good judgment must of necessity govern the safety of cutters as affected by weather conditions. At no time shall they work if wind is strong enough to prevent the falling of trees in the desired direction or when vision is impaired by dense fog or darkness.

(17) Cutters shall be assigned to work in locations where they are in contact with others or their welfare shall be checked on as provided for by WAC 296-54-507(2).

(18) Persons in charge of cutting crews shall account for all persons in their crews being on hand when work ceases as provided for by WAC 296-54-507(3).

(19) All fallers and buckers shall have a current first-aid card.

(20) All fallers and buckers shall carry or have with them in near proximity at all times, an axe, a minimum of two wedges, a whistle and a first-aid kit. The whistle shall be carried on their person.

(21) Special precautions shall be taken to prevent trees from falling into power lines. If it appears that a tree will hit a power line, the power company shall be notified before it is attempted to fall the tree. If an unsuspected tree does contact a power line, the power

company shall be notified immediately and all persons shall remain clear of the area until the power company personnel advise that conditions have been made safe to resume operations.

(22) Wedges shall be of soft metal, hardwood or plastic.

(23) Wedges shall be driven with a hammer or other suitable tool. Double-bitted axes or pulaskies shall not be used for this purpose.

(24) While wedging, fallers shall watch for falling limbs or other material that might be jarred loose. Cutting of holding wood in lieu of using wedges is prohibited.

(25) Undercuts are required except in matchcutting, and shall be large enough to safely guide trees and eliminate the possibility of splitting. Trees with no perceptible lean having undercuts to a depth of one-fourth of the diameter of the tree with a face opening equal to one-fifth of the diameter of the tree, will be assumed to be within reasonable compliance with this rule. Swing cuts are prohibited except by an experienced person.

(26) Undercuts shall be completely removed except when a dutchman is required on either side of the cut.

(27) Backcuts shall be as level as possible and shall be approximately two inches higher than the undercut, except in tree pulling.

(28) Trees with face cuts or backcuts shall not be left standing. When a tree is not completely felled, the faller shall clearly mark the tree, shall discontinue work in the hazardous area and notify his immediate supervisor. The supervisor shall be responsible for notifying all workers who might be endangered and shall take appropriate measures to ensure that the tree is safely felled before other work is undertaken in the hazardous area.

(29) To avoid use of wedges, which might dislodge loose bark or other material, snags shall be felled in the direction of lean unless other means (mechanical or dynamite) are used.

(30) Lodged trees shall be clearly marked and identified by a predetermined method and all persons in the area shall be instructed not to pass or work within two tree lengths of such trees except to ground them.

(31) Work areas shall be assigned so that a tree cannot fall into an adjacent occupied work area. The distance between work areas shall be at least twice the height of the trees being felled. A greater distance may be required on downhill slopes depending on the degree of the slope and on the type of trees and other considerations.

(32) Where felled trees are likely to roll and endanger workers, cutting shall proceed from the bottom toward the top of the slope, and performed uphill from previously felled timber.

(33) Cutters shall not be placed on a hillside immediately below each other or below other operations where there is probable danger.

(34) Fallers shall be informed of the movement and location of buckers or other cutters placed, passing or approaching the vicinity of trees being felled.

(35) A flagperson(s) shall be assigned on roads where hazardous conditions are created from falling trees.

Where there is no through traffic, such as on a dead end road, warning signs or barricades shall be used.

(36) No tree or danger tree shall be felled by one cutter where and when the assistance of a fellow cutter is necessary to minimize the dangers or hazards involved.

(37) Cutters shall be in the clear as the tree falls.

(38) Undercuts and backcuts shall be made at a height above the highest ground level to enable the cutter to safely begin the cut, control the tree, and have freedom of movement for a quick escape to be in the clear from a falling tree.

(39) When falling, a positive means, method or procedure that will prevent accidental cutting of necessary holding wood shall be established and followed. Particular care shall be taken to hold enough wood to guide the tree or snag and prevent it prematurely slipping or twisting from the stump.

(40) The undercut shall not be made while buckers or other workers are in an area into which the tree could fall.

(41) Matchcutting should not be permitted and shall be prohibited for trees larger than six inches in diameter breast high.

(42) The tree (and root wad if applicable) shall be carefully examined to determine which way the logs (and root wad) will roll, drop, or swing when the cut is completed. No worker shall be allowed in this danger zone during cutting.

(43) Logs shall be completely bucked through whenever possible. If it becomes hazardous to complete a cut, then the log shall be marked and identified by a predetermined method. Rigging crews shall be instructed to recognize such marks and when possible, cutters shall warn the rigging crew of locations where such unfinished cuts remain.

(44) Cutters shall give timely warning to all persons within range of any log which may have a tendency to roll after being cut off.

(45) Propping of logs or trees as a means to protect workers downslope from the logs or trees, shall be prohibited.

(46) Logs shall not be jackstrawed when being bucked in piles or decks at a landing. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-529, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-529, filed 9/21/79.]

**WAC 296-54-531 Falling and bucking--Power saws and power equipment.** (1) Operators shall inspect chain saws daily to ensure that handles and guards are in place, and controls and other moving parts are functional.

(2) Fuel outdoors. The chain saw shall be fueled outdoors at least fifty feet from persons smoking or from other potential sources of ignition.

(3) Chain saws shall not be operated unless equipped with a muffler.

(4) Idler end of power chain saw blade on all two-man machines shall be adequately guarded.

(5) Combustion-engine type power saws shall be equipped with a positive means of stopping the engine.

(6) Electric power saws shall be equipped with an automatic (deadman type) control switch. Saws with faulty switches shall not be used.

(7) Unless the carburetor is being adjusted, the saw shall be shut off before any adjustments or repairs are made to the saw, chain or bar.

(8) Combustion-engine type power saws shall be equipped with a clutch.

(9) The chain saw clutch shall be properly adjusted to prevent the chain from moving when the engine is at idle speed.

(10) Power chain saws with faulty clutches shall not be used.

(11) The bar shall be handled only when the power chain saw motor is shut off.

(12) Power chain saws shall have the drive end of the bar guarded.

(13) Combustion-engine driven power saws shall be equipped with an automatic throttle control (deadman type), which will return the engine to idle speed upon release of the throttle (idle speed is when the engine is running and the chain does not rotate on the bar).

(14) When falling of tree is completed, the power saw motor shall be at idle or shutoff. Where terrain or brush creates a hazardous condition, the power saw motor shall be shutoff while the operator is traveling to the next cut. The power saw motor shall also be shutoff while fueling.

(15) Saw pinching and subsequent chain saw kickback shall be prevented by using wedges, levers, guidelines, and saw placement, or by undercutting.

(16) Cutters shall not use the chain saw to cut directly overhead or at a distance that would require the operator to relinquish a safe grip on the saw.

(17) Reserve fuel shall be handled and stored in accordance with WAC 296-24-37009.

(18) Hand-held files shall be equipped with a handle.

(19) Only experienced cutters shall buck windfalls. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-531, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-531, filed 9/21/79.]

**WAC 296-54-533 Falling and bucking--Springboards and tree jacking.** (1) Springboards shall be of clear, straight-grained sound stock of sufficient length, width and strength and shall be replaced when they will no longer safely support the expected load at the extreme end.

(2) Springboard irons shall be well lipped and firmly attached with bolts or a means of attachment furnishing equivalent strength.

(3) Two workers shall be present when falling any tree or snag when springboards are used.

(4) Power saw chains shall be stopped while shifting springboards.

(5) Jack plates shall be used with hydraulic tree jacks and the base plate shall be seated on solid wood inside the bark ring as close to level as possible.

(6) Two workers shall be present at all times during the use of tree jacks.

(7) Wedges shall be used as a follow-up method while using tree jacks. The wedges shall be continuously moved in as the tree is jacked.

(8) Effective January 1, 1980, all hydraulic tree jacks shall be equipped with an operable velocity fuse (check valve) and the pump shall be equipped with an operable pressure gauge.

(9) When tree jacking, the facecut shall be nominally one-fourth the diameter of the tree.

(10) The vertical height of the facecut shall be not less than one-fifth of the diameter of the tree when tree jacking.

NOTE: See Figure No. 1, for illustrations of undercuts.

(A) **Conventional undercut.** Can be made with parallel saw cut and axe diagonal cut or both cuts with the saw. Generally used on trees of small diameter.

(B) **Both cuts made with the saw.** Leaves square-end log. Same as (A), except that waste is put on the stump.

(C) **Two parallel cuts with the saw.** The material between the cuts is chipped out with an axe-adz (pulaski) combination. Used on trees over 30 inches in diameter.

(D) **Three parallel cuts with the saw, leaving a step.** Same in principle as (C). Used on trees of very large diameters.

[Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-533, filed 9/21/79.]

**WAC 296-54-535 Tree pulling.** (1) The cutter shall be responsible for determining if a tree can be safely pulled. If, for any reason, the cutter believes the tree pulling cannot be completed safely, the tree shall be conventionally felled.

(2) When using radio positive radio communications shall be maintained at all times between the tree pulling machine and cutter when tree pulling. An audible signal shall be blown when the initial pull is made on the tree and the line is tightened. Hand signals, in lieu of radio communications and an audible signal, may be used only if the cutter is clearly visible to the tree puller operator.

(3) A choker, choker bell, or a line and sleeve shackle shall be used as the means of attachment around the tree when tree pulling. The bight on the line shall be only that necessary to hold the choker or line around the tree.

(4) The tree pulling machine shall be equipped with a torque converter, fluid coupler, or an equivalent device to insure a steady even pull on the line attached around the tree.

(5) The tree pulling line shall have as straight and direct path from the machine to the tree as possible. Physical obstructions which prevent a steady even pull on the tree pulling line shall be removed or the line shall be rerouted.

(6) Siwashing, in lieu of a block, in order to change tree pulling lead, is prohibited. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43-22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-535, filed 8/20/80. Statutory Authority: RCW 49-17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-535, filed 9/21/79.]

**WAC 296-54-537 Mechanized falling.** (1) When using selfpropelled mobile falling devices, a watchman and/or warning signs shall be posted at appropriate locations indicating that devices of this type are being used to fall trees.

(2) Self-propelled mobile falling equipment used for falling trees shall be designed in a manner or shall have auxiliary equipment installed which will cause the tree to fall in the intended direction.

(3) Mechanized falling shall be conducted in such a manner as not to endanger persons or equipment.

(4) Where a mechanized feller incorporates a cab structure having a single entrance door, it shall be equipped with an alternate means of escape from the cab

should the door be blocked in the event of vehicle roll-over or fire. Cab doors shall be fitted with latches operable from both sides of the door. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-537, filed 9/21/79.]

**WAC 296-54-539 Climbing equipment and passline.**

(1) Standard climbing equipment shall be furnished by the employer; however, this shall not be construed to mean that the climber may not use his own equipment, provided it meets the following standards and is permitted by the employer. The climbing ropes shall be of steelcore type. The climber may fasten his rope by passing it through "D" rings fastened to the belt and around his body before tying it to itself. When topping standing trees, it is recommended that a steel chain of 3/16-inch or larger, with appropriate fittings attached, shall be used in addition to the climbing rope. All climbing equipment shall be maintained in good condition. An extra set of climbing equipment shall be kept at the climbing operation and another person with climbing experience shall be present.

(2) A person shall ride only the passline to thread lines, oil blocks or to inspect rigging.

(3) No one shall work directly under a tree except when directed by the climber. Warning shall be given prior to intentionally dropping any objects or when objects are accidentally dropped.

(4) Running lines shall not be moved while the climber is working in the tree, except such "pulls" as he directs and are necessary for his work.

(5) One experienced person shall be dispatched to transmit the climber's signals to the machine operator and shall not otherwise be occupied during the time the climber is in the tree, nor shall the machine operator be otherwise occupied while the climber is using the passline. The designated signalman shall position himself clear of hazards from falling, flying or thrown objects.

(6) Long or short splices and knots in passline are not permitted. Chains used in passlines shall be in good condition and shall not contain cold shuts or wire strands.

(7) The climber shall be an experienced logger with proper knowledge of logging methods and the safety of rigging spar and tail trees.

(8) Trees shall not be topped during windy weather.

(9) At no time shall topping, rigging-up, or stripping work be done when visibility is impaired.

(10) When the friction lever and passline drum is on the opposite side of the machine from the operator, an experienced person shall operate the friction lever while the engineer operates the throttle. While being used, the passline drum shall be properly attended by another person to guide the passline onto the passline drum with a tool suitable for the purpose.

(11) The use of a gypsy drum for handling persons in the tree is prohibited.

(12) Danger trees leaning towards and within reach of landings, roads, rigging or work areas shall either be felled before the regular operations begin or work shall be arranged so that workers will not be exposed to hazards involved.

(13) Noisy equipment such as power saws, tractors and shovels shall not be operated around the area where a climber is working when such noise will interfere with the climber's signals.

(14) Climbing and passline equipment shall not be used for other purposes.

(15) Defective climbing equipment shall be immediately removed from service.

(16) The climber shall be equipped with a climbing equipment assembly having a breaking strength of not less than five thousand four hundred pounds.

The equipment shall include:

(a) A safety belt with double "D" rings;

(b) Steel spurs long and sharp enough to hold in any tree in which they are used; and

(c) A climbing rope made of wire-core hemp, wire or chain construction.

(17) When the climber is using a chain saw in the tree, the climbing rope shall be made of material that cannot be severed by the saw.

(18) Lineman hooks shall not be used as spurs.

(19) When power saws are used in topping or limbing standing trees, the weight of the saw shall not exceed thirty pounds.

(20) Tools used by the climber, except the power saw, shall be safely secured to his belt when not in use.

(21) Snaps shall not be used on a climber's rope unless a secondary safety device between the belt and snap is used.

(22) A climber's rope shall encircle the tree before the climber leaves the ground except when the climber is riding the passline.

(23) While the climber is working in the tree, persons shall keep at sufficient distance from the tree to be clear of falling objects.

(24) When used, passline fair-leads shall be kept in alignment and free from fouling at all times.

(25) Spikes, used by the climber as a temporary aid in hanging rigging, shall be removed before the tree is used for logging.

(26) Loose equipment, rigging or material shall either be removed from the tree or securely fastened.

(27) All spar trees shall be equipped with passlines that shall:

(a) Be not less than 5/16-inch and not be over 1/2-inch in diameter;

(b) Not be subjected to any sawing on other lines or rigging, and kept clear of all moving lines and rigging;

(c) Be of one continuous length and in good condition with no splices, knots, molles, or eye-to-eye splices between the ends;

(d) Be long enough to provide three wraps on the drum before the climber leaves the ground.

(28) Drums used for passlines shall have sufficient flange depth to prevent the passline from running off the drum at any time.

(29) Passline chains shall:

(a) Be not less than 5/16-inch alloy or 3/8-inch high test chain and shall not contain cold shuts or wire strands;

(b) Be attached to the end of the passline with a screw-pin shackle, a slip-pin shackle with a nut and molle, or a ring large enough to prevent going through the pass block; and

(c) Be fitted with links or rings to prevent workers from being pulled into the passline block.

(30) Pass blocks shall:

(a) Be inspected before placing in each spar and the necessary replacements or repairs made before they are hung;

(b) Have the shells bolted under the sheaves;

(c) Have the bearing pin securely locked and nuts keyed or the block be of the type which positively secures the nut and pin;

(d) Equipped with sheaves not less than six inches in diameter; and

(e) Comply with applicable portions of WAC 296-54-543(6) pertaining to blocks.

(31) When workers are required to go up vertical metal spars, passlines, chains and blocks shall be provided and used. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-539, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-539, filed 9/21/79.]

**WAC 296-54-541 Selection of spar, tail and intermediate trees.** (1) Douglas fir or spruce shall be used as spar, tail, or intermediate support trees when they are available. If other species must be used, additional guy-lines, tree plates, or other precautions shall be taken to insure the tree will withstand the strains to be imposed.

(2) Spar, tail and intermediate support trees shall be examined carefully for defects before being selected. They shall be sound, straight, green and of sufficient diameter to withstand the strains to be imposed.

(3) Trees having defects that impair their strength shall not be used for spar, tail or intermediate support trees. Raised trees shall be identified and marked as such.

(4) Before raising spar trees, dummy trees shall be topped and guyed with three guylines equivalent in breaking strength to the mainline. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-541, filed 9/21/79.]

**WAC 296-54-543 General requirements.** (1) Rigging.

(a) Rigging shall be arranged and operated so rigging or loads will not foul, or saw against lines, straps, blocks or other equipment.

(b) A thorough inspection of all blocks, straps, guy-lines and other rigging shall be made before they are placed in positions for use. Inspections shall include an examination for damaged, cracked or worn parts, loose nuts and bolts, and of lubrication, and the condition of straps and guylines. All necessary repairs or replacements for safe operation shall be made before the rigging is used.

(c) Rigging equipment, when not in use, shall be stored so as to not present a hazard to employees.

(d) Running lines shall be arranged so workers will not be required to work in the bight. When this is not possible, workers shall move out of the bight of lines before the lines are tightened or moved.

(2) Shackles.

(a) Shackles with screw pins should have either a molle or cotter key when used to fasten guylines to spar trees.

(b) All shackles used to hang blocks, jacks, or rigging on trees or loading booms shall have the pins fastened by a nut secured with a cotter pin or molle. When used, molles shall be as large as the pin hole will accommodate and with the loose ends rolled in.

(c) The size of the opening between the jaws of shackles used to hang blocks, jacks, rigging, and for joining or attaching lines, shall not be more than one inch greater than the size of the rope, swivel, shackle, or similar device to which it is attached.

(d) All shackles used for mainline or skyline extensions shall be of a type designed for that purpose.

(e) Shackles used other than for mainline extension connections, shall be of the screw-pin type or with the pin secured by a nut and cotter pin or molle, except as specified elsewhere for specific purposes.

(f) Shackles, swivels, links and tree plates shall be replaced or repaired when they will not safely support the imposed strains of their intended use.

(g) Shackles shall not be loaded in excess of the working load recommended by the manufacturer.

(h) All shackles must be made of forged steel or material of equivalent strength and one size larger than the line it connects.

(3) Straps.

(a) Safety straps of appropriate size shall be placed on all high lead blocks; also other blocks whenever practicable. Safety straps shall be shackled, with closed end of shackle up, to a guyline which extends as near as possible at right angles with power unit, but shall not be placed on a guyline having an extension within one hundred feet of the tree. When the top guyline on which the safety strap of the high lead block is fastened is changed, safety strap must be attached to another guyline or loosened guyline tightened after change.

(b) All tree straps shall be at least 1/4-inch larger than the pulling line. If impossible to use safety strap, all tree straps shall be 1/2-inch larger than the pulling line.

(c) All straps in back of show must be as large as the running line.

(d) All blocks other than passline and straw line lead blocks shall be hung in both eyes or "D's" of straps. Threading eye through eye is prohibited.

(e) Skyline jack shall not be hung by double strap through shackle and hanging jack in two eyes.

(f) Tree straps shall initially be made of new wire rope when made up. They shall be replaced when there is evidence of damage or broken wires.

(g) A guyline safety strap or equivalent device shall be installed at the top of metal spars to prevent guylines

from falling more than five feet in case of structural or mechanical failure of the guyline attachment.

(h) Metal spar guyline safety straps or equivalent devices shall be equal to the strength of the guyline.

(i) Nylon straps may be used in accordance with manufacturer recommendations.

(j) Nylon straps shall be removed from service when the wear reaches the limits prescribed by the manufacturer. The person responsible for inspecting the condition of rigging shall be aware of these limits.

(4) Guylines.

(a) All component parts of the guyline system on head tree shall be of equal or greater strength than the mainline and guylines shall be properly spaced to effectively oppose the pull of the mainline.

(b) Guylines on wood spar trees shall be secured to solid stumps with not less than two and one-half complete wraps with at least six staples or eight railroad spikes driven solidly into sound wood on the first and last wrap. The bark shall be removed and the stump adequately notched or other equivalent means shall be used to prevent movement of the line on the stump or tree. Guyline stumps shall be inspected periodically. Guylines may be secured to properly installed "deadmen" when suitable stumps are not available. It is permissible, on the tail tree, to secure the guylines by placing three wraps around a tree or stump and securing them properly by use of clamps.

(c) When a mainline of 7/8-inch or less is used, the spar shall be supported by at least five top guylines or other positive means of supporting the spar.

(d) When tail hold on skyline is choked on stump, there shall be no excessive bight against shackle.

(e) In removing guylines and skylines from stumps, etc.:

(i) A reversed safety wrap shall be put on and secured before loosening the last wrap.

(ii) An experienced person shall be in charge loosening guylines or skylines using proper precautions, and giving warning before lines are released.

(iii) Safety holdbacks shall be used when necessary for the safety of workers.

(iv) Powder or power shall be used for releasing the last wrap on skylines.

(f) Guylines shall be used with any logging equipment when required by the equipment manufacturer.

(g) Guying shall not be less than the minimum recommended by the equipment manufacturer.

(h) Top guys on vertical metal and wooden spars which require five or more guylines shall be so arranged that at least three guys oppose the pull of the load, with at least one guyline anchored adjacent to the yarding quarter.

(i) Guylines shall be of plow steel or better material, and shall be maintained in good condition.

(j) When side blocking or lateral yarding, lateral stability to the head spar tree shall be insured by guylines sufficient in number, breaking strength and spacing.

(k) All guylines shall be kept well tightened while the spar, tree, equipment or rigging they support is in use.

(l) All trees that interfere with proper alignment, placement or tightening of guylines shall be felled.

(m) Guylines shall be hung in a manner to prevent a bight or fouling when they are tightened.

(n) All spliced guyline eyes shall be tucked at least three times.

(o) Extensions to guylines shall be:

(i) Equal in strength to the guyline to which they are attached; and

(ii) Connected only by a shackle connecting two spliced eyes or by double-end hooks. Connections shall have at least one and one-half times the strength of the guyline.

(p) Portable metal spars and their appurtenances shall be inspected by a qualified person each time the spar is lowered and at any time its safe condition is in doubt. When damage from over-stress is noted or suspected, the part in question shall be inspected by a suitable method and found to be safe, or the part repaired or replaced before the spar is again used.

(q) No person shall go up a raised metal spar unless suitable passline equipment is provided and used.

(r) Repairs, modifications or additions which affect the capacity or safe operation of metal spars shall be made only under the direction of a registered engineer and within the manufacturer's recommendations.

(i) In no case shall the original safety factor of the equipment be reduced.

(ii) If such modifications or additions are made, the identification plate required by WAC 296-54-553(1) shall reflect such changes.

(s) When using skylines 7/8-inch or smaller, tail trees shall be supported by at least two guylines when the rigging is placed on the tail tree at a height greater than five times the tree diameter (dbh) or higher than ten feet from the highest ground point, whichever is lower.

(t) When using skylines one inch or larger, tail trees shall be supported by at least four guylines when the rigging is placed on the tail tree at a height greater than five times the tree diameter (dbh) or higher than ten feet from the highest ground point whichever is lower.

(u) Tail trees shall be supported by additional guylines if necessary to insure stability of the tree.

(v) Wood head spar trees shall be guyed as follows:

(i) All spar trees one hundred ten feet and over in height shall be provided with a minimum of six top guys and three buckle guys, each of which shall be substantially equal in strength to the strength of the mainline. This requirement, however, shall not be construed as applying where more than three buckle guys are specifically required.

(ii) Spar trees used for loading and yarding at the same time, or for loading and swinging at the same time, or supporting a skyline yarding system, shall have not less than six top and four buckle guylines each of which shall be substantially equal in strength to the strength of the mainline.

(iii) Spar trees under one hundred ten feet high used only for yarding with heavy equipment (over 7/8-inch mainline) shall have not less than six top guys each of

which shall be substantially equal in strength to the strength of the mainline.

(iv) Spar trees used for yarding with light equipment (7/8-inch or smaller mainline) shall be guyed in such a manner that strains will be imposed on not less than two guylines. If less than five top guys are used, guylines shall be at least 1/4-inch larger than the mainline.

(v) More guylines shall be added if there is any doubt as to the stability of any spar tree, raised tree, tail trees and lift trees, or other equipment or rigging they support.

(w) Guylines shall alternately be passed around the wood spar in opposite directions to prevent twisting of the spar.

(x) Guylines shall be attached to the upper portion of the wood spar by means of shackles.

(y) A-frames shall be guyed by at least two quarter-guylines and one snap guyline or equivalent means to prevent A-frame from tipping back.

(5) Anchoring.

(a) Stump anchors used for fastening guylines and skylines shall be carefully chosen as to position, height and strength. When necessary, stump anchors shall be tied back in a manner that will distribute the load.

(b) Stump anchors shall be barked where attachments are to be made, or devices designed to accomplish the same purpose shall be used.

(c) Stump anchors shall be notched to a depth not greater than one and one-half times the diameter of the line to be attached.

(d) Deadman anchors may be used if properly installed. Guylines shall not be directly attached to deadman anchors. Suitable straps or equally effective means shall be used for this purpose.

(e) Rock bolts and other types of imbedded anchors may be used if properly designed and installed.

(f) Stumps, trees and imbedded type guyline anchors shall be regularly inspected while the operation is in progress. Insecure or hazardous anchors shall be immediately corrected.

(g) Workers shall not stand close to the stump, or in the bight of lines as the guyline or wraps are being tightened.

(6) Blocks.

(a) All blocks shall:

(i) Not be used for heavier strains or lines than those for which they are constructed;

(ii) Be fitted with line guards and shall be designed and used in a manner that prevents fouling, with the exception of special line blocks not designed with line guards;

(iii) Be kept in proper alignment when in use;

(iv) Have bearing and yoke pins of a material that will safely withstand the strains imposed and shall be securely fastened;

(v) Have sheaves of a size designed for the size of the wire rope used.

(b) Blocks with cracked or excessively worn sheaves shall not be used.

(c) Lead blocks used for yarding, swinging, loading and unloading used in wood spars shall:

(i) Be of the type and construction designed for this purpose;

(ii) Be bolted with not less than two bolts through the shells below the sheaves in a manner that will retain the sheave and line in case of bearing pin failure (this does not apply to haulback lead blocks); and

(iii) Mainline blocks shall have a sheave diameter of not less than twenty times the diameter of the mainline.

(d) Block bearing shall be kept well lubricated.

(e) All blocks must be of steel construction or of material of equal or greater strength and so hung that they will not strike or interfere with other blocks or rigging.

(f) All pins in blocks shall be properly secured by "Molle Hogans" or keys of the largest size the pin hole will accommodate. When blocks are hung in trees, threaded pins and nuts shall be used.

(g) Sufficient corner or tail blocks to distribute the stress on anchors and attachments shall be used on all logging systems.

(h) Blocks used to lead lines directly to yarding, loading or unloading machines other than passline or strawline blocks shall be hung by the following method: In both eyes or "D"s of straps; threading eye through eye is prohibited.

(i) Tail, side or corner blocks used in yarding shall be hung in both eyes of straps.

(7) Wire rope.

(a) Wire rope shall be of the same or better grade as originally recommended by the equipment manufacturer.

(b) Wire rope shall be removed from service when any of the following conditions exist:

(i) In running ropes, six randomly distributed broken wires in one lay or three broken wires in one strand in one lay;

(ii) Wear of one-third the original diameter of outside individual wires. Kinking, crushing, bird-caging, or any other damage resulting in distortion of the rope structure;

(iii) Evidence of any heat damage from any cause;

(iv) Reductions from nominal diameter of more than 3/64-inch for diameters to and including 3/4-inch, 1/16-inch for diameters 7/8-inch to 1-1/8-inch, inclusive, 3/32-inch for diameters 1-1/4-inches to 1-1/2-inches inclusive;

(v) In standing ropes, more than two broken wires in one lay in sections beyond end connections or more than one broken wire at an end connection;

(vi) In standing ropes, when twelve and one-half percent of the wires are broken within a distance of one wrap (lay); and

(vii) Corroded, damaged or improperly applied end connections.

(c) Wire rope shall be kept lubricated as conditions of use require.

(8) Splicing wire rope.

(a) Marlin spikes or needles in good condition and large enough for the size of the line being spliced, shall be used for splicing.

(b) When available, and practical to use, a patented wire cutter shall be used. If using a wire axe to cut cable, the hammer used to strike the axe shall be made of

soft nonspalling type material. Eye and face protection shall be worn in accordance with WAC 296-54-511(2).

(c) Short splices, eye to eye splices, cat's paws, knots, molles and rolled eyes are prohibited except for use in the moving of slack lines. Knots will be permitted for use on single drum tractors and grapple pick-up lines when properly tied.

(d) Wire rope 1/2-inch or less in diameter may be tucked two times provided the rope is used only as straw line.

(e) Splices other than eye splices in lang lay lines are prohibited. Eye splices in lang lay lines shall be tucked at least four times.

(f) Long splices shall be used for permanently joining "regular lay" running lines.

(g) When U-bolt wire rope clips (clamps) are used to form eyes on high strength wire rope, an additional clip (clamp) for each grade of line above improved plow steel shall be used over and above the following table: (See Figure No. 2, following this section, for proper application of wire rope clips.)

Improved Plow Steel Diameter of Rope	Number of Clips Drop Forged	Required Other Material	Minimum Space Between Clips
3/8 to 5/8 inch	3	4	3-3/4 inches
3/4 inch	4	5	4-1/2 inches
7/8 inch	4	5	5-1/4 inches
1 inch	5	6	6 inches
1-1/8 inch	6	6	6-3/4 inches
1-1/4 inch	6	7	7-1/2 inches
1-3/8 inch	7	7	8-1/4 inches
1-1/2 inch	7	8	9 inches

(h) All line eye splices shall be tucked at least three full tucks. D's and knobs are recommended for line ends.

(i) Two lines may be connected by a long splice, or by shackles or patent links of the next size larger than the line being used where practical. Double "Molle Hogans" may be used on drop lines only and single "Molle Hogans" may be used on strawline.

(j) Splicing of two lines together for loading line or pass line is prohibited.

(k) Safe margin of line must be used for making long splices. The following table shows comparative safe lengths as to size of cable in making long splices:

Rope Diameter	To Be Unravalled	Total Length
1/4"	8'	16'
3/8"	8'	16'
1/2"	10'	20'
5/8"	13'	26'
3/4"	15'	30'
7/8"	18'	36'
1 "	20'	40'
1-1/8"	23'	46'

Rope Diameter	To Be Unravelled	Total Length
1-1/4"	25'	50'
1-3/8"	28'	56'
1-1/2"	30'	60'
1-5/8"	33'	66'
1-3/4"	35'	70'
1-7/8"	38'	76'
2"	40'	80'

(9) Miscellaneous requirements.

(a) All lines, straps, blocks, shackles, swivels, etc., shall be inspected frequently and shall be used only when found to be in good condition. Such items shall be of sufficient size and strength as to safely withstand the stress which can be imposed by the maximum pull of the power unit against such equipment or devices as rigged or used in that particular logging operation.

(b) When used or second-hand cables are purchased, they shall not be used for any purpose until inspection determines they will withstand the maximum imposed strain.

(c) Skyline shall be anchored by placing three full wraps around tail hold and staples or spikes shall be used to securely hold each wrap or choked and secured with a shackle or three wraps and at least three clamps securely tightened.

(d) When using haulback lines greater than 7/8-inch diameter on interlocking drum-type yarders, additional precautions shall be taken to prevent the corner blocks or tail blocks from dislodging the anchors to which the blocks are secured.

(e) Where "dutchman" is used, either for yarding or on skyline, a block of heavy construction must be used. Regular tree shoe or jack may be used for "dutchman" on skyline. Cable must be fastened securely.

(f) Choker drops shall be connected to the butt rigging by knobs or shackles. The use of molles or cold shuts is prohibited in all components of the butt rigging. All butt rigging shall be designed to prevent loss of chokers and defective swivels shall not be used. Open hooks shall not be used to connect lines to the buttrigging.

(g) When heel tackle is fastened near machine, safety line must be placed in such manner that in case of breakage, lines shall not strike power unit and endanger operator.

(h) Only in case of necessity shall any metallic object be driven into a log. The metal must be removed immediately when splice or other work is completed. Stumps shall be used whenever possible for splicing.

PUT CLIPS ON RIGHT

RIGHT

WRONG

WRONG

Figure No. 2

Clips should be spaced at least six rope diameters apart to get the maximum holding power and should always be attached with the base or saddle of the clip against the longer or "live" end of the rope. The "U" bolt goes over the dead end. This is the only right way. Do not reverse the clips or stagger them. Otherwise the "U" bolt will cut into the live rope when the load is applied. After the rope has been used and is under tension, the clips should again be tightened to take up any looseness caused by the tension reducing the rope diameter. Remember that even when properly applied, a clip fastening has only about eighty percent of the strength of the rope and far less than that when on wrong.

[Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-543, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-543, filed 9/21/79.]

**WAC 296-54-545 Rigging--Wood spar trees.** (1) Wood spar trees shall be of sound material of sufficient size and strength to withstand any stresses which may be imposed by any equipment used for that specific operation. The top of the tree shall extend not more than sixteen feet above the top guylines on spar trees over fifty feet in height. Spar trees less than fifty feet in height shall extend no more than eight feet above the top guylines. School marms used as spar trees shall be topped at the forks. Spar trees, except cedar, must be barked where guylines, straps, bull blocks and tree plates are placed.

(2) Spar trees must be topped and limbs must be cut off close so that running lines will not foul or saw on protruding knots.

(3) At least four tree plates shall be placed under top guylines on spar trees over fifty feet in height and at least three tree plates shall be used on spar trees less than fifty feet in height.

(4) Tree plates shall be equipped with lugs or other suitable means of holding them in place.

(5) When spar trees are raised, stumps used for snubbing shall be properly notched. Guylines shall be held by some mechanical means. Snubbing by hand is prohibited.

(6) All rub trees shall be limbed and topped.

(7) Guylines.

(a) Wood spar trees using a line greater than 7/8-inch and used as loading and yarding trees shall have at least six top guys and four buckle guys, providing a sail guy is used.

(b) Wood spar trees using a mainline greater than 7/8-inch and used only as yarding trees shall have at least six top guys and, at least three buckle guys shall be used.

(c) Wood spar trees used for loading only with crotch line, spreader bar or swinging boom shall have at least four top guys and, at least three buckle guys shall be used.

(d) Wood spar trees used for any skyline system of logging shall have additional guylines as are necessary to assure rigidity of tree at skyline jack, skidding block, receding and transfer line blocks, and loading rigging.

(e) Wood spar trees used for transfer shall have at least five top guys and, at least three buckle guys shall be used.

(f) When high lead block is hung below buckle guys, at least three top guys of equal strength to the mainline shall be used to keep the top from swaying.

(g) When buckle guys are required, they shall be installed on the tree where they will provide the maximum effectiveness.

(8) Loose material such as bark, spikes, straps or chains not in use and slabs caused by bumping logs of chafing straps must be removed from the spar tree. Heavy bark shall be removed from trees used for a permanent installation. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-545, filed 9/21/79.]

**WAC 296-54-547 Rigging—Tail tree.** (1) No work shall continue on tail tree while the climber is working on the head tree or vice versa, if trees are connected by any line.

(2) Tail trees shall be adequately guyed to withstand any stress to which the tree may be subjected. Live (slackline) or standing skylines may be anchored to the base of standing trees only if no part of the tree will enter the work area (cutting unit) if pulled over. The guylines shall be anchored as low as possible to the base of the tree. If using a live (slackline) standing or running (Grabinski) skyline, the tail tree need not be topped provided the slackline or skyline passes through a jack or block on the tree before being anchored. At least two guylines shall be installed to support the tail tree and may be anchored to the base of standing trees if the

above conditions are complied with. Attaching the end of the skyline or slackline to the base of the tail tree is prohibited.

NOTE: See Figure No. 3 for rigging illustrations.

[Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-547, filed 9/21/79.]

**WAC 296-54-549 Lines, straps and guylines attachments—Steel spars.** (1) When in use, steel tower guylines safety straps shall have a minimum amount of slack.

(2) A safety strap shall be installed on steel towers at the bight of the guylines to prevent the guylines from falling in the case of failure of guylines attachments, guylines lug rings or collar plates, where such exist. Such devices shall have a breaking strength at least equivalent to that of the guylines.

(3) The use of cable clips or clamps for joining the ends of steel tower guylines safety straps is prohibited, unless used to secure end of rolled eye. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and

chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-549, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-549, filed 9/21/79.]

**WAC 296-54-551 Yarding, loading and skidding machines—General requirements.** (1) Yarding, loading and skidding machines shall be operated only by experienced authorized personnel, except that inexperienced personnel may operate machines in accordance with WAC 296-54-515(2).

(2) Overhead protection and other barriers shall be installed to protect the operator from lines, limbs and other moving materials on or over all yarding, loading or skidding machines. Construction shall be so the view of the operator is not impaired. Barriers shall consist of metal screen constructed of 1/4-inch diameter woven wire material with maximum two inch openings or 3/4-inch diameter steel rod with eight inch maximum openings. Such barriers shall be installed no closer than four inches to the glass.

(3) When using a yarder, loader or skidding machine, the location of the machine or position of the yarder shall be such that the operator will not be endangered by incoming logs or debris.

(4) Logging machines and their components shall be securely anchored to their bases.

(5) A safe and adequate means of access and egress to all parts of logging machinery where persons must go shall be provided and maintained in a safe condition.

(6) Any logging equipment having a single cab entrance door, shall be equipped with an alternate means of escape from the cab should the door be blocked in the event of vehicle rollover or fire. Door latches shall be operable from both sides.

(7) Logging machines shall be kept free of flammable waste materials and any materials which might contribute to slipping, tripping or falling.

(8) Logging machine engines shall be stopped during inspection or repairing, except where operation is required for adjustment.

(9) Grab rails shall be provided and maintained in good repair on all walkways of stationary units elevated more than four feet. Walkway surfaces on such units shall be of the slip-proof type.

(10) Standard safeguards shall be provided at every place on a machine where persons may be exposed to contact with revolving parts or pinchpoints during normal operations.

(11) To protect workers from exposure to the hazardous pinchpoint area between the rotating superstructure and the nonrotating undercarriage of any logging machine, signs shall be conspicuously posted on all sides of that type machine warning workers: "DANGER - STAY CLEAR."

(12) Items of personal property, tools or other miscellaneous materials shall not be stored on or near any logging machine if retrieval of such items would expose a worker to the hazardous pinchpoint referred to in subsection (11) of this section.

(13) Workers shall approach the hazardous pinchpoint area referenced in subsection (11) of this section, only after informing the operator of their intent and receiving acknowledgment from the operator that he understands their intention. All such machines shall be stopped while any worker is in the hazardous pinchpoint area.

(14) A minimum distance of thirty-six inch clearance shall be maintained between the counterweight of a loading machine and trees, logs, banks, trucks, etc., while the machine is in operation. If this clearance cannot be maintained, suitable barricades with warning signs attached, similar to a standard guardrail, shall be installed to isolate the hazardous area. "DANGER—36 inch clearance" shall be marked in contrasting colors on sides and face of counterweight on shovels, loaders and other swing-type logging equipment. This requirement shall not apply when:

(a) The distance from the highest point of the undercarriage to the lowest point of the rotating superstructure is greater than 18-inches. This applies only to that portion of the rotating superstructure that swings directly over the undercarriage;

(b) The distance from the ground to the lowest point of the rotating superstructure is greater than five feet six inches. This applies only to that portion of the rotating superstructure that swings directly over the undercarriage; or

(c) On crawler-type track-mounted logging machines only, the rotating superstructure is positioned at a right angle to the tracks, and the distance from the side of the cab to the extreme end of the track is four feet or less. This exemption shall apply to side barricades only; barricades between the tracks at both ends of any crawler-type logging machine are required regardless of the right angle dimension.

(15) Logging machines shall not be operated until all guards have been installed, safety devices activated and maintenance equipment removed.

(16) Stationary logging machines shall be securely anchored to prevent movement of the machine while yarding or skidding.

(17) Ends of drum lines shall be securely fastened to the drum and at least three wraps shall be maintained on the drum at all times. (This rule does not apply to tractor winch lines.)

(18) Such units shall not be tied to any part of the towing unit, when they are being moved on truck and trailer units.

(19) Logs shall not be moved, swung or held over any persons.

(20) Brow logs in the loading or unloading area shall be blocked or secured to prevent movement. Log decks shall be maintained in a safe condition and shall not present a hazard of logs rolling or sliding on workers.

(21) Brakes shall be set and brake locking devices engaged on logging machines when the operator leaves his normal operating position.

(22) Guyline drum controls and outrigger controls shall be separated, color coded or marked in a manner that will prevent engaging of the wrong control.

(23) Exhaust pipes shall be located or insulated to protect workers from accidental contact with the pipes or muffler and shall direct exhaust gases away from the operator and other persons.

(24) Glass on logging machines shall be safety glass or equivalent and shall be free of deposits of oil, mud, or defects that could endanger the operator or other persons.

(25) Broken or defective glass shall be removed and replaced.

(26) Where safety glass or equivalent, does not provide adequate operator protection from flying chokers, chunks, saplings, limbs, etc., an additional metal screen and/or barrier shall be provided over the safety glass. The operator's vision shall not be impaired. Barriers shall consist of 1/4-inch diameter woven wire material with maximum two inch openings, 3/4-inch diameter steel rod with eight inch maximum openings in any direction or barriers so designed and constructed to provide equivalent operator protection. Such barriers shall be installed no closer than four inches to the glass to enable keeping the glass clean.

(27) Except for hydraulic drums, brakes shall be installed on all logging machines and maintained in effective working condition. Brake levers shall be provided with a ratchet or other effective means for securely holding drums. Brakes shall be tested prior to putting the machine in operation. If defective, they shall be repaired immediately.

(28) A stable base shall be provided under outriggers or leveling pads and a means shall be provided to hold outriggers in both the retracted and extended position.

(29) Abrasive contact with hydraulic hose, tubing or fittings shall be eliminated before further use and defective hydraulic hoses, lines and fittings shall be replaced.

(30) When moving logging machines, the driver or operator shall have a clear and unobstructed view of the direction of travel. When this is not possible, a signalperson with a clear and unobstructed view of the direction of travel shall be designated and used to direct movement of the machine.

(31) Where a signalperson is used, the equipment operator shall move the equipment only on signal from the designated signalperson and only when the signal is distinct and clearly understood.

(32) When moving power units, persons other than the operator and the person in charge shall not be permitted to ride thereon.

(33) All obstructions which may reach the operator while moving machines, shall be removed.

(34) Only shackles with threaded pins shall be used for connecting moving rigging.

(35) Anchors used for moving power units shall be carefully chosen and must be stable.

(36) When snubbing a machine down a steep slope, use the mainline for snubbing and pull with the haulback whenever possible.

(37) Self-powered mobile logging machines of the type where towers or spars can be raised, shall not travel on steep road grades unless they are securely snubbed or towed.

(38) When moving, all persons working on the landing shall stay in the clear of the machine and shall inform the operator of their intention to approach or be near the machine.

(39) Service brakes shall be provided on crawler crane-type logging machines that will bring the machine to a complete stop from normal travel speeds.

(40) A traction lock or brake or an equivalent locking and braking system shall be provided on crawler crane-type machines that is capable of holding the machine stationary under normal working conditions, and on any grade the machine is capable of negotiating.

(41) No modifications or additions which affect the capacity or safe operation of the equipment shall be made by the employer without written approval of the manufacturer or a qualified engineer. If such modifications or changes are made, the capacity, operation and maintenance instruction plates, tags, or decals, shall be changed accordingly. In no case shall the original safety factor of the equipment be reduced.

(42) Equipment shall be classed and used according to the manufacturer's rating. Where low gear ratios or other devices are installed to increase the line pull in accordance with subsection (42) of this section, the size of the rigging shall be increased accordingly so that it will safely withstand the increased strains.

(43) Every tractor, skidder, front-end loader, scraper, grader and dozer shall be equipped with a roll-over protective structure (R.O.P.S.). Such structures shall be installed, tested and maintained in accordance with:

(a) WAC 296-155-950 through 296-155-965 of the safety standards for construction, if manufactured prior to the effective date of this chapter.

(b) The society of automotive engineers SAE 1040a-1975, "performance criteria for roll-over protective structures (ROPS) for earthmoving, construction, logging and industrial vehicles," if manufactured after the effective date of this chapter.

(44) The ROPS shall be of sufficient height and width so that it will not impair the movements of the operator or prevent his immediate escape from the vehicle in emergencies and shall allow as much visibility as possible. Clearance above the deck and the ROPS of the vehicle at points of egress shall not be less than fifty-two inches.

(45) Certified roll-over protective systems shall be identified by a metal tag permanently attached to the ROPS in a position where it may be easily read from the ground. The tag shall be permanently and clearly stamped, etched or embossed indicating the name and address of the certifying manufacturer or registered professional engineer, the ROPS model number (if any) and the vehicle make, model or serial number the ROPS is designed to fit.

(46) Roll-over protective structure systems shall be maintained in a manner that will preserve their original strength. Welding shall be performed by qualified welders only. (A qualified welder is defined under "welder qualification" in American Welding Society A.W.S. A3.0-69.)

(47) Every tractor, skidder, front-end loader, log stacker, forklift truck, scraper, grader and dozer shall be equipped with a FOPS. Such structures shall be installed, tested and maintained in accordance with the society of automotive engineers SAE J231-1971, "minimum performance criteria for falling object protective structures (F.O.P.S.)."

(48) Vehicles equipped with ROPS or FOPS as required in subsections (43) and (47) of this section, shall comply with the society of automotive engineers SAE J397a-1972, "deflection limiting volume for laboratory evaluation of roll-over protective structures (ROPS) and falling object protective structures (FOPS) of construction and industrial vehicles."

(49) The opening in the rear of the ROPS on the crawler or rubber-tired tractors (skidders) shall be covered with 1/4-inch diameter woven wire having not less than 1-1/2-inches or more than 2-inch mesh, or material which will afford equivalent protection for the operator. The covering shall be affixed to the structural members so that ample clearance is provided between the screen and the back of the operator. Structural members shall be free from projections which would tend to puncture or tear flesh or clothing. Suitable safeguards or barricades shall be installed, in addition to the screen, to protect the operator when there is a possibility of being struck by any material that could enter from the rear.

(50) Crawler and rubber-tired tractors (skidders) working in areas where limbs or brush may endanger the operator shall be guarded. Shear or deflector guards shall be installed on each side of the vehicle at an angle leading forward and down from the top front edge of the canopy of the vehicle, which will tend to slide the brush or limbs up and over the top of the canopy. Open mesh material with openings of a size that will reject the entrance of an object larger than 1-3/4-inches in diameter, shall be extended forward as far as possible from the rear corners of the cab sides to give the maximum protection against obstacles, branches, etc. entering the cab area. Deflectors shall also be installed ahead of the operator to deflect whipping saplings and branches. These shall be located so as not to impede ingress or egress from the compartment area. The floor and lower portion of the cab shall be completely enclosed with solid material, except at entrances, to prevent the operator from being injured by obstacles which otherwise could enter the cab compartment.

(51) Enclosures for agricultural and industrial tractors manufactured after September 1, 1972, shall be constructed, designed and installed as detailed in the society of automotive engineers technical report J168.

(52) (a) All bidirectional machines, such as rollers, compactors, front-end loaders, log stackers, log loaders, bulldozers, shovels, and similar equipment, shall be equipped with a horn distinguishable from the surrounding noise level, which shall be operated as needed when the machine is moving in either direction. The horn shall be maintained in an operative condition.

(b) No employer shall permit earthmoving, compacting, or yarding equipment, which has an obstructed view

to the rear, to be used in reverse gear unless the equipment has in operation a reverse signal alarm distinguishable from the surrounding noise level or an employee signals that it is safe to do so. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-551, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-551, filed 9/21/79.]

**WAC 296-54-553 Yarding, loading and skidding machines—Mobile towers and boom-type yarding and loading machines.** (1) Portable (mobile) tower specification plate. A specification plate shall be permanently attached to the base of each portable (mobile) tower so it can be easily read by a person standing on the ground or on the base platform. It shall contain the following information:

(a) Name and address of manufacturer and model number;

(b) The maximum diameter of the mainline or skyline for which the unit is designed and size of haulback and mainline to be used together if drums are interlocking or automatic tensioning type;

(c) The number and size of guylines required to stabilize the unit;

(d) The maximum length and capacity of a loading boom or similar equipment which may be attached if the structure is engineered for such;

(e) If the unit is designed for use on any skyline system of logging; and

(f) Maximum degree of inclination from vertical at which the spar (tower) may be used.

(2) The critical parts of portable spars (towers) shall be inspected by a qualified person at reasonable intervals while in service and each time the spar (tower) is lowered. If indication of failure or weakness is noted or suspected, the part shall be inspected by an approved method and found to be safe, or it shall be repaired or replaced before the operation is allowed to proceed.

(3) Blocks and fair leads shall be so located that there will be no chafing or sawing of any line or part of the structure.

(4)(a) Power guylines used for stabilizing any unit may be choked around an adequately notched stump if using a shackle or approved choker attachment. Three full wraps or more must be placed around an adequately notched stump to secure the guyline if clamps are used. Guyline extensions shall be properly shackled to the guylines.

(b) When using a deadman anchor to support a guyline, the connection shall be made by properly shackling both eyes of the anchor strap to the guyline.

(c) If guylines on metal spars or towers are not power guylines, they shall be secured to stumps or anchorages in the same manner as guylines on wood spar trees.

(5) Power driven devices shall be securely anchored when used to tighten guylines. Holding of such devices manually is prohibited.

(6)(a) Machines or equipment shall be stabilized by their design or the attachment of guylines or other devices which will prevent the machine from overturning. Machine operators shall be advised of the stability limitations of the equipment.

(b) If stabilization of a machine is dependent upon the use of hydraulic outriggers, a pilot operated hydraulic check valve or other locking device shall be installed to prohibit the outrigger from retracting in case a hydraulic line breaks, except when proper blocking is provided.

(7) A qualified person shall direct each raising or lowering of a portable spar or tower.

(8) All persons not engaged in the actual raising or lowering of portable spars or towers shall stay in the clear during such operations.

(9) Guylines required in rigging spars or towers shall be evenly spooled to prevent fouling.

(10) Portable spars or towers shall be leveled to provide even line spooling and avoid excessive stress on component parts.

(11) The portable spar or tower shall be lowered or supported so the stability of the machine is not impaired during movement of the portable spar or tower.

(12) Guylines of portable spars or towers shall not be anchored to standing trees if the unit is used for yarding as a head tree.

(13) Timbers used for masts or booms shall be straight-grained, solid, and capable of withstanding the working load.

(14) Boom points of timber booms shall be equipped with metal straps, plates, or other devices as needed to properly secure eyebolts and fittings used to support lines, blocks, or other rigging.

(15) All mobile vehicles on which yarding equipment, towers, spars, masts or booms are installed, shall be maintained in a safe operating condition.

(16) A-frames shall be secured against displacement and the tops shall be securely bolted or lashed to prevent displacement.

(17) When any portable-type tower, A-frame or spar is used, the base shall be securely and solidly supported.

(18) All loading, unloading and skidding machines shall be equipped with a horn or whistle which is audible above the surrounding noise level. Such horn or whistle shall be maintained in an operative condition. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-553, filed 9/21/79.]

#### **WAC 296-54-555 Yarding--General requirements.**

(1) Workers shall be alert and be positioned in the clear where they will not be exposed to the hazards of moving logs, saplings, root wads, chunks, rigging, or any other material which might be put in motion by the rigging or turn, before the "go ahead" signal is given. They shall remain in the clear at all times while the rigging is moving.

(2) No person shall be near rigging which is stopped at a hangup, until the rigging has been slacked to reduce the hazard.

(3) No person shall stand or remain within the bight of any running line, nor in a position where he could be struck by a line were it to break or come loose.

(4) Whenever possible, chokers shall be set from the uphill side of a log. Persons shall not be on the lower side of a log which appears to be unstable or likely to roll.

(5) Wire rope used for chokers shall not exceed seventy-five percent of the breaking strength of the mainline.

(6) Chokers shall be placed near the end of the log whenever possible.

(7) When pulling lines, do not stand close to fair leads or blocks.

(8) Lines shall not be guided on drums with hands or feet. The use of a bar or equivalent means is recommended.

(9) Yarding with more than one unit on any one head spar is prohibited.

(10) The angle between the power unit, the high lead block, and the mainline road shall not exceed a square lead on rigged spars. When using portable spars or towers, the location of the machine or position of the operator shall be such that the operator shall not be endangered by incoming logs.

(11) When there is danger of tail block straps slipping up or off the stump or tree, the stump or tree shall be adequately notched or the line properly wrapped and secured. When the tail tree or stump is not secure, it shall be tied back.

(12) When yarding is being done during the hours of darkness, the area shall be provided with illumination which will allow persons to safely perform their duties. The source of illumination shall be located and directed creating a minimum of shadows and glare. If using a portable tail-hold, lights shall be directed on the equipment to allow the person to visually ascertain that the tail-hold equipment remains stabilized.

(13) No person shall be required or allowed to ride on a turn of logs or rigging excepting the passline. The practice of holding on to moving rigging or chokers to assist a person by being pulled uphill shall be prohibited.

(14) Wire rope shall be wound evenly on the drum and not be allowed to lap one layer on another in an irregular manner. Sheaves shall be smooth and free from defects that could cause rope damage.

(15) Chaser shall be sure that turns are safely landed before approaching to remove the chokers.

(16) Signaling machine operator at landings by throwing bark, chips or other material in the air is prohibited. Whistle or hand signals shall be used at all times.

(17) Logs shall not be landed while loaders or chasers are working in the chutes. Logs shall not be removed from yarder tree by the loader or tractors while the chaser is unhooking a turn from the yarder.

(18) Landings shall be as level as possible and of sufficient size to safely accommodate the majority of type turns to be yarded. At least two-thirds of the log shall rest on the ground or other substantial material when landed. Logs shall be set on the ground or deck and not

dropped when being landed. Long sticks shall be safely removed before additional logs are landed.

(19) Chokers shall not be used on a grapple system when the yarder operator cannot clearly see the persons setting the choker, unless conventional whistle signals are used.

(20) Landings shall be free of root wads, limbs, tops, etc., that constitute a safety hazard.

(21) When shorter logs are yarded in the same turn with long sticks, the shorter logs shall be landed and chokers released before the long stick choker is released.

NOTE: See Figures No. 4-A and 4-B for Standard Hand Signals for High Lead Logging.

**STANDARD HAND SIGNALS FOR HIGH LEAD LOGGING**

**STANDARD HAND SIGNALS FOR HIGH LEAD LOGGING**

[Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-555, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-555, filed 9/21/79.]

**WAC 296-54-557 Yarding--Tractors and skidders.**

(1) Operators shall ensure that all persons are safely in the clear before initiating or continuing the movement of any mobile equipment.

(2) No person shall ride on any mobile equipment, except where adequate and protected seats, or other safe facilities have been provided.

(3) While in use, tractors and skidders shall be maintained in a safe operable condition, with all guards in proper places.

(4) No person shall be under a tractor or other mobile equipment, or be placed in a hazardous position around the equipment without first making certain it cannot move or be moved by another person.

(5) Prior to working on tractor or skidder blades, arches, or other equipment, the equipment must be

blocked up lowered to the ground or otherwise secured against slipping or falling. Prior to working on hydraulic equipment, the pressure shall be relieved.

(6) When making repairs to tractor or skidder equipment, such as blades, arches, etc., the engine shall be stopped. The engine may be run when necessary for making adjustments to the engine or equipment.

(7) Operators shall operate and control their machines in a safe manner and avoid operations in areas where machine stability may not be maintained.

(8) The following safe work procedures shall be adhered to:

(a) When hobo logs are picked up with a log turn, the turn shall be dropped to free the hobo.

(b) No line shall be allowed to trail behind the tractor or skidder where it may hang up and snap forward.

(c) Winching at a severe angle, which could cause a hang-up to upset the machine, shall be avoided.

(d) Grapple skidded log turns shall be evenly bunched with squared butt ends, securely grappled and safely positioned before travel commences.

(e) Before climbing or descending grades, the proper gear shall be selected to allow the engine to govern the tractor speed.

(f) On side hills, an abrupt turn uphill shall be avoided. The tractor or skidder shall be backed downhill first then turned uphill. The turn may be slacked off as necessary to permit this maneuver.

(g) The operator shall, before leaving a tractor or skidder, lower the blade to the ground and apply the parking brake.

(h) Tractor or skidder speed shall be adjusted to the circumstances prevailing. Excessive or uncontrolled speed shall be avoided.

(i) Winch lines on logging tractors or skidders shall be attached to the drum with a break-away device.

(9) When hand signals are required for giving instructions to the tractor or skidder operator, the signals as illustrated in Figure No. 5 shall be used.

(10) Tractor and skidder brakes shall stop and hold the machine on any grade over which the machine is being operated. They shall be effective whether or not the engine is running and regardless of the direction of travel.

(11) Tractors and skidders shall be provided with a brake locking device that will hold the machine indefinitely on any grade on which it is being operated.

(12) Operating a tractor or skidder with defective steering or braking devices is prohibited.

(13) Arches shall be equipped with line guards.

(14) Where tractor and skidder operators or helpers, because of the nature or their work duties, are required to wear calk soled footwear, the decks and operating foot controls shall be covered with a suitable nonslip material.

(15) Glass used in windshields or in cabs shall be of "safety glass." Broken or cracked glass shall be replaced as soon as practical. Barriers shall be provided, as needed, to protect the glass from being broken by using screen, bars or other material. The protective material shall be a

type that will not create a hazard by undue impairment of the operators' vision.

(16) Barriers shall be constructed of at least 1/4-inch diameter woven wire with two inch maximum openings or other material providing equivalent protection. The barrier shall be installed at least four inches from the glass to provide space to clean the glass.

(17) Enclosed-type cabs installed on mobile equipment shall have two means of exit. One may be deemed as an emergency exit and be available for use at all times, regardless of the position of the side arms or other movable parts of the machine. (An easily removable window will be acceptable as the emergency exit if it is of adequate size for a person to readily exit through.)

(18) Seat belts shall be installed on tractors and other mobile equipment equipped with a roll-over protective system and shall be worn by the operator and passenger(s) at all times the vehicle is in motion. The seat belts and assemblies shall be designed, constructed and maintained to conform to the requirements specified in the society of automotive engineers technical report J386 or J333a. Seat belts need not be provided for equipment which is designed for stand-up operations.

(19) If the equipment operator and person in charge of the jobsite agree that life safety of the operator is jeopardized by wearing a seat belt, the seat belt need not be worn.

(20) Seat belts required by subsection (18) of this section, shall have buckles of the quick release type, designed to minimize the possibility of accidental release.

(21) Before a tractor or skidder is started or moved, the operator shall be certain nothing is in the way that could be set in motion by the movement of the machine thereby endangering persons.

(22) A log or turn shall not be moved until all persons are in the clear (behind the turn and on the uphill side on sloping ground).

(23) Before the engine is shut-down, the brake locks shall be applied and all elements such as blades, buckets, grapples and shears shall be lowered to the ground.

(24) Tractors or skidders shall not be operated within a radius of two tree heights of trees being felled unless called upon by the cutter or faller to ground lodged trees. All cutters shall be notified of the tractor or skidder entrance into the area and all felling within two tree lengths of the tractor or skidder shall be stopped.

(25) Except where electrical distribution and transmission lines have been de-energized and visibly grounded at point of work or where insulating barriers, not a part of or an attachment to the equipment or machinery, have been erected to prevent physical contact with the lines, equipment or machines shall be operated proximate to power lines only in accordance with the following:

(a) For lines rated 50 kV or below, minimum clearance between the lines and any part of the equipment or machine shall be ten feet;

(b) For lines rated over 50 kV, minimum clearance between the lines and any part of the equipment or machine shall be ten feet plus 0.4 inch for each 1 kV over

50 kV, or twice the length of the line insulator, but never less than ten feet;

(c) In transit with no load and boom or extended equipment lowered, the equipment clearance shall be a minimum of four feet for voltages less than 50 kV, and ten feet for voltages over 50 kV up to and including 345 kV, and sixteen feet for voltages up to and including 750 kV;

(d) A person shall be designated to observe clearance of the equipment and give timely warning for all operations where it is difficult for the operator to maintain the desired clearance by visual means;

(e) Any overhead wire shall be considered to be an energized line unless and until the person owning such line or the electrical utility authorities indicate it is not an energized line and it has been visibly grounded.

(26) Log piles and decks shall be located and constructed to provide working areas around them that will accommodate the safe movement of personnel and machinery.

(27) Braking systems required by subsection (10) of this section, shall be capable of stopping the equipment fully loaded as specified in the society of automotive engineers technical reports listed in subdivisions (a), (b), (c) or (d) of this subsection and shall be installed by June 30, 1973. All rubber-tired tractors or other types of mobile equipment listed below, manufactured after the effective date of these standards, shall have braking systems and requirements specified in the applicable technical reports of the society of automotive engineers as follows:

(a) Brake systems for off-highway, rubber-tired, self-propelled scrapers shall meet or exceed the requirements outlined in SAE technical report J319b.

(b) Brake systems for off-highway, rubber-tired, front-end loaders, log stackers and dozers (skidders) shall meet or exceed the requirements outlined in SAE technical report J237.

(c) Brake systems for rubber-tired, self-propelled graders shall meet or exceed the requirements outlined in SAE technical report J236.

(d) Brake systems for off-highway trucks and wagons shall meet or exceed the requirements outlined in SAE technical report J166.

STANDARD SIGNALS FOR TRACTOR LOGGING

[Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-557, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-557, filed 9/21/79.]

**WAC 296-54-559 Yarding--Helicopters and helicopter cranes.** (1) Helicopters and helicopter cranes shall comply with any applicable regulations of the Federal Aviation Administration.

(2) Prior to each day's operation, a briefing shall be conducted. This briefing shall set forth the plan of operation for the pilot and ground personnel.

(3) A take-off path from the log pickup point shall be established, and shall be made known to all workers in that area before the first turn of logs is moved.

(4) The helicopter flight path to and from the drop zone shall be designated and no equipment or personnel (other than flight personnel necessary to assist landing and take-off) will occupy these areas during helicopter arrival or departure.

(5) The approach to the landing shall be clear and long enough to prevent tree tops from being pulled into the landing.

(6) The helicopter shall not pass over an area in which cutters are working at a height which would cause the rotor wash to inhibit a cutter's ability to safely control a tree or dislodge limbs.

(7) Drop zones shall be twice the nominal length of logs to be landed.

(8) The drop zone shall be no less than one hundred twenty-five feet from the loading or decking area.

(9) Separate areas shall be designated for landing logs and fueling the helicopter(s).

(10) The yarding helicopter shall be equipped with a siren to warn workers of any hazardous situation.

(11) Workers shall remain in the clear as chokers are being delivered, and under no circumstances will workers move under the helicopter that is delivering the chokers or take hold of the chokers before they have been released by the helicopter.

(12) Log pickup shall be arranged in a manner that the hook up crew will not work on slopes below felled and bucked timber.

(13) If the load must be lightened, the hook shall be placed on the ground on the uphill side of the turn before the hooker approaches to release the excess logs.

(14) Landing crew shall be in the clear before logs are dropped.

(15) One end of all the logs in the turn shall be touching the ground and lowered to an angle of not more than 45° from the horizontal before the chokers are released.

(16) Logs shall be laid on the ground and the helicopter will be completely free of the choker(s) before workers approach the logs.

(17) If the load will not release from the hook, the load and the hook shall be on the ground before workers approach to release the hook manually.

(18) Loads shall be properly slung. Tag lines shall be of a length that will not permit their being drawn up into rotors. Pressed sleeve, swedged eyes, or equivalent means shall be used for all freely suspended loads to prevent hand splices from spinning open or cable clamps from loosening.

(19) All electrically operated cargo hooks shall have the electrical activating device so designed and installed as to prevent inadvertent operation. In addition, these cargo hooks shall be equipped with an emergency mechanical control for releasing the load. The hooks shall be tested prior to each day's operation to determine that the release functions properly, both electrically and mechanically.

(20)(a) Personal protective equipment for employees receiving the load shall consist of complete eye protection and hard hats secured by chinstraps, and high visibility vests or outer garments.

(b) Loose-fitting clothing likely to flap in the downwash, and thus be snagged on hoist line, shall not be worn.

(21) Every practical precaution shall be taken to provide for the protection of employees from flying objects in the rotor downwash. All loose gear within one hundred feet of the place of lifting of the load, depositing

the load, and all other areas susceptible to rotor downwash shall be secured or removed.

(22) Good housekeeping shall be maintained in all helicopter loading and unloading areas.

(23) The helicopter operator shall be responsible for size, weight, and manner in which loads are connected to the helicopter. If, for any reason, the helicopter operator believes the lift cannot be made safely, the lift shall not be made.

(24) Employees shall not perform work under hovering craft except for that limited period of time necessary to guide, secure, hook and unhook loads. Regardless of whether the hooking or unhooking of a load takes place on the ground or other location in an elevated work position in structural members, a safe means of access and egress, to include an unprogrammed emergency escape route or routes, shall be provided for the employees hooking or unhooking loads.

(25) Static charge on the suspended load shall be dissipated with a grounding device before ground personnel touch the suspended load, or protective rubber gloves shall be worn by all ground personnel touching the suspended load.

(26) The weight of an external load shall not exceed the manufacturer's rating.

(27) Hoist wires or other gear, except for pulling lines or conductors that are allowed to "pay out" from a container or roll off a reel, shall not be attached to any fixed ground structure, or allowed to foul on any fixed structure.

(28) When visibility is reduced by dust or other conditions, ground personnel shall exercise special caution to keep clear of main and stabilizing rotors. Precautions shall also be taken by the employer to eliminate as far as practical reduced visibility.

(29) Signal systems between aircrew and ground personnel shall be understood and checked in advance of hoisting the load. This applies to either radio or hand signal systems. Hand signals shall be as shown in Figure 6.

(30) No unauthorized person shall be allowed to approach within fifty feet of the helicopter when the rotor blades are turning.

(31) Whenever approaching or leaving a helicopter with blades rotating, all employees shall remain in full view of the pilot and keep in a crouched position. Employees shall avoid the area from the cockpit or cabin rearward unless authorized by the helicopter operator to work there.

(32) Sufficient ground personnel shall be provided, when required, for safe helicopter loading and unloading operations.

(33) There shall be constant reliable communication between the pilot, and a designated employee of the ground crew who acts as a signalperson during the period of loading and unloading. This signalperson shall be distinctly recognizable from other ground personnel.

(34) Open fires shall not be permitted in an area that could result in such fires being spread by the rotor downwash.

(35) Under no circumstances shall the refueling of any type helicopter with either aviation gasoline or Jet B (Turbine) type fuel be permitted while the engines are running.

(36) Helicopters using Jet A (Turbine-Kerosene) type fuel may be refueled with engines running provided the following criteria is met:

(a) No unauthorized persons shall be allowed within fifty feet of the refueling operation or fueling equipment.

(b) A minimum of one thirty-pound fire extinguisher, or a combination of same, good for class A, B and C fires, shall be provided within one hundred feet on the upwind side of the refueling operation.

(c) All fueling personnel shall be thoroughly trained in the refueling operation and in the use of the available fire extinguishing equipment they may be expected to utilize.

(d) There shall be no smoking, open flames, exposed flame heaters, flare pots or open flame lights within fifty feet of the refueling area or fueling equipment. All entrances to the refueling area shall be posted with "NO SMOKING" signs.

(e) Due to the numerous causes of static electricity, it shall be considered present at all times. Prior to starting refueling operations, the fueling equipment and the helicopter shall be grounded and the fueling nozzle shall be electrically bonded to the helicopter. The use of conductive hose shall not be accepted to accomplish this bonding. All grounding and bonding connections shall be electrically and mechanically firm, to clean unpainted metal parts.

(f) To control spills, fuel shall be pumped either by hand or power. Pouring or gravity flow shall not be permitted. Selfclosing nozzles or deadman controls shall be used and shall not be blocked open. Nozzles shall not be dragged along the ground.

(g) In case of a spill, the fueling operation shall be immediately stopped until such time as the person-in-charge determines that it is safe to resume the refueling operation.

(h) When ambient temperatures have been in the 100 degree F. range for an extended period of time, all refueling of helicopters with the engines running shall be suspended until such time as conditions become suitable to resume refueling with the engines running.

(37) Helicopters with their engines stopped being refueled with aviation gasoline or Jet B (Turbine) type fuel, shall also comply with subsection (36) (a) through (g) of this section.

(38) Hook on persons in logging operations shall wear contrasting colored hard hats, with chinstraps, and high visibility vests or outer garments to enable the helicopter operator to readily identify their location.

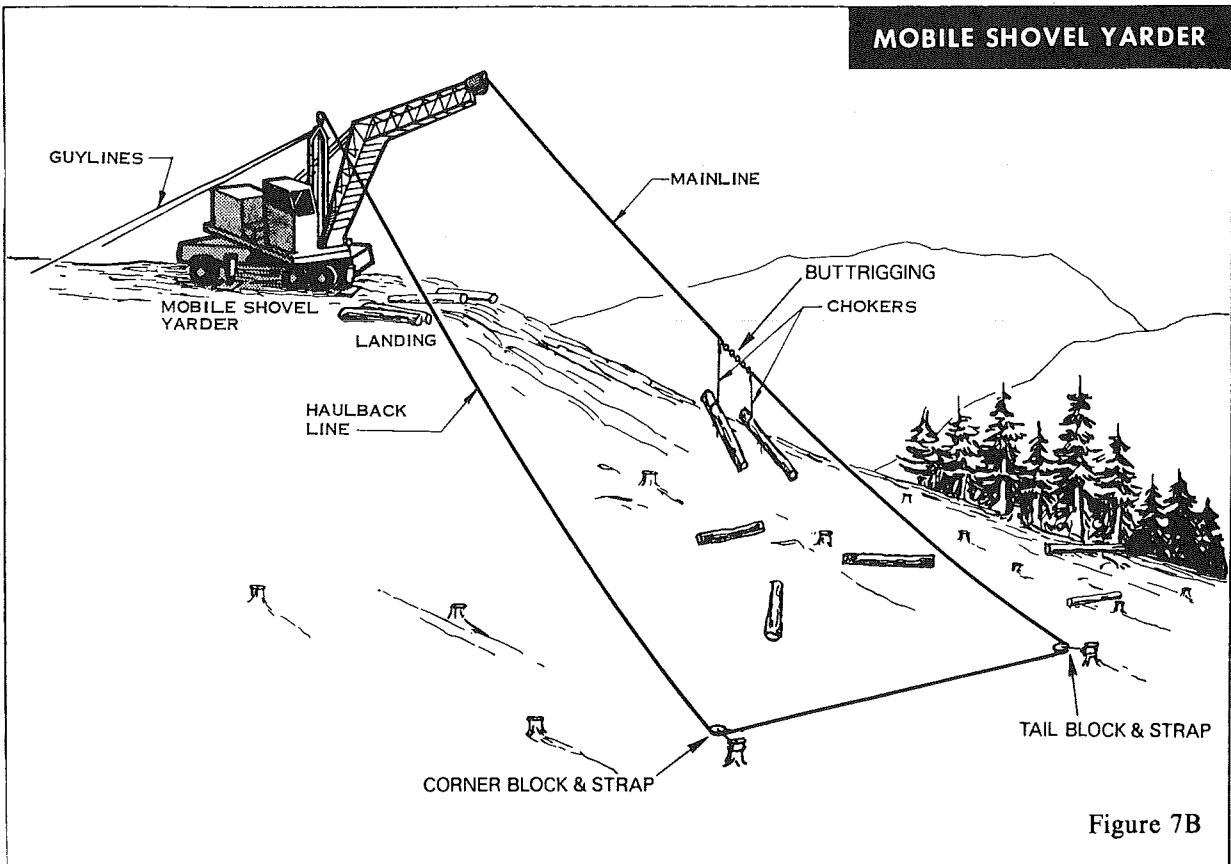

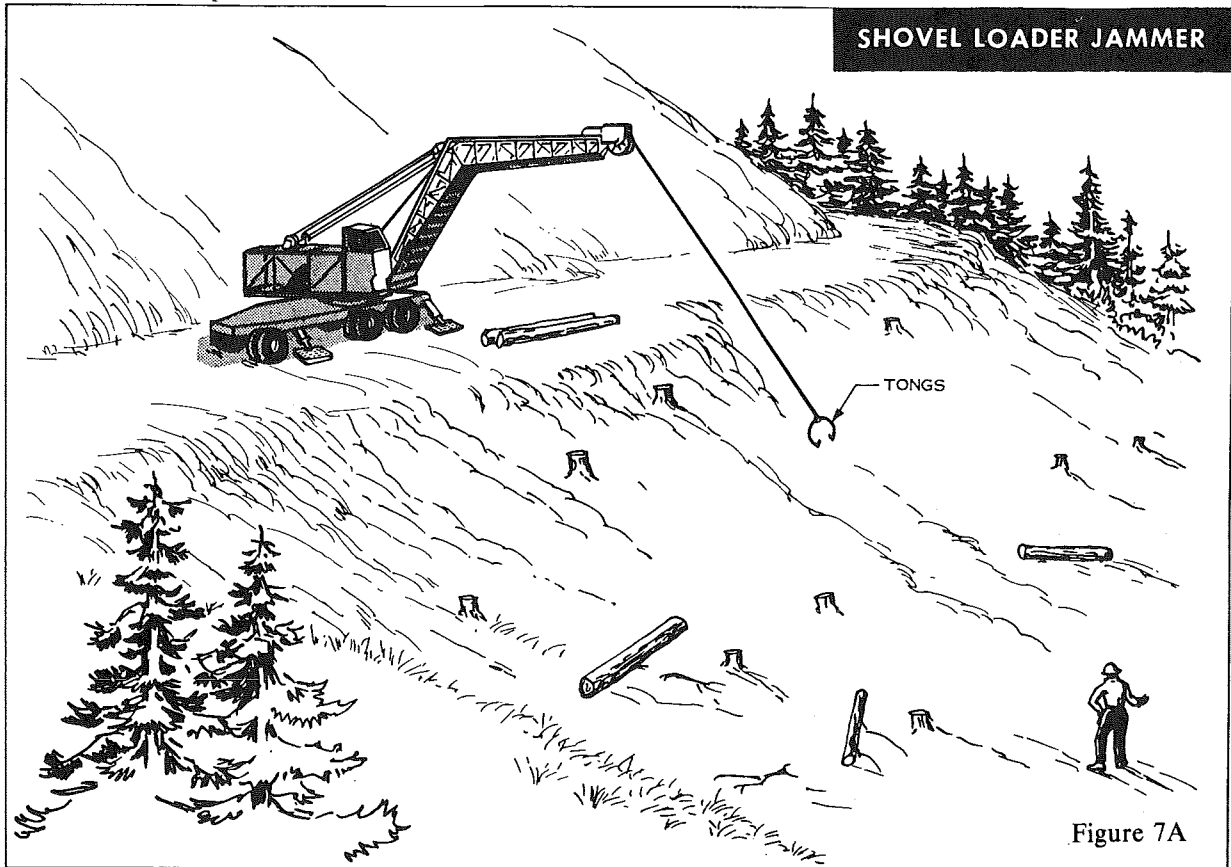

(39) Riding the load or hook of a helicopter is prohibited except in the case of an emergency with the proper safety gear.

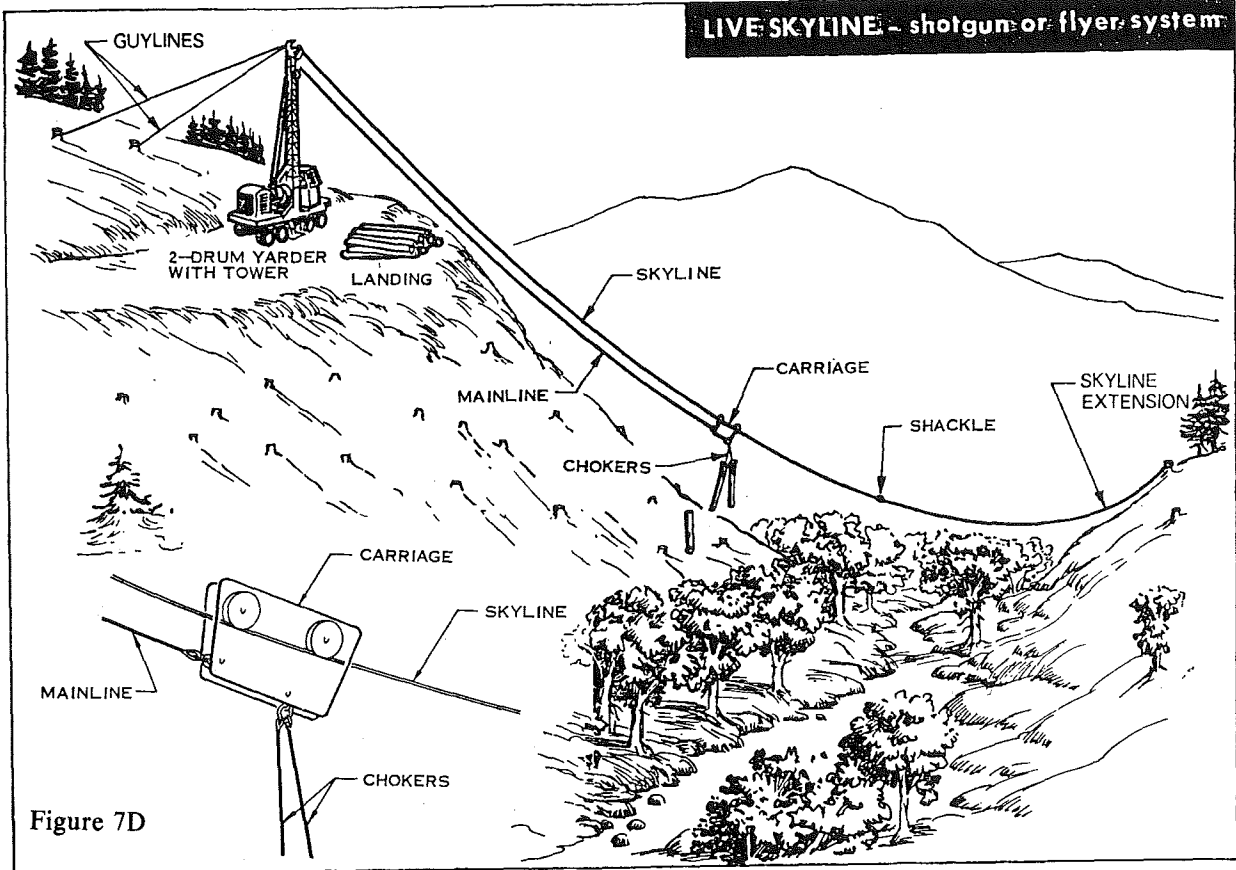

HELICOPTER HAND SIGNALS

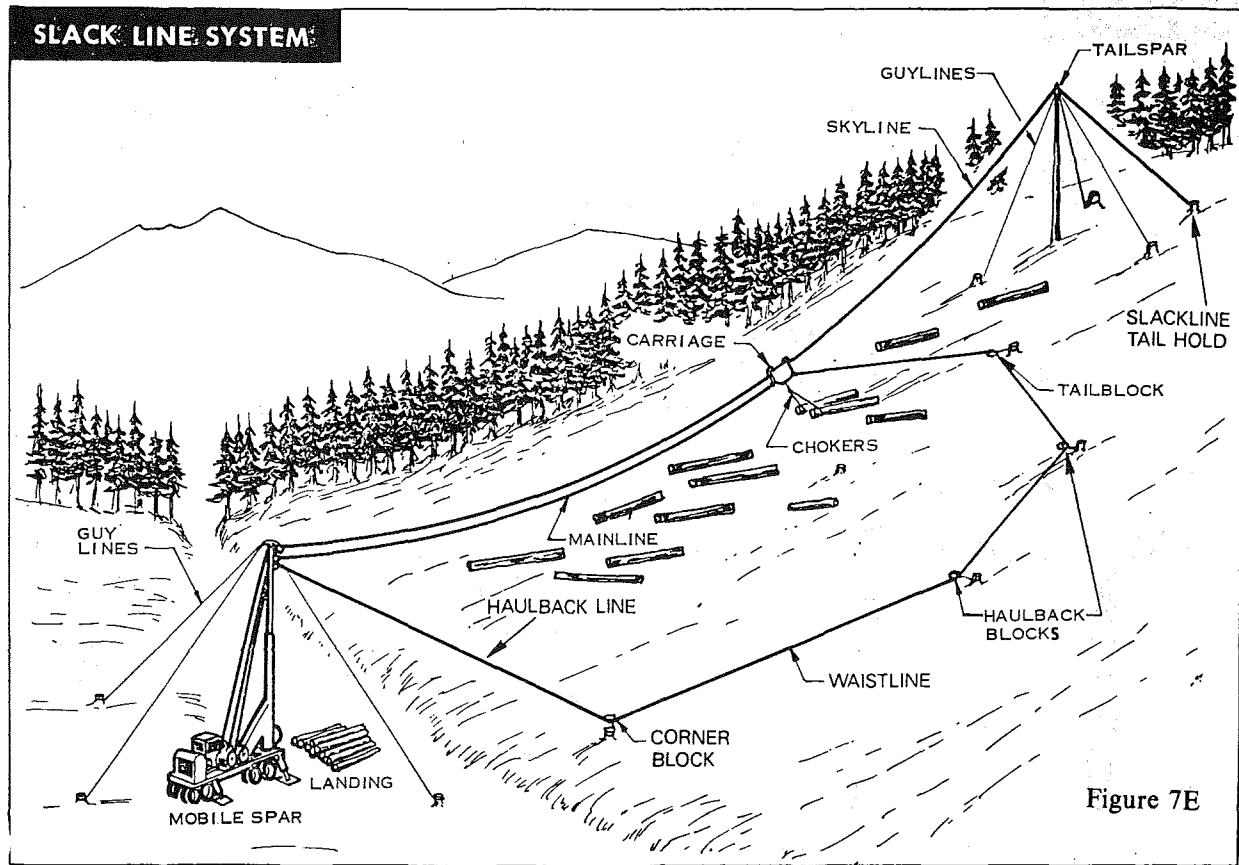

NOTE: See Figures No. 7-A through 7-P, for illustrations of various types of cable logging systems.

See Figures No. 7-Q through 7-U, for illustrations of whistle signals used on various cable logging systems.

**HIGH LEAD LOGGING WHISTLE SIGNALS**

- Means longer spacing between signals.

1 short .....	Stop all lines.
3 short-3 short .....	Ahead slow on mainline.
3 short .....	Ahead on mainline.
2 short .....	Ahead on haulback.
2 short-2 short .....	Ahead slow on haulback.
3 short-1 short .....	Ahead on strawline.
3 short-1 short-3 short ..	Ahead slow on strawline.
4 short or more .....	Slack mainline.
2 short-4 short .....	Slack haulback.
3 short-1 short-4 short ..	Slack strawline.
3 short-2 short .....	Standing tight line.
1 short-1 short .....	Tight line while lines are running, or break if running tight.
3 short .....	When rigging is in: Straw-line back on haulback.
3 short / plus "X" number of shorts .....	When rigging is in: Indicates number of sections of strawline back on rigging.
3 short-1 short-2 short ..	Strawline back on rigging.
1 short .....	When rigging is in: Chaser inspect and repair rigging.
2 short .....	When rigging is in: No chokers back.
2 short-1 short / plus "X" number of shorts ..	Number of chokers back.
2 short-4 short .....	When rigging is in: Slack haulback-hold all lines until 2 short blown.
3 medium .....	Hooker.
3 medium-4 short .....	Hooker and his crew.
5 long .....	Climber.
4 long .....	Foreman.
1 long-1 short .....	Start or stop work.
7 long-2 short .....	Man injured, call transportation and stretcher.
1 long-1 short repeated ..	Fire.
Grabinski system	
2 short-1 short .....	Slack mainline and haulback together.
2 long .....	Take off or put on rider block.

Figure 7-Q

**SKIDDER WHISTLE SIGNALS**

- Means longer spacing between signals.

1 short .....	Stops moving carriage-stops or goes ahead on slack puller, as case may be, if carriage is stopped.
2 short .....	Go ahead on skidding line holding carriage.
1 short-2 short .....	Pick up skidding line, easy.
2 short-1 short .....	Shake up carriage to clear choker.

2 short-2 short .....	Ahead on receding line.
3 short .....	Ahead on carriage, holding at present level, using interlock.
3 short-3 short .....	Ahead easy on skidding line.
2 short-2 short-2 short ..	Slack skyline, cable down.
2 short-2 short-2 short-1 short .....	Pick up skyline, cable up.
2 short-2 short-4 short ..	Slack receding line.
2 short-4 short .....	Slack skidding line.
2 short-2 short-1 short ..	Tighten all lines.
1 short-4 short .....	Slack off slack puller.
1 short-2 short .....	Pick up slack puller when slack.
2 short-2 short / plus "X" number of shorts ..	When carriage is in: Number of chokers wanted.
2 short-2 short-1 long ..	Bull choker.
1 short .....	When carriage is in: Inspect butt rigging.
2 short-4 short / 1 short	For each additional ten feet of tong line.
1 long / plus "X" number of shorts .....	Number of coils of strawline wanted.
5 medium .....	Tail or second rigger.
5 medium-4 short .....	Tail or second rigger and his crew.
2 medium .....	Skidder head rigger.
3 medium-4 short .....	Hooker and his crew.
2 long .....	Ahead on transfer.
2 long-4 short .....	Slack transfer
1 short-3 short .....	Ahead on carriage with slack puller line.
1 long .....	Ahead on strawline.
1 long-4 short .....	Slack strawline.
1 long-3 short .....	Ahead easy on strawline.
5 long .....	Climber.
4 long .....	Foreman.
1 long-1 short .....	Start or stop work.
7 long-2 short .....	Man injured, call transportation and stretcher.
1 long-1 short repeated ..	Fire.

Figure 7-R

**SLACKLINE WHISTLE SIGNALS**

- Means longer spacing between signals.

2 short-2 short-2 short-1 short .....	First cable up when road has been changed and tail hold made fast.
2 short-2 short-2 short ..	Drop skyline.
1 short .....	Stop any moving line.
1 long .....	When logging, slack skyline.
2 short .....	Ahead on skyline.
1 long-2 short .....	Ahead easy on skyline.

3 short .....	Ahead on skidding line, holding haulback.
3 short-3 short .....	Ahead easy on skidding line with slack haulback.
4 short .....	Slack skidding line.
2 short-2 short / 2 short -2 short .....	Ahead easy on haulback with slack skidding line.
2 short-2 short .....	Ahead on haulback.
2 short-2 short-4 short ..	Slack haulback.
2 short / 3 short .....	Pick up skyline and skid.
2 short / 2 short-2 short ..	Pick up skyline and skin.
3 short-1 short .....	When carriage is in: Strawline back on haulback.
3 short-1 short-2 short ..	When carriage is in: Strawline back on carriage.
3 short-1 short .....	When strawline is out: Ahead on strawline.
3 short-2 short .....	Tight line.
3 short-1 short-4 short ..	Slack strawline.
3 short-1 short-3 short ..	Pull easy on strawline.
2 long .....	Ahead on transfer.
2 long-4 short .....	Slack transfer.
2 long-2 short-2 short ..	When carriage is in: Transfer back on carriage.
1 long / plus "X" number of shorts .....	When carriage is in: Number of coils.
2 short-2 short-1 short / plus "X" number of shorts .....	When carriage is in: Number of chokers.
1 short .....	When carriage is in: Inspect rigging, repair and send back.
2 short-2 short-4 short ..	When carriage is in: Slack haulback and hold all lines until 1 short is blown--then send back.
3 short-3 short .....	When carriage is in: Send back powder.
5 medium .....	Tail rigger.
5 medium-4 short .....	Tail rigger and his crew.
3 medium .....	Head hooker.
3 medium-4 short .....	Second hooker and his crew.
5 long .....	Climber.
4 long .....	Foreman.
1 long-1 short .....	Start or stop work.
7 long-2 short .....	Man injured, call transportation and stretcher.
1 long-1 short repeated ..	Fire.

Figure 7-S

**RUNNING SKYLINE WHISTLE SIGNALS**

- Means longer spacing between signals

1 short .....	Stop all moving lines
2 short .....	Skin carriage back
2 short-1 short .....	Slack haulback

2 short-2 short .....	Skin carriage easy
2 short-3 short .....	Standing tight line
1 short-2 short .....	Ahead on drop line
4 short .....	Slack drop line
1 short-4 short .....	Slack both mainlines
1 short-1 short .....	Stop drop line going up and move carriage forward
3 short .....	Move carriage forward
3 short-3 short .....	Move carriage forward easy
3 short-1 short .....	When strawline is out: Ahead on strawline
3 short-1 short-4 short ..	Slack strawline
3 short .....	When carriage is in: Strawline
3 short-X short .....	When carriage is in: Number sections
3 short-1 short-2 short ..	When carriage is in: Strawline back on carriage
2 short-X short .....	When carriage is in: Number of chokers
4 short .....	When carriage is in: Inspect rigging, repair and send back
1 short .....	When carriage is in: Hold all lines until 2 shorts, then send back
3 medium .....	Head hooker
3 medium-4 short .....	Hooker and his crew
4 long .....	Foreman
1 long-1 short .....	Start or stop work
7 long-2 short .....	Man injured; call transportation and stretcher
1 long-1 short (repeated) .....	Fire
3 short-1 long .....	Acknowledged by engineer to signify hazardous turn

Figure 7-T

**TENSION SYSTEM SIGNALS**

4 .....	Release tension
1 short .....	Stop carriage and start unspooling tong line
1 short .....	Stop tong line
1 short .....	Resume unspooling tong line
1 short .....	Will stop any moving line or slack tong line when carriage is stopped
2 short-2 short .....	Go into interlock and go back
2 short-4 short .....	Slack haulback and let carriage down

After turn is set

2 short .....	Go ahead on tong line
2 short-3 short .....	Go ahead easy on tong line
3 short .....	Go into interlock and take carriage to landing
3 short-3 short .....	Ahead on carriage easy

1 short-2 short . . . . .	Increase tension on tong line when carriage is going in
short-1 short . . . . .	Decrease tension on tong line when carriage is going in

Figure 7-U

[Statutory Authority: RCW 34.04.025, 49.17.040, and 49.17.050. 81-05-013 (Order 81-3), § 296-54-559, filed 2/10/81. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-559, filed 9/21/79.]

**WAC 296-54-561 Log loading--General requirements.** (1) Loading operators shall have a clear view of the landing and of the cars or trucks being loaded.

(2) Persons shall not ride logs, tongs, grapples or other loading devices.

(3) The use of plain spiked loading hooks without a bell is prohibited for loading logs.

(4) All limbs or knots that would project beyond the stakes or legal height shall be removed before the log is loaded on the car or truck.

(5) When the loading operator is not able to see the loading operation, signals shall be given by a designated person, who shall have a clear view of the operations and shall be visible to the operator. Hand signals used shall be as illustrated in Figure No. 7, following WAC 296-54-565.

(6) Logs shall not be swung or suspended over occupied equipment by loading machines on landings. Persons shall not stand or walk under suspended logs.

(7) No one shall ride loads while cars or trucks are being spotted or dropped, except those whose regular duties require them to do so.

(8) Cars and trucks shall not be moved until the head loader or loading machine operator is positive that all persons are in the clear.

(9) When grapples, trip tongs or similar devices are used in the loading operation, they shall be lowered to the ground whenever the machine is unattended. If the device can tip or fall over, it shall be laid on its side on the ground.

(10) While logs are being loaded, no one shall remain on the load, chain deck or behind the cab protector. Any unattached material shall be removed from the top of the cab protector before the truck is moved from the landing.

(11) To control the movement of a log truck being loaded, a positive audible means of communication shall be established between the truck driver and the loading machine operator. The established means of communication shall be familiar to all employees on the landing and shall include a danger signal to warn employees in case of an emergency. If a movable loader is being used, the loader operator shall sound a warning signal before moving the loader. The signals so used shall be easily distinguishable from other whistle or horn signals used in the landing area.

(12) When signals are used at a landing, reload or deck to control the movement of logging trucks in accordance with subsection (11) of this section, the following signals shall be used:

1 short . . . . .	Stop
1 short . . . . .	Ahead
2 shorts . . . . .	Back
2 shorts then 2 shorts . . .	Wrapper
3 shorts . . . . .	Check scales
1 long-repeated . . . . .	Danger
1 long . . . . .	Loader moving

(13) No person shall be permitted alongside or underneath trucks being loaded or on the load until communication has been established with the loading machine operator and truck driver and assurance has been received that it is safe to be there.

(14) Power saws shall not be operated on top of loaded logging trucks.

(15) Standing underneath a suspended trailer or its reach is prohibited.

(16) The outside bunklogs (bottom tier) shall be loaded tight against the stakes.

(17) Logs shall be loaded in a manner to prevent undue strain on wrappers, binders, bunk stakes and chains or straps.

**NOTE:** Logs shall be considered to be "within the stakes" when one-half the log diameter is below the top of the stakes.

(18) Logs in any tier or layer unsecured by stakes or chalk blocks shall be well saddled and have their diameter centers inside the diameter centers of the outer logs of the next lower tier or layer.

(19) Bunk and wing logs shall extend not less than twelve inches beyond the front and rear bunks or stakes. On rigid type bunks, they shall extend not less than six inches beyond the front and rear bunks or stakes.

(20) Double ended logs, above the stakes, shall not be loaded on the side of the load from which the binders or wrappers are intended to be released from.

(21) Logs shall be loaded in a manner that will not impair full and free movement of the truck and trailer.

(22) Each log not contained within the stakes shall be secured with at least two wrappers before the truck leaves the immediate landing area.

(23) Loads or logs shall not be moved or shifted while wrappers and binders are being applied or adjusted.

(24) Stable loads. Loads shall be built up or loaded in a manner to be stable without the use of wrappers. Wrappers shall be considered only as precautionary measures to ensure stability of the load.

(25) Loading equipment maintained. All loading machines and equipment shall be maintained in a safe condition. The critical parts of such equipment, such as bolts in base plates, etc., that cannot be inspected while in operation, shall be inspected at reasonable intervals by a qualified person when the machine is shutdown. If indications of failure or weakness is noted or suspected, the parts in question shall be examined by an approved

method and if found to be defective, shall be repaired or replaced before the equipment is put back into operation.

(26) Tongs pulling out. Where there is a danger of tongs or hooks pulling out of the log, straps shall be used. Tongs may be used on extra-large logs provided the logs are barked and notched to provide a secure hold. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-561, filed 9/21/79.]

**WAC 296-54-563 Log loading--Special requirements.** (1)(a) Loading machines shall be equipped with an effective parking braking system which is not dependent on the air or hydraulic pressure which is used to stop the machine while traveling.

(b) A braking system shall be installed on the load line and boom supporting equipment which shall be capable of stopping and holding, in any position, the maximum load for which the loading machine is designed. The equipment shall be of such design as to lower the boom with power. Booms not having power down shall be dogged before workers enter the hazardous area around the boom. Workers shall not be under any boom while it is being held by the brake.

(2) A minimum distance of thirty-six-inch clearance shall be maintained between the counterweight of a loading machine and trees, logs, banks, trucks, etc., while the machine is in operation. If this clearance cannot be maintained, suitable barricades with warning signs attached, similar to a standard guardrail, shall be installed to isolate the hazardous area. "DANGER - 36-inch clearance" shall be marked in contrasting colors on sides and face of counterweight on shovels, loaders and other swing-type logging equipment.

(3) Persons shall not work under a slack puller. A warning line, of sufficient length to reach the ground at all positions, shall be hung from any slack puller.

(4) Where a backstop of a loading machine is so constructed that it could crush the operator's cab should the heel boom be pulled or pushed too far backward, positive boom stops shall be installed.

(5) All mobile fork-lift type log handling machines shall be equipped with a means or mechanism to prevent the logs from leaving or rolling off the forks, and shall be used at all times while moving logs. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-563, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-563, filed 9/21/79.]

**WAC 296-54-565 Log loading--Self-loading log trucks.** (1) A safe means of access and egress shall be provided to the operator's loading work station.

(2) Self-loading log truck operators shall not unload their own load unless a positive means of securing the logs has been provided when binders and wrappers are removed.

(3) New self-loading log trucks purchased and put in operation after January 1, 1980, shall be equipped with:

- (a) A check valve installed on the jib boom; and
- (b) A seat that is offset from the point of attachment of the boom. The seat and boom structure shall rotate concurrently.

(4) The operator of a self-loading log truck shall not heel the log over his head.

**STANDARD SIGNALS for LOADING LOGS**

[Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-565, filed 9/21/79.]

**WAC 296-54-567 Motor truck log transportation--General requirements.** (1) Prior to use, the operator shall make a complete daily inspection of the truck and trailer with particular attention to steering apparatus, lights and reflectors, brake boosters, brake hoses and connections, reaches, and hitches (couplings). The brakes shall be tested before and after movement of the vehicle. The operator shall submit a written list of necessary repairs to a person designated by the employer.

(2) Any defective parts that would make the vehicle unsafe to operate, shall be replaced or repaired before the vehicle is placed in service.

(3) All motor vehicles operated on public roads shall comply with the rules of the regulatory body having jurisdiction. Motor vehicles used on roads not under the control of the state department of transportation, counties or cities shall be equipped with accessories necessary for a safe operation including operable head lamps and at least two tail lamps and brake lamps which shall emit

a red light plainly visible from a distance of one thousand feet to the rear and shall also have two reflectors visible at night from three hundred fifty feet when directly in front of properly adjusted motor vehicle head lamps.

(4) Truck tires worn beyond a point of safety or not meeting the safety requirements of the jurisdiction having authority as to tread wear and tire conditions, shall not be used.

(5) The driver shall do everything reasonably possible to keep his truck under control at all times and shall not operate in excess of a speed at which he can stop the truck in one-half the distance between him and the range of unobstructed vision.

(6) The area between the truck frame members, extending from the cab rearward as far as necessary to provide a safe work area, shall be covered with suitable nonslip type material. Log trucks which have logs scaled at stations shall be provided with a platform on each side extending outward from the frame members at least eighteen inches, and shall be eighteen inches long or as near this dimension as the design of the truck will permit. The treading surface of the platforms shall be of nonslip type material and the platform shall be capable of safely supporting a five hundred pound load.

(7) To protect the operator of vehicles from loads, a substantial bulkhead shall be provided behind the cab which shall extend up to the height of the cab.

(8) If logs must be scaled or branded while the loading operation is being carried on, the loading operation shall cease while the scaling or branding is being done so that the scaler or person doing the branding is not subjected to any hazards created by the loading operation.

(9) When at the dump or reload or where logs are scaled or branded on the truck, the logs shall be scaled or branded before the binders are released.

(10) All vehicles, where vision of the operator in the direction of travel is impaired by the load or vehicle, shall be moved only on a signal from a worker who shall have a clear view in the direction in which the vehicle is to be moved.

(11) Where a bridge or other roadway structure is posted with a load limit sign, log truck drivers or operators of other heavy equipment are prohibited from driving a load in excess of the posted limit over such structure.

(12) Persons shall be allowed to ride only when in the cab of the log truck.

(13) All trucks shall keep to the right side of the road except where the road is plainly and adequately posted for left side travel.

(14) A method shall be provided to assure that the trailer will remain mounted on the truck while driving on highways or logging roads.

(15) When trucks are towed on any road, the person guiding the vehicle being towed shall, by prearranged signals, govern the speed of travel. The towing of vehicles shall be done at a reasonable speed and in a prudent manner. A tow cable or chain over fifteen feet in length

shall have a white flag affixed at the approximate center, however, it is recommended that a rigid tow bar be used for this purpose.

(16) All air lines, air chambers and systems shall be free of leaks and be able to maintain air pressure on constant brake application with the motor shut-off for one minute, or air pressure does not drop more than 4 p.s.i. in one minute with the engine running at idling speed and the service brake applied.

(17) All rubber-tired motor vehicles shall be equipped with fenders. Mud flaps may be used in lieu of fenders whenever the motor vehicle is not designed for fenders.

(18) Seat belts and anchorages meeting the requirements of 49 CFR Part 571 (D.O.T. Federal Motor Vehicle Safety Standards) shall be installed and used in all motor vehicles.

(19) All trucks shall be equipped with doors with operable latches, or a safety bar or strap shall be provided in lieu of the door.

(20) All trucks shall be equipped with a means to protect the operator from inclement weather.

(21) Log trucks shall not approach a landing while there is danger from incoming logs.

(22) Log truck drivers shall stop their vehicle, dismount, check and tighten loose load wrappers and binders, either just before or immediately after leaving a private road to enter a public road. [Statutory Authority: RCW 34.04.025, 49.17.040, and 49.17.050. 81-05-013 (Order 81-3), § 296-54-567, filed 2/10/81. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-567, filed 9/21/79.]

**WAC 296-54-569 Motor truck log transportation-- Brake requirements.** (1) Motor logging trucks and trailers shall be equipped with brakes or other control methods which will safely stop and hold the maximum load on the maximum grade. When unattended trucks are parked on a grade, in addition to setting the brakes, the wheels shall be chocked or blocked.

(2) Logging truck tractors having more than two axles need not have brakes on the steering axle wheels.

(3) All trucks equipped with air brakes shall be also equipped with a readily visual or audible low air pressure warning device in good working order.

(4) Engine-type brakes shall be considered as auxiliary controls, not a substitute for the requirement for a service brake system.

(5) Brake drums shall be maintained free of cracks, breaks or defects. Defective brake drums, cans, shoes or air lines shall be immediately repaired or replaced. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-569, filed 9/21/79.]

**WAC 296-54-571 Motor truck log transportation-- Trailer hitches and safety chains.** (1) All log truck and trailer combinations shall be equipped with approved hitches (couplings) which shall:

(a) Be capable of withstanding, in any direction, the potential stresses imposed;

(b) Be of a design which would not be rendered inoperative by dirt and debris and shall be locked securely and positively;

(c) Be attached to the truck frame or extension of the truck frame by means of not less than four machine bolts and nuts (120,000 p.s.i. material or better) 3/4-inch diameter or larger, secured by lock nuts. Other means of attachment furnishing strength equal to or greater than the above may be accepted if of approved design and application; and

(d) Hitches (couplings) or parts that are broken, cracked, excessively worn, or otherwise defective hitches shall be repaired before use.

(2) Each log truck and trailer combination or log truck and independent trailer combination shall be provided with two or more safety chains or cables with a rated breaking strength of not less than the gross weight of the towed vehicle, be capable of holding the trailer in line in case of failure of the hitch assembly, and be as follows:

(a) Be permanently attached to the frame of the truck or an extension of the truck frame;

(b) Form a separate continuous connection between the truck frame or extension of the truck frame and the reach or trailer;

(c) Be attached not more than twelve inches from the eye of the reach or trailer;

(d) Be of a length short enough to prevent the trailer reach or tongue from contacting the ground in the event of disengagement from the truck;

(e) Be of a design to provide a positive connection that cannot be rendered inoperative by any condition of use or exposure.

(3) Safety chains and cables shall be replaced immediately if they contain cut, cracked, or excessively worn links, or frayed, stranded, or otherwise defective wire rope.

(4) Butt welding of safety chain links to reach truck frame, or extension of truck frame is prohibited.

(5) Cold-shuts may be used in safety chains provided they are welded shut and one size larger than the chain being used.

(6) There shall be no welding or hole drilling in frames on which the manufacturer recommends this not be done. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-571, filed 9/21/79.]

**WAC 296-54-573 Motor truck log transportation--Reaches and bunks.** (1) Log trailers shall be connected to tractors by reaches of a size and strength to withstand all normal imposed stresses. Spliced wooden reaches shall not be used. Proper repair of metal reaches by welding will be permitted if done by a qualified welder.

(2) Hand-holds or other facilities shall be installed on trailer tongues or trailer reaches if workers are required to manually assist in coupling them to their tractors or trucks.

(3) A positive means, other than clamp and in addition to the clamp, shall be installed on the reach of log

truck trailers when the trailers are being towed without a load.

(4) Persons shall never enter the area below a suspended load of logs. At dumps where the load must remain suspended above the bunks until the truck is moved away, and when the trailer is the type with a compensating pin in the reach, a method shall be utilized which will allow the trailer to be towed away from the danger area.

(5) The reaches of unloaded trailers being towed shall be provided with and use a minimum one-inch pin near the end or an equally effective means to prevent pulling or stripping through the tunnel.

(6) Reach locks, clamps, or tighteners shall be of the type that will securely lock the reach in the tunnel.

(7) No reach of less than the maximum size usable in the tunnel of a trailer shall be permitted.

(8) Alteration of trailer tunnel to permit reduction of reach size is prohibited.

(9) Every truck or truck and trailer engaged in the transportation of logs loaded lengthwise, shall be equipped with bunks and chock blocks or stakes.

(10) Log bunks or any part of bunk assembly bent enough to cause bunks to bind, shall be straightened. Bunks shall be sufficiently sharp to prevent logs from slipping. Trip type stakes shall be properly secured and locked in a manner which will prevent them from accidentally tripping or falling.

(11) All trucks with swivel type bunks shall have bunk locks or an equivalent system of holding the bunks in place while loading logs.

(12) The bunks or bolsters of any truck or trailer shall be either curved upward or straight. Bunks with ends lower than their centers are prohibited.

(13) Sufficient clearance between the bunk and bunk rider shall be maintained to prevent bunk binding.

(14) Trailer bunks shall be provided with a false or tilt bunk. The channel of the bunk shall be kept reasonably free of debris.

(15) Stakes and stake extensions shall be installed and maintained so that the angle between bunks and stakes (and extensions if used) shall not exceed ninety degrees when loaded.

(16) Frames, reaches, bunks and running gear of log trucks shall be maintained free of cracks, breaks and defects. If defects are found, they shall be immediately repaired or the part replaced. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-573, filed 9/21/79.]

**WAC 296-54-575 Motor truck log transportation--Stakes, stake extensions and chock blocks.** (1) Trucks and trailers shall be equipped with bunk stakes or chock blocks of strength and sized material to perform their intended function.

(2) Stake extensions shall not be used unless all component parts of the bunking system are of sufficient size and strength to support the added stresses involved. Stake extensions shall be secured by safety chains or other devices to prevent their accidental displacement.

(3) The linkage used to support the stakes or chocks must be of adequate size and strength to withstand the maximum imposed impact load. Molles or cold shuts are prohibited in chains or cables used for linkage.

(4) Stake chains or cables shall be equal to or better than "high test" steel chain or "plow steel" wire rope, and shall be of a size necessary to meet the requirements of a safe working load of not less than six thousand six hundred pounds. (3/8-inch alloy chain, 7/16-inch high test chain of welded link construction, and 5/8 inch improved plow steel cable in 6 x 19 and 6 x 37 construction meet this requirement.)

(5) Bunk chains containing cut, cracked, excessively worn, or otherwise defective links, shall be immediately removed from service. Molles, cold-shuts (welded or otherwise), or bolts are not permitted in bunk chains.

(6) The use of frayed, stranded, or otherwise defective wire rope for chock block cable or stake straps is prohibited.

(7) Only chain links approved for welding (and properly welded) or approved repair links which will develop a strength equivalent to the chain, are permissible for repairs or attachments to stake chains or binder chains.

(8) Chains or cables used to secure stakes or chock blocks shall be secured in a manner which will not necessitate hammering directly on them to release the stakes or blocks. Keyhole slots and similar methods of securing chains are prohibited.

(9) Deformed or defective stakes, stake securing or stake locking devices, or bunks shall be immediately repaired or removed from service. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-575, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-575, filed 9/21/79.]

**WAC 296-54-577 Motor truck log transportation-- Wrappers and binders.** (1) On log trucks equipped with stakes, the following requirements shall apply:

(a) In the hauling of a one log load, one wrapper chain or cable shall be required and secured to the rear bunk. The log shall be properly blocked or secured in a manner which will prevent it from rolling or shifting. An additional wrapper secured to the front bunk is optional.

(b) In the hauling of two log loads, not less than two wrapper chains or cables shall be used to secure the load. The logs shall be properly blocked to prevent them from rolling or shifting.

(c) On loads consisting of three or four logs not over forty-four feet in length, the load shall be secured by not less than two properly spaced wrapper chains or cables. Ends of short logs not secured by such wrappers shall be secured with extra wrappers. If any log is over forty-four feet in length, the load shall be secured by not less than three properly spaced wrappers.

(d) Loads consisting of five or more logs, when the logs are all seventeen feet or less in length, shall be secured by not less than two properly spaced wrappers. Loads consisting of five or more logs, when any log is

over seventeen feet in length, shall be secured by not less than three properly spaced wrappers.

(2) On log trucks equipped with chock blocks, the following requirements shall apply:

(a) In the hauling of a one log load, one wrapper chain or cable shall be required and secured to the rear bunk and the log shall be properly blocked in a manner to prevent it from rolling or shifting.

(b) One additional wrapper chain or cable shall be required on log trucks using chock blocks over and above the requirements in subdivisions (1) (c) and (d) of this section.

(3) In the case of short logs loaded crosswise, the following method of securing the load shall be used if the truck or trailer is not provided with solid ends of a height sufficient to prevent any log in the load from rolling off: Not less than two chock blocks shall be used at each open end of the vehicle and the load shall be held with at least two wrapper chains or cables. The wrappers shall be firmly attached to the end of the truck or trailer. Rigid standards or stakes may be used in lieu of chock blocks but each such standard or stake shall be either rigidly connected to the bed of the truck or trailer or shall be placed in a tight-fitting socket at least 12 inches in depth. Other means furnishing equivalent security may be acceptable.

(4) When two wrappers are required, they shall be applied within six feet of the front and rear bunks. When more than two wrappers are required, the front and back binder shall be applied within six feet of the front and rear bunks.

(5) To properly secure short logs, binders shall be placed near the end, not less than twelve inches from the end of the log.

(6) No log loaded on top or in outside saddles of a load shall be transported unless secured by not less than two wrapper chains or cables, one of which shall be placed near each end of such log.

(7) All wrappers and binders shall be fastened in place prior to tightening to prevent the displacement of logs on the top of the load.

(8) All wrapper chains or cables, except in the case of one log loads, shall entirely surround the load. This does not apply to gut-wrappers.

(9) Gut-wrappers, when used, shall be adjusted so as to be tightened by, but not carry the weight of the logs above them.

(10) A warning shall be given before throwing wrappers over the load and care shall be taken to avoid striking other persons with the wrapper.

(11) Wrappers and binders shall be placed and tightened around the completed load before the truck leaves the immediate loading area.

(12) While moving logs, poles, or log chunks within sorting or mill yards, that could roll or slide off the truck due to snow or ice conditions, or the logs or log chunks do not extend beyond the stakes, at least two wrappers and binders shall be used regardless of the height of the load.

(13) Wrapper chains or cables, binders, fasteners, or attachments thereof, used for any purpose as required by

these standards, shall have a minimum breaking strength of not less than fifteen thousand pounds and shall be rigged so that it can be safely released.

NOTE: 3/8-inch hi-test steel chain, 7/16-inch improved plow steel wire rope of 6x19 or 6x37 construction, or materials having equivalent strength, when in compliance with the requirements herein contained, will be acceptable. (The diameter of the wire rope is immaterial as long as it meets the minimum breaking strength requirements.)

(14) A loaded logging truck required to have wrappers by this section, may be moved within the loading area without wrappers only if such movement does not present a hazard to workers.

(15) For the purposes of this standard, applied bundle straps or banding are not acceptable as wrappers and binders.

(16) All loose ends of wrapper chains or cables shall be securely fastened so as to prevent their swinging free in a manner that will create a hazard.

(17) Binders for securing wrappers on logging trucks shall be fitted with hooks of proper size and design for the wrapper chain being used.

(18) Wrappers shall be removed from service when any of the following conditions exist:

- (a) Excessively worn links on chains;
- (b) Deformed or stretched chain links;
- (c) Cracked chain links;
- (d) Frayed, stranded, knotted, or otherwise defective wire rope.

(19) Pipe extension handles (swedes) for tightening or securing binders shall be limited to not longer than thirty-six inches. Care shall be taken that a sufficient amount of the pipe extends over the binder handle.

(20) Defective binders shall be immediately removed from service.

NOTE: See Figures 9-A and 9-B for illustrations of placement and number of wrappers.

PLACEMENT AND NUMBER OF WRAPPERS

One Log Load

One wrapper required which shall be secured to the rear bunk. The log shall be blocked or secured in a manner to prevent it from rolling or shifting. An additional wrapper secured to the front bunk is optional.

Two Log Load

A minimum of two wrappers required. Logs shall be blocked to prevent them from rolling or shifting. If all logs are not contained by the stakes, additional wrappers required.

Three Or Four Log Load 44 Ft. Or Less

A minimum of two wrappers required. If all logs are not contained by the stakes, additional wrappers required.

Three Or Four Log Loads More Than 44 Feet

A minimum of three wrappers required. If all logs are not contained by the stakes, additional wrappers required.

Five Or Six Log Load  
All Logs 17 Feet Or Less

A minimum of two wrappers required. If all logs are not contained by the stakes, additional wrappers required.

Seven Or More Log Load  
All Logs 17 Feet Or Less

A minimum of two wrappers required. If all logs are not contained by the stakes, additional wrappers required.

Five Or More Log Load  
If Any Logs Are More Than 17 Feet

A minimum of three wrappers are required. If all logs are not contained by the stakes, additional wrappers required.

Proper Support For Logs

Not more than approximately one-third the weight of any log shall extend beyond the end of the logs or bunk supporting it.

Outside Logs Or Top Logs

All outside (wing) or top logs shall be secured by a wrapper near but not within 12 inches of each end.

A Wrapper Shall Be Near Each Bunk

Each load shall be secured by having a wrapper within 6 feet of each bunk except on one log loads.

Short Logs Loaded Crosswise

A minimum of two wrappers are required and two chocks or stakes shall be used on the open end of the truck.

NOTE: All loads of logs on logging trucks equipped with chock blocks instead of stakes, shall have at least one additional wrapper over and above the requirements for trucks equipped with stakes, excepting on one and two log loads and trucks with short logs loaded crosswise.

[Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-577, filed 9/21/79.]

**WAC 296-54-579 Motor truck log transportation--Miscellaneous requirements.** (1) No truck wheel shall have more than twenty-five percent of the lugs missing or defective.

(2) All truck wheels shall be maintained free of cracks, breaks, or defects.

(3) Windshields on all equipment shall be provided with windshield wipers in good working condition.

(4) Mule train trailers shall have a platform on the trailer tongue at least twelve inches by twenty-four inches made of nonslip material and capable of supporting at least three hundred pounds. The platform shall be of the self-cleaning type.

(5) Logs shall be loaded so that not more than approximately one-third of the weight of any log shall extend beyond the end of the logs or bunk supporting it.

(6) Trailer loading and unloading straps, links, or chains shall be fastened securely to the trailer frame and

used in hoisting the trailer. The connections shall be maintained in good condition and shall not be attached to the trailer bunk. The use of molles for this purpose is prohibited.

(7) In unloading trailers from trucks, trailers shall be hoisted clear, the truck driven forward a safe distance, and the trailer lowered to within one foot of the roadway before persons approach the trailer or reach.

(8) Trailer hoisting or unloading straps shall be constructed and installed in a manner enabling the loading or unloading machine to engage the strap without manual personal contact.

(9) All motor vehicles shall be equipped with a horn that is audible above the surrounding noise level. The horn shall be sounded before operating the vehicle in reverse gear and sounded intermittently during the entire backing operation. The horn shall be maintained in an

operative condition. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-579, filed 9/21/79.]

**WAC 296-54-581 Motor truck log transportation--Steered trailers.** Steered trailers, not controlled from the truck cab, shall be designed, constructed, and operated as follows:

(1) A secure seat with substantial foot rest shall be provided for the operator at the rear of the bunk. Any arrangement that permits the operator to ride in front of the bunk is prohibited unless a false bunk or other adequate protection is provided for the operator.

(2) The seat for the operator shall be so arranged that he has an unobstructed exit from both sides and the rear.

(3) The bunk support shall be so constructed that the operator has a clear view ahead at all times.

(4) Adequate means of communication shall be provided between the operator and the truck driver.

(5) Eye protection and respirator shall be provided for the operator.

(6) The trailer shall be equipped with fenders or splash plates to protect the operator from mud and dust so far as possible.

(7) If used during periods of reduced visibility on roads not under the control of the state department of transportation, counties, or cities, the trailer shall be equipped with head, tail, turn and stop lights. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-581, filed 9/21/79.]

**WAC 296-54-583 Stationary log truck trailer loading.** (1) All loading devices shall be designed, constructed, and maintained in such a manner as to have a five to one safety factor for its rated load capacity.

(2) Loaders shall be constructed of such height and width that they can be safely used to load the maximum-sized trailers they will be expected to handle without hanging up or striking the equipment.

(3) Electric-powered trailer loading devices shall be equipped with a switch or device which will govern the upper direction of travel of the load line to a safe limit.

(4) Electric motors used for hoisting purposes shall be equipped with approved overload switches or breakers.

(5) All electrical switch controls shall not exceed twenty-four volts. All control switches shall be of the momentary contact type which require continuous manual pressure for hoist to operate.

(6) Pendant-type control switches shall be suspended by a chain or other suitable device which will prevent placing a strain on the electrical cable.

(7) Pendants shall be so installed that when retracted the control switch shall not touch the ground.

(8) All electrical equipment shall be weatherproof-type or adequately protected from the weather, and shall meet or exceed the requirements of the National Electrical Code as promulgated by the director of the department of labor and industries pursuant to RCW 19.28.060.

(9) Trailer loaders, except A-frame type or bridge crane, shall be equipped with reach guides or devices which will keep reach in proper alignment. A tag rope or other safe guidance device shall be used to guide trailers being loaded by use of an A-frame type loader.

(10) Access roads and the area around the trailer loading devices shall be kept free of standing water and debris and maintained in good repair.

(11) The maximum capacity load to be lifted shall be posted in a conspicuous location where it can be easily seen by any person operating the hoist.

(12) Trailer loading equipment shall be periodically inspected at least every thirty days and shall be maintained in good repair. A written report shall be made and signed by the person making the inspection and kept on file by the company for twelve months.

(13) A lifting test shall be conducted annually on each loading device and a written record showing the date, name of person conducting the test, amount of weight lifted and results shall be kept in the office of the employer or at the site. The test weight shall be at least one hundred twenty-five percent of the maximum rated load but not more than one hundred thirty percent of the maximum rated load.

(14) Each drum shall be designed and arranged in such a manner that the line will maintain lead and spool evenly without chafing, crossing or kinking.

(15) A braking system shall be installed which shall have the capability of safely braking and holding one and one-half times weight of the full rated load.

(16) When trailers are to be loaded after dark, sufficient lights shall be provided for a safe operation. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-583, filed 9/21/79.]

**WAC 296-54-585 Log unloading, booms, and rafting grounds--Storage and sorting areas--General requirements.** (1) At no time shall one person be permitted to work alone.

(2) (a) Employees working on over or along water, where the danger of drowning exists, shall be provided with and shall wear approved personal flotation devices.

(b) Employees are not considered exposed to the danger of drowning when:

(i) The water depth is known to be less than chest deep on the exposed individual;

(ii) When working behind standard height and strength guardrails;

(iii) When working inside operating cabs or stations which eliminate the possibility of accidentally falling into the water;

(iv) When wearing approved safety belts with lifeline attached so as to preclude the possibility of falling into the water.

(c) Prior to and after each use, personal flotation devices shall be inspected for defects which would reduce their designed effectiveness. Defective personal flotation devices shall not be used.

(d) To meet the approved criteria required by subdivision (a), a personal flotation device shall be approved

operative condition. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-579, filed 9/21/79.]

**WAC 296-54-581 Motor truck log transportation--Steered trailers.** Steered trailers, not controlled from the truck cab, shall be designed, constructed, and operated as follows:

(1) A secure seat with substantial foot rest shall be provided for the operator at the rear of the bunk. Any arrangement that permits the operator to ride in front of the bunk is prohibited unless a false bunk or other adequate protection is provided for the operator.

(2) The seat for the operator shall be so arranged that he has an unobstructed exit from both sides and the rear.

(3) The bunk support shall be so constructed that the operator has a clear view ahead at all times.

(4) Adequate means of communication shall be provided between the operator and the truck driver.

(5) Eye protection and respirator shall be provided for the operator.

(6) The trailer shall be equipped with fenders or splash plates to protect the operator from mud and dust so far as possible.

(7) If used during periods of reduced visibility on roads not under the control of the state department of transportation, counties, or cities, the trailer shall be equipped with head, tail, turn and stop lights. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-581, filed 9/21/79.]

**WAC 296-54-583 Stationary log truck trailer loading.** (1) All loading devices shall be designed, constructed, and maintained in such a manner as to have a five to one safety factor for its rated load capacity.

(2) Loaders shall be constructed of such height and width that they can be safely used to load the maximum-sized trailers they will be expected to handle without hanging up or striking the equipment.

(3) Electric-powered trailer loading devices shall be equipped with a switch or device which will govern the upper direction of travel of the load line to a safe limit.

(4) Electric motors used for hoisting purposes shall be equipped with approved overload switches or breakers.

(5) All electrical switch controls shall not exceed twenty-four volts. All control switches shall be of the momentary contact type which require continuous manual pressure for hoist to operate.

(6) Pendant-type control switches shall be suspended by a chain or other suitable device which will prevent placing a strain on the electrical cable.

(7) Pendants shall be so installed that when retracted the control switch shall not touch the ground.

(8) All electrical equipment shall be weatherproof-type or adequately protected from the weather, and shall meet or exceed the requirements of the National Electrical Code as promulgated by the director of the department of labor and industries pursuant to RCW 19.28.060.

(9) Trailer loaders, except A-frame type or bridge crane, shall be equipped with reach guides or devices which will keep reach in proper alignment. A tag rope or other safe guidance device shall be used to guide trailers being loaded by use of an A-frame type loader.

(10) Access roads and the area around the trailer loading devices shall be kept free of standing water and debris and maintained in good repair.

(11) The maximum capacity load to be lifted shall be posted in a conspicuous location where it can be easily seen by any person operating the hoist.

(12) Trailer loading equipment shall be periodically inspected at least every thirty days and shall be maintained in good repair. A written report shall be made and signed by the person making the inspection and kept on file by the company for twelve months.

(13) A lifting test shall be conducted annually on each loading device and a written record showing the date, name of person conducting the test, amount of weight lifted and results shall be kept in the office of the employer or at the site. The test weight shall be at least one hundred twenty-five percent of the maximum rated load but not more than one hundred thirty percent of the maximum rated load.

(14) Each drum shall be designed and arranged in such a manner that the line will maintain lead and spool evenly without chafing, crossing or kinking.

(15) A braking system shall be installed which shall have the capability of safely braking and holding one and one-half times weight of the full rated load.

(16) When trailers are to be loaded after dark, sufficient lights shall be provided for a safe operation. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-583, filed 9/21/79.]

**WAC 296-54-585 Log unloading, booms, and rafting grounds--Storage and sorting areas--General requirements.** (1) At no time shall one person be permitted to work alone.

(2) (a) Employees working on over or along water, where the danger of drowning exists, shall be provided with and shall wear approved personal flotation devices.

(b) Employees are not considered exposed to the danger of drowning when:

(i) The water depth is known to be less than chest deep on the exposed individual;

(ii) When working behind standard height and strength guardrails;

(iii) When working inside operating cabs or stations which eliminate the possibility of accidentally falling into the water;

(iv) When wearing approved safety belts with lifeline attached so as to preclude the possibility of falling into the water.

(c) Prior to and after each use, personal flotation devices shall be inspected for defects which would reduce their designed effectiveness. Defective personal flotation devices shall not be used.

(d) To meet the approved criteria required by subdivision (a), a personal flotation device shall be approved

by the United States Coast Guard as a Type I PFD, Type II PFD, Type III PFD, or Type V PFD, or their equivalent, pursuant to 46 CFR 160 (Coast Guard Life-saving Equipment Specifications) and 33 CFR 175.23 (Coast Guard table of devices equivalent to personal flotation devices). Ski belt or inflatable type personal flotation devices are specifically prohibited.

(3) In operations where regular logging machinery, rigging, etc., is used, the applicable sections of these rules shall apply.

(4) Artificial lights shall be provided and used where work is to be done between the hours of sunset and sunrise. Such lights shall be located in a manner that will be reasonably free of glare and provide uniform distribution of illumination and avoid sharply defined shadows.

(5) On all log dumps, adequate power for the method used for unloading shall be provided. All machines used for hoisting, reloading or lowering purposes shall be of approved design and sufficient power to control or hold the maximum load imposed in mid-air.

(6) Binders shall not be released from any load until an effective safeguard is provided.

(7) All mobile log handling machines shall be equipped with a means or mechanism which will prevent the logs from accidentally leaving the forks, and shall be used.

(8) The operator of the unloading machine shall have an unobstructed view of the unloading area or shall make certain no one is in the area where the logs are to be unloaded. Rearview mirrors shall be installed on mobile log handling equipment to assist the operator in ascertaining that the area behind the machine is clear before backing up.

(9) Unloading lines shall be so arranged that it is not necessary for the workman to attach them on the pond or dump side of the load.

(10) Life rings with a minimum of ninety feet of one-fourth-inch line with a minimum breaking strength of five hundred pounds attached, shall be provided at convenient points adjacent to water which is five feet or more in depth. Life rings shall be a minimum of thirty inches outside diameter and seventeen inches inside diameter and be maintained so as to retain a thirty-two pound positive buoyancy. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-585, filed 9/21/79.]

**WAC 296-54-587 Water dumps.** (1) All water dumps shall have brow logs except when logs are lifted from the load. If portable equipment is used, adequate stops shall be provided to prevent equipment from running off the dump.

(2) Where necessary for persons to walk alongside loads and equipment on trestles or fills, a minimum twenty-two inch wide walkway shall be provided, unless otherwise specified.

(3) All decks and plankways on log dumps must be kept in good repair and free from bark and other debris. Roadways shall not be inclined more than one inch to twelve inches across the driving surface.

(4) The use of small bridge-over logs, planking or timbers, between regular foot logs, or walkways, which will not support the weight of at least three persons are prohibited. All regular foot logs shall be barked on upper side.

(5) Electric powered hoists using hand-held cord remote controls in grounded locations, shall be actuated by circuits operating at no more than twenty-four volts. All control switches shall be of the momentary contact type which requires continuous manual pressure for the hoist to operate.

(6) Roadbeds at log dumps shall be hard packed gravel, heavy planking, or equivalent material, and shall be of sufficient width and even surface to insure safe operation of equipment.

(7) Where logs are unloaded on to rollways, sufficient space shall be provided between the top of the skids and the ground to clear the body of a person.

(8) When a brow log is used with a parbuckle system, all persons are prohibited from going between the brow log and the load of logs at any time.

(9) A positive safeguard shall be provided to prevent logs from leaving the loads on the side opposite the dump. Unloading lines, crotch lines or equally effective means shall be arranged and used in a manner to prevent any log from swinging or rolling back.

(10) All persons shall remain in the clear until all moving equipment has come to a complete stop.

(11) Logs shall not be unloaded by peaves or similar manual methods, unless means are provided and used that eliminate the danger from rolling or swinging logs. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-587, filed 9/21/79.]

**WAC 296-54-589 Boom and rafting grounds.** (1) Breaking of log jams by peavy method is prohibited, except in river drive or when jam occurs away from mechanical means or the dump.

(2) Wooden pike poles shall be of continuous, straight-grained No. 1 material. Defective poles, blunt or dull pikes shall not be used. Conductive pike poles shall not be used where there is a possibility of coming in contact with energized electrical conductors.

(3) Stiff booms shall be made by fastening not less than two boom sticks together. The width of a stiff boom shall be not less than thirty-six inches measured outside to outside of the logs. The boom sticks shall be fastened together with not less than 4" x 6" cross ties, or cable lashings notched into the boom sticks may be used when stiff booms are exposed to heavy swells. Stiff booms shall be kept free of loose bark and shall be maintained in good repair.

(4) A walkway thirty-six inches wide with standard hand railing shall be provided from the shore end of stiff boom to shore.

(5) All sorting gaps shall have a substantial stiff boom on each side of gaps. Such stiff booms or walkways shall be planked over.

(6) (a) Boom sticks shall be reasonably straight with no protruding knots or loose bark. They shall be capable

of supporting above the water line at either end the weight of one worker and equipment or two hundred fifty pounds.

(b) Foot logs shall be reasonably straight with no protruding knots or loose bark and shall be of sufficient size to support above the water line at either end the weight of two workers and equipment or five hundred pounds.

(7) Boom sticks which have been condemned as unsafe shall be marked by three chopped crosses ten feet from the butt end, and such sticks shall not be used as boom sticks.

(8) Gaps between boom sticks shall not exceed twenty-four inches. All wire shall be removed from boom sticks and boom chains before they are re-used or hung in rafting stalls.

(9) When permanent cable swifters are used they shall be arranged so that they are within easy reach of rafter without rolling boom sticks on which they are fastened. When cables become hazardous to use because of jagers, they shall be discarded.

(10) When floating donkeys or other power-driven machinery is used on boom, it shall be placed on a raft or float with enough buoyancy to keep the deck of such raft or float well above water. Wherever persons walk, the deck of the raft or float shall be planked over with not less than two inch planking, and kept in good repair.

(11) When doglines used in rafting, brailing or stowing logs become hazardous to use because of jagers, they shall be discarded.

(12) Storing, sorting or any boom work, other than boom boat operations, shall require a minimum of two persons.

(13) Sufficient walkways and floats shall be installed and securely anchored, to provide safe passage for workers.

(14) Walkways alongside sorting gaps shall not be less than four feet wide. Other walkways shall be not less than twenty-two inches wide. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-589, filed 9/21/79.]

**WAC 296-54-591 Boats and mechanical devices on waters.** (1) Prior to starting the boat motor, any spilled fuel shall be removed and vapors shall be exhausted from any area in which they may accumulate.

(2) The bilge area shall be kept clean and oil, grease, fuel, or highly combustible materials shall not be allowed to accumulate.

(3) Adequate ventilation equipment shall be provided and used for the bilge area to prevent the accumulation of toxic or explosive gases or vapors.

(4) Adequate ventilation equipment shall be provided and used for the cabin area on enclosed-cabin type boats to prevent an accumulation of harmful gases or vapors.

(5) Deck and cabin lighting shall be provided and used where necessary to provide safe levels of illumination aboard boats. Boats operated during the period from sunset to sunrise, or in conditions of restricted visibility, shall display navigation lights as required by the United States Coast Guard. Searchlights or floodlights

shall be provided to facilitate safe navigation and to illuminate working or boarding areas adjacent to the craft.

(6) On craft used by workers wearing calked shoes, all areas where the operator or workers must stand or walk shall be made of or be covered with wood or other suitable matting or nonslip material and such covering shall be maintained in good condition.

(7) Each boat shall be provided with a fire extinguisher and life ring with at least fifty feet of one-fourth inch line attached. On log broncs, boomscooters, or other small boomboats where all occupants are required to wear life saving devices and a life ring would present a tripping hazard, the life ring may be omitted.

(8) (a) Along docks, walkways, or other fixed installations on or adjacent to open water more than five feet deep, approved life rings with at least ninety feet of one-fourth inch line attached, shall be provided. The life rings shall be spaced at intervals not to exceed two hundred feet and shall be kept in easily visible and readily accessible locations.

(b) When employees are assigned work at other casual locations where exposure to drowning exists, at least one approved life ring with at least ninety feet of line attached, shall be provided in the immediate vicinity of the work assigned.

(c) Where work is assigned over water where the vertical drop from an accidental fall would exceed fifty feet, special arrangements shall be made with and approved by the department of labor and industries prior to such assignment.

(d) Lines attached to life rings on fixed installations shall be at least ninety feet in length, at least one-fourth-inch in diameter, and have a minimum breaking strength of five hundred pounds. Similar lines attached to life rings on boats shall be at least fifty feet in length.

(e) Life rings must be United States Coast Guard approved thirty-inch size.

(f) Life rings and attached lines shall be maintained to retain at least seventy-five percent of their designed buoyancy and strength.

(9) Log broncs, boomscooters, and boomboats shall not be loaded with personnel or equipment so as to adversely affect their stability or seaworthiness.

(10) Boats shall not be operated at an excessive speed or handled recklessly. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-591, filed 9/21/79.]

**WAC 296-54-593 Dry land sorting and storage.** (1) Unauthorized foot and vehicle traffic shall not be permitted in the sorting or storage area.

(2) Logs shall be stored in a safe and orderly manner. Roadways and traffic lanes shall be kept clear of protruding ends of logs and debris.

(3) Dry deck log storage areas shall be kept orderly and maintained in a condition conducive to safe operation of mobile equipment. Roadways and walkways shall have a smooth hard-packed surface wide enough to permit a safe operation. Bark, mud, and other debris shall

not be allowed to accumulate to the extent it constitutes a hazard to the operation.

(4) At log dumps, sorting and storage areas, an effective means shall be provided and used to control dust.

(5) Only an authorized person shall operate or ride any lift truck, log stacker, or log unloader.

(6) Signaling log unloader operators at dry deck areas by throwing bark or chips in the air is prohibited. Hand, horn signals or other safe, effective means shall be used at all times.

(7) Unnecessary talking to operator while engaged in operating controls of log stacker or log unloader is forbidden.

(8) Lift forks and arms of unloading machines shall be lowered to their lowest position, and all equipment brakes set prior to the operator leaving his machine unattended.

(9) Log unloaders or stackers shall not be moved about the premises for distances greater than absolutely necessary with the lift extended above the drivers head or with loads lifted higher than is necessary for vision.

(10) When truck drivers are out of the cab, they shall be in the clear, and in view of the log unloader before the lift forks are moved under the load and the lift is made.

(11) Where logs are offloaded onto a dry deck by means of unloading lines, a mechanism shall be used which is self-releasing. Employees shall be prohibited from ascending dry decks to release unloading lines.

(12) Persons shall not position themselves in the hazardous area near or under loads of logs being lifted, moved or suspended.

(13) Jackets or vests of fluorescent or other high visibility material shall be worn by persons working on dry land log storages. Hard hats shall be of a contrasting color or shall have high visibility tape affixed thereon.

(14) Log unloaders and log stackers designed in a manner whereby logs being handled may jeopardize the safety of the operator shall be provided with overhead protection and any other safeguards needed to afford adequate protection.

(15) Log unloaders and log stackers shall be equipped with a horn or other audible warning device. If vision is impaired or restricted to the rear, the warning device shall be sounded before operating the vehicle in reverse gear and sounded intermittently during the entire backing operation. The warning device shall be maintained in an operative condition.

(16) Each log-handling machine shall be equipped with a braking system which is capable of stopping and holding the machine with maximum load on any grade on which it may be required to work.

(17) A limit stop, which will prevent the lift arms from over-traveling, shall be installed on electric powered log unloaders.

(18) Shear guards shall be installed on unloading machines and similar types of equipment on which the arms pivot and move alongside the operator creating a pinch point at that location.

(19) All forklift type machines shall be equipped with grapple arms and the arms shall be used whenever logs are being moved.

(20) When log trucks are loaded by the use of a log stacker and the lay of any log is higher than the stakes, the log stacker shall remain against the completed load, or other suitable protection provided, to prevent the logs from falling until at least two wrappers and binders have been applied.

(21) All binders and wrappers shall remain on the load until an approved safeguard has been provided to prevent logs from rolling off the side of the truck or trailer when binders are released. A shear log, or equivalent means, shall be provided to ensure the log truck will be stationed close enough to the wrapper rack so that a log cannot fall between the log truck and the wrapper rack when removing binders and wrappers. At least one binder shall remain secured while relocating or tightening other binders. Crotch lines, forklifts, log stackers, log unloaders, or other effective means shall be used for this purpose.

(22) An extra wrapper or metal band of equal strength shall be placed to hold the logs when it is necessary to remove a wrapper to prevent it from being fouled by the unloading machine.

(23) Machines of the type having arms which block the regular exit when in the up position, shall have an emergency exit installed.

(24) Seat provided. Riding on any part of a log handling machine except under the canopy guard is prohibited.

(25) Identification tags shall not be applied or pulled unless logs are resting in a stationary place, such as bunks, cradles, skids, or sorting tables.

(26) No person shall approach the immediate vicinity of a forklift-type log handling machine without first notifying the operator of his intention and receiving an acknowledgement from the operator.

(27) When forklift-type machines are used to load, unload, or handle trailers, a positive means of holding the lifting attachment to the fork shall be installed and used.

(28) When dry land log dumps use unloading methods similar to those of water dumps, the safety standards for water dumps shall apply to dry land dumps.

(29) When logs are handled between the hours of sunset and sunrise or other periods of poor visibility, illumination shall be provided consistent with chapter 296-62 WAC, general occupational health standards, pertaining to illumination.

(30) Air operated stake releases shall be in conformity with the following requirements:

(a) The air supply shall be taken from the "wet" air reservoir or from the accessory air line to a spring loaded, normally closed control valve.

(b) The control valve shall be located in the cab, positioned so that it is accessible only from the operator's position.

(c) The control valve shall be fitted with a spring loaded cover or be otherwise guarded against inadvertent operation.

(d) A separate air line shall extend from the control valve to the tractor and trailer stake release chambers. The air line shall be clearly identified or installed in such a manner as to preclude it from being mistaken for the service or emergency air line. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43-.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-593, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-593, filed 9/21/79.]

**WAC 296-54-595 Railroad operations.** (1) All persons employed in any service on trains or rail operations, which are not engaged in interstate commerce, are subject to and shall be conversant with all rules and special instructions.

(2) Employees must render every assistance in their power in carrying out these rules and special instructions and must report to the proper official any violation thereof.

(3) Accidents, detention of trains or speeders, failure in supply of fuel or water, defects in track, bridges, or signals, must be properly reported to the supervisor by the quickest possible method.

(4) Any logging railroad may maintain a special set of operating rules applicable to their operation, provided that said rules are acceptable to the division of industrial safety and health, department of labor and industries.

(5) Each logging railroad operation which has more than one piece of railroad equipment in operation, must have a dispatcher on duty. All equipment must receive clearance from dispatcher.

(6) Train crew size shall be dependent upon the number of persons needed to safely operate the train under all prevailing conditions; however, when necessary to set hand brakes, two or more persons shall be assigned to set the brakes and give signals.

(7) All locomotives shall be equipped with sanding devices for both rails, front and rear, in proper working order. Clean, dry sand should be used.

(8) Locomotives shall be equipped with power brakes (air or steam) on all driving wheels. Tenders also shall have power brakes.

(9) All locomotives and speeders, operating between sunset and sunrise or other periods of reduced visibility, shall be equipped with and use head lights which shine in the direction of travel. The lights shall be of sufficient candlepower so the train can be stopped within range of the light beam. Cab lights shall be provided and maintained so the operators can see from their required positions the gauges and equipment necessary for operation.

(10) All locomotives shall be equipped with proper grab irons, hand holds, steps, and running boards.

(11) All locomotives shall be equipped with automatic couplers, suitable for low or high draw-bars.

(12) On all rolling stock, wheels which have sharp or badly worn flanges, shall be replaced. Avoid the use of flat wheels.

(13) All locomotives with tender shall have an apron of proper length and width to insure safety and which shall be roughened to insure secure footing.

(14) Handholds and footboards shall be provided on locomotive cranes, except where cab overhangs end of car.

(15) Trains and speeders shall not exceed a safe speed.

(16) A terminal test of air brakes shall be made by trainmen before leaving the terminal. Enginemen shall not proceed until they are satisfied by brake action that brakes are able to control the train.

(17) All of the cars in a train shall have their brakes in good operating condition.

(18) On railroads where joint operations of two or more firms are necessary, trains shall not be dispatched less than fifteen minutes apart. Red lights shall be displayed on the rear of such trains at night or when visibility is poor.

(19) Whenever cars are left on grades, derailleurs shall be provided. Derail signs shall be placed near derailleurs. In setting out equipment, care shall be used in seeing that proper clearance is provided.

(20) Standard pressure for mountain grades requires a pressure of ninety pounds in train pipe, one hundred ten pounds in main reservoirs (low pressure) and one hundred thirty pounds in high pressure to insure quick releasing of brakes and recharging of auxiliaries. Engineer shall see that his engine carries these pressures and that sanders, both forward and rear, are in working order. On all heavy grades the high pressure retaining valve must be used and before train is started from landing, a test of brakes must be made and piston travel adjusted, if necessary, and retaining valves put up. Engineer shall start train away from landing slowly, giving wheels a chance to roll before applying brakes and, to avoid skidding of wheels, using sand freely. Brakes should then be applied immediately and released, allowing the retaining valves to hold the train while train pipe and auxiliaries are being recharged. Train speed should be held to the required rate by setting and releasing brakes as it is necessary to control train.

(21) When it is necessary to leave loads on pass while switching a side, loads must be left close to derailer, air set and sufficient hand brakes set up, before cutting engine from train.

(22) Enginemen must see car or signalman when making couplings, giving trainmen ample time to align drawheads and open knuckles of coupler, especially on curves, except when using radios.

(23) Drawbars should not be aligned with the foot while cars or engines are in motion. Trainmen shall not climb between cars while in motion. Enginemen shall not drift too close to switches which are to be thrown. Position of switch points should always be observed after throwing switch. Switch lever should be pushed firmly into the notch before leaving the switch. No persons except trainmen, unless authorized, shall ride on engine foot-boards. No object shall be thrown from train or engine while in motion. Bell shall be rung or whistle blown, before moving locomotive.

(24) No equipment shall be pushed ahead of locomotive unless a brakeman is on head car in constant view of

engineer or second brakeman in position to intercept and pass signal to engineer.

(25) In addition to air brakes, hand brakes must be provided on all cars and maintained in good working order.

(26) Hand brakes must be easily accessible to brakemen when cars are loaded. When wheels or staff brakes are used they should be placed on the side opposite the brow log at the dump to prevent their damage when cars are unloaded. All switch throws, walkways and cleared areas for brakemen shall be on the hand brake side.

(27) All brake hickys shall be made from three-fourths inch hexagon steel (high grade) and be twenty-four inches with a good claw on one end to fit the wheel and a knob on opposite end to prevent slipping from brakeman's hand.

(28) All railroad trucks and cars, where brakes are set by hand while in motion, shall have good footboards and toeboards on the brake end.

(29) A ten inch bunk block is recommended on all trucks to prevent logs from slipping over block.

(30) All cars other than logging trucks must have hand hold and foot steps to permit persons to get on and off easily and safely.

(31) All cars and trucks regularly operated must have automatic couplers.

(32) Locomotives and cabooses shall carry the following equipment:

- 1 red light (lantern type)
- 3 red flags
- At least 3 fuses

(33) When a train stops between telephones, or where the rear of a train extends beyond yard limits, the rear of the train must be properly protected.

(34) Whistle sign board shall be placed one thousand two hundred feet from each side of highway crossings.

(35) A rail clamp shall be placed to hold cars left on a grade on main line or spurs.

(36) All cars and trucks shall be legibly numbered so that those with defects may be reported and taken out of service. Each locomotive, speeder, or other self-propelled vehicles shall be numbered, or otherwise made readily identifiable.

(37) All cars used for hauling logs shall be equipped with patent stake bunks, or bunks with chock blocks and/or chains, so constructed that block can be released from opposite end of bunk unless solid stakes are used.

(38) All main line trains of more than ten loaded cars shall have a caboose at the rear of the train.

(39) All operations having both truck roads and railroads, shall post signs at intersections same as public crossings.

Engine whistle signals. The following engine whistle signals are established as standard and are taken from the American Association of Railroads. The signals prescribed are illustrated by "o" for short sounds and "-" for long sounds. Audible whistle shall be sounded when approaching camps, junctions, grade crossings and other

prescribed places in conformity with the American Association of Railroads:

- One short ..... (o) Stop, apply brakes.
  - Two long ..... (-) Release brakes.
  - Three long ..... (---) When running, train parted, to be repeated until answered by hand signal.
  - Two short ..... (oo) Answer to any signals not otherwise provided for.
  - Three short ..... (ooo) When train is standing back.
  - Four short ..... (oooo) Call for signals.
  - Two long, two short ..... (--oo) Approaching highway crossing at grade.
  - One long ..... (-) Approaching station, rollway, chute, crossing, junctions, and derailers. When standing, air leak.
  - Six long ..... (-----) Repeated at intervals, call for section men, train derailed.
  - One long, three short .... (-ooo) Flagman to go back and protect rear of train.
  - Four long ..... (----) Foreman.
  - Five long ..... (-----) Flagman to return from any direction.
  - Long, short ..... (-o-o-o) Repeated four or more times, fire alarm.
  - Seven long, two short .... (-----oo) Repeated, man hurt.
  - One long, one short ..... (-o) Repeated at intervals, closing down.
  - Groups of shorts repeated (ooooooo) Danger of runaway.
- Unnecessary use of whistle is prohibited.

[Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-595, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-595, filed 9/21/79.]

**WAC 296-54-597 Railroad maintenance--Loading or unloading.** (1) Track gangs, bridge crews, etc., when working on railroads in use shall place a yellow caution flag by day and a yellow lantern by night a sufficient distance both directions from the crew to protect them against approaching equipment. The operator of said equipment shall acknowledge the signal by two short blasts of the whistle or horn and proceed with caution.

When said crews are removing or replacing a rail or are performing any other work that would make it necessary for approaching equipment to come to a stop, they shall place a red flag by day and a red lantern by night in the center of the track a sufficient distance in both directions from the crew to protect them against said equipment. The operator of approaching equipment shall acknowledge the signal by one short blast of the whistle or horn and shall come to a dead stop and remain standing until the signal is removed by the person who placed it, or until investigation proves that the track is safe for passage. If a flagman is used, the above provision need not apply.

(2) Where clearance is scant, warning signs or signals shall be posted.

(3) Switch throws should be kept well oiled and targets and signs in good legible condition.

(4) Standard clearances shall be maintained at all points on the right of way except where necessarily restricted where loading or unloading operations are performed or at water tanks, fuel tanks, etc. Warning signs shall be posted at all such locations.

(5) Whenever workmen are repairing, working on or in railroad equipment, loading or unloading cars or performing other duties where there is danger of the railroad equipment being struck by other moving railroad equipment; proper means, methods or safeguards shall be used to protect such workmen. A derail shall be used to prevent other rail equipment from contacting such cars or equipment or endangering the workmen. After cars are spotted, blue flags shall be placed in the center of the tracks at least fifty feet from the end car during the day and blue lights shall be installed at such locations at night. Flags, lanterns and derails shall be removed only by the person placing them unless they are to remain posted for a longer period of time, in which case one person on each oncoming shift shall be responsible to ascertain that they are in place and he shall not remove such safeguards until he investigates to make certain all persons are in the clear. Operators of approaching equipment shall not pass or remove a flag or lantern which is properly posted. Cars or other equipment shall not be placed where it will obscure the signal from an operator controlling approaching equipment. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-597, filed 9/21/79.]

**WAC 296-54-599 Truck and equipment maintenance shops.** It is recognized that the usual hazards encountered in maintenance shops performing work on logging and related equipment would be very similar to those found in general repair, machine or welding shops; therefore, the rules contained in the general safety and health standards and other applicable safety standards promulgated and administered by the department of labor and industries shall apply to such places of work. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-599, filed 9/21/79.]

[Title 296 WAC—p 1108]

**WAC 296-54-601 Signals and signal systems.** (1) Standard hand or whistle signals as described or illustrated herein, shall be used for the movement of rigging, logs, or equipment when using a high lead, slackline, or cable skidder system for yarding. For hand signal illustrations, see Figure 4.

(2) Voice communications may be used for yarding under the following conditions:

(a) Voice communications by use of radio frequencies may be used to transmit instructions and directions to the yarder operator when using a grapple type logging system, providing no person is in a hazardous area near live rigging.

(b) Voice communication may be used to instruct the yarder operator when picking up an occasional log with the use of a choker on a grapple system, providing the grapple is on the ground prior to the setting of the choker and that no lines are moved by the operator until the person setting the choker has returned to a safe location away from any running lines. At no time shall chokers be used on the grapple system during the hours of darkness or during periods of reduced visibility to such extent that the yarder operator cannot clearly see the workmen setting the choker. When a number of logs are required to be yarded by using chokers instead of the grapple, the requirements specified for high lead type of logging shall apply.

(c) Voice communications by use of radio frequencies may be used to transmit instructions and directions to the yarder operator when using a balloon system for yarding. The person operating the radio shall ascertain that all crew members are in the clear before transmitting instructions which would cause any line or turn to move. The person giving such instructions shall keep the crew members informed as to which movements will commence. The whistle shall be blown before moving any running line.

(d) The Federal Communications Commission rules require that assigned call letters be used in conjunction with voice communications.

(3) Voice communications on the same radio frequencies used to transmit skyline, highlead, slackline, or skidder whistle signals (154.57 and 154.60 MHz channels), shall be prohibited.

**NOTE:** If voice is received on 154.57 or 154.60 MHz channels, it is recommended the Assistant Director, Department of Labor and Industries, Division of Industrial Safety and Health, P.O. Box 207, Olympia, Washington 98504, (Phone 206/753-6500) be contacted as soon as possible to enable the department to ascertain the source of the voice transmission.

(4) If a standard signal is not listed for an unusual or new situation, a hand or whistle signal other than any listed for the type of yarding being done may be used for the specific situation only. Any special signals so developed shall be understood by all persons required to work in the area which may be affected by their use.

(5) A copy of the standard hand and whistle signals shall be posted on the yarder and at places where crews

congregate. For tractor logging operations, hand signals shall be posted at places frequented by the crew members such as in crew buses, etc.

(6) Only one workman in any crew shall give signals at the point where chokers are being set. Any person is authorized to give a stop signal when a workman is in danger or other emergency condition is apparent.

(7) Hand signals are permitted only when the signal person is in plain sight of the machine operator and when visibility is such that the signals are discernible. Hand signals may be used at any time as an emergency stop signal.

(8) Throwing of any type of material as a signal is prohibited.

(9) The use of a jerk wire signal system for any type of yarding operation is prohibited.

(10) All persons shall be in the clear before any signal is given to move the rigging, logs, or turns, and movement of rigging, logs, or turns shall not commence until after the proper signals have been given.

(11) Machine operators shall not move any line unless the signal received is clear and distinct. If in doubt, the operator shall repeat the signal as understood and wait for confirmation.

(12) A horn or whistle which is automatically activated by the radio or electric signaling system shall be used on each yarder used for skyline, high lead, skidder or slackline system of yarding, except where hand signals are permissible. The horn or whistle shall emit a sound which will be clearly audible to all persons in the affected area. Such a horn or whistle shall also be required on combination yarding and loading machines and tree pullers. Audible signals are not necessary on grapple or other yarding systems where persons are not exposed to the movement of logs or rigging.

(13) Each unit of the signal or control system in use, shall be tested daily before operations begin. Audible signals used for test purposes shall not include signals used for the movement of lines or materials.

(14) Citizen band (CB) radios shall not be used to activate any signal, machine, or process, either automatically or by voice. This shall not prohibit the use of CB radios for communication between sides, vehicles, work units, or for emergency situations.

(15) When audible whistle signals are being used simultaneously by yarding and loading machines at a landing, signal whistle or horn tones used in connection with machine movements shall be so differentiated as to distinctively identify any intended work movement of either machine. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, and chapters 43.22 and 42.30 RCW. 80-11-057 (Order 80-15), § 296-54-601, filed 8/20/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-601, filed 9/21/79.]

**WAC 296-54-603 Electric signal systems.** (1) Where an electrical signal system is used, all wire and attachments shall be of the weatherproof type and all connections shall be weatherproof.

(2) Electric signal systems shall be properly installed and adjusted. They shall be protected against accidental signaling and shall be maintained in good operating condition at all times. Sufficient signal wire shall be provided to enable good voice contact between the whistle punk and rigging crew at all times. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-603, filed 9/21/79.]

**WAC 296-54-605 Radio systems used for voice communication, activation of audible signals, or equipment.** (1) Every employer who uses a radio signaling or control system (voice or functions) shall comply with or exceed the minimum requirements specified in this section.

(2) A valid operating permit shall be obtained by the owner from the division of industrial safety and health, department of labor and industries, prior to putting into use any radio signaling or control system (voice or functions) intended to be used in conjunction with any type of cable logging operation. Permits will be issued only for systems licensed for such use and using those carrier frequencies as authorized by the Federal Communications Commission. In addition, permits will be granted only when tone or function frequencies are compatible with other radio systems in use and when in compliance with all other applicable requirements contained in this safety standard.

(3) The division of industrial safety and health reserves the right to designate the use of radio frequencies for certain purposes or functions, for example, certain frequencies may be used for voice transmission of instruction, others for tone coded functions, or activation of signaling devices. No single tone sets shall be permitted for logging purposes. The division may also designate which tone frequencies may be used for the activation of a signaling device or for control of equipment on certain federal communication assigned carrier frequencies.

(4) A list of tone frequencies which may be used with any Federal Communications Commission assigned carrier frequencies will be made available by the division of industrial safety and health to any interested person, firm, or corporation upon request.

(5) The division of industrial safety and health shall assign the area or areas in which a radio signaling system may be used and shall so mark on the permit. Radio signaling systems shall not be used in any area other than indicated on the permit. (See Figure 16 for map of areas.)

(6) The person or firm name on the permit shall be the same as the person or firm operating the radio signaling system except for loaner or rental sets. A person or firm using a loaner or rental set shall be responsible for the radio signal system as if they were the owner of the set. The application for a permit to use a radio signaling system shall contain the following information:

(a) Name and address of applicant.

(b) The radio frequencies of the radio signaling device in MHz.

(c) The tone frequency or frequencies of the radio signaling system used to activate a horn, whistle, or control equipment in Hz. The security gate, or pulse tone, shall be shown first.

(d) The name of the manufacturer of the radio signaling system.

(e) The serial number of the receiving unit.

(f) The state assigned area or location in which the unit will operate.

(g) Indicate type of signaling used.

(h) From whom the system was purchased or acquired, and the date of acquisition of the system.

(i) Intended use and function of system.

NOTE: See sample Form No. 157, "application for permit to operate radio signal system in designated area," Figure 10 following this section.

(7) The permit granted by the department shall be attached to the case of the receiver of the radio signaling system for which it is granted.

NOTE: See sample S.F. Form No. 158, "permit to operate multi-tone radio signal system in designated area," Figure 11 following this section.

(8) Each radio receiver shall have its radio carrier frequency in MHz and tone frequency(s) in Hz indicated on the outside case of the receiver. The manufacturer's name and serial number shall also be permanently indicated on the outside of the case. When the duration or width of the tone frequencies performs a function, the one duration/width shall also be permanently indicated on the outside of the receiver case. Each transmitter shall be identified with its receiver. Two or more receivers in operation simultaneously on the same tone frequency shall be prohibited.

(9) It shall be the responsibility of the owner of any radio signaling system to notify the division of industrial safety and health, department of labor and industries, immediately, if the signal system is:

(a) Permanently retired (in what manner and date retired).

(b) Sold (submit name and address of purchaser and date sold).

(c) Removed from the state (name of state to which moved and date moved).

(d) Stolen (date).

(10) Two operable transmitters shall be carried by separate individuals at the point where chokers are being set at all times when transmitters are being used for tone signaling by persons around the live rigging in the choker setting area. Only one radio transmitter shall be required if in the possession of a signaller who has no other duties and remains in an area where there are no hazards created by the moving rigging or logs. If the total crew consists of a yarder operator and one person

in the rigging, only one transmitter is required provided a positive system is instituted and used to check on the well-being of the person in the rigging.

(11) When interference, overlap, fadeout, or blackout of radio signals is encountered, the use of the device shall be discontinued immediately. The use of the device shall not be resumed until the source of trouble has been detected and corrected.

(12) All radio signaling systems put into use for the first time after the effective date of these safety standards, shall meet or exceed the minimum performance specifications contained in WAC 296-54-607 of these safety standards, and, when altered or repaired, shall continue to meet such specifications.

(13) At least one make and model of each signaling system shall be tested and certified that it meets or exceeds the minimum requirements for performance as specified in WAC 296-54-607. A copy of such performance report shall be signed by the person or persons who tested the unit or components and shall be sent to the Division of Industrial Safety and Health, Department of Labor and Industries, P.O. Box 207, Olympia, Washington 98504.

(14) Radio equipment shall not be used without displaying a permit as required by this standard. The permit shall be prominently displayed on the outside case of the receiver of the unit or, for radio controlled carriages, on the transmitter in the yarder.

(15) Adjustments, repairs, or alterations of radio signaling devices shall be done only by or under the immediate supervision and responsibility of a person holding a first-class or second-class commercial radio operator's license, either radio-telephone or radio-telegraph, issued by the Federal Communications Commission. Persons who do not possess the technical ability or do not have the proper equipment to cause the signaling systems to function within required tolerances shall not attempt to repair, alter, or adjust such systems.

(16) Radio frequencies assigned to systems for which voice communications may be used to give signals to the yarder operator, shall not be the same frequencies as those assigned for whistle signals used in skyline, highlead, slackline, or cable skidder systems.

(17) When hazardous interference is created by moving a voice communication system into an area where a system is already in use on the same frequency, use of the newly-moved system shall be immediately discontinued until the problem of interference has been corrected.

(18) Before moving any unit from one assigned geographical area to another (see area map, Figure 12 following this section), a new permit shall be applied for and secured from the Division of Industrial Safety and Health, Department of Labor and Industries, P.O. Box 207, Olympia, Washington 98504.

AREAS FOR USE OF RADIO SIGNALING SYSTEMS FOR LOGGING OPERATIONS

State of Washington  
 Department of Labor and Industries  
 Division of Industrial Safety and Health

A permit issued by the division of industrial safety and health shall be attached to the outside of the receiver which shall indicate the area in which the radio signaling equipment may be used.

[Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-605, filed 9/21/79.]

**WAC 296-54-607 Radio signal systems—Specifications and test procedures.** All radio-signaling systems put into use for the first time after the effective date of these rules shall meet or exceed the following requirements, specifications, tolerance, and tests and such systems, when altered or repaired, shall meet the same minimum requirements.

(1) Radio-signaling systems used to transmit whistle signals or control functions of equipment associated with skyline, highlead, slackline, or cable skidder systems of logging shall transmit and decode only by the use of authorized multi-tone frequencies. Only sequential tones may be used to transmit signals or control equipment when utilizing carrier frequencies of 154.57 or 154.60 MHz.

(2) The receiver sensitivity shall be capable of attaining .6 microvolt, or greater, for 12 db SINAD ratio for VHF frequencies and .7 microvolt, or greater, for UHF

frequencies. Effective January 1, 1984, all radio systems receiver sensitivity shall be capable of attaining .4 microvolt, or greater, for 12 db SINAD ratio for VHF frequencies and .5 microvolt, or greater, for UHF frequencies. When interference is a factor, the receiver may be desensitized in the furtherance of safety by a person qualified in accordance with WAC 296-54-605(15).

(3) The receiver spurious attenuation shall be at least 40 db when measured by the 20 db quieting method. On all new radio systems put into service after the effective date of these standards, the receiver spurious attenuation shall be at least 60 db when measured by the 20 db quieting method. Effective January 1, 1984, all new radio signal systems shall be required to have receiver spurious attenuation of at least 70 db when measured by the 20 db quieting method and shall have image response attenuation of 60 db when measured by the 20 db quieting method. Effective January 1, 1989, all radio

signal systems shall be required to have receiver spurious attenuation of at least 70 db when measured by the 20 db quieting method and image response attenuation of 60 db when measured by the 20 db quieting method.

NOTE: Spurious response attenuation is a measure of the receiver's ability to discriminate between a desired signal to which it is resonant and an undesired signal at any other frequency to which it is also responsive.

(4) The receiver selectivity shall be more than 40 db plus or minus 30 KHz. All new radio signal systems put into service after the effective date of these standards, the receiver selectivity shall be at least 60 db plus or minus 30 KHz. Effective January 1, 1984, all new radio signal systems purchased and used shall have receiver selectivity of at least 80 db plus or minus 30 KHz. Effective January 1, 1989, all radio signal systems shall have receiver selectivity of at least 80 db plus or minus 30 KHz, when measured by the E.\*I.A. SINAD method.

(5) The receiver-decoder tone frequency stability shall not exceed .006 (.6%) above or below the assigned tone frequency.

(6) The drift of a transmitter-encoder tone shall not exceed .006 (.6%) above or below the assigned tone frequency.

(7) Parts of the radio-signaling system affected by moisture, which may be subjected to the entrance of moisture during use, shall be weatherproofed. Transmitters shall be tested within fifteen minutes after being subjected to the following conditions and shall have the ability to continue functioning properly. The transmitter and receiver shall be placed in a humidity chamber for eight hours where the humidity has been maintained at not less than ninety percent and where a 40°C. temperature has been maintained.

(8) Radio-signaling system units shall operate within tolerances specified at any temperature within the range of -30°C. to +60°C.

(9) Switches of transmitters used to send whistle signals or activate equipment associated with high lead,

slackline, or cable skidder systems of logging shall be designed in such a manner whereby two buttons, motions or a combination of these shall be required simultaneously to cause activation of the system. Arrangement of the activating switches shall be such that the operator can transmit signals easily but cannot easily activate a control or command function accidentally.

(10) All receivers intended to be mounted on or in the yarder or similar equipment, and all portable transmitters, shall continue to maintain specified mechanical and electrical performance during and after being subjected to vibration of the magnitude and amplitude as follows:

The equipment shall be vibrated with simple harmonic motion having an amplitude of 0.015" (total excursion 0.03") with the frequency varied uniformly between 10 and 30 Hz and an amplitude of 0.0075" (total excursion 0.015") with the frequency varied uniformly between 30 and 60 Hz. The entire cycle of frequencies for each group (i.e., 10 to 30 cycles and 30 to 60 cycles) shall be accomplished in five minutes and repeated three times. The above motion shall be applied for a total period of thirty minutes in each direction, namely, the directions parallel to both axes of the base and perpendicular to the plane of the base.

(11) All portable transmitters shall continue to maintain specified mechanical and electrical performance after being subjected to a shock test as follows:

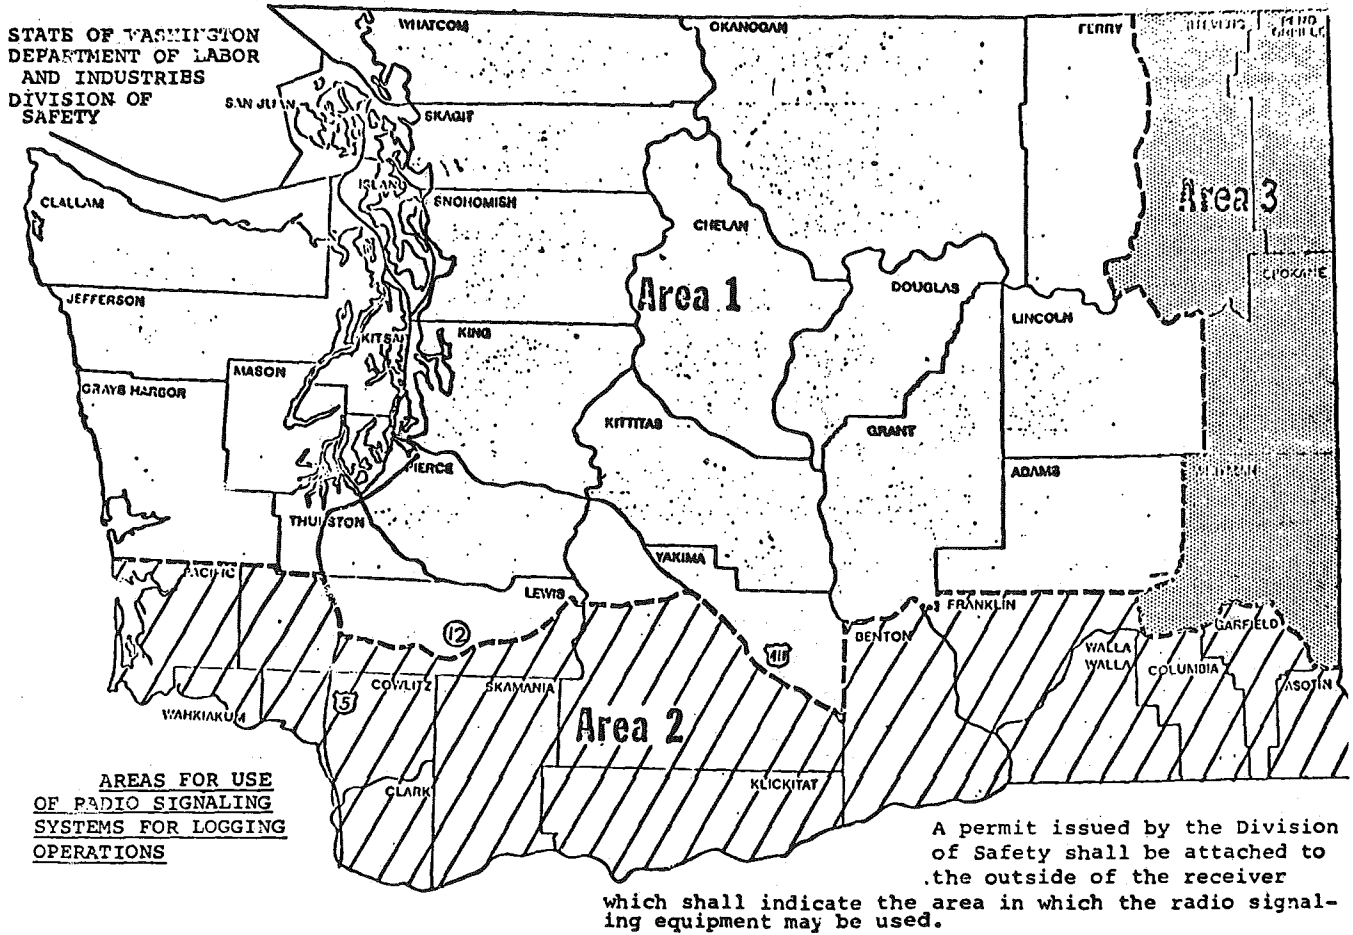

The equipment shall be dropped once on each of five surfaces from a height of four feet onto a smooth concrete floor.

(12) Transmitters operating on carrier frequencies of 154.57 MHz and on 154.60 MHz shall be limited on maximum power output not to exceed 500 mW measured at the antenna terminals.

(13) To minimize the possibility of interference with other signaling systems, the input power of transmitters operating in the 450 MHz range should be limited to only the amount needed to transmit to the receiver of the system effectively. [Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-10-081 (Order 79-14), § 296-54-607, filed 9/21/79.]

WAC 296-54-99011 Appendix I--Figure 11--Placement and number of binders.

ONE LOG LOAD

One binder required which shall be secured to rear bunk. Log shall be blocked to prevent it from rolling or shifting.

TWO LOG LOAD

A minimum of two binders required. Logs shall be blocked to prevent them from rolling or shifting.

THREE OR FOUR LOG LOAD FORTY-FOUR FEET OR LESS

A minimum of two binders required.

THREE OR FOUR LOG LOADS MORE THAN FORTY-FOUR FEET

A minimum of three binders required.

FIVE OR SIX LOG LOAD  
ALL LOGS SEVENTEEN FEET OR LESS

A minimum of two binders required.

SEVEN OR MORE LOG LOAD  
ALL LOGS SEVENTEEN FEET OR LESS

When using chock blocks a minimum of three binders required.

SEVEN OR MORE LOG LOAD  
ALL LOGS SEVENTEEN FEET OR LESS

When using stakes a minimum of two binders required.

FIVE OR MORE LOG LOAD  
IF ANY LOGS ARE MORE THAN SEVENTEEN FEET

A minimum of four binders are required if using chock blocks.

FIVE OR MORE LOG LOAD  
IF ANY LOGS ARE MORE THAN SEVENTEEN FEET

A minimum of three binders are required when using stakes.

SHORT LOGS LOADED CROSSWISE

A minimum of two binders are required and two chocks or stakes shall be used on the open end of the truck.

OUTSIDE LOGS OR TOP LOGS

All outside or top logs shall be secured by a binder near but not within 12 inches of each end.

A BINDER SHALL BE NEAR EACH BUNK

Each load shall be secured by having a binder within 6 feet of each bunk except on one log loads.

PROPER SUPPORT FOR LOGS

Not more than approximately one-third the weight of any log shall extend beyond the end of the logs or bunk supporting it.

Figure 11.

- 296-56-53503 Canneries and cold storage docks.
- 296-56-560 Excerpts from Revised Code of Washington.
- 296-56-990 Form—Appendix A—Certificate of competency.
- 296-56-99001 Form—Appendix B—Notice of deficiencies found on certification examination.
- 296-56-99002 Form—Appendix C—Standard signals for longshore crane signals.
- 296-56-99003 Form—Appendix D—Standard signals for longshore crane signals.
- 296-56-99004 Form—Appendix E—Certificate of unit test and/or examination of crane, derrick, or other material handling device.
- 296-56-99005 Form—Appendix F—Standard procedure—Testing and examination cranes, derricks, or material handling devices longshore, stevedore, and related waterfront operations.
- 296-56-99006 Form—Appendix G—Standard procedure—Testing and inspection cargo spouts, suckers and similar equipment longshore, stevedore and related waterfront operations.

#### DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER

- 296-56-001 through 296-56-400. [Filed 3/23/60.] Superseded by safety standards for longshore, stevedore and related waterfront operations, filed 9/24/65. See WAC 296-56-401 et seq.
- 296-56-445 Radio controlled cranes. [Order 69-3, § 296-56-445, filed 5/26/69, effective 7/1/69.] Repealed by Order 74-14, filed 4/22/74.
- 296-56-450 Posting claim procedure. [§ II, Rule 2.010, filed 9/24/65; Rules (part), filed 3/23/60.] Repealed by Order 74-14, filed 4/22/74.
- 296-56-460 Minimum requirements for first aid—First-aid training. [§ III, Rule 3.010, filed 9/24/65; Rules (part), filed 3/23/60.] Repealed by Order 74-14, filed 4/22/74.
- 296-56-470 Hard hats—General safety standards. [Order 69-3, § 296-56-470, and Appendix A (Forms), filed 5/26/69, effective 7/1/69; § III, Rules 4.010-4.230, filed 9/24/65; Rules (part), filed 3/23/60.] Repealed by Order 74-14, filed 4/22/74. See WAC 296-56-990 through 296-56-99006.
- 296-56-530 Cranes and crane operations. [§ X, Rules 10.010-10.060, filed 9/24/65; Rules (part), filed 3/23/60.] Repealed by Order 74-14, filed 4/22/74.
- 296-56-540 Application for waiver or variances. [Rules (part), filed 9/24/65; Rules (part), filed 3/23/60.] Repealed by Order 74-14, filed 4/22/74.
- 296-56-550 Practical application. [Rules (part), filed 9/24/65; Rules (part), filed 3/23/60.] Repealed by Order 74-14, filed 4/22/74.
- 296-56-570 Glossary. [Glossary, filed 9/24/65; Rules (part), filed 3/23/60.] Repealed by Order 74-14, filed 4/22/74.
- 296-56-590 Standard signals for longshore crane operations. Decodified—See WAC 296-56-990 through 296-56-99006.

**WAC 296-56-401 Scope and application.** (1) The rules included in this chapter apply throughout the state of Washington, to any and all waterfront operations under the jurisdiction of the department of labor and industries, division of industrial safety and health.

(2) These minimum requirements are promulgated to augment the general safety and health standards, and any other safety and health standards promulgated by the department of labor and industries which are applicable to all places of employment under the jurisdiction of the department of labor and industries. The rules of this chapter, and the rules of chapter 296-24 and 296-62 WAC are applicable to all longshore, stevedore and related waterfront operations: *Provided*, That such rules shall not be applicable to those operations under the exclusive safety jurisdiction of the federal government.

(3) The provisions of this chapter shall prevail in the event of a conflict with, or duplication of, provisions contained in chapter 296-24 and 296-62 WAC.

(4) These standards are consolidated with the intent that they will meet or exceed all mandatory requirements included in 29 CFR, Part 1918. [Order 74-14, § 296-56-401, filed 4/22/74; Order 69-3, § 296-56-401, filed 5/26/69, effective 7/1/69; Rules (part), filed 9/24/65; Rule (part), filed 3/23/60.]

**WAC 296-56-405 Practical application.** If there is a question concerning the application of these rules to any given set of facts and it is not fully decided to the satisfaction of all concerned, the question shall be referred to the supervisor of industrial safety and health, department of labor and industries. [Order 74-14, § 296-56-405, filed 4/22/74.]

**WAC 296-56-410 Introduction.** The history of experience of longshoring and related waterfront operations reveals the fact that positive steps toward the prevention of accidents can be made most effective when practices, methods, equipment, and design of port facilities are guided by expert cause analyses of current and past accidents. In the process of achieving a safe place to work and a safe working environment, planning and designing for safety are the responsibility and function of management. [Order 74-14, § 296-56-410, filed 4/22/74; Introduction, filed 9/24/65; Rules (part), filed 3/23/60.]

**WAC 296-56-412 Variance and procedure.** Any employer may apply to the director for an order for a variance from any rule or regulation establishing a safety and health standard promulgated under this chapter. Affected employees shall be given notice of each such application and in the manner prescribed by section 8 of the act shall be informed of their right to request a hearing on any such application. The director shall issue such order granting a variance, after opportunity for an inspection, if he determines or decides after a hearing has been held, if request for hearing has been made, that the applicant for the variance has demonstrated by a preponderance of the evidence that the conditions, practices, means, methods, operations, or

processes used or proposed to be used by such applicant employer will provide employment and places of employment to his employees which are as safe and healthful as those which would prevail if he complied with the safety and health standard or standards from which the variance is sought. The order so issued shall prescribe the conditions the employer must maintain, and the practices, means, methods, operations, and processes which he must adopt and utilize to the extent they differ from the standard in question. At any time after six months has elapsed from the date of the issuance of the order granting a variance upon application of an employer, employee or the director on his own motion, after notice has been given in the manner prescribed for the issuance of such order may modify or revoke the order granting the variance from any standard promulgated under the authority of this chapter. [Order 74-14, § 296-56-412, filed 4/22/74.]

**WAC 296-56-415 Definitions.** (1) "Shall" indicates provisions which are mandatory.

(2) "Employer" means an employer any of whose employees are employed, in whole or in part, in longshoring operations or related employments. See also section 2(3), chapter 80, Laws of 1973, Washington Industrial Safety and Health Act.

(3) "Employee" means any longshoreman, or other person engaged in longshoring operations or related employments. See also section 2(4), chapter 80, Laws of 1973, Washington Industrial Safety and Health Act.

(4) "Vessel" includes every description of watercraft or other artificial contrivance used or capable of being used as a means of transportation on water, including special purpose floating structures not primarily designed for or used as a means of transportation on water.

(5) "Longshoring operations" means the loading, unloading, moving, or handling of cargo, ship's stores, gear, etc., on the docks from or to any vessel.

(6) "Related employments" means any employments performed as an incident to or in conjunction with longshoring operations including, but not restricted to, securing cargo, rigging, and employment as a porter, checker, watchman or lineman.

(7) "Gangway" means any ramp-like or stair-like means of access provided to enable employees or other personnel to board or leave a vessel, including accommodation ladders, gangplanks and brows.

(8) "Bulling" means the horizontal dragging of cargo across a surface with none of the weight of the cargo supported by the fall.

(9) "Crane" means a mechanical device with a boom or moving overhead trolley intended for lifting or lowering a load and moving it horizontally, in which the hoisting mechanism is an integral part of the machine. A crane may be a fixed or mobile machine.

(10) "Derrick" means a mechanical device intended for lifting, with or without a boom supported at its head by a topping lift from a mast, fixed A frame, or similar structure. The mast or equivalent member may or may not be supported by guys or braces. The boom, where

fitted, may or may not be controlled in the horizontal plane by guys (vangs). The term shall include shear legs.

(11) "Bulk cargo spout" means a spout, which may or may not be telescopic and may or may not have removable sections, but is suspended over the vessel from some overhead structure by wire rope or other means. Such a spout is often used with a thrower or trimming machine. A grain loading spout is an example of spouts covered by this definition.

(12) "Bulk cargo sucker" means a pneumatic conveyor which utilizes a spout-like device, which may be adjustable vertically and/or laterally, and which is suspended over a vessel from some overhead structure by wire rope or other means. An example of an installation of this nature is the grain sucker used to discharge grain from barges.

(13) "Hazardous cargo" includes:

(a) Any packaged commodity in the "list of explosives and other dangerous articles and combustible liquids" of the "dangerous cargoes" regulations of the U.S. Coast Guard (46 CFR 146.04-5) requiring a label. The exemptions mentioned at the foot of the list are exempted from this definition.

(b) Any packaged commodity in the list identified in (13)(a) of this section, not requiring a label but classed as a combustible liquid by Coast Guard Regulation 46 CFR 146.

(c) Any packaged liquid commodity in the list identified in (13)(a) of this section not requiring a label but classed as a hazardous article; or

(d) Any article not properly described by a name in that list but which is properly classified under the definition of those categories of dangerous articles given in 46 CFR 146.03-8 and is included in (13)(a), (b), or (c) of this section.

(14) "Active work area" means those fixed areas where workers are performing their normal work tasks.

(15) "Approved" means approved by the director of the department of labor and industries or his authorized representative: *Provided, however,* That should a provision of this chapter state that approval by an agency or organization other than the department of labor and industries is required, such as Underwriters' Laboratories or the Bureau of Mines, the provisions of WAC 296-24-006 shall apply.

(16) "Direct employer" means the stevedore company, steamship company or other employer on whose payroll the employee appears for the job concerned.

(17) "Dock" means any wharf, pier, terminal, warehouse, or any other place where cargo is stored, assembled, received, or prepared for transfer to or from a vessel, railway car or truck.

(18) "Dock facilities" means all piers, wharves, sheds, aprons, dolphins, cranes or other gear or equipment owned or controlled by the dock or facility owner, where cargo is stored, loaded, moved or handled to or from a vessel.

(19) "Flammable solid" means a solid substance other than one classified as an explosive, which is likely, under conditions incident to transportation, to cause fires

through friction, absorption of moisture, or spontaneous chemical changes.

(20) "Jobs of short duration" means the job is not anticipated to exceed one shift consisting of not more than eight hours.

(21) "Longshoreman" means any person who is employed for the purpose of loading or unloading or handling cargo on a dock only or in other operations as defined herein.

(22) "Oxidizing material" means a substance, such as chlorate, permanganate peroxide, or a nitrate that yields oxygen readily to stimulate the combustion of organic matter.

(23) "Dolphin" means a spar or spars used in mooring a vessel.

(24) "Bullrail" means a curb on the edge of the dock surface.

(25) "Bunk" means a device with stanchions that maintains a stabilized load of logs.

(26) "Qualified person" means persons who have demonstrated their abilities and experience and is granted authorization to examine and test cranes, cargo spouts and is certificated by the department of labor and industries, division of industrial safety and health. [Order 74-14, § 296-56-415, filed 4/22/74.]

**WAC 296-56-420 Education and first-aid standards.** It shall be the duty of every employer to comply with such standards and systems of education for safety as shall be, from time to time, prescribed for such employer by the director of labor and industries through the division of industrial safety and health or by statute.

(1) The provisions of the general safety and health standards as regards to the "safety educational standards" section, WAC 296-24-040, shall not apply to employees actually engaged in longshore and stevedore activities, but shall apply to other waterfront activity covered by those standards.

(2) Unless a first-aid room is close at hand and a qualified attendant is prepared to render first aid to employees on behalf of the employer, the employer shall furnish a first-aid kit for each vessel on which work is being performed, except that when work is being performed on more than one small vessel at one pier only one kit shall be required. The kit shall be kept in the immediate vicinity of the vessel and at least one employee holding a currently valid first-aid certificate shall be close at hand.

(3) The first-aid kit shall consist of a weatherproof container with individual sealed packages for each type of item. The contents of such kit shall include a sufficient quantity of at least the following types of items:

- Gauze roller bandages, 1 inch by 2 inch;
- Gauze compress bandages, 4 inch;
- Adhesive bandages, 1 inch;
- Triangular bandage, 40 inch;
- Ammonia inhalants and ampules;
- Antiseptic applicators or swabs;
- Burn dressing;
- Eye dressing;
- Wire or thin board splints;

Forceps and tourniquet.

(4) The contents of the first-aid kit shall be checked before being sent out on each job to ensure that all expended items have been replaced.

(5) There shall be available for each vessel being worked one Stokes basket stretcher, or its equivalent on the dock, permanently equipped with bridles for attaching to the hoisting gear, except that there need be no more than two stretchers on each pier. Stretchers shall be kept close to the vessels. [Order 76-7, § 296-56-420, filed 3/1/76; Order 74-14, § 296-56-420, filed 4/22/74; Rules (part), filed 9/24/65; Rules (part), filed 3/23/60.]

**WAC 296-56-430 Management's responsibility.** (1) It shall be the responsibility of management to establish and supervise:

(a) A safe and healthful working environment.

(b) An accident prevention program as required by these standards.

(c) Training programs to improve the skill and competency of all employees in the field of occupational safety and health.

(d) A system for reporting and recording accidents that will fulfill statistical requirements of State regulations.

(e) Shall report directly by telephone or telegraph (collect) to Olympia, division of industrial safety and health, fatals or potentially fatal accidents and shall make every effort not to move equipment, machine or materials involved unless failure to move would interfere with appropriate removal of victim. [Order 74-14, § 296-56-430, filed 4/22/74; Rules (part), filed 9/24/65; Rules (part), filed 3/23/60.]

**WAC 296-56-432 Employee's responsibility.** (1) Employees shall coordinate and cooperate with all other employees in an attempt to eliminate accidents.

(2) Employees shall study and observe all safety standards governing their work.

(3) Employees should offer safety suggestions, wherein such suggestions may contribute to a safer work environment.

(4) Employees shall apply the principles of accident prevention in their daily work and shall use proper safety devices and protective equipment as required by their employment or employer.

(5) Employees shall properly care for all personal protective equipment.

(6) Employees shall make a prompt report to their immediate supervisor, of each industrial injury or occupational illness, regardless of the degree of severity. [Order 74-14, § 296-56-432, filed 4/22/74.]

**WAC 296-56-435 Accident prevention program.** (1) An accident prevention program, wherein there is equitable management-employee participation, shall be established in all establishments, industrial plants, or operations.

(2) It shall be the responsibility of the employer to initiate and maintain such accident prevention programs

as may be necessary to comply with this section. The division of industrial safety and health may be contacted for assistance in initiating and maintaining an effective accident prevention program.

(3) All accident prevention programs shall be tailored to the needs of the particular operation.

(4) Employer and employee representatives, as elected, delegated or appointed, shall attend and actively take part in frequent and regular safety committee meetings.

(5) Accident prevention programs shall provide for employer-employee safety meetings and frequent and regular safety inspections of job sites, materials, equipment, and operating procedures.

(6) A record of safety activities, such as inspections and meetings, shall be maintained by the employer for a period covering the previous twelve months and shall be made available, upon request, to noncompliance personnel of the department of labor and industries.

(7) The employees shall individually comply with all safety rules and cooperate with management in carrying out of the accident prevention program.

(8) To make effective the preceding statement and promote on-the-job accident prevention, committees shall be established in each port. These committees shall consist of an equal number of port or stevedore company and longshoremen representatives at the job level with the industry or company safety supervisor serving as secretary and coordinator. A function of this committee is to obtain the interest of the workers in accident prevention by providing for their actual participation in the program, to direct their attention to the real causes of accidents, and provide a means for making practical use of their intimate knowledge of working conditions and practices.

(9) It is further intended that this program will produce mutually practical and effective recommendations regarding correction of accident-producing circumstances and conditions. [Order 74-14, § 296-56-435, filed 4/22/74.]

**WAC 296-56-436 General safety requirements.** (1) Unsafe work area. (a) No person shall be required to work on the dock, under or in an area of ship's gear that is defective or is being unsafely operated.

(b) Gear or equipment, when not in use, shall be removed from the work areas, or shall be so placed as not to present a hazard.

(c) Slippery conditions shall be eliminated as they occur.

(d) Loose paper, dunnage and debris shall be collected as the work progresses and be kept clear of the work area.

(e) Nails: (i) Nails which are protruding from shoring or fencing in the work areas shall be bent over or otherwise rendered harmless.

(ii) Dunnage, lumber, or shoring material in which there are visibly protruding nails shall be removed from the immediate work area, or, if left in that area, the nails shall be bent over or otherwise rendered harmless.

(f) Employees shall not be exposed to ice which may fall on them from any overhead structures.

(g) Longshoring operations shall not be carried on when chipping or scaling of decks, bulkheads or sides of vessels creates excessive noise which interferes with communication of warnings or instructions.

(h) Longshoring operations shall not be carried on where employees are exposed to injurious light rays, hot metal, or sparks any of which result from welding or cutting. (Refer to WAC 296-24-70003, Eye protection.)

(i) Longshoring operations shall not be carried on where employees are exposed to unsafe concentrations of dust or vapors from sand blasting, spray painting or other sources.

(2) Preinspection of working areas. Before allowing employees to enter or work in stowage spaces or areas in which explosives, poisonous, noxious, dusty or gaseous cargoes have been previously stored or placed, the making of such spaces free of known safety or explosive hazards shall be the responsibility of the employer.

(3) Longshoring operations shall not be carried on in the immediate vicinity of uncovered garbage or in the way of overboard discharges from sanitary lines unprotected by a baffle or splash boards. [Order 76-7, § 296-56-436, filed 3/1/76; Order 74-14, § 296-56-436, filed 4/22/74.]

**WAC 296-56-43801 Eye protection.** (1) When, because of the nature of the cargo being handled, an eye hazard from flying particles or heavy dust exists, employees shall be protected by eye protection equipment meeting the specifications prescribed by the American National Standard (ANSI) Practice for Occupational and Educational Eye and Face Protection, Z87.1 (1968).

(2) Eye protection equipment shall be maintained as necessary to provide complete protection for employee.

(3) Eye protection equipment which has previously been used shall be cleaned and disinfected before it is issued by the employer to another employee.

(4) Employees who wear corrective spectacles while engaged in eye hazardous work shall be protected by eye protection equipment of a type which can be worn over personal spectacles, except that glasses with prescription ground safety lenses may be worn in lieu of cover goggles when such glasses provide suitable protection against the hazard or hazards involved. Prescription ground safety lenses shall meet the impact test as prescribed by American National Standard (ANSI) Practice, Z87.1-1968. [Order 74-14, § 296-56-43801, filed 4/22/74.]

**WAC 296-56-43803 Respiratory protection.** The respiratory protection requirements of the general occupational health standards, chapter 296-62 WAC, shall apply. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-56-43803, filed 11/30/83; Order 74-14, § 296-56-43803, filed 4/22/74.]

**WAC 296-56-43805 Protective clothing.** (1) Employees handling cargo shall be protected by impervious

clothing when exposed to ruptured, leaking or inadequate containers, the contents of which may cause burns, skin irritation or be otherwise injurious to health.

(2) Protective clothing which has been previously worn shall be cleaned and disinfected before it is issued by the employer to another employee. Harmful cleaning material residuals shall be entirely removed prior to re-issue. [Order 74-14, § 296-56-43805, filed 4/22/74.]

**WAC 296-56-43807 Foot protection.** (1) The employer shall arrange through means, such as vendors or local stores, or otherwise, to make safety shoes readily available to all employees, and shall encourage their use.

(2) Employees working regularly in jobs covered by these standards shall provide appropriate footwear, including safety-toed shoes when engaged in moving of lumber, handling of rails, moving heavy objects, and other similarly hazardous types of work. Sneakers, house slippers, and similar footwear shall not be worn by any person covered by these standards. [Order 74-14, § 296-56-43807, filed 4/22/74.]

**WAC 296-56-43809 Head protection.** (1) Employees shall be protected by protective hats meeting the specifications contained in the American National Standard Safety Requirements for Industrial Head Protection, Z89.1 (1969).

(2) Protective hats which have been previously worn shall be cleaned and disinfected before they are issued by the employer to another employee. [Order 74-14, § 296-56-43809, filed 4/22/74.]

**WAC 296-56-43811 Required clothing, caps, etc.** Workers shall wear clothing designed to protect them from hazards to which they may be exposed while performing their duties. Consideration must be given to temperatures in certain areas in which persons work. Workers whose hair is long enough to be caught in machinery or equipment around which they work shall wear caps, hair nets or other protection which will adequately confine the hair while performing their duties. [Order 74-14, § 296-56-43811, filed 4/22/74.]

**WAC 296-56-43813 Protection from falling.** Employees doing maintenance work on cranes, spouts or similar types of equipment, 8 feet from the ground or surface and not in an area that is protected by any standard safeguards such as walkways with standard railings, ladders with protective cages, shall wear a safety belt and lanyard which can be attached to the structure for their protection from falling. [Order 74-14, § 296-56-43813, filed 4/22/74.]

**WAC 296-56-43815 Personal flotation devices.** (1) Employees working on, over or along water, where the danger of drowning exists, shall be provided with and shall wear approved personal flotation devices.

(a) Employees are not considered exposed to the danger of drowning when;

(i) The water depth is known to be less than chest deep on the exposed individual;

(ii) When working behind standard height and strength guardrails;

(iii) When working inside operating cabs or stations which eliminate the possibility of accidentally falling into the water;

(iv) When wearing approved safety belts with lifeline attached so as to preclude the possibility of falling into the water.

(b) Prior to and after each use, personal flotation devices shall be inspected for defects which would reduce their designed effectiveness. Defective personal flotation devices shall not be used.

(c) To meet the approved criteria required by subdivision (1), a personal flotation device shall be approved by the United States Coast Guard as a Type I PFD, Type II PFD, Type III PFD, or Type V PFD, or their equivalent, pursuant to 46 CFR 160 (Coast Guard life-saving equipment specifications) and 33 CFR 175.23 (Coast Guard table of devices equivalent to personal flotation devices). Ski belt or inflatable type personal flotation devices are specifically prohibited.

(2) Life ring. (a) Along docks, walkways or other fixed installations on or adjacent to open water more than five feet deep, approved life rings with line attached shall be provided. The life rings shall be spaced at intervals not to exceed 200 feet and shall be kept in easily visible and readily accessible locations.

(b) When employees are assigned work at other casual locations where exposure to drowning exists, at least one approved life ring with line attached shall be provided in the immediate vicinity of the work assigned.

(c) Work assigned over water where the vertical drop from an accidental fall would exceed 50 feet, shall be subject to specific procedures as approved by the department.

(d) Lines attached to life rings shall be at least 90 feet in length, at least 1/4 inch in diameter and have a minimum breaking strength of 500 pounds.

(e) Life rings must be United States Coast Guard approved 30 inch size.

(f) Life rings and attached lines must be maintained to retain at least 75 percent of their designed buoyance and strength. [Order 76-7, § 296-56-43815, filed 3/1/76.]

**WAC 296-56-440 Minimum safety requirements for docks and dock facilities.** Nothing contained in this section shall be construed to mean that the direct employer or employees are responsible for the repair, construction of or otherwise bringing into compliance, facilities over which they have no control.

(1) Working prohibited on unsafe docks or dock facilities. Employers shall not require employees to perform work on docks or dock facilities which said direct employer knows or should have known do not meet the minimum safety requirements outlined in this section, except for maintenance workers.

(2) Known unsafe conditions by employees. Employees shall not work on docks or dock facilities which they know or should have known do not meet the minimum safety requirements outlined in this section.

(3) Bulletin boards. At each dock, pier, warehouse or designated area at the job site, there shall be installed a safety bulletin board.

(4) Posting of notices. It shall be the responsibility of the employer to post at prominent places in or adjacent to the work area, legible notices stating:

(a) The location of stretchers, blankets and first-aid equipment and telephones. (Where possible, directional arrows should point to locations.)

(b) The phone numbers of doctors, ambulance services and hospitals within the area and the phone numbers of the police department or other law enforcement agencies. (Where possible, the emergency phone numbers shall be posted adjacent to telephones which would be used for emergency calls and on or inside the cover of first-aid cabinets.)

(5) Ventilation. All areas where employees are required to work shall be ventilated as required by the "general occupational health standards," chapter 296-62 WAC.

(6) Lighting. All areas shall be adequately lighted to meet the requirements of this code.

(a) Active work areas shall be lighted in such a manner the general area being worked will be illuminated at a minimum intensity of approximately five foot candles measured thirty inches above the dock floor. Supplemental lighting shall be utilized for conditions where more than the minimum intensity is necessary for a safe operation.

(b) A minimum of three foot candles (3 F.C.) illumination measured in the manner described above shall be maintained at all points along the bull rail.

(c) The quality of light shall be such that it is reasonably free from glare, and has correct direction, diffusion and distribution.

(d) Lighting shall not be obstructed by any placement of cargo, structures or other objects which will create a shadow in the work area. Portable lighting shall be provided in these areas that do not meet minimum requirements of this subdivision.

(7) Portable illumination. (a) All walking and working areas shall be illuminated.

(b) Portable lights shall meet the following requirements:

(i) Portable lights shall be equipped with reflectors and guards to prevent flammable and other material from coming in contact with the bulb, except that guards are not required where the construction of the reflector is such that the bulb is recessed.

(ii) Portable lights shall be equipped with heavy duty electric cords and may be suspended by such cords only when the means of attachment of the cord to the light is such as to prevent the light from being suspended by the electrical connections. All connections and insulation shall be maintained.

(iii) Lighting wires and fixtures for portable lights shall be so arranged as to be free from contact with drafts, running gear, or other moving equipment.

(8) Washroom facilities. All docks, warehouses or similar working areas shall be equipped with clean, ventilated washroom facilities with hot running water provided.

(9) Toilet and sanitary facilities. All docks, warehouses, or similar working areas shall be provided with proper toilet and sanitary facilities. Such facilities shall be kept in good repair and in a sanitary condition. (Refer to the general safety and health standards, WAC 296-24-12013.)

(10) Lunchroom facilities. Lunchroom facilities for all docks must be separated from the toilet facilities. Both facilities may be located in the same building, providing they are separated by a solid wall. A reasonably tight fitted door may be installed in such wall between the facilities.

(a) General. In all places of employment where employees are permitted to lunch on the premises, sufficient space for that purpose shall be provided for the maximum number of employees who may use such space at one time. Such space shall be physically separate from any location where there is exposure to toxic materials.

(b) Waste disposal containers. Covered receptacles constructed of a smooth, corrosion-resistant, easily cleanable, or disposable material, shall be provided by the employer and used by the employees for the disposal of all waste food. Such receptacles shall be emptied not less than once daily and shall be maintained in a clean and sanitary manner.

(c) Location. (i) No food shall be stored or eaten where there are present any toxic materials or substances that may be injurious to health.

(A) No food shall be stored or eaten in any toilet room.

(B) In every establishment where there is exposure to injurious dusts or other toxic materials, a separate lunchroom shall be maintained unless it is convenient for the employees to lunch away from the premises. The following number of square feet per person, based on the maximum number of persons using the room at one time, shall be required:

Number of persons	Square feet per person
25 or less _____	13.
26-74 _____	12.
75-149 _____	11.
150 and over _____	10.

(11) Dock and warehouse floors. All dock and warehouse floors shall be constructed and maintained in such a way that they will safely support all cargo and equipment to be used on them. Floors shall be kept free from protruding nails, splinters, loose boards, or any other articles or substance that would create a tripping or slipping hazard.

(12) Warehouse door counterbalances. Counterbalances for warehouse doors shall be enclosed or the area below the counterbalance shall be safeguarded in such a manner as to render it impossible for a person to position any portion of his body below the suspended counterbalance.

(13) Aisleways and fire exits. All fire exits and aisleways of all docks and warehouses shall be clearly marked and kept clear. All main aisleways shall be wide enough to permit passage of a fire truck.

(a) There shall be a 28" clearance maintained where employees use a passageway to an exit. Refer to the general safety and health standards WAC 296-24-56511.

(14) Posting load capacities. Load capacities of all cargo docks shall be prominently posted in terms of pounds per square foot.

(15) Life rings. On all docks, spaced at intervals not to exceed two hundred feet, and so located to be readily available in case of emergency, there shall be at least one life ring of an approved standard type with 90 feet of line attached.

(16) Life ladders. On all docks spaced at intervals not to exceed four hundred feet, there shall be provided substantial built-in-place ladders to reach lowest water use. When portable ladders are to be used, ladder may be bolted to the bullrail or dock structure or ladder can be secured to an embedded eye bolt in a concrete dock surface. The immediate area where such ladders or fastenings are located shall be painted with a bright color or of a color which contrasts with the surrounding area. There shall be a ladder at each end of the dock.

(17) Bull rails. All docks shall have bull rails which will prevent any mobile equipment being safely operated on the dock from crossing the bull rail.

(18) Saveall and safety net fastenings. All bull rails shall be provided with rings every twenty feet or other safe means for securing safety nets and savealls.

(19) Power outlets. Power outlets installed to supply power to vessels shall be located in such a manner that the workers will not be in contact with supply lines. Unprotected power lines shall not be driven over by equipment. If located on the underside or waterside of the bull rail, a well lighted walkway with hand rails shall be provided to the power outlets. Refer to the general safety and health standards, WAC 296-24-75007 and 296-24-75011.

(20) Warning system. Where railway tracks are installed on docks and switching on such tracks creates a hazard to workers or equipment moving about on the dock, or moving from inside a warehouse onto the dock a warning system shall be installed to warn persons that a switch is being made. This warning may be done by the installation of flashing light, warning gongs, or other methods.

(21) Maximum speed. The maximum speed for forklift jitneys on all docks shall not exceed eight miles per hour. This speed limit shall be prominently posted on such docks.

(22) Speed bumps shall be located in truck and vehicle traffic lanes, where such speed bumps do not interfere with the normal traffic pattern of cargo moving equipment such as forklifts, straddle carriers and yard container trucks without shock absorbers, which may cause an accident when crossing the speed bump by tipping over or spilling a load of cargo.

(23) All steel plates, boards, etc. used to temporarily cover small holes or weakened surfaces shall be secured in such a manner as to prevent accidental movement.

(24) All large openings or weakened surfaces shall be barricaded on all exposed sides with barricades equipped with blinkers, flashing lights, or reflectors.

(25) Areas around bitts or cleats where workers perform their duties as line handlers shall be lighted as required in this section and have a nonslip surface around each bitt or cleat.

(26) Walkways on which mooring hausers must be moved may have the handrail omitted on the line handling side provided a 6" toeboard is installed. [Order 74-14, § 296-56-440, filed 4/22/74; Order 69-3, § 296-56-440, filed 5/26/69, effective 7/1/69; § I, Rules 1.010-1.030, filed 9/24/65; Rule (part), filed 3/23/60.]

**WAC 296-56-442 Crane and spout certification, application.** The following rules WAC 296-56-44201 through 296-56-44209 shall apply to any fixed or movable shoreside crane, cargo spout, or suckers, derricks or similar types of equipment used to handle cargo or materials between a dock and vessel or vessel to vessel. All such equipment shall be tested and/or inspected, and certificated in accordance with the requirements specified in the following rules.

These rules shall not apply to small industrial crane trucks as described and illustrated in USASI B56.1-1969, Fork Lifts and Other Cargo Moving Vehicles, hulets, dock leg elevators, bulk coal loading facilities, vertical pocket conveyors, or facilities used for the transfer of bulk liquids. [Order 74-14, § 296-56-442, filed 4/22/74.]

**WAC 296-56-44201 Qualifications of persons making inspections, issuance of certificates, posting certificates, etc.** (1) Inspection and test certificates shall be issued only for that equipment which meets or exceeds the requirements as specified in these rules. All inspection and test certificates shall be issued through the office of the supervisor of industrial safety and health, department of labor and industries, and shall be valid for a period of not to exceed one year from the date of issuance.

Equipment requiring certification shall be inspected by representatives of the division of industrial safety and health; or individuals who have received a "certificate of competency" from the supervisor of industrial safety and health indicating that they are qualified and capable of performing such work.

When deficiencies are found they shall be noted on forms provided for such purpose by the division of industrial safety and health. Copies shall be delivered to the owner of the equipment and the division of industrial safety and health at the Olympia office by the person conducting such tests and/or inspections.

A certificate of unit test and/or examination of equipment shall not be issued for any equipment found not to be in compliance with the provisions of this chapter.

Persons desiring a "certificate of competency" shall demonstrate and document their capabilities and qualifications to the supervisor of industrial safety and health who will issue such certificates to those persons whom he considers qualified. The supervisor of industrial safety and health reserves the right to revoke such certificates at any time for cause. A "certificate of competency" shall be issued for a period of not to exceed three years. Applications for renewal may be made not more than sixty days prior to the expiration date shown on the certificate.

The supervisor of industrial safety and health, or his representative, reserves the right to inspect such equipment or to witness or attend any test or inspection in order to ascertain the adequacy of any certification activity performed.

(2) Unless otherwise exempted, all cranes or derricks required to be certificated by these regulations shall have a current test certificate posted in the operator's cab or station and no person shall be required to operate such crane or derrick unless a current valid certificate is posted. [Order 74-14, § 296-56-44201, filed 4/22/74.]

**WAC 296-56-44203 Unit proof load test and inspection.** Cranes and derricks shall be proof load tested, rated and certificated in tons (2,000 lbs. = 1 ton). Cranes and derricks shall be inspected and unit proof load tested prior to being put into use, after any significant modification or repairs of structural parts, or when deemed necessary by the supervisor of industrial safety and health; however, each crane or derrick shall be unit proof load tested at least once during each twelve-month period. Unit proof load tests shall be carried out by the use of weights as a dead load. When use of weights for unit proof load tests is not possible or reasonable a dynamometer or other recording test equipment may be used. Such equipment shall be tested for accuracy with certified calibrating equipment within twelve months prior to being used and a copy of the certified calibration test shall have been available to authorized representatives of the division of industrial safety and health upon request.

The weight of the objects used for a dead load weight test shall be certified and a record of the weight shall be made available upon request. Any replacements or repairs deemed necessary by the person conducting a test shall be carried out before application of the required proof load unit test.

(1) The proof load test for derricks shall be conducted as follows:

Safe Working Load	Proof Load
to 20 tons	25% in excess
20-50 tons	5 tons in excess
over 50 tons	10% in excess of manufacturer's recommended lifting capacity.

Proof load shall be applied at the designed maximum and minimum boom angles or radii, or if this is impracticable, as close to these as practicable. The angles or

radii of test shall be stated in the certificate of test. Proof loads shall be swung as far as possible in all directions. The weight of auxiliary handling devices such as spreader bars, robots, clams, magnets or other gear shall be considered a part of the load. Brakes shall be tested by holding the proof load suspended without other mechanical assistance. After satisfactory completion of a unit proof load test the derrick and all component parts thereof shall be carefully examined and, if necessary, nondestructive tests may be conducted to assure that the equipment is safe for use and has not been damaged in the unit proof load testing process.

(2) Unit proof load tests for cranes shall be carried out where applicable with the boom in the least stable direction relative to the mounting, based on the manufacturer's specifications.

Unit proof load tests for cranes shall be based on the manufacturer's load ratings for the conditions of use and shall, except in the case of bridge type cranes utilizing a trolley, consist of application of a proof load of 10 percent in excess of the load ratings at maximum and minimum radius, and at such intermediate radii as the certifying authority may deem necessary in the circumstances. (The manufacturer's load ratings are usually based upon percentage of tipping loads under some conditions and upon limitations of structural competence at others, as well as on other criteria such as type of crane mounting, whether or not outriggers are used, etc. Some cranes utilizing a trolley may have only one load rating assigned and applicable at any outreach. It is important that the manufacturer's ratings be used.) Trolley equipped cranes shall be subject to a proof load of 25% in excess of the manufacturer's specifications shall be subject to approval by the certifying authority. The weight of all auxiliary handling devices such as, but not limited to, magnets, hooks, slings, and clamshell buckets shall be considered part of the load.

(3) In the event neither manufacturer's data nor design data on safe working loads (including any applicable limitations) are obtainable, the safe working load ratings assigned shall be based on the owner's information and warranty that those so assigned are correct. Unit test certificates shall state the basis for any such safe working load assignment.

(4) If the operation in which equipment is engaged never utilizes more than a fraction of the safe working load rating, the owner of such equipment may, at his option, have the crane or derrick certificated for and operated at a lesser maximum safe working load in keeping with the use and based on radius and other pertinent factors: *Provided, however,* That the equipment concerned is physically capable of operation at the original load rating and the load reduction is not for the purpose of avoiding correction of any deficiency.

(5) Safe working load ratings shall not be increased beyond the manufacturer's ratings or original design limitations without prior approval by the accredited certification agency. Such prior approval shall be based on the manufacturer's approval of such increase or documented engineering design analysis or both. All necessary structural changes shall be completed prior to

approval by the accredited certification agency. [Order 74-14, § 296-56-44203, filed 4/22/74.]

**WAC 296-56-44205 Examination and inspection of cranes and derricks.** An examination shall be carried out in conjunction with each annual unit proof load test. The accredited person, or his authorized representative, shall make a determination as to correction of deficiencies found. The examination shall cover the following points as applicable: (Refer to WAC 296-56-44201 for definition of accredited person.)

(1) All functional operating mechanisms shall be examined for improper function, maladjustment, and excessive component wear, with particular attention to sheaves, pins, and drums. The examinations shall include operation with partial load, in which all functions and movements, including, where applicable, maximum possible rotation in both directions, are performed.

(2) All safety devices shall be examined for malfunction.

(3) Lines, tanks, valves, drains, pumps, and other parts of air or hydraulic systems shall be examined for deterioration or leakage.

(4) Rope reeving shall comply with the manufacturer's recommendations.

(5) Deformed, cracked, or excessively corroded members in crane structure and boom shall be repaired or replaced as necessary.

(6) Loose bolts, rivets, or other connections shall be corrected.

(7) Worn, cracked, or distorted parts affecting safe operation shall be corrected.

(8) All brakes, used to control the load, boom or travel of the crane, shall be tested. Air, hydraulic, or electrically operated brakes shall be of such design as to set and stop the load if the source of power fails.

(9) Brake and clutch system parts, linings, pawls, and ratchets shall be examined for excessive wear and free operation.

(10) Load, boom angle, or other indicators shall be checked over their full range. Defects in such indicators shall be immediately corrected.

(11) Where used, clamshell buckets or other similar equipment, such as magnets, etc., shall be carefully examined in all respects, with particular attention to closing line wires and sheaves. The accredited person may supplement such examination by requesting any operational tests as may be appropriate.

(12) Careful examination of the junction areas of removable boom sections, particularly for proper seating, cracks, deformities, or other defects in securing bolts and in the vicinity of such bolts, shall be made.

(13) All platforms, steps and footwalks located on cranes where workers are exposed to the hazard of slipping shall be of a nonslip material. Wire rope used for railings on cranes shall be kept taut at all times.

**NOTE:** In critical areas such as footwalks along booms, a grating material should be used.

(14) It shall be ascertained that no counterweights in excess weight of the manufacturer's specifications shall be fitted or used.

(15) Such other examination or supplemental functional tests shall be made as may be deemed necessary by the accredited person under the circumstances.

(16) Wire rope. (a) All wire rope shall be inspected once a month, dependent upon conditions to which the wire ropes are subjected, and at intervals not exceeding a twelve-month period. Records of inspection of wire rope shall be kept and shall be available to the department of labor and industries representative. Records shall be kept for one year. Refer to the general safety and health standards. WAC 296-24-240.

(b) Wire rope shall not be used if in any length of eight diameters, the total number of visible broken wires exceeds 10 percent of the total number of wires, or if the rope shows other signs of excessive wear, corrosion, or defect. Particular attention shall be given to the condition of those sections of wire rope adjacent to any terminal connections, those sections exposed to abnormal wear, and those sections not normally exposed for examination.

(c) Documentation, available for inspection, shall include wire rope test certificates relating to any replacements made since the last unit test or annual examination as required.

(d) Wire rope and replacement wire rope shall be of the same size, same or better grade, and same construction as originally furnished by the equipment manufacturer or contemplated in the design, unless otherwise recommended by the equipment or wire rope manufacturer due to actual working condition requirements. In the absence of specific requirements as noted, wire rope shall be of a size and construction suitable for the purpose, and shall have the capacity to handle 4 times the heaviest expected load and verified by wire rope test certificate.

(e) Wire rope in use on equipment previously constructed and prior to initial certification of said equipment shall not be required to be tested but shall be subject to thorough examination at the time of initial certification of the equipment.

(17) Accessory components, such as hooks, shall be carefully examined periodically and at the time of annual examination and inspection. Cracked or deformed hooks shall be discarded immediately and not reused on any equipment subject to the provisions of this chapter.

(18) In the event that heat treatment of any loose gear is recommended by the manufacturer, the latest heat treatment certificate, attesting to compliance with the manufacturer's specifications shall be part of the available documentation. Heat treatment shall be carried out in accordance with the specifications of the manufacturer by persons competent to perform such work.

(19) Replacement parts shall be of equal or better quality than the original equipment and suitable for the purpose. Repairs or modifications shall be such as to render the equipment equal to or better than the original

construction or design. [Order 74-14, § 296-56-44205, filed 4/22/74.]

**WAC 296-56-44207 Equipment and information to be installed or posted on cranes or derricks.** (1) The following requirements shall be met in the use of cranes hoisted aboard a vessel for use thereon or used to service a vessel from the dock, shore, or another vessel, and in the use of any other crane or derrick not a part of a vessel's permanent equipment, but used in longshoring operations.

(a) The crane weight shall be posted on all mobile cranes hoisted aboard vessels for temporary use thereon.

(b) The rated safe working loads of each crane and derrick, for the conditions of use, shall not be exceeded.

(c) No counterweights in excess of manufacturer's (or design) specifications shall be fitted. All equipment shall be used in accordance with manufacturer's (or design) specifications and recommendations.

(d) Pulling of barges or rail cars, and pulling of cargo in such a way as to exert side loading stresses upon crane booms shall not be permitted.

(e) No crane or derrick shall be used in any case where a visible defect affecting safe use exists.

(f) All crane controls should be in the same location on all cranes so that different crane operators can perform these operations safely.

(2) Unless exempted by the provisions of (2)(h) of this section, every crane used to load or discharge cargo into or out of a vessel shall be fitted with a load indicating device or alternative device in proper working condition which shall meet the following criteria:

(a) The type or model of any load indicating device which is used may be such as to provide (i) a direct indication in the cab of actual weight hoisted or a means of determining this by reference to crane ratings posted and visible to the operator, except that the use of a dynamometer or simple scale alone will not meet this requirement, or (ii) an automatic weight-moment device or computer providing indications in the cab according to the radius and load at the moment; or alternatively (iii) a device may be used which shall prevent an overloaded condition.

(b) Accuracy of the load indicating device, weight-moment device, or overload protection device shall be such that any indicated load (or limit), including the sum of actual weight hoisted and additional equipment or "add ons" such as slings, sensors, blocks, etc., is within the range from no less than 95 percent of the actual true total load (5 percent overload) to 110 percent of the actual true total load (10 percent underload). Such accuracy shall be required over the range of the daily operating variables to be expected under the conditions of use.

(c) The device shall permit the operator to determine before making any lift that the indicating or substitute system is operative. In the alternative, if the device is not so mounted or attached and does not include such means of checking, it shall be certified by the manufacturer to remain operable within the limits stated in (2)(b) of this

section for a specific period of time. Checks for accuracy, using known values of load, shall be performed at the time of every certification survey (see WAC 296-56-442 through 296-56-44209) and at such additional times as may be recommended by the manufacturer.

(d) When the load indicating device or alternative system is so arranged in the supporting system (crane structure) that its failure could cause the load to be dropped, its strength shall not be the limiting factor of the supporting system (crane structure).

(e) Marking shall be conspicuously placed giving (i) units of measure in pounds or both pounds and kilograms, (ii) capacity of the indicating system, (iii) accuracy of the indicating system, and (iv) operating instructions and precautions. Data providing (i) the means of measurement, (ii) capacity of the system, (iii) accuracy of the system, and (iv) operating instructions and precautions shall similarly be provided in the case of systems utilizing indications other than actual weights. If the system used provides no readout, but is such as to automatically cease crane operation when the rated load limit under any specific condition of use is reached, marking shall be provided giving the make and model of device installed, a description of what it does, how it is operated, and any necessary precautions regarding the system. All weight indications, other types of loading indications, and other data required shall be readily visible to the operator.

(f) All load indicating devices shall be operative over the full operating radius. Overall accuracy shall be based on actual applied load and not on full scale (full capacity) load.

**NOTE:** For example, if accuracy of the load indicating device is based on full scale load and the device is arbitrarily set at plus or minus 10 percent it would accept a reading between 90,000 and 110,000 lbs., at full capacity of a machine with 100,000 lbs., maximum rating, but would also allow a reading between zero and 20,000 lbs., at that outreach (radius) at which the rating would be 10,000 lbs. capacity—an unacceptable figure. If, however, accuracy is based on actual applied load under the same conditions, the acceptable range would remain the same with the 100,000 lb. load but becomes a figure between 9,000 and 11,000 lbs., a much different and acceptable condition, at the 10,000-lb. load.

(g) When the device uses the radius as a factor in its use or in its operating indications, the indicated radius (which may be in feet and/or meters, or degrees of boom angle, depending on the system used) shall be a figure which is within the range of a figure no greater than 110 percent of the actual radius to a figure which is no less than 97 percent of the actual (true) radius. When radius is presented in degrees, and feet or meters are required for necessary determinations, a conversion chart shall be provided.

(h) The load indicating device requirements of this subsection do not apply to a crane (i) of trolley equipped bridge type while handling containers known to be and

identified as empty, or loaded, and in either case in compliance with the provisions of WAC 296-56-50023(2) or while hoisting other lifts by means of lifting beam supplied by the crane manufacturer for the purpose and in all cases within the crane rating; (ii) while handling bulk commodities or cargoes by means of clamshell bucket or magnet; (iii) while used to handle or hold hoses in connection with transfer of bulk liquids or other hose handled products; or (iv) while the crane is used exclusively to handle cargo or equipment the total actual gross weight of which is known by means of marking of the unit or units hoisted, when such total actual gross weight never exceeds 11,200 lbs., and when 11,200 lbs., is less than the rated capacity of the crane at the maximum outreach that is possible under the conditions of use at the time.

(3) Cranes or derricks having a movable working boom shall have a radius or boom angle indicator installed. This shall be located where the operator can readily read it while in his normal operating position.

There shall also be installed a durable rating chart visible to the operator, covering the complete range of the manufacturer's capacity ratings at all operating radii, for all permissible boom lengths and jib lengths, with alternate ratings for optional equipment affecting such ratings. All precautions or warnings shall be included. The length of each boom section shall be plainly marked on the section.

(4) Limit switches shall be installed on the main line and whip line assemblies which will deactivate the hoisting power when a load reaches the upper limits of travel and at such other places as required by this chapter. Line limit switches shall be tested prior to or at the beginning of each shift to determine if they are functioning properly. Any malfunction shall be reported to the person in charge immediately and shall be repaired at the first reasonable opportunity.

(5) Each crane or derrick shall be equipped with sufficient lights to maintain five foot candles in the working area around the load hook. All crane ladders and machinery houses shall be illuminated at a minimum of 2 candle power.

Light fixtures connected to the boom, gantry legs, or machinery house shall be provided with safety devices which will prevent the light fixture from falling in case of bracket failure.

(6) When there is a possibility of raising a crane boom to an angle above horizontal at which it may endanger the operator or create other hazards, a mechanical device (boom stop or limit switch) shall be installed which will stop the upward travel. If 2 stops are provided, each shall exert uniform resistance to prevent twist torque.

(7) Operating controls shall be marked as to function or an explanation of the controls shall be posted in full view of the operator.

(8) On cranes having accessory components controlled by the operator, by switches or levers, shall have them located as far as practicable in the same location in all cranes serving the same function.

(9) A communications system shall be installed on all gantry type cranes to provide a positive method of communication between the crane operator's cab and the base of the gantry.

(10) When two or more gantry type cranes are operated on the same runway, hydraulic or spring loaded bumpers or other effective means, shall be installed to prevent the cranes from being damaged in the event of a collision.

(11) Electronic devices may be installed to prevent collision subject to approval of the accredited certification agency.

(12) All trucks on rail gantry cranes shall be guarded to protect employees from exposed moving parts, such as gears, set screws, projecting keys, chain sprockets and wheels.

(13) On all rail gantry cranes, truck guards shall extend on the ends of the trucks, close to the top of the rail to prevent worker's feet from being caught between the rail and wheel. This subsection would not apply if rail sweeps are present.

(14) Wire loop guards shall be installed on ends of all crane trucks to alert workers of moving crane by contact.

(15) All hydraulic cylinders used to control crane booms or to provide crane stability (outriggers) shall be equipped with a pilot operated check valve or a device which will prevent the boom or outrigger from retracting in case of failure of a component of the hydraulic system.

(16) Warning device. Except for floor operated cranes, a gong or other effective warning signal shall be provided for each crane equipped with powered traveling mechanism.

(17) A wind indicating device shall be provided which will give a visible or audible alarm to the crane operator at a predetermined wind velocity. (Refer to WAC 296-24-23503.)

(18) Gantry cranes shall be provided with automatic rail clamps or other devices to prevent the crane from moving when not being used on when power is off. (Refer to WAC 296-24-23503.)

(19) Rail stops shall be provided and shall be of a height at least equal to the radius of the wheel. An automatic electronic travel limit switch may be used; however, this device does not eliminate the requirements of rail stops in this subsection unless approved by the department of labor and industries. [Order 74-14, § 296-56-44207, filed 4/22/74.]

**WAC 296-56-44209 Cargo spouts, suckers and similar types of equipment.** All cargo spouts, suckers and similar types of equipment shall be identified by number, manufacturer or by another method acceptable to the division of industrial safety and health. All component parts of the equipment, including the supporting structures or members, shall be examined annually by persons qualified by the division of industrial safety and health. The equipment shall not be considered satisfactory unless, in the opinion of the person authorized to

make the examination, it is deemed fit to serve its intended function. The certificate of examination by the division of industrial safety and health shall note the condition of the equipment, and shall be kept at the office where the equipment is located and made available upon request by any authorized representative of any regulatory agency. [Order 74-14, § 296-56-44209, filed 4/22/74.]

**WAC 296-56-446 Cranes and crane operations-- Scope and application.** All sections of this chapter which include WAC 296-56-446 in the section number apply to cranes and crane operations. [Order 74-14, § 296-56-446, filed 4/22/74.]

**WAC 296-56-44601 Operators.** New operators shall be trained in safe crane operation before being permitted to operate a crane. The training method shall be approved by the office of the supervisor of the division of industrial safety and health. [Order 74-14, § 296-56-44601, filed 4/22/74.]

**WAC 296-56-44603 Signalmen.** A signalman shall be required when a crane operator's visibility is obstructed. When a signalman is required to transmit hand signals, he shall be in such a position that the operator can plainly see the signals. [Order 74-14, § 296-56-44603, filed 4/22/74.]

**WAC 296-56-44605 Signals.** All operators and signalmen shall use standard signals as illustrated for long-shore crane operations. (See Appendix C and D, at the end of this chapter.) [Order 74-14, § 296-56-44605, filed 4/22/74.]

**WAC 296-56-44607 Signalman for power units.** Where power units, such as cranes and winches are utilized and signaling is required, the operator shall have definite instructions as to who is authorized to give signals. The operator shall take signals only from such authorized person. In case of emergency, any worker shall be authorized to give a stop signal.

(1) No draft shall be hoisted unless the winch or crane operator(s) can clearly see the draft itself or see the signals of any signalman associated with the operation.

(2) Loads requiring continuous manual guidance while in motion shall be provided with tag lines. [Order 74-14, § 296-56-44607, filed 4/22/74.]

**WAC 296-56-44609 Radio communication.** When practical and safe, crane operators shall be provided with a radio or telephone to be in contact with the signalman or crane chaser in those cases where a signalman or crane chaser is required. [Order 74-14, § 296-56-44609, filed 4/22/74.]

**WAC 296-56-44611 Obstructions.** Obstructions shall not be placed in the immediate active travel area of the crane or within two feet of moving or traveling parts which would create an area where a worker could be pinned, except this shall not apply to crane legs which

travel within two feet of the face of the dock, or where less than two feet clearance between crane legs and the gang planks exists. When such condition exists, it shall be called to the attention of the workers and the workers shall use extreme caution whenever they are in these areas. [Order 74-14, § 296-56-44611, filed 4/22/74.]

**WAC 296-56-44613 Crane clearance.** A distance of 30 inches shall be maintained within the swing radius between the outermost part of a revolving crane and any stationary object where the area is accessible to workers. When clearance equal to or greater than 30 inches cannot be maintained, the area of reduced clearance shall be guarded or barricaded whenever the crane is in operation. [Order 74-14, § 296-56-44613, filed 4/22/74.]

**WAC 296-56-44615 Qualifications of machinery operators.** (1) Only those employees considered to be competent by reason of training or experience, and who understand the signs, notices, and operating instructions and are familiar with the signal code in use shall be permitted to operate a crane, winch or other power-operated hoisting apparatus, or any power-operated vehicle, or to give signals to the operator of any hoisting apparatus.

(2) No employee known to have defective uncorrected eyesight or hearing, or to be suffering from heart disease, epilepsy, or similar ailments which may suddenly incapacitate him shall be permitted to operate a crane, winch or other power-operated hoisting apparatus or a power-operated vehicle.

(3) No minor under 18-years of age shall be employed in occupations involving the operation of any power-operated hoisting apparatus or assisting in such operations by performing work such as hooking on or landing drafts, rigging gear, etc. [Order 74-14, § 296-56-44615, filed 4/22/74.]

**WAC 296-56-44617 Radio controls.** Any person, firm or corporation desiring to use radio frequencies for controlling the operation of a crane or other equipment, shall have received prior approval for such use from the division of industrial safety and health, department of labor and industries. [Order 74-14, § 296-56-44617, filed 4/22/74.]

**WAC 296-56-455 Inspection of stevedore equipment or gear--Scope and application.** All sections of this chapter which include WAC 296-56-455 in the section number apply to inspection of stevedore equipment and gear. [Order 74-14, § 296-56-455, filed 4/22/74.]

**WAC 296-56-45501 General requirements.** (1) All gear and equipment provided by the employer shall be inspected by the employer or his authorized representative before each use and, at periodic intervals during its use. Any gear which is found upon such inspection to be visibly unsafe shall not be used.

(2) All special stevedoring gear provided by the employer, the strength of which depends upon components other than commonly used stock items such as shackles,

ropes or chains, shall be tested as a unit in the following manner before being put into use, and if an interval of time exists between testing and use, that could cause deterioration, such gear shall be tested to rule out the deterioration.

(a) Gear intended to handle lifts up to and include 20 short tons (40,000 lbs.) shall be tested to 25 percent in excess of its safe working load.

(b) Gear intended to handle lifts over 20 short tons (40,000 lbs.) but not exceeding 50 short tons (100,000 lbs.) shall be tested to 5 short tons (10,000 lbs.) in excess of its safe working load.

(c) Gear intended to handle lifts over 50 short tons (100,000 lbs.) shall be tested to 10 percent in excess of its safe working load.

(d) The employer shall maintain a record of the dates and results of the tests with each unit of gear concerned clearly identifiable. The records shall be available for examination by representatives of the division of industrial safety and health personnel and the employee safety committee.

(3) The safe working load of gear as specified in WAC 296-56-455 through 296-56-45511 shall not be exceeded.

(4) The weight shall be plainly marked on any article of stevedoring gear hoisted by ship's gear and weighing in excess of 2,000 lbs. [Order 74-14, § 296-56-45501, filed 4/22/74.]

**WAC 296-56-45503 Fiber rope and fiber rope slings.** (1) Table G-1 shall be used to determine the safe working load of various sizes of manila rope and rope slings at various angles, except that higher safe working loads are permissible when recommended by the manufacturer for specific, identifiable products, provided that a safety factor of not less than five is maintained.

(2) Where synthetic fiber ropes are substituted for manila ropes of less than three inches circumference, the substitute shall be of equal size. Where synthetic fiber ropes are substituted for manila ropes of three inches circumference or more, the size of the synthetic rope is to be determined from the formula:

$$C = \sqrt{(0.6C_3^2 + 0.4C_m^2)}$$

Where C = The required circumference of the synthetic rope in inches.

C<sub>3</sub> = The circumference to the nearest one-quarter inch of a synthetic rope having a breaking strength not less than the breaking strength of the size manila rope that would be required by (1) of this section.

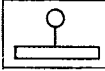

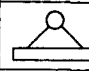

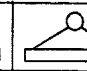

C<sub>m</sub> = The circumference of manila rope in inches which would be required by (1) of this section.

[Order 76-7, § 296-56-45503, filed 3/1/76; Order 74-14, § 296-56-45503, filed 4/22/74.]

**WAC 296-56-45505 Wire rope and wire rope slings.** (1) Tables G-2 through G-5 shall be used to determine the safe working loads of various sizes and classifications of improved plow steel wire rope slings with various types of terminals. For sizes, classifications and grades

not included in these tables the safe working load recommended by the manufacturer for specific, identifiable products shall be followed, provided that a safety factor of not less than five is maintained.

TABLE G-1  
MANILA ROPE  
(In pounds or tons of 2000 pounds)

Circumference	Dia-meter in Inches	Single Leg	60°	45°	30°
					
3/4	1/4	120 lbs.	204 lbs.	170 lbs.	120 lbs.
1	5/16	200	346	282	200
1-1/8	3/8	270	467	380	270

- (A) - Socket or swaged terminal attachment.
- (B) - Mechanical sleeve attachment.
- (C) - Hand tucked splice attachment.

(2) Protruding ends of strands in splices on slings and bridles shall be covered or blunted.

(3) Where "U" bolt wire rope clips are used to form eyes. Table G-6 shall be used to determine the number and spacing of clips. The "U" bolt shall be applied so that "U" section is in contact with the dead end of the rope.

(4) Wire rope shall not be secured by knots, except on haul back lines on scrapers.

(5) The following limitations shall apply to the use of wire rope:

(a) An eye splice made in any wire rope shall have not less than three full tucks. However, this requirement shall not operate to preclude the use of another form of splice or connection which can be shown to be as efficient and which is not otherwise prohibited.

(b) Except for eye splices in the ends of wires and for endless rope slings, each wire rope used in hoisting or lowering, or in bulling cargo, shall consist of one continuous piece without knot or splice.

(c) Eyes in wire rope bridles, slings, or bull wires shall not be formed by wire rope clips or knots.

(d) Wire rope shall not be used as cargo handling gear if, in any length of eight diameters, the total number of visible broken wires exceeds 10 percent of the total number of wires or if the rope shows other signs of excessive wear, corrosion or defect.

TABLE G-6  
NUMBER AND SPACING OF U-BOLT WIRE ROPE CLIPS

[Order 74-14, § 296-56-45505, filed 4/22/74.]

**WAC 296-56-45507 Chains and chain slings.** (1) Tables G-7 and G-8 shall be used to determine the maximum safe working loads of various sizes of wrought iron and alloy steel chains and chain slings, except that higher safe working loads are permissible when recommended by the manufacturer for specific, identifiable products. Proof coil steel chain, also known as common or hardware chain, or other chain not recommended for slinging or hoisting by the manufacturer, shall not be used for hoisting purposes.

TABLE G-7  
WROUGHT IRON CHAIN  
(In pounds or tons of 2000 pounds)

Nominal Size Chain Stock Inch	Single Leg	60°	45°	30°
* 1/4	1060	1835	1500	1060

1	19.3	33.5	27.3	19.8
1-1/8	22.2	38.5	31.5	22.2
1-1/4	28.7	49.7	40.5	28.7
1-3/8	33.5	58.0	47.0	33.5
1-1/2	39.7	68.5	56.0	39.7
1-5/8	42.5	73.5	59.5	42.5
1-3/4	47.0	81.5	62.0	47.0

(2) All sling chains, including end fastenings, shall be given a visual inspection before being used. A thorough inspection of all chains in use shall be made every 3 months. Each chain shall bear an indication of the month in which it was thoroughly inspected. The thorough inspection shall include inspection for wear, defective welds, deformation and increase in length or stretch.

(3) Interlink wear, not accompanied by stretch in excess of five (5) percent, shall be noted and the chain removed from service when maximum allowable wear at any point of link, as indicated in Table G-9, has been reached.

TABLE G-9  
MAXIMUM ALLOWABLE WEAR AT ANY POINT OF LINK

Chain size in inches	Maximum allowable wear in fraction of inches
1/4 (9/32)	3/64
3/8	5/64
1/2	7/64
5/8	9/64
3/4	5/32
7/8	11/64
1	3/16
1 1/8	7/32
1 1/4	1/4
1 3/8	9/32
1 1/2	5/16
1 3/4	11/32

(4) Chain slings shall be removed from service when, due to stretch, the increase in length of a measured section exceeds five percent; when a link is bent, twisted or

otherwise damaged; or when raised scarfs or defective welds appear.

(5) All repairs to chains shall be made under qualified supervision. Links or portions of the chain found to be defective, as described in (4) of this section, shall be replaced by links having same dimensions and materials. Before repaired chains are returned to service, they shall be proof tested to the proof test load recommended by the manufacturer.

(6) Wrought iron chains in constant use shall be annealed or normalized at intervals not exceeding 6 months when recommended by the manufacturer. The chain manufacturer shall be consulted for recommended procedures for annealing or normalizing. Alloy chains shall not be annealed.

(7) A load shall not be lifted with a chain having a kink or knot in it. A chain shall not be shortened by bolting, wiring or knotting. [Order 74-14, § 296-56-45507, filed 4/22/74.]

**WAC 296-56-45509 Shackles.** (1) Table G-10 shall be used to determine the safe working loads of various sizes of shackles, except that higher safe working loads are permissible when recommended by the manufacturer for specific, identifiable products, provided that a safety factor of not less than five is maintained.

TABLE G-10  
SAFE WORKING LOADS FOR SHACKLES  
[In tons of 2,000 pounds]

Material size (inches)	Pin diameter (inches)	Safe working load
1/2	5/8	1.4
5/8	3/4	2.2
3/4	7/8	3.2
7/8	1	4.3
1	1 1/8	5.6
1 1/8	1 1/4	6.7
1 1/4	1 3/8	8.2
1 3/8	1 1/2	10.0
1 1/2	1 5/8	11.9
1 3/4	2	16.2
2	2 1/4	21.2

(2) Screw pin shackles provided by the employer and used aloft, except in cargo hook assemblies, shall have their pins moused. [Order 74-14, § 296-56-45509, filed 4/22/74.]

**WAC 296-56-45511 Hooks other than hand hooks.** (1) The manufacturer's recommendations shall be followed in determining the safe working loads of the various sizes and types of specific and identifiable hooks. All hooks for which no applicable manufacturer's recommendations are available shall be tested to twice the intended safe working load before they are initially put into use. The employers shall maintain a record of the dates and results of such tests.

(2) Loads shall be applied to the throat of the hook since loading the point overstresses and bends or springs the hook.

(3) Hooks shall be inspected once a month to see that they have not been bent by overloading. Bent or sprung hooks shall not be used.

(4) Crane hooks. (a) Magnetic particle or other suitable crack detecting inspection should be performed at least once each year. When testing by x-ray, the pertinent provisions of the atomic energy commission's standards for protection against radiation, relating to protection against occupational radiation exposure, shall apply.

(b) Any activity which involves the use of radioactive materials or x-rays, whether or not under license from the atomic energy commission, shall be performed by competent persons specially trained in the proper and safe operation of such equipment. In the case of materials used under commission license, only persons actually licensed, or competent persons under direction and supervision of the licensee, shall perform such work.

(5) Teeth of case hooks shall not be split, cracked, or deformed.

(6) Jaws of patent clamp type plate hooks shall be kept in safe condition so that they will grip plates securely. [Order 74-14, § 296-56-45511, filed 4/22/74.]

**WAC 296-56-45513 Cargo boards and other type pallet boards.** The term "cargo board" shall mean the typical wing or lip type stevedore board hoisted to or from vessels by means of a bar bridle. "Other pallet boards" include all other platforms used to hold cargo for the purpose of transporting it from place to place.

(1) All pallets and cargo boards shall be of such material and construction as to safely support and carry loads being handled on them.

(2) All cargo boards shall be sheathed (decked) top and bottom with the top sheathing being of two inch lumber and with the top sheathing extending at least six inches beyond the end stringers.

(3) The outer sheathing boards or boards adjacent thereto on cargo boards shall be fastened to the stringers by bolts and nuts. Other sheathing shall be fastened by bolts and nuts, drive screws (helically threaded nails), annular threaded nails, or fastenings of equivalent strength.

(4) Pallet boards, other than cargo boards, may be hoisted if safe means are provided for the type of board used.

(5) Loaded cargo or pallet boards which do not meet the requirements of this section shall be reboarded or placed on cargo boards meeting the requirements before being hoisted, provided weight of the load can be safely distributed on the cargo board.

(6) Cargo boards which are not loaded and secured so that the load will not tip or fall shall not be hoisted.

(7) Bridles used to handle flush end or box type pallets shall be of such a design as to prevent them from becoming disengaged from the pallet under load.

**NOTE:** In areas where the two lip cargo board is being used, that practice shall remain. The department of labor and industries recommends the use of the two lip cargo board.

[Order 74-14, § 296-56-45513, filed 4/22/74.]

**WAC 296-56-45515 Chutes, gravity conveyors and rollers.** (1) Chutes used in the manual handling of cargo shall be adequate for the use to which they are put and shall be kept free of splinters and sharp edges.

(2) Chutes shall be equipped with sideboards of sufficient height to prevent cargo from falling off.

(3) Chutes and gravity roller sections shall be firmly placed or secured to prevent displacement.

(4) Gravity rollers shall be of sufficient strength for the weight of material which is placed upon them. Rollers shall be locked in position to prevent them from falling or jumping out of the frame.

(5) Frames shall be kept free of burrs and sharp edges.

(6) When necessary, provision shall be made for braking objects at the delivery end of the roller or chute. [Order 74-14, § 296-56-45515, filed 4/22/74.]

**WAC 296-56-45517 Disposition of defective material or gear.** If tools, materials, appliances, or any gear are found unsafe at any time during the operation, workers shall report the same immediately to the person in charge of the work, who shall mark or so place any unsafe or doubtful gear so that it will not be used. [Order 74-14, § 296-56-45517, filed 4/22/74.]

**WAC 296-56-46001 Keep clear of lines.** When using a bull line, shovel line, or bucket line, the longshoreman shall stand out of the bight and clear of the throw of the lead and hook. [Order 74-14, § 296-56-460 (codified as WAC 296-56-46001), filed 4/22/74.]

**WAC 296-56-461 Greasing power units.** Power units on cranes, winches, etc., shall be greased, oiled, and cleaned only when the power is off, unless it is necessary for the machinery to be in motion for proper lubrication. [Order 74-14, § 296-56-461, filed 4/22/74.]

**WAC 296-56-462 Use of tools.** (1) Cutting tools. Where necessary to cut wooden strips, cutting tools shall be provided. Such strips shall not be broken upon a person's knee, nor shall they be broken by jumping on them.

(2) Guards for circular saws: Portable circular saws shall be guarded in accordance with the provisions of the general safety and health standards, WAC 296-24-65501.

(3) Moving with chain saw running prohibited. No person shall walk from one area to another with a chain saw while it is running.

(4) Tools for breaking bands. Only tools designed for the specific operation shall be provided and used for the unfastening and breaking off of metal car strips, bands, or wires.

(5) Tools, general. Employers shall not issue or permit the use of visibly unsafe tools.

(6) Portable electric tools. Portable electric tools which are held in the hand shall be equipped with switches of a type which must be manually held in a closed position. [Order 76-7, § 296-56-462, filed 3/1/76; Order 74-14, § 296-56-462, filed 4/22/74.]

**WAC 296-56-465 Jacob's ladders.** (1) Jacob's ladders shall be of the double rung or flat tread type. They shall be well maintained and properly secured, to the dock.

(2) A Jacob's ladder shall either hang without slack from its lashings or be pulled up entirely. [Order 74-14, § 296-56-465, filed 4/22/74.]

**WAC 296-56-467 Secure storage.** Storage of material shall not create a hazard. Bags, containers, bundles, etc., stored in tiers shall be stacked, blocked, interlocked and limited in height so that they are stable and secure against sliding or collapse. [Order 74-14, § 296-56-467, filed 4/22/74.]

**WAC 296-56-475 Standard gauge railroad operations—Scope and application.** All sections of this chapter which include WAC 296-56-475 in the section number apply to standard gauge railroad operations. [Order 74-14, § 296-56-475, filed 4/22/74.]

**WAC 296-56-47501 Warning flags or light.** A blue flag, bright colored flag or blue light shall be displayed at one or both ends of an engine, car(s), or train, to indicate that workers are under or about the railway equipment. When such warning devices are displayed, the equipment shall not be coupled to, or moved. On a deadend spur, a blue light or flag may be displayed adjacent to the switch opening while cars are being loaded or unloaded. [Order 74-14, § 296-56-47501, filed 4/22/74.]

**WAC 296-56-47503 Signals unobscured.** Equipment which would obscure signals shall not be placed on the track. [Order 74-14, § 296-56-47503, filed 4/22/74.]

**WAC 296-56-47504 Derails.** Work being carried on, in, or under cars which subjects employees to the hazard of moving railroad equipment shall be protected by flags and derails set a minimum of 50 feet from one or both ends of the worksite. Where the spur track switch is less than 50 feet from the work location, the switch padlocked in the open position will take the place of the derail and the blue flag shall be placed at that point. [Order 74-14, § 296-56-47504, filed 4/22/74.]

**WAC 296-56-47505 Signals displayed by each maintenance crew.** Each maintenance crew shall display and remove its own set of blue signals. [Order 74-14, § 296-56-47505, filed 4/22/74.]

**WAC 296-56-47507 Warning device.** A flashing warning light or other device shall be installed near any opening which leads to a passageway crossing railroad tracks adjacent to the building. Such light or device

shall be activated prior to any switching or movement of railroad equipment to warn workers of the dangerous condition in the area. [Order 74-14, § 296-56-47507, filed 4/22/74.]

**WAC 296-56-47509 Audible warning system.** A clearly audible warning system shall be employed when cars are being moved in areas where workers are in the vicinity of the tracks. When the audible warning signal may not be heard above the surrounding noises, a person shall be delegated and stationed close enough to the track crew to warn them, by contact, of the oncoming equipment. [Order 74-14, § 296-56-47509, filed 4/22/74.]

**WAC 296-56-47511 Passageway across railroad tracks required.** Employees shall not crawl or climb under, over, or through railroad cars when passing to or from their places of work. Regular passageways shall be established and used. [Order 74-14, § 296-56-47511, filed 4/22/74.]

**WAC 296-56-47513 Cars to be immobilized.** Spotted cars shall either have brakes set, wheels blocked, or shall be coupled to other immobilized cars to prevent each car from rolling. [Order 74-14, § 296-56-47513, filed 4/22/74.]

**WAC 296-56-47515 Working in railroad cars.** Employees, while loading or unloading railroad cars, shall stand outside the car when drafts of long, heavy or awkward cargo which creates a hazard, are being hoisted or lowered. [Order 74-14, § 296-56-47515, filed 4/22/74.]

**WAC 296-56-47517 Safety observer on railroad switching.** When persons are required to work between railway cars, underneath railway cars or in areas where switching is done, there shall be a person who shall be charged with the responsibility to warn of an approaching switch of the railway car or cars, unless other reasonable and practical safeguards are provided. [Order 74-14, § 296-56-47517, filed 4/22/74.]

**WAC 296-56-47519 Warning at road crossing.** An audible whistle, horn or bell shall be sounded by the locomotive engineer to give adequate warning prior to switching across any road crossing. In the case of pushing cars with a locomotive, a signalman shall be located at the crossing to give signals in conjunction with other warnings by the engineer. [Order 74-14, § 296-56-47519, filed 4/22/74.]

**WAC 296-56-47521 Preparation of cars for moving.** All insecure and overhanging stakes and wire straps shall be removed from the car and stacked or placed in an orderly manner away from the working area before cars are moved. [Order 74-14, § 296-56-47521, filed 4/22/74.]

**WAC 296-56-47523 Flying switches.** Flying switches shall not be used when switching railroad

equipment in congested areas or across roadways or walkways. [Order 74-14, § 296-56-47523, filed 4/22/74.]

**WAC 296-56-47525 Car opening devices.** All box car doors and associated mechanisms shall be carefully inspected before workers attempt to open or close them. If the door is not free and cannot be opened by hand, equipment shall be provided, and a safe method shall be used to open or close the door. [Order 74-14, § 296-56-47525, filed 4/22/74.]

**WAC 296-56-47527 Safe car floors.** Machines shall not be used and persons shall not work in railway cars when the floor has holes or has been weakened structurally or slippery or tripping conditions exist. [Order 74-14, § 296-56-47527, filed 4/22/74.]

**WAC 296-56-47529 Clearance from railroad tracks.** Materials shall not be stacked or piled closer than 8 1/2' from the center line of the railroad tracks. [Order 74-14, § 296-56-47529, filed 4/22/74.]

**WAC 296-56-47531 Safety while moving cars.** Persons shall stand clear of moving railroad cars. [Order 74-14, § 296-56-47531, filed 4/22/74.]

**WAC 296-56-480 Mobile vehicles--Scope and application.** All sections of this chapter which include WAC 296-56-480 in the section number apply to mobile vehicles. [Order 74-14, § 296-56-480, filed 4/22/74; Order § V, Rules 5.010-5.280 filed 9/24/65; Rules (part), filed 3/23/60.]

**WAC 296-56-48001 Traffic lanes.** (1) Clear lanes. All cargo, gear, and equipment not in use shall be kept clear of traffic lanes.

(2) Traffic way designation. Regular traffic lanes shall be established and clearly designated.

(3) Traffic system. A system of one-way traffic or circular traffic shall be established.

(4) Follow traffic lanes. All vehicles shall follow designated traffic lanes. [Order 74-14, § 296-56-48001, filed 4/22/74.]

**WAC 296-56-48003 Duties of operator.** (1) A power-driven vehicle operator's special duties are:

(a) To operate the vehicle in a safe manner.

(b) To test brakes, steering gear, lights, horns, or other warning devices, clutches, etc., before starting work.

(c) To not move a vehicle while an unauthorized rider is on the vehicle.

(d) To slow down upon approaching blind corners or other places where vision is limited.

(e) To obey all speed and traffic regulations and other applicable rules.

(f) To have the vehicle at all times under control so that it can be brought to an emergency stop in the clear space in front of the vehicle.

(g) To back down any incline of two percent or more when traveling with a load on the fork lift jitney.

(2) Unobstructed view. When traveling, power-propelled vehicles shall at all times be operated in a manner giving the operator a reasonably unobstructed view in the direction of travel, or where this is impractical, the operator shall be directed in travel, by a person designated to do so.

(3) Employee riding safety. Operators and authorized passengers shall not be permitted to ride with legs or arms extending outside any vehicle nor shall they be permitted to ride while standing unless the vehicle is designed to be operated from a standing position.

(4) Moving vehicles. Vehicles shall be controlled manually while being pushed or towed except when a tow bar is used. Special precautions shall be taken when pushing vehicles where view is obstructed. Vehicles shall not be pushed with blades of a forklift.

(5) Moving highway trailers. In all cargo operations involving the use of highway trailers, such trailers shall be moved in such a manner that at all times the moving trailer is completely under control. Special caution shall be exercised when such trailers are moving on inclines. Trailers shall be loaded in a manner which will prevent the cargo from shifting, and the load in the trailer shall be evenly distributed so as not to cause the trailer to tip to one side.

(6) Prohibited forms of riding. Riding on tongue or handles of trailers or forks of power propelled vehicles is prohibited.

(7) Regular seats for riders. No one except the operator shall ride on power-driven vehicles unless regular seats are provided to accommodate passengers.

(8) Jumping on or off moving vehicles. Employees shall not jump on or off moving vehicles.

(9) When a powered industrial truck is left unattended, load engaging means shall be fully lowered, controls shall be neutralized, power shall be shut off, and brakes set. Wheels shall be blocked if the truck is parked on an incline.

(10) A powered industrial truck is unattended when the operator is 25 feet or more away from the vehicle which remains in view, or whenever the operator leaves the vehicle and it is not in view.

(11) When the operator of an industrial truck is dismounted and within 25 feet of the truck still in view, the load engaging means shall be fully lowered, controls neutralized, and the brakes set to prevent movement.

(12) Reporting defects. If power-driven vehicle is at any time found to be in any way unsafe, the operator shall report same immediately to the person in charge and such vehicle shall not be used for production work until it has been made safe.

(13) Only trained and authorized operators shall be permitted to operate a powered industrial truck. Methods shall be devised to train operators in the safe operation of powered industrial trucks. [Order 74-14, § 296-56-48003, filed 4/22/74.]

**WAC 296-56-48005 Vehicle equipment and maintenance.** (1) Horns and lights. (a) All power-propelled vehicles shall be provided with horns or other warning devices.

(b) Power-propelled vehicles used for night work, when required to travel away from an illuminated work area shall be equipped with a light or lights directed in the direction of travel as required to safely travel about the area.

(2) Guards on operator's platform. Every power truck operated from an end platform or standing position shall be equipped with a substantial guard securely attached to the platform or frame of the vehicle in such a manner as to protect the operator from falling objects and so designed that the operator can easily mount or dismount from the operating station.

(3) Seat cushions. All vehicles having a driver's seat shall be provided with resilient seat cushions fixed in place.

(4) Securing of counterbalances. Counterbalances of all power-driven vehicles shall be properly secured, but may be a removable type which may be removed, if desired, prior to hoisting.

(5) Exhaust pipes and mufflers. Exhaust pipes and mufflers of internal combustion engines, where workers are exposed to contact shall be isolated or insulated. Exhaust pipes shall be constructed to discharge not less than seventy-two inches above the floor on jitneys and eighty-four inches on lift jitneys, or less than twenty inches from the floor.

(6) Ventilation where internal combustion type vehicles are used. Internal combustion type engines may be used only in areas where adequate ventilation is provided.

(a) Concentration levels of carbon monoxide gas created by powered industrial truck operations shall not exceed the levels specified in WAC 296-62-075 (general occupational health standards).

(b) When disputes arise concerning degree of concentration and methods of sampling to ascertain the conditions should be referred to a qualified industrial hygienist.

(7) Brakes on power driven vehicles. Both foot and emergency brakes, where installed on power-driven vehicles shall be kept in proper operating condition at all times.

(8) Cargo truck couplings. Couplings installed on cargo trucks (4-wheelers) shall be of a type which will prevent accidental disengaging.

(9) Operating levers. Operating levers on power-driven vehicles shall be so placed as not to project toward the operator's body.

(10) Front axle assembly secure. The front axle assembly on all trailers shall be securely fastened to the truck bed.

(11) Air line hook-up. Tractors hauling heavy duty highway trailers shall have an air line brake hook-up.

(12) Floor mats. On power-driven vehicles where the operator stands on a platform, resilient foot mats shall be securely attached.

(13) Cleaning vehicles. All power propelled vehicles shall be cleaned at frequent intervals to remove any accumulation of dust and grease that may present a hazard. [Order 74-14, § 296-56-48005, filed 4/22/74.]

**WAC 296-56-490 Lift jitneys.** (1) Lifting capacity of vehicle to be observed. At no time shall a load in excess of the manufacturer's lifting capacity rating be lifted, carried, or moved by a lift jitney.

(2) Posting rated capacity. The rated lifting capacity of all lift jitneys shall at all times be posted on the vehicle in such a manner that it is readily visible to the operator.

(3) Limited use of lift jitney. Lift jitneys shall not be used to carry loose loads of pipe, steel, iron, or lumber unless adequate clearance is provided and the loads are secure.

(4) Supplies to ship's rail. Cargo or supplies shall not be hoisted to or from ship's rail with a lift jitney. This does not apply to ramp or side port loading.

(5) Position of jitney forks. When standing, lift jitney forks shall be lowered to floor. When moving, lift jitney forks shall be kept as low as possible.

(6) Hoisting of persons on vehicle forks prohibited. Persons shall not be hoisted by standing directly on forks of vehicles. A platform or structure built specifically for hoisting persons may be used. Such structure must be securely attached to the forks and shall have standard guard rails installed on sides not used by workers while performing their duties. Four inch high toeboards shall be required where there are tools and equipment which may fall off platform.

(7) Jitney use in gangplank moving. Not less than two lift jitneys shall be used to place or remove gangplanks unless fork width prevents tipping and manufacturer's rated lifting capacity of the fork lift is not exceeded.

(8) Overhead guards on lift jitneys. There shall be on all lift trucks, an overhead guard for the protection of the operator and such overhead protection shall be of such design as to meet with the requirements of Part II, ANSI B56.1-1969. This guard may be removed only when it cannot be used due to the nature of the work and loads shall be maintained in such a manner so as not to create a hazard to the operator.

(9) Lift fork frame guards. To prevent material from falling on the driver, on jitneys without overhead guards, there shall be attached to the carriage of all lift jitneys, a guard extending a minimum of forty inches above the lift fork frame, unless forklift is working in box cars or trailers, where overhead clearance is restricted.

(10) Jitney seat covers. Seats on lift jitneys and seats on jitneys shall be provided with a removable waterproof cover when they are exposed to the weather.

(11) Raised equipment to be blocked. Workers shall not work below the raised bed of a dump truck, raised buckets of front end loaders, raised blades of tractors or in similar positions without blocking the equipment in a manner that will prevent it from falling. When working under equipment suspended by use of jacks, safety standards or blocking shall also be used in conjunction with the jack.

(12) Precautions to be taken while inflating tire. Unmounted split rim wheels shall be placed in a safety cage or other device shall be used which will prevent a split rim from striking the worker if it should dislodge while the tire is being inflated.

(13) Reporting suspected defects. If, in the opinion of the operator, a power-driven vehicle is unsafe, the operator shall report the suspected defect immediately to the person in charge. Any defect which would make the vehicle unsafe to operate under existing conditions shall be cause to take the vehicle out of service and it shall not be put back into use until it has been made safe. [Order 74-14, § 296-56-490, filed 4/22/74; § VI, Rules 6.010-6.100, filed 9/24/65; Rules (part), filed 3/23/60.]

**WAC 296-56-495 Changing and charging storage batteries.** (1) Battery charging installations shall be located in areas designated for that purpose.

(2) Facilities shall be provided for flushing and neutralizing spilled electrolyte, for fire protection, for protecting charging apparatus from damage by trucks, and for adequate ventilation for dispersal of fumes from gas-batteries.

(3) When racks are used for support of batteries, they should be made of materials nonconductive to spark generation or be coated or covered to achieve this objective.

(4) A conveyor, overhead hoist, or equivalent material handling equipment shall be provided for handling batteries.

(5) Reinstalled batteries shall be properly positioned and secured in the truck.

(6) A carboy tilter or siphon shall be provided for handling electrolyte.

(7) When charging batteries, concentrated acid shall be poured into water; water shall not be poured into concentrated acid.

(8) Trucks shall be properly positioned and brake applied before attempting to change or charge batteries.

(9) When charging batteries, the vent caps should be kept in place to avoid electrolyte spray. Care shall be taken to assure that vent caps are functioning. The battery (or compartment) cover(s) shall be open to dissipate heat.

(10) Smoking shall be prohibited in the charging area.

(11) Precautions shall be taken to prevent open flames, sparks, or electric arcs in battery charging areas.

(12) Tools and other metallic objects shall be kept away from the top of uncovered batteries. [Order 74-14, § 296-56-495, filed 4/22/74.]

**WAC 296-56-500 Handling of cargo—Scope and application.** All sections of this chapter which include WAC 296-56-500 in the section number apply to handling of cargo. [Order 74-14, § 296-56-500, filed 4/22/74; § VII, Rules 7.010-7.110, filed 9/24/65; Rules (part), filed 3/23/60.]

**WAC 296-56-50001 Nonuse of defective slings.** A slung load or draft shall not be lifted with a sling having a kink or knot in it. Chain shall not be shortened by wiring, bolting or tying. Chains shall not be repaired by bolting two links together or by the use of wire. Wire slings shall not be used when they are defective. [Order 74-14, § 296-56-50001, filed 4/22/74.]

**WAC 296-56-50003 Landing loads.** Persons assisting in landing a load shall face the load and use caution to prevent themselves from getting in a position where they may be caught between the load and a fixed object. [Order 74-14, § 296-56-50003, filed 4/22/74.]

**WAC 296-56-50005 Secure hoisted cargo.** Any cargo which may reasonably be expected to spread or fall when being hoisted or moved shall be secured or pallitized. Materials or means used for securing cargo shall be of adequate strength to keep the material from spreading or falling.

(1) Cargo handling bridles, such as pallet bridles, which are to remain attached to the hoisting gear while hoisting successive drafts, shall be attached by shackles, or other positive means shall be taken to prevent them from becoming accidentally disengaged from the cargo hook.

(2) Drafts of lumber, pipe, dunnage and other pieces, the top layer of which is not bound by the sling, shall be slung in such a manner as to prevent sliders. Double slings shall be used on unstrapped dunnage, except when, due to the size of hatch or deep tank openings, it is impractical to use them.

(3) Case hooks shall not be used for handling cases into or out of the vessel, unless the cases are specifically designed to be handled by this means. [Order 74-14, § 296-56-50005, filed 4/22/74.]

**WAC 296-56-50007 Hoisting material by bands or fasteners.** (1) Bales of cotton, wool, cork, gunny bags or similar materials may be hoisted by bands providing each band is of sufficient strength to support the load and that two hooks are used and hooked into separate bands.

(2) Bundles of aluminum, steel or similar items shall not be hoisted by bands or ties unless the material used to contain the bundle is designed for such purpose and has an adequate factor of safety to safely handle the load.

(3) Loads requiring continuous manual guidance while in motion shall be provided with tag lines. [Order 76-7, § 296-56-50007, filed 3/1/76; Order 74-14, § 296-56-50007, filed 4/22/74.]

**WAC 296-56-50009 Slings for handling pulp.** When hoisting pulp with a roller bridle, the sling shall be of such length as necessary to keep the bridle rollers a sufficient distance apart to keep side pressure on the load. [Order 74-14, § 296-56-50009, filed 4/22/74.]

**WAC 296-56-50010 Containerized cargo secured by bands or wire.** Each band or wire shall have a known breaking strength and shall not be used beyond the manufacturer's rated capacity. Such capacities shall be considered when lifting with one hook or multiple hooks. [Order 74-14, § 296-56-50010, filed 4/22/74.]

**WAC 296-56-50011 Securing glass cases.** Any time cases of glass over three feet high are stored in warehouses or loaded in rail cars, they shall at all times be

secured so as to prevent them from falling on the workers. [Order 74-14, § 296-56-50011, filed 4/22/74.]

**WAC 296-56-50013 Hoisting bulk cargo.** (1) Drafts shall be so built or such means shall be taken as to prevent cargo from falling from the draft.

(2) Hand loaded buckets or tubs used in handling bulk cargo shall not be loaded above their rims. [Order 76-7, § 296-56-50013, filed 3/1/76; Order 74-14, § 296-56-50013, filed 4/22/74.]

**WAC 296-56-50015 Hand and eye protection on wire rope.** (1) Wire bridles shall have a covering of marline, rubber hose, or other suitable protection over hook splice to protect the workers' hands.

(2) Jiggers on wire rope shall not be cut off with wire cutters unless employee is provided with eye protection.

(3) Protruding ends of strands in splices on slings and bridles shall be covered or blunted. [Order 74-14, § 296-56-50015, filed 4/22/74.]

**WAC 296-56-50017 Car plates.** Whenever workers are required to move cargo into or out of a railway car, a railway car plate shall be used which shall meet the following specifications:

(1) All car plates shall be strong enough to carry maximum loads with a safety factor of three.

(2) All car plates shall be provided with positive stops to prevent shifting of plates. One set of these stops shall be adjustable to take care of different spaces between car door and platform.

(3) Car plates shall be so shaped that edges will always bear on floor of car and platform to prevent "teetering" or rocking.

(4) All car plates shall have skid resistant surfaces.

(5) All car plates are to be provided with toe or guard plates at the sides with a minimum height of four inches.

(6) All car plates must bear no less than six inches back from edge of platform.

(7) Maximum capacity of car plates shall be marked in a conspicuous place.

(8) Car plates shall be provided with an appropriate fixture to enable the plates to be lifted and moved by fork trucks. [Order 74-14, § 296-56-50017, filed 4/22/74.]

**WAC 296-56-50019 Dockboards (bridge plates).** (1) Portable and powered dockboards shall be strong enough to carry the load imposed on them.

(2) Portable dockboards shall be secured in position, either by being anchored or equipped with devices which will prevent their slipping.

(3) Powered dockboards shall be designed and constructed in accordance with commercial standards CS202-56 (1956) "Industrial Lifts and Hinged Loading Ramps" published by the U.S. Department of Commerce.

(4) Handholds or other effective means, shall be provided on portable dockboards to permit safe handling. [Order 74-14, § 296-56-50019, filed 4/22/74.]

**WAC 296-56-50021 Trucks and railroad cars.** (1) The brakes of highway trucks shall be set and wheel chocks placed under the rear wheels to prevent the trucks from rolling while they are boarded with powered industrial trucks.

(2) Wheel stops or other recognized positive protection shall be provided to prevent railroad cars from moving during loading or unloading operations.

(3) Fixed jacks shall be necessary to support a semi-trailer and prevent up-ending during the loading or unloading when the trailer is not coupled to a tractor.

(4) Positive protection shall be provided to prevent railroad cars from being moved while dockboards or bridge plates are in position. [Order 74-14, § 296-56-50021, filed 4/22/74.]

**WAC 296-56-50023 Hazardous cargo.** (1) Prior to the start of cargo handling operations a responsible representative of the employer shall ascertain from labels on the cargo, from the dangerous cargo manifest, or from other shipping documents, what hazardous cargoes, if any, are to be handled and the general nature of the hazard. He shall inform employees of the general nature of the hazard, the importance to the employees of preventing damage to the cargo, and the special precautions to be taken. The responsible representative of the employer aboard the vessel shall instruct the employees to notify him of any leaks or spills.

(2) Drafts of cargo ascertained by the employer to be hazardous shall be so slung and secured that neither the draft nor individual packages can fall as a result of tipping the draft or slacking the supporting gear.

(3) If a cargo ascertained by the employer to be hazardous is spilled or any of its containers has or develops a serious leak, the employees shall be removed from the hold or compartment until the employer has ascertained the specific hazards, has provided such personal protective equipment and clothing and such ventilation and fire protective equipment as may be necessary to avoid, or protect against, the hazard, and has instructed the employees as to the safe method of cleaning up and disposing of a spill or handling and disposing of the leaking containers. The actual work of clean up or disposal shall be carried out under the personal supervision of a responsible representative of the employer. [Order 74-14, § 296-56-50023, filed 4/22/74.]

**WAC 296-56-50025 Recouping broken cargo.** Any cargo found to be sufficiently broken to constitute a hazard shall be immediately repaired or shall be set aside at a safe distance away from the working area so it can be later repaired. Area shall be cleaned of spilled cargo. [Order 74-14, § 296-56-50025, filed 4/22/74.]

**WAC 296-56-50027 Containerized cargo.** (1) For the purpose of this section, the term "container" means a reusable cargo container of rigid construction and rectangular configuration, intended to contain one or more articles of cargo or bulk commodities for shipment aboard a vessel, and capable of utilization for this purpose by one or more other modes of transport without

intermediate reloading. The term includes completely enclosed units, open top units, half or other fractional height units, units incorporating liquid or gas tanks, and any other variations serving the same basic purpose and fitting into the container system, demountable or with attached wheels. The term, however, does not include cylinders, drums, crates, cases, cartons, packages, sacks, unitized loads or any other of the usual forms of packaging.

(2) On every cargo container there shall be permanently marked in pounds (a) the weight of the container when empty, (b) the maximum cargo weight that the container is intended and designed by its manufacturer to carry, and (c) the sum of these two weights.

(3) No container shall be loaded aboard or discharged from any vessel by means of hoisting by ship's cargo handling gear or by shore crane or derrick unless the following conditions have been met:

(a) In the case of an empty container, it shall be ascertained from the carrier that such is the case and the container shall be identified before loading or discharge either by marking, in cargo stowage plans, by both means, or otherwise in such manner that every supervisor and foreman on the site and in charge of loading or discharging, and/or every crane or other hoisting equipment operator, and signalman, if any, shall be enabled to know that such container is empty.

(b) In the case of a loaded container, either the actual gross weight shall be plainly marked so as to be visible to the crane or other hoisting equipment operator or signalman, if any, and/or to every supervisor and foreman on the site and in charge of loading or discharging; or the cargo stowage plan or equivalent permanently recorded display serving the same purpose shall be provided to the crane or other hoisting equipment operator and signalman, if any, and to every supervisor and foreman on the site and in charge of loading or discharging, and contain the actual gross weight, the exact stowage position, and the serial number or other positive identification of that specific container.

(c) Every outbound loaded container received at a marine terminal ready to load aboard a vessel without further consolidation or loading shall be weighed to obtain the actual gross weight, either at the terminal or elsewhere before loading aboard a vessel. The open type vehicle carrying container and those built specifically and used solely for the carriage of compressed gases are excepted from (2)(c), (d) and (e) of this section.

(d) When container weighing scales are located at a marine terminal, any outbound container with a load consolidated at that terminal shall be weighed to obtain an actual gross weight before loading aboard a vessel.

(e) When there are no container weighing scales located at a marine terminal at which outbound containers are loaded with cargo, or where container loads are completed or consolidated there or elsewhere, and no weighing facility is available and located in a reasonably accessible location, the actual gross weight may be calculated, providing that accurate weights of all contents are known and a list of same, including the empty container weight, is totaled and posted on the container in a

conspicuous place with identification of the source and date of calculation. Such list of contents may refer to cartons, cases, or other means of packaging but need not specifically identify the commodity or commodities involved except as otherwise required by law. Container weights so arrived at shall be subject to random sample weight checks at the nearest weighing facility. In cases where such weight checks or experience otherwise indicate consistently inaccurate weights arrived at by this means, the weight of containers so calculated at the source from which the inaccurate weights originated may no longer be recognized as true gross weights, in which case such containers may not be loaded aboard a vessel unless actual gross weights have been obtained by weighing. This procedure shall be continued until the Washington state department of labor and industries, division of industrial safety and health is satisfied by reasonable experience thereunder that correct weights will be furnished.

(f) In the case of loaded inbound containers from foreign ports, they shall, if they have not been weighed, have the calculated weight posted in the manner prescribed by (2)(e) of this section. All loaded inbound containers from foreign ports shall be subject to random sample weight checks at a time satisfactory to the Washington state department of labor and industries, division of industrial safety and health, which may be at any time up to unloading the contents of the container at the terminal or until the container is delivered unopened to the land carrier. When such checks indicate a pattern of significant and continuing inaccuracy or when the provisions of (2)(g) of this section are not met, such suitable means as are acceptable to the division of industrial safety and health to protect the safety of the workers involved shall be taken during discharge to assure safety and such means shall be continued until the division of industrial safety and health is satisfied by experience thereunder that correct weights will be furnished.

(g) The identification and documentation provisions of (2)(a) and (b) of this section shall apply to containers originating from foreign ports.

(h) Any scale used within the United States to weigh containers for the purpose of the requirements of this section shall meet the accuracy standards of the state or local public authority in which the scale is located.

(4) No container shall be hoisted if its actual gross weight exceeds the weight marked as required in (1)(c) of this section, or if it exceeds the capacity of the crane or other hoisting device intended for use, under the conditions in which said crane or other hoisting device is used. All hoisting of containers shall be by means which will safely do so without probable damage to the container, and using the lifting fittings provided.

(5) All outbound containers shall be inspected before loading for any visible defects in structural members and fittings, which would render unsafe their handling in loading. To the extent it is practicable, inbound containers shall be similarly inspected before discharge. Any

outbound container found to have such a defect shall either be discharged by such special means as to insure safety or shall be emptied before discharge.

(6) Before commencing to load grain which has been fumigated, the employer shall ascertain from the elevator operator that the cargo is free from hazardous concentrations of fumigants.

(a) The employer shall not load tobacco until the carrier has provided written notification as to whether or not the cargo has been fumigated. If the tobacco has been fumigated with any toxic fumigant, the employer shall not commence loading until written warranty has been received from the fumigation facility that the aeration of the cargo has been such as to reduce the concentration of the fumigant to a safe limit. Such notification and warranty shall be maintained for at least 30 days after the loading of the tobacco has been completed, and shall be available for examination by representatives of the department of labor and industries.

(b) Before commencing to load cargo other than cargo mentioned in (6) or (6)(a) of this section, which has been fumigated at the loading port, the employer shall ascertain that such cargo does not contain a hazardous concentration of fumigants. [Order 74-14, § 296-56-50027, filed 4/22/74.]

**WAC 296-56-510 Handling explosives or hazardous materials.** (1) Dangerous or explosive nature to be made known. All workers handling explosive or other hazardous material which is properly labeled pursuant to the Washington state labeling code promulgated by the department of labor and industries, or the Explosive Act, or the Federal and Washington State Food, Drug and Cosmetic acts, the Federal Insecticide, Fungicide and Rodenticide Act, the Washington Pesticide Act, the Federal Hazardous Substances Labeling Act, the Interstate Commerce Commission and Foreign Commerce regulations, or explosives or other dangerous cargo which is reasonably known by the employers to be mislabeled or to be lacking a required label, shall be thoroughly informed by the employer of the explosive or dangerous nature of the cargo.

(2) Preparation and handling of explosives or hazardous materials. In all shipping operations including, but not limited to, handling, storing, and preparation, compliance with the standards of the Interstate Commerce Commission, the United States Coast Guard, or the safety rules developed by the Institute of Makers of Explosives shall be deemed proper and safe methods of operation.

(3) Handling of breakage. If breakage should occur while handling explosives or other hazardous materials, the foreman shall order the work in the immediate area to cease until the hazard has been removed. It shall be the responsibility of the employer to use a safe method of handling such breakage and placing the same in a location safely remote from the work area.

(4) No smoking. All workers supervising or engaged in the handling, hoisting, stowing of explosives, combustible oxidizing materials or flammable materials shall smoke only in designated areas.

(5) Loading chute. In chuting packaged explosives, care must be exercised to make sure that one package shall have been taken from the mat before starting another. Each package shall have been completely removed from the mat before another is placed on the chute.

(6) Specifications for chutes. In the loading of explosive merchandise in package form where chutes are used, the chutes shall be constructed only of wood. All fastenings thereon shall be of wooden pins, dowelings, or pegs. Metal fastenings may be used, provided they are countersunk.

(7) Mattress landing buffer. The bottoms of the chutes shall be provided with a stuffed mattress not less than four inches thick and of sufficient width and length to allow for safe landing of packages.

(8) Drafts of cargo ascertained by the employer to be hazardous shall be so slung and secured that neither the draft nor individual packages can fall as a result of tipping the draft or slacking the supporting gear. [Order 74-14, § 296-56-510, filed 4/22/74; § VIII, Rules 8.010-8.070, filed 9/24/65; Rules (part), filed 3/23/60.]

**WAC 296-56-520 Log handling on docks.** (1) Binders required. Two binders shall remain on all logging trucks and rail cars securing the logs while moving on the dock. When logs are unloaded a positive means must be used to safeguard against logs rolling off while binders are being removed.

(2) Slings. A sling especially designed to hoist logs or two slings shall be used for hoisting logs.

(3) Log storage for loading. Logs placed adjacent to the bull rail on the dock for loading onto a vessel shall not be over one log high unless placed in bunks or so stacked as not to roll or otherwise create a hazard to workers.

(4) Skids required. When workers are required to sling up from the dock the logs shall be on skids at least eighteen inches high or in bunks or similar devices. When logs are placed in bunks or similar devices, they shall not be over the top of the stanchions.

(5) Proper arrangement of lines. When hoisting logs, the lines shall be arranged and fastened in such a manner that they will not be subjected to undue strains or kinking.

(6) Bull winches. When bull winches are used on the dock, they shall be secured by no less than two separate lines from the rear and one line from each side. All turnbuckles used shall be secured and moused.

(7) Size of gear. All lines, blocks, and shackles and similar gear used in log operations shall be in good condition and shall be of sufficient size, strength, and material to withstand one and one-half times the maximum stress imposed.

(8) Securing of shackles. Shackles with threaded pins or with nuts secured by keys or wire strands shall be used for connecting moving tackle. [Order 74-14, § 296-56-520, filed 4/22/74; § IX, Rules 9.010-9.090, filed 9/24/65; Rules (part), filed 3/23/60.]

**WAC 296-56-535 Petroleum docks.** (1) Pipe lines which transport petroleum liquids from or to a wharf shall be equipped with valves on shore so located as to be readily accessible and not endangered by a fire on the wharf.

(2) Drip pans, buckets, or other means shall be provided and shall be used to prevent oil spillage upon wharves during loading, disconnecting and draining hoses. After transfer is completed the contents of drip pans and buckets shall be removed and taken to a place of disposal.

(3) Package goods, freight or ship stores shall not be loaded or discharged during the bulk handling of oils or other inflammable liquids, in such a manner that the sling loads will endanger the hose.

(4) Water lights for use at petroleum wharves shall not be a type which create a source of ignition. [Order 74-14, § 296-56-535, filed 4/22/74.]

**WAC 296-56-53501 Boat marinas.** (1) All hoisting equipment including derricks, cranes or other devices used for boat launching, handling cargo or supplies shall be inspected once a month and the records of this inspection be made available to the marine dock inspector upon request. (Refer to WAC 296-56-44205.)

(2) Floating docks will not be required to have bull rails unless lift trucks or other power driven equipment is used on the dock.

(3) No smoking signs shall be posted in areas where fueling or inflammable material is present.

(4) Inflammable material or petroleum products shall be stored in a fireproof storage room or shed.

(5) Slippery surfaces shall be cleaned up and nonslip material shall be used if necessary. [Order 74-14, § 296-56-53501, filed 4/22/74.]

**WAC 296-56-53503 Canneries and cold storage docks.** (1) Hoisting equipment used to load or unload cargo or supplies or fishing vessels shall be inspected once a month and the record of inspection be made available to the marine dock inspector upon request. (Refer to WAC 296-56-44205.)

(2) Slippery surfaces shall be cleaned up and nonslip material shall be used if necessary. [Order 74-14, § 296-56-53503, filed 4/22/74.]

**WAC 296-56-560 Excerpts from Revised Code of Washington.** (1) Hours of operators of power equipment in waterfront operations. RCW 49.28.100 It shall be unlawful for any employer to permit any of his employees to operate on docks, in warehouses and/or in or on other waterfront properties any power-driven mechanical equipment for the purpose of loading cargo on, or unloading cargo from, ships, barges, or other watercraft, or of assisting in such loading or unloading operations, for a period in excess of twelve and one-half hours at any time without giving such person an interval of eight hours rest: Provided, however, The provisions of this section and RCW 49.28.110 shall not be applicable in cases of emergency including fire, violent storms, leaking

or sinking ships or services required by the armed forces of the United States.

(2) RCW 51.28.010 Notice of accident. Whenever any accident occurs to any workman it shall be the duty of such workman or someone in his behalf to forthwith report such accident to his employer, superintendent or foreman in charge of the work, and of the employer to at once report such accident and the injury resulting therefrom to the department and also to any local representative of the department.

NOTE: This section applies only to those accidents occurring to workers covered by Title 51 RCW.

[Order 74-14, § 296-56-560, filed 4/22/74; Rules (part), filed 9/24/65; Rules (part), filed 3/23/60.]

NOTICE OF DEFICIENCIES FOUND ON CERTIFICATION EXAMINATION

Owner -----

Identification, location, and specific description of equipment -----  
-----

The undersigned, being authorized to do so, hereby tenders notification of the following listed uncorrected deficiencies, found upon (test and examination) (examination) of the described equipment in accordance with the requirements of Washington State Safety Standards for Longshore, Stevedore and Related Waterfront Operations, as applicable, to constitute in the opinion of the undersigned a currently unsatisfactory condition: -----  
-----  
-----

Under the applicable requirements of Safety Standards for Longshore, Stevedore and Related Waterfront Operations, the issuance of any certificate of (test and examination) (examination) is prohibited until such time as correction of deficiencies has been verified by the undersigned. It is further required that the certifying authority notify the Supervisor of Industrial Safety and Health, Washington State Department of Labor and Industries, of the above circumstances, by copy of this notice.

296-61-320	Gassy mines.

**WAC 296-61-010 Scope and application.** (1) These standards shall be used for above-ground and underground operations where applicable.

(2) These safety standards were promulgated by the department of labor and industries, division of safety, in accordance with the requirements outlined in the Washington state Administrative Procedure Act (chapter 34.04 RCW) and other statutes. Notices were distributed as required and a public hearing was conducted on January 21, 1972 at Olympia, Washington. Copies of these standards have been filed in the office of the code reviser to become effective on April 1, 1972.

(3) When the words "shall" or "must" are used in these standards or a positive action is required by the wording of any rules, such requirement is compulsory. The words, "may" or "should" as used in these standards identify recommendations or suggestions only. Numerals appearing in brackets after a WAC rule number (example: WAC 296-61-030(2) (57.15-1)) indicate that the cited rule has been published in the Code of Federal Regulations and contains essentially the same requirements as the rule herein promulgated.

(4) (57.24) (a) Realizing that conditions may exist in operations under which certain state standards will not have practical application, the supervisor of safety may, upon receipt of application and after adequate investigation by the department, and subject to subparagraph (b), permit a variation from these requirements when other equal means of protection are provided. Any variation granted under the provisions of this paragraph shall be limited to the particular case or cases covered in the application for variance and may be revoked for cause. The permit for variance shall be conspicuously posted on the premises prior to becoming effective and shall remain posted during the life of such waiver. All requests for a variation, modification or waiver shall be made in writing to the supervisor of safety, department of labor and industries at Olympia, Washington.

(b) The Washington state department of labor and industries shall not approve or apply any variation, modification or waiver of any state law, rule, regulation or standard, to any mine or operation falling within the scope of these rules, which includes or incorporates all or any portion of a mandatory standard promulgated by the secretary of the department of interior without first having obtained the consent and approval of such variation, modification or waiver by the secretary of the department of interior or his delegate.

(5) These standards shall be augmented by the Washington state general safety standards, occupational health standards, precautionary labeling of hazardous substances used in places of employment, electrical workers safety rules, safety requirements for explosive-actuated fastening tools, boilers and unfired pressure vessels law, national electric code, regulations for possession and handling of explosives and any other regulations of general application which are or will be made applicable to all industries governed by the Industrial Insurance and Medical Aid acts.

(6) At least five days prior to commencement of a new, intermittent or temporary operation, the firm responsible for employment of the workmen at the site shall notify the supervisor of the division of safety of such intent. The notice shall include the firm name, mailing address, type of work to be done and the location of the workplace. (Section, township, range.)

(7) The system used by the U.S. Bureau of Mines for identification, location, etc., of mines, quarries, pits, mills and crushers shall be used by the division of safety and shall be included on the report of each inspection conducted.

(8) These standards are consolidated with the intent that they will meet or exceed all mandatory requirements included in 30 CFR, Parts 55, 56, and 57.

(9) These safety standards shall apply to all industries and persons working within the following categories: Mines, pits, mills, quarries, and sand, gravel and crushing operations; whether covered by industrial insurance (Title 51 RCW) or operated on a sole proprietorship or partnership basis.

(10) When standards of other organizations or associations are incorporated by reference, the standards shall be the most recent edition published prior to January 1, 1972. (Example: P 12, WAC 296-61-100(1)(a), "threshold limit values of airborne contaminants," adopted by the American Conference of Governmental Industrial Hygienists, shall refer to the 1971 edition.) [Order 72-1, § 296-61-010, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-020 Definitions.** (1) "Abandoned" means that all work has stopped on the mine premises and that an office with a responsible person in charge is no longer maintained at or in the vicinity of the mine.

(2) "Abandoned workings" means deserted operation areas in which further work is not intended.

(3) "Active workings" means areas at, in or around, an operation where men work or travel.

(4) "Approved" generally means acceptable to the division of safety except when formal written approval would be deemed necessary for use of certain equipment, methods, or means, as determined by the supervisor of safety.

(5) "Auxiliary fan" means a fan used to deliver air to a workplace located off the main air stream supply line.

(6) "Barricaded" means the installation of a suitable safeguard which will prevent the passage of persons, vehicles, flying materials or hazardous radiations.

(7) "Berm" means a pile or mound of material capable of restraining a vehicle of the type generally used in the area.

(8) "Blasting agent" means any material consisting of a mixture of a fuel and oxidizer which:

(a) Is used or intended for use in blasting.

(b) Is not classed as an explosive by the department of transportation.

(c) Contains no ingredient classed as an explosive by the department of transportation.

(d) Cannot be detonated by a number "8" blasting cap.

(9) "Blasting area" means the area near blasting operations in which concussion or flying material can reasonably be expected to cause injury.

(10) "Blasting cap" means a detonator containing a charge of detonating compound, which is ignited by electric current or the spark of a fuse.

(11) "Blasting circuit" means electric circuits used to fire electric detonators.

(12) "Blasting switch" means a switch used to connect a power source to a blasting circuit.

(13) "Booster fan" means a fan installed in a main air stream to maintain or increase the air flow.

(14) "Capped fuse" means a length of safety fuse to which a detonator has been attached.

(15) "Combustible" means capable of being ignited and consumed by fire.

(16) "Company official" means a member of the company supervisory or technical staff.

(17) "Competent person" shall be a qualified person designated by management.

(18) "Detonating cord" or "detonating fuse" means a flexible cord containing a core of high explosives.

(19) "Detonator" means a device used for detonating an explosive.

(20) "Distribution box" means a portable apparatus with an enclosure through which an electric circuit is carried to one or more cables from a single incoming feed line, each cable circuit being connected through individual over-current protective devices.

(21) "Electric blasting cap" means a blasting cap designed for and capable of being ignited by means of an electric current.

(22) "Electrical grounding" means limiting the voltage to the maximum potential for which the circuit is designed, 70-64 N.E.C., by connecting the circuit with earth.

(23) "Employer" means a person or organization which hires one or more persons to work for wages or salary.

(24) "Escapeway" means a passageway by which persons may leave if the ordinary exit is obstructed.

(25) "Explosive" means any chemical compound, mixture, or device, the primary or common purpose of which is to function by explosion. Explosives include, but are not limited to: Black powder, dynamite, nitroglycerin, nitroglycerin compounds, fulminate, and ammonium nitrate when mixed with hydrocarbons.

(26) "Face" or "bank" means that part of any operation where excavating is progressing or was last performed.

(27) "Flammable" means capable of being easily ignited and of burning rapidly.

(28) "Flammable liquid" means liquid having a flash point below 140°F. and having a vapor pressure not exceeding 40 psi (absolute) at 100°F.

(29) "Flash point" means the minimum temperature at which sufficient vapor is released by a liquid or solid to form a flammable vapor-air mixture at atmospheric pressure.

(30) "Highway" means any public street, public alley, or public road.

- (31) "High potential" means more than 650 volts.
- (32) "Hoist" means a power-driven windlass or drum used for raising ore, rock, or other material from an operation and for lowering or raising men and material.
- (33) "Igniter cord" means a fuse, cordlike in appearance, which burns progressively along its length with an external flame at the zone of burning and is used for lighting a series of safety fuses in the desired sequence.
- (34) "Incline" means an inclined plane, whether above or beneath the surface.
- (35) "Inhabited building" means a building regularly occupied in whole or in part as a habitation for human beings or any church, schoolhouse, railroad station, store, or other structure where people are accustomed to assemble, except any manufacture, transportation, storage or use of explosives.
- (36) "Lay" means the distance parallel to the axis of the rope in which a strand makes one complete turn about the axis of the rope.
- (37) "Low potential" means 650 volts or less.
- (38) "Main fan" means a fan that controls the entire air flow of the mine or the air flow of one of the major air currents.
- (39) "Magazine" means a storage place for explosives or detonators.
- (40) "Major electrical installation" means an assemblage of stationary electrical equipment for the generation, transmission, distribution or conversion of electrical power.
- (41) "Manlift" means a power-driven vertical belt having regularly spaced steps which can be boarded by men and used to travel from one elevation to another.
- (42) "Man trip" means a trip on which men are transported to and from a work area.
- (43) "Mill" includes any ore mill, sampling works, concentrator, and any crushing, grinding, or screening plant used at, and in connection with, an excavation or mine.
- (44) "Mine" means an excavation made in the earth (either on the surface or by removal of material from beneath the surface) to extract metallic ores or other usable materials.
- (45) "Mine opening" means any opening or entrance from the surface into a mine.
- (46) "Misfire" means the complete or partial failure of a blasting charge to explode as planned.
- (47) "Operation" means any portion of the work relating to or incidental to mining, such as transporting, crushing, excavating, blasting, timbering, processing of materials, or maintenance work, etc.
- (48) "Overburden" means material of any nature, consolidated or unconsolidated, that overlies a deposit of useful materials or ores that are to be mined.
- (49) "Permissible" means that a machine, material, apparatus, or device has been investigated, tested, and approved for use by the U.S. Bureau of Mines or the division of safety and is continuously maintained in that condition.
- (50) "Potable" means fit for drinking.
- (51) "Powder chest" (day box) means a substantial, nonconductive, portable container equipped with a lid and used for temporary storage of explosives at blasting site.
- (52) "Primer" means a package or cartridge of explosives with a detonator.
- (53) "Reverse-current protection" means a method or device used on direct-current circuits or equipment to prevent the flow of current in the reverse direction.
- (54) "Roll protection" means a framework safety canopy or similar protection for the operator when equipment overturns.
- (55) "Rope" means wire rope unless otherwise specified.
- (56) "Safety can" means an approved container of not more than five gallons capacity, having a spring-closing lid and spout cover.
- (57) "Safety division" refers to the division of safety of the department of labor and industries of the state of Washington.
- (58) "Safety fuse" means a train of powder enclosed in cotton, jute yarn, and water-proofing compounds, which burns at a uniform rate and used for firing a cap containing the detonating compound which in turn sets off the explosive charge.
- (59) "Safety switch" means a sectionalizing switch that also provides short circuit protection in blasting circuits between the blasting switch and the shot area.
- (60) "Scaling" means removal of insecure material from a face or highwall.
- (61) "Secondary safety connection" means a second connection between a conveyance and rope intended to prevent the conveyance from running away or falling in the event the primary connection fails.
- (62) "Secondary underground distribution storage magazine" means a place for storage of explosives or detonators on an underground working level which meets the specifications set forth in these standards.
- (63) "Semiconductive hose" means hose having an electrical resistance of not less than 5,000 ohms per foot and not more than two megohms for its total length, used in pneumatic placement of blasting agents in bore holes.
- (64) "Shaft" means a vertical or inclined shaft, a slope, incline or winze.
- (65) "Sprung hole" means a blasting hole chambered or enlarged to take an increased charge of explosives.
- (66) "Stemming" means the inert material and the placing of such material on top of a charge of explosives.
- (67) "Stray current" means that portion of a total electric current that flows through paths other than the intended circuit.
- (68) "Substantial construction" means construction of such strength, material, and workmanship that the object will withstand all reasonable shock, wear, usage and deterioration to which it will be subjected.
- (69) "Suitable" means that which fits, and has the qualities or qualifications to meet a given purpose, occasion, condition, function, or circumstances.
- (70) "Threshold limit values" refer to concentrations of airborne substances and/or exposures to physical agents to which it is believed that nearly all workers may

be exposed for a specified length of time without adverse effect.

(71) "Travelway" means a passage, walk or way regularly used and designated for persons to go from one place to another.

(72) "Trip light" means a light displayed on the opposite end of a train from the locomotive or engine.

(73) "Wet drilling" means the continuous application of water through the central hole of hollow drill steel to the bottom of the drill hole.

(74) "Working place" means any place in or about a mine where work is being performed.

(75) "Workman" means a person who is engaged in the employment of an employer. [Order 72-1, § 296-61-020, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-030 Safety education and first aid requirements--General, surface, and underground.** (1) The applicable minimum requirements specified in the general safety standards relating to first aid and safety education shall be complied with.

(2) (57.15-1) There shall be adequate first aid supplies and materials, and adequately trained personnel so stationed that they can administer immediate care to all workmen in any mine or operation in case of injury. Water or neutralizing agents shall be available where corrosive chemicals or other harmful substances are stored, handled, or used.

(3) (57.18-6) All workmen shall be indoctrinated in safety rules and safe work procedures. A competent person shall give special safety training to employees who are not familiar with new work assignments.

(4) (57.18-12) A poster shall be fastened and maintained either on or in the cover of each first aid cabinet and at or near all telephones plainly stating the telephone numbers of available doctors, hospitals, and ambulance services within the district of the workmen.

(5) (57.18-4) Arrangements shall be made in advance for obtaining emergency medical assistance and transportation for injured workmen.

(6) (57.18-20) Working alone (surface). When a workman is assigned to work alone in a remote or isolated area, a system shall be instituted whereby such workman reports by use of radio or telephone to someone periodically or a designated person shall check on his safety at reasonable intervals. All persons involved in working alone shall be advised of the procedures to be followed.

(7) (57.18-25) Working alone (underground). A workman shall not be assigned, allowed or required to work alone in any area where conditions could develop which may endanger his safety, unless he can be seen, his cries for help can be heard, or if sounds of equipment being operated would indicate, if the sounds should cease for a length of time, to other workmen in the area that the person operating the equipment may be in trouble.

(8) (57.18-27) All workmen entering or leaving a mine shall be checked in and out. An accurate record of each entry and exit of workmen shall be kept at the mine entrance. [Order 72-1, § 296-61-030, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-040 Personal protective equipment and clothing--General, surface and underground.** The rules for personal protective equipment and clothing shall be as specified by the department of labor and industries in the general safety standards or occupational health standards, and the following standards shall also apply.

(1) (57.15-2) All workmen shall wear suitable head protection when in or around a mine or plant where a hazard exists which could cause an injury to the head.

(2) (57.15-3) All workmen shall wear suitable protective footwear when in or around an area of a mine or plant where a hazard exists which could cause an injury to the feet.

(3) (57.15-4) All workmen shall wear safety glasses, goggles, or face shields or other suitable protective devices when in or around an area of a mine or plant where a hazard exists which could cause injury to unprotected face or eyes.

(4) (57.15-5) Safety belts and lines shall be worn by workmen when there is danger of falling; a second workman shall tend the lifeline when confined or dangerous areas are entered. (See WAC 296-61-140.)

(5) (57.15-7) Protective clothing or equipment shall be worn when welding, grinding, torch-cutting, snagging or chipping, handling molten metals, acids, or caustics, or when exposed to harmful rays, dusts, or flying materials of any kind.

(6) (57.15-20) Life jackets or vests shall be worn where there is danger from falling into water. New equipment shall have a positive buoyancy of at least fifteen and one-half pounds, shall be U.S. Coast Guard approved, and shall be replaced when the positive buoyancy diminishes to thirteen pounds or less. [Order 72-1, § 296-61-040, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-050 General requirements.** (1) (57.20-1) Intoxicating beverages and narcotics shall not be permitted or used in or around mines. Workmen under the influence of alcohol or narcotics shall not be permitted on the job. This rule shall not apply to persons taking prescription drugs and narcotics as directed by a physician, providing such use shall not endanger the workman or others.

(2) (57.20-2) Every place of work shall have an adequate supply of water of a quality meeting the state board of health standards. Drinking utensils shall be of the sanitary type. Piping and outlets conveying nonpotable water shall be identified so that they are readily distinguished from piping and outlets carrying potable water.

(3) (57.20-5) Carbon tetrachloride shall not be used as a cleaning solvent or as a fire extinguishing agent.

(4) (57.20-9) Dusts suspected of being explosive shall be tested for explosibility. If tests prove positive, appropriate control measures shall be taken.

(5) (57.20-10) If water or silt will create a hazard, a retaining dam of substantial construction shall be erected and shall be inspected at regular intervals.

(6) (57.20-20) (Surface only.) Access to unattended mine openings shall be restricted by gates or doors, or the openings shall be fenced and posted.

(7) (57.20-21) Upon abandonment of any mine, the owner or operator shall effectively close or fence off all surface openings into which persons could fall or through which workmen could enter. Trespass warnings and appropriate danger notices shall be posted at or near each opening or entrance.

(8) (57.20-31) (Underground only.) Before blasting, workmen shall be located in a safe area. Such areas shall be where the blast will not create hazards, such as: Accumulations of water, gas, mud, or flammable atmosphere.

(9) (57.14-25) (57.14-26) (57.14-31) (57.14-32) Any person, firm, corporation or association involved in any type of operation as referred to by the title of these standards shall provide and maintain in use, belt shifters or other mechanical contrivances for the purpose of throwing on or off belts on pulley while running, where the same are practicable with regard to the nature and purpose of said belts and the dangers to workmen therefrom; also reasonable safeguards for all vats, pans, trimmers, cut-off, gang edger, and other saws, planers, cogs, gearings, belting, shafting, coupling, set screws, live rollers, conveyors, and machinery of other similar description, which it is practicable to guard and which can be effectively guarded with due regard to the ordinary use of such machinery and appliances, and the dangers to workmen therefrom, and with which the workmen are liable to come into contact while in performance of their duties; and shall correct any other unsafe methods of performing work which can be corrected with due regard to the general performance of such work; and if any machine or equipment, or any part thereof, is in a defective condition, and its operation would be extrahazardous because of such defect, or if any machine is not safeguarded as provided in this chapter, the use thereof is prohibited.

(10) (57.14-29) To avoid accidental activation of machinery, electrical devices or other equipment while performing maintenance, repair, clean-up, or construction work, the main disconnect(s) (line circuit breakers), or supply valve(s) shall first be deenergized or deactivated and locked or tagged out. Equipment shall be stopped and tagged or locked out before workmen remove guards or reach into any potentially hazardous area. The only exception will be when the equipment must be in motion in order to make proper adjustments. (See WAC 296-61-130.)

(11) (57.14-30) Workmen shall not work on or from mobile equipment in a raised position until it has been securely blocked in place. This does not preclude the use of equipment specifically designed as elevated mobile work platforms.

(12) (57.14-33) Pulleys of conveyors shall not be cleaned manually while the conveyor is in motion.

(13) (57.14-34) Belt dressing shall not be applied manually while belts are in motion unless an aerosol-type dressing is used.

(14) (57.14-35) Machinery shall not be lubricated while in motion where a hazard exists. Use of lubricating fittings or cups sufficiently extended to eliminate the hazard is permissible.

(15) (57.14-45) Welding operations shall be shielded and well ventilated in a manner which will protect workmen from harmful exposures.

(16) (57.4-75) Conveyors shall be equipped with slip-page detection devices. Multiple conveyor systems shall be equipped with interlocking shut down system. [Order 72-1, § 296-61-050, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-060 Illumination.** (1) (57.17-1) (Surface only.) All areas shall be sufficiently illuminated in order that workmen in the area can safely perform their assigned duties. When the adequacy of illumination for the area or task performed is questionable, a determination of the amount of illumination needed shall be made by the industrial hygiene section of the division of safety.

(2) (57.17-10) (Underground) Each person, when underground, shall carry an electric lamp which shall be maintained in good working condition. [Order 72-1, § 296-61-060, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-070 Guards and guarding.** (1) General safety standards to prevail where applicable. Driving mechanisms, power transmission equipment or apparatus, prime movers, shear or pinch points, or other similar hazardous areas or exposure shall be properly safeguarded with standard safeguards as required by the general safety standards.

(2) (57.14-1) Gears; sprockets; chains; drive head, tail, and take-up pulleys; flywheels, couplings, shafts, saw blades; fan inlets; and similar exposed moving machine parts which may be contacted by workmen and which may cause injury to workmen shall be guarded.

(3) (57.14-2) All belts and rope drives exposed to contact, which are so located that should the belt or rope break and the whip-like motion of the belt or rope could strike a workman, shall be properly guarded.

(4) (57.14-6) Except when testing the machinery, guards shall be securely in place while machinery is being operated.

(5) (57.14-26) Unsafe equipment or machinery shall be removed from service immediately.

(6) (57.14-8) (57.14-9) (57.14-14) Grinding wheels must be provided with a hooded guard of sufficient strength to withstand the shock of a bursting wheel. This guard must be adjusted close to the wheel and extend forward over the top of the wheel to a point at least thirty degrees beyond a vertical line drawn through the center of the wheel.

(a) Arbor ends must be guarded.

(b) Speed of wheels must not exceed the speed guaranteed by the manufacturer.

(c) Where practicable, grinding wheels must be provided with safety flanges.

(d) Work to be ground shall be held firmly against the steady rest in front of the wheel.

(e) The steady rest shall be properly adjusted and as near the wheel as possible.

(f) The side of emery wheels shall not be used for grinding unless it is designed for side grinding.

(g) Face shields or goggles, in good condition, shall be worn when operating a grinding wheel.

(7) (57.14-10) Hand-held power tools, other than rock drills, shall be equipped with controls requiring constant hand or finger pressure to operate the tools or shall be equipped with friction or other equivalent safety devices.

(8) (57.14-13) Forklift trucks, front-end loaders, and bulldozers shall be provided with substantial canopies when necessary to protect the operator. [Order 72-1, § 296-61-070, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-080 Fire prevention and control--General.** (1) (57.4-1) No person shall smoke or use an open flame:

(a) Where flammable solvents, liquids, fluids, or other flammable materials are stored, transported, handled or used; or

(b) Where oil or grease is stored, transported, handled, or used, if smoking or the use of an open flame may cause a fire; or

(c) Within an unsafe distance of any area where smoking or the use of any open flame may cause a fire or an explosion.

(2) (57.5-2) Signs warning against smoking and open flames shall be posted so they can be readily seen in areas or places where fire or explosion hazards exist.

(3) (57.4-4) Flammable liquids shall be stored in accordance with standards of the National Fire Protection Association or other recognized agencies approved by the U.S. Bureau of Mines. Small quantities of flammable liquids drawn from storage shall be kept in appropriately labeled safety cans.

(4) (57.4-8) Fuel lines shall be equipped with valves to cut off fuel at the source and shall be located and maintained to minimize fire hazards.

(5) (57.4-9) All heat or ignition sources, including lighting equipment, capable of producing combustion shall be insulated or isolated from combustible materials.

(6) (57.4-10) Electrical conductors shall be adequately insulated:

(a) Where they pass through doors or walls,

(b) Where they present a fire hazard, or

(c) Where they may be exposed to contact.

(7) (57.4-11) Abandoned electrical circuits shall be deenergized and isolated so that they cannot become energized inadvertently.

(8) (57.4-14) Solvents with flash points lower than 100°F. (38°C.) shall not be used for cleaning.

(9) (57.4-15) Solvents or flammable materials shall not be used when the following conditions exist:

(a) When there is open flame or source of ignition present,

(b) When the temperature can elevate the temperature of the solvent above its flash point, or

(c) When near any source of heat which may cause the creation of a hazardous condition.

(10) (57.4-18) Oxygen cylinders shall not be stored near oil or grease or in rooms, or areas used or designated for the storage of oil or grease.

(11) (57.4-19) Gauges and regulators used with oxygen or acetylene cylinders shall be kept clean and free of oil and grease.

(12) (57.4-20) Battery-charging stations shall be located in well-ventilated areas, and away from sources of ignition.

(13) (57.4-21) Internal combustion engines, except diesels, shall have the motor stopped while fueling and extreme care shall be taken to prevent spilling fuel on hot parts. The brakes shall be set on mobile equipment prior to fueling.

(14) (57.4-22) Each mine shall be equipped with or be provided with fire extinguishing equipment suitable for the size of the area and types of fire which could be expected.

(15) (57.4-23) Firefighting equipment which is provided on the mine property shall be strategically located, readily accessible, plainly marked, properly maintained, and inspected periodically. Records shall be kept of such inspections.

(16) (57.4-29) When welding, cutting or heating of materials is to be done near combustible materials, proper precautions shall be taken to ensure that the combustible material is not ignited from sparks, smoldering pieces of metal or the flame. A fire extinguisher shall be at the work site.

(17) (57.4-33) Valves on oxygen and acetylene cylinders shall be kept closed when not in use.

(18) (57.4-40) Fire alarm systems shall be provided and maintained in operating condition or adequate fire alarm procedures shall be established to warn promptly all persons who may be endangered by a fire.

(19) (57.4-46) Containers of gasoline, diesel fuel, liquefied petroleum gases, and other flammable liquids, when not buried, shall not be stored within one hundred feet of the following:

(a) Mine openings,

(b) Buildings or snowsheds connected to mine openings,

(c) Fan installations or housings,

(d) Hoist houses.

(20) (57.4-50) Specific escape and evacuation plans shall be established and kept current. Escape routes shall be marked plainly.

(21) (57.4-51) Fire-alarm systems adequate to warn all employees (underground) shall be provided and maintained in operating condition.

(22) (57.4-52) Gasoline shall not be taken, stored or used underground except in permissible flame safety lamps.

(23) (57.4-53) The use of liquefied petroleum gases underground shall be limited to maintenance work.

(24) (57.4-54) Oil, grease, or diesel fuel stored underground shall be kept in suitable tightly sealed containers in fire-resistant areas, at safe distances from explosives magazines, electrical installations, and shaft stations.

(25) (57.4-58) Fires shall not be built underground. Burning open-flame torches and candles shall not be left unattended underground.

(26) (57.4-65) When welding or cutting near combustible materials underground, the surrounding area shall, if practical, be wet down thoroughly before and after work is done, and a fire patrol of the area shall be maintained afterward for at least eight hours. In addition, when welding or cutting in shafts, winzes or raises, barriers, bulkheads or other, protective measures shall be used to prevent injury to anyone working or traveling below.

(27) (57.4-67) A mine rescue station equipped with at least ten sets of approved and properly maintained two-hour, self-contained breathing apparatus, adequate supplies, and spare parts shall be maintained at mines employing seventy-five or more men underground, or, in lieu thereof, the mine shall be affiliated with a central mine rescue station which meets the approval of the U.S. Bureau of Mines.

(28) (57.4-69) Approved mine rescue apparatus shall be properly maintained for immediate use. The equipment shall be tested at least once a month and records kept of the tests.

(29) (57.4-70) At mines employing seventy-five or more men underground, at least two rescue crews (ten men) shall be trained at least annually in the use, care, and limitations of self-contained breathing and fire-fighting apparatus and in mine-rescue procedures. Smaller mines shall have at least one man so trained for each ten men employed underground. [Order 72-1, § 296-61-080, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-090 Travelways and escapeways--Surface and underground.** (1) (57.11-1) Safe means of access shall be provided and maintained to all working places.

(2) (57.11-2) Crossover, elevated walkways, elevated ramps, and stairways shall be of substantial construction, provided with handrails, and maintained in good condition. Where necessary, toeboards shall be provided.

(3) (57.11-3) Ladders shall be of substantial construction and maintained in good condition.

(4) (57.11-5) Fixed ladders used underground shall be anchored securely and installed to provide at least three inches of toe clearance.

(5) Fixed ladders used above ground shall be anchored securely and have not less than seven inches clearance from the center of rungs to the nearest permanent object in back of the ladder.

(6) (57.11-6) Ladders shall project at least three and one-half feet above every platform in the ladderway and at least three and one-half feet above the collar of the shaft, winze, or raise, unless convenient and secure handholds are fixed at such places.

(7) (a) (57.11-9) Walkways with outboard railings shall be provided wherever persons are required to walk alongside elevated conveyor belts. Inclined walkways shall be covered with nonskid type material or provided with cleats.

(b) Whenever conveyors pass adjacent to or over working areas or passageways used by workmen, protective guards shall be installed. These guards shall be designed to catch and hold any load or materials which could create a hazard by falling or becoming dislodged.

(8) (57.11-12) Openings above, below, or near travelways through which men or materials may fall shall be protected by railings, barriers, or covers. If it is impractical to install such protective devices, other means or methods shall be instituted which will afford equivalent protection for the workmen.

(9) (57.11-13) Crossovers or underpasses with proper safeguards shall be provided over or under all conveyors which cannot otherwise be crossed safely.

(10) (57.11-14) Moving conveyors shall be crossed only at designated crossovers or underpasses.

(11) (57.11-16) Regular used walkways and travelways on which snow or ice has accumulated shall be sanded, salted, or cleared as soon as possible.

(12) (57.11-27) Scaffolds and working platforms shall be of substantial construction and provided with handrails and maintained in good condition. Floorboards shall be laid properly and the scaffolds and working platform shall not be overloaded. Working platforms shall be provided with toeboards when necessary.

(13) (57.11-36) Trap doors or adequate guarding shall be provided in ladderways at each level. Doors shall be kept operable.

(14) (57.11-50) Every underground mine shall have two separate properly maintained escapeways to the surface which are so positioned that damage to one shall not lessen the effectiveness of the other, or a method of refuge shall be provided when only one opening to the surface is possible.

(15) (57.11-51) Escape routes shall be:

(a) Inspected at regular intervals maintained in a safe travelable condition.

(b) Marked with conspicuous and easily read direction signs that clearly indicate the ways of escape.

(16) (57.11-52) Underground refuge areas shall be:

(a) Of fire-resistant construction, preferably in un-timbered areas of the mine.

(b) Large enough to accommodate readily the normal number of men in the particular area of the mine.

(c) Constructed so they can be made gastight.

(d) Provided with compressed air lines, waterlines, suitable handtools, and stopping materials.

(17) (57.11-53) Mine maps showing escape routes, directions of principal airflow, locations of telephones, fire doors, and ventilation doors, shall be posted and available. Maps shall be brought up to date as necessary.

(18) (57.11-54) Telephone or other approved types of voice communication shall be provided between the surface and refuge chambers. Such systems shall be independent of the mine power supply.

(19) (57.11-55) Designated escapeways inclined more than thirty degrees from the horizontal shall be equipped with stairways, ladders, cleated walkways or emergency hoisting facilities. [Order 72-1, § 296-61-090, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-100 Air quality, ventilation and radiation.** (1) (57.5-1) Except as permitted by Standard (4) (Federal 57.5-5) in this section:

(a) The exposure to airborne contaminants of a person working in a mine shall not exceed, on the basis of a time-weighted average, the threshold limit values adopted by the American Conference of Governmental Industrial Hygienists, as set forth and explained in the conference's publication entitled "Threshold Limit Values of Airborne Contaminants." Excursions above the listed threshold limit values shall not be of a greater magnitude than is characterized as permissible by the conference. This paragraph:

(a) Does not apply to airborne contaminants given a "C" designation by the conference - for example, nitrogen dioxide.

(b) Workmen shall be withdrawn from areas in which there is a concentration of an airborne contaminant given a "C" designation by the conference which exceeds the threshold limit value (ceiling "C" limit) listed for that contaminant.

(2) (57.5-2) A sufficient quantity of air shall be circulated through the working places of the mine to maintain a quality of air which is safe and respirable. Dust, gas, mist, and fume surveys shall be conducted as frequently as necessary to determine the adequacy of control measures.

(3) (57.5-3) Holes shall be collared and drilled wet, or other efficient dust-control measures shall be used when drilling nonwater-soluble material. Efficient dust-control measures shall be used when drilling water-soluble materials.

(4) (57.5-5) Respirators shall not be substituted for environmental control measures. However, where environmental controls have not been developed or when necessary by nature of the work involved (for example, welding, sand blasting, lead burning), a workman may work for reasonable periods of time in concentrations of airborne contaminants which exceed ceiling "C" limits or the limit of permissible excursions referred to in Standard (1) (Federal 57.5-1) in this section, if such workman wears a respiratory protective device approved by the Bureau of Mines as protection against the particular hazards involved.

(5) UNDERGROUND. (57.5-22) All surface fans, casings and air ducts connecting with the mine openings and also the fan houses and other buildings in close proximity shall be made of noncombustible material throughout; or, if of combustible material, it shall be made fire-resistant.

(6) (57.5-28) Unventilated areas shall be sealed, or barricaded and posted against entry.

(7) RADIATION. In the standards in 57.5 which relate to radiation, a "working level" (WL) means any combination of the short-lived radon daughters in one liter of air that will result in the ultimate emission of  $1.3 \times 10^5$  MeV (million electron volts) of potential alpha energy, and exposure to these radon daughters over a period of time expressed in terms of "working level months" (WLM). Inhalation of air containing a radon daughter

concentration of 1 WL for 170 hours results in an exposure of 1 WLM.

(8) (57.5-37) Mine atmosphere shall be sampled to determine if hazardous concentrations of radon daughters are present. Where potentially hazardous concentrations are found, or known sources of radon exist, each active work area shall be sampled as often as necessary by a qualified person.

(9) (57.5-38) No workman shall be permitted to receive an exposure of more than six working level months in any consecutive three-month period and no more than twelve working level months in any consecutive twelve-month period.

(10) (57.5-39) If samples show an atmospheric concentration or radon daughters of more than 1.0 working level, but less than 2.0 working levels, immediate corrective action shall be taken or the workmen shall be withdrawn. When concentrations higher than 2.0 working levels are found, the workmen shall be withdrawn from the area until corrective action is taken and the radon-daughter atmospheric concentrations are reduced to 1.0 working level or less.

(11) (57.5-40) Where uranium is mined, if measurements in areas indicate exposure to concentrations of radon daughters in excess of 0.3 working level, complete individual exposure records shall be kept for all workmen entering these areas.

(12) (57.5-41) Smoking shall be prohibited where uranium is mined.

(13) (57.5-42) If levels of permissible exposures to concentrations of radon daughters different from those prescribed in standard (7) radiation, in this section, are recommended by the environmental protection agency and approved by the president, no workmen shall be permitted to receive exposures in excess of those levels after the effective dates established by the agency. [Order 72-1, § 296-61-100, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-110 Regulations pertaining to use of diesel equipment underground.** Permission will be granted for specified diesel equipment, working in a specified location under specified conditions, as follows:

(1) Application shall be made to the mining section, division of safety, department of labor and industries, for permission to use specified diesel equipment in a specified underground area and should include the following information:

(a) The type of construction and complete identification data and specifications including analysis of the undiluted exhaust gases of the diesel equipment.

(b) The location of the underground mine where the diesel equipment is to be used, accompanied by a drawing showing the underground area and description of the ventilation system.

(2) Before the diesel equipment is taken underground, written permission shall be obtained from the division of safety or its duly authorized representative. A satisfactory test on surface, to show that the exhaust gases do not exceed the maximum percentage of carbon monoxide permitted, shall be required.

(3) Diesel equipment may only be used underground where the mine ventilation is controlled by mechanical means and shall not be operated if the ventilating current is less than 75 CFM per horsepower, based on the maximum brake horsepower of the engines.

(4) Air measurements shall be made at least once weekly in the diesel engine working area and the measurements entered in the Underground Diesel Engine Record Book. Permissible maximum amounts of noxious gases are as follows:

At engine exhaust ports	Carbon Monoxide	.10%	1,000 ppm <sup>1</sup>
Next to equipment	Carbon Monoxide	.005%	50 ppm
General atmosphere	Carbon Monoxide	.005%	50 ppm
General atmosphere	Nitrogen Dioxide	.0005%	5 ppm
General atmosphere	Aldehydes	.0002%	2 ppm

<sup>1</sup>Parts of vapor or gas per million parts of contaminated air by volume at 25°C and 760 mm. Hg. pressure.

[Order 72-1, § 296-61-110, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-120 Electricity--Surface and underground.** (1) (57.12-1) Circuits shall be protected against excessive overloads by the use of fuses or circuit breakers of the correct type and capacity.

(2) (57.12-2) Electrically-operated equipment and electrical circuits shall be provided with switches and/or other controls. Such switches and/or controls shall be of approved design and construction and shall be properly installed.

(3) (57.12-3) Individual overload protection or short-circuit protection shall be provided for the trailing electrical cables of mobile equipment.

(4) (57.12-7) Trailing cable and power-cable connections to junction boxes shall not be made or broken under load.

(5) (57.12-11) High-potential transmission cables shall be covered, insulated, or placed according to acceptable electrical codes to prevent contact with low-potential circuits.

(6) (57.12-14) Shovel trailing cables shall not be moved with the shovel dipper unless cable slings or sleds are used.

(7) (57.12-30) When a potentially dangerous condition is found the equipment or wiring shall be immediately deenergized and the condition corrected before the equipment or wiring is reenergized.

(8) (57.12-16) Electrical equipment shall be deenergized before work is done on such equipment. Switches shall be locked out or other measures taken which shall prevent the equipment from being energized without the knowledge of the individuals working on it. Such locks, or preventative device, shall be removed by the persons who installed them, or other authorized personnel may remove a lock or device only when he is assured it is safe

to do so and when the person who placed the device is not available.

(9) (57.12-17) Power circuits shall be deenergized before work is done on such circuits unless hot-line tools or other equipment approved for such use is used. Suitable warning signs shall be posted by the workmen who are to do the work. Switches shall be locked out or other measures taken which shall prevent the power circuits from being energized without the knowledge of the workmen working on them. Such locks, signs, or preventative devices shall be removed by the workman who installed them or other authorized personnel may remove a lock or device only when he is assured it is safe to do so and when the person who places the device is not available.

(10) (57.12-18) Principal power switches shall be labeled to show which units they control, unless identification can be made readily by location.

(11) (57.12-20) Dry wooden platforms, insulating mats, or other electrically nonconductive material shall be kept in place at all switchboards and power-control switches where shock hazards exist. However, metal plates on which a person normally would stand and which are kept at the same potential as the grounded, metal, noncurrent-carrying parts of the power switches to be operated, may be used.

(12) (57.12-21) Suitable danger signs shall be posted at all major electrical installations.

(13) (57.12-23) Electrical connections and resistor grids that are difficult or impractical to insulate shall be guarded, unless protection is provided by location.

(14) (57.12-25) All metal enclosing or encasing electrical circuits shall be grounded or provided with equivalent protection. This requirement does not apply to battery-operated equipment.

(15) (57.12-26) Metal fencing and metal buildings enclosing transformers and switchgear shall be grounded.

(16) (57.12-27) Frame grounding or equivalent protection shall be provided for mobile equipment powered through trailing cables.

(17) (57.12-28) Continuity and resistance of grounding systems shall be tested immediately after installation and at reasonable periodic intervals.

(18) (57.12-33) Hand-held electric tools shall not be operated at high potential voltages.

(19) (57.12-36) Fuses shall not be removed or replaced by hand in an energized circuit, and they shall not otherwise be removed or replaced in an energized circuit unless equipment and techniques especially designed to prevent electrical shock are provided and used for such purpose.

(20) (57.12-37) Fuse tongs or hot-line tools shall be used when fuses are removed or replaced in high-potential circuits.

(21) (57.12-40) Operating controls shall be installed in such a manner that they can be operated without danger of contact with energized conductors.

(22) (57.12-41) Switches and starting boxes shall be of safe design and capacity.

(23) (57.12-45) Overhead electrical transmission lines above ground shall be installed as specified by the National Electrical Safety Code, Washington state electrical construction code or Washington state statutes, whichever is most restrictive.

(24) (57.12-71) When equipment must be moved or operated near a power line (other than trolley lines) and can come within ten feet of the power line proper barricades shall be erected or the power line shall be deenergized.

(25) (57.12-47) Guy wires of poles supporting high-potential conductors shall be equipped with insulators installed as required by the applicable safety rules or laws.

(26) (57.12-48) Telegraph, telephone, or signal wires shall not be installed on the same crossarm with power conductors. When installed on poles supporting powerlines they shall be installed as specified by the National Electrical Safety Code or Washington state rules or laws, whichever affords the greatest degree of protection.

(27) (57.12-65) Powerlines, including trolley wires, and telephone circuits shall be protected against short circuits and lightning.

(28) (57.12-66) Where metallic tools or equipment can come in contact with trolley wires or bare powerlines, the lines shall be guarded or deenergized.

(29) (57.12-67) Transformers shall be totally enclosed, or shall be placed at least eight feet above the ground, or installed in a transformer house or surrounded by a substantial fence at least six feet high and at least three feet from any energized parts, casings, or wiring.

(30) (57.12-68) Transformer enclosures shall be kept locked against unauthorized entry.

(31) (57.12-80) Trolley wires and bare power conductors shall be guarded at man trip loading and unloading points, and at shaft stations. Where such trolley wires and bare power conductors are less than seven feet above the rail, they shall be guarded at all points where men work or pass regularly beneath.

(32) (57.12-82) Powerlines shall be well separated or insulated from waterlines, telephone lines, and air lines.

(33) (57.12-85) Transformer stations shall be enclosed to prevent workmen from unintentionally or inadvertently contacting energized parts. [Order 72-1, § 296-61-120, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-130 Deenergizing and lock-out or tag-out procedures.** (1) Procedures outlined in WAC 296-61-050(10) shall be followed:

(a) If pipelines or ducts are constructed without valves or closures, the lines or ducts shall be broken at a flange and a blank flange inserted to stop the accidental flow of any material.

(b) After tagging or locking out equipment, a test shall be conducted to ascertain that the equipment has been made inoperative or the flow of material has been positively stopped. Precautions shall be taken to ascertain that persons will not be subjected to hazard while conducting test if power source or flow of material is not shut off.

(2) A tag-out procedure will be acceptable when evidence indicates it is equivalent to a lock-out procedure.

(3) Tags shall contain the following information: Name of person authorizing placement; reason for placing; signature of workman placing tag; and department with which such workman is associated.

(4) Locking or tagging out a machine by use of a push button or other local control device only will not be acceptable as meeting the intent of these rules.

(5) Equipment shall be stopped and tagged or locked out before workmen remove guards or reach into any potentially hazardous area. The only exception will be when the equipment must be in motion in order to make proper adjustments.

(6) Each person actively engaged in the repair, maintenance or clean-up shall lock-out or tag-out the affected equipment and shall personally remove his lock or tag upon completion of his work, except when it is positively determined that a workman has left the premises without removing his lock or tag, other workmen may remove the locks or tags in accordance with a procedure formulated by each firm and approved by the division of safety. [Order 72-1, § 296-61-130, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-140 Vessel or confined area requirements.** (1) Management shall be responsible for developing a written procedure to be followed for safe entry of workmen into confined areas, tanks, vessels or sewers and for maintaining a safe condition while work is being performed therein. Such procedure shall include the following minimum requirements:

(a) Before workmen enter and at reasonable intervals as work progresses, all vessels, sewers or confined areas must be properly ventilated. Such areas shall be tested and/or evaluated by a person thoroughly trained and instructed in the use of instruments required, or qualified to make evaluations of conditions which may be encountered. Special consideration shall be given to the possibility that the area may be deficient of oxygen or may contain dangerous concentrations of gases or toxic substances.

(b) All equipment necessary to perform the work, including safety equipment, must be at the job site and shall be inspected or tested to assure that it functions properly.

(c) All electrical circuits, valves, ducts, pipes, and other equipment shall be locked out, tagged out, or blanked as required in accordance with the applicable rules in these standards.

(d) Prior to and while welding or burning is being done in areas where a fire or explosion hazard may exist, the applicable rules contained in these standards shall be complied with.

(e) The occupational health standards shall prevail for evaluating conditions concerning health, fire, or explosion hazards. [Order 72-1, § 296-61-140, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-150 Compressed air, boilers, hoses and fittings, surface and underground--General.** (1)

(57.13-1) Boilers, high pressure cylinders and vessels shall be constructed, tested, inspected and maintained to conform to the standards established by the boilers and unfired pressure vessels law, chapter 70.79 RCW, and adopted rules administered by Washington state department of labor and industries, division of building and construction safety inspection services.

(2) (57.13-19) Repairs involving the pressure system of compressors, receivers, or compressed air-powered equipment shall not be attempted until the pressure has been bled off.

(3) (57.13-20) Compressed air shall not be used for cleaning purposes if it may endanger other persons in the area or for cleaning clothing while it is being worn.

(4) (57.13-21) High pressure steam or air hose lines of three-quarter inch inside diameter or greater shall have safety chains or devices affording equivalent protection installed in or between line sections and at connections of machines. [Order 72-1, § 296-61-150, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-160 Materials storage and handling--General, surface and underground.** (1) (57.16-3) (57.16-4) Hazardous materials shall be labeled, handled and stored properly to prevent spillage or damage to the containers. Chemicals shall be stored in such a manner that they will not decompose, contaminate, or react with other chemicals which could create a hazard. The manufacturer's safe practice recommendations or those published by the Manufacturing Chemists Association should be followed.

(2) (57.16-5) (57.4-18) Compressed gas cylinders shall be stored away from heat sources, combustible materials or other materials, which may create hazardous conditions. Manufacturer's, supplier's or other acceptable safe practices shall be followed. Cylinders shall be secured in a manner which will prevent them from tipping or falling. Acetylene cylinders shall be stored, transported, or used while in the upright position only. Oxygen cylinders shall not be stored near oil or grease or in rooms or areas used or designated for the storage of oil or grease.

(3) (57.16-6) Valves on compressed gas cylinders shall be protected by covers when being transported or stored, and by a safe location when the cylinders are in use.

(4) (57.16-9) Workmen shall stay clear of suspended loads.

(5) (57.16-11) Workmen shall not ride on loads being moved by cranes or derricks, nor shall they ride the hoisting hooks unless a special conveyance or safety device with a lifeline is used. [Order 72-1, § 296-61-160, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-170 Crane rail stops, bumpers and fenders.** (57.16-14) (1) Rail stops shall be provided at both ends of the crane runway and at ends of a crane bridge. When two trolleys are operated on the same rails, bumpers shall be provided to prevent collision of the cranes or trolleys.

(2) Bumpers and rail stops shall extend at least as high as the centers of the wheels, and a warning device shall be installed to warn the operator that he is approaching the end of the runway.

(3) Rail stops shall be fastened to the girders and rails, but not to the rails alone. This does not apply to portable rail stops used temporarily as a safeguard for a specific situation.

(4) Rail stops shall be built up of steel plates and angles or be made of cast steel.

(5) When crane rails are located where workmen may be exposed to the pinch point between a crane wheel and the rail, fenders shall be installed which extend below the lowest point of the treads of the outside ridge truck wheels. They shall be of a shape and form that will tend to push or raise a man's hand, arm or leg off the rail and away from the wheel.

(6) Hoists shall be provided with a positive limit stop to prevent the hoist block from over-traveling in the upward direction.

(7) A device for locking or tagging out the disconnect switch shall be provided.

(8) Effective audible warning signals shall be provided within easy reach of the operator. [Order 72-1, § 296-61-170, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-180 Crane platforms and footwalks.** (57.16-15) (1) Crane platforms shall be provided when changing and repairing truck wheels on end trucks.

(2) A platform or footwalk shall be located on crane or crane runway to give access to the crane cage, and it shall be accessible from one or more stairways or fixed ladders. This platform or footwalk shall be not less than eighteen inches in width.

(3) Where stairways are used to give access to platforms, they shall make an angle of not more than fifty degrees with the horizontal and shall be equipped with substantial railing. If ladders are used to give access to platforms, they shall extend not less than thirty-six inches above the platform. Railed stairways or ladders to be used as a means of ingress and egress to crane cages shall be located at either or both ends.

(4) A footwalk with standard railings and toeboards shall be placed along the entire length of the bridge on the motor side, and a short platform twice the length of the trolley placed at one end of the girder on the opposite side, with a vertical clearance of at least six feet, six inches, where the design of crane or building permits, but in no case shall there be less than four feet clearance. For hand-operated cranes, the footwalk shall not be required to be installed on the bridge of the crane, but there shall be a repair platform equal in strength and design to that required for motor-operated cranes, installed on the wall of the building or supported by the crane runway at a height equal to the lower edge of the bridge girder to facilitate necessary repairs. [Order 72-1, § 296-61-180, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-190 Pit and quarry operations--Ground control--Surface.** (1) All rules contained in this

standard shall prevail where applicable to this type of operation.

(2) The words "pits" or "quarry" when used in this section shall mean a cavity or opening formed in the earth by breaking, loosening, cutting, digging or pushing aside and removing therefrom the sand, gravel, ore, rock or other material.

(3) (57.3-1) Standards for the safe control of pit walls, including the overall slope of the pit wall, shall be established and followed by the operator. Such standards shall be consistent with the prudent engineering design, the nature of the ground, and the kind of mineral mined, and the ensuring of safe working conditions according to the degree of slope. Mining methods shall be selected which will ensure wall and bank stability, including benching as necessary to obtain a safe overall slope.

(4) (57.3-2) All material so located as to constitute a hazard shall be stripped for a safe distance but in no case less than ten feet from the top of pit or quarry walls. The faces of any open pit or quarry shall be given a slope to be consistent with the stability of the material to minimize the danger of rock or material from falling on workmen.

(5) The slope of the face shall be consistent with the stability of the rock. On walls where the material is loose or unstable, benches shall be provided to assure capture of falling material.

(6) (57.3-3) Width and height of benches shall be governed by the type of equipment to be used so work can be performed safely.

(7) (57.3-4) Safe means of scaling pit-banks shall be provided. Hazardous banks shall be scaled before other work is performed in the hazardous bank area.

(8) (57.3-5) Workmen shall not work near or under dangerous banks. All loose rock and overhang shall be barred down or removed by mechanical means before proceeding with work under the face. Barring down shall not be done until workmen below are notified and are at a safe location. Other unsafe ground conditions shall be corrected or barricaded and posted.

(9) (57.3-6) Workmen engaged in barring down loose material shall approach the material from above and scale from a safe location and, when scaling from high and steeply inclined ledges, shall be provided with and wear safety belts or harness or equivalent protection which shall be attached to a safety line of which the opposite end shall be securely attached to a substantial anchorage. Safety lines used by scalers shall be of steel wire core type or other material specifically approved for this use by the division of safety.

(10) (57.3-23) Workmen shall be furnished light bars, blunt on one end for scaling loose rock.

(11) (57.3-8) The supervisor, or a competent person designated by him, shall examine working areas and faces for unsafe conditions at least at the beginning of each shift and after blasting, periods of freezing, thawing, rain or other acts of nature. Any unsafe condition found shall be corrected before any further work is performed at the immediate area or face at which the unsafe condition exists.

(12) (57.3-9) Workmen shall examine their working places before starting work and frequently thereafter, and any unsafe condition shall be corrected.

(13) (57.3-12) Workmen shall not work between equipment and the pit wall or bank where the equipment may hinder escape from falls or slides of the bank. Revolving type machines shall be located so as to allow a minimum of thirty inches clearance between the counterweight or outermost projecting part of the machine and any stationary object or the hazardous area shall be restricted to prevent workers from being caught in pinch points. [Order 72-1, § 296-61-190, filed 2/25/72, effective 4/1/72.]

#### **WAC 296-61-200 Ground control--Underground.**

(1) (57.3-20) Whenever the ground or material is not known to be stable, supports such as rock bolts, timbers or other methods shall be installed to prevent material from moving or falling. Materials or methods used shall be consistent with the nature of the ground and the method of mining being employed.

(2) (57.3-22) Miners shall examine and test the back, face, and ribs of their working places at the beginning of each shift and frequently thereafter. Supervisors shall examine the ground conditions during daily visits to insure that proper testing and ground control practices are being followed. Loose ground shall be taken down or adequately supported before any other work is done. Ground conditions along the haulageways and travelways shall be examined periodically and scaled or supported as necessary. [Order 72-1, § 296-61-200, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-210 Drilling.** (1) (57.7-2) Workmen shall not operate or be required to operate any equipment deemed unsafe. Any defect which would make the equipment unsafe to operate under existing conditions shall be cause to take the equipment out of service until the defects have been properly corrected.

(2) (57.7-3) The drilling area shall be inspected for hazards before starting the drilling operations.

(3) (57.7-4) Workmen shall not be on the mast while the drill bit is in operation unless they are provided with a safe platform from which to work and they are required to use safety belts and lifelines to avoid falling.

(4) (57.7-5) Drill crews and others shall stay clear of augers or drill stems that are in motion. Workmen shall not pass under or step over a moving stem or auger.

(5) (57.7-8) When drills are being moved, drill steel, tools, and other equipment shall be secured. The mast shall be placed in such a position that the drill can be moved safely.

(6) (57.7-10) In the event of power failure, drill controls shall be placed in the neutral position until power is restored.

(7) (57.7-11) The drill stem shall be resting on the bottom of the hole or on the platform with the stem secured to the mast before attempts are made to straighten a crossed cable on a reel.

(8) (57.7-12) Drills shall be attended at all times while drill is in operation or while it is being moved under its own power.

(9) (57.7-13) Drill holes large enough to constitute a hazard shall be covered or guarded.

(10) (57.7-18) Workmen shall not hold the drill steel while collaring holes, or rest their hands on the chuck or centralizer while drilling. [Order 72-1, § 296-61-210, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-220 Rotary jet piercing--Surface only.** (1) (57.8-2) Safety chains or other suitable locking devices shall be provided across connections to and between high pressure oxygen hose lines of one inch inside diameter or larger.

(2) (57.8-3) Suitable protective clothing or devices shall be provided and shall be used by the workman when lighting a burner. If burners must be ignited manually, a long lance or other safe device shall be used.

(3) (57.8-5) Workmen shall not smoke and open flames shall not be used in the vicinity of the oxygen storage and supply lines. Signs warning against smoking and open flames shall be posted in these areas. [Order 72-1, § 296-61-220, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-230 Man hoisting--Hoists.** The hoisting standards in this section apply to those hoists and appurtenances used for hoisting workmen. However, where workmen may be endangered by hoists and appurtenances used solely for handling ore, rock, and materials, compliance with the appropriate standards will be required.

(1) (57.19-1) Hoists shall have rated capacities consistent with the loads handled and the recommended safety factors of the ropes used.

(2) (57.19-2) Hoists shall be anchored securely.

(3) (57.19-3) Belt, rope, or chains shall not be used to connect driving mechanisms to man hoists.

(4) (57.19-4) Any hoist used to hoist workmen shall be equipped with a brake or brakes which shall be capable of holding its fully loaded cage, skip, or bucket at any point in the shaft.

(5) (57.19-5) The operating mechanism of the clutch of every man hoist drum shall be provided with a locking mechanism, or interlocked electrically or mechanically with the brake to prevent accidental withdrawal of the clutch.

(6) (57.19-6) Automatic hoists shall be provided with devices that automatically apply the brakes in the event of power failure.

(7) (57.19-7) Man hoists shall be provided with devices to prevent overtravel and overspeed.

(8) (57.19-9) An accurate and reliable indicator of the position of the cage, skip, bucket, or cars in the shaft shall be provided.

(9) (57.19-10) Hoist controls shall be placed or housed so that the noise from machinery or other sources will not prevent hoistmen from hearing signals.

(10) (57.19-21) The following static-load safety factors shall be used for selecting ropes to be used for

hoisting workmen and for determining when such ropes shall be removed from the man hoists:

Length of rope in shaft (feet)	Minimum Factor of safety (new rope)	Minimum Factor of safety (removed)
500 or less	8	6.4
501 - 1,000	7	5.8
1,001 - 2,000	6	5.0
2,001 - 3,000	5	4.3
3,001 - or more	4	3.6

(11) (57.19-24) The rope shall be attached to the load by the thimble-end-clip method, socketing method, or other approved methods. If the socketing method is employed, zinc or its equivalent shall be used. The use of Babbit metal or lead for socketing wire ropes is prohibited. If the thimble-and-clip method is used, the following shall be observed:

(a) The rope shall be attached to the load by passing one end around an oval thimble that is attached to the load bending the end back so that it is parallel to the long or "live" end of the rope and fastening the two parts of the rope together with clips.

(b) The U-bolt of each clip shall encircle the short of "dead" end of the rope and the distance between clips shall not be less than the figures given in the accompanying table.

(c) As a minimum the following number of clips or equivalent shall be used for various diameters of six-strand, 19-wire plow steel ropes: (Follow manufacturer's recommendations for number and installation of clips for specific type of wire rope being used.)

Diameter of Rope Inches	Number of Clips	Center-to-Center Spacing of Clips, Inches
3/4	4	4 1/2
7/8	4	5 1/4
1	4	6
1 1/8	5	6 3/4
1 1/4	5	7 1/2
1 3/8	6	8 1/4
1 1/2	6	9
1 5/8	6	9 3/4
1 3/4	7	10 1/2
1 7/8	8	11 1/4
2	8	12
2 1/8	8	13
2 1/4	8	14

(d) For all ropes less than three-quarters inch in diameter, at least four clips or equivalent shall be used.

(e) When special conditions require the attachment of a sling to the hoisting cable to handle equipment in the shaft, the sling shall be attached by clips or equivalent in accordance with the table in paragraph (c) of this standard.

(12) (57.19-38) Platforms with toeboards and hand-rails shall be provided around elevated head sheaves.

(13) (57.19-39) Diameters of head sheaves and hoist drums should conform to the following specifications:

**Diameter of Sheave  
and Drum**

Rope Construction	Recommended	Minimum
	Times rope diameter	Times rope diameter
6 x 7 classification	72	42
6 x 19	45	30
6 x 37	27	18
6 x 25, Type B flattened strand	45	30
6 x 27, Type H, flattened strand	45	30
6 x 30, Type G, flattened strand	45	30
18 x 7 classification	51	34

(14) The main shaft and all equipment within or connected to it shall be inspected at least as often as indicated in the schedule below. A report of these inspections and all other required reports shall be entered in a "daily log book" and kept on file in the mine office for two years from the date of inspection.

(a) SHAFT INSPECTION REPORT TO BE FILED IN MINE OFFICE.

Name of Inspector \_\_\_\_\_  
Date \_\_\_\_\_

Remarks \_\_\_\_\_

The items listed below shall have a visual daily inspection by persons to be designated by the management. In addition, there shall be a thorough inspection at least as often as indicated below:

- Fire-fighting equipment . . . . . Monthly
- Ladders and platforms . . . . . Monthly
- Manway . . . . . Monthly
- Second exits . . . . . Monthly
- Top sheave wheel . . . . . Weekly
- Guides or track . . . . . Daily
- Inspection and maintenance of safety dogs on cage or skip . . . . . Daily
- Safety gates or guard rails . . . . . Daily
- Safety hood on cages or skips . . . . . Daily
- Shaft rope idlers or deflection sheaves . . . . . Daily
- Skip or cage coupling . . . . . Daily
- Timbers . . . . . Daily
- Bell signal system . . . . . Shift
- Chute gates . . . . . Shift
- Chutes . . . . . Shift
- Hoisting rope . . . . . Shift
- Overwinding devices . . . . . Shift
- Shaft clearance . . . . . Shift
- Telephone system . . . . . Shift

(15) All chains and couplings must be annealed once every three months unless provided with safety straps or bridles. Records identifying the chains and/or couplings and indicating the dates of annealing shall be kept in the company office and shall be made available upon request. [Order 72-1, § 296-61-230, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-240 Conveyances.** (1) (57.19-45) Man cages and skips used for hoisting or lowering workmen or other persons in any vertical shaft or any incline shaft with an angle of inclination of forty-five degrees or more from the horizontal, shall be covered with a metal bonnet.

(2) (57.19-50) Buckets used to hoist workmen during vertical shaft sinking shall have:

(a) Cross heads with safety catches. If the guides are made of steel or wood, the height of the crosshead shall be at least 1 1/2 times the width of the crosshead. If wire rope guides are used the crosshead shall be at least four feet high.

(b) Overhead protection when the shaft depth exceeds fifty feet.

(c) Sufficient depth to transport men safely while they are in a standing position. Platforms may be installed within the bucket to get this desired height.

(d) Devices which will prevent the bucket from accidentally dumping if the bucket is supported by a bail attached near or below the center of the bucket.

(3) (57.19-51) Buckets shall not be used to hoist men in vertical shafts except during shaft sinking operations, inspections, maintenance and repairs.

(4) (57.19-52) Buckets shall not be used to hoist men in incline shafts except during shaft sinking operations, inspections, maintenance and repairs.

(5) (57.19-53) In shaft sinking where a platform is suspended by wire ropes, such ropes shall have an approved rating for the suspended load.

(6) (57.19-54) Where rope guides are used in shafts they shall be of locked coil construction. [Order 72-1, § 296-61-240, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-250 Hoisting procedures.** (1) (57.19-55) When a manually-operated hoist is used, a qualified hoistman shall remain within hearing of the telephone or signal device at all times while any workman is underground.

(2) (57.19-57) Hoistmen shall be physically fit and shall undergo yearly examinations to determine their continued fitness; certification to this effect shall be available at the mine.

(3) (57.19-58) Only experienced hoistmen shall operate the hoist except in cases of emergency and in the training of new hoistmen.

(4) (57.19-59) Whenever a regular shift of men is being hoisted or lowered, a second man familiar with and qualified to stop the hoist shall be in attendance; this provision shall not apply to shaft sinking operations, level development, or repair operations in the mine.

(5) (57.19-65) Conveyances shall not be lowered by the brakes alone except during emergencies.

(6) (57.19-69) Workmen shall not enter or leave conveyances which are in motion or after a signal to move the conveyance has been given to the hoistman.

(7) (57.19-70) Cage doors or gates shall be closed while workmen are being hoisted; they shall not be opened until the cage has come to a stop.

(8) (57.19-71) Workmen shall not ride in skips or buckets with muck, supplies, materials, or tools other than small hand tools.

(9) (57.19-73) Rock or supplies shall not be hoisted in the same shaft as workmen during shift changes, unless the compartments and dumping bins are partitioned to prevent spillage into the cage compartment.

(10) (57.19-75) Open hooks shall not be used to hoist buckets or other conveyances.

(11) (57.19-77) Buckets shall be stopped approximately fifteen feet from the shaft bottom to await a signal from one of the crew on the bottom for further lowering.

(12) (57.19-79) Where mine cars are hoisted by cage or skip, means for blocking cars shall be provided at all landings and also on the cage.

(13) (57.19-80) When tools, timbers, or other materials are being lowered or raised in a shaft by means of a bucket, skip, or cage, they shall be secured or so placed that they will not strike the sides of the shaft. [Order 72-1, § 296-61-250, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-260 Signaling.** (1) (57.19-90) There shall be at least two effective approved methods of signaling between each of the shaft stations and the hoist room, one of which shall be a telephone or speaking tube.

(2) (57.19-92) A method shall be provided to signal the hoist operator from cages or other conveyances at any point in the shaft.

(3) (57.19-94) A legible signal code shall be posted prominently in the hoist house within easy view of the hoistmen, and at each place where signals are given or received.

(4) (57.19-96) Any workman responsible for receiving or giving signals for cages, skips, and man trips when workmen or material are being transported shall be familiar with the posted signaling code. [Order 72-1, § 296-61-260, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-270 Shafts.** (1) (57.19-100) Shaft landings shall be equipped with substantial safety gates so constructed that materials will not go through or under them. Gates shall be closed except when loading or unloading shaft conveyances.

(2) (57.19-101) Positive stop blocks or a derail switch shall be installed on all tracks leading to a shaft collar or landing.

(3) (57.19-105) A safe means of passage around open shaft compartments shall be provided on landings with more than one entrance to the shaft.

(4) (57.19-107) Hoistmen shall be informed when workmen are working in a compartment affected by that hoisting operation and a sign, "men working in shaft," shall be posted at the hoist.

(5) (57.19-108) When workmen are working in a shaft "men working in shaft" signs shall be posted at all devices controlling hoisting operations which may endanger such workmen.

(6) (57.19-110) A substantial bulkhead or equivalent overhead protection shall be installed for protection of workmen working in a mine shaft.

(7) (57.19-120) A systematic procedure of inspection, testing, and maintenance of shaft and hoisting equipment shall be developed and followed. If it is found or suspected that any part is not functioning properly, the hoist shall not be used until any needed repairs or adjustments have been made.

(8) (57.19-128) Ropes shall not be used for hoisting when they have:

(a) More than six broken wires in any lay.

(b) Crown wires worn to less than sixty-five percent of the original diameter.

(c) A marked amount of corrosion or distortion.

(d) A combination of similar factors individually less severe than those above but which in aggregate might create an unsafe condition. [Order 72-1, § 296-61-270, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-280 Explosives.** (57.6) The term "explosives" as used in this section includes blasting agents. The standards in this section in which the term "explosives" appears are applicable to blasting agents, as well as to other explosives, unless blasting agents are expressly excluded.

(1) (57.6-1) Detonators and explosives, including blasting agents, shall be stored in magazines as required by the state of Washington explosives law, chapter 70.74 RCW and the applicable safety rules dealing with explosives, chapters 296-51 and 296-52 WAC.

(2) (57.6-2) Detonators shall not be stored in the same magazine or powder chest with explosives.

(3) (57.6-5) Areas surrounding magazines or facilities used for the storage of blasting agents shall be kept clear of all trash and other unnecessary combustible materials for a distance not less than twenty-five feet in all directions.

(4) (57.6-6) Smoking and open flame shall not be permitted within twenty-five feet of a place where explosives or detonators are stored.

(5) (57.6-8) Ammonium nitrate-fuel oil blasting agents shall be physically separated from other explosives, safety fuse, or detonating cord stored in the same magazine, and shall be stored in such a manner that oil does not contaminate the other explosives, safety fuse, or detonating cord.

(6) (57.6-20) (57.6-21) Magazines shall be:

(a) Located in accordance with the current American Tables of Distances for storage of explosives.

(b) Detached structures located away from power lines, fuse storage areas, and other possible sources of fire.

(c) Constructed substantially of noncombustible material or covered with fire-resistant material.

(d) Reasonably bullet resistant.

(e) Made of nonsparking materials on the inside, including floors. Facilities used for bulk storage of blasting agents shall not be lined with copper or zinc.

(f) Provided with adequate and effectively screened ventilation openings near the floor and ceiling.

(g) Kept locked securely when unattended.

(h) Posted with suitable danger signs so located that a bullet passing through the face of a sign will not strike the magazine.

(i) Used exclusively for storage of explosives or detonators and kept free of all extraneous materials.

(j) Kept clean and dry in the interior, and in good repair.

(k) Unheated, unless heated in a manner that does not create a fire or explosion hazard. Electrical heating devices shall not be used inside a magazine.

(l) Electrically bonded and grounded if constructed of metal.

(m) In compliance with any other applicable rules or laws concerning magazine construction and use as specified by Washington state explosives law, chapter 70.74 RCW and safety rules for explosives, chapter 296-52 WAC.

(n) (57.6-11) Illuminated only by use of approved devices. If electrically illuminated, wires must be in rigid conduit and fixtures must be explosion proof type. Switches must be located outside of the magazine.

(7) (57.6-25) (57.6-27) Underground distribution storage magazines shall be:

(a) Of substantial construction and have only nonsparking material on the inside, including the floors.

(b) Separated from all active haulageways and passageways by a solid barrier, sufficient to protect such haulageway or passageway from any potential explosion that may occur when the magazine is filled to capacity.

(c) Located where the active mining area will not be exposed to a hazardous concentration of fumes or endangered by the blast if a fire or explosion should occur.

(d) Provided with suitable warning signs. Suitable warning signs shall also be posted at the entrance to the drift in which the magazine is situated.

(e) Used only for the storage of explosives or detonators and shall be kept clean and free of extraneous material. (Note WAC 296-61-280(2) prohibits storage of detonators and explosives in the same magazine.)

(f) Provided with doors, covers or lids which shall be kept locked when unattended.

(g) Separated from the active blasting area by a safe distance and out of line of blasts.

(8) (57.6-29) (57.6-159) Powder chest (day boxes) shall be:

(a) Substantially constructed, the inside surface shall be of nonsparking material.

(b) Suitably labeled and posted with warning signs.

(c) Located away from blasting area when blasting and out of line of blasts.

(d) When used on the surface of underground mining operations and for all types of surface operations, emptied of contents at end of shift and contents returned to proper magazines for storage.

(e) Provided with fittings, devices and locks as needed and kept locked when unattended.

(9) (57.6-30) Detonator storage magazines shall be of the same construction as explosive storage magazines and shall be separated by at least twenty-five feet from explosive storage magazines.

(10) (57.6-40) Explosives and detonators shall be transported in separate vehicles unless separated by four inches of hardwood or the equivalent.

(11) (57.6-41) When explosives and detonators are hauled by trolley locomotives, covered, electrically insulated cars shall be used.

(12) (57.6-42) Self-propelled vehicles used to transport explosives or detonators shall be equipped with suitable fire extinguishers.

(13) (57.6-43) Vehicles containing explosives or detonators shall be posted with proper warning signs.

(14) (57.6-44) When vehicles containing explosives or detonators are parked, the brakes shall be set, the motive power shut off, and the vehicles shall be blocked securely against rolling.

(15) (57.6-45) Vehicles containing explosives or detonators shall not be taken to a repair garage or shop for any purpose.

(16) (57.6-46) Vehicles containing explosives or detonators shall be maintained in good condition and shall be operated at a safe speed and in accordance with all safe operating practices.

(17) (57.6-47) (57.6-200) Vehicles used to transport explosives shall have substantially constructed bodies and shall have no spark producing type metal exposed in the cargo space. The cargo carrying area shall be equipped with suitable sides and tailgates. The explosives shall not be stacked higher than the side or end enclosures. If transporting blasting agents, no zinc or copper shall be exposed in the cargo space and the space freely ventilated. If an enclosed screw conveyor is used to discharge blasting agents from the vehicle, the conveyor shall be designed in a manner which will protect the blasting agents against excessive internal pressure and excessive frictional heat.

(18) (57.6-50) Other materials or supplies shall not be placed on or in the cargo space of a conveyance containing explosives, detonating cord or detonators, except carrying safety fuse, and properly secured, nonsparking equipment used expressly in the handling of such explosives will be permissible.

(19) (57.6-51) Explosives or detonators shall not be transported on locomotives.

(20) (57.6-52) Workmen shall not smoke while transporting or handling explosives or detonators.

(21) (57.6-53) Only the necessary attendants shall ride on or in vehicles containing explosives or detonators.

(22) (57.6-54) Explosives or detonators shall not be transported on man trips.

(23) (57.6-56) Substantial, nonconductive, closed containers shall be used to carry explosives to blasting sites.

(24) (57.6-57) Nonconductive containers with tight-fitting covers shall be used to transport or carry capped fuses and electric detonators to blasting sites.

(25) (57.6-65) Vehicles on the surface containing detonators or explosives, other than blasting agents, shall not be left unattended except in blasting areas where loading or charging is in progress.

(26) (57.6-75) Men assigned to and responsible for hoisting shall be notified whenever explosives or detonators are being transported in a shaft conveyance.

(27) (57.6-76) Hoisting in adjacent shaft compartments shall be stopped while explosives are being loaded, transported or handled in a shaftway.

(28) (57.6-77) Vehicles underground shall be attended, whenever practical and possible, while loaded with explosives or detonators.

(29) (57.6-90) Persons who use explosives or detonators shall be licensed as required by chapter 70.74 RCW and chapter 296-52 WAC. They shall be experienced in using explosives in conjunction with type of work they are performing and shall be familiar with the hazards connected with the type of work they are doing. Trainees will be allowed to use explosives or detonators only while under the immediate supervision and presence of a licensed person in the type of work involved.

(30) (57.6-91) Blasting operations shall be under the direct supervision and control of authorized persons.

(31) (57.6-92) Damaged or deteriorated explosives or detonators shall be destroyed in a safe manner.

(32) (57.6-94) Holes to be blasted shall be charged as near to blasting time as practical and such holes shall be blasted as soon as possible after charging has been completed. In no case shall the time elapsing between the completion of charging to the time of blasting exceed seventy-two hours unless prior approval has been obtained from the division of safety.

(33) (57.6-95) No person shall smoke within twenty-five feet of explosives or detonators.

(34) (57.6-96) Explosives shall be kept separated from detonators until charging is started.

(35) (57.6-97) Capped primers shall be made up at the time of charging and as close to the blasting site as conditions allow.

(36) (57.6-98) A primer shall be prepared by completely embedding a blasting cap in the center and along the longitudinal axis of an explosive cartridge. It shall be made in such a manner so that the blasting cap cannot be pulled out of the primer cartridge.

(37) (57.6-99) Only wooden or other nonsparking implements shall be used to punch holes in an explosive cartridge.

(38) (57.6-100) Tamping poles shall be blunt and squared at one end. They shall be made of wood, non-sparking material, or of special plastic acceptable to the Bureau of Mines.

(39) (57.6-101) No tamping shall be done directly on a capped primer.

(40) (57.6-102) Unused explosives and detonators shall be moved to a safe location as soon as charging operations are completed.

(41) (57.6-103) Areas in which charged holes are awaiting firing shall be guarded, or barricaded and posted, or flagged against unauthorized entry.

(42) (57.6-104) When safety fuse has been used, workmen shall not return to misfired holes for at least thirty minutes.

(43) (57.6-105) When electric blasting caps have been used, workmen shall not return to misfired holes for at least fifteen minutes.

(44) (57.6-107) Holes shall not be drilled where there is danger of intersecting a charged or misfired hole.

(45) (57.6-108) Fuse and igniters shall be stored in a cool, dry place away from oils or grease.

(46) (57.6-110) Fuses shall be cut and capped in safe, dry locations posted with "no smoking" signs.

(47) (57.6-111) Blasting caps shall be crimped to fuses only with implements designed for that specific purpose.

(48) (57.6-112) The burning rate of the safety fuse in use at any time shall be measured, posted in conspicuous locations, and brought to the attention of all workmen concerned with blasting. No fuse shall be used that burns faster than one foot in thirty seconds or slower than one foot in fifty-five seconds.

(49) (57.6-113) When firing from one to fifteen blast-holes with safety fuse ignited individually using hand-held lighter, the fuses shall be of such lengths to provide the minimum burning time specified in the following table for a particular size round:

Number of Holes in a Round	Minimum Burning Time, Minutes
1	2
2-5	2 2/3
6-10	3 1/3
11-15	5

In no case shall any forty-second-per-foot safety fuse less than thirty-six inches long or any thirty-second-per-foot safety fuse less than forty-eight inches long be used.

(50) (57.6-114) At least two workmen shall be present when lighting fuses, and no workman shall light more than fifteen individual fuses. If more than fifteen holes per workman are to be fired, igniter cord and connectors or electric blasting shall be used.

(51) (57.6-116) Fuse shall be ignited with hot-wire lighters, lead spitters, igniter cord, or other such devices designed for this purpose. Carbide lights shall not be used to light fuses.

(52) (57.6-117) Fuses shall not be ignited before the primer and the entire charge are securely in place.

(53) (57.6-119) Electric detonators of different brands shall not be used in the same round.

(54) (57.6-120) Except when being tested with a blasting galvanometer:

(a) Electric detonators shall be kept shunted until they are being connected to the blasting line or wired into a blasting round.

(b) Wired rounds shall be kept shunted until they are being connected to the blasting line.

(c) Blasting lines shall be kept shunted until immediately before blasting.

(55) (57.6-122) Permanent blasting lines shall be properly supported, insulated, and kept in good repair.

(56) (57.6-123) When electric detonators are used, charging shall be stopped immediately when the presence of static electricity or stray currents is detected; the condition shall be remedied before charging is resumed.

(a) When electric blasting caps are being used in blasting operations in the proximity of fixed radio transmitters, the following table of distances must be observed, unless it is determined by designated test procedures that there is not sufficient radio frequency energy present to create a hazard. The test procedure shall be to attach a No. 47 radio pilot lamp in place of the cap in the blasting circuit progressively as the circuit is connected, starting with the initial hole. In the event the lamp glows, the length of the wires connecting the circuit shall be altered by adding or cutting off wire until the lamp does not glow. A radio frequency field strength meter may be used in lieu of the test lamp.

Power	Watts	Distance (Ft.)
5	25	100
25	50	150
	100	220
100	250	350
250	500	450
500	1,000	650
1,000	2,500	1,000
2,500	5,000	1,500
5,000	10,000	2,200
10,000	25,000	3,500
25,000	50,000	5,000
50,000	100,000	7,000

(b) Where electric blasting caps are being used where there is a possibility that a mobile transmitter emitting radio frequency energy may approach the blasting area, a warning sign shall be posted requiring that all radio transmitters be turned off at least fifty feet away from the blasting area.

(57) (57.6-124) When electric detonators are used, charging shall be suspended in surface mining, shaft sinking and tunneling, and workmen withdrawn to a safe location upon the approach of an electrical storm.

(58) (57.6-125) If branch circuits are used when blasts are fired from power circuits, safety switches located at safe distances from the blast areas shall be provided in addition to the main blasting switch.

(59) (57.6-127) Blasting switches shall be locked in the open position, except when closed to fire the blast. Lead wires shall not be connected to the blasting switch until the shot is ready to be fired.

(60) (57.6-128) The key or other control to an electrical firing device shall be entrusted only to the workman designated to fire the round, or rounds.

(61) (57.6-129) Electric circuits from the blasting switches to the blast area shall not be grounded.

(62) (57.6-131) Power sources shall be suitable for the number of electric detonators to be fired and for the type of circuits used.

(63) (57.6-133) If any part of a blast is connected in parallel and is to be initiated from power lines or lighting circuits, the time of current flow shall be limited to a

maximum of 25 milliseconds by incorporating an arching control device in the blasting circuit, or by interrupting the circuit with an explosive charge attached to one or both lead lines and initiated by a zero-delay electric blasting cap.

(64) (57.6-134) Tools used for opening metal or nailed wooden containers of explosives or detonators shall be of nonsparking materials.

(65) (57.6-135) Holes shall not be collared in bootlegs.

(66) (57.6-136) Black blasting powder shall not be used for blasting except when a desired result cannot be obtained with another type of explosive such as in quarrying certain types of dimension stone.

(67) (57.6-137) In the use of black blasting powder:

(a) Containers shall not be opened in, or within fifty feet of any magazine; within any building in which a fuel-fired or exposed-element electric heater is in operation; where electrical or incandescent-particle sparks could result in powder ignition; or within fifty feet of any open flame.

(b) Granular powder shall be transferred from containers only by pouring.

(c) Spills of granular powder shall be cleaned up promptly with nonsparking equipment, contaminated powder shall be put into a container of water and its content disposed of promptly after the granules have disintegrated, or the spill area shall be flushed with a copious amount of water to completely disintegrate the granules.

(d) Containers of powder shall be kept securely closed at all times other than when the powder is being transferred from or into a container.

(e) Containers of powder transported by vehicles shall be in a wholly enclosed cargo space.

(f) Misfires shall be disposed of by: (1) Washing the stemming and powder charge from the borehole, and (2) removal and disposal of the initiator as a damaged explosive.

(g) Boreholes of shots that fire but fail to break, or fail to break promptly, shall not be recharged for at least twelve hours.

(68) (57.6-160) Ample warning shall be given before blasts are fired on the surface. All persons shall be cleared and removed from the blasting area unless suitable blasting shelters are provided to protect workmen who otherwise may be endangered by concussion or flyrock from blasting. Access to blast areas shall be posted with warning signs and protected by barricades or flagman.

(69) (57.6-161) If explosives are suspected of burning in a hole, all persons in the endangered area shall move to a safe location and no one shall return to the hole until the danger has passed, but in no case within one hour.

(70) (57.6-162) Lead wires and blasting lines shall not be strung across power conductors, pipelines, railroad tracks, or within twenty feet of bare powerlines. They shall be protected from sources of static or other electrical contact.

(71) (57.6-163) If using a detonating type cord for blasting the double-trunk-line or loop systems shall be used.

(72) (57.6-164) Trunk lines in multiple-row blasts shall make one or more complete loops, with crossties between loops at intervals of not over two hundred feet.

(73) (57.6-166) All detonating cord knots shall be tight and all connections shall be kept at right angles to the trunk lines.

(74) (57.6-168) Misfires shall be reported to the proper supervisor and shall be disposed of safely before any other type of work is performed in that blasting area.

(75) (57.6-170) Where electric blasting is to be performed, electric circuits to equipment in the immediate area to be blasted shall be deenergized before electric detonators or millisecond delays are connected to the blasting circuit; the power shall not be turned on until after the shots are fired or the blast is deactivated by removing the electric detonators or millisecond delays.

(76) (57.6-175) Ample warning shall be given before blasts are fired underground. All persons shall be cleared and removed from areas endangered by the blast. Clear access to exits shall be provided for workmen firing the rounds.

(77) (57.6-177) Misfires shall be disposed of by the following methods:

(a) Reattempting to fire the holes if the leg wires are exposed.

(b) Washing the stemming and the charge from the borehole with water.

(c) Inserting new primers after the stemming has been washed out.

(78) (57.6-182) Blasts in shafts or winzes shall be initiated from a safe location outside the shaft or winze.

(79) (57.6-193) Where pneumatic loading is employed, before any type of blasting operation using blasting agents is put into effect, an evaluation of the potential hazard of static electricity shall be made. Adequate steps, including the grounding and bonding of the conductive parts of pneumatic loading equipment, shall be taken to eliminate the hazard of static electricity before blasting agent use is commenced.

(80) (57.6-194) Pneumatic loading equipment shall not be grounded to waterlines, air lines, rails, or the permanent electrical grounding systems.

(81) (57.6-195) Hoses used in connection with pneumatic loading machines shall be of the semiconductive type, having a total resistance low enough to permit the dissipation of static electricity and high enough to limit the flow of stray electric currents to a safe level. Wire-countered hose shall not be used because of the potential hazard from stray electric currents.

(82) (57.6-197) In small-diameter holes, blasting agents should be loaded so as to provide a continuous column that completely fills the cross section of the borehole.

(83) (57.6-198) Plastic tubes shall not be used as hole liners if blasting agents are loaded pneumatically into holes containing an electric detonator.

(84) (57.6-220) Sensitized ammonium nitrate blasting agents shall not be mixed or compounded underground. All applicable rules for sensitizing, storage and use of sensitized ammonium nitrate administered by the department of labor and industries shall be complied with. [Order 72-1, § 296-61-280, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-290 Loading, hauling, dumping--General, surface and underground.** (1) (57.9-2) Defective equipment which would present a hazard shall be taken out of service immediately and shall not be put back into use until the defect has been properly corrected.

(2) (57.9-3) Powered mobile equipment shall be equipped with brakes and devices which will hold equipment with loads on grades on which it will be used. The brakes and parking devices shall be kept in proper operating condition at all times.

(3) (57.9-5) Operators shall be certain, by signal or other means, that all persons are clear before starting or moving equipment.

(4) (57.9-9) Operators shall sound warning before moving a train, when the train approaches a crossing, when approaching a train on adjacent tracks, and where the operator's vision is obscured.

(5) (57.9-11) If cab windows are installed, they shall be of safety glass or of materials affording equivalent protection and view, and shall be kept clean. Cracked or broken windows shall be replaced immediately.

(6) (57.9-12) Operator's cabs shall be kept free of extraneous materials and tools shall be kept off the cab floors and walking surfaces.

(7) (57.9-20) Positive-acting stop blocks, derail devices, track skates or other adequate means shall be installed wherever necessary to protect workmen from runaway or moving railroad equipment.

(8) (57.9-22) Guards, barricades or berms shall be installed on the outer banks or elevated roadways and on sides of bridges and trestles. Haul roads of adequate width with minimum grades should be established and properly maintained in surface mining operations.

(9) (57.9-23) Trackless haulage equipment shall be operated under power control at all times.

(10) (57.9-24) Mobile equipment operators shall have full control of the equipment while it is in motion.

(11) (57.9-6) When the entire length of a conveyor is visible from the starting switch, the operator shall visually check to make certain that all workmen are in the clear before starting the conveyor. When the entire length of the conveyor is not visible from the starting switch, a positive audible or visible warning system shall be installed and operated to warn workmen that the conveyor will be started. All reasonable precautions shall be taken by the operator prior to starting a conveyor, to assure that no workman is in a hazardous location where he may be injured when the conveyor is started.

(12) (57.9-7) Unguarded conveyors with walkways shall be equipped with emergency stop devices or cords along their full length.

(13) (57.9-13) Adequate backstops or brakes shall be installed on inclined conveyor drive units to prevent conveyors from running in reverse if a hazard to workmen would be caused.

(14) (57.9-14) Riding on conveyor chains, belt, or bucket elevators shall be prohibited. Workmen shall not be allowed to walk on conveyors except for emergency and then only when the conveyors have been deenergized and the workman can do so safely. Riding of conveyors shall only be permitted on the manlift steps or platforms and handholds attached and other safety factors as specified under safety standards for belt manlifts.

(15) (57.9-25) Dippers, buckets, loading booms, or heavy suspended loads shall not be swung over the cabs of haulage vehicles until the drivers are out of the cabs and in safe locations, unless the trucks are designed specifically to protect the drivers from falling material.

(16) (55.9-26) Only authorized persons shall be allowed in areas where loading or dumping operations are being conducted.

(17) (57.9-27) If operator is on equipment, others shall notify him of their intent prior to getting on or off the equipment or entering any area where operation of the equipment may present a hazard to them.

(18) (57.9-28) Switch throws shall be installed so that at least thirty inches of clearance is maintained between the projection of moving equipment for at least ten feet on each side of throws.

(19) (57.9-30) Workmen shall not work or pass under any buckets or booms while equipment is being operated.

(20) (57.9-31) Equipment shall be made safe for travel prior to commencing travel between work areas.

(21) (57.9-32) Dippers, buckets, scraper blades, and similar movable parts shall be secured or lowered to the ground when not in use.

(22) (57.9-33) Workmen shall not ride in dippers, shovel buckets, forks, clamshells, or in the beds of haulage or ore haulage trucks for the purpose of transportation.

(23) (57.9-36) Electrically powered mobile equipment shall not be left unattended unless the master switch is in the OFF position, all operating controls are in the neutral position, and the brakes are set or other equivalent precautions are taken against rolling.

(24) (57.9-37) Mobile equipment shall not be left unattended unless the brakes are set. The wheels shall be turned into a bank or rib, or shall be blocked, when such equipment is parked on a grade.

(25) (57.9-39) Workmen shall not get on or off moving equipment, except that trainmen may get on or off slowly moving trains.

(26) (57.9-40) Workmen shall not ride on top of loaded haulage equipment.

(27) (57.9-41) Only authorized workmen shall be permitted to ride on trains or locomotives and they shall ride in a safe position.

(28) (57.9-43) Passengers shall not be permitted to ride with legs or arms extending outside any mobile equipment, nor shall they be permitted to ride unless a passenger seat or other protective device is provided.

(29) (57.9-45) Equipment to be hauled shall be loaded, protected and secured so as to prevent slipping, shifting, or spillage.

(30) (57.9-47) Spotted cars shall either have brakes set, wheels blocked, or shall be coupled to other immobilized cars to prevent each car from rolling.

(31) (57.9-48) Railroad cars with braking systems, when in use, shall be equipped with effective brake shoes.

(32) (57.9-50) Rail cars shall not be left on side tracks unless ample clearance is provided for traffic on adjacent tracks.

(33) (57.9-51) Workmen, other than railroad crewmen, shall not pass over, under, or between cars when an engine is attached to a section. Railroad crew members shall not enter such hazardous areas unless the motorman has been notified and he acknowledges.

(34) (57.9-52) Inability of a motorman to clearly recognize his brakeman's signals, when the train is under the direction of the brakeman, shall be construed by the motorman as a stop signal.

(35) (57.9-54) Berms, bumper blocks, safety hooks or similar means shall be provided to prevent over-travel and overturning at dumping locations.

(36) (57.9-58) To prevent accidents during the backing of trucks where vision is obstructed, a signalman shall be stationed at a point giving him a clear view of the rear of the truck and the operator of the truck at all times. During the hours of darkness or when necessary due to weather conditions, a signalman shall be furnished, and shall use, a signal light.

(37) (57.9-59) Public and permanent railroad crossings shall be posted with warning signs or signals, or shall be guarded when trains are passing and shall be planked or otherwise filled between the rails.

(38) (57.9-60) Where overhead clearance is restricted, warning devices shall be installed and the restricted area shall be conspicuously marked.

(39) (57.9-61) Stockpile and muckpile faces shall be trimmed to prevent hazards to workmen. Material shall be removed from stockpiles in such a manner that there will be no overhanging material.

(40) (57.9-62) Rocks too large to be handled safely shall be broken before loading.

(41) (57.9-64) Chute loading installations shall be designed and arranged so that the workmen pulling chutes will not be in a hazardous position or location.

(42) (57.9-67) Facilities used to transport workmen shall be of ample size to prevent workmen from being overcrowded.

(43) (57.9-68) Lights, flares, or other warning devices shall be posted when parked equipment creates a hazard to vehicular traffic.

(44) (57.7-69) Tires shall be deflated before repairs on them are started. Unmounted locking rim wheels shall be placed in a safety cage or other device shall be used which will prevent a locking rim from striking the workman if it should dislodge while the tire is being inflated.

(45) (57.9-81) Trucks, shuttle cars, and front-end loaders shall be equipped with emergency brakes, separate and independent of the regular braking system or there shall be a dual method of applying the brakes.

(46) (57.9-83) Where possible at least thirty inches continuous clearance from the farthest projection of moving railroad equipment shall be provided on at least one side of the tracks. All places shall be marked conspicuously where it is not possible to provide thirty inches clearance.

(47) (57.9-85) (57.9-99) Supplies, materials, and tools other than small handtools shall not be transported with workmen in man trip vehicles unless such vehicles are specifically designed to make such transportation safe. Man trips shall be operated independently of ore and supply trips.

(48) (57.9-97) Trains shall be brought to a complete stop, then moved very slowly when coupling or uncoupling cars manually.

(49) (57.9-98) Makeshift couplings shall not be used.

(50) (57.9-102) When a signalman is used during slushing operations, he shall be positioned in a safe place.

(51) (57.9-103) Collars of open draw holes shall be kept free of muck and material.

(52) (57.9-106) Ample warning shall be given to workmen who may be affected by the draw or otherwise exposed to danger from chute-pulling operations.

(53) (57.9-107) Workmen shall not stand on broken rock or ore overdraw points if there is danger that the chute will be pulled. Suitable platforms or safety lines shall be provided and used when work must be done in such areas.

(54) (57.9-110) A sufficient number of shelter holes spaced not more than one hundred fifty feet apart shall be provided to ensure the safety of workmen along haulageways where continuous clearance of at least thirty inches from the farthest projection of moving equipment on at least one side of the haulageway cannot be maintained.

(55) (57.9-113) Man trips shall be operated at speeds consistent with the condition of tracks and equipment used.

(56) (57.9-114) Where man trips are used, discharge and boarding points shall be designated. Workmen shall not board or leave moving man trip cars.

(57) (57.9-116) During shift changes, the movement of rock or material trains shall be limited to areas where such trains could not present a hazard to workmen coming on or going off shift.

(58) (57.9-117) Workmen shall not ride between cars or on top of loaded cars.

(59) (57.9-15) Unless the operator is otherwise protected, slushers in excess of 10 horsepower shall be provided with backlash guards. All slushers shall be equipped with rollers, and drum covers, and anchored securely before slushing operations are started. [Order 72-1, § 296-61-290, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-300 Aerial tramways.** (1) (57.10-3) Any defect which would make the equipment unsafe to

operate under existing conditions shall be cause to take the equipment out of service and it shall not be put back into use until it has been made safe.

(2) (57.10-7) Guard nets or other suitable protection shall be provided where tramways pass over roadways, walkways, or buildings.

(3) (57.10-8) Workmen other than maintenance men shall not ride aerial tramways unless the following features are provided:

(a) Two independent braking systems shall be installed, each capable of holding the maximum load.

(b) Direct communication between terminals shall be installed.

(c) A secondary or emergency source of power shall be available in case of primary power failure.

(d) The buckets shall be equipped with positive locks to prevent accidental tripping or dumping.

(4) (57.10-9) Workmen shall not ride loaded buckets.

(5) No person shall start a tramway until he is assured that all workmen are clear of the moving equipment at terminals and to the best of his ability ascertain that all workmen are clear of moving equipment between terminals. [Order 72-1, § 296-61-300, filed 2/25/72, effective 4/1/72.]

#### **WAC 296-61-310 Crushing and milling operations.**

(1) All rules contained in this standard shall prevail where applicable to this type of operation. The term "crusher" as used in this standard includes both permanent and portable installations.

(2) Land shall be leveled and all material which may create a hazard shall be removed prior to setting up and operating equipment.

(3) Plant structures shall be constructed to carry the required load without material or structural failure for the prescribed life of the material used.

(4) Conveyors shall be installed on footings and solid members capable of safely supporting four times the maximum load to which they may be subjected.

(5) Chains shall not be used to permanently support conveyors.

(6) Support members of conveyors exposed to contact by mobile equipment shall be barricaded or otherwise properly safeguarded.

(7) Entrance to jaws, etc., shall be guarded by screens, rails or other suitable means which will prevent a workman from falling into the crusher.

(8) Cone type crushers shall be equipped with suitable guards over or around the feed end which will prevent rock from flying into the work area.

(9) Dust from crushing operations shall be controlled as specified in the occupational health standards.

(10) Crusher operators and other employees working where hazardous or nuisance dust exists which is uncontrollable by other means shall be furnished with and shall properly wear approved respirators and goggles.

(11) Overhead conveyors shall be constructed and guarded so as to retain the spillage of materials which may create a hazard to persons below. Overhead protection shall be provided over walkways and roadways.

(12) Cone rolls shall be guarded to prevent material from flying and injuring workmen in the area.

(13) Conveyor drive, tail rolls and bend pulleys shall be maintained so that workmen are not required to scrape excess material out from between the belts while equipment is operating.

(14) Employees working around crushing operations shall wear approved head protection.

(15) When a workman is required to enter hoppers, storage bins or bunkers, he shall be provided with and shall wear a safety belt attached to a safety line which shall be attended by a second workman.

(16) Where bins, bunkers, or hoppers are loaded by the use of mobile equipment, bumper stops not less than ten inches by ten inches shall be installed and securely fastened in a manner which will prevent the truck or equipment from over-running the runway. Bull rails at least eight inches by eight inches or equivalent shall be securely fastened along the sides of the ramp or runway to prevent equipment from over-running sides of the runway.

(17) All wiring and grounding of equipment shall be installed and maintained to comply with the National Electrical Code.

(18) All counterweights shall be guarded for protection of workmen.

(19) All chains and sprockets, where exposed, shall be guarded.

(20) Oiling or greasing shall not be done on chains, sprockets or shafts while equipment is operating unless suitable safeguards are provided to eliminate all hazards.

(21) Substantial walkways and working platforms, equipped with toeboards and handrails, shall be installed where needed for maintenance purposes at all plants. Standard stairways or ladders shall be provided to reach all parts requiring oiling and maintenance.

(22) Bunker unloading devices shall be arranged to be operative from a safe location outside the walls of bunkers where overhead hazards exist or there is a danger of overturning.

(23) Mobile equipment shall be provided with overhead canopy or roll bars of sufficient strength to provide suitable protection for the operator.

(24) Mobile vehicles shall have adequate brakes which will safely stop and hold the vehicle on any incline or plane on which they may be required to work.

(25) All vehicles shall have cabs, cab shields, or devices installed which will protect the operator from falling or shifting material.

(26) Safety glass shall be installed in windshields, windows, and doors.

(27) A locking device shall be provided on every fifth wheel mechanism and tow bar arrangement which will prevent the accidental separation of towed and towing vehicles.

(28) Nonslip surfaces shall be provided on steps of all vehicles.

(29) All dump trucks shall be equipped with a supporting device to prevent accidental lowering of a raised truck bed while maintenance or inspection work is being done underneath.

(30) All control levers shall be designed to prevent accidental starting or tripping of the raising or lowering mechanism.

(31) Trip handles for tailgates on all dump equipment shall be located where the operator can activate the mechanism from a safe location.

(32) All self-propelled, bidirectional machines shall be equipped with a horn which shall be audible above the surrounding noise level. This horn shall be operated as needed prior to moving any machine and intermittently (not to exceed three-second intervals) when the machine is moving in either direction whenever the operator does not have a clear view in the direction of travel. A reverse signal alarm emitting a sound as required above shall be installed on all equipment of which the operator has an obstructed view to the rear unless a signalman is assigned to direct the operator and is positioned at all times in plain view of the operator and can observe the immediate area behind the equipment to ascertain that it is clear of all personnel and obstructions.

(33) If doors are removed from mobile equipment, seat belts or other devices shall be installed which will prevent the operator from accidentally falling, or being thrown out.

(34) Stationary dragline machines shall have all moving parts which are exposed to contact guarded with standard safeguards.

(35) Running lines, straps, etc., shall be frequently inspected for wear and other defects and shall be replaced prior to causing a hazardous condition.

(36) Any wire rope showing ten percent of its wires broken in a three foot length shall be removed from service. When cables show deterioration from rusting, wear, undue strain or other conditions to the extent of fifteen percent of their original strength, use of cable shall be discontinued. [Order 72-1, § 296-61-310, filed 2/25/72, effective 4/1/72.]

**WAC 296-61-320 Gassy mines.** (1) All rules contained in this standard shall prevail where applicable to gassy mine operations. When applied to gassy mines, rules contained in this section shall prevail over conflicting rules in other sections.

(2) (57.21-1) A mine shall be deemed gassy, and thereafter operated as a gassy mine, if:

(a) The mining section of the division of safety classifies the mine as gassy; or

(b) Flammable gas emanating from the orebody of the strata surrounding the orebody has been ignited in the mine; or

(c) A concentration of 0.25 percent or more, by air analysis, of flammable gas emanating only from the orebody; or

(d) The strata surrounding the orebody has been detected not less than twelve inches from the back, face, or ribs in any open workings; or

(e) The mine is connected to a gassy mine.

(3) (57.21-2) Flammable gases detected while unwatering mines and similar operations shall not be used to class a mine gassy.

(4) Fire prevention. (a) (57.21-10) Workmen shall not smoke or carry smoking materials, matches, lighters or other sources of ignition underground. The operator shall institute a reasonable program to effectuate this rule.

(b) (57.21-11) When it becomes necessary to do welding or cutting, it shall be done in open air. Open flames or sources of ignition shall not be used where flammable gases are present or may enter the air currents.

(c) (57.21-12) Welding or cutting with arc of flame underground in other than fresh air or in places where flammable gases are present or may enter the air current shall be under the direct supervision of a qualified person who shall test for flammable gases before and frequently during such operations.

(d) (57.21-13) Welding or cutting shall not be performed in atmospheres containing more than 1.0 percent of flammable gases.

(5) Ventilation. (a) (57.21-20) Main fans shall be:

(i) Installed on the surface.

(ii) Powered electrically from a circuit independent of the mine power circuit. Internal combustion engines shall be used only for standby power, or where electrical power is not available.

(iii) Installed in fireproof housing provided with fireproof air ducts.

(iv) Offset not less than fifteen feet from the nearest side of the mine opening and equipped with ample means of pressure relief unless:

(A) The opening is not in direct line with forces which would come out of the mine should an explosion occur, and

(B) Another opening not less than fifteen feet nor more than one hundred feet from the fan opening is equipped with a weak-wall stopping or explosion doors in direct line with the forces which would come out of the mine should an explosion occur.

(v) Installed to permit prompt reversal of airflow.

(vi) Attended constantly or provided with automatic devices to give alarm when the fans slow down or stop. Such devices shall be placed so they will be seen or heard by responsible persons.

(b) (57.21-23) When single shafts are used for intake and return, the curtain wall or partition shall be constructed of reinforced concrete or equivalent and provided with pressure relief devices.

(c) (57.21-24) When a main fan fails or stops and ventilation is not restored in a reasonable time, action shall be taken to cut off the power to the areas affected and to withdraw all workmen from such areas.

(d) (57.21-26) When ventilation is not restored in a reasonable time, all workmen shall be removed from the areas affected, and after ventilation has been restored, the areas affected shall be examined by qualified persons for the presence of gas and other hazards and shall be made safe before power is restored and before workmen, other than the examiners and other authorized persons, return to the areas affected.

(e) (57.21-27) When the main fan or fans have been shut down with all workmen out of the mine, no person,

other than those qualified to examine the mine or other authorized persons, shall go underground until the fans have been started and the mine examined for gas and other hazards and declared safe.

(f) (57.21-28) Booster fans shall be:

(i) Operated by permissible drive units maintained in permissible condition.

(ii) Operated only in air containing not more than one percent flammable gas.

(iii) (57.21-29) Inspected by a qualified person at least once each shift or provided with automatic devices to give alarm when the fans slow down or stop.

(iv) Equipped with devices that automatically cut off the power in areas affected if the fans slow down or stop when the fans are not provided with automatic alarm devices.

(v) Provided with air locks, the doors of which open automatically if the fan stops operating.

(g) (57.21-30) Auxiliary fans shall be:

(i) Operated by permissible drive units maintained in permissible condition.

(ii) Operated only in air containing not more than one percent flammable gas.

(h) (57.21-32) Workmen shall be withdrawn from areas affected by auxiliary or booster fans when such fans slow down or stop.

(i) (57.21-33) The volume and velocity of the current of air coursed through all active areas shall be sufficient to dilute and carry away flammable gases, smoke and fumes.

(j) (57.21-34) The quantity of air coursed through the last open crosscut in pairs or sets of entries or through other ventilation openings nearest the face, shall be at least six thousand cubic feet a minute.

(k) (57.21-35) At least once a week, a qualified person shall measure the volume of air entering the main intakes and leaving the main returns, the volume of the intake and return of each split, and the volume through the last open crosscuts or other ventilation openings nearest the active faces. Records of such measurements shall be kept in a book on the surface.

(l) (57.21-38) Changes in ventilation that materially affect the main air current or any split thereof and may affect the safety of persons in the mine shall be made only when the mine is idle. Only those persons engaged in making such changes shall be permitted in the mine during the change. Power shall be cut off in the areas affected by the change before work starts and not restored until the effect of the change has been ascertained and the affected areas determined to be safe by a qualified person.

(m) (57.21-39) If flammable gas in excess of 1.0 percent by volume is detected in the air not less than twelve inches from the back, face, and rib of an underground working place, or in the air returning from a working place or places, adjustments shall be made in the ventilation immediately so that the concentration of flammable gas in such air is reduced to 1.0 percent or less.

(n) (57.21-40) If 1.5 percent or higher concentration of flammable gas is detected in air returning from an underground working place or places, the workmen shall

be withdrawn and the power cut off to the portion of the mine endangered by such flammable gas until the concentrations of such gas is reduced to 1.0 percent or less.

(o) (57.21-41) Air that has passed by an opening of any unsealed abandoned area and contains 0.25 percent or more of flammable gas shall not be used to ventilate working areas. Examinations of such air shall be conducted during the preshift examinations required by standard (7) of this section and federal (57.21-59).

(p) (57.21-42) Air that has passed through an abandoned panel or area which is inaccessible or unsafe for inspection shall not be used to ventilate any working place in such mine. No air which has been used to ventilate an area from which the pillars have been removed shall be used to ventilate any working place in such mine, except that such air if it does not contain 0.25 volume per centum or more of methane, may be used to ventilate enough advancing working places immediately adjacent to the line of retreat to maintain an orderly sequence of pillar recovery on a set of entries.

(q) (57.21-43) Abandoned areas shall be sealed or ventilated. Areas that are not sealed shall be barricaded and posted against unauthorized entry.

(r) (57.21-44) Seals shall be of substantial construction. Exposed surfaces shall be made of fire-resistant material or, if the commodity mined is combustible, seals shall be made of incombustible material.

(s) (57.21-45) One or more seals of every sealed area shall be fitted with a pipe and valve or cap to permit sampling of the atmosphere and measurement of the pressure behind such seals.

(t) (57.21-46) Crosscuts shall be made at intervals not in excess of one hundred feet between entries and between rooms.

(u) (57.21-48) Line brattice or other suitable devices shall be installed from the last open crosscut to point near the face to assure positive air flow to the face of every active underground working place, unless the secretary or his authorized representative permits an exception to this requirement.

(v) (57.21-50) Damaged brattices shall be repaired promptly.

(w) (57.21-52) Entries or rooms shall not be started off entries beyond the last open crosscuts, except that room necks and entries not to exceed eighteen feet in depth may be turned off entries beyond the last open crosscuts if such room necks or entries are kept free of accumulations of flammable gas by use of line brattice or other adequate means.

(x) (57.21-55) The main ventilation shall be so arranged by means of air locks, overcasts, or undercasts that the passage of trips or workmen does not cause interruptions of air currents. Where air locks are impracticable, single doors may be used if they are attended constantly while the areas of the mine affected by the doors are being worked, unless they are operated mechanically or are self-closing.

(y) (57.21-56) Air locks shall be ventilated sufficiently to prevent accumulations of flammable gas inside the locks.

(6) (57.21-57) Doors shall be kept closed except when workmen or equipment are passing through the doorways.

(7) (57.21-59) Preshift examinations shall be made of all working areas by qualified persons within three hours before any workmen, other than the examiners, enter the mine.

(8) (57.21-61) Only qualified examiners and persons authorized to correct the dangerous conditions shall enter places or areas where danger signs are posted.

(9) (57.21-62) Danger signs shall not be removed until the dangerous conditions have been corrected.

(10) Equipment. (a) (57.21-76) Diesel-powered equipment shall not be taken into or operated in places where flammable gas exceeds 1.0 percent at any point not less than twelve inches from the back, face, and rib.

(b) (57.21-77) Trolley wires and trolley feeder wires shall be on intake air and shall not extend beyond the last open crosscut or other ventilation opening. Such wires shall be kept at least one hundred fifty feet from pillar workings.

(c) (57.21-78) Only permissible equipment maintained in permissible condition shall be used beyond the last open crosscut or in places where dangerous quantities of flammable gases are present or may enter the air current.

(d) (57.21-79) Only permissible distribution boxes shall be used in working places and other places where dangerous quantities of flammable gas may be present or may enter the air current.

(e) (57.21-81) No electric equipment shall be taken into or operated in places where flammable gas can be detected in the amount of 1.0 percent or more at any point not less than twelve inches from the back, face and rib.

(f) (57.21-90) Only permissible electric lamps shall be used for portable illumination underground.

(11) Explosives. The term "explosives" as used in this standard includes blasting agents. The standards in this section in which the term "explosives" appears are applicable to blasting agents (as well as to other explosives) unless blasting agents are expressly excluded.

(a) (57.21-95) Explosives not designated as permissible by the Bureau of Mines shall not be used in any underground gassy mine until the Bureau of Mines and state inspector of mines have given written approval for each such specific explosive to be used.

(b) (57.21-96) The Bureau of Mines and the state inspector of mines in granting approval referred to in standard (11)(a) federal (57.21-95) above, shall provide the operator with a written list of conditions for using the specific explosives covered by the approval and adapted to the mining operation.

(c) (57.21-97) Blasts in gassy mines shall be initiated electrically, and multiple-shot blasts shall be initiated only with milli-second-delay detonators. Permissible blasting units of capacity suitable for the number of holes in a round to be blasted shall be used unless the round is fired from the surface when all workmen are out of the mine.

(d) (57.21-98) Boreholes shall be stemmed as prescribed for the explosives to be used.

(e) (57.21-99) Examinations for gas shall be made immediately before and after firing each shot or round.

(f) (57.21-100) Shots or rounds shall not be fired in places where flammable gas can be detected with a permissible flame safety lamp, or where 1.0 percent or more of flammable gas can be detected by any other Bureau of Mines approved device or method, at a point not less than twelve inches from the back, face, and rib. [Order 72-1, § 296-61-320, filed 2/25/72, effective 4/1/72.]

### Chapter 296-62 WAC

## OCCUPATIONAL HEALTH STANDARDS--SAFETY STANDARDS FOR CARCINOGENS

### WAC

- 296-62-005 Occupational health and environmental control—  
Foreword.
- 296-62-010 Purpose and scope.
- 296-62-020 Definitions applicable to all sections of this chapter.
- 296-62-040 Unconstitutionality clause.
- 296-62-050 Application for waiver or variances.
- 296-62-052 Access to employee exposure and medical records.  
Purpose.
- 296-62-05201 Scope and application.
- 296-62-05203 Definitions applicable to this section.
- 296-62-05207 Preservation of records.
- 296-62-05209 Access to records.
- 296-62-05211 Trade secrets.
- 296-62-05213 Employee information.
- 296-62-05215 Transfer of records.
- 296-62-05217 Appendices.
- 296-62-05219 Effective date.
- 296-62-05221 Appendix A—Sample authorization letter for the release of employee medical record information to a designated representative.
- 296-62-05223 Appendix B—Availability of NIOSH Registry of Toxic Effects of Chemical Substances (RTECS).  
Control requirements in addition to those specified.
- 296-62-060 Chemical agents (airborne or contact).
- 296-62-07001 Definitions (airborne chemical agents).
- 296-62-07003 Definitions (contact chemical agents).
- 296-62-07005 Control of chemical agents.
- 296-62-07007 Labeling of chemical agents.
- 296-62-071 Respiratory protection.  
Scope.
- 296-62-07103 Purpose.
- 296-62-07105 Definitions.
- 296-62-07107 Permissible practice.
- 296-62-07109 Minimal acceptable respirator program.
- 296-62-07111 Respirable air and oxygen for self-contained breathing apparatus and supplied air respirators.
- 296-62-07113 Selection of respirators.
- 296-62-07115 Use of respirators.
- 296-62-07117 Maintenance of respirators.
- 296-62-07119 Identification of air-purifying respirator canisters.
- 296-62-07121 Effective date.
- 296-62-073 Carcinogens—Scope and application.
- 296-62-07302 List of carcinogens.
- 296-62-07304 Definitions.
- 296-62-07306 Requirements for areas containing carcinogens listed in WAC 296-62-07302.
- 296-62-07308 General regulated area requirements.
- 296-62-07310 Signs, information and training.
- 296-62-07312 Reports.
- 296-62-07314 Medical surveillance.
- 296-62-07316 Premixed solutions.
- 296-62-07329 Vinyl chloride.
- 296-62-07341 Acrylonitrile.
- 296-62-07345 1,2-Dibromo-3-chloropropane.
- 296-62-07347 Inorganic arsenic.
- 296-62-075 Air contaminants.
- 296-62-07501 Airborne contaminants.
- 296-62-07503 Ceiling vs time-weighted average limits.
- 296-62-07505 "Skin" notation.
- 296-62-07507 Mixtures.
- 296-62-07509 Nuisance dusts.
- 296-62-07510 Total particulate.
- 296-62-07511 Simple asphyxiants.
- 296-62-07513 Physical factors.
- 296-62-07515 Control of chemical agents.
- 296-62-07517 Asbestos.
- 296-62-07519 Thiram.
- 296-62-07521 Lead.
- 296-62-080 Biological agents.
- 296-62-090 Physical agents.  
Definitions.
- 296-62-09001 Definitions.
- 296-62-09003 Lighting and illumination.
- 296-62-09004 Ionizing radiation.
- 296-62-09005 Nonionizing radiation.
- 296-62-09007 Pressure.
- 296-62-09009 Vibration.
- 296-62-09013 Temperature, radiant heat, or temperature-humidity combinations.
- 296-62-09015 Hearing conservation.  
Definitions.
- 296-62-09017 Monitoring.
- 296-62-09021 Method of noise measurement.
- 296-62-09023 Calibration of monitoring equipment.

- 296-62-14507 Toxic atmospheres.
- 296-62-14509 Flammable atmospheres.
- 296-62-14511 Oxygen deficiency or excess.
- 296-62-14513 Mechanical hazards.
- 296-62-14515 Electrical hazards.
- 296-62-14517 Procedures for entry into toxic or flammable atmospheres.
- 296-62-14519 Removal of flammable or toxic material.
- 296-62-14521 Vapor freeing.
- 296-62-14523 Evaluation of potentially hazardous atmospheres.

- 296-62-14525 Entry into confined space.
- 296-62-14527 Hot work.
- 296-62-14529 Use of toxic and/or flammable materials in confined spaces.
- 296-62-14531 Exposure to cotton dust in cotton gins.
- 296-62-14533 Cotton dust.
- 296-62-14535 Appendix A—Air sampling and analytical procedures for determining concentrations of cotton dust.
- 296-62-146 Appendices.
- 296-62-14601 Appendix A—Requirements for classification and respiratory use of workers exposed to cotton dust in gins.
- 296-62-14603 Appendix B-1—Respiratory questionnaire.
- 296-62-14605 Appendix C—Spirometry prediction tables for normal males and females.
- 296-62-14607 Appendix D—Pulmonary function standards for cotton dust standard.
- 296-62-200 Coke oven emissions.
- 296-62-20001 Definitions.
- 296-62-20003 Permissible exposure limit.
- 296-62-20005 Regulated areas.
- 296-62-20007 Exposure monitoring and measurement.
- 296-62-20009 Methods of compliance.
- 296-62-20011 Respiratory protection.
- 296-62-20013 Protective clothing and equipment.
- 296-62-20015 Hygiene facilities and practices.
- 296-62-20017 Medical surveillance.
- 296-62-20019 Employee information and training.
- 296-62-20021 Precautionary signs and labels.
- 296-62-20023 Recordkeeping.
- 296-62-20025 Observation of monitoring.
- 296-62-20027 Appendix A—Coke oven emissions substance information sheet.
- 296-62-20029 Appendix B—Industrial hygiene and medical surveillance guidelines.
- 296-62-07315 Benzidine. [Order 74-35, § 296-62-07315, filed 9/20/74.] Repealed by 80-17-014 (Order 80-20), filed 11/13/80. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW.
- 296-62-07317 4-Aminodiphenyl. [Order 74-35, § 296-62-07317, filed 9/20/74.] Repealed by 80-17-014 (Order 80-20), filed 11/13/80. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW.
- 296-62-07319 Ethyleneimine. [Order 76-6, § 296-62-07319, filed 3/1/76.] Repealed by 80-17-014 (Order 80-20), filed 11/13/80. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW.
- 296-62-07321 Beta-Propiolactone. [Order 74-35, § 296-62-07321, filed 9/20/74.] Repealed by 80-17-014 (Order 80-20), filed 11/13/80. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW.
- 296-62-07323 2-Acetylaminofluorene. [Order 74-35, § 296-62-07323, filed 9/20/74.] Repealed by 80-17-014 (Order 80-20), filed 11/13/80. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW.
- 296-62-07325 4-Dimethylaminoazobenzene. [Order 74-35, § 296-62-07325, filed 9/20/74.] Repealed by 80-17-014 (Order 80-20), filed 11/13/80. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW.
- 296-62-07327 N-Nitrosodimethylamine—Carcinogen standard report form. [Order 74-35, § 296-62-07327 and Carcinogen Standard Report Form, filed 9/20/74.] Repealed by 80-17-014 (Order 80-20), filed 11/13/80. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW.
- 296-62-07335 Benzene. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30, and 43.22 RCW. 78-09-092 (Order 78-16), § 296-62-07335, filed 8/31/78.] Repealed by 80-11-010 (Order 80-14), filed 8/8/80. Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240.
- 296-62-07349 Lead. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-07349, filed 8/27/81; 81-16-015 (Order 81-20), § 296-62-07349, filed 7/27/81; 80-11-009 (Order 80-16), § 296-62-07349, filed 8/8/80.] Decodified by 82-13-045 (Order 82-22), filed 6/11/82. Statutory Authority: RCW 49.17.040 and 49.17.050. Later promulgation, see WAC 296-62-07521.
- 296-62-09011 Occupational noise exposure. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-03-023 (Order 82-1), § 296-62-09011, filed 1/15/82. Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 81-16-016 (Order 81-19), § 296-62-09011, filed 7/27/81; 80-11-010 (Order 80-14), § 296-62-09011, filed 8/8/80; Order 73-3, § 296-62-09011, filed 5/7/73.] Repealed by 83-24-013 (Order 83-34), filed 11/30/83. Statutory Authority: RCW 49.17.040 and 49.17.050.
- 296-62-120 Respiratory protection. [Order 70-8, § 296-62-120 filed 7/31/70, effective 9/1/70; Rule 12.010, effective 8/1/63.] Repealed by Order 73-3, filed 5/7/73.
- 296-62-140 Industrial sanitation. [Order 70-8, § 296-62-140, filed 7/31/70, effective 9/1/70; Rule 14.010, effective 8/1/63.] Repealed by Order 73-3, filed 5/7/73.
- 296-62-150 Appendix I—Threshold limit values for 1969. [Order 70-8, § 296-62-150, filed 7/31/70, effective 9/1/70; Rules (part), effective 12/1/63.] Repealed by Order 73-3, filed 5/7/73.
- 296-62-155 Appendix I—Adopted values. [Order 70-8, § 296-62-155, filed 7/31/70, effective 9/1/70; Rules (part), effective 12/1/63.] Repealed by Order 73-3, filed 5/7/73.

- 296-62-157 Threshold limit values of physical agents for 1969. [Order 70-8, § 296-62-157, filed 7/31/70, effective 9/1/70.] Repealed by Order 73-3, filed 5/7/73.
- 296-62-160 Appendix II—Levels of illumination currents. [Appendix II, effective 12/1/63.] Repealed by Order 70-8, filed 7/31/70, effective 9/1/70. Also repealed by Order 73-3, filed 5/7/73.
- 296-62-165 Appendix III—Nonionizing radiation. [Order 70-8, § 296-62-165, filed 7/31/70, effective 9/1/70; Appendix III, effective 8/1/63.] Repealed by Order 73-3, filed 5/7/73.
- 296-62-170 Appendix IV—Temperature, radiant heat, humidity, or air velocity combinations. [Order 70-8, § 296-62-170, filed 7/31/70, effective 9/1/70; Appendix IV, effective 8/1/63.] Repealed by Order 73-3, filed 5/7/73.
- 296-62-175 References. [Order 70-8, § 296-62-175, filed 7/31/70, effective 9/1/70.] Repealed by Order 73-3, filed 5/7/73.
- 296-62-180 Appendix V—Use and care of respiratory protective equipment, compressed air supply for respirators. [Order 70-8, § 296-62-180, filed 7/31/70, effective 9/1/70.] Repealed by Order 73-3, filed 5/7/73.
- 296-62-185 References. [Order 70-8, § 296-62-185, filed 7/31/70, effective 9/1/70.] Repealed by Order 73-3, filed 5/7/73.
- 296-62-900 Note on application of appendices A through H. [Order 73-3, Note (codified as WAC 296-62-900), filed 5/7/73.] Repealed by 80-11-010 (Order 80-14), filed 8/8/80. Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240.
- 296-62-901 Appendix A. [Order 73-3, Appendix A (codified as WAC 296-62-901), filed 5/7/73.] Repealed by 80-11-010 (Order 80-14), filed 8/8/80. Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240.
- 296-62-902 Appendix B. [Order 73-3, Appendix B (codified as WAC 296-62-902), filed 5/7/73.] Repealed by 80-11-010 (Order 80-14), filed 8/8/80. Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240.
- 296-62-903 Appendix C—Threshold limit values for mixtures. [Order 73-3, Appendix C (codified as WAC 296-62-903), filed 5/7/73.] Repealed by 80-11-010 (Order 80-14), filed 8/8/80. Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240.
- 296-62-904 Appendix D—Permissible excursions for time-weighted average (TWA) limits. [Order 73-3, Appendix D (codified as WAC 296-62-904), filed 5/7/73.] Repealed by 80-11-010 (Order 80-14), filed 8/8/80. Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240.
- 296-62-905 Appendix E—Some nuisance particulates (see note q). [Order 73-3, Appendix E (codified as WAC 296-62-905), filed 5/7/73.] Repealed by 80-11-010 (Order 80-14), filed 8/8/80. Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240.
- 296-62-906 Appendix F. [Order 73-3, Appendix F (codified as WAC 296-62-906), filed 5/7/73.] Repealed by 80-11-010 (Order 80-14), filed 8/8/80. Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240.
- 296-62-907 Appendix G—Notice of intended changes (for 1972). [Order 73-3, Appendix G (codified as WAC 296-62-907), filed 5/7/73.] Repealed by 80-11-010 (Order 80-14), filed 8/8/80. Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240.
- 296-62-908 Appendix H—Notice of intent to change the TLV for lasers-1972. [Order 73-3, Appendix H (codified as WAC 296-62-908), filed 5/7/73.] Repealed by 80-11-010 (Order 80-14), filed 8/8/80. Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240.

**WAC 296-62-005 Occupational health and environmental control—Foreword.** (1) Foreword. (a) Modern industry is changing at an ever-increasing pace. New inventions, discoveries and developments cause changes in every facet of the industrial process. In keeping with

this changing technology is the necessity to provide an adequate guide for the protection of working men and women. This chapter is for the guidance of both labor and management and to call particular attention to the way in which modernization and updating of the standards can be accomplished.

(b) This chapter is intended to cover as fully as is practical the environment in which work is performed. In addition to the suggestions made herein, the services of modern occupational medicine must also be considered. Occupational medicine with its specialized techniques for examination, diagnosis, and treatment adds another protection for the worker as he encounters newly-developed materials and methods.

(c) With the full realization that close cooperation between government and industry, labor and management, and all the health sciences, is essential, this chapter is promulgated for the health of all the workmen coming under the jurisdiction of the department of labor and industries.

(d) This chapter is promulgated in accordance with the applicable requirements as outlined in the Washington State Administrative Procedure Act (chapter 34.04 RCW) and other applicable statutes. [Order 73-3, § 296-62-005, filed 5/7/73; Order 70-8, § 296-62-005, filed 7/31/70, effective 9/1/70.]

**WAC 296-62-010 Purpose and scope.** (1) Purpose. The purpose of this chapter is:

(a) To protect the health of workmen by prescribing minimum requirements for the prevention or control of conditions in industry hazardous to health.

(b) Assist in the provision of a healthful working environment.

(2) Scope. This chapter shall apply to all industry coming under the jurisdiction of the department of labor and industries. [Order 73-3, § 296-62-010, filed 5/7/73; Order 70-8, § 296-62-010, filed 7/31/70, effective 9/1/70; Section I, effective 8/1/63.]

**WAC 296-62-020 Definitions applicable to all sections of this chapter.** Unless the context indicates otherwise, words used in this chapter shall have the meaning given in this section.

(1) "Adequate" or "effective" means compliance with terms and intent of these standards.

(2) "Appendix" means references or recommendations to be used as guides in applying the provisions of this chapter.

(3) "Approved" means approved by the director of the department of labor and industries or his authorized representative: *Provided, however,* That should a provision of this chapter state that approval by an agency or organization other than the department of labor and industries is required, such as Underwriters' Laboratories or the Bureau of Mines, the provision of WAC 296-24-006 shall apply.

(4) "Authorized person" means a person approved or assigned by the employer to perform a specific type of duty or duties or to be at a specific location or locations at the job site.

(5) "Coal tar pitch volatiles" as used in WAC 296-62-07515, Table I, include the fused polycyclic hydrocarbons which volatilize from the distillation residues of coal, petroleum, (excluding asphalt), wood, and other organic matter. Asphalt (CAS 8052-42-4, and CAS 64742-93-4) is not covered under the "coal tar pitch volatiles" standard.

(6) "Competent person" means one who is capable of identifying existing and predictable hazards in the surroundings or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective action to eliminate them.

(7) "Department" means the department of labor and industries.

(8) "Director" means the director of the department of labor and industries, or his designated representative.

(9) "Employer" means any person, firm, corporation, partnership, business trust, legal representative, or other business entity which engages in any business, industry, profession, or activity in this state and employs one or more employees or who contracts with one or more persons, the essence of which is the personal labor of such person or persons and includes the state, counties, cities, and all municipal corporations, public corporations, political subdivisions of the state[,] and charitable organizations: *Provided*, That any persons, partnership, or business entity not having employees, and who is covered by the industrial insurance act shall be considered both an employer and an employee.

(10) "Hazard" means that condition, potential or inherent, which can cause injury, death, or occupational disease.

(11) "Occupational disease" means such disease or infection as arises naturally and proximately out of employment.

(12) "Qualified" means one who, by possession of a recognized degree, certificate, or professional standing, or who by extensive knowledge, training, and experience, has successfully demonstrated his ability to solve or resolve problems relating to the subject matter, the work, or the project.

(13) "Shall" or "must" means mandatory.

(14) "Should" or "may" means recommended.

(15) "Suitable" means that which fits, or has the qualities or qualifications to meet a given purpose, occasion, condition, function, or circumstance.

(16) "Workmen," "personnel," "man," "person," "employee," and other terms of like meaning, unless the context of the provision containing such term indicates otherwise, mean an employee of an employer who is employed in the business of his employer whether by way of manual labor or otherwise and every person in this state who is engaged in the employment of or who is working under an independent contract the essence of which is his personal labor for an employer whether by manual labor or otherwise.

(17) "Work place" means any plant, yard, premises, room, or other place where an employee or employees are employed for the performance of labor or service

over which the employer has the right of access or control[,] and includes, but is not limited to, all work places covered by industrial insurance under Title 51 RCW, as now or hereafter amended.

(18) Abbreviations used in this chapter:

(a) "ANSI" means American National Standards Institute.

(b) "ASHRE" means American Society of Heating and Refrigeration Engineers.

(c) "BTU" means British thermal unit.

(d) "BTUH" means British thermal unit per hour.

(e) "CFM" means cubic feet per minute.

(f) "CFR" means Code of Federal Register.

(g) "CGA" means Compressed Gas Association.

(h) "ID" means inside diameter.

(i) "MCA" means Manufacturing Chemist Association.

(j) "NEMA" means National Electrical Manufacturing Association.

(k) "NFPA" means National Fire Protection Association.

(l) "OD" means outside diameter.

(m) "WAC" means Washington Administrative Code.

(n) "WISHA" means Washington Industrial Safety and Health Act (Chapter 80, Laws of 1973). [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-020, filed 11/30/83. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 43.22 and 42.30 RCW. 80-17-015 (Order 80-21), § 296-62-020, filed 11/13/80; Order 73-3, § 296-62-020, filed 5/7/73; Order 70-8, § 296-62-020, filed 7/31/70, effective 9/1/70; Section II, effective 8/1/63.]

**Reviser's note:** RCW 34.04.058 requires the use of underlining and deletion marks to indicate amendments to existing rules, and deems ineffectual changes not filed by the agency in this manner. The bracketed material in the above section does not appear to conform to the statutory requirement.

**WAC 296-62-040 Unconstitutionality clause.** In the event that any section, paragraph, sentence, clause, phrase or work of this chapter is declared unconstitutional or invalid for any reason the remainder of said standard or this chapter shall not be affected thereby. [Order 73-3, § 296-62-040, filed 5/7/73; Order 70-8, § 296-62-040, filed 7/31/70, effective 9/1/70; Rule 4.010, effective 8/1/63.]

**WAC 296-62-050 Application for waiver or variances.** See WAC 296-24-010 VARIANCE AND PROCEDURE. [Order 73-3, § 296-62-050, filed 5/7/73; Order 70-8, § 296-62-050, filed 7/31/70, effective 9/1/70; Rule 5.010, effective 8/1/63.]

**WAC 296-62-052 Access to employee exposure and medical records.** This standard establishes rights of access to the information by employees and designated representatives, while at the same time affording appropriate privacy and confidentiality protection. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-052, filed 8/27/81.]

**WAC 296-62-05201 Purpose.** The purpose of this section is to provide employees and their designated representatives a right of access to relevant exposure and medical records, and to provide representatives of the director of labor and industries a right of access to these records. Access by employees, their representatives, and the director of labor and industries is necessary to yield both direct and indirect improvements in the detection, treatment and prevention of occupational disease. Each employer is responsible for assuring compliance with this section, but the activities involved in complying with the access to medical records provisions can be carried out, on behalf of the employer, by the physician or other health care personnel in charge of employee medical records. Except as expressly provided, nothing in this section is intended to affect existing legal and ethical obligations concerning the maintenance and confidentiality of employee medical information, the duty to disclose information to a patient/employee or any other aspect of the medical-care relationship, or affect existing legal obligations concerning the protection of trade secret information. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-05201, filed 8/27/81.]

**WAC 296-62-05203 Scope and application.** (1) This section applies to every employer, except as provided in subsection (4) of this section, who makes, maintains, contracts for, or has access to employee exposure or medical records, or analyses thereof, pertaining to employees exposed to toxic substances or harmful physical agents.

(2) This section applies to all employee exposure and medical records, and analyses thereof, of employees exposed to toxic substances or harmful physical agents, whether or not the records are related to specific occupational safety and health standards.

(3) This section applies to all employee exposure and medical records, and analyses thereof, made or maintained in any manner, including on an in-house or contractual (e.g., fee-for-service) basis. Each employer shall assure that the preservation and access requirements of this section are complied with regardless of the manner in which records are made or maintained.

(4) This section does not apply to the agricultural operations covered by chapter 296-306 WAC. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-05203, filed 8/27/81.]

**WAC 296-62-05205 Definitions applicable to this section.** (1) Access – the right and opportunity to examine and copy.

(2) Analysis using exposure or medical records – any compilation of data, or any research, statistical or other study based at least in part on information collected from individual employee exposure or medical records or information collected from health insurance claims records, provided that either the analysis has been reported to the employer or no further work is currently

being done by the person responsible for preparing the analysis.

(3) Designated representative – any individual or organization to whom an employee gives written authorization to exercise a right of access. For the purposes of access to employee exposure records and analyses using exposure or medical records, a recognized or certified collective bargaining agent shall be treated automatically as a designated representative without regard to written employee authorization.

(4) Employee – a current employee, a former employee, or an employee being assigned or transferred to work where there will be exposure to toxic substances or harmful physical agents. In the case of a deceased or legally incapacitated employee, the employee's legal representative may directly exercise all the employee's rights under this section.

(5) Employee exposure record – a record containing any of the following kinds of information concerning employee exposure to toxic substances or harmful physical agents:

(a) Environmental (workplace) monitoring or measuring, including personal, area, grab, wipe, or other form of sampling, as well as related collection and analytical methodologies, calculations, and other background data relevant to interpretation of the results obtained;

(b) Biological monitoring results which directly assess the absorption of a substance or agent by body systems (e.g., the level of a chemical in the blood, urine, breath, hair, fingernails, etc.) but not including results which assess the biological effect of a substance or agent;

(c) Material safety data sheets; or

(d) In the absence of the above, any other record which reveals the identity (e.g., chemical, common or trade name) of a toxic substance or harmful physical agent.

(6)(a) Employee medical record – a record concerning the health status of an employee which is made or maintained by a physician, nurse, or other health care personnel, or technician, including:

(i) Medical and employment questionnaires or histories (including job description and occupational exposures);

(ii) The results of medical examinations (preemployment, pre-assignment, periodic, or episodic) and laboratory tests (including x-ray examinations and all biological monitoring);

(iii) Medical opinions, diagnoses, progress notes and recommendations;

(iv) Descriptions of treatments and prescriptions; and

(v) Employee medical complaints.

(b) Employee medical record does not include the following:

(i) Physical specimens (e.g., blood or urine samples) which are routinely discarded as a part of normal medical practice, and are not required to be maintained by other legal requirements;

(ii) Records concerning health insurance claims if maintained separately from the employer's medical program and its records, and not accessible to the employer

by employee name or other direct personal identifier (e.g., social security number, payroll number, etc.); or

(iii) Records concerning voluntary employee assistance programs (alcohol, drug abuse, or personal counseling programs) if maintained separately from the employer's medical program and its records.

(7) Employer – a current employer, a former employer or a successor employer.

(8) Exposure or exposed – an employee is subjected to a toxic substance or harmful physical agent in the course of employment through any route of entry (inhalation, ingestion, skin contact or absorption, etc.), and includes past exposure and potential (e.g., accidental or possible) exposure, but does not include situations where the employer can demonstrate that the toxic substance or harmful physical agent is not used, handled, stored, generated, or present in the workplace in any manner different from typical nonoccupational situations.

(9) Record – any item, collection, or grouping of information regardless of the form or process by which it is maintained (e.g., paper document, microfiche, microfilm, x-ray film, or automated data processing).

(10) Specific written consent – (a) A written authorization containing the following:

(i) The name and signature of the employee authorizing the release of medical information;

(ii) The date of the written authorization;

(iii) The name of the individual or organization that is authorized to release the medical information;

(iv) The name of the designated representative (individual or organization) that is authorized to receive the released information;

(v) A general description of the medical information that is authorized to be released;

(vi) A general description of the purpose for the release of the medical information; and

(vii) A date or condition upon which the written authorization will expire (if less than one year).

(b) A written authorization does not operate to authorize the release of medical information not in existence on the date of written authorization, unless this is expressly authorized, and does not operate for more than one year from the date of written authorization.

(c) A written authorization may be revoked in writing prospectively at any time.

(11) Toxic substance or harmful physical agent – any chemical substance, biological agent (bacteria, virus, fungus, etc.), or physical stress (noise, heat, cold, vibration, repetitive motion, ionizing and nonionizing radiation, hypo- or hyperbaric pressure, etc.) which:

(a) Is regulated by any WISHA law or rule due to a hazard to health;

(b) Is listed in the latest printed edition of the National Institute for Occupational Safety and Health (NIOSH) Registry of Toxic Effects of Chemical Substances (RTECS) (See Appendix B);

(c) Has yielded positive evidence of an acute or chronic health hazard in human, animal, or other biological testing conducted by, or known to, the employer; or

(d) Has a material safety data sheet available to the employer indicating that the material may pose a hazard to human health. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-05205, filed 8/27/81.]

**WAC 296-62-05207 Preservation of records.** (1) Unless a specific occupational safety and health standard provides a different period of time, each employer shall assure the preservation and retention of records as follows:

(a) Employee medical records. Each employee medical record shall be preserved and maintained for at least the duration of employment plus thirty years, except that health insurance claims records maintained separately from the employer's medical program and its records need not be retained for any specified period;

(b) Employee exposure records. Each employee exposure record shall be preserved and maintained for at least thirty years, except that:

(i) Background data to environmental (workplace) monitoring or measuring, such as laboratory reports and worksheets, need only be retained for one year so long as the sampling results, the collection methodology (sampling plan), a description of the analytical and mathematical methods used, and a summary of other background data relevant to interpretation of the results obtained, are retained for at least thirty years; and

(ii) Material safety data sheets and WAC 296-62-05205(5) records concerning the identity of a substance or agent need not be retained for any specified period as long as some record of the identity (chemical name if known) of the substance or agent, where it was used, and when it was used is retained for at least thirty years; and

(c) Analyses using exposure or medical records. Each analysis using exposure or medical records shall be preserved and maintained for at least thirty years.

(2) Nothing in this section is intended to mandate the form, manner, or process by which an employer preserves a record so long as the information contained in the record is preserved and retrievable, except that x-ray films shall be preserved in their original state. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-05207, filed 8/27/81.]

**WAC 296-62-05209 Access to records.** (1) General.

(a) Whenever an employee or designated representative requests access to a record, the employer shall assure that access is provided in a reasonable time, place and manner, but in no event later than fifteen days after the request for access is made.

(b) Whenever an employee or designated representative requests a copy of a record, the employer shall, within the period of time previously specified, assure that either:

(i) A copy of the record is provided without cost to the employee or representative;

(ii) The necessary mechanical copying facilities (e.g., photocopying) are made available without cost to the employee or representative for copying the record; or

(iii) The record is loaned to the employee or representative for a reasonable time to enable a copy to be made.

(c) Whenever a record has been previously provided without cost to an employee or designated representative, the employer may charge reasonable, nondiscriminatory administrative costs (i.e., search and copying expenses but not including overhead expenses) for a request by the employee or designated representative for additional copies of the record, except that:

(i) An employer shall not charge for an initial request for a copy of new information that has been added to a record which was previously provided; and

(ii) An employer shall not charge for an initial request by a recognized or certified collective bargaining agent for a copy of an employee exposure record or an analysis using exposure or medical records.

(d) Nothing in this section is intended to preclude employees and collective bargaining agents from collectively bargaining to obtain access to information in addition to that available under this section.

(2) Employee and designated representative access.

(a) Employee exposure records. Each employer shall, upon request, assure the access of each employee and designated representative to employee exposure records relevant to the employee. For the purpose of this section, exposure records relevant to the employee consist of:

(i) Records of the employee's past or present exposure to toxic substances or harmful physical agents;

(ii) Exposure records of other employees with past or present job duties or working conditions related to or similar to those of the employee;

(iii) Records containing exposure information concerning the employee's workplace or working conditions; and

(iv) Exposure records pertaining to workplaces or working conditions to which the employee is being assigned or transferred.

(b) Employee medical records.

(i) Each employer shall, upon request, assure the access of each employee to employee medical records of which the employee is the subject, except as provided in subdivision (2)(b)(iv) of this section.

(ii) Each employer shall, upon request, assure the access of each designated representative to the employee medical records of any employee who has given the designated representative specific written consent. Appendix A to this section contains a sample form which may be used to establish specific written consent for access to employee medical records.

(iii) Whenever access to employee medical records is requested, a physician representing the employer may recommend that the employee or designated representative:

(A) Consult with the physician for the purposes of reviewing and discussing the records requested;

(B) Accept a summary of material facts and opinions in lieu of the records requested; or

(C) Accept release of the requested records only to a physician or other designated representative.

(iv) Whenever an employee requests access to his or her employee medical records, and a physician representing the employer believes that direct employee access to information contained in the records regarding a specific diagnosis of a terminal illness or a psychiatric condition could be detrimental to the employee's health, the employer may inform the employee that access will only be provided to a designated representative of the employee having specific written consent, and deny the employee's request for direct access to this information only. Where a designated representative with specific written consent requests access to information so withheld, the employer shall assure the access of the designated representative to this information, even when it is known that the designated representative will give the information to the employee.

(v) Nothing in this section precludes a physician, nurse, or other responsible health care personnel maintaining employee medical records from deleting from requested medical records the identity of a family member, personal friend, or fellow employee who has provided confidential information concerning an employee's health status.

(c) Analyses using exposure or medical records.

(i) Each employer shall, upon request, assure the access of each employee and designated representative to each analysis using exposure or medical records concerning the employee's working conditions or workplace.

(ii) Whenever access is requested to an analysis which reports the contents of employee medical records by either direct identifier (name, address, social security number, payroll number, etc.) or by information which could reasonably be used under the circumstances indirectly to identify specific employees (exact age, height, weight, race, sex, date of initial employment, job title, etc.) the employer shall assure that personal identifiers are removed before access is provided. If the employer can demonstrate that removal of personal identifiers from an analysis is not feasible, access to the personally identifiable portions of the analysis need not be provided.

(3) Department access.

(a) Each employer shall upon request, assure the immediate access of representatives of the director of the department of labor and industries to employee exposure and medical records and to analyses using exposure or medical records. Agency practice and procedures governing WISHA access to employee medical records shall apply.

(b) Whenever the department seeks access to personally identifiable employee medical information by presenting to the employer a written access order, the employer shall prominently post a copy of the written access order and its accompanying cover letter for at least fifteen working days. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-05209, filed 11/30/83. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-05209, filed 8/27/81.]

**WAC 296-62-05211 Trade secrets.** (1) Except as provided in subsection (2) of this section, nothing in this section precludes an employer from deleting from records requested by an employee or designated representative any trade secret data which discloses manufacturing processes, or discloses the percentage of a chemical substance in a mixture, as long as the employee or designated representative is notified that information has been deleted. Whenever deletion of trade secret information substantially impairs evaluation of the place where or the time when exposure to a toxic substance or harmful physical agent occurred, the employer shall provide alternative information which is sufficient to permit the employee to identify where and when exposure occurred.

(2) Notwithstanding any trade secret claims, whenever access to records is requested, the employer shall provide access to chemical or physical agent identities including chemical names, levels of exposure, and employee health status data contained in the requested records.

(3) Whenever trade secret information is provided to an employee or designated representative, the employer may require, as a condition of access, that the employee or designated representative agree in writing not to use the trade secret information for the purpose of commercial gain and not to permit misuse of the trade secret information by a competitor or potential competitor of the employer. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-05211, filed 8/27/81.]

**WAC 296-62-05213 Employee information.** (1) Upon an employee's first entering into employment, and at least annually thereafter, each employer shall inform employees exposed to toxic substances or harmful physical agents of the following:

(a) The existence, location and availability of any records covered by this section;

(b) The person responsible for maintaining and providing access to records; and

(c) Each employee's rights of access to these records.

(2) Each employer shall make readily available to employees a copy of this standard and its appendices, and shall distribute to employees any informational materials concerning this standard which are made available to the employer by the department of labor and industries, technical services. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-05213, filed 8/27/81.]

**WAC 296-62-05215 Transfer of records.** (1) Whenever an employer is ceasing to do business, the employer shall transfer all records subject to this section to the successor employer. The successor employer shall receive and maintain these records.

(2) Whenever an employer is ceasing to do business and there is no successor employer to receive and maintain the records subject to this standard, the employer

shall notify affected employees of their rights of access to records at least three months prior to the cessation of the employer's business.

(3) Whenever an employer either is ceasing to do business and there is no successor employer to receive and maintain the records, or intends to dispose of any records required to be preserved for at least thirty years, the employer shall:

(a) Transfer the records to the director of the department of labor and industries if so required by a specific occupational safety and health standard; or

(b) Notify the director of the department of labor and industries in writing of the impending disposal of records at least three months prior to the disposal of the records.

(4) Where an employer regularly disposes of records required to be preserved for at least thirty years, the employer may, with at least three months notice, notify the director of the department of labor and industries on an annual basis of the records intended to be disposed of in the coming year. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-05215, filed 8/27/81.]

**WAC 296-62-05217 Appendices.** The information contained in the appendices to this section is not intended, by itself, to create any additional obligations not otherwise imposed by this section nor detract from any existing obligation. Copies of these appendices can be obtained from the following address:

Department of Labor and Industries  
Division of Industrial Safety & Health  
Technical Services Section  
P.O. Box 207  
Olympia, Washington 98504

[Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-05217, filed 8/27/81.]

**WAC 296-62-05219 Effective date.** WAC 296-62-052 through 296-62-05219 shall become effective thirty days after filing with the code reviser. All obligations of this section commence on the effective date except that the employer shall provide the information required under WAC 296-62-05213(1) to all current employees within sixty days after the effective date. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-05219, filed 8/27/81.]

**WAC 296-62-05221 Appendix A--Sample authorization letter for the release of employee medical record information to a designated representative.**

I, \_\_\_\_\_ (full name of worker/patient) hereby authorize \_\_\_\_\_ (individual or organization holding the medical records) to release to \_\_\_\_\_ (individual or organization authorized to receive the medical information), the following medical information from my personal medical records:

\_\_\_\_\_  
 \_\_\_\_\_  
 (Describe generally the information desired to be released.)

I give my permission for this medical information to be used for the following purpose: \_\_\_\_\_, but I do not give permission for any other use or re-disclosure of this information.

(NOTE: Several extra lines are provided below so that you can place additional restrictions on this authorization letter if you want to. You may, however, leave these lines blank. On the other hand, you may want to (1) specify a particular expiration date for this letter (if less than one year); (2) describe medical information to be created in the future that you intend to be covered by this authorization letter; or (3) describe portions of the medical information in your records which you do not intend to be released as a result of this letter.)

\_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

\_\_\_\_\_  
 Full name of Employee or Legal Representative

\_\_\_\_\_  
 Signature of Employee or Legal Representative

\_\_\_\_\_  
 Date of Signature

[Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240, 81-18-029 (Order 81-21), § 296-62-05221, filed 8/27/81.]

**WAC 296-62-05223 Appendix B—Availability of NIOSH Registry of Toxic Effects of Chemical Substances (RTECS).** WAC 296-62-052 applies to all employee exposure and medical records, and analyses thereof, of employees exposed to toxic substances or harmful physical agents (WAC 296-62-05203). The term "toxic substance or harmful physical agent" is defined by WAC 296-62-05205(11) to encompass chemical substances, biological agents, and physical stresses for which there is evidence of harmful health effects. The standard uses the latest printed edition of the National Institute for Occupational Safety and Health (NIOSH) Registry of Toxic Effects of Chemical Substances (RTECS) as one of the chief sources of information as to whether evidence of harmful health effects exists. If a substance is listed in the latest printed RTECS, the standard applies to exposure and medical records (and analyses of these records) relevant to employees exposed to the substance.

It is appropriate to note that the final standard does not require that employers purchase a copy of RTECS, and many employers need not consult RTECS to ascertain whether their employee exposure or medical records

are subject to the standard. Employers who do not currently have the latest printed edition of the NIOSH RTECS, however, may desire to obtain a copy. The RTECS is issued in an annual printed edition as mandated by section 20(a)(6) of the Occupational Safety and Health Act (29 U.S.C. 669(a)(6)). The 1979 edition is the most recent printed edition as of July 1, 1981.

The RTECS may be purchased from the Superintendent of Documents, U.S. Government Printing Office (GPO), Washington D.C. 20402 (202-783-3238). New editions are anticipated to be issued in the late summer of each year. Some employers may also desire to subscribe to the quarterly update to the RTECS which is published in a microfiche edition. An annual subscription to the quarterly microfiche may be purchased from the GPO (Order the "Microfiche Edition, Registry of Toxic Effects of Chemical Substances"). Both the printed edition and the microfiche edition of RTECS are available for review at many university and public libraries throughout the country. The latest RTECS editions may also be examined at any OSHA regional or area office. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240, 81-18-029 (Order 81-21), § 296-62-05223, filed 8/27/81.]

**WAC 296-62-060 Control requirements in addition to those specified.** (1) In those cases where no acceptable standards have been derived for the control of hazardous conditions, every reasonable precaution shall be taken to safeguard the health of the worker whether provided herein or not.

(2) Preservation of records.

(a) Scope and application. This section applies to each employer who makes, maintains or has access to employee exposure records or employee medical records.

(b) Definitions.

(i) "Employee exposure record" – a record of monitoring or measuring which contains qualitative or quantitative information indicative of employee exposure to toxic materials or harmful physical agents. This includes both individual exposure records and general research or statistical studies based on information collected from exposure records.

(ii) "Employee medical record" – a record which contains information concerning the health status of an employee or employees exposed or potentially exposed to toxic materials or harmful physical agents. These records may include, but are not limited to:

(A) The results of medical examinations and tests;

(B) Any opinions or recommendations of a physician or other health professional concerning the health of an employee or employees; and

(C) Any employee medical complaints relating to workplace exposure. Employee medical records include both individual medical records and general research or statistical studies based on information collected from medical records.

(c) Preservation of records. Each employer who makes, maintains, or has access to employee exposure records or employee medical records shall preserve these records.

(d) Availability of records. The employer shall make available, upon request, to the director, department of labor and industries, or his designee, all employee exposure records and employee medical records for examination and copying.

(e) Effective date. This standard shall become effective thirty days after filing with the code reviser.

(3) Monitoring of employees. The department shall use industrial hygiene sampling methods and techniques including but not limited to personal monitoring devices and equipment approved by the director or his designee for the purpose of establishing compliance with chapter 296-62 WAC.

(a) The employer shall permit the director or his designee to monitor and evaluate any workplace or employee in accordance with all provisions of this subsection.

(b) The employer shall not prevent or discourage an employee from cooperating with the department by restricting or inhibiting his/her participation in the use of personal monitoring devices and equipment in accordance with all provisions of this subsection. [Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 80-11-010 (Order 80-14), § 296-62-060, filed 8/8/80; Order 73-3, § 296-62-060, filed 5/7/73; Order 70-8, § 296-62-060, filed 7/31/70, effective 9/1/70; Rule 6.010, effective 8/1/63.]

**WAC 296-62-070 Chemical agents (airborne or contact).** [Order 70-8, § 296-62-070, filed 7/31/70, effective 9/1/70; Section VII, effective 8/1/63.] See WAC 296-62-07001 through 296-62-07007, Order 73-3, filed 5/7/73.

**WAC 296-62-07001 Definitions (airborne chemical agents).** (1) "Dust" means solid particles suspended in air, generated by handling, drilling, crushing, grinding, rapid impact, detonation, or decrepitation of organic or inorganic materials such as rock, ore, metal, coal, wood, grain, etc.

(2) "Fume" means solid particles suspended in air, generated by condensation from the gaseous state, generally after volatilization from molten metals, etc., and often accompanied by a chemical reaction such as oxidation.

(3) "Gas" means a normally formless fluid which can be changed to the liquid or solid state by the effect of increased pressure or decreased temperature or both.

(4) "Mist" means liquid droplets suspended in air, generated by condensation from the gaseous to the liquid state or by breaking up a liquid into a dispersed state, such as by splashing, foaming or atomizing.

(5) "Vapor" means the gaseous form of a substance which is normally in the solid or liquid state. [Order 73-3, § 296-62-07001, filed 5/7/73.]

**WAC 296-62-07003 Definitions (contact chemical agents).** (1) "Corrosives" means substances which in contact with living tissue cause destruction of the tissue by chemical action.

(2) "Irritants" means substances which on immediate, prolonged, or repeated contact with normal living tissue will induce a local inflammatory reaction.

(3) "Toxicants" means substances which have the inherent capacity to produce personal injury or illness to man by absorption through any body surface. [Order 73-3, § 296-62-07003, filed 5/7/73.]

**WAC 296-62-07005 Control of chemical agents.** Chemical agents shall be controlled in such a manner that they will not constitute a hazard to the worker, or workers shall be protected from the hazard of contact with or exposure to chemical agents. [Order 73-3, § 296-62-07005, filed 5/7/73.]

**WAC 296-62-07007 Labeling of chemical agents.** Labeling of chemical agents shall conform to the department's "Standards relating to precautionary labeling of hazardous substances used in places of employment." (See chapter 296-64 WAC.) [Order 73-3, § 296-62-07007, filed 5/7/73.]

**WAC 296-62-071 Respiratory protection.** This section contains the requirements to be followed when establishing a respiratory protection program. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-16-016 (Order 81-19), § 296-62-071, filed 7/27/81.]

**WAC 296-62-07101 Scope.** This standard sets forth accepted practices when respiratory protection is used in controlling employee exposures to harmful air contaminants to comply with permissible exposure limits or to protect employees in oxygen-deficient atmospheres, or when respirators are utilized for emergency or rescue use. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-08-026 (Order 82-10), § 296-62-07101, filed 3/30/82. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-16-016 (Order 81-19), § 296-62-07101, filed 7/27/81.]

**WAC 296-62-07103 Purpose.** The purpose of this standard is to provide minimum performance requirements for the selection and use of respirators and the implementation of a respirator program. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-16-016 (Order 81-19), § 296-62-07103, filed 7/27/81.]

**WAC 296-62-07105 Definitions.** (1) Abrasive-blasting respirator. See "respirator." A respirator designed to protect the wearer against inhalation of abrasive material and against impact and abrasion from rebounding abrasive material.

(2) Accepted. Reviewed and listed as satisfactory for a specified use by the director or his or her designee.

(3) Aerodynamic diameter. The diameter of a unit density sphere having the same settling velocity as the particle in question of whatever shape and density.

(4) Aerosol. A system consisting of particles, solid or liquid, suspended in air.

(5) Air-line respirator. See "respirator."

(6) Air-purifying respirator. See "respirator."

(7) Air-regulating valve. An adjustable valve used to regulate, but which cannot completely shut off the air-flow to the facepiece, helmet, hood, or suit of an air-line respirator.

(8) Air-supply device. A hand- or motor-operated blower for the hose mask, or a compressor or other source of respirable air for the air-line respirator.

(9) Approved. Tested and listed as satisfactory by the Bureau of Mines (BM) of the U.S. Department of Interior, or jointly by the Mining Enforcement and Safety Administration (MESA) of the U.S. Department of Interior and the National Institute for Occupational Safety and Health (NIOSH) of the U.S. Department of Health and Human Services, or jointly by the Mine Safety and Health Administration (MSHA) of the U.S. Department of Labor and NIOSH under the provisions of Title 30, Code of Federal Regulations, Part 11.

(10) Bioassay. A determination of the concentration of a substance in a human body by an analysis of urine, feces, blood, bone, or tissue.

(11) Breathing tube. A tube through which air or oxygen flows to the facepiece, mouthpiece, helmet, hood, or suit.

(12) Canister (air-purifying). A container with a filter, sorbent, or catalyst, or any combination thereof, which removes specific contaminants from the air drawn through it.

(13) Canister (oxygen-generating). A container filled with a chemical which generates oxygen by chemical reaction.

(14) Carcinogen. A substance known to produce cancer in some individuals following a latent period (for example: Asbestos, Chromates, radioactive particulates).

(15) Cartridge (air-purifying). A small canister.

(16) Catalyst. In respirator use, a substance which converts a toxic gas (or vapor) into a less-toxic gas (or vapor).

(17) Ceiling concentration. The concentration of an airborne substance that shall not be exceeded.

(18) Chemical-cartridge respirator. See respirator.

(19) Confined space. See WAC 296-62-14501(1).

(20) Contaminant. A harmful, irritating, or nuisance material that is foreign to the normal atmosphere.

(21) Corrective lens. A lens ground to the wearer's individual corrective prescription to permit normal visual acuity.

(22) Demand. A type of self-contained breathing apparatus or type of air-line respirator which functions due to the negative pressure created by inhalation (i.e., air flow into the facepiece on "demand").

(23) Detachable coupling. A device which permits the respirator wearer, without using hand tools, to detach the air-supply line from that part of the respirator worn on the person.

(24) Dust. See WAC 296-62-07001(1).

(25) Emergency respirator use. Wearing a respirator when a hazardous atmosphere suddenly occurs that requires immediate use of a respirator either for escape from the hazardous atmosphere or for entry into the hazardous atmosphere.

(26) Exhalation valve. A device that allows exhaled air to leave a respirator and prevents outside air from entering through the valve.

(27) Eyepiece. A gas-tight, transparent window(s) in a full facepiece, helmet, hood, or suit, through which the wearer may see.

(28) Facepiece. That portion of a respirator that covers the wearer's nose and mouth in quarter-mask (above the chin) or half-mask (under the chin) facepiece or that covers the nose, mouth, and eyes in a full facepiece. It is designed to make a gas-tight or particle-tight fit with the face and includes the headbands, exhalation valve(s), and connections for an air-purifying device or respirable gas source, or both.

(29) Face shield. A device worn in front of the eyes and a portion of, or all of, the face, whose predominant function is protection of the eyes and the face.

(30) Fibrosis-producing dust. Dust which, when inhaled, deposited, and retained in the lungs, may produce findings of fibrotic growth that may cause pulmonary disease.

(31) Filter. A media component used in respirators to remove solid or liquid particles from the inspired air.

(32) Filter respirator. See respirator.

(33) Fog. A mist of sufficient concentration to perceptibly obscure vision.

(34) Full facepiece. See facepiece.

(35) Fume. See WAC 296-62-07001(2).

(36) Gas. An aeriform fluid which is in the gaseous state at ordinary temperature and pressure.

(37) Gas mask. See respirator.

(38) Goggle. A device, with contour-shaped eyecups with glass or plastic lenses, worn over eyes and held in place by a headband or other suitable means for the protection of the eyes and eye sockets.

(39) Half-mask facepiece. See facepiece.

(40) Hazardous atmosphere. Any atmosphere, either immediately or not immediately dangerous to life or health, which is oxygen deficient or which contains a toxic or disease-producing contaminant.

(41) Head harness. That part of a facepiece assembly which secures the facepiece to the wearer.

(42) Helmet. That portion of a respirator which shields the eyes, face, neck, and other parts of the head.

(43) High-efficiency filter. A filter which removes from air 99.97% or more of monodisperse dioctyl phthalate (DOP) particles having a mean particle diameter of 0.3 micrometer.

(44) Hood. That portion of a respirator which completely covers the head, neck, and portions of the shoulders.

(45) Hose mask. See respirator.

(46) Immediately dangerous to life or health (IDLH). Any atmosphere that poses an immediate hazard to life or produces immediate irreversible debilitating effects on health.

(47) Inhalation valve. A device that allows respirable air to enter a respirator and prevents exhaled air from leaving the respirator through the valve.

(48) Irrespirable. Unfit for breathing.

(49) Maximum use limit of filter, cartridge, or canister. The maximum concentration of a contaminant for which an air-purifying filter, cartridge, or canister is approved for use.

(50) Mist. See WAC 296-62-07001(4).

(51) Mouthpiece. That portion of a respirator which is held in the wearer's mouth and is connected to an air-purifying device or respirable gas source, or both. It is designed to make a gas-tight or particle-tight fit with the mouth.

(52) MPCa. Maximum permissible airborne concentration. These concentrations are set by the National Committee on Radiation Protection. They are recommended maximum average concentrations of radionuclides to which a worker may be exposed, assuming that he works 8 hours a day, 5 days a week, and 50 weeks a year.

(53) Negative pressure respirator. A respirator in which the air pressure inside the respiratory-inlet covering is positive during exhalation in relation to the air pressure of the outside atmosphere and negative during inhalation in relation to the air pressure of the outside atmosphere.

(54) Nonroutine respirator use. Wearing a respirator when carrying out a special task that occurs infrequently.

(55) Nose clamp. A device used with a respirator equipped with a mouthpiece that closes the nostrils of the wearer (sometimes called a nose clip).

(56) Not immediately dangerous to life or health. Any hazardous atmosphere which may produce physical discomfort immediately, chronic poisoning after repeated exposure, or acute adverse physiological symptoms after prolonged exposure.

(57) Odor threshold limit. The lowest concentration of a contaminant in air that can be detected by the olfactory sense.

(58) Oxygen deficiency - immediately dangerous to life or health. An atmosphere which causes an oxygen partial pressure of 100 millimeters of mercury column or less in the freshly inspired air in the upper portion of the lungs which is saturated with water vapor.

(59) Oxygen deficiency - not immediately dangerous to life or health. An atmosphere having an oxygen concentration below the minimum legal requirement of 18.0% by volume for respirable air at sea-level conditions, but above that which is immediately dangerous to life or health.

(60) Particulate matter. A suspension of fine solid or liquid particles in air, such as: Dust, fog, fume, mist, smoke, or spray. Particulate matter suspended in air is commonly known as an aerosol.

(61) Permissible exposure limit (PEL). The legally established time-weighted average (TWA) concentration or ceiling concentration of a contaminant that shall not be exceeded.

(62) Pneumoconiosis-producing dust. Dust which, when inhaled, deposited, and retained in the lungs, may produce signs, symptoms, and findings of pulmonary disease.

(63) Positive-pressure respirator. A respirator in which the air pressure inside the respiratory-inlet covering is positive in relation to the air pressure of the outside atmosphere during exhalation and inhalation.

(64) Powered air-purifying respirator. See respirator.

(65) Pressure demand. Similar to a demand type respirator but so designed to maintain positive pressure in the facepiece at all times.

(66) Protection factor. The ratio of the ambient concentration of an airborne substance to the concentration of the substance inside the respirator at the breathing zone of the wearer. The protection factor is a measure of the degree of protection provided by a respirator to the wearer. As used herein, a protection factor is synonymous with the fit factor assigned to a respirator facepiece by the use of qualitative and quantitative fitting tests.

(67) Rescue respirator use. Wearing a respirator for entry into a hazardous atmosphere to rescue a person(s) in the hazardous atmosphere.

(68) Resistance. Opposition to the flow of air, as through a canister, cartridge, particulate filter, orifice, valve, or hose.

(69) Respirable. Suitable for breathing.

(70) Respirator. A device designed to protect the wearer from the inhalation of harmful atmospheres.

(71) Respiratory-inlet covering. That portion of a respirator which connects the wearer's respiratory tract to an air-purifying device or respirable gas source, or both. It may be a facepiece, helmet, hood, suit, or mouthpiece/nose clamp.

(72) Routine respirator use. Wearing a respirator as a normal procedure when carrying out a regular and frequently repeated task.

(73) Sanitization. The removal of dirt and the inhibiting of the action of agents that cause infection or disease.

(74) Self-contained breathing apparatus. See respirator.

(75) Service life. The period of time that a respirator provides adequate protection to the wearer - for example, the period of time that an air-purifying device is effective for removing a harmful substance from inspired air.

(76) Smoke. A system which includes the products of combustion, pyrolysis, or chemical reaction of substances in the form of visible and invisible solid and liquid particles and gaseous products in air. Smoke is usually of sufficient concentration to perceptibly obscure vision.

(77) Sorbent. A material which is contained in cartridge or canister and which removes toxic gases and vapors from the inhaled air.

(78) Spray. A liquid, mechanically produced particle with sizes generally in the visible or macroscopic range.

(79) Supplied-air respirator. See respirator.

(80) Supplied-air suit. A suit that is impermeable to most particulate and gaseous contaminants and that is provided with an adequate supply of respirable air.

(81) Time-weighted average (TWA). The average concentration of a contaminant in air during a specific time period.

(82) Valve (air or oxygen). A device which controls the pressure, direction, or rate of flow of air or oxygen.

(83) Vapor. The gaseous state of a substance that is solid or liquid at ordinary temperature and pressure.

(84) Welding helmet. A device designed to provide protection for the eyes and face against intense radiant energy and molten metal splatter encountered in the welding and cutting of metals.

(85) Window indicator. A device on a cartridge or canister that visually denotes the service life of the cartridge or canister. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-16-016 (Order 81-19), § 296-62-07105, filed 7/27/81.]

**WAC 296-62-07107 Permissible practice.** (1) In the control of those occupational diseases caused by breathing air contaminated with harmful dusts, fumes, sprays, mists, fogs, smokes, vapors, gases, or other airborne contaminants, the primary objective shall be to prevent atmospheric contamination. When effective administrative or engineering controls are not feasible, or while they are being instituted or evaluated, appropriate respirators shall be used pursuant to the following requirements.

(2) Employer responsibility.

(a) Respirators shall be provided at no cost to an employee by the employer when such equipment is necessary to protect the health of the employee.

(b) The employer shall provide respirators which are applicable and suitable for the purpose intended.

(c) The employer shall be responsible for the establishment and maintenance of a respiratory protection program which shall minimally include the general requirements outlined in WAC 296-62-07109.

(3) Employee responsibility. The employee shall use the provided respiratory protection in accordance with instructions and training received. The employee shall notify a responsible person of any defect. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-03-023 (Order 82-1), § 296-62-07107, filed 1/15/82. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-16-016 (Order 81-19), § 296-62-07107, filed 7/27/81.]

**WAC 296-62-07109 Minimal acceptable respirator program.** (1) Standard operating procedures. Written standard operating procedures covering a complete respirator program shall be established and implemented in conformance with subsections (2) through (15) of this section. The employer shall, upon request, submit a copy of the written standard operating procedures to the director.

(2) Program administration. Responsibility and authority for the respirator program shall be assigned to a single person. This program administrator shall have sufficient knowledge of respiratory protection to properly supervise the respirator program.

(3) Physiological and psychological limitations for respirator wearers. The respirator program administrator or his or her designee, using guidelines established by a

physician, shall determine whether or not a person may be assigned to a task requiring the use of a respirator. Persons with physical disabilities such as, but not limited to, respiratory impairments, or claustrophobia when wearing a respirator, shall not be assigned to tasks requiring the use of respirators unless it has been determined by a qualified physician that they are physically able to perform the work and use the equipment. All respirator user's medical status should be reviewed annually.

(4) Approved or accepted respirators shall be used. Any modification of an approved respirator that is not authorized by the approving agencies voids the approval.

(5) Respirator selection. Respirators shall be selected on the basis of the hazards to which the worker is exposed. (See WAC 296-62-07113)

(6) Training. Each worker required to wear a respirator shall be given training such that he or she is knowledgeable and proficient with respect to the respirator to be worn. Refresher training shall be given at least annually.

(7) Respirator fit. Each respirator wearer shall be fitted in accordance with WAC 296-62-07113. Each wearer of a respirator equipped with a facepiece shall check the seal of the respirator by appropriate means. This may be done by using procedures recommended by the respirator manufacturer.

(8) Facial hair, contact lenses, and eye and face protective devices. A negative pressure respirator, any self-contained breathing apparatus, or any respirator which is used in an atmosphere immediately dangerous to life or health (IDLH), equipped with a facepiece shall not be worn if facial hair comes between the sealing periphery of the facepiece and the face or if facial hair interferes with valve function. The wearer of a respirator shall not be allowed to wear contact lenses if the risk of eye damage is increased by their use. If a spectacle, goggle, face shield, or welding helmet must be worn with a facepiece, it shall be worn so as not to adversely affect the seal of the facepiece to the face. (See WAC 296-62-07115(3).)

(9) Issue of respirators. The proper type of respirator for each respiratory hazard shall be listed in the written standard operating procedures.

(10) Respirator inspection. The respirator shall be inspected by the wearer prior to each use to ensure that it is in proper working condition. Each respirator stored for emergency or rescue use shall be inspected at least once a month. (See WAC 296-62-07115 and 296-62-07117.)

(11) Monitoring respirator use. Supervisory personnel shall periodically monitor the use of respirators to ensure that they are worn properly. (See WAC 296-62-07115(7).)

(12) Evaluating respiratory hazard. Appropriate surveillance of work area conditions and degree of employee exposure or stress shall be maintained. (See WAC 296-62-07115(8).)

(13) Medical and bioassay surveillance. When appropriate, medical surveillance, including bioassay, shall be

carried out to determine if respirator wearers are receiving adequate respiratory protection. A physician shall determine the requirements of the surveillance program.

(14) Respirator maintenance. Respirator maintenance shall be performed regularly. Maintenance shall be carried out on a schedule which ensures that each respirator wearer is provided with a respirator that is clean and in good operating condition. Maintenance shall include: (a) Washing, sanitizing, rinsing, and drying, (b) inspection for defects, (c) replacement of worn or deteriorated parts, (d) repair if necessary, and (e) storage to protect against dust, sunlight, excessive heat, extreme cold, excessive moisture, damaging chemicals, and physical damage. (See WAC 296-62-07117.)

(15) Respirator program evaluation. An appraisal of the effectiveness of the respirator program shall be carried out at least annually. Action shall be taken to correct defects found in the program. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-13-045 (Order 82-22), § 296-62-07109, filed 6/11/82; 82-03-023 (Order 82-1), § 296-62-07109, filed 1/15/82. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-16-016 (Order 81-19), § 296-62-07109, filed 7/27/81.]

**WAC 296-62-07111 Respirable air and oxygen for self-contained breathing apparatus and supplied air respirators.** Compressed gaseous air, compressed gaseous oxygen, liquid air, and liquid oxygen used for respiration shall be of high purity. Compressed gaseous or liquid oxygen shall meet the requirements of the United States Pharmacopeia for medical or breathing oxygen. Chemically generated oxygen shall meet the requirements of U.S. Department of Defense Military Specification MIL-E-83252 or Military Specification MIL-O-15633c. Compressed gaseous air shall meet at least the requirements of the specification for Type I - Grade D breathing air, and liquid air shall meet at least the requirements for Type II - Grade B breathing air as described in American National Standard Commodity Specification for Air, ANSI Z86.1-1973 (Compressed Gas Association Commodity Specification for Air, G-7.1, 1973).

(1) Compressed gaseous air may contain low concentrations of oil. If high-pressure oxygen passes through an oil- or grease-coated orifice, an explosion or fire may occur. Therefore, compressed gaseous oxygen shall not be used in supplied-air respirators or in open-circuit-type self-contained breathing apparatus that have previously used compressed air.

(2) Breathing air may be supplied to respirators from cylinders or air compressors. Cylinders shall be tested and maintained in accordance with applicable department of transportation specifications for shipping containers (Title 49, Code of Federal Regulations, Part 173, General Requirements for Shipments and Packagings, and Part 178, Shipping Container Specifications). A compressor shall be constructed and situated so as to avoid entry of contaminated air into the air-supply system and shall be equipped with a suitable in-line particulate filter followed by a bed of activated charcoal and, if necessary, a moisture adsorber to further assure

breathing air quality. These filters should be placed before any receiver and after the discharge in the compressor. If an oil-lubricated compressor is used, it shall be equipped with a carbon monoxide alarm or an equally as effective alternative if approved by the department.

(a) If a carbon monoxide alarm is used, it shall be calibrated to activate at or below 20 parts per million carbon monoxide at least once per month. A calibration and maintenance log shall be kept and shall be available for review and copying by the director or his or her designee. The log shall identify the test method, date, time of test, results, and the name of the person performing the test. The log shall be retained for at least one year from the date of the test.

(b) If the use of an alarm at the compressor will not effectively provide warning to the respirator wearer of a carbon monoxide problem, a remote alarm or other means of warning the wearer shall be used.

(3) Breathing air couplings shall be incompatible with outlets for nonrespirable plant air or other gas systems to prevent inadvertent servicing of air-line respirators with nonrespirable gases.

(4) Breathing gas containers shall be marked in accordance with American National Standard Method of Marking Portable Compressed Gas Containers to Identify the Material Contained, ANSI Z48.1-1954 (R1971); Federal Specification BB-A-1034a, June 21, 1968, Air, Compressed for Breathing Purposes; or Interim Federal Specification GG-B-675d, September 23, 1976, Breathing Apparatus, Self-Contained. Further details on sources of compressed air and its safe use will be found in Compressed Gas Association Pamphlet G-7, 1976, Compressed Air for Human Respiration. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-16-016 (Order 81-19), § 296-62-07111, filed 7/27/81.]

**WAC 296-62-07113 Selection of respirators.** (1) General considerations. Proper selection of respirators shall be made in accordance with the classification, capabilities, and limitations listed in tables I through IV of this section. Additional guidance may be obtained by referring to American National Standard Practices for Respiratory Protection Z88.2 - 1980.

(2) Respirator protection factor (PF). Respirators shall be selected according to the characteristics of the hazards involved, the capabilities and limitations of the respirators, and the ability of each respirator wearer to obtain a satisfactory fit with a respirator. Taking into account the capabilities and limitations of respirators and the results of respirator-fitting tests, a table of respirator protection factors has been prepared (see table V). A respirator protection factor is a measure of the degree of protection provided by a respirator to a wearer. Multiplying either (1) the permissible time-weighted average concentration or the permissible ceiling concentration, whichever is applicable, for a toxic substance, or (2) the maximum permissible airborne concentration for a radionuclide by a protection factor assigned to a respirator gives the maximum concentration of the hazardous substance in which the respirator

can be used. Limitations of filters, cartridges, and canisters also shall be considered (see table V).

(3) Respirator-fitting tests. A qualitative or quantitative respirator-fitting test shall be used to determine the ability of each individual respirator wearer to obtain a satisfactory fit with a negative-pressure respirator. The results of qualitative or quantitative respirator fitting-tests shall be used to select specific types, makes, and models of negative-pressure respirators for use by individual respirator wearers. A respirator-fitting test shall be carried out for each wearer of a negative-pressure respirator equipped with a facepiece. Respirator-fitting tests shall not be required for positive-pressure respirators or for mouthpiece respirators.

(a) Qualitative respirator-fitting test - A person wearing a respirator is exposed to an irritant smoke, an odorous vapor, or other suitable test agent. An air-purifying respirator must be equipped with an air-purifying element(s) which effectively removes the test agent from inspired air. If the respirator wearer is unable to detect penetration of the test agent into the respirator, the respirator wearer has achieved a satisfactory fit with the respirator.

(b) Quantitative respirator-fitting test - A person wears a respirator in a test atmosphere containing a test agent in the form of an aerosol, vapor, or gas. Instrumentation, which samples the test atmosphere and the air inside the respiratory-inlet covering of the respirator, is used to measure quantitatively the penetration of the test agent into the respiratory-inlet covering.

(c) When carrying out a qualitative or quantitative respirator-fitting test, the respirator wearer shall carry out a series of exercises which simulate work movements.

(d) When carrying out respirator-fitting tests, it shall be an acceptable procedure to make the following modifications to respirators provided that such modifications do not affect the seal of the respirators to wearers.

(i) When carrying out a qualitative or quantitative respirator-fitting test which uses an aerosol as the test agent, it shall be acceptable procedure to equip an air-purifying respirator with a high-efficiency filter.

(ii) When carrying out a qualitative or quantitative respirator-fitting test which uses a vapor or gas as the test agent, it shall be acceptable procedure to equip an air-purifying respirator with an appropriate cartridge or canister which removes the vapor or gas from air.

(iii) When carrying out a quantitative respirator-fitting test, it shall be acceptable procedure to attach a sampling probe to the respirator which is connected by flexible tubing to an instrument which measures the penetration of the test agent into the respirator.

(e) If a qualitative respirator-fitting test has been used in respirator selection, a person shall be allowed to use only the specific make(s) and model(s) of

respirator(s) for which the person obtained a satisfactory fit, and the respirator protection factor listed under "qualitative test" in table V shall apply. Under no circumstances shall a person be allowed to use any respirator for which the results of the qualitative respirator fitting test indicate that the person is unable to obtain a satisfactory fit.

(f) If a quantitative respirator-fitting test has been used in selecting a respirator, the test results shall be used to assign a respirator protection factor to each person for each specific make and model of respirator tested. The assigned respirator protection factor shall be applied when the person wears the specific respirator in a hazardous atmosphere, but it shall not exceed the respirator protection factor listed under "quantitative test" in table V for the particular type of respirator.

(4) Respirator-fitting test records. Records of respirator-fitting tests shall be kept for at least the duration of employment. These records shall include the following information:

- (a) Type of respirator-fitting test used;
- (b) Specific make and model of respirator tested;
- (c) Name of person tested;
- (d) Name of test operator;
- (e) Date of test;
- (f) Results of respirator-fitting tests;
- (i) Success or failure of person to obtain satisfactory fit if a qualitative respirator-fitting test was carried out.
- (ii) Respirator protection factor based upon test results if a quantitative respirator-fitting test was carried out.

(5) Face dimensions and facepiece sizes. The wide range of face dimensions may require more than a single size of respirator facepiece to provide a proper fit to all respirator users. Therefore, respirator facepieces of more than one size should be available in any respirator-selection program involving respirators equipped with facepieces.

TABLE I

CLASSIFICATION OF RESPIRATORY HAZARDS ACCORDING TO THEIR BIOLOGICAL EFFECT

[CODIFICATION NOTE: The graphic presentation of this table has been varied slightly in order that it would fall within the printing specifications for the Washington Administrative Code. In the following table, the original table had columns relating to (1) "Oxygen Deficiency" which is now "Part 1," (2) "Gas and Vapor Contaminants" which is now "Part 2," (3) "Particulate Contaminants (Dust, fog, fume, mist, smoke, and spray)" which is now "Part 3," and "Part 4" is "Combinations of Gas, Vapor, and Particulate Contaminants" and is a combination of the columns in "Part 2," and "Part 3." These columns were all positioned side by side. In the new WAC format these are split up into four separate tables.]

TABLE I--PART 1

CLASSIFICATION OF RESPIRATORY HAZARDS ACCORDING TO THEIR BIOLOGICAL EFFECT

*oxygen deficiency*

Minimum legal requirements: 18.0% by volume for respirable air at sea-level conditions. (See Note 1.)

Occurrence: Confined or unventilated cellars, wells, mines, ship holds, tanks, burning buildings, and enclosures containing inert atmospheres:

Atmosphere oxygen content (percent by volume) versus expected conditions:

20.9% Oxygen content of normal air at sea-level conditions.

**Oxygen  
Volume  
Percent  
At Sea  
Level**

**Physiological Effects**

16% - 12%	Loss of peripheral vision, increased breathing volume, accelerated heart-beat, impaired attention and thinking, impaired coordination.
12% - 10%	Very faulty judgment, very poor muscular coordination, muscular exertion causes fatigue that may cause permanent heart damage, intermittent respiration.
10% - 6%	Nausea, vomiting, inability to perform vigorous movement, unconsciousness followed by death.
Less than 6%	Spasmodic breathing, convulsive movements, death in minutes.

TABLE I--PART 2

CLASSIFICATION OF RESPIRATORY HAZARDS ACCORDING TO THEIR BIOLOGICAL EFFECT

*Gas and Vapor Contaminants*

Asphyxiants: Interfere with utilization of oxygen in the body.

Simple asphyxiants: Physiologically inert substances that dilute oxygen in the air (for example: nitrogen, hydrogen, helium, methane). See Oxygen Deficiency, Column 1.

Chemical asphyxiants: Low concentrations interfere with supply or utilization of oxygen in the body (for example: Carbon monoxide, hydrogen cyanide, cyanogen, and nitriles).

Irritants: Corrosive in action. May cause irritation and inflammation of parts of the respiratory system (also skin and eyes) and pulmonary edema (for example: Ammonia hydrogen chloride, formaldehyde, sulfur dioxide, chlorine, ozone, nitrogen dioxide, phosgene, and arsenic trichloride).

Anesthetics: Cause loss of feeling and sensation with unconsciousness and death possible (for example: Nitrous oxide hydrocarbons, and ethers). Some anesthetics injure body organs (for example: Carbon tetrachloride (liver and kidneys), chloroform (liver and heart), benzene (bone marrow), and carbon disulfide (nervous system)).

Sensitizers: Cause increased probability of physiological reactions (for example: Isocyanates, epoxy resin systems).

Systemic poisons: Damage organs and systems in the body (for example: Mercury (nervous system and various organs), phosphorus (bone), hydrogen sulfide (respiratory paralysis), and arsine (red blood cells and liver)).

Carcinogens: Produce cancer in some individuals after a latent period (for example: Vinyl chloride, benzene).

TABLE I--PART 3

CLASSIFICATION OF RESPIRATORY HAZARDS ACCORDING TO THEIR BIOLOGICAL EFFECT

*Particulate Contaminants  
(Dust, fog, fume, mist, smoke, and spray)*

Relatively inert: May cause discomfort and minor irritation, but generally without injury at reasonable concentrations (for example: Marble, gypsum).

Pulmonary-fibrosis-producing: Produce nodulation and fibrosis in the lung, possibly leading to complications (for example: Quartz, asbestos).

Carcinogens: Produce cancer in some individuals after latent period (for example: Asbestos, chromates, radioactive particulates).

Chemical irritants: Produce irritation, inflammation, and ulceration in upper respiratory tract (for example: Acidic mists, alkalies).

Systemic poisons: Produce pathologic reactions in various systems of the body (for example: Lead manganese, cadmium).

Allergy-producing: Produce reactions such as itching, sneezing, and asthmas (for example: Pollens, spices, and animal fur).

Febrile-reaction-producing: Produce chills followed by fever (for example: Fumes of zinc and copper).

TABLE I--PART 4

**CLASSIFICATION OF RESPIRATORY HAZARDS ACCORDING TO THEIR BIOLOGICAL EFFECT**

*Combinations of Gas, Vapor, and Particulate Contaminants*

Combinations of contaminants may occur simultaneously in the atmosphere. Contaminants may be entirely different substances (dusts and gases from blasting) or the particulate and vapor forms of the same substance. Synergistic effects (joint action of two or more agents that results in an effect which is greater than the sum of their individual effects) may occur. Such effects may require extraordinary protective measures.

Note 1: See definition in WAC 296-62-07105 "oxygen deficiency - not immediately dangerous to life or health" and "oxygen deficiency - immediately dangerous to life or health."

TABLE II

**CLASSIFICATION OF RESPIRATORY HAZARDS ACCORDING TO THEIR PROPERTIES WHICH INFLUENCE RESPIRATOR SELECTION**

[CODIFICATION NOTE: The graphic presentation of this table has been varied slightly in order that it would fall within the printing specifications for the Washington Administrative Code. In the following table, the original table had columns relating to (1) "Gas and Vapor Contaminants" which is now "Part 1," and (2) "Particulate Contaminants" which is now "Part 2." These columns were positioned side by side. In the new WAC format these are split up into two separate tables.]

TABLE II--PART 1

**CLASSIFICATION OF RESPIRATORY HAZARDS ACCORDING TO THEIR PROPERTIES WHICH INFLUENCE RESPIRATOR SELECTION**

*Gas and Vapor Contaminants*

Inert: Substances that do not react with other substances under most conditions, but create a respiratory hazard by displacing air and producing oxygen deficiency (for example: Helium, neon, argon).

Acidic: Substances that are acids or that react with water to produce an acid. In water, they produce positively charged hydrogen ions ( $H^{+1}$ ) and a pH of less than 7. They taste sour, and many are corrosive to tissues (for

example: Hydrogen chloride, sulfur dioxide, fluorine, nitrogen dioxide, acetic acid, carbon dioxide, hydrogen sulfide, and hydrogen cyanide).

Alkaline: Substances that are alkalies or that react with water to produce an alkali. In water, they result in the production of negatively charged hydroxyl ions ( $OH^{-1}$ ) and a pH greater than 7. They taste bitter, and many are corrosive to tissues (for example: Ammonia, amines, phosphine, arsine, and stibine).

Organic: The compounds of carbon. Examples are saturated hydrocarbons (methane, ethane, butane), unsaturated hydrocarbons (ethylene, acetylene), alcohols (methyl ether, ethyl ether), aldehydes (formaldehyde), ketones (methyl ketone), organic acids (formic acid, acetic acid), halides (chloroform, carbon tetrachloride), amides (formamide, acetamide), nitriles (acetonitrile), isocyanates (toluene diisocyanate), amines (methylamine), epoxies (epoxyethane, propylene oxide), and aromatics (benzene, toluene, xylene).

Organometallic: Compounds in which metals are chemically bonded to organic groups (for example: Ethyl silicate, tetraethyl lead, and organic phosphate).

Hydrides: Compounds in which hydrogen is chemically bonded to metals and certain other elements (for example: Diborane and tetraborane).

TABLE II--PART 2

**CLASSIFICATION OF RESPIRATORY HAZARDS ACCORDING TO THEIR PROPERTIES WHICH INFLUENCE RESPIRATOR SELECTION**

*Particulate Contaminants*

Particles are produced by mechanical means by disintegration processes such as grinding, crushing, drilling, blasting, and spraying; or by physiochemical reactions such as combustion, vaporization, distillation, sublimation, calcination, and condensation. Particles are classified as follows:

- Dust: A solid, mechanically produced particle with sizes varying from submicroscopic to visible or macroscopic.
- Spray: A liquid, mechanically produced particle with sizes generally in the visible or macroscopic range.
- Fume: A solid condensation particle of extremely small particle size, generally less than one micrometer in diameter.
- Mist: A liquid condensation particle with sizes ranging from submicroscopic to visible or macroscopic.
- Fog: A mist of sufficient concentration to perceptibly obscure vision.

**Smoke:** A system which includes the products of combustion, pyrolysis, or chemical reaction of substances in the form of visible and invisible solid and liquid particles and gaseous products in air. Smoke is usually of sufficient concentration to perceptibly obscure vision.

TABLE III

**CLASSIFICATION AND DESCRIPTION OF RESPIRATORS BY MODE OF OPERATION**

[CODIFICATION NOTE: The graphic presentation of this table has been varied slightly in order that it would fall within the printing specifications for the Washington Administrative Code. In the following table, the original table had columns relating to (1) "Atmosphere-Supplying Respirators" which is now "Part 1," and (2) "Air-Purifying Respirators" which is now "Part 2." These columns were positioned side by side. In the new WAC format these are split up into two separate tables.]

TABLE III--PART I

**CLASSIFICATION AND DESCRIPTION OF RESPIRATORS BY MODE OF OPERATION**

*Atmosphere-Supplying Respirators*

A respirable atmosphere independent of the ambient air is supplied to the wearer.

**Self-Contained Breathing Apparatus (SCBA)**

A supply of air, oxygen, or oxygen-generating material is carried by the wearer. Normally equipped with full facepiece, but may be equipped with a quarter-mask facepiece, half-mask facepiece, helmet, hood, or mouthpiece and nose clamp.

(1) Closed-circuit SCBA (oxygen only, negative pressure<sup>a</sup> or positive pressure<sup>b</sup>).

(a) Compressed or liquid oxygen type. Equipped with a facepiece or mouth piece and nose clamp. High-pressure oxygen from a gas cylinder passes through a high-pressure reducing valve and, in some designs, through a low-pressure admission valve to a breathing bag or container. Liquid oxygen is converted to low-pressure gaseous oxygen and delivered to the breathing bag. The wearer inhales from the bag, through a corrugated tube connected to a mouthpiece or facepiece and a one-way check valve. Exhaled air passes through another check valve and tube into a container of carbon-dioxide removing chemical and reenters the breathing bag. Make-up oxygen enters the bag continuously or as the bag deflates sufficiently to actuate an admission valve. A pressure-relief system is provided, and a manual by-pass system and saliva trap may be provided depending upon the design.

(b) Oxygen-generating type. Equipped with a facepiece or mouthpiece and nose clamp. Water vapor in the exhaled breath reacts with chemical in the canister to

release oxygen to the breathing bag. The wearer inhales from the bag through a corrugated tube and one-way check valve at the facepiece. Exhaled air passes through a second check valve/breathing tube assembly into the canister. The oxygen-release rate is governed by the volume of exhaled air. Carbon dioxide in the exhaled breath is removed by the canister fill.

(2) Open-circuit SCBA (compressed air, compressed oxygen, liquid air, liquid oxygen). A bypass system is provided in case of regulator failure except on escape-type units.

(a) Demand type<sup>c</sup>. Equipped with a facepiece or mouthpiece and nose clamp. The demand valve permits oxygen or air flow only during inhalation. Exhaled breath passes to ambient atmosphere through a valve(s) in the facepiece.

(b) Pressure-demand type<sup>d</sup>. Equipped with a facepiece only. Positive pressure is maintained in the facepiece. The apparatus may have provision for the wearer to select the demand or pressure-demand mode of operation, in which case the demand mode should be used only when donning or removing the apparatus.

Combination air-line respirators with auxiliary self-contained air supply include an air-line respirator with an auxiliary self-contained air supply. To escape from a hazardous atmosphere in the event the primary air supply fails to operate, the wearer switches to the auxiliary self-contained air supply. Devices approved for both entry into and escape from dangerous atmospheres have a low-pressure warning alarm and contain at least a 15-minute self-contained air supply.

**Supplied-Air Respirators**

(1) Hose mask

Equipped with a facepiece, breathing tube, rugged safety harness, and large-diameter heavy-duty nonkinking air-supply hose. The breathing tube and air-supply hose are securely attached to the harness. The facepiece is equipped with an exhalation valve. The harness has provision for attaching a safety line.

(a) Hose mask with blower. Air is supplied by a motor-driven or hand-operated blower. The wearer can continue to inhale through the hose if the blower fails. Up to 300 feet (91 meters) of hose length is permissible.

(b) Hose mask without blower. The wearer provides motivating force to pull air through the hose. The hose inlet is anchored and fitted with a funnel or like object covered with a fine mesh screen to prevent entrance of coarse particulate matter. Up to 75 feet (23 meters) of hose length is permissible.

(2) Air-line respirator

Respirable air is supplied through a small-diameter hose from a compressor or compressed air cylinder(s). The hose is attached to the wearer by a belt or other suitable means and can be detached rapidly in an emergency. A flow-control valve or orifice is provided to govern the rate of air flow to the wearer. Exhaled air passes to the ambient atmosphere through a valve(s) or opening(s) in

the enclosure (facepiece, helmet, hood, or suit). Up to 300 feet (91 meters) of hose length is permissible.

(a) Continuous-flow class. Equipped with a facepiece, hood, helmet, or suit. At least 115 liters (four cubic feet) of air per minute to tight-fitting facepieces and 170 liters (six cubic feet) of air per minute to loose-fitting helmets, hoods, and suits is required. Air is supplied to a suit through a system of internal tubes to the head, trunk, and extremities through valves located in appropriate parts of the suit.

(b) Demand type<sup>c</sup>. Equipped with a facepiece only. The demand valve permits flow of

(c) Pressure-demand type<sup>d</sup>. Equipped with a facepiece only. A positive pressure is maintained in the facepiece.

TABLE III--PART 2

CLASSIFICATION AND DESCRIPTION OF RESPIRATORS BY  
MODE OF OPERATION

*Air-Purifying Respirators*

Ambient air, prior to being inhaled, is passed through a filter, cartridge, or canisters which removes particles, vapors, gases, or a combination of these contaminants. The breathing action of the wearer operates the nonpowered type of respirator. The powered type contains a blower - stationary or carried by the wearer - which passes ambient air through an air-purifying component and then supplies purified air to the respirator-inlet covering. The nonpowered type is equipped with a facepiece or mouthpiece and nose clamp. The powered type is equipped with a facepiece, helmet, hood, or suit.

**Vapor-and Gas-Removing Respirators**

Equipped with cartridge(s) or canister(s) to remove a single vapor or gas (for example: Chlorine gas), a single class of vapors or gases (for example: Organic vapors), or a combination of two or more classes of vapors or gases (for example: Organic vapors and acidic gases) from air.

**Particulate-Removing Respirators**

Equipped with filter(s) to remove a single type of particulate matter (for example: Dust) or a combination of two or more types of particulate matter (for example: Dust and fume) from air. Filter may be a replaceable part or a permanent part of the respirator. Filter may be of the single-use or the reusable type.

**Combination Particulate-and Vapor-and Gas-Removing Respirators**

Equipped with cartridge(s) or canister(s) to remove particulate matter, vapors, and gasses from air. The filter may be a permanent part or a replaceable part of a cartridge or canister.

**Combination Atmosphere-Supplying and Air-Purifying Respirators**

Provide the wearer with the option of using either of two different modes of operation: (1) An atmosphere-supplying respirator with an auxiliary air-purifying attachment which provides protection in the event the air supply fails or (2) an air-purifying respirator with an auxiliary self-contained air supply which is used when the atmosphere may exceed safe conditions for use of an air-purifying respirator.

<sup>a</sup> Device produces negative pressure in respiratory-inlet covering during inhalation.

<sup>b</sup> Device produces positive pressure in respiratory-inlet covering during both inhalation and exhalation.

<sup>c</sup> Equipped with a demand valve that is activated on initiation and permits the flow of breathing atmosphere to the facepiece. On exhalation, pressure in the facepiece becomes positive and the demand valve is deactivated.

<sup>d</sup> A positive pressure is maintained in the facepiece by a spring-loaded or balanced regulator and exhalation valve.

TABLE IV

CAPABILITIES AND LIMITATIONS OF RESPIRATORS

[CODIFICATION NOTE: The graphic presentation of this table has been varied slightly in order that it would fall within the printing specifications for the Washington Administrative Code. In the following table, the original table had columns relating to (1) "atmosphere supplying respirators" which is now "Part 1," and (2) "air-purifying respirators" which is now "Part 2." These columns were positioned side by side. In the new WAC format these are split up into two separate tables.]

TABLE IV--PART 1

CAPABILITIES AND LIMITATIONS OF RESPIRATORS

*Atmosphere Supplying Respirators*

(See WAC 296-62-07111 for specification on respirable atmospheres.)

Atmosphere-supplying respirators provide protection against oxygen deficiency and toxic atmospheres. The breathing atmosphere is independent of ambient atmospheric conditions.

General limitations: Except for some air-line suits, no protection is provided against skin irritation by materials such as ammonia and hydrogen chloride, or against sorption of materials such as hydrogen cyanide, tritium, or organic phosphate pesticides through the skin. Facepieces present special problems to individuals required to wear prescription lenses. Use of atmosphere-supplying respirators in atmospheres immediately dangerous to life or health is limited to specific devices under specified conditions (see Table V).

### Self-Contained Breathing Apparatus (SCBA)

The wearer carries his own breathing atmosphere.

Limitations: The period over which the device will provide protection is limited by the amount of air oxygen in the apparatus, the ambient atmospheric pressure (service life of open-circuit devices is cut in half by a doubling of the atmospheric pressure), and the type of work being performed. Some SCBA devices have a short service life (less than 15 minutes) and are suitable only for escape (self-rescue) from an irrespirable atmosphere.

Chief limitations of SCBA devices are their weight or bulk, or both, limited service life, and the training required for their maintenance and safe use.

#### (1) Closed-circuit SCBA.

The closed-circuit operation conserves oxygen and permits longer service life at reduced weight. The negative-pressure type produces a negative-pressure in the respiratory inlet covering during inhalation, and this may permit inward leakage of contaminants; whereas the positive-pressure type always maintains a positive pressure in the respiratory-inlet cover in and is less apt to permit inward leakage of contaminants.

#### (2) Open-circuit SCBA.

The demand type produces a negative pressure in the respiratory-inlet covering during inhalation, whereas the pressure-demand type maintains a positive pressure in the respiratory-inlet covering during inhalation and is less apt to permit inward leakage of contaminants.

### Supplied-Air Respirators

The respirable air supply is not limited to the quantity the individual can carry, and the devices are lightweight and simple.

Limitations: Limited to use in atmospheres from which the wearer can escape unharmed without the aid of the respirator.

The wearer is restricted in movement by the hose and must return to a respirable atmosphere by retracing his route of entry. The hose is subject to being severed or pinched off.

#### (1) Hose mask.

The hose inlet or blower must be located and secured in a respirable atmosphere.

##### (a) Hose mask with blower.

If the blower fails, the unit still provides protection, although a negative pressure exists in the facepiece during inhalation.

##### (b) Hose mask without blower

Maximum hose length may restrict application of device.

#### (2) Air-line respirator (continuous flow, demand, and pressure-demand types).

The demand type produces a negative pressure in the facepiece on inhalation, whereas continuous-flow and pressure-demand types maintain a positive pressure in

the respiratory-inlet covering and are less apt to permit inward leakage of contaminants.

Air-line suits may protect against atmospheres that irritate the skin or that may be absorbed through the unbroken skin.

Limitations: Air-line respirators provide no protection if the air supply fails. Some contaminants, such as tritium, may penetrate the material of an air-line suit and limit its effectiveness.

Other contaminants, such as fluorine, may react chemically with the material of an air-line suit and damage it.

### Combination Airline Respirators with Auxiliary SC Air Supply

The auxiliary self-contained air supply on this type of device allows the wearer to escape from a dangerous atmosphere. This device with auxiliary self-contained air supply is approved for escape and may be used for entry when it contains at least a 15-minute auxiliary self-contained air supply. (See Table V).

TABLE IV--PART 2

#### CAPABILITIES AND LIMITATIONS OF RESPIRATORS

#### *Air-Purifying Respirators*

General limitations: Air-purifying respirators do not protect against oxygen-deficient atmospheres not against skin irritations by, or sorption through the skin of, airborne contaminants.

The maximum contaminant concentration against which an air-purifying respirator will protect is determined by the design efficiency and capacity of the cartridge, canister, or filter and the facepiece-to-face seal on the user. For gases and vapors, the maximum concentration for which the air-purifying element is designed is specified by the manufacturer or is listed on labels of cartridges and canisters.

Nonpowered air-purifying respirators will not provide the maximum design protection specified unless the facepiece or mouthpiece/nose clamp is carefully fitted to the wearer's face to prevent inward leakage (see WAC 296-62-07115(4)). The time period over which protection is provided is dependent on canister, cartridge, or filter type; concentration of contaminant; humidity levels in the ambient atmosphere; and the wearer's respiratory rate.

The proper type of canister, cartridge, or filter must be selected for the particular atmosphere and conditions. Nonpowered air-purifying respirators may cause discomfort due to a noticeable resistance to inhalation. This problem is minimized in powered respirators. Respirator facepieces present special problems to individuals required to wear prescription lenses. These devices do have the advantage of being small, light, and simple in operation.

Use of air-purifying respirators in atmospheres immediately dangerous to life or health is limited to specific devices under specified conditions (see Table V).

#### Vapor and Gas-Removing Respirators

Limitations: No protection is provided against particulate contaminants. A rise in canister or cartridge temperature indicates that a gas or vapor is being removed from the inspired air.

An uncomfortably high temperature indicates a high concentration of gas or vapor and requires an immediate return to fresh air.

Use shall be avoided in atmospheres where the contaminant(s) lacks sufficient warning properties (that is: Odor, taste, or irritation at a concentration in air at or above the permissible exposure limit). Vapor-and-gas-removing respirators are not approved for contaminants that lack adequate warning properties.

Not for use in atmospheres immediately dangerous to life or health unless the device is powered-type respirator with escape provisions (see Table V).

(1) Full facepiece respirator.  
Provides protection against eye irritation in addition to respiratory protection.

(2) Quarter-mask and half-mask facepiece respirator.  
A fabric covering (facelet) available from some manufacturers shall not be used.

(3) Mouthpiece Respirator.  
Shall be used only for escape applications. Mouth breathing prevents detection of contaminant by odor. Nose clamp must be securely in place to prevent nasal breathing.

A small lightweight device that can be donned quickly.

#### Particulate-Removing Respirators

Limitations: Protection against nonvolatile particles only. No protection against gases and vapors.

Not for use in atmospheres immediately dangerous to life or health unless the device is a powered-type respirator with escape provisions (see Table V).

(1) Full facepiece respirator. Provides protection against eye irritation in addition to respiratory protection.

(2) Quarter-mask and half-mask facepiece respirator. A fabric covering (face-let) available from some manufacturers shall not be used unless approved for use with respirator.

(3) Mouthpiece respirator. Shall be used only for escape applications. Mouth breathing prevents detection of contaminant by odor. Nose clamp must be securely in place to prevent nasal breathing.

A small, lightweight device that can be donned quickly.

#### Combination Particulate and Vapor and Gas-Removing Respirators

The advantages and disadvantages of the component sections of the combination respirator as described above apply.

#### Combination Atmosphere-Supplying and Air-Purifying Respirators

The advantages and disadvantages expressed above, of the mode of operation being used will govern. The mode with the greater limitations (air-purifying mode) will mainly determine the overall capabilities and limitations of the respirator, since the wearer may for some reason fail to change the mode of operation even though conditions would require such a change.

TABLE V  
RESPIRATOR PROTECTION FACTORS<sup>a</sup>

[CODIFICATION NOTE: The graphic presentation of this table has been varied slightly in order that it would fall within the printing specifications for the Washington Administrative Code. In the following table, the original table had columns relating to (1) "type of respirator" which is now "Part 1," and (2) "respirator protection factor" which is now "Part 2." These columns were positioned side by side. In the new WAC format these are split up into two separate tables.]

TABLE V--PART 1  
RESPIRATOR PROTECTION FACTORS<sup>a</sup>

Type of Respirator	Permitted for Use in Oxygen-Deficient Atmosphere	Permitted for Use in Immediately-Dangerous Life-or-Health Atmosphere <sup>f</sup>

100	As measured on each person, but limited to the use of the respirator in concentrations of contaminants below the immediately-dangerous-to-life-or-health (IDLH) values, except when the respirator is used for mine rescue and mine recovery operations.
N/A No tests are required due to positive-pressure operation of respirator. The maximum protection factor is 10,000 plus <sup>h</sup> .	N/A

TABLE V--PART 2

RESPIRATOR PROTECTION FACTORS<sup>a</sup>

## Qualitative Test

## Quantitative Test

N/A means not applicable since a respirator-fitting test is not carried out.

<sup>a</sup> A respirator protection factor is a measure of the degree of protection provided by a respirator to a respirator wearer. Multiplying the permissible time-weighted average concentration or the permissible ceiling concentration, whichever is applicable, for a toxic substance, or the maximum permissible airborne concentration for a radionuclide, by a protection factor assigned to a respirator gives the maximum concentration of the hazardous substance for which the respirator can be used. Limitations of filters, cartridges, and canisters used in air-purifying respirators shall be considered in determining protection factors.

<sup>b</sup> When the respirator is used for protection against airborne particulate matter having a permissible time-weighted average concentration less than 0.05 milligram particulate matter per cubic meter of air or less than 2 million particles per cubic foot of air, or for protection against airborne radionuclide particulate matter, the respirator shall be equipped with a high-efficiency filter(s).

<sup>c</sup> If the air contaminant causes eye irritation, the wearer of a respirator equipped with a quarter-mask or half-mask facepiece or mouthpiece and nose clamp shall be permitted to use a protective goggle or to use a respirator equipped with a full facepiece.

<sup>d</sup> If the powered air-purifying respirator is equipped with a facepiece, the escape provision means that the wearer is able to breathe through the filter, cartridge, or canister and through the pump. If the powered air-purifying respirator is equipped with a helmet, hood, or suit, the escape provision shall be an auxiliary self-contained supply of respirable air.

<sup>e</sup> The escape provision shall be an auxiliary self-contained supply of respirable air.

<sup>f</sup> For definition of "oxygen deficiency - not immediately dangerous to life or health" see WAC 296-62-07105.

<sup>g</sup> For definition of "oxygen deficiency - immediately dangerous to life or health" see WAC 296-62-07105.

<sup>h</sup> The protection factor measurement exceeds the limit of sensitivity of the test apparatus. Therefore, the respirator has been classified for use in atmospheres having unknown concentrations of contaminants.

<sup>i</sup> The service life of a vapor-or-gas-removing cartridge or canister depends on the specific vapor or gas, the concentration of the vapor or gas in air, the temperature and humidity of the air, the type and quantity of the sorbent in the cartridge or canister, and the activity of the respirator wearer. Cartridges and canisters may provide only very short service lives for certain vapors and gases. Vapor/gas service life testing is recommended to ensure that cartridges and canisters provide adequate service lives. Reference should be made to published reports which give vapor/gas life data for cartridges and canisters.

<sup>j</sup> Vapor-and gas-removing respirators are not approved for contaminants that lack adequate warning properties of odor, irritation, or taste at concentrations in air at or above the permissible exposure limits.

NOTE: Respirator protection factors for air-purifying-type respirators equipped with a mouthpiece/nose clamp form of respiratory-inlet covering are not given, since such respirators are approved only for escape purposes.

[Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-16-016 (Order 81-19), § 296-62-07113, filed 7/27/81.]

**WAC 296-62-07115 Use of respirators.** (1) Standard operating procedures. Written standard operating procedures shall cover a complete respirator program and shall include information necessary for the proper use of respirators, including training of respirator wearers, respirator sealing tests, issuance of respirators, inspection of respirators prior to use, monitoring respirator use, monitoring respiratory hazard, and planning for routine, nonroutine, emergency, and rescue uses of respirators.

(a) The written standard operating procedures shall include plans necessary to ensure the safe routine use and nonroutine use of respirators. Emergency and rescue uses of respirators shall be anticipated, and the written standard operating procedures shall include plans necessary to ensure the safe emergency and rescue uses of respirators. Persons who wear respirators routinely, who wear respirators nonroutinely, and who may be required to wear respirators for emergency and rescue work shall be given adequate information concerning plans covering these respirator uses to ensure the safe use of respirators.

(b) Standard operating procedures for emergency and rescue use of respirators. It is recognized that it is not possible to foresee every emergency and rescue use of respirators for every kind of operation. Nevertheless, a wide variety of possible conditions requiring the emergency or rescue use of respirators can be envisioned and an adequate emergency and rescue respirator-response capability can be achieved through a serious effort to anticipate the worst possible consequences of particular malfunctions or mishaps.

The written standard operating procedures governing the emergency and rescue uses of respirators shall be developed in the following manner:

(i) An analysis of the emergency and rescue uses of respirators that may occur in each operation shall be made by careful consideration of materials, equipment, processes, and personnel involved. Such an analysis shall be reviewed by the person who is thoroughly familiar with the particular operation. Consideration shall be given to past occurrences requiring emergency or rescue uses of respirators as well as conditions which resulted in

such respirator applications. The possible consequences of equipment or power failures, uncontrolled chemical reactions, fire, explosion, or human error shall be given consideration. All potential hazards which may result in emergency or rescue use of respirators shall be listed.

(ii) Based upon the analysis, appropriate types of respirators shall be selected, an adequate number shall be provided for each area where they may be needed for emergency or rescue use, and these respirators shall be maintained and stored so that they are readily accessible and operational when needed.

(iii) In areas where the wearer, with failure of the respirator, could be overcome by a toxic or oxygen-deficient atmosphere, at least one additional man shall be present. Communications (visual, voice, or signal line) shall be maintained between both or all individuals present. Planning shall be such that one individual will be unaffected by any likely incident and have the proper rescue equipment to be able to assist the other(s) in case of emergency.

(iv) When self-contained breathing apparatus or air-line respirators with an escape provision are used in atmospheres immediately dangerous to life or health, standby workers must be present at the nearest fresh air base with suitable rescue equipment.

(v) Persons using air line respirators in atmospheres immediately hazardous to life or health shall be equipped with safety harnesses and safety lines for lifting or removing persons from hazardous atmospheres or other and equivalent provisions for the rescue of persons from hazardous atmospheres shall be used. A standby worker or workers with suitable self-contained breathing apparatus shall be at the nearest fresh air base for emergency rescue.

(2) Training. The supervisor, the person issuing respirators, and the respirator wearers shall be given adequate training by a qualified person(s) to ensure the proper use of respirators. Written records shall be kept of the names of the persons trained and the dates when training occurred.

(a) Training of supervisor. A supervisor – that is, a person who has the responsibility of overseeing the work activities of one or more persons who must wear respirators – shall be given adequate training to ensure the proper use of respirators.

(b) Training of person issuing respirators. A person assigned the task of issuing respirators to persons who must wear respirators for protection against harmful atmospheres shall be given adequate training to ensure that the correct respirator is issued for each application in accordance with written standard operating procedures.

(c) Training of respirator wearer. To ensure the proper and safe use of a respirator, the minimum training of each respirator wearer shall include the following elements:

(i) The reasons for the need of respiratory protection.

(ii) The nature, extent, and effects of respiratory hazards to which the person may be exposed.

(iii) An explanation of why engineering controls are not being applied or are not adequate and of what effort

is being made to reduce or eliminate the need for respirators.

(iv) An explanation of why a particular type of respirator has been selected for a specific respiratory hazard.

(v) An explanation of the operation, and the capabilities and limitations, of the respirator selected.

(vi) Instruction in inspecting, donning, checking the fit of, and wearing the respirator.

(vii) An opportunity for each respirator wearer to handle the respirator, learn how to don and wear it properly, check its seals, wear it in a safe atmosphere, and wear it in a test atmosphere.

(viii) An explanation of how maintenance and storage of the respirator is carried out.

(ix) Instructions in how to recognize and cope with emergency situations.

(x) Instructions as needed for special respirator use.

(xi) Regulations concerning respirator use.

(A) Wearing instructions and training. Wearing instructions and training, including practice demonstrations, shall be given to each respirator wearer and shall cover:

(aa) Donning, wearing, and removing the respirator.

(bb) Adjusting the respirator so that its respiratory-inlet covering is properly fitted on the wearer and so that the respirator causes a minimum of discomfort to the wearer.

(cc) Allowing the respirator wearer to wear the respirator in a safe atmosphere for an adequate period of time to ensure that the wearer is familiar with the operational characteristics of the respirator.

(dd) Providing the respirator wearer an opportunity to wear the respirator in a test atmosphere to demonstrate that the respirator provides protection to the wearer. A test atmosphere is any atmosphere in which the wearer can carry out activities simulating work movements and respirator leakage or respirator malfunction can be detected by the wearer.

(B) Retraining. Each respirator wearer shall be retrained as necessary to assure effective respirator use. Refresher training shall be given at least annually and shall include the provisions of WAC 296-62-07115 (2)(c)(vii) through (2)(c)(xi)(A)(cc).

(3) Respirator sealing problems. Respirators shall not be worn when conditions prevent a seal of the respirator to the wearer.

(a) A person who has hair (stubble, moustache, sideburns, beard, low hairline, bangs) which passes between the face and the sealing surface of the facepiece of the respirator shall not be permitted to wear such a respirator.

(b) A person who has hair (moustache, beard) which interferes with the function of a respirator valve(s) shall not be permitted to wear the respirator.

(c) A spectacle which has temple bars or straps which pass between the sealing surface of a respirator full facepiece and the wearer's face shall not be used.

(d) A head covering which passes between the sealing surface of a respirator facepiece and the wearer's face shall not be used.

(e) The wearing of a spectacle, a goggle, a faceshield, a welding helmet, or other eye and face protective device which interferes with the seal of a respirator to the wearer shall not be allowed.

(f) If scars, hollow temples, excessively protruding cheekbones, deep creases in facial skin, the absence of teeth or dentures, or unusual facial configurations prevent a seal of a respirator facepiece to a wearer's face, the person shall not be permitted to wear the respirator.

(g) If missing teeth or dentures prevent a seal of a respirator mouthpiece in a person's mouth, the person shall not be allowed to wear a respirator equipped with a mouthpiece.

(h) If a person has a nose of a shape or size which prevents the closing of the nose by the nose clamp of a mouthpiece/nose-clamp type of respirator, the person shall not be permitted to wear this type of respirator.

(4) Respirator sealing tests. To ensure proper protection, the wearer of a respirator equipped with a facepiece shall check the seal of the facepiece prior to each entry into a hazardous atmosphere. This may be done using procedures recommended by respirator manufacturers or by approved field tests.

(5) Issuance of respirators. The proper respirator shall be specified for each application and shall be listed in the written standard operating procedures. If a respirator is marked for the worker to whom it is assigned or for other identification purposes, the markings shall not affect the respirator performance in any way.

(6) Respirator inspection prior to use. Each person issued a respirator for routine, nonroutine, emergency, or rescue use shall inspect the respirator prior to its use to ensure that it is in good operating condition.

(7) Monitoring respirator use. The use of respirators on a routine or nonroutine basis shall be monitored to ensure that the correct respirators are being used, that the respirators are being worn properly and that the respirators being used are in good working condition.

(8) Evaluation of respiratory hazard during use. The level of the respiratory hazard in the workplace to which a person wearing a respirator is exposed shall be evaluated periodically.

(9) Leaving a hazardous area. A respirator wearer shall be permitted to leave the hazardous area for any respirator-related cause. Reasons which may cause a respirator wearer to leave a hazardous area include, but are not limited to, the following:

(a) Failure of the respirator to provide adequate protection.

(b) Malfunction of the respirator.

(c) Detection of leakage of air contaminant into the respirator.

(d) Increase in resistance of respirator to breathing.

(e) Severe discomfort in wearing the respirator.

(f) Illness of respirator wearer, including: Sensation of dizziness, nausea, weakness, breathing difficulty, coughing, sneezing, vomiting, fever, and chills. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-07115, filed 11/30/83; 82-08-026 (Order 82-10), § 296-62-07115, filed 3/30/82. Statutory Authority: RCW 49.17.040, 49.17.050 and

49.17.240. 81-16-016 (Order 81-19), § 296-62-07115, filed 7/27/81.]

#### WAC 296-62-07117 Maintenance of respirators.

(1) General. A program for the maintenance of respirators shall be adjusted to the type of plant, working conditions, hazards involved, and shall include the following:

(a) Cleaning and sanitizing.

(b) Inspection for defects.

(c) Repair.

(d) Storage.

Each respirator shall be properly maintained to retain its original shape and effectiveness.

(2) Cleaning and sanitizing. Each respirator shall be cleaned and sanitized to ensure that the respirator wearer is provided with a clean and sanitized respirator at all times. A respirator issued for other than continuous personal use by a particular worker, such as with routine, nonroutine, emergency, or rescue use, shall be cleaned and sanitized after each use.

(3) Inspection. Each respirator shall be inspected routinely before and after use. A respirator shall be inspected by the user immediately prior to each use to ensure that it is in proper working condition.

(a) After cleaning and sanitizing, each respirator shall be inspected to determine if it is in proper working condition, if it needs replacement of parts or repairs, or if it should be discarded. Each respirator stored for emergency or rescue use shall be inspected at least monthly. Respirator inspection shall include a check for tightness of connections; for the condition of the respiratory-inlet covering, head harness, valves, connecting tubes, harness assemblies, filters, cartridges, canisters, end-of-service-life indicator, and shelf life date(s); and for the proper function of regulators, alarms, and other warning systems.

(b) Each rubber or other elastomeric part shall be inspected for pliability and signs of deterioration. Each air and oxygen cylinder shall be inspected to ensure that it is fully charged according to the manufacturer's instructions.

(c) A record of inspection dates, findings, and remedial actions shall be kept for each respirator maintained for emergency or rescue use.

(4) Part replacement and repair. Replacement of parts or repairs shall be done only by persons trained in proper respirator assembly and correction of possible respirator malfunctions and defects. Replacement parts shall be only those designed for the specific respirator being repaired. Reducing or admission valves, regulators, and alarms shall be returned to the manufacturer or to a trained technician for repair or adjustment. Instrumentation for valve, regulator, and alarm adjustments and tests must be approved by the valve, regulator, or alarm manufacturer.

(5) Storage. Respirators shall be stored in a manner that will protect them against dust, sunlight, heat, extreme cold, excessive moisture, or damaging chemicals. Respirators shall be stored to prevent distortion of rubber or other elastomeric parts. Respirators shall not be stored in such places as lockers and tool boxes unless

they are protected from contamination, distortion, and damage. Emergency and rescue-use respirators that are placed in work areas shall be quickly accessible at all times, and the storage cabinet or container in which they are stored shall be clearly marked. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-16-016 (Order 81-19), § 296-62-07117, filed 7/27/81.]

**WAC 296-62-07119 Identification of air-purifying respirator canisters.** (1) The primary means of identifying a gas mask canister shall be by means of properly worded labels. The secondary means of identifying a gas mask canister shall be by a color code.

(2) Employers or their representative who issue or use gas masks falling within the scope of this section shall see that all gas mask canisters purchased or used by them are properly labeled and colored in accordance with these requirements before they are placed in service and that the labels and colors are properly maintained at all times thereafter until the canisters have completely served their purpose.

(3) On each canister shall appear in bold letters the following:

(a) Canister for

\_\_\_\_\_  
 (Name for atmospheric contaminant)  
 or  
 Type N Gas Mask Canister

(b) In addition, essentially the following wording shall appear beneath the appropriate phrase on the canister label: "For respiratory protection in atmospheres containing not more than \_\_\_\_\_ percent by volume of \_\_\_\_\_"

\_\_\_\_\_  
 (Name of atmospheric contaminant)

(c) All of the markings specified above should be placed on the most conspicuous surface or surfaces of the canister.

(4) Canisters having a special high-efficiency filter for protection against radionuclides and other highly toxic particulates shall be labeled with a statement of the type and degree of protection afforded by the filter. The label shall be affixed to the neck end of, or to the gray stripe which is around and near the top of, the canister. The degree of protection shall be marked as the percent of penetration of the canister by a 0.3 - micron-diameter dioctyl phthalate (DOP) smoke at a flow rate of 85 liters per minute.

(5) Each canister shall have a label warning that gas masks should be used only in atmospheres containing sufficient oxygen to support life (at least 16 percent by volume), since gas mask canisters are only designed to neutralize or remove contaminants from the air.

(6) Each gas mask canister shall be painted a distinctive color or combination of colors indicated in Table I. All colors used shall be such that they are clearly identifiable by the user and clearly distinguishable from one another. The color coating used shall offer a high degree of resistance to chipping, scaling, peeling, blistering, fading, and the effects of the ordinary atmospheres to

which they may be exposed under normal conditions of storage and use. Appropriately colored pressure sensitive tape may be used for the stripes.

TABLE I

Atmospheric Contaminants to be

Protected Against      Colors Assigned\*

Acid gases . . . . .	White.
Hydrocyanic acid gas . . . . .	White with 1/2 - inch green stripe completely around the canister near the bottom.
Chlorine gas . . . . .	White with 1/2 - inch yellow stripe completely around the canister near the bottom.
Organic vapors . . . . .	Black.
Ammonia gas . . . . .	Green.
Acid gases and ammonia gas . . . . .	Green with 1/2 - inch white stripe completely around the canister near the bottom.
Carbon monoxide . . . . .	Blue.
Acid gases and organic vapors . . . . .	Yellow.
Hydrocyanic acid gas and chloropicrin vapor . . . . .	Yellow with 1/2 - inch blue stripe completely around the canister near the bottom.
Acid gases, organic vapors, and ammonia gases . . . . .	Brown.
Radioactive materials, excepting tritium and noble gases . . . . .	Purple (Magenta).
Particulates (dusts, fumes, mists, fogs, or smokes) in combination with any of the above cases or vapors . . . . .	Canister color for contaminant, as designated above, with 1/2 - inch gray stripe completely around the canister near the top.

All of the above atmospheric

TABLE I

## Atmospheric Contaminants to be

Protected Against	Colors Assigned*
contaminants . . . . .	Red with 1/2 - inch gray stripe com- pletely around the canister near the top.

\*Gray shall not be assigned as the main color for a canister designed to remove acids or vapors.

NOTE: Orange shall be used as a complete body, or stripe color to represent gases not included in this table. The user will need to refer to the canister label to determine the degree of protection the canister will afford.

[Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240, 81-16-016 (Order 81-19), § 296-62-07119, filed 7/27/81.]

**WAC 296-62-07121 Effective date.** This standard shall become effective thirty days after filing with the code reviser. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240, 81-16-016 (Order 81-19), § 296-62-07121, filed 7/27/81.]

**WAC 296-62-073 Carcinogens—Scope and application.** All sections of this chapter which include WAC 296-62-073 in the section number apply to the manufacturing, processing, repackaging, releasing, handling or storing of carcinogens. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW, 80-17-014 (Order 80-20), § 296-62-073, filed 11/13/80; Order 76-6, § 296-62-073, filed 3/1/76; Order 74-35, § 296-62-073, filed 9/20/74.]

**WAC 296-62-07302 List of carcinogens.** (1) The following substances are deemed to be carcinogens for the purposes of WAC 296-62-073 through 296-62-07316.

(2) Any reference to carcinogens in WAC 296-62-07304 through 296-62-07316 shall mean only those carcinogens listed in WAC 296-62-07302.

(a) 4-Nitrobiphenyl – Chemical Abstracts Registry Number 92933.

(b) Alpha-Naphthylamine – Chemical Abstracts Registry Number 134327.

(c) 4,4' Methylene bis – Chemical Abstract Service Registry Number 101144.

(d) Methyl chloromethyl ether – Chemical Abstracts Service Registry Number 107302.

(e) 3,3'-Dichlorobenzidine (and its salts) – Chemical Abstracts Service Registry Number 91941.

(f) Bis-Chloromethyl ether – Chemical Abstracts Service Registry Number 542881.

(g) Beta-Naphthylamine – Chemical Abstracts Service Registry Number 91598.

(h) Benzidine – Chemical Abstracts Service Registry Number 92875.

(i) 4-Aminodiphenyl – Chemical Abstracts Service Registry Number 92671.

(j) Ethyleneimine – Chemical Abstracts Service Registry Number 151564.

(k) Beta-Propiolactone – Chemical Abstracts Service Registry Number 57578.

(l) 2-Acetylaminofluorene – Chemical Abstracts Service Registry Number 53963.

(m) 4-Dimethylaminoazobenzene – Chemical Abstract Service Registry Number 60117.

(n) N-Nitrosodimethylamine – Chemical Abstracts Service Registry Number 62759. [Statutory Authority: RCW 49.17.040 and 49.17.050, 82-13-045 (Order 82-22), § 296-62-07302, filed 6/11/82; 81-07-048 (Order 81-4), § 296-62-07302, filed 3/17/81. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW, 80-17-014 (Order 80-20), § 296-62-07302, filed 11/13/80.]

**WAC 296-62-07304 Definitions.** (1) The definitions set forth in this section apply throughout WAC 296-62-073 through 296-62-07316.

(2) This section shall not apply to solid or liquid mixtures containing less than 0.1 percent by weight or volume of the carcinogens listed in WAC 296-62-07302.

(a) Absolute filter – is one capable of retaining 99.97 percent of a mono disperse aerosol of 0.3 micron size particles.

(b) Authorized employee – an employee whose duties require him to be in the regulated area and who has been specifically assigned to those duties by the employer.

(c) Clean change room – a room where employees put on clean clothing and/or protective equipment in an environment free of carcinogens listed in WAC 296-62-07302. The clean change room shall be contiguous to and have an entry from a shower room, when the shower room facilities are otherwise required in this section.

(d) Closed system – an operation involving carcinogens listed in WAC 296-62-07302 where containment prevents the release of carcinogens into regulated areas, or the external environment.

(e) Decontamination – the inactivation of a carcinogen listed in WAC 296-62-07302 or its safe disposal.

(f) Disposal – the safe removal of a carcinogen listed in WAC 296-62-07302 from the work environment.

(g) Emergency – an unforeseen circumstance or set of circumstances resulting in the release of a carcinogen which may result in exposure to or contact with any carcinogen listed in WAC 296-62-07302.

(h) External environment – any environment external to regulated and nonregulated areas.

(i) Isolated system – a fully enclosed structure other than the vessel of containment of a listed carcinogen which is impervious to the passage of listed carcinogens and which would prevent the entry of carcinogens into regulated areas, nonregulated areas, or the external environment, should leakage or spillage from the vessel of containment occur.

(j) Laboratory-type hood – a device enclosed on three sides and the top and bottom, designed and maintained so as to draw air inward at an average linear face velocity of 150 feet per minute with a minimum of 125 feet per minute, designed, constructed and maintained such that an operation involving a listed carcinogen within the hood does not require the insertion of any portion of any employees' body other than his hands and arms.

(k) Nonregulated area – any area under the control of the employer where entry and exit is neither restricted nor controlled.

(l) Open-vessel system – an operation involving listed carcinogens in an open vessel, which is not in an isolated system, a laboratory-type hood, nor in any other system affording equivalent protection against the entry of carcinogens into regulated areas, nonregulated areas, or the external environment.

(m) Protective clothing – clothing designed to protect an employee against contact with or exposure to listed carcinogens.

(n) Regulated area – an area where entry and exit is restricted and controlled. [Statutory Authority: RCW 49.17.040 and 49.17.050, 81-07-048 (Order 81-4), § 296-62-07304, filed 3/17/81. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW, 80-17-014 (Order 80-20), § 296-62-07304, filed 11/13/80.]

**WAC 296-62-07306 Requirements for areas containing carcinogens listed in WAC 296-62-07302.** (1) A regulated area shall be established by an employer where listed carcinogens are manufactured, processed, used, repackaged, released, handled or stored.

(2) All such areas shall be controlled in accordance with the requirements for the following category or categories describing the operation involved:

(a) Isolated systems. Employees working with carcinogens within an isolated system such as a "glove box" shall wash their hands and arms upon completion of the assigned task and before engaging in other activities not associated with the isolated system.

(b) Closed system operation. Within regulated areas where carcinogens are stored in sealed containers, or contained in a closed system including piping systems with any sample ports or openings closed while carcinogens are contained within:

(i) Access shall be restricted to authorized employees only;

(ii) Employees shall be required to wash hands, forearms, face and neck upon each exit from the regulated areas, close to the point of exit and before engaging in other activities.

(c) Open vessel system operations. Open vessel system operations as defined in WAC 296-62-07304 (2)(l) are prohibited.

(d) Transfer from a closed system. Charging or discharging point operations, or otherwise opening a closed system. In operations involving "laboratory-type hoods," or in locations where a carcinogen is contained in an otherwise "closed system," but is transferred, charged,

or discharged into other normally closed containers, the provisions of this section shall apply.

(i) Access shall be restricted to authorized employees only;

(ii) Each operation shall be provided with continuous local exhaust ventilation so that air movement is always from ordinary work areas to the operation. Exhaust air shall not be discharged to regulated areas, nonregulated areas or the external environment unless decontaminated. Clean makeup air shall be introduced in sufficient volume to maintain the correct operation of the local exhaust system.

(iii) Employees shall be provided with, and required to wear, clean, full body protective clothing (smocks, coveralls, or long-sleeved shirt and pants), shoe covers and gloves prior to entering the regulated area.

(iv) Employees engaged in a carcinogen handling operation shall be provided with and required to wear and use a half-face, filter-type respirator for dusts, mists, and fumes, in accordance with chapter 296-62 WAC, of the general safety and health standards. A respirator affording higher levels of protection may be substituted.

(v) Prior to each exit from a regulated area, employees shall be required to remove and leave protective clothing and equipment at the point of exit and at the last exit of the day, to place used clothing and equipment in impervious containers at the point of exit for purposes of decontamination or disposal. The contents of such impervious containers shall be identified, as required under WAC 296-62-07310 (2), (3) and (4).

(vi) Employees shall be required to wash hands, forearms, face and neck on each exit from the regulated area, close to the point of exit, and before engaging in other activities.

(vii) Employees shall be required to shower after the last exit of the day.

(viii) Drinking fountains are prohibited in the regulated area.

(e) Maintenance and decontamination activities. In clean up of leaks or spills, maintenance or repair operations on contaminated systems or equipment, or any operations involving work in an area where direct contact with carcinogens could result, each authorized employee entering the area shall:

(i) Be provided with and required to wear, clean, impervious garments, including gloves, boots and continuous-air supplied hood in accordance with chapter 296-24 WAC, the general safety and health standards;

(ii) Be decontaminated before removing the protective garments and hood;

(iii) Be required to shower upon removing the protective garments and hood.

(f) Laboratory activities. The requirements of this subdivision shall apply to research and quality control activities involving the use of carcinogens listed in WAC 296-62-07302.

(i) Mechanical pipetting aids shall be used for all pipetting procedures.

(ii) Experiments, procedures and equipment which could produce aerosols shall be confined to laboratory-type hoods or glove boxes.

(iii) Surfaces on which carcinogens are handled shall be protected from contamination.

(iv) Contaminated wastes and animal carcasses shall be collected in impervious containers which are closed and decontaminated prior to removal from the work area. Such wastes and carcasses shall be incinerated in such a manner that no carcinogenic products are released.

(v) All other forms of listed carcinogens shall be inactivated prior to disposal.

(vi) Laboratory vacuum systems shall be protected with high efficiency scrubbers or with disposable absolute filters.

(vii) Employees engaged in animal support activities shall be:

(A) Provided with, and required to wear, a complete protective clothing change, clean each day, including coveralls or pants and shirt, foot covers, head covers, gloves, and appropriate respiratory protective equipment or devices; and

(B) Prior to each exit from a regulated area, employees shall be required to remove and leave protective clothing and equipment at the point of exit and at the last exit of the day, to place used clothing and equipment in impervious containers at the point of exit for purposes of decontamination or disposal. The contents of such impervious containers shall be identified as required under WAC 296-62-07310 (2), (3) and (4).

(C) Required to wash hands, forearms, face and neck upon each exit from the regulated area close to the point of exit, and before engaging in other activities; and

(D) Required to shower after the last exit of the day.

(viii) Employees, other than those engaged only in animal support activities, each day shall be:

(A) Provided with and required to wear a clean change of appropriate laboratory clothing, such as a solid front gown, surgical scrub suit, or fully buttoned laboratory coat.

(B) Prior to each exit from a regulated area, employees shall be required to remove and leave protective clothing and equipment at the point of exit and at the last exit of the day, to place used clothing and equipment in impervious containers at the point of exit for purposes of decontamination or disposal. The contents of such impervious containers shall be identified as required under WAC 296-62-07310 (2), (3) and (4).

(C) Required to wash hands, forearms, face and neck upon each exit from the regulated area close to the point of exit, and before engaging in other activities.

(ix) Air pressure in laboratory areas and animal rooms where carcinogens are handled and bioassay studies are performed shall be negative in relation to the pressure in surrounding areas. Exhaust air shall not be discharged to regulated areas, nonregulated areas or the external environment unless decontaminated.

(x) There shall be no connection between regulated areas and any other areas through the ventilation system.

(xi) A current inventory of the carcinogens shall be maintained.

(xii) Ventilated apparatus such as laboratory-type hoods, shall be tested at least semi-annually or immediately after ventilation modification or maintenance operations, by personnel fully qualified to certify correct containment and operation. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-16-015 (Order 81-20), § 296-62-07306, filed 7/27/81. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-62-07306, filed 11/13/80.]

**WAC 296-62-07308 General regulated area requirements.** (1) Emergencies. In an emergency, immediate measures including, but not limited to, the requirements of (a), (b), (c), (d) and (e) of this subsection shall be implemented.

(a) The potentially affected area shall be evacuated as soon as the emergency has been determined.

(b) Hazardous conditions created by the emergency shall be eliminated and the potentially affected area shall be decontaminated prior to the resumption of normal operations.

(c) Special medical surveillance by a physician shall be instituted within twenty-four hours for employees present in the potentially affected area at the time of the emergency. A report of the medical surveillance and any treatment shall be included in the incident report, in accordance with WAC 296-62-07312(2).

(d) Where an employee has a known contact with a listed carcinogen, such employee shall be required to shower as soon as possible, unless contraindicated by physical injuries.

(e) An incident report on the emergency shall be reported as provided in WAC 296-62-07312(2).

(2) Hygiene facilities and practices.

(a) Storage or consumption of food, storage or use of containers of beverages, storage or application of cosmetics, smoking, storage of smoking materials, tobacco products or other products for chewing, or the chewing of such products, are prohibited in regulated areas.

(b) Where employees are required by this section to wash, washing facilities shall be provided in accordance with WAC 296-24-12009, of the general safety and health standards.

(c) Where employees are required by this section to shower, shower facilities shall be provided.

(i) One shower shall be provided for each ten employees of each sex, or numerical fraction thereof, who are required to shower during the same shift.

(ii) Body soap or other appropriate cleansing agents convenient to the showers shall be provided as specified in WAC 296-24-12009, of the general safety and health standards.

(iii) Showers shall be provided with hot and cold water feeding a common discharge line.

(iv) Employees who use showers shall be provided with individual clean towels.

(d) Where employees wear protective clothing and equipment, clean change rooms shall be provided and shall be equipped with storage facilities for street clothes and separate storage facilities for the protective clothing

for the number of such employees required to change clothes.

(e) Where toilets are in regulated areas, such toilets shall be in a separate room.

(3) Contamination control.

(a) Regulated areas, except for outdoor systems, shall be maintained under pressure negative with respect to nonregulated areas. Local exhaust ventilation may be used to satisfy this requirement. Clean makeup air in equal volume shall replace air removed.

(b) Any equipment, material, or other item taken into or removed from a regulated area shall be done so in a manner that does not cause contamination in nonregulated areas or the external environment.

(c) Decontamination procedures shall be established and implemented to remove carcinogens from the surfaces of materials, equipment and the decontamination facility.

(d) Dry sweeping and dry mopping are prohibited. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-24-013 (Order 83-34), § 296-62-07308, filed 11/30/83. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-62-07308, filed 11/13/80.]

**WAC 296-62-07310 Signs, information and training.** (1) Signs. (a) Entrances to regulated areas shall be posted with signs bearing the legend:

CANCER-SUSPECT AGENT

AUTHORIZED PERSONNEL ONLY

(b) Entrances to regulated areas containing operations covered in WAC 296-62-07306 (2)(e) shall be posted with signs bearing the legend:

CANCER-SUSPECT AGENT EXPOSED IN THIS AREA

IMPERVIOUS SUIT INCLUDING GLOVES,  
BOOTS, AND AIR-SUPPLIED HOOD  
REQUIRED AT ALL TIMES

AUTHORIZED PERSONNEL ONLY

(c) Appropriate signs and instructions shall be posted at the entrance to, and exit from, regulated areas, informing employees of the procedures that must be followed in entering and leaving a regulated area.

(2) Container contents, identification. (a) Containers of carcinogens named in WAC 296-62-07302 and containers required in WAC 296-62-07306 (2)(d)(v) and 296-62-07306 (2)(f)(vii)(B) and 296-62-07306 (2)(f)(viii)(B) which are accessible only to, and handled only by authorized employees, or by other employees training in accordance with WAC 296-62-07310(5), may have contents identification limited to a generic or proprietary name, or other proprietary identification of the carcinogen and percent.

(b) Containers of carcinogens and containers required under WAC 296-62-07306 (2)(d)(v) and 296-62-07306 (2)(f)(vii)(B) and 296-62-07306 (2)(f)(viii)(B) which are accessible to, or handled by employees other

than authorized employees or employees trained in accordance with WAC 296-62-07310(5) shall have contents identification which includes the full chemical name and Chemical Abstracts Service Registry number as listed in WAC 296-62-07302.

(c) Containers shall have the warning words "CANCER-SUSPECT AGENT" displayed immediately under or adjacent to the contents identification.

(d) Containers which have carcinogenic contents with corrosive or irritating properties shall have label statements warning of such hazards, noting, if appropriate, particularly sensitive or affected portions of the body.

(3) Lettering. Lettering on signs and instructions required by WAC 296-62-07310(1) shall be a minimum letter height of two inches. Labels on containers required under this section shall not be less than one-half the size of the largest lettering on the package, and not less than eight point type in any instance: Provided, that no such required lettering need be more than one inch in height.

(4) Prohibited statements. No statements shall appear on or near any required sign, label, or instruction which contradicts or detracts from the effect of any required warning, information or instruction.

(5) Training and indoctrination. (a) Each employee prior to being authorized to enter a regulated area, shall receive a training and indoctrination program including, but not necessarily limited to:

(i) The nature of the carcinogenic hazards of listed carcinogens, including local and systemic toxicity;

(ii) The specific nature of the operation involving carcinogens which could result in exposure;

(iii) The purpose for and application of the medical surveillance program, including, as appropriate, methods of self-examination;

(iv) The purpose for and application of decontamination practices and purposes;

(v) The purpose for and significance of emergency practices and procedures;

(vi) The employee's specific role in emergency procedures;

(vii) Specific information to aid the employee in recognition and evaluation of conditions and situations which may result in the release of listed carcinogens;

(viii) The purpose for an application of specific first-aid procedures and practices.

(b) A review of this section at the employee's first training and indoctrination program and annually thereafter.

(c) Specific emergency procedures shall be prescribed, and posted, and employees, shall be familiarized with their terms, and rehearsed in their application.

(d) All materials relating to the program shall be provided upon request to the director. [Statutory Authority: RCW 49.17.040 and 49.17.050. 81-07-048 (Order 81-4), § 296-62-07310, filed 3/17/81. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-62-07310, filed 11/13/80.]

**WAC 296-62-07312 Reports.** (1) Operations. Not later than October 30, 1974, the information required in

WAC 296-62-07312 (1)(a), (b), (c) and (d) of this section shall be reported in writing to the industrial hygiene section, division of industrial safety and health. Any changes in such information shall be similarly reported in writing within 15 calendar days of such change.

(a) A brief description and in plant location of the area(s) regulated and the address of each regulated area;

(b) The name(s) and other identifying information as to the presence of listed carcinogens in each regulated area;

(c) The number of employees in each regulated area, during normal operations including maintenance activities; and

(d) The manner in which a carcinogen is present in each regulated area; e.g., whether it is manufactured, processed, used, repackaged, released, stored, or otherwise handled.

(2) Incidents. Incidents which result in the release of a listed carcinogen into any area where employees may be potentially exposed shall be reported in accordance with this subsection.

(a) A report of the occurrence of the incident and the facts obtainable at that time including a report on any medical treatment of affected employees shall be made within 24 hours to the industrial hygiene section, division of industrial safety and health.

(b) A written report shall be filed with the industrial hygiene section, division of industrial safety and health, within 15 calendar days thereafter and shall include:

(i) A specification of the amount of material released, the amount of time involved, and an explanation of the procedure used in determining this figure;

(ii) A description of the area involved, and the extent of known and possible employee exposure and area contamination;

(iii) A report of any medical treatment of affected employees, and any medical surveillance program implemented; and

(iv) An analysis of the circumstances of the incident, and measures taken or to be taken, with specific completion dates, to avoid further similar releases.

Date: -----

Compound and Other Identifying Information	Description of Inplant Location of Regulated Area*	Number of Employees in Each Regulated Area* Normally Maintenance	Manner** In Which Compound is Present in Each Regulated Area*

\* See WAC 296-62-07308 for definition of "regulated area."

\*\* Indicated whether manufactured, processed, used, repackaged, released, stored, or if otherwise handled (describe).

[Statutory Authority: RCW 49.17.040 and 49.17.050. 81-07-048 (Order 81-4), § 296-62-07312, filed 3/17/81. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-62-07312, filed 11/13/80.]

**WAC 296-62-07314 Medical surveillance.** (1) At no cost to the employee, a program of medical surveillance shall be established and implemented for employees considered for assignment to enter regulated areas, and for authorized employees.

(2) Examinations.

(a) Before an employee is assigned to enter a regulated area, a preassignment physical examination by a physician shall be provided. The examination shall include the personal history of the employee, family and occupation background, including genetic and environmental factors.

(b) Authorized employees shall be provided periodic physical examination, not less often than annually, following the preassignment examination.

(c) In all physical examinations, the examining physician shall be requested to consider whether there exist conditions of increased risk, including reduced immunological competence, those undergoing treatment with steroids or cytotoxic agents, pregnancy and cigarette smoking.

(3) Records.

(a) Employers of employees examined pursuant to this subdivision shall cause to be maintained complete and accurate records of all such medical examinations. Records shall be maintained for the duration of the employee's employment. Upon termination of the employee's employment, including retirement or death, or in the event that the employer ceases business without a successor, records, or notarized true copies thereof, shall be forwarded by registered mail to the director.

(b) Records required by this section shall be provided upon request to employees, designated representatives, and the director in accordance with WAC 296-62-05201 through 296-62-05209 and 296-62-05213 through 296-62-05217. These records shall also be provided upon request to the director.

(c) Any employer who requests a physical examination of one of his employees or prospective employees as required by this section shall obtain from the physician a statement of the employee's suitability for employment in the specific exposure. [Statutory Authority: RCW 49.17.040 and 49.17.050. 83-15-017 (Order 83-19), § 296-62-07314, filed 7/13/83, effective 9/12/83. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-62-07314, filed 11/13/80.]

**WAC 296-62-07316 Premixed solutions.** (1) Where 4,4'-Methylene bis (2-chloroaniline) is present only in a single solution at a temperature not exceeding 220°F. the establishment of a regulated area is not required; however,

(a) Only authorized employees shall be permitted to handle such materials.

(b) Each day employees shall be provided with and required to wear a clean change of protective clothing (smocks, coveralls, or long-sleeved shirts and pants), gloves and other protective garments and equipment necessary to prevent contact with the solution in the process used.

(c) Employees shall be required to remove and leave protective clothing and equipment when leaving the work area at the end of the work day, or at any time solution is spilled on such clothing or equipment. Used clothing and equipment shall be placed in impervious containers for purposes of decontamination or disposal. The contents of such impervious containers shall be identified, as required under WAC 296-62-07310 (2), (3) and (4).

(d) Employees shall be required to wash hands and face after removing such clothing and equipment and before engaging in other activities.

(e) Employees assigned to work covered by this section shall be deemed to be working in regulated areas for the purposes of WAC 296-62-07308 (1), (2)(a) and (b), and (3)(c) and (d), WAC 296-62-07310, 296-62-07312 and 296-62-07314.

(f) Work areas where solution may be spilled shall be:

(i) Covered daily or after any spill with a clean covering; or

(ii) Clean thoroughly, daily and after any spill. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-62-07316, filed 11/13/80.]

**WAC 296-62-07329 Vinyl chloride.** (1) Scope and application.

(a) This section includes requirements for the control of employee exposure to vinyl chloride (chloroethene), Chemical Abstracts Service Registry No. 75014.

(b) This section applies to the manufacture, reaction, packaging, repackaging, storage, handling or use of vinyl chloride or polyvinyl chloride, but does not apply to the handling or use of fabricated products made of polyvinyl chloride.

(c) This section applies to the transportation of vinyl chloride or polyvinyl chloride except to the extent that the department of transportation may regulate the hazards covered by this section.

(2) Definitions.

(a) "Action level" means a concentration of vinyl chloride of 0.5 ppm averaged over an 8-hour work day.

(b) "Authorized person" means any person specifically authorized by the employer whose duties require him to enter a regulated area or any person entering such an area as a designated representative of employees for the purpose of exercising an opportunity to observe monitoring and measuring procedures.

(c) "Director" means chief, industrial hygiene section, department of labor and industries.

(d) "Emergency" means any occurrence such as, but not limited to, equipment failure, or operation of a relief device which is likely to, or does, result in massive release of vinyl chloride.

(e) "Fabricated product" means a product made wholly or partly from polyvinyl chloride, and which does not require further processing at temperatures, and for times, sufficient to cause mass melting of the polyvinyl chloride resulting in the release of vinyl chloride.

(f) "Hazardous operation" means any operation, procedure, or activity where a release of either vinyl chloride liquid or gas might be expected as a consequence of the operation or because of an accident in the operation, which would result in an employee exposure in excess of the permissible exposure limit.

(g) "Polyvinyl chloride" means polyvinyl chloride homopolymer or copolymer before such is converted to a fabricated product.

(h) "Vinyl chloride" means vinyl chloride monomer.

(3) Permissible exposure limit.

(a) No employee may be exposed to vinyl chloride at concentrations greater than 1 ppm averaged over any 8-hour period, and

(b) No employee may be exposed to vinyl chloride at concentrations greater than 5 ppm averaged over any period not exceeding 15 minutes.

(c) No employee may be exposed to vinyl chloride by direct contact with liquid vinyl chloride.

(4) Monitoring.

(a) A program of initial monitoring and measurement shall be undertaken in each establishment to determine if there is any employee exposed, without regard to the use of respirators, in excess of the action level.

(b) Where a determination conducted under paragraph (4)(a) of this section shows any employee exposures without regard to the use of respirators, in excess of the action level, a program for determining exposures for each such employee shall be established. Such a program:

(i) Shall be repeated at least monthly where any employee is exposed, without regard to the use of respirators, in excess of the permissible exposure limit.

(ii) Shall be repeated not less than quarterly where any employee is exposed, without regard to the use of respirators, in excess of the action level.

(iii) May be discontinued for any employee only when at least two consecutive monitoring determinations, made not less than 5 working days apart, show exposures for that employee at or below the action level.

(c) Whenever there has been a production, process or control change which may result in an increase in the release of vinyl chloride, or the employer has any other reason to suspect that any employee may be exposed in excess of the action level, a determination of employee exposure under subsection (4)(a) of this section shall be performed.

(d) The method of monitoring and measurement shall have an accuracy (with a confidence level of 95 percent) of not less than plus or minus 50 percent from 0.25 through 0.5 ppm, plus or minus 35 percent from over 0.5 ppm through 1.0 ppm, plus or minus 25 percent over 1.0 ppm, (methods meeting these accuracy requirements are available from the director).

(e) Employees or their designated representatives shall be afforded reasonable opportunity to observe the monitoring and measuring required by this subdivision.

(5) Regulated area.

(a) A regulated area shall be established where:

(i) Vinyl chloride or polyvinyl chloride is manufactured, reacted, repackaged, stored, handled or used; and

(ii) Vinyl chloride concentrations are in excess of the permissible exposure limit.

(b) Access to regulated areas shall be limited to authorized persons.

(6) Methods of compliance. Employee exposures to vinyl chloride shall be controlled to at or below the permissible exposure limit provided in subsection (3) of this section by engineering, work practice, and personal protective controls as follows:

(a) Feasible engineering and work practice controls shall immediately be used to reduce exposures to at or below the permissible exposure limit.

(b) Wherever feasible engineering and work practice controls which can be instituted immediately are not sufficient to reduce exposures to at or below the permissible exposure limit, they shall nonetheless be used to reduce exposures to the lowest practicable level, and shall be supplemented by respiratory protection in accordance with subsection (6) of this section. A program shall be established and implemented to reduce exposures to at or below the permissible exposure limit, or to the greatest extent feasible, solely by means of engineering and work practice controls, as soon as feasible.

(c) Written plans for such a program shall be developed and furnished upon request for examination and copying to the director. Such plans shall be updated at least every six months.

(7) Respiratory protection. Where respiratory protection is required under this section:

(a) The employer shall provide a respirator which meets the requirements of this subdivision and shall assure that the employee uses such respirator, except that until December 31, 1975, wearing of respirators shall be at the discretion of each employee for exposures not in excess of 25 ppm, measured over any 15-minute period. Until December 31, 1975, each employee who chooses not to wear an appropriate respirator shall be informed at least quarterly of the hazards of vinyl chloride and the purpose, proper use, and limitations of respiratory devices.

(b) Respirators shall be selected from among those jointly approved by the Mining Enforcement and Safety Administration, Department of the Interior, and the National Institute for Occupational Safety and Health under the provisions of 30 CFR Part 11.

(c) A respiratory protection program meeting the requirements of chapter 296-62 WAC shall be established and maintained.

(d) Selection of respirators for vinyl chloride shall be as follows:

Atmospheric concentration of Vinyl Chloride	Required Apparatus
(i) Unknown, or above 3,600 ppm	Open-circuit, self-contained breathing apparatus, pressure demand type, with full facepiece.
(ii) Not over 3,600 ppm	(A) Combination type C supplied air respirator, pressure demand type, with full or half facepiece, and auxiliary self-contained air supply; or (B) Combination type C, supplied air respirator continuous flow type, with full or half facepiece, and auxiliary self-contained air supply.
(iii) Not over 1,000 ppm	Type C, supplied air respirator, continuous flow type, with full or half facepiece, helmet or hood.
(iv) Not over 100 ppm	(A) Combination type C supplied air respirator demand type, with full facepiece, and auxiliary self-contained air supply; or (B) Open-circuit self-contained breathing apparatus with full facepiece, in demand mode; or (C) Type C supplied air respirator, demand type, with full facepiece.
(v) Not over 25 ppm	(A) A powered air-purifying respirator with hood, helmet, full or half facepiece, and a canister which provides a service life of at least 4 hours for concentrations of vinyl chloride up to 25 ppm, or (B) Gas mask, front or back-mounted canister which provides a service life of at least 4 hours for concentrations of vinyl chloride up to 25 ppm.
(vi) Not over 10 ppm	(A) Combination type C supplied-air respirator, demand type, with half facepiece, and auxiliary self-contained air supply; or (B) Type C supplied-air respirator, demand type, with half facepiece; or (C) Any chemical cartridge respirator with an organic vapor cartridge which provides a service life of at least 1 hour for concentrations of vinyl chloride up to 10 ppm.

(e)(i) Entry into unknown concentrations or concentrations greater than 36,000 ppm (lower explosive limit) may be made only for purposes of life rescue; and

(ii) Entry into concentrations of less than 36,000 ppm, but greater than 3,600 ppm may be made only for purposes of life rescue, firefighting, or securing equipment so as to prevent a greater hazard from release of vinyl chloride.

(f) Where air-purifying respirators are used:

(i) Air-purifying canisters or cartridges shall be replaced prior to the expiration of their service life or the end of the shift in which they are first used, whichever occurs first, and

(ii) A continuous monitoring and alarm system shall be provided where concentrations of vinyl chloride could reasonably exceed the allowable concentrations for the devices in use. Such system shall be used to alert employees when vinyl chloride concentrations exceed the allowable concentrations for the devices in use.

(g) Apparatus prescribed for higher concentrations may be used for any lower concentration.

(8) Hazardous operations.

(a) Employees engaged in hazardous operations, including entry of vessels to clean polyvinyl chloride residue from vessel walls, shall be provided and required to wear and use;

(i) Respiratory protection in accordance with subsections (3) and (6) of this section; and

(ii) Protective garments to prevent skin contact with liquid vinyl chloride or with polyvinyl chloride residue from vessel walls. The protective garments shall be selected for the operation and its possible exposure conditions.

(b) Protective garments shall be provided clean and dry for each use.

(i) Emergency situations. A written operational plan for emergency situations shall be developed for each facility storing, handling, or otherwise using vinyl chloride as a liquid or compressed gas. Appropriate portions of the plan shall be implemented in the event of an emergency. The plan shall specifically provide that:

(A) Employees engaged in hazardous operations or correcting situations of existing hazardous releases shall be equipped as required in subsection (8) of this section;

(B) Other employees not so equipped shall evacuate the area and not return until conditions are controlled by the methods required in subsection (6) of this section and the emergency is abated.

(9) Training. Each employee engaged in vinyl chloride or polyvinyl chloride operations shall be provided training in a program relating to the hazards of vinyl chloride and precautions for its safe use.

(a) The program shall include:

(i) The nature of the health hazard from chronic exposure to vinyl chloride including specifically the carcinogenic hazard;

(ii) The specific nature of operations which could result in exposure to vinyl chloride in excess of the permissible limit and necessary protective steps;

(iii) The purpose for, proper use, and limitations of respiratory protective devices;

(iv) The fire hazard and acute toxicity of vinyl chloride, and the necessary protective steps;

(v) The purpose for and a description of the monitoring program;

(vi) The purpose for and a description of, the medical surveillance program;

(vii) Emergency procedures:

(A) Specific information to aid the employee in recognition of conditions which may result in the release of vinyl chloride; and

(B) A review of this standard at the employee's first training and indoctrination program, and annually thereafter.

(b) All materials relating to the program shall be provided upon request to the director.

(10) Medical surveillance. A program of medical surveillance shall be instituted for each employee exposed, without regard to the use of respirators, to vinyl chloride in excess of the action level. The program shall provide each such employee with an opportunity for examinations and tests in accordance with this subsection. All medical examinations and procedures shall be performed by or under the supervision of a licensed physician and shall be provided without cost to the employee.

(a) At the time of initial assignment, or upon institution of medical surveillance;

(i) A general physical examination shall be performed with specific attention to detecting enlargement of liver, spleen or kidneys, or dysfunction in these organs, and for abnormalities in skin, connective tissues and the pulmonary system (See Appendix A).

(ii) A medical history shall be taken, including the following topics:

(A) Alcohol intake,

(B) Past history of hepatitis,

(C) Work history and past exposure to potential hepatotoxic agents, including drugs and chemicals,

(D) Past history of blood transfusions, and

(E) Past history of hospitalizations.

(iii) A serum specimen shall be obtained and determinations made of:

(A) Total bilirubin,

(B) Alkaline phosphatase,

(C) Serum glutamic oxalacetic transaminase (SGOT),

(D) Serum glutamic pyruvic transaminase (SGPT),

and

(E) Gamma glutamyl transpeptidase.

(b) Examinations provided in accordance with this subdivision shall be performed at least:

(i) Every 6 months for each employee who has been employed in vinyl chloride or polyvinyl chloride manufacturing for 10 years or longer; and

(ii) Annually for all other employees.

(c) Each employee exposed to an emergency shall be afforded appropriate medical surveillance.

(d) A statement of each employee's suitability for continued exposure to vinyl chloride including use of protective equipment and respirators, shall be obtained from the examining physician promptly after any examination. A copy of the physician's statement shall be provided each employee.

(e) If any employee's health would be materially impaired by continued exposure, such employee shall be withdrawn from possible contact with vinyl chloride.

(f) Laboratory analyses for all biological specimens included in medical examinations shall be performed in laboratories licensed under 42 CFR Part 74.

(g) If the examining physician determines that alternative medical examinations to those required by subsection (10)(a) of this section will provide at least equal assurance of detecting medical conditions pertinent to the exposure to vinyl chloride, the employer may accept

such alternative examinations as meeting the requirements of subsection (10)(a) of this section, if the employer obtains a statement from the examining physician setting forth the alternative examinations and the rationale for substitution. This statement shall be available upon request for examination and copying to authorized representatives of the director.

(11) Signs and labels.

(a) Entrances to regulated areas shall be posted with legible signs bearing the legend:

CANCER-SUSPECT AGENT AREA AUTHORIZED PERSONNEL  
ONLY

(b) Areas containing hazardous operations or where an emergency currently exists shall be posted with legible signs bearing the legend:

CANCER-SUSPECT AGENT IN THIS AREA PROTECTIVE  
EQUIPMENT REQUIRED AUTHORIZED PERSONNEL ONLY

(c) Containers of polyvinyl chloride resin waste from reactors or other waste contaminated with vinyl chloride shall be legibly labeled:

CONTAMINATED WITH VINYL CHLORIDE CANCER-  
SUSPECT AGENT

(d) Containers of polyvinyl chloride shall be legibly labeled:

POLYVINYL CHLORIDE (OR TRADE NAME) CONTAINS  
VINYL  
CHLORIDE VINYL CHLORIDE IS A CANCER-SUSPECT  
AGENT

(e) Containers of vinyl chloride shall be legibly labeled either:

VINYL CHLORIDE EXTREMELY FLAMMABLE GAS UNDER  
PRESSURE CANCER-SUSPECT AGENT (or)

(f) In accordance with 49 CFR Part 173, Subpart H, with the additional legends:

CANCER-SUSPECT AGENT

applied near the label or placard.

(g) No statement shall appear on or near any required sign, label or instruction which contradicts or detracts from the effect of any required warning, information or instruction.

(12) Records.

(a) All records maintained in accordance with this section shall include the name and social security number of each employee where relevant.

(b) Records of required monitoring and measuring and medical records shall be provided upon request to employees, designated representatives, and the assistant director in accordance with WAC 296-62-05201 through 296-62-05209; and WAC 296-62-05213 through 296-62-05217. These records shall be provided upon request to the director. Authorized personnel rosters shall also be provided upon request to the assistant director.

(i) Monitoring and measuring records shall:

(A) State the date of such monitoring and measuring and the concentrations determined and identify the instruments and methods used;

(B) Include any additional information necessary to determine individual employee exposures where such exposures are determined by means other than individual monitoring of employees; and

(C) Be maintained for not less than 30 years.

(ii) Medical records shall be maintained for the duration of the employment of each employee plus 20 years, or 30 years, whichever is longer.

(c) In the event that the employer ceases to do business and there is no successor to receive and retain his records for the prescribed period, these records shall be transmitted by registered mail to the director, and each employee individually notified in writing of this transfer. The employer shall also comply with any additional requirements set forth in WAC 296-62-05215.

(d) Employees or their designated representatives shall be provided access to examine and copy records of required monitoring and measuring.

(e) Former employees shall be provided access to examine and copy required monitoring and measuring records reflecting their own exposures.

(f) Upon written request of any employee, a copy of the medical record of that employee shall be furnished to any physician designated by the employee.

(13) Reports.

(a) Not later than 1 month after the establishment of a regulated area, the following information shall be reported to the director. Any changes to such information shall be reported within 15 days.

(i) The address and location of each establishment which has one or more regulated areas; and

(ii) The number of employees in each regulated area during normal operations, including maintenance.

(b) Emergencies and the facts obtainable at that time, shall be reported within 24 hours to the director. Upon request of the director, the employer shall submit additional information in writing relevant to the nature and extent of employee exposures and measures taken to prevent future emergencies of similar nature.

(c) Within 10 working days following any monitoring and measuring which discloses that any employee has been exposed, without regard to the use of respirators, in excess of the permissible exposure limit, each such employee shall be notified in writing of the results of the exposure measurement and the steps being taken to reduce the exposure to within the permissible exposure limit.

(i) Effective January 1, 1975, the provisions set forth in WAC 296-62-07329 shall apply.

APPENDIX A SUPPLEMENTARY MEDICAL INFORMATION

When required tests under paragraph (10)(a) of this section show abnormalities, the tests should be repeated as soon as practicable, preferably within 3 to 4 weeks. If tests remain abnormal, consideration should be given to withdrawal of the employee from contact with vinyl chloride, while a more comprehensive examination is made.

Additional tests which may be useful:

(A) For kidney dysfunction: Urine examination for albumin, red blood cells, and exfoliative abnormal cells.

(B) Pulmonary system: Forced vital capacity, forced expiratory volume at 1 second, and chest roentgenogram (posterior-anterior, 14 x 17 inches).

(C) Additional serum tests: Lactic acid dehydrogenase, lactic acid dehydrogenase isoenzyme, protein determination, and protein electrophoresis.

(D) For a more comprehensive examination on repeated abnormal serum tests: Hepatitis B antigen, and liver scanning. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-13-045 (Order 82-22), § 296-62-07329, filed 6/11/82. Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-07329, filed 8/27/81; 81-16-015 (Order 81-20), § 296-62-07329, filed 7/27/81; Order 75-41, § 296-62-07329, filed 12/19/75.]

**WAC 296-62-07341 Acrylonitrile.** (1) Scope and application.

(a) This section applies to all occupational exposure to acrylonitrile (AN), Chemical Abstracts Service Registry No. 000107131, except as provided in subsection (1)(b) and (c) of this section.

(b) This section does not apply to exposures which result solely from the processing, use, and handling of the following materials:

(i) ABS resins, SAN resins, nitrile barrier resins, solid nitrile elastomers, and acrylic and modacrylic fibers, when these listed materials are in the form of finished polymers, and products fabricated from such finished polymers;

(ii) Materials made from and/or containing AN for which objective data is reasonably relied upon to demonstrate that the material is not capable of releasing AN in airborne concentrations in excess of 1 ppm as an eight-hour time-weighted average, under the expected conditions of processing, use, and handling which will cause the greatest possible release; and

(iii) Solid materials made from and/or containing AN which will not be heated above 170° F during handling, use, or processing.

(c) An employer relying upon exemption under (1)(b)(ii) shall maintain records of the objective data supporting that exemption, and of the basis of the employer's reliance on the data as provided in subsection (17) of this section.

(2) Definitions, as applicable to this section:

(a) "Acrylonitrile" or "AN" – acrylonitrile monomer, chemical formula  $\text{CH}_2=\text{CHCN}$ .

(b) "Action level" – a concentration of AN of 1 ppm as an eight-hour time-weighted average.

(c) "Authorized person" – any person specifically authorized by the employer whose duties require the person to enter a regulated area, or any person entering such an area as a designated representative of employees for the purpose of exercising the opportunity to observe monitoring procedures under subsection (18) of this section.

(d) "Director" – the director of labor and industries, or his authorized representative.

(e) "Emergency" – any occurrence such as, but not limited to, equipment failure, rupture of containers, or failure of control equipment, which is likely to, or does, result in unexpected exposure to AN in excess of the ceiling limit.

(f) "Polyacrylonitrile" or "PAN" – polyacrylonitrile homopolymers or copolymers, except for materials as exempted under subsection (1)(b) of this section.

(3) Permissible exposure limits.

(a) Inhalation. (i) Time-weighted average limit (TWA). The employer shall assure that no employee is exposed to an airborne concentration of acrylonitrile in excess of two parts acrylonitrile per million parts of air (2 ppm), as an eight-hour time-weighted average.

(ii) Ceiling limit. The employer shall assure that no employee is exposed to an airborne concentration of acrylonitrile in excess of (10) ppm as averaged over any fifteen-minute period during the working day.

(b) Dermal and eye exposure. The employer shall assure that no employee is exposed to skin contact or eye contact with liquid AN or PAN.

(4) Notification of use and emergencies.

(a) Use. Within ten days of the effective date of this standard, or within fifteen days following the introduction of AN into the workplace, every employer shall report, unless he has done so pursuant to the emergency temporary standard, the following information to the director for each such workplace:

(i) The address and location of each workplace in which AN is present;

(ii) A brief description of each process of operation which may result in employee exposure to AN;

(iii) The number of employees engaged in each process or operation who may be exposed to AN and an estimate of the frequency and degree of exposure that occurs; and

(iv) A brief description of the employer's safety and health program as it relates to limitation of employee exposure to AN. Whenever there has been a significant change in the information required by this subsection, the employer shall promptly amend such information previously provided to the director.

(b) Emergencies and remedial action. Emergencies, and the facts obtainable at that time, shall be reported within 24 hours of the initial occurrence to the director. Upon request of the director, the employer shall submit additional information in writing relevant to the nature and extent of employee exposures and measures taken to prevent future emergencies of a similar nature.

(5) Exposure monitoring.

(a) General. (i) Determinations of airborne exposure levels shall be made from air samples that are representative of each employee's exposure to AN over an eight-hour period.

(ii) For the purposes of this section, employee exposure is that which would occur if the employee were not using a respirator.

(b) Initial monitoring. Each employer who has a place of employment in which AN is present shall monitor

each such workplace and work operation to accurately determine the airborne concentrations of AN to which employees may be exposed. Such monitoring may be done on a representative basis, provided that the employer can demonstrate that the determinations are representative of employee exposures.

(c) Frequency. (i) If the monitoring required by this section reveals employee exposure to be below the action level, the employer may discontinue monitoring for that employee.

(ii) If the monitoring required by this section reveals employee exposure to be at or above the action level but below the permissible exposure limits, the employer shall repeat such monitoring for each such employee at least quarterly.

(iii) If the monitoring required by this section reveals employee exposure to be in excess of the permissible exposure limits, the employer shall repeat these determinations for each such employee at least monthly. The employer shall continue these monthly measurements until at least two consecutive measurements, taken at least seven days apart, are below the permissible exposure limits, and thereafter the employer shall monitor at least quarterly.

(d) Additional monitoring. Whenever there has been a production, process, control or personnel change which may result in new or additional exposure to AN, or whenever the employer has any other reason to suspect a change which may result in new or additional exposures to AN, additional monitoring which complies with this subsection shall be conducted.

(e) Employee notification. (i) Within five working days after the receipt of monitoring results, the employer shall notify each employee in writing of the results which represent that employee's exposure.

(ii) Whenever the results indicate that the representative employee exposure exceeds the permissible exposure limits, the employer shall include in the written notice a statement that the permissible exposure limits were exceeded and a description of the corrective action being taken to reduce exposure to or below the permissible exposure limits.

(f) Accuracy of measurement. The method of measurement of employee exposures shall be accurate, to a confidence level of 95 percent, to within plus or minus 25 percent for concentrations of AN at or above the permissible exposure limits, and plus or minus 35 percent for concentrations of AN between the action level and the permissible exposure limits.

(g) Weekly survey of operations involving liquid AN. In addition to monitoring of employee exposures to AN as otherwise required by this subsection, the employer shall survey areas of operations involving liquid AN at least weekly to detect points where AN liquid or vapor are being released into the workplace. The survey shall employ an infra-red gas analyzer calibrated for AN, a multipoint gas chromatographic monitor, or comparable system for detection of AN. A listing of levels detected and areas of AN release, as determined from the survey, shall be posted prominently in the workplace, and shall remain posted until the next survey is completed.

(6) Regulated areas.

(a) The employer shall establish regulated areas where AN concentrations are in excess of the permissible exposure limits.

(b) Regulated areas shall be demarcated and segregated from the rest of the workplace, in any manner that minimizes the number of persons who will be exposed to AN.

(c) Access to regulated areas shall be limited to authorized persons or to persons otherwise authorized by the act or regulations issued pursuant thereto.

(d) The employer shall assure that in the regulated area, food or beverages are not present or consumed, smoking products are not present or used, and cosmetics are not applied, (except that these activities may be conducted in the lunchrooms, change rooms and showers required under subsections (13)(a)-(13)(c) of this section.

(7) Methods of compliance.

(a) Engineering and work practice controls. (i) The employer shall institute engineering or work practice controls to reduce and maintain employee exposures to AN, to or below the permissible exposure limits, except to the extent that the employer establishes that such controls are not feasible.

(ii) Wherever the engineering and work practice controls which can be instituted are not sufficient to reduce employee exposures to or below the permissible exposure limits, the employer shall nonetheless use them to reduce exposures to the lowest levels achievable by these controls and shall supplement them by the use of respiratory protection which complies with the requirements of subsection (8) of this section.

(b) Compliance program. (i) The employer shall establish and implement a written program to reduce employee exposures to or below the permissible exposure limits solely by means of engineering and work practice controls, as required by subsection (7)(a) of this section.

(ii) Written plans for these compliance programs shall include at least the following:

(A) A description of each operation or process resulting in employee exposure to AN above the permissible exposure limits;

(B) Engineering plans and other studies used to determine the controls for each process;

(C) A report of the technology considered in meeting the permissible exposure limits;

(D) A detailed schedule for the implementation of engineering or work practice controls; and

(E) Other relevant information.

(iii) Written plans for such a program shall be submitted upon request to the director, and shall be available at the worksite for examination and copying by the director, or any affected employee or representative.

(iv) The plans required by this subsection shall be revised and updated at least every six months to reflect the current status of the program.

(8) Respiratory protection.

(a) General. The employer shall assure that respirators are used where required pursuant to this section to

reduce employee exposure to within the permissible exposure limits and in emergencies. Compliance with the permissible exposure limits may not be achieved by the use of respirators except:

(i) During the time period necessary to install or implement feasible engineering and work practice controls; or

(ii) In work operations such as maintenance and repair activities in which the employer establishes that engineering and work practice controls are not feasible; or

(iii) In work situations where feasible engineering and work practice controls are not yet sufficient to reduce exposure to or below the permissible exposure limits; or

(iv) In emergencies.

(b) Respirator selection. (i) Where respiratory protection is required under this section, the employer shall select and provide at no cost to the employee, the appropriate type of respirator from Table I and shall assure that the employee wears the respirator provided.

TABLE I

RESPIRATORY PROTECTION FOR ACRYLONITRILE (AN)

Concentration of AN or Condition of Use	Respirator Type
(a) Less than or equal to 10 x permissible exposure limits.	(1) Any chemical cartridge respirator with organic vapor cartridge(s) and half-mask; or (2) Any supplied air respirator with half-mask.
(b) Less than or equal to 50 x permissible exposure limits.	(1) Any organic vapor gas mask; or (2) Any supplied air respirator with full facepiece; or (3) Any self-contained breathing apparatus with full facepiece.
(c) Less than or equal to 2,000 x permissible exposure limits.	(1) Supplied air respirator in positive pressure mode with full facepiece, helmet, hood, or suit.
(d) Less than or equal to 10,000 x permissible exposure limits.	(1) Supplied air respirator and auxiliary self-contained full facepiece in positive pressure mode; or (2) Open circuit self-contained breathing apparatus with full facepiece in positive pressure mode.
(e) Emergency entry into unknown concentration of fire-fighting.	(1) Any self-contained breathing apparatus with full facepiece in positive pressure mode.
(f) Escape.	(1) Any organic vapor gas mask; or (2) Any self-contained breathing apparatus with full facepiece.

(ii) The employer shall select respirators from those approved for use with AN by the National Institute for

Occupational Safety and Health under the provisions of WAC 296-62-071.

(c) Respirator program. (i) The employer shall institute a respiratory protection program in accordance with WAC 296-62-071.

(ii) Where air-purifying respirators (chemical cartridge or canister-type gas mask) are used, the air-purifying canister or cartridge(s) shall be replaced prior to the expiration of their service life or at the beginning of each shift, whichever occurs first. A label shall be attached to the cartridge or canister to indicate the date and time at which it is first installed on the respirator.

(iii) The employer shall allow each employee who uses a filter respirator (cartridge or canister) to change the filter elements whenever an increase in breathing resistance is detected and shall maintain an adequate supply of the filter elements necessary for this purpose.

(iv) Employees who wear respirators shall be allowed to wash their faces and respirator facepieces to prevent potential skin irritation associated with respirator use.

(9) Emergency situations.

(a) Written plans. (i) A written plan for emergency situations shall be developed for each workplace where AN is present. Appropriate portions of the plan shall be implemented in the event of an emergency.

(ii) The plan shall specifically provide that employees engaged in correcting emergency conditions shall be equipped as required in subsection (8) of this section until the emergency is abated.

(b) Alerting employees. (i) Alarms. Where there is the possibility of employee exposure to AN in excess of the ceiling limit due to the occurrence of an emergency, a general alarm shall be installed and maintained to promptly alert employees of such occurrences.

(ii) Evacuation. Employees not engaged in correcting the emergency shall be restricted from the area and shall not be permitted to return until the emergency is abated.

(10) Protective clothing and equipment.

(a) Provision and use. Where eye or skin contact with liquid AN or PAN may occur, the employer shall provide at no cost to the employee, and assure that employees wear, appropriate protective clothing or other equipment in accordance with WAC 296-24-07501 and 296-24-07801 to protect any area of the body which may come in contact with liquid AN or PAN.

(b) Cleaning and replacement. (i) The employer shall clean, launder, maintain, or replace protective clothing and equipment required by this subsection, as needed to maintain their effectiveness. In addition, the employer shall provide clean protective clothing and equipment at least weekly to each affected employee.

(ii) The employer shall assure that the employee removes all protective clothing and equipment at the completion of a work shift and that an employee whose protective clothing becomes wet with liquid AN or PAN removes that clothing promptly to avoid skin contact with the liquid AN or PAN. Protective clothing shall be removed only in change rooms as required by subsection (14)(a) of this section.

(iii) The employer shall assure that AN- or PAN-contaminated protective clothing and equipment is

placed and stored in closable containers which prevent dispersion of the AN or PAN outside the container.

(iv) The employer shall assure that no employee removes AN- or PAN-contaminated protective equipment or clothing from the change room, except for those employees authorized to do so for the purpose of laundering, maintenance, or disposal.

(v) The employer shall inform any person who launders or cleans AN- or PAN-contaminated protective clothing or equipment of the potentially harmful effects of exposure to AN.

(vi) The employer shall assure that containers of contaminated protective clothing and equipment which are to be removed from the workplace for any reason are labeled in accordance with subsection (16)(c)(ii) of this section, and that such labels remain affixed when such containers leave the employer's workplace.

(11) Housekeeping.

(a) Surfaces. (i) All surfaces shall be maintained free of accumulations of liquid AN and of PAN.

(ii) Dry sweeping and the use of compressed air for the cleaning of floors and other surfaces where liquid AN and PAN are found is prohibited.

(iii) Where vacuuming methods are selected, either portable units or a permanent system may be used.

(A) If a portable unit is selected, the exhaust shall be attached to the general workplace exhaust ventilation system or collected within the vacuum unit, equipped with high efficiency filters or other appropriate means of contaminant removal, so that AN is not reintroduced into the workplace air; and

(B) Portable vacuum units used to collect AN may not be used for other cleaning purposes and shall be labeled as prescribed by subsection (16)(c)(ii) of this section.

(iv) Cleaning of floors and other contaminated surfaces may not be performed by washing down with a hose, unless a fine spray has first been laid down.

(b) Liquids. Where AN is present in a liquid form, or as a resultant vapor, all containers or vessels containing AN shall be enclosed to the maximum extent feasible and tightly covered when not in use, with adequate provision made to avoid any resulting potential explosion hazard.

(12) Waste disposal. AN and PAN waste, scrap, debris, bags, containers or equipment, shall be disposed of in sealed bags or other closed containers which prevent dispersion of AN outside the container, and labeled as prescribed in subsection (16)(c)(ii) of this section.

(13) Hygiene facilities and practices. Where employees are exposed to airborne concentrations of AN above the permissible exposure limits, or where employees are required to wear protective clothing or equipment pursuant to subsection (11) of this section, or where otherwise found to be appropriate, the facilities required by WAC 296-24-12009 shall be provided by the employer for the use of those employees, and the employer shall assure that the employees use the facilities provided. In addition, the following facilities or requirements are mandated.

(a) Change rooms. The employer shall provide clean change rooms in accordance with WAC 296-24-12011.

(b) Showers. (i) The employer shall provide shower facilities in accordance with WAC 296-24-12009(3).

(ii) In addition, the employer shall also assure that employees exposed to liquid AN and PAN shower at the end of the work shift.

(c) Lunchrooms. (i) Whenever food or beverages are consumed in the workplace, the employer shall provide lunchroom facilities which have a temperature controlled, positive pressure, filtered air supply, and which are readily accessible to employees exposed to AN above the permissible exposure limits.

(ii) In addition, the employer shall also assure that employees exposed to AN above the permissible exposure limits wash their hands and face prior to eating.

(14) Medical surveillance.

(a) General. (i) The employer shall institute a program of medical surveillance for each employee who is or will be exposed to AN above the action level. The employer shall provide each such employee with an opportunity for medical examinations and tests in accordance with this subsection.

(ii) The employer shall assure that all medical examinations and procedures are performed by or under the supervision of a licensed physician, and shall be provided without cost to the employee.

(b) Initial examinations. At the time of initial assignment, or upon institution of the medical surveillance program, the employer shall provide each affected employee an opportunity for a medical examination, including at least the following elements:

(i) A work history and medical history with special attention to skin, respiratory, and gastrointestinal systems, and those non-specific symptoms, such as headache, nausea, vomiting, dizziness, weakness, or other central nervous system dysfunctions that may be associated with acute or chronic exposure to AN.

(ii) A physical examination giving particular attention to central nervous system, gastrointestinal system, respiratory system, skin and thyroid.

(iii) A 14" x 17" posteroanterior chest x-ray.

(iv) Further tests of the intestinal tract, including fecal occult blood and proctosigmoidoscopy, on all workers 40 years of age or older, and to any other affected employees for whom, in the opinion of the physician, such testing would be appropriate.

(c) Periodic examinations. (i) The employer shall provide examinations specified in this subsection at least annually for all employees specified in subsection (14)(a) of this section.

(ii) If an employee has not had the examinations prescribed in subsection (14)(b) of this section within six months of termination of employment, the employer shall make such examination available to the employee upon such termination.

(d) Additional examinations. If the employee for any reason develops signs or symptoms commonly associated with exposure to AN, the employer shall provide appropriate examination and emergency medical treatment.

(e) Information provided to the physician. The employer shall provide the following information to the examining physician:

- (i) A copy of this standard and its appendices;
- (ii) A description of the affected employee's duties as they relate to the employee's exposure;
- (iii) The employee's representative exposure level;
- (iv) The employee's anticipated or estimated exposure level (for preplacement examinations or in cases of exposure due to an emergency);
- (v) A description of any personal protective equipment used or to be used; and
- (vi) Information from previous medical examinations of the affected employee, which is not otherwise available to the examining physician.

(f) Physician's written opinion. (i) The employer shall obtain a written opinion from the examining physician which shall include:

- (A) The results of the medical tests performed;
- (B) The physician's opinion as to whether the employee has any detected medical condition which would place the employee at an increased risk of material impairment of the employee's health from exposure to AN;
- (C) Any recommended limitations upon the employee's exposure to AN or upon the use of protective clothing and equipment such as respirators; and

(D) A statement that the employee has been informed by the physician of the results of the medical examination and any medical conditions which require further examination or treatment.

(ii) The employer shall instruct the physician not to reveal in the written opinion specific findings or diagnoses unrelated to occupational exposure to AN.

(iii) The employer shall provide a copy of the written opinion to the affected employee.

(15) Employee information and training.

(a) Training program. (i) The employer shall institute a training program for all employees where there is occupational exposure to AN and shall assure their participation in the training program.

(ii) The training program shall be provided at the time of initial assignment, or upon institution of the training program, and at least annually thereafter, and the employer shall assure that each employee is informed of the following:

(A) The information contained in Appendices A, B and C\*<sup>(1)</sup>;

(B) The quantity, location, manner of use, release or storage of AN and the specific nature of operations which could result in exposure to AN, as well as any necessary protective steps;

(C) The purpose, proper use, and limitations of respirators;

(D) The purpose and a description of the medical surveillance program required by subsection (14) of this section;

(E) The emergency procedures developed, as required by subsection (9) of this section; and

(F) The engineering and work practice controls, their function and the employee's relationship thereto; and

(G) A review of this standard.

(b) Access to training materials. (i) The employer shall make a copy of this standard and its appendices readily available to all affected employees.

(ii) The employer shall provide, upon request, all materials relating to the employee information and training program to the director.

(16) Signs and labels.

(a) General. (i) The employer may use labels or signs required by other statutes, regulations, or ordinances in addition to, or in combination with, signs and labels required by this subsection.

(ii) The employer shall assure that no statement appears on or near any sign or label, required by this subsection, which contradicts or detracts from such effects of the required sign or label.

(b) Signs. (i) The employer shall post signs to clearly indicate all workplaces where AN concentrations exceed the permissible exposure limits. The signs shall bear the following legend:

DANGER  
ACRYLONITRILE (AN)  
CANCER HAZARD  
AUTHORIZED PERSONNEL ONLY  
RESPIRATORS REQUIRED

(ii) The employer shall assure that signs required by this subsection are illuminated and cleaned as necessary so that the legend is readily visible.

(c) Labels. (i) The employer shall assure that precautionary labels are affixed to all containers of AN, and to containers of PAN and products fabricated from PAN, except for those materials for which objective data is provided as to the conditions specified in subsection (1)(b) of this section. The employer shall assure that the labels remain affixed when the AN or PAN are sold, distributed or otherwise leave the employer's workplace.

(ii) The employer shall assure that the precautionary labels required by this subsection are readily visible and legible. The labels shall bear the following legend:

DANGER  
CONTAINS ACRYLONITRILE (AN)  
CANCER HAZARD

(17) Recordkeeping.

(a) Objective data for exempted operations. (i) Where the processing, use, and handling of products fabricated from PAN are exempted pursuant to subsection (1)(b) of this section, the employer shall establish and maintain an accurate record of objective data reasonably relied upon in support of the exemption.

(ii) This record shall include the following information:

(A) The relevant condition in subsection (1)(b) upon which exemption is based;

(B) The source of the objective data;

(C) The results of testing and analysis of the material being processed;

(D) A description of the operation exempted; and

(E) Other data relevant to the operations, materials, and processing covered by the exemption.

(iii) The employer shall maintain this record for the duration of the employer's reliance upon such objective data.

(b) Exposure monitoring. (i) The employer shall establish and maintain an accurate record of all monitoring required by subsection (5) of this section.

(ii) This record shall include:

(A) The dates, number, duration, and results of each of the samples taken, including a description of the sampling procedure used to determine representative employee exposure;

(B) A description of the sampling and analytical methods used;

(C) Type of respiratory protective devices worn, if any; and

(D) Name, social security number and job classification of the employee monitored and of all other employees whose exposure the measurement is intended to represent.

(iii) The employer shall maintain this record for at least 40 years or the duration of employment plus 20 years, whichever is longer.

(c) Medical surveillance. (i) The employer shall establish and maintain an accurate record for each employee subject to medical surveillance as required by subsection (14) of this section.

(ii) This record shall include:

(A) A copy of the physicians' written opinions;

(B) Any employee medical complaints related to exposure to AN;

(C) A copy of the information provided to the physician as required by subsection (14)(f) of this section; and

(D) A copy of the employee's work history.

(iii) The employer shall assure that this record be maintained for at least forty years or for the duration of employment plus twenty years, whichever is longer.

(d) Availability. (i) The employer shall assure that all records required to be maintained by this section be made available upon request to the director for examination and copying.

(ii) Records required by subdivisions (a) through (c) of this subsection shall be provided upon request to employees, designated representatives, and the assistant director in accordance with WAC 296-62-05201 through 296-62-05209 and 296-62-05213 through 296-62-05217. Records required by subdivision (a) of this section shall be provided in the same manner as exposure monitoring records.

(iii) The employer shall assure that employee medical records required to be maintained by this section, be made available, upon request, for examination and copying, to the affected employee or former employee, or to a physician designated by the affected employee, former employee, or designated representative.

(e) Transfer of records. (i) Whenever the employer ceases to do business, the successor employer shall receive and retain all records required to be maintained by this section.

(ii) Whenever the employer ceases to do business and there is no successor employer to receive and retain the

records for the prescribed period, these records shall be transmitted to the director.

(iii) At the expiration of the retention period for the records required to be maintained pursuant to this section, the employer shall transmit these records to the director.

(iv) The employer shall also comply with any additional requirements involving transfer of records set forth in WAC 296-62-05215.

(18) Observation of monitoring.

(a) Employee observation. The employer shall provide affected employees, or their designated representatives, an opportunity to observe any monitoring of employee exposure to AN conducted pursuant to subsection (5) of this section.

(b) Observation procedures. (i) Whenever observation of the monitoring of employee exposure to AN requires entry into an area where the use of protective clothing or equipment is required, the employer shall provide the observer with personal protective clothing or equipment required to be worn by employees working in the area, assure the use of such clothing and equipment, and require the observer to comply with all other applicable safety and health procedures.

(ii) Without interfering with the monitoring, observers shall be entitled:

(A) To receive an explanation of the measurement procedures;

(B) To observe all steps related to the measurement of airborne concentrations of AN performed at the place of exposure; and

(C) To record the results obtained.

(19) Effective date. This standard will become effective 30 days after it is filed with the code reviser.

\*<sup>(1)</sup> Appendices printed in addition to this section, and information contained therein is not intended, by itself, to create any additional obligations not otherwise imposed or to detract from any existing obligations. Appendices are available from:

Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30, and 43.22 RCW. 78-07-052 (Order 78-10), § 296-62-07341, filed 6/28/78.]

**WAC 296-62-07345 1,2-Dibromo-3-chloropropane.** (1) Scope and application. This section applies to all occupational exposures to 1,2-dibromo-3-chloropropane (DBCP), Chemical Abstracts Service Registry Number 96-12-8, except that this section does not apply to exposure to DBCP which results solely from the application and use of DBCP as a pesticide.

(2) Definitions applicable to this section:

(a) "Authorized person" - any person specifically authorized by the employer and whose duties require the

person to be present in areas where DBCP is present; and any person entering this area as a designated representative of employees exercising an opportunity to observe employee exposure monitoring.

(b) "DBCP" - 1,2-dibromo-3-chloropropane.

(c) "Director" - the director of labor and industries, or his authorized representative.

(3) Permissible exposure limits.

(a) Inhalation. (i) Time-weighted average limit (TWA). The employer shall assure that no employee is exposed to an airborne concentration in excess of 1 part DBCP per billion part of air (ppb) as an eight-hour time-weighted average.

(ii) Ceiling limit. The employer shall assure that no employee is exposed to an airborne concentration in excess of 50 parts DBCP per billion parts of air (ppb) as averaged over any 15 minutes during the working day.

(b) Dermal and eye exposure. The employer shall assure that no employee is exposed to eye or skin contact with DBCP.

(4) Notification of use. Within ten days of the effective date of this section or within ten days following the introduction of DBCP into the workplace, every employer who has a workplace where DBCP is present shall report the following information to the director for each such workplace:

(a) The address and location of each workplace in which DBCP is present;

(b) A brief description of each process or operation which may result in employee exposure to DBCP;

(c) The number of employees engaged in each process or operation who may be exposed to DBCP and an estimate of the frequency and degree of exposure that occurs;

(d) A brief description of the employer's safety and health program as it relates to limitation of employee exposure to DBCP.

(5) Exposure monitoring.

(a) General. Determinations of airborne exposure levels shall be made from air samples that are representative of each employee's exposure to DBCP over an eight-hour period. (For the purposes of this section, employee exposure is that exposure which would occur if the employee were not using a respirator.)

(b) Initial. Each employer who has a place of employment in which DBCP is present shall monitor, within thirty days of the effective date of this section, each workplace and work operation to accurately determine the airborne concentrations of DBCP to which employees may be exposed.

(c) Frequency. (i) If the monitoring required by this section reveals employee exposures to be below the permissible exposure limits, the employer shall repeat these determinations at least quarterly.

(ii) If the monitoring required by this section reveals employee exposure to be in excess of the permissible exposure limits, the employer shall repeat these determinations for each such employee at least monthly. The employer shall continue these monthly determinations until at least two consecutive measurements, taken at

least seven days apart, are below the permissible exposure limit, thereafter the employer shall monitor at least quarterly.

(d) Additional. Whenever there has been a production process, control or personnel change which may result in any new or additional exposure to DBCP, or whenever the employer has any other reason to suspect a change which may result in new or additional exposure to DBCP, additional monitoring which complies with subsection (5) shall be conducted.

(e) Employee notification. (i) Within five working days after the receipt of monitoring results, the employer shall notify each employee in writing of results which represent the employee's exposure.

(ii) Whenever the results indicate that employee exposure exceeds the permissible exposure limit, the employer shall include in the written notice a statement that the permissible exposure limit was exceeded and a description of the corrective action being taken to reduce exposure to or below the permissible exposure limits.

(f) Accuracy of measurement. The method of measurement shall be accurate, to a confidence level of 95 percent, to within plus or minus 25 percent for concentrations of DBCP at or above the permissible exposure limits.

(6) Methods of compliance. The employer shall control employee exposures to airborne concentrations of DBCP to within the permissible exposure limit, and shall protect against employee exposure to eye or skin contact with DBCP by engineering controls, work practices and personal protective equipment.

(a) Engineering controls. The employer shall develop and implement, as soon as possible, feasible engineering controls to reduce the airborne concentrations of DBCP to within the permissible exposure limits.

(b) Work practices. The employer shall examine each work area in which DBCP is present and shall institute, as soon as possible, work practices to reduce employee exposure to DBCP. The work practices shall be described in writing and shall include, among other things, the following mandatory work practices:

(i) Limiting access to work areas where DBCP is present to authorized personnel only;

(ii) Prohibiting smoking and the consumption of food and beverages in work areas where DBCP is present; and

(iii) Establishing good maintenance and housekeeping practices including the prompt cleanup of spills, repair of leaks, and the practices required in subsection (9) of this section.

(c) Respiratory protection. Where engineering and work practice controls are not sufficient to reduce employee exposures to airborne concentrations of DBCP to within the permissible exposure limits, the employer shall provide at no cost to the employee, and assure that employees wear respirators in accordance with subsection (7) of this section.

(d) Engineering and work practice control plan. (i) Within ninety days of the effective date of this section, the employer shall develop a written plan describing proposed means to reduce employee exposures to DBCP

to the lowest feasible level solely by means of engineering and work practice controls.

(ii) Written plans required under subsection (6)(d) shall be submitted upon request to the director, and shall be available at the worksite for examination and copying by the director, and any affected employee or designated representative of employees.

(7) Respirators.

(a) Required use. The employer shall assure that respirators are used where required under this section to reduce employee exposure to within the permissible exposure limits, and in emergencies.

(b) Respirator selection. (i) Where respirators are used to reduce employee exposures to within the permissible exposure limit and in emergencies, the employer shall select and provide, at no cost to the employee, the appropriate respirator from Table I and shall assure that the employee wears the respirator provided.

(ii) The employer shall select respirators from among those approved by the National Institute for Occupational Safety and Health (NIOSH) under the provisions of WAC 296-62-071.

TABLE I

RESPIRATORY PROTECTION FOR DBCP

RESPIRATORY PROTECTION

Concentration not greater than:

100 ppb:

Any chemical cartridge respirator with pesticide cartridge(s).  
Any supplied-air respirator.  
Any self-contained cartridge breathing apparatus.

500 ppb:

A chemical cartridge respirator with full facepiece and pesticide cartridge(s).  
A gas mask with full facepiece and pesticide canister.  
Any supplied-air respirator with full facepiece, helmet or hood.  
Any self-contained breathing apparatus with full facepiece.

5,000 ppb:

A Type C supplied-air respirator operated in pressure-demand or other positive pressure or continuous flow mode.

20,000 ppb:

A Type C supplied-air respirator with full facepiece operated in pressure-demand or other positive pressure mode, or with full facepiece, hood or helmet operated in continuous flow mode.

Greater than 20,000 ppb or entry and escape from unknown concentrations:

A combination respirator which includes a Type C supplied-air respirator with full facepiece operated in pressure-demand or other positive pressure or continuous flow mode and an auxiliary self-contained breathing apparatus operated in pressure-demand or positive pressure mode.

A self-contained breathing apparatus with full facepiece operated in pressure-demand or other positive pressure mode.

Firefighting:

A self-contained breathing apparatus with full facepiece operated in pressure-demand or other positive pressure mode.

(c) Respirator program. (i) The employer shall institute a respiratory protection program in accordance with WAC 296-62-071.

(ii) Where air-purifying respirators (chemical cartridge or gas mask) are used, the air-purifying canister or cartridge(s) shall be replaced prior to the expiration of their service life or the beginning of each shift, whichever occurs first.

(iii) Employees who wear respirators shall be allowed to wash their face and respirator facepiece to prevent potential skin irritation associated with respirator use.

(8) Protective clothing and equipment.

(a) Provision and use. Where eye or skin contact with liquid or solid DBCP may occur, employers shall provide at no cost to the employee, and assure that employees wear impermeable protective clothing and equipment in accordance with WAC 296-24-07501 and 296-24-07801 to protect the area of the body which may come in contact with DBCP.

(b) Cleaning and replacement. (i) The employer shall clean, launder, maintain, or replace protective clothing and equipment required by this subsection to maintain their effectiveness. In addition, the employer shall provide clean protective clothing and equipment at least daily to each affected employee.

(ii) The employer shall assure that the employee removes all protective clothing and equipment at the completion of a workshift.

(iii) The employer shall assure that DBCP-contaminated protective work clothing and equipment is placed and stored in closed containers which prevent dispersion of DBCP outside the container.

(iv) The employer shall inform any person who launders or cleans DBCP-contaminated protective clothing or equipment of the potentially harmful effects of exposure to DBCP.

(v) The employer shall assure that the containers of contaminated protective clothing and equipment which are to be removed from the workplace for any reason are labeled in accordance with subsection (13)(c) of this section.

(vi) The employer shall prohibit the removal of DBCP from protective clothing and equipment by blowing or shaking.

(9) Housekeeping.

(a) Surfaces. (i) All surfaces shall be maintained free of accumulations of DBCP.

(ii) Dry sweeping and the use of air for the cleaning of floors and other surfaces where DBCP dust or liquids are found is prohibited.

(iii) Where vacuuming methods are selected, either portable units or a permanent system may be used.

(A) If a portable unit is selected, the exhaust shall be attached to the general workplace exhaust ventilation system or collected within the vacuum unit, equipped with high efficiency filters or other appropriate means of contaminant removal, so that DBCP is not reintroduced into the workplace air; and

(B) Portable vacuum units used to collect DBCP may not be used for other cleaning purposes and shall be labeled as prescribed by subsection (13)(c) of this section.

(iv) Cleaning of floors and other contaminated surfaces may not be performed by washing down with a hose, unless a fine spray has first been laid down.

(b) Liquids. Where DBCP is present in a liquid form, or as a resultant vapor, all containers or vessels containing DBCP shall be enclosed to the maximum extent feasible and tightly covered when not in use.

(c) Waste disposal. DBCP waste, scrap, debris, bags, containers or equipment, shall be disposed in sealed bags or other closed containers which prevent dispersion of DBCP outside the container.

(10) Hygiene facilities and practices. Hygiene facilities shall be provided and practices implemented in accordance with the requirements of WAC 296-24-12009.

(11) Medical surveillance.

(a) General. The employer shall institute a program of medical surveillance for each employee who is or will be exposed, without regard to the use of respirators, to DBCP. The employer shall provide each such employee with an opportunity for medical examinations and tests in accordance with this subsection. All medical examinations and procedures shall be performed by or under the supervision of a licensed physician, and shall be provided without cost to the employee.

(b) Frequency and content. Within 30 days of the effective date of this section or time of initial assignment, and whenever exposure to DBCP, the employer shall provide a medical examination including at least the following:

(i) A complete medical and occupational history with emphasis on reproductive history.

(ii) A complete physical examination with emphasis on the genito-urinary tract, testicle size, and body habitus including the following tests:

(A) Sperm count;

(B) Complete urinalysis (U/A);

(C) Complete blood count; and

(D) Thyroid profile.

(iii) A serum specimen shall be obtained and the following determinations made:

(A) Serum multiphasic analysis (SMA 12);

(B) Serum testosterone;

(C) Serum follicle stimulating hormone (FSH);

(D) Serum luteinizing hormone (LH).

(c) Information provided to the physician. The employer shall provide the following information to the examining physician:

(i) A copy of this standard and its appendices;

(ii) A description of the affected employee's duties as they relate to the employee's exposure;

(iii) The level of DBCP to which the employee is exposed; and

(iv) A description of any personal protective equipment used or to be used.

(d) Physician's written opinion. (i) The employer shall obtain a written opinion from the examining physician which shall include:

(A) The results of the medical tests performed;

(B) The physician's opinion as to whether the employee has any detected medical condition which would place the employee at an increased risk of material impairment of health from exposure to DBCP;

(C) Any recommended limitations upon the employee's exposure to DBCP or upon the use of protective clothing and equipment such as respirators; and

(D) A statement that the employee was informed by the physician of the results of the medical examination, and any medical conditions which require further examination or treatment.

(ii) The employer shall instruct the physician not to reveal in the written opinion specific findings or diagnoses unrelated to occupational exposure to DBCP.

(iii) The employer shall provide a copy of the written opinion to the affected employee.

(12) Employee information and training.

(a) Training program. (i) Within thirty days of the effective date of this standard, the employer shall institute a training program for all employees who may be exposed to DBCP and shall assure their participation in such training program.

(ii) The employer shall assure that each employee is informed of the following:

(A) The information contained in Appendices A, B and C<sup>(1)</sup>;

(B) The quantity, location, manner of use, release or storage of DBCP and the specific nature of operations which could result in exposure to DBCP as well as any necessary protective steps;

(C) The purpose, proper use, and limitations of respirators;

(D) The purpose and description of the medical surveillance program required by subsection (11) of this section; and

(E) A review of this standard.

(b) Access to training materials. (i) The employer shall make a copy of this standard and its appendices readily available to all affected employees.

(ii) The employer shall provide, upon request, all materials relating to the employee information and training program to the director.

(13) Signs and labels.

(a) General. (i) The employer may use labels or signs required by other statutes, regulations, or ordinances in addition to or in combination with, signs and labels required by this subsection.

(ii) The employer shall assure that no statement appears on or near any sign or label required by this subsection which contradicts or detracts from the required sign or label.

(b) Signs. (i) The employer shall post signs to clearly indicate all work areas where DBCP may be present. These signs shall bear the legend:

DANGER

1,2-Dibromo-3-chloropropane

(Insert appropriate trade or common names)

CANCER HAZARD

AUTHORIZED PERSONNEL ONLY

(ii) Where airborne concentrations of DBCP exceed the permissible exposure limits, the signs shall bear the additional legend:

RESPIRATOR REQUIRED

(c) Labels. (i) The employer shall assure that precautionary labels are affixed to all containers of DBCP and of products containing DBCP, and that the labels remain affixed when the DBCP or products containing DBCP are sold, distributed, or otherwise leave the employer's workplace. Where DBCP or products containing DBCP are sold, distributed or otherwise leave the employer's workplace bearing appropriate labels required by EPA under the regulations in 40 CFR Part 162, the labels required by this subsection need not be affixed.

(ii) The employer shall assure that the precautionary labels required by this subsection are readily visible and legible. The labels shall bear the following legend:

DANGER

1,2-Dibromo-3-chloropropane

CANCER HAZARD

#### (14) Recordkeeping.

(a) Exposure monitoring. (i) The employer shall establish and maintain an accurate record of all monitoring required by subsection (5) of this section.

(ii) This record shall include:

(A) The dates, number, duration and results of each of the samples taken, including a description of the sampling procedure used to determine representative employee exposure;

(B) A description of the sampling and analytical methods used;

(C) Type of respiratory worn, if any; and

(D) Name, social security number, and job classification of the employee monitored and of all other employees whose exposure the measurement is intended to represent.

(iii) The employer shall maintain this record for the effective period of this standard.

(b) Medical surveillance. (i) The employer shall establish and maintain an accurate record for each employee subject to medical surveillance required by subsection (11) of this section.

(ii) This record shall include:

(A) A copy of the physician's written opinion.

(B) Any employee medical complaints related to exposure to DBCP;

(C) A copy of the information provided the physician as required by subsection (11)(c) of this section; and

(D) A copy of the employee's work history.

(iii) The employer shall assure that this record be maintained for the effective period of this standard.

(c) Availability. (i) The employer shall assure that all records required to be maintained by this section be made available upon request to the director for examination and copying.

(ii) Employee exposure monitoring records and employee medical records required by this subsection shall be provided upon request to employees' designated representatives and the assistant director in accordance with WAC 296-62-05201 through 296-62-05209; and 296-62-05213 through 296-62-05217.

(d) Transfer of records. (i) If the employer ceases to do business, the successor employer shall receive and retain all records required to be maintained by this section for the prescribed period.

(ii) If the employer ceases to do business and there is no successor employer to receive and retain the records for the prescribed period, the employer shall transmit these records by mail to the director.

(iii) At the expiration of the retention period for the records required to be maintained under this section, the employer shall transmit these records by mail to the director.

(iv) The employer shall also comply with any additional requirements involving transfer of records set forth in WAC 296-62-05215.

(15) Observation of monitoring.

(a) Employee observation. The employer shall provide affected employees, or their designated representatives, an opportunity to observe any monitoring of employee exposure to DBCP conducted under subsection (5) of this section.

(b) Observation procedures. (i) Whenever observation of the measuring or monitoring of employee exposure to DBCP requires entry into an area where the use of protective clothing or equipment is required, the employer shall provide the observer with personal protective clothing or equipment required to be worn by employees working in the area, assure the use of such clothing and equipment, and require the observer to comply with all other applicable safety and health procedures.

(ii) Without interfering with the monitoring or measurement, observers shall be entitled to:

(A) Receive an explanation of the measurement procedures;

(B) Observe all steps related to the measurement of airborne concentrations of DBCP performed at the place of exposure; and

(C) Record the results obtained.

(16) Effective date. This standard will become effective 30 days after it is filed with the code reviser.

\*<sup>(1)</sup> Appendices printed in addition to this section, and information contained therein is not intended, by itself, to create any additional obligations not otherwise imposed or to detract from any existing obligations. Appendices are available from:

**WAC 296-62-07347 Inorganic arsenic.** (1) Scope and application. This section applies to all occupational exposures to inorganic arsenic except that this section does not apply to employee exposures in agriculture or resulting from pesticide application, the treatment of wood with preservatives or the utilization of arsenically preserved wood.

(2) Definitions.

(a) "Action level" - a concentration of inorganic arsenic of 5 micrograms per cubic meter of air ( $5 \mu\text{g}/\text{m}^3$ ) averaged over any eight-hour period.

(b) "Authorized person" - any person specifically authorized by the employer whose duties require the person to enter a regulated area, or any person entering such an area as a designated representative of employees for the purpose of exercising the right to observe monitoring and measuring procedures under subsection (5) of this section.

(c) "Director" - the director of the department of labor and industries, or his designated representative.

(d) "Inorganic arsenic" - copper aceto-arsenite and all inorganic compounds containing arsenic except arsine, measured as arsenic (As).

(3) Permissible exposure limit. The employer shall assure that no employee is exposed to inorganic arsenic at concentrations greater than 10 micrograms per cubic meter of air ( $10 \mu\text{g}/\text{m}^3$ ), averaged over any eight-hour period.

(4) Notification of use.

(a) By October 1, 1978, or within sixty days after the introduction of inorganic arsenic into the workplace, every employer who is required to establish a regulated area in his workplaces shall report in writing to the department of labor and industries for each such workplace:

(i) The address of each such workplace;

(ii) The approximate number of employees who will be working in regulated areas; and

(iii) A brief summary of the operations creating the exposure and the actions which the employer intends to take to reduce exposures.

(b) Whenever there has been a significant change in the information required by subsection (4)(a) of this section, the employer shall report the changes in writing within sixty days to the department of labor and industries.

(5) Exposure monitoring.

(a) General. (i) Determinations of airborne exposure levels shall be made from air samples that are representative of each employee's exposure to inorganic arsenic over an eight-hour period.

(ii) For the purposes of this section, employee exposure is that exposure which would occur if the employee were not using a respirator.

(iii) The employer shall collect full shift (for at least seven continuous hours) personal samples including at least one sample for each shift for each job classification in each work area.

(b) Initial monitoring. Each employer who has a workplace or work operation covered by this standard shall monitor each such workplace and work operation to accurately determine the airborne concentration of inorganic arsenic to which employees may be exposed.

(c) Frequency. (i) If the initial monitoring reveals employee exposure to be below the action level the measurements need not be repeated except as otherwise provided in subsection (5)(d) of this section.

(ii) If the initial monitoring, required by this section, or subsequent monitoring reveals employee exposure to be above the permissible exposure limit, the employer shall repeat monitoring at least quarterly.

(iii) If the initial monitoring, required by this section, or subsequent monitoring reveals employee exposure to be above the action level and below the permissible exposure limit the employee shall repeat monitoring at least every six months.

(iv) The employer shall continue monitoring at the required frequency until at least two consecutive measurements, taken at least seven days apart, are below the action level at which time the employer may discontinue monitoring for that employee until such time as any of the events in subsection (5)(d) of this section occur.

(d) Additional monitoring. Whenever there has been a production, process, control or personal change which may result in new or additional exposure to inorganic arsenic, or whenever the employer has any other reason to suspect a change which may result in new or additional exposures to inorganic arsenic, additional monitoring which complies with subsection (5) of this section shall be conducted.

(e) Employee notification. (i) Within five working days after the receipt of monitoring results, the employer shall notify each employee in writing of the results which represent that employee's exposures.

(ii) Whenever the results indicate that the representative employee exposure exceeds the permissible exposure limit, the employer shall include in the written notice a statement that the permissible exposure limit was exceeded and a description of the corrective action taken to reduce exposure to or below the permissible exposure limit.

(f) Accuracy of measurement. (i) The employer shall use a method of monitoring and measurement which has an accuracy (with a confidence level of 95 percent) of not less than plus or minus 25 percent for concentrations of inorganic arsenic greater than or equal to  $10 \mu\text{g}/\text{m}^3$ .

(ii) The employer shall use a method of monitoring and measurement which has an accuracy (with confidence level of 95 percent) of not less than plus or minus 35 percent for concentrations of inorganic arsenic greater than  $5 \mu\text{g}/\text{m}^3$  but less than  $10 \mu\text{g}/\text{m}^3$ .

(6) Regulated area.

(a) Establishment. The employer shall establish regulated areas where worker exposures to inorganic arsenic, without regard to the use of respirators, are in excess of the permissible limit.

(b) Demarcation. Regulated areas shall be demarcated and segregated from the rest of the workplace in any manner that minimizes the number of persons who will be exposed to inorganic arsenic.

(c) Access. Access to regulated areas shall be limited to authorized persons or to persons otherwise authorized by the Act or regulations issued pursuant thereto to enter such areas.

(d) Provision of respirators. All persons entering a regulated area shall be supplied with a respirator, selected in accordance with subsection (8)(b) of this section.

(e) Prohibited activities. The employer shall assure that in regulated areas, food or beverages are not consumed, smoking products, chewing tobacco and gum are not used and cosmetics are not applied, except that these activities may be conducted in the lunchrooms, change rooms and showers required under subsection (12) of this section. Drinking water may be consumed in the regulated area.

(7) Methods of compliance.

(a) Controls. (i) The employer shall institute at the earliest possible time but not later than December 31, 1979, engineering and work practice controls to reduce exposures to or below the permissible exposure limit, except to the extent that the employer can establish that such controls are not feasible.

(ii) Where engineering and work practice controls are not sufficient to reduce exposures to or below the permissible exposure limit, they shall nonetheless be used to reduce exposures to the lowest levels achievable by these controls and shall be supplemented by the use of respirators in accordance with subsection (8) of this section and other necessary personal protective equipment. Employee rotation is not required as a control strategy before respiratory protection is instituted.

(b) Compliance program. (i) The employer shall establish and implement a written program to reduce exposures to or below the permissible exposure limit by means of engineering and work practice controls.

(ii) Written plans for these compliance programs shall include at least the following:

(A) A description of each operation in which inorganic arsenic is emitted; e.g., machinery used, material

processed, controls in place, crew size, operating procedures and maintenance practices;

(B) Engineering plans and studies used to determine methods selected for controlling exposure to inorganic arsenic;

(C) A report of the technology considered in meeting the permissible exposure limit;

(D) Monitoring data;

(E) A detailed schedule for implementation of the engineering controls and work practices that cannot be implemented immediately and for the adaptation and implementation of any additional engineering and work practices necessary to meet the permissible exposure limit;

(F) Whenever the employer will not achieve the permissible exposure limit with engineering controls and work practices by December 31, 1979, the employer shall include in the compliance plan an analysis of the effectiveness of the various controls, shall install engineering controls and institute work practices on the quickest schedule feasible, and shall include in the compliance plan and implement a program to minimize the discomfort and maximize the effectiveness of respirator use; and

(G) Other relevant information.

(iii) Written plans for such a program shall be submitted upon request to the director, and shall be available at the worksite for examination and copying by the director, any affected employee or authorized employee representatives.

(iv) The plans required by this subsection shall be revised and updated at least every six months to reflect the current status of the program.

(8) Respiratory protection.

(a) General. The employer shall assure that respirators are used where required under this section to reduce employee exposures to below the permissible exposure limit and in emergencies. Respirators shall be used in the following circumstances:

(i) During the time period necessary to install or implement feasible engineering or work practice controls;

(ii) In work operations such as maintenance and repair activities in which the employer establishes that engineering and work practice controls are not feasible;

(iii) In work situations in which engineering controls and supplemental work practice controls are not yet sufficient to reduce exposures to or below the permissible exposure limit; or

(iv) In emergencies.

(b) Respirator selection. (i) Where respirators are required under this section the employer shall select, provide at no cost to the employee and assure the use of the appropriate respirator or combination of respirators from Table I for inorganic arsenic compounds without significant vapor pressure, or Table II for inorganic arsenic compounds which have significant vapor pressure.

(ii) Where employee exposures exceed the permissible exposure limit for inorganic arsenic and also exceed the relevant limit for particular gasses such as sulfur

dioxide, any air purifying respirator supplied to the employee as permitted by this standard must have a combination high efficiency filter with an appropriate gas sorbent. (See footnote in Table I)

TABLE I

RESPIRATORY PROTECTION FOR INORGANIC ARSENIC PARTICULATE EXCEPT FOR THOSE WITH SIGNIFICANT VAPOR PRESSURE

Concentration of Inorganic Arsenic (as As) or Condition of Use.	Required Respirator
(i) Unknown or greater or lesser than 20,000 $\mu\text{g}/\text{m}^3$ (20 $\text{mg}/\text{m}^3$ ) or firefighting.	(A) Any full facepiece self-contained breathing apparatus operated in positive pressure mode.
(ii) Not greater than 20,000 $\mu\text{g}/\text{m}^3$ (20 $\text{mg}/\text{m}^3$ )	(A) Supplied air respirator with full facepiece, hood, or helmet or suit and operated in positive pressure mode.
(iii) Not greater than 10,000 $\mu\text{g}/\text{m}^3$ (10 $\text{mg}/\text{m}^3$ )	(A) Powered air-purifying respirators in all inlet face coverings with high-efficiency filters. <sup>1</sup> (B) Half-mask supplied air respirators operated in positive pressure mode.
(iv) Not greater than 500 $\mu\text{g}/\text{m}^3$	(A) Full facepiece air-purifying respirator equipped with high-efficiency filter. <sup>1</sup> (B) Any full facepiece supplied air respirator. (C) Any full facepiece self-contained breathing apparatus.
(v) Not greater than 100 $\mu\text{g}/\text{m}^3$	(A) Half-mask air-purifying respirator equipped with high-efficiency filter. <sup>1</sup> (B) Any half-mask supplied air respirator.

<sup>1</sup>High-efficiency filter—99.97 pct efficiency against 0.3 micrometer monodisperse diethyl-hexyl phthalate (DOP) particles.

TABLE II

RESPIRATORY PROTECTION FOR INORGANIC ARSENICALS (SUCH AS ARSENIC TRICHLORIDE<sup>2</sup> AND ARSENIC PHOSPHIDE) WITH SIGNIFICANT VAPOR PRESSURE

Concentration of Inorganic Arsenic (as As) or Condition of Use	Required Respirator
(i) Unknown or greater or lesser than 20,000 $\mu\text{g}/\text{m}^3$ (20 $\text{mg}/\text{m}^3$ ) or firefighting.	(A) Any full facepiece contained breathing apparatus operated in positive pressure mode.
(ii) Not greater than 20,000 $\mu\text{g}/\text{m}^3$ (20 $\text{mg}/\text{m}^3$ )	(A) Supplied air respirator with full facepiece hood, or helmet or suit and operated in positive pressure mode.
(iii) Not greater than 10,000 $\mu\text{g}/\text{m}^3$ (10 $\text{mg}/\text{m}^3$ )	(A) Half-mask <sup>2</sup> supplied air respirator operated in positive pressure mode.

[Title 296 WAC—p 1226]

Concentration of Inorganic Arsenic (as As) or Condition of Use

Required Respirator

- |  |  |
|--|--|
| (iv) Not greater than 500 $\mu\text{g}/\text{m}^3$ | (A) Front or back mounted gas mask equipped with high-efficiency filter <sup>1</sup> and acid gas canister. (B) Any full facepiece supplied air respirator. (C) Any full facepiece self-contained breathing apparatus. |
| (v) Not greater than 100 $\mu\text{g}/\text{m}^3$  | (A) Half-mask <sup>2</sup> air-purifying respirator equipped with high-efficiency filter <sup>1</sup> and acid gas cartridge. (B) Any half-mask supplied air respirator.   |

<sup>1</sup>High efficiency filter—99.97 pct efficiency against 0.3 micrometer monodisperse diethyl-hexyl phthalate (DOP) particles.

<sup>2</sup>Half-mask respirators shall not be used for protection against arsenic trichloride, as it is rapidly absorbed through the skin.

(iii) The employer shall select respirators from among those approved for protection against dust, fume, and mist by the National Institute for Occupational Safety and Health (NIOSH) under the provisions of 30 CFR Part 11.

(c) Respirator usage. (i) The employer shall assure that the respirator issued to the employee exhibits minimum facepiece leakage and that the respirator is fitted properly.

(ii) The employer shall perform qualitative fit tests at the time of initial fitting and at least semi-annually thereafter for each employee wearing respirators, where quantitative fit tests are not required.

(iii) Employers with more than twenty employees wearing respirators shall perform a quantitative face fit test at the time of initial fitting and at least semi-annually thereafter for each employee wearing negative pressure respirators. The test shall be used to select facepieces that provide the required protection as prescribed in Table I or II.

(iv) If an employee has demonstrated difficulty in breathing during the fitting test or during use, he or she shall be examined by a physician trained in pulmonary medicine to determine whether the employee can wear a respirator while performing the required duty.

(d) Respirator program. (i) The employer shall institute a respiratory protection program in accordance with WAC 296-62-071.

(ii) The employer shall permit each employee who uses a filter respirator to change the filter elements whenever an increase in breathing resistance is detected and shall maintain an adequate supply of filter elements for this purpose.

(iii) Employees who wear respirators shall be permitted to leave work areas to wash their face and respirator facepiece to prevent skin irritation associated with respirator use.

(e) Commencement of respirator use. (i) The employer's obligation to provide respirators commences on August 1, 1978, for employees exposed over 500  $\mu\text{g}/\text{m}^3$  of

inorganic arsenic, as soon as possible but not later than October 1, 1978, for employees exposed to over 50  $\mu\text{g}/\text{m}^3$  of inorganic arsenic, and as soon as possible but not later than December 1, 1978, for employees exposed between 10 and 50  $\mu\text{g}/\text{m}^3$  of inorganic arsenic.

(ii) Employees with exposures below 50  $\mu\text{g}/\text{m}^3$  of inorganic arsenic may choose not to wear respirators until December 31, 1979.

(iii) After December 1, 1978, any employee required to wear air purifying respirators may choose, and if so chosen the employer must provide, if it will give proper protection, a powered air purifying respirator and in addition if necessary a combination dust and acid gas respirator for times where exposures to gases are over the relevant exposure limits.

(9) RESERVED.

(10) Protective work clothing and equipment.

(a) Provision and use. Where the possibility of skin or eye irritation from inorganic arsenic exists, and for all workers working in regulated areas, the employer shall provide at no cost to the employee and assure that employees use appropriate and clean protective work clothing and equipment such as, but not limited to:

(i) Coveralls or similar full-body work clothing;

(ii) Gloves, and shoes or coverlets;

(iii) Face shields or vented goggles when necessary to prevent eye irritation, which comply with the requirements of WAC 296-24-07801(1) - (6).

(iv) Impervious clothing for employees subject to exposure to arsenic trichloride.

(b) Cleaning and replacement. (i) The employer shall provide the protective clothing required in subsection (10)(a) of this section in a freshly laundered and dry condition at least weekly, and daily if the employee works in areas where exposures are over 100  $\mu\text{g}/\text{m}^3$  of inorganic arsenic or in areas where more frequent washing is needed to prevent skin irritation.

(ii) The employer shall clean, launder, or dispose of protective clothing required by subsection (10)(a) of this section.

(iii) The employer shall repair or replace the protective clothing and equipment as needed to maintain their effectiveness.

(iv) The employer shall assure that all protective clothing is removed at the completion of a work shift only in change rooms prescribed in subsection (13)(a) of this section.

(v) The employer shall assure that contaminated protective clothing which is to be cleaned, laundered, or disposed of, is placed in a closed container in the change-room which prevents dispersion of inorganic arsenic outside the container.

(vi) The employer shall inform in writing any person who cleans or launders clothing required by this section, of the potentially harmful effects including the carcinogenic effects of exposure to inorganic arsenic.

(vii) The employer shall assure that the containers of contaminated protective clothing and equipment in the workplace or which are to be removed from the workplace are labeled as follows:

**Caution:** Clothing contaminated with inorganic arsenic; do not remove dust by blowing or shaking. Dispose of inorganic arsenic contaminated wash water in accordance with applicable local, state, or federal regulations.

(viii) The employer shall prohibit the removal of inorganic arsenic from protective clothing or equipment by blowing or shaking.

(11) Housekeeping.

(a) Surfaces. All surfaces shall be maintained as free as practicable of accumulations of inorganic arsenic.

(b) Cleaning floors. Floors and other accessible surfaces contaminated with inorganic arsenic may not be cleaned by the use of compressed air, and shoveling and brushing may be used only where vacuuming or other relevant methods have been tried and found not to be effective.

(c) Vacuuming. Where vacuuming methods are selected, the vacuums shall be used and emptied in a manner to minimize the reentry of inorganic arsenic into the workplace.

(d) Housekeeping plan. A written housekeeping and maintenance plan shall be kept which shall list appropriate frequencies for carrying out housekeeping operations, and for cleaning and maintaining dust collection equipment. The plan shall be available for inspection by the director.

(e) Maintenance of equipment. Periodic cleaning of dust collection and ventilation equipment and checks of their effectiveness shall be carried out to maintain the effectiveness of the system and a notation kept of the last check of effectiveness and cleaning or maintenance.

(12) RESERVED.

(13) Hygiene facilities and practices.

(a) Change rooms. The employer shall provide for employees working in regulated areas or subject to the possibility of skin or eye irritation from inorganic arsenic, clean change rooms equipped with storage facilities for street clothes and separate storage facilities for protective clothing and equipment in accordance with WAC 296-24-12011.

(b) Showers. (i) The employer shall assure that employees working in regulated areas or subject to the possibility of skin or eye irritation from inorganic arsenic shower at the end of the work shift.

(ii) The employer shall provide shower facilities in accordance with WAC 296-24-12009(3).

(c) Lunchrooms. (i) The employer shall provide for employees working in regulated areas, lunchroom facilities which have a temperature controlled, positive pressure, filtered air supply, and which are readily accessible to employees working in regulated areas.

(ii) The employer shall assure that employees working in the regulated area or subject to the possibility of skin or eye irritation from exposure to inorganic arsenic wash their hands and face prior to eating.

(d) Lavatories. The employer shall provide lavatory facilities which comply with WAC 296-24-12009 (1) and (2).

(e) Vacuuming clothes. The employer shall provide facilities for employees working in areas where exposure,

without regard to the use of respirators, exceeds 100  $\mu\text{g}/\text{m}^3$  to vacuum their protective clothing and clean or change shoes worn in such areas before entering change rooms, lunchrooms or shower rooms required by subsection (10) of this section and shall assure that such employees use such facilities.

(f) Avoidance of skin irritation. The employer shall assure that no employee is exposed to skin or eye contact with arsenic trichloride, or to skin or eye contact with liquid or particulate inorganic arsenic which is likely to cause skin or eye irritation.

(14) Medical surveillance.

(a) General. (i) Employees covered. The employer shall institute a medical surveillance program for the following employees:

(A) All employees who are or will be exposed above the action level, without regard to the use of respirators, at least thirty days per year; and

(B) All employees who have been exposed above the action level, without regard to respirator use, for thirty days or more per year for a total of ten years or more of combined employment with the employer or predecessor employers prior to or after the effective date of this standard. The determination of exposures prior to the effective date of this standard shall be based upon prior exposure records, comparison with the first measurements taken after the effective date of this standard, or comparison with records of exposures in areas with similar processes, extent of engineering controls utilized and materials used by that employer.

(ii) Examination by physician. The employer shall assure that all medical examinations and procedures are performed by or under the supervision of a licensed physician, and shall be provided without cost to the employee, without loss of pay and at a reasonable time and place.

(b) Initial examinations. By December 1, 1978, for employees initially covered by the medical provisions of this section, or thereafter at the time of initial assignment to an area where the employee is likely to be exposed over the action level at least thirty days per year, the employer shall provide each affected employee an opportunity for a medical examination, including at least the following elements:

(i) A work history and a medical history which shall include a smoking history and the presence and degree of respiratory symptoms such as breathlessness, cough, sputum production and wheezing.

(ii) A medical examination which shall include at least the following:

(A) A 14" by 17" posterior-anterior chest x-ray and International Labor Office UICC/Cincinnati (ILO U/C) rating;

(B) A nasal and skin examination;

(C) A sputum cytology examination; and

(D) Other examinations which the physician believes appropriate because of the employees exposure to inorganic arsenic or because of required respirator use.

(c) Periodic examinations. (i) The employer shall provide the examinations specified in subsections (14)(b)(i) and (14)(b)(ii)(A), (B) and (D) of this section at least

annually for covered employees who are under forty-five years of age with fewer than ten years of exposure over the action level without regard to respirator use.

(ii) The employer shall provide the examinations specified in subsections (14)(b)(i) and (ii) of this section at least semi-annually for other covered employees.

(iii) Whenever a covered employee has not taken the examinations specified in subsection (14)(b)(i) and (ii) of this section within six months preceding the termination of employment, the employer shall provide such examinations to the employee upon termination of employment.

(d) Additional examinations. If the employee for any reason develops signs or symptoms commonly associated with exposure to inorganic arsenic the employer shall provide an appropriate examination and emergency medical treatment.

(e) Information provided to the physician. The employer shall provide the following information to the examining physician:

(i) A copy of this standard and its appendices;

(ii) A description of the affected employee's duties as they relate to the employee's exposure;

(iii) The employee's representative exposure level or anticipated exposure level;

(iv) A description of any personal protective equipment used or to be used; and

(v) Information from previous medical examinations of the affected employee which is not readily available to the examining physician.

(f) Physician's written opinion. (i) The employer shall obtain a written opinion from the examining physician which shall include:

(A) The results of the medical examination and tests performed;

(B) The physician's opinion as to whether the employee has any detected medical conditions which would place the employee at increased risk of material impairment of the employee's health from exposure to inorganic arsenic;

(C) Any recommended limitations upon the employee's exposure to inorganic arsenic or upon the use of protective clothing or equipment such as respirators; and

(D) A statement that the employee has been informed by the physician of the results of the medical examination and any medical conditions which require further explanation or treatment.

(ii) The employer shall instruct the physician not to reveal in the written opinion specific findings or diagnoses unrelated to occupational exposure.

(iii) The employer shall provide a copy of the written opinion to the affected employee.

(15) Employee information and training.

(a) Training program. (i) The employer shall institute a training program for all employees who are subject to exposure to inorganic arsenic above the action level without regard to respirator use, or for whom there is the possibility of skin or eye irritation from inorganic arsenic. The employer shall assure that those employees participate in the training program.

(ii) The training program shall be provided by October 1, 1978 for employees covered by this provision, at the time of initial assignment for those subsequently covered by this provision, and shall be repeated at least quarterly for employees who have optional use of respirators and at least annually for other covered employees thereafter, and the employer shall assure that each employee is informed of the following:

(A) The information contained in Appendix A;

(B) The quantity, location, manner of use, storage, sources of exposure, and the specific nature of operations which could result in exposure to inorganic arsenic as well as any necessary protective steps;

(C) The purpose, proper use, and limitation of respirators;

(D) The purpose and a description of medical surveillance program as required by subsection (14) of this section;

(E) The engineering controls and work practices associated with the employee's job assignment; and

(F) A review of this standard.

(b) Access to training materials. (i) The employer shall make readily available to all affected employees a copy of this standard and its appendices.

(ii) The employer shall provide, upon request, all materials relating to the employee information and training program to the director.

(16) Signs and labels.

(a) General. (i) The employer may use labels or signs required by other statutes, regulations, or ordinances in addition to, or in combination with, signs and labels required by this subsection.

(ii) The employer shall assure that no statement appears on or near any sign or label required by this subsection which contradicts or detracts from the meaning of the required sign or label.

(b) Signs. (i) The employer shall post signs demarcating regulated areas bearing the legend:

DANGER  
INORGANIC ARSENIC  
CANCER HAZARD  
AUTHORIZED PERSONNEL ONLY  
NO SMOKING OR EATING  
RESPIRATOR REQUIRED

(ii) The employer shall assure that signs required by this subsection are illuminated and cleaned as necessary so that the legend is readily visible.

(c) Labels. The employer shall apply precautionary labels to all shipping and storage containers of inorganic arsenic, and to all products containing inorganic arsenic except when the inorganic arsenic in the product is bound in such a manner so as to make unlikely the possibility of airborne exposure to inorganic arsenic. (Possible examples of products not requiring labels are semiconductors, light emitting diodes and glass.) The label shall bear the following legend:

DANGER  
CONTAINS INORGANIC ARSENIC  
CANCER HAZARD  
HARMFUL IF INHALED OR  
SWALLOWED  
USE ONLY WITH ADEQUATE  
VENTILATION  
OR RESPIRATORY PROTECTION

(17) Recordkeeping.

(a) Exposure monitoring. (i) The employer shall establish and maintain an accurate record of all monitoring required by subsection (5) of this section.

(ii) This record shall include:

(A) The date(s), number, duration location, and results of each of the samples taken, including a description of the sampling procedure used to determine representative employee exposure where applicable;

(B) A description of the sampling and analytical methods used and evidence of their accuracy;

(C) The type of respiratory protective devices worn, if any;

(D) Name, social security number, and job classification of the employees monitored and of all other employees whose exposure the measurement is intended to represent; and

(E) The environmental variables that could affect the measurement of the employee's exposure.

(iii) The employer shall maintain these monitoring records for at least forty years or for the duration of employment plus twenty years, whichever is longer.

(b) Medical surveillance. (i) The employer shall establish and maintain an accurate record for each employee subject to medical surveillance as required by subsection (14) of this section.

(ii) This record shall include:

(A) The name, social security number, and description of duties of the employee;

(B) A copy of the physician's written opinions;

(C) Results of any exposure monitoring done for that employee and the representative exposure levels supplied to the physician; and

(D) Any employee medical complaints related to exposure to inorganic arsenic.

(iii) The employer shall in addition keep, or assure that the examining physician keeps, the following medical records:

(A) A copy of the medical examination results including medical and work history required under subsection (14) of this section;

(B) A description of the laboratory procedures and a copy of any standards or guidelines used to interpret the test results or references to that information;

(C) The initial x-ray;

(D) The x-rays for the most recent five years;

(E) Any x-rays with a demonstrated abnormality and all subsequent x-rays;

(F) The initial cytologic examination slide and written description;

(G) The cytologic examination slide and written description for the most recent five years; and

(H) Any cytologic examination slides with demonstrated atypia, if such atypia persists for three years, and all subsequent slides and written descriptions.

(iv) The employer shall maintain or assure that the physician maintains those medical records for at least forty years, or for the duration of employment, plus twenty years, whichever is longer.

(c) Availability. (i) The employer shall make available upon request all records required to be maintained by subsection (17) of this section to the director for examination and copying.

(ii) Records required by this subsection shall be provided upon request to employees, designated representatives, and the assistant director in accordance with WAC 296-62-05201 through 296-62-05209 and 296-62-05213 through 296-62-05217.

(iii) The employer shall make available upon request an employee's medical records and exposure records representative of that employee's exposure required to be maintained by subsection (17) of this section to the affected employee or former employee or to a physician designated by the affected employee or former employee.

(d) Transfer of records. (i) Whenever the employer ceases to do business, the successor employer shall receive and retain all records required to be maintained by this section.

(ii) Whenever the employer ceases to do business and there is no successor employer to receive and retain the records required to be maintained by this section for the prescribed period, these records shall be transmitted to the director.

(iii) At the expiration of the retention period for the records required to be maintained by this section, the employer shall notify the director at least three months prior to the disposal of such records and shall transmit those records to the director if he requests them within that period.

(iv) The employer shall also comply with any additional requirements involving transfer of records set forth in WAC 296-62-05215.

(18) Observation of monitoring.

(a) Employee observation. The employer shall provide affected employees or their designated representatives an opportunity to observe any monitoring of employee exposure to inorganic arsenic conducted pursuant to subsection (5) of this section.

(b) Observation procedures. (i) Whenever observation of the monitoring of employee exposure to inorganic arsenic requires entry into an area where the use of respirators, protective clothing, or equipment is required, the employer shall provide the observer with and assure the use of such respirators, clothing, and such equipment, and shall require the observer to comply with all other applicable safety and health procedures.

(ii) Without interfering with the monitoring, observers shall be entitled to;

(A) Receive an explanation of the measurement procedures;

(B) Observe all steps related to the monitoring of inorganic arsenic performed at the place of exposure; and

(C) Record the results obtained or receive copies of the results when returned by the laboratory.

(19) Effective date. This standard shall become effective thirty days after filing with the code reviser.

(20) Appendices. The information contained in the appendices to this section is not intended by itself, to create any additional obligations not otherwise imposed by this standard nor detract from any existing obligation.

(21) Startup dates.

(a) General. The startup dates of requirements of this standard shall be the effective date of this standard unless another startup date is provided for, either in other subsections of this section or in this subsection.

(b) Monitoring. Initial monitoring shall be commenced by August 1, 1978, and shall be completed by September 15, 1978.

(c) Regulated areas. Regulated areas required to be established as a result of initial monitoring shall be set up as soon as possible after the results of that monitoring is known and no later than October 1, 1978.

(d) Compliance program. The written program required by subsection (7)(b) as a result of initial monitoring shall be made available for inspection and copying as soon as possible and no later than December 1, 1978.

(e) Hygiene and lunchroom facilities. Construction plans for change-rooms, showers, lavatories, and lunchroom facilities shall be completed no later than December 1, 1978, and these facilities shall be constructed and in use no later than July 1, 1979. However, if as part of the compliance plan it is predicted by an independent engineering firm that engineering controls and work practices will reduce exposures below the permissible exposure limit by December 31, 1979, for affected employees, then such facilities need not be completed until one year after the engineering controls are completed or December 31, 1980, whichever is earlier, if such controls have not in fact succeeded in reducing exposure to below the permissible exposure limit.

(f) Summary of startup dates set forth elsewhere in this standard.

STARTUP DATES

August 1, 1978 – Respirator use over 500  $\mu\text{g}/\text{m}^3$ .

AS SOON AS POSSIBLE BUT NO LATER THAN

September 15, 1978 – Completion of initial monitoring.  
October 1, 1978 – Complete establishment of regulated areas. Respirator use for employees exposed above 50  $\mu\text{g}/\text{m}^3$ . Completion of initial training. Notification of use.

December 1, 1978 – Respirator use over 10  $\mu\text{g}/\text{m}^3$ .  
Completion of initial medical. Completion of compliance plan. Optional use of powered air-purifying respirators.

July 1, 1979 – Completion of lunch rooms and hygiene facilities.

December 31, 1979 – Completion of engineering controls.

All other requirements of the standard have as their startup date August 1, 1978.

[Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-18-029 (Order 81-21), § 296-62-07347, filed 8/27/81; 81-16-015 (Order 81-20), § 296-62-07347, filed 7/27/81; 79-08-115 (Order 79-9), § 296-62-07347, filed 7/31/79; 79-02-037 (Order 79-1), § 296-62-07347, filed 1/23/79.]

#### WAC 296-62-075 Air contaminants.

[Order 73-3, § 296-62-075, filed 5/7/73.] See WAC 296-62-07501 through 296-62-07517.

**WAC 296-62-07501 Airborne contaminants.** (1) Permissible exposure limits (PELs) refer to airborne concentrations of substances without regard to the use of respiratory protection and represent conditions under which it is believed that nearly all workers may be repeatedly exposed day after day without adverse effect. Because of wide variation in individual susceptibility, however, a small percentage of workers may experience discomfort from some substances at concentrations at or below the permissible limit, a smaller percentage may be affected more seriously by aggravation of a pre-existing condition or by development of an occupational illness.

(2) Permissible exposure limits refer to time-weighted concentrations for an 8-hour workday within a 40-hour workweek.

The time-weighted average exposure for an 8-hour work shift shall be computed as follows:

$$E = \frac{C_a T_a + C_b T_b + \dots + C_n T_n}{8}$$

where:

E is the equivalent exposure for the working shift.

C is the concentration during any period of time T where the concentration remains constant.

T is the duration in hours of the exposure at the concentration C.

The value of E shall not exceed the eight-hour time-weighted average limit in Tables 1, 2 or 3 (see WAC 296-62-07515), for the material involved.

#### (3) Methods of compliance:

(a) To achieve compliance with these standards, the employer shall determine and implement feasible administrative or engineering controls.

(b) When administrative or engineering controls are not feasible to achieve full compliance, they shall nonetheless be used to reduce exposures to the lowest levels achievable by these controls.

(c) Any control equipment or technical measure utilized for the purpose of complying with WAC 296-62-07501(3) must be approved for each particular use by a competent industrial hygienist or other technically qualified person.

(d) Upon request, the employer shall prepare and submit a written compliance plan to the director. This plan must include a description of the manner in which

compliance will be achieved with respect to cited violations of WAC 296-62-07501(3), and shall include proposed abatement methods, anticipated completion dates, and provision for progress reports to be sent to the department.

(4) An employee's exposure to any substance in Tables 1 and 3 (see WAC 296-62-07515), the name of which is not preceded by a "C," shall not exceed the excursion level limit which is computed by multiplying the appropriate factor below times eight-hour time-weighted average for the substance in the applicable table.

PEL > 0-1	(ppm or mg/M <sup>3</sup> ), Excursion Factor = 3
PEL > 1-10	(ppm or mg/M <sup>3</sup> ), Excursion Factor = 2
PEL > 10-100	(ppm or mg/M <sup>3</sup> ), Excursion Factor = 1.5
PEL > 100-1000	(ppm or mg/M <sup>3</sup> ), Excursion Factor = 1.25
PEL > 1000	(ppm or mg/M <sup>3</sup> ), Excursion Factor = 1

(5) Permissible limits are based on the best available information from industrial experience, from experimental human and animal studies, and, when possible, from a combination of the three. The basis on which the values are established may differ from substance to substance; protection against impairment of health may be a guiding factor for some, whereas reasonable freedom from irritation, narcosis, nuisance or other forms of stress may form the basis for others.

(6) The limits based on physical irritation shall be considered no less binding than those based on physical impairment. There is increasing evidence that physical irritation may initiate, promote or accelerate physical impairment through interaction with other chemical or biologic agents.

(7) In spite of the fact that serious injury is not believed likely as a result of exposure to the permissible limit concentrations, the best practice is to maintain concentrations of all atmospheric contaminants as low as is practical.

(8) These limits are intended for use in the practice of industrial hygiene and should be interpreted and applied only by a technically qualified person. [Statutory Authority: RCW 49.17.040 and 49.17.050. 82-03-023 (Order 82-1), § 296-62-07501, filed 1/15/82. Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 81-16-015 (Order 81-20), § 296-62-07501, filed 7/27/81; 80-11-010 (Order 80-14), § 296-62-07501, filed 8/8/80; Order 73-3, § 296-62-07501, filed 5/7/73.]

**WAC 296-62-07503 Ceiling vs time-weighted average limits.** (1) Although the time-weighted average concentration provides the most satisfactory, practical way of monitoring airborne agents for compliance with the limits, there are certain substances for which it is inappropriate. In the latter group are substances which are predominantly fast acting and whose permissible limit is based on this particular response. Substances with this type of response are controlled by a ceiling "C" limit that shall not be exceeded. It is implicit in these definitions that the manner of sampling to determine compliance with the limits for each group must differ; a single brief sample, that is applicable to a "C" limit, is not appropriate to the time-weighted limit; here, a sufficient

number of samples are needed to determine a time-weighted average concentration throughout a complete cycle of operations or throughout the work shift.

(2) Whereas the ceiling limit places a definite boundary which concentrations shall not be permitted to exceed, the time-weighted average limit requires an explicit limit to the excursions that are permissible above the listed values. The magnitude of these excursions are limited by an appropriate factor shown in WAC 296-62-07501(4). [Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 80-11-010 (Order 80-14), § 296-62-07503, filed 8/8/80; Order 73-3, § 296-62-07503, filed 5/7/73.]

**WAC 296-62-07505 "Skin" notation.** Listed substances followed by the designation "skin" refer to the potential contribution to the overall exposure by the cutaneous route including mucous membranes and eye, either by airborne, or more particularly, by direct contact with the substance. Vehicles can alter skin absorption. Measures for the prevention of cutaneous absorption so that the permissible limit is not invalidated shall be taken. [Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 80-11-010 (Order 80-14), § 296-62-07505, filed 8/8/80; Order 73-3, § 296-62-07505, filed 5/7/73.]

**WAC 296-62-07507 Mixtures.** Special consideration shall be given to assessing the health hazards associated with exposure to mixtures of two or more substances which have similar health effects. In case of a mixture of air-contaminants compute the equivalent exposure as follows:

$$E_m = \frac{C_1}{L_1} + \frac{C_2}{L_2} + \dots + \frac{C_n}{L_n}$$

Where:

$E_m$  is the equivalent exposure for the mixture.

$C$  is the concentration of a particular contaminant.

$L$  is the exposure limit for that contaminant, from table 1, 2, or 3.

The value of  $E_m$  shall not exceed unity (1).

[Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 80-11-010 (Order 80-14), § 296-62-07507, filed 8/8/80; Order 73-3, § 296-62-07507, filed 5/7/73.]

**WAC 296-62-07509 Nuisance dusts.** (1) In contrast to fibrogenic dusts which cause scar tissue to be formed in lungs when inhaled in excessive amounts, so-called "nuisance" dusts have a long history of little adverse effect on lungs and do not produce significant organic disease or toxic effect when exposures are kept under reasonable control. The nuisance dusts have also been called (biologically) "inert" dusts, but the latter term is inappropriate to the extent that there is no dust which does not evoke some cellular response in the lung when inhaled in sufficient amount. However, the lung-tissue reaction caused by inhalation of nuisance dusts has the following characteristics:

(a) The architecture of the air spaces remains intact,  
(b) Collagen (scar tissue) is not formed to a significant extent,

(c) The tissue reaction is potentially reversible.

(2) Excessive concentrations of nuisance dusts in the workroom air may seriously reduce visibility, may cause unpleasant deposits in the eyes, ears and nasal passages, or cause injury to the skin or mucous membranes by chemical or mechanical action per se or by the rigorous skin cleansing procedures necessary for their removal.

(3) A permissible limit of 10 milligrams per cubic meter, of total dust < 1% SiO<sub>2</sub>, is mandatory for substances in these categories and for which no specific permissible limits have been assigned. This limit, for a normal workday, does not apply to brief exposures at higher concentrations. Neither does it apply to those substances which may cause physiologic impairment at lower concentrations but for which a threshold limit has not yet been adopted. [Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 80-11-010 (Order 80-14), § 296-62-07509, filed 8/8/80; Order 73-3, § 296-62-07509, filed 5/7/73.]

**WAC 296-62-07510 Total particulate.** Total particulate exposure shall not exceed a permissible limit of 10 milligrams per cubic meter (mg/M<sup>3</sup>) of air. The use of this eight-hour time-weighted-average exposure limit does not preclude the application of other applicable limits in WAC 296-62-075 through 296-62-07515. Nor does it preclude the use of WAC 296-62-060 when substances not specifically listed in Table 1, 2 and 3 are found to require a lower limit. This section does, however, limit the combined total concentration of all particulate contaminants whether or not specifically listed in Tables 1, 2 and 3. [Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 80-11-010 (Order 80-14), § 296-62-07510, filed 8/8/80.]

**WAC 296-62-07511 Simple asphyxiants.** "Inert" gases or vapors. A number of gases and vapors when present in high concentrations in air act primarily as simple asphyxiants without other significant physiologic effects. A PEL may not be established for each simple asphyxiant because the limiting factor is the available oxygen. The minimal oxygen content shall be 18 percent by volume under normal atmospheric pressure (equivalent to a partial pressure, pO<sub>2</sub> of 135 mm Hg). Atmospheres deficient in O<sub>2</sub> do not provide adequate warning and most simple asphyxiants are odorless. Several simple asphyxiants present an explosion hazard. Account shall be taken of this factor in limiting the concentration of the asphyxiant. [Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 80-11-010 (Order 80-14), § 296-62-07511, filed 8/8/80; Order 73-3, § 296-62-07511, filed 5/7/73.]

**WAC 296-62-07513 Physical factors.** It is recognized that such physical factors as heat, ultraviolet and ionizing radiation, humidity, abnormal pressure and the

like may place added stress on the body so that the effects from exposure at a permissible limit may be altered. Most of these stresses act adversely to increase the toxic response of a substance. Although most permissible limits have built-in safety factors to guard against adverse effects to moderate deviations from normal environments, the safety factors of most substances are not of such a magnitude as to take care of gross deviations. [Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 80-11-010 (Order 80-14), § 296-62-07513, filed 8/8/80; Order 73-3, § 296-62-07513, filed 5/7/73.]

**WAC 296-62-07515 Control of chemical agents.** Chemical agents shall be controlled in such a manner that the workers exposure shall not exceed the applicable limits in WAC 296-62-075 through 296-62-07515.

TABLE 1

## PERMISSIBLE EXPOSURE LIMITS (PEL)

Substance	ppm (See note a)	mg/M <sup>3</sup> (See note b)
Abate	—	10
Acetaldehyde	200	360
Acetic acid	10	25
Acetic anhydride	5	20
Acetone	1,000	2,400
Acetonitrile	40	70
Acetylene	Simple	Asphyxiant
Acetylene dichloride, see 1,2-Dichloroethylene		
Acetylene tetrabromide	1	14
Acrolein	0.1	0.25
Acrylamide—Skin	—	0.3
Aldrin—Skin	—	0.25
Allyl alcohol—Skin	2	3
Allyl chloride	1	5
C Allyl glycidyl ether (AGE)	10	45
Allyl propyl disulfide	2	12
Alundum (Al <sub>2</sub> O <sub>3</sub> )	—	10
2-Aminoethanol, see Ethanolamine		
2-Aminopyridine	0.5	2
Ammonia	50	35
Ammonium chloride, fume	—	10
Ammonium sulfamate (Ammate)	—	10
n-Amyl acetate	100	525
sec-Amyl acetate	125	650
Aniline—Skin	5	19
Anisidine (o, p-isomers)—Skin	—	0.5
Antimony & Compounds (as Sb)	—	0.5
ANTU (alpha Naphthyl thiourea)	—	0.3
Argon	Simple	Asphyxiant
Arsenic & Compounds (as As) which are exempt from WAC 296-62-07347	—	0.5
Arsine	0.05	0.2
Asphalt (petroleum) fumes	—	5
Azinphos methyl—Skin	—	0.2
Barium (soluble compounds)	—	0.5
p-Benzoquinone, see Quinone		
Benzoyl peroxide	—	5
Benzyl chloride	1	5

Zinc oxide fume	—	5
Zirconium compounds (as Zr)	—	5

a) Parts of vapor or gas per million parts of contaminated air by volume at 25°C and 760 mm. Hg. pressure.

b) Approximate milligrams of substance per cubic meter of air.

d) An atmospheric concentration of not more than 0.02 ppm, or personal protection may be necessary to avoid headache.

e) <5-7 μm in diameter.

f) As sampled by method that does not collect vapor.

g) According to analytically determined composition.

h) For control of general room air, biologic monitoring is essential for personnel control.

+ TABLE 2  
(See note <sup>3</sup>)

Material	8-hour time weighted average	Acceptable ceiling concentration	Acceptable maximum peak above the acceptable ceiling concentration for an 8 hour shift.	
			Concentration	Maximum duration
Benzene (Z37.4-1969)	10 ppm	25 ppm	50 ppm	10 minutes.
Beryllium and beryllium compounds (Z37.29-1970)	2 μg/M <sup>3</sup>	5 μg/M <sup>3</sup>	25 μg/M <sup>3</sup>	30 minutes.
Cadmium dust (Z37.5-1970)	0.2 mg/M <sup>3</sup>	0.6 mg/M <sup>3</sup>	—	—
Carbon disulfide (Z37.3-1968)	20 ppm	30 ppm	100 ppm	30 minutes.
Carbon Tetrachloride (Z37.17-1967)	10 ppm	25 ppm	200 ppm	5 minutes in any 4 hours.
Ethylene dibromide (Z37.31-1970)	20 ppm	30 ppm	50 ppm	5 minutes.
Ethylene dichloride (Z37.21-1969)	50 ppm	100 ppm	200 ppm	5 minutes in any 3 hours.
Methylene Chloride (Z37.23-1969)	500 ppm	1,000 ppm	2,000 ppm	5 minutes in any 2 hours.
Organo (alkyl) mercury (Z37.30-1969)	0.01 mg/M <sup>3</sup>	0.04 mg/M <sup>3</sup>	—	—
Styrene (Z37.15-1969)	100 ppm	200 ppm	600 ppm	5 minutes in any 3 hours.
Trichloroethylene (Z37.19-1967)	100 ppm	200 ppm	300 ppm	5 minutes in any 2 hours.
Tetrachloroethylene (Z37.22-1967)	100 ppm	200 ppm	300 ppm	5 minutes in any 3 hours.
Toluene (Z37.12-1967)	200 ppm	300 ppm	500 ppm	10 minutes.
Hydrogen sulfide (Z37.2-1966)	10 ppm	20 ppm	50 ppm	10 minutes

+ TABLE 2  
(See note <sup>a</sup>)

Material	8-hour time weighted average	Acceptable ceiling concentration	Acceptable maximum peak above the acceptable ceiling concentration for an 8 hour shift.	
			Concentration	Maximum duration
Mercury (Z37.8-1971)	0.05 mg/M <sup>3</sup>	0.1 mg/M <sup>3</sup>		once only if no measurable exposure occurs.
Chromic acid and chromates (Z37.7-1973)	0.1 mg/M <sup>3</sup>	0.3 mg/M <sup>3</sup>		

NOTE: <sup>a</sup> Acceptable ceiling concentrations. An employee's exposure to a material listed in table 2 shall not exceed at any time during an 8-hour shift the acceptable ceiling concentration limit given for the material in the table, except for a time period, and up to a concentration not exceeding the maximum duration and concentration allowed in the column under "acceptable maximum peak above the acceptable ceiling concentration for an 8-hour shift."

Example. During an 8-hour work shift, an employee may be exposed to a concentration of Benzene above 25 ppm (but never above 50 ppm) only for a maximum period of 10 minutes. Such exposure must be compensated by exposures to concentrations less than 10 ppm so that the cumulative exposure for the entire 8-hour work shift does not exceed a weighted average of 10 ppm.

+ TABLE 3  
PARTICULATES

Substance	Mppcf (See note e)	mg/M <sup>3</sup>
Silica:		
Crystalline: (See note f)		
Quartz (respirable)		10mg/M <sup>3</sup> m
Quartz (total dust)		%SiO <sub>2</sub> +2 30mg/M <sup>3</sup>
		%SiO <sub>2</sub> +3
Cristobalite: Use 1/2 the value calculated from the mass formulae for quartz.		
Tridymite: Use 1/2 the value calculated from the formulae for quartz.		
Amorphous, including natural diatomaceous earth	20	80mg/M <sup>3</sup>
		%SiO <sub>2</sub>
Silicates (less than 1% crystalline silica):		
Mica	20	
Soapstone	20	
Talc	20	
Portland cement	50	
Graphite (natural)	15	
Coal dust (respirable fraction less than 5% SiO <sub>2</sub> )		2.4mg/M <sup>3</sup> or 10mg/M <sup>3</sup>
For more than 5% SiO <sub>2</sub>		%SiO <sub>2</sub> +2
Inert or Nuisance Dust:		
Respirable fraction		5mg/M <sup>3</sup>
Total dust		10mg/M <sup>3</sup>
Total Particulates (less than 1% SiO <sub>2</sub> )		
Respirable fraction		10mg/M <sup>3</sup> 5mg/M <sup>3</sup>

NOTE: Conversion factors—

mppcf X 35.3 = million particles per cubic meter  
= particles per c.c.

e Millions of particles per cubic foot of air, based on impinger samples counted by light-field techniques.

f The percentage of crystalline silica in the formula is the amount determined from airborne samples, except in those instances in which other methods have been shown to be applicable.

m Both concentration and percent quartz for the application of this limit are to be determined from the fraction passing a size-selector with the following characteristics:

Aerodynamic diameter (unit density sphere)	Percent passing selector
2	90
2.5	75
3.5	50
5.0	25
10	0

The measurements under this note refer to the use of an AEC instrument. If the respirable fraction of coal dust is determined with a MRE the figure corresponding to that of a 2.4 mg/M<sup>3</sup> in the table for coal dust is 4.5 mg/M<sup>3</sup>.

[Statutory Authority: RCW 49.17.040 and 49.17.050. 82-13-045 (Order 82-22), § 296-62-07515, filed 6/11/82. Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 81-16-015 (Order 81-20), § 296-62-07515, filed 7/27/81; 80-11-010 (Order 80-14), § 296-62-07515, filed 8/8/80. Statutory Authority: RCW 49.17.040, 49.17.150, and 49.17.240. 79-08-115 (Order 79-9), § 296-62-07515, filed 7/31/79; Order 73-3, § 296-62-07515, filed 5/7/73.]

WAC 296-62-07517 Asbestos. (1) Definitions. For the purpose of this section, (a) "Asbestos" means chrysotile, amosite, crocidolite, tremolite, anthophyllite, and actinolite.

(b) "Asbestos fibers" means asbestos fibers longer than 5 micrometers.

(2) Permissible exposure to airborne concentrations of asbestos fibers. (a) The 8-hour time-weighted average airborne concentrations of asbestos fibers to which any employee may be exposed shall not exceed two fibers, longer than 5 micrometers, per cubic centimeter of air, as determined by the method prescribed in (5) of this section.

(b) Ceiling concentration. No employee shall be exposed at any time to airborne concentrations of asbestos fibers in excess of 10 fibers, longer than 5 micrometers, per cubic centimeter of air, as determined by the method prescribed in (5) of this section.

(3) Methods of compliance. (a) Engineering methods. (i) Engineering controls. Engineering controls, such as, but not limited to, isolation, enclosure, exhaust ventilation, and dust collection, shall be used to meet the exposure limits prescribed in (2) of this section.

(ii) Local exhaust ventilation. Local exhaust ventilation and dust collection systems shall be designed, constructed, installed, and maintained in accordance with the American National Standard Fundamentals Governing the Design and Operation of Local Exhaust Systems,

ANSI Z9.2-1971, which is incorporated by reference herein.

(iii) Particular tools. All hand-operated and power-operated tools which may produce or release asbestos fibers in excess of the exposure limits prescribed in (2) of this section, such as, but not limited to, saws, scorers, abrasive wheels, and drills, shall be provided with local exhaust ventilation systems in accordance with (3)(a)(ii) of this section.

(b) Work practices. (i) Wet methods. Insofar as practicable, asbestos shall be handled, mixed, applied, removed, cut, scored, or otherwise worked in a wet state sufficient to prevent the emission of airborne fibers in excess of the exposure limits prescribed in (2) of this section, unless the usefulness of the product would be diminished thereby.

(ii) Particular products and operations. No asbestos cement, mortar, coating, grout, plaster, or similar material containing asbestos shall be removed from bags, cartons, or other containers in which they are shipped, without being either wetted, or enclosed, or ventilated so as to prevent effectively the release of airborne asbestos fibers in excess of the limits prescribed in (2) of this section.

(iii) Spraying, demolition, or removal. Employees engaged in the spraying of asbestos, the removal, or demolition of pipes, structures, or equipment covered or insulated with asbestos, and in the removal or demolition of asbestos insulation or coverings shall be provided with respiratory equipment in accordance with (4)(b)(iii) of this section and with special clothing in accordance with (4)(c) of this section.

(4) Personal protective equipment. (a) Compliance with the exposure limits prescribed by (2) of this section may not be achieved by the use of respirators or shift rotation of employees except:

(i) During the time period necessary to install the engineering controls and to institute the work practices required by (3) of this section.

(ii) In work situations in which the methods prescribed in (3) of this section are either technically not feasible or feasible to an extent insufficient to reduce the airborne concentrations of asbestos fibers below the limits prescribed by (2) of this section; or

(iii) In emergencies.

(iv) Where both respirators and personnel rotation are allowed by (4)(a)(i), (ii), or (iii) of this section, and both are practicable, personnel rotation shall be preferred and used.

(b) Where a respirator is permitted by (4)(a)(i), (ii), or (iii) of this section, it shall comply with the applicable provisions of WAC 296-62-071.

(i) Air purifying respirators. A reusable or single use air purifying respirator, or a respirator described in (4)(b)(ii) or (iii) of this section shall be used to reduce the concentrations of airborne asbestos fibers in the respirator below the exposure limits prescribed in (2) of this section, when the ceiling or the 8-hour time-weighted average airborne concentrations of asbestos fibers are reasonably expected to exceed no more than 10 times those limits.

(ii) Powered air purifying respirators. A full facepiece powered air purifying respirator, or a powered air purifying respirator, or a respirator described in (4)(b)(iii) of this section, shall be used to reduce the concentrations of airborne asbestos fibers in the respirator below the exposure limits prescribed in (2) of this section, when the ceiling or the 8-hour time-weighted average concentrations of asbestos fibers are reasonably expected to exceed 10 times, but not 100 times, those limits.

(iii) Type "C" supplied-air respirators, continuous flow or pressure-demand class. A type "C" continuous flow or pressure-demand, supplied-air respirator shall be used to reduce the concentrations of airborne asbestos fibers in the respirator below the exposure limits prescribed in (2) of this section, when the ceiling or the 8-hour time-weighted average airborne concentrations of asbestos fibers are reasonably expected to exceed 100 times those limits.

(iv) Establishment of a respirator program. (A) The employer shall establish a respirator program in accordance with the requirements of chapter 296-62 WAC.

(B) No employee shall be assigned to tasks requiring the use of respirators if, based upon his most recent examination, an examining physician determines that the employee will be unable to function normally wearing a respirator, or that the safety or health of the employee or other employees will be impaired by his use of a respirator. Such employee shall be rotated to another job or given the opportunity to transfer to a different position whose duties he is able to perform with the same employer, in the same geographical area and with the same seniority, status, and rate of pay he had just prior to such transfer, if such a different position is available.

(c) Special clothing: The employer shall provide, and require the use of, special clothing, such as coveralls or similar whole body clothing, head coverings, gloves, and foot coverings for any employee exposed to airborne concentrations of asbestos fibers, which exceed the ceiling level prescribed in (2)(b) of this section.

(d) Change rooms: (i) At any fixed place of employment exposed to airborne concentrations of asbestos fibers in excess of the exposure limits prescribed in (2) of this section, the employer shall provide change rooms for employees working regularly at the place.

(ii) Clothes lockers: The employer shall provide two separate lockers or containers for each employee, so separated or isolated as to prevent contamination of the employee's street clothes from his work clothes.

(iii) Laundering: (A) Laundering of asbestos contaminated clothing shall be done so as to prevent the release of airborne asbestos fibers in excess of the exposure limits prescribed in (2) of this section.

(B) Any employer who gives asbestos-contaminated clothing to another person for laundering shall inform such person of the requirement in (4)(d) of this section to effectively prevent the release of airborne asbestos fibers in excess of the exposure limits prescribed in (2) of this section.

(C) Contaminated clothing shall be transported in sealed impermeable bags, or other closed, impermeable

containers, and labeled in accordance with (7)(b) of this section.

(5) Method of measurement. All determinations of airborne concentrations of asbestos fibers shall be made by the membrane filter method at 400-450 X (magnification) (4 millimeter objective) with phase contrast illumination.

(6) Monitoring. (a) Initial determinations. Every employer shall cause every place of employment where asbestos fibers are released to be monitored in such a way as to determine whether every employee's exposure to asbestos fibers is below the limits prescribed in (2) of this section. If the limits are exceeded, the employer shall immediately undertake a compliance program in accordance with (3) of this section.

(b) Personal monitoring. (i) Samples shall be collected from within the breathing zone of the employees, on membrane filters of 0.8 micrometer porosity mounted in an open-face filter holder. Samples shall be taken for the determination of the 8-hour time-weighted average airborne concentrations and of the ceiling concentrations of asbestos fibers.

(ii) Sampling frequency and patterns. After the initial determinations required by (6)(a) of this section, samples shall be of such frequency and pattern as to represent with reasonable accuracy the levels of exposure of employees. In no case shall the sampling be done at intervals greater than 6 months for employees whose exposure to asbestos may reasonably be foreseen to exceed the limits prescribed by (2) of this section.

(c) Environmental monitoring. (i) Samples shall be collected from areas of a work environment which are representative of the airborne concentrations of asbestos fibers which may reach the breathing zone of employees. Samples shall be collected on a membrane filter of 0.8 micrometer porosity mounted in an open-face filter holder. Samples shall be taken for the determination of the 8-hour time-weighted average airborne concentrations and of the ceiling concentrations of asbestos fibers.

(ii) Sampling frequency and patterns. After the initial determinations required by (6)(a) of this section, samples shall be of such frequency and pattern as to represent with reasonable accuracy the levels of exposure of the employees. In no case shall sampling be at intervals greater than 6 months for employees whose exposures to asbestos may reasonably be foreseen to exceed the exposure limits prescribed in (2) of this section.

(d) Employee observation of monitoring. Affected employees, or their representatives, shall be given a reasonable opportunity to observe any monitoring required by this paragraph and shall have access to the records thereof.

(7) Caution signs and labels. (a) Caution signs. (i) Posting. Caution signs shall be provided and displayed at each location where airborne concentrations of asbestos fibers are reasonably expected to be released or where airborne concentrations of asbestos fibers may be in excess of the exposure limits prescribed in (2) of this section. Signs shall be posted at such a distance from such a location so that an employee may read the signs and take necessary protective steps before entering the area

marked by the signs. Signs shall be posted at all approaches to areas containing airborne asbestos fibers.

(ii) Sign specifications. The warning signs required by (7)(a)(i) of this section shall conform to the requirements of 20" X 14" vertical format signs specified in WAC 296-24-14007(4) and to this subsection. The signs shall display the following legend in the lower panel, with letter sizes and styles of a visibility at least equal to that specified in this subdivision.

Legend	Notation
Asbestos _____	1" Sans Serif, Gothic or Block.
Dust Hazard _____	3/4" Sans Serif, Gothic or Block.
Avoid Breathing Dust _____	1/4" Gothic.
Wear Assigned Protective Equipment _____	1/4" Gothic.
Do Not Remain In Area Unless Your Work Requires It _____	1/4" Gothic.
Breathing Asbestos Dust May Be Hazardous To Your Health _____	14 point Gothic.

Spacing between lines shall be at least equal to the height of the upper of any two lines.

(b) Caution labels. (i) Labeling. Caution labels shall be affixed to all raw materials, mixtures, scrap, waste, debris, and other products containing asbestos fibers, or to their containers, except that no label is required where asbestos fibers have been modified by a bonding agent, coating, binder, or other material so that during any reasonably foreseeable use, handling, storage, disposal, processing, or transportation, no airborne concentrations of asbestos fibers will be released.

(ii) Label specifications. The caution labels required by (7)(b)(i) of this section shall be printed in letters of sufficient size and contrast as to be readily visible and legible. The label shall state:

CAUTION

Contains Asbestos Fibers

Avoid Creating Dust

Breathing Asbestos Dust May Cause

Serious Bodily Harm

(8) Housekeeping. (a) Cleaning. All external surfaces in any place of employment shall be maintained free of accumulations of asbestos fibers.

(b) Waste disposal. Asbestos waste, scrap, debris, bags, containers, equipment, and asbestos-contaminated clothing, consigned for disposal, shall be collected and disposed of in sealed impermeable bags, or other closed, impermeable containers.

(c) Deterioration. Friable asbestos or friable asbestos containing material which has become damaged or deteriorated shall be contained, treated, or replaced.

(9) Recordkeeping. (a) Exposure records. Every employer shall maintain records of any personal or environmental monitoring required by (6) of this section. Records shall be maintained for a period of at least 20 years and shall be made available upon request to the Director of the Department of Labor and Industries.

(b) Access. Employee exposure records required by this subsection shall be provided upon request to employees, designated representatives, and the assistant director in accordance with WAC 296-62-05201 through 296-62-05209 and 296-62-05213 through 296-62-05217.

(c) Employee notification. Any employee found to have been exposed at any time to airborne concentrations of asbestos fibers in excess of the limits prescribed in (2) of this section shall be notified in writing of the exposure as soon as practicable but not later than 5 days of the finding. The employee shall also be timely notified of the corrective action being taken.

(10) Medical examinations. (a) General. The employer shall provide or make available at his cost, medical examinations relative to exposure to asbestos required by this section.

(b) Preplacement. The employer shall provide or make available to each of his employees, within 30 calendar days following his first employment in an occupation exposed to airborne concentrations of asbestos fibers, a comprehensive medical examination, which shall include, as a minimum, a chest roentgenogram (posterior-anterior 14 x 17 inches), a history to elicit symptomatology of respiratory disease, and pulmonary function tests to include forced vital capacity (FVC) and forced expiratory volume at 1 second (FEV<sub>1.0</sub>).

(c) Annual examinations. Every employer shall provide or make available on an annual basis, comprehensive medical examinations to each of his employees engaged in occupations exposed to airborne concentrations of asbestos fibers. Such annual examination shall include, as a minimum, a chest roentgenogram (posterior-anterior 14 x 17 inches), a history to elicit symptomatology of respiratory disease, and pulmonary function tests to include forced vital capacity (FVC) and forced expiratory volume at 1 second (FEV<sub>1.0</sub>).

(d) Termination of employment. The employer shall provide, or make available, within 30 calendar days before or after the termination of employment of any employee engaged in an occupation exposed to airborne concentrations of asbestos fibers, a comprehensive medical examination which shall include, as a minimum, a chest roentgenogram (posterior-anterior 14 x 17 inches), a history to elicit symptomatology of respiratory disease, and pulmonary function tests to include forced vital capacity (FVC) and forced expiratory volume at 1 second (FEV<sub>1.0</sub>).

(e) Recent examinations. No medical examination is required of any employee, if adequate records show that the employee has been examined in accordance with this subsection within the past 1-year period.

(f) Medical records. (i) Maintenance. Employers of employees examined pursuant to this subsection shall cause to be maintained complete and accurate records of all such medical examinations. Records shall be retained by employers for at least 20 years.

(ii) Access. Records of the medical examinations required by this subsection shall be provided upon request to employees, designated representative and the assistant

director in accordance with WAC 296-62-05201 through 296-62-05209 and 296-62-05213 through 296-62-05217. These records shall also be provided upon request to the director of the department of labor and industries. Any physician who conducts a medical examination required by this subsection shall furnish to the employer of the examined employee all the information specifically required by this subsection, and any other medical information related to occupational exposure to asbestos fibers. [Statutory Authority: RCW 49.17.040, 49.17.050, and 49.17.240. 81-18-029 (Order 81-21), § 296-62-07517, filed 8/27/81; 81-16-015 (Order 81-20), § 296-62-07517, filed 7/27/81; 80-11-010 (Order 80-14), § 296-62-07517, filed 8/8/80; Order 77-12, § 296-62-07517, filed 7/11/77; Order 73-3, § 296-62-07517, filed 5/7/73.]

**WAC 296-62-07519 Thiram.** (1) Scope and application. This section applies to occupational exposure to thiram (tetramethylthiuram disulfide), in addition to those requirements listed in WAC 296-62-07515. Nothing in this section shall preclude the application of other appropriate standards and regulations to minimize worker exposure to thiram.

(2) Definitions. The following definitions are applicable to this section:

(a) Clean - the absence of dirt or materials which may be harmful to a worker's health.

(b) Large seedlings - those seedlings of such size, either by length or breadth, that it is difficult to avoid contact of the thiram treated plant with the mouth or face during planting operations.

(3) General requirements.

(a) Workers should not be allowed to work more than five days in any seven day period with or around the application of thiram or thiram treated seedlings.

(b) Washing and worker hygiene.

(i) Workers shall wash their hands prior to eating or smoking at the close of work.

(ii) Warm (at least 85°F, 29.4°C) wash water and single use hand wiping materials shall be provided for washing.

(iii) The warm water and hand wiping materials shall be at fixed work locations or at the planting unit.

(iv) Where warm water is not available within 15 minutes travel time, non-alcoholic based waterless hand cleaner shall be provided.

(v) Every planter or nursery worker shall be advised to bathe or shower daily.

(vi) The inside of worker carrying vehicles shall be washed or vacuumed and wiped down at least weekly during the period of thiram use.

(c) Personal protective measures.

(i) Clothing shall be worn by workers to reduce skin contact with thiram to the legs, arms and torso.

(ii) For those workers who have thiram skin irritations, exposed areas of the body shall be protected by a suitable barrier cream.

(iii) Clothing worn by workers shall be washed or changed at least every other day.

(iv) Only impervious gloves may be worn by workers.

(v) Workers hands should be clean of thiram before placing them into gloves.

(vi) Thiram applicators shall be provided with and use respiratory protection in accordance with WAC 296-62-071, disposable coveralls or rubber slickers or other impervious clothing, rubberized boots, head covers and rubberized gloves.

(vii) Nursery workers, other than applicators, who are likely to be exposed to thiram shall be provided with and use disposable coveralls or rubber slickers or other impervious clothing, impervious footwear and gloves, and head covers in accordance with WAC 296-24-075, unless showers have been provided and are used.

(viii) Eye protection according to WAC 296-24-078, shall be provided and worn by workers who may be exposed to splashes of thiram during spraying, plug bundling, belt line grading and plugging or other operations.

(ix) Item (viii) of this subdivision need not be complied with where pressurized emergency eye wash fountains are within 10 seconds travel time of the work location. (Approved respirator - see WAC 296-62-071.)

(x) A dust mask shall be worn, when planting large seedlings, to avoid mouth and face contact with the thiram treated plant unless equally effective measures or planting practices have been established.

(d) Food handling.

(i) Food snacks, beverages, smoking materials, or any other item which is consumed shall not be stored or consumed in the packing area of the nursery.

(ii) Worker carrying vehicles shall have a clean area for carrying lunches.

(iii) The clean area of the vehicle shall be elevated from the floor and not used to carry other than food or other consumable items.

(iv) The carrying of lunches, food or other consumable items in tree planting bags is prohibited.

(v) Care shall be taken to insure that worker exposure to thiram spray, including downwind driftings, is minimized or eliminated.

(vi) When bags that contained thiram or thiram treated seedlings are burned, prevent worker exposure to the smoke.

(e) Thiram use and handling.

(i) Thiram treated seedlings shall be allowed to dry or stabilize prior to packing.

(ii) Seedlings shall be kept moist during packing and whenever possible during planting operations.

(iii) Floors, where thiram is used, shall not be dry swept but instead vacuumed, washed or otherwise cleaned at least daily.

(iv) Silica chips used to cover thiram treated seedling plugs shall be removed at the nursery.

(f) Training.

(i) Each worker engaged in operations where exposure to thiram may occur shall be provided training on the hazards of thiram, as well as the necessary precautions for its safe use and handling.

(ii) The training shall include instruction in:

(A) The nature of the health hazard(s) from exposure to thiram including specifically the potential for alcohol intolerance, drug interaction, and skin irritation;

(B) The specific nature of operations which could result in exposure to thiram and the necessary protective steps;

(C) The purpose for, proper use, and limitations of protective devices including respirators and clothing;

(D) The necessity for and requirements of good personal hygiene; and

(E) A review of the thiram rules at the worker's first training and indoctrination, and annually thereafter.

(4) Effective date. This standard shall become effective 30 days after being filed with the code reviser. [Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.240. 81-16-016 (Order 81-19), § 296-62-07519, filed 7/27/81.]

**WAC 296-62-07521 Lead.** (1) Scope and application.

(a) This section applies to all occupational exposure to lead, except as provided in subdivision (1)(b).

(b) This section does not apply to the construction industry or to agricultural operations covered by chapter 296-306 WAC.

(2) Definitions as applicable to this part.

(a) "Action level" - employee exposure, without regard to the use of respirators, to an airborne concentration of lead of thirty micrograms per cubic meter of air ( $30 \mu\text{g}/\text{m}^3$ ) averaged over an eight-hour period.

(b) "Director" - the director of the department of labor and industries.

(c) "Lead" - metallic lead, all inorganic lead compounds, and organic lead soaps. Excluded from this definition are all other organic lead compounds.

(3) Permissible exposure limit (PEL).

(a) The employer shall assure that no employee is exposed to lead at concentrations greater than fifty micrograms per cubic meter of air ( $50 \mu\text{g}/\text{m}^3$ ) averaged over an eight-hour period.

(b) If an employee is exposed to lead for more than eight hours in any work day, the permissible exposure limit, as a time weighted average (TWA) for that day, shall be reduced according to the following formula:

$$\text{Maximum permissible limit (in } \mu\text{g}/\text{m}^3) = 400 \div \text{hours worked in the day.}$$

(c) When respirators are used to supplement engineering and work practice controls to comply with the PEL and all the requirements of subsection (6) have been met, employee exposure, for the purpose of determining whether the employer has complied with the PEL, may be considered to be at the level provided by the protection factor of the respirator for those periods the respirator is worn. Those periods may be averaged with exposure levels during periods when respirators are not worn to determine the employee's daily TWA exposure.

(4) Exposure monitoring.

(a) General.

(i) For the purposes of subsection (4), employee exposure is that exposure which would occur if the employee were not using a respirator.

(ii) With the exception of monitoring under subdivision (4)(c), the employer shall collect full shift (for at least seven continuous hours) personal samples including at least one sample for each shift for each job classification in each work area.

(iii) Full shift personal samples shall be representative of the monitored employee's regular, daily exposure to lead.

(b) Initial determination. Each employer who has a workplace or work operation covered by this standard shall determine if any employee may be exposed to lead at or above the action level.

(c) Basis of initial determination.

(i) The employer shall monitor employee exposures and shall base initial determinations on the employee exposure monitoring results and any of the following, relevant considerations:

(A) Any information, observations, or calculations which would indicate employee exposure to lead;

(B) Any previous measurements of airborne lead; and

(C) Any employee complaints of symptoms which may be attributable to exposure to lead.

(ii) Monitoring for the initial determination may be limited to a representative sample of the exposed employees who the employer reasonably believes are exposed to the greatest airborne concentrations of lead in the workplace.

(iii) Measurements of airborne lead made in the preceding twelve months may be used to satisfy the requirement to monitor under item (4)(c)(i) if the sampling and analytical methods used meet the accuracy and confidence levels of subdivision (4)(i) of this section.

(d) Positive initial determination and initial monitoring.

(i) Where a determination conducted under subdivision (4)(b) and (4)(c) of this section shows the possibility of any employee exposure at or above the action level, the employer shall conduct monitoring which is representative of the exposure for each employee in the workplace who is exposed to lead.

(ii) Measurements of airborne lead made in the preceding twelve months may be used to satisfy this requirement if the sampling and analytical methods used meet the accuracy and confidence levels of subdivision (4)(i) of this section.

(e) Negative initial determination. Where a determination, conducted under subdivisions (4)(b) and (4)(c) of this section is made that no employee is exposed to airborne concentrations of lead at or above the action level, the employer shall make a written record of such determination. The record shall include at least the information specified in subdivision (4)(c) of this section and shall also include the date of determination, location within the worksite, and the name and social security number of each employee monitored.

(f) Frequency.

(i) If the initial monitoring reveals employee exposure to be below the action level the measurements need not be repeated except as otherwise provided in subdivision (4)(g) of this section.

(ii) If the initial determination or subsequent monitoring reveals employee exposure to be at or above the action level but below the permissible exposure limit the employer shall repeat monitoring in accordance with this subsection at least every six months. The employer shall continue monitoring at the required frequency until at least two consecutive measurements, taken at least seven days apart, are below the action level at which time the employer may discontinue monitoring for that employee except as otherwise provided in subdivision (4)(g) of this section.

(iii) If the initial monitoring reveals that employee exposure is above the permissible exposure limit the employer shall repeat monitoring quarterly. The employer shall continue monitoring at the required frequency until at least two consecutive measurements, taken at least seven days apart, are below the PEL but at or above the action level at which time the employer shall repeat monitoring for that employee at the frequency specified in item (4)(f)(ii), except as otherwise provided in subdivision (4)(g) of this section.

(g) Additional monitoring. Whenever there has been a production, process, control or personnel change which may result in new or additional exposure to lead, or whenever the employer has any other reason to suspect a change which may result in new or additional exposures to lead, additional monitoring in accordance with this subsection shall be conducted.

(h) Employee notification.

(i) Within five working days after the receipt of monitoring results, the employer shall notify each employee in writing of the results which represent that employee's exposure.

(ii) Whenever the results indicate that the representative employee exposure, without regard to respirators, exceeds the permissible exposure limit, the employer shall include in the written notice a statement that the permissible exposure limit was exceeded and a description of the corrective action taken or to be taken to reduce exposure to or below the permissible exposure limit.

(i) Accuracy of measurement. The employer shall use a method of monitoring and analysis which has an accuracy (to a confidence level of ninety-five percent) of not less than plus or minus twenty percent for airborne concentrations of lead equal to or greater than  $30 \mu\text{g}/\text{m}^3$ .

(5) Methods of compliance.

(a) Engineering and work practice controls.

(i) Where any employee is exposed to lead above the permissible exposure limit for more than thirty days per year, the employer shall implement engineering and work practice controls (including administrative controls) to reduce and maintain employee exposure to lead in accordance with the implementation schedule in Table I below, except to the extent that the employer can demonstrate that such controls are not feasible. Wherever the engineering and work practice controls which can be instituted are not sufficient to reduce employee exposure to or below the permissible exposure limit, the employer shall nonetheless use them to reduce exposures to the lowest feasible level and shall supplement them by

the use of respiratory protection which complies with the requirements of subsection (6) of this section.

(ii) Where any employee is exposed to lead above the permissible exposure limit, but for thirty days or less per year, the employer shall implement engineering controls to reduce exposures to  $200 \mu\text{g}/\text{m}^3$ , but thereafter may implement any combination of engineering, work practice (including administrative controls), and respiratory controls to reduce and maintain employee exposure to lead to or below  $50 \mu\text{g}/\text{m}^3$ .

TABLE I  
IMPLEMENTATION SCHEDULE

Industry <sup>1</sup>	Compliance Dates <sup>2</sup>		
	200 $\mu\text{g}/\text{m}^3$	100 $\mu\text{g}/\text{m}^3$	50 $\mu\text{g}/\text{m}^3$
Primary lead production . . . . .	(3)	3	10
Secondary lead production . . . . .	(3)	3	5
Lead-acid battery manufacturing (3)	(3)	2	5
Automobile manufacture/ solder grinding . . . . .	(3)	N/A	7
Electronics, gray iron found- ries, ink manufacture, paints and coatings man- ufacture, wall paper man- ufacture, can manufac- ture, and printing . . . . .	(3)	N/A	1
Lead pigment manufacture, nonferrous foundries, lead steel manufacture, lead chemical manufac- ture, shipbuilding and ship repair, battery breaking in the collection and pro- cessing of scrap (excluding collection and processing of scrap which is part of a secondary smelting op- eration), secondary lead smelting of copper, and lead casting . . . . .	(3)	N/A	N/A
All other industries . . . . .	(3)	N/A	2 1/2

<sup>1</sup> Includes ancillary activities located on the same worksite.

<sup>2</sup> Expressed as the number of years from the effective date by which compliance with the given airborne exposure level, as an eight-hour TWA, must be achieved.

<sup>3</sup> On effective date. This continues an obligation from WAC 296-62-07515 Table 1 which had been in effect since 1973.

(b) Respiratory protection. Where engineering and work practice controls do not reduce employee exposure to or below the  $50 \mu\text{g}/\text{m}^3$  permissible exposure limit, the employer shall supplement these controls with respirators in accordance with subsection (6).

(c) Compliance program.

(i) Each employer shall establish and implement a written compliance program to reduce exposures to or below the permissible exposure limit, and interim levels if applicable, solely by means of engineering and work practice controls in accordance with the implementation schedule in subdivision (5)(a).

(ii) Written plans for these compliance programs shall include at least the following:

(A) A description of each operation in which lead is emitted; e.g., machinery used, material processed, controls in place, crew size, employee job responsibilities, operating procedures and maintenance practices;

(B) A description of the specific means that will be employed to achieve compliance, including engineering plans and studies used to determine methods selected for controlling exposure to lead;

(C) A report of the technology considered in meeting the permissible exposure limit;

(D) Air monitoring data which documents the source of lead emissions;

(E) A detailed schedule for implementation of the program, including documentation such as copies of purchase orders for equipment, construction contracts, etc.;

(F) A work practice program which includes items required under subsections (7), (8) and (9) of this regulation;

(G) An administrative control schedule required by subdivision (5)(f), if applicable; and

(H) Other relevant information.

(iii) Written programs shall be submitted upon request to the director, and shall be available at the work-site for examination and copying by the director, any affected employee or authorized employee representatives.

(iv) Written programs shall be revised and updated at least every six months to reflect the current status of the program.

(d) Bypass of interim level. Where an employer's compliance plan provides for a reduction of employee exposures to or below the PEL solely by means of engineering and work practice controls in accordance with the implementation schedule in Table I, and the employer has determined that compliance with the  $100 \mu\text{g}/\text{m}^3$  interim level would divert resources to the extent that it clearly precludes compliance, otherwise attainable, with the PEL by the required time, the employer may proceed with the plan to comply with the PEL in lieu of compliance with the interim level if:

(i) The compliance plan clearly documents the basis of the determination;

(ii) The employer takes all feasible steps to provide maximum protection for employees until the PEL is met; and

(iii) The employer notifies the director in writing within ten working days of the completion or revision of the compliance plan reflecting the determination.

(e) Mechanical ventilation.

(i) When ventilation is used to control exposure, measurements which demonstrate the effectiveness of the system in controlling exposure, such as capture velocity, duct velocity, or static pressure shall be made at least every three months. Measurements of the system's effectiveness in controlling exposure shall be made within five days of any change in production, process, or control which might result in a change in employee exposure to lead.

(ii) Recirculation of air. If air from exhaust ventilation is recirculated into the workplace, the employer shall assure that (A) the system has a high efficiency filter with reliable back-up filter; and (B) controls to monitor the concentration of lead in the return air and

to bypass the recirculation system automatically if it fails are installed, operating, and maintained.

(f) Administrative controls. If administrative controls are used as a means of reducing employees TWA exposure to lead, the employer shall establish and implement a job rotation schedule which includes:

(i) Name or identification number of each affected employee;

(ii) Duration and exposure levels at each job or work station where each affected employee is located; and

(iii) Any other information which may be useful in assessing the reliability of administrative controls to reduce exposure to lead.

(6) Respiratory protection.

(a) General. Where the use of respirators is required under this section, the employer shall provide, at no cost to the employee, and assure the use of respirators which comply with the requirements of this subsection. Respirators shall be used in the following circumstances:

(i) During the time period necessary to install or implement engineering or work practice controls, except that after the dates for compliance with the interim levels in Table I, no employer shall require an employee to wear a negative pressure respirator longer than 4.4 hours per day;

(ii) In work situations in which engineering and work practice controls are not sufficient to reduce exposures to or below the permissible exposure limit; and

(iii) Whenever an employee requests a respirator.

(b) Respirator selection.

(i) Where respirators are required under this section the employer shall select the appropriate respirator or combination of respirators from Table II.

TABLE II

RESPIRATORY PROTECTION FOR LEAD AEROSOLS

Airborne Concentration of Lead or Condition of Use	Required Respirator <sup>1</sup>
Not in excess of 0.5 mg/m <sup>3</sup> (10X PEL).	Half-mask, air-purifying respirator equipped with high efficiency filters. <sup>3</sup>
Not in excess of 2.5 mg/m <sup>3</sup> (50X PEL).	Full facepiece, air-purifying respirator with high efficiency filters. <sup>3</sup>
Not in excess of 50 mg/m <sup>3</sup> (1000X PEL).	(1) Any powered, air-purifying respirator with high efficiency filters <sup>3</sup> ; or (2) Half-mask supplied air respirator operated in positive-pressure mode. <sup>2</sup>
Not in excess of 100 mg/m <sup>3</sup> (2000X PEL).	Supplied-air respirators with full facepiece, hood, helmet, or suit, operated in positive pressure mode.
Greater than 100 mg/m <sup>3</sup> , unknown concentration or fire fighting.	Full facepiece, self-contained breathing apparatus operated in positive-pressure mode.

<sup>1</sup>Respirators specified for high concentrations can be used at lower concentrations of lead.

<sup>2</sup>Full facepiece is required if the lead aerosols cause eye or skin irritation at the use concentrations.

<sup>3</sup>A high efficiency particulate filter means 99.97 percent efficient against 0.3 micron size particles.

(ii) The employer shall provide a powered, air-purifying respirator in lieu of the respirator specified, in Table II whenever:

(A) An employee chooses to use this type of respirator; and

(B) This respirator will provide adequate protection to the employee.

(iii) The employer shall select respirators from among those approved for protection against lead dust, fume, and mist by the Mine Safety and Health Administration and the National Institute for Occupational Safety and Health (NIOSH) under the provisions of 30 CFR Part 11.

(c) Respirator usage.

(i) The employer shall assure that the respirator issued to the employee exhibits minimum facepiece leakage and that the respirator is fitted properly.

(ii) Employers shall perform either quantitative or qualitative face fit tests at the time of initial fitting and at least every six months thereafter for each employee wearing negative pressure respirators. The qualitative fit tests may be used only for testing the fit of half-mask respirators where they are permitted to be worn, and shall be conducted in accordance with Appendix D. The tests shall be used to select facepieces that provide the required protection as prescribed in Table II.

(iii) If an employee exhibits difficulty in breathing during the fitting test or during use, the employer shall make available to the employee an examination in accordance with subitem (10)(c)(i)(C) of this section to determine whether the employee can wear a respirator while performing the required duty.

(d) Respirator program.

(i) The employer shall institute a respiratory protection program in accordance with WAC 296-62-071.

(ii) The employer shall permit each employee who uses a filter respirator to change the filter elements whenever an increase in breathing resistance is detected and shall maintain an adequate supply of filter elements for this purpose.

(iii) Employees who wear respirators shall be permitted to leave work areas to wash their face and respirator facepiece whenever necessary to prevent skin irritation associated with respirator use.

(7) Protective work clothing and equipment.

(a) Provision and use. If an employee is exposed to lead above the PEL, without regard to the use of respirators or where the possibility of skin or eye irritation exists, the employer shall provide at no cost to the employee and assure that the employee uses appropriate protective work clothing and equipment such as, but not limited to:

(i) Coveralls or similar full-body work clothing;

(ii) Gloves, hats, and shoes or disposable shoe coverlets; and

(iii) Face shields, vented goggles, or other appropriate protective equipment which complies with WAC 296-24-078.

(b) Cleaning and replacement.

(i) The employer shall provide the protective clothing required in subdivision (7)(a) of this section in a clean and dry condition at least weekly, and daily to employees whose exposure levels without regard to a respirator are over 200 µg/m<sup>3</sup> of lead as an eight-hour TWA.

(ii) The employer shall provide for the cleaning, laundering, or disposal of protective clothing and equipment required by subdivision (7)(a) of this section.

(iii) The employer shall repair or replace required protective clothing and equipment as needed to maintain their effectiveness.

(iv) The employer shall assure that all protective clothing is removed at the completion of a work shift only in change rooms provided for that purpose as prescribed in subdivision (9)(b) of this section.

(v) The employer shall assure that contaminated protective clothing which is to be cleaned, laundered, or disposed of, is placed in a closed container in the change-room which prevents dispersion of lead outside the container.

(vi) The employer shall inform in writing any person who cleans or launders protective clothing or equipment of the potentially harmful effects of exposure to lead.

(vii) The employer shall assure that the containers of contaminated protective clothing and equipment required by subdivision (7)(b)(v) are labeled as follows:

CAUTION: CLOTHING CONTAMINATED WITH LEAD.  
DO NOT REMOVE DUST BY BLOWING OR SHAKING.  
DISPOSE OF LEAD CONTAMINATED WASH WATER IN  
ACCORDANCE WITH APPLICABLE LOCAL, STATE, OR  
FEDERAL REGULATIONS.

(viii) The employer shall prohibit the removal of lead from protective clothing or equipment by blowing, shaking, or any other means which disperses lead into the air.

(8) Housekeeping.

(a) Surfaces. All surfaces shall be maintained as free as practicable of accumulations of lead.

(b) Cleaning floors.

(i) Floors and other surfaces where lead accumulates may not be cleaned by the use of compressed air.

(ii) Shoveling, dry or wet sweeping, and brushing may be used only where vacuuming or other equally effective methods have been tried and found not to be effective.

(c) Vacuuming. Where vacuuming methods are selected, the vacuums shall be used and emptied in a manner which minimizes the reentry of lead into the workplace.

(9) Hygiene facilities and practices.

(a) The employer shall assure that in areas where employees are exposed to lead above the PEL, without regard to the use of respirators, food or beverage is not present or consumed, tobacco products are not present or used, and cosmetics are not applied, except in change rooms, lunchrooms, and showers required under subdivision (9)(b) through (9)(d) of this section.

(b) Change rooms.

(i) The employer shall provide clean change rooms for employees who work in areas where their airborne exposure to lead is above the PEL, without regard to the use of respirators.

(ii) The employer shall assure that change rooms are equipped with separate storage facilities for protective work clothing and equipment and for street clothes which prevent cross-contamination.

(c) Showers.

(i) The employer shall assure that employees who work in areas where their airborne exposure to lead is above the PEL, without regard to the use of respirators, shower at the end of the work shift.

(ii) The employer shall provide shower facilities in accordance with WAC 296-24-12009.

(iii) The employer shall assure that employees who are required to shower pursuant to item (9)(c)(i) do not leave the workplace wearing any clothing or equipment worn during the work shift.

(d) Lunchrooms.

(i) The employer shall provide lunchroom facilities for employees who work in areas where their airborne exposure to lead is above the PEL, without regard to the use of respirators.

(ii) The employer shall assure that lunchroom facilities have a temperature controlled, positive pressure, filtered air supply, and are readily accessible to employees.

(iii) The employer shall assure that employees who work in areas where their airborne exposure to lead is above the PEL without regard to the use of a respirator wash their hands and face prior to eating, drinking, smoking or applying cosmetics.

(iv) The employer shall assure that employees do not enter lunchroom facilities with protective work clothing or equipment unless surface lead dust has been removed by vacuuming, downdraft booth, or other cleaning method.

(e) Lavatories. The employer shall provide an adequate number of lavatory facilities which comply with WAC 296-24-12009 (1) and (2).

(10) Medical surveillance.

(a) General.

(i) The employer shall institute a medical surveillance program for all employees who are or may be exposed above the action level for more than thirty days per year.

(ii) The employer shall assure that all medical examinations and procedures are performed by or under the supervision of a licensed physician.

(iii) The employer shall provide the required medical surveillance including multiple physician review under item (10)(c)(iii) without cost to employees and at a reasonable time and place.

(b) Biological monitoring.

(i) Blood lead and ZPP level sampling and analysis. The employer shall make available biological monitoring in the form of blood sampling and analysis for lead and zinc protoporphyrin levels to each employee covered under item (10)(a)(i) of this section on the following schedule:

(A) At least every six months to each employee covered under item (10)(a)(i) of this section;

(B) At least every two months for each employee whose last blood sampling and analysis indicated a blood lead level at or above 40  $\mu\text{g}/100\text{ g}$  of whole blood. This frequency shall continue until two consecutive blood samples and analyses indicate a blood lead level below 40  $\mu\text{g}/100\text{ g}$  of whole blood; and

(C) At least monthly during the removal period of each employee removed from exposure to lead due to an elevated blood lead level.

(ii) Follow-up blood sampling tests. Whenever the results of a blood lead level test indicate that an employee's blood lead level exceeds the numerical criterion for medical removal under item (11)(a)(i), the employer shall provide a second (follow-up) blood sampling test within two weeks after the employer receives the results of the first blood sampling test.

(iii) Accuracy of blood lead level sampling and analysis. Blood lead level sampling and analysis provided pursuant to this section shall have an accuracy (to a confidence level of ninety-five percent) within plus or minus fifteen percent or 6  $\mu\text{g}/100\text{ ml}$ , whichever is greater, and shall be conducted by a laboratory licensed by the Center for Disease Control (CDC), United States Department of Health, Education and Welfare or which has received a satisfactory grade in blood lead proficiency testing from CDC in the prior twelve months.

(iv) Employee notification. Within five working days after the receipt of biological monitoring results, the employer shall notify in writing each employee whose blood lead level exceeds 40  $\mu\text{g}/100\text{ g}$ : (A) of that employee's blood lead level and (B) that the standard requires temporary medical removal with medical removal protection benefits when an employee's blood lead level exceeds the numerical criterion for medical removal under item (11)(a)(i) of this section.

(c) Medical examinations and consultations.

(i) Frequency. The employer shall make available medical examinations and consultations to each employee covered under item (10)(a)(i) of this section on the following schedule:

(A) At least annually for each employee for whom a blood sampling test conducted at any time during the preceding twelve months indicated a blood lead level at or above 40  $\mu\text{g}/100\text{ g}$ ;

(B) Prior to assignment for each employee being assigned for the first time to an area in which airborne concentrations of lead are at or above the action level;

(C) As soon as possible, upon notification by an employee either that the employee has developed signs or symptoms commonly associated with lead intoxication, that the employee desires medical advice concerning the effects of current or past exposure to lead on the employee's ability to procreate a healthy child, or that the employee has demonstrated difficulty in breathing during a respirator fitting test or during use; and

(D) As medically appropriate for each employee either removed from exposure to lead due to a risk of sustaining material impairment to health, or otherwise limited pursuant to a final medical determination.

(ii) Content. Medical examinations made available pursuant to subitems (10)(c)(i)(A) through (B) of this section shall include the following elements:

(A) A detailed work history and a medical history, with particular attention to past lead exposure (occupational and nonoccupational), personal habits (smoking, hygiene), and past gastrointestinal, hematologic, renal, cardiovascular, reproductive and neurological problems;

(B) A thorough physical examination, with particular attention to teeth, gums, hematologic, gastrointestinal,

renal, cardiovascular, and neurological systems. Pulmonary status should be evaluated if respiratory protection will be used;

(C) A blood pressure measurement;

(D) A blood sample and analysis which determines:

(aa) Blood lead level;

(bb) Hemoglobin and hematocrit determinations, red cell indices, and examination of peripheral smear morphology;

(cc) Zinc protoporphyrin;

(dd) Blood urea nitrogen; and

(ee) Serum creatinine;

(E) A routine urinalysis with microscopic examination; and

(F) Any laboratory or other test which the examining physician deems necessary by sound medical practice.

The content of medical examinations made available pursuant to subitems (10)(c)(i)(C) through (D) of this section shall be determined by an examining physician and, if requested by an employee, shall include pregnancy testing or laboratory evaluation of male fertility.

(iii) Multiple physician review mechanism.

(A) If the employer selects the initial physician who conducts any medical examination or consultation provided to an employee under this section, the employee may designate a second physician:

(aa) To review any findings, determinations or recommendations of the initial physician; and

(bb) To conduct such examinations, consultations, and laboratory tests as the second physician deems necessary to facilitate this review.

(B) The employer shall promptly notify an employee of the right to seek a second medical opinion after each occasion that an initial physician conducts a medical examination or consultation pursuant to this section. The employer may condition its participation in, and payment for, the multiple physician review mechanism upon the employee doing the following within fifteen days after receipt of the foregoing notification, or receipt of the initial physician's written opinion, whichever is later:

(aa) The employee informing the employer that he or she intends to seek a second medical opinion, and

(bb) The employee initiating steps to make an appointment with a second physician.

(C) If the findings, determinations or recommendations of the second physician differ from those of the initial physician, then the employer and the employee shall assure that efforts are made for the two physicians to resolve any disagreement.

(D) If the two physicians have been unable to quickly resolve their disagreement, then the employer and the employee through their respective physicians shall designate a third physician:

(aa) To review any findings, determinations or recommendations of the prior physicians; and

(bb) To conduct such examinations, consultations, laboratory tests and discussions with the prior physicians as the third physician deems necessary to resolve the disagreement of the prior physicians.

(E) The employer shall act consistent with the findings, determinations and recommendations of the third

physician; unless the employer and the employee reach an agreement which is otherwise consistent with the recommendations of at least one of the three physicians.

(iv) Information provided to examining and consulting physicians.

(A) The employer shall provide an initial physician conducting a medical examination or consultation under this section with the following information:

(aa) A copy of this regulation for lead including all appendices;
