STANDARDS FOR SCHOOL BUS WARNING
LAMPS

WAC

204-74A-050 Operation of lamps.

WAC 204-74A-050 Operation of lamps. (1) Operation of the warning lamp system shall be in compliance with FMVSS 108. Activation of the warning lamp sequence shall begin only by means of a manually-operated switch. Such activation will cause the right and left amber lamps to flash alternately until the stop signal arm is extended, or the bus entrance door is opened, at which time the amber lamps shall be automatically deactivated and the right and left red lamps shall be automatically activated. Whenever the warning lamp system has been activated, opening of the entrance door shall automatically deactivate the amber lamps, cause the stop signal arm to extend, and activate the red lamps. Automatic extension of the stop signal arm does not apply to systems equipped with a manually operated stop signal arm. All lamps shall flash at a rate from sixty to one hundred twenty times per minute and shall reach full brilliance during each cycle.

(2) Lamp controls shall consist of:

(a) The master or sequencing switch which shall be in plain view and mounted within easy reach of the driver, and which shall activate the system sequencing and deactivate the system at any time during the sequence.

(b) An override switch which shall automatically activate the red lamps whenever the stop signal arm is extended even though the master control switch is turned off, and which shall automatically deactivate the amber lamps if previously activated regardless of the then present normal state of sequencing or entrance door position. Such override switch shall be designed and installed so as to function with air, vacuum, electric, or manually operated stop signal arms. The stop signal arm shall be capable of being extended at any time, regardless of the position of the entrance door. The opening of the entrance door shall not cause extension of the stop signal arm, or the activation of the red lamps unless the master switch has been activated.

(c) A minimum of two pilot lamps, one amber and one red, each of which shall flash when the like colored warning lamps are in operation. Pilot lamps which show the operation of each individual lamp are permissible. All pilot lamps shall be located so as to be clearly visible to the driver.

(3) The warning lamp system shall be operated in accordance with the regulations set forth in chapter 392-145 WAC.

204-82A-070 Physical alteration of motor vehicle glazing material prohibited.

WAC 204-82A-070 Physical alteration of motor vehicle glazing material prohibited. Window glazing, manufactured and installed in accordance with federal motor vehicle safety standards shall not be etched or otherwise permanently altered if such glazing is installed in the windshield or any other window location of a motor vehicle passenger compartment. The only exception to this rule is the etching of the vehicle identification number permissible with the following provisions:

(1) The maximum height of the letters or numbers shall not exceed one-half inch.

(2) The etched vehicle identification number shall not be located in any position as to interfere with the vision of the occupant(s).
