PART 2
CUSTOM FARM SLAUGHTERING

WAC 16-19-100 Additional requirements for sanitary operations of custom farm slaughtering. Mobile custom farm slaughtering units must have:

(1) A van body completely covering the unit, but which may exclude the driver's cab and the hoist. The van body must be made of material that is nonporous and impervious to moisture. Wood may be used only as internal framing or spacing material between double nonwooden walls. The van body must be constructed so that it excludes dust, dirt and insects. The construction must be smooth, durable and easily cleanable inside and out.

(a) All vans must have the joints at junctions of internal facing surfaces and panels sealed and waterproof. Metal joints must be smooth and splatter free. If metal is used, only stainless steel, galvanized steel, aluminum in good condition or other materials approved by the director may be used. Any insulation used must be of a type that does not absorb water.

(b) Minimum interior dimensions of the van, exclusive of room taken up by tanks and other mounted equipment must be:

- (i) Height - six feet.
- (ii) Length - six feet.

(iii) Width - (when using single center rail for hanging carcass) four feet.

(iv) Width - (when using two rails for hanging carcasses) six feet.

(2) A hoist of 2,000 pound capacity, capable of lifting a beef carcass to a height that enables the carcass to clear the ground for bleeding and evisceration. This hoist must extend outward from the truck body. If a beef spreader is included as part of the equipment it must be of suitable construction.

(3) A sterilizing tank constructed of smooth, cleanable, impervious and durable material, large enough to allow complete sanitizing of tools used in the slaughter operation. This sterilizing unit must be filled during all slaughter operations, with potable water maintained at a temperature of at least 180°F. An approved cold sterilant may be used if sufficient hot water is available for preliminary cleaning of contaminated equipment prior to sterilizing.

(4) A water tank built into the vehicle constructed of smooth, cleanable, impervious and durable material with a minimum capacity of forty gallons. No slaughtering operation may be commenced unless at least twenty gallons is available. Water must be delivered to the outlets at a pressure of at least forty pounds per square inch. One hose connection from tank and hose with nozzle must be provided to wash down carcasses. The water system must be maintained to a sanitary condition and be used only for potable water.

(5) Soap and paper towels must be available for washing hands and equipment.

(6) Outer garments worn by persons handling meat must be clean.

(7) All tools and equipment must be thoroughly washed and sanitized after each day's operation. They must be washed and sanitized if contaminated with viscera contents, abscesses, or foreign material during slaughtering operations.

(8) Meat food animals or meat food bird carcasses must not be transported in the mobile slaughter unit unless each carcass is hung so that it does not touch the floor except for beef carcasses that are dressed with the hide on and are to be delivered to a processing plant within two hours for completion of the dressing procedure. Carcasses with the hide on must be secured and placed in the mobile unit in a manner that prevents contact of hide with bare meat surfaces. Surfaces of the mobile unit that have been contaminated by contact with the hide must be cleaned and sanitized before subsequent carcasses are hauled.

(9) Edible offal must be transported in clean, covered, properly identified containers constructed of approved materials.

(10) No animals other than scalded and dehaired hogs, and defeathered meat food birds, and carcasses exempted under subsection (8) of this section may be dressed and transported with the hide on.

(11) Viscera of all meat food animals and meat food birds must be separated from the carcass at the time of slaughter on the premises where the animal is slaughtered. Feet must be removed from all meat food animals, except hogs, when scalded, and the head shall be removed from beef on the premises where it is slaughtered. Feet and metatarsus must be removed from meat food birds.

(12) All material produced through the slaughter activity, such as inedible offal and hide that may cause the slaughter area to become insanitary, must immediately upon completion of actual slaughter of the animal, be removed from the slaughtering area and disposed of in a sanitary manner. This is the licensee's responsibility.

(13) Meat food birds may be slaughtered by a custom farm slaughterer or custom slaughter establishment but not by a licensed custom poultry processor without prior approval by the director.

(14) Inedible offal may be only transported by a mobile custom slaughtering establishment under the following conditions:

(a) In a covered, watertight trailer constructed of smooth, cleanable, nonpervious material and maintained in a sanitary condition at all times; or

(b) In approved sanitary containers, in a separate compartment, in the van body. The compartment must be metal lined. There must be no openings from this compartment to the portion of the van used to transport edible products. All inedible offal containers, such as barrels or tubs, must be tightly covered and made of smooth, cleanable and nonpervious materials.

(15) A custom farm slaughterer may slaughter his or her own animal for his or her own consumption on any premises, farm or ranch, owned, rented or in any way controlled by him or her. No other animal may be slaughtered by the licensee on the premises, farm or ranch, owned, rented or in any way controlled by him or her or by members of his or her immediate family. Licensees under this section may slaughter more than one animal only if the animals have been in his or her possession more than sixty days.

(16) Whenever a licensee has reason to believe that a meat food animal or meat food product is unwholesome as defined in these rules, he or she must require an examination and declaration of wholesomeness by a licensed veterinarian before proceeding with slaughter or with processing of the carcass.

(17) Meat food birds must be slaughtered in a custom farm slaughterer mobile unit unless they are delivered to a custom slaughtering establishment.

[Statutory Authority: RCW 16.49.680, 99-12-021, § 16-19-100, filed 5/24/99, effective 6/24/99.]

WAC 16-19-110 Custom farm slaughtering—Special slaughter conditions. A custom farm slaughterer may slaughter an animal only on the premises of the present or first preceding owner of such animal, except as follows:

(1) An animal injured to such extent that immediate slaughter at the place of injury is necessary for humane reasons.

(2) Animals purchased for custom slaughter at any 4-H and FFA market stock sales and open class carcass contests where ownership of the carcass is retained by the entrant may be slaughtered by a custom farm slaughterer on any premise. The premises must be approved in advance by the local health district/department and the department. The fair representative must request approval for each operator they plan on using by submitting an application for special

slaughter conditions to the department at least thirty days before any such slaughter is to be done.

[Statutory Authority: RCW 16.49.680. 99-12-021, § 16-19-110, filed 5/24/99, effective 6/24/99.]

WAC 16-19-120 Custom farm slaughtering—Signs.

Each custom farm slaughterer's mobile unit must be conspicuously identified with letters and numbers at least three inches high by the words Washington license or abbreviation Wa. Lic. and bear the license number issued by the department to the licensee.

[Statutory Authority: RCW 16.49.680. 99-12-021, § 16-19-120, filed 5/24/99, effective 6/24/99.]

WAC 16-19-130 Custom farm slaughtering—Identification of carcass and parts of carcasses. Carcasses or parts of carcasses processed by a custom farm slaughterer must be identified in the following manner:

(1) Each operator must obtain from the department prior to slaughtering an animal, an approved tagging device for identifying each carcass slaughtered.

(2) Each carcass slaughtered by the licensee must have affixed to each quarter, or side, prior to departure from the slaughtering site, the department approved identifying tag. At the time of tagging the licensee must complete the attached "custom slaughter report certificate of permit," giving the name and address of the owner; the signature of the owner or agent; name of consignee if applicable; the date of slaughter and the slaughterer's license number; the species of animal slaughtered and the brand, if any; and the license number of the custom farm slaughtering unit if the meat is to be delivered for processing. Edible offal delivered to a custom meat facility must be stamped "not for sale" upon arrival.

[Statutory Authority: RCW 16.49.680. 99-12-021, § 16-19-130, filed 5/24/99, effective 6/24/99.]

WAC 16-19-140 Custom farm slaughtering—Reporting of activities. (1) Each custom farm slaughterer must send the department a completed custom slaughter certificate of permit report for each animal processed the previous month no later than the 20th of each month.

(2) Custom slaughter certificate of permit reports accumulated between reporting periods must be kept on file at the licensee's principal place of business and be made available to the department on request.

(3) Failure to maintain or submit reports as required, or the making of fraudulent reports, constitutes grounds for suspension or revocation of an establishment's or slaughterer's license.

[Statutory Authority: RCW 16.49.680. 99-12-021, § 16-19-140, filed 5/24/99, effective 6/24/99.]

PART 3

CUSTOM SLAUGHTERING ESTABLISHMENTS

WAC 16-19-200 Additional requirements for sanitary operation of custom slaughtering establishments.

Custom slaughtering establishments must have:

[Title 16 WAC—p. 66]

(1) Hot water of sufficient temperature in sufficient quantity to thoroughly clean and sanitize all equipment subject to contamination from dressing or handling of diseased carcasses. For the purpose of this section "sufficient temperature" means at least 160°F for cleaning purposes and 180°F for purposes of sanitizing. If an approved chemical sanitizing agent is used in the sanitizing step, a temperature of 160°F is considered adequate.

(2) Properly located sanitizing facilities of approved construction and of sufficient size for complete immersion of butcher tools, and other implements must be provided in the slaughter room and at any other place where the operation is likely to result in the contamination of such equipment and utensils. Such receptacles must have means of heating the water contained therein to 180°F and maintaining it at that temperature during the entire operation. The sanitizers must be designed so that they can be drained after each day's use.

(3) Inedible and condemned storage and handling facilities.

(a) Adequate facilities for sanitary handling and storage of inedible offal and for sanitizing equipment in which inedible materials were transported must be provided, including one or more properly located enclosed rooms. Hot and cold water must be provided at outlets in or adjacent to the inedible handling room. The necessary doors connecting inedible storage rooms with rooms where edible products are handled must be metal clad, self-closing and tight fitting.

(b) A separate refrigerated room capable of maintaining a temperature of 45°F or less must be provided for the storage of inedible material at plants that store such material for a period longer than twenty-four hours. Such rooms must be of sanitary construction and must have impervious floors, walls and ceilings. The floors must be watertight, properly sloped and provided with drains leading to the plant sewage disposal system.

(c) All tanks and equipment used for rendering or preparing inedible meat must be in rooms or compartments separate from those used for rendering or preparing edible products.

(4) The slaughter floor must be kept reasonably free of blood, fat, scraps, etc. Water must not be permitted to splash from the floor upon unprotected carcasses on the bed or on the half hoist. The bed must be reasonably clean before the carcass is lowered. Clean watertight metal containers in good repair and free from objectionable odors must be provided at convenient locations for the reception of feet, tails, ears, pizzles, or other inedible material. Evisceration must be performed so as to avoid contamination of the carcass with ingesta or fecal material.

(5) Carcasses must be washed with water under pressure from a spray nozzle. Towels, rags, cloths, brushes of any kind, or water dipped out of a drum or containers must not be used. Metal drums of containers of water must not be used for washing hands, tools, or parts of carcasses, or for flushing the floor. A carcass that has been contaminated by manure or by pus must have the contaminated portion removed by trimming before being washed.

(6) Inedible material must not be placed on the slaughter room floor and must be kept in suitable watertight containers or vehicles until removed from the slaughter room.

(7) Skinned beef, calf and vealer heads must not be permitted to come in contact with the floor. The horns, horn-butts, muzzles, and all pieces of hide must be removed before the head is washed. If the meat from the head is to be saved, the head must be thoroughly washed individually, and flushed in a head flushing cabinet. This must include a thorough flushing of the mouth, nostrils, and pharynx while the head is hanging in an inverted position.

(8) In removing the front feet of cattle and calves, care should be taken to expose as little of the flesh of the fore-shank as possible.

(9) Calves of such size that there is not a clearance of at least eight inches above the floor, or whose viscera cannot be transported manually and unaided to the inedible room, must be skinned and eviscerated as cattle.

(10) Calves dressed hide-on must be thoroughly washed and cleaned prior to making any incision into the carcass other than the sticking wound, except the heads of calves and vealers slaughtered in the "Kosher" method should be skinned prior to washing the carcasses.

(11) In slaughtering lambs and sheep, the pelt must be removed and the carcass thoroughly washed and cleaned before any incision is made for evisceration. Adequate care must be taken to prevent soilage of the carcass when removing the pelt.

(12) Hog carcasses must be thoroughly washed, cleaned, and singed (when necessary) to remove all hair, scale, scurf, dirt and toenails on the slaughtering floor before any incision is made other than the sticking wound. The forefeet need not be cleaned if discarded in the slaughtering room. Hog heads left on the carcass or saved intact must be thoroughly washed and flushed (nostrils, mouth and pharynx) and have ear tubes and eyelids removed.

(13) Paunches must not be opened in the slaughtering room, except when a power operated paunch lift table is provided for this purpose.

(14) Carcasses must be removed from the slaughter room to the chill cooler immediately after dressing and washing is completed. Improperly washed or unclean carcasses must not be brought into the coolers.

[Statutory Authority: RCW 16.49.680. 99-12-021, § 16-19-200, filed 5/24/99, effective 6/24/99.]

WAC 16-19-210 Requirements for assignment, stamping, recordkeeping and condemnation of meat. The operator of any custom slaughtering establishment must have in his or her possession certificates of permit or other satisfactory proof of ownership of carcasses or parts thereof in his establishment. Such proof of ownership must be kept on file for a period of six months after receipt of the carcass or part of the carcass.

[Statutory Authority: RCW 16.49.680. 99-12-021, § 16-19-210, filed 5/24/99, effective 6/24/99.]

(2001 Ed.)

PART 4 CUSTOM MEAT FACILITIES

WAC 16-19-300 Additional requirements for sanitary operations of custom meat facilities. (1) Refrigerated facilities.

(a) Adequate refrigerated facilities must be provided for the chilling and storage of products. Carcass chill coolers and holding coolers must have mechanical refrigeration capable of maintaining a temperature of 35°F or lower, when loaded to capacity. When overhead refrigerating facilities are provided, insulated drip pans must be installed beneath them and the pans properly connected to the drainage system or to other suitable facilities. If wall coils are installed, a drip gutter of impervious material and connected with the drainage system must be installed beneath the coils. The clearance between a hanging carcass and the floor must be sufficient to avoid contact with or contamination from the floor.

(b) Meat food product storage and display facilities must not be loaded to exceed their intended capacity and must maintain fresh and cured products stored in them below 45°F internal temperature and frozen meat food products below 0°F internal temperature.

(i) Such refrigeration facilities must be equipped with a visible, accurate thermometer located in the warmest part of the refrigerated area.

(ii) Uninspected meat food products must not be stored in display cases used for displaying inspected meat held for sale.

(2) Clean and sanitary operations and procedures. Operations and procedures involving the preparation, storing or handling of any meat must be strictly in accord with clean and sanitary methods.

(a) Receptacles used for inedible meat in rooms where edible products are handled must be in good repair and be properly sanitized before usage.

(b) Carcasses or parts of carcasses of uninspected meat not returned to their owner must be properly denatured and properly disposed of. Inspected carcasses or parts of carcasses not intended for human consumption shall be denatured before disposal.

(c) Coolers must not be loaded beyond their capacity to properly chill the carcasses and edible offal. Maximum cooler capacity for carcass chilling and holding purposes is based on available rail space in the coolers. Sufficient space must be provided so that carcasses do not touch.

(3) Employee health. Every person employed in a custom meat facility who may contribute to the transmission of infectious disease through the nature of the employee's contact with meat or equipment and facilities is encouraged to obtain and place on file with the operator, a food and beverage service worker's permit as prescribed by chapter 69.06 RCW.

[Statutory Authority: RCW 16.49.680. 99-12-021, § 16-19-300, filed 5/24/99, effective 6/24/99.]

WAC 16-19-310 Proof of ownership of uninspected carcasses or parts of carcasses. (1) The operator of any custom meat facility must have in his or her possession certifi-

cates of permit as provided by chapter 16-620 WAC (Brand Inspection) or other satisfactory proof of ownership of all uninspected carcasses or parts of carcasses received in his or her establishment. Such proof of ownership must be kept on file for six months after receipt of such carcass or part of carcass.

(2) While in possession of the operator all uninspected cattle carcasses or parts of carcasses must be identified by a department-approved tagging device describing the name and address of the owner, name and address of the slaughterer, if not the owner, the slaughter date and brand, if the animal was branded, while in the possession of the operator. Such identification must conform to the requirements of chapter 16.57 RCW (Livestock identification).

(3) All uninspected meat food animal carcasses or parts of carcasses other than cattle must be identified on a tag available from the department as to name and address of owner, name and address of the slaughterer if different from the owner, and the slaughter date while in possession of the operator.

(4) The operator must give each owner of uninspected carcasses, parts of carcasses, or meat food products delivered to a custom meat facility for preparation a written record stating the gross weight received for preparation. The operator must maintain a duplicate copy of this record at his or her principal place of business for six months.

(5) Operators making sales of prepackaged inspected meat to other than household users must maintain written records of all such transactions, including the buyer, type of product sold and total net weight of each exchange.

[Statutory Authority: RCW 16.49.680. 99-12-021, § 16-19-310, filed 5/24/99, effective 6/24/99.]

WAC 16-19-320 Labeling and packaging requirements. (1) All inspected meat and meat food products stored or prepared for the owner thereof, including packages or containers containing any uninspected meat food products, must be marked "NOT FOR SALE" in letters three-eighths of an inch in height immediately upon receipt and immediately after preparing.

(2) All meat food product labels and meat food product packaging must conform to requirements of chapter 19.94 RCW, the Weights and Measures Act and chapter 69.04 RCW, Intrastate Commerce in Food, Drugs, and Cosmetics, now in effect or as amended, and rules adopted under those chapters.

[Statutory Authority: RCW 16.49.680. 99-12-021, § 16-19-320, filed 5/24/99, effective 6/24/99.]

WAC 16-19-330 Requirements for preparation and storage of meat and meat food products. (1) Inspected meat and uninspected meat must be stored and prepared separately at all times. Separate meat storage areas must be designated for inspected and uninspected meat and meat food products. There must be no physical contact between inspected and uninspected meat.

(2) There must be a complete equipment cleanup after preparation of uninspected meat.

[Title 16 WAC—p. 68]

(3) Meat food products offered for sale as fully cooked must be heated in all parts to the following minimum temperatures before delivery to a household user:

(a) Beef 145°F for three minutes or, comminuted (ground) beef products 155°F for fifteen seconds.

(b) Pork 145°F for three minutes or 150°F for one minute.

(c) Any products containing poultry or meat food birds must be cooked to an internal temperature of at least 165°F for fifteen seconds.

(4) Any cooked or partially cooked meat food product not delivered to a household user within two hours of heating must be placed in a cooler allowing adequate air circulation that is maintained at an ambient temperature of 45°F or less within two hours after removal from the heating source (smoker).

(5) Any processing of food other than meat must be done at different times from processing of meat. Any common equipment, utensils, or food contact surfaces used in the preparation of meat, meat food products, and other food products must be sanitized between periods of processing. Processing food, other than meat food animals or meat food birds, whether for the owner or for wholesale distribution, requires obtaining a food processing license from the department. Specific requirements and information on food processing plant licensing may be obtained from the department.

[Statutory Authority: RCW 16.49.680. 99-12-021, § 16-19-330, filed 5/24/99, effective 6/24/99.]

[Order 1067, Regulations 2-5, filed 9/19/67, effective 10/20/67; Order 804, Regulation 1.06, effective 3/18/60.]

WAC 16-24-020 Chemical—Carbon dioxide. The slaughtering of calves, sheep, and swine with the use of carbon dioxide gas and the handling in connection therewith, in compliance with the provisions contained in this section, are hereby designated and approved as humane methods of slaughtering and handling of such animals under the law.

(1) Administration of gas, required effect; handling.

(a) The carbon dioxide gas shall be administered in a chamber in accordance with this section so as to produce surgical anesthesia in the animals before they are shackled, hoisted, thrown, cast, or cut. The animals shall be exposed to the carbon dioxide gas in a way that will accomplish the anesthesia quickly and calmly, with a minimum of excitement and discomfort to the animals.

(b) The driving or conveying of the animals to the carbon dioxide chamber shall be done with a minimum of excitement and discomfort to the animals. Delivery of calm animals to the anesthesia chamber is essential since the induction or early phase of anesthesia is less violent with docile animals. Among other things this requires that, in driving animals to the anesthesia chamber, electrical equipment be used as little as possible and with the lowest effective voltage.

(c) On emergence from the carbon dioxide chamber the animals shall be in a state of surgical anesthesia and shall remain in this condition throughout shackling, sticking and bleeding. Asphyxia or death from any cause shall not be produced in the animals before bleeding.

(2) Facilities and procedures.

(a) General requirements for gas chamber and auxiliary equipment; operator.

(i) The carbon dioxide gas shall be administered in a chamber which accomplishes effective exposure of the animal. Two types of chambers involving the same principle are in common use for carbon dioxide anesthesia. They are the "U" type chamber and the "straight line" type chamber. Both are based upon the principle that carbon dioxide gas has a higher specific gravity than air. The chambers open at both ends for entry and exit of animals and have a depressed central section. Anesthetizing carbon dioxide concentrations are maintained in the depressed central section of the chamber. Effective anesthetization is produced in this section. Animals are driven from holding pens through a pathway constructed of pipe or other smooth metal onto a continuous conveyor device which moves the animals through the chamber. The animals are compartmentalized on the conveyor by impellers synchronized with the conveyor or are otherwise prevented from crowding. Where impellers are used to compartmentalize the animal, a mechanically or manually operated gate will be used to move the animal onto the conveyor. Surgically anesthetized animals are moved from the chamber by the same continuous conveyor that carried them into and through the carbon dioxide gas.

(ii) Flow of animals into and through the carbon dioxide chamber is dependent on one operator. The operation or stoppage of the conveyor is entirely dependent upon this operator.

[Title 16 WAC—p. 69]

It is necessary that he be skilled, attentive, and aware of his responsibility. Overdosages and death of animals can be brought about by carelessness of this individual.

(b) Special requirements for gas chamber and auxiliary equipment. The ability of anesthetizing equipment to perform with maximum efficiency is dependent on its proper design and efficient mechanical operation. Pathways, compartments, gas chambers, and all other equipment used must be designed to accommodate properly the species of animals being anesthetized. They shall be free from pain producing restraining devices. Injury of animals must be prevented by the elimination of sharp projections or exposed wheels or gears. There shall be no unnecessary holes, spaces, or openings where feet or legs of animals may be injured. Impellers or other devices designed to mechanically move or drive animals or otherwise keep them in motion or compartmentalized shall be constructed of flexible or well padded rigid material. Power activated gates designed for constant flow of animals to anesthetizing equipment shall be so fabricated that they will not cause injury. All equipment involved in anesthetizing animals shall be maintained in good repair.

(c) Gas. Maintenance of a uniform carbon dioxide concentration and distribution in the anesthesia chamber is a vital aspect of producing surgical anesthesia. This may be assured by reasonable accurate instruments which sample and analyze carbon dioxide gas concentration within the chamber throughout anesthetizing operations. Gas concentration shall be maintained uniform so that the degree of anesthesia in exposed animals will be constant. Carbon dioxide gas supplied to anesthesia chambers may be from controlled reduction of solid carbon dioxide or from a controlled liquid source. In either case, the carbon dioxide shall be supplied at a rate sufficient to anesthetize adequately and uniformly the number of animals passing through the chamber. Sampling of gas for analysis shall be made from a representative place or places within the chamber and on a continuing basis. Gas concentrations and exposure time shall be graphically recorded throughout each day's operation. Neither carbon dioxide nor atmospheric air used in the anesthesia chambers shall contain noxious or irritating gases. Each day before equipment is used for anesthetizing animals, proper care shall be taken to mix adequately the gas and air within the chamber. All gas producing and control equipment shall be maintained in good repair and all indicators, instruments, and measuring devices must be available for inspection by department inspectors during anesthetizing operations and at other times. A suitable exhaust system must be provided to eliminate possible overdosages due to mechanical or other failure of equipment.

[Order 1067, Regulation 6, filed 9/19/67, effective 10/20/67; Order 804, Regulation 1.02, effective 3/18/60.]

WAC 16-24-030 Mechanical—Captive bolt. The slaughtering of cattle, calves, sheep, swine, goats, horses and mules by using captive bolt stunners and the handling in connection therewith, in compliance with the provisions contained in this section, are hereby designated and approved as humane methods of slaughtering and handling of such animals under the law.

(1) Application of stunners, required effect; handling.

[Title 16 WAC—p. 70]

(a) The captive bolt stunners shall be applied to the livestock in accordance with this section so as to produce immediate unconsciousness in the animals before they are shackled, hoisted, thrown, cast, or cut. The animals shall be stunned in such a manner that they will be rendered unconscious with a minimum of excitement and discomfort.

(b) The driving of the animals to the stunning areas shall be done with a minimum of excitement and discomfort to the animals. Delivery of calm animals to the stunning areas is essential since accurate placement of stunning equipment is difficult on nervous or injured animals. Among other things, this requires that, in driving animals to the stunning areas, electrical equipment be used as little as possible and with the lowest effective voltage.

(c) Immediately after the stunning blow is delivered the animals shall be in a state of complete unconsciousness and remain in this condition throughout shackling, sticking and bleeding.

(2) Facilities and procedures.

(a) General requirements for stunning facilities; operator.

(i) Acceptable captive bolt stunning instruments may be either skull penetrating or nonpenetrating. The latter type is also described as a concussion or mushroom type stunner. Penetrating instruments on detonation deliver bolts of varying diameters and lengths through the skull and into the brain. Unconsciousness is produced immediately by physical brain destruction and a combination of changes in intracranial pressure and acceleration concussion. Nonpenetrating or mushroom stunners on detonation deliver a bolt with a flattened circular head against the external surface of the animal's head over the brain. Diameter of the striking surface of the stunner may vary as conditions require. Unconsciousness is produced immediately by a combination of acceleration concussion and changes in intracranial pressures. A combination instrument utilizing both penetrating and nonpenetrating principles is acceptable. Energizing of instruments may be accomplished by detonation of measured charges of gunpowder or accurately controlled compressed air. Captive bolts shall be of such size and design that, when properly positioned and activated, immediate unconsciousness is produced.

(ii) To assure uniform unconsciousness with every blow, compressed air devices must be equipped to deliver the necessary constant air pressure and must have accurate constantly operating air pressure gauges. Gauges must be easily read and conveniently located for use by the stunning operator and the inspector. For purposes of protecting employees, inspectors, and others, it is desirable that any stunning device be equipped with safety features to prevent injuries from accidental discharge. Stunning instruments must be maintained in good repair.

(iii) The stunning area shall be so designed and constructed as to limit the free movements of animals sufficiently to allow the operator to locate the stunning blow with a high degree of accuracy. All chutes, alleys, gates and restraining mechanisms between and including holding pens and stunning area shall be free from pain producing features such as exposed bolt ends, loose boards, splintered or broken planking and protruding sharp metal of any kind. There shall be no unnecessary holes or other openings where feet or legs

(2001 Ed.)

of animals may be injured. Overhead drop gates shall be suitably covered on the bottom edge to prevent injury on contact with animals. Roughened or cleated cement shall be used as flooring in chutes leading to stunning areas to reduce falls of animals. Chutes, alleys, and stunning areas shall be so designed that they will comfortably accommodate the kinds of animals to be stunned.

(iv) The stunning operation is an exacting procedure and requires a well-trained and experienced operator. He must be able to accurately place the stunning instrument to produce immediate unconsciousness. He must use the correct detonating charge with regard to kind, breed, size, age, and sex of the animal to produce the desired results.

(b) Special requirements: Choice of instrument and force required to produce immediate unconsciousness varies, depending on kind, breed, size, age, and sex of the animal: Young swine, lambs, and calves usually require less stunning force than mature animals of the same kind. Bulls, rams, and boars usually require skull penetration to produce immediate unconsciousness. Charges suitable for smaller kinds of livestock such as swine or for young animals are not acceptably interchanged for use on larger kinds or older livestock, respectively.

[Order 1067, Regulation 7, filed 9/19/67, effective 10/20/67; Order 804, Regulation 1.03, effective 3/18/60.]

WAC 16-24-040 Mechanical—Gunshot. The slaughtering of cattle, calves, sheep, swine, goats, horses and mules by shooting with firearms and the handling in connection therewith, in compliance with the provisions contained in this section, are hereby designated and approved as humane methods of slaughtering and handling of such animals under the law.

(1) Utilization of firearms, required effect; handling.

(a) The firearms shall be employed in the delivery of a bullet or projectile into the animal in accordance with this section so as to produce immediate unconsciousness in the animal by a single shot before it is shackled, hoisted, thrown, cast, or cut. The animals shall be shot in such a manner that they will be rendered unconscious with a minimum of excitement and discomfort.

(b) The driving of the animals to the shooting areas shall be done with a minimum of excitement and discomfort to the animals. Delivery of calm animals to the shooting area is essential since accurate placement of the bullet is difficult in case of nervous or injured animals. Among other things, this requires that, in driving animals to the shooting areas, electrical equipment be used as little as possible and with the lowest effective voltage.

(c) Immediately after the firearm is discharged and the projectile is delivered, the animal shall be in a state of complete unconsciousness and remain in this condition throughout shackling, sticking and bleeding.

(2) Facilities and procedure.

(a) General requirements for shooting facilities; operator.

(i) On discharge, acceptable firearms dispatch free projectiles or bullets of varying sizes and diameters through the skull and into the brain. Unconsciousness is produced immediately by a combination of physical brain destruction and

changes in intracranial pressure. Caliber of firearms shall be such that when properly aimed and discharged, the projectile produces immediate unconsciousness.

(ii) To assure uniform unconsciousness with every discharge when small-bore firearms are used, it is necessary to use one of the following type projectiles: Hollow pointed bullets, frangible iron plastic composition bullets, or powdered iron missiles. When powdered iron missiles are used, the firearms shall be in close proximity with the skull of the animal when fired. Firearms must be maintained in good repair. For purposes of protecting employees, inspectors, and others, it is desirable that all firearms be equipped with safety devices to prevent injuries from accidental discharge. Aiming and discharging of firearms should be directed away from operating areas.

(iii) The provisions contained in WAC 16-24-030 (2)(a)(iii) with respect to the stunning area also apply to the shooting area.

(iv) The shooting operation is an exacting procedure and requires a well-trained and experienced operator. He must be able to accurately direct the projectile to produce immediate unconsciousness. He must use the correct caliber firearm, powder charge and type of ammunition to produce the desired results.

(b) Special requirements: Choice of firearms and ammunition with respect to caliber and choice of powder charge required to produce immediate unconsciousness varies, depending on age and sex of the animal. In the case of bulls, rams, and boars, small-bore firearms may be used provided they are able to produce immediate unconsciousness of the animals. Small-bore firearms are usually effective for stunning other cattle, sheep, swine, goats, calves, horses and mules.

[Order 1067, Regulation 8, filed 9/19/67, effective 10/20/67; Order 804, Regulation 1.04, effective 3/18/60.]

WAC 16-24-050 Electrical—Stunning with electric current. The slaughtering of cattle, calves, sheep, swine and goats with the use of electric current and the handling in connection therewith, in compliance with the provisions contained in this section, are hereby designated and approved as humane methods of slaughtering and handling of such animals under the law.

(1) Administration of electric current, required effect; handling.

(a) The electric current shall be administered so as to produce surgical anesthesia in the animals before they are shackled, hoisted, thrown, cast, or cut. The animals shall be exposed to the electric current in a way that will accomplish the anesthesia quickly and calmly, with a minimum of excitement and discomfort to the animals.

(b) The driving or conveying of the animals to the place of application of electric current shall be done with a minimum of excitement and discomfort to the animals. Delivery of calm animals to the place of application is essential to insure rapid and effective insensibility. Among other things this requires that, in driving animals to the place of application, electrical equipment be used as little as possible and with the lowest effective voltage.

(c) The quality and location of the electrical shock shall be such as to produce immediate insensibility to pain in the exposed animal.

(d) The stunned animal shall remain in a state of surgical anesthesia through shackling, sticking and bleeding. However, the animal shall die from loss of blood resulting from sticking and bleeding, and not from electrical shock.

(2) Facilities and procedures; operator.

(a) General requirements for operator: It is necessary that the operator of electric current application equipment be skilled, attentive, and aware of his responsibility. Overdoses and death of animals can be brought about by carelessness of this individual.

(b) Special requirements for electric current application equipment: The ability of electric current equipment to perform with maximum efficiency is dependent on its proper design and efficient mechanical operation. Pathways, compartments, current applicators, and all other equipment used must be designed to accommodate properly the species of animals being anesthetized. They shall be free from pain producing restraining devices. Injury of animals must be prevented by the elimination of sharp projections or exposed wheels or gears. There shall be no unnecessary holes, spaces or openings where feet or legs of animals may be injured. Impellers or other devices designed to mechanically move or drive animals or otherwise keep them in motion or compartmentalized shall be constructed of flexible or padded material. Power activated gates designed for constant flow of animals to electrical stunning equipment shall be so fabricated that they will not cause injury. All electrical stunning and auxiliary control and other equipment shall be maintained in good repair and all indicators, instruments, and measuring devices shall be available for inspection by department inspectors during stunning operations and at other times.

(c) Electric current: Each animal shall be given a sufficient application of electric current to insure unconsciousness immediately and through the bleeding operation. Suitable timing, voltage and current control devices shall be used to insure that each animal receives the necessary electrical charge to produce immediate unconsciousness. Moreover, the current shall be applied so as to avoid the production of hemorrhages or other tissue changes that would interfere with the inspection procedures of the department.

[Order 1067, Regulation 9, filed 9/19/67, effective 10/20/67; Order 804, Regulation 1.05, effective 3/18/60.]

WAC 16-54-082 Domestic bovine animals. All domestic bovine animals (including bison) entering Washington shall be moved on a permit issued by the office of the state veterinarian. All domestic bovine animals (including bison) shall meet the following requirements:

(1) Tuberculosis. All beef and dairy cattle must originate from herds not under quarantine in a not less than modified accredited area. The state veterinarian may require a negative tuberculosis test within thirty days of import for cattle (including bison) from the states classified as modified accredited or accredited free if *Mycobacterium bovis* (*M.*

bovis) has been cultured from a herd in that state within the previous twelve months. All Mexican cattle imported from Mexico within three years of date of importation to Washington must show proof of a tuberculosis retest at least one hundred twenty days after import to the United States. Such cattle without proof of retest must be held on the premises of destination in Washington and kept separate from all other cattle for not less than one hundred twenty nor more than one hundred eighty days from the date of entry and retested for tuberculosis during the one hundred twenty to one hundred eighty-day period.

(2) Brucellosis health certificate requirements. All domestic bovine animals (including bison), except those consigned to restricted feedlots, to federally inspected slaughter plants for immediate slaughter, or beef breed cattle, slaughter only dairy breed cattle, or dairy breed cattle from Oregon, Montana, and Idaho consigned to a state-federal approved livestock market, shall be accompanied by an official interstate health certificate and shall meet the following requirements:

(a) Brucellosis test.

(i) Cattle from class free and A states.

(A) Sexually intact heifers from brucellosis quarantined herds in class free and A states shall not be imported into the state of Washington except for immediate slaughter at a federally inspected slaughter plant.

(B) Cattle other than those referred to in (a)(i)(A) of this subsection from class free or A states which are test eligible, unless destined for a restricted feedlot or for immediate slaughter at a federally inspected slaughter establishment, must be negative to an official brucellosis test conducted within thirty days prior to date of entry. Cattle not considered test eligible include:

(I) Calves under six months of age.

(II) Steers and spayed heifers.

(III) Officially vaccinated dairy cattle under twenty months of age and officially vaccinated beef cattle under twenty-four months of age.

(IV) Cattle from a certified brucellosis free herd.

(V) Cattle from selected brucellosis free states designated by the Washington state veterinarian.

(ii) Cattle from Class B or C states.

(A) Sexually intact females from other than certified brucellosis free herds in states classified B or C by the USDA shall not be imported into the state of Washington except for immediate slaughter at a federally inspected slaughter establishment.

(B) Sexually intact males from Class B states which are test eligible, unless destined for a restricted feedlot or for immediate slaughter at a federally inspected slaughter establishment, must be negative to an official brucellosis test conducted within thirty days prior to date of entry and held on the premises of destination and kept separate from all other cattle for retest not less than forty-five nor more than one hundred twenty days from the date of the preentry test. Cattle not considered test eligible include:

(I) Calves under six months of age.

(II) Steers and spayed heifers.

(III) Cattle from a certified brucellosis free herd.

(C) Sexually intact males from Class C states which are test eligible must be negative to two official brucellosis tests conducted prior to entry at least sixty days apart, the second test to be conducted within thirty days of entry. Those cattle shall be held on the premises of destination and kept separate from all other cattle for retest not less than forty-five nor more than one hundred twenty days from the date of the second negative preentry test. Cattle not considered test eligible include:

- (I) Calves under six months of age.
- (II) Steers and spayed heifers.
- (III) Cattle from a certified brucellosis free herd.

(iii) Beef cattle eligible for brucellosis testing coming from class free or A states or dairy cattle coming from Idaho, Montana, or Oregon may be moved to state-federal approved livestock markets in Washington to meet entry health requirements.

(iv) Should brucellosis infection occur in the state of Washington as a result of importation of infected animals, all future importations from the state of origin shall be required to meet import regulations of the next lower classification. State regulatory officials of that state shall be notified and the lower classification entry requirement will be in effect for twelve months following notification to the state of origin.

(b) Brucellosis vaccinates—female dairy cattle. All female dairy cattle must be identified as official brucellosis vaccinates before entry into a dairy cow breeding herd. Except the following classes of cattle are exempt from this requirement:

- (i) Calves under four months of age.
- (ii) Those cattle consigned directly to a restricted feedlot.
- (iii) Spayed heifers.

- (ii) Cattle sold or consigned to a restricted feedlot.
- (iii) Spayed heifers.

(d) Cattle from a certified brucellosis free country may be imported if the state veterinarian, upon being assured that to allow such cattle to enter would not create any jeopardy to the livestock industry of the state of Washington, issues a special permit for such entry.

(3) Scabies. The office of the state veterinarian may require that any cattle from a known infected area be dipped at an official dipping facility within ten days of entry and, except those consigned to a federally inspected slaughter plant for immediate slaughter within fourteen days, be accompanied by an official interstate health certificate. Ivermectin may be used as an alternative to the dipping procedure for beef and nonlactating dairy animals.

(4) Vesicular stomatitis. The office of the state veterinarian may require that:

(a) Any cattle be accompanied by an official interstate health certificate except those consigned to a federally

inspected slaughter plant for immediate slaughter within fourteen days;

(c) Beef breed cattle from known infected areas be held separate and apart from all other cattle for a period of thirty days either prior to entry or at the point of destination or both.

(5) Temporary grazing permits. Herd owners desiring to move cattle into Washington for temporary grazing purposes must obtain a prior permit from the office of the state veterinarian. The state veterinarian may, if deemed necessary, require a brucellosis herd test and/or an official health certificate for any cattle entering the state for grazing purposes. Applicants must also file an approved herd plan with the office of the state veterinarian to phase out all brucellosis nonvaccinates in the herd prior to January 1, 1988. Grazing permits shall be for one specified season only and shall be valid for movement to only that destination declared on the permit. A copy of the permit shall accompany any vehicle transporting cattle into the state for such temporary grazing purposes.

WAC 16-59-020 Wrongful sale. It is unlawful for any person to exchange, sell, or otherwise distribute poultry or hatching eggs affected with or originating from flocks affected with pullorum-typhoid or other contagious, infectious or communicable disease mentioned in this chapter. The state veterinarian may make an exception and issue a permit for importation or movement when satisfied such movement will not affect the health of flocks in the state.

[Statutory Authority: RCW 16.36.040. 99-09-024, § 16-59-020, filed 4/15/99, effective 5/16/99; Order 997, Regulation 2, filed 1/21/66.]

WAC 16-59-030 Testing of breeding stock. (1) **Pullorum-typhoid:** All poultry and hatching eggs in interstate movement must originate from parent or grandparent stock which are registered as participating flocks under NPIP or equivalent state program. The poultry and hatching eggs must be classified as pullorum-typhoid free or must be tested negative for pullorum-typhoid within thirty days of movement. Acceptable tests are standard tube agglutination, microagglutination, enzyme-linked immuno-sorbent assay (ELISA) or rapid serum test. The stained antigen, rapid whole blood test can be used for all poultry except turkeys. The state veterinarian may allow cloacal swab or environmental testing in lieu of blood testing for certain species of ratites. Any person who sells poultry or hatching eggs as pullorum-typhoid free must qualify under the provisions of this rule. Exempt from pullorum-typhoid requirements are:

- (a) Eggs for table consumption;
- (b) Poultry for immediate slaughter; and
- (c) Shipments consigned to a diagnostic laboratory or research institute approved by the department.

(2) **Infectious laryngotracheitis; infectious coryza:** Poultry cannot be imported if naturally infected or exposed to natural infection with infectious laryngotracheitis or infectious coryza. Such poultry can be imported under permit from the state veterinarian. The shipment can only be moved into the state when accompanied by an official federal form VS1-27 completed and signed by a federal or state veterinarian. The shipment will be quarantined once it reaches its Washington destination. A permit will be granted when available information indicates that the poultry to be transported will not present a disease hazard to state of Washington flocks. Exempted from the infectious laryngotracheitis and infectious coryza requirements are:

- (a) Poultry for immediate slaughter;
- (b) Poultry consigned to a diagnostic laboratory or research institute approved by the department; and

(2001 Ed.)

(c) Eggs for table consumption from flocks naturally infected or vaccinated with virulent vaccines. To meet this exemption, eggs for table consumption must be washed and sanitized by methods required by the state veterinarian after consultation with Washington state poultry pathologists. Crates, equipment, and packaging material used for transportation must be cleaned and disinfected to the department's satisfaction or must be burned before leaving the slaughter, diagnostic, or egg processing premises. If crates, equipment and packaging material cannot be burned, they must be disposed of by a method in compliance with local air quality standards that still provide for destruction of pathogens.

WAC 16-71-010 Definitions. (1) "Department" means the Washington state department of agriculture.

(2) "Director" means the director of the department or his or her duly authorized representative.

(3) "Equines" means horses, donkeys, mules, ponies and others in the Equidae family.

(4) "Equine Infectious Anemia (EIA)" means infection with the equine infectious anemia lentivirus, affecting both sexes, all ages, all breeds and all species of equines. Infected equines remain carriers for life, constituting a potential source for spread of the infection. There is no known cure or treatment.

(5) "Official health certificate" means a legible certificate of veterinary inspection executed on an official form published by the state of origin or by the United States Department of Agriculture (USDA) Animal and Plant Health Inspection Service (APHIS). This certificate must be issued by a licensed, accredited veterinarian or a veterinarian approved by USDA APHIS.

(6) "Official test" means blood samples tested by USDA-approved laboratories or by people authorized by the state of origin's animal health officials to conduct tests.

(7) "Reactor" means an equine found positive on an official EIA test.

[Statutory Authority: RCW 16.36.040. 00-14-059, § 16-71-010, filed 7/3/00, effective 8/3/00; Order 1330, § 16-71-010, filed 12/21/73.]

WAC 16-71-022 Procedure. (1) Positive diagnosis of EIA is made with the agar gel immunodiffusion test (AGID or Coggins test), competitive enzyme-linked immunosorbent assay (cELISA test) or other official test. A supplementary AGID will be conducted to confirm positives detected with other official tests. Blood samples for EIA testing will be collected by licensed, accredited veterinarians at the owners' request and expense. At sample collection, the veterinarian will make an accurate, detailed identification of the equine on an official test request form. Positive test results are to be reported to state and federal animal health authorities. Owners will be advised of the procedure if equines are found positive on the official test. The owner must sign an agreement regarding disposition of a reactor. The agreement should follow a herd plan as defined in chapter 16.36 RCW.

(2) All equines over six months of age entering the state must be accompanied by an official health certificate and a record of a negative EIA test conducted within six months prior to importation. Exceptions to the EIA test requirement:

- (a) Equines consigned for immediate slaughter;
- (b) Equines consigned to a veterinary clinic for the purpose of treatment or surgery, under the supervision of a veterinarian. These equines must return to the state of origin following treatment or surgery and must not be commingled, housed or corralled in common with any other equine;
- (c) Equines under six months old;

(d) Oregon-origin equines under a reciprocal arrangement; and

(e) Idaho-origin equines may be excluded when a reciprocal arrangement exists for Washington-origin equines moving into Idaho.

(3) The management or board of governors at race tracks, rodeos, shows, fairs or other assembly points may require negative, official EIA tests within six months prior to consignment or participation for all equines consigned to these assembly points or participating in events.

[Statutory Authority: RCW 16.36.040. 00-14-059, § 16-71-022, filed 7/3/00, effective 8/3/00; Order 1431, § 16-71-022, filed 2/10/76. Formerly WAC 16-71-020.]

WAC 16-71-030 Quarantine. (1) Within twenty-four hours after positive test results are known, reactors will be quarantined to the premises of origin as provided in chapter 16.36 RCW. The quarantine will remain in effect until confirmation of reactor status and the reactor's disposition. The quarantine will be released only upon the reactor's death or when it is legally moved from the premises by permit on a VS form 1-27. If reactor status is disclosed while the equine is on a premises other than the owner's, permission may be granted to move the animal to the owner's premises. Reactors can only move by permit on a VS form 1-27. State and federal animal health authorities will conduct an epidemiological investigation to identify other equines exposed to EIA by contact with the reactor. All equines having contact with the reactor must be quarantined. The quarantine will be removed on these contact equines and movement allowed only after a negative, official EIA test at least 60 days after removal of the reactor.

(2) Confirmed reactors must be euthanized, placed in a quarantine facility for life, donated to a diagnostic or research facility, legally moved to slaughter or legally removed from the state. A state or federal animal health authority or a licensed, accredited veterinarian will conduct euthanasia. For lifelong quarantine, a state or federal animal health authority must approve the isolation facility. The isolation facility must keep the reactor separate from all other equines. It must be screened to prevent transmission of EIA by insects. With consultation of an entomologist, an insect control program must be developed, approved by the director and must be followed routinely. The isolation facility must be located at least 200 yards from any other equines. The department will pay for and hold a lifetime brand inspection on those equines held in lifetime quarantine. If the reactor is donated, moved to slaughter or removed from the state, it can only move by permit on a VS form 1-27. For removal from the state, the receiving state must agree in advance to accept the reactor.

[Statutory Authority: RCW 16.36.040. 00-14-059, § 16-71-030, filed 7/3/00, effective 8/3/00; Order 1330, § 16-71-030, filed 12/21/73.]

WAC 16-71-035 Identification of reactors. Confirmed reactors will be permanently identified by lip tattooing or branding with a hot iron, chemical brand or freeze brand. A lip tattoo is applied to the inside surface of the upper lip and consists of the numbers 91 followed by the letter A, with each character being at least one inch high and three-fourths of an

(2001 Ed.)

inch wide. A brand is applied on the left side of the neck or left shoulder and consists of the numbers 91 followed by the letter A, with each character being at least two inches high. Permanent identification will be applied by state or federal animal health authorities or by licensed, accredited veterinarians. Permanent identification is not necessary if the reactor is moved directly to slaughter under permit with a VS form 1-27 and the vehicle is officially sealed.

[Statutory Authority: RCW 16.36.040. 00-14-059, § 16-71-035, filed 7/3/00, effective 8/3/00.]

(8) "Official pseudorabies test" means a test for the diagnosis of pseudorabies conducted in a USDA-approved laboratory. These tests include, but are not limited to, serum neutralization (SN), virus isolation, fluorescent antibody, latex agglutination, particle concentration fluorescence immunoassay (PCFIA) and enzyme-linked immunosorbent assay (ELISA).

[Statutory Authority: RCW 16.36.040. 00-06-066, § 16-80-005, filed 3/1/00, effective 4/1/00. Statutory Authority: RCW 16.36.040 and 16.36.096. 91-08-027, § 16-80-005, filed 3/29/91, effective 4/29/91.]

WAC 16-80-007 Surveillance program. All swine blood submitted to the department's laboratory for brucellosis testing will be tested for pseudorabies by the latex agglutination test. Samples positive on the latex agglutination test will be further tested by the enzyme linked immunosorbent assay (ELISA) and serum neutralization (SN) tests. The ELISA or SN tests must show positive results before classifying the sample as positive. An epidemiological investigation will be initiated for each positive sample and an attempt will be made to trace such a sample to the herd of origin. Area testing will be done on all swine herds within a five mile radius of any infected premises. Trace forward and trace backward testing will be done in all herds which may have bought animals from or sold animals to the infected herd within a twenty-four month period prior to discovery of the infection.

[Statutory Authority: RCW 16.36.040. 00-06-066, § 16-80-007, filed 3/1/00, effective 4/1/00. Statutory Authority: RCW 16.36.040 and 16.36.096. 91-08-027, § 16-80-007, filed 3/29/91, effective 4/29/91.]

WAC 16-80-010 Quarantine. All swine herds infected with or exposed to pseudorabies will be quarantined and officially tested for pseudorabies. If the owner of any such swine herd refuses to allow the department to test, the swine herd and the premises on which they are quarantined will remain quarantined until released under WAC 16-80-020, RCW 16.36.010 or 16.36.020. No animal or products of such animals will be removed from the premises while they are under quarantine except as provided in RCW 16.36.010 or 16.36.020.

WAC 16-80-015 Sale of quarantined animals. Swine from a pseudorabies quarantined herd cannot be offered for sale, except for immediate slaughter. Such swine can only be moved from the pseudorabies quarantined herd when accompanied by an official federal form VS1-27 completed and signed by a federal or state veterinarian.

[Statutory Authority: RCW 16.36.040. 00-06-066, § 16-80-015, filed 3/1/00, effective 4/1/00. Statutory Authority: RCW 16.36.040 and 16.36.096. 91-08-027, § 16-80-015, filed 3/29/91, effective 4/29/91.]

WAC 16-80-020 Quarantine and release. Any herd of swine in which pseudorabies positive animals are found will be quarantined. The quarantine will be released when the entire quarantined herd has successfully completed Plan A (test and removal), Plan B (offspring segregation), Plan C

(depopulation - repopulation), or any plan listed in Pseudorabies Eradication State-Federal-Industry Program Standards, APHIS Document 91-55-041, effective January 1, 1998. Plan C will be the plan of choice if the statewide herd infection rate is less than 0.1% of total number of state herds. The plan used will be determined by mutual agreement between the herd owner or his or her veterinarian designated by the owner and the state veterinarian.

[Statutory Authority: RCW 16.36.040. 00-06-066, § 16-80-020, filed 3/1/00, effective 4/1/00. Statutory Authority: RCW 16.36.040 and 16.36.096. 91-08-027, § 16-80-020, filed 3/29/91, effective 4/29/91.]

WAC 16-80-025 Disinfecting premises. All barns, feed troughs, water tanks, feeding platforms, farrowing houses, and dry lots where a pseudorabies infected herd has been held must be thoroughly cleaned and disinfected within fifteen days after all infected swine have been removed. Recommended disinfectants are: Orthophenolphenate compounds, phenolic compounds, 2% sodium hydroxide, trisodium phosphate, chlorhexidine.

[Statutory Authority: RCW 16.36.040. 00-06-066, § 16-80-025, filed 3/1/00, effective 4/1/00. Statutory Authority: RCW 16.36.040 and 16.36.096. 91-08-027, § 16-80-025, filed 3/29/91, effective 4/29/91.]

WAC 16-80-030 Disinfecting vehicles. When a vehicle is used to transport pseudorabies infected animals or pseudorabies exposed animals from a pseudorabies quarantined herd, the vehicle must be cleaned and disinfected immediately following the unloading of the last animal of each load. The destination of infected or exposed swine must be equipped with department approved facilities to clean and disinfect vehicles.

Written approval will be issued after inspection of the cleaning and disinfection of the vehicle. This approval must be obtained from a state or federal veterinarian or registered veterinary technician or from the director.

[Statutory Authority: RCW 16.36.040. 00-06-066, § 16-80-030, filed 3/1/00, effective 4/1/00. Statutory Authority: RCW 16.36.040 and 16.36.096. 91-08-027, § 16-80-030, filed 3/29/91, effective 4/29/91.]

WAC 16-80-035 Indemnity for pseudorabies infected or exposed swine. The director may order the slaughter or destruction of any swine affected with or exposed to pseudorabies. The state veterinarian must approve the disposal methods of those swine destroyed. Subject to the availability of sufficient funds, the director may pay an indemnity for any swine ordered slaughtered or destroyed. When the indemnity is approved, the amount that will be paid is one hundred dollars for any sow past fifty days pregnant or with suckling piglets, fifty dollars for boars and open sows or sows less than fifty days pregnant, and fifty dollars for breeding gilts over two hundred fifty pounds live weight. An indemnity of up to seventy-five percent of appraised value of feeding stock will be paid when destroyed rather than slaughtered.

No indemnity will be paid if:

(1) The statewide infection rate exceeds 0.1% of total swine herds in the state; or

(2001 Ed.)

(2) The swine belong to the federal government or any of its agencies, this state or any of its political subdivisions or any municipal corporations; or

(3) The swine were brought into this state within six months of being ordered slaughtered or destroyed.

WAC 16-86-005 Definitions. For purposes of this chapter:

(1) "Accredited veterinarian" means a veterinarian licensed to practice veterinary medicine, surgery, and dentistry in the state of Washington and approved by the United States Department of Agriculture (USDA) veterinary services to participate in state-federal cooperative programs.

(2) "Adult vaccination" means the whole herd vaccination of a herd infected with or exposed to the Brucella abortus organism when conducted under a herd plan agreed to by the owner and the director. A USDA approved adult dosage brucella vaccine will be used to vaccinate all female cattle in the herd above twelve months of age.

(3) "Approved brucella vaccine" means only those biological products that are approved by and produced under license of the USDA for injection into cattle for the purpose of enhancing their resistance to brucellosis.

(4) "Department" means the Washington state department of agriculture.

(5) "Director" means the director of agriculture of the state of Washington or his or her duly authorized representative.

(6) "Immediate slaughter" means delivery within seven days to an inspected slaughter facility or restricted feedlot as defined in chapter 16-30 WAC and operating under the permission of the director.

(7) "Official calfhood vaccinate" means a female bovine animal vaccinated with an approved brucella abortus vaccine such as strain 19 vaccine or RB-51 vaccine at a calfhood dose between the ages of four and twelve months of age (one hundred twenty days to three hundred sixty-five days).

(8) "Official mature vaccinate" means a female bovine over the age of twelve months vaccinated with an approved adult dosage brucella vaccine under directions issued by the state veterinarian. Mature vaccinates must be blood tested for brucellosis at the time of vaccination and a copy of the test chart submitted to the state veterinarian with the vaccination record.

(9) "Registry tattoo" means a tattoo identifying the individual as a registered animal within the breed association.

(10) "Vaccination tattoo" means the United States registered shield and V preceded by a number indicating the quarter of the year and followed by a number corresponding to the last digit of the year in which the animal was vaccinated with strain 19 brucella vaccine. For strain RB-51 calfhood vaccination an R precedes the shield and V. In the case of strain RB-51 mature vaccination an M precedes the shield and V. In the case of strain RB-51 adult vaccination an A precedes the shield. For strain RB-51 vaccinates, the last number of the tattoo corresponds to the last digit of the year in which vaccine was administered.

Herds in which only no gross legions (NGL) reactor(s) occur and in which no evidence of *Mycobacterium bovis* infection has been disclosed may be released from quarantine after a sixty-day negative caudal fold retest of the entire herd.

(b) Herds containing one or more suspects to the caudal fold tuberculosis test shall be quarantined until the suspect animals are:

(i) Retested by the comparative-cervical tuberculosis test within ten days of the caudal fold injection and the tuberculosis status of the suspect(s) has/have been determined; or

WAC 16-89-005 Purpose. (1) Scrapie is an insidious, fatal neurological disease of sheep and goats. The disease agent has not been definitively characterized. The incubation period is very long, usually over eighteen months. There is no treatment, and the disease is always fatal. Currently there is no live animal diagnostic test for the presence of the disease. Diagnosis is made by observation of characteristic signs in the live animal and is confirmed by post-mortem examination of brain tissue.

(2) The United States Department of Agriculture (USDA) Voluntary Scrapie Flock Certification program is (2001 Ed.)

designed to monitor flocks and certify the scrapie status of the animals that are enrolled in the program. Any sheep or goat owner may apply to the USDA Veterinary Services area office in Olympia, Washington to participate in this program. It requires individual animal identification, keeping of good records, the reporting of acquisitions and deaths of animals to the USDA, Animal and Plant Health Inspection Service (APHIS) veterinary representative and annual inspections by the APHIS veterinary representative. At the end of five years, if all criteria have been met, the flock may be certified as being free of scrapie, as long as the flock remains on the USDA Voluntary Scrapie Flock Certification Program.

(3) The Washington state scrapie program requires that every blackface or blackface crossbred breeding sheep which is one year or older be identified with a Washington state flock identification number. Ninety seven percent of all diagnosed scrapie cases in the United States have occurred in blackfaced breeds or crosses although whitefaced individuals can occasionally be susceptible. Blackface or blackface crossbred breeding stock of any age must be identified before transfer of ownership or possession. Few records need to be maintained, no reports of deaths or new acquisitions are required. The program is strictly a control and eradication program and does not lead to flock certification.

Enrollment in the USDA Voluntary Scrapie Flock Certification Program will fulfill the requirements of the Washington state program.

[Statutory Authority: RCW 16.36.040. 99-09-026, § 16-89-005, filed 4/15/99, effective 5/16/99.]

WAC 16-89-010 Definitions. For the purposes of this chapter:

(1) "Director" means the director of agriculture of the state of Washington or his or her duly authorized representative.

(2) "Department" means the Washington state department of agriculture.

(3) "Blackface breeding stock" means intact male or female sheep of blackface breeds and intact male or female sheep that are crosses of blackface and other breeds of sheep.

(4) "Flock" means a number of animals of sheep or goat species which are kept, fed and herded together having single or multiple ownership. The term "flock" shall be interchangeable with the term "herd" and shall apply to purebred and commercial sheep.

(5) "Washington flock identification number" means a unique flock identification number assigned to the owner or owners of each flock of blackface breeding sheep in the state of Washington.

(6) "Official individual identification" means the unique identification of individual animals with an alphanumeric number applied as a tamper proof tag, tattoo, electronic device, or other tag approved by USDA or the director. The Washington flock identification number can serve as the official individual identification number if it contains a unique individual animal number in addition to the flock number.

(7) "Scrapie" means a transmissible spongiform encephalopathy that is a nonfebrile, transmissible, insidious, degen-

erative disease affecting the central nervous system of sheep and goats.

(8) "Scrapie exposed animal" means any animal, which has been in the same flock at the same time within the previous sixty months as a scrapie positive animal excluding limited contacts. Limited contacts are contacts between animals that occur off the premises of the flock and do not occur during or up to sixty days after parturition for any of the animals involved. Limited contacts do not include commingling or transportation to other flocks for the purposes of breeding. Examples of limited contacts include incidental contact in the show/sales ring. (See Appendix III of USDA's Voluntary Scrapie Flock Certification Program.)

(9) "Scrapie high risk animal" means an animal determined by epidemiologic investigation to be a high risk for developing clinical scrapie because the animal was the progeny of a scrapie-positive dam, was born in the same contemporary lambing group as a scrapie-positive animal or was born in the same contemporary lambing group as progeny of a scrapie-positive dam. Based upon evidence from the latest research information available and upon recommendation of the state scrapie certification board, animals that fit the criteria for high risk animals may be exempted by the director as high risk animals if they are determined by genetic testing to be QR or RR at the 171 codon or are determined by other recognized testing procedures to pose no risk.

(10) "Scrapie infected flock" means any flock in which a scrapie-positive animal has been identified by a state or federal animal health official.

(11) "Scrapie positive animal" means an animal for which a diagnosis of scrapie has been made by the National Veterinary Services Laboratories, USDA, laboratories accredited by the American Association of Veterinary Laboratory Diagnosticians (AAVLD) or another laboratory authorized by state or federal officials to conduct scrapie tests through histological examinations of central nervous system or by other diagnostic procedures approved for scrapie diagnosis by USDA. Animals diagnosed by experimental tests for abnormal prion will not be considered infected animals for the purposes of this rule.

(12) "Scrapie source flock" means a flock in which an animal was born and subsequently diagnosed as scrapie-positive at less than fifty-four months of age.

(13) "Voluntary scrapie flock certification program" means a national voluntary program for classification of flocks relative to scrapie.

[Statutory Authority: RCW 16.36.040, 99-09-026, § 16-89-010, filed 4/15/99, effective 5/16/99.]

WAC 16-89-015 Scrapie program standards. The USDA Voluntary Scrapie Flock Certification Program Standards, dated October 1, 1992, as amended October 17, 1997, and Scrapie in Sheep and Goats, Title 9, Code of Federal Regulations, Parts 54 and 79 as revised January 1, 1997, are adopted by reference as the basic standards for the scrapie control and eradication program in Washington state. Copies of these documents are on file at the Washington Department of Agriculture, Division of Food Safety/Animal Health, 1111 Washington Street, Olympia, Washington 98504 and are available on request.

[Title 16 WAC—p. 96]

[Statutory Authority: RCW 16.36.040, 99-09-026, § 16-89-015, filed 4/15/99, effective 5/16/99.]

WAC 16-89-020 Identification of blackface breeding stock. (1) The state veterinarian will designate the form and content of the Washington state flock identification number, approve identification devices for utilization of the flock identification number, assure availability of flock identification devices, and assign Washington flock identification numbers to owners or possessors of blackface breeding stock.

(2) Owners and possessors of blackface breeding stock will bear the costs of obtaining the identification devices and placing the device in or on the animal except the department may provide tamper proof ear tags to 4-H, FFA or other organized youth projects dependent upon the availability of funds. The department may also provide such tags for cooperative research programs and under the provisions of other interagency agreements.

(3) All owners or possessors of blackface breeding stock in Washington state must identify all blackface breeding stock in the flock which are one year of age or older with a Washington state flock identification number. Blackface breeding stock of any age will be identified with a flock identification number before transfer of ownership or possession.

(4) Blackface breeding stock imported into the state will be identified with a flock identification number within sixty days after entry into the state.

(5) Blackface breeding stock of any age must be identified with a flock identification number prior to movement of such sheep from the premises of origin for show, sale, purchase or other movement.

(6) Blackface breeding stock sold within the state must retain the original flock identification number. In the event an animal loses a flock identification device, the owner of the animal must reidentify the animal with his or her flock identification number and must maintain records to document the original and new flock identification numbers.

(7) Acceptable devices for application of the flock identification number to blackface breeding stock will include: Tamper proof ear tags bearing the flock identification number, legible tattoos bearing the flock identification number, electronic devices with owner records correlated to the flock identification number, approved voluntary scrapie flock certification program identification devices, and other identification devices approved by the state veterinarian.

(8) Blackface animals exempt from the state requirement for identification with a state flock identification number will include:

(a) Neutered animals.

(b) Sexually intact market lambs consigned directly to an approved slaughter facility or consigned directly to an approved lamb feedlot for finish feeding for slaughter only. Animals in approved feedlots may be removed only to approved slaughter facilities or other approved feedlots. Owners or livestock dealers delivering market lambs to Washington state slaughter facilities or approved feedlots must provide to the managers of such facilities the Washington flock numbers from which the market lambs have origi-

(2001 Ed.)

nated. A record of the flock numbers must be maintained for two years and available for review by the director.

(c) Lambs under one year of age that have not been sold or transferred to the possession of another person or entity.

(d) Sheep over one year of age that have not been sold or transferred to the possession of another person where management practices preclude applying the identification devices within the flock. This exemption must be specifically approved by the state veterinarian for each flock.

(e) Blackface animals within a flock enrolled in the federal Voluntary Scrapie Flock Certification Program.

[Statutory Authority: RCW 16.36.040. 99-09-026, § 16-89-020, filed 4/15/99, effective 5/16/99.]

WAC 16-89-030 Quarantine. Infected and source flocks or flocks that have received high risk animals must be placed and held under quarantine until the infected or high risk animals have been depopulated or the flock has qualified for and has been enrolled in the voluntary scrapie flock certification program. Flocks not participating in the certification program will remain under quarantine until the entire flock has been slaughtered or depopulated. Infected or high risk animals must be destroyed by means other than by slaughter under the direction of the state veterinarian.

[Statutory Authority: RCW 16.36.040. 99-09-026, § 16-89-030, filed 4/15/99, effective 5/16/99.]

WAC 16-89-040 Restriction of exposed animals. Scrapie exposed flocks and animals from exposed flocks will be placed under a hold order when the flocks or animals are determined by the state veterinarian to be exposed. During the seven-day duration of the hold order, an epidemiological investigation will be conducted on the flock or animals to determine the risk of infection with scrapie. Flocks or animals determined by a scrapie epidemiologist to pose a substantial risk to other flocks will be maintained under a quarantine order until the flock has fulfilled Section III of the voluntary scrapie flock certification program standards or been depopulated.

[Statutory Authority: RCW 16.36.040. 99-09-026, § 16-89-040, filed 4/15/99, effective 5/16/99.]

WAC 16-89-050 Scrapie source flocks. A single trace to a flock must meet the following criteria to designate the flock as a source flock:

The scrapie positive animal must:

(1) Be identified with a Washington state flock identification number on a tamper proof tag; or an official eartag, electronic device, ear tattoo, or flank tattoo which is correlated to the Washington state flock identification number on flock records; or

(2) Be identified by genetic testing; or

(3) Possess the original registry eartag or individual identification ear tag along with the movement, production, and registry records indicating birth in the source flock; or

(4) Be traced to the flock by a veterinary epidemiologist through a thorough epidemiological investigation of records and all other available evidence.

[Statutory Authority: RCW 16.36.040. 99-09-026, § 16-89-050, filed 4/15/99, effective 5/16/99.]

(2001 Ed.)

WAC 16-89-060 Movement and disposition of restricted animals. Animals other than infected and high risk animals from infected and source flocks may be moved from the quarantined premises with approval of the director only under the following conditions:

(1) By written permission the director may allow the animals to be moved under quarantine to other preapproved locations. The animals must be moved in sealed vehicles or be accompanied in transit by representatives of the director in lieu of individual identification. Animals moved under quarantine will remain under quarantine at the new location.

(2) Infected animals and high risk animals may only be moved from the quarantined premises for destruction under the supervision of the state veterinarian or to an approved research facility by permission of the director.

[Statutory Authority: RCW 16.36.040. 99-09-026, § 16-89-060, filed 4/15/99, effective 5/16/99.]

WAC 16-89-070 Importation of exposed, suspect and high risk animals. As defined in the basic standards for the scrapie control and eradication program, sheep and goats that are scrapie suspect, exposed, high risk animals or flock mates from scrapie infected, source, trace or exposed flocks, will not be allowed entry into Washington state except to approved scrapie research facilities. All animals must be individually identified by official identification tattoos, tags, or devices on a VS 1-27 or other approved movement document.

[Statutory Authority: RCW 16.36.040. 99-09-026, § 16-89-070, filed 4/15/99, effective 5/16/99.]

WAC 16-89-080 Reporting scrapie. Suspected and confirmed cases of scrapie must be reported by owners, veterinarians and diagnostic laboratories by phone or fax to the state veterinarian's office the next working day after suspecting or confirming scrapie in any sheep or goat.

[Statutory Authority: RCW 16.36.040. 99-09-026, § 16-89-080, filed 4/15/99, effective 5/16/99.]

WAC 16-89-090 Condemnation and destruction of scrapie infected animals or flocks. Animals or flocks determined by the director or representatives of USDA to be infected with scrapie may be condemned and destroyed by order of the director. The disposal of condemned scrapie infected animals and flocks will be under the direction of the director and the means of disposal will be other than by offering for human or animal consumption.

[Statutory Authority: RCW 16.36.040. 99-09-026, § 16-89-090, filed 4/15/99, effective 5/16/99.]

WAC 16-89-100 Indemnification. (1) Owners, individuals, partnerships, corporations or other legal entities whose animals or flocks have been destroyed or otherwise disposed of by order of the director may be eligible for indemnification in the form of cash payment for part of the value of the animals destroyed or otherwise disposed of and for reasonable actual costs for burial or disposal of animal carcasses.

(2) Indemnity payments will be paid only to an owner of sheep or goats that were born in the state of Washington or were imported into the state in compliance with existing Washington state statutes and rules. Payment of indemnity does not apply to animals belonging to the federal government or any of its agencies, this state or any of its agencies, or any municipal corporation.

(3) The amount of indemnity to be paid for each animal will be determined by the state veterinarian and will not exceed seventy-five percent of the appraised value of the animal up to the following maximum amounts:

(a) Ewes or does one year of age or older - three hundred dollars per head.

(b) Rams or billies one year of age or older - six hundred dollars per head.

(c) Lambs or kids under one year of age - one hundred twenty-five dollars per head.

(4) In addition to the indemnity payments authorized in subsection (3) of this section, owners who voluntarily destroy rams found to be genetically prone to scrapie will be paid up to twenty-five dollars of the laboratory diagnostic fee.

[Statutory Authority: RCW 16.36.040. 99-09-026, § 16-89-100, filed 4/15/99, effective 5/16/99.]

WAC 16-89-110 Cleaning and disinfection. Barns, sheds, stockyards, trucks, ferry boats and other vehicles, feed yards, stable pens, corrals, lanes and premises which have been used in confining, trailing, or transporting any sheep or goat affected or infected with any contagious, infectious or communicable diseases, will be cleaned and disinfected under state or federal supervision as directed by the state veterinarian. The owner of such premises, conveyances, or carriers will be responsible for such cleaning and disinfecting and their costs.

[Statutory Authority: RCW 16.36.040. 99-09-026, § 16-89-110, filed 4/15/99, effective 5/16/99.]

WAC 16-101X-020 How is the length of a degrade of a producer or a milk processing plant determined? The

length of a degrade of a dairy farm operation or a grade A milk processing plant operation shall be based on the total number of debit points awarded to repeat violations as provided in WAC 16-101X-030 or until the director determines the violations that caused the degrade are corrected, which ever is longer. The schedule for determining a degrade period is as follows.

WAC 16-101X-030 How is the debit point value of each violation determined? (1) The debit point for each

violation, as shown in the table below, is the same as the debit points awarded to dairy farms or milk processing plants during state surveys and federal check ratings as determined in the 1995 "Methods of Making Sanitation Ratings of Milk Supplies" published by the U.S. Department of Health and Human Services, Public Health Service, Food and Drug Administration.

(1) Proportionate portions from each shipment of milk shall be added to the composite sample so that the completed composite sample will contain not less than 5 ounces.

(2) When each shipment of milk is tested on a fresh basis, there shall be at least 5 ounces of milk taken for sample.

(3) Potassium dichromate shall be used for composite samples. Other preservatives may only be used if approved by the director of agriculture specifically for this method of testing.

[Order 1133, § 16-102-010, filed 3/16/70.]

WAC 16-102-020 Calibration, operation, maintenance and cleaning of instrument. The instrument shall be operated, maintained and cleaned in the manner specified by the manufacturer of the instrument, and each manufacturer of instruments for use in this method of testing milk for butterfat shall satisfy the director of agriculture that their instructions are complete and by following them an accurate test for butterfat will result. Except as provided below, instrument calibrations and operation shall be conducted only by technicians licensed by the department of agriculture specifically for this method using procedures for calibration and procedure checks, as recommended in the official first action approval published in Vol. 52, No. 2, 1969 of the Journal of the Association of Official Analytical Chemists or in the latest edition of the Official Methods of Analysis of the Association of Official Analytical Chemists.

(1) Samples used for calibration shall be prepared in the same manner as samples upon which producer payments are to be based. If composite samples are to be tested, the samples shall be preserved and stored in the same manner as the regular composites. If fresh samples are the basis for payment, then the samples shall be from fresh milk.

(2) Samples used for calibration shall include samples in (3%-4%) (4%-5%) (5%-6%) ranges.

(3) Temper all milk samples, whether fresh or composite to 98°-100°F. in thermostatically controlled water bath which is provided with an accurate thermometer: Provided, That a lower temperature which is proven to give accurate tests to the satisfaction of the director of agriculture may be used.

(4) When any sample differs in butterfat content by greater than 2.0 percentage points from the sample preceding it through the instrument, there shall be an immediate retest and the second test shall be the one recorded.

(2001 Ed.)

(5) Any dairy technician operating this instrument shall hold a license specifically for this method and shall also hold a Babcock testing license with the department of agriculture.
[Order 1133, § 16-102-020, filed 3/16/70.]

WAC 16-102-030 Permanent records. (1) A bound record book shall be provided for all permanent records.

(2) All calibration results and check tests for initial calibration or subsequent calibration shall be recorded in permanent record book.

(3) All tests for checking accuracy of calibration shall be recorded in permanent record book.

[Order 1133, § 16-102-030, filed 3/16/70.]

WAC 16-104-130 Washington state standards for quality of individual shell eggs—Application. (1) General. The Washington state standards for quality of individual shell eggs contained in this order are applicable only to eggs that are the product of the domesticated chicken hen and are in the shell.

Interior egg quality specifications for these standards are based on the apparent condition of the interior contents of the egg as it is twirled before the candling light. Any type or make of candling light may be used that will enable the particular grader to make consistently accurate determinations of the interior quality of shell eggs.

(2) AA quality. The shell must be clean, unbroken, and practically normal. The air cell must not exceed 1/8 inch in depth, may show unlimited movement and may be free or bubbly. The white must be clear and firm so that the yolk is only slightly defined when the egg is twirled before the candling light. The yolk must be practically free from apparent defects.

(3) A quality. The shell must be clean, unbroken, and practically normal. The air cell must not exceed 3/16 inch in depth and may be free or bubbly. The white must be clear and at least reasonably firm so that the yolk outline is only fairly well defined when the egg is twirled before the candling

light. The yolk must be practically free from apparent defects.

(4) B quality. The shell must be unbroken, may be abnormal, and may have slightly stained areas. Moderately stained areas are permitted if they do not cover more than 1/32 of the shell surface if localized, or 1/16 of the shell surface if scattered. Eggs having shells with prominent stains or adhering dirt are not permitted. The air cell may be over 3/16 inch in depth, may show unlimited movement, and may be free or bubbly. The white may be weak and watery so that the yolk outline is plainly visible when the egg is twirled before the candling light. The yolk may appear dark, enlarged, and flattened and may show clearly visible germ development but no blood due to such development. It may show other serious defects that do not render the egg inedible. Small blood spots or meat spots (aggregating not more than 1/8 inch in diameter) may be present.

Dirty. An individual egg that has an unbroken shell with adhering dirt or foreign material, prominent stains, or moderate stains covering more than 1/32 of the shell surface if localized, or 1/16 of the shell surface if scattered.

Check. An individual egg that has a broken shell or crack in the shell but with its shell membranes intact and its contents do not leak. A "check" is considered to be lower in quality than a "dirty."

[Statutory Authority: Chapter 69.25 RCW. 87-16-075 (Order 1945), § 16-104-130, filed 8/4/87.]

WAC 16-104-140 Terms descriptive of the shell. (1) Clean. A shell that is free from foreign material and from stains or discolorations that are readily visible. An egg may be considered clean if it has only very small specks, stains, or cage marks, if such specks, stains, or cage marks are not of sufficient number or intensity to detract from the generally clean appearance of the egg. Eggs that show traces of processing oil on the shell are considered clean unless otherwise soiled.

(2) Dirty. A shell that is unbroken and that has dirt or foreign material adhering to its surface, which has prominent stains, or moderate stains covering more than 1/32 of the shell surface if localized, or 1/16 of the shell surface if scattered.

(3) Practically normal (AA or A quality). A shell that approximates the usual shape and that is sound and is free from thin spots. Ridges and rough areas that do not materially affect the shape and strength of the shell are permitted.

(4) Abnormal (B quality). A shell that may be somewhat unusual or decidedly misshapen or faulty in soundness or strength or that may show pronounced ridges or thin spots.

[Statutory Authority: Chapter 69.25 RCW. 87-16-075 (Order 1945), § 16-104-140, filed 8/4/87.]

WAC 16-104-150 Terms descriptive of the air cell.

(1) Depth of the air cell (air space between shell membranes, normally in the large end of the egg). The depth of the air cell is the distance from its top to its bottom when the egg is held air cell upward.

(2) Free air cell. An air cell that moves freely toward the uppermost point in the egg as the egg is rotated slowly.

(2001 Ed.)

(3) Bubbly air cell. A ruptured air cell resulting in one or more small separate air bubbles usually floating beneath the main air cell.

[Statutory Authority: Chapter 69.25 RCW. 87-16-075 (Order 1945), § 16-104-150, filed 8/4/87.]

WAC 16-104-160 Terms descriptive of the white. (1) Clear. A white that is free from discolorations or from any foreign bodies floating in it. (Prominent chalazae should not be confused with foreign bodies such as spots or blood clots.)

(2) Firm (AA quality). A white that is sufficiently thick or viscous to prevent the yolk outline from being more than slightly defined or indistinctly indicated when the egg is twirled.

(3) Reasonably firm (A quality). A white that is somewhat less thick or viscous than a firm white. A reasonably firm white permits the yolk to approach the shell more closely which results in a fairly well defined yolk outline when the egg is twirled.

(4) Weak and watery (B quality). A white that is weak, thin, and generally lacking in viscosity. A weak and watery white permits the yolk to approach the shell closely, thus causing the yolk outline to appear plainly visible and dark when the egg is twirled.

(5) Blood spots or meat spots. Small blood spots or meat spots (aggregating not more than 1/8 inch in diameter) may be classified as B quality. If larger, or showing diffusion of blood into the white surrounding a blood spot, the egg shall be classified as loss. Blood spots shall not be due to germ development. They may be on yolk or in the white. Meat spots may be blood spots which have lost their characteristic red color or tissue from the reproductive organs.

(6) Bloody white. An egg which has blood diffused through the white. Eggs with bloody whites are classed as loss. Eggs with blood spots which show a slight diffusion into the white around the localized spot are not to be classed as bloody whites.

[Statutory Authority: Chapter 69.25 RCW. 87-16-075 (Order 1945), § 16-104-160, filed 8/4/87.]

WAC 16-104-170 Terms descriptive of the yolk. (1) Outline slightly defined (AA quality). A yolk outline that is indistinctly indicated and appears to blend into the surrounding white as the egg is twirled.

(2) Outline fairly well defined (A quality). A yolk outline that is discernible but not clearly outlined as the egg is twirled.

(3) Outline plainly visible (B quality). A yolk outline that is clearly visible as a dark shadow when the egg is twirled.

(4) Enlarged and flattened (B quality). A yolk in which the yolk membranes and tissues have weakened and/or moisture has been absorbed from the white to such an extent that the yolk appears definitely enlarged and flat.

(5) Practically free from defects (AA quality or A quality). A yolk that shows no germ development but may show other very slight defects on its surface.

(6) Serious defects (B quality). A yolk that shows well developed spots or areas and other serious defects, such as olive yolks, which do not render the egg inedible.

(7) Clearly visible germ development (B quality). A development of the germ spot on the yolk of a fertile egg that has progressed to a point where it is plainly visible as a definite circular area or spot with no blood in evidence.

(8) Blood due to germ development. Blood caused by development of the germ in a fertile egg to the point where it is visible as definite lines or as a blood ring. Such an egg is classified as inedible.

[Statutory Authority: Chapter 69.25 RCW. 87-16-075 (Order 1945), § 16-104-170, filed 8/4/87.]

WAC 16-104-180 General terms. (1) Loss. An egg that is inedible, cooked, frozen, contaminated, or containing bloody whites, large blood spots, large unsightly meat spots, or other foreign material.

(2) Inedible eggs. Eggs of the following descriptions are classed as inedible: Black rots, yellow rots, white rots, mixed rots (addled eggs), sour eggs, eggs with green whites, eggs with stuck yolks, moldy eggs, musty eggs, eggs showing blood rings, eggs containing embryo chicks (at or beyond the blood ring state); and any eggs that are adulterated as such term is defined pursuant to the Federal Food, Drug, and Cosmetic Act.

(3) Leaker. An individual egg that has a crack or break in the shell and shell membranes to the extent that the egg contents are exuding or free to exude through the shell.

(4) Restricted eggs means any check, dirty eggs, incubator, reject, inedible, leaker, or loss.

[Statutory Authority: Chapter 69.25 RCW. 87-16-075 (Order 1945), § 16-104-180, filed 8/4/87.]

WAC 16-104-190 General. (1) These grades are applicable to edible shell eggs in "lot" quantities rather than on an "individual" egg basis. A lot may contain any quantity of two or more eggs. References in these standards to the term "case" means 30-dozen egg cases as used in commercial practices in the state of Washington.

(2) Terms used in WAC 16-104-190 that are defined in WAC 16-104-130 have the same meaning as defined therein.

(3) Aggregate tolerances are permitted within each consumer grade only as an allowance for variable efficiency and interpretation of graders, normal changes under favorable conditions during reasonable periods between grading and inspection and reasonable variation of inspector's interpretation.

(4) Substitution of higher qualities for the lower qualities specified is permitted.

(5) "No grade" or "receipts" means eggs of possible edible quality on which no grade determination has been made or that fail to meet the requirements of an official Washington state consumer grade or that may have been contaminated by smoke, chemicals or other foreign material which may have seriously affected the character, appearance or flavor of the eggs. "No grade" or "receipts" eggs shall be sold only to a dealer who shall be equipped to assign a grade.

[Statutory Authority: Chapter 69.25 RCW. 87-16-075 (Order 1945), § 16-104-190, filed 8/4/87.]

WAC 16-104-200 Grades. (1) Washington consumer grade AA (at origin) shall consist of eggs which are at least

87 percent AA quality. The maximum tolerance of 13 percent which may be below AA quality may consist of A or B quality in any combination, except that within the tolerance for B quality, not more than 1 percent may be B quality due to air cells over 3/4 inch, blood spots (aggregating not more than 1/8 inch in diameter), or serious yolk defects. Not more than 5 percent (7 percent for jumbo size) checks are permitted and not more than 0.50 percent leakers, dirties, or loss (due to meat or blood spots) in any combination, except that such loss may not exceed 0.30 percent. Other types of loss are not permitted.

(2) Washington consumer grade AA (destination) shall consist of eggs which are at least 72 percent AA quality. The remaining tolerance of 28 percent shall consist of at least 10 percent A quality, and the remainder shall be B quality, except that within the tolerance for B quality not more than 1 percent may be B quality due to air cells over 3/8 inch, blood spots (aggregating not more than 1/8 inch in diameter), or serious yolk defects. Not more than 7 percent (9 percent for jumbo size) checks are permitted and not more than 1 percent leakers, dirties, or loss (due to meat or blood spots) in any combination, except that such loss may not exceed 0.30 percent. Other types of loss are not permitted.

(a) Washington consumer grade A (A) Washington consumer grade A (at origin) shall consist of eggs which are at least 87 percent A quality or better. Within the maximum tolerance of 13 percent which may be below A quality, not more than 1 percent may be B quality due to air cells over 3/8 inch, blood spots (aggregating not more than 1/8 inch in diameter), or serious yolk defects. Not more than 5 percent (7 percent for jumbo size) checks are permitted and not more than 0.50 percent leakers, dirties, or loss (due to meat or blood spots) in any combination, except that such loss may exceed 0.30 percent. Other types of loss are not permitted.

(b) Washington consumer grade A (destination) shall consist of eggs which are at least 82 percent A quality or better. Within the maximum tolerance of 18 percent which may be below A quality, not more than 1 percent may be B quality due to air cells over 3/8 inch, blood spots (aggregating not more than 1/8 inch in diameter), or serious yolk defects. Not more than 7 percent (9 percent for jumbo size) checks are permitted and not more than 1 percent leakers, dirties, or loss (due to meat or blood spots) in any combination, except that such loss may not exceed 0.30 percent. Other types of loss are not permitted.

(3) Washington consumer grade B.

(a) Washington consumer grade B (at origin) shall consist of eggs which are at least 90 percent B quality or better, not more than 10 percent may be checks, and not more than 0.50 percent leakers, dirties, or loss (due to meat or blood spots) in any combination, except that such loss may not exceed 0.30 percent. Other types of loss are not permitted.

(b) Washington consumer grade B (destination) shall consist of eggs which are at least 90 percent B quality or better, not more than 10 percent may be checks and not more than 1 percent leakers, dirties, or loss (due to meat or blood spots) in any combination, except that such loss may not exceed 0.30 percent. Other types of loss are not permitted.

"Exemption." A licensed wholesale shell egg dealer may sell a consumer grade check on the premises where he

packages eggs, directly to household consumers for use by such consumer and members of his household and his non-paying guests and employees. This consumer grade check shall consist of eggs which at least 99 percent are checks or better. Checks may not exceed 1% dirties, leakers, and loss in any combination (due to meat or blood spots). Loss other than meat or blood spots is not permitted.

(4) Additional tolerances:

(a) In lots of two or more cases:

(i) For grade AA - no individual case may exceed 10 percent less AA quality eggs than the minimum permitted for the lot average.

(ii) For grade A - no individual case may exceed 10 percent less A quality eggs than the minimum permitted for the lot average.

(iii) For grade B - no individual case may exceed 10 percent less B quality eggs than the minimum permitted for the lot average.

(b) For grade AA, A, and B, no lot shall be rejected or downgraded due to the quality of a single egg except for loss other than blood or meat spots.

[Statutory Authority: Chapter 69.25 RCW. 87-16-075 (Order 1945), § 16-104-200, filed 8/4/87.]

WAC 16-104-210 Summary of grades. It shall be unlawful to sell, offer for sale, or use as human food any eggs or products containing eggs which have been broken or separated by a process that does not permit the inspection of each individual egg after it is broken or that allows the egg meat and shell to commingle. For the purposes of this rule, egg products sold under a United States Department of Agriculture (USDA) seal from a USDA approved and inspected egg products plant shall be deemed to meet the requirements of this rule for use as human food.

Cartons:	1/8 inch minimum
Cases:	1 inch minimum
Baskets and racks:	1 inch minimum

This provision shall apply to baskets, racks, cases and cartons acquired after June 1, 1992.

(2) Accurate thermometers shall be provided in egg coolers and egg storage facilities to monitor required ambient air temperatures.

(3) All shell egg coolers shall be equipped with a hygrometer or portable equipment such as a psychrometer to determine that relative humidity is at least seventy percent. When necessary, humidifying equipment capable of maintaining seventy percent relative humidity, to minimize shrinkage, shall be provided: Provided, That this requirement shall not apply to refrigerated vehicles used to transport shell eggs.

(4) Egg coolers and egg storage facilities shall be free from objectionable odors and mold, and shall be maintained in a sanitary condition.

(5) All facilities where eggs are offered for sale to consumers, shall be maintained in a clean and sanitary condition. Display and storage temperatures shall be maintained at a maximum of forty-five degrees Fahrenheit ambient air temperature.

(2001 Ed.)

(6) Shell eggs stored prior to grading shall be refrigerated at a maximum of fifty-five degrees Fahrenheit ambient air temperature, when time prior to processing/grading exceeds twenty-four hours. When time during transport of ungraded eggs will exceed three hours, refrigeration at fifty-five degrees Fahrenheit maximum is required. Transport time of shell eggs prior to processing/grading of three hours or less in unrefrigerated vehicles is allowed, however, that time shall be included as part of the twenty-four hours.

(7) Inedibles shall be held under refrigeration in covered containers, clearly labeled and stored to prevent possible odor contamination of graded or ungraded eggs.

(8) Refrigeration is required during all transit of graded product when transit time will require an excess of two hours. Temperatures during all transit of graded product shall be maintained at a maximum of forty-five degrees Fahrenheit ambient air temperature.

[Statutory Authority: RCW 69.25.030 and chapters 42.30 and 35.05 [34.05] RCW. 92-01-091, § 16-104-330, filed 12/17/91, effective 1/17/92.]

(2) Oil having any off odor, or that is obviously rancid or contaminated, shall not be used in shell egg protection.

(3) Processing oil that has been previously used and which has become contaminated shall be filtered and heat treated at one hundred eighty degrees Fahrenheit for three minutes prior to re-use.

(4) Shell egg protecting equipment shall be washed, rinsed, and treated with a bactericidal agent each time the oil is removed. It is preferable to filter and heat treat processing oil and clean processing equipment daily when in use.

Rinse water temperature shall be at least ten degrees Fahrenheit warmer than the final wash water temperature. These temperatures shall be maintained throughout the cleaning cycle.

(3) An approved cleaning compound shall be used in the wash water. It must be approved by the United States Department of Agriculture or the Washington state department of agriculture. The use of metered equipment for dispensing the compound into solution is recommended.

(4) Wash water shall be changed approximately every four hours, or more often if needed, to maintain cleanliness and sanitary conditions, and at the end of each shift. Mea-

tures shall be taken to prevent excess foaming during the egg washing operation.

(9) Pre-wetting shell eggs prior to washing may be accomplished by spraying a continuous flow of water over the eggs in a manner which permits the water to drain away, or other methods which may be approved by the director. The temperature of the water shall be the same as prescribed in subsection (2) of this section.

(10) Washed eggs shall be spray rinsed with warm water containing an approved sanitizer of not less than 50 p/m nor more than 200 p/m of available chlorine or its equivalent.

(12) During any rest period or other line shutdown, preventative measures shall be taken to prevent overheating and/or partial cooking of eggs in the washing, rinsing, and scanning areas.

(13) Washed eggs shall be dry before cartoning or casing.

(14) When steam or vapors originate from the washing operation, they shall be continuously and directly removed to the outside of the building.

(15) Every reasonable precaution should be exercised to prevent "sweating" of eggs.

(16) Eggs may be dry cleaned or washed. If eggs are dry cleaned, the equipment shall be of a sanitary type, and kept clean and in good repair.

(17) Cloth or wash rags shall not be used for cleaning eggs unless they are of a sanitary single service type. Single service paper toweling may be used.

[Statutory Authority: RCW 69.25.030 and chapters 42.30 and 35.05 [34.05] RCW. 92-01-091, § 16-104-350, filed 12/17/91, effective 1/17/92.]

WAC 16-104-360 Shipping containers, egg cartons, and packing materials. Eggs which are to be distributed with consumer grademarks shall be packaged only in new or good used cases, baskets or racks. They shall be clean, and

[Title 16 WAC—p. 116]

[Statutory Authority: RCW 69.25.030 and chapters 42.30 and 35.05 [34.05] RCW. 92-01-091, § 16-104-360, filed 12/17/91, effective 1/17/92.]

WAC 16-104-370 Chemicals and compounds. The following list of compounds shall be handled in accordance with the manufacturers' instructions. They shall be stored away from the grading area and not be allowed to come in contact with the shell eggs being processed, or with egg cases or cartons: Pesticides including herbicides, insecticides, fungicides and rodenticides; inks, oils, cleaning compounds, foam control agents, sanitizers, and any common cleaners used in the plant.

This paragraph is not intended to prohibit eggs being contacted by certain materials when those materials are used in the normal shell egg cleaning and sanitizing process and the materials have been authorized for such usage in the "List of Proprietary Substance and Non-Food Compounds Authorized for Use Under USDA Inspection And Grading Program."

WAC 16-125-020 Construction. All new farm tanks must conform with the 3-A sanitary standards for farm milk cooling and holding tanks. Whenever a ladder or platform is needed for sampling, measuring or other purposes, it must be permanently attached to the tank or a wall. All calibrated rods must be identified with the serial number of the tank. Sight glass tubes must be of one-piece construction and permanently attached to the farm tank. All sight glass tubes must be cleaned with a clean-in-place (C.I.P.) system.

[Title 16 WAC—p. 118]

WAC 16-125-030 Installation. Before any person installs a new tank or relocates a used tank, he or she must file drawings and detailed information about where and how the milk storage tank is to be installed with the director. There must be a minimum of two feet clearance between the sides of the tank and the walls of the milkhouse or other permanent equipment and a minimum of three feet on the working side of the tank and at the outlet valve. Adequate additional space necessary for normal milkhouse operations must be provided. There must be at least 30 inches clearance between the top of the pouring tank lip and the ceiling. Adequate space must be provided above the tank to accommodate the measuring rod.

Provisions of the National Bureau of Standards' Handbook 44 Code on Farm Milk Tanks as adopted under chapter 19.94 RCW applicable to installation and use shall be applicable.

[Statutory Authority: RCW 15.36.020. 99-18-032, § 16-125-030, filed 8/25/99, effective 9/25/99; Order 1283, § 16-125-030, filed 1/29/73.]

WAC 16-125-035 Farm tank pickup and washing requirements. (1) All milk must be picked up at least every forty-eight hours from farm tanks.

(2) All farm tanks must be emptied, washed and sanitized at least once every forty-eight hours.

[Statutory Authority: RCW 15.36.020. 99-18-032, § 16-125-035, filed 8/25/99, effective 9/25/99.]

WAC 16-125-120 Bulk milk tanker requirements. All bulk milk tankers operating in the state of Washington must comply with the provisions of 3A standard 05-14. Additional requirements are:

(1) Trucks and trailers with remote pumps, mounted on tractor or front trailer, and a system of external hoses and/or piping may be used: Provided, That

(a) External flexible hoses meet the following requirements:

(i) Hoses are the thick walled rubber type and meet 3A standards 18-01, 62-01 and 63-01 except for pump box hoses.

(ii) Hoses are capped with a sanitary cap when not in use.

(b) Piping along the length of the trailer is of the fixed type and meets the following requirements:

(i) The pipe is stainless steel and meets the requirements of 3A standards 63-02 and 33-01. Other materials may be used if they are approved by the Milk Safety Branch of the Food and Drug Administration.

(ii) The sanitary piping is enclosed in an insulated holder and both the sanitary piping and the holder are capped with a dust tight cap when disconnected.

(c) Sanitary air that meets the requirements of 3A standard 64-04 may be used to remove residual milk from the external piping system.

(d) Any milk in the external piping system that exceeds forty-five degrees Fahrenheit is discarded.

(e) Adequate facilities must be provided at all receiving stations for the proper cleaning and sanitizing of tankers including the external lines and valves.

(2001 Ed.)

(2) All external valves on a tanker must be provided with a means of protection against dust, dirt, and road debris.

(a) Outlet valves must be protected by dust tight covers that will comply with 3A standard 05-14.

(b) Inlet valves and valves with attached hoses must be protected by a relatively dust tight cover. This cover may be:

(i) Stainless steel with an opening for the connection of hoses that is sealed with a flexible material that will prevent the entrance of dust, dirt, or road debris.

(ii) A flexible mounting made of rubber or other approved material that is close fitting, smooth, impervious, and easily removable for cleaning.

(iii) Any other cover for which plans have been submitted to and approved by the director.

(c) All valves not connected to hoses must have a sanitary cap and an approved dust cover on them.

(3) Markings on each truck or trailer must be sufficient to identify the owner of the truck or trailer.

(4) Cleaning and bactericidal treatment of all product contact surfaces including valves, hoses, covers, connections, appurtenances, pumps, and pump compartment of each tanker, when used, must be accomplished at least once every twenty-four hours after first use. If the tanker is not used for hauling milk for seventy-two hours after cleaning and sanitizing it must be sanitized again before it may be used for hauling milk. After sanitization each tanker must be tagged to show the date washed, place washed, and initials or signature of the person who washed the tanker. This wash tag must not be removed until the tanker is rewashed. It shall be the responsibility of the bulk milk hauler to ensure that the wash tag is present and that the tank is in fact clean prior to commencing his route.

(5) Plans and drawings relating to tankers submitted to the director will be treated with confidentiality except as required under Public Disclosure Act, chapter 42.17 RCW.

(6) Bulk milk tankers must meet the requirements under chapter 69.04 RCW and the rules adopted thereunder for transportation of food.

[Statutory Authority: RCW 15.36.020, 99-18-032, § 16-125-120, filed 8/25/99, effective 9/25/99. Statutory Authority: Chapter 15.36 RCW. 84-18-055 (Order 1840), § 16-125-120, filed 9/5/84.]

WAC 16-125-200 Recording thermometers—Installation. (1) All new farm bulk tank installations must include a recording thermometer and an automatic interval timer. Installation of a used milk tank will be regarded as a new installation.

(2) The installation and operation of recording thermometers and interval timers shall be the responsibility of the holder of the Grade A producer permit.

(3) Recording devices must not be attached to a farm tank. Recording devices may be suspended on metal brackets from the ceiling, firmly attached to the inside wall of the milk room, or at any other location acceptable to the department. The recording device must be mounted no more than six feet from the floor or be otherwise accessible from the floor without the necessity of climbing.

(4) The sensor bulb or device must be located so as to record the temperature of the milk in the tank before the milk reaches twenty percent of the tank volume. A capillary sys-

(2001 Ed.)

tem containing toxic gas or liquids must not be used in a bare bulb sensor device.

(5) The recorder and chart must be capable at a minimum of recording from thirty-two degrees to one hundred eighty degrees F, or above, and must be accurate within plus or minus two degrees F.

(6) The case of the recording device must be moisture-proof under operating conditions in the milk house or milk room.

(7) The recording chart must make at a minimum one revolution every seven days. A strip chart must not be used.

(8) The recording clock must be electrically operated. The recorder pen must be set to the actual time.

(9) If at any time, the recording device becomes inoperable or out of tolerance, the inspection service and the pooling agent or hauler must be notified immediately by the producer. Repair or replacement of the device must be made as soon as possible.

(10) The producer must maintain an adequate supply of recording charts. The charts must fit the specific instrument installed.

(11) To prevent stratification of the milk in the tank the interval timer must be set so the milk will be agitated for at least five minutes every hour.

[Statutory Authority: RCW 15.36.020, 99-18-032, § 16-125-200, filed 8/25/99, effective 9/25/99. Statutory Authority: Chapter 15.36 RCW. 86-17-014 (Order 1902), § 16-125-200, filed 8/8/86.]

WAC 16-125-210 Recording thermometer—Operation. (1) Milk and milk products for consumption in the raw state or for pasteurization must be cooled to forty degrees F or lower within two hours after completion of milking and maintained at that temperature until picked up: Provided, That the blend temperature after the first and subsequent milkings may not exceed fifty degrees F.

(2) In making a milk pick-up, the licensed grader and sampler must:

(a) Remove the chart from the recorder before the chart has lapsed;

(b) Mark the date and time of pick-up;

(c) Sign the chart;

(d) Date and install a new chart, if necessary;

(e) File the completed charts under protected conditions, provided for by the producer, unless they are taken to the purchaser's premises for his review.

(f) If the charts are taken from the dairy farm, they must be returned within ten days from the date they were taken: Provided, That subject to the approval of its members and the department, a pooling agent, processing plant, receiving plant or regular place of business may file the recording thermometer charts at its place of business.

(g) The official milk temperature must be taken with an accurate, properly calibrated thermometer.

(3) The temperature recording charts may be used for more than one pick-up: Provided, That all the pick-ups occur within the maximum time interval of the chart. When the chart is used for more than one pick-up, the licensed grader and sampler must identify each lot of milk with the date, time of pick-up and his/her signature.

(4) Before removing milk from a farm bulk tank, the licensed grader and sampler must check the recording chart. If the licensed grader and sampler finds milk temperature variations extending beyond the legal limits, he/she must immediately notify the producer, or in the absence of the producer, an employee, and the producer's marketing agent. The licensed grader and sampler must sign the chart noting the date, time, stick reading and indicate that a temperature infraction has occurred. The producer's marketing agent must notify the department of agriculture of temperature standard violations detected through the official milk quality testing program. Temperature standard violations reported to the department will become part of the producer's official record.

(5) Except as otherwise provided in subsection (2) of this section, recorder charts must be held at the dairy farm for ninety days and be made available to the director.

16-139-060 Disposition of collected penalty money.

WAC 16-139-001 Promulgation and purpose. This chapter is promulgated by the director of agriculture for the purpose of establishing fair, uniform and equitable means for assessing civil penalties and licensing actions authorized under RCW 16.49.444, 19.32.060, 69.04.880, 69.07.060, 69.07.110, 69.07.150(2), 69.10.030 and 69.10.050. The rules adopted in WAC 16-139-005 through 16-139-060 apply to violations of chapters 16.49 RCW (Custom slaughtering), 19.32 RCW (Food lockers), 69.04 RCW (Intrastate commerce in food, drugs, and cosmetics), 69.07 RCW (Washington Food Processing Act) and 69.10 RCW (Food storage warehouses). The director also declares:

(1) Education and technical assistance play an important role in the prevention, correction or abatement of food safety violations and are the department's preferable alternative to regulatory action. However, at times regulatory action is necessary to deter violations of food safety laws and rules, to educate persons about the consequences of such violations, and to compel compliance with food safety laws for the protection of consumers. The department initiates such actions when educational measures, technical assistance, warning letters, compliance agreements or other remedial measures fail to achieve compliance; and

(2) Any regulatory action taken by the department against any person who violates the provisions of chapters 16.49, 19.32, 69.04, 69.07 and 69.10 RCW, and rules adopted thereunder shall be commensurate with the seriousness of the violation under the circumstances; and

(3) Each person shall be treated fairly in accordance with the rules set forth in this chapter.

[Statutory Authority: RCW 16.49.680, 19.32.030, 69.04.730, 69.07.020 and 69.10.055, 98-02-023, § 16-139-001, filed 12/31/97, effective 1/31/98.]

WAC 16-139-005 Definitions. (1) Definitions:

(2001 Ed.)

(a) "Violation" means commission of an act or acts prohibited by chapter 16.49, 19.32, 69.04, 69.07 or 69.10 RCW, including rules adopted under them.

(b) "Prior violation" means the same or a similar violation committed by a person within the previous three years.

(c) "Critical violation" means a violation resulting in food adulteration that could cause injury or illness in consumers or that has the potential to contribute to conditions resulting in such adulteration.

(d) "Significant violation" means a violation resulting in food adulteration or food being prepared under unsanitary conditions not apparently related to a public health danger or that has the potential to contribute to conditions resulting in such adulteration and if not corrected could lead to a critical violation.

(e) "Economic violation" means a violation which affects the purchaser economically, either due to misbranding or adulteration where inferior or substandard quality product is substituted, by hiding defects or by false or misleading labeling.

(f) "Other violation" means a violation of chapter 16.49, 19.32, 69.04, 69.07 or 69.10 RCW, not covered under the penalty schedules in WAC 16-139-020 or 16-139-030, including, but not limited to, violation of embargo, mutilation of embargo notices, sale of food from an unlicensed processor, operating without a required license, refusal of inspection or access, interference with the director or the director's designee, or economic and labeling violations.

(g) "Same," with respect to violations, means an identical recurrence or an exact repetition of a previous violation, or a continuation of a previous violation.

(h) "Similar," with respect to violations, means related in appearance or nature; alike though not identical.

(i) "Knowingly" means that the alleged violator had previous warning, knew or reasonably should have known that a condition could result in adverse effects or that a violation would occur.

(j) "Potential," with respect to violations, means that a violation may result in food adulteration or a risk to health or that the violation supports conditions that may contribute to food adulteration or a risk to health.

(k) "Probable," with respect to violations, means that a violation is reasonably likely to result in food adulteration or a risk to health.

(2) Additional definitions for terms used in this chapter are found in the following provisions of law:

(b) Washington Food Processing Act, chapter 69.07 RCW.

(c) Current Good Manufacturing Practice in Manufacturing, Packing or Holding Human Food, Title 21, Code of Federal Regulations, Chapter 1, Subchapter B, Part 110.

(d) Food storage warehouses, chapter 69.10 RCW.

(e) Custom Slaughter Act, chapter 16.49 RCW.

[Statutory Authority: RCW 16.49.680, 19.32.030, 69.04.730, 69.07.020 and 69.10.055. 98-02-023, § 16-139-005, filed 12/31/97, effective 1/31/98.]

WAC 16-139-010 Calculation of penalty. (1) Median penalty selection. In the disposition of administrative cases, the department shall determine the penalty as follows:

(a) The department shall first determine the correct penalty assignment schedule table listed in either WAC 16-139-020 (critical violations), WAC 16-139-030 (significant violations), or WAC 16-139-040 (economic and other violations), that is applied based on the type of violation alleged.

(b) The department shall then determine the penalty range based on whether there have been prior violations in last three years.

(c) The department shall then determine:

(i) The probability of a violation causing a risk to health under WAC 16-139-020 (critical violations); or

(ii) The probability of a violation resulting in food adulteration under WAC 16-139-030 (significant violations); or

(iii) Whether the violation was knowing under WAC 16-139-040 (economic and other violations).

(d) The scheduled penalty is then applied unless a proportionate adjustment is made. In no case will a penalty less than the minimum penalty listed for the violation be applied.

(2) Proportionate adjustment of median penalty. The department reserves the right to proportionately increase the civil penalty and proportionately decrease the licensing action under certain circumstances. WAC

16-142-100 What is the purpose for this rule?

[Title 16 WAC—p. 122]

WAC 16-142-100 What is the purpose for this rule?

The purpose for this rule is to establish uniform standards for pull date labeling and safe storage conditions for perishable packaged food goods as described in RCW 69.04.900 through 69.04.920.

[Statutory Authority: RCW 69.04.915. 99-13-048, § 16-142-100, filed 6/9/99, effective 7/10/99.]

WAC 16-142-110 What is the purpose for pull dates?

The purpose for pull dates is to inform the consumer of the expected length of shelf life for perishable packaged foods in order to allow them a reasonable amount of time to use the product under proper care and storage conditions.

[Statutory Authority: RCW 69.04.915. 99-13-048, § 16-142-110, filed 6/9/99, effective 7/10/99.]

WAC 16-142-120 What does the pull date indicate?

The pull date indicates the last day that the product can be sold and still allow the purchaser a reasonable amount of time to use the product under normal usage and storage conditions.

[Statutory Authority: RCW 69.04.915. 99-13-048, § 16-142-120, filed 6/9/99, effective 7/10/99.]

WAC 16-142-130 Can products be sold after the pull date? Yes, products can be sold after the pull date has expired if they are still wholesome, not a danger to health and clearly labeled indicating that the pull date has expired. They must be separated from products that are still within pull date.

[Statutory Authority: RCW 69.04.915. 99-13-048, § 16-142-130, filed 6/9/99, effective 7/10/99.]

The month can either be identified with three letters indicating the month such as DEC for December or by numbers indicating the month from one for January through twelve for December. The day of the month must be shown using two numbers such as 06 for the sixth day or 19 for the nineteenth day. When both the month and day of the month are shown by numbers they must be separated by a space or dash. The pull date must be separated from other numbers or letters on the label so as to prevent confusion.

[Statutory Authority: RCW 69.04.915. 99-13-048, § 16-142-140, filed 6/9/99, effective 7/10/99.]

WAC 16-154-050 Organic crop production standards. (1) Buffer zones. Crops harvested and marketed as "organic," "organically grown," or "transition to organic" shall be grown, raised, or produced within the meaning of RCW 15.86.030 at least twenty-five feet from the nearest application of prohibited materials. Crops grown in the buffer zone may not be marketed as "organic" or "transition to organic."

(3) Borders at risk: Organic and transition to organic crops produced in proximity to the aerial or airblast application of prohibited materials are considered borders at risk. The department may periodically sample crops grown in

borders at risk to assure that pesticide drift does not affect the integrity of the organic crops.

(4) Roadside and right of way vegetation management: Nonchemical vegetation management agreements must be established with road departments, railroads, irrigation districts, and other rights of way that are in proximity to organic and transition to organic food production, or, where no agreement is possible, adequate buffer zones must be established.

WAC 16-154-053 Organic farm plan. Producers of organic and/or transition to organic food products must have an organic plan that consists of the following elements:

(1) Soil quality - The organic plan must contain provisions designed to foster soil quality, primarily through the management of the organic matter of the soil. The producer must conduct a baseline assessment of soil quality. The baseline assessment must include measurement of percent

organic matter, cation exchange capacity, pH, nitrogen, phosphorus, potassium, and copper. Each producer must conduct an assessment of soil quality at least once every three years.

(2) Pest management - The organic plan must contain provisions that include an integrated approach to pest management that stresses biointensive pest control and limits the use of botanical insecticides and copper compounds.

The principles of biointensive pest control are:

(a) Building prevention into pest management systems to lessen need for treatments.

(b) Identify and enhance the ability of beneficial organisms to directly control pest populations, compete with them for habitat, food and water, or repel them.

(c) Alter the pests' ability to reproduce or progress through its normal life cycle.

(d) Strengthen plant or tree defense mechanisms, and ability to overcome stress caused by pests and other environmental factors, through good cultural practices.

The department shall require producers to complete an organic plan and the plans shall be updated annually. The department shall restrict producers from selling, offering for sale or representing food products as organic and/or transition to organic food products when an organic plan is not implemented.

(2) The materials applied, excluding water, made to the soil or applied to the plant or added to irrigation water. The records of materials applied shall include the date the material was applied, the quantity of the material applied, the application rate and the name of the material applied. WAC 16-154-180 Mushroom standards. Green plants create tissue from sunlight, carbon dioxide and the soil in which they are grown. In contrast, fungi produce tissue directly and exclusively from the medium on which they are grown since they do not have the ability to manufacture food through photosynthesis. The organic requirements for the growth media for the products of fungi should reflect their complete reliance on their growth media for sustenance.

(a) Agar medium: The agar medium does not have to contain certified organic ingredients and can contain antibiotics (see "antibiotics" below in (c) of this subsection).

(b) Growing medium amendments: **All amendments must be certified organic.**

(c) Antibiotics: The agar medium may contain antibiotics not to exceed 1/25th of a gram per liter of agar mix.

(i) Any pest control materials used in the organic production areas or storage areas must be approved for use in organic food production under this chapter. Outside production areas cannot have any prohibited materials applied to the land on which logs, wood chips or other such approved growing medium will lie, for at least three years.

(2) **Mixed operations** - Organic and nonorganic production may exist in the same indoor growing area if:

(a) The organic and nonorganic products are clearly identified at all stages of the growth cycle on all containers or areas that contain spawn, growing medium, substrate or fungi.

(b) No prohibited materials are applied to the organic or nonorganic fungi, spawn or growing medium.

Organic and nonorganic production must be in separate facilities and have separate ventilation systems if prohibited materials are applied to the fungi, spawn or growing medium during any stage of the growth cycle.

(3) **Growth cycle** - For a mushroom product to be sold as certified organic, the operation must comply with these mushroom standards throughout the entire growing cycle of the fungus.

Processors must keep organic food producer or processor certificates for all organic ingredients used in processing on file and available to the department upon request. All organic producers or processors that supply ingredients to processor(s) must be certified by the department or a recognized organic certifying agent.

(b) All nonorganic ingredients which are used in product formulation and that are not specifically approved under WAC 16-158-060 must be approved by the director and their sources must be listed as part of the certification process.

(2) **Processing of organic food products:**

The processing of organic food must be done during a separate production run from the processing of nonorganic food. Prior to the processing of organic food, the processing line must be cleaned or cleared of nonorganic products.

(3) **Water:**

All water used in processing as an ingredient or as a processing aid must be potable and comply with all local, state, and federal guidelines for potable water.

(4) **Steam:**

Volatile amines are prohibited as boiler water additives when steam comes into direct contact with organic food.

(5) **Solvent extraction:**

Solvent extraction with synthetic materials is prohibited in organic food processing.

(6) **Ion exchange filters:**

Ion exchange filters are prohibited in organic food processing.

(7) **Processing aids:**

Processing aids used in organic processing must be approved under WAC 16-158-060.

(8) **Cleaning and sanitizing:**

Cleaning and sanitizing must be done with appropriate cleansers and sanitizers that will ensure clean and sanitary facilities and do not leave any residues of cleansers or sanitizers on the organic food products.

(9) **Packages:**

All packages must be free of fungicides, preservatives, fumigants, and any other materials which are not approved for use on organic products under chapter 16-154 WAC or this chapter.

(10) **Identification:**

(2001 Ed.)

All organic food products must be clearly identified as organic at all times on all boxes, bins, bags or other containers that contain organic food products.

(11) Storage:

All organic food products and organic ingredients must be stored so that there is no cross contamination or confusion with nonorganic food products. Organic and nonorganic food products may be stored in the same storage area as long as there is adequate separation of products and product identification assures no mixing of products.

(12) Controlled atmosphere storage:

Storage techniques may be used to alter the nitrogen, oxygen and carbon dioxide levels in the storage room atmosphere.

(13) Pest control:

The processor must demonstrate that materials used in pest control programs do not contaminate organic products.

(a) For processed food products which contain more than ninety-five percent organic ingredients by weight excluding water, salt, and leavening agents, the term organic may be used without restriction on the principal display panel (see example illustration WAC 16-158-040 (3)(b)). Up to five percent of the ingredients, by weight, may be minor ingredients or additives which are approved under WAC 16-158-060 or by the director.

(4) Made with organic food products:

(a) For multi-ingredient food products which contain more than fifty percent organic ingredients by weight, excluding water, salt and leavening agents, the term "organic" can only modify the organic ingredient(s) and the type size of the word "organic" is restricted to not larger than three-quarters type size of the product identity (see example illustration WAC 16-158-040 (4)(b)).

(5) Food products with organic ingredients:

(a) For food products which contain less than fifty percent organic ingredients by weight, excluding water, salt and leavening agents, the term "organic" can only modify the organic ingredients on the ingredients panel (see example illustration WAC 16-158-040 (5)(b)).

Such records may include invoices, bills of lading, and producer certificates for incoming raw product; date and quantity of product processed; repack data and production run reports; and invoices and bills of lading of products shipped out. Processors must maintain these records for a minimum of five years from date of processing.

Every material which is manufactured within this state and/or distributed within this state for use in organic food production, processing or handling may be registered with the department. Registration is not required, but is necessary for a product to appear on the brand name materials list or to label or advertise itself as approved for use in organic food production, processing or handling.

[Statutory Authority: Chapter 15.86 RCW. 99-16-054, § 16-160-030, filed 7/30/99, effective 8/30/99; 91-05-007, § 16-160-030, filed 2/7/91, effective 3/10/91.]

WAC 16-160-035 Brand name materials list. The department maintains a list of registered materials and brand name materials that have been denied registration. The list is provided to all producers, processors and handlers of organic food who apply for certification with the department. A registered material that appears on the brand name materials list has been reviewed to verify that all of its ingredients comply with organic standards.

Applications received after October 31 may appear on the annual brand name materials list if received in time to complete the registration prior to the publication of the list. The application form shall include:

(1) The name and address of the applicant and the name and address of the person whose name will appear on the label, if other than the applicants;

(2) The name of the material;

(3) A copy of the labeling accompanying the material and a statement of all claims to be made for it, including the directions and precautions for use;

(4) The complete formula of the material including the active and inert ingredients;

(5) A description of the manufacturing process including all materials used for the extraction and synthesis of the material, if appropriate;

(6) The intended uses of the product;

(7) The source or supplier of all ingredients; and

Inside areas must provide a minimum of one and one-half square feet per bird and be sufficient to avoid stress such as cannibalism, nervousness and self-destructive behaviors such as feather picking, self-mutilation, and limb harrowing. Outside areas must provide a minimum of one and one-half square feet per bird. Minimum living space requirements are calculated for the size of an adult chicken with a mature body weight of five pounds and requirements for other poultry animals are calculated proportionately according to the size of the species;

(1) The organic livestock producer must make every reasonable effort and maintain a record of every such effort to locate organically grown feed, using the following prioritization:

(a) Certified organic feed;

(b) Noncertified organic feed;

(c) Feed from farms under organic management for two years;

(d) Feed from farms under organic management for one year; and

(e) Conventional feed;

(2) The organic livestock producer notifies the department and submits the organic feed supplier record (subsection (1) of this section) to the department prior to the feeding of nonorganic feed;

WAC 16-162-070 Disease and pest management. In order for animals to be considered "organically produced" an organic disease and pest management program must be in place. An organic disease and pest management program includes an integrated approach to disease and pest management that stresses preventative control. The department shall restrict producers from using the terms "organic," or "organically produced" for producers without adequate organic disease and pest management programs. A proper herd health program should include strategies for disease prevention, parasite control, and disease treatment. (c) Weight of slaughter animals at slaughter and weight of post-slaughter animal products; and

(d) Sales records of all organic animal products sold including dates, quantities and weights.

(3) Receipts for stock and materials must be kept to insure a complete audit trail.

(4) Inadequate recordkeeping may constitute cause for the director to prohibit labeling or marketing animal products as "organic" or "organically produced."

[Statutory Authority: Chapter 15.86 RCW. 97-24-007, § 16-162-100, filed 11/21/97, effective 12/22/97; 92-11-001, § 16-162-100, filed 5/6/92, effective 6/6/92.]

WAC 16-165-110 Food processor licensing—New application—Inspection criteria. To qualify for a new food processing plant license issued under chapter 69.07 RCW, the Washington Food Processing Act, a food processing facility must first make application to the department. After the department receives a complete application, the department will inspect the facility. The facility must be in compliance with the following requirements prior to issuance of a license:

The food processing facility must achieve a score of ninety points or higher on the prelicensing inspection AND be in compliance with licensing criteria. Refer to WAC 16-165-140 for the inspection criteria. For the purposes of licensing, a food processing facility may incur a one-point debit of a licensing criteria that has sliding scale.

(2) "**Adequate washing and sanitizing of hands as necessary**" means washing and sanitizing hands thoroughly to protect against contamination of food from undesirable microorganisms in an adequate hand wash facility by:

(a) Using proper hand washing methods which consist of:

(i) Applying soap to hands;

(ii) Using warm water;

(iii) Scrubbing hands thoroughly;

(iv) Rinsing and drying hands using methods that prevent food contamination;

(b) Washing hands before beginning work, after each absence from the work station, and any time hands become soiled or contaminated; and

(2001 Ed.)

(c) Sanitizing hands when appropriate in addition to, but not in place of, the proper hand washing methods.

(3) **"Garments and personal belongings stored appropriately; not a source of contamination"** means personal belongings and garments, either personal or plant supplied, are stored or kept separately from food processing, handling and storage operations such as in an area, locker, cupboard, or other closeable unit that is dedicated to the storing or hanging of personal belongings and clothing so not to become a source of contamination to food, food packaging or food contact surfaces; and

No food, packaging materials, utensils or equipment used in the food processing operation are kept, stored or comingled with personal belongings or garments.

(4) **"Processes separated as required"** means there is a separation of processes for the purpose of reducing potential contamination in food processing operations where contamination is likely to occur. One or more of the following means may accomplish this:

- (a) Location;
- (b) Time;

when its continued use is apparent, are not soiled with any residue or contaminant that could adulterate food products as defined in RCW 69.04.210; and

(b) Food residues are removed from food product contact surfaces frequently enough to prevent residues from becoming unwholesome or unfit for food, decomposed, filthy, putrid, or injurious to health; and

(c) The food product contact surfaces are sanitized prior to use and after cleaning.

(8) **"Product contact surfaces clean and maintained in a sanitary condition, cleaned and sanitized prior to each use or as essential: Critical violation"** means it is a critical violation if a food product contact surface comes into contact with potentially hazardous food and the surface is not sanitized after cleaning or prior to use.

Product contact surfaces that become contaminated, but are cleaned and sanitized prior to use are not considered a critical violation.

(9) **"Nonproduct contact surfaces of equipment cleaned and maintained in a sanitary condition"** means nonproduct contact surfaces of equipment used in the processing of food are kept reasonably free from dirt, old food residues, foreign material, dust, mold, mildew, slime and other accumulations that occur because of day-to-day food processing operations.

Filth includes, but is not limited to, microorganisms, unsuitable toxic chemicals, and microscopic physical contaminants.

Storage and placement of utensils or equipment in the following manner is considered inappropriate storage:

- (a) In contact with the floor, dirty equipment frames, other insanitary nonfood contact surfaces;
- (b) In contact with containers of nonpotable water (other than sterilizing solutions); and
- (c) In contact with other contaminants.

(11) **"In-use food contact equipment and utensils appropriately stored: Protected from contamination between uses: Critical violation"** means that it is a critical violation when a utensil or piece of equipment is or has been stored in such a manner that it becomes obviously contaminated with filth and its continued use is apparent.

Utensils and equipment that become contaminated are not considered a critical violation if the utensils and equipment are cleaned and sanitized prior to the next use.

(12) **Water supply—"Safe and of sanitary quality"** means the water supply used in the processing of food is potable from an approved source and is monitored in accordance with applicable laws and rules. Water from an approved source and monitored in accordance with applicable laws and rules means:

(e) Processors that operate from single-family residences on private water supplies meet the department of health, division of drinking water requirements for a group B water system (chapter 246-291 WAC) with respect to monitoring for bacteriological, chemical and physical properties. Processors that do not use water as an ingredient or incorporate water into their product need only meet the bacteriological testing requirements.

(f) Water used for certain purposes within the food processing operation (such as circulated water used in the washing of soil from raw agricultural commodities or fluming) is acceptable if:

(i) The water does not impart harmful or deleterious substances or additives to food products; and

(ii) The food products in contact with the water undergo a final potable water wash/rinse; and

(iii) The water meets the requirements of the good manufacturing practices under 21 CFR, Part 110.

(13) **"Current satisfactory water test"** means analysis verifying the bacteriological, physical and chemical safety of the water has been conducted according to appropriate group A or B water system monitoring schedules or, in the case of bottled water operations, according to the requirements of Title 21 CFR, Part 129 and that reports of such analysis are on file at the processing facility and available for review by WSDA during routine facility inspection.

(b) Outhouses, chemical toilets or other nonflush toilets may not be used in a food establishment.

(19) **"Toilets clean, in good repair, not opening directly into process areas, self-closing doors"** means toilet rooms are kept clean, free of trash and litter, in good

repair and all toilet room doors are self-closing and do not open directly into a food processing area.

(20) **"Hand wash facilities adequate and convenient, with hot and cold or tempered water"** means food handlers in a food establishment have access to one or more hand washing facilities with hot, cold, or tempered running water, and:

(a) There is at least one hand wash facility located in the food processing area in a location convenient to each food handling area when hands come into contact with or manipulate unwrapped or unpackaged ready to eat food. (Hand sanitizing stations may be required if appropriate); or

(b) Hand wash facilities are located in rest rooms or other areas in operations where food is not manipulated by hand and hands do not contact the food; or

(c) Hand wash facilities are located in rest rooms or other areas and hand sanitizing stations are located in food processing areas in operations where food would normally undergo further preparation (for example washing, cleaning, cooking or other processing) either in the plant or by the consumer that would adequately eliminate physical, chemical and microbiological contaminants introduced by handling.

(21) **"Hand dips provided as necessary"** means hand sanitizing stations are provided, and properly positioned and maintained in all food operations as provided in subsection (20)(c) of this section.

(a) For the purposes of this subsection "properly positioned" means:

(i) Food handlers have ready access to hand sanitizing stations when returning from the toilet, hand wash stations, lunch and breaks and whenever necessary while working; and

(ii) At least one hand sanitizing station is inside the process room entryways on each side of the processing table, lines and equipment where food is manipulated by hand, and at least one hand sanitizing station for every ten food handlers at processing tables, lines and equipment.

(b) For the purposes of this subsection "properly maintained" means sanitizing solutions are checked and recharged to a strength equal to 10 PPM chlorine or 25 PPM iodine, and changed every four hours while in use.

(c) Hand sanitizing stations are recommended for all food operations provided for in subsection (20)(c) of this section.

(22) **"Food protected from contamination in storage"** means food is stored under conditions that protect food against physical, chemical and microbial contamination, as well as against deterioration of the food and the container.

(23) **"Food protected from contamination in storage: Critical violation"** means it is a critical violation when:

(a) A storage situation allows potential contamination of products. This includes, but is not limited to, the storing of raw materials in such a fashion that they cross-contaminate finished food products, particularly ready to eat food. For example, the storage of raw fish and seafood, meat, poultry and other food which inherently contains pathogenic and spoilage microorganisms, as well as soil and other foreign material, is in direct contact with other food in the same con-

tainer or in any other cross-contaminating circumstance with finished food products; or

(b) Raw materials or food products from unapproved or uncertified sources are used that are inherently associated with food-borne illnesses. Raw products include, but are not limited to:

WAC 16-165-150 Food establishment inspection rating system—Inspection score. (1) A food establishment is rated as follows at the completion of an inspection conducted by the department:

(a) A food establishment will be debited the point value assigned to the inspection item listed in WAC 16-165-140 for each violation found during an inspection.

(b) The sum of the points debited for an inspection are subtracted from the maximum point value of one hundred. The remaining sum is the establishment's score for that inspection.

(c) When the department on a food establishment inspection identifies a critical violation, no score will be listed unless the critical violation is satisfactorily corrected during the inspection.

(2) An establishment is considered in substantial compliance with the inspection criteria if:

- No critical violations are found, or if critical violations are found and corrected prior to completion of the inspection; and
- The establishment's inspection score is ninety points or above.

WAC 16-200-600 Purpose. The following sections concerning the protection of ground water, labeling requirements and examination of fertilizer minerals and limes (WAC 16-200-708 through 16-200-742) are established in this chapter under the authority of the Commercial Fertilizer Act, chapter 15.54 RCW.

This chapter also describes the requirements for registration of commercial fertilizers, including the information which must be submitted as part of the registration application, the sample preparation and analysis methods which must be used, the maximum application rates the department will use to determine whether a commercial fertilizer may be registered, the Washington standards for metals (in pounds per acre per year), and the acts which are unlawful under this chapter.

[Statutory Authority: RCW 15.54.270(4) and 15.54.800.00-19-058, § 16-200-600, filed 9/18/00, effective 10/19/00.]

WAC 16-200-695 Definitions. The definitions set forth in this section shall apply throughout this chapter unless context otherwise requires:

(1) "Organic" means a material containing carbon and one or more elements (other than hydrogen and oxygen) essential for plant growth. When the term "organic" is utilized in the label or labeling of any commercial fertilizer, it shall be qualified as either "synthetic organic" or "natural organic," with the percentage of each specified.

(2) "Natural organic" means a material derived from either plant or animal products containing carbon and one or

more elements (other than hydrogen and oxygen) essential for plant growth.

(3) "Synthetic organic" means a material that is manufactured chemically (by synthesis) from its elements and other chemicals, containing carbon and one or more elements (other than hydrogen and oxygen) essential for plant growth.

(4) "Unit" means one percent (by weight) of a ton.

(5) "AOAC" means the association of official analytical chemists.

(6) "Commercial fertilizer" means a substance containing one or more recognized plant nutrients and that is used for its plant nutrient content or that is designated for use or claimed to have value in promoting plant growth, and shall include limes, gypsum, and manipulated animal and vegetable manures. It does not include unmanipulated animal and vegetable manures, organic waste-derived material, and other products exempted by the department by rule.

(7) "Fertigation" means a method of applying commercial fertilizers with irrigation water to fertilize land or plants.

(8) "Fertilizer component" means a commercial fertilizer ingredient containing one or more recognized plant nutrients which is incorporated in the commercial fertilizer for its plant nutrient value.

(9) "Maximum acceptable cumulative metals additions to soil" means the amount of total metals that can be added to soil over a forty-five-year period of time without exceeding the Canadian standards which have been adopted in RCW 15.54.800(3) as Washington standards for metals.

(10) "Organic waste-derived material" means grass clippings, leaves, weeds, bark, plantings, prunings, and other vegetative wastes, uncontaminated wood waste from logging and milling operations, food wastes, food processing wastes, and materials derived from these wastes through composting. "Organic waste-derived material" does not include products that include biosolids.

(11) "Maximum application rate" means the maximum amount of commercial fertilizer expressed by weight (such as: pounds, ounces, kilograms, or milligrams) or volume (such as: gallons, quarts, fluid ounces, liters, or milliliters) to be applied to an area of a specified size (such as: acres, square feet, hectares, or square meters) in a period of time stated in years.

(12) "Biosolids" means municipal sewage sludge that is a primarily organic, semisolid product resulting from the wastewater treatment process that can be beneficially recycled, including material derived from biosolids, and septic tank sludge, also known as septage. For the purposes of this rule, semisolid products include biosolids or products derived from biosolids ranging in character from mostly liquid to fully dried solids.

(13) "Unpackaged biosolids" means biosolids distributed in a loose, unpackaged form such as, but not limited to, tote bags, tote tanks, bins, tanks, trailers, spreader trucks, railcars, and pick-up truckloads or other containers provided by the final user solely for transport of the material.

(14) "Packaged biosolids" means biosolids distributed in a container provided by the distributor of the material.

[Statutory Authority: RCW 15.54.270(4) and 15.54.800.00-19-058, § 16-200-695, filed 9/18/00, effective 10/19/00. Statutory Authority: RCW 15.54.325 and 15.54.800.99-08-037, § 16-200-695, filed 3/31/99, effective

5/1/99. Statutory Authority: Chapter 15.54 RCW. 99-02-035, § 16-200-695, filed 12/30/98, effective 1/30/99. Statutory Authority: Chapter 15.54 RCW. 87-19-097 (Order 1952), § 16-200-695, filed 9/17/87.]

WAC 16-200-701 What products are exempt from the definition of commercial fertilizer? In addition to unmanipulated animal and vegetable manures and organic waste-derived materials, the following materials are exempt from the definition of commercial fertilizer:

(1) Unpackaged biosolids if they comply with biosolids regulation under chapter 173-308 WAC, and they do not use the term "fertilizer" in the labeling of the biosolids, except to disclaim them as commercial fertilizer;

(2) Packaged biosolids if they do not meet the definition for commercial fertilizer, do not use the term "fertilizer" in the labeling of the biosolids, except to disclaim them as commercial fertilizer, and comply with biosolids regulation under chapter 173-308 WAC.

[Statutory Authority: RCW 15.54.270(4) and 15.54.800. 00-19-058, § 16-200-701, filed 9/18/00, effective 10/19/00.]

WAC 16-200-703 How are biosolids regulated under the Commercial Fertilizer Act? (1) Unpackaged biosolids and packaged biosolids that do not meet the definition for commercial fertilizer must include a legible and conspicuous disclaimer on their labeling. The disclaimer must specifically state that the product is not a commercial fertilizer, and that any nutrient claims are estimates or averages and are not guaranteed.

(2) Packaged biosolids that meet the definition for commercial fertilizer must be registered as commercial fertilizer.

[Statutory Authority: RCW 15.54.270(4) and 15.54.800. 00-19-058, § 16-200-703, filed 9/18/00, effective 10/19/00.]

WAC 16-200-7061 What information must I include with my registration application concerning total metals

and application rates? (1) You are required to submit the following metals information with your registration application:

(a) Total concentration of each metal in each commercial fertilizer reported in parts per million (PPM) which is equivalent to milligrams of metal per kilogram of fertilizer (mg/kg), or micrograms per gram;

(b) Copy of the laboratory report on total metals analysis;

(c) Method of analysis;

(d) Method of sample preparation; and

(e) Minimum detection limits for each method used.

(2) The department may request quality assurance and quality control documentation for analytical procedures and/or for the laboratory which performed the analyses.

(3) The analytical data and maximum application rate will be used to determine if a commercial fertilizer meets or exceeds the Washington standards for metals.

(4) For all commercial fertilizers that have application rates on their labels, the maximum application rate shall be disclosed for each commercial fertilizer on the registration application form.

[Statutory Authority: RCW 15.54.325 and 15.54.800. 99-08-037, § 16-200-7061, filed 3/31/99, effective 5/1/99. Statutory Authority: Chapter 15.54 RCW. 99-02-035, § 16-200-7061, filed 12/30/98, effective 1/30/99.]

WAC 16-200-7062 What method must I use to analyze the total metals contained in my commercial fertilizer? (1) You must prepare your sample of commercial fertilizer using U.S. Environmental Protection Agency ("EPA") sample preparation method 3050B (except when preparing a sample for analysis of mercury*). You must analyze your commercial fertilizer for the total concentration of each of the following nine metals in each commercial fertilizer using one or more of the EPA analysis methods listed in Table 1. All methods are described in EPA's SW-846, Third Edition.

Table 1. Acceptable Sample Preparation and Analysis Methods for Total Metals

Copies of SW-846 Third Edition and all associated updates are available from: The Government Printing Office, Superintendent of Documents, Washington, DC 20402, (202) 512-1800, and from the Department of Commerce, National Technical Information Center, 5285 Port Royal Road, Springfield, VA 22161, (703) 487-4650 or 800-553-NTIS.

(2001 Ed.)

*Since sample preparation method 3050B cannot provide for an analysis of mercury, when you prepare a sample for analysis of mercury you must use the sample preparation method established for analysis method 7470A when using method 7470A to analyze your sample and the sample preparation

method established for analysis method 7471A when using method 7471A to analyze your product.

(2) Other sample preparation and analysis methods for total concentration of each metal in each commercial fertilizer may be used only under the following conditions:

(a) You must submit a request to the department, in writing, detailing the sample preparation and analysis methods, minimum detection limits and quality assurance, quality control documentation and a side-by-side comparison of the analysis results from the alternative method to one of the approved methods' analysis results of the same material; and

(b) The department, after reviewing the request, may approve the sample preparation or analysis method only if the capability of the method meets or exceeds the sensitivity and accuracy of the applicable method listed in the Table 1.

(3) Any commercial fertilizer product registered prior to the enactment of these provisions using any sample preparation or analysis method not authorized by subsection (1) or (2) must be registered in accordance with subsection (1) or (2) in the next annual commercial fertilizer registration cycle.

[Statutory Authority: Chapter 15.54 RCW. 99-02-035, § 16-200-7062, filed 12/30/98, effective 1/30/99.]

WAC 16-200-7063 How will the department determine whether a commercial fertilizer meets Washington standards for metals? (1) To determine whether a commercial fertilizer meets Washington standards for metals, the department will use the following formula:

$$\frac{\text{Pounds of product applied per acre per year} \times \text{metal content of product (ppm)}}{1,000,000}$$

The number used for pounds of product applied per acre per year will be the maximum application rate allowed by the commercial fertilizer label. If specific label directions for use are not available, the department will use the Washington application rates listed in subsection (2) of this section, divided by four.

(2) Using normal agronomic rates that are representative of soil, crop rotation, and climatic conditions in Washington state, the department developed the following Washington application rates:

Nutrient	4 Yr. Cumulative Total (lbs./acre)
Nitrogen (N)	1600
Phosphorous (as P2O5)	700
Potassium (as K2O)	1600
Boron (B)	12
Calcium (Ca)	800
Chlorine (Cl)	300
Copper (Cu)	10
Iron (Fe)	80
Magnesium (Mg)	400
Manganese (Mn)	40
Molybdenum (Mo)	4
Sulfur (S)	400
Zinc (Zn)	30
Lime (CaCO3 equivalent)	20,000
Gypsum (CaSO4)	16,000

(3) To ensure that the maximum acceptable cumulative metals additions to soil are not exceeded, the department will assume the commercial fertilizer will be applied at the maximum rate as stated on the label or established in this rule.

[Statutory Authority: Chapter 15.54 RCW. 99-02-035, § 16-200-7063, filed 12/30/98, effective 1/30/99.]

WAC 16-200-7064 What are the Washington standards for metals? (1) The standards for metals in Washington are the maximum acceptable annual metals additions to soils adopted in RCW 15.54.800 and are presented in Table

2. Because the Canadian standards contained in the Canadian Trade Memorandum T-4-93 dated August 1996 are based on long-term (forty-five-year) cumulative metals additions to soils, the maximum acceptable annual metals additions to soils are determined by dividing the Canadian standards by forty-five. The Washington standards are expressed as pounds per acre per year.

Table 2. Washington Standards For Metals.

Metals	Lbs./acre/yr.
Arsenic (As)	.297
Cadmium (Cd)	.079
Cobalt (Co)	.594
Mercury (Hg)	.019
Molybdenum (Mo)	.079
Nickel (Ni)	.713
Lead (Pb)	1.981
Selenium (Se)	.055
Zinc (Zn)	7.329

(2) To be registered with the department and distributed in Washington, a commercial fertilizer must not exceed the above standards. Because cobalt (Co), molybdenum (Mo), and zinc (Zn) are also plant nutrients, higher concentrations than those presented in the table may be permitted. Commercial fertilizers which contain cobalt (Co), molybdenum (Mo), and/or zinc (Zn) concentrations may be registered and distributed in Washington if those metals are used as plant nutrients and those metals meet all applicable minimum guarantees and labeling requirements of chapter 15.54 RCW and the rules adopted thereunder.

(3) If a commercial fertilizer contains cobalt (Co), molybdenum (Mo), or zinc (Zn) and any one or more of those metals are not intended to be used as a plant nutrient, then the nonplant nutrient metals must meet the Standards shown in Table 2.

[Statutory Authority: Chapter 15.54 RCW. 99-02-035, § 16-200-7064, filed 12/30/98, effective 1/30/99.]

WAC 16-200-708 Unlawful acts. (1) It shall be unlawful for any person to refuse or neglect to comply with the

provisions of the applicable sections of chapter 15.54 RCW, the rules adopted thereunder, or any lawful order of the department.

(2) It is unlawful to distribute a commercial fertilizer in Washington that exceeds the standards for nonnutritive substances established in RCW 15.54.800(3). The department will determine if a commercial fertilizer exceeds the standards by using the maximum application rates and by either:

(a) Comparing data submitted by the registrant to the standards established in WAC 16-200-7064; or

(b) Comparing the results of the analysis of an official sample to the standards established in WAC 16-200-7064. Official samples will be analyzed by the methods set forth in these rules.

[Statutory Authority: Chapter 15.54 RCW. 99-02-035, § 16-200-708, filed 12/30/98, effective 1/30/99. Statutory Authority: RCW 15.54.800. 91-01-015 (Order 2066), § 16-200-708, filed 12/7/90, effective 1/7/91.]

WAC 16-200-711 Plant nutrients in addition to nitrogen, phosphorus and potassium.

(1) Plant nutrients, other than nitrogen, phosphorus and potassium, when mentioned in any form or manner shall be registered and shall be guaranteed on the label. Guarantees shall be made on the elemental basis. Sources of the elements guaranteed shall be shown on the label. Proof of availability shall be provided the director upon request. Except guarantees for those water soluble nutrients labeled solely for hydroponic or continuous liquid feed programs, the minimum percentages which will be accepted for registration are as follows:

Element	%
Calcium (Ca)	1.0000
Magnesium (Mg)	0.5000
Sulfur (S)	1.0000
Boron (B)	0.0200
Chlorine (Cl)	0.1000
Cobalt (Co)	0.0005
Copper (Cu)	0.0500
Iron (Fe)	0.1000
Manganese (Mn)	0.0500
Molybdenum (Mo)	0.0005
Sodium (Na)	0.1000
Zinc (Zn)	0.0500

(2) Guarantees or claims for the plant nutrients listed in subsection (1) of this section are the only ones which shall be accepted by the department. Proposed labels and directions for the use of the fertilizer shall be furnished to the department with the application for registration upon request. Any of the above listed elements which are guaranteed shall appear in the order listed immediately following guarantees for the primary nutrients of nitrogen, phosphorus and potassium.

(3) A warning or caution statement may be required on the label for any commercial fertilizer containing more than 0.1% boron or more than 0.001% molybdenum. The following are examples of possible warning or caution statements:

(a) Boron:

(i) This fertilizer contains boron which may be injurious to certain crops. Contact your local county agent or field consultant for specific information.

(2001 Ed.)

(ii) WARNING: This fertilizer carries added borax and is intended for use only on alfalfa. Its use on any other crops or under conditions other than those recommended may result in serious injury to the crops.

(b) Molybdenum: CAUTION: This fertilizer is to be used only on crops which respond to molybdenum. Crops high in molybdenum are toxic to grazing animals (ruminants).

WAC 16-200-721 Slowly released plant nutrients.

(1) No fertilizer label shall bear a statement that connotes or implies that certain plant nutrients contained in a fertilizer are released slowly over a period of time, unless the nutrient or nutrients are identified and guaranteed.

(2) Types of products with slow release properties recognized are:

(a) Water insoluble (nitrogen products only), such as natural organics, ureaform materials, urea-formaldehyde products, IBDU, oxamide, etc.;

(b) Coated slow release, such as sulfur coated urea and other encapsulated soluble fertilizers;

(c) Occluded slow release, where fertilizers or fertilizer materials are mixed with waxes, resins, or other inert materials and formed into particles; and

(d) Products containing water soluble nitrogen such as ureaform materials, urea-formaldehyde products, methylene-diurea (MDU), dimethylenetriurea (DMTU), dicyanodiamide (DCD), etc.

(3) The terms "water insoluble," "coated slow release," "slow release," "controlled release," "slowly available water soluble," and "occluded slow release" are accepted as descriptive of the products listed in subsection (2) of this section; however the registrant can show a testing program substantiating the claim (testing under guidance of experiment station personnel or a recognized reputable researcher acceptable to the director). A laboratory procedure, acceptable to the director for evaluating the release characteristics of the product(s) shall also be provided by the registrant upon request.

(4) When the nitrogen is organic, it shall be established that if a label states the amount of organic nitrogen present in a phrase, such as "nitrogen in organic form equivalent to X% N," then the water insoluble nitrogen guarantee shall not be less than sixty percent of the nitrogen so designated. For example: If the total nitrogen guarantee for a fertilizer is ten percent and the label states "Nitrogen in organic form equivalent to 2.5% N" then the water insoluble nitrogen guarantee shall not be less than 1.5% ($2.5\% \times 0.6 = 1.5\%$).

(5) When a slowly released nutrient is less than fifteen percent of the guarantee for either total nitrogen (N), available phosphoric acid (P₂O₅), or soluble potash (K₂O), as appropriate, the label shall bear no reference to such designations.

(6) AOAC method 2.074 (13th Edition), or as designated in subsequent editions, shall be used to confirm the coated slow release and occluded slow release nutrients and others whose slow release characteristics depend on particle size. AOAC method 2.072 (13th Edition) or as designated in subsequent editions, shall be used to determine the water insoluble nitrogen of organic materials.

(2) If dry bulk fertilizer is stored outdoors, it shall be placed on a ground cover sufficiently impermeable to prevent seepage or runoff and shall be completely covered with a tarpaulin or other suitable covering to prevent contact with precipitation and surface water.

(3) All loading, unloading, mixing and handling of dry bulk fertilizer at the storage facility shall be conducted on a surface of a size and design that will allow for the collection of spilled materials.

WAC 16-213-200 Buckwheat inspection definitions.

(1) "Buckwheat" means grain which before the removal of dockage consists of fifty percent or more of whole kernels of buckwheat (domestic varieties). The term "buckwheat" in these standards shall not include wild buckwheat.

(2) "Dockage" means all matter other than buckwheat which can be readily removed from a test portion of the original sample by use of the approved device in accordance with the procedures as set down in these standards.

(3) "Foreign material" means all matter other than buckwheat which remains in the sample after the removal of dockage.

(4) "Moisture" means a percentage ascertained by the air oven or by any device and method which gives equivalent results.

(5) "Percentages" means percentages ascertained by weight except in the case of moisture.

(6) "Sample grade buckwheat" means buckwheat which has a commercially objectionable foreign odor; or is musty, sour, heating, or hot; or contains eight or more stones per one thousand grams; or fails to meet the grade requirements of Washington numerical grades, or is otherwise distinctly low quality.

(7) "Stones" means concreted, earthy, or mineral matter or other substances of similar hardness that do not disintegrate readily in water.

(8) "Test weight per bushel" means the weight as determined per Winchester bushel (35.24 liters) or as determined by any device and method which gives equivalent results.

(9) "Type" of buckwheat (large or small) means the result determined by sizing a portion using an 8/64 x 3/4 slotted sieve, and shall be added to and made a part of the grade designation.

(a) The designation shall be "large" when twenty percent or less of the buckwheat passes through an 8/64 x 3/4 slotted sieve.

(b) The designation shall be "small" when more than twenty percent of the buckwheat passes through an 8/64 x 3/4 slotted sieve.

(10) "Weevily" buckwheat shall be buckwheat that is infested with live weevils or other insects injurious to stored buckwheat.

[Statutory Authority: Chapter 22.09 RCW. 00-08-041, § 16-213-200, filed 3/30/00, effective 4/30/00; 84-06-036 (Order 1812), § 16-213-200, filed 3/2/84.]

WAC 16-213-210 Procedures. (1) The determination of dockage shall be on approximately nine hundred seventy-five to one thousand twenty-five grams cut from the representative sample.

(a) The Carter dockage tester shall be set up as follows:

(i) Set the air control at number six;

(ii) Set the feed control at number six;

(iii) Use the number two riddle in the riddle carriage;

(iv) Use no sieve in the top sieve carriage;

(v) Use the number eight sieve in the middle sieve carriage;

(vi) Use the number six sieve in the bottom sieve carriage.

(b) Buckwheat produced in the Pacific Northwest tends to be exceptionally large and dockage cannot be accurately determined using the standard method. For this large northwest buckwheat, the Carter dockage tester shall be set up as follows:

(i) Set the air control at number three;

(ii) Set the feed control at number four;

(iii) Use the number twenty-five riddle in the riddle carriage;

(iv) Use no sieve in the top sieve carriage;

(v) Use the number eight sieve in the middle sieve carriage;

(vi) Use the number six sieve in the bottom sieve carriage.

(c) Dockage will then consist of:

(i) The material removed from the air collecting pan;

(ii) Material over the number two or twenty-five riddle.

If any buckwheat is in this pan, remove and return to dockage free buckwheat;

(iii) Material through the number eight sieve. If by weight, it is fifty percent or more of material other than buckwheat, return all of it to the dockage. If by weight, it is more than fifty percent buckwheat, return all of it to the dockage free buckwheat;

(iv) Material through the number six bottom sieve.

(d) Record the percentage of dockage on the pan ticket. When applicable, the percentage of dockage shall be shown on the inspection certificate. The percentage of dockage when equal to 0.5 percent or more shall be stated in terms of half percent, whole percent, or whole and half percent, whichever is applicable, with other fractions disregarded as shown in the following examples:

0.50 to 0.99 percent is expressed as 0.5 percent;

1.00 to 1.49 percent is expressed as 1.0 percent;

1.50 to 1.99 percent is expressed as 1.5 percent, etc.

(2) The determination of foreign material shall be made on a representative portion of approximately sixty grams cut from the work sample after the removal of dockage. The percentage of foreign material shall be shown on the pan ticket and the inspection certificate to the nearest tenth of a percent.

(3) The determination for moisture shall be made on a representative portion of exactly two hundred fifty grams obtained from the representative sample before the removal of dockage. The percentage of moisture shall be shown on the pan ticket and the inspection certificate in whole and tenths of a percent to the nearest tenth percent.

(4) The determination for distinctly low quality and Washington sample grade factors shall be made on the basis of the lot as a whole and/or a representative portion of approximately one thousand grams cut from the representative sample before the removal of dockage. Distinctly low quality factors shall include:

(a) Animal filth. Buckwheat containing two or more rodent pellets, bird droppings, or an equivalent quantity of other animal filth shall be graded Washington sample grade.

(b) Broken glass. Buckwheat containing two or more pieces of broken glass shall be graded Washington sample grade.

(c) Castor beans. These multi-colored bean-like seeds of the castor-oil plant have been found to be highly toxic to animal life. Buckwheat containing three or more castor beans shall be graded Washington sample grade.

(d) Crotalaria. The seeds of crotalaria (CROTALARIA spp.) are highly toxic to animal life. These seeds can be various colors and are generally "kidney" or "boxing glove" shaped. Buckwheat containing three or more crotalaria seeds shall be graded Washington sample grade.

(e) Unknown foreign substance. Buckwheat containing four or more pieces of an unknown foreign substance shall be graded Washington sample grade. Pelletized material other than feed pellets shall be considered an unknown foreign substance. Feed pellets in buckwheat are considered dockage or foreign material, depending on where they are found during grading.

When buckwheat is found to be Washington sample grade on one or more of these factors, this fact and the reasons therefore shall be shown on the pan ticket and the inspection certificate even though the buckwheat may be Washington sample grade on another factor.

(5) The determination of stones shall be made on a representative portion of approximately one thousand grams of buckwheat after the removal of dockage.

(6) The determination for test weight per bushel shall be made on a representative portion of buckwheat ranging in size from one and one-eighth to one and one-quarter quarts after the removal of dockage. The test weight per bushel of buckwheat, whether or not this factor determines the grade, shall be shown on the pan ticket and the inspection certificate in whole and half pounds. A fraction of a half pound shall be disregarded.

(7) The determination of type shall be made on a representative portion of approximately two hundred fifty grams cut from the work sample after the removal of dockage. One of the following methods may be used:

(a) The mechanical sieving method.

(i) Mount an 8/64 x 3/4 slotted sieve and the bottom pan on the mechanical sieve shaker with the sieve perforations parallel to the direction of the movement. The sample is placed on the sieve and shaken lengthwise of the slots for twenty strokes.

(ii) All the material passing through the sieve shall be weighed and the percentage determined to the nearest tenth of a percent. This percentage shall be shown on the pan ticket and the inspection certificate.

(b) Hand sieving method.

(i) Mount an 8/64 x 3/4 slotted sieve on a bottom pan.

(ii) Place the two hundred fifty gram portion in the center of the pan.

(iii) Hold the sieve level in both hands with elbows close to the body and the sieve perforations parallel to the direction of the movement.

(iv) In a steady motion move the sieve left to right approximately ten inches and then return from right to left.

(v) Repeat the operation twenty times.

(vi) All the material passing through the sieve shall be weighed and the percentage determined to the nearest tenth of a percent. This percentage shall be shown on the pan ticket and the inspection certificate.

(8) The determination for the special grade "weevily" shall be made on the basis of the lot as a whole and/or the representative sample before the removal of dockage. Buckwheat is considered infested and shall be graded weevily when:

(a) The work sample contains one live weevil and any other live insect injurious to stored grain.

(b) The work sample contains one live weevil and the balance of the representative sample contains one live weevil or any other live insect injurious to stored grain.

(c) The work sample, or the work sample and the balance of the representative sample combined, contains no live weevils but does contain five or more other live insects injurious to stored grain.

(d) Two or more live weevils are found in, on or about the lot. When buckwheat is found to be weevily, this fact shall be shown on the pan ticket and on the inspection certificate in accordance with grade designation procedures.

(9) To provide uniform certification the following procedure shall be observed when writing grade designations on pan tickets and inspection certificates:

(a) The word "Washington" preceded by the abbreviation "no." and the numerical grade, or preceded by the words "sample grade," as the case may be, shall be shown first;

(b) The word "large" or "small" shall be shown next;

"Cracked corn" is a byproduct of the elevating, transporting, or cleaning of corn. Cracked corn is the entire corn kernel, broken, ground, or fractured. Cracked corn may contain incidental whole kernels of corn. Cracked corn may be "yellow" or "white" if one color constitutes ninety percent or more of the mixture. Cracked corn may not contain more than four percent of admixture (foreign material).

(2) "Corn screenings" is a byproduct of the elevating, transporting, or cleaning of corn. Corn screenings is the entire corn kernel, broken, ground, or fractured. Corn screenings may contain incidental whole kernels of corn. Corn screenings must consist of seventy percent or more of corn, whole and broken, and may contain not more than thirty percent of admixture.

(3) "Mixed grain screenings" is a byproduct of the elevating, transporting, or cleaning of grain. Grain screenings is the entire grain kernel, broken, ground, or fractured. Mixed grain screenings may contain incidental whole kernels of grain. Mixed grain screenings must consist of seventy percent or more of whole, light, and broken kernels of wheat, barley, oats, corn, rye, flaxseed, sorghum, triticale, soybeans, or wild oats in combination. Mixed grain screenings may contain not more than thirty percent of other foreign material.

(4) "Admixture" in cracked corn or corn screenings means foreign material and standardized grains other than corn.

(5) "Other foreign material" in mixed grain screenings means material other than standardized grains under the United States Grain Standards Act and wild oats.

(6) "Test weight per bushel" means the weight per winchester bushel (35.24 liters) or as determined by any device and method which gives equivalent results.

(7) "Moisture" means a percentage ascertained by the air oven method or by any device and method which gives equivalent results.

(1) The determination of cracked corn, yellow or white in cracked corn, corn screenings or mixed grain screenings shall be made on a representative portion of approximately thirty grams cut from the representative sample.

(a) In the case of cracked corn and corn screenings, the percentage of admixture shall be determined and recorded on the inspection certificate in whole and tenths of a percent to the nearest tenth of a percent.

(b) In the case of mixed grain screenings, the percentage of other foreign material shall be determined and recorded on the inspection certificate in whole and tenths of a percent to the nearest tenth of a percent.

(2) The determination for moisture shall be made on a representative portion of the sample of exactly two hundred fifty grams cut from the work sample. The percentage of moisture is determined by using the motomco moisture meter or other device that yields equivalent results. The percentage of moisture shall be recorded on the inspection certificate in whole and tenths of a percent to the nearest tenth of a percent.

(3) The determination of test weight per bushel shall be made on a representative portion of the sample ranging in size from one and one-eighth to one and one-fourth quarts. The test weight per bushel shall be recorded on the inspection certificate in whole and half pounds. A fraction of a half pound shall be disregarded.

(4) The examination of shiplots and combined lots of cracked corn, corn screenings and mixed grain screenings.

(a) When examining a shiplot or combined lot of cracked corn, corn screenings or mixed grain screenings, an individual subplot sample may exceed the limit for admixture in cracked corn and corn screenings and the limit of other foreign material in mixed grain screenings by up to two percent provided that:

(i) The weighted or mathematical average for the lot as a whole is within the prescribed limits of the applicable definition; and

(ii) The preponderance of the lot by weight meets the applicable definition.

(b) The certificate for a lot must show the following:

(i) The term cracked corn, corn screenings or mixed grain screenings.

(ii) The approximate weight of the lot.

(iii) In the case of cracked corn or corn screenings, the percentage of admixture.

(iv) In the case of mixed grain screenings, the percentage of other foreign material.

(c) At the request of the applicant, the certificate for a lot may show the following:

(i) In the case of cracked corn, the terms yellow or white.

(ii) The percentage of moisture.

(iii) The test weight per bushel.

(iv) In remarks, "We certify that cracked corn (or corn screenings) is not residue or waste from food industries. It is corn cracked during transportation or handling."

WAC 16-228-1010 Definitions. The definitions set forth in this section shall apply throughout this chapter, unless the context otherwise requires:

(1) "Agricultural commodity" means any plant, or part of a plant, or animal, or animal product, produced by a person (including farmers, ranchers, vineyardists, plant propagators, Christmas tree growers, aquaculturists, floriculturists, orchardists, foresters, or other comparable persons) primarily for sale, consumption, propagation, or other use by people or animals.

[Title 16 WAC—p. 198]

(2) "Agricultural emergency" means a sudden occurrence or set of circumstances which the agricultural employer could not have anticipated and over which the agricultural employer has no control, and which requires entry into a pesticide treated area during a restricted-entry interval, when no alternative practices would prevent or mitigate a substantial economic loss.

(3) "Authorized agent" is any person who is authorized to act on behalf of a certified applicator for the purpose of purchasing pesticides.

(4) "Bait box" for rodenticides is a box constructed of durable metal, wood, plastic, or other treated synthetic material. It shall be designed to hold rodent bait securely, allow rodents to enter and leave, and prevent unauthorized persons and domestic animals from gaining access to the bait. The cover shall be provided with a lock that can be unlocked only by a combination, key, special tool, or forced entry. Fragile materials are unacceptable.

(5) "Bait station" may be any location where baits are placed to allow target pests to gain access to the bait.

(6) "Blossoming plants" means

(a) when there are five or more open blooms per square yard on average in a given field; or

(b) when there are one or more open blooms per tree or vine in an orchard or vineyard; or

(c) when there are five or more open weed blooms per square yard on average for the area being measured for groundcover in orchards or vineyards, fence lines, ditch banks, or field, vineyard or orchard edges: PROVIDED that this definition shall not apply to plants that are not attractive to bees (e.g. lentils, white blossomed peas, second bloom of pears and potatoes and hops). For the purposes of this definition, "bloom" means a flower head, raceme or spike with one or more open flowers.

(7) "Bulk fertilizer" is a commercial fertilizer, agricultural mineral, or lime, distributed in nonpackaged form.

(8) "Certified applicator" means any individual who is licensed as a commercial pesticide applicator, commercial pesticide operator, public operator, private-commercial applicator, demonstration and research applicator, or certified private applicator, or any other individual who is certified by the director to use or supervise the use of any pesticide which is classified by the EPA as a restricted use pesticide or by the state as restricted to use by certified applicators only.

(9) "Chemigation" means the application of any substance or combination of substances intended as a pesticide, plant or crop protectant or a system maintenance compound applied with irrigation water.

(10) A "complainant" is defined as a person who has requested an inspection of an area in which a pesticide violation is believed to have occurred.

(11) "Complete wood destroying organism inspection" means (a) an inspection of a structure for the purpose of determining (i) evidence of infestation(s), and (ii) damage, and (iii) conducive conditions; or (b) any wood destroying organism inspection which is conducted as the result of a telephone solicitation by an inspection firm or pest control business, even if the inspection would otherwise fall within

the definition of a limited wood destroying organism inspection.

WAC 16-228-1110 Definitions—Penalty assignment.

In addition to the definitions set forth in RCW 17.21.020, 15.58.030, and WAC 16-228-1010, the following shall apply to WAC 16-228-1100 through 16-228-1150:

(1) "Adverse effect(s)" means that the alleged activity actually causes, or creates the possibility of damage, injury or public health threat, to humans, animals, plants, property or the environment. In those situations involving a wood destroying organism inspection, adverse effects exist when the inspection has been performed in a faulty, careless or negligent manner.

(2) "Level of violation" means that the alleged violation is a first, second, third, fourth, or more violation(s).

(a) First violation. This means the alleged violator has committed no prior incident(s) which resulted in a violation or violations within three years of committing the current alleged violation.

(b) Second violation. This means the alleged violator committed one prior incident which resulted in a violation or violations within three years of committing the current alleged violation.

(c) Third violation. This means the alleged violator committed two prior incidents which resulted in a violation or violations within three years of committing the current alleged violation.

(d) Fourth violation. This means the alleged violator committed three prior incidents which resulted in a violation or violations within three years of committing the current alleged violation.

(e) For purposes of calculating the level of violation, prior incidents will be measured from the date that a final order or stipulated order resolved the prior violation(s), and not from the date that the incident(s) occurred.

(3) "Not probable" means that the alleged violator's conduct more likely than not would not have an adverse effect.

(4) "Probable" means that the alleged violator's conduct more likely than not would have an adverse effect.

(5) "Violation" means commission of an act or acts prohibited by chapter 17.21 RCW, chapter 15.58 RCW, and/or rules adopted thereunder.

(6) "Civil penalty" means a monetary penalty administratively issued by a regulatory agency for noncompliance with state or federal law, or rules. The term does not include any criminal penalty, damage assessment, wages, premiums, or taxes owed, or interest or late fees on any existing obligation.

(7) "Notice of Correction" means a document issued by the department that describes a condition or conduct that is not in compliance with chapter 15.58 or 17.21 RCW, or the rules adopted under the authority of chapter 15.58 or 17.21 RCW and is not subject to civil penalties as provided for in RCW 43.05.110. A notice of correction is not a formal enforcement action, is not subject to appeal and is a public record.

(2001 Ed.)

(8) "Notice of intent" means a document issued by the department that alleges specific violations of chapter 15.58 or 17.21 RCW, or any rules adopted under the authority of those chapters. A notice of intent is a formal enforcement document issued with the intent to assess civil penalties to the alleged violator and/or to suspend, deny or revoke the alleged violator's pesticide license.

[Statutory Authority: Chapters 17.21 and 15.58 RCW, 01-01-058, § 16-228-1110, filed 12/12/00, effective 1/12/01. Statutory Authority: Chapters 15.54, 15.58 and 17.21 RCW, 99-22-002, § 16-228-1110, filed 10/20/99, effective 11/20/99.]

WAC 16-228-1115 Application of RCW 43.05.100 and RCW 43.05.110—Issuance of a civil penalty without first issuing a notice of correction.

(1) Pursuant to RCW 43.05.100 a notice of correction may be issued by the department when they become aware of conditions and/or conduct that are not in compliance with the applicable laws and rules enforced by the department. The issuance of a notice of correction by the department shall not constitute a previous violation for purposes of WAC 16-228-1110(2), but may, at the discretion of the department, be considered as an aggravating factor for the purposes of WAC 16-228-1120(2).

(2) Prior to issuing a civil penalty for a violation of chapter 15.58 or 17.21 RCW, and the rules adopted under the authority of chapter 15.58 or 17.21 RCW the department shall comply with the requirements of RCW 43.05.110. RCW 43.05.110 provides that the department of agriculture may issue a civil penalty provided for by law without first issuing a notice of correction if: (1) The person has previously been subject to an enforcement action for the same or similar type of violation of the same statute or rule or has been given previous notice of the same or similar type of violation of the same statute or rule; or (2) compliance is not achieved by the date established by the department in a previously issued notice of correction, if the department has responded to any request for review of such date by reaffirming the original date or establishing a new date; (3) the violation has a probability of placing a person in danger of death or bodily harm, has a probability of causing more than minor environmental harm, or has a probability of causing physical damage to the property of another in an amount exceeding one thousand dollars; or (4) the violation was committed by a business that employed fifty or more employees on at least one day in each of the preceding twelve months.

[Statutory Authority: Chapters 17.21 and 15.58 RCW, 01-01-058, § 16-228-1115, filed 12/12/00, effective 1/12/01.]

WAC 16-228-1120 Calculation of penalty. (1) Median penalty selection. In the disposition of administrative cases, the department shall use the penalty assignment schedule listed in WAC 16-228-1130 to determine appropriate penalties. The department shall calculate the appropriate penalty based on the level of violation and the adverse effect(s) or potential adverse effects at the time of the incident(s) giving rise to the violation. The median penalty shall be assessed unless a proportionate adjustment is warranted and/or there are aggravating or mitigating factors present. The median penalty as listed in WAC 16-228-1130 may be proportionately adjusted and/or aggravated to a level more than the

[Title 16 WAC—p. 201]

maximum penalty listed for the violation in the penalty assignment schedule table. The median penalty under the penalty assignment schedule may not be proportionately adjusted and/or mitigated to a level less than the minimum penalty listed for the violation.

(2) Proportionate adjustment of median penalty.

(a) The department reserves the right to proportionately increase the civil penalty and proportionately decrease the licensing action under certain circumstances[.]. Such circumstances include situations where licensing action(s) as a deterrent are ineffective and include, but are not limited to:

(i) Violations by persons who are not licensed; and

(ii) situations where the civil penalty assessed is not substantially equivalent to the violator's economic benefit derived from the violation.

(b) The department also reserves the right to proportionately decrease the civil penalty and increase the licensing action in circumstances that demonstrate the ineffectiveness of a civil penalty as a deterrent. Nothing shall prevent the department from proportionally adjusting a licensing action to a level greater than the maximum licensing action listed in the penalty assignment schedule.

(3) Aggravating factors. The department may consider circumstances enhancing the penalty based on the seriousness of the violation. Aggravating factors include, but are not limited to, the following:

(a) The number of separate alleged violations contained within a single notice of intent.

(b) The high magnitude of the harm, or potential harm, including quantity and/or degree, to humans, animals, plants, property or the environment caused by the violation(s).

(c) The similarity of the current alleged violation to previous violations committed within the last three years.

(d) The extent to which the alleged violation is part of a pattern of the same or substantially similar conduct.

(4) When the department determines that one or more aggravating factors are present, the department may assess the maximum penalty as listed within the level of violation or may, in its discretion, increase the penalty to a level greater than the maximum penalty, including but not limited to revocation of the license.

(5) Mitigating factors. The department may consider circumstances reducing the penalty based upon the seriousness of the violation. Mitigating factors include but are not limited to, the following:

(a) Voluntary disclosure of a violation.

(b) The low magnitude of the harm, or potential harm, including quantity and/or degree, caused by the violation.

(c) Voluntary taking of remedial measures that will result in increased public protection, or that will result in a decreased likelihood that the violation will be repeated.

(6) When the department determines that one or more mitigating factors are present, the department may assess the minimum penalty for the violation from the penalty schedule.

(7) The department considers each violation to be a separate and distinct event. When a person has committed multiple violations, the violations are cumulative for purposes of calculating the appropriate penalty. Penalties are added together.

(8) Violation(s) committed during the period when an individual's license is suspended or revoked shall be subject to the maximum civil penalty of seven thousand five hundred dollars and/or revocation of the license for a period of up to five years. Violation(s) committed by unlicensed individuals are subject to the provisions of this chapter, including the penalty provision.

WAC 16-228-1125 Revocation and denial of licenses—Actions against licenses only.

(1) The department retains the sole discretion to determine when an individual license should be revoked rather than suspended. Revocation of a license shall be an option for the department in those circumstances where:

(a) The penalty schedule allows for revocation;

(b) One or more aggravating factors are present; and/or

(c) The duration of the licensure action exceeds six months.

In circumstances where the department determines revocation to be appropriate, the period of revocation shall be determined at the discretion of the department, but in no instance shall the revocation exceed five years.

(2) The department may deny an applicant a license when the applicant has committed a violation(s) of chapters 15.58 and 17.21 RCW and/or the rules adopted under those chapters. The duration of denial shall be determined based upon the penalty provisions of this chapter. In circumstances where the department determines denial to be appropriate, the period of denial shall not exceed five years.

(3) Nothing shall prevent the department from denying an applicant a license when the applicant has an outstanding civil penalty owed to the department from a previous violation(s).

(4) The department may, at its discretion, suspend a license without also seeking a civil penalty. Such circumstances include, but are not limited to, those incidents where a civil penalty is not available as an appropriate penalty pursuant to RCW 43.05.110. The appropriate period of suspension shall be determined from the penalty schedule.

- (3) Negotiating settlement(s) of cases on such terms and for such reasons as it deems appropriate. Toxicities of pesticides shall be considered in distribution, storage, handling, and merchandising practices.
- (2) Highly toxic pesticides shall not be transported in the same compartment of the vehicle or other equipment together with clothes, food, feed, or any other material intended for consumption by humans or animals. Any vehicle or other equipment shall be inspected by the owner or authorized

agent for contamination before reuse. In instances where leakage or spillage has occurred, the shipper of the pesticides shall be immediately notified for instructions concerning the best method to be employed for the removal of the contamination. Vehicles or other equipment which have been contaminated shall not be returned to service until the contamination has been removed.

- (3) Pesticide containers shall be secured during transit by use of side or end racks, bracing, chocks, tiedowns, or other means to prevent their sliding, falling, tipping, rolling, or falling off the vehicle with normal vehicle acceleration, deceleration, or change in direction.
- (4) Valves shall be tightly closed and manhole covers shall be secured on cargo or portable tanks used for transporting pesticides, whether tanks are full or empty.
- (5) Portable tanks shall be secured to prevent their sliding, falling, tipping, or rolling with normal vehicle acceleration, deceleration, or change in direction. Ends, sidewalls, or doors of van bodies shall not be relied upon for securement.
- (6) Pesticides shall not be delivered to a pesticide consignee unless the consignee or authorized agent is present to accept delivery of the pesticides and signs a delivery slip and the pesticides are secured in a proper storage.
- (7) Pesticides shall not be stored and/or displayed over or adjacent to meat or vegetable cases, other human foods, animal feeds, or drugs, or in any manner that may result in contamination of food, feed, or clothing. Pesticides intended for sale or distribution shall only be stored and displayed within an enclosed area of a building or fence and shall not be displayed on sidewalks.
- (8) Pesticide dealers shall not sell, offer for sale, or hold for sale highly toxic pesticides in the same department where food for human consumption is displayed or sold. The use of the same "checkstand" or food packaging area is prohibited for the distribution of highly toxic pesticides.

Baits placed in industrial, commercial or other areas that are accessible to the public shall be contained in tamper resistant bait boxes and such bait boxes shall be secured in such a way that nonpest animals, children and unauthorized persons cannot displace or remove the baits out of such bait boxes. Those containers that are used for exposing vertebrate control pesticides outside of bait boxes shall bear a legible warning label with wording not less restrictive than requirements on bait boxes being used as per WAC 16-228-1380(3), (except for the size of lettering). Food containers, such as "meat boats" and "souffle cups" are unacceptable. Containers used for liquid bait exposure shall be water and/or liquid impervious.

(5) All vertebrate control pesticide stocks, when not in use or when unattended, shall be kept in locked storage or locked service vehicles.

(6) All containers used for storing or transporting vertebrate control pesticides shall bear an EPA or department registered label.

(7) Servicemen's kits which contain vertebrate control pesticides shall be handled with extra caution and shall not be left where children or other unauthorized persons or nontarget animals might remove contents.

(8) Upon completion of a baiting operation, all bait boxes, containers, and/or throw bags, if they may become readily accessible to the public, shall be recovered for disposal in an approved manner.

(9) Wherever poisoned carcasses jeopardize public sanitation, or create a health hazard to wildlife, domestic animals, or the public, they shall be recovered and disposed of by burning, burying not less than three feet below the soil surface, or placed in proper waste containers and delivered to an approved disposal site.

(10) Thallium-containing compounds shall not be used for vertebrate control.

(1) The inspector shall make a thorough inspection of accessible areas of the subject structure which are not excluded. The inspection shall be conducted by making a careful visual examination, and/or probing with inspection instruments.

(2) Substructural crawl areas shall be inspected when accessible.

(3) Upon completion of an inspection, a wood destroying organism report shall be issued to the person paying for and/or otherwise requesting the inspection. Such report shall include the following: Provided, That all diagrammatic representations may be omitted from the report provided to the person paying for or otherwise requesting the inspection, but shall be maintained on file pursuant to subsection (3)(k) of this section.

- (a) Date of inspection;
- (b) Name of seller/owner and purchaser (when applicable);
- (c) Street address of structure inspected. When there is more than one structure that may be used as a dwelling at a given street address it shall be clearly indicated which structure was inspected;

(d) Name of structural inspector and department pesticide license number;

(e) Substructural crawl areas which are not accessible due to inadequate clearance, or foundation walls/partitions, etc., which block access, shall be clearly indicated on the complete wood destroying organism inspection report including any diagram which is a part of that report. It shall be stated on the report that such areas may be vulnerable to attack by wood destroying organisms, and should be made accessible for inspection if feasible. In the event that it is neither feasible or necessary to make access into such areas, a statement indicating the reason(s) shall be included on the report;

(f) With the exception of areas within the living quarters of an occupied structure, all areas which are excluded from the inspection shall be clearly indicated on any complete wood destroying organism inspection report;

(g) Evidence of infestation of wood destroying organisms which shall include:

(i) Common name of the wood destroying organism(s). Termites shall be described as either dampwoods or subterraneans. Wood boring beetles shall be described by the appropriate family name, i.e., anobiidae (deathwatch beetles). Buprestid and Cerambycid beetles shall not be described as "powder post beetles";

(ii) Statement describing specific evidence of infestation(s) observed;

(iii) If evidence of infestation(s) is observed only in wood which is not normally considered a part of the structure i.e., form boards, cellulose debris, roots, stumps, landscaping wood/lumber, etc., the report shall so state;

(iv) Diagrammatic representation of areas infested sufficient to identify the approximate location of areas infested;

(h) Optional method of control. When infestations of dampwood termites or rot fungus are localized in a structure, or observed only in wood which is not normally considered a part of the structure, such as form boards, cellulose debris, roots, stumps, landscaping wood/lumber, it shall be stated in the report that such infestations may be eliminated by removal of all infested wood and correction of any contributing conducive conditions;

(i) Damage caused by wood destroying organisms:

(i) A statement describing any damage which was observed in accessible areas of the structure which were not excluded from the inspection.

(ii) A diagrammatic representation indicating such areas of damage;

(j) Conducive conditions for an infestation of wood destroying organisms. Written statements and diagrammatic representation of the following shall be provided:

(i) Inadequate clearance: Where there is less than eighteen inches clear space between the bottom of floor joists and the unimproved ground area in any crawl space or portion thereof.

(iii) Cellulose debris: Where wood by-product material can be raked or is larger than can be raked, or where any

stumps, roots, form boards, etc., are on the ground of a crawl space.

(iv) Excess moisture: Where there is standing water or evidence of seasonal standing water in crawl space or basement. Plumbing and other moisture leaks.

(v) Inadequate ventilation: Where there is detectable excessive moisture content in the wood of a substructure, and/or an active infestation of wood destroying organisms which can be attributed to the lack of sufficient ventilation in the substructure;

(k) A record of the complete wood destroying organism inspection report shall be maintained on file by the structural inspector or employer for a period of seven years. Such record shall be made available to the department upon request.

[Statutory Authority: Chapters 15.54, 15.58 and 17.21 RCW. 99-22-002, § 16-228-2000, filed 10/20/99, effective 11/20/99.]

(1) A limited or complete wood destroying organism inspection shall be conducted and a report issued to the person paying for and/or otherwise requesting the inspection prior to the contracting of any treatment for wood destroying organisms, except when the treatment is for preventative purposes only. In situations when treatment is for preventative purposes, the person requesting treatment shall provide the following preauthorization:

I have requested that..... perform a preventative treatment for control of..... on the structure located at..... I acknowledge that this preventative treatment may be performed without inspection.

(2) A limited or complete wood destroying organism inspection report or treatment preauthorization form shall accompany or be included within any proposal/estimate for treatment of wood destroying organisms.

(3) When no evidence of infestation is observed, and any proposed treatment is for preventative purposes only, a limited or complete wood destroying organism inspection report shall include:

(a) A statement describing that no evidence of infestation was observed, and the treatment proposed is for preventative purposes only. Such statement shall stand out by having larger print than the main body of the report, or by being highlighted or underlined.

**PART 1
GENERAL PROVISIONS**

WAC 16-229-010 Definitions. The definitions set forth in this section shall apply throughout this chapter unless the context otherwise requires:

(1) "**Approved air gap**" means a physical separation between the free-flowing end of a water supply pipeline and the overflow rim of an open or nonpressurized receiving vessel. To be an approved air gap, the separation must be at least:

(a) Twice the diameter of the supply piping measured vertically from the overflow rim of the receiving vessel, and in no case be less than one inch, when unaffected by vertical surfaces (sidewalls); or

(b) Three times the diameter of the supply piping, if the horizontal distance between the supply pipe and a vertical surface (sidewall) is less than or equal to three times the diameter of the supply pipe, or if the horizontal distance between the supply pipe and intersecting vertical surfaces (sidewalls) is less than or equal to four times the diameter of the supply pipe and in no case less than one and one-half inches.

(2) "**Approved reduced pressure principle backflow prevention assembly (RPBA)**" means an RPBA of a make, model and size that is approved by the Washington State Department of Health.

(3) "**Appurtenances**" means all valves, pumps, fittings, pipes, hoses, metering devices, and mechanical devices which are connected to a storage container, or which are used to transfer a material into or out of such container.

(4) "**Bulk pesticide**" means any registered pesticide which is transported or held in an individual container in undivided quantities of greater than fifty-five U.S. gallons liquid measure or one hundred pounds net dry weight.

(5) "**Certified engineer**" means a licensed professional engineer, registered in the state of Washington in the discipline in which he/she is practicing.

(6) "**Department**" means the Washington state department of agriculture.

(7) "**Discharge**" means a spill, leak, or release, accidental or otherwise, from a storage container, container or appurtenance. It does not include a fully contained transfer of pesticide which is made pursuant to sale, storage, distribution or use.

Pressure shall not exceed twenty-five pounds per square inch at the nozzle for .052 and other orifice openings and pressure shall not exceed fifteen pounds per square inch at the nozzle for LP 8002 or equivalent nozzle. Pressure up to fifty pounds per square inch at the nozzle may be used for equipment with handguns and up to ninety pounds per square inch at the nozzle manifold for an inert system: Provided, That the department may issue a permit for other nozzles and pressure combinations that are equal or better. Prior to issuing such permits, the request shall be reviewed by a scientific committee established by the director: Provided further, That when Glyphosate is the only restricted use herbicide being used during an application for weed control in reduced tillage cropping any nozzles may be used that delivers at a minimum ten gallons of water carrier or greater per treated acre at a pressure not exceeding twenty-five pounds per square inch at the nozzle: Provided further, That Glyphosate applications using a .052 nozzle at twenty-five pounds of pressure or less at the nozzle, and a LP 8002 nozzle at fifteen pounds of pressure or less at the nozzle shall be exempt from the ten-gallon minimum volume: Provided further, That pressurized handsized household devices used to apply restricted use herbicides, or any equipment, device, or contrivance of which the person who is applying the pesticide is the source of power or energy in making such herbicide applications shall be exempt from nozzle requirements.

GENERAL PROVISIONS

WAC 16-233-001 Federal worker protection standards—Washington state department of labor and industries. This chapter contains the federal Environmental Protection Agency worker protection standards as listed in 40 CFR, Part 170. Revisions to the federal language have been incorporated into this chapter in order to be consistent with other requirements of Washington state law. These rules are adopted in conjunction with rules adopted by the Washington state department of labor and industries in chapter 296-306A WAC.

[Statutory Authority: Chapters 15.58 and 17.21 RCW. 96-21-008 (Order 6002), § 16-233-001, filed 10/3/96, effective 11/3/96.]

WAC 16-233-005 Scope and purpose—Worker protection standards—40 CFR, § 170.1. This chapter contains standards designed to reduce the risks of illness or injury resulting from workers' and handlers' occupational exposures to pesticides used in the production of agricultural plants on farms or in nurseries, greenhouses, and forests and also to reduce the accidental exposure of workers and other persons to such pesticides. It requires workplace practices designed to reduce or eliminate exposure to pesticides and establishes procedures for responding to exposure-related emergencies.

[Statutory Authority: Chapters 15.58 and 17.21 RCW. 96-21-008 (Order 6002), § 16-233-005, filed 10/3/96, effective 11/3/96.]

WAC 16-233-010 Definitions—Worker protection standards—40 CFR, § 170.3. Terms used in this chapter have the same meanings they have in the Federal Insecticide, Fungicide, and Rodenticide Act, as amended. In addition, the following terms, when used in this chapter, shall have the following meanings:

(1) "Agricultural emergency" means a sudden occurrence or set of circumstances which the agricultural employer could not have anticipated and over which the agricultural employer has no control, and which requires entry into a pesticide treated area during a restricted-entry interval, when no alternative practices would prevent or mitigate a substantial economic loss.

(2) "Agricultural employer" means any person who hires or contracts for the services of workers, for any type of compensation, to perform activities related to the production of agricultural plants, or any person who is an owner of or is responsible for the management or condition of an agricultural establishment that uses such workers.

(3) "Agricultural establishment" means any farm, forest, nursery, or greenhouse.

(4) "Agricultural plant" means any plant grown or maintained for commercial or research purposes and includes, but is not limited to, food, feed, and fiber plants; trees; turfgrass; flowers, shrubs; ornamentals; and seedlings.

(5) "Animal premise" means the actual structure used to house, cage, or confine animals such as barns, poultry houses, mink sheds, corrals or structures used for shelter.

(6) "Chemigation" means the application of pesticides through irrigation systems.

(7) "Commercial pesticide handling establishment" means any establishment, other than an agricultural establishment, that:

(a) Employs any person, including a self-employed person, to apply on an agricultural establishment, pesticides used in the production of agricultural plants.

(b) Employs any person, including a self-employed person, to perform on an agricultural establishment, tasks as a crop advisor.

(8) "Crop advisor" means any person who is assessing pest numbers or damage, pesticide distribution, or the status or requirements of agricultural plants and who holds a current Washington state department of agriculture commercial consultant license in the agricultural areas in which they are advising. The term does not include any person who is performing hand labor tasks.

(9) "Early entry" means entry by a worker into a treated area on the agricultural establishment after a pesticide application is complete, but before any restricted-entry interval for the pesticide has expired.

(10) "Farm" means any operation, other than a nursery or forest, engaged in the outdoor production of agricultural plants.

(11) "Forest" means any operation engaged in the outdoor production of any agricultural plant to produce wood fiber or timber products.

(12) "Fumigant" means any pesticide product that is a vapor or gas, or forms a vapor or gas on application, and whose method of pesticidal action is through the gaseous state.

(13) "Greenhouse" means any operation engaged in the production of agricultural plants inside any structure or space that is enclosed with nonporous covering and that is of sufficient size to permit worker entry. This term includes, but is not limited to, polyhouses, mushroom houses, rhubarb houses, and similar structures. It does not include such structures as malls, atriums, conservatories, arboretums, or office buildings where agricultural plants are present primarily for aesthetic or climatic modification.

(14) "Hand labor" means any agricultural activity performed by hand or with hand tools that causes a worker to have substantial contact with surfaces (such as plants, plant parts, or soil) that may contain pesticide residues. These activities include, but are not limited to, harvesting, detasseling, thinning, weeding, topping, planting, sucker removal, pruning, disbudding, roguing, and packing produce into containers in the field. Hand labor does not include operating, moving, or repairing irrigation or watering equipment or performing the tasks of crop advisors.

(15) "Handler" means any person, including a self-employed person:

(a) Who is employed for any type of compensation by an agricultural establishment or commercial pesticide handling establishment to which WAC 16-233-200 applies and who is:

(i) Mixing, loading, transferring, or applying pesticides.

(ii) Disposing of pesticides or pesticide containers.

(iii) Handling opened containers of pesticides.

(iv) Acting as a flagger.

(v) Cleaning, adjusting, handling, or repairing the parts of mixing, loading, or application equipment that may contain pesticide residues.

(vi) Assisting with the application of pesticides.

(vii) Entering a greenhouse or other enclosed area after the application and before the inhalation exposure level listed in the labeling has been reached or one of the ventilation criteria established by WAC 16-233-115 (3)(c) or in the labeling has been met:

(A) To operate ventilation equipment.

(B) To adjust or remove coverings used in fumigation.

(C) To monitor air levels.

(viii) Entering a treated area outdoors after application of any soil fumigant to adjust or remove soil coverings such as tarpaulins.

(ix) Performing tasks as a crop advisor:

(A) During any pesticide application.

(B) Before the inhalation exposure level listed in the labeling has been reached or one of the ventilation criteria established by WAC 16-233-115 (3)(c) or in the labeling has been met.

(C) During any restricted-entry interval.

(b) The term does not include any person who is only handling pesticide containers that have been emptied or cleaned according to pesticide product labeling instructions or, in the absence of such instructions, have been subjected to triple-rinsing or its equivalent.

(16) "Handler employer" means any person who is self-employed as a handler or who employs any handler, for any type of compensation.

(17) "Immediate family" includes only spouse, children, stepchildren, foster children, parents, stepparents, foster parents, brothers, and sisters.

(18) "Nursery" means any operation engaged in the outdoor production of any agricultural plant to produce cut flowers and ferns or plants that will be used in their entirety in another location. Such plants include, but are not limited to, flowering and foliage plants or trees; tree seedlings; live Christmas trees; vegetable, fruit, and ornamental transplants; and turfgrass produced for sod.

(19) "Owner" means any person who has a present possessory interest (fee, leasehold, rental, or other) in an agricultural establishment covered by this chapter. A person who has both leased such agricultural establishment to another person and granted that same person the right and full authority to manage and govern the use of such agricultural establishment is not an owner for purposes of this chapter.

(20) "Restricted-entry interval" means the time after the end of a pesticide application during which entry into the treated area is restricted.

(21) "Substantial economic loss" means a loss in profitability greater than that which would be expected based on the experience and fluctuations of crop yields in previous years. Only losses caused by the agricultural emergency specific to the affected site and geographic area are considered. The contribution of mismanagement cannot be considered in determining the loss.

(22) "Treated area" means any area to which a pesticide is being directed or has been directed.

(23) "Worker" means any person, including a self-employed person, who is employed for any type of compensation and who is performing activities relating to the production of agricultural plants on an agricultural establishment to which WAC 16-233-100 applies. While persons employed by a commercial pesticide handling establishment are performing tasks as crop advisors, they are not workers covered by the requirements of WAC 16-233-100.

[Statutory Authority: Chapters 15.58 and 17.21 RCW. 96-21-008 (Order 6002), § 16-233-010, filed 10/3/96, effective 11/3/96.]

(b) Application of the pesticide.

(c) Post-application activities necessary to reduce the risks of illness and injury resulting from handlers' and workers' occupational exposures to pesticide residues during the restricted-entry interval plus thirty days. These activities include, but are not limited to, responsibilities related to worker training, notification, and decontamination.

(d) Other pesticide-related activities, including, but not limited to, providing emergency assistance, transporting or storing pesticides that have been opened, and disposing of excess pesticides, spray mix, equipment wash waters, pesticide containers, and other pesticide-containing materials.

(3) FIFRA section 14 (b)(4) provides that a person is liable for a penalty under FIFRA if another person employed by or acting for that person violates any provision of FIFRA. The term "acting for" includes both employment and contractual relationships.

(4) The requirements of this chapter, including the decontamination requirements, shall not, for the purposes of section 653(b)(1) of Title 29 of the U.S. Code, be deemed to be the exercise of statutory authority to prescribe or enforce standards or regulations affecting the general sanitary hazards addressed by the WISHA Field Sanitation Standard, WAC 296-24-120, or other agricultural, nonpesticide hazards.

WAC 16-233-120 Entry restrictions—Standards for workers—40 CFR, § 170.112. (1) General restrictions.

(a) After the application of any pesticide on an agricultural establishment, the agricultural employer shall not allow or direct any worker to enter or to remain in the treated area before the restricted-entry interval specified on the pesticide labeling has expired, except as provided in this section.

(b) Entry-restricted areas in greenhouses are specified in column D in Table 2 under WAC 16-233-115 (3)(d).

(c) When two or more pesticides are applied at the same time, the restricted-entry interval shall be the longest of the applicable intervals.

(d) The agricultural employer shall assure that any worker who enters a treated area under a restricted-entry interval as permitted by subsections (3), (4), and (5) of this section uses the personal protective equipment specified in the product labeling for early entry workers and follows any other requirements on the pesticide labeling regarding early entry.

(2) Exception for activities with no contact. A worker may enter a treated area during a restricted-entry interval if the agricultural employer assures that both of the following are met:

(a) The worker will have no contact with anything that has been treated with the pesticide to which the restricted-entry interval applies, including, but not limited to, soil, water, air, or surfaces of plants; and

(b) No such entry is allowed until any inhalation exposure level listed in the labeling has been reached or any ventilation criteria established by WAC 16-233-115 (3)(c) or in the labeling have been met.

(3) Exception for short-term activities. A worker may enter a treated area during a restricted-entry interval for short-term activities if the agricultural employer assures that the following requirements are met:

(a) No hand labor activity is performed.

(b) The time in treated areas under a restricted-entry interval for any worker does not exceed one hour in any twenty-four-hour period.

(2001 Ed.)

(c) No such entry is allowed for the first four hours following the end of the application, and no such entry is allowed thereafter until any inhalation exposure level listed in the labeling has been reached or any ventilation criteria established by WAC 16-233-115 (3)(c) or in the labeling have been met.

(d) The personal protective equipment specified on the product labeling for early entry is provided to the worker. Such personal protective equipment shall conform to the following standards:

(i) Personal protective equipment (PPE) means devices and apparel that are worn to protect the body from contact with pesticides or pesticide residues, including, but not limited to, coveralls, chemical-resistant suits, chemical-resistant gloves, chemical-resistant footwear, respiratory protection devices, chemical-resistant aprons, chemical-resistant headgear, and protective eyewear.

(ii) Long-sleeved shirts, short-sleeved shirts, long pants, short pants, shoes, socks, and other items of work clothing are not considered personal protective equipment for the purposes of this section and are not subject to the requirements of this section, although pesticide labeling may require that such work clothing be worn during some activities.

(iii) When "chemical-resistant" personal protective equipment is specified by the product labeling, it shall be made of material that allows no measurable movement of the pesticide being used through the material during use.

(iv) When "waterproof" personal protective equipment is specified by the product labeling, it shall be made of material that allows no measurable movement of water or aqueous solutions through the material during use.

(v) When a "chemical-resistant suit" is specified by the product labeling, it shall be a loose-fitting, one-piece or two-piece, chemical-resistant garment that covers, at a minimum, the entire body except head, hands, and feet.

(vi) When "coveralls" are specified by the product labeling, they shall be a loose-fitting, one-piece or two-piece garment, such as a cotton or cotton and polyester coverall, that covers, at a minimum, the entire body except head, hands, and feet. The pesticide product labeling may specify that the coveralls be worn over a layer of clothing. If a chemical-resistant suit is substituted for coveralls, it need not be worn over a layer of clothing.

(vii) Gloves shall be of the type specified by the product labeling. Gloves or glove linings made of leather, cotton, or other absorbent materials must not be worn for early entry activities unless these materials are listed on the product labeling as acceptable for such use. If chemical-resistant gloves with sufficient durability and suppleness are not obtainable for tasks with roses or other plants with sharp thorns, leather gloves may be worn over chemical-resistant liners. However, once leather gloves have been worn for this use, thereafter they shall be worn only with chemical-resistant liners and they shall not be worn for any other use.

(viii) When "chemical-resistant footwear" is specified by the product labeling, it shall be one of the following types of footwear: Chemical-resistant shoes, chemical-resistant boots, or chemical-resistant shoe coverings worn over shoes or boots. If chemical-resistant footwear with sufficient durability and a tread appropriate for wear in rough terrain is not obtainable for workers, then leather boots may be worn in such terrain.

(ix) When "protective eyewear" is specified by the product labeling, it shall be one of the following types of eyewear: Goggles; face shield; safety glasses with front, brow, and temple protection; or a full-face respirator.

(x) When "chemical-resistant headgear" is specified by the product labeling, it shall be either a chemical-resistant hood or a chemical-resistant hat with a wide brim.

(e) The agricultural employer shall assure that the worker, before entering the treated area, either has read the product labeling or has been informed, in a manner that the worker can understand, of all labeling requirements related to human hazards or precautions, first aid, symptoms of poisoning, personal protective equipment specified for early entry, and any other labeling requirements related to safe use.

(f) The agricultural employer shall assure that:

(i) Workers wear the personal protective equipment correctly for its intended purpose and use personal protective equipment according to manufacturer's instructions.

(ii) Before each day of use, all personal protective equipment is inspected for leaks, holes, tears, or worn places, and any damaged equipment is repaired or discarded.

(iii) Personal protective equipment that cannot be cleaned properly is disposed of in accordance with any applicable federal, state, and local regulations.

(iv) All personal protective equipment is cleaned according to manufacturer's instructions or pesticide product labeling instructions before each day of reuse. In the absence of any such instructions, it shall be washed thoroughly in detergent and hot water.

(v) Before being stored, all clean personal protective equipment is dried thoroughly or is put in a well-ventilated place to dry.

(vi) Personal protective equipment contaminated with pesticides is kept separately and washed separately from any other clothing or laundry.

(vii) Any person who cleans or launders personal protective equipment is informed that such equipment may be contaminated with pesticides, of the potentially harmful effects of exposure to pesticides, and of the correct way(s) to handle and clean personal protective equipment and to protect them-

selves when handling equipment contaminated with pesticides.

(viii) All clean personal protective equipment is stored separately from personal clothing and apart from pesticide-contaminated areas.

(ix) Each worker is instructed how to put on, use, and remove the personal protective equipment and is informed about the importance of washing thoroughly after removing personal protective equipment.

(x) Each worker is instructed in the prevention, recognition, and first aid treatment of heat-related illness.

(xi) Workers have a clean place(s) away from pesticide-storage and pesticide-use areas for storing personal clothing not in use; putting on personal protective equipment at the start of any exposure period; and removing personal protective equipment at the end of any exposure period.

(g) When personal protective equipment is required by the labeling of any pesticide for early entry, the agricultural employer shall assure that no worker is allowed or directed to perform the early entry activity without implementing, when appropriate, measures to prevent heat-related illness.

(h) During any early entry activity, the agricultural employer shall provide a decontamination site in accordance with WAC 16-233-150.

(i) The agricultural employer shall not allow or direct any worker to wear home or to take home personal protective equipment contaminated with pesticides.

(4) Declaration of an agricultural emergency.

(a) The director may declare the existence of circumstances causing an agricultural emergency on a particular establishment or establishments.

(b) The director may declare an agricultural emergency based on the reasonably expected certainty of circumstances occurring based on weather or other forecasts that would create conditions that would normally be anticipated to cause an agricultural emergency.

(c) The agricultural employer may determine if the establishment under his/her control is subject to the agricultural emergency declared by the director.

(d) Emergency repair of equipment that is in use and sited within a pesticide treated area under a restricted-entry interval, such as frost protection devices, shall be considered to be an agricultural emergency. The conditions in WAC 16-228-655 shall be met.

(e) Activities that require immediate response such as fire suppression, relocation of greenhouse plants due to power failure, and similar conditions, shall be considered to be agricultural emergencies. The conditions in WAC 16-228-655 shall be met.

(5) Agricultural activities permitted under an agricultural emergency.

(a) A worker may enter a pesticide treated area under a restricted-entry interval in an agricultural emergency to perform tasks, including hand labor tasks, necessary to mitigate the effects of the agricultural emergency if the agricultural employer assures that all the following requirements are met:

(i) No entry is permitted for the first four hours after the pesticide application or the minimum reentry interval allowed by EPA for that product, whichever is less;

(ii) The personal protective equipment specified on the product labeling for early entry is provided to the worker;

(iii) The agricultural employer shall assure that the worker, before entering the treated area, either has read the product labeling or has been informed, in a manner the worker can understand, of all labeling requirements related to human hazards or precautions, first aid, symptoms of poisoning, personal protective equipment specified for early entry, and any other labeling requirements related to safe use;

(iv) The agricultural employer shall assure that the worker wears the proper PPE and that the PPE is in operable condition and that the worker has been trained in its proper use;

(v) The agricultural employer shall assure that measures have been taken, when appropriate, to prevent heat-related illness;

(vi) A decontamination site has been provided in accordance with WISHA regulations;

(vii) The agricultural employer shall not allow or direct any worker to wear home or take home personal protective equipment contaminated with pesticides.

(b) If the agricultural emergency is due to equipment failure, then the agricultural employer shall assure that all the requirements in subsection (1) of this section are met plus the following additional requirement. The only permitted activity until the restricted-entry interval has elapsed is equipment repair that would mitigate the effect of the equipment failure.

(6) Recordkeeping required for agricultural emergencies.

(a) If the employer declares that his/her establishment is affected by an agricultural emergency and that activities regulated by the worker protection standard have been performed, the employer shall keep the following records for seven years from the date of the agricultural emergency:

(i) Date of the agricultural emergency;

(ii) Time of the agricultural emergency, start and end;

(iii) Reason for the agricultural emergency, such as frost, fire, equipment failure, etc.;

(iv) Crop/site;

(v) Pesticide(s) - name, EPA number, REI;

(vi) Name, date, time of entry and exit of early entry person(s);

(vii) Estimated potential of economic loss which would have occurred had no early entry been allowed.

(b) Records shall be completed within twenty-four hours of the early entry exposure and be available to the department and/or department of health and/or medical facility or treating physician if requested by the above or the employee.

(7) Exception to entry restrictions requiring EPA approval. EPA may in accordance with 40 CFR, Part 170.112(e) grant an exception from the requirements of this section. A request for an exception must be submitted to the Director, Office of Pesticide Programs (H-7501C), Environmental Protection Agency, 401 "M" Street SW, Washington, DC 20460 and must be accompanied by two copies of the information specified in 40 CFR, Part 170.112(e).

(2001 Ed.)

WAC 16-233-125 Notice of applications—Standards for workers—40 CFR, § 170.120. (1) Notification to workers of pesticide applications in greenhouses. The agricultural employer shall notify workers of any pesticide application in the greenhouse in accordance with this subsection.

(a) All pesticide applications shall be posted in accordance with subsection (3) of this section.

(b) If the pesticide product labeling has a statement requiring both the posting of treated areas and oral notification to workers, the agricultural employer shall also provide oral notification of the application to the worker in accordance with subsection (4) of this section.

(c) Notice need not be given to a worker if the agricultural employer can assure that one of the following is met:

(i) From the start of the application until the end of the application and during any restricted-entry interval, the worker will not enter, work in, remain in, or pass through the greenhouse; or

(ii) The worker applied (or supervised the application of) the pesticide for which the notice is intended and is aware of all information required by subsection (4)(a) through (c) of this section.

(2) Notification to workers on farms, in nurseries, or in forests of pesticide applications. The agricultural employer shall notify workers of any pesticide application on the farm or in the nursery or forest in accordance with this subsection.

(a) If the pesticide product labeling has a statement requiring both the posting of treated areas and oral notification to workers, the agricultural employer shall post signs in accordance with subsection (3) of this section and shall provide oral notification of the application to the worker in accordance with subsection (4) of this section.

(b) For any pesticide other than those for which the labeling requires both posting and oral notification of applications, the agricultural employer shall give notice of the application to the worker either by the posting of warning signs in accordance with subsection (3) of this section or orally in accordance with subsection (4) of this section, and shall inform the workers as to which method of notification is in effect.

(c) Notice need not be given to a worker if the agricultural employer can assure that one of the following is met:

(i) From the start of the application until the end of the application and during any restricted-entry interval, the worker will not enter, work in, remain in, or pass through on foot the treated area or any area within one-quarter mile of the treated area; or

(ii) The worker applied (or supervised the application of) the pesticide for which the notice is intended and is aware of all information required by subsection (4)(a) through (c) of this section.

(3) Posted warning signs. The agricultural employer shall post warning signs in accordance with the following criteria:

(a) The warning sign shall have a background color that contrasts with red. The words "DANGER" and "PELIGRO," plus "PESTICIDES" and "PESTICIDAS," shall be at the top of the sign, and the words "KEEP OUT" and "NO ENTRE" shall be at the bottom of the sign. Letters for all words must be clearly legible. A circle containing an upraised hand on the left and a

stern face on the right must be near the center of the sign. The inside of the circle must be red, except that the hand and a large portion of the face must be in a shade that contrasts with red. The length of the hand must be at least twice the height of the smallest letters. The length of the face must be only slightly smaller than the hand. Additional information

such as the name of the pesticide and the date of application may appear on the warning sign if it does not detract from the appearance of the sign or change the meaning of the required information. A black and white example of a warning sign meeting these requirements, other than the size requirements, follows:

(b) The standard sign shall be at least fourteen inches by sixteen inches with letters at least one inch in height. Farms and forests shall use the standard size sign unless a smaller sign is necessary because the treated area is too small to accommodate a sign of this size. In nurseries and green houses, the agricultural employer may, at any time, use a sign smaller than the standard size sign. Whenever a small sign is used on any establishment, there are specific posting distances depending on the size of the lettering and symbol on the sign. If a sign is used with DANGER and PELIGRO in letters at least 7/8 inch in height and the remaining letters at least 1/2 inch in height and a red circle at least three inches

in diameter containing an upraised hand and a stern face, the signs shall be no further than fifty feet apart. If a sign is used with DANGER and PELIGRO in letters at least 7/16 inch in height and the remaining letters at least 1/4 inch in height and a red circle at least 1 1/2 inches in diameter containing an upraised hand and a stern face, the signs shall be no further than twenty-five feet apart. A sign with DANGER and PELIGRO in letters less than 7/16 inch in height or with any words in letters less than 1/4 inch in height or a red circle smaller than 1 1/2 inches in diameter containing an upraised hand and a stern face will not satisfy the requirements of the

rule. All signs must meet the requirements of (a) of this subsection.

(c) The employer may replace the Spanish portion of the warning sign with a non-English language read by the largest group of workers who do not read English. The replacement sign must be in the same format as the original sign and be visible and legible.

(d) On farms and in forests and nurseries, the signs shall be visible from all usual points of worker entry to the treated area, including at least each access road, each border with any labor camp adjacent to the treated area, and each footpath and other walking route that enters the treated area. When there are no usual points of worker entry, signs shall be posted in the corners of the treated area or in any other location affording maximum visibility.

(e) In greenhouses, the signs shall be posted so they are visible from all usual points of worker entry to the treated area including each aisle or other walking route that enters the treated area. When there are no usual points of worker entry to the treated area, signs shall be posted in the corners of the treated area or in any other location affording maximum visibility.

(f) The signs shall:

(i) Be posted no sooner than twenty-four hours before the scheduled application of the pesticide.

(ii) Remain posted throughout the application and any restricted-entry interval.

(iii) Be removed within three days after the end of the application and any restricted-entry interval and before agricultural-worker entry is permitted, other than entry permitted by WAC 16-233-120.

(g) The signs shall remain visible and legible during the time they are posted.

(h) When several contiguous areas are to be treated with pesticides on a rotating or sequential basis, the entire area may be posted. Worker entry, other than entry permitted by WAC 16-233-120, is prohibited for the entire area while the signs are posted.

(4) Oral warnings. The agricultural employer shall provide oral warnings to workers in a manner that the worker can understand. If a worker will be on the premises during the application, the warning shall be given before the application takes place. Otherwise, the warning shall be given at the beginning of the worker's first work period during which the application is taking place or the restricted-entry interval for the pesticide is in effect. The warning shall consist of:

(a) The location and description of the treated area.

(b) The time during which entry is restricted.

(c) Instructions not to enter the treated area until the restricted-entry interval has expired.

[Statutory Authority: Chapters 15.58 and 17.21 RCW. 96-21-008 (Order 6002), § 16-233-125, filed 10/3/96, effective 11/3/96.]

WAC 16-233-130 Providing specific information about applications—Standards for workers—40 CFR, § 170.122. When workers are on an agricultural establishment and, within the last thirty days, a pesticide covered by this chapter has been applied on the establishment or a restricted-entry interval has been in effect, the agricultural employer

(2001 Ed.)

shall display, in accordance with this section, specific information about the pesticide.

(1) Location, accessibility, and legibility. The information shall be displayed in the location specified for the pesticide safety poster in WAC 16-233-145(4) and shall be accessible and legible, as specified in WAC 16-233-145 (4) and (6).

(2) Timing.

(a) If warning signs are posted for the treated area before an application, the specific application information for that application shall be posted at the same time or earlier.

(b) The information shall be posted before the application takes place, if workers will be on the establishment during application. Otherwise, the information shall be posted at the beginning of any worker's first work period.

(c) The information shall continue to be displayed for at least thirty days after the end of the restricted-entry interval (or, if there is no restricted-entry interval, for at least thirty days after the end of the application) or at least until workers are no longer on the establishment, whichever is earlier.

(ii) The agricultural employer may permit workers to use clean water from springs, streams, lakes, or other sources for decontamination at the remote work site, if such water is

more accessible than the water located at the nearest place of vehicular access.

(c) The decontamination supplies shall not be maintained in an area being treated with pesticides.

(d) The decontamination supplies shall not be maintained in an area that is under a restricted-entry interval, unless the workers for whom the supplies are provided are performing early entry activities permitted by WAC 16-233-120 and involving contact with treated surfaces and the decontamination supplies would otherwise not be reasonably accessible to those workers.

(4) Decontamination after early entry activities. At the end of any exposure period for workers engaged in early entry activities permitted by WAC 16-233-120 and involving contact with anything that has been treated with the pesticide to which the restricted-entry interval applies, including, but not limited to, soil, water, air, or surfaces of plants, the agricultural employer shall provide, at the site where the workers remove personal protective equipment, soap, clean towels, and a adequate amount of water so that the workers may wash thoroughly. WAC 16-233-240 Posted pesticide safety information—Standards for pesticide handlers—40 CFR, § 170.235. (1) Requirement. When handlers (except those employed by a commercial pesticide handling establishment) are on an agricultural establishment and, within the last thirty days, a pesticide covered by this chapter has been applied on the establishment or a restricted-entry interval has been in effect, the handler employer shall display, in accordance with this section, pesticide safety information.

(2) Pesticide safety poster. A safety poster must be displayed that conveys, at a minimum, the following basic pesticide safety concepts:

- (a) Help keep pesticides from entering your body. At a minimum, the following points shall be conveyed:
 - (i) Avoid getting on your skin or into your body any pesticides that may be on plants and soil, in irrigation water, or drifting from nearby applications.
 - (ii) Wash before eating, drinking, using chewing gum or tobacco, or using the toilet.

(2001 Ed.)

(iii) Wear work clothing that protects the body from pesticide residues (long-sleeved shirts, long pants, shoes and socks, and a hat or scarf).

(iv) Wash/shower with soap and water, shampoo hair, and put on clean clothes after work.

(v) Wash work clothes separately from other clothes before wearing them again.

(vi) Wash immediately in the nearest clean water if pesticides are spilled or sprayed on the body. As soon as possible, shower, shampoo, and change into clean clothes.

(vii) Follow directions about keeping out of treated or restricted areas.

(b) There are federal rules to protect workers and handlers including a requirement for safety training.

(3) Emergency medical care information.

(a) The name, address, and telephone number of the nearest emergency medical care facility shall be on the safety poster or displayed close to the safety poster.

(b) The handler employer shall inform handlers promptly of any change to the information on emergency medical care facilities.

(4) Location.

(a) The information shall be displayed in a central location on the farm or in the nursery or greenhouse where it can be readily seen and read by handlers.

(b) The information shall be displayed in a location in or near the forest in a place where it can be readily seen and read by handlers and where handlers are likely to congregate or pass by, such as at a decontamination site or an equipment storage site.

(5) Accessibility. Handlers shall be informed of the location of the information and shall be allowed access to it.

(6) Legibility. The information shall remain legible during the time it is posted.

[Statutory Authority: Chapters 15.58 and 17.21 RCW. 96-21-008 (Order 6002), § 16-233-240, filed 10/3/96, effective 11/3/96.]

WAC 16-233-245 Personal protective equipment—Standards for pesticide handlers—40 CFR, § 170.240. (1) Requirement. Any person who performs tasks as a pesticide handler shall use the clothing and personal protective equipment specified on the labeling for use of the product.

(2) Definition.

(a) Personal protective equipment (PPE) means devices and apparel that are worn to protect the body from contact with pesticides or pesticide residues, including, but not limited to, coveralls, chemical-resistant suits, chemical-resistant gloves, chemical-resistant footwear, respiratory protection devices, chemical-resistant aprons, chemical-resistant headgear, and protective eyewear.

(b) Long-sleeved shirts, short-sleeved shirts, long pants, short pants, shoes, socks, and other items of work clothing are not considered personal protective equipment for the purposes of this section and are not subject to the requirements of this section, although pesticide labeling may require that such work clothing be worn during some activities.

(3) Provision. When personal protective equipment is specified by the labeling of any pesticide for any handling activity, the handler employer shall provide the appropriate

personal protective equipment in clean and operating condition to the handler.

(a) When "chemical-resistant" personal protective equipment is specified by the product labeling, it shall be made of material that allows no measurable movement of the pesticide being used through the material during use.

(b) When "waterproof" personal protective equipment is specified by the product labeling, it shall be made of material that allows no measurable movement of water or aqueous solutions through the material during use.

(c) When a "chemical-resistant suit" is specified by the product labeling, it shall be a loose-fitting, one-piece or two-piece chemical-resistant garment that covers, at a minimum, the entire body except head, hands, and feet.

(d) When "coveralls" are specified by the product labeling, they shall be a loose-fitting, one-piece or two-piece garment, such as a cotton or cotton and polyester coverall, that covers, at a minimum, the entire body except head, hands, and feet. The pesticide product labeling may specify that the coveralls be worn over another layer of clothing.

(e) Gloves shall be of the type specified by the product labeling. Gloves or glove linings made of leather, cotton, or other absorbent material shall not be worn for handling activities unless such materials are listed on the product labeling as acceptable for such use.

(f) When "chemical-resistant footwear" is specified by the product labeling, one of the following types of footwear must be worn:

- (i) Chemical-resistant shoes.
- (ii) Chemical-resistant boots.
- (iii) Chemical-resistant shoe coverings worn over shoes or boots.

(g) When "protective eyewear" is specified by the product labeling, one of the following types of eyewear must be worn:

- (i) Goggles.
- (ii) Face shield.
- (iii) Safety glasses with front, brow, and temple protection.
- (iv) Full-face respirator.

(h) When a "chemical-resistant apron" is specified by the product labeling, an apron that covers the front of the body from mid-chest to the knees shall be worn.

(i) When a respirator is specified by the product labeling, it shall be appropriate for the pesticide product used and for the activity to be performed. The handler employer shall assure that the respirator fits correctly by using the procedures consistent with WAC 296-62-071. If the label does not specify the type of respirator to be used, it shall meet the requirements of WAC 296-62-071. The respiratory protection requirements of the general occupational health standards, WAC 296-62-071, shall apply.

(j) When "chemical-resistant headgear" is specified by the product labeling, it shall be either a chemical-resistant hood or a chemical-resistant hat with a wide brim.

(4) Exceptions to personal protective equipment specified on product labeling.

- (a) Body protection.

(i) A chemical-resistant suit may be substituted for "coveralls," and any requirement for an additional layer of clothing beneath is waived.

(ii) A chemical-resistant suit may be substituted for "coveralls" and a chemical-resistant apron.

(b) Boots. If chemical-resistant footwear with sufficient durability and a tread appropriate for wear in rough terrain is not obtainable, then leather boots may be worn in such terrain.

(c) Gloves. If chemical-resistant gloves with sufficient durability and suppleness are not obtainable, then during handling activities with roses or other plants with sharp thorns, leather gloves may be worn over chemical-resistant glove liners. However, once leather gloves are worn for this use, thereafter they shall be worn only with chemical-resistant liners and they shall not be worn for any other use.

(d) Closed systems. If handling tasks are performed using properly functioning systems that enclose the pesticide to prevent it from contacting handlers or other persons, and if such systems are used and are maintained in accordance with that manufacturer's written operating instructions, exceptions to labeling-specified personal protective equipment for the handling activity are permitted as provided in (d)(i) and (ii) of this subsection.

(i) Persons using a closed system to mix or load pesticides with a signal word of DANGER or WARNING may substitute a long-sleeved shirt, long pants, shoes, socks, chemical-resistant apron, and any protective gloves specified on the labeling for handlers for the labeling-specified personal protective equipment.

(ii) Persons using a closed system to mix or load pesticides other than those in (d)(i) of this subsection or to perform other handling tasks may substitute a long-sleeved shirt, long pants, shoes, and socks for the labeling-specified personal protective equipment.

(iii) Persons using a closed system that operates under pressure shall wear protective eyewear.

(iv) Persons using a closed system shall have all labeling-specified personal protective equipment immediately available for use in an emergency.

(e) Enclosed cabs. If handling tasks are performed from inside a cab that has a nonporous barrier which totally surrounds the occupants of the cab and prevents contact with pesticides outside of the cab, exceptions to personal protective equipment specified on the product labeling for that handling activity are permitted as provided in (e)(i) through (iv) of this subsection.

(i) Persons occupying an enclosed cab may substitute a long-sleeved shirt, long pants, shoes, and socks for the labeling-specified personal protective equipment. If a respiratory protection device is specified on the pesticide product labeling for the handling activity, it must be worn.

(ii) Persons occupying an enclosed cab that has a properly functioning ventilation system which is used and maintained in accordance with the manufacturer's written operating instructions and which is declared in writing by the manufacturer and by the Washington state department of labor and industries to provide respiratory protection equivalent to or greater than a dust/mist filtering respirator may substitute a long-sleeved shirt, long pants, shoes, and socks for the

labeling-specified personal protective equipment. If a respiratory protection device other than a dust/mist-filtering respirator is specified on the pesticide product labeling, it must be worn.

(iii) Persons occupying an enclosed cab that has a properly functioning ventilation system which is used and maintained in accordance with the manufacturer's written operating instructions and which is declared in writing by the manufacturer and the Washington state department of labor and industries to provide respiratory protection equivalent to or greater than the vapor-removing or gas-removing respirator specified on pesticide product labeling may substitute a long-sleeved shirt, long pants, shoes, and socks for the labeling-specified personal protective equipment. If an air-supplying respirator or a self-contained breathing apparatus (SCBA) is specified on the pesticide product labeling, it must be worn.

(iv) Persons occupying an enclosed cab shall have all labeling-specified personal protective equipment immediately available and stored in a chemical-resistant container, such as a plastic bag. They shall wear such personal protective equipment if it is necessary to exit the cab and contact pesticide-treated surfaces in the treated area. Once personal protective equipment is worn in the treated area, it must be removed before reentering the cab.

(f) Aerial applications.

(i) Use of gloves. Chemical-resistant gloves shall be worn when entering or leaving an aircraft contaminated by pesticide residues. In the cockpit, the gloves shall be kept in an enclosed container to prevent contamination of the inside of the cockpit.

(ii) Open cockpit. Persons occupying an open cockpit shall use the personal protective equipment specified in the product labeling for use during application, except that chemical-resistant footwear need not be worn. A helmet may be substituted for chemical-resistant headgear. A visor may be substituted for protective eyewear.

(iii) Enclosed cockpit. Persons occupying an enclosed cockpit may substitute a long-sleeved shirt, long pants, shoes, and socks for labeling-specified personal protective equipment.

(g) Crop advisors. Crop advisors entering treated areas while a restricted-entry interval is in effect may wear the personal protective equipment specified on the pesticide labeling for early entry activities instead of the personal protective equipment specified on the pesticide labeling for handling activities, provided:

(i) Application has been completed for at least four hours.

(ii) Any inhalation exposure level listed in the labeling has been reached or any ventilation criteria established by WAC 16-233-115 (3)(c) or in the labeling have been met.

(5) Use of personal protective equipment.

(a) The handler employer shall assure that personal protective equipment is used correctly for its intended purpose and is used according to the manufacturer's instructions.

(b) The handler employer shall assure that, before each day of use, all personal protective equipment is inspected for leaks, holes, tears, or worn places, and any damaged equipment is repaired or discarded.

(6) Cleaning and maintenance.

(a) The handler employer shall assure that all personal protective equipment is cleaned according to the manufacturer's instructions or pesticide product labeling instructions before each day of reuse. In the absence of any such instructions, it shall be washed thoroughly in detergent and hot water.

(b) If any personal protective equipment cannot be cleaned properly, the handler employer shall dispose of the personal protective equipment in accordance with any applicable federal, state, and local regulations. Coveralls or other absorbent materials that have been drenched or heavily contaminated with an undiluted pesticide that has the signal word DANGER or WARNING on the label shall not be reused.

(c) The handler employer shall assure that contaminated personal protective equipment is kept separately and washed separately from any other clothing or laundry.

(d) The handler employer shall assure that all clean personal protective equipment shall be either dried thoroughly before being stored or shall be put in a well ventilated place to dry.

(e) The handler employer shall assure that all personal protective equipment is stored separately from personal clothing and apart from pesticide-contaminated areas.

(f) The handler employer shall assure that when dust/mist filtering respirators are used, the filters shall be replaced:

(i) When breathing resistance becomes excessive.

(ii) When the filter element has physical damage or tears.

(iii) According to manufacturer's recommendations or pesticide product labeling, whichever is more frequent.

(iv) In the absence of any other instructions or indications of service life, at the end of each day's work period.

(g) The handler employer shall assure that when gas-removing or vapor-removing respirators are used, the gas-removing or vapor-removing canisters or cartridges shall be replaced:

(i) At the first indication of odor, taste, or irritation.

(ii) According to manufacturer's recommendations or pesticide product labeling, whichever is more frequent.

(iii) In the absence of any other instructions or indications of service life, at the end of each day's work period.

(h) The handler employer shall inform any person who cleans or launders personal protective equipment:

(i) That such equipment may be contaminated with pesticides.

(ii) Of the potentially harmful effects of exposure to pesticides.

(iii) Of the correct way(s) to clean personal protective equipment and to protect themselves when handling such equipment.

(i) The handler employer shall assure that handlers have a clean place(s) away from pesticide storage and pesticide use areas where they may:

(i) Store personal clothing not in use.

(ii) Put on personal protective equipment at the start of any exposure period.

(iii) Remove personal protective equipment at the end of any exposure period.

(j) The handler employer shall not allow or direct any handler to wear home or to take home personal protective equipment contaminated with pesticides.

(7) Heat-related illness. When the use of personal protective equipment is specified by the labeling of any pesticide for the handling activity, the handler employer shall assure that no handler is allowed or directed to perform the handling activity unless appropriate measures are taken, if necessary, to prevent heat-related illness.

[Statutory Authority: Chapters 15.58 and 17.21 RCW. 96-21-008 (Order 6002), § 16-233-245, filed 10/3/96, effective 11/3/96.]

WAC 16-233-250 Decontamination—Standards for pesticide handlers—40 CFR, § 170.250. (1) Requirement. During any handling activity, the handler employer shall provide for handlers, in accordance with this section, decontamination supplies for washing off pesticides and pesticide residues.

(2) General conditions.

(a) The handler employer shall provide handlers with enough water for routine washing, for emergency eyeflushing, and for washing the entire body in case of an emergency. At all times when the water is available to handlers, the handler employer shall assure that it is of a quality and temperature that will not cause illness or injury when it contacts the skin or eyes or if it is swallowed. At least ten gallons of water for one employee and twenty gallons of water for two or more employees shall be provided at mixing and loading sites that do not have running water.

(b) When water stored in a tank is to be used for mixing pesticides, it shall not be used for decontamination or eyeflushing, unless the tank is equipped with properly functioning valves or other mechanisms that prevent movement of pesticides into the tank.

(c) The handler employer shall provide soap and single-use towels in quantities sufficient to meet handlers' needs.

(d) The handler employer shall provide one clean change of clothing, such as coveralls, for use in an emergency.

(3) Location. The decontamination supplies shall be located together and be reasonably accessible to and not more than one-quarter mile from each handler during the handling activity.

(a) Exception for mixing sites. For mixing activities, decontamination supplies shall be at the mixing site.

(b) Exception for pilots. Decontamination supplies for a pilot who is applying pesticides aerially shall be in the airplane or at the aircraft loading site.

(c) Exception for handling pesticides in remote areas. When handling activities are performed more than one-quarter mile from the nearest place of vehicular access:

(i) The soap, single-use towels, clean change of clothing, and water may be at the nearest place of vehicular access.

(ii) The handler employer may permit handlers to use clean water from springs, streams, lakes, or other sources for decontamination at the remote work site, if such water is more accessible than the water located at the nearest place of vehicular access.

(d) Decontamination supplies in treated areas. The decontamination supplies shall not be in an area being treated

with pesticides or in an area under a restricted-entry interval, unless:

(i) The decontamination supplies are in the area where the handler is performing handling activities;

(ii) The soap, single-use towels, and clean change of clothing are in enclosed containers; and

(iii) The water is running tap water or is enclosed in a container.

(4) Emergency eyeflushing. To provide for emergency eyeflushing, the handler employer shall assure that at least one pint of water is immediately available to each handler who is performing tasks for which the pesticide labeling requires protective eyewear. The eyeflush water shall be carried by the handler, or shall be on the vehicle or aircraft the handler is using, or shall be otherwise immediately accessible.

(5) A plumbed or portable emergency eyewash capable of delivering at least 1.5 liters (0.4 gals.) of water per minute for fifteen minutes shall be provided at all pesticide mixing and loading stations or handler decontamination sites when the label requires protective eyewear for mixing, loading or applying. A plumbed or portable system meeting the above requirements shall be provided at all permanent mixing and loading sites.

(6) Decontamination after handling activities. At the end of any exposure period, the handler employer shall provide at the site where handlers remove personal protective equipment, soap, clean towels, and a sufficient amount of water so that the handlers may wash thoroughly. At least ten gallons of water for one employee and twenty gallons of water for two or more employees shall be provided at mixing and loading sites that do not have running water.

[Statutory Authority: Chapters 15.58 and 17.21 RCW. 96-21-008 (Order 6002), § 16-233-250, filed 10/3/96, effective 11/3/96.]

WAC 16-233-255 Emergency assistance—Standards for pesticide handlers—40 CFR, § 170.260. If there is reason to believe that a person who is or has been employed by an agricultural establishment or commercial pesticide handling establishment to perform pesticide handling tasks has been poisoned or injured by exposure to pesticides as a result of that employment, including, but not limited to, exposures from handling tasks or from application, splash, spill, drift, or pesticide residues, the handler employer shall:

(1) Make available to that person prompt transportation from the place of employment or the handling site to an appropriate emergency medical facility.

(2) Provide to that person or to treating medical personnel, promptly upon request, any obtainable information on:

(a) Product name, EPA registration number, and active ingredients of any product to which that person might have been exposed.

(b) Antidote, first aid, and other medical information from the product labeling.

(c) The circumstances of handling of the pesticide.

(d) The circumstances of exposure of that person to the pesticide.

[Statutory Authority: Chapters 15.58 and 17.21 RCW. 96-21-008 (Order 6002), § 16-233-255, filed 10/3/96, effective 11/3/96.]

WAC 16-301-095 Sampling—Administration of the Washington State Seed Act. (1) The official sampling procedure for sampling all seed is as follows:

(a) In order to secure a representative sample, equal portions must be taken from evenly distributed parts of the quantity of seed to be sampled. Access must be allowed to all parts of that quantity.

(b) For free-flowing seed in bags or bulk, a probe or trier is used. For small free-flowing seed in bags, a probe or trier long enough to sample all portions of the bag or container must be used.

(c) Nonfree-flowing seed, such as certain grass seed, uncleaned seed, or screenings, difficult to sample with a probe or trier, are sampled by thrusting the hand into the bulk and withdrawing representative portions.

(d) Composite samples must be obtained to determine the quality of a lot of seed, such as the percentages of pure seed, other crop seed, weed seed, inert matter, noxious weed seed, germination, varietal purity, freedom from disease, and effectiveness of seed treatment. Individual bag samples may be obtained to determine whether the seed is of uniform quality.

(2) Sampling equipment. The trier must be designed so that it will remove an equal volume of seed from each part of the bag through which the trier travels. Unless the trier has partitions in the seed chamber, it must be inserted into the bags horizontally.

(3) Obtaining representative samples.

(a) For lots of one to six bags, sample each bag and take a total of at least five cores or handfull.

(b) For lots of more than six bags, sample five bags plus at least ten percent of the number of bags in the lot. (Round numbers with decimals to the nearest whole number.) Regardless of the lot size, it is not necessary to sample more than thirty bags.

	Examples:							
No. bags in lots	7	10	23	50	100	200	300	400
No. bags to sample	6	6	7	10	15	25	30	30

(c) For sampling bulk seed to obtain a composite sample, take at least as many cores or handfull as if the same quantity of seed were in bags of an ordinary size. Take the cores or handfull from well-distributed points throughout the bulk.

(d) Seed in small containers must be sampled by taking entire unopened container in sufficient numbers to supply a minimum size sample as required in subsection (4) of this section. The contents of a single container or the combined contents of multiple containers of the same lot must be considered representative of the entire lot of seed sampled.

(4) Minimum weights of seed samples are defined in chapter 16-303 WAC, Schedule of testing, certification and other fees.

PART 2 - SEED ARBITRATION

The nursery must be seeded in rows. It is the duty of the person receiving seed stock containing annual bluegrass to rogue this increase area or chemically treat to eradicate the annual bluegrass thus assuring production of seed that is free of annual bluegrass. Seed increase areas are inspected by the department at least three times during the seedling year. Any areas not passing inspection must not be harvested, but instead destroyed by the person who planted the increase area upon order of the director of the Washington state department of agriculture or his agent. (2) Corrective procedures may be agreed upon, such as roging, chemical treatment, etc., and the time frame for such work, or agreement for voluntary destruction of all acreage involved.

(3) Treated and rogued acreage is inspected by department of agriculture three times during the seedling stages to assure freedom from annual bluegrass. The violator is assessed an hourly inspection fee and a mileage fee where additional mileage is involved.

BEAN SEED QUARANTINE

WAC 16-301-365 Bean seed quarantine—Establishing quarantine. The production of edible beans and bean seed is an important industry in the state of Washington. The economic well-being of that industry is threatened by the introduction of bean seed contaminated with viral, bacterial and fungal diseases not established in the commercial production areas in Washington. The director has determined that a quarantine will be effective in preventing the introduction of these viral, bacterial and fungal diseases of beans, and that control of these diseases of beans will provide the bean growers of the state of Washington with a source of seed beans for planting purposes which are tested for the presence of these diseases.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-301-365, filed 12/4/00, effective 1/4/01.]

(2) "Dominant I-gene cultivar" means a cultivar which has resistance to all known strains of bean common mosaic virus (B.C.M.V.) due to the presence of the dominant I-gene. Dominant I-gene cultivars will not show mosaic mottle symptoms or transmit the virus through seed when inoculated with any strain of B.C.M.V.

(3) "Recessive I-gene cultivar" means a cultivar which may be susceptible to some strains of bean common mosaic virus and may show mosaic mottle symptoms.

(4) "Diseases" means those viral, fungal and bacterial diseases of beans enumerated in WAC 16-301-380 and any new variations or strains of these identified in the future.

(5) "Quarantine Area I" means all areas west of the Continental Divide except those counties within the state of Washington subject to internal quarantine and the states of Alaska and Hawaii.

(6) "Quarantine Area II" means areas east of the Continental Divide, the counties in the state of Washington subject to internal quarantine, the states of Alaska and Hawaii and foreign countries.

Further, if at any time prior to harvest, the grower decides that the plantings are not to be harvested as green beans, the department must be notified and the plantings placed under an inspection program.

(2) This quarantine does not apply to the shipment, movement, or transportation of beans prepackaged in packages of eight ounces or less for home garden use in the regulated area if the beans are free of diseases.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-301-420, filed 12/4/00, effective 1/4/01.]

(2) A minimum of three field inspections is made during the growing season and one windrow inspection.

(3) A disinfectant must be applied to machinery used in the production of bean seed and to footwear of personnel performing inspections prior to movement to other bean fields.

(4) If any regulated diseases are detected by field inspections or subsequent laboratory/greenhouse tests, no seed may be released for general planting but must again be planted in an approved trial ground for one additional year and undergo inspection procedures by the department.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-301-425, filed 12/4/00, effective 1/4/01.]

WAC 16-301-430 Identification and disposition of diseased bean seed and infected bean fields. (1) Any bean field planted with seed in violation of the requirements of this quarantine is subject to destruction, in full or in part, or quarantined, as determined necessary by the director, to prevent the spread of regulated diseases. Any expenses of such

actions will be solely that of the grower or their responsible agents.

(a) Fields that are placed under a quarantine order must be entered into the Washington state bean seed phytosanitary inspection program as provided in WAC 16-301-235 with all costs of inspection to be borne by the grower or the grower's agent.

(b) Fields that are placed under a quarantine order may be subject to additional requirements for inspection, control or isolation, as deemed necessary by the director, to prevent the spread of regulated diseases.

(2) Any bean field determined to be infected with a regulated disease must be reported within seventy-two hours after discovery to the department, plant certification program.

(3) The department encourages the aid of all interested parties, including growers and seed company representatives, in the prompt reporting of suspected infected bean fields in order that timely investigation may be made.

(4) Any bean fields within the boundaries of the regulated area which show contamination by a regulated disease, as provided in subsection (5) of this section, must be destroyed in part or in total as may be required to eliminate the disease, by or at the expense of the grower or their responsible agents. The director may authorize any other method of control at the director's discretion. The director must notify the grower, seed company representatives and/or the grower's landlord of the method and extent of the destruction and safeguards against disease spread in order for the parties to comply.

(5) The identity of a regulated disease on growing plants or plants in windrow is based on the observance of the visual symptoms of the disease. If the department deems it necessary to establish true identity or pathogenically, a laboratory and/or greenhouse test may be conducted by the department in cooperation with the university.

(a) In cases of disagreement concerning the presence of a regulated disease between the department plant pathologist and a qualified plant pathologist representing the commercial company or grower, the definitive verification of identity or pathogenically must be determined by isolation of the suspected pathogen and inoculation of seedlings of a known susceptible host using accepted scientific and professional techniques.

(b) Until verification of the suspected pathogen as specified in this section is completed, the involved planting must be placed under quarantine for a period of thirty days subject to conditions and review or extension as determined by the director. Entry into the quarantined area is to be restricted to the grower or grower's agents, department employees, and/or persons authorized in writing by the director. Persons granted entry into the quarantined area will be required to take all necessary sanitary precautions as prescribed by the director to safeguard against the possible spread of the suspected regulated disease.

(6) The true identity of the regulated disease when found in or on seed is based on testing methods recommended by the university results of which, when positive, is evidence to identify the disease as being subject to the department's requirements. The owner of the seed, at owner's expense,

(2001 Ed.)

may request verification of pathogenicity. Such verification must be made using accepted scientific and professional techniques.

(7) Exemptions and special situations:

(a) Any field of beans first found infected during windrow inspection, is exempt from total destruction if the diseased portion and an area (not less than a fifty-foot radius) surrounding the infected site is promptly destroyed or harvested with the beans from the infected area directed, under department supervision, to processing. Seed from the remainder of the field must be tested by a serology test. Only seed apparently free from regulated diseases may be used for seed purposes in the regulated area.

(b) Any field of beans to be used only for dry edible purposes is exempt from destruction if the diseased portion of the field is destroyed and the entire crop residue is promptly and completely destroyed after harvest.

(c) Beans for processing or fresh consumption are exempt from destruction if the diseased portion of the field is destroyed or harvested within ten days after first detection and/or verification as provided in subsection (4) of this section and the crop residue is promptly and completely destroyed after harvest.

WAC 16-301-435 Notice of destruction. When the director finds personal property planted in violation of the terms of this quarantine or infected as described in WAC 16-301-430, the director may issue a written notice of quarantine or destruction to the owners and occupants thereof. The notice must identify the property under quarantine, order the destruction of infested plants or prescribe the terms of entry, inspection, partial destruction and/or treatment of regulated articles.

WAC 16-301-440 Penalties. In addition to actions specified in WAC 16-301-430, any grower violating the terms of this chapter, is subject to civil and/or criminal penalties provided in chapters 15.49 and/or 17.24 RCW.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-301-440, filed 12/4/00, effective 1/4/01.]

WAC 16-301-470 Bean seed-borne viral disease quarantine—Regulated area. The entire counties of Adams, Asotin, Benton, Chelan, Columbia, Douglas, Ferry, Franklin, Garfield, Grant, Kittitas, Klickitat, Lincoln, Okanogan, Pend Oreille, Spokane, Walla Walla, Whitman, and Yakima are established as a protected area for bean seed-borne viral diseases in Washington.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-301-470, filed 12/4/00, effective 1/4/01.]

WAC 16-301-475 Bean seed-borne viral disease quarantine—Requirements for planting bean seed in the regulated area. No bean seed may be planted, or sold, shipped, or transported for seed purposes, or knowingly received, into the regulated area which are known to be contaminated with bean seed-borne viral diseases and which do not comply with the requirements of the bean seed quarantine in WAC 16-301-365 through 16-301-440.

Bean seed, that otherwise qualifies, may be received for planting purposes, planted, sold, shipped, or transported if that seed meets one of the following criteria:

[Title 16 WAC—p. 316]

(1) The bean variety (cultivar) is known to be uniform for the dominant I-gene. Documentation of evidence of uniformity must accompany the seed shipment. Undocumented cultivars are subject to serology and/or grow out testing to determine freedom from bean seed-borne viral diseases.

(2) The bean seed has been tested by the serology method (ELISA) and is found to be free from bean seed-borne viral diseases.

(3) The bean seed is tested by the serology method and is found to be positive for seed-borne viral diseases and on a subsequent grow out test, the sample is found free from bean seed-borne viral diseases.

(4) All serology tests are based on an official one pound sample of untreated bean seed for each fifty thousand pounds of bean seed or fraction thereof.

(5) All bean seed to be planted in the regulated area must have a viral disease compliance form filed with the WSDA seed program prior to planting.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-301-475, filed 12/4/00, effective 1/4/01.]

WAC 16-301-480 Bean seed-borne viral disease quarantine—Identification and disposition of diseased bean seed. All bean seed that is determined to be contaminated by bean seed-borne viral diseases and which does not meet the requirements of WAC 16-301-475 must be destroyed or diverted to dry edible or other non-seed purposes. For seed that is diverted to dry edible or other non-seed purposes, documentation of disposition of the seed must be provided to the department of agriculture upon request.

(1) Seed fields entered in the Washington state bean seed phyto-sanitary certificate inspection program or the Washington state seed certification inspection program as provided in WAC 16-302-045 and 16-301-235 that display symptoms of bean seed-borne viral diseases during the growing season is subject to testing provided in WAC 16-301-475 (3) and (4) to determine final disposition.

(2) When the director determines that it is probable, based on visual symptoms and serological analysis, that a seed field may be infected with bean seed-borne viral diseases and determines that a threat of infection of other fields exists, the director may prescribe aphid control or other requirements, through a notice of destruction as provided in WAC 16-301-435, deemed necessary to prevent infection of adjacent properties.

(3) The true identity of bean seed-borne viral diseases is based on testing methods recommended by the university results of which, when positive, is evidence to identify the disease as being subject to the department's requirements. The owner of the seed, at owner's expense, may request verification of pathogenicity. Such verification must be made using accepted scientific and professional techniques.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-301-480, filed 12/4/00, effective 1/4/01.]

WAC 16-301-485 Bean seed-borne viral disease quarantine—Penalties. (1) Any bean field planted with seed in violation of the requirements of this quarantine is subject

to destruction, in full or in part, or quarantined, as determined necessary by the director, to prevent the spread of bean seed-borne viral diseases. Any expenses of such actions will be solely that of the grower or their responsible agents.

(2) Any grower violating the terms of this quarantine, is subject to the criminal and/or civil penalties provided in chapters 15.49 and/or 17.24 RCW.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-301-485, filed 12/4/00, effective 1/4/01.]

PART 1 - GENERAL SEED CERTIFICATION STANDARDS

WAC 16-302-005 Seed certification—Purpose. Under the authority of chapter 15.49 RCW, the department adopts rules to establish standards for seed certification in Washington state in order to maintain and make available sources of high quality seeds and propagating material of plant varieties so grown and distributed as to ensure genetic identity and genetic purity.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-005, filed 12/4/00, effective 1/4/01.]

WAC 16-302-010 Agencies that certify seed in Washington state. (1) Seed certification in Washington state is conducted under the authority of chapter 15.49 RCW. The department conducts seed certification in cooperation with the WSCIA, Washington State University and AOSCA.

(2) The WSCIA is designated to assist the department in the certification of certain agricultural seeds. A memorandum of understanding between the department and the WSCIA designates WSCIA to act as the director's duly authorized agent for the purpose of certifying seed of buckwheat, chickpeas, field peas, lentils, millet, soybeans, small grain, sorghum and forest trees. The address and phone

number for the WSCIA office is 414 S. 46th Avenue, Yakima, WA 98908, (509) 966-2234.

(3) The department's seed program certifies seed other than buckwheat, chickpeas, field peas, lentils, millet, soybeans, small grain, sorghum and forest trees. The address and phone number for the department seed program office is 21 N. 1st Avenue, Yakima, WA 98902, (509) 225-2630.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-010, filed 12/4/00, effective 1/4/01.]

WAC 16-302-015 Seed classes recognized for seed certification. For the eligibility of varieties of seed refer to WAC 16-302-040. Four seed classes are recognized in seed certification, namely: Breeder, foundation, registered, and certified.

(1) Breeder seed is seed or vegetative propagating material directly controlled by the originating, or in certain cases the sponsoring plant breeder, institution, or firm. Breeder seed supplies the source for the initial and recurring increase of foundation seed.

(2) Foundation seed (identified by white tags) is first-generation seed increased from breeder seed or its equivalent. Production must be carefully supervised and approved by the certifying agency and/or the agricultural experiment station. Foundation seed is eligible to produce registered or certified seed.

(3) Registered seed (identified by purple tags) is the progeny of foundation seed that is handled as to maintain satisfactory genetic identity and purity and is approved and certified by the certifying agency. Registered seed is eligible to produce certified seed.

(4) Certified seed (identified by blue tags) is the progeny of foundation, registered or certified seed which is handled as to maintain satisfactory genetic identity and purity and is approved and certified by the certifying agency. Certified seed is not eligible for recertification for the crops certified by WSCIA, listed in WAC 16-302-550, except as provided for in WAC 16-302-035.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-015, filed 12/4/00, effective 1/4/01.]

WAC 16-302-020 Seed standards for proprietary variety certification—Application for proprietary certification. The general seed certification standards provided for in this chapter together with the varieties eligible for seed certification constitutes the basic requirements for proprietary variety certification.

(1) The owner or designee with production or marketing rights of a proprietary variety must submit to the certifying agency a list of growers who will submit applications for certification showing the variety, acreage authorized, processor authorized, and also advising whether the variety is under genetic purity certification or under complete certification. The list of growers must be submitted prior to the application due dates for seed certification as specified in WAC 16-302-050.

(2) Each application for seed certification received by the certifying agency is subject to approval from the list sub-

mitted by the owner with production or marketing rights of a proprietary variety.

(3) The certifying agency shall refuse certification of any seed that appears in a processing or conditioning plant not authorized by the owner with production or marketing rights of a proprietary variety.

(4) An application for seed certification may be withdrawn at any time prior to tagging. The applicant is responsible for fees due and owing when an application for seed certification is withdrawn.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-020, filed 12/4/00, effective 1/4/01.]

WAC 16-302-025 Seed standards for genetic purity certification. All certified seed must conform to the standards of purity and identity or variety in compliance with chapter 15.49 RCW and rules adopted thereunder. The general certification standards together with the specific crop certification standards established in this chapter are the basic requirements for genetic purity seed certification:

(1) Only proprietary varieties and OECD varieties not of United States origin to be tagged under the OECD scheme are eligible for genetic purity certification.

(2) Only the specific crop certification standards established in rule which pertain to genetic purity such as land requirements and isolation, shall apply for genetic purity certification. Fields must not contain other varieties or off-type plants in excess of established standards. The grower is responsible for controlling noxious weeds to prevent seed formation.

(3) Excessive prohibited and/or objectionable weeds, poor stands, lack of vigor, or other conditions, which make inspection by the certifying agency inaccurate, may be cause for rejection of a field.

(4) Field inspection. A field inspection is made by the certifying agency each year at the time the seed crop is in bloom, or at other times as may be most advantageous to determine genetic purity. A complete record must be maintained on the condition of the field (weeds, crop mixtures, etc.) and all information reported to the authorized agent and/or grower. Upon completion of all requirements for field inspection, a final field inspection report is issued by the certifying agency that the seed produced passed genetic purity requirements.

(5) Seed standards. The certifying agency shall test all lots to determine the purity and germination quality. Seed to be certified must not contain seeds of other varieties or off-types in excess of standards established in rule. The quality of each lot of seed represented to be certified must be that which is normally acceptable in the marketing of high quality seed. Failure to maintain acceptable quality shall be considered cause for revoking permission to participate in seed certification by genetic purity.

(6) Processing or conditioning requirements. Only those conditioning plants approved by the department Seed Program are permitted to process seed for certification. Complete records must be kept of all processing or conditioning. Blending of seed lots of the same variety from fields passing field inspections may be permitted with prior approval and if

in accordance with requirements for blending. Sampling and all other operations involving certified seed must be under supervision of the certifying agency. The sample must be obtained in accordance with official sampling procedures. The entire lot must be cleaned and in condition for sale at the time of sampling. This sample must be submitted to the seed laboratory for testing to evaluate quality. Lots of questionable quality may be rejected and not eligible for certification.

(7) Certification tags for seed meeting the genetic purity standards must be clearly marked, "genetic purity certified."

(8) Fees for genetic purity certification are as established for each seed crop in chapter 16-303 WAC and the authorized agent or grower is responsible for all fees.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-025, filed 12/4/00, effective 1/4/01.]

WAC 16-302-030 Standards for production of foundation seed. The general seed certification standards together with specific crop standards established in this chapter constitute the basic standards for production of foundation seed. Seed to be eligible for foundation certification tags, or OECD basic tags, must be approved by the originating plant breeder or his designated agent, and in compliance with the following standards:

(1) Preplanting report. A preplanting inspection, an industry responsibility, must be made of fields to be planted with breeder seed. A written report of the preplant inspection, performed by either a representative of the person issuing the contract or by the grower must be maintained by the variety owner or designee for a minimum of three years. The report shall show the grower's name, number of acres, location, crop history for the past three years, crops to be planted, origin of breeder seed, isolation status, and weed and crop present.

(2) Planting requirement. To distinguish between any possible volunteer and the crop seeded, all fields must be planted in distinct rows. Plants outside defined rows may be construed as volunteers.

(3) Combine inspection. The combine used for seed harvesting must be cleaned and inspected prior to harvesting foundation or OECD basic seed. The combine must be free of all contaminating material. If an official combine inspection is requested, the certifying agency must be notified of the following: The date, time, and location where the combine inspection may be made.

(4) Processing plant inspection. The processing or conditioning plant must be inspected before processing foundation or OECD basic seed and periodic inspections will be made during processing by the processor.

(5) Recleaning, rebagging, preinoculation, treating, or other processes must be approved by the certifying agency. An original tag must be submitted with the request for recertification and the seed must be retagged and resealed on completion.

(6) For a proprietary variety the above combine inspection (subsection (3) of this section), and processing plant inspection (subsection (4) of this section), responsibility may be assigned to the proprietor or his designee upon their

request. The variety owner or designee must maintain a report covering required inspections.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-030, filed 12/4/00, effective 1/4/01.]

WAC 16-302-035 Limitation of generations for seed certification. The number of generations through which a seed variety may be multiplied is limited to the number specified by the originating breeder or owner of a variety except that:

(1) Unlimited recertification of the certified seed class may be permitted for crop varieties where foundation seed is not being maintained.

(2) The production of an additional generation of the certified class may be permitted on a one-year basis when:

(a) Prior to the planting season, the certifying agency states that foundation and registered seed supplies in the United States are not adequate to plant the needed acreage of the variety.

(b) Permission of the originating breeder and/or owner of the variety is obtained (if applicable).

(c) The additional generation of certified seed produced is declared to be ineligible for recertification.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-035, filed 12/4/00, effective 1/4/01.]

WAC 16-302-040 Varieties eligible for seed certification in Washington state. (1) Only seed varieties that are accepted as meriting seed certification by an appropriate AOSCA National Variety Review Board or a member agency of AOSCA in accordance with the criteria listed in subsection (3) of this section may be eligible for seed certification in Washington state.

(2) A current list of varieties eligible for certification for the crops certified by the seed program may be obtained by contacting WSDA Seed Program, 21 N. 1st Avenue, Yakima, WA 98902, (509) 225-2630. A current list of varieties eligible for certification for the crops certified by WSCIA may be obtained by contacting WSCIA, 414 S. 46th Avenue, Yakima, WA 98908, (509) 966-2234.

(3) The following information is required for submission to an AOSCA National Variety Review Board or other certifying agency for acceptance of a seed variety for certification:

(a) A statement and supporting evidence by the originator, developer, or owner requesting certification that:

(i) The variety has been adequately tested to determine its value and probable area of adaptation, and that it merits certification; and

(ii) The variety is distinguishable from other varieties as set forth in Article 5, International Code of Nomenclature for Cultivated Plants, which reads as follows: "The term cultivar (variety) denotes an assemblage of cultivated individuals which are distinguished by any characters (morphological, physiological, cytological, chemical or others) significant for the purposes of agriculture, forestry, or horticulture, and which, when reproduced (sexually or asexually) retain their distinguishing features."

[Title 16 WAC—p. 320]

(b) A statement on origin and breeding procedure.

(c) A description of:

(i) The morphological characteristics, (such as color, height, uniformity, leaf, head or flower characteristics, etc.);

(ii) Physiological characteristics;

(iii) Disease and insect reactions; and

(iv) Any other identifying characteristics of value to field inspectors and other pertinent factors as the breeder or sponsor considers relevant.

(d) Evidence of performance, including data on yield, insect or disease resistance and other factors supporting the value of the variety. Performance tests may be conducted by private seed firms or agricultural experiment stations, and must include appropriate check varieties, which are used extensively in the area of intended usage.

(e) A statement giving the suggested region of probable adaptation and purposes for which the variety is used. This includes where the breeder of the variety has tested the variety and anticipates recommending the merchandising of it.

(f) A description of the procedure for maintenance of stock seed classes. At the time a variety is accepted for certification, a sample lot of breeder seed is presented to the certifying agency. The sample is retained as a control varietal sample against which all future seed stock released for certified seed production may be tested to establish continued trueness of variety.

If a person wishes to participate in the Washington state seed certification program, you must submit an application to the appropriate certifying agency along with the required fees (application fee, field inspection fee and late application fee if applicable):

(1) An application for seed certification must be submitted for each crop, variety and field.

(2) Applications may be obtained from a certified seed processor or the certifying agency listed in WAC 16-302-010.

(3) The applicant is responsible for payment of all fees. Washington State University, its official agents and USDA Plant Material Center are exempt from paying fees on seed stock.

(4) The applicant must attach to the application for seed certification official tags/labels and/or other verification from seed stock planted. The applicant must also attach proof of quarantine compliance when required, under chapter 16-301 WAC. Refer to chapter 16-303 WAC for appropriate fees.

(5) When it is necessary for a grower to reseed due to a failure to get a stand, the grower will retain records of seed lots used and the date of reseeding. Reseeding must be done within two years of the original planting date for grasses or within one year for all other crops. If seed stock of a different lot is used for reseeding, the grower must submit proof of seed stock used on a seedling application form. An additional application fee will be charged.

WAC 16-302-050 When is an application for seed certification submitted? (1) Seed certification application due dates are:

(a) For seed certified by the department: Alfalfa, clover, grasses and rapeseed (seedling applications) - within sixty days of planting. Seedling applications will not be accepted if received more than one hundred five days after planting.

(b) Notification of a seedling field to be harvested for certification the same year of planting is due July 31 with the required fees.

(i) Bean - July 1.

(ii) Corn - June 1.

(2) For seed certified by the WSCIA:

(a) Buckwheat, field pea, chickpea, lentil, millet, and small grains (both winter and spring varieties) - June 1.

(b) Soybean - July 1.

(c) Sorghum - July 15.

(d) Forest tree seed certification - refer to specific crop requirements in chapter 16-319 WAC.

(3) An application for seed certification must be submitted to the certifying agency each year a grower plans to produce seed for certification of annual crops (beans, peas, grain).

(4) A renewal application for seed certification must be submitted to the certifying agency after a stand is established each year that a grower plans to produce seed for certification of perennial crops (alfalfa, clover, grass). Due dates for renewal applications are as follows:

(a) Alfalfa and clover - June 15.

(b) Grass - May 1.

(5) Applications received after the due date are assessed a late application fee.

(6) No renewal application for seed certification may be accepted after the due date if a field inspection cannot be conducted prior to harvest except at the discretion of the certifying agency.

WAC 16-302-055 What are the responsibilities of a grower when participating in the seed certification program? All growers participating in the seed certification program must:

(1) Maintain the purity and identity of seed harvested and/or farm stored, and ensures reasonable precaution is taken to control contaminating crops and varieties, noxious weeds, and seed-borne diseases.

(2) Exercise precaution to prevent seed crop and lot mixture when harvesting.

(3) Identify the seed crop as it is delivered to the processor with the assigned field number or numbers.

(4) Clean the seed crop at a seed conditioner approved by the department under WAC 16-302-125. A list of approved seed conditioners may be obtained from the department seed program.

(2001 Ed.)

(5) Comply with standards and procedures for seed certification under the authority of chapter 15.49 RCW and rules adopted thereunder.

(6) Prior to planting, comply with the quarantine provisions under chapter 16-301 WAC.

(7) Harvest of seed before a field inspection by the certifying agency causes forfeitures of both the application and field inspection fees, and completion of certification.

(8) Failure of seed growers to comply with the seed laws and rules is cause for the department to deny certification of seed under the provisions of chapter 34.05 RCW, the Administrative Procedure Act.

WAC 16-302-060 What are the certification requirements for seed? (1) The general seed certification rules in addition to the rules adopted on specific seed crop standards constitute the certification requirements for the seed crops listed in this chapter.

(2) Crops approved for certification for which rules are not in effect may be certified under the minimum requirements for seed certification as shown in WAC 16-301-010. Fees for certification of seed shall be the most applicable fees established by the department in rule.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-060, filed 12/4/00, effective 1/4/01.]

WAC 16-302-065 Land history—Seed certification. Land requirements for seed certification are as established in the specific seed crop standards. When a cultural practice has proved to be successful, requirements may be modified upon written approval of the seed certifying agency. Cultural practice may include any of the following:

(1) Mechanical means such as deep plowing.

(2) Chemical means such as fumigants.

(3) Other material for seed bed preparation. Materials and methods must be a matter of record. Any practice used must be adequate to ensure varietal purity and must be approved in writing by the certifying agency. Any deviations from established land requirements must be submitted in writing to the certifying agency.

WAC 16-302-070 When is a seed field inspected by the certifying agency? The certifying agency conducts field inspections as follows:

(1) A seedling field is inspected at the most appropriate time after receipt of seedling application. If the field produces seed the same year of planting, a seedling producing inspection is made prior to harvest.

(2) Each year a crop of certified seed is produced, field inspections are made at a time when factors affecting certification are most evident.

(3) The unit of certification is the entire field standing at the time of inspection. A portion of a field may be certified if

the area to be certified is clearly defined by flagging, stakes or other visual means.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-070, filed 12/4/00, effective 1/4/01.]

WAC 16-302-075 Tolerances stated as "none found."

A tolerance of "none found" for contaminating or diseased material in either field or clean seed standards means that none was found during the normal procedure of field inspection or seed sample testing. None found does not constitute a guarantee that the field or seed is entirely free of the contaminant or disease.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-075, filed 12/4/00, effective 1/4/01.]

WAC 16-302-080 What will cause a seed field to be ineligible for seed certification? (1) A seed field is not eligible for certification unless a field inspection is made prior to defoliation or harvesting.

(2) The presence of prohibited noxious weeds or excessive objectionable weeds may be cause for rejection of a seed field. Excessive weeds, poor stands, lack of vigor, or other conditions which make inspection inaccurate may be cause for rejection. A field producing foundation or registered seed that warrants a rejection because of noxious weeds may be reclassified to certified blue tag class if upon reinspection the field meets certified blue tag standards.

(3) If a seed field is rejected for certification, the grower may reapply to the certifying agency and pay a fee for reinspection after the cause for rejection is corrected, unless otherwise specified in chapter 16-302 WAC. No more than two reinspections are permitted for each field per year.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-080, filed 12/4/00, effective 1/4/01.]

WAC 16-302-085 When may an applicant withdraw a field from inspection for seed certification? The applicant applying for seed certification may withdraw a field from field inspection for seed certification by notifying the certifying agency before the field is inspected.

WAC 16-302-086 Agency power to reject certification. The certifying agency shall have the authority to reject from certification any lot of seed not meeting these regulations. The agency reserves the right to refuse certification on any lot of seed if, in the opinion of the certifying agency, the color appearance, or the condition of the seed might be detrimental to the certification program. The certifying agency has the authority to refuse certification if the labeling of containers is misleading or may tend to be confusing as to its contents.

Persons found guilty of violation or misuse or abuse of these regulations shall be subject to prosecution under chap-

WAC 16-302-090 Sampling—Methods used in the sampling, inspecting, testing, analyzing and examining seed for certification. (1) The terms used in seed testing and the methods of sampling, inspecting, analyzing, testing and examining seed for certification are those adopted by the AOSA as shown in WAC 16-301-010.

(2) The entire lot of seed must be cleaned and in condition for sale at the time of sampling. Except for ryegrass which may be sampled under the early sampling program as allowed in WAC 16-302-091.

(3) The department shall obtain a representative sample for laboratory analysis of each lot of seed for certification. The sample shall be taken in accordance with official sampling procedures. Official sampling procedures are as follows:

Seed in bags.

(a) When more than one core is drawn from a bag, follow different paths. When more than one handful is taken from a bag, take them from well-separated points.

(b) For lots of one to six bags, sample each bag and take a total of at least five cores or handfuls.

(c) For lots of more than six bags, sample five bags plus at least 10% of the number of bags in the lot. Round numbers with decimals to the nearest whole number. Regardless of the lot size, it is not necessary to sample more than thirty bags.

Ex: No. bags in lots	7	10	23	50	100	200	300	400
No. bags to sample	6	6	7	10	15	25	30	30

(4) Bulk seed. To obtain a composite sample, take at least as many cores or handfuls as if the same quantity of seed were in bags of an ordinary size. Take the cores or handfuls from well distributed points throughout the bulk.

(5) Seed in small containers. Seed in small containers shall be sampled by taking the entire unopened container in sufficient number to supply a minimum size sample for testing. The contents of a single container or the combined contents of multiple containers of the same lot shall be considered representative of the entire lot of seed sampled.

(6) A mechanical sampling device installed in a conditioning plant approved by the department under WAC 16-302-125 may be used in lieu of the sampling procedures above.

(7) If it is necessary for a sample to be taken by the department, a sampling fee will be charged under provisions of chapter 16-303 WAC.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-090, filed 12/4/00, effective 1/4/01.]

WAC 16-302-091 What is the program for early sampling of ryegrass? The procedure for participating in the program for early sampling of ryegrass is as follows:

(1) Any company participating in this program must submit a report to the seed program listing the grower, acreage, variety, and field number of each field to be enrolled. This report must be filed by June 15th of each year. For fields that are in their second year of production or beyond, all lab numbers of tests from the previous year must also be provided.

(2) The seed company is responsible for having their field personnel sample each field in the window. The sample must be obtained from well-distributed points throughout the field. It is recommended that samples be thrashed and cleaned prior to testing. An additional fee will be charged for samples that are not cleaned. Samples must be forwarded to the seed program with the following information: The crop and variety, field number, grower, the name of the seed company, and a request for germination and fluorescence test. The sample must also indicate that it is being submitted under the early sampling program for ryegrass.

(3) At the time of conditioning the seed, a composite sample must be submitted to the seed program for purity testing. The sample information must indicate the seed is from a field under the early sampling program for ryegrass. In addition to providing complete certification information, the lab number on which the fluorescence test was conducted must also be provided. The seed program may run a fluorescence test on the composite sample to verify the results from the early sample.

(4) Certification tags will be issued upon completion of all required testing meeting the minimum certification standards for ryegrass. A tagging request must be filed with the seed program.

(5) Failure to comply with the requirements of this section will result in the disqualification of the seed company from the early sampling program for the year.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-091, filed 12/4/00, effective 1/4/01.]

WAC 16-302-095 Identification of seed containers with field or lot numbers. (1) The field number must be on all seed containers or bulk seed delivery documents to ensure identity when delivered to the seed conditioner.

(2) All seed for certification must be packaged in clean, new containers of uniform weight and identified with a lot number when tagged and sealed. The lot number must identify the producer and year of production for each lot of seed. This requirement may be satisfied by use of a conditioner's code.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-095, filed 12/4/00, effective 1/4/01.]

WAC 16-302-110 Completion of seed certification—When may seed be labeled with a seed certification tag, label or seal? (1) The seed certification tag, label or seal is evidence of the genetic identity and purity of the contents and is attached to a container of certified seed prior to distribution. Seed that fails to meet certification standards because of genetic purity is not eligible for labeling.

(2) Seed certification tags, labels, and seals must be obtained from the certifying agency except as allowed in WAC 16-302-390, and must be attached to seed containers under the supervision of the certifying agency.

(3) Certification of seed is valid only if the tag, label or seal is affixed to each container in accordance with the AOSCA procedures as shown in WAC 16-301-010.

(4) No tag, label or seal may be removed and reused without permission of the certifying agency.

(5) A certified seed sale certificate will be issued upon completion of final certification for all seed to be sold in bulk. This certificate must accompany any shipment or transfers including those to other seed plants, out-of-state shipments or with any brokered seed. The seed plants own invoice may be used in lieu of a certified seed sale certificate for retail sales to growers.

(6) Seed that fails to meet certification requirements on factors other than genetic purity may be designated substandard at the discretion of the certifying agency. The certification tag or label attached to the seed must clearly show the reason the seed is substandard. Seed may not be tagged substandard if the seed can be remilled to meet minimum seed standards.

(7) Refer to chapter 16-301 WAC for seed labeling requirements.

WAC 16-302-115 Limitation of liability—Certification. The issuance of a certified seed label or certificate by the certifying agency for a lot of seed affirms that seed has been produced and conditioned according to chapter 15.49 RCW and the certification rules adopted thereunder. The certifying agency makes no warranty, expressed or implied or any representation as to the freedom from disease or quality of certified seed.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-115, filed 12/4/00, effective 1/4/01.]

WAC 16-302-120 Labeling, advertising or other representation of seed—Prohibitions. It shall be deemed unlawful if any labeling, advertising, or other representation subject to chapter 15.49 RCW represents:

(1) Seed to be certified seed or any class thereof unless it has been determined by a seed certifying agency that such seed conforms to standards of purity and identity as to species (and subspecies, if appropriate), and variety, in compliance with the rules and laws of that agency pertaining to such seed.

(2) Seed to be foundation, registered, or certified seed unless it has been inspected and tagged accordingly by a certifying agency as meeting certification standards of the department.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-120, filed 12/4/00, effective 1/4/01.]

WAC 16-302-125 Who may condition seed in Washington state? (1) Under the authority of RCW 15.49.350, a seed conditioning facility must be inspected and approved by the department prior to conditioning seed in Washington state. Upon approval by the department, a seed conditioning permit is issued and the facility is placed on a list of approved seed conditioning plants. A copy of the list can be obtained by contacting the department seed program.

(2) A person desiring to condition seed must make application to the department for a permit on a form provided by the department.

(3) To obtain department approval for a seed-conditioning permit, the department conducts an inspection. A facility must show evidence that:

(a) Seed for certification is handled in a manner which prevents mixture of lots of seed;

(b) The seed conditioning facility is maintained and cleaned. Equipment must be easily accessible for cleaning and inspection, and must be cleaned between lots;

(c) Each lot of seed is identified with a lot number;

(d) Screenings are disposed of in accordance with chapter 15.49 RCW; and

(e) Seed is sampled in accordance with WAC 16-301-095 and 16-302-090.

(4) A seed conditioning facility must be approved by the department prior to handling seed for certification in bulk.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-125, filed 12/4/00, effective 1/4/01.]

WAC 16-302-130 What are the responsibilities of a seed conditioner? (1) It is the responsibility of a department approved seed conditioner to operate in a manner that:

(a) Maintains the purity and identity of seed conditioned, stored, transshipped or labeled.

(b) Complies with the standards and procedures for conditioning and sampling seed in accordance with chapter 15.49 RCW and rules adopted thereunder.

(2) Prior to shipping seed out-of-state, the seed conditioner must obtain approval from the certifying agency. Refer to WAC 16-302-145 through 16-302-165 for inter-agency seed certification requirements.

(3) Records of all operations must be complete and adequate to account for all incoming seed and final disposition of seed.

(4) The seed conditioner is responsible for seed certification fees including sampling, testing, production and final certification fees, and may request the responsibility for additional fees.

(5) Failure of a seed conditioner to comply with the seed law and rules is cause for the department to revoke a seed conditioning permit under the provisions of chapter 34.05 RCW, the Administrative Procedure Act.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-130, filed 12/4/00, effective 1/4/01.]

PART 2 - BLENDING OF CERTIFIED SEED

WAC 16-302-135 What considerations are there for blending seed? (1) Size of seed blend permitted is dependent on factors such as quality of seed lots to be blended and the conditioning plant facilities.

(2) A blend data sheet is filed with the certifying agency and must be maintained by the seed conditioner. Laboratory analysis must be completed before tags are issued.

(3) Seed must be blended by a seed conditioner approved by the department under WAC 16-302-125.

(4) A representative of the certifying agency may supervise the blending operation.

(5) A tetrazolium test may be used in lieu of a germination test.

(6) Upon approval of the certifying agency, field run lots of seed may be commingled to facilitate conditioning. The blend fee shall not apply.

(7) Remill lots of seed may be blended prior to testing to facilitate processing.

(8) Individual lots of grass seed shall not contain more than one hundred eighty per pound and alfalfa and clover shall not contain more than ninety per pound of objectionable weed seeds.

(9) Individual lots must be free of prohibited noxious weed seeds.

(2001 Ed.)

(10) Two or more sod quality lots may be blended and tagged as a "sod quality mixture or blend." Appropriate tags will be issued and blend fee shall be applicable.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-135, filed 12/4/00, effective 1/4/01.]

WAC 16-302-140 When are seed blends eligible for tagging prior to analysis? Blends are eligible for tagging prior to analysis of the official sample of the blend upon meeting the following conditions:

(1) The calculated percent of impurities (weeds, crop, inert, etc.) is twenty percent less than the maximum allowed in rules for seed certification.

(2) The calculated percent of germination is not less than the minimum germination standard established in the rule for seed certification.

(3) All seed lots blended meet certification standards.

(4) All lots of seed used in a registered class blend must meet registered class purity and germination standards.

(5) Fees for blending are payable to the department by the person requesting permission for the blend after completion of lab analysis. Refer to chapter 16-303 WAC for the appropriate fee.

PART 3 - INTERAGENCY SEED CERTIFICATION REQUIREMENTS

WAC 16-302-145 Interagency seed certification standards. (1) Interagency certification is the participation of two or more official certifying agencies in performing the services required to certify the same lot or lots of seed.

(2) The general rules for seed certification and specific certification standards are basic and together with WAC 16-302-150 through 16-302-165, constitute the rules for inter-agency certification for Washington state.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-145, filed 12/4/00, effective 1/4/01.]

WAC 16-302-150 Eligibility for interagency certification. (1) Seed recognized for interagency certification must be received in containers carrying official certification labels or evidence of its eligibility from another official certifying agency together with the following information:

(a) Variety and species;

(b) Quantity of seed;

(c) Class of seed; and

(d) Field or lot number traceable to the previous certifying agency's records.

(2) Seed tagged and sealed with official certification tags is eligible for interagency certification without obtaining approval from the certifying agency of the originating state.

(3) An "interagency certified seed" report form must be submitted to all certifying agencies involved. Forms can be obtained from the department seed program. Information required to complete the form includes:

Part A

- Name
- Address of shipper
- Destination
- Shipping weight
- Lot number
- Grower name
- Field number
- Date of seed shipment
- Amount of seed used

Part B and C

- Date shipment is received by the receiving state
- Receiving weight and lot number
- Clean weight
- Bag count
- New lot number if different than the receiving lot number
- Screenings weight

(4) Certified seed not tagged and sealed with official certification tags must follow the interagency certification procedure in WAC 16-302-155.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-150, filed 12/4/00, effective 1/4/01.]

WAC 16-302-155 Interagency seed certification procedure. Certified seed that is produced in Washington state and shipped out-of-state must comply with the interagency seed certification procedure.

(1) The interagency seed certification procedure for field pea, lentil, soybean, small grain and sorghum seed is as follows:

(a) A certified seed sale certificate must be executed by the department for unprocessed seed pending final certification when moved out-of-state.

(b) Unprocessed seed pending final certification is subject to all certification fees when moved out-of-state.

(2) The interagency seed certification procedure for all other kinds of seed except field pea, lentil, soybean, small grain and sorghum seed shipped out-of-state is as follows:

(a) Obtain approval of all certifying agencies involved prior to shipment:

- Complete section (A) of "interagency certified seed" report referred to in WAC 16-302-150(3). Prior to shipment one copy of the "interagency certified seed" report must be submitted to the department seed program and one copy to the certifying agency where seed is being processed.
- Clearly mark each container with the lot number and Washington field number.

(b) Upon completion of seed processing, sections (B) and (C) of "interagency certified seed" report referred to in WAC 16-302-150(3) must be completed and submitted to the department seed program.

- If the department is to finalize certification, a representative of the certifying agency in the receiving state must draw an official sample. The sample must be submitted to the department seed program.

[Title 16 WAC—p. 326]

- When Washington state certification tags are used, the lot must be tagged and sealed under supervision of the department. The applicant must pay a mileage fee and hourly rate for all additional mileage and travel time required.

- When Washington state interagency tags are used, the tags must be mailed to the nearest representative of the certifying agency having jurisdiction for tagging.

(c) If another state receives seed and finalizes certification, the department must advise the receiving state's certifying agency of certification eligibility. Sampling, testing, and tagging shall be in accordance with the receiving state's requirements.

(d) The applicant for interagency seed certification is responsible for all fees authorized under Washington's certification program and any additional fees that may be assessed by both agencies involved. Fees for Washington's interagency certification program must be paid upon submission to the department of the "interagency certified seed" report, section (A).

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-155, filed 12/4/00, effective 1/4/01.]

WAC 16-302-160 Interagency seed certification standards—Seed produced out-of-state. (1) Certified seed produced out-of-state and shipped into Washington state for processing is eligible for Washington interagency tags only after obtaining approval from the certifying agency of the originating state. The seed must then comply with Washington certification standards.

(2) Certified seed produced out-of-state that is officially tagged and sealed must be handled under the interagency program if seals are to be broken for reinoculation or other processing. The applicant for interagency seed certification must obtain approval from the department prior to breaking the official seals and all operations must be under the supervision of the certifying agency.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-160, filed 12/4/00, effective 1/4/01.]

WAC 16-302-165 Interagency certification requirements—Blends. Blends of different origin can be authorized only after obtaining approval from certifying agencies involved. Blends must comply with blend standards established by the department (see blending of certified seed in this chapter). Interagency tags used must show percentage of each origin involved.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-165, filed 12/4/00, effective 1/4/01.]

WAC 16-302-170 Other considerations in applying the standards for certification. (1) Any crop certification standard, with the exception of germination that is expressed as a percent will be derived from a test based on the minimum weight for purity analysis as specified in the 2000 AOSA rules for that crop unless otherwise specified in rule.

(2) Any crop certification standard that is based on a number per pound will be derived from a test based on the

(2001 Ed.)

minimum weight for noxious weed seed examination as specified in the 2000 AOSA rules for that crop unless otherwise specified in rule.

(3) For species that have a high rate of inherent dormancy, it will be acceptable to use the percent of total viability instead of germination percentage for certification only. State and federal seed laws require seed be labeled on a germination test.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-170, filed 12/4/00, effective 1/4/01.]

PART 4 - PROCEDURES FOR ORGANIZATION FOR ECONOMIC COOPERATION AND DEVELOPMENT SCHEME FOR VARIETY CERTIFICATION (OECD)

WAC 16-302-210 What is the organization for economic cooperation and development? The Organization for Economic Cooperation and Development (OECD) certification scheme is an international organization limited to federal government membership. The agricultural research service of the United States Department of Agriculture is responsible for implementing the OECD seed certification schemes in the United States. The department, by virtue of an agreement with the agricultural research service, United States Department of Agriculture, is authorized to implement OECD certification in Washington state.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-210, filed 12/4/00, effective 1/4/01.]

WAC 16-302-215 Crop standards for OECD variety certification. (1) The general and specific crop certification standards as established in rule by the department are basic and, together with the following specific standards, constitute the rules for OECD varietal seed certification.

(2) Varieties eligible for OECD certification.

(a) Crop varieties of United States origin shall be eligible for OECD certification only if accepted into Washington state's certification program.

(b) Crop varieties, of origin other than United States, are eligible for OECD certification only if listed in OECD publication, *List of Cultivars Eligible for Certification*.

(3) Classes of seed eligible for OECD certification.

Washington and U.S. Seed Classes	Label Color	Equivalent OECD Seed Classes	OECD Label Color
Breeder	-----	Prebasic	-----
Foundation	White	Basic	White
Registered	Purple	Basic	White
Certified	Blue	1st Generation Certified Seed	Blue
Certified produced from Certified	Blue	2nd Generation Certified Seed	Red

(a) Breeder or prebasic shall be planted to be eligible to produce basic white label.

(b) Foundation white label, registered purple label, or basic white label shall be planted to be eligible to produce 1st generation blue label.

(2001 Ed.)

(c) Certified or 1st generation blue label shall be planted to be eligible to produce 2nd generation red label.

(4) OECD seed stock sample. Each lot of OECD seed stock shall be sampled under supervision of the certifying agency before seals are broken. Samples are used as control for grow out test and a portion may be submitted to seed laboratory for analysis if deemed necessary. Seed stock lots without official tags will not be granted OECD approval.

(5) The department must obtain approval from the originating country for each OECD seed stock lot to be planted in the state of Washington for OECD production. Request for OECD approval is submitted by the seed program to ARS-Beltsville, Maryland, which then contacts the originating country.

(6) Application for OECD certification and fees.

(a) Applicant desiring plantings to be eligible for OECD certification must submit applications and fees as required for certification of that crop under Washington state's certification standards. Certification requirements and procedures for each species shall be the genetic standards in Washington state's certification program supplemented by OECD standards and by the limitations specified by originating country; such as, length of stand and number of seed crops eligible. All OECD seed shall be officially sampled and tested prior to tagging. Seed lots may not be required to meet Washington's minimum purity or germination certified seed standards.

(b) Washington OECD eligible lots may, with approval of both agencies involved, be blended with OECD eligible seed of other state agencies. The applicant is responsible for all fees of both agencies involved.

(c) Seed produced out-of-state and processed in Washington must be OECD tagged by the state of origin.

(7) OECD tagging and sealing. OECD tags shall be printed and issued according to OECD rules. The department seed program shall issue an OECD reference number; e.g. (USA-W-78-000), which is printed on each tag. The department recommends that OECD reference numbers be stenciled on each bag. Additional statements on the OECD tag such as, "date of sealing," etc. must be kept to a minimum.

(8) Bagging sample of OECD lot. A bagging sample of each lot of OECD seed tagged is drawn under supervision of the certifying agency. One hundred to two hundred fifty grams of the sample must be held for the originating country, and the balance of the sample is used for required post control grow-out tests.

(9) OECD certificate. The seed program shall issue an OECD certificate showing:

- (a) Species,
- (b) Variety,
- (c) Reference number,
- (d) Date of sealing,
- (e) Number of containers,
- (f) Weight of lot, class of seed, and

(g) OECD reference number of seed stock used for each lot tagged and sealed upon receipt of tagging report and bagging sample.

One copy of the OECD certificate is to be mailed to the shipper, one copy is mailed to ARS-USDA, one copy is attached to bagging sample and one copy is for department seed program files.

(10) OECD grow-out tests. As prescribed by OECD rules, at least one of four domestic lots tagged and all lots of foreign varieties OECD tagged must be planted in grow-out tests.

(11) Special OECD fees. In addition to fees required by applicable Washington certification rules, an additional fee shall apply to all seed tagged OECD. Refer to chapter 16-303 WAC for the appropriate fee.

All fees are payable by the person requesting OECD certificate.

PART 5 - SPECIFIC SEED CERTIFICATION STANDARDS

ALFALFA SEED CERTIFICATION STANDARDS

WAC 16-302-220 What are the standards for alfalfa seed certification. (1) The general seed certification definitions and standards in this chapter are basic and together with WAC 16-302-225 through 16-302-240 constitute the standards for alfalfa seed certification.

(2) Fees for seed certification are assessed by the certifying agency as established in chapter 16-303 WAC.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-220, filed 12/4/00, effective 1/4/01.]

WAC 16-302-225 Land requirements for alfalfa seed certification. Land requirements for the production of alfalfa seed crop are as follows:

(1) Prior to stand establishment an alfalfa seed crop of the same kind must not have been grown or planted on the land for four years for the production of foundation or registered class or one year for the production of certified class; except two years are required for the production of certified class seed of varieties adapted to the northern and central regions following varieties adapted to the southern region.

(2) Reseeding of an alfalfa seed field due to failure or partial failure of the first seeding may be done by referring to the guidelines in WAC 16-302-045(5).

(3) Ditchbanks, roadways, etc. adjacent to a certified alfalfa seed field must be free of volunteer alfalfa and prohibited noxious weeds.

(4) Volunteer alfalfa plants in the alfalfa seed field may be cause for rejection or reclassification of a seed field.

(5) No manure or other contaminating materials may be applied during the establishment and production period of the alfalfa seed stand.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-225, filed 12/4/00, effective 1/4/01.]

WAC 16-302-230 Isolation requirements for alfalfa seed certification. Isolation requirements for the production of alfalfa seed crop are as follows:

(1) Alfalfa seed crop for certification must be isolated from all other alfalfa varieties or fields of the same variety

[Title 16 WAC—p. 328]

not meeting varietal purity requirements for certification as follows:

	Fields less than five acres	Fields five acres or more
Foundation	900 feet	600 feet
Registered	450 feet	300 feet
Certified	165 feet	165 feet

(2) Isolation between different classes (generations) of the same variety of alfalfa seed crop must be as follows:

Class Being Produced	Distance required from fields planted with:	Fields less than five acres	Fields five acres or more
Foundation	Foundation or Registered	225 feet	150 feet
Registered	Registered or Certified	115 feet	75 feet
Certified	Certified	75 feet	45 feet

(3) In cases where an adjoining field is planted with a different variety of alfalfa, or alfalfa of a lower class, isolation may be obtained by measuring off the required strip in the certified seed crop field. This isolation strip may be mowed for hay or it may be harvested for uncertified seed under the following conditions:

(a) The grower must apply for certification of the entire alfalfa seed field and clearly stake off the isolation strip. The entire field must pass all certification requirements, except for isolation at time of inspection. The field report will show rejection due to lack of isolation.

(b) The grower must harvest and deliver to a department approved conditioning plant the seed from the certified portion of the field separately from the seed from isolation strip. After the seed is weighed and lotted in, the weight of the seed from the isolation strip is to be reported to the seed program. At this time the seed program records will indicate the field has passed certification.

(4) Isolation is not required in an alfalfa seed field producing certified class seed when the isolation zone is less than ten percent of the entire field being certified if there is a clear ten-foot line of demarcation between adjacent varieties. The isolation zone is the area calculated by the length of the common border with other varieties by average width of the certified field falling within the one hundred sixty-five-foot isolation distance requirement.

"Adzuki bean" means *Vigna angularis*.

"Dominant I-gene cultivar" means a cultivar that has resistance to all known strains of bean common mosaic virus (B.C.M.V.) due to the presence of the dominant I-gene. Dominant I-gene cultivars will not show mosaic mottle symptoms or transmit the virus through seed when inoculated with any strain of B.C.M.V.

"Diseases" means those viral, fungal, and bacterial diseases of beans enumerated in WAC 16-494-013 and any new variations or strains of these identified in the future.

(2001 Ed.)

"Recessive I-gene cultivar" means a cultivar that may be susceptible to some strains of bean common mosaic virus and may show mosaic mottle symptoms.

"Seed-borne viral diseases" includes bean common mosaic virus, adzuki common mosaic virus, and other similar viral diseases causing mosaic mottle and other symptoms similar to those of bean common mosaic virus.

(a) For the purposes of corn seed certification, the propagation of male sterile inbred lines is subject to the same requirements and rules as apply to foundation single crosses in subsection (2) of this section.

(b) An inbred line must be a relatively true breeding strain of corn resulting from at least five successive generations of controlled self-fertilization; or at least five generations of back-crossing to a recurrent parent with selection; or its equivalent.

(c) Inbred lines increased by hand pollination are eligible for corn seed certification.

(d) An inbred used as a pollinator in a foundation single cross production corn field may be certified if all the seed parents in the isolated corn field are inspected for certification and meet all field requirements for certification.

(e) Addition of specific genetic factors to a line of corn.

(i) When a specific genetic factor(s) is added to an inbred line, the line must be backcrossed to its recurrent parent at least five generations. The line shall be homozygous for the specific genetic factor(s) except for the pollen restoration factor(s), and the genic male sterile maintainer line.

(ii) For a recovered pollen restorer inbred line, selection must be relative to a specific cytoplasmic male sterile source.

(iii) The originator must supply proof of the genetic nature of a recovered line.

(iv) A genic male sterile maintainer line, consisting of duplicate-deficient and male-steriles in an approximate one to one ratio must be no more than two generations removed from breeder's seed. The maintainer must be designated according to generation as:

(A) Breeder seed: The hand pollinated selfed seed from a known duplicate-deficient plant heterozygous at a particular male sterile locus.

(B) Foundation I seed: The product of random-mating among fertile plants arising from breeder seed.

(C) Foundation II seed: The product of random-mating among fertile plants arising from foundation I seed.

(v) A genic male sterile line must be a strain homozygous for a particular male sterile recessive allele.

(vi) The genic male sterile lines shall be identified as to the recessive genes they carry, e.g., B37 ms-1, N26 ms-10. The maintainer lines must be identified not only for the male sterile gene for which it is heterozygous, but also for the specific translocation from which it was derived, e.g., B37 Mt-1 ms-1, N28 Mt-1 ms-10.

(2) Foundation corn single crosses:

(a) Foundation single cross. A foundation single cross must consist of the first generation of a cross between: Two inbred lines; an inbred line and a foundation back cross; or two foundation back crosses.

(b) Foundation back-crosses:

(i) A first generation foundation back cross must be the first generation cross between a foundation single cross of related inbred lines and an inbred line which must be the same as one of the inbreds in the foundation single cross.

(ii) A second generation foundation back cross must be made by using a first generation back cross as the seed parent and the pollinating parent shall be an inbred line. The inbred line must be the same as the inbred parent used in making the first generation back cross seed parent.

(c) A male sterile line may be substituted for its fertile counterpart as one parent of a foundation single cross if the male sterile line has been backcrossed for not less than five generations to its fertile counterpart, or the male sterile line is the same in other characteristics as its fertile counterpart.

(d) Male sterile lines propagated by hand pollination will be eligible for certification.

(e) A pollen restoring line may be substituted for its non-restoring counterpart in a foundation single cross if the pollen restoring line is the same in other characteristics as its non-restoring counterpart.

(3) Hybrid corn seed:

(a) Hybrid corn seed is seed to be planted for the production of feed or for use other than seed. It may be any one of the following:

(i) Double cross - the first generation cross between two foundation single crosses.

(ii) Three-way cross - the first generation cross between a foundation single cross as one parent and an inbred line or a foundation back cross as the other parent.

(iii) Single cross must consist of the first generation of a cross between: Two inbred lines; an inbred line and a foundation back cross; or of two foundation back crosses.

(b) Foundation single cross seed and foundation back cross seed planted for the production of double cross, single cross, or three-way cross hybrid corn seed must be completely certified by a recognized seed certifying agency.

(c) Inbred line seed planted for the production of single cross or three-way cross hybrid corn seed to be used for grain or forage production must meet the requirements for the definition of an inbred line (as provided for in subsection (1)(b) of this section) and be certified.

(d) Only the class "certified" is recognized.

(4) Inbred seed and the seed of each parent for single crosses must meet one of the following requirements:

(a) Be in the hands of the originator;

(b) Be a line obtained directly from the originator;

(c) Be a line obtained from a state agricultural experiment station;

(d) Be a line obtained from the United States Department of Agriculture; or

(e) Be certified. Evidence of eligibility must be a certification tag taken from the seed planted.

WAC 16-302-290 Field standards for corn seed certification. Except for hybrid corn field standards for corn seed certification are:

(1) Corn seed isolation requirements are:

(a) An inbred must be so located that it is not less than 660 feet from other corn except when the inbred is grown as a pollinator in a single cross production field. Any ear parent(s) in the same isolated field must be entered for certification, inspected, and meet all field requirements for certification.

(b) A specific foundation single cross must be located so the seed parent is not less than six hundred and sixty feet from other corn for pollinator rows and other seed parent(s) in the same isolated field. All seed parent(s) in the same isolated field must be applied for certification, inspected, and meet all field requirements for certification.

(c) Differential maturity dates are permitted for modifying isolation distances for inbred lines or male sterile inbred line increases if there are no receptive silks in the ear or seed parent at the same time pollen is being shed in the contaminating field.

(d) Foundation inbred or single cross production fields of dent sterile popcorn need not be isolated from yellow dent field corn.

(e) Corrections for improper isolation must be made by one of the following methods:

(i) By completely destroying or by detasseling the necessary contaminating corn before silks appear in the ear or seed parent in the field to be certified; or

(ii) By completely destroying the plants which are improperly isolated from the contaminating corn before the final field inspection.

(2) For corn single crosses, nine feet is the maximum distance a seed parent row must be from a pollen parent row.

(3) For corn single crosses, the minimum population of pollen shedding plants per acre is two thousand. Ineffective pollen parent plants must not be counted.

(4) Corn single cross fields being inspected for certification must contain not less than four hundred pollen plants per acre that are actively shedding pollen when more than twenty-five percent of the seed parent silks are apparently receptive.

(5) Corn single cross detasseling or pollen control. More than five percent of the seed parent must have apparently receptive silks for the following provisions to apply. Apparently receptive silks are emerged silks which are not wilted or brown.

(a) An isolation of a specific foundation single cross is not accepted for certification if at one inspection more than one-half percent of the stalks of the seed parent have shed pollen, or if the total number having shed pollen on any three days of inspection exceeds one percent.

[Title 16 WAC—p. 331]

(b) Cytoplasmic male sterile seed parent plants; detasseling (cutting or pulling) to control plant pollen is permitted.

(6) Corn field roguing:

(a) Definitely off-type plants must be destroyed completely so that suckers do not develop. Plants showing definite hybrid vigor or a definitely different type from the inbred or parent being inspected are classified as definitely off-type.

(b) For inbred lines, an isolation in which more than one-tenth of one percent (one per one thousand) of definitely off-type plants have shed pollen, when at the same time more than five percent of the plants have apparently receptive silks, is not certified.

(c) For single crosses, an isolation in which more than one-tenth of one percent of definitely off-type plants are present in the seed parent, when the silks have turned brown, is not eligible for certification.

(d) Sucker tassels and portions of tassels of off-type plants is counted as shedding pollen when two inches or more of the central stem, the side branches, or a combination of the two has the anthers extended from the glumes.

WAC 16-302-295 Field standards for hybrid corn seed certification. Field standards for hybrid corn seed certification are:

(1) Hybrid corn seed isolation:

(a) A specific hybrid must be located so that the seed parent is not less than six hundred and sixty feet from corn of a different color or texture with the following exceptions:

(i) Hybrid seed production fields of dent sterile popcorn need not be isolated from yellow dent field corn; or

(ii) When the contaminating corn is of a different color or texture aggregating less than one-fourth acre on one exposure, the isolation distance may be modified in accordance with the table listed in this section.

(2) A specific hybrid corn must be located so that the seed parent is not less than four hundred and fifteen feet from other corn of the same color or texture. The planting of pollen parent border rows and the size of the crossing field according to the following table may modify this distance.

Field Size* = 1-20 Acres		Field Size* = 21 Acres or more	
Distance from other corn in feet	Minimum border rows required	Distance from other corn in feet	Minimum border rows required
415	0	415	0
395	1	375	1

185	11		
165	12		
145	13		
125	14		

105 15
85 16

* Different dates of planting will not divide a field for isolation purposes but may divide the field for detasseling inspection.

(a) The border rows and pollen parent rows must be planted with certified first generation seedstock, must be shedding pollen simultaneously with silk emergence of the seed parent and must not be separated from the seed parent by more than thirty-three feet.

(b) A field planted with the same eligible pollen parent may be used as an isolation buffer if it is applied for certification, inspected and meets field requirements for certification.

(c) Full credit is not given where poor stands of border corn exist, where the border rows have been detasseled, or where, for any reason, the border rows are not shedding pollen as plentifully as the pollen parent rows. Because of the difficulty of obtaining and maintaining a good stand of corn, the planting of more than the minimum number of border rows is recommended.

(d) The maximum distance a seed parent row shall be from a pollen parent row is fifteen feet.

(3) Corrections for improper isolation of hybrid corn must be made by one of the following methods:

(a) By completely destroying or by detasseling the necessary contaminating corn before silks appear in the seed parent in the field to be certified; or

(b) By completely destroying the seed producing plants that are improperly isolated from contaminating corn before the final field inspection.

(4) Hybrid corn detasseling or pollen control. More than five percent of the stalks of the seed parent must have apparently receptive silks for the following provisions to apply. Apparently receptive silks are emerged silks which are not wilted or brown.

(a) An isolation is not accepted for certification if upon inspection by the certifying agency more than one percent of the stalks of the seed parent have shed pollen, or if the total number having shed pollen on any three days of inspection exceeds two percent.

(b) When more than one combination of hybrid corn is grown in the same isolation and the seed parent of one or more is shedding pollen in excess of one percent, all seed parents having five percent or more apparently receptive silks at the time is disqualified for certification unless adequately isolated from the shedding seed parent.

(c) Sucker tassels and portion of tassels are counted as shedding pollen when two inches or more of the central stem, the side branches, or a combination of the two have the anthers extended from the glumes.

(5) A male sterile seed parent may be used to produce certified hybrid corn seed by either of two methods:

(a) Seed of the normal fertile seed parent is mixed with the seed of the male sterile seed parent of the same pedigree either by blending in the field at harvest or by size at conditioning time. The ratio of male sterile seed parent seed to normal seed parent seed does not exceed two to one.

(b) The male parent involves a certified pollen restoring line or lines so that not less than one-third of the plants grown

from the hybrid corn seed produce pollen that appears to be normal in quantity and viability.

(6) Hybrid corn roguing:

(a) Definitely off-type plants in a parent line planted for the production of single cross or three-way cross hybrid corn seed to be used for grain or forage production must be completely destroyed so that suckers do not develop.

(b) Plants showing definite hybrid vigor or a definitely different type from the parent being inspected must be classified as definitely off-type.

(c) An isolation in which more than two-tenths of one percent of definitely off-type plants in the parent or parents have shed pollen, at a time when more than five percent of the seed parent plants have apparently receptive silks, is disqualified for certification.

WAC 16-302-300 Seed inspection for foundation corn single crosses and inbred lines certification. The following applies for certification of corn single crosses and inbred lines: When excessive off-type or different textured kernels are observed at the time of ear inspection by the certifying agency and the off-type kernels are detectable in the shelled seed, the seed certification applicant may have the option of shelling the ears to attempt to remove the kernels by mechanical or other means. The sampled seed after conditioning must not contain in excess of three-tenths of one percent of the off-type kernels.

WAC 16-302-315 Ear inspection and winter growouts for certification of foundation corn single crosses and inbred lines. Ear inspection and winter growouts for

(2001 Ed.)

certification of foundation corn single crosses and inbred lines are:

(1) Foundation single crosses and inbred lines is either inspected in the ear or included in a winter growout.

(2) Foundation corn single crosses and inbred lines for ear inspection are inspected by the certifying agency after the applicant for seed certification indicates the seed is sorted and ready for inspection.

(3) A corn seed lot must not contain in excess of one-tenth of one percent of definitely off-type ears, or more than five-tenths of one percent of ears with off-colored or different textured kernels which would not exceed a total of twenty-five off-colored seeds, or different textured kernels per one thousand ears.

(4) Winter growouts for foundation corn single crosses and inbred lines:

(a) When differential maturity dates or detasseling within the required isolation distance are permitted for modifying isolation distances for corn foundation male sterile inbred line increases or foundation inbred lines, winter growouts are required in addition to other standards.

(b) The applicant may choose to have a winter growout in lieu of ear inspection.

(c) Seed shelled before ear inspection must be included in a winter growout.

(d) Standards for winter growouts are:

(i) Percentage of off-types allowed must not exceed one percent.

(ii) Growouts are made on one round and/or flat separation, or on individual grade sizes.

(iii) The inspection fee for winter growouts are charged to the applicant for seed certification at actual cost.

GRASS SEED CERTIFICATION STANDARDS

WAC 16-302-320 What are the standards for grass seed certification? (1) The general seed certification definitions and standards in this chapter are basic and together with WAC 16-302-325 through 16-302-360 constitute the standards for grass seed certification.

(2) Each lot of seed stock subject to the annual bluegrass and rough bluegrass quarantine as established in chapter 16-301 WAC must be in compliance with the quarantine requirements prior to planting in order to be eligible for certification. Any seedling application submitted without proof of quarantine compliance will not be accepted into the certification program. Any seed field planted in violation of chapter 16-301 WAC will be subject to the violation procedures under WAC 16-301-295 and 16-301-355.

(3) Fees for seed certification are assessed by the certifying agency as established in chapter 16-303 WAC.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-320, filed 12/4/00, effective 1/4/01.]

WAC 16-302-325 Land requirements for grass seed certification. (1) Land requirements for production of grass seed are as follows:

(a) A grass field planted with breeder seed for the production of foundation seed must not have been seeded to the same species, subspecies, variety, or strain of grass during the preceding five years of planting. The field must be planted in spaced rows. The five-year eligibility may be waived to three years with the use of fumigants and other short-term soil sterilization chemicals with prior approval of the certifying agency.

(b) A grass field planted with foundation seed for the production of registered seed must not have been seeded to the same species, subspecies, variety, or strain of grass during the preceding three years.

(c) A grass field planted with foundation, registered, or certified seed for the production of certified seed must not have been seeded to the same species, subspecies, variety or strain of grass during the preceding year from planting unless the previous planting was of the same variety and eligible to produce foundation, registered or certified seed.

(d) Reseeding of a grass field because of failure or partial failure of the first seeding may be done by referring to the guidelines in WAC 16-302-045(5).

(e) Grasses of the same kind growing in fencerows and other areas adjacent to the field must be controlled to prevent blooming.

(f) Prohibited noxious weeds in the field, or on ditch-banks, roadways, etc., adjacent to a certified field shall be controlled to prevent seed formation.

[Statutory Authority: RCW 15.49.005, 15.49.081, 15.49.310, 15.49.370(3) and chapter 17.24 RCW. 00-24-077, § 16-302-325, filed 12/4/00, effective 1/4/01.]

WAC 16-302-330 Field isolation requirements for grass seed certification. (1) The field isolation requirements for grass seed are as follows:

(a) A seed field eligible for the production of foundation, registered or certified seed must be isolated from any other variety or strain of the same species in accordance with the requirements in the following table:

Symbol for Type of Reproduction	Minimum Isolation Distance Required for Fields Producing:		
	Foundation	Registered	Certified
Strains at least 80%			15 feet
Apomictic A	60 feet	30 feet	clean fallow
Highly Self-Fertile Species—S	60 feet	30 feet	15 feet
All cross-pollinated Species—C	900 feet	300 feet	clean fallow
			165 feet

(b) A seed field that is eligible for the production of foundation or registered seed must be isolated from different classes of the same variety of cross-pollinated (C) species in accordance with the requirements in the following table:

Class Seed Planted	Class Seed Produced	Distance Required From Nearest Field Producing:	
Breeder	Foundation	Registered	150 feet
Breeder	Foundation	Certified	225 feet
Foundation	Registered	Certified	75 feet

[Title 16 WAC—p. 334]

(c) Isolation is not required in fields producing certified class seed when the isolation zone is less than ten percent of the entire field being certified if there is a clear (ten feet) line of demarcation between adjacent varieties. The isolation zone is the area calculated by the length of the common border with other varieties by average width of the certified field falling within the one hundred sixty-five feet isolation distance requirement.

(d) A field eligible for the production of foundation, registered or certified seed must be isolated from classes of the same variety of apomictic (A) and self-fertile (S) species in accordance with the following requirements:

(i) A field producing foundation or registered seed must be a minimum of fifteen feet from a field planted with a different class of the same variety.

(ii) A field producing certified seed must be a minimum of five feet from a field planted with a different class of the same variety.

(e) If it is not possible to provide minimum isolation distances for fields producing foundation, registered or certified seed exceeding five acres in area, border removal is permitted. Border removal requires removal of the portion of the field being certified that is adjacent to a contamination source. The following requirements apply if the grower uses border removal:

(i) The minimum distances required for border removal are as follows:

Border to be removed from the field being	Minimum Isolation Distance Required for Fields Producing:			
	certified	Foundation	Registered	Certified
0 feet	900 ft.	300 ft.	165 ft.	
15 feet	450 ft.	150 ft.	75 ft.	

(ii) The grower must apply for seed certification of the entire field and clearly stake off the border removal portion before inspection of the field by the certifying agency.

(f) The border removal portion of the field may be harvested for uncertified seed under the following conditions:

(i) The entire field must pass all certification requirements except for isolation at time of inspection. The field report will show rejection due to lack of isolation.

(ii) The grower must harvest and deliver to a department approved conditioning plant the seed from the certified portion of the field separately from the seed from the isolation strip. After the seed is weighed and lotted in, the weight of the seed from the isolation strip is to be reported to the seed program. At this time the seed program records will indicate the field has passed certification.

WAC 16-302-390 Inspection and final grass seed certification fees—Options. Inspection and final grass seed certification fees are based on the following options:

(a) **Option A** - certification is based on pounds of seed sampled, and billed at completion of required laboratory tests, the fees are:

(b) **Option B** - certification is based on dealers requesting sampling and tagging privileges. Seed dealers must sign a memorandum of agreement with the department that expires on June 30 of each year. The memorandum may be terminated by the director if the dealer violates certification standards or requirements of memorandum. Payment of fees is the responsibility of the conditioner under this program. Upon termination or nonrenewal of the memorandum of agreement, the dealer is responsible for Option A fees on all certified seed not tagged at termination date. A dealer choosing this program must handle all certified grasses in his warehouse under this program for the entire crop year.

Fees are as established in chapter 16-303 WAC.

(5) Ditchbanks, roadways, etc., adjacent to a certified red clover field must be free of volunteer red clover and prohibited noxious weeds.

(6) Volunteer plants in the red clover field may be cause for rejection or reclassification of the seed field.

(7) No manure or contaminating material may be applied one year preceding planting, or during the establishment and productive period of the red clover stand.

(8) A stand of red clover over three years old is not eligible for certification.

WAC 16-302-510 Isolation requirements for red clover seed certification. Isolation requirements for the production of red clover seed crop are as follows:

(1) Red clover for certification must be isolated from all other red clover varieties or fields of the same variety not meeting varietal purity requirements for certification as follows:

Class Being Produced	Fields less than five acres	Fields five acres or more
Foundation	900 feet	600 feet
Certified	165 feet	165 feet

(2) Isolation between different classes (generations) of the same red clover variety is as follows:

Class Being Produced	Distance Required from Fields Planted with:	Fields less than 5 acres	Fields 5 acres or more
Foundation	Foundation or Certified	225 feet	150 feet
Certified	Certified	75 feet	45 feet

(3) In cases where an adjoining field is planted with a different variety of red clover, or red clover of a lower class, isolation may be obtained by measuring off the required strip in the certified seed field. This isolation strip may be mowed for hay or it may be harvested for uncertified seed under the following conditions:

(a) The grower must apply for certification of the entire red clover field and clearly stake off the isolation strip. The entire field must pass all certification requirements, except for isolation at time of inspection. The field report will show rejection due to lack of isolation.

(b) The grower must harvest and deliver to a department approved conditioning plant the seed from the certified portion of the field separately from the seed from the isolation strip. After the seed is weighed and lotted in the weight of the seed from the isolation strip is to be reported to the seed program. At this time the seed program records will indicate the field has passed certification.

WAC 16-302-560 Miscellaneous field and seed inspection standards for buckwheat, chickpea, field pea, lentil, millet, soybean, sorghum, small grain seed certification. (1) Field inspection standards for buckwheat, chickpea, field pea, lentil, millet, soybean, sorghum, small grain seed entered in the certification program are:

(a) For field pea and chickpea (garbanzo bean) - when seed crop is in full bloom and at maturity;

(b) For lentil - when seed crop is in full bloom and at maturity;

(c) For soybean - when seed crop is in full bloom and/or of mature color;

(d) For open pollinated sorghum - when seed crop is in full bloom, and optionally again when seed crop begins to show mature color;

(e) For hybrid sorghum - two inspections during bloom and one inspection after seed begins to show mature color;

(f) For small grains - when seed crop is fully headed and of mature color;

(g) For millet - one inspection during bloom and one inspection after seed begins to show mature color; and

(h) For buckwheat - one inspection when seed crop is in full bloom.

(2) Any condition or practice which permits or causes contamination of the seed crop, such as failure to prevent seed formation in bindweeds, Canada thistle or jointed goatgrass, or excess weeds, or mechanical field mixing, is cause for rejection upon inspection except for formation of bind-

weed or Canada thistle in fields of chickpea, lentil, and field pea seed. Fields rejected for jointed goatgrass at first inspection are not eligible for reinspection and must remain ineligible for any production of certified classes of small grain seed until a reclamation procedure, as specified in subsection (3) of this section has been completed. Fields rejected for other causes will remain eligible for reinspection.

(3) The jointed goatgrass reclamation procedure includes the following:

(a) Each grower must develop a reclamation plan for his/her affected fields. The plan must be based on the most current recommendations of Pacific Northwest scientists and Washington State University cooperative extension as well as good management practices. The plan may include use of certified seed, spring cropping practices, and late tilling and planting. No particular program is specified or endorsed and compliance with a program does not assure eligibility for the production of certified classes of small grain seed. Eligibility is based solely upon results of field inspections as provided in (b) through (e) of this subsection.

(b) The rehabilitation and inspection program duration is three years for irrigated land and five years for dryland without production of certified small grain seed and the first year of certified seed production thereafter.

(c) Annual inspections of the affected fields are conducted by the certifying agency during the prescribed rehabilitation period at such time that the jointed goatgrass would be most visible.

(d) Following the prescribed period of rehabilitation and during the first certified seed production year, a minimum of three field inspections are conducted by the certifying agency.

(e) If jointed goatgrass is found during any inspection as provided in (c) and (d) of this subsection, the rehabilitation program is determined unsuccessful or the field is declared ineligible and the rehabilitation and inspection program for that field must begin again at year one of the procedure.

(4) Field run lots of seed of the same variety may be commingled to facilitate storage and conditioning.

(5) No prohibited noxious weed seeds are permitted upon inspection for seed standards.

(6) Germination minimum refers to germination when sampled.

(7) If chemically controllable seed-borne diseases are noted upon inspection for field standards and seed standards for small grains, treatment of seed is required.

(8) Wild oat, isolated patches and borders must be removed or clearly marked so as to avoid harvesting with the rest of the field. If rejected, a reinspection is necessary to assure clean-up efforts are satisfactory. Spot checks are conducted on fields where heavy patches or contaminated borders were noted. Harvesting these areas with the rest of the field is cause for rejection of the entire field.

(9) The official laboratory providing seed analysis for the purpose of certification is the department.

WAC 16-303-020 Schedule of charges—Billing policies and procedures. (1) Accounts.

(a) All billable services provided for under chapter 15.49 RCW are due and payable upon billing by the department. For the convenience of established accounts and in accord with good business practices, the department provides a monthly billing service. Accounts not paid in full within thirty days of billing are considered delinquent.

(b) On all debts due and payable after July 28, 1991, all delinquent accounts are assessed a late charge equal to one percent per month, or portion of a month, on the unpaid balance.

(c) Except for established accounts where there is a reasonable expectation of additional charges during a calendar month, the minimum billable amount through the monthly billing system is twenty dollars. All billable services of less than twenty dollars are due and payable on the date that service is rendered.

(d) No person with an account ninety days or more in arrears may receive service except on the basis of payment in full at the time service is rendered. Accounts in arrears may be subject to legal action for collection and are not restored to monthly billing status until all past due amounts are paid-in-full.

(e) Accounts that become ninety or more days in arrears twice within a five-year period may be subject to a permanent requirement for payment in full at the time service is provided.

(2) Unless otherwise provided for in rule, requests for refund fees or assessments must be submitted to the department by June 30 of the year following payment of the fee or assessment.

(3) Fees for services not listed in rule are set on the basis of the actual cost to the department of agriculture, or the most appropriate fee established by rule.

Regular service samples have priority and the Seed Branch Laboratory will run samples, as germination space is available.

(2) Samples must be plainly labeled "inventory samples" according to the sender's designation. The laboratory assumes no responsibility for correct identification.

(3) Reports on inventory testing are mailed after all tests are completed. Samples and test reports do not become a part of the seed program's permanent record.

(4) The fee for inventory testing is one-half the regular germination fee.

WAC 16-319-030 Classes of reproductive material.

(1) Tested class means that forest reproductive material came from tree(s) which have been tested for specific character(s) as determined by progeny or other applicable tests and under specified conditions. Further, such forest reproductive material is produced and processed in a manner assuring genetic identity common with the tested material, and, for nursery stock, that it was produced from tested reproductive material. Said forest reproductive material shall be labeled with a blue label stating "tested." Certifying agency shall examine trees and reproductive material; exercise field, plant, and warehouse inspection, and audit all pertinent records involved.

(2) Selected class means that reproductive material came from trees that were selected for specific character(s). Two subclasses are recognized:

Subclass A: Reproductive material is obtained from selected trees and, in addition for tree seed, the male parent(s) is also selected.

Subclass B: Applies to tree seed when only one parent is selected.

Both subclasses shall be labeled with a green label stating "selected" and the subclass. Certifying agency shall examine trees and reproductive material; exercise field, plant, and warehouse inspection, and audit all pertinent records involved.

(a) Selected subclass A means that the donor or parents of the reproductive material are selected, known, and of record, but have no test results of record, and, for nursery stock, that it was produced from selected subclass A or better reproductive material.

(b) Selected subclass B means that only one parent of the tree seed is selected, known, and of record and reproductive material has not been tested, and, for nursery stock, that it was produced from selected subclass B or better reproductive material.

(3) Source identified class means that the reproductive material came from within a seed zone(s) or portion thereof (as defined by legal description) and from within a 500-foot elevation increment(s) or breeding zone(s) or code(s).

Subclass A: Personally supervised production.

Subclass B: Procedurally supervised production.

Both classes of said reproductive material shall be labeled with a yellow label stating "source identified" and the subclass. Certifying agency shall exercise field inspection, plant/warehouse inspection, and audit.

(a) Subclass A source identified means that applicant and certifying agency personally know beyond a reasonable doubt the seed zone(s) or portion thereof and 500-foot elevation increment(s) within which cones and/or reproductive material were collected; and, for nursery stock, that it was produced from subclass A source identified or better reproductive material. Certifying agency knows location from applicant's prior written plan of his reproductive material collecting and/or producing activities. For source identified subzone collections, a representative of the producer, whose major responsibility is observation of picker location, shall make daily observations within the collection area.

(b) Subclass B source identified means that applicant and certifying agency know reproductive material is identified as collected from within a seed zone(s) and from within a 500-foot elevation increment(s), and for nursery stock, that it was produced from subclass B source identified or better reproductive material.

(4) Audit class means that the applicant's records of procurement, processing, storage, and distribution state that the reproductive material was collected from within stated seed zone(s) or described portions thereof and from within 500-foot elevation increment(s), and, for nursery stock, certifying agency knows that it was produced from audit class or better reproductive material. Containers of said reproductive material shall carry a serially numbered brown and white label stating "audit certificate." All records of the applicant for this class of reproductive material are subject to audit.

[Statutory Authority: Chapter 15.49 RCW. 87-12-006 (Order 1930), § 16-319-030, filed 5/22/87; 80-10-001 (Order 1704), § 16-319-030, filed 7/24/80; Order 1506, § 16-319-030, filed 4/11/77; Order 1369, § 16-319-030, filed 6/12/74; Order 1151, § 16-319-030, filed 4/16/70.]

(ii) Buyer shall require collector to sign collector's registration record prior to collection of reproductive material. He shall also issue collector's labels, and direct collector to complete them and place them in or attach them to each container of reproductive material before it is transported from point of collection. Coincident with purchase of reproductive material, he shall complete description on labels including species, source by seed zone, breeding zone or code, elevation increment, special collection area if any, certification class, date of purchase and his signature or initials.

WAC 16-319-061 Forest reproductive material—Conditioning standards. (1) Applicant shall maintain a

(2001 Ed.)

continuous record for each lot and batch of reproductive material at each plant or warehouse, showing lot and batch number or code, species, seed zone, breeding zone or code, elevation increment, date received and units of reproductive material. Reproductive material stored at plant or warehouse prior to conditioning shall be assembled by lot or batch and so arranged as to be reasonably accessible for audit. The auditor will advise producer before making changes in the certification class of cones or seed offered by the producer.

(2) Labels shall be maintained on containers until reproductive material is conditioned. During conditioning, labels shall be removed and immediately deposited in a container marked with the lot or batch designation or code. Upon completely emptying the containers for each lot or batch of audit or source identified classes, the package of labels from it shall be closed and set aside for examination by the certifying agency auditor. All labels for tested and selected classes shall be attached to or placed inside of the seed containers by the producer for examination by the certifying agency auditor. These labels shall remain with the seed until the lot is depleted.

(3) All reproductive material shall be handled in a manner to prevent lot mixture and maintain lot identity. All machinery, containers, and equipment shall be thoroughly cleaned before conditioning another lot or batch.

(4) Specific requirement: Certifying agency may refuse to certify reproductive material failing to meet the following maximum standards: Other distinguishable species or cultivars: Seed one-half of one percent by weight; trees, cuttings, scions, etc. one percent by number; pollen one percent by number.

(5) Labeling and sealing of tested, selected, or source identified reproductive material shall be done by the certifying agency.

(a) Labeling of audit class reproductive material shall be done by the applicant with the label being affixed to the container: Provided, That for small sales (any quantity of reproductive material less than a full container of a size normally used by the applicant) the label may be affixed to the invoice or sales slip.

(6) For each lot of tested or selected reproductive material, a certificate of genetic identity shall be prepared and affirmed by the producer upon demand and, if verified by the certifying agency, shall be signed and placed in or attached to each container before other labels or seals are affixed. The certificate of genetic identity shall include the following information:

(a) For both tested and selected reproductive material, the lot number, breeding zone or code and information on:

(i) The donor or parents which produced the reproductive material, including their selection generation, type of selection made, selected character(s), seed zone(s) and elevation increment(s) in which selection was made, and selection procedure.

(ii) For each prior selection generation, the same information.

(iii) For sexual reproductive material, whether pollination was controlled or not: If controlled, the pollen situation; if controlled, the pollen or pollen mix used, including iden-

[Title 16 WAC—p. 357]

tification of pollen parent(s), also the number of maternal parents, and, if applicable, the crossing design used.

(b) For tested reproductive material only.

(i) A progeny, clonal, or other applicable test plan shall normally be submitted to the certifying agency for review and acceptance before installation. Acceptance of the test plan may be made after installation providing requirements in WAC 16-319-051(1) and 16-319-061 (6)(b)(ii) are met. Applicant may request assistance from the certifying agency in the development of a plan.

(ii) The plan shall include in the test both randomization and replication for the material to be tested and the identity and background of the check material to be used.

(iii) Complete randomization and balanced randomized blocks are recommended. The actual design of the established test shall be recorded in detail.

(iv) Trees to be planted for tests shall be grown together in soil as uniform as possible, or, if they are grown in different soils, shall be so distributed that like proportions of all clones or progenies are produced in each distinct class of soil.

(v) Test measurements are to be presented in numerical form. Each character to be evaluated is to be measured separately. The genetic superiority as compared with the check shall be clearly demonstrated for at least one of the characters being tested. Characters of economic importance in forestry identified in the test shall be clearly reported if they are significantly inferior at the ninety-five percent level to those of the check material.

(vi) The results of the test measurements and data shall be readily available to the certifying agency and prospective user or purchaser.

(7) A document, acceptable to the certifying agency for informing the purchaser of species and certification information of each item, and, for auditing purposes, shall be issued by the producer for each sale of tested, selected, source identified, and audit class reproductive material. Such document may be a certificate of provenance for tested, selected, or source identified reproductive material, or an invoice, shipping order, or sales slip for audit class reproductive material. The certifying agency may authorize use of said certificate of provenance for portions of reproductive material from labeled and sealed containers in lieu of labels and seals when relabeling and resealing by the certifying agency is impractical.

(8) If a lot is composed of reproductive material from more than one seed zone, elevation increment or code in excess of seven percent if of contiguous seed zones, elevation increments, or codes or if in excess of two percent of other than contiguous seed zones, elevation increments, or codes, the certification label shall show all seed zones, elevation increments, or codes either with or without the percentage of each.

(9) The allowance for accidental mixing of noncertifiable reproductive material with audit class, or noncertifiable or audit class reproductive material with source identified classes is two percent. When in excess of two percent, the lot shall drop to the lowest class represented. No mixing of lower classes with selected or tested classes is permissible.

WAC 16-319-091 Forest reproductive material—Mixing of lots. (1) When lots collected in the same or different crop seasons are deliberately mixed, the new lot shall be given a new identification number and certification label. The certification class shall drop to the lowest certification class represented in the new lot.

(2) For the tested and selected classes, the certification label shall show the components of the new lot and the percentage of each in the new lot, or this information shall be contained on a properly executed certificate of genetic identity placed in, or attached to each container of the lot before other labels or seals are affixed.

(3) For the source identified classes and the audit class, the certification label shall show the components of the new lot and the percentage of each in the new lot.

(4) Lots being mixed shall be uniformly blended into the new lot so that they are near equally represented throughout the new lot.

(5) The producer of the new lot shall make the last viability information for the component parts of the new lot available to the certifying agency and prospective user or buyer upon demand.

The privilege of certification may be withdrawn by certifying agency for a definite period of time in case of flagrant violations of field or processing standards. If applicant believes an erroneous decision has been rendered, he may make written appeal to certifying agency for review by its governing body.

WAC 16-324-381 Certified seed potato stock—Fees.

(1) The seed potato certification fee is twenty-nine dollars per acre or fraction of an acre.

(2) The certification fee for a field plot is twenty dollars per application.

(3) The department may assess additional fees for time and mileage pursuant to chapter 16-470 WAC.

(4) Growers must submit a minimum of fifty percent of the total certification fees with the applications.

(5) Final payment of certification fees is due and payable November 1 of each year.

(6) For the purpose of fee assessment, acreage may be adjusted by no more than ten percent prior to the first field inspection. The department will refund certification fees, if a written withdrawal notice is received by the department prior to the first field inspection.

(7) Growers are not required to pay the final half of the certification fee on lots rejected or withdrawn before the second inspection.

(8) The department will deny certification to any applicant who fails to pay fees when due.

(9) The department will not accept applications from any grower owing the department for previous fees.

WAC 16-324-382 Seed potato classification. (1) All seed potatoes entered for certification are classified on the basis of production phases as follows:

(a) Prenuclear (PN) - Micropropagated potatoes or seed potatoes grown in a greenhouse or screenhouse under sanitary conditions free of insects, weeds that can harbor potato diseases or other sources of disease contamination.

(b) Nuclear (N) - First field production year.

(c) Generation 1 (G1) - Second field production year.

(d) Generation 2 (G2) - Third field production year.

(e) Generation 3 (G3) - Fourth field production year.

(f) Generation 4 (G4) - Fifth field production year.

(g) Generation 5 (G5) - Sixth field production year.

(2) If a seed lot fails to meet the standards established in this chapter for its class, then it will be reclassified to the earliest generation for which it meets established standards.

[Statutory Authority: Chapter 15.14 RCW. 00-20-070, § 16-324-382, filed 10/3/00, effective 11/3/00. Statutory Authority: RCW 15.14.030. 97-11-028, § 16-324-382, filed 5/14/97, effective 6/14/97.]

WAC 16-324-385 Production requirements. (1) A grower is not eligible to produce nuclear, generation 1, or generation 2 seed potatoes, if ring rot has been detected on his or her farm during the previous two years.

(2) Prenuclear class.

(a) Prenuclear seed lots must be derived from disease tested micropropagated plants. All testing methods and laboratories must be approved by the department.

(b) A minimum of one percent (and not less than twenty samples) of prenuclear seed produced in a greenhouse must be tested and found free of potato virus X (PVX), potato virus Y (PVY), potato virus S (PVS), potato leafroll virus (PLRV), *Erwinia carotovora* ssp. *carotovora* (soft rot), *Erwinia carotovora* ssp. *atroseptica* (black leg), and *Clavibacter michiganense* ssp. *sependonicum* (ring rot).

(c) The department will inspect all facilities used in the production of prenuclear class seed potatoes on a periodic basis. Department approval is necessary in order to utilize these facilities.

(3) Nuclear class.

(a) Nuclear class seed potatoes must be propagated entirely from prenuclear plants.

(b) Each nuclear class seed lot must be distinctly separated in storage and in the field.

(c) If a ground rig is used for spraying, wide enough spacing between rows must be left, so that tires will not touch plants during the growing season.

(d) Growers must plant cut seed and single drop seed separately, with single drop seed identified.

(4) Generations 1, 2, 3, 4 and 5.

(a) Growers must leave a distinct separation of at least six feet unplanted or planted to some other crop between lots of seed potatoes from different classes. A similar separation

must be left between different varieties, unless the varieties are readily distinguishable by visual observation.

(b) When more than one lot of seed potatoes is planted in the same field, growers must stake or mark the identity of each lot.

[Statutory Authority: Chapter 15.14 RCW. 00-20-070, § 16-324-385, filed 10/3/00, effective 11/3/00.]

WAC 16-324-391 Eligibility requirements. (1) Only seed potatoes derived from plants that have been disease tested and certified by an official certification agency are eligible for certification.

(2) Only seed lots that meet or exceed the minimum requirements as established in this chapter are eligible for certification. A seed lot that has more than a trace amount of virus disease noted during any field inspection is not eligible for recertification, unless it has been post harvest tested and meets the minimum standards established in WAC 16-324-420.

(3) In order to be eligible for certification in Washington state, seed lots from other states or countries must be eligible for recertification in the state or country of origin.

(4) A seed lot blended from two or more different sources of seed is not eligible for recertification.

(5) A seed lot infested with powdery scab is not eligible for recertification.

(6) Generation 5 (G5) seed lots are not eligible for recertification.

[Statutory Authority: Chapter 15.14 RCW. 00-20-070, § 16-324-391, filed 10/3/00, effective 11/3/00. Statutory Authority: RCW 15.14.030. 97-11-028, § 16-324-391, filed 5/14/97, effective 6/14/97.]

WAC 16-324-392 Isolation requirements. (1) The department must approve all nuclear and generation 1 field locations.

(2) Generation 2 through generation 5 must be isolated by at least three hundred fifty feet from all noncertified potatoes.

(3) When ring rot is found in a field planted with more than one lot of seed potatoes, the department will reject entire field unless at least six feet between lots has been left unplanted or planted to some other crop.

[Statutory Authority: Chapter 15.14 RCW. 00-20-070, § 16-324-392, filed 10/3/00, effective 11/3/00. Statutory Authority: RCW 15.14.030. 97-11-028, § 16-324-392, filed 5/14/97, effective 6/14/97.]

WAC 16-324-393 Land requirements. (1) The department will not accept any field infested with nematodes.

(2) Detection of ring rot in a field will make that field ineligible for production of certified seed potatoes for three years. Presence of volunteer potato plants in a field with ring rot history will disqualify the current field crop for certification. Plants outside of the defined row are considered volunteers.

(3) Nuclear class seed potatoes must be produced in a field that has not been planted with potatoes for at least six years. (New ground is preferred.)

(4) Generation 1 class seed potatoes must be produced in a field that has not been planted with potatoes for at least four years.

(5) Generation 2, 3, 4, and 5 class seed potatoes must be produced in a field that has not been planted with potatoes during the previous year unless the prior potato crop was certified seed potatoes of an earlier class of the same variety. Volunteer plants from a previously planted seed potato crop will cause the class designation of the current crop to be changed to the appropriate generation of the volunteer plants.

WAC 16-324-396 Sanitation requirements. (1) Chemicals used in the sanitation of equipment should be those recommended by the *Pacific Northwest Plant Disease Control Handbook*. Vector control must be maintained throughout the growing season as recommended by the *Pacific Northwest Plant Disease Control Handbook*.

WAC 16-324-399 Field inspection. (1) The department will visually inspect each seed lot at least two times during the growing season. The department may make additional inspections if the department deems it necessary.

(2) The department will reject all seed lots that do not comply with minimum field inspection standards at the time of inspection.

(3) Growers must notify the department of unusual field conditions, which may cause premature dying from any cause prior to the final reading of the field.

(4) Post harvest testing is required for any seed lot with a field condition preventing adequate field evaluation at the time of the first field inspection.

(5) If the department is unable to perform the final field inspection of a seed potato lot for any reason at least one of the following actions will be taken:

- (a) The seed lot will be denied certification;
- (b) The seed lot will be denied recertification; and/or
- (c) The lot must be post harvest tested and found free of ring rot.

(6) The department will reject any seed lot in which ring rot is detected and will conduct additional inspections on all of the grower's remaining seed lots. The department will not recertify any seed lot associated with or planted after the rejected lot. The department will submit samples of ring rot

(2001 Ed.)

(2) Seed stocks entered for certification must be planted and harvested prior to handling any other seed stock. The earliest generation must be handled prior to lower classes within the program.

(3) Only department-approved containers shall be used during the digging, storage, and packing process.

WAC 16-324-398 Field inspection disease tolerance.

(1) Compliance with a 0.0% tolerance is not intended, nor should it be construed, to mean that the lot inspected is free from the disease. It means that the disease was not detected during visual inspections of the seed lot.

(2) First and second field inspection tolerances, expressed as percentages.

detected during field inspections to an approved laboratory for confirmation.

(7) The department may require a post harvest test and withhold certification pending results of the post harvest test on seed potato lots exposed to any chemical that causes tuber-borne injury. Any seed potato lot showing five percent or greater tuber-borne chemical damage in the post harvest test will be rejected for certification.

(1) PVX testing is required for nuclear generation 1 and generation 2 class seed potatoes. PVX testing is optional for all other classes.

(2) Growers must submit petiole samples for latent virus testing to a laboratory approved by the department. The applicant is responsible for laboratory testing fees.

(3) The minimum number of plants per seed lot to be sampled for PVX testing is one hundred. For nuclear class, a minimum of ten percent of the total number of plants per lot must be sampled. For generation 1, a minimum of two percent of the total number of plants per lot must be sampled. For generation 2, a minimum of fifty leaves per acre must be sampled. Generation 3, 4 and 5 seed lots should be sampled at a rate of twenty leaves per acre. The department may require additional testing.

(2) A minimum of four hundred tubers must be submitted for each seed lot entered for post harvest testing. Seed lots less than one acre in size must submit a minimum of four tubers per total hundred weight with a minimum of fifty tubers.

(3) The applicant is responsible for the cost of post harvest testing.

(4) Seed lots in the post harvest test which fail to comply with the disease tolerance requirements set forth in WAC 16-324-420 are not eligible for recertification.

(a) The applicant must notify in writing all receivers of any seed lot that failed to comply with post harvest tolerances set forth in WAC 16-324-420.

(b) Acceptance of a seed lot that fails to comply with the tolerances set forth in WAC 16-324-420 must be based on a written buyer/seller agreement. The grower must provide the department with a copy of the written agreement within thirty days of receiving the post harvest results.

WAC 16-325-005 Promulgation—Establishing an isolation district. The production of high quality seed potatoes within the state requires conditions that are as free as possible from insect pests and plant diseases. The production of other potatoes intermixed with or in close proximity to a concentrated seed potato production area poses an increased risk of introduction of insect pests and plant diseases. To mitigate this problem this chapter establishes a seed potato isolation district requiring commercial potato production within the boundaries to be enrolled in the seed potato certification program.

WAC 16-403-170 Green or yellow varieties—Washington C grade. The requirements of this grade are the same as for Washington fancy except for color, russeting and invisible watercore. Apples of this grade are free from excessive damage caused by russeting which means that apples meet the russeting requirements for Washington fancy as defined under the definitions of "damage by russeting," except the aggregate area of an apple which may be covered by smooth net-like russeting shall not exceed 25 percent; and the aggregate area of an apple which may be covered by smooth solid russeting shall not exceed 10 percent: Provided, That in the case of the Yellow Newtown[,] Granny Smith or similar varieties the aggregate area of an apple which may be covered with smooth solid russeting shall not exceed 20 percent; and the aggregate area of an apple which may be covered with excessively rough or barklike russeting or limb rubs shall not exceed the area of a circle three-fourths of an inch in diameter. Each apple of this grade has the amount of color specified in WAC 16-403-175 for the variety. There is no requirement in this grade pertaining to invisible watercore.

WAC 16-403-175 Green or yellow varieties—Color requirements. (1) Golden Delicious. In extra fancy and fancy grades, 75 percent or more of the surface of the apple shall show white or light green predominating over the green color. In C grade, 33-1/3 percent or more of the surface of the

apple shall show white or light green predominating over the green color.

(2) In green and yellow varieties, other than Golden Delicious, characteristic ground color shall be required in extra fancy, fancy or C grade.

(3) In no case shall the color requirements for any variety be less than those required under the United States standards for grades of apples, effective September 1, 1964, as amended October 1, 1966 and July 25, 1972 for the comparable Washington grade and variety.

[Order 1374, § 16-403-175, filed 7/26/74, effective 9/1/74.]

WAC 16-403-180 Combination grades. (1) Combination extra fancy and fancy. When extra fancy and fancy apples are packed together, the boxes may be marked "Washington combination extra fancy and fancy" and shall contain at least 80 percent extra fancy apples, except Newtowns, which shall contain at least 50 percent extra fancy apples. (This is the only combination grade which may be used for red or partial red varieties.)

(2) Combination extra fancy, fancy and C grade. When extra fancy, fancy and C grade apples are packed together, the boxes may be marked "Washington combination extra fancy, fancy and C grade" and shall contain at least 80 percent extra fancy apples, except Newtowns, which shall contain at least 50 percent extra fancy apples.

(3) Combination fancy and C grade. When fancy and C grade apples are packed together, the boxes may be marked "Washington combination fancy and C grade" but shall contain at least 80 percent fancy apples, except Newtowns, which shall contain at least 50 percent fancy apples.

(4) Jumble pack. The larger sizes of the above grades may be removed and the rest packed and marked "jumble" or "face and fill" in addition to the grade mark.

(5) Gift grade. Gift grade may consist of mixed varieties (apples and pears) and in the case of apples shall meet Washington extra fancy grade as defined in Washington standards for apples, and in the case of pears shall be U.S. No. 1 or higher grade as defined in Washington standards for D'Anjou, Bosc, Winter Nelis and other varieties of winter pears. When gift containers meet the requirements of gift grade, such containers need be marked only "gift grade" and a statement of net contents in weight or count and name and address of packer or shipper.

WAC 16-403-185 Culls. (1) Apples which are not graded in conformity with the foregoing grades and which contain not more than 5 percent serious insect damage shall be designated as "culls."

(2) Following is a quotation from RCW 15.17.080 - Fresh fruits—Culls—Container markings—Designation on bills of lading, invoices, etc.:

"It shall be unlawful for any person to sell fresh fruits for fresh consumption classified as culls under the provisions of this chapter or rules adopted hereunder unless such fruit is packed in one-half bushel or one bushel

wooden baskets ring faced, with the fruit in the ring face representative of the size and quality of the fruit in such baskets. Such baskets shall be lidded and the words "cull" including the kind of fruit and variety must appear on the top and side of each basket and on any label thereon in clear and legible letters at least two and one-half inches high. Every bill of lading, invoice, memorandum, and document referring to said fruit shall designate them as culls."

[Order 1374, § 16-403-185, filed 7/26/74, effective 9/1/74.]

WAC 16-403-190 Tolerances. In order to allow for variations incident to proper grading and handling in each of the foregoing grades, the following tolerances are provided as specified:

(1) Defects: Washington extra fancy, Washington fancy and Washington C grade.

Ten percent of the apples in any lot may fail to meet the requirements of the grade, but not more than one-half of this amount, or 5 percent, shall be allowed for apples which are seriously damaged, including therein not more than one percent for apples affected by decay or internal breakdown.

(2) When applying the foregoing tolerances to combination grades, no part of any tolerance shall be allowed to reduce, for the lot as a whole, the percent of apples of the higher grade required in the combination.

Combinations requiring 80 percent of the higher grade for the lot shall have not less than 65 percent of the higher grade in individual samples.

Combinations requiring 50 percent of the higher grade for the lot shall have not less than 40 percent of the higher grade in individual samples.

(3) Size. When size is designated by the numerical count for a container, not more than 5 percent of the apples in the lot may vary more than 1/4 inch in diameter. When size is designated by minimum or maximum diameter or weight, not more than 5 percent of the apples in any lot may be smaller than the designated minimum and not more than 10 percent may be larger than the designated maximum.

(4) Firmness. Not more than ten percent of the apples in any lot of Red Delicious, Delicious, and Golden Delicious varieties shall fail to meet the firmness requirements as defined in WAC 16-403-142.

[Statutory Authority: Chapter 15.17 RCW. 92-15-056, § 16-403-190, filed 7/13/92, effective 8/13/92; 90-09-032 (Order 2032), § 16-403-190, filed 4/11/90, effective 5/12/90; 89-14-031 (Order 2012), § 16-403-190, filed 6/28/89, effective 9/1/89; 88-14-128 (Order 1982), § 16-403-190, filed 7/6/88, effective 9/1/88; Order 1374, § 16-403-190, filed 7/26/74, effective 9/1/74.]

WAC 16-403-195 Application of tolerances. The contents of individual samples in the lot, are subject to the following limitations: Provided, That the averages for the grade for the entire lot are within the tolerances specified for the grade.

Packages which contain more than 10 pounds:

Samples shall have not more than one and one-half times a specified tolerance of 10 percent or more and not more than double a tolerance of less than 10 percent, except that at least one apple which is seriously damaged by insects or affected

by decay or internal breakdown may be permitted in any sample.

Packages which contain 10 pounds or less:

Not over 10 percent of the samples may have more than three times the tolerance specified, except that at least one defective apple may be permitted in any sample: Provided, That not more than one apple or more than 6 percent (which-ever is the larger amount) may be seriously damaged by insects or affected by decay or internal breakdown.

[Statutory Authority: Chapter 15.17 RCW. 88-14-128 (Order 1982), § 16-403-195, filed 7/6/88, effective 9/1/88; Order 1374, § 16-403-195, filed 7/26/74, effective 9/1/74.]

WAC 16-403-200 Calculation of percentages. (1) When the numerical count is marked on the container, percentages shall be calculated on the basis of count.

(2) When the minimum diameter and/or minimum weight of individual apples, or minimum and maximum diameters and/or weights of individual apples are marked on a container or when the apples are jumbled in a container or in bulk, percentages shall be calculated on the basis of weight or an equivalent basis.

[Statutory Authority: Chapter 15.17 RCW. 92-15-056, § 16-403-200, filed 7/13/92, effective 8/13/92; Order 1475, § 16-403-200, filed 7/2/76; Order 1374, § 16-403-200, filed 7/26/74, effective 9/1/74.]

WAC 16-403-205 Condition after storage or transit. (1) Decay, scald or any other deterioration which may have developed on apples after they have been in storage or transit shall be considered as affecting condition and not the grade, except a separate tolerance in addition to and aside from the regular grade tolerances shall be allowed for apples that are overripe, providing an average of not more than 5 percent overripe in any lot of apples with not more than 10 percent overripe in any one container shall be permitted in any shipment.

[Order 1374, § 16-403-205, filed 7/26/74, effective 9/1/74.]

WAC 16-403-215 Packing requirements. (1) Apples tray packed or cell packed in cartons shall be arranged according to approved and recognized methods. Packs shall be at least fairly tight^a or fairly well filled^b.

(2) Closed cartons containing apples not tray or cell packed shall be fairly well filled^b or the pack shall be sufficiently tight to prevent any appreciable movement of the apples.

(3) Apples on the shown face of any container shall be reasonably representative in size, color and quality of the contents.

(4) Tolerances: In order to allow for variations incident to proper packing, not more than 10 percent of the containers in any lot may fail to meet these requirements.

^a- "Fairly tight" means that apples are of the proper size for molds or cell compartments in which they are packed and that molds or cells are filled in such a way that no more than slight movement of apples within molds or cells is possible. The top layer of apples, or any pad or space filler over the top layer of apples shall be not more than 3/4 inch below the top edge of the carton.

- b- "Fairly well filled" means that the net weight of apples in containers ranging from 2,100 to 2,900 cubic inch capacity is not less than 38 pounds for Jonathan, McIntosh and Golden Delicious varieties and not less than 40 pounds for all other varieties.

[Order 1374, § 16-403-215, filed 7/26/74, effective 9/1/74.]

WAC 16-403-220 Marking requirements—Open or closed containers. (1) The containers shall bear the correct name of the variety or "variety unknown," the name of the grower, packer, or distributor, and his address, the grade, the numerical count or the minimum diameter of apples packed in a closed container, and the net contents either in terms of dry measure or weight. The minimum weight of individual apples within the container may be stated in lieu of, in combination with, or in addition to, minimum diameter as a declaration of size. All open containers and consumer packages must bear statement of net weight or volume.

(a) When the numerical count is not shown, the minimum diameter or minimum weight of individual apples shall be plainly stamped, stenciled, or otherwise marked on the container in terms of whole inches, or whole inches and not less than eight inch fractions thereof or in terms of whole grams.

(b) When used in combination with minimum diameter as a size designation, the following minimum fruit weights shall be used:

Red Delicious	Golden Delicious
2 1/8 in. or 65 grams	63 grams
2 1/4 in. or 75 grams	70 grams
2 3/8 in. or 84 grams	82 grams
2 1/2 in. or 100 grams	95 grams
2 5/8 in. or 115 grams	109 grams
2 3/4 in. or 139 grams	134 grams

(c) The word "minimum," or its abbreviation, when following a diameter size or weight size marking, means that the apples are of the size marked or larger.

(2) Over-wrapped consumer units may be marked with count, if all specimens can be counted.

(3) Any of these marks may be placed on either the end or side of the container. (California requires end markings.)

(4) When containers are marked as to number, each container shall contain the correct number of apples designated by the markings.

(5) Grade markings on consumer-type packages must be at least one-fourth inch in height.

(6) Apples which were produced outside of the state of Washington and which are graded, packed, or repacked in the state of Washington, shall be correctly labeled as to the state or country of origin, e.g., "Product of Oregon," "Grown in Oregon," "Produced in Canada."

Such marking shall be placed on the same end or side panel of the container as other markings related to grade, variety, net contents, and name and address of the grower, packer, or distributor, and shall be of similar print size. Consumer type packages shall not be required to bear a statement as to origin when such marking has been placed on the master shipping container.

The following specific defects shall be considered as injury:

(a) Russeting in the stem cavity or calyx basin which cannot be seen when the apple is placed stem end or calyx end down on a flat surface shall not be considered in determining whether or not an apple is injured by russeting. Smooth net-like russeting outside of the stem cavity or calyx basin shall be considered as injury when an aggregate area of more than 10 percent of the surface is covered in the red, partial red and blushed varieties and 5 percent of the surface for green and yellow varieties, and the color of the russeting shows no very pronounced contrast with the background color of the apple, or lesser amounts of more conspicuous net-like russeting when the appearance is affected to a greater extent than the above amount permitted. Smooth solid russeting when the aggregate area in the green and yellow varieties exceeds more than 1/4 inch in diameter and in the red and partial red varieties when the aggregate area exceeds 3/8 inch in diameter shall also be considered as injury.

(2001 Ed.)

(b) Sunburn or sprayburn, when the discolored area does not blend into the normal color of the fruit.

(i) When the skin is broken, whether healed or unhealed;

(ii) When there is appreciable discoloration of the surface;

(iii) When any surface indentation exceeds one-sixteenth inch in depth;

(iii) Red skin spots which are thinly scattered over more than one-tenth of the surface, or dark, heavily concentrated spots which affect an area of more than one-fourth inch in diameter.

(f) Insects:

(i) Any healed sting or healed stings which affect a total area of more than one-eighth inch in diameter including any encircling discolored rings.

(ii) Worm holes.

(g) Stem or calyx cracks which more than slightly detract from the appearance or the edible or shipping quality of the apple or stem or calyx cracks which are not well healed, or well healed stem or calyx cracks which exceed an aggregate length of one-eighth inch.

(1) "Damage" means any specific defect defined in this section; or an equally objectionable variation of any one of these defects, any other defect, or any combination of defects, which materially detracts from the appearance, or the edible or shipping quality of the apple. The following specific defects shall be considered as damage:

(a) Russeting in the stem cavity or calyx basin which cannot be seen when the apple is placed stem end or calyx end down on a flat surface shall not be considered in determining whether or not an apple is damaged by russeting, except that excessively rough or barklike russeting in the stem cavity or calyx basin shall be considered as damage when the appearance of the apple is materially affected. The following types and amounts of russeting outside of the stem cavity or calyx basin shall be considered as damage:

[Title 16 WAC—p. 397]

(i) Russeting which is excessively rough or rough on green and yellow varieties.

(ii) Smooth net-like russeting, when an aggregate area of more than 15 percent of the surface is covered, and the color of the russeting shows no very pronounced contrast with the background color of the apple, or lesser amounts of more conspicuous net-like russeting when the appearance is affected to a greater extent than the above amount permitted.

WAC 16-404-001 Promulgation. I, Donald W. Moos, director of agriculture of the state of Washington, by virtue of the authority vested in me under chapter 15.17 RCW, after due notice and public hearings held at Yakima, Wenatchee and Okanogan on July 14, 15 and 16, 1965, respectively (pursuant to chapter 34.04 RCW), do hereby establish the following Washington standards for summer apples.

[Order 987, Promulgation, filed 7/26/65; Emergency Order 986, filed 7/26/65.]

WAC 16-404-010 Definitions. (1) The following regulations and definitions shall apply to all varieties and grades under this order:

- (a) Apples at the time of shipment shall not be overripe (see tolerance which applies at time of shipment).
- (b) "Mature" means having reached the stage of growth which will insure the proper completion of the ripening process. Firmness of the flesh shall be considered only in connection with other factors to determine the degree of maturity.
- (c) "Overripe" means dead ripe, with flesh very mealy or soft, and past commercial utility.
- (d) "Hand picked" means that the apples do not show evidence of rough handling or of having been on the ground.
- (e) "Clean" means free from excessive dirt or other foreign material.
- (f) "Sound" means that the apples at time of packing are free from visible defects, such as decay, breakdown, scald, bitter pit, or physical injury affecting quality.
- (g) "Aggregate area" means that all the areas of the blemish under consideration may be assembled into one circular area of the maximum diameter specified.

(2) Summer apples shall be defined as all apples such as Early MacIntosh, Beacon, Tydeman Red, Lodi, Yellow Transparent and all other similar varieties ripening before Jonathans. Excluding Jonathans, Arkansas Black, Spitzenburg, King David, Winesap, Red Sport varieties, Delicious, Stayman, Vanderpool, Black Twig, MacIntosh and Rome Beauty.

(Note: Winter Banana variety may also be packed under summer grades.)

[Order 987, Regulation, filed 7/26/65; Emergency Order 986, filed 7/26/65.]

WAC 16-404-020 Grades—Washington extra fancy apples. (1) Washington summer extra fancy shall consist of apples of one variety which are mature, hand-picked, clean, sound, fairly well formed and free from visible watercore, broken skin and from damage caused by insects, disease, mechanical injury or other causes.

(2) Each apple shall have the amount of color hereinafter specified for apples in this grade.

(3) **Caution:** To be certified on an export from certificate all apples must meet U.S. No. 1 grade requirements.

(4) "Fairly well formed" means that the apple shall have the normal shape characteristic of the variety except that one-half of the apple may deviate slightly or that the apple may be slightly flattened as by frost injury.

(5) "Damage" means any defect which materially affects the appearance or the edible or shipping qualities of the apple.

(6) The following shall not be considered damage:

(a) Slight handling bruises or box bruises, such as are incidental to good commercial handling in the preparation of a tight pack.

(b) Sunburn or spray burn when the normal color of the apple is not seriously affected, and there is no blistering or cracking of the skin, and the discolored area blends into the normal coloring of the apple.

(c) Dark colored limb rubs not to exceed 1/2" in the aggregate area. Limb rubs of a light brown or russet character shall be governed by the definition covering solid russetting.

(d) Smooth russetting at the stem or calyx end provided that such russetting is not visible for more than 1/2" when the apple is placed with the russet end down on a flat surface.

(e) Smooth net-like russetting which does not cover an aggregate area of more than ten percent of the surface and net-like russetting on the colored portions of the apple which does not materially detract from its appearance shall not be counted in computing the ten percent mentioned above.

(f) Hail marks, drought spots or other similar depressions or scars where there is no appreciable discoloration, except as later noted, other than russetting, or when any individual indentation does not exceed 1/4 of an inch in diameter or the total area affected does not exceed 3/4 of an inch in diameter. One discolored unbroken area not to exceed 1/8 of an inch in diameter shall be allowed.

(g) Scab spots affecting an aggregate area not to exceed 3/8 of an inch in diameter.

(h) Any healed stings affecting an aggregate area not to exceed 3/16 of an inch in diameter.

(i) Slight aphid sign or thrip marks which do not roughen or pebble the surface of the apple.

(j) Any defect or defects not listed above which affects the appearance or quality of the apple not more than the defects listed above.

[Order 987, Regulation 1, filed 7/26/65; Emergency Order 986, filed 7/26/65.]

WAC 16-404-030 Grades—Washington summer fancy apples. (1) Washington summer fancy apples shall consist of apples of one variety which are mature, hand-picked, sound, not badly misshapen and free from visible watercore, serious damage caused by insects, disease, mechanical injuries or other causes and free from soft bruises or broken skin (except that apples may have skin punctures not exceeding 1/4" in diameter).

(2) **Caution:** Punctured apples do not meet the requirements of the Export Apple and Pear Act and cannot be certified on an export certificate.

(3) Each apple shall have the amount of color hereinafter specified for apples of this grade.

(4) "Not badly misshapen" means that the apple may be more irregularly misshapen than defined above, but shall not be deformed to the extent of materially affecting its utility or general appearance.

(2001 Ed.)

(5) "Serious damage" means any injury or defect or a combination thereof which seriously detract from the appearance of the apple.

(6) The following shall not be considered serious damage:

(a) Sunburn or spray burn which does not seriously detract from the appearance of the apple.

(b) Limb rubs affecting an aggregate area not to exceed 3/4 of an inch.

(c) Smooth solid russetting affecting an area of not more than one-half the surface in the aggregate, including russetting of the stem basin or bark-like russetting which does not seriously detract from the appearance of the apple.

(d) Growth cracks when no crack exceeds 1/2" in length.

(e) Hail marks, drought spots or other similar depressions do not exceed an aggregate area of ten percent of the surface. Slight injury means that no individual area may exceed 3/4" in diameter of discolored area. The discolored area may be a light brown or black or may be a russeted area and the skin may or may not be broken, if broken, the area shall be well healed.

(f) Scab spots affecting an aggregate area of not to exceed 3/4 of an inch.

(g) Not to exceed two stings, each having an encircling hard ring or slight depression, providing no sting exceeds 1/8" in diameter exclusive of any encircling ring.

(h) Aphid pebbling or thrip marks not seriously affecting the appearance of the apple.

(i) Any defect or defects not listed above which does not affect the appearance of the apple more than the defects listed above.

[Order 987, Regulation 2, filed 7/26/65; Emergency Order 986, filed 7/26/65.]

WAC 16-406-001 Promulgation. I, Donald W. Moos, director of agriculture of the state of Washington, by virtue of the authority vested in me under chapter 15.17 RCW, after due notice and public hearings held at Yakima and Wenatchee, Washington on March 29 and 30, 1966, (pursuant to chapters 42.32 and 34.04 RCW), do hereby establish the following Washington standards for apricots and the container marking and packing requirements.

[Order 1015, Promulgation, filed 4/29/66; Order 771, Promulgation, effective 4/28/58.]

WAC 16-406-020 Tolerances. (1) In order to allow for variations incident to proper grading and handling, not more than a total of ten percent of the apricots in any lot may be below the requirements of grade, provided that not more than five percent shall be seriously damaged by insects, and not more than one percent shall be allowed for decay or internal breakdown: Provided, That in addition in Washington No. 1 not more than ten percent, by count, of the apricots in any lot may be damaged but not seriously damaged by bruising.

(2) When applying the foregoing tolerances to the combination grade no part of any tolerance shall be used to reduce the percentage of Washington No. 1 apricots required in the combination, but individual containers may have not more than ten percent less than the percentage of Washington No. 1 required, provided that the entire lot averages within the percentage specified.

[Statutory Authority: Chapter 15.17 RCW. 99-17-003, § 16-406-020, filed 8/4/99, effective 9/4/99; Order 1015, Regulation B, filed 4/29/66; Order 771, effective 4/28/58.]

WAC 16-406-025 Application of tolerances. (1) The contents of individual samples are subject to the following limitations: Provided, That the averages for the entire lot are within the tolerances specified for this grade.

[Title 16 WAC—p. 402]

(2) For packages which contain more than ten pounds, and a tolerance of ten percent or more is provided, individual samples in any lot shall have not more than one and one-half times the tolerance specified. For packages which contain more than ten pounds and a tolerance of less than ten percent is provided, individual samples in any lot shall have not more than double the tolerance specified: Provided, That not more than one apricot which is seriously damaged by insects or affected by decay or internal breakdown may be permitted in any sample.

(3) Washington No. 1 grade. For packages containing ten pounds or less: Not more than ten percent of the samples may have more than three times the tolerances specified, except that at least one defective apricot may be permitted in any sample: Provided, That not more than one apricot or more than six percent (whichever is the larger amount) may be affected by decay or internal breakdown.

(4) Washington No. 2 grade. For packages containing ten pounds or less: Not more than ten percent of the samples may contain more than three times the tolerances specified.

[Statutory Authority: Chapter 15.17 RCW. 99-17-003, § 16-406-025, filed 8/4/99, effective 9/4/99.]

WAC 16-406-030 Marking and packing requirements. (1) When the numerical count is used, the apricots in any container shall not vary more than one fourth inch in diameter. In order to allow for variations incident to proper sizing, not more than ten percent, by count, of the apricots in any package may be below the minimum size specified. The determination of grade may be made on the count basis.

(2) When apricots are prepared for market and/or offered for sale in containers, open or closed, such containers shall have stamped thereon the variety, grade, and packer's, grower's or shipper's name and address, count, or net weight and minimum diameter.

(These marking requirements do not apply to apricots being sold or shipped to canneries)

[Statutory Authority: Chapter 15.17 RCW. 99-17-003, § 16-406-030, filed 8/4/99, effective 9/4/99; Order 1015, Regulation C, filed 4/29/66; Order 771, effective 4/28/58.]

WAC 16-406-040 Culls for fresh market. Cull apricots shall be clearly marked with the word CULLS, in large letters at least two inches high, on containers which must be of the closed type.

[Order 1015, Regulation D, filed 4/29/66; Order 771, effective 4/28/58.]

WAC 16-406-050 Definition of terms. As used in these grades:

(1) "Mature" means having reached the stage of maturity which will insure a proper completion of the ripening process.

(2) "Well formed" means having the shape characteristic of the variety.

(3) "Damage" means that the apricot is injured to an extent readily apparent in the process of proper grading and handling. Well healed growth cracks not over three eighths of an inch in length, punctures not over three sixteenths of an inch in diameter, stem pulls not over three-eighths of an inch

in diameter (except for the Riland variety - growth cracks not over three-eighths of an inch in length, punctures not over one-fourth of an inch in diameter and stem pulls not over one-half inch in diameter) or smooth shallow limb rubs not more than one-fourth of an inch in diameter or russeting affecting not to exceed one-tenth of the surface of the apricot shall not be regarded as damage. Bruises not to exceed five percent of the surface of the apricot shall not be regarded as damage.

(4) Hail marks that are shallow and superficial or not more than three-eighths of an inch in diameter in the aggregate, or when the skin has been broken, except that not to exceed one well healed hail mark, such mark not to exceed one-eighth of an inch in diameter will not be considered as damage.

(5) "Serious damage" means immaturity, or any deformity or injury which causes breaking of the skin in excess of three-eighths of an inch in diameter or which seriously affects the appearance, but well healed growth cracks, not over one-half inch in length, shall not be regarded as serious damage. Except for the Riland variety - growth cracks that are not well healed and not over one-half inch in length shall not be regarded as serious damage. Bruises not to exceed ten percent of the surface of the apricot shall not be regarded as serious damage. Hail marks that are not more than three-sixteenth of an inch deep, or not more than one-half of an inch in diameter in the aggregate or when the skin has been broken, except that not to exceed four well healed hail marks, each such mark not to exceed one-eighth of an inch in diameter, will not be considered as serious damage.

(6) "Diameter" means the greatest diameter, measured through the center of the apricot, at right angles to a line running from the stem to the blossom end. Apricots having a diameter of one and one-half inches or larger, ring measurement, may be considered large, while the apricots having a diameter of less than one and one-half inches may be designated as small.

(7) The following will be taken into consideration in determining maturity:

(a) Ambering—Replacement of the green color of the flesh immediately around the pit by an amber shade is recognized by many authorities on apricots as an indicator of maturity.

(b) Springiness—This condition develops in connection with the separation of the flesh from the pit and is an indication that the fruit is reaching proper tree maturity for picking for fresh shipment. Springiness may be detected by external pressure on the fruit or by cutting the apricot in half at right angles to the longitudinal axis and noting how one-half or both halves slip away from the pit.

(c) Taste—On a tree whose fruit is ready for harvest for fresh shipment it is usually impossible to find at least an occasional fruit which has lost sufficient of its green taste to be fairly palatable. In using this test, do not be misled by fruits which may be maturing abnormally because of worm infestation.

(d) Separation of fruit from stem—The manner in which fruit may be separated from its stem is some indication of maturity, the more immature fruit tending to tear the adjacent skin and flesh more than fruit which is near proper maturity.

(2001 Ed.)

(8) The following varieties shall not be considered to have reached that stage of maturity which will insure a proper completion of the ripening process until they have developed characteristic turning or yellow (shades Nos. 3 or 4 on U.S. standard ground color chart) on the minimum percentage of surface area as stated opposite the varietal name:

Moorpark	—20%
Gilbert or Newcastle	—50%
Tilton	—40%
Blenheim	—40%
Royal	—40%

[Statutory Authority: Chapter 15.17 RCW, 99-17-003, § 16-406-050, filed 8/4/99, effective 9/4/99; Order 1015, Regulation E, filed 4/29/66; Order 771, effective 4/28/58.]

WAC 16-406-060 Definition of grades. (1) Washington No. 1 shall consist of apricots of one variety which are mature but not soft, overripe or shriveled, and which are well formed, visibly clean and free from decay, worm holes, and from damage caused by dirt, limb rubs, growth cracks, bruises, scale, hail, disease, insects or mechanical or other means. (See tolerances WAC 16-406-020)

(2) Washington No. 2 shall consist of apricots of one variety which are mature but not soft, overripe or shriveled, but which are fairly clean and free from decay, worm holes, and from serious damage caused by growth cracks, bruises, hail, insect pests, mechanical or other means. (See tolerances WAC 16-406-020)

(3) Washington combination shall consist of a combination of Washington No. 1 and Washington No. 2 and may be packed. When such a combination is packed, at least fifty percent of the apricots in any container shall meet the requirements of Washington No. 1. (See tolerances WAC 16-406-020)

(4) Culls shall consist of apricots which are immature or seriously damaged by growth cracks, nail, insect pests, mechanical or other means. (See marking and packing requirements WAC 16-406-030)

(1) Washington No. 1 grade sulphured whole cherries shall consist of properly matured cherries of similar varietal characteristics that are clean, firm, well formed and well bleached. The cherries shall be free from damage caused by mechanical injury, surface discoloration, rain cracks, blemishes or other means.

In order to allow for variations incident to proper preparation, grading and handling, at least ninety-five percent of the cherries of any lot must meet the requirements of "firm." In addition, not more than ten percent of the cherries of any lot may be below the remaining requirements of this grade, of which not more than one-half or five percent shall be allowed for defects classified as serious damage.

(2) Washington No. 1 grade sulphured halved cherries shall consist of portions of sliced cherries, no particle of which shall be smaller than an estimated one-third or more than an estimated two-thirds of a whole cherry. The cherries shall be properly matured, of similar varietal characteristics that are clean, firm, well formed and well bleached. The cherries shall be free from damage caused by mechanical injury, surface discoloration, rain cracks, blemishes or other means.

In order to allow for variations incident to proper preparation, grading and handling, at least ninety-five percent of the cherries of any lot must meet the requirements of "firm." In addition, not more than ten percent of the cherries of any lot may be below the remaining requirements of this grade, of which not more than one-half or five percent shall be allowed for defects classified as serious damage.

(3) Washington No. 2 grade sulphured whole cherries shall consist of properly matured cherries of similar varietal characteristics that are clean, fairly firm, well formed, and fairly well bleached. The cherries shall be free from serious damage caused by mechanical injury, surface discoloration, rain cracks, blemishes or other means.

(4) Washington No. 2 grade sulphured halved cherries shall consist of properly matured cherries of similar varietal characteristics that are clean, fairly firm, well formed, and fairly well bleached. The cherries shall be free from serious

(2001 Ed.)

damage caused by mechanical injury, surface discoloration, rain cracks, blemishes or other means.

In order to allow for variations incident to proper preparation, grading and handling, at least ninety percent of the cherries of any lot must meet the requirements of "fairly firm." In addition, not more than ten percent of the cherries of any lot may be below the remaining requirements of this grade.

(5) Washington combination grade sulphured cherries shall be a combination of Washington No. 1 and Washington No. 2 cherries of any style. When such a combination grade is packed, unless otherwise specified, the lot shall average not less than fifty percent Washington No. 1 quality cherries.

A tolerance of not more than ten percent shall be allowed for cherries which fall below the requirements of Washington No. 2 grade.

The tolerances for the standards are on a container basis. However, individual containers in any lot may vary from the specified tolerances, providing the averages for the entire lot, based on sample inspection, are within the tolerances specified. No part of any tolerance shall be allowed to reduce, for the lot as a whole, the fifty percent of cherries of the higher grade requirement in the combination; but individual containers may not have less than thirty-five percent of the higher grade or more than twenty percent below the requirements of Washington No. 2 grade.

WAC 16-439-001 Promulgation. I, Donald W. Moos, director of agriculture of the state of Washington, by virtue of the authority vested in me under chapter 15.17 RCW, after due notice and public hearing held at Olympia, Washington

(2001 Ed.)

on September 30, 1966, (pursuant to chapters 42.32 and 34.04 RCW), do hereby establish the Washington standards for Bartlett and other summer and fall pears, container minimum size and marking requirements.

[Order 1033, Promulgation, filed 10/10/66, effective 11/10/66; Order 930, Promulgation, filed 8/6/63; Emergency Order 922, filed 6/7/63.]

WAC 16-439-200 Definition of terms. The following regulations and definitions shall apply to all varieties and grades under this order.

(1) "Mature" means having reached the stage of maturity which will insure a proper completion of the ripening process. Firmness of the flesh shall be considered only in connection with other factors to determine the degree of maturity.

(2) "Hand picked" means that pears do not show evidence of rough handling or of having been on the ground.

(3) "Clean" means reasonably free from dust, dirt, or honey dew.

(4) "Sound" means that pears at time of packing are free from visible defects such as decay, breakdown, scald, bitter pit, or physical injury affecting keeping quality.

(5) "Aggregate area" means that all the areas of the blemish under consideration may be assembled into one circular area of the maximum diameter specified.

[Order 1033, § 1, filed 10/10/66, effective 11/10/66; Order 930, General Regulation, filed 8/6/63; Emergency Order 922, filed 6/7/63.]

WAC 16-439-210 Grades. Washington extra fancy shall consist of pears of one variety which are mature, hand picked, clean, well formed, sound, and free from drought spot, cork spot, and visible black end, and from damage caused by broken skin, bruises, limbrubs, sunburn, sprayburn, hail marks, russeting, disease, insects, mechanical or other means.

(1) "Well formed" means having the shape characteristic of the variety; and is further defined by variety as follows:

(a) Bartletts shall have a characteristic pyriform shape of a length not less than 1 1/4 times the diameter of the pear, except that the shape may be slightly irregular provided it does not detract from the general appearance of the pear.

(b) In other varieties slight irregularities of shape from type which do not materially detract from the general appearance of the fruit shall be considered well formed.

(2) "Free from damage" means that no blemish shall be allowed which materially affects the appearance of the fruit. The following blemishes shall not be considered as damage:

(a) Slight handling bruises and box bruises such as are incident to good commercial handling in the preparation of a tight pack.

(b) Sunburn, if the normal color of the fruit has not been materially changed, without any softening of the flesh or blistering or cracking of the skin.

(c) Spray burn, same as sunburn.

(d) Russeting, characteristic of the variety as follows:

(i) On Bartlett, characteristic russeting shall be permitted at the calyx end provided such russeting is not visible for more than 1/2 inch when the pear is placed calyx end down on a flat surface.

(e) Light russeting not characteristic of the variety, when the affected area does not exceed an aggregate of 15% of the surface.

(f) Slight pebbling on Bartletts which does not materially detract from the appearance.

In addition to the above, a pear may show any one or a combination of the following, the aggregate of which does not exceed 3/4 inch in diameter:

(g) Limbrubs which are light and not soft and which affect an aggregate area not to exceed 3/4 inch in diameter.

(h) Hail marks when the injury is superficial and which affect an aggregate area not to exceed 1/4 inch in diameter.

(i) Heavy russeting, such as is characteristic of frost injury when the aggregate area does not exceed 1/2 inch in diameter.

(j) Two slight, healed depressions which do not materially affect the general appearance of the fruit.

(k) Sooty blotch when affecting an aggregate area of more than 10% slight or thin, or 1/2 inch moderate, or 3/8 inch heavy.

(3) **Washington fancy** shall consist of pears of one variety which are mature, hand picked, clean, not seriously misshapen, sound, and free from cork spot, and visible black end, and from damage caused by broken skin, and from serious damage caused by bruises, limbrub, sunburn, spray burn, hail marks, drought spot, russeting, disease, insects, mechanical or other means.

(4) "Not seriously misshapen" means in Bartletts and other varieties, the pear shall have a shape which will permit the cutting of three fairly uniform quarters, and which is neither excessively flattened or elongated for the variety, and which shall be free from excessive creases or folds.

(5) "Free from serious damage" means that the defects taken singly or collectively shall not seriously deform or disfigure the fruit, or seriously affect the edible or culinary value. The following blemishes shall not be considered as serious damage:

(a) Slight handling bruises and box bruises, such as are incident to good commercial handling in the preparation of a tight pack.

(b) Sunburn, if the normal color of the fruit has been but slightly changed without any softening of the flesh or blistering or cracking of the skin.

(c) Spray burn, same as sunburn.

(d) Russeting characteristic of the variety.

(i) On Bartlett, characteristic russeting shall be permitted at the calyx end provided such russeting is not visible for more than 1/2 inch when the pear is placed calyx end down on a flat surface and in addition smooth russeting shall be permitted on the entire surface.

(ii) On other varieties, smooth russeting not characteristic of the variety will be permitted on the entire surface of the fruit.

(e) Pebbling on Bartletts which does not seriously affect the culinary or edible value of the fruit.

(f) Limbrubs on Bartletts and other varieties which are light and which are not soft and which do not affect an aggregate area to exceed 10% of the surface of the fruit.

(g) Drought spots which do not affect an aggregate area exceeding 1/4 inch.

In addition to the above, a pear may show any one or a combination of the following, the aggregate of which does not exceed the maximum area specified on each variety mentioned below:

(h) Heavy or dark heavy limbrubs on Bartletts and other varieties which are not soft and which do not affect an aggregate area to exceed 3/4 of an inch.

(i) Hail marks when the injury does not affect an aggregate area to exceed 3/4 inch in diameter on Bartlett pears, and 1/2 inch in diameter on other varieties of pears.

(j) **Frost rings.**

(i) Bartletts: Frost rings which do not completely encircle the pear and when the surface is only slightly grooved; and frost damage, such as occurs at the calyx end and which does not materially detract from the appearance of the pear.

(ii) On other varieties frost injury of the nature of heavy russet shall be considered under heavy limbrubs.

(k) Scab spot affecting an aggregate area not to exceed 1/2 inch in diameter.

(l) Shallow healed depressions which do not seriously affect the general appearance of the fruit and which do not affect an aggregate area to exceed 3/4 of an inch in diameter.

(m) Sooty blotch when affecting an aggregate area of not more than 50% of the surface area of thin, widely scattered spots, or not more than 1 1/4 inches of moderate, or not more than 3/4 inch of heavy.

(6) **Washington C grade** shall consist of pears of one variety which are mature, hand picked, clean, sound and free from hard-end; and free from serious damage caused by (a) broken skin, (b) insects, disease, hail marks, limbrubs, heavy russet, or other means; and shall not be so excessively elongated or flattened as to preclude the cutting of one good half.

(a) Broken skin exceeding 1/4 inch in diameter.

(b) "Free from serious damage" means defects when taken singly or collectively shall not seriously affect the edible or culinary value of the fruit. The following conditions shall not be considered serious damage: Healed insect depressions or other surface blemishes which do not prevent the cutting of one good half.

(c) Hard-end is defined as those pears which show an abnormally yellow or green color at the blossom end or an abnormally smooth rounded bases with little or no depression at the calyx, or if the flesh near the calyx is abnormally dry and tough or woody.

(d) Pears affected by hard-end shall be considered defects of all grades.

(e) Rat-tail shaped pears, or second bloom pears that are tough or ridged shall be considered defects of all grades.

(7) **Combination grades.**

A. When extra fancy and fancy pears are packed together, the packages may be marked "combination extra fancy and fancy." In this grade at least 50%, by count, of the fruit must meet the requirements of extra fancy.

B. When extra fancy, fancy, and C grade pears are packed together, the packages may be marked "combination extra fancy, fancy and C grade" but must contain at least 50%, by count, of pears meeting the requirements of extra fancy grade.

C. When extra fancy and C grade pears are packed together, the packages may be marked "combination extra

fancy, and C grade," but must contain at least 50%, by count, of pears meeting the requirements of extra fancy grade.

D. When fancy and C grade pears are packed together, the packages may be marked "combination fancy and C grade," but must contain at least 50%, by count, of pears meeting the requirements of fancy grade.

[Order 1033, Regulation 1, filed 10/10/66, effective 11/10/66; Order 930, Regulation 1, filed 8/6/63; Emergency Order 922, filed 6/7/63.]

WAC 16-439-220 Tolerances. (1) Tolerances which apply at time of packing:

(a) In order to allow for variations incident to commercial grading and handling, in each of the foregoing grades not more than 10%, by count, of any lot may be below the requirements of the grade, and not more than one-tenth of this amount shall be allowed for decay and/or breakdown. Slight imperfections which are not discernible in good commercial sorting practice shall not be considered as defects of grade.

(b) In addition to the above, a 10% tolerance for a total of all defects from the standards defined for uniformity of size, wrapping, and tightness of pack shall be permitted, and shall be computed by counting, weighing, or measuring the specimens judged to be below the standard.

(c) In order to allow for variations incident to proper sizing, not more than five percent, by count, of the pears in any lot may be below any specified minimum size and not more than ten percent may be above any specified maximum size.

(d) Small inconspicuous skin breaks, less than one-eighth inch in diameter or depth, shall not be considered damage. In addition, not more than 15 percent of the pears in any container may have not more than one skin break from one-eighth inch to three-sixteenths inch, inclusive, in diameter or depth.

(2) Tolerances which apply after pears have been placed in storage or in transit in Washington state: After pears have been placed in storage or in transit, scald, breakdown, decay, bitter pit, or physical injury affecting keeping quality which may have developed or may only have become evident after pears are packed are defined as applying to condition rather than to grade.

[Order 1033, Regulation 2, filed 10/10/66, effective 11/10/66; Order 930, Regulation 2, filed 8/6/63; Emergency Order 922, filed 6/7/63.]

WAC 16-439-230 Culls. (1) Pears which are not graded in conformity with foregoing grades and standards and which contain not more than 5% serious insect damage shall be designated as "culls."

(2) Infested culls. Pears which are not graded in conformity with the foregoing grades and which contain 5% or more infestation from codling moth, San Jose scale, and other horticultural pests, shall be designated as "infested culls."

[Order 1033, Regulation 3, filed 10/10/66, effective 11/10/66; Order 930, Regulation 3, filed 8/6/63; Emergency Order 922, filed 6/7/63.]

WAC 16-439-240 Size. (1) The following packs shall be recognized as standard for determining range in sizes: 70, 80, 90, 100, 110, 120, 135, 165, 180, 193, 210, 228, 245.

(2) The following terms will be used for description of degrees of uniformity of sizing of pears in packed containers.

(a) **Uniform** when the container contains not more than two sizes, the majority of which must be of the size with which the container is marked;

(b) **Fairly uniform** when the container actually contains a range of not more than three sizes, one size larger and one size smaller than the size with which the container is marked;

(c) **Slightly irregular** when not more than 10% of the pears in the container exceed the range of three sizes mentioned above;

(d) **Irregular** when more than 10% of the pears in the container exceed the range of three sizes mentioned above. (Note: Packages in which the size must be described as "irregular" do not comply with the state grading and packing regulations and cannot legally be shipped.)

[Order 1033, Regulation 4, filed 10/10/66, effective 11/10/66; Order 930, Regulation 4, filed 8/6/63; Emergency Order 922, filed 6/7/63.]

WAC 16-439-250 Containers. (1) Standard box packs: All pears packed in boxes under these regulations shall be arranged in clean, fairly bright and tightly nailed boxes according to the approved and recognized methods, with stems pointing towards the end of the box, except when jumbled. All boxes shall be tightly packed at time of packing but the contents shall not show excessive or unnecessary bruising because of an overfilled package. Each pear wrapped shall be well wrapped.

(2) Tray packs:

(a) A standard tray pack container carries four, five, or six molded pulp trays and is packed to and marked with one of the same size counts of the same size pears as are packed in the standard container.

(b) All pears packed in tray pack containers shall be as uniformly sized as those packed in the standard box and shall be arranged according to the approved method for the tray type of pack.

(c) Each container shall be well filled.

(3) When containers smaller than standard boxes or tray pack cartons are used, the containers shall be tightly packed, and if pears are wrapped and/or packed in a uniform manner as described in (1) or (2) above, the same requirements for sizing, wrapping and/or placement shall apply.

(Except for overwrap trays or other consumer type packages packed in master containers.) The director may, after receiving application, grant the use of experimental packages.

[Order 1033, Regulation 6, filed 10/10/66, effective 11/10/66; Order 930, Regulation 6, filed 8/6/63; Emergency Order 922, filed 6/7/63.]

WAC 16-439-270 Marking. (Packed or loose in containers.) (1) When shipped, the container shall bear the correct name of the variety or "variety unknown," the name of the grower, packer, or shipper, and his address, the grade, and the correct number of pears or the net contents either in terms of dry measure or weight. Any of these marks may be printed

(2001 Ed.)

on the label but in case they are not, they must be stamped on the end of the container. The grower's, packer's, or shipper's name and address, if not included on the label, must be placed either in line with the grade marks above the label or on the opposite end of the container.

(2) When pears are packed in other than standard boxes or tray cartons, the container shall be marked with the correct number of pears and the net weight.

[Order 1033, Regulation 7, filed 10/10/66, effective 11/10/66; Order 930, Regulation 7, filed 8/6/63; Emergency Order 922, filed 6/7/63.]

WAC 16-439-280 United States standards for summer and fall pears. (1) The following U.S. grades may be used for Bartlett and other summer and fall pears: U.S. No. 1, U.S. No. 2, and U.S. combination, as promulgated in the U.S. standards for summer and fall pears and adopted effective August 20, 1955.

(2) When U.S. grades are used, pears must meet the requirements of the lowest Washington state grade or better.

[Order 322, effective 7/29/40.]

WAC 16-442-090 Definitions of terms. As used in these standards:

(1) "Mature" means that the pear has reached the stage of maturity which will insure the proper completion of the ripening process.

Before a mature pear becomes overripe it will show varying degrees of firmness depending upon the stage of the ripening process. Therefore, a statement of firmness should be given in order to indicate the state of the ripening process. A description of the ground color should also be given.

The following terms should be used for describing the ground colors "green," "light green," "yellowish green," and "yellow."

The following terms should be used for describing the firmness of pears:

"Hard" means that the flesh of the pear is solid and does not yield appreciably even to considerable pressure. Such pears are in suitable condition for long storage periods for the variety;

"Firm" means that the flesh of the pear is fairly solid but yields somewhat to moderate pressure. The ripening process in firm pears is further advanced than in hard pears and they cannot be held in storage as long. Winter varieties at the firm stage may be held longer than the early varieties;

"Firm ripe" means that the flesh of the pear yields readily to moderate pressure. Such a pear is approaching the stage at which it is in prime eating condition but may be held for a brief period although winter varieties can be held longer than the early varieties;

"Ripe" means that the pear is at the stage where it is in its most desirable condition for eating.

(2) "Overripe" means dead ripe, very mealy or soft, past commercial utility;

(3) "Carefully handpicked" means that the pears do not show evidence of rough handling or of having been on the ground;

(4) "Clean" means free from excessive dirt, dust, spray residue or other foreign material;

(5) "Well formed" means having the shape characteristic of the variety. Slight irregularities of shape from type which do not appreciably detract from the general appearance of the fruit shall be considered well formed;

(6) "Black end" is evidenced by an abnormally deep green color around the calyx, or black spots usually occurring on the one-third of the surface nearest to the calyx, or by an abnormally shallow calyx cavity;

(7) "Injury" means any blemish or defect that more than slightly affects the appearance, edible or shipping quality. The following shall be considered as injury:

(7a) Russeting which exceeds the following shall be considered as injury:

On all varieties any excessively rough russeting (russeting which shows "frogging" or slight cracking).

On Comice, and on Anjou and other smooth-skinned varieties, slightly rough russeting, or thick russeting such as is characteristic of frost injury, when the aggregate area exceeds 1/2 inch in diameter;

On Anjou and other smooth-skinned varieties, smooth solid russeting when the aggregate area exceeds 1/2 inch in diameter and smooth netlike russeting when the aggregate area exceeds 15 percent of the surface, and on Comice, smooth solid or smooth netlike russeting when the aggregate area exceeds one-third of the surface, except that, in addition, on these and similar varieties, any amount of characteristic smooth russeting shall be permitted on that portion of the calyx and not visible for more than 1/2 inch along the contour of the pear, when it is placed calyx end down on a flat surface;

On any of the following and other similar varieties, rough or thick russeting such as is characteristic of frost injury when the aggregate area exceeds 1/2 inch in diameter. On any of these varieties any amount of characteristic russeting is permitted whether due to natural causes such as weather or stimulated by artificial means; leaf whips or light limb rubs which resemble and blend into russeted areas shall be considered as russet:

Bosc	Pound
Clairgeau	Seckel
Easter Beurre	Sheldon
Kieffer	Winter Nelis, and other similar varieties;
P. Barry	

Any one of the following defects or any combination thereof, the seriousness of which exceeds the maximum allowed for any one defect, shall be considered as injury:

(7b) Limbrubs which are cracked, softened, more than very slightly depressed, not light in color, or exceeding an aggregate area of 3/4 inch in diameter;

(7c) Hail marks or other similar depressions or scars which are not very shallow or superficial, or which affect an aggregate area of more than 1/4 inch in diameter;

(7d) Cork spot when a pear shows depressions or other external evidence of the disease;

(7e) Sunburn or sprayburn if the normal color of the fruit has been materially changed, or if the skin is blistered or cracked, or the flesh softened or discolored;

(7f) More than two healed slight stings or depressions, or any stings which materially affect the general appearance of the fruit.

Blister mite or canker worm injury which is not very shallow and superficial or where the injury affects an aggregate area or more than 1/4 inch;

(8) "Fairly well formed" means that the pear may be slightly abnormal in shape but not to an extent which detracts materially from the appearance of the fruit. Winter Nelis pears with characteristic slight sutures or with slight flattening on one side and/or other slight irregularities which do not materially detract from the general appearance of the pear shall be considered fairly well formed;

(9) "Damage" means any injury or defect which materially affects the appearance, edible or shipping quality;

(9a) Hard end, if the pear shows an abnormally yellow color at the blossom end, or an abnormally smooth rounded base with little or no depression at the calyx, or if the flesh near the calyx is abnormally dry and tough or woody;

(9b) Slight handling bruises and package bruises such as are incident to good commercial handling in the preparation of a tight pack shall not be considered damage;

(9c) Any pear with one skin break larger than 3/16 inch in diameter or depth, or with more than one skin break 1/8 inch or larger in diameter or depth, shall be considered damaged, and scored against the grade tolerance.

Small inconspicuous skin breaks, less than 1/8 inch in diameter or depth, shall not be considered damage. In addition, not more than 15 percent of the pears in any container may have not more than one skin break from 1/8 inch to 3/16 inch inclusive in diameter or depth;

(9d) Russeting which exceeds the following shall be considered as damage:

On all varieties excessively rough russeting (russeting which shows "frogging" or slight cracking) when the aggregate area exceeds 1/2 inch in diameter;

On Anjou and other smooth-skinned varieties, slightly rough russeting, or thick russeting such as is characteristic of frost injury, when the aggregate area exceeds 3/4 inch in diameter;

On Anjou, smooth solid or smooth netlike russeting when the aggregate area exceeds one-third of the surface, and on other smooth-skinned varieties, 15 percent of the surface, except that, in addition, on Anjou and other smooth-skinned varieties, any amount of characteristic smooth russeting shall be permitted on that portion of the calyx end not visible for more than 1/2 inch along the contour of the pear, when it is placed calyx end down on the flat surface;

On any of the following and other similar varieties, rough or thick russeting such as is characteristic of frost injury, when the aggregate area exceeds 3/4 inch in diameter; on any of these varieties any amount of characteristic russet-

ing is permitted, whether due to natural causes such as weather or stimulated by artificial means; leaf whips or light limb rubs which resemble and blend into russeted areas shall be considered as russet:

Bosc	Pound
Clairgeau	Seckel
Comice	Sheldon
Easter Beurre	Winter Nelis, and other similar
Kieffer	varieties;
P. Barry

(10) "Seriously misshapen" means that the pear is excessively flattened or elongated for the variety, or is constricted or deformed so it will not cut three fairly uniform good quar-

ters, or is so badly misshapen that the appearance is seriously affected;

[Order 610, effective 8/21/51; Order 322, effective 7/29/40.]

WAC 16-442-100 Tolerances for preceding grades.

(1) In order to allow for variations incident to proper grading and handling, not more than a total of 10 percent of the pears in any container may be below the requirements of grade, provided that not more than 5 percent shall be seriously damaged by insects, and not more than 1 percent shall be allowed for decay or internal breakdown.

(2) When applying the foregoing tolerances to the combination grade no part of any tolerance shall be used to reduce the percentage of U.S. No. 1 pears required in the combination; but individual containers may have not more than 10 percent less than the percentage of U.S. No. 1 required, provided that the entire lot averages within the percentage specified.

[Order 322, effective 7/29/40.]

WAC 16-442-110 Condition after storage or transit.

Decay, scald or other deterioration which may have developed on pears after they have been in storage or transit shall be considered as affecting condition and not the grade.

[Order 322, effective 7/29/40.]

WAC 16-442-120 Standard pack. (1) Sizing. The numerical count, or the minimum size of the pears packed in closed containers shall be indicated on the package. The number of pears in the box shall not vary more than 3 from the number indicated on the box.

(2) When the numerical count is marked on western standard or special pear boxes the pears shall not vary more than 3/8 inch in their transverse diameter for counts 120 or less; 1/4 inch for counts 135 to 180 inclusive; and 3/16 inch for counts 193 or more.

(3) When the numerical count is marked on western standard half boxes or special half boxes packed three tiers deep, the pears shall not vary more than 1/4 inch for counts 90 or less, and 3/16 inch for counts 100 or more.

(4) When the numerical count is marked on western standard half boxes or special half boxes packed two tiers deep, the pears shall not vary more than 3/8 inch for counts 50 or less; 1/4 inch for counts 55 to 60 inclusive; and 3/16 inch for counts 65 or more.

(5) When the numerical count is not shown, the minimum size shall be plainly stamped, stenciled or otherwise marked on the container in terms of whole inches, whole and half inches, whole and quarter inches, or whole and eighth inches, as 2-1/2 inches minimum, 2-1/4 inches minimum, or 2-5/8 inches minimum, in accordance with the facts. It is suggested that both minimum and maximum sizes be marked on the container, as 2-1/4 to 2-3/4 inches, 2-1/2 to 2-3/4 inches, as such marking is especially desirable for pears marketed in the export trade.

(2001 Ed.)

(6) "Size" means the greatest transverse diameter of the pear taken at right angles to a line running from the stem to the blossom end.

(7) Packing. Each package shall be packed so that the pears in the shown face shall be reasonably representative in size and quality of the contents of the package.

(8) Pears packed in any container shall be tightly packed. All packages shall be well filled but the contents shall not show excessive or unnecessary bruising because of overfilled packages.

(9) Pears packed in boxes shall be arranged in containers according to the approved and recognized methods with the pears packed lengthwise. A bridge shall not be allowed in any standard pack. When wrapped each pear shall be fairly well enclosed by its individual wrapper.

(10) Pears packed in round stave bushel baskets, tubs or in barrels shall be ring faced.

[Order 322, effective 7/29/40.]

WAC 16-442-130 Tolerances for standard pack. (1)

In order to allow for variations incident to proper sizing, not more than 5 percent of the pears in any container may not meet the size requirements provided that, when the maximum and minimum sizes are both stated, an additional 10 percent tolerance shall be allowed for pears which are larger than the maximum size stated.

(2) In order to allow for variations incident to proper packing, not more than 10 percent of the containers in any lot may not meet these requirements, but no part of this tolerance shall be allowed for bridge packs, or for packs with different sizes and arrangements such as layers of 195 size and arrangement, and layers of 180 size and arrangement packed in the same box.

[Order 322, effective 7/29/40.]

WAC 16-442-140 Box packs. All pears packed in boxes under these regulations shall be arranged in clean, fairly bright and tightly nailed boxes according to the approved and recognized methods, with the stems pointing towards the end of the box, except when jumbled, and all boxes shall be tightly packed at time of packing but the contents shall not show excessive or unnecessary bruising because of an overfilled package. Each pear wrapped shall be well wrapped.

[Order 322, effective 7/29/40.]

WAC 16-442-150 Marking boxes. (1) When shipped, the box shall bear the correct name of the variety, or "variety unknown," the name of the grower, packer, or shipper, and his address, the grade and the number of pears or the net contents either in terms of dry measure or weight. Any of these marks may be printed on the label but in case they are not, they must be stamped on the end of the box. The grower's, packer's or shipper's name and address, if not included on the label, must be placed either in line with the grade marks above the label or on the opposite end of the box.

(2) When boxes are marked as to number, they shall comply with the specifications mentioned under size.

[Order 322, effective 7/29/40.]

WAC 16-442-160 Other grades and brands. Any person, firm, or organization wishing to pack pears under any other grade or brand than those described in the foregoing rules shall file a certified copy of the description of such grade or brand with the director of agriculture at Olympia, Washington, before the first day of August of the year in which the pears so to be packed are grown. If such grade or brand is approved by the director of agriculture, pears may be packed under such grade or brand instead of the official state grading rules, and all boxes of pears so packed shall be marked with that grade or brand.

[Order 322, effective 7/29/40.]

I, Cameron S. Adams, acting director of agriculture of the state of Washington, by virtue of the authority vested in me under chapter 15.17 RCW and after due notice and public hearing held in Yakima, Washington on April 26, 1972, pursuant to chapters 42.32 and 34.04 RCW do hereby establish the following standards for Italian prunes.

[Order 1262, § 16-445-001, filed 5/5/72.]

WAC 16-445-040 Washington No. 1 grade and tolerances. (1) Defined. Washington No. 1 grade shall consist of prunes of one variety which are well formed (1), mature (2) but not overripe, soft or shriveled, and which are free from decay and sunscald (3), and from damage (4) caused by broken skins (4a), heat injury (4b), growth cracks (4c), sunburn (4d), split pits (4e), hail marks (4f), drought spots (4g), russetting (4h), scars (4i), dirt or other foreign material, disease, insects or mechanical or other means. Italian type prunes shall have two-thirds of the surface with purplish color characteristic of the particular area where grown, and unless otherwise specified, the minimum size of such prunes shall be not less than 1-1/4 inches in diameter (7).

[Title 16 WAC—p. 422]

(2) Tolerances. In order to allow for variations incident to proper grading and handling, the following tolerances are specified:

(a) At shipping point: Not more than a total of ten percent, by count, of the prunes in any container may not meet the requirements of this grade for defects other than color and size, but not more than five percent by count, may be allowed for defects causing serious damage and not more than one percent may be allowed for decay. In addition, not more than ten percent, by count, in any container may not meet the color requirements and not more than ten percent, by count, may not meet the size specifications, but the combined tolerance for all defects shall not exceed fifteen percent.

(b) At destination or en route: Not more than a total of eighteen percent of the prunes in any container may not meet the requirements of this grade and not more than the following percentages shall be allowed for the defects listed:

Ten percent which fail to meet the color requirement;

Ten percent which fail to meet the minimum size requirement;

Ten percent which fail to meet the requirements of the grade because of other permanent defects;

Seven percent for defects causing serious damage, including therein not more than five percent for serious damage by permanent defects and not more than two percent decay.

[Statutory Authority: Chapter 15.17 RCW. 78-04-061 (Order 1549), § 16-445-040, filed 3/31/78; Order 1262, § 16-445-040, filed 5/5/72; Order 698, (1), effective 6/15/54; Order 662, effective 7/8/53.]

WAC 16-445-050 Culls. Culls shall consist of prunes which are immature, or seriously damaged by growth cracks, hail, insect pests, mechanical or other means.

[Order 1262, § 16-445-050, filed 5/5/72; Order 662, effective 7/8/53.]

WAC 16-445-060 Application of tolerances. The contents of individual containers in the lot, based on sample inspection, are subject to the following limitations, provided the averages for the entire lot are within the tolerances specified:

(1) When a tolerance is 10 percent or more, individual containers in any lot shall have not more than one and one-half times the tolerance specified, except that at least one defective and one undersized fruit may be permitted in a container.

(2) When a tolerance is less than 10 percent, individual containers in any lot shall have not more than double the tolerance specified, except that at least one defective and one undersized fruit may be permitted in a container.

[Order 1262, § 16-445-060, filed 5/5/72; Order 662, effective 7/8/53.]

WAC 16-445-070 Standard pack. (1) The prunes shall be of fairly uniform size (10) and tightly packed according to the approved and recognized methods. The fruits in the top layer shall not be noticeably superior in quality or size to those in the remainder of the package.

(2) The size of prunes packed in 4-basket crates shall be indicated as follows: 4x4, 4x5, 5x5, etc., in accordance with the arrangement in the top layer of the basket. These packs

shall not be more than 3 layers deep. Arrangements such as 4-3x5 and 5-4x5 shall not be considered standard packs.

(3) The arrangement of the bottom layer shall be one row less one way, and may be one row less each way than the arrangement of the top layer. The arrangement of the middle layer may be the same as the top layer, or may be one row less one way than the arrangement of the top layer. Straight, offset, and diagonal packs in the layers are permitted. For example: A pack with 5x5 in the top layer may have 5x5 in the middle layer, and shall have 4x5 or 4-3x5 in the bottom layer; or it may have 4x5 or 4-3x5 in the middle layer, and shall have 4x5, 4-3x5, or 4x4 in the bottom layer.

(4) In layer-packed California peach or lug boxes, the count in the entire container shall be marked on the package.

(5) In double-faced and filled special lugs the number of rows, lengthwise of the lugs, shall be marked on the package to indicate size, as "nine row."

(6) In order to allow for variations incident to proper packing, not more than 10 percent, by count, of the containers in any lot may fail to meet the requirements of the standard pack.

[Order 1262, § 16-445-070, filed 5/5/72; Order 662, effective 7/8/53.]

WAC 16-445-080 Definitions of terms. As used in these standards:

(1) "Well-formed" means that the fruit has the shape characteristic of the variety. Doubles shall not be considered well-formed.

(2) "Mature" means that the fruit has reached the stage of maturity which will insure a proper completion of the ripening process.

(3) "Sunscald" means injury caused by the sun in which softening or collapse of the flesh is apparent.

(4) "Damage" means any injury or defect which materially affects the appearance, or edible or shipping quality of the fruit. Internal growth cracks, cavities or gum spots are not considered damage. Any one of the following defects, or any combination of defects, the seriousness of which exceeds the maximum allowed for any one defect, shall be considered as damage:

(a) Broken skins which are unhealed; except those caused by pulled stems where the skin is not torn beyond the stem basin. (Healed skin breaks shall be handled as scars.)

(b) Heat injury which is extensive or not light in color.

(c) External growth cracks, when there are more than one on a fruit, or when any growth crack is deep, not well healed, or more than one-fourth inch in length.

(d) Sunburn which has materially changed the normal color of the fruit, or has caused the skin to blister or crack.

(e) Split pit which causes a readily apparent crack at the stem end, or which affects the shape to the extent that the fruit is not well-formed.

(f) Hail marks, or other similar depressions or scars, which are not shallow or superficial, or which aggregate more than three-eighths inch in diameter, or when the skin has been broken.

(g) Drought spots or external gum spots which are more than one-fourth of an inch in diameter.

(h) Russeting which is not excessively rough, when aggregating more than 10 percent of the fruit surface; or

excessively rough russeting when aggregating more than one-fourth inch in diameter.

(i) Scars:

Dark, rough or depressed scars which aggregate more than one-fourth inch in diameter.

Fairly smooth, superficial scars, including fairly light discoloration such as is caused by handling or packing or by prunes rubbing against each other while on the tree, which aggregate more than one-half inch in diameter.

Thorn and limb scratches which are not well healed, or which aggregate more than one-half inch in length.

(5) "Well colored" as applied to Italian type prunes, means that 95 percent of the surface of the prune is purple color, excepting that portion which is permitted to be affected by russeting.

(6) "Fairly well colored" as applied to Italian type prunes, means that at least three-fourths of the surface of the prune is purple color.

(7) "Diameter" means the greatest distance measured through the center of the fruit, at right angles to a line running from the stem to the blossom end.

(8) "Badly misshapen" means that the fruit is so malformed or rough that its appearance is seriously damaged. Doubles shall be considered badly misshapen, except that doubles of Italian type prunes which have approximately equal sized halves shall not be considered badly misshapen.

(9) "Serious damage" means any injury or defect which seriously affects the appearance, edible or shipping quality of the fruit. Any one of the following defects, or any combination of defects, the seriousness of which exceeds the maximum allowed for any one defect, shall be considered as serious damage:

(a) Broken skins which are unhealed and more than one-eighth inch in diameter or depth, except those caused by pulled stems where the skin is not torn beyond the stem basin. (Healed skin breaks shall be handled as scars.)

(b) Heat injury which causes any softening or dark discoloration of the flesh. Heat injury may cause internal or external discoloration, and may or may not be serious. It should not be confused with sunscald which causes softening or collapse of the tissue, and which is always classed as serious damage.

(c) External growth cracks which are not well healed, or which are more than 3/16 inch in depth, or more than one-half inch in length.

(d) Sunburn which causes decided flattening of the fruit, or causes blistering, cracking, or noticeable brownish discoloration of the skin.

(e) Split pit which causes a crack at the stem end more than 3/16 inch in length, including any part which may be covered by the stem; or which affects the shape to the extent that the fruit is badly misshapen.

(f) Hail marks which are more than 3/16 inch in depth, or which aggregate more than one-half inch in diameter.

(g) Drought spots or external gum spots which aggregate more than one-half inch in diameter.

(h) Russeting which is not excessively rough, when aggregating more than one-third of the fruit surface; or excessively rough russeting when aggregating more than one-half inch in diameter.

(i) Scars which are very dark or excessively rough and aggregate more than one-half inch in diameter; or which are more than 3/16 inch in depth.

(10) "Fairly uniform size" means that the fruits in each packed container shall not show a variation of more than one-fourth of an inch in diameter (6).

WAC 16-470-300 Quarantine—Onion white rot disease. Onion white rot is a potentially devastating disease of onions and closely related species, which causes greatly decreased yields and reduced storage quality. It is spread primarily by movement of contaminated water, soil, equipment, tools, machinery, and infested plants and plant parts. Onion white rot disease is caused by *Sclerotium cepivorum*, a fungus. Once a field is infested, the disease remains indefinitely in the soil. The director finds that onion white rot disease is

(2001 Ed.)

detrimental to the onion industry of Washington state and establishes a quarantine to prevent introduction and spread of the disease within noninfested areas of Washington state.

[Statutory Authority: Chapter 17.24 RCW. 01-01-013, § 16-470-300, filed 12/6/00, effective 1/6/01; 86-07-020 (Order 1881), § 16-470-300, filed 3/12/86; 85-20-043 (Order 1873), § 16-470-300, filed 9/25/85.]

(1) No person shall import onion bulbs, sets or seedlings into the pest-free area for onion white rot for the purpose of planting or propagation, except those produced in and shipped from any area of this state or other states where onion white rot is not known to occur. Each shipment must be certified to be free from white rot disease by the pest protection organization of the state where the onion planting stock was produced.

(2) Except as provided in this chapter, no person shall in any manner import or move soil, machinery, tools, or equipment into the pest-free area for onion white rot. If the soil, machinery, tools, or equipment have been previously used in any manner in fields outside the pest-free area for onion white rot. Machinery, tools or equipment may be imported or moved into the pest-free area for onion white rot with prior approval from the department. The soil, machinery, tools or equipment must be cleaned and sanitized to the satisfaction of the department prior to movement into the pest-free area for onion white rot. The cleaning shall include the thorough removal of all soil and debris by the use of steam under pressure. Sanitation must be accomplished by the use of steam or other methods approved by the department. For the purposes of this section, "machinery, tools or equipment" includes but is not limited to vehicles, farm trucks, harvesters, and tillage equipment.

(3) The department may stop the movement into or within the pest-free area for onion white rot of any machin-

ery, tools or equipment that has not been cleaned and sanitized as provided in this section.

(4) No person shall knowingly import into the pest-free area for onion white rot livestock which have been pastured on irrigated fields known to be infested with white rot or which have been fed white rot infested plant parts. Onion white rot infested plant parts may not be imported into the quarantine area for livestock feed. Onion white rot infested plant parts found in the pest-free area for onion white rot may not be fed to livestock. No restrictions are imposed by this section on livestock moving to feed lots, sale yards, or exhibition sites (such as fairgrounds, shows, etc.) in the pest-free area for onion white rot.

WAC 16-470-700 Quarantine—Japanese beetle. A quarantine is established under this chapter against all life stages of the insect pest Japanese beetle (*Popillia japonica* Newman), a member of the family Scarabaeidae. WAC 16-472-010 Establishing quarantine—Promulgation. The common barberry, (*Berberis vulgaris*) and many of its horticultural varieties as well as certain other species of *Berberis*, *Mahonia*, and *Mahoberberis* are the alternate host plants of the disease black stem rust, caused by the organism *Puccinia graminis*. Black stem rust attacks wheat, oats, barley, rye, and many other cultivated and wild grasses, often resulting in material financial loss to growers of these crops in Washington. Without access to alternate host plants, *Puccinia graminis* cannot reproduce, and black stem rust is eliminated or greatly decreased. The director of agriculture, under authority granted by chapters 17.24, 15.13 and 15.08 RCW, has determined that the regulation and exclusion of rust susceptible varieties of barberry and related *Berberis*, *Mahonia*, and *Mahoberberis* species is necessary to protect agricultural crops of the state of Washington.

[Statutory Authority: Chapters 17.24, 15.13, and 15.08 RCW, 00-20-069, § 16-472-010, filed 10/3/00, effective 11/3/00; Order 556, effective 9/1/49.]

(2) No person who is or should be licensed as a nursery dealer under provisions of chapter 15.13 RCW may sell, offer for sale, ship or grow any rust susceptible variety of barberry or related *Berberis*, *Mahonia*, and *Mahoberberis* species, as defined in 7 C.F.R. 301.38-2.

WAC 16-472-030 This rule does not apply to rust-resistant *Berberis*, *Mahonia*, and *Mahoberberis* plants or seeds. No restrictions are placed by this rule on the growing or intrastate movement of rust-resistant *Berberis*, *Mahonia*, and *Mahoberberis* plants, plant parts or seeds, as defined in United States Department of Agriculture Animal and Plant Health Inspection Service regulations in 7 C.F.R. 301.38-2.

(1) All intrastate and interstate shipments and/or individual packages of *Berberis*, *Mahonia* or *Mahoberberis* plants, seeds, or parts capable of propagation must be plainly labelled or stamped on the outside of the package with botanical species or horticultural variety and the name and address of the consignee and consignor. In addition, when required by federal regulations in 7 C.F.R. 301.38, each shipment and/or individual package containing *Berberis*, *Mahonia* or *Mahoberberis* plants or seeds must have securely attached to the outside, a valid shipping permit issued by the United States Department of Agriculture authorizing its interstate movement.

(2) Any *Berberis*, *Mahonia* and *Mahoberberis* plants, plant parts or seeds that are in violation of this barberry and black stem rust quarantine are subject to destruction, shipment out-of-state or other disposition in a manner prescribed by the department. WAC 16-478-010 Establishing quarantine for European corn borer. European corn borer (*Ostrinia nubilalis*) is a nonnative, invasive insect which has infested most of North America since its introduction in the early 1900's. Its host range constitutes a wide range of plants, including important food and nursery crops grown in this state. The director of agriculture, pursuant to authorities in chapter 17.24 RCW, has determined that the exclusion of European corn borer at all stages of its life cycle is necessary to protect the environmental quality and agricultural crops of the state of Washington.

[Statutory Authority: Chapter 17.24 RCW, 00-23-097, § 16-478-010, filed 11/21/00, effective 12/22/00; Order 607, effective 7/23/51.]

(a) The grain or seed has been passed through a 1/2 inch or less mesh screen or otherwise cleaned prior to loading and is believed to be free from stalks, cobs, stems or other plant parts capable of harboring larvae of the European corn borer;

(b) The grain, seed, or stalks, ears, cobs or other parts, fragments, or debris has been treated, sterilized, or disinfected in a manner approved by the director as adequate to control European corn borer.

(5) Exemptions.

(a) The requirement for a phytosanitary certificate is waived for shipments or lots of 10 pounds or less of beans in the pod, beets, bell peppers, endive, Swiss chard or rhubarb (cut or plants with roots).

(b) During the period November 30 to May 1, the requirement for a phytosanitary certificate is waived for divisions without stems of the previous year's growth, rooted cuttings, seedling plants and cut flowers of aster, chrysanthemum, calendula, cosmos, hollyhock, marigold, zinnia and Japanese hop.

WAC 16-481-010 Establishing quarantine. Grape phylloxera (*Daktulosphaira vitifoliae* (Fitch)) is an insect pest injurious to grape plants that can cause severe reductions in grape yield and ultimately the death of the grape plant. This pest is widely distributed throughout the United States and the world. Introductions of the pest into the state of Washington through infested grape plants, rootstock, and plant cuttings or on contaminated grape cultivation or harvesting equipment could have a severe economic impact on the Washington grape industry. To prevent this the director, under the authority provided in chapters 17.24 and 15.13 RCW, has established a quarantine to prevent the introduction of this pest into the state.

[Statutory Authority: Chapters 15.13 and 17.24 RCW. 91-21-042, § 16-481-010, filed 10/11/91, effective 11/11/91; Order 384, § 1, effective 3/30/43.]

(7) "Softwood cutting" means any cutting taken when the grape plant is not fully dormant.

(8) "Susceptible varieties" means grape plants that may serve as host to grape phylloxera and which show symptoms of decline when infested.

(9) "Nonsusceptible varieties" means grape plants that may serve as host to grape phylloxera but which do not show symptoms of decline when infested. Nonsusceptible varieties include concord varieties and vinifera varieties on resistant rootstock.

the state of Washington. The director has determined that these industries are threatened by the introduction and establishment of the virus diseases known as leafroll, fanleaf and corky bark that are not known to occur in the state of Washington. The presence of these virus diseases cannot be determined by the most rigorous visual examination of dormant grape planting stock. The introduction and establishment of these virus diseases would entail great economic loss to the grape industries of the state. To minimize this risk, the director, under the authority provided in chapter 17.24 RCW, has established a quarantine setting forth rules for the importation of grape planting stock into the state of Washington.

Such document shall, however, in either event, be prepared by the inspector issuing the shipping permit and shall be forwarded by him, together with stamps affixed or accompanying payment in lieu of stamps, to the office of the commission at such intervals as the manager of the commission may from time to time designate for each respective handler. Stamps shall be deemed cancelled when affixed to such document.

(iv) In order to pay for such stamps, or to provide funds for the payment made in lieu thereof, handlers, including warehousemen and processors, receiving potatoes from a producer, shall collect the assessment of 2¢ per hundred weight of potatoes handled from the respective producer thereof at the time the potatoes are first handled. Producers handling their own potatoes shall pay the assessment either through the purchase of stamps directly from the commission or through payment in lieu of stamps as provided in subsection (b) below.

(v) In providing stamps, the commission may extend credit to the handler ordering them for a period not to exceed 30 days from date stamps are forwarded from the office of the commission to the handler, or may require payment for the stamps prior to forwarding. Payments for stamps will be credited as received. Unused stamps may be returned for credit or, if the account has been paid in full, for cash refund.

(vii) The party to whom stamps are issued shall be primarily liable for payment for them; if stamps are used by a

party other than to whom issued, both parties shall be jointly and severally liable for payment therefor.

(ii) As used in subsection (b)(i) immediately preceding, the term "handler" shall be deemed to be the person, firm, or corporation designated as "shipper" on the potato shipping record form.

WAC 16-622-001 Purpose. The department of agriculture promulgates this chapter to implement the provisions of the Agricultural Marketing and Fair Practices Act, chapter 15.83 RCW (chapter 355, Laws of 1989). The purpose of this act is to establish standards of fair practices required of handlers, producers, and association of producers dealing in sweet corn and potatoes and to establish the mutual obligation of handlers and accredited associations of producers to negotiate relative to the production or marketing of these agricultural commodities.

[Statutory Authority: RCW 15.83.020, 90-08-069, § 16-622-001, filed 4/2/90, effective 5/3/90.]

WAC 16-622-005 Definitions. Unless the context clearly requires otherwise, the definitions in this section apply throughout this chapter.

(c) Contracting or negotiating contracts or other arrangements, written or oral, with or on behalf of producers or associations of producers with respect to the production or

marketing of any agricultural product for use by a processor; or

WAC 16-622-015 Accreditation file. Both the association of producers requesting accreditation of a negotiating unit and the person operating the processing facility for which the negotiating unit is being proposed shall create and maintain in their possession an accreditation file for the purpose of allowing the director to determine if the association of producers has met the requirements for the accreditation of the negotiating unit. The file shall be available to the department during normal working hours with reasonable advance notice. Documents contained in the file shall become a permanent part of the file and shall be serially numbered and indexed to assure the integrity of the file. Copies of original documents may be placed in the file or new documents may be created to satisfy the requirements of this chapter. The director may examine other records as necessary to confirm the validity of the information contained in the accreditation file. The accreditation files shall be maintained at the principal business address of the association of producers and the person operating the processing facility. In the case where the principal business address of the person operating a processing facility is located outside of the state of Washington, the accreditation file shall be maintained at the processing facility or at some other location within the state of Washington as approved by the director.

WAC 16-622-030 Accreditation procedure. The director shall, upon receipt of an application for accreditation of a negotiating unit, promptly notify in writing the processor who operates the processing facility. The director shall schedule a time to examine the accreditation files of both the association of producers and the processor operating the processing facility. This examination shall not occur prior to five working days following the receipt of the notice to the processor of the application for accreditation of the negotiating unit. The director shall issue a report of findings resulting from the examination of the accreditation files of both parties which shall include:

(1) Whether the association of producers is owned and controlled by producers and that one of its functions is to act as principal or agent for its members in negotiations with processors;

(2) Whether the association of producers has valid and binding contracts with its members who are part of the proposed negotiating unit;

(3) Whether the members of the proposed negotiating unit represent more than fifty percent of the total average number of producers of record at the processing facility with advance contracts for the previous two growing seasons, or whether the number of acres of qualified commodities produced by members of the proposed negotiating unit, who were producers of records at the processing facility, represents more than fifty percent of the total average number of acres of qualified commodity obtained through advance contracts for the previous two growing seasons.

If the director's findings regarding subsection (1), (2), and (3) above are that the association meets the criteria for accreditation, a notice of accreditation of the negotiating unit will be issued to both parties. If the finding regarding any of the subsections above is that the association fails to meet any of the criteria, a notice citing the specific deficiency will be issued to both parties pending the filing of an amended application in a timely manner.

The director shall not accredit more than one bargaining unit for each processing facility. Should more than one proposed bargaining unit meet the criteria for accreditation the director shall accredit the proposed negotiating unit that would function as the most effective agent for producers in negotiating with the processor. The director, when consider-

ing the accreditation of proposed negotiating units, shall consider the ratio of the number of producers to acres previously contracted by those producers, with substantial weight given to the number of acres contracted.

An association of producers upon receiving notice of deficiencies in the application for accreditation of a proposed negotiating unit may file an amended application with the director. The amended application will be examined in the same manner as the initial application. Amended applications must be filed with the director within thirty days of receipt of the notice of deficiencies in the application.

[Statutory Authority: RCW 15.83.020. 90-08-069, § 16-622-035, filed 4/2/90, effective 5/3/90.]

WAC 16-622-040 Renewal of application for accreditation. An affected processor or an affected association of producers may petition the director to require an accredited association of producers to renew the application for accreditation of a negotiating unit. If the director concurs with the request of the petitioners or determines that a renewed application would best carry-out the purposes of the chapter, then the parties will be notified of the requirement that a new application be filed. The renewed application shall be examined in the same manner as an initial application.

[Statutory Authority: RCW 15.83.020. 90-08-069, § 16-622-040, filed 4/2/90, effective 5/3/90.]

[Statutory Authority: RCW 15.83.020. 90-08-069, § 16-622-045, filed 4/2/90, effective 5/3/90.]

Applications or petitions received after that date will be considered for the next succeeding negotiat-

[Statutory Authority: RCW 15.83.020. 90-08-069, § 16-622-055, filed 4/2/90, effective 5/3/90.]

WAC 16-622-060 Report of negotiating session. For the purposes of this section, a negotiating session is a meeting of the parties at which pertinent information is exchanged. Each summary shall accurately reflect the substance of discussions and the points raised by either side. Each summary shall be signed by an authorized representative of the association of producers or handler which prepared it. Each summary shall contain the last offer of contract terms placed on the table during that negotiating session. Either party may place supplementary materials regarding the negotiation into their file.

To convert from measured volume at another temperature to net volume at 60°F: Measure the volume and temperature. Determine the gravity at 60°F. Refer to the column corresponding to this gravity and read the volume conversion factor opposite the observed temperature. Multiply the observed volume by this factor to obtain the volume at 60°F.

WAC 16-663-120 Registration, certification and standards. (1) Service agents and servicepersons who intend to provide service that permits a weighing or measuring device to be placed back into commercial service must register with the department annually. Service agents and servicepersons must register on a form provided by the department annually. The fee for registration is eighty dollars per service person. This registration requirement does not apply to city sealers.

(2) Service agents and servicepersons registering with the department will specifically state the types of devices they will be placing in service. Such a statement is the agent's or person's certification that they are knowledgeable of the requirements of the state and possess proper and certified equipment and standards to perform the services.

(3) The registered service agent or serviceperson shall submit a copy of their tag or label, seal or seal press identification mark to the department at time of registration.

(4) The department will issue an official registration certification for each service agent and serviceperson whose application is approved. Official registration certificates are valid for a period of one year from date of registration.

(5) For requests that are denied the department will provide reasons, in writing, for the denial and refund payment.

dards will be submitted to the state's metrology laboratory or a laboratory of any state in which a reciprocity agreement has been entered. The state metrology laboratory examines and certifies standards using the current version of National Institute of Standards and Technology Handbook 105.

(3) Recognition of out-of-state certification any standard that has been inspected and examined by any state or agency in which the director has entered a reciprocity agreement will be considered correct if said examination is within the previous two-year period. Proof of inspection must be submitted to the department with the registration application.

(4) Proof of certification shall be maintained by the owner of the standards and be kept with the standards during normal usage for the purpose of inspection by the director or authorized representative.

The notice shall state the date placed in service, type of device, capacity, business' name and site address, and name and address of the service company installing the device. The report shall also indicate whether the device is new or used.

(2) After correcting a rejected device, registered service agents or servicepersons must return the reject report issued by the weights and measures official to the address indicated on the form within seven days from completion of work. All discrepancies noted on the department's rejection report must be corrected before returning the device to service. The form must be signed and dated by the registered serviceperson returning the device to service. (9) Faulty installation conditions must be corrected, and any defective parts must be renewed or suitably repaired, before adjustments are made.

(10) When equipment is adjusted, the adjustment must be made so that performance errors are as close as practicable to zero value.

(11) Equipment put into service, repaired, adjusted, calibrated or refurbished must be sealed with an appropriate security seal and the seal number recorded on the inspection test report. Any security seal removed prior to servicing the device will be noted on the test report and will include the number or identifying mark of the security seal.

(12) Equipment must be assembled and installed so that it does not facilitate the perpetration of fraud.

WAC 16-664-030 Certificate of Conformance—When required. The director shall require a device to be

(2001 Ed.)

traceable to a Certificate of Conformance prior to its installation or use for commercial or law enforcement purposes.

[Statutory Authority: RCW 19.94.190 and 19.94.195. 97-12-076, § 16-664-030, filed 6/4/97, effective 7/5/97.]

WAC 16-664-040 Commercial and law enforcement equipment—Certificate of Conformance—Requirements—Exemptions—One-of-a-kind device—Repaired device—Remanufactured device—Device copy—Components. (1) Except for a device exempted under subsection (6) of this section, no person shall sell a device, within the state of Washington, unless it is traceable to a Certificate of Conformance. Certificate of Conformance documentation must be provided as part of the sales transaction.

(2) No person shall use a device within the state of Washington, unless it is traceable to a Certificate of Conformance, except when the device is exempted by subsection (3), (4), or (5) of this section. Certificate of Conformance documentation must be maintained at the device location.

(3) A device in service in Washington prior to July 5, 1997, that meets the specifications, tolerances, and other technical requirements of National Institute of Standards and Technology Handbook 44, is not required to be traceable to a Certificate of Conformance.

(4) A device in service in Washington prior to July 5, 1997, removed from service by the owner or on which the department has issued a removal order after July 5, 1997, and returned to service at a later date shall be modified to meet all specifications, tolerances, and other technical requirements of National Institute of Standards and Technology Handbook 44 effective on the date of the return to service. Such a device is not required to be traceable to a Certificate of Conformance.

(5) A device in service in Washington prior to July 5, 1997, which is repaired after such date shall meet the specifications, tolerances, and other technical requirements of National Institute of Standards and Technology Handbook 44 is not required to be traceable to a Certificate of Conformance.

(6) A device in service in Washington prior to July 5, 1997, and sold after such date shall be modified by the seller to meet the specifications, tolerances, and other technical requirements of National Institute of Standards and Technology Handbook 44 on or before the date sold, unless the buyer and seller agree by written contract to exchange the modification responsibility in which case modification must be completed before further commercial application. Such commercial weighing or measuring device is not required to be traceable to a Certificate of Conformance.

(7) A device in service in another state prior to July 5, 1997, may be installed in Washington; however, the device shall meet the specifications, tolerances, and technical requirement for weighing and measuring devices in National Institute of Standards and Technology Handbook 44 and be traceable to a Certificate of Conformance.

(8) One-of-a-kind device — A "one-of-a-kind" device is not required to be traceable to a Certificate of Conformance. However, if the manufacturer decides to make an additional device or devices, the device will no longer be considered to be "one-of-a-kind" and it shall be traceable to a Certificate of

Conformance. For scales, the load cells and electronic indicators must be traceable to a Certificate of Conformance.

(9) Repaired device — If a person makes changes to a device to the extent that the metrological characteristics are changed, that specific device is no longer traceable to the Certificate of Conformance.

(10) Remanufactured device — If a person repairs or remanufactures a device, they are obligated to repair or remanufacture it consistent with the manufacturer's original design; otherwise, that specific device is no longer traceable to a Certificate of Conformance.

(11) Copy of a device — The manufacturer who copies the design of a device that is traceable to a Certificate of Conformance, but which is made by another company, must obtain a separate Certificate of Conformance for the device. The Certificate of Conformance for the original device shall not apply to the copy.

(12) Device components — If a person buys a load cell(s) and an indicating element that are traceable to Certificates of Conformance and then manufactures a device from the parts, that person shall obtain a Certificate of Conformance for the device.

[Statutory Authority: RCW 19.94.190 and 19.94.195. 98-01-014, § 16-664-040, filed 12/5/97, effective 1/5/97; 97-12-076, § 16-664-040, filed 6/4/97, effective 7/5/97.]

WAC 16-750-025 Plant monitor list—Purpose. The purpose of the monitor list is to gather more information on suspect weeds as well as monitor for occurrence or spread. Information collected may be used to justify future inclusion on the state noxious weed list. There is no regulatory aspect to this list. Reasons for plant inclusion on the monitor list include:

(2) Additional information is needed on distribution, abundance, or biology.

(3) The species was once present in Washington and on the state noxious weed list. It is now being monitored for reoccurrence.

(4) There is need to verify existence (site investigation), verify identification, and/or obtain voucher specimen.

(5) It exists in an adjacent state or province or occurs on an adjacent state or province's noxious weed list and is not known to occur in Washington.

Native species of Washington will not be included on the monitor list. Each weed included on the monitor list will be included by vote of the noxious weed committee. WAC 16-750-110 State noxious weed control board—Mission. The mission of the board is to serve as responsible stewards of Washington by protecting and preserving the land and resources from the degrading impact of noxious weeds.

(2001 Ed.)

The board believes that prevention is the best approach and may be achieved through full implementation of the intent of the state noxious weed law. To further that, the board strives for enhanced public awareness through improved educational efforts.

The board does not deal directly in control activities but rather works to achieve this end through others. For that reason, the board seeks to improve communication, gain cooperation, and improve coordination of the efforts for noxious weed control.

The board believes noxious weed control is best carried out by strong, adequately funded programs at the local level. To achieve this, the board strives to build public support for local programs and to empower those programs to be more successful.

[Statutory Authority: Chapter 17.10 RCW. 98-24-026, § 16-750-110, filed 11/23/98, effective 1/2/99; 93-01-004, § 16-750-110, filed 12/2/92, effective 1/2/93.]

WAC 16-752-300 Establishing quarantine. Yellow nutsedge (*Cyperus esculentus* L.) is a herbaceous perennial that is one of the most serious noxious weeds of agronomic crops. It propagates by seed, rhizomes, bulbs, and nutlets. Soil containing nutlets is the primary mode of spread in cultivated land. It is highly invasive and its unchecked spread would entail great economic loss to the agricultural industries of the state. It is a class B noxious weed designated for control in Cowlitz and Thurston counties (WAC 16-750-011(33)(a)). Yellow nutsedge infests a dredging spoil site at the Port of Kalama in Kalama, Washington and a plant nursery site at the Port of Olympia in Tumwater, Washington. Movement of material from these sites initiates additional infestations. RCW 17.10.210 provides that either the director or the county noxious weed control board or a weed district may issue an order for quarantine and restriction or denial of access to land determined to be so seriously infested that control measures cannot be undertaken without quarantine of the land. The director has determined:

(1) That the identified sites are so seriously infested as to require quarantine; and

(2) That the movement of contaminated materials from these sites presents an immediate threat of infestation to the rest of the county agricultural and nonagricultural areas; and

(3) That the restriction of such spread is critical to control efforts.

LYTHRUM QUARANTINE

WAC 16-752-400 Establishing quarantine. The Lythrum species (Purple loosestrife) is an aggressive, semi-aquatic, herbaceous perennial weed that has infested wetlands in the state of Washington causing serious harm to native plants and destroying habitat for birds and small mammals. Some varieties of loosestrife are cultivated and sold as nursery stock in the horticultural industry. The director of agriculture, pursuant to the powers provided in chapter 17.24 RCW and RCW 17.10.074 (1)(c), and chapter 15.13 RCW, has determined that the regulation and exclusion of this plant, plant parts, and seeds is necessary to preserve Washington wetlands from further infestation.

WETLAND AND AQUATIC WEED QUARANTINE

WAC 16-752-500 Establishing wetland and aquatic weed quarantine. Washington waters and wetlands are threatened by nonnative, aggressive weeds that destroy the commercial, aesthetic, fish and/or wildlife habitat, and recreational value of these areas. African elodea, Brazilian elodea (or egeria), Eurasian watermilfoil, fanwort, slender-leaved naiad, hydrilla and water chestnut (a different species from the food "water chestnut" commonly sold in grocery stores) are submersed species that can invade shallow to deep water. Parrotfeather, water primrose, and yellow floating heart are rooted plants that invade shallow water and aquatic margins. European frogbit and swollen bladderwort are freely floating species. These species, when established, form dense mats that will clog irrigation systems and waterways, displace native species, alter fish and wildlife habitat, and seriously impact recreational use of the waterways.

[Title 16 WAC—p. 597]

Garden loosestrife, hairy willow herb, grass-leaved arrowhead, mud mat, marsh dew flower and flowering rush are rooted plants which invade wetlands, shallow water and aquatic margins. When established, their dense stands displace native vegetation and harm wildlife habitat.

Salt meadow cordgrass, common cordgrass, and smooth cordgrass are noxious weeds that have invaded salt water estuarine areas on the Washington coast displacing native species, threatening bird and mammal habitats and the shellfish industry. Dense-flowered cordgrass, a closely related species, has potential to duplicate this invasion.

The director of agriculture, pursuant to the powers provided in chapters 17.10, 15.13 and 17.24 RCW, finds that the regulation and exclusion of these plants and plant parts are necessary to preserve Washington waters and wetlands, both fresh water and estuarine, from new or additional infestation. These requirements and restrictions, contained in WAC 16-752-500 through 16-752-525, are in addition to the requirements contained in WAC 232-12-271, "Criteria for planting aquatic plants and releasing wildlife," administered by the Washington state department of fish and wildlife.

No permit is required to transport plants or plant parts, as a part of a noxious weed control activity, to a sanitary landfill, to be burned, or otherwise for disposition, if such activities are conducted under the supervision of an official weed control agency or other public agency with management responsibilities for the control efforts and are conducted in such a manner that seed dispersal or dispersal of propagative materials to uninfested areas is prevented. NOXIOUS WEED SEED AND PLANT QUARANTINE

WAC 16-752-600 Establishing the noxious weed seed and plant quarantine. Washington agriculture, environmental quality and natural resources are threatened by non-native, aggressive species of noxious weeds. A number of these noxious weeds are transported and sold within the state of Washington both as nursery plants and as seeds in packets of flower seeds or "wildflower mixes." Subsequent "escape" of these ornamentals has been a documented source of a number of infestations and has resulted in large public and private expenditures by landowners and land managers, weed boards, and weed districts and the department of agriculture to achieve the control mandated in chapter 17.10 RCW. The director of agriculture, pursuant to the powers provided in chapters 17.10 and 17.24 RCW, finds that regulation of the sale of these seed packets and plants is necessary to protect Washington agriculture and natural resources and prevent public and private costs of control.

Note: For rules prescribing the limits of prohibited and restricted noxious weed seeds as contaminants in certified seed, see WAC 16-300-010 through 16-300-025.

PURPLE NUTSEDGE QUARANTINE

WAC 16-752-700 Establishing quarantine for purple nutsedge. Purple nutsedge (*Cyperus rotundus*) is a highly invasive, herbaceous perennial and is commonly considered one of the most serious noxious weeds in agronomic crops in the world. Purple nutsedge propagates by seed, rhizomes, bulbs and nutlets. Soil containing nutlets is the primary mode by which purple nutsedge spreads. The establishment of purple nutsedge in Washington would cause reduction in native vegetation and great economic loss to the agricultural industries of the state. The director of agriculture, pursuant to authorities in chapter 17.24 RCW, RCW 17.10.074 (1)(c) and chapter 15.13 RCW, has determined that the regulation and exclusion of purple nutsedge and its parts, seeds, rhizomes, bulbs and nutlets is necessary to protect the environmental quality and agricultural crops of the state of Washington.

[Title 16 WAC—p. 600]

[Statutory Authority: Chapters 15.13 and 17.24 RCW and RCW 17.10.074 (1)(c). 00-02-033, § 16-752-700, filed 12/29/99, effective 1/29/00.]

WAC 16-752-705 What articles are regulated under the quarantine of purple nutsedge and what do you need to ship regulated articles into Washington? (1) All plants or plant parts, including seeds and propagules, of purple nutsedge (*Cyperus rotundus*).

(2) Any of the following articles entering the state of Washington from the states of Alabama, Arizona, Arkansas, California, Florida, Georgia, Hawaii, Kentucky, Louisiana, Maryland, Mississippi, New Jersey, New York, North Carolina, Oklahoma, Pennsylvania, South Carolina, Tennessee, Texas and Virginia, the territories of Puerto Rico and the Virgin Islands, and any other state, territory or district of the United States where purple nutsedge is found are regulated under this quarantine as hosts or possible carriers of purple nutsedge:

(a) All plants with roots, including planting medium and containers, except house plants;

(b) Soil, humus, compost or manure, except for commercially packaged products;

(c) Sod;

(d) Plant crowns, tubers or roots for propagation; and

(e) Any other article or means of conveyance, when it is determined by the department to present a hazard of spreading live purple nutsedge due to infestation or exposure to infestation.

(3) Shipment of the regulated articles described in subsection (2) of this section into or within the state of Washington must be accompanied by a certificate of inspection issued by an authorized state or federal regulatory authority from the state or entity of origin. The certificate of inspection must certify that the regulated article(s) has been inspected and found free of purple nutsedge and its plant parts, seeds, rhizomes, bulbs and nutlets.

WAC 16-752-710 Acts prohibited by this purple nutsedge quarantine. (1) Except under the terms of a compliance agreement with the department, the movement into or within the state of Washington of the following is prohibited:

(a) All purple nutsedge plants and purple nutsedge plant parts, including seeds and propagules; and

(b) Soil, humus, compost, bark, sawdust, ground wood products or manure contaminated with purple nutsedge seed, rhizomes, bulbs or nutlets.

(2) Planting or propagation of purple nutsedge is prohibited.

(3) Shipment of any of the regulated articles described in WAC 16-752-705(2) into or within the state of Washington without a certificate of inspection issued in accordance with WAC 16-752-705(3) is prohibited.

(4) The department may issue permits allowing actions otherwise prohibited under this section subject to the department's conditions and provisions necessary to prevent the introduction, escape or spread of purple nutsedge as prescribed in the permits.
