the office of the secretary of state as soon as the ballots are available.

WAC 434-334-155 Optical scan read head adjustment standards and tests. Prior to all state primaries, read heads of optical scan central counting systems shall be cleaned and tested to insure that the reader is functioning within system standards.

WAC 434-334-160 Optical scan read head and ballot scan area alignment tests. Prior to all official logic and accuracy tests, a test shall be conducted by each county employing an optical scan ballot counting system to confirm that the voting response areas printed on all ballot faces are aligned properly with the scanning area of the ballot counter.

WAC 434-334-165 Optical scan ballot marking code program test. Prior to the official logic and accuracy test each county employing an optical scan ballot counting system shall thoroughly test all programming and system components. The test must at least verify the office programming by thoroughly testing each individual office, test the ballot style logic to insure that all offices are included on the intended ballot faces, and verify that the program is accumulating all offices. The county auditor or deputy shall certify that these tests have been completed prior to the official logic and accuracy test.

WAC 434-334-170 Precinct-based optical scan ballot counter preparation and testing. All logic and accuracy testing of precinct-based systems shall be performed by the county during the preparation of the precinct ballot counters prior to system distribution. As each ballot counter is programmed and set up for distribution a test of the ballot counter and ballot styles shall be performed. It shall be established by these tests that the ballot counter(s) are functioning within system standards. All ballot styles programmed for each machine shall be processed by each machine in order to insure that the machine is correctly counting and accumulating every office. The tests shall also establish that the printed ballot voter response areas are correctly aligned with the scanning area. After all tests are performed and the machine is ready for distribution, the machine shall be sealed and the seal number recorded. This will serve as the official logic and accuracy test of these poll site ballot counters.

WAC 434-334-175 Poll site-based optical scan ballot counter test notices, observers, and log of process. A log shall be created during the testing of the poll site-based ballot counters. The log shall record the time and place of each test, the precinct number(s), seal number and machine number of each ballot counter and the initials of each person testing and observing the test for each machine. This log shall be included in the official logic and accuracy test materials. The processes described in WAC 434-334-170 shall be open to observation and subject to all notices and observers pursuant to WAC 434-334-070 and 434-334-085.
