(8) Facilities are near handwashing facilities and within one-quarter mile of each employee's worksite in the field.

Exception: Where it is not feasible to locate facilities as required above, the facilities must be located at the point of closest vehicular access.

Part II
Personal Protective Equipment

WAC 296-307-100  Personal protective equipment.

[97-09-013, recodified as § 296-307-100, filed 4/7/97, effective 4/7/97. Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-100, filed 10/31/96, effective 12/1/96.]

WAC 296-307-10005 Who must provide personal protective equipment? (1) You must ensure that employees are protected from injury or impairment of any bodily function that might occur through absorption, inhalation or physical contact of any substance, vapor, radiation, or physical hazard. Wherever appropriate, you must ensure that employees use protective clothing; respiratory devices; shields; barriers; and adequate protective equipment for eyes, face, head, and extremities.

(2) You must provide personal protective equipment at no cost to employees, including replacement due to normal wear and tear. The equipment must be maintained in sanitary and reliable condition.

Exception: You may require employees to provide their own normal work clothing, including long-sleeved shirts, long-legged pants, and socks.

(3) If employees provide their own protective equipment, then you must ensure that the equipment is adequate, properly maintained, and sanitary.

WAC 296-307-10010 What requirements apply to eye protection? You must require eye protection wherever employees are exposed to flying objects, welding or cutting glare, injurious liquids, or injurious radiation. Eye protectors must meet the criteria of the American National Standard for Occupational and Educational Eye and Face Protection.

[Title 296 WAC—p. 2392]

WAC 296-307-10015 How must personal protective equipment be used? (1) You must ensure that employees use personal protective equipment according to the manufacturer's instructions.

(2) You must ensure that, before each use, employees inspect all personal protective equipment for leaks, holes, tears, or worn places, and any damaged equipment is repaired or discarded.

(3) The employee must use personal protective equipment according to instructions and training received.

(4) The employee shall notify you of any defects in personal protective equipment or when the equipment becomes contaminated.

WAC 296-307-10020 What must an employer do to prevent heat-related illness? You must take appropriate measures to prevent heat-related illness that may be caused by employees wearing any required personal protective equipment.

WAC 296-307-10025 What instruction on personal protective equipment must an employer give to employees? You must instruct each employee in the proper use of personal protective equipment. The instruction must include any special limitations or precautions indicated by the manufacturer.

Part I
Pesticides
(Worker Protection Standard)

WAC 296-307-107 Federal worker protection standards—Washington state department of agriculture. This part contains the federal Environmental Protection Agency worker protection standards as listed in 40 CFR, Part 170. Revisions to the federal language have been incorporated into this chapter in order to be consistent with other requirements of Washington state law. These rules are adopted in conjunction with rules adopted by the Washington state department of agriculture in chapter 16-233 WAC.

WAC 296-307-110 Scope and purpose—Worker protection standards—40 CFR, § 170.1. This part contains standards designed to reduce the risks of illness or injury
resulting from workers' and handlers' occupational exposures to pesticides used in the production of agricultural plants on farms or in nurseries, greenhouses, and forests and also to reduce the accidental exposure of workers and other persons to such pesticides. It requires workplace practices designed to reduce or eliminate exposure to pesticides and establishes procedures for responding to exposure-related emergencies.

[WAC 296-307-11005 Definitions—Worker protection standards—40 CFR, § 170.3. Terms used in this part have the same meanings they have in the Federal Insecticide, Fungicide, and Rodenticide Act, as amended. In addition, the following terms, when used in this part, shall have the following meanings:

"Agricultural emergency" means a sudden occurrence or set of circumstances which the agricultural employer could not have anticipated and over which the agricultural employer has no control, and which requires entry into a pesticide treated area during a restricted-entry interval, when no alternative practices would prevent or mitigate a substantial economic loss.

"Agricultural employer" means any person who hires or contracts for the services of workers, for any type of compensation, to perform activities related to the production of agricultural plants, or any person who is an owner of or is responsible for the management or condition of an agricultural establishment that uses such workers.

Note: This definition does not conflict with the definition of employer in WAC 296-307-012.

"Agricultural establishment" means any farm, forest, nursery, or greenhouse.

"Agricultural plant" means any plant grown or maintained for commercial or research purposes and includes, but is not limited to, food, feed, and fiber plants; trees; turfgrass; flowers, shrubs; ornamentals; and seedlings.

"Animal premise" means the actual structure used to house, cage or confine animals such as: Barns, poultry houses, mink sheds, corrals, or structures used for shelter.

"Chemigation" means the application of pesticides through irrigation systems.

"Commercial pesticide handling establishment" means any establishment, other than an agricultural establishment, that:

• Employs any person, including a self-employed person, to apply on an agricultural establishment, pesticides used in the production of agricultural plants.

• Employs any person, including a self-employed person, to perform on an agricultural establishment, tasks as a crop advisor.

"Crop advisor" means any person who is assessing pest numbers or damage, pesticide distribution, or the status or requirements of agricultural plants and who holds a current Washington state department of agriculture commercial consultant license in the agricultural areas in which they are advising. The term does not include any person who is performing hand labor tasks.

"Early entry" means entry by a worker into a treated area on the agricultural establishment after a pesticide application is complete, but before any restricted-entry interval for the pesticide has expired.

"Farm" means any operation, other than a nursery or forest, engaged in the outdoor production of agricultural plants.

"Forest" means any operation engaged in the outdoor production of any agricultural plant to produce wood fiber or timber products.

"Fumigant" means any pesticide product that is a vapor or gas, or forms a vapor or gas on application, and whose method of pesticidal action is through the gaseous state.

"Greenhouse" means any operation engaged in the production of agricultural plants inside any structure or space that is enclosed with nonporous covering and that is of sufficient size to permit worker entry. This term includes, but is not limited to, polyhouses, mushroom houses, rhubarb houses, and similar structures. It does not include such structures as malls, atriums, conservatories, arboretums, or office buildings where agricultural plants are present primarily for aesthetic or climatic modification.

"Hand labor" means any agricultural activity performed by hand or with hand tools that causes a worker to have substantial contact with surfaces (such as plants, plant parts, or soil) that may contain pesticide residues. These activities include, but are not limited to, harvesting, detasseling, thinning, weeding, topping, planting, sucker removal, pruning, disbudding, roguing, and packing produce into containers in the field. Hand labor does not include operating, moving, or repairing irrigation or watering equipment or performing the tasks of crop advisors.

"Handler" means any person, including a self-employed person:

• Who is employed for any type of compensation by an agricultural establishment or commercial pesticide handling establishment to which WAC 296-307-130 applies and who is:
  ■ Mixing, loading, transferring, or applying pesticides.
  ■ Disposing of pesticides or pesticide containers.
  ■ Handling opened containers of pesticides.
  ■ Acting as a flagger.
  ■ Cleaning, adjusting, handling, or repairing the parts of mixing, loading, or application equipment that may contain pesticide residues.
  ■ Assisting with the application of pesticides.
  ■ Entering a greenhouse or other enclosed area after application and before the inhalation exposure level listed in the labeling has been reached or one of the ventilation criteria established by WAC 296-307-12015 (3)(c) or in the labeling has been met:
    ✦ To operate ventilation equipment.
    ✦ To adjust or remove coverings used in fumigation.
    ✦ To monitor air levels.
  ■ Entering a treated area outdoors after application of any soil fumigant to adjust or remove soil coverings such as tarpaulins.
    ■ Performing tasks as a crop advisor:
      ✦ During any pesticide application.
      ✦ Before the inhalation exposure level listed in the labeling has been reached or one of the ventilation criteria estab-
lished by WAC 296-307-12015 (3)(c) or in the labeling has been met.

- During any restricted-entry interval.
- The term does not include any person who is only handling pesticide containers that have been emptied or cleaned according to pesticide product labeling instructions or, in the absence of such instructions, have been subjected to triple-rinsing or its equivalent.

"Handler employer" means any person who is self-employed as a handler or who employs any handler, for any type of compensation.

"Immediate family" includes only spouse, children, stepchildren, foster children, parents, stepparents, foster parents, brothers, and sisters.

"Nursery" means any operation engaged in the outdoor production of any agricultural plant to produce cut flowers and ferns or plants that will be used in their entirety in another location. Such plants include, but are not limited to, flowering and foliage plants or trees; tree seedlings; live Christmas trees; vegetable, fruit, and ornamental transplants; and turfgrass produced for sod.

"Owner" means any person who has a present possessory interest (fee, leasehold, rental, or other) in an agricultural establishment covered by this chapter. A person who has both leased such agricultural establishment to another person and granted that same person the right and full authority to manage and govern the use of such agricultural establishment is not an owner for purposes of this part.

"Restricted-entry interval" means the time after the end of a pesticide application during which entry into the treated area is restricted.

"Substantial economic loss" means a loss in profitability greater than that which would be expected based on the experience and fluctuations of crop yields in previous years. Only losses caused by the agricultural emergency specific to the affected site and geographic area are considered. The contribution of mismanagement cannot be considered in determining the loss.

"Treated area" means any area to which a pesticide is being directed or has been directed.

"Worker" means any person, including a self-employed person, who is employed for any type of compensation and who is performing activities relating to the production of agricultural plants on an agricultural establishment to which WAC 296-307-120 applies. While persons employed by a commercial pesticide handling establishment are performing tasks as crop advisors, they are not workers covered by the requirements of WAC 296-307-120.

(b) Assure that any pesticide to which WAC 296-307-130 applies is used in a manner consistent with the labeling of the pesticide, including the requirements of this part.

(c) Provide, to each person who supervises any worker or handler, information and directions sufficient to assure that each worker or handler receives the protections required by this part. Such information and directions shall specify which persons are responsible for actions required to comply with this part.

(d) Require each person who supervises any worker or handler to assure compliance by the worker or handler with the provisions of this part and to assure that the worker or handler receives the protections required by this part.

(2) Prohibited actions. The agricultural employer or the handler employer shall not take any retaliatory action for attempts to comply with this part or any action having the effect of preventing or discouraging any worker or handler from complying or attempting to comply with any requirement of this part.

(1) General duties. The agricultural employer or the handler employer, as appropriate, shall:

(a) Assure that each worker subject to WAC 296-307-120 or each handler subject to WAC 296-307-130 receives the protections required by this part.

(b) Assure that any pesticide to which WAC 296-307-130 applies is used in a manner consistent with the labeling of the pesticide, including the requirements of this part.

(c) Provide, to each person who supervises any worker or handler, information and directions sufficient to assure that each worker or handler receives the protections required by this part. Such information and directions shall specify which persons are responsible for actions required to comply with this part.

(d) Require each person who supervises any worker or handler to assure compliance by the worker or handler with the provisions of this part and to assure that the worker or handler receives the protections required by this part.

(1) RCW 15.58.150 (2)(c) provides that it is unlawful for any person "... to use or cause to be used any pesticide contrary to label directions ..." When 40 CFR, Part 170 is referenced on a label, users must comply with all of its requirements except those that are inconsistent with product specific instructions on the labeling. For purposes of this chapter, the term "use" is interpreted to include:

(a) Preapplication activities, including, but not limited to:

(i) Arranging for the application of the pesticide;
(ii) Mixing and loading the pesticide; and
(iii) Making necessary preparations for the application of the pesticide, including responsibilities related to worker notification, training of handlers, decontamination, use and care of personal protective equipment, emergency information, and heat stress management.

(b) Application of the pesticide.

(c) Post-application activities necessary to reduce the risks of illness and injury resulting from handlers' and workers' occupational exposures to pesticide residues during the restricted-entry interval plus thirty days. These activities include, but are not limited to, responsibilities related to worker training, notification, and decontamination.

(d) Other pesticide-related activities, including, but not limited to, providing emergency assistance, transporting or storing pesticides that have been opened, and disposing of excess pesticides, spray mix, equipment wash waters, pesticide containers, and other pesticide-containing materials.

(2) A person who has a duty under this chapter, as referenced on the pesticide product label, and who fails to perform that duty, violates RCW 15.58.330 and 17.21.315, and is subject to civil penalties under RCW 15.58.335, 15.58.260 and 17.21.315.
(3) FIFRA section 14 (b)(4) provides that a person is liable for a penalty under FIFRA if another person employed by or acting for that person violates any provision of FIFRA.

The term "acting for" includes both employment and contractual relationships.

(4) The requirements of this chapter, including the decontamination requirements, shall not, for the purposes of section 653 (b)(1) of Title 29 of the U.S. Code, be deemed to be the exercise of statutory authority to prescribe or enforce standards or regulations affecting the general sanitary hazards addressed by Field Sanitation, WAC 296-307-095, or other agricultural, nonpesticide hazards.

[Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-20-082, § 296-306A-120, filed 9/30/96, effective 11/1/96.]

**Standard for Workers**

**WAC 296-307-12005 Exceptions—Standards for workers—40 CFR, § 170.103.** This section does not apply when any pesticide is applied on an agricultural establishment in the following circumstances:

(1) For mosquito abatement, Mediterranean fruit fly eradication, or similar wide-area public pest control programs sponsored by governmental entities.

(2) On livestock or other animals, or in or about animal premises.

(3) On plants grown for other than commercial or research purposes, which may include plants in habitations, home fruit and vegetable gardens, and home greenhouses.

(4) On plants that are in ornamental gardens, parks, and public or private lawns and grounds that are intended only for aesthetic purposes or climatic modification.

(5) By injection directly into agricultural plants. Direct injection does not include "hack and squirt," "frill and spray," chemigation, soil-incorporation, or soil-injection.

(6) In a manner not directly related to the production of agricultural plants, including, but not limited to, structural pest control, control of vegetation along rights of way and in other noncrop areas, and pasture and rangeland use.

(7) For control of vertebrate pests.

(8) As attractants or repellents in traps.

(9) On the harvested portions of agricultural plants or on harvested timber.

(10) For research uses of unregistered pesticides.

(2007 Ed.)

**WAC 296-307-12010 Exemptions—Standards for workers—40 CFR, § 170.104.** The workers listed in this section are exempt from the specified provisions of WAC 296-307-120.

(1) Owners of agricultural establishments.

(a) The owner of an agricultural establishment is not required to provide to himself/herself or members of his/her immediate family who are performing tasks related to the production of agricultural plants on their own agricultural establishment the protections of:

(i) WAC 296-307-12020 (3)(e) through (i);

(ii) WAC 296-307-12020 (3)(e) through (i); as referenced in WAC 296-307-12020 (4)(b)(iii) and (5);

(iii) WAC 296-307-12025;

(iv) WAC 296-307-12030;

(v) WAC 296-307-12040;

(vi) WAC 296-307-12045;

(vii) WAC 296-307-12050;

(viii) WAC 296-307-12055.

(b) The owner of the agricultural establishment must provide the protections listed in (a)(i) through (viii) of this subsection to other workers and other persons who are not members of his/her immediate family.

(2) Crop advisors.

(a) Provided that the conditions of this section are met, a person who is certified or licensed as a crop advisor by a program acknowledged as appropriate in writing by EPA or a state or tribal lead agency for pesticide enforcement, and persons performing crop advising tasks under such qualified crop advisor's direct supervision, are exempt from the provisions of:

(i) WAC 296-307-12050.

(ii) WAC 296-307-12055.

A person is under the direct supervision of a crop advisor when the crop advisor exerts the supervisory controls set out in (b)(iii) and (iv) of this subsection. Direct supervision does not require that the crop advisor be physically present at all times, but the crop advisor must be readily accessible to the employees at all times.

(b) Conditions of exemption.

(i) The certification or licensing program requires pesticide safety training that includes, at least, all the information in WAC 296-307-13025 (3)(d).

(ii) Applies only when performing crop advising tasks in the treated area.

(iii) The crop advisor must make specific determinations regarding the appropriate PPE, appropriate decontamination supplies, and how to conduct the tasks safely. The crop advisor must convey this information to each person under his/her direct supervision in a language that the person understands.

(iv) Before entering a treated area, the certified or licensed crop advisor must inform, through an established practice of communication, each person under his/her direct supervision of the pesticide product and active ingredient(s) applied, method of application, time of application, the restricted entry interval which tasks to undertake, and how to contact the crop advisor.

[Title 296 WAC—p. 2395]
WAC 296-307-12015 Restrictions associated with pesticide applications—Standards for workers—40 CFR, § 170.110. (1) Farms and forests. During the application of any pesticide on a farm or in a forest, the agricultural employer shall not allow or direct any person, other than an appropriately trained and equipped handler, to enter or to remain in the treated area.

(2) Nurseries. In a nursery, during any pesticide application described in column A of Table 1 of this section, the agricultural employer shall not allow or direct any person, other than an appropriately trained and equipped handler, to enter or to remain in the area specified in column B of Table 1 of this section. After the application is completed, until the end of any restricted-entry interval, the entry-restricted area is the treated area.

Table 1.—Entry-Restricted Areas in Nurseries During Pesticide Applications

<table>
<thead>

</table>

(a) After the application of any pesticide on an agricultural establishment, the agricultural employer shall not allow or direct any worker to enter or to remain in the treated area before the restricted-entry interval specified on the pesticide labeling has expired, except as provided in this section.

(b) Entry-restricted areas in greenhouses are specified in column D in Table 2 under WAC 296-307-12015 (3)(d).

(c) When two or more pesticides are applied at the same time, the restricted-entry interval shall be the longest of the applicable intervals.

(d) The agricultural employer shall assure that any worker who enters a treated area under a restricted-entry interval as permitted by subsections (3), (4), and (5) of this section uses the personal protective equipment specified in the product labeling for early entry workers and follows any other requirements on the pesticide labeling regarding early entry.

(2) Exception for activities with no contact. A worker may enter a treated area during a restricted-entry interval if the agricultural employer assures that both of the following are met:

(a) The worker will have no contact with anything that has been treated with the pesticide to which the restricted-entry interval applies, including, but not limited to, soil, water, air, or surfaces of plants; and

(b) No such entry is allowed until any inhalation exposure level listed in the labeling has been reached or any ventilation criteria established by WAC 296-307-12015 (3)(c) or in the labeling have been met.

(3) Exception for short-term activities. A worker may enter a treated area during a restricted-entry interval for short-term activities if the agricultural employer assures that the following requirements are met:

(a) No hand labor activity is performed.

(b) The time in treated areas under a restricted-entry interval for any worker does not exceed one hour in any twenty-four-hour period.

(c) No such entry is allowed for the first four hours following the end of the application, and no such entry is allowed thereafter until any inhalation exposure level listed in the labeling has been reached or any ventilation criteria established by WAC 296-307-12015 (3)(c) or in the labeling have been met.

(d) The personal protective equipment specified on the product labeling for early entry is provided to the worker. Such personal protective equipment shall conform to the following standards:

(i) Personal protective equipment (PPE) means devices and apparel that are worn to protect the body from contact...
with pesticides or pesticide residues, including, but not limited to, coveralls, chemical-resistant suits, chemical-resistant gloves, chemical-resistant footwear, respiratory protection devices, chemical-resistant aprons, chemical-resistant headgear, and protective eyewear.

(ii) Long-sleeved shirts, short-sleeved shirts, long pants, short pants, shoes, socks, and other items of work clothing are not considered personal protective equipment for the purposes of this section and are not subject to the requirements of this section, although pesticide labeling may require that such work clothing be worn during some activities.

(iii) When "chemical-resistant" personal protective equipment is specified by the product labeling, it shall be made of material that allows no measurable movement of the pesticide being used through the material during use.

(iv) When "waterproof" personal protective equipment is specified by the product labeling, it shall be made of material that allows no measurable movement of water or aqueous solutions through the material during use.

(v) When a "chemical-resistant suit" is specified by the product labeling, it shall be a loose-fitting, one-piece or two-piece, chemical-resistant garment that covers, at a minimum, the entire body except head, hands, and feet.

(vi) When "coveralls" are specified by the product labeling, they shall be a loose-fitting, one-piece or two-piece garment, such as a cotton or cotton and polyester coverall, that covers, at a minimum, the entire body except head, hands, and feet. The pesticide product labeling may specify that the coveralls be worn over a layer of clothing. If a chemical-resistant suit is substituted for coveralls, it need not be worn over a layer of clothing.

(vii) Gloves shall be of the type specified by the product labeling. Gloves or glove linings made of leather, cotton, or other absorbent materials must not be worn for early entry activities unless these materials are listed on the product labeling as acceptable for such use. If chemical-resistant gloves with sufficient durability and suppleness are not obtainable for tasks with roses or other plants with sharp thorns, leather gloves may be worn over chemical-resistant liners. However, once leather gloves have been worn for this use, thereafter they shall be worn only with chemical-resistant liners and they shall not be worn for any other use.

(viii) When "chemical-resistant footwear" is specified by the product labeling, it shall be one of the following types of footwear: Chemical-resistant shoes, chemical-resistant boots, or chemical-resistant shoe coverings worn over shoes or boots. If chemical-resistant footwear with sufficient durability and a tread appropriate for wear in rough terrain is not obtainable for workers, then leather boots may be worn in such terrain.

(ix) When "protective eyewear" is specified by the product labeling, it shall be one of the following types of eyewear: Goggles; face shield; safety glasses with front, brow, and temple protection; or a full-face respirator.

(x) When "chemical-resistant headgear" is specified by the product labeling, it shall be either a chemical-resistant hood or a chemical-resistant hat with a wide brim.

(e) The agricultural employer shall assure that the worker, before entering the treated area, either has read the product labeling or has been informed, in a manner that the worker can understand, of all labeling requirements related to human hazards or precautions, first aid, symptoms of poisoning, personal protective equipment specified for early entry, and any other labeling requirements related to safe use.

(f) The agricultural employer shall assure that:

(i) Workers wear the personal protective equipment correctly for its intended purpose and use personal protective equipment according to manufacturer's instructions.

(ii) Before each day of use, all personal protective equipment is inspected for leaks, holes, tears, or worn places, and any damaged equipment is repaired or discarded.

(iii) Personal protective equipment that cannot be cleaned properly is disposed of in accordance with any applicable federal, state, and local regulations.

(iv) All personal protective equipment is cleaned according to manufacturer's instructions or pesticide product labeling instructions before each day of reuse. In the absence of any such instructions, it shall be washed thoroughly in detergent and hot water.

(v) Before being stored, all clean personal protective equipment is dried thoroughly or is put in a well-ventilated place to dry.

(vi) Personal protective equipment contaminated with pesticides is kept separately and washed separately from any other clothing or laundry.

(vii) Any person who cleans or launders personal protective equipment is informed that such equipment may be contaminated with pesticides, of the potentially harmful effects of exposure to pesticides, and of the correct way(s) to handle and clean personal protective equipment and to protect themselves when handling equipment contaminated with pesticides.

(viii) All clean personal protective equipment is stored separately from personal clothing and apart from pesticide-contaminated areas.

(ix) Each worker is instructed how to put on, use, and remove the personal protective equipment and is informed about the importance of washing thoroughly after removing personal protective equipment.

(x) Each worker is instructed in the prevention, recognition, and first-aid treatment of heat-related illness.

(xi) Workers have a clean place(s) away from pesticide-storage and pesticide-use areas for storing personal clothing not in use; putting on personal protective equipment at the start of any exposure period; and removing personal protective equipment at the end of any exposure period.

(g) When personal protective equipment is required by the labeling of any pesticide for early entry, the agricultural employer shall assure that no worker is allowed or directed to perform the early entry activity without implementing, when appropriate, measures to prevent heat-related illness.

(h) During any early entry activity, the agricultural employer shall provide a decontamination site in accordance with WAC 296-307-1205.

(i) The agricultural employer shall not allow or direct any worker to wear home or to take home personal protective equipment contaminated with pesticides.

(4) Declaration of an agricultural emergency.

(a) The director of the Washington state department of agriculture may declare the existence of circumstances causing an agricultural emergency on a particular establishment or establishments.
(b) The director may declare an agricultural emergency based on the reasonably expected certainty of circumstances occurring based on weather or other forecasts that would create conditions that would normally be anticipated to cause an agricultural emergency.

(c) The agricultural employer may determine if the establishment under his/her control is subject to the agricultural emergency declared by the director.

(d) Emergency repair of equipment that is in use and sited within a pesticide treated area under a restricted-entry interval, such as frost protection devices, shall be considered to be an agricultural emergency. The conditions in WAC 16-228-655 shall be met.

(e) Activities that require immediate response such as fire suppression, relocation of greenhouse plants due to power failure, and similar conditions, shall be considered to be agricultural emergencies. The conditions in WAC 16-228-655 shall be met.

(5) Agricultural activities permitted under an agricultural emergency.

(a) A worker may enter a pesticide treated area under a restricted-entry interval in an agricultural emergency to perform tasks, including hand labor tasks, necessary to mitigate the effects of the agricultural emergency if the agricultural employer assures that all the following requirements are met:

(i) No entry is permitted for the first four hours after the pesticide application or the minimum reentry interval allowed by EPA for that product, whichever is less;

(ii) The personal protective equipment specified on the product labeling for early entry is provided to the worker;

(iii) The agricultural employer shall assure that the worker, before entering the treated area, either has read the product labeling or has been informed, in a manner the worker can understand, of all labeling requirements related to human hazards or precautions, first aid, symptoms of poisoning, personal protective equipment specified for early entry, and any other labeling requirements related to safe use;

(iv) The agricultural employer shall assure that the worker wears the proper PPE and that the PPE is in operable condition and that the worker has been trained in its proper use;

(v) The agricultural employer shall assure that measures have been taken, when appropriate, to prevent heat-related illness;

(vi) A decontamination site has been provided in accordance with EPA regulations;

(vii) The agricultural employer shall not allow or direct any worker to wear home or take home personal protective equipment contaminated with pesticides.

(b) If the agricultural emergency is due to equipment failure, then the agricultural employer shall assure that all the requirements in subsection (1) of this section are met plus the following additional requirement. The only permitted activity until the restricted-entry interval has elapsed is equipment repair that would mitigate the effect of the equipment failure.

(6) Recordkeeping required for agricultural emergencies.

(a) If the employer declares that his/her establishment is affected by an agricultural emergency and that activities regulated by the worker protection standard have been performed, the employer shall keep the following records for seven years from the date of the agricultural emergency:

(i) Date of the agricultural emergency;

(ii) Time of the agricultural emergency, start and end;

(iii) Reason for the agricultural emergency, such as frost, fire, equipment failure, etc.;

(iv) Crop/site;

(v) Pesticide(s) - name, EPA number, REI;

(vi) Name, date, time of entry and exit of early entry person(s);

(vii) Estimated potential of economic loss which would have occurred had no early entry been allowed.

(b) Records shall be completed within twenty-four hours of the early entry exposure and be available to the department and/or department of health and/or medical facility or treating physician if requested by the above or the employee.

(7) Exception to entry restrictions requiring EPA approval. EPA may in accordance with 40 CFR, Part 170.112(e) grant an exception from the requirements of this section. A request for an exception must be submitted to the Director, Office of Pesticide Programs (H-7501C), Environmental Protection Agency, 401 "M" Street SW, Washington, DC 20460 and must be accompanied by two copies of the information specified in 40 CFR, Part 170.112(e).

WAC 296-307-12025 Notice of applications—Standards for workers—40 CFR, § 170.120. (1) Notification to workers of pesticide applications in greenhouses. The agricultural employer shall notify workers of any pesticide application in the greenhouse in accordance with this subsection.

(a) All pesticide applications shall be posted in accordance with subsection (3) of this section.

(b) If the pesticide product labeling has a statement requiring both the posting of treated areas and oral notification to workers, the agricultural employer shall also provide oral notification of the application to the worker in accordance with subsection (4) of this section.

(c) Notice need not be given to a worker if the agricultural employer can assure that one of the following is met:

(i) From the start of the application until the end of the application and during any restricted-entry interval, the worker will not enter, work in, remain in, or pass through the greenhouse; or

(ii) The worker applied (or supervised the application of) the pesticide for which the notice is intended and is aware of all information required by subsection (4)(a) through (c) of this section.

(2) Notification to workers on farms, in nurseries, or in forests of pesticide applications. The agricultural employer shall notify workers of any pesticide application on the farm or in the nursery or forest in accordance with this subsection.

(a) If the pesticide product labeling has a statement requiring both the posting of treated areas and oral notification to workers, the agricultural employer shall post signs in accordance with subsection (3) of this section and shall pro-
provide oral notification of the application to the worker in accordance with subsection (4) of this section.

(b) For any pesticide other than those for which the labeling requires both posting and oral notification of applications, the agricultural employer shall give notice of the application to the worker either by the posting of warning signs in accordance with subsection (3) of this section or orally in accordance with subsection (4) of this section, and shall inform the workers as to which method of notification is in effect.

(c) Notice need not be given to a worker if the agricultural employer can assure that one of the following is met:

(i) From the start of the application until the end of the application and during any restricted-entry interval, the worker will not enter, work in, remain in, or pass through on foot the treated area or any area within one-quarter mile of the treated area; or

(ii) The worker applied (or supervised the application of) the pesticide for which the notice is intended and is aware of all information required by subsection (4)(a) through (c) of this section.

(3) Posted warning signs. The agricultural employer shall post warning signs in accordance with the following criteria:

(a) The warning sign shall have a background color that contrasts with red. The words "DANGER" and "PELIGRO," plus "PESTICIDES" and "PESTICIDAS," shall be at the top of the sign, and the words "KEEP OUT" and "NO ENTRA" shall be at the bottom of the sign. Letters for all words must be clearly legible. A circle containing an upraised hand on the left and a stern face on the right must be near the center of the sign. The inside of the circle must be red, except that the hand and a large portion of the face must be in a shade that contrasts with red. The length of the hand must be at least twice the height of the smallest letters. The length of the face must be only slightly smaller than the hand. Additional information such as the name of the pesticide and the date of application may appear on the warning sign if it does not detract from the appearance of the sign or change the meaning of the required information. A black and white example of a warning sign meeting these requirements, other than the size requirements, follows:

![DANGER PELIGRO PESTICIDES PESTICIDAS](image)

(b) The standard sign shall be at least fourteen inches by sixteen inches with letters at least one inch in height. Farms and forests shall use the standard size sign unless a smaller sign is necessary because the treated area is too small to accommodate a sign of this size. In nurseries and greenhouses, the agricultural employer may, at any time, use a sign smaller than the standard size sign. Whenever a small sign is used on any establishment, there are specific posting distances depending on the size of the lettering and symbol on the sign. If a sign is used with DANGER and PELIGRO in letters at least 7/8 inch in height and the remaining letters at least 1/2 inch and a red circle at least three inches in diameter containing an upraised hand and a stern face, the signs shall be no further than fifty feet apart. If a sign is used with DANGER and PELIGRO in letters at least 7/16 inch in height and the remaining letters at least 1/4 inch in height and a red circle at least 1 1/2 inches in diameter containing an upraised hand and stern face, the signs shall be no further than twenty-five feet apart. A sign with DANGER and PELIGRO in letters less than 7/16 inch in height or with any words in letters less than 1/4 inch in height, or a red circle smaller than 1 1/2 inches in diameter containing an upraised hand and a stern face will not satisfy the requirements of the rule. All signs must meet the requirements of (a) of this subsection.

(c) The employer may replace the Spanish portion of the warning sign with a non-English language read by the largest group of workers who do not read English. The replacement warning sign must be in the same format as the original sign and must be visible and legible.

(d) On farms and in forests and nurseries, the signs shall be visible from all usual points of worker entry to the treated area, including at least each access road, each border with any labor camp adjacent to the treated area, and each footpath and other walking route that enters the treated area. When there are no usual points of worker entry, signs shall be posted in the corners of the treated area or in any other location affording maximum visibility.

(e) In greenhouses, the signs shall be posted so they are visible from all usual points of worker entry to the treated area including each aisle or other walking route that enters the treated area. When there are no usual points of worker entry to the treated area, signs shall be posted in the corners of the treated area or in any other location affording maximum visibility.

(f) The signs shall:

(i) Be posted no sooner than twenty-four hours before the scheduled application of the pesticide.

(ii) Remain posted throughout the application and any restricted-entry interval.

(iii) Be removed within three days after the end of the application and any restricted-entry interval and before agricultural-worker entry is permitted, other than entry permitted by WAC 296-307-12020.

(g) The signs shall remain visible and legible during the time they are posted.

(h) When several contiguous areas are to be treated with pesticides on a rotating or sequential basis, the entire area may be posted. Worker entry, other than entry permitted by WAC 296-307-12020, is prohibited for the entire area while the signs are posted.
(4) Oral warnings. The agricultural employer shall provide oral warnings to workers in a manner that the worker can understand. If a worker will be on the premises during the application, the warning shall be given before the application takes place. Otherwise, the warning shall be given at the beginning of the worker's first work period during which the application is taking place or the restricted-entry interval for the pesticide is in effect. The warning shall consist of:

(a) The location and description of the treated area.
(b) The time during which entry is restricted.
(c) Instructions not to enter the treated area until the restricted-entry interval has expired.

WAC 296-307-12030 Providing specific information about applications—Standards for workers—40 CFR, § 170.122. When workers are on an agricultural establishment and, within the last thirty days, a pesticide covered by this part has been applied on the establishment or a restricted-entry interval has been in effect, the agricultural employer shall display, in accordance with this section, specific information about the pesticide.

(1) Location, accessibility, and legibility. The information shall be displayed in the location specified for the pesticide safety poster in WAC 296-307-12045(4) and shall be accessible and legible, as specified in WAC 296-307-12045(4) and (6).

(2) Timing.

(a) If warning signs are posted for the treated area before an application, the specific application information for that application shall be posted at the same time or earlier.
(b) The information shall be posted before the application takes place, if workers will be on the establishment during application. Otherwise, the information shall be posted at the beginning of any worker's first work period.
(c) The information shall continue to be displayed for at least thirty days after the end of the restricted-entry interval (or, if there is no restricted-entry interval, for at least thirty days after the end of the application) or at least until workers are no longer on the establishment, whichever is earlier.

(3) Required information. The information shall include:

(a) The location and description of the treated area.
(b) The product name, EPA registration number, and active ingredient(s) of the pesticide.
(c) The time and date the pesticide is to be applied.
(d) The restricted-entry interval for the pesticide.

WAC 296-307-12035 Notice of applications to handler employers—Standards for workers—40 CFR, § 170.124. Whenever handlers who are employed by a commercial pesticide handling establishment will be performing pesticide handling tasks on an agricultural establishment, the agricultural employer shall provide to the handler employer, or assure that the handler employer is aware of, the following information concerning any areas on the agricultural establishment that the handler may be in (or may walk within one-quarter mile of) and that may be treated with a pesticide or that may be under a restricted-entry interval while the handler will be on the agricultural establishment:

(1) Specific location and description of any such areas; and
(2) Restrictions on entering those areas.

(a) Agricultural employer assurance. The agricultural employer shall assure that each worker, required by this section to be trained, has been trained according to this section during the last five years, counting from the end of the month in which the training was completed.

Note: In addition to the training required by this section, the agricultural employer shall assure without exception, that all employees are trained in accordance with WAC 296-307-550, Employer chemical hazard communication.

(b) Requirement for workers performing early entry activities. Before a worker enters a treated area on the agricultural establishment during a restricted-entry interval to perform early entry activities permitted by WAC 296-307-12020 and contacts anything that has been treated with the pesticide to which the restricted-entry interval applies, including but not limited to, soil, water, or surfaces of plants, the agricultural employer shall assure that the worker has been trained.

(c) Requirements for other agricultural workers.

(i) Information before entry. Except as provided in (b) of this subsection, before a worker enters any areas on the agricultural establishment where, within the last thirty days a pesticide to which this part applies has been applied or the restricted-entry interval for such pesticide has been in effect, the agricultural employer shall assure that the worker has been provided the pesticide safety information specified in subsection (3) of this section, in a manner that agricultural workers can understand, such as by providing written materials or oral communication or by other means. The agricultural employer must be able to verify compliance with this requirement.

(ii) Training before the start of a work period. The agricultural employer shall assure that a worker has been trained before the worker enters any areas on the agricultural establishment where, within the last thirty days a pesticide to which this chapter applies has been applied or a restricted-entry interval for such pesticide has been in effect, the agricultural employer shall assure that the worker has been trained.

(2) Exceptions. The following persons need not be trained under this section:

(a) A worker who is currently certified as an applicator of restricted-use pesticides under chapter 17.21 RCW.
(b) A worker who satisfies the training requirements of chapter 17.21 RCW.
(c) A worker who satisfies the handler training requirements of WAC 296-307-13025(3).

(d) A worker who is certified or licensed as a crop advisor by the Washington state department of agriculture under RCW 15.58.230: Provided, That a requirement for such certification or licensing is pesticide safety training that includes all the information set out in WAC 296-307-13025 (3)(d).

(3) Training programs.

(a) General pesticide safety information shall be presented to workers either orally from written materials or audiovisually. The information must be presented in a manner that the workers can understand (such as through a translator) using nontechnical terms. The presenter also shall respond to workers' questions.

(b) The person who conducts the training shall meet at least one of the following criteria:

(i) Be currently certified as an applicator of restricted-use pesticides under chapter 17.21 RCW; or

(ii) Be currently designated as a trainer of certified applicators or pesticide handlers by the Washington state department of agriculture in accordance with chapters 15.58 and 17.21 RCW; or

(iii) Have completed a pesticide safety train-the-trainer program approved by the Washington state department of agriculture in accordance with chapters 15.58 and 17.21 RCW; or

(iv) Satisfy the training requirements in WAC 296-307-13025(3).

(c) Any person who issues a Washington state department of agriculture-approved Worker Protection Standard worker training card must assure that the worker who receives the training card has been trained in accordance with subsection (4)(d) of this section.

(d) The training materials shall convey, at a minimum, the following information:

(i) Where and in what form pesticides may be encountered during work activities.

(ii) Hazards of pesticides resulting from toxicity and exposure, including acute and chronic effects, delayed effects, and sensitization.

(iii) Routes through which pesticides can enter the body, including information on wearing work clothing that protects the body from pesticide residues.

(iv) Signs and symptoms of common types of pesticide poisoning.

(v) Emergency first aid for pesticide injuries or poisonings.

(vi) How to obtain emergency medical care.

(vii) Routine and emergency decontamination procedures, including preventing pesticides from entering the body by:

- Emergency eyeflushing techniques;
- Washing work clothes separately from other clothes before wearing them again;
- Washing before eating, drinking, using chewing gum or tobacco, or using the toilet;
- Washing/showering with soap and water, shampooing hair, and putting on clean clothes after work; and
- Washing immediately in the nearest clean water if pesticides are spilled on the body. As soon as possible shower, shampoo, and change into clean clothes.

(viii) Hazards from chemigation and drift.

(ix) Hazards from pesticide residues on clothing.

(x) Warnings about taking pesticides or pesticide containers home.

(xi) Requirements of this part designed to reduce the risks of illness or injury resulting from workers' occupational exposure to pesticides, including application and entry restrictions, the design of the warning sign, posting of warning signs, oral warnings, the availability of specific information about applications, and the protection against retaliatory acts.

(4) Verification of training.

(a) Except as provided in subsection (4)(b) of this section, if the agricultural employer assures that a worker possesses a Washington state department of agriculture-approved Worker Protection Standard worker training card, then the requirements of subsection (1) of this section will have been met.

(b) If the agricultural employer is aware or has reason to know that a Washington state department of agriculture-approved Worker Protection Standard worker training card has not been issued in accordance with this section, or has not been issued to the worker bearing the card, or the training was completed more than five years before the beginning of the current month, a worker's possession of that certificate does not meet the requirements of subsection (1) of this section.

WAC 296-307-12045 Posted pesticide safety information—Standards for workers—40 CFR, § 170.135. (1) Requirement. When workers are on an agricultural establishment and, within the last thirty days, a pesticide covered by this part has been applied on the establishment or a restricted-entry interval has been in effect, the agricultural employer shall display, in accordance with this section, pesticide safety information.

(2) Pesticide safety poster. A safety poster must be displayed that conveys, at a minimum, the following basic pesticide safety concepts:

(a) Help keep pesticides from entering your body. At a minimum, the following points shall be conveyed:

- Avoid getting on your skin or into your body any pesticide that may be on plants and soil, in irrigation water, or drifting from nearby applications.

- Wash before eating, drinking, using chewing gum or tobacco, or using the toilet.

- Wear work clothing that protects the body from pesticide residues (long-sleeved shirts, long pants, shoes and socks, and a hat or scarf).

- Wash/shower with soap and water, shampoo hair, and put on clean clothes after work.

- Wash work clothes separately from other clothes before wearing them again.

- Wash immediately in the nearest clean water if pesticides are spilled or sprayed on the body. As soon as possible, shower, shampoo, and change into clean clothes.

[Title 296 WAC—p. 2402]
(vii) Follow directions about keeping out of treated or restricted areas.
(b) There are federal rules to protect workers and handlers, including a requirement for safety training.
(3) Emergency medical care information.
(a) The name, address, and telephone number of the nearest emergency medical care facility shall be on the safety poster or displayed close to the safety poster.
(b) The agricultural employer shall inform workers promptly of any change to the information on emergency medical care facilities.
(4) Location.
(a) The information shall be displayed in a central location on the farm or in the nursery or greenhouse where it can be readily seen and read by workers.
(b) The information shall be displayed in a location in or near the forest in a place where it can be readily seen and read by workers and where workers are likely to congregate or pass by, such as at a decontamination site or an equipment storage site.
(5) Accessibility. Workers shall be informed of the location of the information and shall be allowed access to it.
(6) Legibility. The information shall remain legible during the time it is posted.

(1) Requirements. The agricultural employer must provide decontamination supplies for workers in accordance with this section whenever:
(a) Any worker on the agricultural establishment is performing an activity in the area where a pesticide was applied or a restricted-entry interval (REI) was in effect within the last thirty days; and
(b) The worker contacts anything that has been treated with the pesticide including but not limited to soil, water, plants, plant surfaces, and plant parts;
(c) Exception. The thirty-day time period established in (a) of this subsection shall not apply if the only pesticides used in the treated area are products with an REI of four hours or less on the label (but not a product without an REI on the label). When workers are in such treated areas, the agricultural employer shall provide decontamination supplies for not less than seven days following the expiration of any applicable REI.
(2) General conditions.
(a) The agricultural employer shall provide workers with adequate water for routine washing and emergency eye flushing. At all times when the water is available to workers, the employer shall assure that it is of a quality and temperature that will not cause illness or injury when it contacts the skin or eyes or if it is swallowed.
(b) When water stored in a tank is to be used for mixing pesticides, it shall not be used for decontamination or eye flushing, unless the tank is equipped with properly functioning valves or other mechanisms that prevent movement of pesticides into the tank.
(c) The agricultural employer shall provide soap and single-use towels in quantities sufficient to meet workers’ needs.
(d) To provide for emergency eyewashing, the agricultural employer shall assure that at least one pint of water is immediately available to each worker who is performing early entry activities permitted by WAC 296-307-12020 and for which the pesticide labeling requires protective eyewear. The eyewash water shall be carried by the early entry worker, or shall be on the vehicle the early entry worker is using, or shall be otherwise immediately accessible.
(3) Location.
(a) The decontamination supplies shall be located together and shall be reasonably accessible to and not more than one-quarter mile from where workers are working.
(b) For worker activities performed more than one-quarter mile from the nearest place of vehicular access:
(i) The soap, single-use towels, and water may be at the nearest place of vehicular access.
(ii) The agricultural employer may permit workers to use clean water from springs, streams, lakes, or other sources for decontamination at the remote work site, if such water is more accessible than the water located at the nearest place of vehicular access.
(c) The decontamination supplies shall not be in an area being treated with pesticides.
(d) The decontamination supplies shall not be maintained in an area that is under a restricted-entry interval, unless the workers for whom the decontamination supplies are provided are performing early entry activities permitted by WAC 296-307-12020 and involving contact with treated surfaces and the decontamination supplies would otherwise not be reasonably accessible to those workers.
(4) Decontamination after early entry activities. At the end of any exposure period for workers engaged in early entry activities permitted by WAC 296-307-12020 and involving contact with anything that has been treated with the pesticide to which the restricted-entry interval applies, including, but not limited to, soil, water, air, or surfaces of plants, the agricultural employer shall provide, at the site where the workers remove personal protective equipment, soap, clean towels, and a adequate amount of water so that the workers may wash thoroughly. At least ten gallons of water for one employee and twenty gallons of water for two or more employees shall be provided at early entry sites that do not have running water.

If there is reason to believe that a person who is or has been employed on an agricultural establishment to perform tasks related to the production of agricultural plants has been poisoned or injured by exposure to pesticides used on the agricultural establishment, including, but not limited to, exposures from application, splash, spill, drift, or pesticide residues, the agricultural employer shall:
(1) Make available to that person prompt transportation from the agricultural establishment, including any labor

[Title 296 WAC—p. 2403]
camp on the agricultural establishment, to an appropriate emergency medical facility.

(2) Provide to that person or to treating medical personnel, promptly upon request, any obtainable information on:

(a) Product name, EPA registration number, and active ingredients of any product to which that person might have been exposed.

(b) Antidote, first-aid, and other medical information from the product labeling.

(c) The circumstances of application or use of the pesticide on the agricultural establishment.

(d) The circumstances of exposure of that person to the pesticide.

Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.060. 96-20-082, § 296-306A-12055, filed 9/30/96, effective 11/1/96.

Standard for Pesticide Handlers

(1) Requirement. Except as provided by subsection (2) of this section, WAC 296-307-130 applies when any pesticide is handled for use on an agricultural establishment.

(2) Exceptions. WAC 296-307-130 does not apply when any pesticide is handled for use on an agricultural establishment in the following circumstances:

(a) For mosquito abatement, Mediterranean fruit fly eradication, or similar wide-area public pest control programs sponsored by governmental entities.

(b) On livestock or other animals, or in or about animal premises.

(c) On plants grown for other than commercial or research purposes, which may include plants in habitats, home fruit and vegetable gardens, and home greenhouses.

(d) On plants that are in ornamental gardens, parks, and public or private lawns and grounds and that are intended only for aesthetic purposes or climatic modification.

(e) In a manner not directly related to the production of agricultural plants, including, but not limited to, structural pest control, control of vegetation along rights of way and in other noncrop areas, and pasture and rangeland use.

(f) For control of vertebrate pests.

(g) As attractants or repellents in traps.

(h) On the harvested portions of agricultural plants or on harvested timber.

(i) For research uses of unregistered pesticides.

(j) Exemptions. Except as provided by WAC 296-307-130 and 296-307-13005, WAC 296-307-130 applies when a pesticide is handled for an agricultural establishment.

[Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.060. 96-20-082, § 296-306A-12055, filed 9/30/96, effective 11/1/96.]

Standard for Pesticide Handlers

WAC 296-307-13005 Exemptions—Standards for handlers—40 CFR, § 170.204. The handlers listed in this section are exempt from the specified provisions of this part.

(1) Owners of agricultural establishments.

(a) The owner of an agricultural establishment is not required to provide to himself or members of his immediate family who are performing handling tasks on their own agricultural establishment the protections of:

(i) WAC 296-307-13010 (2) and (3).

(ii) WAC 296-307-13015.

(iii) WAC 296-307-13025.

(iv) WAC 296-307-13030.

(v) WAC 296-307-13035.

(vi) WAC 296-307-13040.

(vii) WAC 296-307-13045 (5) through (7).

(viii) WAC 296-307-13050.

(ix) WAC 296-307-13055.

(b) The owner of the agricultural establishment must provide the protections listed in subsection (1)(a)(i) through (ix) of this section to other handlers and other persons who are not members of his immediate family.

(2) Crop advisors.

(a) That provided that the conditions of (b) of this subsection are met, a person who is certified or licensed as a crop advisor by the Washington state department of agriculture under RCW 15.58.230, and persons performing crop advising tasks under such qualified crop advisor's direct supervision, are exempt from the provisions of:

(i) WAC 296-307-13030.

(ii) WAC 296-307-13045.

(iii) WAC 296-307-13050.

(iv) WAC 296-307-13055.

A person is under the direct supervision of a crop advisor when the crop advisor exerts the supervisory controls set out in (b)(iv) and (v) of this subsection. Direct supervision does not require that the crop advisor be physically present at all times, but the crop advisor must be readily accessible to the employees at all times.

(b) Conditions of exemption.

(i) The certification or licensing program requires pesticide safety training that includes, at least, all the information in WAC 296-307-13025 (3)(d).

(ii) No entry into the treated area occurs until after application ends.

(iii) Applies only when performing crop advising tasks in the treated area.

(iv) The crop advisor must make specific determinations regarding the appropriate PPE, appropriate decontamination supplies, and how to conduct the tasks safely. The crop advisor must convey this information to each person under his direct supervision in a language that the person understands.

(v) Before entering a treated area, the certified or licensed crop advisor must inform, through an established practice of communication, each person under his direct supervision of the pesticide products and active ingredient(s) applied, method of application, time of application, the restricted-entry interval, which tasks to undertake, and how to contact the crop advisor.

(c) Applies only when the persons are performing crop advising tasks in the treated area.

(d) The crop advisor must make specific determinations regarding the appropriate PPE, appropriate decontamination supplies, and how to conduct the tasks safely. The crop advisor must convey this information to each person under his direct supervision in a language that the person understands.

[Title 296 WAC—p. 2404] (2007 Ed.)
WAC 296-307-13010 Restrictions during applications—Standards for pesticide handlers—40 CFR, §170.210. (1) Contact with workers and other persons. The handler employer and the handler shall assure that no pesticide is applied so as to contact, either directly or through drift, any worker or other person, other than an appropriately trained and equipped handler.

(2) Handlers handling highly toxic pesticides. The handler employer shall assure that any handler who is performing any handling activity with a product that has the skull and crossbones symbol on the front panel of the label is monitored visually or by voice communication at least every two hours.

(3) Fumigant applications in greenhouses. The handler employer shall assure:

(a) That any handler who handles a fumigant in a greenhouse, including a handler who enters the greenhouse before the acceptable inhalation exposure level or ventilation criteria have been met to monitor air levels or to initiate ventilation, maintains continuous visual or voice contact with another handler.

(b) That the other handler has immediate access to the personal protective equipment required by the fumigant labeling for handlers in the event entry into the fumigated greenhouse becomes necessary for rescue.

WAC 296-307-13025 Pesticide safety training—Standards for pesticide handlers—40 CFR, §170.222. When handlers (except those employed by a commercial pesticide handling establishment) are on an agricultural establishment and, within the last thirty days, a pesticide covered by this part has been applied on the establishment or a restricted-entry interval has been in effect, the handler employer shall display, in accordance with this section, specific information about the pesticide.

(1) Location, accessibility, and legibility. The information shall be displayed in the same location specified for the pesticide safety poster in WAC 296-307-13040(4) and shall be accessible and legible, as specified in WAC 296-307-13040 (5) and (6).

(2) Timing.

(a) If warning signs are posted for the treated area before an application, the specific application information for that application shall be posted at the same time or earlier.

(b) The information shall be posted before the application takes place, if handlers (except those employed by a commercial pesticide handling establishment) will be on the establishment during application. Otherwise, the information shall be posted at the beginning of any such handler's first work period.

(c) The information shall continue to be displayed for at least thirty days after the end of the restricted-entry interval (or, if there is no restricted-entry interval, for at least thirty days after the end of the application) or at least until the handlers are no longer on the establishment, whichever is earlier.

(3) Required information. The information shall include:

(a) The location and description of the treated area.

(b) The product name, EPA registration number, and active ingredient(s) of the pesticide.

(c) The time and date the pesticide is to be applied.

(d) The restricted-entry interval for the pesticide.

WAC 296-307-13020 Notice of applications to agricultural employers—Standards for pesticide handlers—40 CFR, §170.224. Before the application of any pesticide on or in an agricultural establishment, the handler employer shall provide the following information to any agricultural employer for the establishment or shall assure that any agricultural employer is aware of:

(1) Specific location and description of the treated area.

(2) Time and date of application.

(3) Product name, EPA registration number, and active ingredient(s).

(4) Restricted-entry interval.

(5) Whether posting and oral notification are required.

(6) Any other product-specific requirements on the product labeling concerning protection of workers or other persons during or after application.

WAC 296-307-13030 Pesticide safety training—Standards for pesticide handlers—40 CFR, §170.230. (1) Requirement. Before any handler performs any handling task, the handler employer shall assure that the handler has been trained in accordance with this section during the last five years, counting from the end of the month in which the training was completed.

Note: In addition to the training required by this section, the agricultural employer shall assure, without exception, that all employees are trained in accordance with WAC 296-307-550, Employer chemical hazard communication.

(2) Exceptions. The following persons need not be trained under this section:

(a) A handler who is currently certified as an applicator of restricted-use pesticides under chapter 17.21 RCW.

(b) A handler who is certified or licensed as a crop advisor by the Washington state department of agriculture under RCW 15.58.230: Provided, That a requirement for such certification or licensing is pesticide safety training that includes all the information set out in WAC 296-307-13025 (3)(d).

(3) Training programs.

(a) General pesticide safety information shall be presented to handlers either orally from written materials or audiovisually. The information must be presented in a manner that the handlers can understand (such as through a translator). The presenter also shall respond to handlers' questions.
(b) The person who conducts the training shall meet at
least one of the following criteria:
(i) Be currently certified as an applicator of restricted-use
pesticides under chapter 17.21 RCW; or
(ii) Be currently designated as a trainer of certified applica-
tors or pesticide handlers by the Washington state depart-
ment of agriculture under chapters 15.58 or 17.21 RCW; or
(iii) Have completed a pesticide safety training program approved by a state, federal, or tribal agency having jurisdic-
tion.

(c) Any person who issues a Washington state department
of agriculture-approved worker protection standard
handler training card must assure that the handler who
receives the training card has been trained in accordance with
(d) of this subsection.

(d) The pesticide safety training materials must convey,
at a minimum, the following information:
(i) Format and meaning of information contained on pes-
ticide labels and in labeling, including safety information
such as precautionary statements about human health haz-
ards.

(ii) Hazards of pesticides resulting from toxicity and
exposure, including acute and chronic effects, delayed
effects, and sensitization.

(iii) Routes by which pesticides can enter the body.
(iv) Signs and symptoms of common types of pesticide
poisoning.

(v) Emergency first aid for pesticide injuries or poison-
ings.

(vi) How to obtain emergency medical care.

(vii) Routine and emergency decontamination proce-
dures.

(viii) Need for and appropriate use of personal protective
equipment.

(ix) Prevention, recognition, and first-aid treatment of
heat-related illness.

(x) Safety requirements for handling, transporting, stor-
ing, and disposing of pesticides, including general procedures
for spill cleanup.

(xi) Environmental concerns such as drift, runoff, and
wildlife hazards.

(xii) Warnings about taking pesticides or pesticide con-
tainers home.

(xiii) Requirements of this part that must be followed by
handler employers for the protection of handlers and other
persons, including the prohibition against applying pesticides
in a manner that will cause contact with workers or other per-
sons, the requirement to use personal protective equipment,
the provisions for training and decontamination, and the pro-
tection against retaliatory acts.

(4) Verification of training.

(a) Except as provided in (b) of this subsection, if the
handler employer assures that a handler possesses a Wash-
ington state department of agriculture-approved worker pro-
tection standard handler training card, then the require-
ments of subsection (1) of this section will have been met.

(b) If the handler employer is aware or has reason to
know that a Washington state department of agriculture-
approved worker protection standard handler training card
has not been issued in accordance with this section, or has not
been issued to the handler bearing the card, or the handler
training was completed more than five years before the
beginning of the current month, a handler's possession of that
card does not meet the requirements of subsection (1) of this
section.

[Statutory Authority: RCW 49.17.010, [49.17.]040, and [49.17.]050. 01-17-
033, § 296-307-13025, filed 8/8/01, effective 9/1/01. Statutory Authority:

WAC 296-307-13030 Knowledge of labeling and site-
specific information—Standards for pesticide handlers—
(a) The handler employer shall assure that before the
handler performs any handling activity, the handler either has
read the product labeling or has been informed in a manner
the handler can understand of all labeling requirements
related to safe use of the pesticide, such as signal words,
human hazard precautions, personal protective equipment
requirements, first-aid instructions, environmental precau-
tions, and any additional precautions pertaining to the han-
dling activity to be performed.

(b) The handler employer shall assure that the handler
has access to the product labeling information during han-
dling activities.

(2) Knowledge of site-specific information. Whenever a
handler who is employed by a commercial pesticide handling
establishment will be performing pesticide handling tasks on
an agricultural establishment, the handler employer shall
assure that the handler is aware of the following information
concerning any areas on the agricultural establishment that
the handler may be in (or may walk within one-quarter mile
of) and that may be treated with a pesticide or that may be
under a restricted-entry interval while the handler will be on
the agricultural establishment:

(a) Specific location and description of any such areas;
and

(b) Restrictions on entering those areas.

[97-09-013, recodified as § 296-307-13030, filed 4/7/97, effective 4/7/97.

082, § 296-306A-13030, filed 9/30/96, effective 11/1/96.]

WAC 296-307-13035 Safe operation of equipment—
Standards for pesticide handlers—40 CFR, § 170.234. (1)
The handler employer shall assure that before the handler
uses any equipment for mixing, loading, transferring, or
applying pesticides, the handler is instructed in the safe op-
ation of such equipment, including, when relevant, chemiga-
tion safety requirements and drift avoidance.

(2) The handler employer shall assure that, before each
day of use, equipment used for mixing, loading, transferring,
or applying pesticides is inspected for leaks, clogging, and
worn or damaged parts, and any damaged equipment is
repaired or is replaced.

(3) Before allowing any person to repair, clean, or adjust
equipment that has been used to mix, load, transfer, or apply
pesticides, the handler employer shall assure that pesticide
residues have been removed from the equipment, unless the
person doing the cleaning, repairing, or adjusting is a handler
employed by the agricultural or commercial pesticide han-
dling establishment. If pesticide residue removal is not feasi-
able, the handler employer shall assure that the person who repairs, cleans, or adjusts such equipment is informed:

(a) That such equipment may be contaminated with pesticides.

(b) Of the potentially harmful effects of exposure to pesticides.

(c) Of the correct way to handle such equipment.

WAC 296-307-13040 Posted pesticide safety information—Standards for pesticide handlers—40 CFR, § 170.235. (1) Requirement. When handlers (except those employed by a commercial pesticide handling establishment) are on an agricultural establishment and, within the last thirty days, a pesticide covered by this part has been applied on the establishment or a restricted-entry interval has been in effect, the handler employer shall display, in accordance with this section, pesticide safety information.

(2) Pesticide safety poster. A safety poster must be displayed that conveys, at a minimum, the following basic pesticide safety concepts:

(a) Help keep pesticides from entering your body. At a minimum, the following points shall be conveyed:

(i) Avoid getting on your skin or into your body any pesticides that may be on plants and soil, in irrigation water, or drifting from nearby applications.

(ii) Wash before eating, drinking, using chewing gum or tobacco, or using the toilet.

(iii) Wear work clothing that protects the body from pesticide residues (long-sleeved shirts, long pants, shoes and socks, and a hat or scarf).

(iv) Wash/shower with soap and water, shampoo hair, and put on clean clothes after work.

(v) Wash work clothes separately from other clothes before wearing them again.

(vi) Wash immediately in the nearest clean water if pesticides are spilled or sprayed on the body. As soon as possible, shower, shampoo, and change into clean clothes.

(vii) Follow directions about keeping out of treated or restricted areas.

(b) There are federal rules to protect workers and handlers including a requirement for safety training.

(3) Emergency medical care information.

(a) The name, address, and telephone number of the nearest emergency medical care facility shall be on the safety poster or displayed close to the safety poster.

(b) The handler employer shall inform handlers promptly of any change to the information on emergency medical care facilities.

(4) Location.

(a) The information shall be displayed in a central location on the farm or in the nursery or greenhouse where it can be readily seen and read by handlers.

(b) The information shall be displayed in a location in or near the forest in a place where it can be readily seen and read by handlers and where handlers are likely to congregate or pass by, such as at a decontamination site or an equipment storage site.

(5) Accessibility. Handlers shall be informed of the location of the information and shall be allowed access to it.

(6) Legibility. The information shall remain legible during the time it is posted.

...durability and a tread appropriate for wear in rough terrain is worn from mid-chest to the knees shall be worn.

(p) An apron that covers the front of the body product labeling, an apron that covers the front of the body from mid-chest to the knees shall be worn.

(q) The respiratory protection requirements of chapter 296-307 WAC, Part Y-5, shall apply.

(r) If the product labeling does not specify the type of respirator to be used, it shall meet the requirements of chapter 296-307 WAC, Part Y-5. The respiratory protection requirements of chapter 296-307 WAC, Part Y-5, shall apply.

(s) When "chemical-resistant headgear" is specified by the product labeling, it shall be either a chemical-resistant hood or a chemical-resistant hat with a wide brim.

(t) Exceptions to personal protective equipment specified on product labeling.

(i) A chemical-resistant suit may be substituted for "coveralls," and any requirement for an additional layer of clothing beneath is waived.

(ii) A chemical-resistant suit may be substituted for "coveralls" and a chemical-resistant apron.

(b) Open cockpit. Persons occupying an open cockpit shall use the personal protective equipment specified in the product labeling for use during application, except that chemical-resistant footwear with sufficient durability and suppleness are not obtainable, then during handling activity are permitted as provided in (e)(i) through (iv) of this subsection.

(i) When a respirator is specified by the product labeling, it shall be appropriate for the pesticide product used and for the activity to be performed. The handler employer shall assure that the respirator fits correctly by using the procedures consistent with chapter 296-307 WAC, Part Y-5. If the label does not specify the type of respirator to be used, it shall meet the requirements of chapter 296-307 WAC, Part Y-5. The respiratory protection requirements of chapter 296-307 WAC, Part Y-5, shall apply.

(j) When "chemical-resistant headgear" is specified by the product labeling, it must be worn.

(k) When "chemical-resistant headgear" is specified by the product labeling-specified personal protective equipment. If a respiratory protection device other than a dust/mist filtering respirator is specified on the pesticide product labeling, it must be worn.

(l) When "chemical-resistant headgear" is specified by the product labeling-specified personal protective equipment. If a respirator is specified on the pesticide product labeling, it must be worn.

(m) Persons using a closed system that operates under pressure shall wear protective eyewear.

(n) Persons using a closed system shall have all labeling-specified personal protective equipment immediately available for use in an emergency.

(o) Persons using a closed system that operates under pressure shall wear protective eyewear.

(p) Persons using a closed system that operates under pressure shall wear protective eyewear.

(q) Persons using a closed system that operates under pressure shall wear protective eyewear.

(r) Persons using a closed system that operates under pressure shall wear protective eyewear.

(s) Persons using a closed system that operates under pressure shall wear protective eyewear.

(t) Persons using a closed system that operates under pressure shall wear protective eyewear.

(u) Persons using a closed system that operates under pressure shall wear protective eyewear.

(v) Persons using a closed system that operates under pressure shall wear protective eyewear.

(w) Persons using a closed system that operates under pressure shall wear protective eyewear.

(x) Persons using a closed system that operates under pressure shall wear protective eyewear.

(y) Persons using a closed system that operates under pressure shall wear protective eyewear.

(z) Persons using a closed system that operates under pressure shall wear protective eyewear.

[a] When "chemical-resistant headgear" is specified by the product labeling, it must be worn.

(b) Closed systems. If handling tasks are performed from inside a cab that has a nonporous barrier which totally surrounds the occupants of the cab and prevents contact with pesticides outside of the cab, exceptions to personal protective equipment specified on the product labeling for that handling activity are permitted as provided in (e)(i) through (iv) of this subsection.

(i) When a respirator is specified by the product labeling-specified personal protective equipment. If a respirator is specified on the pesticide product labeling, it must be worn.

(j) When "chemical-resistant headgear" is specified by the product labeling, it shall be either a chemical-resistant hood or a chemical-resistant hat with a wide brim.

(k) Exceptions to personal protective equipment specified on product labeling.

(l) A chemical-resistant suit may be substituted for "coveralls," and any requirement for an additional layer of clothing beneath is waived.

(m) A chemical-resistant suit may be substituted for "coveralls" and a chemical-resistant apron.

(n) Gloves. If chemical-resistant gloves with sufficient durability and suppleness are not obtainable, then during handling activities with roses or other plants with sharp thorns, leather gloves may be worn over chemical-resistant glove liners. However, once leather gloves are worn for this use, thereafter they shall be worn only with chemical-resistant liners and they shall not be worn for any other use.

(o) Closed systems. If handling tasks are performed using properly functioning systems that enclose the pesticide to prevent it from contacting handlers or other persons, and if such systems are used and are maintained in accordance with that manufacturer's written operating instructions, exceptions to labeling-specified personal protective equipment for the handling activity are permitted as provided in (d)(i) and (ii) of this subsection.

(p) Persons using a closed system to mix or load pesticides with a signal word of DANGER or WARNING may substitute a long-sleeved shirt, long pants, shoes, and socks for the labeling-specified personal protective equipment.

(q) Persons using a closed system to mix or load pesticides other than those in (d)(i) of this subsection or to perform other handling tasks may substitute a long-sleeved shirt, long pants, shoes, and socks for the labeling-specified personal protective equipment.

(r) Persons using a closed system to mix or load pesticides other than those in (d)(i) of this subsection or to perform other handling tasks may substitute a long-sleeved shirt, long pants, shoes, and socks for the labeling-specified personal protective equipment.

(s) Persons using a closed system to mix or load pesticides other than those in (d)(i) of this subsection or to perform other handling tasks may substitute a long-sleeved shirt, long pants, shoes, and socks for the labeling-specified personal protective equipment.

(t) Persons using a closed system to mix or load pesticides other than those in (d)(i) of this subsection or to perform other handling tasks may substitute a long-sleeved shirt, long pants, shoes, and socks for the labeling-specified personal protective equipment.

(u) Persons using a closed system to mix or load pesticides other than those in (d)(i) of this subsection or to perform other handling tasks may substitute a long-sleeved shirt, long pants, shoes, and socks for the labeling-specified personal protective equipment.

(v) Persons using a closed system to mix or load pesticides other than those in (d)(i) of this subsection or to perform other handling tasks may substitute a long-sleeved shirt, long pants, shoes, and socks for the labeling-specified personal protective equipment.

(w) Persons using a closed system to mix or load pesticides other than those in (d)(i) of this subsection or to perform other handling tasks may substitute a long-sleeved shirt, long pants, shoes, and socks for the labeling-specified personal protective equipment.

(x) Persons using a closed system to mix or load pesticides other than those in (d)(i) of this subsection or to perform other handling tasks may substitute a long-sleeved shirt, long pants, shoes, and socks for the labeling-specified personal protective equipment.

(y) Persons using a closed system to mix or load pesticides other than those in (d)(i) of this subsection or to perform other handling tasks may substitute a long-sleeved shirt, long pants, shoes, and socks for the labeling-specified personal protective equipment.

(z) Persons using a closed system to mix or load pesticides other than those in (d)(i) of this subsection or to perform other handling tasks may substitute a long-sleeved shirt, long pants, shoes, and socks for the labeling-specified personal protective equipment.

[Title 296 WAC—p. 2408] (2007 Ed.)
substituted for chemical-resistant headgear. A visor may be substituted for protective eyewear.

(iii) Enclosed cockpit. Persons occupying an enclosed cockpit may substitute a long-sleeved shirt, long pants, shoes, and socks for labeling-specified personal protective equipment.

(g) Crop advisors. Crop advisors entering treated areas while a restricted-entry interval is in effect may wear the personal protective equipment specified on the pesticide labeling for early entry activities instead of the personal protective equipment specified on the pesticide labeling for handling activities, provided:

(i) Application has been completed for at least four hours.

(ii) Any inhalation exposure level listed in the labeling has been reached or any ventilation criteria established by WAC 296-307-12015 (3)(c) or in the labeling have been met.

(5) Use of personal protective equipment.
(a) The handler employer shall assure that personal protective equipment is used correctly for its intended purpose and is used according to the manufacturer’s instructions.

(b) The handler employer shall assure that, before each day of use, all personal protective equipment is inspected for leaks, holes, tears, or worn places, and any damaged equipment is repaired or discarded.

(6) Cleaning and maintenance.
(a) The handler employer shall assure that all personal protective equipment is cleaned according to the manufacturer’s instructions or pesticide product labeling instructions before each day of reuse. In the absence of any such instructions, it shall be washed thoroughly in detergent and hot water.

(b) If any personal protective equipment cannot be cleaned properly, the handler employer shall dispose of the personal protective equipment in accordance with any applicable federal, state, and local regulations. Coveralls or other absorbent materials that have been drenched or heavily contaminated with an undiluted pesticide that has the signal word DANGER or WARNING on the label shall not be reused.

(c) The handler employer shall assure that contaminated personal protective equipment is kept separately and washed separately from any other clothing or laundry.

(d) The handler employer shall assure that all clean personal protective equipment shall be either dried thoroughly before being stored or shall be put in a well ventilated place to dry.

(e) The handler employer shall assure that all personal protective equipment is stored separately from personal clothing and apart from pesticide-contaminated areas.

(f) The handler employer shall assure that when dust/mist filtering respirators are used, the filters shall be replaced:

(i) When breathing resistance becomes excessive.

(ii) When the filter element has physical damage or tears.

(iii) According to manufacturer’s recommendations or pesticide product labeling, whichever is more frequent.

(iv) In the absence of any other instructions or indications of service life, at the end of each day’s work period.

(g) The handler employer shall assure that when gas-removing or vapor-removing respirators are used, the gas-removing or vapor-removing canisters or cartridges shall be replaced:

(i) At the first indication of odor, taste, or irritation.

(ii) According to manufacturer’s recommendations or pesticide product labeling, whichever is more frequent.

(iii) In the absence of any other instructions or indications of service life, at the end of each day’s work period.

(h) The handler employer shall inform any person who cleans or launder personal protective equipment:

(i) That such equipment may be contaminated with pesticides.

(ii) Of the potentially harmful effects of exposure to pesticides.

(iii) Of the correct way(s) to clean personal protective equipment and to protect themselves when handling such equipment.

(i) The handler employer shall assure that handlers have a clean place(s) away from pesticide storage and pesticide use areas where they may:

(1) Require personal clothing not in use.

(2) Put on personal protective equipment at the start of any exposure period.

(ii) Remove personal protective equipment at the end of any exposure period.

(j) The handler employer shall not allow or direct any handler to wear home or to take home personal protective equipment contaminated with pesticides.

(7) Heat-related illness. When the use of personal protective equipment is specified by the labeling of any pesticide for the handling activity, the handler employer shall assure that no handler is allowed or directed to perform the handling activity unless appropriate measures are taken, if necessary, to prevent heat-related illness.

WAC 296-307-13050 Decontamination—Standards for pesticide handlers—40 CFR, § 170.250. (1) Requirement. During any handling activity, the handler employer shall provide for handlers, in accordance with this section, decontamination supplies for washing off pesticides and pesticide residues.

(2) General conditions.

(a) The handler employer shall provide handlers with enough water for routine washing, for emergency eyewashing, and for washing the entire body in case of an emergency. At all times when the water is available to handlers, the handler employer shall assure that it is of a quality and temperature that will not cause illness or injury when it contacts the skin or eyes or if it is swallowed. At least ten gallons of water for one employee and twenty gallons of water for two or more employees shall be provided at mixing and loading sites that do not have running water.

(b) When water stored in a tank is to be used for mixing pesticides, it shall not be used for decontamination or eyewashing, unless the tank is equipped with properly functioning valves or other mechanisms that prevent movement of pesticides into the tank.

(2007 Ed.)
(c) The handler employer shall provide soap and single-use towels in quantities sufficient to meet handlers' needs.

(d) The handler employer shall provide one clean change of clothing, such as coveralls for use in an emergency.

(3) Location. The decontamination supplies shall be located together and reasonably accessible to and not more than one-quarter mile from each handler during the handling activity.

(a) Exception for mixing sites. For mixing activities, the decontamination supplies shall be at the mixing site.

(b) Exception for pilots. The decontamination supplies for a pilot who is applying pesticides aerially shall be in the airplane or at the aircraft loading site.

(c) Exception for handling pesticides in remote areas. When handling activities are performed more than one-quarter mile from the nearest place of vehicular access:

(i) The soap, single-use towels, clean change of clothing, and water may be at the nearest place of vehicular access.

(ii) The handler employer may permit handlers to use clean water from springs, streams, lakes, or other sources for decontamination at the remote work site, if such water is more accessible than the water with the decontamination supplies located at the nearest place of vehicular access.

(d) Decontamination supplies in treated areas. The decontamination supplies shall not be in an area being treated with pesticides or in an area under a restricted-entry interval, unless:

(i) The decontamination supplies are in the area where the handler is performing handling activities;

(ii) The soap, single-use towels, and clean change of clothing are in enclosed containers; and

(iii) The water is running tap water or is enclosed in a container.

(4) Emergency eyeflushing. To provide for emergency eyeflushing, the handler employer shall assure that at least one pint of water is immediately available to each handler who is performing tasks for which the pesticide labeling requires protective eyewear. The eyewash water shall be carried by the handler, or shall be on the vehicle or aircraft the handler is using, or shall be otherwise immediately accessible.

(5) A plumbed or portable emergency eyewash capable of delivering at least 1.5 liters (0.4 gals.) of water per minute for fifteen minutes shall be provided at all pesticide mixing and loading stations or handler decontamination sites when the label requires protective eyewear for mixing, loading or applying. A plumbed or portable system meeting the above requirements shall be provided at all permanent pesticide mixing and loading sites.

(6) Decontamination after handling activities. At the end of any exposure period, the handler employer shall provide at the site where handlers remove personal protective equipment, soap, clean towels, and a sufficient amount of water so that the handlers may wash thoroughly. At least ten gallons of water for one employee and twenty gallons of water for two or more employees shall be provided at mixing and loading sites that do not have running water.

WAC 296-307-13055 Emergency assistance—Standards for pesticide handlers—40 CFR, § 170.260. If there is reason to believe that a person who is or has been employed by an agricultural establishment or commercial pesticide handling establishment to perform pesticide handling tasks has been poisoned or injured by exposure to pesticides as a result of that employment, including, but not limited to, exposures from handling tasks or from application, splash, spill, drift, or pesticide residues, the handler employer shall:

(1) Make available to that person prompt transportation from the place of employment or the handling site to an appropriate emergency medical facility.

(2) Provide to that person or to treating medical personnel, promptly upon request, any obtainable information on:

(a) Product name, EPA registration number, and active ingredients of any product to which that person might have been exposed.

(b) Antidote, first-aid, and other medical information from the product labeling.

(c) The circumstances of handling of the pesticide.

(d) The circumstances of exposure of that person to the pesticide.

Part J Pesticides Recordkeeping

WAC 296-307-145 Pesticides recordkeeping.

WAC 296-307-14505 What records must an employer keep for pesticide applications? (1) If you apply pesticides, or have pesticides applied for you, related to the production of an agricultural crop, you must keep records for each application. The records must include the following:

(a) The address or exact location where the pesticide was applied or stored;

Note: If you apply pesticides to one acre or more, the location must be shown on the map on the required form for at least the first application.

(b) The year, month, day, and time the pesticide was applied or stored;

(c) The product name on the registered label and the United States Environmental Protection Agency registration number, if applicable, of the pesticide that was applied or stored;

(d) The crop or site to which the pesticide was applied (application crop or site);

(e) The amount of pesticide applied per acre, or other appropriate measure;

(f) The concentration of pesticide applied;

(g) The total area to which pesticide was applied;

(h) If applicable, the licensed applicator's name, address, and telephone number and the name of the individual(s) making the application;

(i) The direction and estimated velocity of the wind at the time the pesticide was applied;
Exception: Wind information does not have to be recorded for applications of baits in bait stations and pesticide applications within structures.

(j) Any other reasonable information required by the department.

(2) A commercial pesticide applicator must provide a copy of the pesticide application records to the owner or lessee of the lands to which the pesticide is applied. Pesticide application records may be provided on any form that includes all required information.

(3) You must update records on the same day that a pesticide is applied. You may use a copy as the record of the pesticide application. You must maintain the records for at least seven years after the date of the application.

(4) You must ensure that pesticide application records are readily accessible to employees and their designated representatives in a central location in the workplace. The records must be available beginning on the day the application is made and for at least thirty days after. You may view the pesticide application records and make your own record from that information.

(5) New or newly assigned employees must be made aware of the accessibility of the application records before working with pesticides or in an area containing pesticides.

(6) When storing pesticides, you must, at least once a year, perform an inventory of the pesticides stored in any work area.

(7) The pesticide inventory records must include the following information:
   (a) The location where the pesticide is stored;
   (b) The year, month, day, and time the pesticide was first stored;
   (c) The product name used on the registered label and the United States Environmental Protection Agency registration number, if applicable, of the pesticide that is stored; and
   (d) The amount of pesticide in storage at the time of the inventory.

(8) You must maintain a record of pesticide purchases made between the annual inventory dates.

(a) Instead of this purchase record, you may obtain from distributors from whom you buy pesticides, a statement obligating the distributor to maintain the purchase records on your behalf to meet the requirements of this section.

(b) We may require you to submit all purchase records covering the purchases during a specified period of time or in a specified geographical area.

(9) When you end all pesticide activities, you must file the records with us. Anyone who succeeds or replaces you must retain the records required by this section, but that person is not liable for any violations you commit.

(10) You must ensure that the records required under this section are readily accessible to us for inspection. You must also provide copies of the records on request, to:
   (a) An employee or the employee’s designated representative in the case of an industrial insurance claim filed under Title 51 RCW with the department of labor and industries;
   (b) Treating health care personnel; or
   (c) The pesticide incident reporting and tracking review panel.

(2007 Ed.)

(11) The designated representative or treating health care personnel are not required to identify the employee represented or treated.

(12) We will keep the name of any affected employee confidential according to RCW 49.17.080(1).

(13) When treating health care personnel request records under this section, and the record is required to determine treatment, you must provide copies of the record immediately. Information for treating health care personnel must be made immediately available by telephone, if requested, with a copy of the records provided within twenty-four hours. For all other requests, you must provide copies of the records within seventy-two hours.

(14) If requested, you must provide copies of records on a form provided by the department.

(15) If you suspect that an employee is ill or injured because of an exposure to one or more pesticides, you must immediately provide the employee with a copy of the relevant pesticide application records.

(16) If you refuse to provide a copy of a requested record, the requester may notify the department of the request and your refusal.

(a) Within seven working days, we will request that you provide us with all pertinent copies of the records, except that in a medical emergency we will request within two working days.

(b) You must provide copies of the records to us within twenty-four hours after we request.

(17) We inspect for the records required under this section as part of any on-site inspection of a workplace conducted under this chapter or chapter 49.17 RCW. We will determine, during the inspection, whether the records are readily transferable to a form adopted by the department, and readily accessible to employees. However, your records will not be inspected more than once in any calendar year, unless a previous inspection has found recordkeeping violations. If recordkeeping violations are found, we may conduct reasonable multiple inspections, according to department rules. Nothing in this section limits our inspection of records pertaining to pesticide-related injuries, illnesses, fatalities, accidents, or complaints.

(18) If you fail to maintain the records, or provide access to or copies of the records required under this section, you will be subject to penalties authorized under RCW 49.17.180.

(19) The department of labor and industries and the department of agriculture will jointly adopt by rule, forms that satisfy the information requirements of this section and RCW 17.21.100. Pesticide application record forms can be found in chapter 16-228 WAC, General pesticide rules.

### Part J-1

**Cholinesterase Monitoring**

**WAC 296-307-148 Scope and summary.**

**Your responsibility:**
To implement a monitoring program for your employees who, as part of their job duties, **handle** category I or II organophosphate or N-methyl-carbamate pesticides with the words "DANGER" or "WARNING" on the label.

**Definition:**
The terms **handle** and **handler** refer to employees who are engaged in the job duties listed in the definition of "handler" contained in WAC 296-307-11005, Pesticides (worker protection standard).

**IMPORTANT:**
Whenever there is reason to believe that an employee has been poisoned or injured by exposure to pesticides while on the job, you need to provide the medical services required by WAC 296-307-13055.

**You must:**
- Maintain handling records for covered pesticides WAC 296-307-14805.
- Implement a medical monitoring program WAC 296-307-14810.
- Identify a physician or licensed health care professional WAC 296-307-14815.
- Make cholinesterase testing available WAC 296-307-14820.

[Title 296 WAC—p. 2412] (2007 Ed.)
WAC 296-307-14825 Identify a physician or other licensed health care professional.

You must:
- Provide medical removal protection benefits
- Maintain records
- Provide training
- Implementation plan

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 06-01-074, § 296-307-14810, filed 12/20/05, effective 2/1/06; 03-24-105, § 296-307-14815, filed 12/3/03, effective 2/1/04.]

WAC 296-307-14805 Maintain handling records for covered pesticides.

You must:
- Maintain accurate records of all time that each employee spends handling category I or II organophosphate or N-methyl-carbamate pesticides (this includes employees who do not meet the handling hour thresholds in WAC 296-307-14810).
- Provide a completed CHOLINESTERASE MONITORING HANDLING HOURS REPORT (F413-065-000) to the physician or other licensed health care professional (LHCP) for each employee receiving a periodic cholinesterase blood test and make sure the report is submitted to the laboratory with each periodic cholinesterase test.
- Provide the employee with a copy of the CHOLINESTERASE MONITORING HANDLING HOURS REPORT upon request.
- Retain pesticide handling records for seven years.
- Make sure that pesticide-handling records are readily accessible to employees, their designated representatives, and treating health care professionals.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 06-01-074, § 296-307-14805, filed 12/20/05, effective 2/1/06; 03-24-105, § 296-307-14805, filed 12/3/03, effective 2/1/04.]

WAC 296-307-14810 Implement a medical monitoring program.

You must:
- Implement a medical monitoring program for your employees who handle or will be expected to handle category I or II organophosphate or N-methyl-carbamate pesticides for thirty or more hours in any consecutive thirty-day period.

Note: You do not need to count time spent mixing and loading using closed systems (as defined in WAC 296-307-13045 (4)(d)) in determining the need for periodic testing. Closed cabs are not "closed systems." Time using closed systems is still counted for purposes of establishing coverage under this rule and determining the need for obtaining baseline cholinesterase levels.
- The first thirty consecutive day period begins on the first day of handling organophosphate or N-methyl-carbamate pesticides after obtaining the baseline cholinesterase test.
- There is nothing in this rule that prohibits employers from providing cholinesterase monitoring to employees who handle organophosphate or N-methyl-carbamate pesticides for fewer than thirty hours in any consecutive thirty-day period.

Note: All testing for an employee should be conducted through the same laboratory. This will allow for accurate comparison between baseline and periodic tests.

You must:
- Instruct the LHCP to NOT reveal in writing or in any other communication with you any other personally identifiable medical information.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 06-01-074, § 296-307-14810, filed 12/20/05, effective 2/1/06; 03-24-105, § 296-307-14810, filed 12/3/03, effective 2/1/04.]

(2007 Ed.)
WAC 296-307-14820 Make cholinesterase testing available.

You must:

- Make medical monitoring available to employees who will meet the handling hour threshold of thirty or more hours in any consecutive thirty-day period (WAC 296-307-14810) at no cost and at a reasonable time and place, as follows:
  - Provide annual baseline red blood cell (RBC) and serum cholinesterase tests that are taken at least thirty days after the employee last handled organophosphate or N-methyl-carbamate pesticides.
  - Provide periodic RBC and serum cholinesterase testing:
    - Within three days after the end of each thirty-day period where the employee meets the handling hour threshold in WAC 296-307-14810; however, testing is not required more often than every thirty days;
    - OR
    - At least every thirty days for those employees who may meet the handling hour threshold in WAC 296-307-14810.
  - Follow the recommendations of the LHCP regarding continued employee pesticide handling or removal from handling until a thirty-day exposure free baseline can be established.

Exemption: You do not need to provide baseline or periodic testing for those employees whose work exposure is limited to handling only N-methyl-carbamate pesticides.

Note:

- For employees who have had exposure to organophosphate or N-methyl-carbamate pesticides in the thirty days prior to the test obtain a working baseline. For example, a worker who initially declines cholinesterase testing and later chooses to participate in testing would obtain a "working baseline."
- For new employees, the LHCP may accept previous baselines, if they are obtained according to this rule.

You must:

- Obtain a signed declination statement from the LHCP for each employee who declines cholinesterase testing.
  - Employees may decline cholinesterase testing only after they receive training about cholinesterase inhibiting pesticides and discuss the risks and benefits of participation with the LHCP.
  - An employee may change his or her mind and elect to participate or decline to continue participation in the testing program at any time.
- Make sure the employee receives a copy of the signed declination statement, either through you or directly through the LHCP, within five business days after you receive the declination statement.

Note: If employers discourage participation in cholinesterase monitoring, or in any way interfere with an employee's decision to continue with this program, this interference may represent unlawful discrimination under RCW 49.17-160, Discrimination against employee filing, instituting proceedings, or testifying prohibited—Procedure—Remedy.

WAC 296-307-14825 Respond to depressed cholinesterase levels.

You must:

- Respond to an employee's depressed cholinesterase levels by:
  - Taking the actions required in Table 1;
  - AND
  - Following any additional occupational health recommendations from the LHCP.

### Table 1
**Required Responses to an Employee's Depressed Cholinesterase Levels**

<table>
<thead>
<tr>
<th>When:</th>
<th>Action to be taken:</th>
<th>Methods:</th>
</tr>
</thead>
<tbody>
<tr>
<td>An employee's RBC or serum cholinesterase levels fall more than twenty percent below the baseline</td>
<td>Evaluate the employee's workplace and work practices to identify and correct potential sources of pesticide exposure</td>
<td>Review:</td>
</tr>
<tr>
<td>An employee's RBC cholinesterase level falls thirty percent or more from the baseline</td>
<td>Remove the employee from handling and other work exposures to organophosphate and N-methyl-carbamate pesticides such as thinning and harvesting in recently treated areas</td>
<td>OR</td>
</tr>
<tr>
<td>An employee's serum cholinesterase level falls forty percent or more from the baseline</td>
<td>Evaluate the employee's work practices to identify and correct potential sources of pesticide exposure</td>
<td>AND</td>
</tr>
<tr>
<td>A removed employee's cholinesterase levels return to twenty percent or less below baseline</td>
<td>The employee may return to handling class I and II organophosphate and N-methyl-carbamate pesticides</td>
<td>Continue periodic cholinesterase monitoring</td>
</tr>
</tbody>
</table>

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 06-01-074, § 296-307-14820, filed 12/20/05, effective 2/1/06; 03-24-105, § 296-307-14825, filed 12/3/03, effective 2/1/04.]
You must:
• Provide medical removal protection benefits for a maximum of three months on each occasion:
  – An employee is temporarily removed from work due to depressed cholinesterase levels;
OR
  – Assigned to other duties due to depressed cholinesterase levels.
• Provide medical removal protection benefits that include maintenance of the same pay, seniority and other employment rights and benefits of an employee as though the employee had not been removed from normal exposure to organophosphate or N-methyl-carbamate pesticides or otherwise limited.

Note: The following are examples of how a worker’s pay could be maintained while medically removed from exposure to cholinesterase-inhibiting pesticides:
• A removed worker is assigned to work eight hours a day but the employer’s pesticide handlers are working ten hours a day. The removed worker would be paid for ten hours at the handler’s pay rate.
• The farmer pays workers two dollars more per hour when they are handling organophosphate or N-methyl-carbamate pesticides. The removed worker will be paid this premium when the pesticides are being handled on the farm; however, the worker will be paid at their usual pay rate when the pesticides are not being handled on the farm.

WAC 296-307-14835 Maintain records.
You must:
• Make sure that the following records are maintained:
  – The name, address, and telephone number of the physician or LHCP.
  – Written recommendations and opinions received from the physician or LHCP.
  – Findings of all work practice investigations.
  – Dates when employees were medically removed from their duties and dates when employees are returned to duties that include handling organophosphate or N-methyl-carbamate pesticides.
  – Signed declination statements.
  – Maintain records for seven years.
  – Make sure that all records are readily accessible to the employee and his or her designated representative.

WAC 296-307-14840 Provide training.
You must:
• Make sure employees have received training before initial medical monitoring. The training must include at least the following:
  – The human health hazards and physical symptoms of overexposure to organophosphate and N-methyl-carbamate cholinesterase-inhibiting pesticides.
  – The purpose and requirements for medical monitoring.

Note: Training required by this rule may be combined with other pesticide handler training as required by WAC 296-307-13025, Pesticide safety training—Standards for pesticide handlers.

(2007 Ed.)
engaged in the construction, reconstruction, operations and maintenance of overhead electrical circuits or conductors (and their supporting structures and associated equipment) of rail transportation systems, or electrical generating, transmission, distribution, and communication systems.

[Statutory Authority: RCW 49.17.040. 96-22-048, § 296-306A-15003, filed 10/31/96, effective 12/1/96.]

WAC 296-307-15006 What clearance and safeguards are required to protect employees working near overhead lines? (1) All exposed overhead conductors must be isolated from accidental contact by employees or equipment.

(2) Irrigation pipe must not be stored within one hundred feet of overhead conductors.

(3) Upending irrigation pipe within one hundred feet of overhead conductors is prohibited.

(4) Water and irrigation systems, and other devices that discharge a conductive liquid, must be set up and operated so that the discharge from the system is directed more than ten feet away from overhead high-voltage lines, and avoids contact with any exposed electrical power conductor.

(5) Employees are prohibited from entering or working in proximity to high-voltage lines, unless there are guards to prevent accidental contact.

Note: Voltage 600V and higher is considered high voltage.

(6) The following are prohibited if it is possible to bring these objects within ten feet of high-voltage lines:

(a) Operating, erecting, or transporting tools, equipment, or a moving part;

(b) Handling, transporting, or storing materials; or

(c) Moving a building near high-voltage lines.

(7) Equipment or machines must be operated near power lines according to the following:

(a) For lines rated 50 kv. or below, minimum clearance between the lines and any part of the object must be ten feet;

(b) For lines rated over 50 kv. minimum clearance between the lines and any part of the object must be ten feet plus four tenths of an inch for each 1 kv., over 50 kv., or twice the length of the line insulator but never less than ten feet;

(c) In transit, the clearance must be a minimum of four feet for voltages less than 50 kv., ten feet for voltages over 50 kv. up to and including 345 kv., and sixteen feet for voltages up to and including 750 kv.;

(d) You must designate someone to observe clearance and give warning for operations where it is difficult for the operator to see well enough to maintain the necessary clearance.

Exception: You are exempt from this requirement if electrical distribution and transmission lines have been deenergized and visibly grounded at point of work; or if insulating barriers, not a part of or an attachment to the equipment or machinery, have been erected to prevent physical contact with the lines.

WAC 296-307-15009 What signs must an employer post to warn employees working near overhead lines? You must post and maintain in plain view of the operator on each derrick, power-shovel, drilling-rig, hay loader, hay stacker, or similar apparatus with parts that are capable of vertical, lateral or swinging motion, a durable warning sign legible at twelve feet that says, "unlawful to operate this equipment within ten feet of high-voltage lines."

WAC 296-307-15012 When must an employer notify the utility of employees working near overhead lines? The employer must notify the operator of high-voltage lines when any operations are to be performed, tools or materials handled, or equipment is to be moved or operated within ten feet of any high-voltage line. All required safety measures must be completed before proceeding with any work that would reduce the clearance requirements of this section.

Part L
Temporary Worker Housing

WAC 296-307-161 Temporary worker housing.

[Statutory Authority: RCW 49.17.010, [49.17.]040, and [49.17.]050 and 1999 c 374. 00-06-081, § 296-307-161, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16101 Purpose and applicability. (1) Purpose. This part is adopted by the Washington state department of labor and industries to implement the provisions of chapter 49.17 RCW and establish minimum health and safety requirements for temporary worker housing.

(2) Applicability.

(a) This part applies only to operators of temporary worker housing. Operators using tents within the cherry harvest season must refer to WAC 296-307, Part L-1, or chapter 246-361 WAC.

(b) Operators with ten or more occupants are required to be licensed under this part. Operators with nine or less employees are not required to be licensed, but must comply with these standards.

(c) For department of health licensing, on-site survey, water test fees, etc., see WAC 246-358-990.

[Statutory Authority: RCW 49.17.010, [49.17.]040, and [49.17.]050 and 1999 c 374. 00-06-081, § 296-307-16101, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16103 Definitions. For the purposes of this part, the following words and phrases will have the following meanings unless the context clearly indicates otherwise:

"Agricultural employer" means any person who renders personal services to, or under the direction of, an agricultural employer in connection with the employer's agricultural activity.

"Agricultural employer" means any person engaged in agricultural activity, including the growing, producing, or harvesting of farm or nursery products, or engaged in the forestation or reforestation of lands, which includes but is not limited to the planting, transplanting, tubing, precommercial thinning, and thinning of trees and seedlings, the clearing,
piling, and disposal of brush and slash, the harvest of Christmas trees, and other related activities.

"Building" means any structure used or intended to be used for supporting or sheltering any use or occupancy that may include cooking, eating, sleeping, and sanitation facilities.

"Common food-handling facility" means an area designated by the operator for occupants to store, prepare, cook, and eat their own food supplies.

"Current certificate (first aid)" means a first-aid training certificate that has not expired.

"Department" means the Washington state department of health and/or the department of labor and industries.

"Dining hall" means a cafeteria-type eating place with food furnished by and prepared under the direction of the operator for consumption, with or without charge, by occupants.

"Drinking fountain" means a fixture equal to a nationally recognized standard or a designed-to-drain faucet, which provides potable drinking water under pressure. "Drinking fountain" does not mean a bubble-type water dispenser.

"Dwelling unit" means a shelter, building, or portion of a building, that may include cooking and eating facilities, which is:

- Provided and designated by the operator as either a sleeping area, living area, or both, for occupants; and
- Physically separated from other sleeping and common-use areas.

"First-aid qualified" means that the person holds a current certificate of first-aid training from the American Red Cross or another course with equivalent content or hours.

"Food-handling facility" means a designated, enclosed area for preparation of food.

"Group A water system" means a public water system and includes community and noncommunity water systems.

(a) A community water system means any Group A water system providing service to fifteen or more service connections used by year-round residents for one hundred eighty or more days within a calendar year, regardless of the number of people, or regularly serving at least twenty-five year-round (i.e., more than one hundred eighty days per year) residents.

(b) A noncommunity water system means a Group A water system that is not a community water system. Noncommunity water systems are further defined as:

(i) Nontransient (NTNC) water system that provides service opportunity to twenty-five or more of the same nonresidential people for one hundred eighty or more days within a calendar year.

(ii) Transient (TNC) water system that serves:

- Twenty-five or more of the same people each day for sixty or more days within a calendar year;
- Twenty-five or more of the same people each day for sixty or more days, but less than one hundred eighty days within a calendar year; or
- One thousand or more people for two or more consecutive days within a calendar year.

"Group B water system" means a public water system:

(a) Constructed to serve less than fifteen residential services regardless of the number of people; or

(b) Constructed to serve an average nonresidential population of less than twenty-five per day for sixty or more days within a calendar year; or

(c) Any number of people for less than sixty days within a calendar year.

"Habitable room" means a room or space in a structure with a minimum seven-foot ceiling used for living, sleeping, eating, or cooking. Bathrooms, toilet compartments, closets, halls, storage or utility space, and similar areas are not considered habitable space.

"Health officer" means the individual appointed as such for a local health department under chapter 70.05 RCW or appointed as the director of public health of a combined city-county health department under chapter 70.08 RCW.

"Livestock" means horses, cows, pigs, sheep, goats, poultry, etc.

"Livestock operation" means any place, establishment, or facility consisting of pens or other enclosures in which livestock is kept for purposes including, but not limited to, feeding, milking, slaughtering, watering, weighing, sorting, receiving, and shipping. Livestock operations include, among other things, dairy farms, corrals, slaughterhouses, feedlots, and stockyards. Operations where livestock can roam on a pasture over a distance may be treated as outside the definition.

"MSPA" means the Migrant and Seasonal Agricultural Worker Protection Act (96 Stat. 2583; 29 U.S.C. Sec. 1801 et seq.).

"Occupant" means a temporary worker or a person who resides with a temporary worker at the housing site.

"Operating license" means a document issued annually by the department of health or contracted health officer authorizing the use of temporary worker housing.

"Operator" means a person holding legal title to the land on which temporary worker housing is located. However, if the legal title and the right to possession are in different persons, "operator" means a person having the lawful control or supervision over the temporary worker housing.

"Recreational park trailers" means a trailer-type unit that is primarily designed to provide temporary living quarters for recreational, camping, or seasonal use, that meets the following criteria:

- Built on a single chassis, mounted on wheels;
- Having a gross trailer area not exceeding 400 square feet (37.15 square meters) in the set-up mode; and
- Certified by the manufacturer as complying with ANSI A119.5.

"Recreational vehicle" means a vehicular-type unit primarily designed as temporary living quarters for recreational camping, travel, or seasonal use that either has its own motive power or is mounted on, or towed by, another vehicle. Recreational vehicles include: Camping trailers, fifth-wheel trailers, motor homes, travel trailers, and truck campers, but does not include pickup trucks with camper shells, canopies, or other similar coverings.

"Refuse" means solid wastes, rubbish, or garbage.

"Temporary worker" means an agricultural employee employed intermittently and not residing year-round at the same site.

"Temporary worker housing" or "housing" means a place, area, or piece of land where sleeping places or housing
sites are provided by an agricultural employer for agricultural employees or by another person, including a temporary worker housing operator, who is providing such accommodations for employees for temporary, seasonal occupancy.

"WISHA" means the Washington Industrial Safety and Health Act, chapter 49.17 RCW, administered by the Washington state department of labor and industries.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16103, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16105 Operating license. The operator:

(a) Must request a license from the department of health or health officer when:
   (i) Housing consists of:
      (A) Five or more dwelling units; or
      (B) Any combination of dwelling units, or spaces that house ten or more occupants.
   (b) Must comply with MSPA requires a license; or
   (c) Construction of camp buildings requires a license under chapter 246-359 WAC, Temporary worker housing construction standard.

(2) Must apply for an operating license at least forty-five days prior to either the use of housing or the expiration of an existing operating license by submitting to the department of health or health officer:
   (a) A completed application on a form provided by the department of health or health officer;
   (b) Proof water system is current with all water tests required by chapters 246-290 or 246-291 WAC; and
   (c) A fee as specified in WAC 246-358-990.

(3) Will receive an operating license for the maximum number of occupants as determined by WAC 246-358-029 when:
   (a) The application requirements from subsection (2) of this section are met;
   (b) Cooperate with the department of health or health officer:
      (i) A licensing survey completed by the department of health;
      (ii) A self-survey completed by the operator and approved by the department of health; and
      (c) The operator complies with the corrective action plan established by the department.

(4) May allow the use of housing without a renewed license when all of the following conditions exist:
   (a) The operator applied for renewal of an operating license in accordance with subsection (2) of this section at least forty-five days before occupancy, as evidenced by the post mark;
   (b) The department of health or health officer has not inspected the housing or issued an operating license;
   (c) Not have a change in ownership.

(5) Must post the operating license in a place readily accessible to occupants of the housing.

(6) Must notify the department of health or health officer of a transfer of ownership.

(7) Must cooperate with the department or health officer during on-site inspections.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16105, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16110 Requirements for self-survey program. If a licensed operator meets the requirements provided in this section, then the operator may participate in the self-survey program. This means an operator is allowed to conduct a self-survey for two years. On the third year the department of health will conduct an on-site verification survey to assure compliance with this chapter and determine if the temporary worker housing still meets the requirements of the self-survey program.

(1) To be in the self-survey program the operator must:
   (a) Meet the requirements of WAC 246-358-025;
   (b) Not have had any valid complaints;
   (c) Have had two consecutive years without any deficiencies or have had very minor deficiencies (for example one or two screens torn, missing a few small trash cans, etc.); and
   (d) Be recommended by the health surveyor.

(2) For a licensed operator to remain in the self-survey program the licensed operator must:
   (a) Continue to comply with subsection (1) of this section;
   (b) Continue to not have any deficiencies or very minor deficiencies; and
   (c) Not have a change in ownership.

(3) When licensed temporary worker housing changes ownership, the new licensed operator must comply with the requirements of subsection (1) of this section before being eligible to be on the self-survey program.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16110, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16115 Maximum housing occupancy. (1) The maximum occupancy for operator-supplied housing will be based on:
   (a) The square footage of the housing facility; and
   (b) The number of bathing, food handling, handwashing, laundry, and toilet facilities.

(2) The maximum occupancy for worker-supplied housing will be based on:
   (a) The number of spaces designated for worker-supplied housing by the operator; and
   (b) The number of bathing, food handling, handwashing, laundry, and toilet facilities in excess of those facilities required for operator-supplied housing.

Note: Worker-supplied housing includes recreational park trailers, recreation vehicles, OSHA complaint tents, or other structures that meet the requirements of this part.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16115, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16120 Variance and procedure. Conditions may exist in operations that a state standard will not have practical use. The director of the department of labor and industries may issue a variance from the requirements of the standard when another means of providing equal protection is provided. The substitute means must provide equal protection in accordance with the requirements of chapter 49.17 RCW and chapter 296-350 WAC, variances.
Applications for variances will be reviewed and may be investigated by the department of labor and industries and the department of health. Variances granted will be limited to the specific case or cases covered in the application and may be revoked for cause. The variance shall remain prominently posted on the premises while in effect.

Variance application forms may be obtained from the Department of Labor and Industries, P.O. Box 44625, Olympia, Washington 98504-4625 or the Department of Health, P.O. Box 47852, Olympia, Washington 98504-7852, upon request. Requests for variances from safety and health standards shall be made in writing to the director or the assistant director, Department of Labor and Industries, P.O. Box 44625, Olympia, Washington 98504-4625. (Reference RCW 49.17.080 and 49.17.090.)

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16125, filed 3/1/00, effective 3/1/00.]

**WAC 296-307-16125 Temporary worker housing sites.** The operator must:

1. Locate and operate a site to prevent a health or safety hazard that is:
   a. Adequately drained and any drainage from and through the housing must not endanger any domestic or public water supply;
   b. Free from periodic flooding and depressions in which water may become a nuisance;
   c. At least two hundred feet from a swamp, pool, sink hole, or other surface collection of water unless there is a mosquito prevention program for those areas;
   d. Large enough to prevent overcrowding of necessary structures. The principal housing area for sleeping and for food preparation and eating must be at least five hundred feet from where livestock are kept; and
   e. The grounds and open areas surrounding the shelters must be in a clean and sanitary condition.

2. Must develop and implement a temporary worker housing management plan and rules for operators with ten or more occupants, to assure that the housing is operated in a safe and secure manner and is kept within the approved capacity. Additionally, the licensed operator must:
   a. Inform occupants of the rules, in a language the occupant understands by providing individual copies of the rules to each occupant or posting the rules in the housing area;
   b. Restrict the number of occupants in the temporary worker housing to the capacity as determined by the department.

3. When closing housing permanently or for the season, complete the following:
   a. Dispose of all refuse to prevent nuisance;
   b. Fill all abandoned toilet pits with earth; and
   c. Leave the grounds and buildings in a clean and sanitary condition.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16125, filed 3/1/00, effective 3/1/00.]

**WAC 296-307-16130 Water supply.** The operator must:

1. Provide a water system that is:
   a. Approved as a Group A public water system in compliance with chapter 246-290 WAC if the water system supplies fifteen or more connections or twenty-five or more people at least sixty days per year or provide proof the temporary worker housing receives water from an approved Group A public water system; or
   b. Approved as a Group B water system in compliance with chapter 246-291 WAC if the water system supplies less than fifteen connections and does not supply twenty-five or more people at least sixty days per year.

Note: A "same farm exemption" applies to a public water system with four or fewer connections all of which serve residences on the same farm. "Same farm" means a parcel of land or series of parcels that are connected by covenants and devoted to the production of livestock or agricultural commodities for commercial purposes and does not qualify as a Group A water system.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16130, filed 3/1/00, effective 3/1/00.]

**WAC 296-307-16135 Sewage disposal.** The operator must:

1. Provide sewage disposal systems in accordance with local health jurisdictions.

2. Connect all drain, waste, and vent systems from buildings to:
   a. Public sewers, if available; or
   b. Approved on-site sewage disposal systems that are designed, constructed, and maintained as required in chapters 246-272 and 173-240 WAC, and local ordinances.

[Title 296 WAC—p. 2419]
WAC 296-307-16140 Electricity and lighting. The operator must ensure that:
(1) Electricity is supplied to all dwelling units, kitchen facilities, shower/bathroom facilities, common areas, and laundry facilities;
(2) All electrical wiring, fixtures and electrical equipment must comply with the electric standards of the department of labor and industries regulations, chapter 19.28 RCW, and local ordinances, and be maintained in a safe condition;
(3) Each habitable room must have at least one ceiling-type light fixture and at least one separate floor-type or wall-type convenience outlet;
(4) Laundry, toilet rooms, shower/bathroom facilities, and rooms where people congregate have at least one ceiling-type or wall-type fixture;
(5) General lighting and task lighting is adequate to carry on normal daily activities;
(6) Adequate lighting is provided for safe passage for occupants to handwashing sinks and toilets. Note: Lighting requirements may be met by natural or artificial means.

WAC 296-307-16145 Building requirements and maintenance. An operator must:
(1) Construct buildings to provide protection against the elements and comply with:
   (a) The State Building Code, chapter 19.27 RCW, or Temporary worker housing construction standard, chapter 246-359 WAC;
   (b) State and local ordinances, codes, regulations; and
   (c) This part. Any shelter meeting these requirements is acceptable.
(2) Identify each dwelling unit and space used for shelter by posting a number at each site.
(3) Maintain buildings in good repair and sanitary condition.
(4) Provide exits that are unobstructed and remain free of any material or matter where its presence would obstruct or render the exit hazardous.
(5) Provide a ceiling height of at least seven feet for each habitable room. If a building has a sloped ceiling, no portion of the room measuring less than seven feet from the finished floor to the finished ceiling will be included in any computation of the minimum floor space.
(6) Provide at least seventy square feet of floor space for the first occupant and at least fifty square feet of floor space for each additional occupant in each dwelling unit.
(7) Provide each room used for sleeping purposes with at least fifty square feet of floor space for each occupant.
(8) Provide floors in accordance with the State Building Code, chapter 19.27 RCW, or Temporary worker housing construction standard, chapter 246-359 WAC, that are tightly constructed and in good repair.
(9) Ensure wooden floors are at least one foot above ground level or meet the requirements in the State Building Code, chapter 19.27 RCW or Temporary worker housing construction standard, chapter 246-359 WAC.
(10) Provide habitable rooms that have:
   (a) Windows covering a total area equal to at least one-tenth of the total floor area and at least one-half of each window can be opened to the outside for ventilation; or
   (b) Mechanical ventilation in accordance with applicable ASHRAE standards.
(11) Provide sixteen-mesh screening on all exterior openings and screen doors with self-closing devices.
(12) Install all heating, cooking, and water heating equipment according to state and local ordinances, codes, and regulations and maintain in a safe condition.
(13) Provide adequate heating equipment if habitable rooms, including bathrooms, are used during cold weather.
(14) Ensure that all recreational vehicles and park trailers meet the requirements of chapters 296-150P and 296-150R WAC.

WAC 296-307-16150 Laundry facilities. An operator must:
(1) Provide one laundry tray or tub or one mechanical washing machine for every thirty persons;
(2) Provide facilities for drying clothes;
(3) Provide sloped, coved floors of nonslip impervious materials with floor drains;
(4) Maintain laundry facilities in a clean and sanitary condition.

WAC 296-307-16155 Handwashing and bathing facilities. An operator must:
(1) Provide one handwash sink for each family dwelling unit or for every six persons in centralized facilities. Handwash sinks must be adjacent to toilets;
(2) Provide one showerhead for each family dwelling unit or for every ten persons in centralized facilities;
(3) Provide one "service sink" in each building used for centralized laundry, handwashing, or bathing;
(4) Provide sloped, coved floors of nonslip impervious materials with floor drains;
(5) Ensure shower room walls are smooth and nonabsorbent to the height of four feet. If used, partitions must be smooth and nonabsorbent to the height of four feet;
(6) Provide all showers, baths, or shower rooms with floor drains to remove wastewater;
(7) Provide cleanable, nonabsorbent waste containers;
(8) Maintain centralized bathing and handwashing facilities in a clean and sanitary condition, cleaned at least daily;
(9) Request occupants of family dwelling units to maintain bathing and handwashing facilities in a clean and sanitary condition;
(10) Ensure shower facilities provide privacy from the opposite sex and the public; and
(11) Make showers and bathing facilities available when needed.
WAC 296-307-16160 Toilet facilities. (1) General toilet requirements. Operators must provide flush toilets unless chemical toilets or pit privies are specifically approved by the department of health or health officer according to requirements in chapter 246-272 WAC and ensure the following:
   (a) Flush toilets, chemical toilets, and urinals must not be located in any sleeping room, dining room, cooking or food-handling facility.
   (b) When chemical toilets are approved, they must be:
      (i) Located at least fifty feet from any dwelling unit or food-handling facility;
      (ii) Maintained by a licensed waste disposal company; and
      (iii) Comply with local ordinances;
   (c) When urinals are provided:
      (i) There must be one urinal or two linear feet of urinal trough for each twenty-five men;
      (ii) The floors and the walls surrounding a urinal and extending out at least fifteen inches on all sides must be constructed of materials which will not be adversely affected by moisture;
      (iii) The urinal must have an adequate water flush where water under pressure is available; and
      (iv) Urinal troughs are prohibited in pit privies.
   (d) When pit privies are approved they must be:
      (i) At least one hundred feet away from any sleeping room, dining room, cooking, or food-handling facilities; and
      (ii) Constructed to exclude insects and rodents from the pit.

   (2) Centralized toilet facilities. The operator must meet the following requirements when centralized toilet facilities are provided:
      (a) Provide toilet rooms with:
         (i) One toilet for every fifteen persons;
         (ii) One handwashing sink for every six persons;
         (iii) Either a window of at least six square feet opening directly to the outside, or be satisfactorily ventilated; and
         (iv) All outside openings screened with sixteen-mesh material;
      (b) Locate toilet rooms so that:
         (i) Toilets are within two hundred feet of the door of each sleeping room; and
         (ii) No person has to pass through a sleeping room to reach a toilet room.
      (c) Maintain toilets in a clean and sanitary condition, cleaned at least daily;
      (d) Provide each toilet compartment with an adequate supply of toilet paper;
      (e) When shared facilities will be used for both men and women:
         (i) Provide separate toilet rooms for each sex with a minimum of one toilet room for each sex and meet the required ratio as defined in (a) of this subsection;
         (ii) Identify each room for "men" and "women" with signs printed in English and in the native language of the persons occupying the camp, or identified with easily understood pictures or symbols; and
         (iii) Separate facilities by solid walls or partitions extending from the floor to the roof or ceiling when facilities for each sex are located in the same building.

   (3) Individual family/unit dwelling toilet requirements. If providing flush toilets in individual cabins, apartments, or houses, the operator must:
      (a) Provide one toilet for each individual family dwelling unit or fifteen persons;
      (b) Provide one handwashing sink for each six persons. The sink must be located in the toilet room or immediately adjacent;
      (c) Provide a window of at least six square feet opening directly to the outside, or be satisfactorily ventilated;
      (d) Ensure all outside openings screened with sixteen-mesh material;
      (e) Ensure toilet facilities are cleaned prior to occupancy and request occupants to maintain the facilities in a clean and sanitary condition.

   [Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16160, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16165 Cooking and food-handling facilities. The operator must provide enclosed or screened cooking and food-handling facilities for all occupants. The operator must provide adequate tables and seating for occupants.

   (1) If cooking facilities are located in dwelling units, the operator must provide:
      (a) An operable cook stove or hot plate with at least one cooking surface for every two occupants;
      (b) A sink with hot and cold running potable water under pressure;
      (c) At least two (2) cubic feet of dry food storage space per occupant;
      (d) Nonabsorbent, easily cleanable food preparation counters situated off the floor;
      (e) Mechanical refrigeration conveniently located and able to maintain a temperature of forty-five degrees Fahrenheit or below, with at least two (2) cubic feet of storage space per occupant;
      (f) Fire-resistant, nonabsorbent, nonasbestos, and easily cleanable wall coverings adjacent to cooking areas;
      (g) Nonabsorbent, easily cleanable floors; and
      (h) Adequate ventilation for cooking facilities.

   (2) In common food-handling facilities, the operator must provide:
      (a) A room or building, adequate in size, separate from any sleeping quarters;
      (b) No direct openings to living or sleeping areas from the common food-handling facility;
      (c) An operable cook stove or hot plate with at least one cooking surface for every four occupants, or four cooking surfaces for every two families;
      (d) Sinks with hot and cold running potable water under pressure;
      (e) At least two (2) cubic feet of dry food storage space per occupant;
      (f) Nonabsorbent, easily cleanable food preparation counters situated off the floor;
      (g) Mechanical refrigeration conveniently located and able to maintain a temperature of forty-five degrees Fahrenheit or below, with at least two (2) cubic feet of storage space per occupant;

(2007 Ed.)
WAC 296-307-16170 Cots, beds, bedding, and personal storage. The operator must:

1. Provide beds, cots, or bunks furnished with clean mattresses in good condition for the maximum occupancy approved by the department of health or health officer for operator-supplied housing;
2. Maintain bedding, if provided by the operator, in a clean and sanitary condition;
3. Provide sufficient clearance between each cot, bed or bunk and the floor or a commercially available cot, bed, or bunk;
4. Allow space to separate beds laterally and end-to-end by at least thirty-six inches when single beds are used;
5. Meet the following requirements when bunk beds are used:
   a. Allow space to separate beds laterally and end-to-end by at least forty-eight inches;
   b. Maintain a minimum space of twenty-seven inches between the upper and lower bunks; and
   c. Prohibit triple bunks; and
6. Provide storage facilities for clothing and personal articles in each room used for sleeping.

WAC 296-307-16180 Refuse disposal. The operator must:

1. Comply with chapters 15.58 and 17.21 RCW and chapters 16-228 and 296-307 WAC, Parts I and J, and pesticide label instructions when using pesticides in and around the housing;
2. Comply with local sanitation codes for removing and disposing of refuse from housing areas;
3. Provide readily accessible first-aid equipment;
4. Ensure that a first-aid qualified person is readily accessible to administer first aid at all times;
5. Store or remove unused refrigerator units to prevent access by children.

WAC 296-307-16185 Insect and rodent control. The operator must:

1. Comply with chapters 16-228 and 296-307 WAC, Parts I and J, and pesticide label instructions when using pesticides in and around the housing;
2. Maintain a minimum space of twenty-seven inches between the upper and lower bunks; and
3. Prohibit triple bunks; and
4. Provide storage facilities for clothing and personal articles in each room used for sleeping.

WAC 296-307-16190 Disease prevention and control. The operator must:

1. Comply with chapters 16-228 and 296-307 WAC, Parts I and J, and pesticide label instructions when using pesticides in and around the housing;
2. Comply with local sanitation codes for removing and disposing of refuse from housing areas;
3. Provide readily accessible first-aid equipment;
4. Ensure that a first-aid qualified person is readily accessible to administer first aid at all times;
5. Store or remove unused refrigerator units to prevent access by children.

WAC 296-307-163 Cherry Harvest Camps

1. Cherry harvest camps.

WAC 296-307-16301 Purpose and applicability. (1) Purpose. This part is adopted by the Washington state department of labor and industries, to implement the provisions of chapter 49.17 RCW and establish minimum health and safety requirements for cherry harvest camps.

(2) Applicability. (a) This part applies only to operators of cherry harvest camps using tents during the cherry harvest season. Operators using other housing must refer to WAC 296-307-161, Part L, or chapter 246-358 WAC.

(b) Operators with ten or more occupants are required to be licensed under this part. Operators with nine or less employees are not required to be licensed, but must comply with these standards.

(c) For department of health licensing, on-site survey, and water test fees, see WAC 246-361-990.

WAC 296-307-16303 Definitions. For the purposes of this part, the following words and phrases will have the fol-
lowing meanings unless the context clearly indicates otherwise:

"Building" means any structure used or intended to be used for supporting or sheltering any use or occupancy that may include cooking, eating, sleeping, and sanitation facilities.

"Cherry harvest camp" or "camp" means a place, area, or piece of land where dwelling units or campsites are provided by an operator during the cherry harvest.

"Common food-handling facility" means an area designated by the operator for occupants to store, prepare, cook, and eat their own food supplies.

"Current certificate (first aid)" means a first-aid training certificate that has not expired.

"Department" means the Washington state department of health and/or the department of labor and industries.

"Dining hall" means a cafeteria-type eating place with food furnished by and prepared under the direction of the operator for consumption, with or without charge, by occupants.

"Drinking fountain" means a fixture equal to a nationally recognized standard or a designed-to-drain faucet, which provides potable drinking water under pressure. "Drinking fountain" does not mean a bubble-type water dispenser.

"Dwelling unit" means a shelter, building, or portion of a building, that may include cooking and eating facilities, which is:

- Provided and designated by the operator as either a sleeping area, living area, or both, for occupants; and
- Physically separated from other sleeping and common-use areas.

Note: For the purpose of this Part L1, a "tent" is considered a dwelling unit.

"First-aid qualified" means that the person holds a current certificate of first-aid training from the American Red Cross or another course with equivalent content or hours.

"Food-handling facility" means a designated, enclosed area for preparation of food.

"Group A water system" means a public water system and includes community and noncommunity water systems. (a) A community water system means any Group A water system providing service to fifteen or more service connections used by year-round residents for one hundred eighty or more days within a calendar year, regardless of the number of people, or regularly serving at least twenty-five year-round (i.e., more than one hundred eighty days per year) residents.

- One thousand or more people for two or more consecutive days within a calendar year.

"Group B water system" means a public water system: (a) Constructed to serve less than fifteen residential services regardless of the number of people; or (b) Constructed to serve an average nonresidential population of less than twenty-five per day for sixty or more days within a calendar year; or (c) Any number of people for less than sixty days within a calendar year.

"Health officer" means the individual appointed as such for a local health department under chapter 70.05 RCW or appointed as the director of public health of a combined city-county health department under chapter 70.08 RCW.

"Livestock" means horses, cows, pigs, sheep, goats, poultry, etc.

"Livestock operation" means any place, establishment, or facility consisting of pens or other enclosures in which livestock is kept for purposes including, but not limited to, feeding, milking, slaughter, watering, weighing, sorting, receiving, and shipping. Livestock operations include, among other things, dairy farms, corrals, slaughterhouses, feedlots, and stockyards. Operations where livestock can roam on a pasture over a distance may be treated as outside the definition.

"MSPA" means the Migrant and Seasonal Agricultural Worker Protection Act (96 Stat. 2583; 29 U.S.C. Sec. 1801 et seq.).

"Occupant" means a temporary worker or a person who resides with a temporary worker at the campsite.

"Operating license" means a document issued annually by the department of health or contracted health officer authorizing the use of temporary worker housing.

"Operator" means a person holding legal title to the land on which the camp is located. However, if the legal title and the right to possession are in different persons, "operator" means a person having the lawful control or supervision over the camp.

"Recreational park trailers" means a trailer-type unit that is primarily designed to provide temporary living quarters for recreational, camping, or seasonal use, that meets the following criteria:

- Built on a single chassis, mounted on wheels;
- Having a gross trailer area not exceeding 400 square feet (37.15 square meters) in the set-up mode; and
- Certified by the manufacturer as complying with ANSI A119.5.

"Recreational vehicle" means a vehicular-type unit primarily designed as temporary living quarters for recreational camping, travel, or seasonal use that either has its own mode of power or is mounted on, or towed by, another vehicle. Recreational vehicles include: Camping trailers, fifth-wheel trailers, motor homes, travel trailers, and truck campers, but does not include pickup trucks with camper shells, canopies or other similar coverings.

"Refuse" means solid wastes, rubbish, or garbage.

"Temporary worker" means an agricultural employee employed intermittently and not residing year-round at the same site.

"Tent" means an enclosure or shelter constructed of fabric or pliable material composed of rigid framework to

(2007 Ed.)
support tensioned membrane that provides the weather barrier.

"WISHA" means the Washington Industrial Safety and Health Act, chapter 49.17 RCW, administered by the Washington state department of labor and industries.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 02-23-072, § 296-307-16305, filed 11/19/02, effective 1/1/03. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16305, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16305 Technical assistance. An operator may request technical assistance from the department of health or the department of labor and industries to assist in compliance with this part.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16305, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16310 Operating license. A cherry tent camp license is limited to one week before the commencement through one week following the conclusion of the cherry harvest within the state.

The operator:

(1) Must request a license from the department of health or health officer when:

(a) The camp will house ten or more occupants;
(b) Compliance with MSPA requires a license; or
(c) Construction of camp buildings requires a license under chapter 246-359 WAC, Temporary worker housing construction standard.

(2) Must apply for an operating license at least forty-five days prior to either the use of the camp or the expiration of an existing operating license by submitting to the department of health or health officer:

(a) A completed application on a form provided by the department or health officer;
(b) Proof water system is current with all water tests required by chapter 246-290 or 246-291 WAC; and
(c) A fee as specified in WAC 246-361-990.

(3) Will receive an operating license for the maximum number of occupants as determined by WAC 246-361-030 when:

(a) The application requirements from subsection (2) of this section are met;
(b) The site is in compliance with this part as demonstrated by a licensing survey completed by the department; and
(c) The operator complies with the corrective action plan established by the department.

(4) Must post the operating license in a place readily accessible to workers.

(5) Must notify the department of health in the event of a transfer of ownership.

(6) Must cooperate with the department during on-site inspections.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 02-23-072, § 296-307-16310, filed 11/19/02, effective 1/1/03. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16310, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16315 Maximum camp occupancy. The maximum occupancy for a camp will be based on:

(1) The number of shelters provided; and
(2) The number of bathing, food handling, handwashing, laundry, and toilet facilities.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16315, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16320 Variance and procedure. Conditions may exist in operations that a state standard will not have practical use. The director of the department of labor and industries may issue a variance from the requirements of the standard when another means of providing equal protection is provided. The substitute means must provide equal protection in accordance with the requirements of chapter 49.17 RCW and chapter 296-350 WAC, variances.

Applications for variances will be reviewed and may be investigated by the department of labor and industries and the department of health. Variances granted will be limited to the specific case or cases covered in the application and may be revoked for cause. The variance must remain prominently posted on the premises while in effect.

Variance application forms may be obtained from the Department of Labor and Industries, P.O. Box 44625, Olympia, Washington 98504-4625 or the Department of Health, P.O. Box 47852, Olympia, Washington 98504-7852, upon request. Requests for variances from safety and health standards must be made in writing to the director or the assistant director, Department of Labor and Industries, P.O. Box 44625, Olympia, Washington 98504-4625. (Reference RCW 49.17.080 and 49.17.090.)

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16320, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16325 Cherry harvest campsites. The operator must:

(1) Locate and operate a site to prevent a health or safety hazard that is:

(a) Adequately drained and any drainage from and through the camp must not endanger any domestic or public water supply;
(b) Free from periodic flooding and depressions in which water may become a nuisance;
(c) At least two hundred feet from a swamp, pool, sink hole, or other surface collection of water unless there is a mosquito prevention program for those areas;
(d) Large enough to prevent overcrowding of necessary structures. The principal camp area for sleeping and for food preparation and eating must be at least five hundred feet from where livestock are kept; and
(e) Maintained in a clean and sanitary condition.

(2) Develop and implement a cherry harvest camp management plan and rules for camps with ten or more occupants, to assure that the camp is operated in a safe and secure manner and is kept within the approved capacity. Additionally, the licensed operator must:

(a) Inform residents of the rules, in a language the resident understands by providing individual copies of the rules to each camp resident or posting the rules in the camp area; and

(b) Restrict the number of occupants in the camp to the capacity as determined by the department.

(2007 Ed.)
(3) When closing the camp permanently or for the season, complete the following:
   (a) Dispose of all refuse to prevent nuisance;
   (b) Fill all abandoned toilet pits with earth; and
   (c) Leave the grounds and buildings in a clean and sanitary condition.

[Statutory Authority:  RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16325, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16330 Water supply. The operator must:

   (1) Provide a water system that is:

      (a) Approved as a Group A public water system in compliance with chapter 246-290 WAC if the water system supplies fifteen or more connections or twenty-five or more people at least sixty days per year or provide proof the camp receives water from an approved Group A public water system; or

      (b) Approved as a Group B water system in compliance with chapter 246-291 WAC if the water system supplies less than fifteen connections and does not supply twenty-five or more people at least sixty days per year.

   Note: A "same farm exemption" applies to a public water system with four or fewer connections all of which serve residences on the same farm. "Same farm" means a parcel of land or series of parcels that are connected by covenants and devoted to the production of livestock or agricultural commodities for commercial purposes and does not qualify as a Group A water system.

   (2) Provide an adequate and convenient hot and cold water supply for drinking, cooking, bathing, and laundry purposes.

   Note: An "adequate water supply" means the storage capacity of the potable water system must meet the requirements of ASHRAE 1999 Applications Handbook, chapter 48, Water Systems.

   (3) Ensure that the distribution lines are able to maintain the working pressure of the water piping system at not less than fifteen pounds per square inch after allowing for friction and other pressure losses.

   (4) When water is not piped to each dwelling unit, provide cold, potable, running water under pressure within one hundred feet of each dwelling unit.

   (5) When water sources are not available in each individual tent, provide one or more drinking fountains for each one hundred occupants or fraction thereof. Prohibit the use of common drinking cups or containers from which water is dipped or poured.

   (6) When water is unsafe for drinking purposes and accessible to occupants, post a sign by the source reading "Do not drink. Do not use for washing. Do not use for preparing food" printed in English and in the native language of the persons occupying the camp, or marked with easily understood pictures or symbols.

[Statutory Authority:  RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16330, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16335 Sewage disposal. An operator must:

   (1) Provide sewage disposal systems in accordance with local health jurisdictions.

   (2) Connect all drain, waste, and vent systems from buildings to:

      (a) Public sewers, if available; or

      (b) Approved on-site sewage disposal systems that are designed, constructed, and maintained as required in chapters 246-272 and 173-240 WAC, and local ordinances.

[Statutory Authority:  RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16335, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16340 Electricity and lighting. (1) General electricity requirements.

   (a) The operator must supply electricity to all dwelling units, kitchen facilities, bathroom facilities, common areas, and laundry facilities.

   (b) All electrical wiring, fixtures and electrical equipment must comply with department of labor and industries regulations, chapter 19.28 RCW and local ordinances, and maintained in a safe condition.

   (2) Electricity requirements in tents.

      (a) Each individual tent must have at least one separate floor-type or wall-type convenience outlet. If the operator provides a refrigerator in the tent, a dedicated outlet must be provided for it.

      (b) All electrical wiring and equipment installed in tents must meet the requirements of WAC 296-45-045.

      (c) All electrical appliances to be connected to the electrical supply must meet the requirements for the load calculations as required by chapter 19.28 RCW.

      (d) Electrical wiring exiting the tent to connect to the GFI outside outlet must be placed in approved flexible conduit not to exceed six feet in length.

      (e) All wiring located inside the tent must be placed in conduit for protection and connected to a surface to secure the wiring to prevent movement. Wiring must be located to prevent tripping or safety hazards.

      (f) Receptacles and lighting fixtures must be UL Listed and approved by the department for use in the tent.

   (3) General lighting requirements.

      (a) The operator must provide adequate lighting sufficient to carry on normal daily activities in all common use areas.

      (b) Laundry and toilet rooms and rooms where people congregate must have at least one ceiling-type or wall-type fixture. Where portable toilets are used, lighting requirements can be met by area illumination.

      (c) The operator must provide adequate lighting for safe passage for camp occupants to handwashing sinks and toilets.

      (d) The operator must provide adequate lighting for shower rooms during hours of operation.

   Note: Lighting requirements may be met by natural or artificial means.

   (4) Lighting requirements in tents.
(a) Tents must have adequate lighting sufficient to carry on all normal daily activities. For example: Three 100-watt bulbs located at the top ridge of the frame and are UL Listed or equivalent.

(b) Each tent must have at least one ceiling-type light fixture.

(c) Food preparation areas, if located in the tent, must have at least one lighting fixture located to provide task lighting over the food preparation area.

(d) Alternate lighting appliances must provide adequate lighting. In addition, if using two or more propane, butane, or white gas lighting appliances, a carbon monoxide monitor must be provided and located not more than thirty inches from the floor.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060, 05-01-166, § 296-307-16340, filed 12/21/04, effective 4/2/05. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16340, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16345  Tents.  (1) Tents must provide protection from the elements.

(2) Structural stability and floors.

(a) Tents and their supporting framework must be adequately braced and anchored to prevent weather related collapse. Documentation of the structural stability must be furnished to the department.

(b) Floors must be smooth, flat, and without breaks or holes to provide a hard, stable walking surface. Nonrigid flooring supported by grass, dirt, soil, gravel, etc., are not acceptable. Floors that are constructed of wood or concrete must comply with the building code, chapter 19.27 RCW or temporary worker housing construction standard, chapter 246-359 WAC.

(c) Floor systems must be designed to prevent the entrance of snakes and rodents.

(3) Flame-retardant treatments.

(a) The sidewalls, drops, and tops of tents must be composed of flame-resistant material or treated with a flame retardant in an approved manner.

(b) Floor coverings, which are integral to the tent, and the bunting must be composed of flame-resistant material or treated with a flame retardant in an approved manner and in accordance with Uniform Building Code, Standard 31.1.

(c) All tents must have a permanently affixed label bearing the following information:

(i) Identification of tent size and fabric or material type;

(ii) For flame-resistant materials, the necessary information to determine compliance with this section and National Fire Protection Association Standard 701, Standard Methods of Fire Tests for Flame-resistant Textiles and Films;

(iii) For flame-retardant materials, the date that the tent was last treated with an approved flame-retardant;

(iv) The trade name and type of flame-retardant utilized in the flame-retardant treatment; and

(v) The name of the person and firm that applied the flame retardant.

(4) Means of egress.

(a) At least one door must lead to the outside of the tent and the area designated for refuge must be accessible and remain clear of storage materials or hazards.

(b) The door must not be obstructed in any manner and must remain free of any material or matter where its presence would obstruct or render the exit hazardous.

(c) If cooking facilities are provided in tents, the window located opposite the door must have a means to open the window or provide an easily operable space. For example, a zipper which opens downward toward the floor.

(5) Floor area. The operator must:

(a) If cooking facilities are provided in the tent, provide at least seventy square feet of floor space for one occupant and fifty square feet for each additional occupant; or

(b) If cooking facilities are not provided in the tent, provide at least fifty square feet of floor space for each occupant in rooms used for sleeping purposes.

(6) Ceiling height.

(a) If the tent has a sloped ceiling, a ceiling height of at least seven feet is required in fifty percent of the total area.

(b) No portion of the tent measuring less than six feet from the flooring to the ceiling will be included in any computation of the minimum floor area.

(7) Windows and ventilation.

(a) Provide a window area equal to one-tenth of the total floor area in each habitable room which opens at least halfway or more directly to the outside for cross-ventilation and has sixteen-mesh screens on all exterior openings.

(b) The windows must have weather-resistant flaps, which will cover the window area and a means of fastening the flaps to provide protection from the elements and allow privacy for the occupants.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16345, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16350  Recreational vehicles. The operator must ensure that all recreational vehicles and park trailers meet the requirements of chapters 296-150P and 296-150R WAC.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16350, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16355  Laundry facilities. An operator must:

(1) Provide one laundry tray or tub or one mechanical washing machine for every thirty persons;

(2) Provide facilities for drying clothes;

(3) Provide sloped, coved floors of nonslip impervious materials with floor drains;

(4) Maintain laundry facilities in a clean and sanitary condition.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16355, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16360  Handwashing and bathing facilities. An operator must:

(1) Provide one handwash sink for every six persons in centralized facilities. Handwash sinks must be adjacent to toilets;

(2) Provide one showerhead for every ten persons in centralized facilities;

(3) Provide one "service sink" in each building used for centralized laundry, handwashing, or bathing;
(4) Provide sloped, coved floors of non-slip impervious materials with floor drains;
(5) Provide walls that are smooth and nonabsorbent to the height of four feet. If partitions are used, they must be smooth and nonabsorbent to the height of four feet;
(6) Provide all showers, baths, and shower rooms with floor drains to remove wastewater;
(7) Provide cleanable, nonabsorbent waste containers;
(8) Maintain bathing and handwashing facilities in a clean and sanitary condition, cleaned at least daily;
(9) Ensure shower facilities provide privacy from the opposite sex and the public;
(10) Make showers and bathing facilities available when needed.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16360, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16365 Toilet facilities. (1) General toilet requirements. Operators must provide flush toilets, chemical toilets, or pit privies. The department of health or health officer, according to requirements in chapter 246-272 WAC, must approve pit privies. The operator must comply with the following:

(a) Flush toilets, chemical toilets, and urinals must not be located in any tent.
(b) When chemical toilets are provided, they must be:
   (i) Located at least fifty feet from any dwelling unit or food-handling facility;
   (ii) Maintained by a licensed waste disposal company; and
   (iii) Comply with local ordinances.
(c) When urinals are provided:
   (i) There must be one urinal or two linear feet of urinal trough for each twenty-five men;
   (ii) The floors and walls surrounding a urinal and extending out at least fifteen inches on all sides must be constructed of materials which will not be adversely affected by moisture;
   (iii) The urinal must have an adequate water flush where water under pressure is available; and
   (iv) Urinal troughs are prohibited in pit privies.
(d) When pit privies are approved they must be:
   (i) At least one hundred feet away from any dwelling unit or food-handling facility; and
   (ii) Constructed to exclude insects and rodents from the pit.
(2) Centralized toilet facilities. The operator must meet the following requirements when centralized toilet facilities are provided:
(a) Provide toilet rooms with:
   (i) One toilet for every fifteen persons;
   (ii) One handwashing sink for every six persons;
   (iii) Either a window of at least six square feet opening directly to the outside, or be satisfactorily ventilated; and
   (iv) All outside openings screened with sixteen-mesh material.
(b) Locate toilet rooms so that:
   (i) Toilets are within two hundred feet of the door of each tent; and
   (ii) No person has to pass through a sleeping room to reach a toilet room;
(c) Maintain toilets in a clean and sanitary condition, cleaned at least daily;
(d) Provide each toilet compartment with an adequate supply of toilet paper;
(e) When shared facilities will be used for both men and women:
   (i) Provide separate toilet rooms for each sex with a minimum of one toilet room for each sex and meet the required ratios as defined in (a) of this subsection;
   (ii) Identify each room "men" and "women" with signs printed in English and in the native language of the persons occupying the camp, or identified with easily understood pictures or symbols; and
   (iii) Separate facilities by solid walls or partitions extending from the floor to the roof or ceiling when facilities for each sex are located in the same building.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16365, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16370 Cooking and food-handling facilities. The operator must provide enclosed or screened cooking and food-handling facilities for all occupants. The operator must provide adequate tables and seating for occupants.

(1) If the operator provides cooking facilities in tents, the operator must provide:
(a) An operable cook stove or hot plate with at least one cooking surface for every four occupants;
(b) A sink with hot and cold running potable water under pressure at each tent site;
(c) At least two cubic feet of dry food storage space per occupant;
(d) Nonabsorbent, easily cleanable food preparation counters situated off the floor;
(e) Mechanical refrigeration conveniently located and able to maintain a temperature of forty-five degrees Fahrenheit or below, with at least one cubic foot of storage space per occupant; and
(f) Adequate ventilation for cooking facilities.
(2) If the operator provides common food-handling facilities, the operator must provide:
(a) A room or building, adequate in size, separate from any tent;
(b) No direct openings to living or sleeping areas from the common food-handling facility;
(c) An operable cook stove or hot plate with at least one cooking surface for every four occupants, or four cooking surfaces for every two families;
(d) Sinks with hot and cold running potable water under pressure;
(e) At least two cubic feet of dry food storage space per occupant;
(f) Nonabsorbent, easily cleanable food preparation counters situated off the floor;
(g) Mechanical refrigeration conveniently located and able to maintain a temperature of forty-five degrees Fahrenheit or below, with at least one cubic foot of storage space per occupant;
(h) Fire-resistant, nonabsorbent, nonasbestos, and easily cleanable wall coverings adjacent to cooking areas;
(i) Nonabsorbent, easily cleanable floors; and
(j) Adequate ventilation for cooking facilities.
(3) The operator must ensure that dining hall facilities comply with chapter 246-215 WAC, Food service.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16375, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16375 Cots, beds, bedding, and personal storage. The operator must provide cots, beds, or bunks for each occupant, not to exceed the maximum occupancy approved by the department or health officer.

(1) Beds or bunks must be furnished with clean mattresses and maintained in a clean and sanitary condition.

(2) The operator must:
   (a) Provide sufficient clearance between each cot, bed, or bunk and the floor or a commercially available cot, bed, or bunk; and
   (b) Allow space to separate beds laterally and end-to-end by at least thirty-six inches when single beds are used.

(3) When bunk beds are used the operator must:
   (a) Allow space to separate beds laterally and end-to-end by at least forty-eight inches; and
   (b) Maintain a minimum space of twenty-seven inches between the upper and lower bunks.

(4) Locate cots, beds, or bunks at least thirty inches or more from cooking surfaces.

(5) The use of triple bunk beds is prohibited.

(6) The operator must provide suitable storage facilities for clothing and personal articles in each tent.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16375, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16380 First aid and safety. The operator must:

(1) Comply with chapters 15.58 and 17.21 RCW and chapters 16-228 and 296-307 WAC, Part I and J, and pesticide label instructions when using pesticides in and around the camp;

(2) Prohibit, in the housing area, the use, storage, and mixing of flammable, volatile, or toxic substances other than those intended for household use;

(3) Provide readily accessible first-aid equipment;

(4) Ensure that a first-aid qualified person is readily accessible to administer first aid at all times;

(5) Store or remove unused refrigerator units to prevent access by children.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16380, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16385 Refuse disposal. The operator must:

(1) Comply with local sanitation codes for removing refuse from camp areas and disposing of refuse;

(2) Protect against rodent harborage, insect breeding, and other health hazards while storing, collecting, transporting, and disposing of refuse;

(3) Store refuse in fly-tight, rodent-tight, impervious, and cleanable or single-use containers;

(4) Keep refuse containers clean;

(5) Provide a container on a wooden, metal, or concrete stand within one hundred feet of each dwelling unit;

(6) Empty refuse containers at least twice each week, and when full.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16385, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16390 Insect and rodent control. The operator must take effective measures to prevent and control insect and rodent infestation.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16390, filed 3/1/00, effective 3/1/00.]

WAC 296-307-16395 Disease prevention and control. The operator must:

(1) Report immediately to the local health officer the name and address of any individual in the camp known to have or suspected of having a communicable disease;

(2) Report immediately to the local health officer:
   (a) Suspected food poisoning;
   (b) An unusual prevalence of fever, diarrhea, sore throat, vomiting, or jaundice; or
   (c) Productive cough, or when weight loss is a prominent symptom among occupants.

(3) Prohibit any individual with a communicable disease from preparing, cooking, serving, or handling food, food-stuffs, or materials in dining halls.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050 and 1999 c 374. 00-06-081, § 296-307-16395, filed 3/1/00, effective 3/1/00.]

INDOOR OPERATIONS

Part M
Guarding Tools and Equipment; Farm Shops; Materials Handling

WAC 296-307-18005 How must fan blades be guarded? You must guard the blades of a fan located less than seven feet above the floor or working level. The guard must have maximum openings of one-half inch.

WAC 296-307-18010 How must constant-running drives be guarded? Shields, guards, and access doors that will prevent accidental contact with rotating machine parts on constant-running drives must be in place when the machine is running.

EXCEPTION: This requirement does not apply to combines when guards could create fire hazards.

"Constant-running drives" means drives that continue to rotate when the engine is running and all clutches are disengaged.

WAC 296-307-18015 What training must an employer provide for employees who use agricultural equipment? At the time of initial assignment and at least annually thereafter, you must instruct every employee in the safe operation and servicing of all equipment that the employee will use, including at least the following:

(2007 Ed.)
(1) Keep all guards in place when the machine is in operation.

(2) Only persons required for instruction or machine operation may ride on equipment, unless a passenger seat or other protective device is provided.

(3) Stop engine, disconnect the power source, and wait for all machine movement to stop before servicing, adjusting, cleaning, or unclogging the equipment.

EXCEPTION: When the machine must be running to be properly serviced or maintained, you must instruct employees in the steps and procedures necessary to safely service or maintain the equipment.

(4) Make sure everyone is clear of machinery before starting the engine, engaging power, or operating the machine.

(5) Lock out electrical power before performing maintenance or service on farmstead equipment.

WAC 296-307-18020 What requirements apply to machine controls? (1) If machine operation requires the presence of an operator on the machine, a "stop button" must be provided on the machine within reach of the operator.

(2) Power control devices must be marked to indicate the function and machine they control. "On" and "off" must be marked.

(3) "Stop" buttons must be red or orange. Each machine must have one or more stop buttons according to the working position of the operators.

(4) Power control devices must be located or guarded to prevent unexpected or accidental movement of the control. "Start" buttons must be recessed.

WAC 296-307-18025 How must steam pipes be guarded? (1) All steam pipes or pipes hot enough to burn a person (other than coil pipes, radiators for heating rooms or buildings, or pipes on portable steam engines and boilers) must be guarded with a standard safeguard, unless guarded by location.

(2) All exposed hot pipes within seven feet of the floor or working platform, or within fifteen inches measured horizontally from stairways, ramps, or fixed ladders, must be covered with insulating material or be guarded to prevent contact.

WAC 296-307-185 Guarding powered saws.

[97-09-013, recodified as § 296-307-185, filed 4/7/97, effective 4/7/97. Statutory Authority: RCW 49.17.040. [49.17.050 and [49.17.060. 96-22-048, § 296-306A-185, filed 10/31/96, effective 12/1/96.]

WAC 296-307-18503 What general requirements apply to powered saws? (1) You must ensure that all cracked saw blades are removed from service, except as indicated in WAC 296-307-18515(6).

(2) Inserting a wedge between a saw disk and its collar to form a "wobble saw" for rabbeting or dadoing is prohibited.

EXCEPTION: This does not apply to properly designed adjustable rabbeting blades.

(3) You must provide and ensure that employees use push sticks or push blocks in sizes and types suitable for the work to be done.

WAC 296-307-18506 How must band saws be guarded? (1) You must ensure that all band wheels are completely encased or guarded on both sides. Guards must be constructed of at least No. 14 U.S. gauge metal, nominal two-inch wood material, or mesh or perforated metal of at least U.S. gauge No. 20 with maximum openings of three-eighths inch.

(2) You must ensure that all nonworking portions of the band saw blade are enclosed or guarded. The working side of the blade between the guide and the table may be left open to work on the stock.

(3) You must ensure that the guard for the portion of the blade between the sliding guide and the upper-saw-wheel guard protects the saw blade at the front and outer side.

WAC 296-307-18509 How must radial arm saws be guarded? (1) You must ensure that the upper hood completely encloses the upper portion of the blade, including the end of the saw arbor. The upper hood must be constructed to protect the operator from flying material, and to deflect sawdust. The sides of the lower exposed portion of the blade must be guarded to the full diameter of the blade by a device that will automatically adjust itself to the thickness of the stock and remain in contact with stock. You may use an alternative lower blade guard if it provides equivalent protection.

(2) You must provide an adjustable stop to prevent the forward travel of the blade beyond the position necessary to complete the cut.

(3) You must equip a radial arm-saw with a mechanism to return the saw and keep it in position at the back of the table or behind the rip fence.

For example: You may use a counter-weight or a saw retractor device, or tilt the front of the radial arm saw unit up enough to maintain the blade at the back of the table or behind the rip fence when the pull handle is released by the operator.

(4) You must ensure that ripping and ploughing are permitted only against the direction in which the saw turns. Mark the direction of the saw rotation on the hood, and attach a permanent warning sign to the rear of the guard that prohibits ripping or ploughing from that position. (Where the blade teeth exit the upper hood when set up for ripping would be the rear of the saw in this case.) Each radial arm saw used for ripping must be provided with antikickback fingers or dogs to prevent the saw from throwing the material or stock back at the operator.

WAC 296-307-18512 How must table saws be guarded? (1) You must ensure that each circular blade table saw used for ripping or crosscutting is guarded by a standard hood that covers the saw blade above the material completely at all times during the cut. The hood must adjust itself automatically to the thickness of, and must remain in contact with, the material being cut.

EXCEPTION: When finished surfaces of stock may be marred by the guard, it may be raised slightly to avoid contact. The hood must be designed to protect the operator from flying material.

(2) You must ensure that any table saw used for ripping has antikickback fingers or dogs and a spreader.

(3) While used for rabbeting, ploughing, grooving or dadoing a table saw may be used without an antikickback device and a spreader. Upon completion, the antikickback device and spreader must be replaced immediately.

(4) You must ensure that the part of the table saw that is beneath the table is fully guarded to prevent employee contact with the portion of the blade below the table.

(5) Power transmission components of table saws must be guarded according to WAC 296-307-280.

WAC 296-307-18515 How must circular fuel-wood saws be guarded? (1) You must ensure that fuel-wood saws are guarded by a standard guard that completely encloses the blade to the depth of the teeth, except for the area where material is fed into the blade.

(2) You must ensure that the tables of fuel-wood saws is constructed so that material being sawed is supported on both sides of the blade.

(3) You must provide a mechanism that will prevent the leading edge of the saw from passing the front edge of the table or roll case.

(4) You must provide tilting tables of fuel-wood saws with a backrest for the full length of the table. The backrest must extend upward from the table platform at least to the height of the saw opening. An opening in a backrest must be a maximum of two inches. The backrest frame and filler must be constructed of material strong and rigid enough to prevent distortion under normal use.

(5) Power transmission components of fuel-wood saws must be guarded according to WAC 296-307-280.

(6) When a circular fuel-wood saw blade develops a crack, you must discontinue its use until properly repaired, according to the following measurements.

<table>
<thead>
<tr>
<th>Length of crack</th>

296-307-18512 Title 296 WAC: Labor and Industries, Department of

WAC 296-307-190 Guarding bench grinders, abrasive wheels, and portable grinders.

WAC 296-307-19003 What definitions apply to this section? "Abrasive wheel" means a cutting tool consisting of abrasive grains held together by organic or inorganic bonds. This includes diamond and reinforced wheels.

"Flanges" means collars, discs, or plates between which wheels are mounted. Also referred to as adapter, sleeve, or back.

"Mounted wheels" means wheels of various dimensions that are usually 2 inches in diameter or smaller. They can be either organic or inorganic bonded abrasive wheels. They are secured to plain or threaded steel mandrels.

"Off-hand grinding" means grinding material or a part that is held in the operator's hand.

"Portable grinding" means the grinding machine is hand-held and may be easily moved from one location to another.

"Reinforced wheels" means a class of organic wheels that contain strengthening fabric or filament. "Reinforced" does not mean wheels using such mechanical additions as steel rings, steel cup backs, or wire or tape winding.

"Safety guard" means an enclosure designed to restrain the pieces of the grinding wheel and protect the operator in the event that the wheel is broken in operation.

"Mounted wheels" means wheels of various dimensions that are usually 2 inches in diameter or smaller. They can be either organic or inorganic bonded abrasive wheels. They are secured to plain or threaded steel mandrels.

"Mounted wheels" means wheels of various dimensions that are usually 2 inches in diameter or smaller. They can be either organic or inorganic bonded abrasive wheels. They are secured to plain or threaded steel mandrels.

"Safety guard" means an enclosure designed to restrain the pieces of the grinding wheel and protect the operator in the event that the wheel is broken in operation.

"Mounted wheels" means wheels of various dimensions that are usually 2 inches in diameter or smaller. They can be either organic or inorganic bonded abrasive wheels. They are secured to plain or threaded steel mandrels.

EXCEPTIONS: (a) When the work provides protection to the operator, the spindle end, nut, and outer flange may be exposed. When the work entirely covers the side of the wheel, the side covers of the guard may be omitted.

(b) The spindle end, nut, and outer flange may be exposed on portable machines designed for, and used with, type 6, 11, 27, and 28 abrasive wheels, cutting off wheels, and tuck pointing wheels.

(c) The spindle end, nut, and outer flange may be exposed on machines designed as portable saws.

WAC 296-307-19006 What rules apply to guarding abrasive wheels? (1) Abrasive wheels must be used only on machines provided with safety guards.

EXCEPTION: This requirement does not apply to the following: (a) Wheels used for internal work where the wheel is within the work being ground.

(b) Mounted wheels 2 inches and smaller in diameter, used in portable operations.

(c) Types 16, 17, 18, 18R, and 19 cones, plugs, and threaded hole pot balls where the work offers protection.

(d) Specially shaped "sickle grinding" wheels mounted in mandrel-type bench or floor stands.

(2) The safety guard must cover the spindle end, nut, and flange projections.

EXCEPTIONS: (a) When the work provides protection to the operator, the spindle end, nut, and outer flange may be exposed. When the work entirely covers the side of the wheel, the side covers of the guard may be omitted.

(b) The spindle end, nut, and outer flange may be exposed on portable machines designed for, and used with, type 6, 11, 27, and 28 abrasive wheels, cutting off wheels, and tuck pointing wheels.

(c) The spindle end, nut, and outer flange may be exposed on machines designed as portable saws.

[Title 296 WAC—p. 2430] (2007 Ed.)
(3) The guard must cover the sides and periphery of the wheel.

EXCEPTIONS: (a) Bench and floor stands;
   (i) The maximum permissible angle of exposure is 90°. This exposure must begin at a point not more than 65° above the horizontal plane of the wheel spindle.
   (ii) Wherever the nature of the work requires contact with the wheel below the horizontal plane of the spindle, the exposure must not exceed 125°. This exposure must begin at a point not more than 65° above the horizontal plane of the wheel spindle.
   (b) Swing-frame grinders may only be exposed on the bottom half; the top half of the wheel must be enclosed at all times.
   (c) Where the work is applied to the top of the wheel, the exposure of the grinding wheel periphery must not exceed 60°.
   (d) When the work entirely covers the side of the wheel, the side covers of the guard may be omitted.

(4) The safety guard must be mounted to maintain proper alignment with the wheel, and the strength of the fastenings must exceed the strength of the guard.

(5) Take care to see that the safety guard is properly positioned before starting the mounted wheel.

(6) Abrasive wheel machinery guards must meet the design specifications of ANSI B7.1-1970.

(7) Exception: WAC 296-307-19006 does not apply to natural sandstone wheels and metal, wooden, cloth, or paper discs, with a layer of abrasive on the surface.

WAC 296-307-19009 What are the use, mounting, and guarding rules for abrasive wheels? (1) Immediately before mounting, the operator must closely inspect and sound (ring test) all wheels to make sure they are not damaged. Before mounting the wheel, the operator must check the spindle speed of the machine to be certain that it does not exceed the maximum operating speed marked on the wheel.

"Ring test" means to tap the wheel gently with a light nonmetallic implement, such as the handle of a screwdriver for light wheels, or a wooden mallet for heavier wheels.

(2) Grinding wheels must fit freely on the spindle and remain free under all grinding conditions. The wheel hole must be made suitably oversized to ensure that heat and pressure do not create a hazard.

(3) All contact surfaces of wheels, blotters, and flanges must be flat and free of foreign matter.

(4) Bushings used in the wheel hole must not exceed the width of the wheel and must not contact the flanges.

(5) On offhand grinding machines, work rests must be used to support the work. The work rest must be rigid and adjustable to compensate for wheel wear. Work rests must be kept adjusted closely to the wheel with a maximum opening of one-eighth inch to prevent the work from jamming between the wheel and the rest. The work rest must be securely clamped after each adjustment and shall not be adjusted with the wheel in motion.

(6) Goggles or face shields must be used when grinding.

(7) Nonportable grinding machines must be securely mounted on substantial floors, benches, foundations, or other adequate structures.

(8) After mounting, abrasive wheels must be run at operating speed with the safety guard in place and properly adjusted, or in a protected enclosure for at least one minute before applying work. During this time, no one may stand in front of or in line with the wheel.

(9) Grinders or abrasive wheels that vibrate or are out of balance must be repaired before use.

(10) Abrasive wheels not designed for the machine or guard must not be mounted on a grinder.

(11) Side grinding must only be performed with wheels designed for this purpose.

Note: Light grinding on the side of straight wheels is permitted only when very delicate pressure is applied.

(12) Where the operator may stand in front of the opening, safety guards must be adjustable to compensate for wheel wear. The distance between the wheel periphery and the adjustable tongue or the guard above the wheel must not exceed one-quarter inch.

WAC 296-307-19012 What requirements apply to flanges? (1) Grinding machines must have flanges.

(2) All abrasive wheels must be mounted between flanges that are at least one-third the diameter of the wheel. Regardless of flange type used, the wheel must always be guarded. Blotters must be used according to this section.

(3) Design and material requirements include:
   (a) Flanges must be designed to transmit the driving torque from the spindle to the grinding wheel.
   (b) Flanges must be made of steel, cast iron, or other material of equal or greater strength and rigidity.

(4) An abrasive wheel that is designed to be held by flanges must not be operated without them. Except for those types requiring flanges of a special design, flanges must be at least one-third the diameter of the wheel.

(5) Facings of compressible material (blotters) must be inserted between the abrasive wheel and flanges to ensure uniform distribution of flange pressure.

(6) All flanges must be maintained in good condition. When the bearing surfaces become damaged, they should be trued or refaced. When refacing or truing, exercise care to make sure that proper relief and rigidity is maintained before starting the wheel.

WAC 296-307-19015 How must vertical portable grinders be guarded? Safety guards on right angle head or vertical portable grinders must have a maximum exposure angle of 180°, and the guard must be between the operator and the wheel during use. The guard must be adjusted so that
pieces of an accidentally broken wheel will be deflected away from the operator.

WAC 296-307-19018 How must other portable grinders be guarded? Other portable grinding machines must be guarded so that only the bottom half of the wheel is exposed. The top half of the wheel must be enclosed at all times.

WAC 296-307-195 What rules apply to grounding and "dead man" controls for hand-held portable power tools? (1) Each hand-held, power-driven tool must have a "dead man" control, such as a spring-actuated switch, valve, or equivalent device, so that the power will be automatically shut off whenever the operator releases the control.

(2) The frames and all exposed, noncurrent-carrying metal parts of portable electric machinery, operated at more than fifty volts to ground, must be grounded. Other hand-held portable motors driving electric tools must be grounded if they operate at more than fifty volts to ground, must be grounded. Other hand-held electric tools must be grounded if they operate at more than fifty volts to ground, must be grounded.

Exception: Double insulated tools that are designed and used according to the requirements of Article 250-45 of the National Electrical Code (1971 edition) are exempt from the grounding requirements.

WAC 296-307-200 Compressed air.

WAC 296-307-20005 May compressed air be used for cleaning? Using compressed air for cleaning purposes is prohibited, except where the pressure is reduced to less than 30 psi and then only with effective chip guarding and personal protective equipment.

WAC 296-307-20010 What requirements apply to compressed air tools? (1) When using compressed air tools, use care to prevent the tool from being shot from the gun.

(2) When momentarily out of use, the gun should be laid so that the tool cannot fly out if the pressure is accidentally released. When not in use, all tools should be removed from the gun.

(3) When disconnecting a compressed air tool from the air line, first shut off the pressure and then operate the tool to release the pressure remaining in the hose.

(4) Compressed air hose or guns must not be pointed at or brought into contact with the body of any person.
These tools may have a lock-on control if they can be turned off by a single motion of the same finger or fingers that turn it on.

(3) The following powered tools must have either a positive on-off control, or other controls as described above:

- All other hand-held powered tools, including:
  - Platen sanders;
  - Grinders with wheels 2 inches in diameter or less;
  - Disc sanders with discs 2 inches in diameter or less;
  - Routers;
  - Planers;
  - Laminate trimmers;
  - Nibblers;
  - Shears; and
  - Saber, scroll, and jig saws with blade shanks a nominal 1/4 inch wide or less.
  (a) Saber, scroll, and jig saws with nonstandard blade holders may use blades with shanks that are nonuniform in width, if the narrowest portion of the blade shank is an integral part in mounting the blade.
  (b) Blade shank width must be measured at the narrowest portion of the blade shank when saber, scroll, and jig saws have nonstandard blade holders.
  (c) "Nominal" in this section means +0.05 inch.

(4) The operating control on hand-held power tools must be located to minimize the possibility of accidental operation that would constitute a hazard to employees.

Exception: This section does not apply to concrete vibrators, concrete breakers, powered tampers, jack hammers, rock drills, garden appliances, household and kitchen appliances, personal care appliances, or to fixed machinery.

WAC 296-307-20515 What requirements apply to pneumatic powered tools and hose? (1) The operating trigger on portable pneumatic powered tools must be located to minimize the possibility of accidental operation and arranged to close the air inlet valve automatically when the operator removes pressure.

(2) A tool retainer must be installed on each tool that would otherwise be ejected from the hose.

(3) Hose and hose connections used for conducting compressed air to utilization equipment must be designed for the pressure and service to which they are subjected.

WAC 296-307-220 Power lawn mowers.

WAC 296-307-22003 What definitions apply to this section? "Blade tip circle" means the path described by the outermost point of the blade as it rotates about its shaft axis.

"Catcher assembly" means a part that provides a means for collecting grass clippings or debris.

"Deadman control" means a control designed to automatically interrupt power to a drive when the operator releases the control.

"Guard" means a part for shielding a hazardous area of a machine.

"Lowest blade position" means the lowest blade position when the mower is not in use.

"Operator area" (walk-behind mowers) means a circular area behind the mower that is no smaller than 30 inches in diameter, the center of which is 30 inches behind the nearest blade tip circle.

"Power reel mower" means a lawn-cutting machine with a power source that rotates one or more helically formed blades about a horizontal axis and creates a shearing action with a stationary cutter bar or bed knife.

"Power rotary mower" means a lawn-cutting machine with a power source that rotates one or more cutting blades about a vertical axis.

"Riding mower" means a powered, self-propelled lawn-cutting vehicle on which the operator rides and controls the machine.

"Sulky type mower" means a walk-behind mower that has been converted to a riding mower by the addition of a sulky.

"Walk-behind mower" means a mower either pushed or self-propelled and normally guided by the operator walking behind the unit.

WAC 296-307-22006 What are the general guarding requirements for power lawn mowers? (1) Walk-behind, riding-rotary, and reeler power lawn mowers designed for use by employees must meet the design specifications in ANSI B71.1-1968.

Exception: These specifications do not apply to sulky-type mowers, flail mowers, sickle-bar mowers, or mowers designed for commercial use.

(2) All power-driven chains, belts, and gears must be positioned or guarded to prevent accidental contact with the operator during normal starting, mounting, and operation of the machine.

(3) The motor must have a shutoff device that requires manual and intentional reactivation to restart the motor.

(4) All positions of the operating controls must be clearly identified.

(5) The words, "Caution — Be sure the operating control(s) is in neutral before starting the engine," or similar wording must be clearly visible at an engine starting control point on self-propelled mowers.

(6) All power lawn mowers must be used according to the manufacturer's instructions.

WAC 296-307-22009 What rules apply to walk-behind and riding rotary mowers? (1) The mower blade must be enclosed except on the bottom and the enclosure must extend to or below the lowest blade position.
(2) Guards that must be removed to install a catcher assembly must meet the following requirements:
   (a) Warning instructions are attached to the mower near the opening stating that the mower must not be used without either the catcher assembly or the guard in place.
   (b) The mower is used only with either the catcher assembly or the guard in place.
   (c) The catcher assembly is properly and completely installed.
   (3) The word "caution" or stronger wording must be placed on the mower at or near each discharge opening.
   (4) Blade(s) must stop rotating from the manufacturer's specified maximum speed within 15 seconds after declutching, or shutting off power.

WAC 296-307-22012 What rules apply to walk-behind rotary mowers? (1) The horizontal angle of the grass discharge opening(s) in the blade enclosure must not contact the operator area.
(2) There must be one of the following at all grass discharge openings:
   (a) A minimum of 3 inches between the end of the discharge chute and the blade tip circle; or
   (b) A rigid bar fastened across the discharge opening, secured to prevent removal without the use of tools. The bottom of the bar must be no higher than the bottom edge of the blade enclosure.
(3) The highest point(s) on the blade enclosure front, except discharge-openings, must be a maximum of 1-1/4 inches above the lowest blade position. Mowers with a swingover handle are considered to have no front in the blade enclosure and therefore must comply with WAC 296-307-22009(1).
(4) The mower handle must be fastened to the mower to prevent loss of control by unintentional uncoupling while in operation.
(5) Mower handles must be locked in the normal operating position(s) so that they cannot be accidentally disengaged during normal mower operation.
(6) A swingover handle must meet the requirements of this section.
(7) Wheel drive disengaging controls, except deadman controls, must move opposite to the direction of the vehicle motion in order to disengage the drive. Deadman controls may operate in any direction to disengage the drive.
(8) You must ensure that each walk-behind rotary mower has a positive constant-pressure device that requires the operator to hold the device in the "on" position to operate the mower. Using rope or string or other material to tie the constant pressure device in the "on" position is prohibited.

WAC 296-307-22015 What rules apply to riding rotary mowers? (1) The highest point(s) of all openings in the blade enclosure front must be a maximum of 1 1/4 inches above the lowest blade position.
(2) Opening(s) must not allow grass or debris to discharge directly toward the operator seated in normal operator position.
(3) There must be one of the following at all grass discharge openings:
   (a) A minimum of 6 inches between the end of the discharge chute and the blade tip circle; or
   (b) A rigid bar fastened across the discharge opening secured to prevent removal without the use of tools. The bottom of the bar must be no higher than the bottom edge of the blade enclosure.
(4) Mowers must have stops to prevent jackknifing or locking of the steering mechanism.
(5) The mower must have brakes.
(6) Hand-operated wheel drive disengaging controls must move opposite to the direction of vehicle motion in order to disengage the drive. Foot-operated wheel drive disengaging controls must be depressed to disengage the drive. Deadman controls, both hand and foot operated, may operate in any direction to disengage the drive.

WAC 296-307-22503 What definitions apply to this section? "Jack" means an appliance for lifting and lowering or moving horizontally a load using a pushing force.

Note: Jack types include lever and ratchet, screw, and hydraulic.

"Rating" means the maximum working load for which a jack is designed to lift the load safely throughout its travel.

Note: You should follow the manufacturer's specifications to raise the rated load of a jack.

WAC 296-307-22506 How shall the rated load be marked on a jack? (1) The operator must make sure that the jack used has a load rating sufficient to lift and sustain the load.
(2) The rated load must be legibly and permanently marked in a prominent location on the jack by casting, stamping, or other suitable means.

WAC 296-307-22509 What rules apply to the operation and maintenance of jacks? (1) If the foundation is not firm, you must block the base of the jack. If the cap might slip, you must place a block in between the cap and the load.
(2) The operator must watch the stop indicator, which must be kept clean, in order to determine the limit of travel. The indicated limit must not be overrun.

(3) After the load has been raised, it must immediately be cribbed, blocked, or otherwise secured. Working under a load raised only with jacks is prohibited.

(4) Hydraulic jacks exposed to freezing temperatures must be supplied with an adequate antifreeze liquid.

(5) All jacks must be properly lubricated at regular intervals. The lubricating instructions of the manufacturer should be followed, and only lubricants recommended by the manufacturer should be used.

(6) You must ensure that each jack is thoroughly inspected according to the service conditions and at least:
   (a) For constant or intermittent use at one locality, once every 6 months;
   (b) For jacks sent out of shop for special work, when sent out and when returned;
   (c) For a jack subjected to abnormal load or shock, immediately before and immediately thereafter.

(7) Repair or replacement parts must be examined for possible defects.

(8) Jacks that are out of order must be tagged, and not be used until repaired.

WAC 296-307-230 What are the general requirements for materials handling and storage? (1) Safe clearances of three feet must be allowed for aisles, loading docks, doorways, and wherever turns or passage must be made. Passageways must be kept clear and in good repair, with no obstructions.

(2) Bags, bales, boxes, and other containers stored in tiers must be made secure against sliding or collapse.

(3) Storage areas must be kept free from any accumulation of materials that could cause tripping, fire, or explosion.

(4) Employees must be instructed in proper lifting or moving techniques and methods. Mechanical devices or assistance in lifting must be used when moving heavy objects.

(5) When removing material stored in piles, employees must remove material in a manner that maintains the stability of the pile and prevents collapse.

(6) Storage areas must have proper drainage.

(7) You must provide clearance signs to warn of clearance limits.

(8) For powered industrial truck (forklift) requirements, see WAC 296-307-520.

(1) When the return strand of a conveyor operates within seven feet of the floor, there must also be a trough strong enough to carry the weight resulting from a broken chain.

(2) If the strands are over a passageway, a means must be provided to catch and support the ends of the chain in the event of a break.

(3) When the working strand of a conveyor crosses within three feet of the floor level in passageways, a bridge must be provided for employees to cross over the conveyor.

(4) Whenever conveyors pass adjacent to or over working areas or passageways, protective guards must be installed. These guards must be designed to catch and hold any load or materials that may fall off or dislodge and injure an employee.

(5) Employees must be prohibited from walking on the rolls of roller-type conveyors. If employees must walk on roller-type conveyors because of an emergency, the conveyor must be shut off first.

(6) Guards, screens, or barricades that are strong enough to prevent material from falling must be installed on all sides of the shaftway of elevator-type conveyors except at openings where material is loaded or unloaded. Automatic shaftway gates or suitable barriers must be installed at each floor level where material is loaded or unloaded from the platform.

(7) Conveyors must have an emergency stopping device that can be reached from the conveyor. The device must be located near the material entrance to each chopper, mulcher, saw, or similar equipment. The device must be located so that it can stop the conveyor before an employee enters the point of operation of the machine fed by the conveyor.

EXCEPTION: The emergency stopping device is not required where the conveyor leading into the equipment is under constant control of an operator with full view of the material entrance and the conveyor is located where the operator cannot fall onto it.

(8) Where conveyors are over seven feet high, means must be provided to safely permit essential inspection and maintenance operations.

(9) Any part showing signs of significant wear must be inspected carefully and replaced before it creates a hazard.

(10) Replacement parts must be equal to or exceed the manufacturer's specifications.

WAC 296-307-240 Sanitation for Indoor Workplaces.

(97-09-013, recodified as § 296-307-240, filed 4/7/97, effective 4/7/97, Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-232, filed 10/31/96, effective 12/1/96.)

Part N
Sanitation for Indoor Workplaces

WAC 296-307-240 Sanitation for fixed, indoor workplaces.

(97-09-013, recodified as § 296-307-240, filed 4/7/97, effective 4/7/97, Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-240, filed 10/31/96, effective 12/1/96.)
tion in the workplace. We enforce these regulations according to RCW 43.20.050.

A "fixed, indoor workplace" is one where the employees perform a majority of their duties at that site.

This does not cover field employees who only occasionally enter a shop or other farm building as part of their normal duties. Field employees are covered by the field sanitation requirements of WAC 296-307-095.

This section does not cover measures for the control of toxic materials.

WAC 296-307-24006  What definitions apply to this section? "Lavatory" means a basin used exclusively for washing hands, arms, face, and head.

"Personal service room" means a room used for activities not directly connected with the business function of the employer. Such activities include but are not limited to, first aid, medical services, dressing, showering, toilet use, washing, and eating.

"Potable water" means water that meets state or local quality standards for drinking water, or water that meets the quality standards of the Environmental Protection Agency's "National Interim Primary Drinking Water Regulations," published in 40 CFR, Part 141, and 40 CFR 147.2400.

"Toilet facility" means a fixture maintained within a toilet room for the purpose of defecation or urination, or both.

"Toilet room" means a room maintained within or on the premises of any place of employment, containing toilet facilities for employee use.

"Toxic material" means a material that exceeds a regulatory limit (such as in chapter 296-62 WAC), or toxicity that causes or is likely to cause death or serious physical harm.

"Urinal" means a toilet facility maintained within a toilet room for the sole purpose of urination.

"Water closet" means a toilet facility maintained within a toilet room for the purpose of both defecation and urination and which is flushed with water.

"Wet process" means any process or operation in a workroom that normally results in walking or standing surfaces becoming wet.

WAC 296-307-24009  What housekeeping requirements apply to fixed, indoor workplaces? (1) You must ensure that all places of employment are kept clean to the extent that the work allows.

(2) You must ensure that the floor of every workroom is kept as dry as possible. Where wet processes are used, you must maintain drainage. You must provide false floors, platforms, mats, or other dry standing places where practical, or provide appropriate waterproof footwear.

(3) To facilitate cleaning, every floor, working place, and passageway must be kept free from protruding nails, splinters, loose boards and unnecessary holes and openings.

(4) Cleaning and sweeping must be done to minimize dust in the air and when practical, done outside of working hours.

WAC 296-307-24012  How must the potable water supply be maintained? (1) You must provide potable water in all places of employment, for drinking, washing of the person, cooking, washing food, washing cooking or eating utensils, washing food preparation or processing premises, and for personal service rooms.

(2) Potable drinking water dispensers must be maintained in sanitary condition, be closeable, and have a tap.

(3) Open containers for drinking water from which the water must be dipped or poured, even if fitted with a cover, are prohibited.

(4) A common drinking cup and other common utensils are prohibited.

WAC 296-307-24015  How must the nonpotable water supply be maintained? (1) You must ensure that nonpotable water is marked as unsafe and is not used for drinking, washing of the person, cooking, washing food, washing cooking or eating utensils, washing food preparation or processing premises, or personal service rooms, or for washing clothes.

(2) Nonpotable water used for cleaning any other work premises must be free of concentrations of chemicals, fecal coliform, or other substances that could create unsanitary conditions or be harmful to employees.

(3) Nonpotable water systems or systems carrying any other nonpotable substance must be constructed to prevent backflow or backsiphonage into a potable water system.

WAC 296-307-24018  What toilet facilities must an employer provide? (1) You must provide toilet facilities, with separate toilet rooms for each sex, according to the requirements in the table below. You must provide facilities for each sex based on the number of employees of that sex for whom facilities are furnished.

(2) Where single-occupancy rooms have more than one toilet facility, only one facility in each toilet room counts toward these requirements.
In this table, "number of employees" means the maximum number of employees present at any one time on a regular shift.

<table>
<thead>
<tr>
<th>Number of employees</th>
<th>Minimum number of water closets</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>81 to 110</td>
<td>5</td>
</tr>
<tr>
<td>111 to 150</td>
<td>6</td>
</tr>
<tr>
<td>Over 150</td>
<td>One additional fixture for each additional 40 employees</td>
</tr>
</tbody>
</table>

(3) Where toilet rooms are occupied by one person at a time, can be locked from the inside, and contain at least one water closet, separate toilet rooms for each sex need not be provided.

(4) Where toilet facilities will not be used by women, urinals may be provided instead of water closets, except that the number of water closets must not be less than 2/3 of the minimum specified.

(5) The sewage disposal method must not endanger the health of employees.

(6) Toilet paper with holder must be provided for every water closet.

(7) Each water closet must occupy a separate compartment with a door and walls or partitions between fixtures high enough to ensure privacy.

**WAC 296-307-24021** What washing facilities must an employer provide? You must provide facilities for maintaining personal cleanliness in the workplace. The facilities must be convenient for employees and maintained in a sanitary condition.

**WAC 296-307-24024** What requirements apply to lavatories? (1) You must ensure that lavatories are available in all workplaces.

(2) Each lavatory must have hot and cold running water, or tepid running water.

(3) You must provide a soap or similar cleansing agent.

(4) You must provide individual hand towels, warm air blowers, or clean individual sections of continuous cloth towel- ing convenient to the lavatories.

**WAC 296-307-24027** When must an employer provide change rooms? (1) Whenever employees are required by a WISHA standard to wear protective clothing because of the possibility of contamination with toxic materials, you must provide change rooms with separate storage facilities for street clothes and for the protective clothing.

(2) If you provide work clothes for employees, they must be dry.

[97-09-013, recodified as § 296-307-24027, filed 4/7/97, effective 4/7/97. Statutory Authority: RCW 49.17.040, [49.17.050 and [49.17.060. 96-22-048, § 296-306A-24027, filed 10/31/96, effective 12/1/96.]

**WAC 296-307-24030** What requirements apply to consumption of food and beverages in the workplace? (1) This section applies to workplaces where employees may consume food, beverages, or both on the premises.

(2) No employee may consume food or beverages in a toilet room nor in any area exposed to a toxic material.

(3) If your workplace exposes employees to injurious dusts or other toxic materials, you must provide a separate lunchroom unless it is convenient for employees to lunch away from the premises. The size of the lunchroom must be based on the maximum number of persons using the room at one time, according to the following table.

<table>
<thead>
<tr>
<th>Number of persons</th>

</tr>
<tr>
<td>150 and over</td>
<td>10</td>
</tr>
</tbody>
</table>

(4) You must provide receptacles of smooth, corrosion resistant, easily cleanable, or disposable materials for the disposal of waste food. You must provide enough receptacles to encourage their use and to prevent overfilling. Receptacles must be emptied at least once a working day and maintained in sanitary condition. Receptacles must have a solid tight-fitting cover unless sanitary condition can be maintained without a cover.

(5) No food or beverages may be stored in toilet rooms or in an area exposed to toxic material.

(6) All employee food service facilities and operations must follow sound hygienic principles. If all or part of the food service is provided, the food dispensed must be wholesome and free from spoilage. Food must be processed, prepared, handled, and stored so as to prevent contamination.

**WAC 296-307-24033** How must waste be stored and removed? (1) You must ensure that any receptacle used for waste or garbage that may rot is constructed so that it does not leak and can be thoroughly cleaned and maintained in a sanitary condition. A receptacle must have a solid tight-fitting cover, unless it can be maintained in a sanitary condition without a cover. Receptacles designed to maintain sanitary condition may be used in place of this requirement.

(2) All sweepings, solid or liquid wastes, refuse, and garbage must be removed to avoid creating a health menace, and as often as necessary to maintain the workplace in a sanitary condition.

[Title 296 WAC—p. 2437]
WAC 296-307-24036 When must an employer have a vermin control program? Every building with personal service, food preparation, or eating rooms must be constructed, equipped, and maintained to restrict infestation by rodents, insects, and other vermin. You must have a continuing and effective extermination program where vermin are present.

WAC 296-307-24039 What definitions apply to this section? "Wall hole" means an opening between one and 30 inches high, of any width, in any wall or partition, such as a ventilation hole or drainage scupper. "Floor hole" means an opening with the smallest dimension of 12 inches or more, in any floor, platform, pavement, or yard, through which materials may fall but not people. Examples are a belt hole, pipe opening, or slot opening.

"Runway" means a passageway used by people that is elevated above the surrounding floor or ground level, such as a footwalk along shafting or a walkway between buildings.

"Standard railing" means a vertical barrier along exposed edges of a floor opening, wall opening, ramp, platform, or runway to prevent people from falling.

"Standard strength and construction" means any construction of railings, covers, or other guards that meets the requirements of this section.

"Stair railing" means a vertical barrier along exposed sides of a stairway to prevent people from falling.

"Toeboard" means a vertical barrier at floor level along exposed edges of a floor opening, wall opening, platform, runway, or ramp to prevent materials from falling.

"Wall hole" means an opening between one and 30 inches high, of any width, in any wall or partition, such as a ventilation hole or drainage scupper. "Floor opening" means an opening with the smallest dimension between one and 12 inches, in any floor, platform, pavement, or yard, through which materials may fall but not people. Examples are a belt hole, pipe opening, or slot opening.

"Wall opening" means an opening at least 30 inches high and 18 inches wide, in any wall or partition, through which people may fall, such as a yard-arm doorway or chute opening.

"Runway" means a passageway used by people that is elevated above the surrounding floor or ground level, such as a footwalk along shafting or a walkway between buildings.

"Standard railing" means a vertical barrier along exposed edges of a floor opening, wall opening, ramp, platform, or runway to prevent people from falling.

"Standard strength and construction" means any construction of railings, covers, or other guards that meets the requirements of this section.

"Stair railing" means a vertical barrier along exposed sides of a stairway to prevent people from falling.

"Toeboard" means a vertical barrier at floor level along exposed edges of a floor opening, wall opening, platform, runway, or ramp to prevent materials from falling.

"Wall hole" means an opening between one and 30 inches high, of any width, in any wall or partition, such as a ventilation hole or drainage scupper.

"Floor opening" means an opening with the smallest dimension between one and 12 inches, in any floor, platform, pavement, or yard, through which materials may fall but not people. Examples are a belt hole, pipe opening, or slot opening.
(8) Every infrequently used pit and trapdoor floor opening must be guarded by a floor opening cover of standard strength and construction that should be hinged in place. When the cover is not in place, the pit or trap opening must be constantly attended or protected on all exposed sides by removable standard railings.

(9) Every manhole floor opening must be guarded by a standard manhole cover. The manhole cover may be left unhinged. When the cover is removed, the manhole opening must be constantly attended or protected by removable standard railings.

(10) Every temporary floor opening must have standard railings or must be constantly attended.

(11) Every floor hole that people can accidentally walk into must be guarded by either:
   (a) A standard railing with standard toeboard on all exposed sides; or
   (b) A floor hole cover of standard strength and construction that should be hinged in place. While the cover is not in place, the floor hole must be constantly attended or protected by a removable standard railing.

(12) Every floor hole surrounded by fixed machinery, equipment, or walls that prevent people from walking into it, must be protected by a cover that leaves openings a maximum of one inch wide. The cover must be securely held in place to prevent tools or materials from falling through.

(13) Where doors or gates open directly on a stairway, a platform must be provided so that the swing of the door does not reduce the platform width to less than 20 inches.

Where the window opening is below the landing, or platform, a standard toeboard must be provided.

(4) Every temporary wall opening must have adequate guards that may be of less than standard construction.

(5) Where there is a hazard of materials falling through a wall hole, and the lower edge of the near side of the hole is less than 4 inches above the floor, and the far side of the hole is more than 5 feet above the next lower level, the hole must be protected by a standard toeboard or a solid enclosing screen, or according to WAC 296-307-25042(3).

WAC 296-307-25015 What protection must an employer provide for open-sided floors, platforms, and runways? (1) Every open-sided floor or platform 4 feet or more above an adjacent floor or ground level must be guarded by a standard railing (or the equivalent according to WAC 296-307-25027) on all open sides, except where there is an entrance to a ramp, stairway, or fixed ladder. The railing must have a toeboard wherever, beneath the open sides:
   (a) A person can pass; or
   (b) There is moving machinery; or
   (c) Materials falling onto equipment would create a hazard.

(2) Every runway must be guarded by a standard railing (or the equivalent according to WAC 296-307-25027) on all open sides that are 4 feet or more above floor or ground level. Wherever tools, machine parts, or materials are likely to be used on the runway, a toeboard must also be provided on each exposed side.

Runways used exclusively for special purposes (such as oiling, shafting, or filling tank cars) may have the railing on one side omitted when operating conditions require, if the hazard is minimized by using a runway at least 18 inches wide. Where people entering runways become exposed to machinery, electrical equipment, or hazards other than from falling, additional guarding may be necessary.

(3) Regardless of height, all open-sided floors, walkways, platforms, or runways above or adjacent to dangerous equipment, pickling or galvanizing tanks, degreasing units, or similar hazardous equipment, must be guarded with a standard railing and toeboard.

(4) Tools and loose materials must not be left on overhead platforms and scaffolds.

WAC 296-307-25018 What requirements apply to stairway railings and guards? (1) Every flight of stairs having four or more risers must have standard stair railings or standard handrails as follows (stairway widths measured clear of all obstructions except handrails):
   (a) Stairways less than 44 inches wide with both sides enclosed must have at least one handrail, preferably on the right side descending.

(2007 Ed.)
(b) Stairways less than 44 inches wide with one side open must have at least one stair railing on the open side.

c) Stairways less than 44 inches wide with both sides open must have one stair railing on each side.

d) Stairways more than 44 inches wide but less than 88 inches wide must have one handrail on each enclosed side and one stair railing on each open side.

e) Stairways 88 or more inches wide must have one handrail on each enclosed side, one stair railing on each open side, and one intermediate stair railing at the approximate middle.

Exception: Vehicle service pit stairways are exempt from this requirement if hand or stair rails would prevent vehicle movement into position over the pit.

(2) Winding stairs must have a handrail that prevents walking on all portions of the treads that are less than 6 inches wide.

(3) Nonindustrial and "monumental" steps are exempt from the requirements of this section. However, public and private building steps at loading or receiving docks, in maintenance areas, etc., and stairs used exclusively by employees, must meet the requirements of this section.

WAC 296-307-25021 How must a standard railing be constructed? A standard railing must meet the following requirements:

(1) The railing has a top rail, intermediate rail, and posts.

(2) The railing height is between thirty-six and forty-two inches nominal from the upper surface of the top rail to the floor, platform, runway, or ramp level.

(3) The top rail is smooth.

(4) The intermediate rail is approximately halfway between the top rail and the floor, platform, runway, or ramp.

(5) The ends of the rails do not overhang the terminal posts except where the overhang does not create a hazard.

(6) Guardrails taller than 42 inches are constructed so they do not create a hazard. Additional mid-rails are installed so that openings beneath the top rail prevent a spherical object with a 19-inch or larger diameter from falling through.

WAC 296-307-25024 How must a stair railing be constructed? A stair railing must be constructed similar to a standard railing. The stair railing must be between 34 and 30 inches tall measured from the top of the top rail to the tread surface meeting the face of the riser at the forward edge of the tread.

WAC 296-307-25027 What are the requirements for railing dimensions? Standard railings must meet the following requirements:

(1) For wood railings:

(a) The posts are of at least two inch by four inch nominal stock spaced six feet apart or less; and

(b) The top and intermediate rails are of at least two inch by four inch nominal stock.

(c) If the top rail is made of two right-angle pieces of 1-inch by 4-inch stock, posts are spaced on 8-foot centers, with 2-inch by 4-inch intermediate rail.

(2) For pipe railings:

(a) The Posts and top and intermediate railings are at least 1-1/2 inches nominal diameter (outside diameter); and

(b) The posts are spaced on centers of eight feet or less.

(3) For structural steel railings:

(a) The posts and top and intermediate rails are of 2-inch by 2-inch by 3/8-inch angles or other metal shapes of equivalent bending strength; and

(b) The posts are spaced on centers of eight feet or less.

(4) Post anchors and framing parts for all railings are constructed so that the completed structure can withstand a load of at least two hundred pounds applied in any direction at any point on the top rail.

(5) Other types, sizes, and arrangements of railing construction that meet the following requirements are acceptable:

(a) The top rail is smooth;

(b) The top rail is between thirty-six and forty-two inches nominal above the floor, platform, runway, or ramp level;

(c) The railing is strong enough to withstand two hundred pounds of pressure on the top rail;

(d) The railing provides protection between the top rail and the floor, platform, runway, ramp, or stair treads, equivalent to that of a standard intermediate rail;

(e) There are no overhanging rail ends unless the overhang does not create a hazard; such as balustrade railings, scrollwork railings, or paneled railings.

Note: The dimensions specified are based on the U.S. Department of Agriculture Wood Handbook, No. 72, 1955 (No. 1 (S4S) Southern Yellow Pine (Modulus of Rupture 7,400 psi)) for wood; ANSI G 41.5-1970, American National Standard Specifications for Structural Steel, for structural steel; and ANSI B 125.1-1970, American National Standard Specifications for Welded and Steamless Steel Pipe, for pipe.

WAC 296-307-25030 What requirements apply to toeboards? (1) Standard toeboard height is at least four inches nominal from its top edge to the level of the floor, platform, runway, or ramp. The toeboard must be securely fastened in place and with a maximum of 1/4 inch clearance above floor level. It must be made of any substantial material that is either solid or with openings that are a maximum of one inch in diameter.

(2) Where material is piled high enough that a standard toeboard does not provide protection, paneling from the floor to the intermediate rail, or to the top rail, must be provided.

(2007 Ed.)
WAC 296-307-25033 How must handrails and railings be constructed? (1) A handrail must have a horizontal part mounted directly on a wall or partition by brackets attached to the lower side of the handrail. The brackets must be attached to ensure that there is a smooth surface along the top and both sides of the handrail. The handrail must be rounded or otherwise provide an adequate handhold for anyone grasping it to avoid falling. The ends of the handrail should be turned in to the supporting wall or arranged to prevent a projection hazard.

(2) Handrails must be a maximum of thirty-four inches high and at least thirty inches from the upper surface of the handrail to the surface of the tread in line with the face of the riser or to the surface of the ramp.

(3) The size of handrails must be:
   (a) For hardwood, at least two inches in diameter.
   (b) For metal pipe, at least 1-1/2 inches in diameter.
(4) Brackets must be spaced a maximum of eight feet apart.

(5) Handrail mounting must be strong enough to withstand a load of at least two hundred pounds applied in any direction at any point on the rail.

(6) All handrails and railings shall have a clearance of at least 1-1/2 inches between the handrail or railing and the wall or any other object.

WAC 296-307-25036 What materials may be used for floor opening covers? Floor opening covers must be made of any material that meets the following strength requirements:

(1) Trench or conduit covers and their supports, when located in plant roadways, must be designed to carry a truck rear-axle load of at least 20,000 pounds.

(2) Manhole covers and their supports, when located in plant roadways, must meet local standard highway requirements if any; otherwise, they must be designed to carry a truck rear-axle of at least 20,000 pounds.

(3) Other floor opening covers must be made of any material that can carry a truck rear-axle load of at least 20,000 pounds. Covers may project a maximum of one inch above the floor level if all edges are chamfered to a maximum angle with the horizontal of thirty degrees. All hinges, handles, bolts, or other parts must set flush with the floor or cover surface.

WAC 296-307-25039 How must skylight screens be constructed and mounted? Skylight screens must be constructed and mounted to withstand a load of at least two hundred pounds applied perpendicularly anywhere on the screen. Skylight screen must be constructed and mounted so that, under ordinary loads or impacts, they will not deflect downward enough to break the glass below them. They must be constructed of grillwork with openings a maximum of four inches long or of slatwork with openings a maximum of two inches wide and any length.

WAC 296-307-26006 What definitions apply to this section? "Nose or nosing" means the part of a tread projecting beyond the face of the riser immediately below. "Open riser" means the air space between the treads of stairways without risers. "Platform" means an extended step or landing breaking a continuous run of stairs. "Railing" means a vertical barrier erected along exposed sides of stairways and platforms to prevent people from falling. The top part of the railing usually serves as a handrail.
"Rise" means the vertical distance from the top of a tread to the top of the next higher tread.

"Riser" means the upright part of a step at the back of a lower tread and near the leading edge of the next higher tread.

"Stairs or stairway" means a series of steps. A series of steps and landings having three or more risers constitutes a stairs or a stairway.

"Tread" means the horizontal part of a step.

"Tread run" means the horizontal distance from the leading edge of a tread to the leading edge of an adjacent tread.

"Tread width" means the horizontal distance from front to back of tread, including nosing.

Fixed stairways must be designed and constructed to provide a stairway at an angle within the permissible range.

The following table lists examples of rise/tread dimensions that will provide a stairway within the permissible range. Rise/tread combinations are not limited to those in the table.

---

### WAC 296-307-26021 What angles may stairways be installed at?

1. Fixed stairs must be installed at angles to the horizontal of between thirty and fifty degrees. Any uniform combination of rise/tread dimensions may be used that will provide a stairway at an angle within the permissible range.

The following table lists examples of rise/tread dimensions that will provide a stairway within the permissible range. Rise/tread combinations are not limited to those in the table.

<table>

(2) A permanent stairway may be installed at an angle above the fifty degree critical angle when space limitations require. Such installations (commonly called inclined ladders or ships ladders) must have handrails on both sides and open risers. They must be capable of sustaining a live load of one hundred pounds per square foot with a safety factor of four. The following preferred and critical angles from the horizontal are recommended for inclined ladders and ships ladders:

(a) 35 to 60 degrees—Preferred angle from horizontal.

(b) 60 to 70 degrees—Critical angle from horizontal.

---

### WAC 296-307-26024 What requirements apply to stair treads?

1. When risers are used, each tread and the top landing of a stairway should have a nose extending 1/2 to one inch beyond the face of the lower riser.

2. Noses should have an even leading edge.

3. All treads must be reasonably slip-resistant and the nosings must be of nonslip finish. Welded bar grating treads without nosings are acceptable if the leading edge can easily be identified by employees descending the stairway and the tread is serrated or is nonslip.

4. Rise height and tread width must be uniform throughout any flight of stairs including any foundation structure used as one or more treads of the stairs.

---

### WAC 296-307-26027 What requirements apply to the length of stairways?

Long flights of stairs, unbroken by landings or intermediate platforms, should be avoided.

---

[(2007 Ed.)](#)
should consider providing intermediate platforms where practical and for frequently used stairways. Stairway platforms must be at least as wide as the stairway and at least 30 inches long, measured in the direction of travel.

**WAC 296-307-26030 What requirements apply to railings and handrails on fixed stairs?** Standard railings must be provided on the open sides of all exposed stairways and stair platforms. Handrails must be provided on at least one side of closed stairways, preferably on the right side descending. Stair railings and handrails must be installed according to WAC 296-307-250.

**WAC 296-307-26033 What requirements apply to alternating tread-type stairs?** "Alternating tread-type stairs" means stairs with a series of steps between 50 and 70 degrees from horizontal, attached to a center support rail in an alternating manner so that a user of the stairs never has both feet at the same level at the same time.

1. Alternating tread-type stairs must be designed, installed, used, and maintained according to the manufacturer's specifications, and must have the following:
   
   (a) Stair rails on all open sides;
   
   (b) Handrails on both sides of enclosed stairs;
   
   (c) Stair rails and handrails that provide an adequate handhold for a user grasping it to avoid a fall;
   
   (d) A minimum of 17 inches between handrails;
   
   (e) A minimum width of 22 inches overall;
   
   (f) A minimum tread depth of 8 inches;
   
   (g) A minimum tread width of 7 inches; and
   
   (h) A maximum rise of 9 1/2 inches to the tread surface of the next alternating tread.

2. Alternating tread-type stairs must have a maximum 20-foot continuous rise. Where more than a 20-foot rise is necessary to reach the top of a required stair, one or more intermediate platforms must be provided according to WAC 296-307-26027.

3. Stairs and platforms must be installed so the top landing of the alternating tread stair is flush with the top of the landing platform.

4. Stair design and construction must sustain a load of at least five times the normal live load, and be at least strong enough to carry safely a moving concentrated load of 1,000 pounds.

5. Treads must have slip-resistant surfaces.

6. Where a platform or landing is used, the width must be at least as wide as the stair and at least 30-inches deep in the direction of travel. Stairs must be flush with the top of the landing platform.

(2007 Ed.)

**WAC 296-307-26036 What other requirements apply to fixed stairs?**

1. Vertical clearance above any stair tread to an overhead obstruction must be at least 7 feet measured from the leading edge of the tread.

2. Stairs with treads less than 9 inches wide should have open risers.

3. Open grating type treads are desirable for outside stairs.

**WAC 296-307-270 Aerial manlift equipment.**

**WAC 296-307-27005 What requirements apply to aerial manlift equipment?**

1. We will accept safety factor test data on working or structural components from one of the following as evidence that a manlift meets minimum safety requirements:

   (a) The manufacturer;

   (b) A competent testing laboratory;

   (c) A registered engineering firm; or

   (d) A registered engineer.

   If, after use, it appears doubtful whether this equipment will meet the above requirements, we may require that tests be conducted, and we may order that you make corrections.

2. All aerial manlifts must have working brake systems.

3. Automatic apertures must be installed in the hydraulic systems of aerial manlifts to maintain the boom in position in case any part of the hydraulic pressure system fails.

4. Controls must be guarded by partial enclosures to minimize accidental contact.

5. The manufacturer's recommended maximum load limit must be posted conspicuously near the controls and must be kept in a legible condition.

6. All critical hydraulic and pneumatic components must meet the provisions of ANSI A92.2-1969, Section 4.9 Bursting Safety Factor. Critical components are those which, in case of failure, would cause a free fall or free rotation of the boom. All noncritical components must have a bursting safety factor of at least two to one.

**WAC 296-307-27010 What requirements apply to using aerial manlift equipment?**

1. The manufacturer's instructional manual, if any, must be used to establish the proper operational sequences and maintenance procedures. If there is no manual, you must develop instructions. The instructions must be available for reference by operators.

2. The assigned operator must make a daily visual inspection and perform the tests recommended by the manufacturer.

3. Only employees qualified by training or experience may operate aerial manlifts.

4. Employees must report defective aerial manlift equipment to you as soon as identified. Using defective
equipment is prohibited when the defect may cause an accident.

(5) When moving to and from the job site, the basket of the manlift must be in the low position.

(6) Unsafe practices are prohibited, such as, sitting or standing on the basket edge, standing on material placed across the basket, or working from a ladder set inside the basket.

(7) The basket must not be rested on a fixed object so that the weight of the boom is supported by the basket.

(8) The employee and the aerial manlift equipment must maintain distance from high voltage lines according to WAC 296-307-150.

[Statutory Authority: RCW 49.17.040, 49.17.050 and [49.17.]060. 96-22-048, § 296-306A-27010, filed 10/31/96, effective 12/1/96.]

Part P
Guarding Power Transmission Machinery

WAC 296-307-280 Guarding power transmission machinery.

WAC 296-307-28002 What power transmission belts are covered by this section? WAC 296-307-280 covers all types and shapes of power transmission belts.

EXCEPTION: The following power transmission belts are exempt from WAC 296-307-280 when operating at 250 feet per minute or less:

(1) Flat belts that are one inch wide or less.
(2) Flat belts that are 2" wide or less and are free from metal lacings or fasteners.
(3) Round belts that are 1/2" in diameter or less.
(4) Single strand V-belts that are 13/32" wide or less.

WAC 296-307-28004 What does "guarded by location" mean? "Guarded by location" means that the location of a component eliminates potential hazards. A component seven feet or more above a working surface is considered guarded by location.

WAC 296-307-28006 What general requirements apply to machine guarding? (1) All power transmission components must be guarded according to the requirements of this section.

(2) You must protect employees from coming into contact with moving machinery parts by:
(a) A guard or shield or guarding by location; or
(b) A guardrail or fence whenever a guard or shield or guarding by location is infeasible.

(3) Strength and design of guards.
(a) Guards must be designed and located to prevent inadvertent contact with the hazard.
(b) Unless otherwise specified, each guard and its supports must be strong enough to withstand the force that a 250 pound person would exert leaning on or falling against the guard.
(c) Guards must be securely fastened to the equipment or building.
(d) A guard or shield on stationary equipment must be provided at the mesh point or pinch point where the chain or belt contacts the sprocket or pulley.
(e) Machines that will throw stock, material, or objects must be covered or provided with a device designed and constructed to minimize this action. (Machines such as rip saws, rotary mowers and beaters, rotary tillers are included in this classification.)
(f) For requirements relating to the control of hazardous energy (lockout-tagout) see WAC 296-307-320.

[Statutory Authority: RCW 49.17.040, 49.17.050 and [49.17.]060. 96-22-048, § 296-306A-28006, filed 10/31/96, effective 12/1/96.]

WAC 296-307-28014 What requirements apply to prime-mover guards? "Flywheels" include flywheels, balance wheels, and flywheel pulleys mounted and revolving on crankshaft of engine or other shafting.

"Prime movers" include steam, gas, oil, and air engines, motors, steam and hydraulic turbines, and other equipment used as a source of power.

(1) Unless guarded by location, flywheels must be guarded according to the following requirements:
(a) Guard enclosures are made of sheet, perforated, or expanded metal, or woven wire.
(b) Guard rails are between 15 and 20 inches from the rim. When a flywheel extends into a pit or is within 12 inches of the floor, a standard toeboard is provided.
(c) When the upper rim of a flywheel extends through a working floor, it is surrounded by a guardrail and toeboard.
(d) Exception: When a flywheel with a smooth rim 5 feet or less in diameter cannot be guarded by the above methods, you must guard by meeting the following requirements:

On the exposed side, cover the flywheel spokes with a disk that makes a smooth surface and edge, and provides for inspection. You may leave an open space, less than 4 inches wide, between the outside edge of the disk and the rim of the wheel, to turn the wheel over. If you use a disk, keys or other projections left uncovered by the projections shall be cut off or covered.

Note: This exception does not apply to flywheels with solid web centers.

(e) At the flywheel of a gas or oil engine, you may provide an adjustable guard for starting the engine or for running adjustment. A slot opening for a jack bar is permitted.
(f) For flywheels above working areas, you must install guards that are strong enough to hold the weight of the flywheel if the shaft or wheel mounting fails.

(2) Cranks and connecting rods, when exposed to contact, must be guarded according to WAC 296-307-28046 and
296-307-28048, or by a guardrail according to WAC 296-307-28060.

(3) Tail rods or extension piston rods must be guarded according to WAC 296-307-28046 and 296-307-28048, or by a guardrail on the sides and end, with a clearance of between 15 and 20 inches when rod is fully extended.

**WAC 296-307-28016 What requirements apply to guarding shafting?** Revolving shafts must be guarded by a standard safeguard unless guarded by location.

(1) All shafting must be secured against excessive end movement.

(2) Guarding horizontal shafting.

(a) Unless guarded by location, all exposed parts of horizontal shafting must be enclosed in a guard that covers the shafting completely or by a trough that covers the sides and top or sides and bottom of the shafting as location requires.

(b) Shafting under bench machines must be enclosed by a guard that covers the shafting completely or by a trough that covers the sides and top or sides and bottom of the shafting as location requires. The sides of the trough must extend to at least 6 inches from the underside of table. If shafting is near the floor, the trough must extend to at least 6 inches from the floor. In every case, the sides of trough must extend at least 2 inches beyond the shafting or projection.

Exception: Maintenance runways are exempt from this requirement. "Maintenance runway" means any permanent runway or platform used for oiling, maintenance, running adjustment, or repair work, but not for passageway.

(3) Unless guarded by location, vertical and inclined shafting must be enclosed according to WAC 296-307-28046 and 296-307-28050 through 296-307-28060.

Exception: Maintenance runways are exempt from this requirement.

(4) Projecting shaft ends.

(a) Projecting shaft ends must have a smooth edge and end and must not project more than one-half the diameter of the shaft unless guarded by nonrotating caps or safety sleeves.

(b) Unused keyways must be filled up or covered.

**WAC 296-307-28018 What requirements apply to guarding pulleys?** (1) Unless guarded by location, pulleys must be guarded according to WAC 296-307-28046 and 296-307-28050 through 296-307-28060. Pulleys serving as balance wheels (e.g., punch presses) on which the point of contact between belt and pulley is more than 6 feet 6 inches from the floor or platform may be guarded with a disk covering the spokes.

(2) If the distance to the nearest fixed pulley, clutch, or hanger is equal to or less than the width of the belt, then you must provide a guide to prevent the belt from leaving the pulley on the side where insufficient clearance exists.

(3) Where there are overhanging pulleys on line, jack, or countershafts with no bearing between the pulley and the outer end of the shaft, you should provide a guide to prevent the belt from running off the pulley.

(4) Pulleys with cracks, or pieces broken out of rims are prohibited.

(5) Pulleys must be designed and balanced for the operating speed.

(6) Composition or laminated wood pulleys must not be installed where they are likely to deteriorate.

**WAC 296-307-28020 What requirements apply to guarding horizontal belt, rope, and chain drives?** "Belts" include all power transmission belts, such as flat belts, round belts, V-belts, etc., unless otherwise specified.

(1) Where both runs of horizontal belts are 7 feet or less from the floor level, the guard must extend to at least 15 inches above the belt or to a standard height. (See Table P-1.) Exception: Where both runs of a horizontal belt are 42 inches or less from the floor, the belt must be fully enclosed according to WAC 296-307-28046 and 296-307-28050 through 296-307-28060.

(2) In power development rooms, a guardrail may be used instead of the guard.

**WAC 296-307-28022 What requirements apply to guarding overhead horizontal belt, rope, and chain drives?** (1) Unless guarded by location, overhead horizontal belts must be guarded on the sides and bottom according to WAC 296-307-28054.

(2) Unless guarded by location, horizontal overhead belts must be guarded for their entire length when:

(a) Located over passageways or work places and traveling 1,800 feet or more per minute.

(b) The center to center distance between pulleys is 10 feet or more.

(c) The belt is 8 inches wide or more.

(3) Where the upper and lower runs of horizontal belts are located so that employees can pass between them, the passageway must be either:

(a) Completely barred according to WAC 296-307-28046 and 296-307-28050 through 296-307-28060; or

(b) In a passage that employees must use, there must be a platform over the lower run guarded on either side by a railing that is completely filled in with wire mesh or other filler, or by a solid barrier. The upper run must be guarded to prevent contact by the employee or by objects carried by the employee.

(4) Overhead chain and link belt drives must be guarded according to the same requirements as overhead horizontal belts.

(2007 Ed.)
(5) American or continuous system rope drives located where the condition of the rope (particularly the splice) cannot be constantly and conveniently observed, must have an alarm (preferably electric-bell type) that will warn when the rope begins to fray.

(2) All guards for inclined belts must provide a minimum clearance of 7 feet between belt and floor at any point outside of the guard.

(3) A vertical or inclined belt may be guarded with a nip-point belt and pulley guard, if it is:

(a) 2-1/2 inches wide or less;

(b) Running at a speed of less than one thousand feet per minute; and

(c) Free from metal lacings or fastenings.

"Nip-point belt and pulley guard" means a device that encloses the pulley and has rounded or rolled edge slots through which the belt passes.

(4) Vertical belts running over a lower pulley more than seven feet above floor or platform must be guarded according to the same requirements as horizontal overhead belts, if the belt is:

(a) Located over passageways or work places and traveling 1,800 feet or more per minute;

(b) Eight inches wider or more.

WAC 296-307-28026 What requirements apply to guarding cone-pulley belts? (1) The cone belt and pulley must have a belt shifter that adequately guards the nip point of the belt and pulley. If the frame of the belt shifter does not adequately guard the nip point of the belt and pulley, the nip point must be protected by a vertical guard in front of the pulley that extends at least to the top of the largest step of the cone.

"Belt shifter" means a device for mechanically shifting belts from tight to loose pulleys or vice versa, or for shifting belts on cones of speed pulleys.

(2) If the belt is endless or laced with rawhide laces, and no belt shifter is used, the belt may be guarded according to the following:

(a) The nip point of the belt and pulley is protected by a nip point guard in front of the cone;

(b) The guard extends at least to the top of the largest step of the cone; and

(c) The guard is formed to show the contour of the cone.

(3) If the cone is less than 3 feet from the floor or working platform, the cone pulley and belt must be guarded to a height of 3 feet regardless of whether the belt is endless or laced with rawhide.

WAC 296-307-28028 What requirements apply to guarding belt tighteners? (1) Suspended counterbalanced belt tighteners and all components must be substantially constructed and securely fastened. The bearings must be securely capped. You must provide a mechanism to prevent the tightener from falling in case the belt breaks.

(2) Unless guarded by location, suspended counterweights must be encased to prevent accident.

(3) Belt tighteners used for starting and stopping machinery, unless held by gravity in the "off" or "out of service" position, must have a mechanism that will hold the belt tightener away from the belt when not in use. The mechanism must automatically grip, latch or otherwise fasten itself to and hold the belt tightener in "off" or "out of service" position until released by hand.

WAC 296-307-28030 What requirements apply to guarding gears, sprockets, and chains? (1) Gears must be guarded by one of the following methods:

(a) A complete enclosure; or

(b) A standard guard according to WAC 296-307-28050 through 296-307-28060, at least 7 feet high extending 6 inches above the mesh point of the gears; or

(c) A band guard covering the face of gear. The guard must have flanges extended inward beyond the root of the teeth on the exposed side or sides. If a part of the train of gears guarded by a band guard is less than 6 feet from the floor, the gear must be guarded by a disk guard or by a complete enclosure at least 6 feet tall.

(2) Hand-operated gears used only to adjust hand-powered machine parts may be unguarded. However, we recommend guarding these gears.

(3) Unless guarded by location, all sprocket wheels and chains must be enclosed. Where the drive extends over other machine or working areas, you must provide protection against falling parts.

Exception: This section does not apply to manually operated sprockets.

(4) When gears require frequent oiling, you must provide openings with hinged or sliding self-closing covers. All points not readily accessible must have oil feed tubes if lubricant is added while machinery is in motion.

WAC 296-307-28032 What requirements apply to guarding friction drives? When exposed to contact, the driving point of all friction drives must be guarded. All arm or spoke friction drives and all web friction drives with holes
WAC 296-307-28034 What requirements apply to guarding keys, set screws, and other projections? (1) All projecting keys, set screws, and other projections in revolving parts must be removed, or made flush, or guarded by metal covers.

(2) Projections, such as exposed bolts, keys, or set screws that are part of sprockets, grooved pulleys or pulleys on stationary equipment must be shielded unless guarded by location.

Exception: This section does not apply to keys or set screws within gear or sprocket casings or other enclosures, nor to keys, set screws, or oilcups in hubs of pulleys less than 20 inches in diameter where they are within the plane of the rim of the pulley.

Note: We recommend that you not use projecting set screws or oilcups in any revolving pulley or part of machinery.

WAC 296-307-28036 What requirements apply to guarding collars and couplings? (1) All revolving collars, including split collars, must be cylindrical. Screws or bolts used in collars must not project beyond the largest periphery of the collar.

(2) Shaft couplings must be constructed to prevent hazard from bolts, nuts, set screws, or revolving surfaces. Bolts, nuts, and set screws are permitted where they are covered with safety sleeves or where they are used parallel with the nuts, and set screws are permitted where they are covered with safety sleeves or where they are used parallel with the nuts, and set screws are permitted where they are covered with safety sleeves or where they are used parallel with

Exception: Diamond or square wire mesh made of No. 14 gauge wire, 3/4-inch mesh or heavier is exempt from this requirement.

WAC 296-307-28040 What requirements apply to guarding clutches, cutoff couplings, and clutch pulleys? (1) Unless guarded by location, clutches, cutoff couplings, or clutch pulleys with projecting parts must be enclosed by a stationary guard constructed according to WAC 296-307-28046. You may use a "U" type guard.

(2) In enginerooms, a guardrail, preferably with toeboard, may be used instead of the guard if the room is only occupied by engineroom attendants.

(3) A bearing support next to a friction clutch or cutoff coupling must have self-lubricating bearings that require infrequent maintenance.

WAC 296-307-28042 What requirements apply to guarding belt shifters, clutches, shippers, poles, perches, and fasteners? "Belt pole" (sometimes called a "belt shipper" or "shipper pole") means a device used in shifting belts on and off fixed pulleys on line or countershift where there are no loose pulleys.

(1) Tight and loose pulleys must have a permanent belt shifter with a mechanical means to prevent the belt from creeping from loose to tight pulley.

(2) Belt shifter and clutch handles must be rounded. They must be as far as possible from danger of accidental contact, but within easy reach of the operator. Where belt shifters are not directly over a machine or bench, the handles must be cut off 6 feet 6 inches above floor level.

(3) All belt and clutch shifters of the same type in each shop should move in the same direction to stop machines, i.e., either all right or all left.

WAC 296-307-28044 What materials must be used for standard guards? (1) Standard guards must be made of the following materials:

(a) Expanded metal;

(b) Perforated or solid sheet metal;

(c) Wire mesh on a frame of angle iron; or

(d) Iron pipe securely fastened to the floor or the frame of the machine.

(2) Wire mesh should have wires that are securely fastened at every cross point either by welding, soldering, or galvanizing.

Exception: Diamond or square wire mesh made of No. 14 gauge wire, 3/4-inch mesh or heavier is exempt from this requirement.
WAC 296-307-28046 How must standard guards be manufactured? (1) Guards must be free from burrs, sharp edges, and sharp corners.

(2) Expanded metal, sheet or perforated metal, and wire mesh must be securely fastened to the frame by one of the following methods:

(a) Rivets or bolts spaced not more than five inches center to center. In case of expanded metal or wire mesh, metal strips or clips must be used to form a washer for rivets or bolts.

(b) Welding to frame every four inches.

(c) Weaving through channel or angle frame, or, if No. 14 gauge 3/4-inch mesh or heavier is used, by bending entirely around rod frames.

(d) To fill openings in pipe railing with expanded metal, wire mesh, or sheet metal, make the filler material into panels with rolled edges or edges bound with "V" or "U" edging. The edging must be of at least No. 24 gauge sheet metal fastened to the panels with bolts or rivets spaced a maximum of 5 inches center to center. The bound panels must be fastened to the railing by sheet-metal clips spaced a maximum of 5 inches center to center.

(e) Diamond or square mesh made of crimped wire fastened into channels, angle irons, or round-iron frames may also be used as a filler in guards. Size of mesh must correspond to Table P-1.

(3) Where guard design requires filler material greater than 12 square feet, additional frame members must be provided to ensure that the panel area is a maximum of 12 square feet.

(4) All joints of framework must be as strong as the material of the frame.

WAC 296-307-28048 What requirements apply to disk, shield, and U-guards? (1) A disk guard must have a sheet-metal disk of at least No. 22 gauge fastened by U-bolts or rivets to the spokes of pulleys, flywheels, or gears. To prevent contact with sharp edges of the disk, the edge must be rolled or wired. In all cases, the nuts must have locknuts on the unexposed side of the wheel.

(2) A shield guard must have a frame filled in with wire mesh or expanded, perforated, or solid sheet metal.

(3) If the shield area is less than six square feet, the wire mesh or expanded metal may be fastened in a framework of 3/8-inch solid rod, 3/4-inch by 3/4-inch by 1/8-inch angle iron, or a metal construction of equivalent strength. Metal shields may have edges entirely rolled around a 3/8-inch solid iron rod.

(4) A U-guard consisting of a flat surface with edge members must cover the under surface and lower edge of a belt, multiple chain, or rope drive. It must be constructed of materials specified in Table P-1, and must meet the requirements of WAC 296-307-28054 through 296-307-28058. Edges must be smooth and, if the size of the guard requires, be reinforced by rolling, wiring, or by binding with angle or flat iron.

WAC 296-307-28050 What materials must be used for guards? The materials and dimensions specified in this section apply to all guards. The materials and dimensions specified are minimum requirements. You may choose to provide stronger guards.

Exception: Horizontal overhead belts, rope, cable, or chain guards more than 7 feet above floor, or platform must meet the requirements outlined in Table P-2.

(1) The framework of all guards must have minimum dimensions of 1-inch by 1-inch by 1/8-inch for angle iron, 3/4-inch inside diameter for metal pipe, or metal construction of equivalent strength.

Exception: Guards thirty inches tall or less with a total surface area of ten square feet or less may have a framework of 3/8-inch solid rod, 3/4-inch by 3/4-inch by 1/8-inch angle iron, or metal construction of equivalent strength. The filling material must correspond to the requirements of Table 1.

(a) All guards must be rigidly braced every 3 feet of their height to some fixed part of machinery or building structure. Where a guard is exposed to contact with moving equipment additional strength may be necessary.

(b) The framework for all guards fastened to the floor or working platform and without other support or bracing must consist of 1-1/2-inch by 1-1/2-inch by 1/8-inch angle iron, metal pipe of 1-1/2-inch inside diameter, or metal construction of equivalent strength. All rectangular guards must have at least four upright frame members that extend to the floor and are securely fastened. Cylindrical guards must have at least three supporting members that extend to the floor.

(2) Where guards are exposed to unusual wear, deterioration, or impact, heavier material and construction should be used to protect against the specific hazards involved.

[Title 296 WAC—p. 2448]
WAC 296-307-28054  What materials may be used for guarding horizontal overhead belts? (1) Guards for horizontal overhead belts must run the entire length of the belt and follow the line of the pulley to the ceiling or extend to the nearest wall.

Exception: Where belts are located so that it is impractical to extend the guard to wall or ceiling, the guard must completely enclose the top and bottom runs of the belt and the face of pulleys.

(2) The guard and its supporting parts must be securely fastened to the wall or ceiling by gimlet-point lag screws or through bolts. In masonry, expansion bolts must be used. We recommend using bolts placed horizontally through floor beams or ceiling rafters.

(3) When necessary, suitable reinforcement must be provided for the ceiling rafters or overhead floor beams to sustain safely the weight and stress imposed by the guard.

(4) The interior surface of all guards must be smooth and free from projections.

Exception: Where construction demands it, protruding shallow round-head rivets may be used.

WAC 296-307-28056  What clearance must be maintained between guards and power transmission machinery? (1) Overhead belt guards must be at least one-quarter wider than the belt they protect, with a maximum clearance of 6 inches on each side. Overhead rope-drive and block and roller-chain-drive guards must be at least six inches wider than the drive on each side.

(2) Overhead silent chain-drive guards with the chain held on sprockets must have side clearance of:

(a) On drives of 20-inch centers or less, at least 1/4 inch from the nearest moving chain part, and

(b) On drives of over 20-inch centers, a minimum of 1/2 inch from the nearest moving chain part.

(3) Table 2 gives the sizes of materials and construction specifications for guards for belts that are 10 inches wide or more. All materials for overhead belt guards must be at least the size specified in Table 2 for belts 10 to 14 inches wide, even if the overhead belt is less than 10 inches wide. However, No. 20 gauge sheet metal may be used as a filler on guards for belts less than 10 inches wide. Expanded metal, because of the sharp edges, should not be used as a filler in horizontal belt guards.

(4) For clearance between guards and belts, ropes, or chains see Table P-2.

WAC 296-307-28058  How must overhead rope and chain-drive guards be constructed? (1) Overhead-rope and chain-drive guard construction must meet the requirements for overhead-belt guard construction of similar width.

Exception: The filler material must be solid, according to Table P-2, unless fire hazard demands the use of open construction.

(2) A side guard member of the same solid filling material should extend 2 inches above the level of the lower run of the rope or chain drive and 2 inches within the periphery of the pulleys that the guard encloses, forming a trough.

(3) The side filler members should be reinforced on the edges with 1-1/2-inch by 1/4-inch flat steel, riveted to the filling material at 8 inch centers or less. The reinforcing strip should be fastened or bolted to all guard supporting members with at least one 3/8-inch rivet or bolt at each intersection, and the ends should be secured to the ceiling with lag screws or bolts.

(4) The filling material must be fastened to the framework of the guard and the filler supports by 3/16-inch rivets spaced on 4-inch centers. Measure the width of a multiple drive from the outside of the first to the outside of the last rope or chain in the group accommodated by the pulley.

WAC 296-307-28060  What materials must be used for guardrails and toeboards? (1) A guardrail used to guard power transmission parts must be 42 inches tall, with a midrail between the top rail and the floor.

(2) Posts must be 8 feet apart or less. They must be permanent and substantial, smooth, and free from protruding nails, bolts, and splinters. If made of pipe, the post must be at least 1-1/4 inches inside diameter. If posts are made of metal shapes or bars, the section must be as strong as posts made of 1-1/2 by 1-1/2 by 3/16-inch angle iron. If posts are made of wood, the posts must be at least 2 by 4 inches. The upper rail must be 2 by 4 inches, or two 1 by 4 inch strips, one at the top and one at the side of the posts. The midrail must be at least 1 by 4 inches.

(3) The rails (metal shapes, metal bars, or wood), should be on the side of the posts that gives the best protection and support. Where panels are fitted with expanded metal or wire mesh (as noted in Table 1) the middle rails may be omitted. Where guard is exposed to contact with moving equipment, additional strength may be necessary.

(4) Toeboards must be at least 4 inches tall, of wood, metal, or metal grill of a maximum 1-inch mesh. Toeboards at flywheel pits should be placed as close to edge of the pit as possible.

[WAC 296-307-28062] How must shafting be maintained? (1) Shafting must be kept in alignment, and free from rust and excess oil or grease.

(2) Where explosives, explosive dusts, flammable vapors or flammable liquids exist, guards must take into account the hazard of static sparks from shafting.

[WAC 296-307-28064] How must pulleys be maintained? (1) Pulleys must be kept in proper alignment to prevent belts from running off.

(2) Any pulley carrying a nonshifting belt should have a crowned face.

(3) Cast-iron pulleys should be tested frequently with a hammer to detect cracks in rim or spokes. The sound is different depending on whether the belt is or is not on the pulley.

(4) Split pulleys should be inspected to be sure that all bolts holding together the sections of the pulley are tight.

[WAC 296-307-28066] How must belts be maintained? (1) Quarter-twist belts without an idler can be used on drives running in one direction only. They will run off a pulley when running in one direction only.
296-307-28068  How must other equipment be maintained?  (1) You must inspect all power-transmission equipment at least every 60 days and ensure that it is kept in good working condition at all times. (2) Bearings must be kept in alignment and properly adjusted. (3) Hangers must be inspected to ensure that all supporting bolts and screws are tight and that supports of hanger boxes are adjusted properly. (4) The oilers must wear tightfitting clothing and should use cans with long spouts to keep their hands out of danger. Machinery must be oiled when not in motion, wherever possible.

WAC 296-307-29005  What requirements apply to auger conveying equipment?  "Augers" means screw conveyors and related accessories designed primarily for conveying agricultural materials on farms. (1) Power take-off shafts must be guarded according to WAC 296-307-28046. (2) All augers must be covered or guarded when exposed to contact. (3) You must ensure that each sweep auger has its top half shielded by a guard. All guard openings must be no larger than 4 3/4 inches across. (4) You must ensure that the exposed auger at the hopper and the intake is guarded or designed to prevent accidental contact with the rotating inlet area. The guard must extend at least 2 1/2 inches above and below the exposed auger. Openings in the guard, for the free flow of material, must be no larger than 4 3/4 inches across and must be strong enough to support 250 pounds at mid span. (5) The hand raising winch must have a control that will hold the auger at any angle, and that will only respond to the control. You must ensure that the operator is able to lower the auger without disengaging the control. The maximum force required on the handle to raise or lower the auger manually must be 50 pounds. (6) The wire rope lifting pulleys must be grooved to fit the wire rope used. (7) In order to avoid separation, you must provide a positive restraint between the auger tube and the under-carriage lifting arm. You must provide stops that restrict the maximum raised angle and minimum lowered angle. (8) Wire ropes (cables) must be rust resistant and selected for the design load and service intended. (9) You must provide the auger operator with service and operation instructions that include safe operation and servicing practices.

WAC 296-307-29003  What does this section cover?  WAC 296-307-300 applies to the guarding and care of farmstead equipment. "Farmstead equipment" means agricultural equipment normally used in a stationary manner. This includes, but is not limited to, materials handling equipment and accessories for such equipment whether or not the equipment is an integral part of a building.

WAC 296-307-30006  How must power takeoff shafts of farmstead equipment be guarded?  (1) You must ensure that all power takeoff shafts, including rear-mounted, mid-mounted or side-mounted shafts, are guarded either by a mas-
udder shield or by other protective guarding. The master shield must be strong enough to prevent damaging the shield when a 250-pound operator mounts or dismounts the tractor using the shield as a step.

(2) Power takeoff driven equipment must be guarded to prevent employee contact with rotating parts of the power drive system. Where power takeoff driven equipment requires removal of the tractor master shield, the equipment must also include protection from any portion of the tractor power takeoff shaft that protrudes from the tractor.

(3) Signs must be placed at prominent locations on power takeoff driven equipment specifying that power drive system safety shields must be kept in place.

WAC 296-307-30009 How must other power transmission components of farmstead equipment be guarded?

(1) All power transmission parts must be guarded according to WAC 296-307-280.

(2) Smooth shafts and shaft ends (without any projecting bolts, keys, or set screws) may be unguarded if they:

(a) Revolve at less than 10 RPM; and

(b) Are part of feed handling equipment used on the top surface of materials in bulk storage facilities.

WAC 296-307-30012 How must functional components of farmstead equipment be guarded? The following functional components must be shielded to a degree consistent with the intended function and operator's vision of the component:

- Snapping or husking rolls;
- Straw spreaders and choppers;
- Cutterbars;
- Flail rotors;
- Rotary beaters;
- Mixing augers;
- Feed rolls;
- Rotary tillers; and
- Similar units that must be exposed for proper function.

WAC 296-307-30015 When may guards be removed on farmstead equipment? (1) Guards, shields and access doors must be in place when the equipment is in operation.

(2) Where removal of a guard or access door will expose an employee to any component that continues to rotate after the power is disengaged, you must provide in the immediate area, a safety sign warning the employee:

(a) To look and listen for evidence of rotation; and

(b) To refrain from removing the guard or access door until all components have stopped.

(3) On equipment manufactured after October 25, 1976, a readily visible or audible warning of rotation is required.

WAC 296-307-30018 What requirements apply to electrical control for maintaining and servicing farmstead equipment? (1) You must ensure that only the employee maintaining or servicing equipment has control of the electrical power source by:

(a) Providing an exclusive, positive locking means on the main switch that can be operated only by the employee performing the maintenance or service; or

(b) For material handling equipment in a bulk storage structure, by providing on the equipment an electrical or mechanical means to disconnect the power. Minimum lock-out means must meet the requirements of WAC 296-307-320.

(2) All circuit protection devices, including those that are an integral part of a motor, must have a manual reset, except where:

(a) A manual reset is infeasible because of the nature of the operation, distances involved, and the amount of time normally spent by employees in the area of the affected equipment;

(b) An electrical disconnect switch is available to the employee within fifteen feet of the equipment being maintained or serviced; and

(c) A sign, prominently posted near each hazardous component, warns the employee that unless the electrical disconnect switch is utilized, the motor could automatically reset while the employee is working on the hazardous component.

WAC 296-307-30021 What additional guarding requirements apply to farmstead equipment? (1) You must ensure that carton or bag stitching machines are properly safeguarded to prevent anyone from coming in contact with the stitching head and other pinch or nip points.

(2) The point of operation of all machines must be guarded. The guard must be designed and constructed to prevent the operator from having any part of the body in the danger zone during the operating cycle.

[Title 296 WAC—p. 2453]
Title 296 WAC: Labor and Industries, Department of

WAC 296-307-320 Control of hazardous energy (lockout-tagout).

WAC 296-307-32001 What does this section cover? (1) WAC 296-307-320 covers the servicing and maintenance of machines and equipment in which the unexpected start up of the machine or equipment or release of stored energy could cause injury to employees. This standard establishes minimum performance requirements for the control of such hazardous energy.

(2) Normal production operations are not covered by this standard. Servicing and/or maintenance that takes place during normal production operations is covered by this standard only if:

(a) An employee is required to remove or bypass a guard or other safety device; or

(b) An employee is required to place a body part into a point of operation or where an associated danger zone exists during a machine operating cycle.

Exception: Minor servicing activities, that take place during normal production operations is covered by this standard if they are routine, repetitive, and integral to the use of the equipment for production, provided that the work is performed using alternative measures that provide effective protection.

WAC 296-307-32003 When does this section not apply? (1) WAC 296-307-320 does not apply to work on cord and plug connected electric equipment when:

(a) Unexpected energization or start up of the equipment is controlled by unplugging the equipment from the energy source; and

(b) The plug is under the exclusive control of the employee performing the servicing or maintenance.

(2) WAC 296-307-320 does not apply to hot tap operations involving transmission and distribution systems for substances such as gas, steam, water, or petroleum products when they are performed on pressurized pipelines, when:

(a) Continuity of service is essential; and

(b) Shutdown of the system is impractical; and

(c) Documented procedures are followed, and special equipment is used that will provide proven effective protection for employees.

(3) WAC 296-307-320 does not cover exposure to electrical hazards from work on, near, or with conductors or equipment in electric utilization installations. These hazards are covered in chapter 296-307 WAC Part T.

WAC 296-307-32005 What definitions apply to this section? "Affected employee" means an employee who uses a machine or equipment while it is serviced or maintained under lockout or tagout, or who works where such servicing or maintenance is being performed.

"Authorized employee" means a person who locks out or tags out machines or equipment in order to perform servicing or maintenance on that machine or equipment. An affected employee becomes an authorized employee when that employee's duties include performing servicing or maintenance covered under this part.

"Capable of being locked out" means an energy isolating device that has a hasp or other means for a lock to be affixed, or has a locking mechanism built into it. It also means that the device can be locked out without dismantling, rebuilding, or replacing the energy isolating device or permanently altering its energy control capability.

"Energized" means connected to an energy source or containing residual or stored energy.

"Energy isolating device" means a mechanical device that physically prevents the transmission or release of energy, including but not limited to the following:

- A manually operated electrical circuit breaker;
- A disconnect switch;
- A manually operated switch with conductors of circuit that can be disconnected from all ungrounded supply conductors and allows no pole to operate independently;
- A line valve;
- A block; and
- Any similar device used to block or isolate energy.

Push buttons, selector switches, and other control circuit devices are not energy isolating devices.

"Energy source" means any source of electrical, mechanical, hydraulic, pneumatic, chemical, thermal, or other energy, including gravity.

"Hot tap" means a procedure used in repair, maintenance, and service activities that involves welding on a piece of equipment (pipelines, vessels, or tanks) under pressure, in order to install connections or accessories. It is commonly used to replace or add sections of pipeline without the interruption of service for air, gas, water, steam, and petrochemical distribution systems.

"Lockout" means placing a lockout device on an energy isolating device, in accordance with an established procedure, to ensure that the energy isolating device and the equipment being controlled cannot be operated until the lockout device is removed.

[Title 296 WAC—p. 2454] (2007 Ed.)
"Lockout device" means a device with a positive means such as a lock (key or combination type) to hold an energy isolating device in the safe position and prevents the energizing of a machine or equipment. Blank flanges and bolted slip blinds are included.

"Normal production operations" means using a machine or equipment for its intended production function.

"Servicing and/or maintenance" means workplace activities such as constructing, installing, setting up, adjusting, inspecting, modifying, and maintaining and/or servicing machines or equipment. These activities include lubrication, cleaning, or unjamming of machines or equipment and making adjustments or tool changes, where the employee may be exposed to the unexpected energization or start up of the equipment or release of hazardous energy.

"Setting up" means any work performed to prepare a machine or equipment to perform its normal production operation.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout device" means a prominent warning device, such as a tag and attachment, that can be securely fastened to an energy isolating device according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.

"Tagout" means placing a tagout device on an energy isolating device, according to an established procedure, to indicate that the energy isolating device and the equipment being controlled must not be operated until the tagout device is removed.
(c) Specific procedural steps for the placement, removal, and transfer of lockout devices or tagout devices and the responsibility for them; and

(d) Specific requirements for testing a machine or equipment to determine and verify the effectiveness of lockout devices, tagout devices, and other energy control measures.

**WAC 296-307-32015 What requirements apply to lockout and tagout devices and materials?** (1) You must provide locks, tags, chains, wedges, key blocks, adapter pins, self-locking fasteners, or other hardware for isolating, securing, or blocking machines or equipment from energy sources.

(2) Lockout and tagout devices must be singularly identified; must be the only device(s) used for controlling energy; must not be used for other purposes.

(3) Lockout and tagout devices must be durable and meet the following requirements:

(a) Lockout and tagout devices must be able to withstand the environment to which they are exposed for the maximum period of time that exposure is expected.

(b) Tagout devices must be constructed and printed so that exposure to weather conditions or wet and damp locations will not deteriorate the tag or make the tag's message illegible.

(c) Tags must not deteriorate when used in corrosive environments such as areas where acid and alkali chemicals are handled and stored.

(4) Lockout and tagout devices must be the same within the facility in at least color, shape, or size. Also, tagout devices must have the same print and format.

(5) Lockout and tagout devices must be substantial and meet the following requirements:

(a) Lockout devices must be substantial enough to prevent removal without the use of excessive force or unusual techniques, such as with the use of bolt cutters or other metal cutting tools.

(b) Tagout devices and their means of attachment must be substantial enough to prevent accidental removal. Tagout device attachment means must be single-use, attachable by hand, self-locking, releasable with an unlocking strength of at least 50 pounds, and having the general design and basic characteristics of being at least equivalent to a one-piece, all-environment-tolerant nylon cable tie.

(c) Lockout and tagout devices must indicate the name of employee applying the device(s).

(6) Tagout devices must warn against hazardous conditions if the machine or equipment is energized and must include a message such as: "Do not start," "do not open," "do not close," "do not energize," "do not operate."

**WAC 296-307-32017 How often must the energy control procedure be inspected?** (1) You must conduct an inspection of the energy control procedure at least annually to ensure that the procedure and the requirements of this standard are followed.

(a) An authorized employee, other than the one(s) using the energy control procedure, must perform the inspection.

(b) The inspection must be conducted to correct any deviations or inadequacies identified.

(c) Where lockout is used for energy control, the inspection must include a review, between the inspector and each authorized employee, of that employee's responsibilities under the energy control procedure.

(d) Where tagout is used for energy control, the inspection must include a review, between the inspector and each authorized and affected employee, of that employee's responsibilities under the energy control procedure, and the elements of WAC 296-307-32021.

(2) You must certify that the inspections have been performed. The certification must identify the machine or equipment on which the energy control procedure was being used, the date of the inspection, the employees included in the inspection, and the person performing the inspection.

**WAC 296-307-32019 What general requirements apply to energy control program training and communication?** You must provide training to ensure that employees understand the purpose and function of the energy control program, and that employees have the knowledge and skills required for the safe application, use, and removal of the energy controls. The training must include the following:

(1) Each authorized employee must receive training in the recognition of applicable hazardous energy sources, the type and magnitude of the energy available in the workplace, and the methods and means necessary for energy isolation and control.

(2) Each affected employee must be instructed in the purpose and use of the energy control procedure.

(3) All other employees who work in an area where energy control procedures must be used, must be instructed about the procedure and the prohibition against attempting to restart or reenergize machines or equipment that are locked out or tagged out.

**WAC 296-307-32021 What additional requirements apply to tagout training and communication?** When tagout systems are used, employees must also be trained in the following limitations of tags:

(1) Tags are warning devices affixed to energy isolating devices, and do not provide the physical restraint on those devices that is provided by a lock.

(2) When a tag is attached to an energy isolating means, it is not to be removed without approval of the authorized person responsible for it, and it is never to be bypassed, ignored, or otherwise defeated.

(3) Tags must be legible and understandable by all authorized, affected, and other employees working in the area.
(4) Tags and their means of attachment must be made of materials that will withstand the environmental conditions encountered in the workplace.

(5) Tags may create a false sense of security, and their meaning needs to be understood as part of the overall energy control program.

(6) Tags must be securely attached to energy isolating devices so that they cannot be accidentally detached during use.

WAC 296-307-32023 What requirements apply to employee retraining? (1) Authorized and affected employees must be retrained whenever there is a change in job assignments, machines, equipment, or processes that present a new hazard, or when there is a change in the energy control procedures.

(2) Additional retraining must also be provided whenever an inspection reveals, or whenever you believe, that the employee's knowledge or use of the energy control procedures is inadequate.

(3) Retraining must reestablish employee proficiency and introduce new or revised control methods and procedures, as necessary.

WAC 296-307-32025 What training records must an employer keep? You must keep records that certify that employee training has been completed and is up to date. The records must contain each employee's name and dates of training.

WAC 296-307-32027 Who may perform lockout or tagout? Lockout or tagout must be performed only by authorized employees performing the service or maintenance.

WAC 296-307-32029 Who must be notified of lockout and tagout? Affected employees must be notified of the application and removal of lockout or tagout devices. Notification must be given before controls are applied and after they are removed.

WAC 296-307-32031 What order of events must lockout or tagout procedures follow? The established lockout or tagout procedures must cover the following elements in the following sequence:

Machinery or equipment shutdown before lockout or tagout:

(1) Before an authorized or affected employee turns off a machine or equipment, the authorized employee must have knowledge of the type and magnitude of the energy, the hazards of the energy to be controlled, and the method or means to control the energy.

(2) The machine or equipment must be turned off or shut down using the procedures established for the machine or equipment. The shutdown must be done in the prescribed order to avoid increased hazards to employees.

(3) All necessary energy isolating devices must be physically located and operated in such a manner as to isolate the machine or equipment from the energy source.

Application of the lockout or tagout device:

(4) Lockout or tagout devices must be affixed to each energy isolating device by authorized employees.

(5) Lockout devices, where used, must be affixed in a manner that will hold the energy isolating devices in a "safe" or "off" position.

(6) Tagout devices, where used, must be affixed in such a manner as will clearly indicate that the operation or movement of energy isolating devices from the "safe" or "off" position is prohibited.

(a) Where tagout devices are used with energy isolating devices designed with the capability of being locked, the tag attachment must be fastened at the same point at which the lock would have been attached.

(b) Where a tag cannot be affixed directly to the energy isolating device, the tag must be located as close as safely possible to the device, in a position that will be immediately obvious to anyone attempting to operate the device.

Eliminating the hazards of stored energy:

(7) After applying lockout or tagout devices to energy isolating devices, all potentially hazardous stored or residual energy must be relieved, disconnected, restrained, and otherwise rendered safe.

(8) If there is a possibility of reaccumulation of stored energy to a hazardous level, verification of isolation must be continued until the servicing or maintenance is completed, or until the possibility of such accumulation no longer exists.

Before beginning service or maintenance:

(9) Prior to starting work on machines or equipment that have been locked out or tagged out, the authorized employee must verify that the machine or equipment has been isolated and deenergized.
(3) Each lockout or tagout device must be removed from each energy isolating device by the authorized employee who applied the device.

Exception: When the authorized employee who applied the lockout or tagout device is not available to remove it, that device may be removed under your direction, if specific procedures and training for such removal have been developed, documented, and incorporated into the energy control program.

You must ensure that the specific procedure provides equivalent safety to the removal of the device by the authorized employee who applied it. The specific procedure must include the following elements:

(a) Verification by the employer that the authorized employee who applied the device is not at the facility;
(b) Making all reasonable efforts to inform the authorized employee that the lockout or tagout device has been removed; and
(c) Ensuring that the authorized employee has this knowledge before resuming work at that facility.

[WAC 296-307-32035 What requirements apply to testing and positioning machines and equipment? When lockout or tagout devices must be temporarily removed from the energy isolating device and the machine or equipment energized to test or position the machine or equipment, the following sequence of actions must be followed:

(1) Clear the machine or equipment of tools and materials according to WAC 296-307-32033 (1)(a).
(2) Remove employees from the machine or equipment area according to WAC 296-307-32033 (1)(b).
(3) Remove the lockout or tagout devices as specified in WAC 296-307-32033(3).
(4) Energize and proceed with testing or positioning.
(5) Deenergize all systems and reapply energy control measures in accordance with WAC 296-307-32031 to continue the servicing and/or maintenance.

[WAC 296-307-32037 What requirements apply to outside servicing contractors? (1) Whenever outside servicing contractors are to be engaged in activities covered by this standard, you and the outside employer must inform each other of your respective lockout or tagout procedures.
(2) The outside employer must ensure that employees understand and comply with the restrictions and prohibitions of your energy control program.

[WAC 296-307-32039 What requirements apply to group lockout or tagout? (1) When servicing and/or maintenance is performed by a crew or other group, they must use a procedure that provides a level of protection equivalent to that provided by the implementation of a personal lockout or tagout device.

(2) Group lockout or tagout devices must be used according to the procedures required by WAC 296-307-32013 including, but not limited to, the following:
(a) An authorized employee has primary responsibility for a set number of employees working under the protection of a group lockout or tagout device (such as an operations lock); and
(b) A method for the authorized employee to determine if individual group members are exposed to release of stored energy hazards; and
(c) When more than one crew or group is involved, assignment of overall lockout or tagout control responsibility to an authorized employee designated to coordinate individual group members and ensure continuity of protection; and
(d) Each authorized employee must affix a personal lockout or tagout device to the group lockout device when beginning work, and must remove those devices when the work is complete.

[WAC 296-307-33001 What definitions apply to lockout/tagout during shift changes? During shift or personnel changes, you must ensure that employees follow specific procedures to ensure the continuity of lockout or tagout protection. The procedures must include orderly transfer of lockout or tagout protection between off-going and oncoming employees, to minimize exposure to hazards from the unexpected energization or start up of the machine or equipment, or release of stored energy.

Part R
Safety Color Coding; Accident Prevention Signs and Tags

[WAC 296-307-330 Safety color coding; accident prevention signs and tags.

[WAC 296-307-33001 What definitions apply to this section? "Accident prevention sign" ("sign") means a surface with text or pictographs, meant to warn or instruct employees who may be exposed to hazards. Safety posters and education bulletins are not included in this definition.
"Accident prevention tag" ("tag") means a card that identifies a hazardous condition, generally related to unsafe equipment.
"Major message" means the sign's or tag's text that is more specific than the signal word and that identifies the specific hazardous condition or safety instruction. Examples include: "High Voltage," "Close Clearance," "Do Not Start," or "Do Not Use" or a corresponding pictograph.

[Title 296 WAC—p. 2458]
"Pictograph" means a pictorial representation that identifies a specific hazardous condition or safety instruction. "Signal word" means the sign's or tag's text that contains the word, usually "danger" or "caution" that is intended to capture the employee's immediate attention.

WAC 296-307-33003 What does red identify in safety color coding? Use red to identify:

1. Fire protection equipment;
2. Safety cans or other portable containers of flammable liquids;
3. Danger signs and tags;
4. Emergency stop bars on hazardous machines; and
5. Stop buttons or electrical switches used to stop machinery in an emergency.

Red lights must be provided at barricades and at temporary obstructions, as specified in ANSI Safety Code for Building Construction, A10.2-1944.

WAC 296-307-33005 What does yellow identify in safety color coding? Use yellow to identify:

1. Caution signs and tags; and
2. Physical hazards.

WAC 296-307-33007 When should signs and tags use "danger" versus "caution"? (1) Danger signs and tags.

1. Use danger signs and tags when an immediate hazard presents a threat of death or serious injury to employees.
2. Instruct all employees that danger signs and tags indicate immediate danger and that special precautions are necessary.

(2) Caution signs and tags.

1. Use caution signs and tags to warn against potential hazards or to caution against unsafe practices.
2. Instruct all employees that caution signs and tags indicate a possible hazard against which proper precaution should be taken.

WAC 296-307-33009 What are the design and color specifications for accident prevention signs? (1) All signs must have rounded or blunt corners and be free from sharp edges. The ends or heads of bolts or other fastening devices must be located so that they do not constitute a hazard.

(2) Danger, caution, directional, informational, exit, and safety instruction signs must comply with the specification of safety colors of the ANSI Z53.1-1971.

WAC 296-307-33011 What are the proper uses of accident prevention tags? (1) Use tags as a temporary means of warning employees of a hazardous condition, especially defective equipment. Tags are not a complete warning method, but should be used until the hazard can be eliminated.

For example: You may use a "do not start" tag on power equipment for a short time until the switch in the system can be locked out; you may use a "defective equipment" tag on a damaged ladder while arrangements are made for the ladder to be taken out of service and repaired.

(2) Use of accident prevention tags.

1. Use tags as a warning to prevent accidental injury or illness to employees who are exposed to hazardous or potentially hazardous conditions, equipment or operations that are out of the ordinary, unexpected or not readily apparent.
2. Use tags until the identified hazard is eliminated or the hazardous operation is completed. Tags are not necessary if signs, guarding, or other protection is used.
3. Place "do not start" tags in a conspicuous location and, if possible, so that they block the starting mechanism that would cause hazardous conditions if the equipment was energized.

1. Tags must contain a signal word and a major message. The signal word must be either "danger" or "caution."
2. The signal word must be readable at least five feet from the hazard.
3. The signal word and the major message must be understandable to all employees who may be exposed to the identified hazard.
4. Inform all employees of the meaning of the tags used throughout the workplace and what special precautions are necessary.
5. Attach tags as closely as is safely possible to the hazard. Attach the tags so as to prevent loss or unintentional removal.
6. The tag and attachment method must be constructed of material that is not likely to deteriorate.
4. You may use warning tags to represent a hazard level between "caution" and "danger," instead of the required "caution" tag, if they have a signal word of "warning" and an appropriate major message.
5. Use "out of order" tags only to indicate that a piece of equipment, machinery, etc., is out of order and that it might present a hazard if used.

WAC 296-307-34003 What does this section cover? (1) WAC 296-307-340 applies to the placement, use, maintenance, and testing of portable fire extinguishers provided for...
employee use. WAC 296-307-34012 does not apply to extinguishers provided for employee use on the outside of workplace buildings or structures. If you do not intend for employees to use extinguishers, and your emergency action plan and fire prevention plan meet the requirements of WAC 296-307-35018, then only the requirements of WAC 296-307-34015 and 296-307-34018 apply. 

(2) All standpipe and hose systems, automatic sprinkler systems, fixed extinguishing systems, dry-chemical fixed extinguishing systems, water-spray and foam, and fire detection systems, must be installed according to state and local ordinances, codes, and regulations governing such installations.

[Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-34003, filed 10/31/96, effective 12/1/96.]

WAC 296-307-34006 Who is exempt from the requirements of this section? (1) You are exempt from all requirements of this section, if:

(a) You have implemented a written fire safety policy that requires all employees to evacuate immediately when the fire alarm sounds; and

(b) You have an emergency action plan and a fire prevention plan meeting the requirements of WAC 296-307-35015 and 296-307-35018; and

(c) Extinguishers are not available for employee use in the workplace.

Note: If you are covered by one of the following sections requiring you to provide a portable fire extinguisher, then you may not apply this exemption:

- WAC 296-307-07013(12)—Transporting employees;
- WAC 296-307-34009(8)—Storage of flammables; or
- WAC 296-307-49503(2)—Welding.

(2) You are exempt from the distribution requirements in WAC 296-307-34012, if:

(a) You have an emergency action plan meeting the requirements of WAC 296-307-35015 that authorizes only certain employees to use the available portable fire extinguishers; and

(b) The plan requires all other employees to evacuate immediately when the fire alarm sounds.

WAC 296-307-34009 What general requirements apply to portable fire extinguishers? (1) You must provide portable fire extinguishers that are readily accessible to employees without subjecting the employees to possible injury.

(2) You must only use approved portable fire extinguishers.

(3) Portable fire extinguishers using carbon tetrachloride or chlorobromomethane extinguishing agents are prohibited.

(4) Water type fire extinguishers with a soldered or riveted shell that use self-generating soda acid or self-generating foam or gas cartridges are prohibited.

(5) You must ensure that all portable fire extinguishers are fully charged, operable, and kept in their designated places at all times except during use.

(6) You must ensure that all portable fire extinguishers are tested, constructed, and used according to the National Fire Protection Association's pamphlet No. 10A-1970.

Note: The supplier of the extinguisher or local fire official can furnish this information.

(7) You must post "no smoking" signs in areas where fire or explosion hazards exist. You must prohibit smoking within fifty feet of all fueling operations. Take precautions to prevent open flames, sparks, or electric arcs in fueling areas.

(8) You must keep a portable fire extinguisher with a rating of at least 12-B units outside the door of any room used to store flammables or combustibles. This extinguisher must not be more than ten feet from the door.

WAC 296-307-34012 How should portable fire extinguishers be selected and distributed? (1) You must select and distribute portable fire extinguishers based on the classes of anticipated workplace fires and on the size and degree of hazard that would affect their use.

(2) Distribution of portable fire extinguishers.

(a) For Class A fires: You must distribute portable fire extinguishers so that no employee must travel more than 75 feet (22.9 m) to a fire extinguisher.

Exception: You may use uniformly spaced standpipe systems or hose stations connected to a sprinkler system for emergency use by employees instead of Class A portable fire extinguishers, if:

- The system meets all regulatory requirements governing total coverage of the area to be protected; and
- Employees are trained at least annually in their use.

(b) For Class B fires: You must distribute portable fire extinguishers so that no employee must travel more than 50 feet (15.2 m) to a fire extinguisher.

(c) For Class C fires: You must distribute portable fire extinguishers on the basis of the appropriate pattern for the existing Class A or Class B hazards.

(d) For Class D fires: You must distribute portable fire extinguishers or other containers of Class D extinguishing agent so no employee must travel more than 75 feet (22.9 m) from the combustible metal working area to any extinguishing agent. Portable fire extinguishers for Class D hazards are required in those combustible metal working areas where combustible metal powders, flakes, shavings, or similarly sized products are generated at least once every two weeks.

WAC 296-307-34015 What are the requirements for inspection, maintenance and testing of portable fire extinguishers? (1) You are responsible for the inspection, mainte-
nance, and testing of all portable fire extinguishers in the workplace.

(2) You must visually inspect portable extinguishers or hose at least once a month.

(3) You must ensure that portable fire extinguishers receive an annual maintenance check. You must keep records of the maintenance dates for one year after the previous entry to receive an annual maintenance check. You must keep records of the record if we ask for it.

(4) You must ensure that stored-pressure dry chemical extinguishers that require a twelve-year hydrostatic test are emptied and undergo applicable maintenance procedures every six years.

Exception: Dry chemical extinguishers with nonrefillable disposable containers are exempt from this requirement.

The six years begins when recharging or hydrostatic testing is performed.

(5) You must ensure that alternate equivalent protection is provided when portable fire extinguishers are removed from service for maintenance and recharging.

Exception: Extinguishers must not be hydrostatically tested if the following conditions exist:

(a) When the unit has been repaired by soldering, welding, brazing, or use of patching compounds;
(b) When the cylinder or shell threads are damaged;
(c) When there is corrosion that has caused pitting, including corrosion under removable name plate assemblies;
(d) When the extinguisher has been burned in a fire; or
(e) When a calcium chloride extinguishing agent has been used in a stainless steel shell.

(2) You must visually inspect portable extinguishers or hose at least once a month.

(3) In addition to an external visual examination, you must ensure that the cylinders and shells are examined internally before the hydrostatic testing.

(4) You must ensure that portable fire extinguishers are hydrostatically tested whenever they show new evidence of corrosion or mechanical injury.

(5) You must ensure that hydrostatic tests are performed on extinguisher hose assemblies that are equipped with a shut-off nozzle at the discharge end of the hose. The test interval must be the same as specified for the extinguisher on which the hose is installed.

(6) Carbon dioxide hose assemblies with a shut-off nozzle must be hydrostatically tested at 1,250 psi (8,620 kPa).

(7) Dry chemical and dry powder hose assemblies with a shut-off nozzle must be hydrostatically tested at 300 psi (2,070 kPa).

(8) Hose assemblies passing a hydrostatic test do not require any type of recording or stamping.

(9) You must ensure that hose assemblies for carbon dioxide extinguishers that require a hydrostatic test are tested within a protective cage device.

(10) You must ensure that carbon dioxide extinguishers and nitrogen or carbon dioxide cylinders used with wheeled extinguishers are tested every five years at $\frac{5}{3}$ of the service pressure as stamped into the cylinder. Nitrogen cylinders that comply with 29 CFR 173.34(e)(15) may be hydrostatically tested every ten years.

(11) You must ensure that all stored pressure and Halon 1211 types of extinguishers are hydrostatically tested at the factory test pressure not to exceed two times the service pressure.

(12) You must ensure that self-generating type soda acid and foam extinguishers are tested at 350 psi (2,410 kPa).

(13) Air or gas pressure used for hydrostatic testing is prohibited.

(14) You must remove from the workplace all extinguisher shells, cylinders, or cartridges that fail a hydrostatic pressure test, or that are not fit for testing.

(15)(a) Water-jacket equipment must be used for testing compressed gas type cylinders. The equipment must have an expansion indicator that operates with an accuracy within one percent of the total expansion or 0.1 cc (.1 mL) of liquid.

(b) The following equipment must be used to test non-compressed gas type cylinders:

(i) A hydrostatic test pump, hand or power operated, capable of producing not less than one hundred fifty percent of the test pressure, which must include appropriate check valves and fittings;

(ii) A flexible connection for attachment to fittings to test through the extinguisher nozzle, test bonnet, or hose outlet, as is applicable; and

(iii) A protective cage or barrier for personal protection of the tester, designed to provide visual observation of the extinguisher under test.

(16) You must maintain records of the hydrostatic testing. Your records must include:

- The date of test;
- The test pressure used;
- The serial number, or other identifier of the fire extinguisher that was tested; and
- The person or agency performing the test.
You must keep the records until the next testing, or until the extinguisher is taken out of service, whichever comes first. You must provide us with copies of the records if we ask for them.

WAC 296-307-34021 What are the training requirements for portable fire extinguishers? (1) If you provide portable fire extinguishers for employee use, then you must also provide training to familiarize employees with the general principles of fire extinguisher use and the hazards involved in fighting fires when they first appear.

You must provide the training when the employee is first hired and at least annually thereafter.

(2) For employees who have been designated to use fire fighting equipment as part of an emergency action plan, you must provide training in the use of the appropriate equipment.

You must provide the training upon initial assignment to the designated group of employees and at least annually thereafter.

WAC 296-307-345 Employee alarm systems.

WAC 296-307-34503 What does this section cover? (1) WAC 296-307-345 applies to all emergency employee alarms required by a specific WAC chapter. This section does not apply to discharge or supervisory alarms required on various fixed extinguishing systems or to supervisory alarms on fire suppression, alarm or detection systems unless they are intended to be employee alarm systems.

(2) The maintenance, testing, and inspection requirements of this section apply to all local fire alarm signaling systems used for alerting employees regardless of the other functions of the system.

(3) All predischARGE employee alarms required by this chapter must meet the requirements of WAC 296-307-34506 and 296-307-34512.

WAC 296-307-34506 What general requirements apply to employee alarm systems? (1) Your employee alarm system must provide warning for necessary emergency action called for in the emergency action plan, or safe escape of employees from the workplace.

(2) You must ensure that all employees can see or hear your employee alarm above normal noise or light levels in the workplace. You may use tactile devices to alert employees who can not see or hear the alarm.

(3) You must ensure that your employee alarm is recognizable as an evacuation signal or signal to perform actions designated under the emergency action plan.

(4) You must explain to each employee how to report emergencies. For example: They may use manual pull box alarms, public address systems, radio or telephones. You must post emergency telephone numbers near telephones, or employee notice boards when telephones serve as a means of reporting emergencies. When your communication system also serves as the employee alarm system, you must ensure that all emergency messages have priority over all nonemergency messages.

(5) You must establish procedures for sounding emergency alarms in the workplace. If you have ten or fewer employees in a workplace, direct voice communication is an acceptable procedure for sounding the alarm if all employees can hear it. In this case, you do not need a back-up system.

WAC 296-307-34509 What are the installation and restoration requirements for employee alarm systems? (1) You must ensure that all systems installed to comply with this standard are approved. Steam whistles, air horns, strobe lights or similar lighting devices, or tactile devices meeting the requirements of this section must also be approved.

(2) After each test or alarm, you must ensure that all employee alarm systems are restored to normal operating condition as soon as possible. You must ensure that you have spare alarm components available in sufficient quantities and locations for prompt restoration of the system.

WAC 296-307-34512 How must employee alarm systems be maintained and tested? (1) You must ensure that all employee alarm systems are maintained in operating condition except when undergoing repairs or maintenance.

(2) You must ensure that a test of the reliability and adequacy of nonsupervised employee alarm systems is made every two months. You must use a different actuation device for each test of a multiactuation device system so that no individual device is used for two consecutive tests.

(3) You must maintain or replace power supplies as often as necessary to ensure fully operational condition. You must provide back-up alarms, such as employee runners or telephones, when systems are out of service.

(4) You must ensure that supervised employee alarm circuitry is supervised and that it will provide positive notification to assigned personnel whenever a deficiency exists in the system. You must ensure that all supervised employee alarm systems are tested at least annually for reliability and adequacy.

(5) You must ensure that employee alarms are serviced, maintained, and tested by someone trained in the operation and functions necessary for reliable and safe operation of the system.

[Title 296 WAC—p. 2462]
WAC 296-307-34515 Where must manually operated devices be located? You must ensure that manually operated actuation devices used with employee alarms are easy to find and accessible.

WAC 296-307-350 Exit routes.

WAC 296-307-35003 What does this section cover? WAC 296-307-350 requires you to provide exit routes for employees to leave the workplace safely during emergencies. This section does not apply to mobile workplaces, such as vehicles or vessels.

WAC 296-307-35006 What definitions apply to this section? "Exit" means the portion of an exit route that is generally separated from other areas to provide a protected way of travel out of the workplace.

"Exit route" means a continuous and unobstructed path of exit travel from any point within a workplace to safety outside. An exit route generally consists of three parts: Access to an exit; the area which provides a way of travel out of the workplace; and the way from the exit to the outside. An exit route includes all vertical and horizontal areas.

WAC 296-307-35009 What are the design requirements for exit routes? You must ensure that each workplace meets each of the following requirements:

1. Each exit is a permanent part of the workplace.
2. Two exit routes, remote from one another, are available to provide alternate means for employees to safely leave the workplace during an emergency.
   - A single exit route is permitted where the number of employees, the size of the building, its occupancy, or the arrangement of the workplace indicate that a single exit will allow all employees to exit safely during an emergency. Other means of escape, such as fire exits or accessible windows, should be available where fewer than two exit routes are provided.
   - More than two exit routes are available to allow employees to safely leave the workplace during an emergency where the number of employees, the size of the building, its occupancy, or the arrangement of the workplace reasonably suggest that reliance on two exit routes could endanger employees.
   - An exit has only those openings necessary to permit access to, or exit from, occupied areas of the workplace. An opening into an exit is protected by a self-closing fire door that remains closed. Each fire door, its frame, and hardware are listed or approved by a nationally recognized testing laboratory.
   - Construction materials used to separate an exit have a 1-hour fire resistance rating if the exit connects three or fewer stories. Construction materials used to separate an exit have a 2-hour fire resistance rating if the exit connects 4 or more stories.
   - Free and unobstructed access to each exit route is provided to ensure safe exit during an emergency.
     - The exit route is free of material or equipment.
     - Employees are not required to travel through a room that can be locked, such as a bathroom, or toward a dead end to reach an exit.
     - Stairs or a ramp are used if the exit route is not substantially level.
     - An exit leads directly outside or to a street, walkway, refuge area, or to an open space with access to the outside.
     - The street, walkway, refuge area, or open space to which an exit leads is large enough to accommodate all building occupants likely to use that exit.
   - A refuge area:
     - (1) A space along an exit route protected from the effects of fire either by separation from other spaces within the building or by its location; or
     - (ii) A floor with at least two spaces separated by smoke-resistant partitions, in a building where each floor is protected by an automatic sprinkler system. An automatic sprinkler system complies with NFPA No. 13, Automatic Sprinkler Systems.
   - Exit stairs that continue beyond the floor of exit discharge are interrupted by doors, partitions, or other effective means.
   - Where a doorway or corner of a building is located near a railroad or trolley track so that an employee is liable to walk upon the track in front of an approaching engine or cars, a standard safeguard must be installed with a warning sign.
   - An exit door can be readily opened from the inside without keys, tools, or special knowledge. A device, such as a panic bar, that locks only from the outside is permitted. An exit door is free of any device or alarm that, if it fails, can restrict emergency use of an exit.

   Note: An exit door may be locked or blocked from the inside in a mental, penal, or correctional institution, if supervisory personnel are continually on duty and a plan exists to remove occupants during an emergency.

   (9) The opening device on all doors of walk-in refrigerated or freezer rooms must be the type, when locked from the outside with a lock, can be opened from inside.
   (10) A side-hinged exit door is used to connect any room to an exit route. A door that connects any room to an exit route swings out if the room may be occupied by more than 50 persons or highly flammable or explosive materials may be used inside.
   (11) Each exit route supports the maximum-permitted occupant load for each floor served by the exit route. The capacity of an exit does not decrease with the direction of exit travel.

(2007 Ed.)
(12) Minimum height and width requirements:
   (a) The ceiling for an exit route is at least 7 feet 6 inches high and the exit route is at least 6 feet 8 inches high at all points.
   (b) The width of an exit route is at least 28 inches wide at all points between handrails. An exit route is wider than 28 inches if necessary to accommodate the expected occupant load.
   (c) Objects that project into the exit route do not reduce the minimum height and width of an exit route.
(13) An outdoor exit route is permitted if it meets the requirements for an indoor exit route and the following additional requirements.
   (a) The exit has guardrails to protect exposed sides.
   (b) The exit route is covered if accumulation of snow or ice is likely and is not removed regularly.
   (c) The exit route is reasonably straight with smooth, solid, substantially level floors.
   (d) The exit route has no dead ends longer than 20 feet.

WAC 296-307-35012 What are the operation and maintenance requirements for exit routes? You must ensure that each workplace meets the following requirements:
(1) The workplace exit route is maintained to minimize danger to employees during an emergency.
   (a) The workplace exit route is free of explosive or highly flammable furnishings or decorations.
   (b) Accumulations of flammable or combustible waste materials are controlled.
   (c) An exit route does not require employees to travel toward materials that burn very quickly, emit poisonous fumes, or are explosive, unless those materials are effectively shielded from the exit route.
   (2) Each exit route is adequately lit.
   (3) Each exit is clearly visible and is marked by a distinctive sign reading "exit."
      (a) An exit door is free of signs or decorations that obscure its visibility.
      (b) Signs are posted along the exit route indicating the direction of travel to the nearest exit.
      (c) The line-of-sight to an exit sign is uninterrupted.
      (d) Any doorway or passage that might be mistaken for an exit is marked "not an exit" or with an indication of its actual use.
      (e) An exit sign is illuminated to a surface value of at least 5 foot candles by a reliable light source and shows a designated color. Self-luminous or electroluminescent signs have a minimum luminance surface value of .06 footlamberts.
      (f) Fire retardant paints or other coatings used in the workplace are maintained.
      (g) Each safeguard to protect employees during an emergency is maintained in proper working order.
      (h) Employees do not occupy a workplace under construction until an exit route that meets these requirements is available for the portion of the workplace to be occupied.

(a) Employees do not occupy a workplace during repair or alteration unless either all exits and existing fire protection are maintained or alternate fire protection is provided that ensures an equivalent level of safety.
(b) Flammable or explosive materials used during construction or repair do not expose employees to hazards not otherwise present in the workplace or impede emergency escape from the workplace.
(c) An operable employee alarm system with a distinctive signal to warn employees of fire or other emergencies is installed and maintained. No employee alarm system is required if employees can see or smell a fire or other hazard so that it would provide adequate warning to them. The employee alarm system complies with the requirements of WAC 296-307-345.

WAC 296-307-35015 What are the requirements for an emergency action plan? (1) You must develop an emergency action plan for each part of the workplace as required by WAC 296-307-030 (3)(d).
   (a) The plan must be in writing, kept in the workplace, and made available to employees on request.
   (b) An employer of 10 or fewer employees may communicate the plan orally to employees rather than develop a written plan.
   (2) An emergency action plan must include:
      (a) Procedures for emergency evacuation, including exit route assignments;
      (b) Procedures to account for all employees after evacuation;
      (c) Procedures for reporting a fire or other emergency;
      (d) Procedures for operating and maintaining an emergency alarm system; and
      (e) Procedures to follow for rescue and medical duties;
      (f) Procedures for operating and maintaining an emergency alarm system; and
      (g) Names or job titles of employees to be contacted to get more information about what to do in an emergency.
(3) You must designate employees to assist in the safe emergency evacuation of other employees. You must ensure that the designated employees receive training in emergency evacuation procedures.
(4) You must review the emergency action plan with each employee covered by the plan:
      (a) When the plan is developed or the employee is assigned initially to the job;
      (b) When the employee's responsibilities under the plan change; and
      (c) When the plan is changed.

WAC 296-307-35018 What are the requirements for a fire prevention plan? (1) You must develop a fire preven-
tion plan for each part of the workplace if required by WAC 296-307-34006(1).

(a) The plan must be in writing, kept in the workplace, and made available to employees on request.

(b) An employer of 10 or fewer employees may communicate the plan orally to employees rather than develop a written plan.

(2) A fire prevention plan must include:

(a) A list of all major fire hazards, including proper handling and storage procedures for hazardous materials, potential ignition sources and their control, and the type of fire protection equipment necessary to control each major hazard;

(b) Procedures to control accumulations of flammable and combustible waste materials;

(c) Procedures for regular maintenance of safeguards installed on heat producing equipment to prevent accidental ignition of combustible materials;

(d) Names or job titles of employees responsible for maintaining equipment to prevent or control sources of ignition or fires;

(e) Names or job titles of employees responsible for control of fuel source hazards.

(3) You must:

(a) Inform employees of the fire hazards to which they are exposed; and

(b) Review with each employee those parts of the fire prevention plan necessary for self-protection upon initial assignment to a job.

[Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.060. 96-22-048, § 296-306A-360, filed 10/31/96, effective 12/1/96.]

Part T
Electrical

WAC 296-307-360 Electrical.

WAC 296-307-36005 What does this part cover? (1) Chapter 296-307 WAC Part T covers methods to protect against electrical hazards in agricultural workplaces.

(2) Chapter 296-307 WAC Part T does not cover:

• Installations in watercraft, or automotive vehicles; or

• Electric welding. (See chapter 296-307 WAC Part V.)

(3) Unless otherwise provided in this chapter all electrical work, installation, and wire capacities must be according to the National Electrical Code, NFPA 70-1973; ANSI C1-1971, and all other applicable standards administered by the department of labor and industries.

WAC 296-307-36010 What definitions apply to this part? The following definitions apply to this part:

"Acceptable" means an installation or equipment that is acceptable to the department and meets the requirements of this section. An installation or equipment is acceptable if:

(1) It is accepted, certified, listed, labeled, or otherwise determined to be safe by a nationally recognized testing laboratory; or

(2) For installations or equipment that no nationally recognized testing laboratory accepts, certifies, lists, labels, or determines to be safe, it is inspected or tested by another federal agency, or by state, municipal, or other local authority responsible for enforcing occupational safety provisions of the National Electrical Code, and complies with the provisions of the National Electrical Code, and complies with the provisions of the National Electrical Code as applied in this section; or

(3) For custom-made equipment or related installations that are designed, fabricated for, and intended for use by a particular customer, it is determined to be safe for its intended use by its manufacturer on the basis of test data that you keep and make available for our inspection.

"Accepted" means an installation that has been inspected and certified by a nationally recognized testing laboratory to meet specified plans or procedures of applicable codes.

"Bonding jumper" means a reliable conductor that provides the correct electrical conductivity between metal parts that are required to be electrically connected.

"Branch circuits" means the part of a wiring system extending beyond the final overcurrent device protecting the circuit. A device not approved for branch circuit protection, such as thermal cutout or motor overload protective device, is not considered as the overcurrent device protecting the circuit.

"Certified" means equipment that:

• Has been tested and found by a nationally recognized testing laboratory to meet nationally recognized standards, or to be safe for use in a specified manner; or

• Is a kind whose production is periodically inspected by a nationally recognized testing laboratory; and

• Bears a label, tag, or other record of certification.

"Exposed" means a live part that can be accidentally touched or approached nearer than a safe distance. This term applies to parts that are not suitably guarded, isolated, or insulated.

"Fixed equipment" means equipment fastened or connected by permanent wiring methods.

"Ground" means a conducting connection, whether intentional or accidental, between an electrical circuit or equipment and earth, or to some conducting body that serves in place of the earth.

"Grounded" means connected to earth or to some conducting body that serves in place of the earth.

"Isolated" means equipment that is not readily accessible except through special means of access.

"Labeled" means equipment that has an attached label, symbol, or other identifying mark of a nationally recognized testing laboratory that:

• Makes periodic inspections of the production of such equipment; and

• Whose labeling indicates compliance with nationally recognized standards or tests to determine safe use in a specified manner.
"Qualified person" means a person who is familiar with the construction and operation of the equipment and the hazards involved.

Note 1: Whether an employee is considered a "qualified person" depends on various circumstances in the workplace. It is possible and likely for an individual to be considered "qualified" with regard to certain equipment in the workplace, but "unqualified" as to other equipment.

Note 2: An employee undergoing on-the-job training and who, in the course of such training, has demonstrated an ability to perform duties safely at his or her level of training and who is under the direct supervision of a qualified person is considered a qualified person for the performance of those duties.

"Shock hazard" exists at an accessible part in a circuit between the part and ground, or other accessible parts if the potential is more than 42.4 volts peak and the current through a 1,500 ohm load is more than 5 milliamperes.

"Weatherproof" means constructed or protected so that exposure to the weather does not interfere with successful operation. Rainproof, raintight, or watertight equipment may be considered weatherproof where weather conditions other than wetness, such as snow, ice, dust, or temperature extremes, are not a factor.

WAC 296-307-362 General electrical requirements.

WAC 296-307-36203 What electrical equipment must be approved? The conductors and equipment required or permitted by this section must be approved.

WAC 296-307-36206 How must electrical equipment safety be determined? (1) Electrical equipment must be free from hazards to employees. Safety of equipment must be determined using the following considerations:

(a) Suitability for installation and use according to the requirements of this part. Suitability of equipment for a specific purpose may be shown by listing or labeling for that purpose.

(b) Mechanical strength and durability, including, for parts designed to enclose and protect other equipment, the adequacy of the protection provided.

(c) Electrical insulation.

(d) Heating effects under conditions of use.

(e) Arcing effects.

(f) Classification by type, size, voltage, current capacity, specific use.

(g) Other factors that contribute to the practical safeguarding of employees using or likely to come in contact with the equipment.

(2) Listed or labeled equipment must be used or installed according to any instructions included in the listing or labeling.

WAC 296-307-36209 What requirements apply to guarding live parts? (1) Unless otherwise indicated, live parts of electric equipment operating at 50 volts or more must be guarded against accidental contact by an approved cabinet or other form of approved enclosure, or by any of the following:

(a) Location in a room, vault, or similar enclosure that is accessible only to qualified persons.

(b) Suitable permanent substantial partitions or screens arranged so that only qualified persons have access to the area within reach of the live parts. Any openings in such partitions or screens must be small enough and located so that employees are not likely to come into accidental contact with live parts or to bring conducting objects into contact with them.

(c) Location on a suitable balcony, gallery, or platform elevated and accessible only to qualified persons.

(d) Elevation of eight feet or more above the floor or other working surface.

(2) In locations where electric equipment would be exposed to physical damage, enclosures or guards must be arranged and be strong enough to prevent damage.

(3) Entrances to rooms and other guarded locations containing exposed live parts must be marked with conspicuous warning signs forbidding unqualified persons to enter.

(4) Electrical repairs must be made only by qualified persons that you authorize.

(5) Fuse handling equipment, insulated for the circuit voltage, must be used to remove or install fuses when the fuse terminals are energized.

(6) Employees must be prohibited from working closely enough to an electric power circuit to contact it unless the employee is protected against electric shock.

Note: The circuit must be protected by deenergizing the circuit and grounding it, by guarding it, by effective insulation, or other means.

(7) In work areas where the exact location of underground electric power lines is unknown, employees using jack-hammers, bars or other hand tools that may contact a line must have insulated protective gloves.

WAC 296-307-36212 What workspace must be provided? (1) When parts are exposed, the minimum clearance for the workspace must be at least six feet six inches high, or at least a radius of three feet wide.

(2) There must be enough clearance to permit at least a 90° opening of all doors or hinged panels.

WAC 296-307-36215 What general requirements apply to splices? Conductors must be spliced or joined with splicing devices suitable for the use or by brazing, welding,
or soldering with a fusible metal or alloy. Soldered splices must first be spliced or joined so they are mechanically and electrically secure without solder and then soldered. (Rosin-core solder should be used instead of acid core solder when joining electrical conductors.) All splices and joints and the free ends of conductors must be covered with an insulation equivalent to that of the conductors or with an insulating device suitable for the purpose.

WAC 296-307-36218 What protection must be provided against combustible materials? Parts of electric equipment that in ordinary operation produce arcs, sparks, flames, or molten metal must be enclosed or separated and isolated from all combustible material.

WAC 296-307-36221 How must electrical equipment be marked? All electrical equipment in use must have the manufacturer's name, trademark, or other descriptive marking of the organization responsible for the product on the equipment. Other markings must be provided giving voltage, current, wattage, or other ratings as necessary. The marking must be durable enough to withstand the environment.

WAC 296-307-36224 How must disconnecting means be marked? Each disconnecting means required by this part for motors and appliances must be legibly marked to indicate its purpose, unless located and arranged so the purpose is evident. Each service, feeder, and branch circuit, at its disconnecting means or overcurrent device, must be legibly marked to indicate its purpose, unless located and arranged so the purpose is evident. These markings must be durable enough to withstand the environment involved.

WAC 296-307-36227 What access and working space must be provided for electrical equipment of 600 volts, nominal, or less? Sufficient access and working space must be provided and maintained about all electric equipment to permit ready and safe operation and maintenance of such equipment.

(1) Unless otherwise indicated, the dimension of the working space in the direction of access to live parts operating at 600 volts or less and likely to require examination, adjustment, servicing, or maintenance while alive must be at least that indicated in the table below. Also, workspace must be at least 30 inches wide in front of the electric equipment. Distances must be measured from the live parts if they are exposed, or from the enclosure front or opening if the live parts are enclosed. Concrete, brick, or tile walls are considered grounded. Working space is not required behind assem-

blies such as dead-front switchboards or motor control centers where there are no renewable or adjustable parts such as fuses or switches on the back and where all connections are accessible from other directions.

Working Clearances

<tr>
<td>151-600</td>
<td>13</td>
</tr>
</tbody>
</table>

Conditions:
(a) Exposed live parts on one side and no live or grounded parts on the other side of the working space, or exposed live parts on both sides guarded by suitable wood or other insulating material. Insulated wire or insulated buses operating at 300 volts or less are not considered live parts.
(b) Exposed live parts on one side and grounded parts on the other side.
(c) Exposed live parts on both sides of the workspace (not guarded as in (a)) with the operator between.

(2) Working space required by this part must not be used for storage. When normally enclosed live parts are exposed for inspection or servicing, the working space, if in a passageway or general open space, must be suitably guarded.

(3) At least one entrance of sufficient area must be provided to give access to the working space about electric equipment.

(4) Where there are live parts normally exposed on the front of switchboards or motor control centers, the working space in front of such equipment must be at least 3 feet.

(5) All working spaces around service equipment, switchboards, panelboards, and motor control centers installed indoors must be adequately lit.

(6) The minimum headroom of working spaces about service equipment, switchboards, panelboards, or motor control centers must be 6 feet 3 inches.

"Motor control center" means an assembly of one or more enclosed sections having a common power bus and principally containing motor control units.

WAC 296-307-36230 What access and working space must be provided for electrical equipment over 600 volts, nominal? (1) Conductors and equipment used on circuits exceeding 600 volts, nominal, must meet all requirements of WAC 296-307-36221 and the additional requirements of this section. This section does not apply to equipment on the supply side of the service conductors.

(2) Electrical installations in a vault, room, closet or area surrounded by a wall, screen, or fence, with access controlled by lock and key or other approved means, are considered accessible to qualified persons only. A wall, screen, or fence less than 8 feet high is not considered to prevent access unless it has other features that provide a degree of isolation equivalent to an 8 foot fence. The entrances to all buildings, rooms, or enclosures containing exposed live parts or exposed con-

(2007 Ed.)
ductors operating at over 600 volts, nominal, must be kept locked or under the observation of a qualified person at all times.

(a) Electrical installations with exposed live parts must be accessible to qualified persons only.

(b) Electrical installations that are open to unqualified persons must be made with metal-enclosed equipment or enclosed in a vault or in an area, with access controlled by a lock. If metal-enclosed equipment is installed so that the bottom of the enclosure is less than 8 feet above the floor, the door or cover must be kept locked. Metal-enclosed switchgear, unit substations, transformers, pull boxes, connection boxes, and other similar associated equipment must be marked with appropriate caution signs. If equipment is exposed to physical damage from vehicular traffic, guards must be provided to prevent damage. Ventilating or similar openings in metal-enclosed equipment must be designed so that foreign objects inserted through these openings will be deflected from energized parts.

(3) You must provide and maintain enough space around electric equipment to permit ready and safe operation and maintenance of equipment. Where energized parts are exposed, the minimum clear workspace must be at least 6 feet 6 inches high (measured vertically from the floor or platform), or less than 3 feet wide (measured parallel to the equipment). The depth must meet the requirements of Table T. The workspace must be adequate to permit at least a 90-degree opening of doors or hinged panels.

(a) The minimum clear working space in front of electric equipment such as switchboards, control panels, switches, circuit breakers, motor controllers, relays, and similar equipment must be at least that specified in Table T unless otherwise indicated. Distances must be measured from the live parts if they are exposed, or from the enclosure front or opening if the live parts are enclosed. However, working space is not required in back of equipment such as deadfront switchboards or control assemblies where there are no renewable or adjustable parts (such as fuses or switches) on the back and where all connections are accessible from another direction. Where rear access is required to work on deenergized parts on the back of enclosed equipment, a minimum working space of 30 inches horizontally shall be provided.

(b) All working spaces around electric equipment must be adequately lit. The lighting outlets shall be arranged so that anyone changing lamps or making repairs on the lighting system will not be endangered by live parts or other equipment. The points of control must be located so that no one is likely to come in contact with any live part or moving part of the equipment while turning on the lights.

(c) Unguarded live parts above working space must be elevated to at least the height specified below:

<table>
<thead>
<tr>
<th>Elevation of Unguarded Energized Parts Above Working Space</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nominal voltage between phases</td>
</tr>
<tr>
<td>601 to 7,500</td>
</tr>
<tr>
<td>7,501 to 35,000</td>
</tr>
<tr>
<td>Over 35kV</td>
</tr>
</tbody>
</table>

Note: Minimum elevation may be 8 feet for installations built prior to April 16, 1981, if the nominal voltage between phases is in the range of 601-6600 volts.

(4) Entrance and access to workspace must meet the following requirements:

(a) At least one entrance that is at least 24 inches wide and 6 feet 6 inches high must be provided to give access to the working space around electric equipment. On switchboard and control panels over 48 inches wide, there must be one entrance at each end of the board where practical. Where bare energized parts at any voltage or insulated energized parts above 600 volts are located adjacent to the entrance, they must be suitably guarded.

(b) Permanent ladders or stairways must be provided to give safe access to the working space around electric equipment installed on platforms, balconies, mezzanine floors, or in attic or roof rooms or spaces.

WAC 296-307-364 Electrical installation and maintenance.

[Title 296 WAC—p. 2468] (2007 Ed.)
WAC 296-307-36403 How must flexible cords and cables be installed and maintained? (1) Extension cords used with portable electric tools and appliances must be three wire and must be fitted with an approved grounding attachment plug and receptacle providing ground continuity.

Exception: This does not apply to cords used with portable tools and equipment provided by an approved system of double insulation or its equivalent.

(2) Worn or frayed electric cables are prohibited.

WAC 296-307-36406 How must attachment plugs and receptacles be installed and maintained? (1) Attachment plugs used in work areas must be constructed so that they will endure rough use and have a suitable cord grip to prevent strain on the terminal screws.

(2) Attachment plugs must be approved grounding plugs.

(3) Receptacles for attachment plugs must have approved concealed contacts with a contact for extending ground continuity. Receptacles must be designed and constructed to ensure that the plug can be pulled out without leaving any live parts exposed to accidental contact.

(4) Polarized attachment plugs, receptacles, and cord connectors must be wired to maintain continuity.

(5) Polarized attachment plugs, receptacles, and cord connectors for plugs and polarized plugs must have the terminal intended for connection to the grounded (white) conductor identified by a metal coating that is mostly white. If the terminal is not visible, its entrance hole must be marked with the word "white," or the color white.

(6) The terminal for the connection of the equipment grounding conductor must be:

   a) A green colored, not easily removed terminal screw with hexagonal head; or

   b) A green colored, hexagonal, not easily removed terminal nut; or

   c) A green colored pressure wire connector.

   If the terminal for the grounding conductor is not visible, its entrance hole must be marked with the word "green" or the color green.

   Note: Two-wire attachment plugs, unless of the polarity type, need not have their terminals marked for identification.

   (7) Where different voltages, or types of current (A.C. or D.C.) are to be supplied by portable cords, receptacles must be designed so that attachment plugs used on the circuits are not interchangeable.

   (8) Attachment plugs or other connectors supplying equipment at more than 300 volts must be skirted or otherwise designed so that arcs are confined.

WAC 296-307-36409 What must employees do when equipment causes electrical shock? Employees must report all shocks received from electrical equipment, no matter how slight, immediately to you. The equipment causing the shock must be checked and any necessary corrective action taken immediately.

WAC 296-307-36412 What grounding and bonding requirements apply to equipment installation and maintenance? (1) The path to ground must have enough carrying capacity to conduct safely the currents likely to be imposed on it; and have low enough impedance to limit the potential above ground and to result in the operation of the overcurrent devices in the circuit.

(2) Driven rod electrodes must, where practical, have a resistance to ground of a maximum of 25 ohms. Where the resistance is over 25 ohms, two electrodes connected in parallel shall be used.

(3) Grounding circuits must be checked to ensure that the circuit between the ground and the grounded power conductor has a resistance that is low enough to permit sufficient current to flow to cause the fuse or circuit breaker to interrupt the current.

(4) Conductors used for bonding and grounding equipment must be large enough to carry the anticipated current.

WAC 296-307-36415 What requirements apply to disconnecting means? (1) Disconnecting means must be located or shielded so that employees will not be injured. Using open knife switches is prohibited.

(2) Boxes for disconnecting means must be securely and rigidly fastened to the surface upon which they are mounted, and fitted with covers.

WAC 296-307-36418 What requirements apply to identification and load rating of electrical equipment? (1) Name plates, rating data, and marks of identification on electrical equipment and electrically operated machines must not be removed, defaced or obliterated.

(2) In existing installations, no changes in circuit protection must be made to increase the load beyond the load rating of the circuit wiring, as specified in the National Electrical Code, NFPA 70-1973; ANSI C1-1972, Article 310.

(3) Tampering with, bridging, or using oversized fuses is prohibited. If fuses blow repeatedly, employees must immediately report the trouble to you or to an authorized electrician.

(4) Attempting to start electric motors that kick out repeatedly is prohibited.

WAC 296-307-36421 How must equipment be installed in wet locations? (1) Cabinets, cutout boxes, fittings, boxes, and panelboard enclosures in damp or wet loca-
tions must be installed to prevent moisture or water from entering and accumulating within the enclosures. In wet locations the enclosures must be weatherproof.

(2) Switches, circuit breakers, and switchboards installed in wet locations must be enclosed in weatherproof enclosures.

WAC 296-307-366 Wiring design and protection.

WAC 296-307-36603 How must grounded and grounding conductors be used and identified? (1) A conductor used as a grounded conductor must be identified separately from all other conductors. A conductor used as an equipment grounding conductor must be identified separately from all other conductors.

(2) A grounded conductor must not be attached to any terminal or lead to reverse the designated polarity.

(3) Using a grounding terminal or grounding-type device on a receptacle, cord connector, or attachment plug for anything other than grounding is prohibited.

WAC 296-307-36606 What ampere rating must outlet devices have? Outlet devices must have an ampere rating at least equal to the load served.

WAC 296-307-36609 What requirements apply to conductors? This section applies to branch circuit, feeder, and service conductors rated 600 volts, nominal, or less and run outdoors as open conductors.

(1) Conductors supported on poles must provide a horizontal climbing space of at least the following:

(a) For power conductors below communication conductors, 30 inches.

(b) For power conductors alone or above communication conductors:

• 300 volts or less, 24 inches;

• More than 300 volts, 30 inches.

(c) For communication conductors below power conductors with power conductors of:

• 300 volts or less, 24 inches;

• More than 300 volts, 30 inches.

(2) Open conductors must provide at least the following minimum clearances:

(a) 10 feet, above finished grade, sidewalks, or from any platform or projection from which they might be reached;

(b) 12 feet, over areas subject to vehicular traffic other than truck traffic;

(c) 15 feet, over areas that are subject to truck traffic; except

(d) 18 feet, over public streets, alleys, roads, and driveways.

(3) Conductors must have a clearance of at least 3 feet from windows, doors, porches, fire escapes, or similar locations. Conductors run above the top level of a window are considered to be out of reach from that window and, therefore, do not have to be 3 feet away.

(4) Conductors must have a clearance of at least 8 feet from the highest point of roofs they pass over.

Exceptions: (a) Where the voltage between conductors is 300 volts or less and the roof has a slope of at least 4 inches in 12, the clearance from the roofs must be at least 3 feet; or

(b) Where the voltage between conductors is 300 volts or less, the conductors do not pass over more than 4 feet of the overhang portion of the roof, and they are terminated at a through-the-roof raceway or approved support, the clearance from the roofs must be at least 18 inches.

(5) Lamps for outdoor lighting must be located below all live conductors, transformers, or other electric equipment, unless such equipment is controlled by a disconnecting means that can be locked in the open position or unless adequate clearances or other safeguards are provided for relamping operations.

WAC 296-307-36612 What design and protection requirements apply to service-entrances? (1) Disconnecting means for service-entrances must meet the following requirements:

(a) Means must be provided to disconnect all conductors in a building or other structure from the service-entrance conductors. The disconnecting means must plainly indicate whether it is in the open or closed position and must be installed at a readily accessible location nearest the point of entrance of the service-entrance conductors.

(b) Each service disconnecting means must disconnect all ungrounded conductors at the same time.

(2) The following additional requirements apply to services over 600 volts, nominal.

(a) Service-entrance conductors installed as open wires must be guarded to make them accessible only to qualified persons.

(b) Signs warning of high voltage must be posted where other than qualified employees might come in contact with live parts.

WAC 296-307-36615 What overcurrent protection must be provided? (1) The following requirements apply to overcurrent protection of circuits rated 600 volts, nominal, or less.

(a) Conductors and equipment must be protected from overcurrent according to their ability to safely conduct current.

(b) Except for motor running overload protection, overcurrent devices must not interrupt the continuity of the grounded conductor unless all conductors of the circuit are opened at the same time.
c) Except for service fuses, all cartridge fuses that are accessible to other than qualified persons and all fuses and thermal cutouts on circuits over 150 volts to ground must have disconnecting means. This disconnecting means must be installed so that the fuse or thermal cutout can be disconnected from its supply without disrupting service to equipment and circuits unrelated to those protected by the overcurrent device.

(d) Overcurrent devices must be readily accessible to each employee or authorized building management personnel. These overcurrent devices must be located where they will be protected against physical damage and away from easily ignitable material.

(e) Fuses and circuit breakers must be located or shielded so that employees will not be burned or otherwise injured by their operation.

(f) Circuit breakers must meet the following requirements:

(i) Circuit breakers must clearly indicate whether they are in the open (off) or closed (on) position.

(ii) Where circuit breaker handles on switchboards are operated vertically rather than horizontally or rotationally, the up position of the handle must be the closed (on) position.

(iii) If used as switches in 120-volt, fluorescent lighting circuits, circuit breakers must be approved for the purpose and marked "SWD."

(2) Feeders and branch circuits over 600 volts, nominal, must have short-circuit protection.

WAC 296-307-36618 What premises wiring systems must be grounded? The following systems that supply premises wiring must be grounded:

(1) All 3-wire DC systems must have their neutral conductor grounded.

(2) Two-wire DC systems operating at 50-300 volts between conductors must be grounded.

Exceptions: This requirement does not apply if:

(a) They supply only industrial equipment in limited areas and are equipped with a ground detector; or

(b) They are rectifier-derived from an AC system that meets the requirements of subsections (3), (4), and (5) of this section; or

(c) They are fire-protective signaling circuits with a maximum current of 0.030 amperes.

(3) AC circuits of less than 50 volts must be grounded if they are installed as overhead conductors outside of buildings or if they are supplied by transformers and the transformer primary system is ungrounded or exceeds 150 volts to ground.

(4) AC systems of 50-1000 volts must be grounded under any of the following conditions:

(a) If the system can be grounded so that the maximum voltage to ground on the ungrounded conductors is a maximum of 150 volts;

(b) If the system is nominally rated 480Y/277 volt, 3-phase, 4-wire in which the neutral is used as a circuit conductor;

(c) If the system is nominally rated 240/120 volt, 3-phase, 4-wire in which the midpoint of one phase is used as a circuit conductor; or

(d) If a service conductor is uninsulated.

(5) Exceptions: AC systems of 50-1000 volts are not required to be grounded under any of the following conditions:

(a) If the system is used exclusively to supply industrial electric furnaces for melting, refining, tempering, and the like.

(b) If the system is separately derived and is used exclusively for rectifiers supplying only adjustable speed industrial drives.

(c) If the system is separately derived and is supplied by a transformer that has a primary voltage rating less than 1000 volts, if all of the following conditions are met:

(i) The system is used exclusively for control circuits;

(ii) The conditions of maintenance and supervision ensure that only qualified persons will service the installation;

(iii) Continuity of control power is required; and

(iv) Ground detectors are installed on the control system.

WAC 296-307-36621 Must the conductor be grounded for AC premises wiring? For AC premises wiring systems the identified conductor must be grounded.

WAC 296-307-36624 What general requirements apply to grounding conductors? (1) For a grounded system, a grounding electrode conductor must be used to connect both the equipment grounding conductor and the grounded circuit conductor to the grounding electrode. Both the equipment grounding conductor and the grounding electrode conductor must be connected to the grounded circuit conductor on the supply side of the service disconnecting means, or on the supply side of the system disconnecting means or overcurrent devices if the system is separately derived.

(2) For an ungrounded service-supplied system, the equipment grounding conductor must be connected to the grounding electrode conductor at the service equipment. For an ungrounded separately derived system, the equipment grounding conductor must be connected to the grounding electrode conductor at, or ahead of, the system disconnecting means or overcurrent devices.

(3) On extensions of existing branch circuits that do not have an equipment grounding conductor, grounding-type receptacles may be grounded to a grounded cold water pipe near the equipment.

WAC 296-307-36627 Must the path to ground be continuous? The path to ground from circuits, equipment, and enclosures must be permanent and continuous.

(2007 Ed.)
WAC 296-307-36630 What supports, enclosures, and equipment must be grounded? (1) Metal cable trays, metal raceways, and metal enclosures for conductors must be grounded.

Exceptions: (a) Metal enclosures such as sleeves that are used to protect cable assemblies from physical damage need not be grounded; or
(b) Metal enclosures for conductors added to existing installations of open wire, knob-and-tube wiring, and nonmetallic-sheathed cable need not be grounded if all of the following conditions are met:
(i) Runs are less than 25 feet;
(ii) Enclosures are free from probable contact with ground, grounded metal, metal laths, or other conductive materials; and
(iii) Enclosures are guarded against employee contact.

(2) Metal enclosures for service equipment must be grounded.

(3) Frames of electric ranges, wall-mounted ovens, counter-mounted cooking units, clothes dryers, and metal outlet or junction boxes that are part of the circuit for these appliances must be grounded.

(4) Exposed noncurrent-carrying metal parts of fixed equipment that may become energized must be grounded under any of the following conditions:
(a) If within 8 feet vertically or 5 feet horizontally of ground or grounded metal objects and subject to employee contact;
(b) If located in a wet or damp location and not isolated;
(c) If in electrical contact with metal;
(d) If in a hazardous (classified) location;
(e) If supplied by a metal-clad, metal-sheathed, or grounded metal raceway wiring method;
(f) If equipment operates with any terminal at over 150 volts to the ground; however, the following need not be grounded:
   (i) Enclosures for switches or circuit breakers used for other than service equipment and accessible to qualified persons only;
   (ii) Metal frames of electrically heated appliances that are permanently and effectively insulated from ground; and
   (iii) The cases of distribution apparatus such as transformers and capacitors mounted on wooden poles that are over 8 feet above ground or grade level.

(5) Under any of the conditions below, exposed noncurrent-carrying metal parts of cord-connected and plug-connected equipment that may become energized must be grounded.
(a) When equipment is in hazardous (classified) locations.
(b) When equipment is operated at over 150 volts to ground.

Exception: Guarded motors and metal frames of electrically heated appliances need not be grounded if the appliance frames are permanently and effectively insulated from ground.

(c) When equipment is one of the following:
   • Refrigerators, freezers, and air conditioners;
   • Clothes-washing, clothes-drying and dishwashing machines, sump pumps, and electrical aquarium equipment;
   • Hand-held motor-operated tools;
   • The following motor-operated appliances: Hedge trimmers, lawn mowers, snow blowers, and wet scrubbers;
   • Cord-connected and plug-connected appliances used in damp or wet locations or by employees standing on the ground or on metal floors or working inside of metal tanks or boilers;
   • Tools likely to be used in wet and conductive locations; and
   • Portable hand lamps.

Tools likely to be used in wet and conductive locations need not be grounded if supplied through an isolating transformer with an ungrounded secondary of a maximum of 50 volts. Listed or labeled portable tools and appliances protected by an approved system of double insulation, or its equivalent, need not be grounded. The equipment must be distinctively marked to indicate that the tool or appliance uses an approved system of double insulation.

(6) The metal parts of the following nonelectrical equipment must be grounded: Frames and tracks of electrically operated cranes; frames of nonelectrically driven elevator cars to which electric conductors are attached; hand operated metal shifting ropes or cables of electric elevators, and metal partitions, grill work, and other metal enclosures around equipment of over 750 volts between conductors.

WAC 296-307-36633 How must fixed equipment be grounded? (1) Noncurrent-carrying metal parts of fixed equipment, if required to be grounded by this section, must be grounded by an equipment grounding conductor that is contained within the same raceway, cable, or cord, or runs with or encloses the circuit conductors. For DC circuits only, the equipment grounding conductor may be run separately from the circuit conductors.

(2) Electric equipment is considered grounded if it is secured to, and in electrical contact with, a metal rack or structure that is provided for its support and the metal rack or structure is grounded as described above.

For installations made before May 30, 1982, electric equipment is also considered grounded if it is secured to, and in metallic contact with, the grounded structural metallic frame of a building. Metal car frames supported by metal hoisting cables attached to or running over metal sheaves or drums of grounded elevator machines are also considered grounded.

WAC 296-307-36636 How must high voltage systems be grounded? Grounded high voltage (1000 volts or more) systems and circuits must meet all requirements of WAC 296-307-366 and the additional requirements of this section.

(1) Systems supplying portable or mobile high voltage equipment, other than substations installed on a temporary basis, must meet the following requirements:
(a) Portable and mobile high voltage equipment must be supplied from a system having its neutral grounded through an impedance. If a delta-connected high voltage system is...
used to supply the equipment, a system neutral must be derived.

(b) Exposed noncurrent-carrying metal parts of portable and mobile equipment must be connected by an equipment grounding conductor to the point at which the system neutral impedance is grounded.

c) Ground-fault detection and relaying must be provided to automatically deenergize any high voltage system component that has developed a ground fault. The continuity of the equipment grounding conductor must be continuously monitored to deenergize automatically the high voltage feeder to the portable equipment on loss of continuity of the equipment grounding conductor.

d) The grounding electrode to which the portable or mobile equipment system neutral impedance is connected must be isolated from and separated in the ground by at least 20 feet from any other system or equipment grounding electrode. There must be no direct connection between the grounding electrodes, such as buried pipe, fence, etc.

(2) All noncurrent-carrying metal parts of portable equipment and fixed equipment including their associated fences, housings, enclosures, and supporting structures shall be grounded. However, equipment that is guarded by location and isolated from ground need not be grounded. Additionally, pole-mounted distribution apparatus over 8 feet above ground or grade level need not be grounded. However, equipment that is guarded by location and isolated from ground need not be grounded.

WAC 296-307-36803 Does this section apply to factory-assembled equipment? WAC 296-307-368 does not apply to conductors that are an integral part of factory-assembled equipment.

WAC 296-307-36806 What wiring methods must be used for temporary wiring? Temporary electrical power and lighting wiring methods may be of a class less than would be required for a permanent installation. All requirements for permanent wiring apply to temporary wiring installations, except as indicated in this section.

(1) Temporary electrical power and lighting installations 600 volts, nominal, or less must only be used:

(a) During and for remodeling, maintenance, repair, or demolition of buildings, structures, or equipment, and similar activities;

(b) For experimental or development work; and

(c) For a maximum of 90 days for Christmas lighting and similar purposes.

(2) Temporary wiring over 600 volts, nominal, must only be used during periods of tests, experiments, or emergencies.

(3) General requirements for temporary wiring.

(a) Working spaces, walkways, and similar locations must be kept clear of power cords.

(b) All temporary wiring must be grounded. (See NFPA 70 Art. 250.)

(c) All wiring equipment must be maintained as vapor-tight, dust-tight, or fiber-tight as their approval requires. There must be no loose or missing screws, gaskets, threaded connections, or other conditions that impair the required tightness.

(d) Take precautions to make necessary open wiring accessible only to authorized personnel.

(e) Feeders must originate in an approved distribution center. The conductors must be run as multiconductor cord or cable assemblies, or, where not subject to physical damage, they may be run as open conductors on insulators not more than 10 feet apart.

(f) Branch circuits must originate in an approved power outlet or panelboard. Conductors must be multiconductor cord or cable assemblies or open conductors. If run as open conductors they must be fastened at ceiling height every 10 feet. A branch-circuit conductor must not be laid on the floor. Each branch circuit that supplies recep tacles or fixed equipment must have a separate equipment grounding conductor if run as open conductors.

(g) Receptacles must be of the grounding type. Unless installed in a complete metallic raceway, each branch circuit must have a separate equipment grounding conductor and all receptacles must be electrically connected to the grounding conductor.

(h) A bare conductor or an earth return must not be used to wire any temporary circuit.

(i) Suitable disconnecting switches or plug connectors must be installed to permit the disconnection of all ungrounded conductors of each temporary circuit.

(j) Lamps for general illumination must be protected from accidental contact or breakage. Lamps must be elevated at least 7 feet from normal working surface or by a suitable fixture or lampholder with a guard.

(k) Flexible cords and cables must be protected from accidental damage. Sharp corners and projections must be avoided. Where passing through doorways or other pinch points, flexible cords and cables must be protected to avoid damage.

(4) General requirements for temporary lighting.

(a) Temporary lights must have guards to prevent accidental contact with the bulb.

Note: Guards are not required when the entire bulb is below the rim and completely surrounded and protected by the reflector.

(b) Temporary lights must have heavy duty electric cords with connections and insulation maintained in safe condition.

(c) Temporary lights must not be suspended by their electric cords unless cords and lights are designed for suspension.

(d) Brass shell, paper-lined lamp holders are prohibited.

(e) Portable extension lamps used where flammable vapors or gases, combustible dusts, or easily ignitable fibers
or flyings are present, must be specifically approved as complete assemblies for the type of hazard. [97-09-013, recodified as § 296-307-36806, filed 4/7/97, effective 4/7/97. Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-307-36806, filed 10/31/96, effective 12/1/96.]

WAC 296-307-36809 When may cable trays be used? (1) Only the following may be installed in cable tray systems:
(a) Mineral-insulated metal-sheathed cable (Type MI);
(b) Armored cable (Type AC);
(c) Metal-clad cable (Type MC);
(d) Power-limited tray cable (Type PLTC);
(e) Nonmetallic-sheathed cable (Type NM or NMC);
(f) Shielded nonmetallic-sheathed cable (Type SNM);
(g) Multiconductor service-entrance cable (Type SE or USE);
(h) Multiconductor underground feeder and branch-circuit cable (Type UF);
(i) Power and control tray cable (Type TC);
(j) Other factory-assembled, multiconductor control, signal, or power cables that are specifically approved for installation in cable trays; or
(k) Any approved conduit or raceway with its contained conductors.
(2) In industrial establishments only, where conditions of maintenance and supervision ensure that only qualified persons will service the installed cable tray system, the following cables may also be installed in ladder, ventilated trough, or 4 inch ventilated channel-type cable trays:
Single conductor cables that are 250 MCM or larger and are Types RHH, RHW, MV, USE, or THW, and other 250 MCM or larger single conductor cables if specifically approved for installation in cable trays. Where exposed to direct rays of the sun, cables must be sunlight-resistant.
(3) Cable trays in hazardous (classified) locations must contain only the cable types permitted in such locations.

Exception: Cable tray systems must not be used in hoistways or where subjected to severe physical damage. [97-09-013, recodified as § 296-307-36809, filed 4/7/97, effective 4/7/97. Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-36809, filed 10/31/96, effective 12/1/96.]

WAC 296-307-36812 What requirements apply to open wiring on insulators? (1) Open wiring on insulators is only permitted on systems of 600 volts, nominal, or less for industrial or agricultural establishments and for services.
(2) Conductors must be rigidly supported on noncombustible, nonabsorbent insulating materials and must not contact any other objects.
(3) In dry locations with no exposure to severe physical damage, conductors may be separately enclosed in flexible nonmetallic tubing. The tubing must be in continuous lengths a maximum of 15 feet and secured to the surface by Straps at maximum intervals of 4 feet 6 inches.
(4) Open conductors must be separated from contact with walls, floors, and wood cross members, or partitions through which they pass by tubes or bushings of noncombustible, nonabsorbent insulating material. If the bushing is shorter than the hole, a waterproof sleeve of nonconductive material must be inserted in the hole and an insulating bushing slipped into the sleeve at each end to keep the conductors completely out of contact with the sleeve. Each conductor must be carried through a separate tube or sleeve.
(5) Conductors within 7 feet of the floor are considered exposed to physical damage. Where open conductors cross ceiling joints and wall studs and are exposed to physical damage, they must be protected. [97-09-013, recodified as § 296-307-36812, filed 4/7/97, effective 4/7/97. Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-36812, filed 10/31/96, effective 12/1/96.]

WAC 296-307-36815 What wiring requirements apply to cabinets, boxes, and fittings? (1) Conductors entering boxes, cabinets, or fittings must be protected from abrasion, and openings through which conductors enter must be closed. Unused openings in cabinets, boxes, and fittings must also be closed.
(2) All pull boxes, junction boxes, and fittings must have covers approved for the purpose. All metal covers must be grounded. In completed installations each outlet box must have a cover, faceplate, or fixture canopy. A cover of an outlet box with holes through which a flexible cord pendant passes must have bushings designed for the purpose or have a smooth, well-rounded surface for the cord to run on.
(3) All pull and junction boxes for systems over 600 volts, nominal, must meet the following requirements:
(a) Boxes must provide a complete enclosure for the contained conductors or cables.
(b) Boxes must be closed by suitable covers securely fastened in place. Underground box covers that weigh over 100 pounds meet this requirement. Covers for boxes must be permanently marked "HIGH VOLTAGE." The marking must be on the outside of the box cover and must be readily visible and legible. [97-09-013, recodified as § 296-307-36815, filed 4/7/97, effective 4/7/97. Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-36815, filed 10/31/96, effective 12/1/96.]

WAC 296-307-36818 What requirements apply to switches? (1) Single-throw knife switches must be connected so that the blades are dead when the switch is in the open position. Single-throw knife switches must be placed so that gravity will not tend to close them. Single-throw knife switches approved for use in the inverted position must have a locking device that keeps the blades open when set. Double-throw knife switches may be mounted so that the throw will be either vertical or horizontal. However, if the throw is vertical a locking device must be provided to ensure that the blades remain open when so set.
(2) Flush snap switches that are mounted in ungrounded metal boxes and located within reach of conducting floors or other conducting surfaces must have faceplates of nonconductive, noncombustible material. [97-09-013, recodified as § 296-307-36818, filed 4/7/97, effective 4/7/97. Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-36818, filed 10/31/96, effective 12/1/96.]

WAC 296-307-36821 Where must switchboards and panelboards be located? Switchboards that have any exposed live parts must be located in permanently dry locations and accessible only to qualified persons. Panelboards must be mounted in cabinets, cutout boxes, or enclosures
approved for the purpose and must be dead front. However, panelboards other than the dead front externally operable type are permitted where accessible only to qualified persons. Exposed blades of knife switches must be dead when open.

WAC 296-307-36824 When must conductors be insulated? All conductors used for general wiring must be insulated unless otherwise permitted in this section. The conductor insulation must be approved for the voltage, operating temperature, and location of use. Insulated conductors must be distinguishable by appropriate color or other means as grounded conductors, ungrounded conductors, or equipment grounding conductors.

WAC 296-307-36827 When may flexible cords and cables be used? (1) Flexible cords and cables must be approved and suitable for conditions of use and location. Flexible cords and cables must be used only for:

(a) Pendants;
(b) Wiring of fixtures;
(c) Connection of portable lamps or appliances;
(d) Elevator cables;
(e) Wiring of cranes and hoists;
(f) Connection of stationary equipment to facilitate frequent interchange;
(g) Prevention of the transmission of noise or vibration;
(h) Appliances where the fastening means and mechanical connections are designed to permit removal for maintenance and repair; or

(i) Data processing cables approved as a part of the data processing system.

(2) If used as permitted above, the flexible cord must have an attachment plug and shall be energized from an approved receptacle outlet.

(3) Unless permitted in subsection (1) of this section, flexible cords and cables must not be used:

(a) As a substitute for the fixed wiring of a structure;
(b) Where run through holes in walls, ceilings, or floors;
(c) Where run through doorways, windows, or similar openings;
(d) Where attached to building surfaces; or
(e) Where concealed behind building walls, ceilings, or floors.

(4) Flexible cords used in show windows and showcases must be Type S, SO, SJ, SJO, ST, STO, SJT, SJO, SO, ST, and STO except for the wiring of chain-supported lighting fixtures and supply cords for portable lamps and other merchandise being displayed or exhibited.

WAC 296-307-36830 How must flexible cords and cables be identified, spliced, and terminated? (1) A conductor of a flexible cord or cable that is used as a grounded conductor or an equipment grounding conductor must be distinguishable from other conductors. Types SJ, SJO, SJT, SJO, S, SO, ST, and STO must be durably marked on the surface with the type designation, size, and number of conductors.

(2) Flexible cords must be used only in continuous lengths without splice or tap. Vulcanized splices or equivalent means such as systems using shrinkable materials may be used to repair flexible cords. Hard service flexible cords No. 12 or larger may be repaired by splice if the splice retains the insulation, outer sheath properties, and usage characteristics of the cord being spliced.

(3) Flexible cords must be connected to devices and fittings so that strain relief is provided to prevent pull from being directly transmitted to joints or terminal screws.

WAC 296-307-36833 What requirements apply to multiconductor portable cable? Multiconductor portable cable for use in supplying power to portable or mobile equipment at over 600 volts, nominal, must consist of No. 8 or larger conductors employing flexible stranding. Cables operated at over 2,000 volts must be shielded to confine the voltage stresses to the insulation. Grounding conductors must be provided. Connectors for these cables must be locking with provisions to prevent their opening or closing while energized. Strain relief must be provided at connections and terminations. Portable cables must not be operated with splices unless the splices are permanent molded, vulcanized, or other approved type. Termination enclosures must be suitably marked with a high voltage hazard warning, and terminations must be accessible only to authorized and qualified personnel.

WAC 296-307-36836 When may fixture wires be used? (1) A fixture wire must be approved for the voltage, temperature, and location of use. A fixture wire used as a grounded conductor must be identified.

(2) Fixture wires may be used:

(a) For installation in lighting fixtures and in similar equipment where enclosed or protected and not subject to bending or twisting in use; or

(b) For connecting lighting fixtures to the branch-circuit conductors supplying the fixtures.

(3) Fixture wires must not be used as branch-circuit conductors except as permitted for Class 1 power limited circuits.

WAC 296-307-36839 What requirements apply to wiring for lighting fixtures, lampholders, lamps, and receptacles? (1) Fixtures, lampholders, lamps, rosettes, and receptacles must have no live parts normally exposed to employee contact. However, rosettes and cleat-type lam...
pholders and receptacles located at least 8 feet above the floor may have exposed parts.

(2) Handlamps of the portable type supplied through flexible cords must have a handle of molded composition or other material approved for the purpose, and a substantial guard must be attached to the lampholder or the handle.

(3) Lampholders of the screw-shell type must be installed for use as lampholders only. Lampholders installed in wet or damp locations must be weatherproof.

(4) Fixtures installed in wet or damp locations must be approved for the purpose and must be constructed or installed so that water cannot enter or accumulate in wireways, lampholders, or other electrical parts.

WAC 296-307-36842 What requirements apply to wiring for receptacles, cord connectors, and attachment plugs (caps)? (1) Receptacles, cord connectors, and attachment plugs must be constructed so that no receptacle or cord connector will accept an attachment plug with a different voltage or current rating than that for which the device is intended. However, a 20-ampere T-slot receptacle or cord connector may accept a 15-ampere attachment plug of the same voltage rating.

(2) A receptacle installed in a wet or damp location must be suitable for the location.

WAC 296-307-36845 What requirements apply to wiring for appliances? (1) Appliances, other than those in which the current-carrying parts at high temperatures are necessarily exposed, must have no live parts normally exposed to employee contact.

(2) Each appliance must have a disconnecting means.

(3) Each appliance must be marked with its rating in volts and amperes or volts and watts.

WAC 296-307-36848 What requirements apply to wiring for motors, motor circuits, and controllers? (1) If specified that one piece of equipment must be "in sight from" another piece of equipment, one shall be visible and not more than 50 feet from the other.

(2) Disconnecting means must meet the following requirements:

(a) A disconnecting means must be located in sight from the controller location. However, a single disconnecting means may be located adjacent to a group of coordinated controllers mounted adjacent to each other or a multimotor continuous process machine. The controller disconnecting means for motor branch circuits over 600 volts, nominal, may be out of sight of the controller, if the controller is marked with a warning label giving the location and identification of the disconnecting means which is to be locked in the open position.

(b) The disconnecting means must disconnect the motor and the controller from all ungrounded supply conductors and must be designed so that no pole can be operated independently.

(c) If a motor and the driven machinery are not in sight from the controller location, the installation must meet one of the following conditions:

(i) The controller disconnecting means must be able to be locked in the open position.

(ii) A manually operable switch that will disconnect the motor from its source of supply must be placed in sight from the motor location.

(d) The disconnecting means must plainly indicate whether it is in the open (off) or closed (on) position.

(e) The disconnecting means must be readily accessible. If more than one disconnect is provided for the same equipment, only one need be readily accessible.

(f) An individual disconnecting means must be provided for each motor, but a single disconnecting means may be used for a group of motors under any of the following conditions:

(i) If a number of motors drive special parts of a single machine or piece of apparatus, such as a metal or woodworking machine, crane, or hoist; or

(ii) If a group of motors is under the protection of one set of branch-circuit protective devices; or

(iii) If a group of motors is in a single room in sight from the location of the disconnecting means.

(3) Motors, motor-control apparatus, and motor branch-circuit conductors must be protected against overheating from motor overloads or failure to start, and against short-circuits or ground faults. Overload protection is not required if it will stop a motor where a shutdown is likely to introduce additional or increased hazards, as in the case of fire pumps, or where continued operation of a motor is necessary for a safe shutdown of equipment or process and motor overload sensing devices are connected to a supervised alarm.

(4) Live parts of all voltages must be protected according to the following:

(a) Stationary motors with commutators, collectors, and brush rigging located inside of motor end brackets and not conductively connected to supply circuits operating at more than 150 volts to ground may have those parts unguarded. Exposed live parts of motors and controllers operating at 50 volts or more between terminals must be guarded against accidental contact by any of the following:

(i) By installation in a room or enclosure that is accessible only to qualified persons;

(ii) By installation on a suitable balcony, gallery, or platform, elevated and arranged to exclude unqualified persons; or

(iii) By elevation 8 feet or more above the floor.

(b) Where live parts of motors or controllers operating at over 150 volts to ground are guarded against accidental contact only by location, and where adjustment or other attendance may be necessary during the operation of the apparatus, suitable insulating mats or platforms must be provided so that the attendant cannot readily touch live parts unless standing on the mats or platforms.

[Title 296 WAC—p. 2476]
WAC 296-307-36851 What requirements apply to wiring for transformers? (1) This section applies to the installation of all transformers. Exception: (a) Current transformers; (b) Dry-type transformers installed as a component part of other apparatus; (c) Transformers that are an integral part of a high frequency or electrostatic-coating apparatus; (d) Transformers used with Class 2 and Class 3 circuits, sign and outline lighting, electric discharge lighting, and power-limited fire-protective signaling circuits; and (e) Liquid-filled or dry-type transformers used for research, development, or testing, where effective safeguard arrangements are provided.

(2) The operating voltage of exposed live parts of transformer installations must be indicated by warning signs or visible markings on the equipment or structure.

(3) Dry-type, high fire point liquid-insulated, and askarel-insulated transformers installed indoors and rated over 35kV must be in a vault.

(4) If they present a fire hazard to employees, oil-insulated transformers installed indoors must be in a vault.

(5) Combustible material, combustible buildings and parts of buildings, fire escapes, and door and window openings must be safeguarded from fires that may originate in oil-insulated transformers attached or adjacent to a building or combustible material.

(6) Transformer vaults must be constructed to contain fire and combustible liquids within the vault and to prevent unauthorized access. Locks and latches must be arranged so that a vault door can be readily opened from the inside.

(7) Any pipe or duct system foreign to the vault installation must not enter or pass through a transformer vault.

(8) Materials must not be stored in transformer vaults.

WAC 296-307-36854 What requirements apply to wiring for capacitors? (1) All capacitors, except surge capacitors or capacitors included as a component part of other apparatus, must have an automatic means of draining the stored charge after the capacitor is disconnected from its source of supply.

(2) Capacitors rated over 600 volts, nominal, must meet the following additional requirements:

(a) Isolating or disconnecting switches (with no interrupting rating) must be interlocked with the load interrupting device or must have prominently displayed caution signs to prevent switching load current.

(b) For series capacitors, the proper switching must be ensured by any of the following:

(i) Mechanically sequenced isolating and bypass switches;

(ii) Interlocks; or

(iii) Switching procedure prominently displayed at the switching location.

WAC 296-307-36857 How must storage batteries be ventilated? You must ensure that there is sufficient diffusion and ventilation of gases from storage batteries to prevent the accumulation of explosive mixtures.

WAC 296-307-36860 What other miscellaneous requirements apply to wiring methods? (1) Metal raceways, cable armor, and other metal enclosures for conductors must be metallically joined into a continuous electric conductor and must be connected to all boxes, fittings, and cabinets to provide effective electrical continuity.

(2) All wiring systems are prohibited from being installed in ducts used to transport dust, loose stock or flammable vapors. All wiring system are prohibited from being installed in any duct used for vapor removal or for ventilation of commercial-type cooking equipment, or in any shaft containing only such ducts.

WAC 296-307-370 Special purpose equipment and installations.

WAC 296-307-37003 What requirements apply to cranes, hoists, and runways? The installation of electric equipment and wiring used with cranes, monorail hoists, hoists, and all runways must meet the following requirements:

(1) Disconnecting means must meet the following requirements:

(a) A readily accessible disconnecting means is provided between the runway contact conductors and the power supply.

(b) Another disconnecting means, capable of being locked in the open position, is provided in the leads from the runway contact conductors or other power supply on any crane or monorail hoist.

(i) If this additional disconnect means is not readily accessible from the crane or monorail hoist operating station, means is provided at the operating station, to open the power circuit to all motors of the crane or monorail hoist.

(ii) The additional disconnect may be omitted if a monorail hoist or hand-propelled crane bridge installation meets all of the following:

(A) The unit is floor controlled;

(B) The unit is within view of the power supply disconnecting means; and

(C) No fixed work platform has been provided for servicing the unit.

(2) A limit switch or other device shall be provided to prevent the load block from passing the safe upper limit of travel of any hoisting mechanism.

(3) The dimension of the working space in the direction of access to live parts that may require examination, adjust-

[Title 296 WAC—p. 2477]
ment, servicing, or maintenance while alive must be a minimum of 2 feet 6 inches. Where controls are enclosed in cabinets, the door must either open at least 90 degrees or be removable.

WAC 296-307-37006 What requirements apply to elevators, dumbwaiters, escalators, and moving walks? (1) Elevators, dumbwaiters, escalators, and moving walks must have a single means for disconnecting all ungrounded main power supply conductors for each unit.

(2) If interconnections between control panels are necessary for operation of the system on a multicar installation that remains energized from a source other than the disconnecting means, a warning sign must be mounted on or adjacent to the disconnecting means. The sign must be clearly legible and shall read "Warning—Parts of the control panel are not deenergized by this switch."

(3) If control panels are not located in the same space as the drive machine, they must be located in cabinets with doors or panels capable of being locked closed.

WAC 296-307-37009 What requirements apply to the disconnecting means for electric welders? (1) A disconnecting means must be provided in the supply circuit for each motor-generator arc welder, and for each AC transformer and DC rectifier arc welder that is not equipped with a disconnect mounted as an integral part of the welder.

(2) A switch or circuit breaker must be provided by which each resistance welder and its control equipment can be isolated from the supply circuit. The ampere rating of this disconnecting means must be less than the supply conductor amperage.

WAC 296-307-37012 What requirements apply to electrically driven or controlled irrigation machines? (1) If an electrically driven or controlled irrigation machine has a stationary point, a driven ground rod must be connected to the machine at the stationary point for lightning protection.

(2) The main disconnecting means for a center pivot irrigation machine must be located at the point of connection of electrical power to the machine and must be readily accessible and capable of being locked in the open position. A disconnecting means must be provided for each motor and controller.

WAC 296-307-372 Hazardous (classified) locations.

WAC 296-307-37203 What does this section cover? WAC 296-307-372 covers the requirements for electric equipment and wiring in locations that are classified based on the properties of the flammable vapors, liquids or gases, or combustible dusts or fibers that may be present and the likelihood that a flammable combustible concentration or quantity is present. Each room, section, or area must be considered individually to determine its classification.

All requirements in this part apply to hazardous locations, unless otherwise indicated.

WAC 296-307-37206 What classifications apply to this section? These hazardous locations are classified as follows:

(1) "Class I locations" are those in which flammable gases or vapors are or may be present in the air in quantities sufficient to produce explosive or ignitable mixtures. They include the following:
   (a) Class I, Division 1 locations are those where:
      (i) Hazardous concentrations of flammable gases or vapors may exist under normal operating conditions; or
      (ii) Hazardous concentrations of such gases or vapors may exist frequently because of repair or maintenance operations or because of leakage; or
      (iii) Breakdown or faulty operation of equipment or processes might release hazardous concentrations of flammable gases or vapors, and might also cause simultaneous failure of electric equipment.

   This classification usually includes locations where:
   • Volatile flammable liquids or liquefied flammable gases are transferred from one container to another;
   • Interiors of spray booths and areas in the vicinity of spraying and painting operations where volatile flammable solvents are used;
   • Locations containing open tanks or vats of volatile flammable liquids;
   • Drying rooms or compartments for the evaporation of flammable solvents;
   • Locations containing fat and oil extraction equipment using volatile flammable solvents;
   • Gas generator rooms and other portions of gas manufacturing plants where flammable gas may escape;
   • Inadequately ventilated pump rooms for flammable gas or for volatile flammable liquids;
   • The interiors of refrigerators and freezers in which volatile flammable materials are stored in open, lightly stoppered, or easily ruptured containers; and
   • All other locations where ignitable concentrations of flammable vapors or gases are likely to occur in the course of normal operations.

   (b) Class I, Division 2 locations are those where:
      (i) Volatile flammable liquids or flammable gases are handled, processed, or used, but in which the hazardous liquids, vapors, or gases are normally confined within closed containers or systems from which they can escape only in an...
accidental rupture or breakdown of containers or systems, or
in case of abnormal operation of equipment; or
(ii) Hazardous concentrations of gases or vapors are nor-
mally prevented by positive mechanical ventilation, and
which might become hazardous through failure or abnormal
operation of the ventilating equipment; or
(iii) They are adjacent to a Class I, Division 1 location,
and to which hazardous concentrations of gases or vapors
might occasionally be communicated unless prevented by
adequate positive-pressure ventilation from a source of clean
air, and effective safeguards against ventilation failure are
provided.

This classification usually includes locations where:
• Volatile flammable liquids or flammable gases or
vapors are used, but which would become hazardous only in
case of an accident or unusual operating condition. The quan-
tity of flammable material that might escape in case of acci-
dent, the adequacy of ventilating equipment, the total area
involved, and the record of the industry or business with
respect to explosions or fires are all factors to consider in
determining the classification.
• Piping without valves, checks, meters, and similar
devices would not ordinarily introduce a hazardous condition
even though used for flammable liquids or gases. Locations
used for the storage of flammable liquids or a liquefied or
compressed gases in sealed containers are not normally con-
sidered hazardous unless also subject to other hazardous con-
ditions.
• Electrical conduits and their enclosures separated from
process fluids by a single seal or barrier are Division 2 loca-
tions if the outside of the conduit enclosures is a nonhaz-
ardous location.

(2) "Class II locations" are those that are hazardous
because of the presence of combustible dust. They include
the following:
(a) Class II, Division 1 locations are those where:
(i) Combustible dust is or may be suspended in the air
under normal operating conditions, in quantities sufficient
to produce explosives or ignitable mixtures; or
(ii) Mechanical failure or abnormal operation of machin-
ery or equipment might produce explosive or ignitable, and
might also provide a source of ignition through simultaneous
failure of electric equipment, operation of protection devices,
or from other causes; or
(iii) Combustible dusts of an electrically conductive
nature may be present.

This classification may include areas of grain handling
and processing plants, starch plants, sugar-pulverizing plants,
malting plants, hay-grinding plants, coal pulverizing plants,
areas where metal dusts and powders are produced or pro-
cessed, and other similar locations that contain dust produc-
ing machinery and equipment (except where the equipment is
dust-tight or vented to the outside). These areas would have
combustible dust in the air, under normal operating condi-
tions, in quantities sufficient to produce explosive or ignit-
able mixtures.

Combustible dusts that are electrically nonconductive
include dusts produced in the handling and processing of
grain and grain products, pulverized sugar and cocoa, dried
egg and milk powders, pulverized spices, starch and pastes,
potato and wood flour, oil meal from beans and seed, dried
hay, and other organic materials that may produce combusti-
ble dusts when processed or handled. Dusts containing mag-
nesium or aluminum are particularly hazardous and the use of
extreme caution is necessary to avoid ignition and explosion.
(b) Class II, Division 2 location are those where:
(i) Combustible dust is not normally suspended in the air
in quantities sufficient to produce explosive or ignitable mix-
tures; and dust accumulations are normally insufficient to
interfere with the normal operation of electrical equipment or
other apparatus; or
(ii) Dust may be in suspension in the air as a result of
in frequent malfunctioning of handling or processing equip-
ment, and resulting dust accumulations may be ignitable by
abnormal operation or failure of electrical equipment or other
apparatus.

This classification includes locations where dangerous
concentrations of suspended dust would not be likely but
where dust accumulations might form on or in the vicinity of
electric equipment. These areas may contain equipment from
which appreciable quantities of dust would escape under
abnormal operating conditions or be adjacent to a Class II
Division 1 location into which an explosive or ignitable con-
centration of dust may be suspended under abnormal operat-
ing conditions.

(3) "Class III locations" are those that are hazardous
because of the presence of easily ignitable fibers or flyings
but in which such fibers or flyings are not likely to be sus-
pended in the air in quantities sufficient to produce ignitable
mixtures. They include the following:
(a) Class III, Division 1 locations are those where easily
ignitable fibers or materials producing combustible flyings
are handled, manufactured, or used.

Such locations usually include combustible fiber manu-
facturing and processing plants; cotton gins and cottonseed
mills; flax-processing plants; and industries involving similar
hazardous processes or conditions.

Easily ignitable fibers and flyings include rayon, cotton
(including cotton linters and cotton waste), sisal or henequen,
flax, jute, hemp, tow, cocoa fiber, oakum, baled waste kapok,
Spanish moss, excelsior, and other materials of similar
nature.
(b) Class III, Division 2 locations are those where easily
ignitable fibers are stored or handled, except in process of
manufacture.

[97-09-013, recodified as § 296-307-37206, filed 4/7/97, effective 4/7/97.]
Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-
048, § 296-306A-37206, filed 10/31/96, effective 12/1/96.]

WAC 296-307-37209 What equipment, wiring meth-
do s, and installations may be used in hazardous loca-
tions? Equipment, wiring methods, and installations of
equipment in hazardous locations must be intrinsically safe,
or approved for the hazardous location, or safe for the hazar-
drous location. Requirements for each of these options are as
follows:

(1) Equipment and associated wiring approved as intrin-
sically safe are permitted in any hazardous location for which
it is approved.

(2) Requirements to be approved for the hazardous loca-
tion:
(a) Equipment must be approved for the class of location and for the ignitable or combustible properties of the specific gas, vapor, dust, or fiber that will be present.

(b) Equipment must be marked to show the class, group, and operating temperature or temperature range, based on operation in a 40 degrees C ambient, for which it is approved. The temperature marking must be a maximum of the ignition temperature of the specific gas or vapor to be encountered. The following provisions apply to specific equipment:

(i) Nonheat-producing equipment, such as junction boxes, conduit, and fittings, and heat-producing equipment with a maximum temperature of 100 degrees C (212 degrees F) need not have a marked operating temperature or temperature range.

(ii) Fixed lighting fixtures marked for use in Class I, Division 2 locations only, need not be marked to indicate the group.

(iii) Fixed general-purpose equipment in Class I locations (other than lighting fixtures) that is acceptable for use in Class I, Division 2 locations need not be marked with the class, group, division, or operating temperature.

(iv) Fixed dust-tight equipment (other than lighting fixtures) that is acceptable for use in Class II, Division 2 and Class III locations need not be marked with the class, group, division, or operating temperature.

(3) Equipment that is safe for the location shall be of a type and design that provide protection from the hazards arising from ignitable and flammable vapors, liquids, gases, dusts, or fibers.

Note: Equipment that meets the requirements of The National Electrical Code, NFPA 70, shall be considered in compliance with the requirements of WAC 296-307-372.

[Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-37218, filed 10/31/96, effective 12/1/96.]

WAC 296-307-37212 How must conduit be installed in hazardous locations? All conduits must be threaded and wrench-tight. Where it is impractical to make a threaded joint tight, a bonding jumper must be used.

WAC 296-307-37215 Which equipment may be used in Division 1 and 2 locations? Equipment that has been approved for a Division 1 location may be installed in a Division 2 location of the same class and group. General-purpose equipment or equipment in general-purpose enclosures may be installed in Division 2 locations if the equipment does not constitute a source of ignition under normal operating conditions.

WAC 296-307-37218 What requirements apply to motors and generators used in hazardous locations? In Class I, Division 1 locations, motors, generators and other rotating electric machinery must be:

(1) Approved for Class I, Division 1 locations (explosion-proof); or

(2) Of the totally enclosed type supplied with positive-pressure ventilation from a source of clean air with discharge to a safe area, arranged to prevent energizing of the machine until ventilation has been established and the enclosure has been purged with at least 10 volumes of air, and also arranged to automatically deenergize the equipment when the air supply fails; or

(3) Of the totally enclosed inert-gas-filled type supplied with a suitable reliable source of inert gas for pressuring the enclosure, with devices provided to ensure a positive pressure in the enclosure and arranged to automatically deenergize the equipment when the gas supply fails; or

(4) Of a type designed to be submerged in a liquid that is flammable only when vaporized and mixed with air, or in a gas or vapor at a pressure greater than atmospheric and which is flammable only when mixed with air; and the machine is arranged to prevent energizing it until it has been purged with the liquid or gas to exclude air, and also arranged to automatically deenergize the equipment when the supply of liquid, or gas or vapor fails or the pressure is reduced to atmospheric.

Totally enclosed type (2) and (3) motors must have no external surface with a Celsius operating temperature greater than 80% of the ignition temperature of the gas or vapor involved, as determined by ASTM test procedure (Designation: D-2155-69). Appropriate devices must be provided to detect an increase in temperature of the motor beyond design limits and automatically deenergize the equipment or provide an adequate alarm. Auxiliary equipment must be approved for the location in which it is installed.

WAC 296-307-374 Special systems.

WAC 296-307-37403 What requirements apply to systems over 600 volts, nominal? (1) Wiring methods for fixed installations over 600 volts, nominal, must meet the following requirements:

(a) Above-ground conductors must be installed in rigid metal conduit, in intermediate metal conduit, in cable trays, in cablebus, in other suitable raceways, or as open runs of metal-clad cable suitable for the use and purpose. Open runs of nonmetallic-sheathed cable or of bare conductors or busbars must be installed in locations accessible only to qualified persons. Metallic shielding components, such as tapes, wires, or braids for conductors, must be grounded. Open runs of insulated wires and cables with a bare lead sheath or a braided outer covering must be supported to prevent physical damage to the braid or sheath.

(b) Conductors emerging from the ground must be enclosed in approved raceways.

(2) Interrupting and isolating devices must meet the following requirements:

(a) Circuit breaker installations located indoors must consist of metal-enclosed units or fire-resistant cell-mounted
units. Circuit breakers must be open mounted only in locations that are accessible only to qualified persons. A means of indicating the open and closed position of circuit breakers must be provided.

(b) Fused cutouts installed in buildings or transformer vaults must be approved for the purpose. They must be readily accessible for fuse replacement.

(c) A means must be provided to completely isolate equipment for inspection and repairs. Isolating means that are not designed to interrupt the load current of the circuit must be either interlocked with an approved circuit interrupter or provided with a sign warning against opening them under load.

(3) Mobile and portable equipment must meet the following requirements:

(a) A metallic enclosure must be provided on the mobile machine for enclosing the terminals of the power cable. The enclosure must include provisions for a solid connection for the ground wire terminal to effectively ground the machine frame. The method of cable termination used must prevent any strain or pull on the cable from stressing the electrical connections. The enclosure must be lockable so only authorized qualified persons may open it and must be marked with a sign warning of the presence of energized parts.

(b) All energized switching and control parts must be enclosed in grounded metal cabinets or enclosures. Circuit breakers and protective equipment must have the operating means projecting through the metal cabinet or enclosure so these units can be reset without opening locked doors. Enclosures and metal cabinets must be locked so that only authorized qualified persons have access and must be marked with a sign warning of the presence of energized parts. Collector ring assemblies on revolving machines (shovels, draglines, etc.) must be guarded.

(4) Tunnel installations of high-voltage power distribution and utilization equipment that is portable or mobile, such as substations, trailers, cars, mobile shovels, draglines, hoists, drills, dredges, compressors, pumps, conveyors, and underground excavators must meet the following requirements:

(a) Conductors in tunnels must be installed in one or more of the following:

(i) Metal conduit or other metal raceway;

(ii) Type MC cable;

(iii) Other approved multiconductor cable.

Conductors must also be located or guarded to protect them from physical damage. Multiconductor portable cable may supply mobile equipment. An equipment grounding conductor must be run with circuit conductors inside the metal raceway or inside the multiconductor cable jacket. The equipment grounding conductor may be insulated or bare.

(b) Bare terminals of transformers, switches, motor controllers, and other equipment must be enclosed to prevent accidental contact with energized parts. Enclosures used in tunnels must be drip-proof, weatherproof, or submersible as required by environmental conditions.

(c) A disconnecting means that simultaneously opens all ungrounded conductors must be installed at each transformer or motor location.

(d) All nonenergized metal parts of electric equipment and metal raceways and cable sheaths must be effectively grounded and bonded to all metal pipes and rails at the portal and at maximum intervals of 1000 feet throughout the tunnel.

WAC 296-307-37406  What requirements apply to emergency power systems? This section applies to circuits, systems, and equipment intended to supply power for illumination and special loads, in the event of failure of the normal supply.

(1) Emergency circuit wiring must be kept entirely independent of all other wiring and equipment and must not enter the same raceway, cable, box, or cabinet as other wiring.

Exception: This does not apply where common circuit elements suitable for the purpose are required, or for transferring power from the normal to the emergency source.

(2) Where emergency lighting is necessary, the system must be arranged so that the failure of any individual lighting element, such as a burned out light bulb, cannot leave any space in total darkness.

WAC 296-307-37409  How are Class 1, Class 2, and Class 3 remote control, signaling, and power-limited circuits classified? (1) Class 1, Class 2, or Class 3 remote control, signaling, or power-limited circuits are characterized by their usage and electrical power limitation which differentiates them from light and power circuits. These circuits are classified according to their voltage and power limitations as follows.

(a) Class 1 circuits.

(i) A Class 1 power-limited circuit is supplied from a source with a maximum rated output of 30 volts and 1000 volt-amperes.

(ii) A Class 1 remote control circuit or a Class 1 signaling circuit has a maximum voltage of 600 volts; however, the power output of the source need not be limited.

(b) Class 2 and Class 3 circuits.

(i) Power for Class 2 and Class 3 circuits is limited either inherently (in which no overcurrent protection is required) or by a combination of a power source and overcurrent protection.

(ii) The maximum circuit voltage is 150 volts AC or DC for a Class 2 inherently limited power source, and 100 volts AC or DC for a Class 3 inherently limited power source.

(iii) The maximum circuit voltage is 30 volts AC and 60 volts DC for a Class 2 power source limited by overcurrent protection, and 150 volts AC or DC for a Class 3 power source limited by overcurrent protection.

(c) The maximum circuit voltages in (a) and (b) of this subsection apply to sinusoidal AC or continuous DC power sources, and where wet contact is unlikely.

(2) A Class 2 or Class 3 power supply unit must be durably and visibly marked to indicate the class of supply and its electrical rating.

[Title 296 WAC—p. 2481]
WAC 296-307-37412 What requirements apply to fire protective signaling systems? (1) Fire protective signaling circuits must be classified either as nonpower limited or power limited.

(2) The power sources for use with fire protective signaling circuits must be either power limited or nonlimited as follows:

(a) The power supply of nonpower-limited fire protective signaling circuits must have a maximum output voltage of 600 volts.

(b) The power for power-limited fire protective signaling circuits must be either inherently limited, in which no overcurrent protection is required, or limited by a combination of power source and overcurrent protection.

(3) Nonpower-limited fire protective signaling circuits and Class 1 circuits may occupy the same enclosure, cable, or raceway if all conductors are insulated for maximum voltage of any conductor within the enclosure, cable or raceway. Power supply and fire protective signaling circuit conductors are permitted in the same enclosure, cable, or raceway only if connected to the same equipment.

(4) Where open conductors are installed, power-limited fire protective signaling circuits must be separated at least 2 inches from conductors of any light, power, Class 1, and nonpower-limited fire protective signaling circuits unless using a special and equally protective method of conductor separation. Cables and conductors of two or more power-limited fire protective signaling circuits or Class 3 circuits are permitted in the same cable, enclosure, or raceway. Conductors of one or more Class 2 circuits are permitted within the same cable, enclosure, or raceway with conductors of power-limited fire protective signaling circuits if the insulation of Class 2 circuit conductors in the cable, enclosure, or raceway is at least that needed for the power-limited fire protective signaling circuits.

(5) Fire protective signaling circuits must be identified at terminal and junction locations in a manner that will prevent unintentional interference with the signaling circuit during testing and servicing. Power-limited fire protective signaling circuits must be visibly and durably marked at terminations.

WAC 296-307-376 Working on or near exposed energized parts.

WAC 296-307-37603 What does this section cover? WAC 296-307-376 applies to work performed on exposed live parts (including either direct contact or contact by means of tools or materials) or near enough to them for employees to be exposed to any hazard they present.

WAC 296-307-37606 Who may work on energized parts? Only qualified persons may work on electric circuit parts of equipment that have not been deenergized under the procedures of WAC 296-307-37807. Qualified persons must be capable of working safely on energized circuits and must be familiar with the proper use of special precautionary techniques, personal protective equipment, insulating and shielding materials, and insulated tools.

WAC 296-307-37609 What requirements apply to working near low voltage lines? When employees are working near energized electrical service conductors operating at 750 volts or less, employees must work in a manner to prevent contact with the energized conductors.

WAC 296-307-37612 What requirements apply to qualified persons working near overhead lines? When a qualified person is working near overhead lines, whether in an elevated position or on the ground, the person must not approach, or take any conductive object without an approved insulating handle, closer to exposed energized parts than shown in WAC 296-307-150 unless:

(1) The person is insulated from the energized part (gloves, with sleeves if necessary, rated for the voltage involved are considered to be insulation of the person from the energized part on which work is performed);

(2) The energized part is insulated both from all other conductive objects at a different potential and from the person;

(3) The person is insulated from all conductive objects at a potential different from that of the energized part.

WAC 296-307-37615 What requirements apply to vehicles and mechanical equipment near overhead lines? (1) Any vehicle or mechanical equipment that may have parts of its structure elevated near energized overhead lines must be operated so that a clearance of 10 ft. is maintained. If the voltage is higher than 50kV, the clearance must be increased 0.4 inch for every 1kV over the voltage. The clearance may be reduced only if:

(a) The vehicle is in transit with its structure lowered, the clearance may be reduced to 4 ft. If the voltage is higher than 50kV, the clearance must be increased 0.4 inch for every 1kV over that voltage.

(b) Insulating barriers are installed to prevent contact with the lines, and if the barriers are rated for the voltage of the line being guarded and are not a part of or an attachment to the vehicle or its raised structure, the clearance may be
reduced to a distance within the designed working dimensions of the insulating barrier.

(2) If the equipment is an aerial lift insulated for the voltage involved, and if the work is performed by a qualified person, the clearance (between the uninsulated portion of the aerial lift and the power line) may be reduced to the distance given in WAC 296-307-150.

(3) Employees standing on the ground must not contact the vehicle or mechanical equipment or any of its attachments, unless:
   (a) The employee is using protective equipment rated for the voltage; or
   (b) The equipment is located so that no uninsulated part of its structure (that portion of the structure that provides a conductive path to employees on the ground) can come closer to the line than permitted in this section.

(4) If any vehicle or mechanical equipment that may have parts of its structure elevated near energized overhead lines is intentionally grounded, employees working on the ground near the point of grounding must not stand at the grounding location whenever there is a possibility of overhead line contact. Additional precautions, such as the use of barricades or insulation, must be taken to protect employees from hazardous ground potentials, depending on earth resistance and fault currents, which can develop within the first few feet or more outward from the grounding point.

WAC 296-307-37618 What lighting must be provided for employees working near exposed energized parts? (1) Employees must not enter spaces containing exposed energized parts, unless lighting is provided that enables the employees to perform the work safely.

(2) Where lack of lighting or an obstruction prevents an employee from seeing the work to be performed, employees must not perform tasks near exposed energized parts. Employees shall not reach blindly into areas that may contain energized parts.

WAC 296-307-37621 What requirements apply to working near exposed energized parts in confined spaces? (1) For working in a confined or enclosed space (such as a manhole or vault) that contains exposed energized parts, the employer shall provide, and the employee must use, protective shields, protective barriers, or insulating materials that are necessary to avoid contact with these parts. Doors, hinged panels, and the like must be secured to prevent swinging into an employee and causing the employee to contact exposed energized parts.

(2) Conductive materials and equipment that are in contact with any part of an employee's body shall be handled in a manner that will prevent them from contacting exposed energized conductors or circuit parts. If an employee handles long conductive objects (such as ducts and pipes) in areas with exposed live parts, you must institute work practices (such as the use of insulation, guarding, and material handling techniques) that will minimize the hazard.

(3) Portable ladders must have nonconductive siderails if they are used where the employee or the ladder could contact exposed energized parts.

(4) Conductive articles of jewelry and clothing shall not be worn if they might contact exposed energized parts.

WAC 296-307-37624 What housekeeping requirements apply to working near exposed energized parts? (1) Where live parts present an electrical contact hazard, employees must not perform housekeeping duties near enough to the parts that there is a possibility of contact, unless adequate safeguards (such as insulating equipment or barriers) are provided.

(2) Electrically conductive cleaning materials (including conductive solids such as steel wool, metalized cloth, and silicon carbide, as well as conductive liquid solutions) must not be used in proximity to energized parts unless procedures are followed that will prevent electrical contact.

WAC 296-307-37627 Who may defeat an electrical safety interlock? Only a qualified person following the requirements of this section may defeat an electrical safety interlock, and then only temporarily while he or she is working on the equipment. The interlock system must be returned to its operable condition when this work is completed.

WAC 296-307-378 Safety-related work practices. (1) WAC 296-307-376 and 296-307-378 cover electrical safety-related work practices for both qualified persons (those who have training in avoiding the electrical hazards of working on or near exposed energized parts) and unqualified persons (those with little or no such training) working on, near, or with the following installations:
   (a) Installations of electric conductors and equipment within or on buildings or other structures, and on other premises such as yards, parking, and other lots, and industrial substations;
   (b) Installations of conductors that connect to the supply of electricity;
   (c) Installations of other outside conductors on the premises; and
   (d) Installations of optical fiber cable where such installations are made along with electric conductors.
(2) WAC 296-307-367 and 296-307-378 cover work performed by unqualified persons on, near, or with the installations listed in subsection (3) of this section.
(3) WAC 296-307-376 and 296-307-378 do not apply to work performed by qualified persons on or directly associated with the following installations:
(a) Installations for the generation, control, transmission, and distribution of electric energy (including communication and metering) located in buildings used for such purposes or located outdoors.
(b) Installations in watercraft, railway rolling stock, aircraft, or automotive vehicles other than mobile homes and recreational vehicles.
(c) Installations of railways for generation, transmission, or distribution of power used exclusively for operation of rolling stock or installations of railways used exclusively for signaling and communication purposes.
(2) WAC 296-307-37803 How must employees be trained on safety practices? (1) The training requirements in this section apply to employees who face a risk of electrical shock that is not reduced to a safe level by the electrical installation requirements of WAC 296-307-362 through 296-307-374.
(2) Training contents must include the following:
(a) Employees must be trained and familiar with the safety-related work practices required by WAC 296-307-376 through 296-307-378 that apply to their job assignments.
(b) Employees who are covered by this section but who are not qualified persons must also be trained in and familiar with any electrically related safety practices that are not covered by this standard, but that are necessary for their safety.
(c) Qualified persons must, at a minimum, be trained in and familiar with the following:
(i) The skills and techniques necessary to distinguish exposed live parts from other parts of electric equipment;
(ii) The skills and techniques necessary to determine the nominal voltage of exposed live parts; and
(iii) The clearance distance specified in WAC 296-307-376 and the corresponding voltages to which the qualified person will be exposed.

Note 1: For the purposes of WAC 296-307-376 and 296-307-378, an employee must have the training required for a qualified person in order to be considered a qualified person.

Note 2: Qualified persons whose work on energized equipment involves either direct contact or contact by means of tools or materials must also have the training needed to meet WAC 296-307-376.

(3) You must provide either classroom or on-the-job training. The degree of training provided must be determined by the risk to the employee.

WAC 296-307-37805 How must safety-related work practices be chosen and used? Safety-related work practices must be used to prevent electric shock or other injuries resulting from either direct or indirect electrical contacts, when work is performed near or on equipment or circuits that are or may be energized. The specific safety-related work practices must be consistent with the nature and extent of the associated electrical hazards.

(1) When an employee may be exposed to live parts, they must be deenergized before the employee works on or near them, unless deenergizing introduces other hazards or is infeasible due to equipment design or operational limitations. Live parts that operate at less than 50 volts to ground need not be deenergized if there will be no increased exposure to electrical burns or to explosion due to electric arcs.

Note 1: Examples of other hazards include deactivation of emergency alarm systems, shutdown of hazardous location ventilation equipment, or removal of illumination for an area.

Note 2: An example of work that may be performed on or near energized circuit parts because of infeasibility due to equipment design or operational limitations is testing of electric circuits that can only be performed with the circuit energized.

(2) If the exposed live parts are not deenergized (for reasons of increased or additional hazards or infeasibility), other safety-related work practices must be used to protect employees who may be exposed to the electrical hazards involved. Such work practices must protect employees against contact with energized circuit parts directly with any part of their body or indirectly through some other conductive object. The work practices must be suitable for the voltage level of the exposed electric conductors or circuit parts.

WAC 296-307-37807 What work practices must be followed for work on exposed deenergized parts? (1) This section applies to work on exposed deenergized parts near enough to them to expose the employee to any electrical hazard they present. Conductors and parts of electric equipment that have been deenergized but have not been locked out or tagged must be treated as energized parts, and WAC 296-307-376 applies to work on or near them.

(2) While any employee is exposed to contact with parts of fixed electric equipment or circuits which have been deenergized, the circuits energizing the parts must be locked out or tagged or both according to the requirements of this sec-
tion. The requirements must be followed in the order in which they are presented.

"Fixed equipment" means equipment that is fastened or connected by permanent wiring methods.

Note: Lockout and tagging procedures that comply with WAC 296-307-320 will also be deemed to comply with WAC 296-307-37807 through 296-307-37817 if:

1. The procedures address the electrical safety hazards covered by this part; and
2. The procedures include the requirements of WAC 296-307-37813(4) and 296-307-37815(2).

WAC 296-307-37809 Must an employer have a written copy of lockout-tagout procedures? The employer must maintain a written copy of the procedures outlined in WAC 296-307-37807 through 296-307-37817 and must make it available for inspection by us or by employees. The written procedures may be in the form of a copy of WAC 296-307-37807 through 296-307-37817.

WAC 296-307-37811 What work practices must be followed for deenergizing equipment? (1) Safe procedures for deenergizing circuits and equipment must be determined before circuits or equipment are deenergized.

2. The circuits and equipment to be worked on must be disconnected from all electric energy sources. Control circuit devices, such as push buttons, selector switches, and interlocks, must not be used as the sole means for deenergizing circuits or equipment. Interlocks for electric equipment must not be used as a substitute for lockout and tagging procedures.

3. Stored electric energy which might endanger employees must be released. Capacitors must be discharged and high capacitance elements must be short-circuited and grounded, if the stored electric energy might endanger employees.

Note: Capacitors or associated equipment handled in meeting this requirement must be treated as energized.

4. Stored nonelectrical energy in devices that could reenergize electric circuit parts must be blocked or relieved to the extent that the circuit parts could not be accidently energized by the device.

WAC 296-307-37813 How must locks and tags be applied? (1) A lock and a tag must be placed on each disconnecting means used to deenergize circuits and equipment on which work is to be performed, except as provided in subsections (3) and (5) of this section. The lock must be attached to prevent anyone from operating the disconnecting means unless they resort to undue force or the use of tools.

(2) Each tag must have a statement prohibiting unauthorized operation of the disconnecting means and removal of the tag.

(3) If a lock cannot be applied, or if tagging procedures will provide a level of safety equivalent to that obtained by the use of a lock, a tag may be used without a lock.

(4) A tag used without a lock must be supplemented by at least one additional safety measure that provides a level of safety equivalent to that obtained by the use of a lock. Examples of additional safety measures include the removal of an isolating circuit element, blocking of a controlling switch, or opening of an extra disconnecting device.

(5) A lock may be placed without a tag only under the following conditions:

a. Only one circuit or piece of equipment is deenergized; and

b. The lockout period does not extend beyond the work shifts; and

c. Employees exposed to the hazards associated with reenergizing the circuit or equipment are familiar with this procedure.

WAC 296-307-37815 What work practices must be followed to verify deenergization? The requirements of this section must be met before any circuits or equipment can be considered and worked as deenergized.

1. A qualified person must operate the equipment operating controls or otherwise verify that the equipment cannot be restarted.

2. A qualified person must use test equipment to test the circuit elements and electrical parts of equipment to which employees will be exposed and shall verify that the circuit elements and equipment parts are deenergized. The test must also determine if any energized conditions exists as a result of inadvertently induced voltage or unrelated voltage backfeed even though specific parts of the circuit have been deenergized and presumed to be safe. If the circuit to be tested is over 600 volts, nominal, the test equipment must be checked for proper operation immediately before and immediately after this test.

WAC 296-307-37817 What work practices must be followed when reenergizing equipment? These requirements must be met, in the order given, before circuits or equipment are reenergized, even temporarily.

1. A qualified person must conduct tests and visual inspections as necessary to verify that all tools, electrical jumpers, shorts, grounds, and other devices have been removed, so that the circuits and equipment can be safely energized.

2. Employees exposed to the hazards associated with reenergizing the circuit or equipment must be warned to stay clear of circuits and equipment.

3. Each lock and tag must be removed by the employee who applied it or under his or her direct supervision. How-
ever, if this employee is absent from the workplace, then the lock or tag must be removed by a qualified person designated to perform this task if:

(a) The employer ensures that the employee who applied the lock or tag is not available at the workplace; and

(b) The employer ensures that the employee is aware that the lock or tag has been removed before resuming work at that workplace.

(4) There shall be a visual determination that all employees are clear of the circuits and equipment.

**WAC 296-307-37819** What safety-related work practices relate to portable electric equipment? This section applies to using cord-connected and plug-connected equipment, including flexible cord sets (extension cords).

(1) Portable equipment must be handled in a manner that will not cause damage. Flexible electric cords connected to equipment must not be used for raising or lowering the equipment. Flexible cords must not be fastened with staples or otherwise hung in a way that could damage the outer jacket or insulation.

(2) Visual inspection requirements:

(a) Portable cord-connected and plug-connected equipment and flexible cord sets must be visually inspected before use on any shift for external defects (such as loose parts, deformed and missing pins, or damage to outer jackets or insulation) and for evidence of possible internal damage (such as pinched or crushed outer jacket). Cord-connected and plug-connected equipment and flexible cord sets that remain connected once they are in place and are not exposed to damage need not be visually inspected until they are relocated.

(b) If there is a defect or evidence of damage that might expose an employee to injury, the defective or damaged items must be removed from service, and no employee shall use it until repairs and tests necessary to render the equipment safe have been made.

(c) When an attachment plug is to be connected to a receptacle (including any on a cord set), the relationship of the plug and receptacle contacts must first be checked to ensure they are of proper mating configurations.

(3) Requirements for grounding-type equipment:

(a) A flexible cord used with grounding-type equipment must contain an equipment grounding conductor.

(b) Attachment plugs and receptacles must not be connected or altered in a manner that would prevent proper continuity of the equipment grounding conductor at the point where plugs are attached to receptacles. These devices must not be altered to allow the grounding pole of a plug to be inserted into slots intended for connection to the current-carrying conductors.

(c) Adapters that interrupt the continuity of the equipment grounding connection are prohibited.

(4) Portable electric equipment and flexible cords used in highly conductive work locations, or in locations where employees are likely to contact water or conductive liquids, must be approved for those locations.

(5) Connecting attachment plugs.

(a) Employees’ hands must not be wet when plugging and unplugging flexible cords and cord-connected and plug-connected equipment, if energized equipment is involved.

(b) Energized plug and receptacle connections must be handled only with insulating protective equipment if the condition of the connection could provide a conducting path to the employee’s hand. For example: If a cord connector is wet from being immersed in water.

(c) Locking-type connectors must be properly secured after connection.

**WAC 296-307-37821** What safety-related work practices relate to electric power and lighting circuits? (1) Load rated switches, circuit breakers, or other devices specifically designed as disconnecting means must be used for the opening, reversing, or closing of circuits under load conditions. Any cable connectors other than the load-break type, fuses, terminal lugs, and cable splice connections are prohibited for such purposes, except in an emergency.

(2) After a circuit is deenergized by a circuit protective device, the circuit must not be manually reenergized until it has been determined that the equipment and circuit can be safety energized. This repetitive manual reclosing of circuit breakers or reenergizing circuits through replaced fuses is prohibited.

Note: When it can be determined from the design of the circuit and the overcurrent devices involved that the automatic operation of a device was caused by an overload rather than a fault connection, no examination of the circuit or connected equipment is needed before the circuit is reenergized.

(3) Overcurrent protection of circuits and conductors must not be modified, even on a temporary basis, beyond that allowed by this part for the installation safety requirements for overcurrent protection.

**WAC 296-307-37823** What safety-related work practices relate to test instruments and equipment? (1) Only qualified persons may perform testing work on electric circuits or equipment.

(2) Test instruments and equipment and all associated test leads, cables, power cords, probes, and connectors must be visually inspected for external defects and damage before the equipment is used. If there is a defect or evidence of damage that might expose an employee to injury, the defective or damaged item must be removed from service, and no employee may use it until necessary repairs and tests to render the equipment safe have been made.

(3) Test instruments and equipment and their accessories must be rated for the circuits and equipment to which they will be connected and must be designed for the environment in which they will be used.

[Title 296 WAC—p. 2486] (2007 Ed.)
WAC 296-307-37825 What safety-related work practices relate to flammable materials? Where flammable materials are present only occasionally, electric equipment capable of igniting them must not be used, unless measures are taken to prevent hazardous conditions from developing.

Such materials include, but are not limited to: Flammable gases, vapors, or liquids; combustible dust; and ignitable fibers or flyings.

Note: Electrical installation requirements for locations where flammable materials are present on a regular basis are contained in WAC 296-307-372.

WAC 296-307-380 Electrical protective equipment.

WAC 296-307-38003 How must protective equipment be used? (1) Employees working in the areas where there are potential electrical hazards must have and use electrical protective equipment that is appropriate for the specific parts of the body to be protected and for the work to be performed.

(2) If the insulating capability of protective equipment may be subject to damage during use, the insulating material must be protected. For example: An outer covering of leather is sometimes used to protect rubber insulating material.

(3) Employees must wear nonconductive head protection wherever there is a danger of head injury from electric shock or burns due to contact with exposed energized parts.

(4) Employees must wear protective equipment for the eyes or face wherever there is a danger of injury to the eyes or face from electrical arcs or flashes or from flying objects resulting from electrical explosion.

WAC 296-307-38006 What requirements apply to general protective equipment and tools? (1) When working near exposed energized conductors or circuit parts, each employee must use insulated tools or handling equipment if the tools or handling equipment might make contact with such conductors or parts. If the insulating capability of insulated tools or handling equipment is subject to damage, the insulating material must be protected.

(2) Ropes and handlines used near exposed energized parts must be nonconductive.

(3) Protective shields, protective barriers, or insulating materials must be used to protect each employee from shock, burns, or other electrically related injuries while that employee is working near exposed energized parts that might be accidentally contacted or where dangerous electric heating or arcing might occur. When normally enclosed live parts are exposed for maintenance or repair, they must be guarded to protect unqualified persons from contact with the live parts.

(4) Altering techniques must be used to warn and protect employees from hazards that could cause injury due to electrical shock, burns, or failure of electric equipment parts.

(5) Safety signs, safety symbols, or accident prevention tags must be used where necessary to warn employees about electrical hazards that may endanger them, as required by WAC 296-307-330.

WAC 296-307-38009 What manufacturing and marking requirements apply to electrical protective devices? Insulating blankets, matting, covers, line hose, gloves, and sleeves made of rubber must meet the following manufacture and marking requirements:

(1) Blankets, gloves, and sleeves must be produced by a seamless process.

(2) Each item must be clearly marked as follows:

(a) All classified equipment must be marked with its class number.

(b) Nonozone-resistant equipment other than matting must be marked Type I.

(c) Ozone-resistant equipment other than matting must be marked Type II.

(d) Other relevant markings, such as the manufacturer’s identification and the size of the equipment, may also be provided.

(3) Markings must be nonconducting and shall be applied so they do not impair the insulating qualities of the equipment.

(4) Markings on gloves must be on the cuff.

WAC 296-307-38012 What electrical requirements apply to electrical protective devices? Insulating blankets, matting, covers, line hose, gloves, and sleeves made of rubber must meet the following electrical requirements:

(1) Equipment must be capable of withstand the a-c proof-test voltage specified in Table 1 or the d-c proof-test voltage specified in Table 2.

(a) The proof-test must reliably indicate that the equipment can withstand the voltage involved.

(b) The test voltage must be applied continuously for three minutes for equipment other than matting and must be applied continuously for one minute for matting.

(c) Gloves must also be capable of withstanding the a-c proof-test voltage specified in Table 1 after a sixteen-hour water soak.

(2) When the a-c proof-test is used on gloves, the 60 hertz proof-test current must not exceed the values specified in Table 1 at any time during the test period.

[Title 296 WAC—p. 2487]
(a) If the a-c proof-test is made at a frequency other than 60 hertz, the permissible proof-test current must be computed from the direct ratio of the frequencies.

(b) For the test, gloves (right side out) must be filled with tap water and immersed in water to a depth that is in accordance with Table 3. Water must be added to or removed from the glove, as necessary, so that the water level is the same inside and outside the glove.

(c) After the sixteen-hour water soak, the 60 hertz proof-test current may exceed the values given in Table 1 by not more than 2 milliamperes.

(3) Equipment that has been subjected to a minimum breakdown voltage test must not be used for electrical protection.

(4) Material used for Type II insulating equipment must be capable of withstanding an ozone test, with no visible effects. The ozone test must reliably indicate that the material will resist ozone exposure in actual use. Any visible signs of ozone deterioration of the material, such as checking, cracking, breaks, or pitting, is evidence of failure to meet the requirements for ozone-resistant material.

Note: Rubber insulating equipment meeting the following national consensus standards is considered to be in compliance with WAC 296-307-38009, 296-307-38012, and 296-307-38015:

- ASTM D 1798-93, Specification for Rubber Insulating Matting.
- ASTM D 1048-93, Specification for Rubber Insulating Blankets.
- ASTM D 1049-93, Specification for Rubber Insulating Covers.
- ASTM D 1050-90, Specification for Rubber Insulating Line Hose.
- ASTM D 1051-87, Specification for Rubber Insulating Sleeves.

These standards contain specifications for conducting the tests required in this section.

[WAC 296-307-38018  How must electrical protective devices be maintained and used? (1) Electrical protective equipment must be maintained in a safe, reliable condition.

(2) The following specific requirements apply to insulating blankets, covers, line hose, gloves, and sleeves made of rubber:

(a) Maximum use voltages must meet the requirements in Table 1.

(b) Insulating equipment must be inspected for damage before each day's use and immediately following any incident that can reasonably be suspected of having caused damage. Insulating gloves must be given an air test, along with the inspection.

(c) Insulating equipment with any of the following defects must not be used:

(i) A hole, tear, puncture, or cut;

(ii) Ozone cutting or ozone checking (the cutting action produced by ozone on rubber under mechanical stress into a series of interlacing cracks);

(iii) An embedded foreign object;

(iv) Any of the following texture changes: Swelling, softening, hardening, or becoming sticky or inelastic;

(v) Any other defect that damages the insulating properties.

(d) Insulating equipment found to have other defects that might affect its insulating properties must be removed from service and returned for testing under (h) of this subsection.

(e) Insulating equipment must be cleaned as needed to remove foreign substances.

(f) Insulating equipment must be stored in such a location and in such a manner as to protect it from light, temperature extremes, excessive humidity, ozone, and other injurious substances and conditions.

(g) Protector gloves must be worn over insulating gloves.

(h) Electrical protective equipment must be subjected to periodic electrical tests. Test voltages and the maximum intervals between tests must be according to Table 4 and Table 5.

(i) The test method used must reliably indicate whether the insulating equipment can withstand the voltages involved.

Note: Standard electrical test methods considered as meeting this requirement are given in the following national consensus standards:

- ASTM D 1048-93, Specification for Rubber Insulating Blankets.
- ASTM D 1049-93, Specification for Rubber Insulating Covers.
- ASTM D 1050-90, Specification for Rubber Insulating Line Hose.
- ASTM D 1051-87, Specification for Rubber Insulating Sleeves.
- ASTM F 478-92, Specification for In-Service Care of Insulating Line Hose and Covers.
- ASTM F 479-88a, Specification for In-Service Care of Insulating Blankets.
- ASTM F 496-93b, Specification for In-Service Care of Insulating Gloves and Sleeves.
(j) Insulating equipment that fails inspections or electrical tests must not be used by employees, except as follows:

(i) Rubber insulating line hose could be used in shorter lengths with the defective portion cut off.

(ii) Rubber insulating blankets could be repaired using a compatible patch that results in physical and electrical properties equal to those of the blanket.

(iii) Rubber insulating blankets could be salvaged by severing the defective area from the undamaged portion of the blanket. The resulting undamaged area must not be smaller than twenty-two inches by twenty-two inches (560 mm by 560 mm) for Class 1, 2, 3, and 4 blankets.

(k) Repaired insulating equipment must be retested before it may be used by employees.

(l) You must certify that equipment has been tested in accordance with the requirements of (h), (i), and (k) of this subsection. The certification must identify the equipment that passed the test and the date it was tested.

Note: This requirement may be met by marking the equipment and entering the results of the tests and the dates of testing onto logs.

*Note:* Rubber gloves shall only be used on voltages of 5000 volts phase to phase or less.
The maximum use voltage is the a-c voltage (rms) classification of the protective equipment that designates the maximum nominal design/voltage of the energized system that may be safely worked. The nominal voltage design is equal to the phase-to-phase voltage on multiple circuits. However, the phase-to-ground potential is considered to be the nominal design/voltage:

(a) If there is no multiphase exposure in a system area and if the voltage exposure is limited to the phase-to-ground potential, or
(b) If the electrical equipment and devices are insulated or isolated or both so that the multiphase exposure on a grounded wye circuit is removed.

2 The proof-test voltage shall be applied continuously for at least one minute, but no more than three minutes.

(3) Where switches or fuses of more than 150 volts to ground are not guarded during ordinary operations, suitable insulating floors, mats or platforms must be provided on which the operator must stand while handling the switches.

---

**WAC 296-307-40005 What general requirements apply to the storage and handling of anhydrous ammonia?**

1. All employees must use at least gloves and goggles and may supplement with a face shield while working on or with charged anhydrous ammonia equipment.
2. You must ensure that equipment is inspected before each day's work. Conditions that would contribute to leaks shall be corrected.
3. Hose end-valves must be closed when not in use to prevent accidental discharge in case the main valve is opened.
4. Relief and vapor valves must discharge away from the operator's working position.

---

**WAC 296-307-40007 What requirements apply to systems mounted on farm wagons (implements of husbandry) for the transportation of ammonia?**

All anhydrous ammonia containers with a capacity of 3,000 gallons or less and equipment mounted on farm wagons (implements of husbandry) that is used to transport ammonia must meet the requirements of this section.

**WAC 296-307-40011 through 296-307-40037 also apply unless otherwise noted.**

1. Containers must meet the following mounting requirements:
   a. The farm wagon or container has a stop so the container does not dislodge from its mounting when a farm wagon stops suddenly.
   b. The container is anchored to the farm wagon at one or more places on each side of the container.
   c. The weight of containers mounted on four-wheel farm wagons, is distributed evenly over both axles.
   d. When the cradle and the container are not welded together, material between them eliminates metal-to-metal friction.
(2) Container accessories must meet the following requirements:
   (a) Each container has a fixed maximum liquid-level gauge.
   (b) All containers with more than 250-gallon capacity have a pressure gauge with a dial graduated from 0-400 psi.
   (c) The filling connection is fitted with one of the following:
      (i) A combination back-pressure check valve and excess-flow valve; or
      (ii) One double or two single back-pressure check valves; or
      (iii) A positive shut-off valve that has either an internal back-pressure check valve or an internal excess flow valve.
   (d) All containers with more than 250-gallon capacity are equipped for spray loading or with an approved vapor return valve.
   (e) All vapor and liquid connections have approved excess flow valves or quick-closing internal valves that are only open for operating.

   Exception: Safety-relief valves and connections that are specifically exempted by WAC 296-307-40019(5) are exempt from this requirement.

   (f) Fittings are protected from physical damage by a rigid guard. The guard is designed to withstand force from any direction, equal to twice the weight of the container and lading, at a safety factor of four. If the guard is fully enclosed, the safety-relief valves are properly vented through the guard.

   (g) If a liquid withdrawal line is installed in the bottom of a container, the connections and hose are at least as high as the lowest horizontal edge of the farm wagon axle.

   (h) Both ends of the hose are secure while in transit.

   (3) Each side and the rear end of the container must be marked in letters at least four inches high, with the words "ANHYDROUS AMMONIA" or, "CAUTION—AMMONIA," or marked according to DOT regulations.

   (4) Farm wagons (implements of husbandry) must meet all state regulations and the following requirements:
      (a) All farm wagons must be securely attached to the vehicle drawing them by drawbars with safety chains.
      (b) A farm wagon must be constructed so that it will follow the path of the towing vehicle and will prevent the towed wagon from whipping or swerving dangerously from side to side.
      (c) All farm wagons must have five gallons or more of readily available clean water.

   WAC 296-307-40009 What requirements apply to systems mounted on farm wagons (implements of husbandry) for the application of ammonia? This section applies to systems mounted on farm equipment that are used for the field application of ammonia.

   WAC 296-307-40011 through 296-307-40037 also apply unless otherwise noted.

   (1) All containers must be securely mounted.

WAC 296-307-40011 What requirements must approved anhydrous ammonia equipment meet? All equipment must be approved by one of the following methods:

   (1) The equipment was installed before February 8, 1973, and was approved and tested, and installed according to either the requirements of the American National Standard for the Storage and Handling of Anhydrous Ammonia, K61.1, or the Fertilizer Institute Standards for the Storage and Handling of Agricultural Anhydrous Ammonia, M-1, in effect at the time of installation; or

   (2) The equipment is accepted, or certified, or listed, or labeled, or otherwise determined to be safe by a nationally recognized testing laboratory; or

   (3)(a) The equipment is a type that no nationally recognized testing laboratory accepts, certifies, lists, labels, or determines to be safe; and

   (b) The equipment is inspected or tested by an authority responsible for enforcing occupational safety provisions of a law, code, or regulation pertaining to the storage, handling, transport, and use of anhydrous ammonia; and

   (c) The equipment is found in compliance with either the requirements of the American National Standard for the Storage and Handling of Anhydrous Ammonia, K61.1, or the Fertilizer Institute Standards for the Storage and Handling of
Agricultural Anhydrous Ammonia, M-1, in effect at the time of installation; or

(4) For a custom-designed and custom-built unit:
   (a) You cannot find a nationally recognized testing laboratory or authority responsible for the enforcement of a law, code or regulation pertaining to the storage, transportation and use of anhydrous ammonia that is willing to accept, certify, list, label or determine to be safe your custom equipment; and
   (b) You have on file a document attesting to its safe condition following appropriate tests. The document must be signed by a registered professional engineer or qualified person. The document must describe the test bases, test data and results, and also the qualifications of the certifying person.

[Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.060. 96-22-048, § 296-307-40013, filed 10/31/96, effective 12/1/96.]

(1) Containers used with systems covered in WAC 296-307-40005 and 296-307-40007 must be constructed and tested according to the code.

Exception: Construction under Table UW-12 at a basic joint efficiency of under 80% is prohibited. Containers built according to code are exempt from paragraphs UG-125 to UG-128, inclusive, and paragraphs UG-132 and UG-133 of the code.

Note: This subsection allows the continued use or reinstallation of containers constructed and maintained according to the 1949, 1950, 1952, 1956, 1959, 1962, 1965 and 1968 editions of the Unfired Pressure Vessel Code of the ASME or any revisions thereof in effect at the time of fabrication.

(2) Containers more than 36 inches in diameter or 250 gallons water capacity must be constructed to meet one or more of the following requirements:
   (a) Containers must be stress relieved after fabrication according to the code; or
   (b) Cold-formed heads, when used, must be stress relieved; or
   (c) Hot-formed heads must be used.

(3) Welding to the shell, head, or any other part of the container subject to internal pressure must be according to the code. Other welding is permitted only on saddle plates, lugs, or brackets attached to the container by the container manufacturer.

Containers used with systems covered in subsection (4) of this section must be constructed and tested in accordance with the DOT specifications.

(4) Containers must comply with department of transportation specifications and must be maintained, filed, packaged, marked, labeled and shipped to comply with current DOT regulations and American National Standard Method of Marking Portable Compressed Gas Containers to Identify the Material Contained, Z48.1-1954 R1970. See Appendix C for availability.

WAC 296-307-40015 How must nonrefrigerated containers and systems (other than DOT containers) be marked? (1) System nameplates, when required, must be permanently attached to the system so they are readily accessible for inspection.

(2) Each container or system covered in WAC 296-307-40005 and 296-307-40007 must be marked as follows:
   (a) With indication that the container or system meets the requirements of the code under which the container is constructed.
   (b) With indication on the container and system nameplate when the system is designed for underground installation.
   (c) With the name and address of the supplier of the container or the trade name of the container and with the date of fabrication.
   (d) With the water capacity of the container in pounds at 60°F or gallons, United States standard.
   (e) With the design pressure in pounds per square inch gauge.
   (f) With the wall thickness of the shell and heads.
   (g) With indication of the maximum fill level for liquid anhydrous ammonia between 20°F and 100°F. Markings must be in increments of not more than 20°F.

Exception: Containers with fixed maximum level indicators, such as fixed length dip tubes, or containers that are filled by weight are exempt from this requirement.

(h) With the outside surface area in square feet.
   (i) With minimum temperature in Fahrenheit for which the container is designed.
   (j) The marking must be on the container itself or on a permanently attached nameplate.

(3) All main operating valves on permanently installed containers with a capacity of over 3,000 water gallons must be identified to show whether the valve is in liquid or vapor service. The valve must be identified as follows:
   (a) The word LIQUID (or LIQUID VALVE), VAPOR (or VAPOR VALVE), as appropriate, must be placed on or within twelve inches of the valve by means of a stencil tag or decal.
   (b) Liquid valves must be painted orange and vapor valves must be painted yellow. The legend ORANGE-LIQUID, YELLOW-VAPOR must be displayed in one or more conspicuous places at each permanent storage location. The legend must have letters at least two inches high and must be placed against a contrasting background.

(4) "Marking refrigerated containers." Each refrigerated container must be marked with a name plate on the outer covering in an accessible place as specified in the following:
   • With the notation, "Anhydrous Ammonia"
   • With the name and address of the builder and the date of fabrication
   • With the water capacity of the container in gallons, U.S. Standard
   • With the design pressure
• With the minimum temperature in degrees Fahrenheit for which the container was designed
• The maximum allowable water level to which the container may be filled for test purposes
• With the density of the product in pounds per cubic foot for which the container was designed
• With the maximum level to which the container may be filled with liquid anhydrous ammonia.

WAC 296-307-40017 Where may anhydrous ammonia containers be located? (1) When selecting the location for a storage container, you must take into account the physiological effects of ammonia and adjacent fire hazards. Containers located indoors must be in areas especially approved for container storage.

(2) Containers must be located at least fifty feet from a dug well or other sources of potable water supply, unless the container is a part of a water treatment installation.

(3) Permanent storage containers must be located outside densely populated areas.

(4) Containers must be located according to the following:

Minimum distances (feet) from container to:

<table>
<thead>
<tr>

<td>600</td>
<td>1,000</td>
</tr>
</tbody>
</table>

(5) Storage areas must be kept free of readily ignitable materials such as waste, weeds and long dry grass.

WAC 296-307-40019 What requirements apply to container accessories? (1) All accessories must be designed for at least the maximum working pressure of the part of the system on which they are installed. All accessories must be fabricated from materials suitable for anhydrous ammonia service.

(2) All connections to containers must have shut-off valves located as close to the container as practical. Exception: Safety-relief devices, gauging devices, or those fitted with a No. 54 drill size orifice are exempt from this requirement.

(2007 Ed.)
(7) All piping, tubing, and fittings must allow for expansion, contraction, jarring, vibration, and settling.

(8) You must make adequate provision to protect all exposed piping from physical damage from moving machinery, the presence of automobiles or trucks, or other strain on the piping.

(9) Joint compounds must be resistant to ammonia.

(10) After assembly, all piping and tubing must be tested and proved to be free from leaks at pressure that is at least equal to the normal operating pressure of the system.

[WAC 296-307-40023 What specifications must hoses meet? (1) Hose used in ammonia service and subject to container pressure must meet the requirements of the joint Rubber Manufacturers Association and the Fertilizer Institute "Hose Specifications for Anhydrous Ammonia."

(2) Hose subject to container pressure must be designed for a minimum working pressure of 350 psig and a minimum burst pressure of 1750 psig. Hose assemblies must be able to withstand a test pressure of 500 psig.

(3) Hose and hose connections on the low pressure side of flow control or pressure reducing valves on devices discharging to atmospheric pressure must be designed for the maximum low side working pressure. All connections must be designed, constructed, and installed to prevent leaks when connected.

(4) Where liquid transfer hose is not drained after transfer operations, the hose must have an approved shut-off valve at the discharge end. You must provide a method to prevent excessive hydrostatic pressure in the hose. (See WAC 296-307-40025.)

(5) On all hose 1/2-inch outside diameter and larger, used for the transfer of anhydrous ammonia liquid or vapor, you must ensure that the following information is etched, cast, or impressed at five-foot intervals:

- Anhydrous Ammonia
- xxx psig (Maximum working pressure)
- Manufacturer's Name or Trademark
- Year of Manufacture

[WAC 296-307-40025 What requirements apply to safety-relief devices? (1) Every container used in systems covered by WAC 296-307-400 must have one or more spring-loaded safety-relief valves or the equivalent.

(2) The discharge from safety-relief valves must be vented away from the container, upward, and unobstructed to the atmosphere. All safety-relief valve discharge openings must have suitable raincaps that allow free discharge of the vapor and prevent water from entering. You must provide a method to drain condensate. The rate of discharge must be as follows:

<table>

</table>

Surface area = total outside surface area of container in square feet. When the surface area is not stamped on the name plate or when the marking is not legible, calculate the area with one of the following formulas:

- Hemispherical heads: Area = (Length in feet) X (outside diameter in feet) X 3.1416.
- Other than hemispherical heads: Area = (Length in feet) + (0.3 outside diameter in feet) X (outside diameter in feet) X 3.1416.
- Spherical container: Area = (outside diameter in feet)$^2$ X 3.1416.
- Flow rate: CFM air = cubic feet per minute of air required at standard conditions, 60F and atmospheric pressure (14.7 psia).

For containers with total outside surface area greater than 2,500 sq. ft., the formula is: Flow rate CFM air = 22.11 A0.82 where A = outside surface area of the container in square feet.

(3) Container safety-relief valves must be set for start to discharge as follows, according to the design pressure of the container.

Containers | Minimum | Maximum *
---|---|---
U.S. Coast Guard | As required by USCG regulations | DOT | As required by DOT regulations

*Note: Plus a relief valve manufacturer's tolerance of ten percent.

(4) Safety-relief devices used in systems covered by WAC 296-307-400 must be constructed to discharge at a rate equal to or greater than the rates required in subsection (2) of this section before the pressure exceeds 120% (not including the tolerance referred to in subsection (3) of this section) of the maximum permitted start-to-discharge pressure setting of the device.

(5) Safety-relief valves must be arranged to minimize tampering. If the pressure setting adjustment is external, the relief valves must have a sealable adjustment.

(6) Shut-off valves installed between the safety-relief valves and the containers or systems described in WAC 296-307-400 are prohibited.

Exception: A shut-off valve may be used where the arrangement of the valve allows the required capacity flow through the relief valves.

Exception example 1: A three-way valve installed under two safety-relief valves, each of which has the required rate of discharge and is installed to allow either of the safety-relief valves to be closed off, but does not allow both safety valves to be closed off at the same time.

Exception example 2: Two separate relief valves are installed with individual shut-off valves. The two shut-off valve stems must be mechanically interconnected to allow the full required flow of one safety-relief valve at all times.

Exception example 3: A safety-relief valve manifold that allows one valve of two, three, four or more to be closed off, and the remaining valve or valves will provide not less than the rate of discharge shown on the manifold nameplate.

(7) Safety-relief valves must have direct communication with the vapor space of the container.

(8) Each safety-relief valve used with systems described in WAC 296-307-400 must be plainly and permanently marked as follows:

(a) With the letters "AA" or the symbol NH3.
(b) The pressure in pounds per square inch gauge (psig) at which the valve is set to start to discharge.
(c) The rate of discharge of the valve in cubic feet per minute of air at 60°F and atmospheric pressure (14.7 psia).
(d) The manufacturers name and catalog number.

For example: A safety-relief valve marked AA-250-4200 (air) mean the valve is suitable for use on an anhydrous ammonia container; that it is set to start to discharge at 250 psig; and that its rate of discharge is 4,200 cubic feet per minute of air.

(9) No connection to the safety-relief valve may restrict the flow capacity on either the upstream or downstream side.

(10) The manufacturer or supplier of a safety-relief valve manifold must publish complete data showing the flow rating through the combined assembly of the manifold with safety-relief valves installed. The manifold flow rating must be determined by testing the manifold with all but one valve discharging. The flow rate must be determined by the restricted opening or openings or those having the lowest flow. The valve must be marked as required in subsection (7) of this section.

(11) A hydrostatic relief valve must be installed between each pair of valves in the liquid ammonia piping or hose where liquid may be trapped to release into the atmosphere at a safe location.

(12) Discharge from safety-relief devices must not terminate in or beneath any building.

WAC 296-307-40027 What emergency precautions are required when handling anhydrous ammonia? (1) You must train employees required to handle ammonia in the safe operating practices and the proper action to take in an emergency. Employees must be instructed to use the equipment listed in subsection (3) of this section in an emergency.

(2) If ammonia system leaks, the employees trained for and designated to act in emergencies must:

(a) See that anyone not required to deal with an emergency is evacuated from the contaminated area.
(b) Have two suitable gas masks in readily accessible locations. Full face masks with ammonia canisters as certified by NIOSH under 42 CFR Part 84, are suitable for emergency action for most leaks, particularly those that occur outdoors. For protection in concentrated ammonia atmospheres, self-contained breathing apparatus is required.
(c) Wear gauntlet type plastic or rubber gloves and wear plastic or rubber suits in heavily contaminated atmospheres.
(d) Shut off the appropriate valves.
(3) All storage systems must have on hand at least the following equipment for emergency and rescue purposes:

(a) *One full face gas mask with anhydrous ammonia refill canisters.
(b) **One pair of protective goggles.
(c) **One pair of protective boots.
(d) **One protective slicker and/or protective pants and jacket.
(e) Easily accessible shower and/or at least 50 gallons of clean water in an open top container.
(f) Tight-fitting vented goggles or one full face shield.

*If ammonia vapors are detected when the mask is applied, leave the area immediately. The life of a canister in service is controlled by the percentage of vapors to which it is exposed. Canisters must not be opened until ready for use and should be discarded after use or as recommended by the canister manufacturer. Unopened canisters may be guaranteed for as long as three years and all should be dated when received. In addition, an independently supplied air mask of the type used by fire departments may be used for emergencies.

**Gloves, boots, slickers, jackets, and pants must be made of rubber or other material impervious to ammonia.
(4) Where several persons are usually present, additional safety equipment may be necessary.

(5) Each tank motor vehicle transporting anhydrous ammonia, except farm applicator vehicles, must carry a container of at least five gallons of water and must have a full face gas mask, a pair of tight-fitting goggles or one full face shield. The driver must be instructed in their use and the proper action to take to provide for the driver's safety.

(2007 Ed.)
(6) If a leak occurs in transportation equipment and it is impractical to stop the leak, the driver should move the vehicle to an isolated location.

(7) If liquid ammonia contacts the skin or eyes, the affected area should be promptly and thoroughly flushed with water. Do not use neutralizing solutions or ointments on affected areas. A physician must treat all cases of eye exposure to liquid ammonia.

[Statutory Authority: RCW 49.17.040, [49.17.050 and 49.17.060. 03-10-068, § 296-307-40027, filed 5/6/03, effective 8/1/03; 97-09-013, recodified as § 296-307-40027, filed 4/7/97, effective 4/7/97. Statutory Authority: RCW 49.17.040, [49.17.050 and [49.17.060. 96-22-048, § 296-306A-40027, filed 10/31/96, effective 12/1/96.]]

WAC 296-307-40029 What requirements apply to filling densities? Filling density means the percent ratio of the weight of the gas in a container to the weight of water at 60°F that will contain one pound of water equals 27.737 cubic inches at 60°F. To determine the weight capacity of the tank in pounds, the weight of a gallon (231 cubic inches) of water at 60°F in air must be 8.32828 pounds.

(1) The filling densities for nonrefrigerated containers must not exceed the following:

<table>
<thead>
<tr>
<th>Aboveground</th>
<th>Underground</th>
</tr>
</thead>
<tbody>
<tr>
<td>(i) Uninsulated</td>
<td>56%</td>
</tr>
<tr>
<td>(ii) Insulated</td>
<td>57%</td>
</tr>
<tr>
<td>(iii) DOT containers shall be filled according to DOT regulations. This corresponds to 82% by volume at -28°F, 85% by volume at 5°F, 87.5% by volume at 30°F, and 90.6% by volume at 60°F.</td>
<td></td>
</tr>
</tbody>
</table>

(2) When containers are filled according to liquid level by any gauging method other than a fixed length dip tube gauge, each container should have a thermometer well so that the internal liquid temperature can be easily determined and the amount of liquid and vapor in the container corrected to a 60°F basis.

WAC 296-307-40031 What requirements apply to the transfer of liquids? (1) Anhydrous ammonia must always be at a temperature suitable for the material of construction and design of the receiving containers. Ordinary steels are not suitable for refrigerated ammonia. See Appendix R of API Standard 620 "Recommended Rules for Design and Construction of Large Welded Low-Pressure Storage Tanks" for materials for low temperature service.

(2) At least one attendant must supervise the transfer of liquids from the time the connections are first made until they are finally disconnected.

(3) Flammable gases or gases that will react with ammonia (such as air) must not be used to unload tank cars or transport trucks.

(4) Containers must be charged or used only on authorization of the owner.

(5) Containers must be gauged and charged only in the open atmosphere or in buildings approved for that purpose.

(6) Pumps used for transferring ammonia must be recommended and labeled for ammonia service by the manufacturer.

(a) Pumps must be designed for at least 250 psig working pressure.

(b) Positive displacement pumps must have installed, off the discharge port, a constant differential relief valve discharging into the suction port of the pump through a line large enough to carry the full capacity of the pump at relief valve setting. The setting and installation must be according to the pump manufacturer's recommendations.

(c) On the discharge side of the pump, before the relief valve line, there must be a pressure gauge graduated from 0 to 400 psig installed.

(d) Plant piping must contain shut-off valves located as close as practical to pump connections.

(7) Compressors used for transferring or refrigerating ammonia must be recommended and labeled for ammonia service by the manufacturer.

(a) Compressors, except those used for refrigeration, must be designed for at least 250 psig working pressure. Crank cases of compressors not designed to withstand system pressure must be protected with a suitable safety-relief valve.

(b) Plant piping must have shut-off valves located as close as practical to compressor connections.

(c) A safety-relief valve large enough to discharge the full capacity of the compressor must be connected to the discharge before any shut-off valve.

(d) Compressors must have pressure gauges at suction and discharge graduated to at least one and one-half times the maximum pressure that can develop.

(e) Adequate means, such as drainable liquid trap, must be provided on the compressor suction to minimize the entry of liquid into the compressor.

(f) Where necessary to prevent contamination, an oil separator must be provided on the discharge side of the compressor.

(8) Loading and unloading systems must be protected by suitable devices to prevent emptying of the storage container or the container being loaded or unloaded if the hose is cut. Backflow check valves or properly sized excess flow valves must be installed where necessary to provide this protection. In the event that valves are not practical, remotely operated shut-off valves may be installed.

(9) Meters used to measure liquid anhydrous ammonia must be recommended and labeled for ammonia service by the manufacturer.

(a) Liquid meters must be designed for a minimum working pressure of 250 psig.

(b) The metering system must incorporate devices that will prevent the inadvertent measurement of vapor.

WAC 296-307-40033 What requirements apply to tank car unloading points and operations? (1) Provisions for unloading tank cars must meet DOT requirements.

(2007 Ed.)
(2) Unloading operations must be performed by reliable employees who are properly instructed and responsible for careful compliance with all procedures.

(3) Caution signs must be placed on the track or car to give necessary warning to anyone approaching car from the open end of the siding. The signs must be left up until after car is unloaded and disconnected from discharge connections. Signs must be of metal or other suitable material, at least 12 by 15 inches, and bear the words "STOP—Tank car connected" or "STOP—Men at work." The word "STOP" must be in letters at least four inches high and the other words in letters at least two inches high. The letters must be white on a blue background.

(4) The track of a tank car siding must be substantially level.

(5) Brakes must be set and wheels blocked on all cars being unloaded.

(6) Tank cars of anhydrous ammonia must be unloaded only at approved locations meeting the requirements of WAC 296-307-40025(4) and 296-307-40031(8).

WAC 296-307-40035 What requirements apply to the liquid-level gauging device? (1) Each container except those filled by weight must have an approved liquid-level gauging device.

(2) All gauging devices must be arranged so that the maximum liquid level to which the container is filled is easily determined.

(3) Gauging devices that require bleeding of the product to the atmosphere such as the rotary tube, fixed tube, and slip tube devices, must be designed so that the maximum opening of the bleed valve is a maximum of No. 54 drill size unless provided with an excess flow valve.

(4) Gauging devices must have a design pressure equal to or greater than the design pressure of the container on which they are installed.

(5) Fixed liquid-level gauges must be designed so that the maximum volume of the container filled by liquid is a maximum of 85% of its water capacity. The coupling into which the fixed liquid-level gauge is threaded must be placed at the 85% level of the container. If located elsewhere, the dip tube of this gauge must be installed so that it cannot be readily removed.

Note: This does not apply to refrigerated storage.

(6) Columnar gauge glasses must be restricted to stationary storage installation. They must have shut-off valves having metallic hand wheels, excess flow valves, and extra heavy glass adequately protected by a metal housing applied by the gauge manufacturer. They must be shielded against the direct rays of the sun.

WAC 296-307-40037 How should aboveground uninsulated containers be maintained? Aboveground uninsulated containers should have a reflective surface maintained in good condition. We recommend white for painted surfaces, but other light reflecting colors are acceptable.

WAC 296-307-40039 What requirements apply to electrical equipment and wiring? (1) Electrical equipment and wiring for use in ammonia installations must be general purpose or weather resistant as appropriate.

(2) Where concentrations of ammonia in the air in excess of 16% by volume are likely to be encountered, electrical equipment and wiring must be specified by and installed according to chapter 296-307 WAC Part T, for Class I, Group D locations.

WAC 296-307-41001 What does this part cover? Chapter 296-307 WAC Part U covers the storage and handling of liquefied petroleum gases.

The requirements of WAC 296-307-410 apply to all LP-gas installations covered by this part.

For additional requirements related to: See WAC:

Cylinder systems 296-307-415
Systems using non-DOT containers 296-307-420
LP-gas as a motor fuel 296-307-425
LP-gas installations on commercial vehicles 296-307-430
LP-gas service stations 296-307-435
LP-gas service stations 296-307-440

WAC 296-307-41003 Which LP-gas installations are not covered by this part? (1) This part does not apply to:

(a) LP-gas refrigerated storage systems;

(b) LP-gas used with oxygen;

(c) LP-gas used in utility gas plants (covered by the National Fire Protection Association Standard for the Storage and Handling of Liquefied Petroleum Gases at Utility Gas Plants, NFPA No. 59-1968);

(d) Low-pressure (less than 1/2 pound per square inch or 14 inches water column) LP-gas piping systems, and the installation and operation of residential and commercial appliances supplied through such systems. The National Fire Protection Association Standard for the Installation of Gas...
Appliances and Gas Piping, NFPA 54-1969 apply to these systems.

(2) LP-gas installations, equipment, and appliances that met the requirements of the National Fire Protection Association Standard for the Storage and Handling of Liquefied Petroleum Gases NFPA No. 58-1972, 1973 at the time of manufacture or installation may be used if they do not create a hazard to employees.

WAC 296-307-41005 What definitions apply to this part? "Adequate ventilation," for fire prevention during normal operation, means the concentration of the gas in a gas-air mixture does not exceed 25% of the lower flammable limit.

"Containers" means all vessels, such as tanks, cylinders, or drums, used to transport or store LP-gases.

"DOT" means the federal Department of Transportation.

"DOT container" means a container that meets DOT regulations.

"DOT cylinder" means a cylinder that meets DOT regulations.

"DOT regulations/requirements/specifications" means the DOT regulations of 49 CFR part 178.

"Liquefied petroleum gases" and "LP-gas" means any material that is composed mostly of any of the following: Hydrocarbons, or mixtures of them; propane; propylene; butanes (normal butane or iso-butane); and butylenes.

"PSIG" means pounds per square inch absolute.

"PSIG" means pounds per square inch gauge.

"Systems" means an assembly of the container or containers, major devices such as vaporizers, safety-relief valves, excess flow valves, regulators, and piping connecting such parts.

"Vaporizer-burner" means an integral vaporizer-burner unit, dependent upon the heat generated by the burner to vaporize the liquid used for dehydrators or dryers.

WAC 296-307-41007 When must LP-gas be odorized? You must ensure that all LP-gas is odorized by an approved agent to indicate by distinct odor, the presence of gas down to concentration in air of a maximum of 1/5 the lower limit of flammability.

Exception: Odorization is not required if it will create a hazard in further processing, or if it serves no useful purpose as a warning agent.

Note: The odorization requirement may be met by using 1.0 pounds of ethyl mercaptan, 1.0 pounds of thiophene, or 1.4 pounds of amyl mercaptan per ten thousand gallons of LP-gas. You may use any odorant and quantity that meets the requirements of this section.

WAC 296-307-41009 Must LP-gas containers and equipment be approved? (1) Each system of DOT contain-

ers must have approved container valves, connectors, manifold valve assemblies, and regulators.

(2) Each non-DOT system using containers of 2,000 gallons or less water capacity, must have a container assembly, one or more regulators, and other necessary parts. The entire system, or the container assembly with the regulators, must be individually listed by a nationally recognized testing laboratory.

"Container assembly" means the container and fittings for all openings, including shut-off valves, excess flow valves, liquid-level gauging devices, safety-relief devices, and protective housing.

(3) In systems using containers of over 2,000 gallons water capacity, each regulator, container, valve, excess flow valve, gauging device, and relief valve, must be listed by a nationally recognized testing laboratory.

(4) All DOT containers must be constructed, tested, and stamped according to the DOT specifications effective at the date of their manufacture.

WAC 296-307-41011 How construction and test requirements must containers meet? (1) Containers must be designed, constructed, and tested according to the Rules for Construction of Unfired Pressure Vessels, section VIII, Division 1, American Society of Mechanical Engineers (ASME) Boiler and Pressure Vessel Code, 1968 edition, unless otherwise specified.

(2) Containers constructed according to the 1949 and earlier editions of the ASME Code are exempt from U-2 through U-10 and U-19 of the code. Containers constructed according to U-70 in the 1949 and earlier editions do not meet the requirements of this section.

(3) Containers designed, constructed, and tested prior to July 1, 1961, according to the Code for Unfired Pressure Vessels for Petroleum Liquids and Gases, 1951 edition with 1954 Addenda, of the American Petroleum Institute and the American Society of Mechanical Engineers are considered in compliance. Containers constructed according to API-ASME Code do not have to comply with section I or with the appendix to section I. W-601 through W-606 in the 1943 and earlier editions do not apply.

WAC 296-307-41013 How must containers be welded? (1) You must ensure that all welding to the shell, head, or any other part of the container subject to internal pressure, meets the requirements of the code under which the tank was fabricated. You may weld on saddle plates, lugs, or brackets attached to the container by the tank manufacturer.

(2) When you must repair or modify DOT containers by welding, you must return the container to a qualified manufacturer, making containers of the same type, to make the repair or modification according to DOT regulations.

[Title 296 WAC—p. 2498]
WAC 296-307-41015  How must containers be marked? (1) You must ensure that containers are marked according to DOT regulations or with the following:

(a) Indication that the container meets the requirements of the code under which it is constructed, and all marks required by that code.

(b) Indication whether the container is designed for underground or aboveground installation or both. If intended for both and different style hoods are provided, the marking must indicate the proper hood for each type of installation.

(c) The name and address of the supplier of the container, or with the trade name of the container.

(d) The water capacity of the container in pounds or gallons, United States standard.

(e) The pressure in psig, for which the container is designed.

(f) The wording "This container must not contain a product with a vapor pressure greater than _ psig at 100°F."

(g) The tare weight, for containers with a water capacity of three hundred pounds or less.

(h) Indication of the maximum fill level for liquid at temperatures between 20°F and 130°F. Markings must be in maximum increments of 20°F. This marking may be located on the liquid level gauging device.

Exception: Containers provided with fixed maximum level indicators or that are filled by weighing are exempt from this requirement.

(i) The outside surface area in square feet.

(2) The markings must be on a metal nameplate attached to the container so that it is visible after the container is installed.

(3) When LP-gas and one or more other gases are stored or used in the same area, the containers must be marked to identify their content. Marking must be according to American National Standard Z48.1-1954, "Method of Marking Portable Compressed Gas Containers to Identify the Material Contained."

WAC 296-307-41017  Where must containers be located? You must ensure that containers are located according to the following:

(1) Containers and first stage regulating equipment are located outdoors.

Containers may be located indoors under any of the following conditions:

(a) In buildings used exclusively for container charging, vaporization pressure reduction, gas mixing, gas manufacturing, or distribution;

(b) When portable use is necessary and meets the requirements of WAC 296-307-41509;

(c) LP-gas fueled stationary or portable engines that meet the requirements of WAC 296-307-42521 or 296-307-42523;

(d) LP-gas fueled industrial trucks that meet the requirements of WAC 296-307-42525;

(e) LP-gas fueled vehicles garaged according to WAC 296-307-42527; or

(f) Containers awaiting use or resale when stored according to WAC 296-307-430.

(2) Each individual container is located away from the nearest important building, group of buildings, or line of adjoining property that may be built on, according to Table U-1.

</table>

(a) If the total water capacity of a multicontainer installation at a consumer site is 501 gallons or more, the minimum distance must comply with this table, applying the aggregate capacity instead of the capacity per container. For multiple installations, installations must be at least twenty-five feet apart. Do not apply the MINIMUM DISTANCES BETWEEN ABOVEGROUND CONTAINERS to such installations.

(b) Distance requirements may be reduced to 10 feet for a single container of 1200 gallons water capacity or less, if the container is at least 25 feet from any other LP-gas container of more than 125 gallons water capacity.

(c) In buildings devoted exclusively to gas manufacturing and distributing operations, the distances may be reduced if no containers of more than 500 gallons water capacity are located closer than ten feet to gas manufacturing and distributing buildings.

(3) Containers installed for use must not be stacked one above the other.

(4) In industrial installations involving containers of 180,000 gallons total water capacity or more, where serious exposures from the container to adjacent properties are common, firewalls or other means of protection designed and constructed according to good engineering practices are required.

(5) Readily ignitable material such as weeds and long dry grass is removed within ten feet of any container.

(6) The minimum separation between LP-gas containers and flammable liquid tanks is twenty feet; the minimum separation between a container and the centerline of the dike is ten feet.

EXCEPTION: This does not apply when LP-gas containers of 125 gallons or less capacity are installed adjacent to Class U-1.

(2007 Ed.)
WAC 296-307-41019 What requirements apply to valves and accessories? (1) Valves, fittings, and accessories connected directly to the container including primary shut-off valves, must have a rated working pressure of at least 250 psig and must be of material and design suitable for LP-gas service. The use of cast iron for container valves, fittings, and accessories is prohibited. Container valves may be made of malleable or nodular iron.

(2) Connections to containers must have shut-off valves located as close to the container as practical.

Exception: This does not apply to safety-relief connections, liquid level gauging devices, and plugged openings.

(3) All required excess flow valves must close automatically at the rated flows of vapor or liquid specified by the manufacturer. The connections, lines, valves, and fittings must have a greater capacity than the rated flow of the excess flow valve.

(4) Liquid level gauging devices that are constructed so that outward flow is a maximum of that passed by a No. 54 drill size opening may be installed without excess flow valves.

(5) Openings from container or through fittings attached directly on container to which pressure gauge connection is made, need not have shut-off or excess flow valves if such openings are restricted to not larger than No. 54 drill size opening.

(6) Required excess flow and back pressure check valves must be located inside the container or outside where the line enters the container. When located outside, the installation must be made to prevent any stress beyond the excess flow or back pressure check valve from causing a break between the container and the valve.

Exception: This does not apply to systems using containers with a water capacity greater than 2-1/2 pounds (nominal one pound LP-gas capacity).

(7) Excess flow valves must be designed with a bypass that is a maximum of No. 60 drill size opening to allow equalization of pressures.

(8) Containers of more than 30 gallons water capacity and less than 2,000 gallons water capacity, filled on a volumetric basis, and manufactured after December 1, 1963, must be equipped for filling into the vapor space.

WAC 296-307-41021 What requirements apply to piping, tubing, and fittings? (1) Pipe must be wrought iron or steel (black or galvanized), brass, copper, or aluminum alloy. Aluminum alloy pipe must be at least Schedule 40 according to the specifications for Aluminum Alloy Pipe, ANSI H38.7-1969 (ASTM, B241-1969), and must be suitably marked at each end of each length indicating compliance with ANSI specifications. Alloy 5456 is prohibited.

Exception: This does not apply to piping for LP-gas used as a motor fuel or to piping on commercial vehicles.

(2) Aluminum alloy pipe must be protected against external corrosion whenever:
(a) It is in contact with dissimilar metals other than galvanized steel;
(b) Its location is subject to repeated wetting by such liquids as water (except rain water), detergents, sewage, or leaking from other piping;
(c) It passes through flooring, plaster, masonry, or insulation.

Galvanized sheet steel or pipe, galvanized inside and out, are considered suitable protection.

(3) Aluminum pipe must be three-fourths inch nominal and shall not be used for pressures exceeding 20 psig. Aluminum alloy pipe must not be installed within six inches of the ground.

(a) Vapor piping with operating pressures not exceeding 125 psig must be suitable for a working pressure of at least 125 psig. Pipe must be at least Schedule 40 ASTM A-53-69, Grade B Electric Resistance Welded and Electric Flash Welded Pipe or equal.

(b) Vapor piping with operating pressures over 125 psig and all liquid piping must be suitable for a working pressure of at least 250 psig. Pipe must be at least Schedule 80 if joints are threaded or back welded. At least Schedule 40 (ASTM A-53-69 Grade B Electric Resistance Welded and Electric Flash Welded Pipe or equal) must be used if joints are welded, or welded and flanged.

(4) Tubing must be seamless copper, brass, steel, or aluminum alloy. Copper tubing must be of Type K or L or equivalent as covered in the Specification for Seamless Copper Water Tube, ANSI H23.1-1970 (ASTM B88-1969). Aluminum alloy tubing must be of Type A or B or equivalent as covered in Specification ASTM B210-1968 and must be suitably marked every 18 inches indicating compliance with ASTM specifications. The minimum nominal wall thickness of copper tubing and aluminum alloy tubing must be as specified in Table U-2 and Table U-3.

1Based on data in Standard Specification for Aluminum-Alloy Drawn Seamless Tubes for Special Purpose Applications, ASTM B210-68.

(5) Aluminum alloy tubing must be protected against external corrosion whenever:

(a) It is in contact with dissimilar metals other than galvanized steel; or
(b) Its location is subject to repeated wetting by liquids such as water (except rainwater), detergents, sewage, or leakage from other piping; or
(c) It passes through flooring, plaster, masonry, or insulation.

Galvanized sheet steel or pipe, galvanized inside and out, are considered suitable protection.

(6) The maximum outside diameter for aluminum alloy tubing must be three-fourths inch and must not be used for pressures exceeding 20 psig. Aluminum alloy tubing installed within six inches of the ground is prohibited.

(7) In systems where the gas in liquid form enters the building without pressure reduction, only heavy walled seamless brass or copper tubing with an internal diameter a maximum of 3/32 inch, and a wall thickness of at least 3/64 inch shall be used.

Exception: This requirement does not apply to research and experimental laboratories, buildings or separate fire divisions of buildings used exclusively for housing internal combustion engines, and to commercial gas plants or bulk stations where containers are charged, nor to industrial vaporizer buildings, nor to buildings, structures, or equipment under construction or undergoing major renovation.

(8) Pipe joints must be screwed, flanged, welded, soldered, or brazed with a material having a melting point over 1,000°F. Joints on seamless copper, brass, steel, or aluminum alloy gas tubing shall be made by approved gas tubing fittings, or soldered or brazed with a material having a melting point over 1,000°F.

(9) For operating pressures of 125 psig or less, fittings must be designed for a pressure of at least 125 psig. For operating pressures above 125 psig, fittings must be designed for a minimum of 250 psig.

(10) Threaded cast iron pipe fittings are prohibited. Aluminum alloy fittings must be used with aluminum alloy pipe and tubing. Insulated fittings must be used where aluminum alloy pipe or tubing connects with a dissimilar metal. You may use malleable, nodular, or higher strength gray iron for fittings.

Note: Strainers, regulators, meters, compressors, pumps, etc., are not to be considered as pipe fittings.

(11) All materials such as valve seats, packing, gaskets, diaphragms, etc., must be resistant to the action of LP-gas under the service conditions to which they are subjected.

(12) All piping, tubing, or hose must be tested after assembly and proved free from leaks at least normal operating pressures. After installation, piping and tubing of all domestic and commercial systems must be tested and proved free of leaks using a manometer or equivalent device that will indicate a drop in pressure. Test made by flame is prohibited.

(13) You must ensure that piping allows for expansion, contraction, jarring, and vibration, and settling. You may use flexible connections.

(14) Piping outside buildings may be buried, aboveground, or both, but must be well supported and protected against physical damage. Where soil conditions warrant, all piping must be protected against corrosion. Where condensation may occur, the piping must be pitched back to the container, or you must provide a means for revaporization of the condensate.

### WAC 296-307-41023 What specifications must hoses meet?

(1) Hose shall be fabricated of materials that are resistant to the action of LP-gas in the liquid and vapor phases. If wire braid is used for reinforcing the hose, it must be of corrosion-resistant material such as stainless steel.

(2) Hose subject to container pressure must be marked "LP-gas" or "LPG" at not greater than ten-foot intervals.

(3) Hose subject to container pressure must be designed for a bursting pressure of not less than 1,250 psig.

(4) Hose subject to container pressure must be listed by a nationally recognized testing laboratory.

(5) Hose connections subject to container pressure must be able to withstand, without leaking, a test pressure of not less than 500 psig.

(6) Hose and hose connections on the low-pressure side of the regulator or reducing valve must be designed for a bursting pressure of not less than 125 psig or five times the set pressure of the relief devices protecting that portion of the system, whichever is higher.

(7) Hose may be used on the low-pressure side of regulators to connect to other than domestic and commercial gas appliances under the following conditions:

(a) The appliances connected with hose are portable and need a flexible connection.

(b) For use inside buildings, the hose is of minimum practical length, but is a maximum of six feet. Hose must not extend from one room to another, nor pass through any walls, partitions, ceilings, or floors. Such hose must not be concealed from view or used in a concealed location.

Exception: For use outside of buildings, the hose may exceed this length but must be kept as short as practical.

(c) The hose must be approved and must not be used where it may be exposed to temperatures above 125°F. The
hose must be securely connected to the appliance. Rubber slip ends are prohibited.

(d) The shut-off valve for an appliance connected by hose must be in the metal pipe or tubing and not at the appliance end of the hose. When shut-off valves are installed close to each other, precautions must be taken to prevent operation of the wrong valve.

(e) Hose used for connecting to wall outlets must be protected from physical damage.

**WAC 296-307-41025 What requirements apply to safety devices?**

(1) Every container except those constructed according to DOT specifications and every vaporizer (except motor fuel vaporizers and vaporizers described in WAC 296-307-41029(3) and 296-307-42007(6)) that is heated by artificial means or not, must have one or more safety-relief valves of spring-loaded or equivalent type. These valves must be arranged to afford free vent to the outer air with discharge not less than five feet horizontally away from any opening into the building that is below such discharge. The rate of discharge must be according to the requirements of subsection (2) or (4) of this section.

(2) Minimum required rate of discharge in cubic feet per minute of air at one hundred twenty percent of the maximum permitted start to discharge pressure for safety-relief valves to be used on containers other than those constructed according to DOT specification must be as follows:

</table>

Surface area = total outside surface area of container in square feet.

(3) When the surface area is not stamped on the name plate or when the marking is not legible, calculate the area with one of the following formulas:

- Hemispherical heads: \( A = (\text{overall length}) \times (\text{outside diameter}) \times 3.1416. \)
- Other than hemispherical heads: \( A = (\text{overall length}) + 0.3 \times (\text{outside diameter}) \times (\text{outside diameter}) \times 3.1416. \)

Note: This formula is not exact, but will give results within the limits of practical accuracy for the sole purpose of sizing relief valves.

- Spherical container: \( A = (\text{outside diameter})^2 \times 3.1416. \)
- Flow rate: CFM air = required flow capacity in cubic feet per minute of air at standard conditions, 60°F and atmospheric pressure (14.7 psia).

For containers with total outside surface area greater than 2,000 sq. ft., the formula is: Flow rate CFM air = 53.632 A0.82 where \( A = \) outside surface area of the container in square feet.

Valves not marked "air" have flow rate marking in cubic feet per minute of LP-gas. These can be converted to ratings in cubic feet per minute of air by multiplying the LP-gas ratings by factors listed below. Air flow ratings can be converted to ratings in cubic feet per minute of LP-gas by dividing the air ratings by the factors listed below.

**AIRE CONVERSION FACTORS**

<table>
<thead>

<td>1.078</td>
<td>1.010</td>
</tr>
</tbody>
</table>

(4) The minimum required rate of discharge for safety-relief valves for LP-gas vaporizers (steam heated, water heated, and direct fired) must be determined as follows:

(a) Obtain the total surface area by adding the surface area of vaporizer shell in square feet directly in contact with LP-gas and the heat exchanged surface area in square feet directly in contact with LP-gas.

(b) Obtain the minimum required rate of discharge in cubic feet of air per minute, at 60°F and 14.7 psia from subsection (2) of this section, for this total surface area.

(5) Container and vaporizer safety-relief valves must be set to start to discharge, with relation to the design pressure of the container, according to the following:

<table>
<thead>
<tr>
<th>Containers</th>
<th>Minimum (percent)</th>
<th>Maximum (percent)</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASME Code; Par. U-68, U-69—1949 and earlier editions</td>
<td>110</td>
<td>*125</td>
</tr>
</tbody>
</table>
(11) Each safety-relief valve must be plainly and perma-
nently marked with the following:
   (a) Container type of the pressure vessel on which the
       valve is designed to be installed;
   (b) The pressure in psig at which the valve is set to dis-
       charge;
   (c) The actual rate of discharge of the valve in cubic feet
       per minute of air at 60°F and 14.7 psia; and
   (d) The manufacturer's name and catalog number.

   For example: T200-250-4050 AIR: Indicates that the
   valve is suitable for use on a Type 200 container, that it is set
   to start to discharge at 250 psig; and that its rate of discharge
   is 4,050 cubic feet per minute of air.

(12) Safety-relief valve assemblies and their connections
    must be large enough to provide the required rate of flow for
    the container on which they are installed.

(13) A hydrostatic relief valve must be installed between
    each pair of shut-off valves on LP-gas liquid piping. The
    start-to-discharge pressure setting of such relief valves must
    be a maximum of 500 psig. The minimum setting on relief
    valves installed in piping connected to non-DOT containers
    shall be 140% of the container relief valve setting. For piping
    connected to DOT containers, the minimum must be 400
    psig. The relief valve should not be installed in the pump dis-
    charge piping if the same protection can be provided by
    installing the relief valve in the suction piping. The start-to-
    discharge pressure setting of such a relief valve, if installed
    on the discharge side of a pump, must exceed the maximum
    pressure permitted by the recirculation device in the system.

(14) The discharge from any safety-relief device must
    not terminate in or beneath any building.

   EXCEPTION: This requirement does not apply to relief devices
               covered by WAC 296-307-41017(1), 296-307-41507(1), or 296-307-
               41509.

(15) Container safety-relief devices and regulator relief
    vents must be located at least five feet in any direction from
    air openings into sealed combustion system appliances or
    mechanical ventilation air intakes.

   [Statutory Authority: RCW 49.17.040. 98-24-096, § 296-307-41025, filed
    12/1/98, effective 3/1/99. 97-09-013, recodified as § 296-307-41025, filed
    4/7/97, effective 4/7/97. Statutory Authority: RCW 49.17.040, [49.17.050
    and [49.17.060]. 96-22-048, § 296-306A-41025, filed 10/31/96, effective
    12/1/96.]

WAC 296-307-41027 How must indirect fired vapor-
izers be constructed and installed? Indirect fired vaporizers
utilizing steam, water, or other heating medium must be con-
structed and installed according to the following:

(1) Vaporizers must be constructed according to the
requirements of WAC 296-307-41011 and must be perma-
nently marked as follows:

   (a) With the code marking signifying the specifications
       to which the vaporizer is constructed;
   (b) With the allowable working pressure and tempera-
       ture for which the vaporizer is designed;
   (c) With the sum of the outside surface area and the
       inside heat exchange surface area expressed in square feet; and
   (d) With the name or symbol of the manufacturer.

(2) Vaporizers with an inside diameter of six inches or
less exempted by the ASME Unfired Pressure Vessel Code,
Section VIII of the ASME Boiler and Pressure Vessel Code,
1968, must have a design pressure of at least 250 psig and
need not be permanently marked.

(3) Heating or cooling coils installed inside a storage
container are prohibited.

(4) Vaporizers may be installed in buildings, rooms,
sheds, or lean-tos used exclusively for gas manufacturing
or distribution, or in other light, noncombustible structures
that are well ventilated near the floor line and roof.

   Exception: When vaporizing and/or mixing equipment is in a structure not
used exclusively for gas manufacturing or distribution, the
structure or room must be kept free of fuel vapors and
must have a roof or at least one exterior wall of lightweight
construction.

(5) All DOT vaporizers must have, at or near the dis-
charge, a safety-relief valve providing an effective rate of dis-
charge according to WAC 296-307-41025.

(6) The heating medium lines into and out of the vapor-
izer must have a mechanism to prevent the flow of gas into
the heat systems in the event of tube rupture in the vaporizer.
Vaporizers must have an automatic means to prevent liquid

---

*Manufacturers of safety-relief valves are allowed a plus tole-
rance not exceeding 10% of the set pressure marked on the
valve.

(6) Safety-relief devices used with systems employing
non-DOT containers must be constructed to discharge at not
less than the rates shown in subsection (2) of this section,
before the pressure is in excess of 120% of the maximum (not
including the 10% referred to in subsection (5) of this section)
permitted start-to-discharge pressure setting of the
device.

(7) In high temperature areas, you must use a lower
vapor pressure product or a higher designed pressure vessel
prevent the safety valves from opening. The tanks may be
protected by cooling devices such as spraying, shading, or
other means.

(8) Safety-relief valves must be arranged to minimize
tampering. For external pressure setting or adjustment, the
relief valves must have an approved sealable adjustment.

(9) Shut-off valves are prohibited between safety-relief
devices and the container, equipment, or piping.

Vaporizers must have an automatic means to prevent liquid
Vaporizers must have an automatic means to prevent liquid
Vaporizers must have an automatic means to prevent liquid
Vaporizers must have an automatic means to prevent liquid
Vaporizers must have an automatic means to prevent liquid
Vaporizers must have an automatic means to prevent liquid
Vaporizers must have an automatic means to prevent liquid
Vaporizers must have an automatic means to prevent liquid
Vaporizers must have an automatic means to prevent liquid
Vaporizers must have an automatic means to prevent liquid
Vaporizers must have an automatic means to prevent liquid
from passing through the vaporizers to the gas discharge piping.

(7) The device that supplies heat to produce steam, hot water, or other heat may be installed in a building, compartment, room, or lean-to ventilated near the floorline and roof to the outside. The device must be separated from all compartments or rooms containing LPG vaporizers, pumps, and central gas mixing devices by a wall designed to withstand a static pressure of at least 100 pounds per square foot. This wall must have no openings or pipes or conduit passing through it.

Exception: This requirement does not apply to the domestic water heaters that may supply heat for a vaporizer in a domestic system.

(8) Gas-fired heating systems supplying heat exclusively for vaporization must have automatic safety devices to shut off the flow of gas to main burners, if the pilot light should fail.

(9) Vaporizers may be an integral part of a fuel storage container directly connected to the liquid section or gas section or both.

(10) Fusible plugs are prohibited on vaporizers.

(11) Vaporizer houses must not have unprotected drains to sewers or sump pits.

WAC 296-307-41029  How must atmospheric vaporizers be constructed and installed? Atmospheric vaporizers using heat from the ground or surrounding air must be installed as follows:

(1) Buried underground; or

(2) Located inside the building near where the pipe enters the building, if the capacity of the unit does not exceed one quart;

(3) Vaporizers of less than one quart capacity heated by the ground or surrounding air, may be installed without safety-relief valves if tests show that the assembly is safe.

WAC 296-307-41031  How must direct gas-fired vaporizers be constructed and installed? Direct gas-fired vaporizers must be constructed, marked, and installed as follows:

(1) According to the requirements of the American Society of Mechanical Engineers Boiler and Pressure Vessel Code, 1968, that apply to the maximum working conditions for which the vaporizer is designed.

(2) With the name of the manufacturer; rated Btu input to the burner; the area of the heat exchange surface in square feet; the outside surface of the vaporizer in square feet; and the maximum vaporizing capacity in gallons per hour.

(3) Vaporizers may be connected to the liquid section or the gas section of the storage container, or both. The container must have a manually operated valve in each connection that completely shuts off when desired, all flow of gas or liquid from container to vaporizer.

(4) Vaporizers with a maximum capacity of 35 gallons per hour must be located at least 5 feet from container shut-off valves. Vaporizers more than 35 gallon capacity but a maximum of 100 gallons per hour must be located at least 10 feet from the container shut-off valves. Vaporizers having a capacity greater than 100 gallons per hour must be located at least 15 feet from container shut-off valves.

(5) Vaporizers may be installed in buildings, rooms, housings, sheds, or lean-tos used exclusively for vaporizing or mixing of LPG. Vaporizing housing structures must be noncombustible, and well ventilated near the floorline and the highest point of the roof. When vaporizer and/or mixing equipment is located in a structure or room attached to or within a building, such structure or room must be separated from the remainder of the building by a wall designed to withstand a static pressure of at least 100 pounds per square foot. This wall must have no openings or pipes or conduit passing through it. The structure or room must have adequate ventilation, and a roof or at least one exterior wall of lightweight construction.

(6) Vaporizers must have at or near the discharge, a safety-relief valve providing an effective rate of discharge according to WAC 296-307-41025. The relief valve must be located where it is not subjected to temperatures over 140°F.

(7) Vaporizers must have suitable automatic means to prevent liquid passing from the vaporizer to the gas discharge piping of the vaporizer.

(8) Vaporizers must have means for manually turning off the gas to the main burner and pilot.

(9) Vaporizers must have automatic safety devices to shut off the flow of gas to main burners if the pilot light should fail. When the flow through the pilot exceeds 2,000 Btu per hour, the pilot also must have an automatic safety device to shut off the flow of gas to the pilot should the pilot flame be extinguished.

(10) Pressure regulating and pressure reducing equipment located within 10 feet of a direct fired vaporizer must be separated from the open flame by an airtight noncombustible partition.

(11) Except as provided in subsection (5) of this section, the following minimum distances must be maintained between direct fired vaporizers and the nearest important building, group of buildings, or line of adjoining property that may be built on:

(a) Ten feet for vaporizers with a vaporizing capacity of 15 gallons per hour or less;

(b) Twenty-five feet for vaporizers with a vaporizing capacity of 16-100 gallons per hour;

(c) Fifty feet for vaporizers with a vaporizing capacity over 100 gallons per hour.

(12) Direct fired vaporizers must not raise the product pressure above the design pressure of the vaporizer equipment or above the pressure shown in the second column of Table U-8.

(13) Fusible plugs are prohibited on vaporizers.

(14) Vaporizers must not have unprotected drains to sewers or sump pits.

WAC 296-307-41033 How must direct gas-fired tank heaters be constructed and installed? Direct gas-fired tank heaters must be constructed and installed as follows:

1. Direct gas-fired tank heaters, and tanks to which they are applied, must only be installed aboveground.

2. Tank heaters must be permanently marked with the name of the manufacturer, the rated Btu input to the burner, and the maximum vaporizing capacity in gallons per hour.

Note: Tank heaters may be an integral part of a fuel storage container directly connected to the container liquid section, or vapor section, or both.

3. Tank heaters must have a means for manually turning off the gas to the main burner and pilot.

4. Tank heaters must have an automatic safety device to shut off the flow of gas to main burners, if the pilot light should fail. When flow through pilot exceeds 2,000 Btu per hour, the pilot also must have an automatic safety device to shut off the flow of gas to the pilot should the pilot flame be extinguished.

5. Pressure regulating and pressure reducing equipment if located within ten feet of a direct fired tank heater must be separated from the open flame by a substantially airtight non-combustible partition.

6. The following minimum distances must be maintained between a storage tank heated by a direct fired tank heater and the nearest important building, group of buildings, or line of adjoining property that may be built on:

   a. Ten feet for storage containers of less than 500 gallons water capacity;

   b. Twenty-five feet for storage containers of 500-1,200 gallons water capacity;

   c. Fifty feet for storage containers of over 1,200 gallons water capacity.

7. No direct fired tank heater may raise the product pressure within the storage container over 75% of the pressure in the second column of Table U-8.

WAC 296-307-41035 How must dehydrators be constructed and installed? The vaporizer section of vaporizer-burners used for dehydrators or dryers must be located outdoors; they must be constructed and installed as follows:

1. Vaporizer-burners must have a minimum design pressure of 250 psig with a factor safety of five.

2. Manually operated positive shut-off valves must be located at the containers to shut off all flow to the vaporizer-burners.

3. Minimum distances between storage containers and vaporizer-burners must be as follows:

<table>
<thead>
<tr>
<th>Water capacity per container (gallons)</th>

(2007 Ed.)
(2) Any container including mobile cargo tanks and portable tank containers regardless of size or construction, shipped under DOT jurisdiction or constructed according to DOT specifications must be charged according to DOT requirements.

(3) Exception: Portable containers not subject to DOT jurisdiction must be filled either by weight, or by volume using a fixed length dip tube gauging device.

WAC 296-307-41039 What requirements apply to LP-gas in buildings? (1) Vapor may be piped into buildings at pressures over 20 psig only if the buildings or separate areas thereof:

(a) Are constructed according to this section;

(b) Are used exclusively to house equipment for vaporization, pressure reduction, gas mixing, gas manufacturing, or distribution, or to house internal combustion engines, industrial processes, research and experimental laboratories, or equipment and processes using such gas and having similar hazard;

(c) Are buildings, structures, or equipment under construction or undergoing major renovation.

(2) Liquid may be permitted in buildings as follows:

(a) In buildings, or separate areas of buildings, used exclusively to house equipment for vaporization, pressure reduction, gas mixing, gas manufacturing, or distribution, or to house internal combustion engines, industrial processes, research and experimental laboratories, or equipment and processes using such gas and having similar hazard; and when such buildings, or separate areas are constructed according to this section.

(b) In buildings, structures, or equipment under construction or undergoing major renovation if the temporary piping meets the following conditions:

(i) Liquid piping inside the building meets the requirements of WAC 296-307-41021 and is a maximum of three-fourths iron pipe size. Copper tubing with an outside diameter of 3/4 inch or less may be used if it meets the requirements of Type K of Specifications for Seamless Water Tube, ANSI H23.1-1970 (ASTM B88-1969). (See Table U-2.) All such piping must be protected against construction hazards. Liquid piping inside buildings must be kept to a minimum. Such piping must be securely fastened to walls or other surfaces to provide adequate protection from breakage and located to subject the liquid line to the lowest ambient temperatures.

(ii) A shut-off valve must be installed in each intermediate branch line where it takes off the main line and must be readily accessible. A shut-off valve must also be placed at the appliance end of the intermediate branch line. Such shut-off valve must be upstream of any flexible connector used with the appliance.

(iii) Suitable excess flow valves must be installed in the container outlet line supplying liquid LP-gas to the building. A suitable excess flow valve must be installed immediately downstream of each shut-off valve. Excess flow valves must be installed where piping size is reduced and must be sized appropriately.

(iv) Hydrostatic relief valves must be installed according to WAC 296-307-41025(13).

(v) Using hose to carry liquid between the container and the building or at any point in the liquid line, except at the appliance connector, is prohibited.

(vi) Where flexible connectors are necessary for appliance installation, such connectors must be as short as practical and must meet the requirements of WAC 296-307-41021(4) or 296-307-41023.

(vii) Release of fuel when any section of piping or appliances is disconnected must be minimized by either of the following methods:

(A) Using an approved automatic quick-closing coupling (closing in both directions when coupled in the fuel line); or

(B) Closing the valve nearest to the appliance and allowing the appliance to operate until the fuel in the line is consumed.

(viii) See WAC 296-307-41059 for the conditions under which portable containers may be brought indoors.

WAC 296-307-41041 What requirements apply to transfer of liquids? When transferring liquids, you must ensure that:

(1) At least one attendant remains close to the transfer connection from the time the connections are first made until they are finally disconnected, during the transfer of the product.

(2) Containers must be filled or used only upon authorization of the owner.

(3) Containers manufactured according to DOT specifications authorized by DOT as a "single trip" or "nonrefillable container" must not be refilled or reused in LP-gas service.

(4) Gas or liquid must not be vented to the atmosphere to assist in transferring contents of one container to another, except as provided in WAC 296-307-42509(4). A listed pump may use LP-gas in the vapor phase as a source of energy. The gas may be vented to the atmosphere at a rate not to exceed that from a No. 31 drill size opening, if venting and liquid transfer are located at least 50 feet from the nearest important building.

(5) Filling fuel containers for industrial trucks or motor vehicles from industrial bulk storage containers must be performed at least ten feet from the nearest important masonry-walled building or at least twenty-five feet from the nearest important building or other construction and always at least 25 feet from any building opening.

(6) Filling portable containers, containers mounted on skids, fuel containers on farm tractors, or similar applications, from storage containers used in domestic or commercial service, must be performed at least 50 feet from the nearest important building.

(7) The filling connection and the vent from the liquid level gauges in containers, filled at point of installation, must be at least ten feet in any direction from air openings into sealed combustion system appliances or mechanical ventilation air intakes.
(8) Fuel supply containers must be gauged and charged only in the open air or in buildings especially provided for that purpose.

(9) Marketers and users must exercise precaution to ensure that only those gases for which the system is designed, examined, and listed, are employed in its operation, particularly with regard to pressures.

(10) Pumps or compressors must be designed for use with LP-gas. When compressors are used they must normally take suction from the vapor space of the container being filled and discharge to the vapor space of the container being emptied.

(11) Pumping systems, when equipped with a positive displacement pump, must include a recirculating device that limits the differential pressure on the pump under normal operating conditions to the maximum differential pressure rating of the pump. The discharge of the pumping system must be protected so that pressure is a maximum of 350 psig. If a recirculation system discharges into the supply tank and contains a manual shut-off valve, an adequate secondary safety recirculation system must be incorporated that has no means of rendering it inoperative. Manual shut-off valves in recirculation systems must be kept open except during an emergency or when repairs are being made to the system.

(12) When necessary, unloading piping or hoses must have suitable bleeder valves for relieving pressure before disconnection.

(13) Agricultural air moving equipment, including crop dryers, shall be shut down when supply containers are filling unless the air intakes and sources of ignition on the equipment are located 50 feet or more from the container.

(14) Agricultural equipment employing open flames or equipment with integral containers, such as flame cultivators, weed burners, and tractors, must be shut down during refueling.

**WAC 296-307-41043 Must workers be trained?**

Workers performing installation, removal, operation, and maintenance work must be properly trained in that function.

**WAC 296-307-41045 What fire protection must be provided for LP-gas installations?**

(1) Open flames or other sources of ignition are prohibited in vaporizer rooms (except those housing direct-fired vaporizers), pumphouses, container charging rooms or other similar locations. Direct-fired vaporizers are prohibited in pumphouses or container charging rooms.

Note: LP-gas storage containers do not require lightning protection. Since LP-gas is contained in a closed system of piping and equipment, the system need not be electrically conductive or electrically bonded for protection against static electricity. (See NFPA No. 77-1972-1973, Recommended Practice for Static Electricity.)

(2) Open flames (except as provided in subsection (1) of this section), cutting or welding, portable electric tools, and extension lights capable of igniting LP-gas, are prohibited within classified areas specified in Table U-5 unless the LP-gas facilities have been freed of all liquid and vapor, or special precautions observed under carefully controlled conditions.

**WAC 296-307-41047 What electrical requirements apply to LP-gas installations?**

(1) Electrical equipment and wiring must be specified by and installed according to chapter 296-307 WAC Part T, for ordinary locations.

(2) Fixed electrical equipment and wiring installed within classified areas must comply with Table U-5 and must be installed according to chapter 296-307 WAC Part T.

**EXCEPTION:** This provision does not apply to fixed electrical equipment at residential or commercial installations of LP-gas systems, LP-gas used as a motor fuel, or to LP-gas system installations on commercial vehicles.

1The classified area must not extend beyond an unpierced wall, roof, or solid vaportight partition.
2See chapter 296-46 WAC, and chapter 296-306A WAC Part T.
3When classifying the extent of a hazardous area, consider the possible variations in the spotting of tank cars and tank vehicles at the unloading points and the effect these variations of actual spotting point may have on the point of connection.
4Ventilation, either natural or mechanical, is considered adequate when the concentration of the gas in a gas-air mixture does not exceed twenty-five percent of the lower flammable limit under normal operating conditions.

---

WAC 296-307-41049 What requirements apply to liquid-level gauging devices? (1) Each container manufactured after December 31, 1965, and filled on a volumetric basis must have a fixed liquid-level gauge to indicate the maximum permitted filling level according to subsection (5) of this section. Each container manufactured after December 31, 1969, must have permanently attached to the container adjacent to the fixed level gauge a marking showing the percentage full that will be shown by that gauge. When used with a variable liquid-level gauge, the fixed liquid-level gauge will act as a check on the variable gauge. Gauges must be used in charging containers as required in WAC 296-307-41034.

(2) All variable gauging devices must be arranged so that the maximum liquid level for butane, for a 50/50 mixture of butane and propane, and for propane, to which the container may be charged, is easily determined. Liquid levels from empty to full must be marked on the system nameplate or gauging device. Dials of magnetic or rotary gauges must show whether they are for cylindrical or spherical containers and whether for aboveground or underground service. The dials of gauges for aboveground containers of over 1,200 gallons water capacity must be so marked.

(3) Gauging devices that require bleeding of the product to the atmosphere, such as the rotary tube, fixed tube, and slip tube, shall be designed so that the bleed valve maximum opening is not larger than a No. 54 drill size, unless provided with excess flow valve.

(4) Gauging devices must have a design working pressure of at least 250 psig.

(5) Length of tube or position of fixed liquid-level gauge must be designed to indicate the maximum level to which the container may be filled for the product contained. This level shall be based on the volume of the product at 40°F at its maximum permitted filling density for aboveground containers and at 50°F for underground containers. You must calculate the filling point for which the fixed liquid level gauge must be designed according to this section.

Note: It is impossible to set out in a table the length of a fixed dip tube for various tank capacities because of the various tank diameters and lengths, and because the tank may be installed either vertically or horizontally. If you know the maximum permitted filling volume in gallons, however, you can determine the length of the fixed tube by using a strapping table from the container manufacturer.

The fixed tube should be long enough so that when its lower end touches the surface of the liquid in the container, the contents of the container will be the maximum permitted volume as determined by the following formula:

\[
\text{Water capacity of container} \times 2 \quad \text{X filling density} = \text{Maximum specific gravity of LP-gas} \times \text{volume} \quad \text{correction factor} \times 100
\]

1 Measure at 60°F.
2 From WAC 296-307-41037(1).
3 For aboveground containers the liquid temperature is assumed to be 40°F and for underground containers the liquid temperature is assumed to be 50°F. To correct the liquid volumes at these temperatures to 60°F, use the following factors:

(a) To determine maximum volume of LP-gas for which a fixed length of dip tube must be set:

(2007 Ed.)

</tbody>
</table>

(b) To calculate the maximum volume of LP-gas that can be placed in a container when determining the length of the dip tube expressed as a percentage of total water content of the container, use the formula in (c) of this subsection.

(c) Determine the maximum weight of LP-gas that may be placed in a container for determining the length of a fixed dip tube by multiplying the maximum volume of LP-gas from Table U-6 by the pounds of LP-gas in a gallon at 40°F for aboveground and at 50°F for underground containers. Typical pounds per gallon are specified below:

Example: Assume a one hundred gallon total water capacity tank for aboveground storage of propane having a specific gravity of 0.510 of 60°F.

\[
\text{Maximum weight of LP-gas} = \left( \frac{4000}{52.6} \right) \times \text{water capacity} = \left( \frac{4000}{52.6} \right) \times 100 = 76.7 \text{ pounds}
\]

(6) Fixed liquid-level gauges used on non-DOT containers must be stamped on the exterior of the gauge with the letters DT followed by the vertical distance (expressed in inches and carried out to one decimal place) from the top of container to the end of the dip tube or to the centerline of the gauge when located at the maximum permitted filling level. For portable containers that may be filled in the horizontal and/or vertical position the letters DT must be followed by V with the vertical distance from the top of the container to the end of the dip tube for vertical filling, and with H followed by the proper distance for horizontal filling. For DOT containers the stamping must be placed both on the exterior of the gauge and on the container. On aboveground or cargo containers where the gauges are positioned at specific levels, the marking may be specified in percent of total tank contents and the marking must be stamped on the container.

(7) Columnar gauge glasses must be restricted to charging plants where the fuel is withdrawn in the liquid phase only. They must have valves with metallic handwheels, excess flow valves, and extra-heavy glass adequately protected with a metal housing applied by the gauge manufacturer. They must be shielded against the direct rays of the sun. Columnar gauge glasses are prohibited on tank trucks, motor fuel tanks, and containers used in domestic, commercial, and industrial installations.

(8) Float gauging devices or equivalent that do not require flow for their operation and that have connections extending outside the container do not have to have excess flow valves if the piping and fittings are adequately

[Title 296 WAC—p. 2509]
designated to withstand the container pressure and are properly protected against physical damage and breakage.

WAC 296-307-41051 What requirements apply to appliances? (1) New commercial and industrial gas consuming appliances must be approved.

Exception: Any appliance that was originally manufactured for operation with a gaseous fuel other than LP-gas and is in good condition may be used with LP-gas only after it is properly converted, adapted, and tested for performance with LP-gas before the appliance is placed in use.

(2) Unattended heaters used inside buildings for the purpose of animal or poultry production or care must have an approved automatic device designed to shut off the flow of gas to the main burners, and pilot if used, in case the flame goes out.

(3) All commercial, industrial, and agricultural appliances or equipment must be installed according to the requirements of these standards and according to the following:

(a) Domestic and commercial appliances, NFPA 54-1969, Standard for the Installation of Gas Appliances and Gas Piping.

(b) Industrial appliances, NFPA 54A-1969, Standard for the Installation of Gas Piping and Gas Equipment on Industrial Premises and Certain Other Premises.

WAC 296-307-415 Cylinder systems.

WAC 296-307-41501 What does this section cover? WAC 296-307-415 applies to systems using DOT containers. Cylinder systems must meet all requirements of WAC 296-307-410 (unless otherwise indicated) and the additional requirements of this section.

WAC 296-307-41503 What is a "cylinder system"? A "cylinder system" includes the container base or bracket, containers, container valves, connectors, manifold valve assembly, regulators, and relief valves.

WAC 296-307-41505 How must containers be marked for cylinder systems? (1) Containers must be marked according to DOT regulations. Additional markings that do not conflict with DOT regulations may be used.

(2) Each container must be marked with its water capacity in pounds or other identified unit of weight.

(3) Exception: If you are the only one who fills and maintains the container and if the water capacity of the container is identified by a code, subsection (2) of this section does not apply.

(4) Each container must be marked with its tare weight in pounds or other identified unit of weight including all permanently attached fittings but not the cap.

WAC 296-307-41507 What additional requirements apply to cylinder systems installed outdoors? (1) Containers must not be buried below ground. However, systems may be installed in a compartment or recess below grade level, such as a niche in a slope or terrace wall that is used for no other purpose, if the container and regulating equipment are not in contact with the ground, and the compartment or recess is drained and ventilated horizontally to the outside air from its lowest level, with the outlet at least 3 feet away from any building opening below the level of the outlet.

(2) Except as provided in WAC 296-307-4125(14), the discharge from safety-relief devices must be located at least three feet away from any building opening that is below the level of discharge and must not terminate beneath any building unless the space is well ventilated to the outside and is not enclosed on more than two sides.

(3) Containers must be set on firm foundation or otherwise firmly secured; the possible effect of settling on the outlet piping must be guarded against by a flexible connection or special fitting.

WAC 296-307-41509 What additional requirements apply to cylinder system installed indoors? (1) When portable containers are necessary and it is not practical to use them outdoors, containers and equipment may be used indoors only if they meet the requirements of this section.

(a) "Containers in use" means connected for use.

(b) Systems using containers with a water capacity greater than 2-1/2 pounds (nominal one pound LP-gas capacity) must have excess flow valves. Such excess flow valves must be either integral with the container valves or in the connections to the container valve outlets. In either case, an excess flow valve must be installed so that any strain beyond the excess flow valve will not cause breakage between the container and the excess flow valve. The installation of excess flow valves must take into account the type of valve protection provided.

(c) Regulators must be either directly connected to the container valves or to manifolds connected to the container valves. The regulator must be suitable for use with LP-gas.
Manifolds and fittings connecting containers to pressure regulator inlets must be designed for at least 250 psig service pressure.

(d) Valves on containers having a water capacity greater than fifty pounds (nominal twenty pounds LP-gas capacity) must be protected while in use.

(e) Aluminum pipe or tubing is prohibited.

(f) Hose must be designed for a working pressure of at least 250 psig. Hose and hose connections shall be listed by a nationally recognized testing laboratory.

(ii) Hose must be long enough to allow required spacing without kinking, straining, or allowing hose to be close enough to a burner to be damaged by heat.

(g) Portable heaters, including salamanders, must have an approved automatic device to shut off the flow of gas to the main burner, and pilot if used, in case the flame goes out. Heaters with inputs above 50,000 Btu manufactured on or after May 17, 1967, and heaters with inputs above 100,000 Btu manufactured before May 17, 1967, must have either:
   (i) A pilot that must be lighted and proved before the main burner can be turned on; or
   (ii) An electric ignition system;

(iii) Container valves, connectors, regulators, manifolds, piping, and tubing must not be used as structural supports for heaters.

Exception: These requirements do not apply to tar kettle burners, torches, melting pots, nor do they apply to portable heaters under 7,500 Btu input when used with containers with a maximum water capacity of 2-1/2 pounds.

(h) Containers, regulating equipment, manifolds, piping, tubing, and hose must be located to minimize exposure to normally high temperatures (such as may result from exposure to convection or radiation from heating equipment or installation in confined spaces), physical damage, or tampering.

(i) Heat producing equipment must be located and used to minimize the possibility of igniting combustibles.

(j) Containers with water capacity greater than 2-1/2 pounds (nominal one pound LP-gas capacity) connected for use, must stand on a firm and substantially level surface and, when necessary, must be secured in an upright position.

(k) Containers, including the valve protective devices, must be installed to minimize the probability of impingement of discharge of safety-relief devices upon containers.

(2) Containers with a maximum water capacity of 2-1/2 pounds (nominal one pound LP-gas capacity) may be used indoors as part of approved self-contained hand torch assemblies or similar appliances.

(3) When buildings frequented by the public are open to the public, containers may be used for repair or minor renovation as follows:

(a) The maximum water capacity of individual containers must be 50 pounds (nominal twenty pounds LP-gas capacity).

(b) The number of LP-gas containers must not exceed the number of employees assigned to use LP-gas.

(c) Containers with a water capacity greater than 2-1/2 pounds (nominal one pound LP-gas capacity) must be attended at all times.

(4) When buildings frequented by the public are closed to the public, containers may be used in buildings or structures for repairs or minor renovation as follows:

(a) The maximum water capacity of individual containers must be 245 pounds (nominal one hundred pounds LP-gas capacity).

(b) For temporary heating such as curing concrete, drying plaster and similar applications, heaters (other than integral heater-container units) must be located at least six feet from any LP-gas container. You may use heaters specifically designed for attachment to the container or to a supporting standard, if they are designed and installed to prevent direct or radiant heat application from the heater onto the container. Blower and radiant type heater must not be directed toward any LP-gas container within 20 feet.

(c) If two or more heater-container units are located in an unpartitioned area on the same floor, the container or containers of each unit must be separated from the container or containers of any other unit by at least 20 feet.

(d) When heaters are connected to containers for use in an unpartitioned area on the same floor, the total water capacity of containers manifolded together for connection to a heater or heaters shall not be greater than 735 pounds (nominal three hundred pounds LP-gas capacity). Such manifolds must be separated by at least 20 feet.

(e) On floors on which heaters are not connected for use, containers may be manifolded together for connection to a heater or heaters on another floor, if:

(i) The total water capacity of containers connected to any one manifold is a maximum of 2,450 pounds (nominal one thousand pounds LP-gas capacity) and;

(ii) Where more than one manifold having a total water capacity greater than 735 pounds (nominal three hundred pounds LP-gas capacity) are located in the same unpartitioned area, they shall be separated by at least 50 feet.

(f) Containers with a water capacity greater than 2-1/2 pounds (nominal one pound LP-gas capacity) must be attended at all times.

(5) Containers may be used in industrial occupancies for processing, research, or experimental purposes as follows:

(a) The maximum water capacity of individual containers must be 245 pounds (nominal one hundred pounds LP-gas capacity).

(b) Containers connected to a manifold must have a total water capacity of a maximum of 735 pounds (nominal three hundred pounds LP-gas capacity) and only one manifold may be located in the same room unless separated at least 20 feet from a similar unit.

(c) LP-gas in containers for research and experimental use must use the smallest practical quantity.

(6) Containers used in industrial occupancies with essentially noncombustible contents where portable equipment for space heating is essential and where a permanent heating installation is not practical, must meet the requirements of subsection (5) of this section.

(7) Containers may be used in buildings for temporary emergency heating purposes, if necessary to prevent damage to the buildings or contents, when the permanent heating system is temporarily out of service, as follows:

(a) Containers and heaters must meet the requirements of subsection (5) of this section.
(b) The temporary heating equipment must be attended at all times.

(8) Containers may be used temporarily in buildings for training purposes related in installation and use of LP-gas systems, as follows:

(a) The maximum water capacity of individual containers must be 245 pounds (nominal one hundred pounds LP-gas capacity), but the maximum quantity of LP-gas that may be placed in each container is 20 pounds.

(b) If more than one container is located in the same room, the containers must be separated by at least 20 feet.

(c) Containers must be removed from the building when the training class has terminated.

WAC 296-307-41511 What requirements apply to valves and accessories? (1) Valves in the assembly of multiple container systems must be arranged so that containers can be replaced without shutting off the flow of gas in the system.

Note: An automatic changeover device is not required.

(2) Regulators and low-pressure relief devices must be rigidly attached to the cylinder valves, cylinders, supporting standards, the building walls or otherwise rigidly secured and must be installed or protected so that weather will not affect their operation.

(3) Valves and connections to the containers must be protected while in transit, in storage, and while being moved into final use, as follows:

(a) By setting into the recess of the container to prevent the possibility of being struck if the container is dropped on a flat surface; or

(b) By ventilated cap or collar, fastened to the container capable of withstanding a blow from any direction equivalent to that of a 30-pound weight dropped four feet. Construction must ensure that a blow will not be transmitted to the valve or other connection.

(4) When containers are not connected to the system, the outlet valves must be kept tightly closed or plugged, even on empty containers.

(5) Containers having a water capacity in excess of 50 pounds (approximately 21 pounds LP-gas capacity), recharged at the installation, must have excess flow or backflow check valves to prevent the discharge of container contents in case of failure of the filling or equalizing connection.

WAC 296-307-41513 What requirements apply to safety devices for cylinder systems? (1) Containers must have safety devices as required by DOT regulations.

(2) A final stage regulator of an LP-gas system (excluding any appliance regulator) must have, on the low-pressure side, a relief valve that is set to start to discharge within the limits specified in Table U-7.

WAC 296-307-42003 How must non-DOT containers be designed and classified? Storage containers must be designed and classified according to Table U-8.

(3) When a regulator or pressure relief valve is used indoors for other than purposes specified in WAC 296-307-41017(1), the relief valve and the space above the regulator and relief valve diaphragms shall be vented to the outside air with the discharge outlet located at least three feet horizontally away from any building opening that is below such discharge.

Exception: This requirement does not apply to individual appliance regulators when protection is otherwise provided, nor to WAC 296-307-41509 and 296-307-4125(14). In buildings devoted exclusively to gas distribution, the space above the diaphragm need not be vented to the outside.

WAC 296-307-41515 What other requirements apply to cylinder systems? (1) Containers must not be reinstalled unless they are requalified according to DOT regulations.

(2) A product must not be placed in a container marked exclusively to gas distribution, the space above the diaphragm need not be vented to the outside.

WAC 296-307-42001 What does this section cover? WAC 296-307-420 applies to systems using storage containers not constructed according to DOT specifications. Non-DOT containers must meet all requirements of WAC 296-307-410 (unless otherwise indicated) and the additional requirements of this section.

Note: An automatic changeover device is not required.

Regulator delivery pressure | Minimum | Maximum
--- | --- | ---
1 psig or less | 200 | 300
Above 1 psig but not over 3 psig | 140 | 200
Above 3 psig | 125 | 200

TABLE U-7

Regulator delivery pressure | Minimum | Maximum
--- | --- | ---
1 psig or less | 200 | 300
Above 1 psig but not over 3 psig | 140 | 200
Above 3 psig | 125 | 200

Note: An automatic changeover device is not required.

(3) When a regulator or pressure relief valve is used indoors for other than purposes specified in WAC 296-307-41017(1), the relief valve and the space above the regulator and relief valve diaphragms shall be vented to the outside air with the discharge outlet located at least three feet horizontally away from any building opening that is below such discharge.

Exception: This requirement does not apply to individual appliance regulators when protection is otherwise provided, nor to WAC 296-307-41509 and 296-307-4125(14). In buildings devoted exclusively to gas distribution, the space above the diaphragm need not be vented to the outside.

WAC 296-307-41515 What other requirements apply to cylinder systems? (1) Containers must not be reinstalled unless they are requalified according to DOT regulations.

(2) A product must not be placed in a container marked exclusively to gas distribution, the space above the diaphragm need not be vented to the outside.

WAC 296-307-41513 What requirements apply to safety devices for cylinder systems? (1) Containers must have safety devices as required by DOT regulations.

(2) A final stage regulator of an LP-gas system (excluding any appliance regulator) must have, on the low-pressure side, a relief valve that is set to start to discharge within the limits specified in Table U-7.

Note: An automatic changeover device is not required.

Regulator delivery pressure | Minimum | Maximum
--- | --- | ---
1 psig or less | 200 | 300
Above 1 psig but not over 3 psig | 140 | 200
Above 3 psig | 125 | 200

TABLE U-7

Regulator delivery pressure | Minimum | Maximum
--- | --- | ---
1 psig or less | 200 | 300
Above 1 psig but not over 3 psig | 140 | 200
Above 3 psig | 125 | 200

Note: An automatic changeover device is not required.

(3) When a regulator or pressure relief valve is used indoors for other than purposes specified in WAC 296-307-41017(1), the relief valve and the space above the regulator and relief valve diaphragms shall be vented to the outside air with the discharge outlet located at least three feet horizontally away from any building opening that is below such discharge.

Exception: This requirement does not apply to individual appliance regulators when protection is otherwise provided, nor to WAC 296-307-41509 and 296-307-4125(14). In buildings devoted exclusively to gas distribution, the space above the diaphragm need not be vented to the outside.

WAC 296-307-41515 What other requirements apply to cylinder systems? (1) Containers must not be reinstalled unless they are requalified according to DOT regulations.

(2) A product must not be placed in a container marked exclusively to gas distribution, the space above the diaphragm need not be vented to the outside.

WAC 296-307-41513 What requirements apply to safety devices for cylinder systems? (1) Containers must have safety devices as required by DOT regulations.

(2) A final stage regulator of an LP-gas system (excluding any appliance regulator) must have, on the low-pressure side, a relief valve that is set to start to discharge within the limits specified in Table U-7.

WAC 296-307-41513 What requirements apply to safety devices for cylinder systems? (1) Containers must have safety devices as required by DOT regulations.

(2) A final stage regulator of an LP-gas system (excluding any appliance regulator) must have, on the low-pressure side, a relief valve that is set to start to discharge within the limits specified in Table U-7.

WAC 296-307-42003 How must non-DOT containers be designed and classified? Storage containers must be designed and classified according to Table U-8.

(3) When a regulator or pressure relief valve is used indoors for other than purposes specified in WAC 296-307-41017(1), the relief valve and the space above the regulator and relief valve diaphragms shall be vented to the outside air with the discharge outlet located at least three feet horizontally away from any building opening that is below such discharge.

Exception: This requirement does not apply to individual appliance regulators when protection is otherwise provided, nor to WAC 296-307-41509 and 296-307-4125(14). In buildings devoted exclusively to gas distribution, the space above the diaphragm need not be vented to the outside.

WAC 296-307-41515 What other requirements apply to cylinder systems? (1) Containers must not be reinstalled unless they are requalified according to DOT regulations.

(2) A product must not be placed in a container marked exclusively to gas distribution, the space above the diaphragm need not be vented to the outside.

WAC 296-307-41513 What requirements apply to safety devices for cylinder systems? (1) Containers must have safety devices as required by DOT regulations.

(2) A final stage regulator of an LP-gas system (excluding any appliance regulator) must have, on the low-pressure side, a relief valve that is set to start to discharge within the limits specified in Table U-7.

WAC 296-307-42003 How must non-DOT containers be designed and classified? Storage containers must be designed and classified according to Table U-8.

(3) When a regulator or pressure relief valve is used indoors for other than purposes specified in WAC 296-307-41017(1), the relief valve and the space above the regulator and relief valve diaphragms shall be vented to the outside air with the discharge outlet located at least three feet horizontally away from any building opening that is below such discharge.

Exception: This requirement does not apply to individual appliance regulators when protection is otherwise provided, nor to WAC 296-307-41509 and 296-307-4125(14). In buildings devoted exclusively to gas distribution, the space above the diaphragm need not be vented to the outside.

WAC 296-307-41515 What other requirements apply to cylinder systems? (1) Containers must not be reinstalled unless they are requalified according to DOT regulations.

(2) A product must not be placed in a container marked exclusively to gas distribution, the space above the diaphragm need not be vented to the outside.

WAC 296-307-41513 What requirements apply to safety devices for cylinder systems? (1) Containers must have safety devices as required by DOT regulations.

(2) A final stage regulator of an LP-gas system (excluding any appliance regulator) must have, on the low-pressure side, a relief valve that is set to start to discharge within the limits specified in Table U-7.

Note: An automatic changeover device is not required.
TABLE U-8
Minimum design pressures of container lb. per sp. in. gauge

|
|---------------|---------------------------------------------------------------|---------------------------------|-------------------------------------------------------------------------------------------------|

| 2002          | 215                                                           | 200                             | 250                                                                                             |

1 New type 80 storage containers have not been authorized since Dec. 31, 1947.
2 Container type may be increased by increments of 25. The minimum design pressure of containers shall be 100% of the container type designation when constructed under 1949 or earlier editions of the ASME Code (Par. U-68 and U-69). The minimum design pressure of containers shall be 125% of the container type designation when constructed under:
   1. The 1949 ASME Code (Par. U-200 and U-201);
   3. All editions of the API-ASME Code.
3 Construction of containers under the API-ASME Code is prohibited after July 1, 1961.

WAC 296-307-42005 What requirements apply to valves and accessories, filler pipes, and discharge pipes for non-DOT containers? (1) The filling pipe inlet terminal must not be located inside a building. For containers with a water capacity of 125 gallons or more, such terminals must be located at least 10 feet from any building, and preferably at least 5 feet from any driveway, and must have a protective housing.

(2) The filling connection must be fitted with one of the following:
   (a) Combination back-pressure check valve and excess flow valve.
   (b) One double or two single back-pressure check valves.
   (c) A positive shut-off valve in conjunction with either:
      (i) An internal back pressure valve; or
      (ii) An internal excess flow valve.
   (3) All openings in a container must have approved automatic excess flow valves unless otherwise exempt.
   (4) An excess flow valve is not required in the withdrawal service line if the following requirements are met:
      (a) The total water capacity is a maximum of 2,000 U.S. gallons.
      (b) The discharge from the service outlet is controlled by a manually operated shut-off valve that is:
         (i) Threaded directly into the service outlet of the container; or
         (ii) Is an integral part of a substantial fitting threaded into or on the service outlet of the container; or
         (iii) Threaded directly into a substantial fitting threaded into or on the service outlet of the container.
   (c) The shut-off valve is equipped with an attached handwheel or the equivalent.
   (d) The controlling orifice between the contents of the container and the outlet of the shut-off valve is a maximum of 5/16 inch in diameter for vapor withdrawal systems and 1/8 inch in diameter for liquid withdrawal systems.
   (e) An approved pressure-reducing regulator is directly attached to the outlet of the shut-off valve and is rigidly supported, or an approved pressure-reducing regulator is attached to the outlet of the shut-off valve by means of a suitable flexible connection, if the regulator is adequately supported and properly protected on or at the tank.
   (5) All inlet and outlet connections except safety-relief valves, liquid-level gauging devices and pressure gauges on containers of 2,000 gallons water capacity, or more, and on any container used to supply fuel directly to an internal combustion engine, must be labeled to designate whether they communicate with vapor or liquid space. Labels may be on valves.
   (6) Instead of an excess flow valve, openings may be fitted with a quick-closing internal valve that must remain closed when not in operation. The internal mechanism for such valves may have a secondary control that must have a fusible plug (not over 220°F melting point) that will cause the internal valve to close automatically in case of fire.
   (7) A maximum of two plugged openings may be used on a container of 2,000 gallons or less water capacity.
   (8) Containers of 125 gallons water capacity or more manufactured after July 1, 1961, must have an approved device for liquid evacuation, the size of which must be 3/4 inch national pipe thread minimum. A plugged opening does not satisfy this requirement.

WAC 296-307-42007 What additional requirements apply to safety devices for non-DOT containers? (1) All safety devices must comply with the following:
   (a) All container safety-relief devices must be located on the containers.
   (b) In industrial and gas manufacturing plants, discharge pipe from safety-relief valves on pipe lines within a building must discharge upward and be piped to a point outside a building.
   (c) Safety-relief device discharge terminals must be located to provide protection against physical damage and must be fitted with loose raincaps. Return bends and restrictive pipe fittings are prohibited.
   (d) If desired, discharge lines from two or more safety-relief devices located on the same unit, or similar lines from two or more different units, may be run into a common discharge header, if the cross-sectional area of the header is at least equal to the sum of the cross-sectional area of the individual discharge lines, and the setting of safety-relief valves are the same.
   (e) Each storage container of over 2,000 gallons water capacity must have a suitable pressure gauge.

(2007 Ed.)
(f) A final stage regulator of an LP-gas system (excluding any appliance regulator) must have, on the low-pressure side, a relief valve that is set to start to discharge within the limits specified in Table U-7.

(g) When a regulator or pressure relief valve is installed indoors, the relief valve and the space above the regulator and relief valve diaphragms must be vented to the outside air with the discharge outlet located not less than 3 feet horizontally away from any opening into the building that is below such discharge.

Exception: This requirement does not apply to individual appliance regulators already protected. In buildings devoted exclusively to gas distribution, the space above the diaphragm need not be vented to the outside.

(2) Safety devices for aboveground containers must be provided as follows:

(a) Containers of 1,200 gallons water capacity or less that may contain liquid fuel when installed underground must have the rate of discharge required by WAC 296-307-41025(2) provided by a spring-loaded relief valve or valves. In addition to the required spring-loaded relief valve, a suitable fuse plug may be used if the total discharge area of the fuse plug for each container does not exceed 0.25 square inch.

(b) The fusible metal of the fuse plugs must have a yield temperature of 208°F minimum and 220°F maximum. Relief valves and fuse plugs must have direct communication with the vapor space of the container.

(c) On a container having a water capacity between 125 and 2,000 gallons, the discharge from the safety-relief valves must be vented away from the container upwards and unobstructed to the open air so that it prevents any impingement of escaping gas upon the container; loose-fitting rain caps shall be used. Suitable provision must be made for draining condensate that may accumulate in the relief valve or its discharge pipe.

(d) On containers of 125 gallons water capacity or less, the discharge from safety-relief devices must be located at least 5 feet horizontally away from any opening into the building below the level of such discharge.

(e) On a container having a water capacity greater than 2,000 gallons, the discharge from the safety-relief valves must be vented away from the container upwards to a point at least 7 feet above the container, and unobstructed to the open air so that it prevents any impingement of escaping gas upon the container; loose-fitting rain caps shall be used. Suitable provision must be made so that any liquid or condensate that may accumulate inside of the safety-relief valve or its discharge pipe will not render the valve inoperative. If a drain is used, the container, adjacent containers, piping, or equipment must be protected against impingement of flame resulting from ignition of product escaping from the drain.

(3) On all containers that are installed underground and that contain no liquid fuel until buried and covered, the rate of discharge of the spring-loaded relief valve installed thereon may be reduced to a minimum of 30% of the rate of discharge specified in WAC 296-307-41025(2). Containers so protected must remain covered after installation until the liquid fuel has been removed. Containers that may contain liquid fuel before being installed underground and before being completely covered with earth are aboveground containers when determining the rate of discharge requirement of the relief valves.

(4) On underground containers of over 2,000 gallons water capacity, the discharge from safety-relief devices must be piped directly upward to a point at least 7 feet above the ground.

(5) Where the manhole or housing may become flooded, the discharge from regulator vent lines must be above the highest probable water level. All manholes or housings must have ventilated louvers or equivalent, and the area of openings must be equal to or exceed the combined discharge areas of the safety-relief valves and other vent lines that discharge their content into the manhole housing.

(6) Safety devices for vaporizers must be provided as follows:

(a) Vaporizers of less than 1 quart total capacity, heated by the ground or the surrounding air, need not have safety-relief valves if adequate tests demonstrate that the assembly is safe without safety-relief valves.

(b) Fusible plugs are prohibited on vaporizers.

(c) In industrial and gas manufacturing plants, safety-relief valves on vaporizers within a building must be piped to a point outside the building and be discharged upward.

WAC 296-307-42009 When may non-DOT containers be reinstalled? Containers may be reinstalled if they are free from harmful external corrosion or other damage. Where containers are reinstalled underground, the corrosion resistant coating must be put in good condition. Where containers are reinstalled aboveground, the safety devices and gauging devices must meet all requirements for aboveground containers.

WAC 296-307-42011 What is the maximum capacity allowed for non-DOT containers? A non-DOT storage container must have a maximum 90,000 gallons water capacity.

WAC 296-307-42013 How must non-DOT containers be installed? (1) Containers installed aboveground must have substantial masonry or noncombustible structural supports on firm masonry foundation, unless otherwise indicated.

(2) Aboveground containers must be supported as follows:

(a) Horizontal containers must be mounted on saddles that permit expansion and contraction. Structural metal supports may be used when they are protected against fire. Suitable means of preventing corrosion must be provided on that portion of the container in contact with the foundations or saddles.

[Title 296 WAC—p. 2514]
(b) Containers of 2,000 gallons water capacity or less may be installed with nonfireproofed ferrous metal supports if mounted on concrete pads or footings, and if the distance from the outside bottom of the container shell to the concrete pad, footing, or the ground is a maximum of 24 inches.

(3) Any container may be installed with nonfireproofed ferrous metal supports if mounted on concrete pads or footings, and if the distance from the outside bottom of the container to the ground is a maximum of 5 feet, if the container is in an isolated location.

(4) Partially buried containers must meet the following requirements:

(a) The portion of the container below the surface and for a vertical distance not less than 3 inches above the surface of the ground is protected to resist corrosion, and the container is protected against settling and corrosion as required for fully buried containers.

(b) Partially buried containers must meet the same spacing requirements as underground tanks.

(c) Relief valve capacity must be the same as for aboveground containers.

(d) Container is protected against vehicular damage by location or other means.

(e) Partially buried containers must meet the same requirements for filling densities as for aboveground containers.

(5) Containers buried underground must be placed so that the top of the container is at least 6 inches below grade. Underground containers subject to abrasive action or physical damage must be:

(a) Placed not less than 2 feet below grade; or

(b) Otherwise protected against such physical damage.

It is not necessary to cover the portion of the container to which manhole and other connections are affixed. When necessary to prevent floating, containers must be securely anchored or weighted.

(6) Containers must be given a protective coating before being placed underground. This coating must be equivalent to hot-dip galvanizing or to two coatings of red lead followed by an heavy coating of coal tar or asphalt. In lowering the container into place, take care to prevent damage to the coating. Any damage to the coating must be repaired before backfilling.

Containers must be set on a firm foundation (firm earth may be used) and surrounded with earth or sand firmly tamped in place. Backfill should be free of rocks or other abrasive materials.

(7) Containers with foundations attached (portable or semiportable containers with suitable steel runners or skids popularly known as "skid tanks") must meet the requirements of WAC 296-307-410 and the following:

(a) If they are to be used at a given general location for a temporary period of 6 months at most, they may be without fire-resisting foundations or saddles but must have adequate ferrous metal supports.

(b) They must not be located with the outside bottom of the container shell more than 5 feet above the surface of the ground unless fire-resisting supports are provided.

(c) The bottom of the skids must be between 2 and 12 inches below the outside bottom of the container shell.
WAC 296-307-42017 What requirements apply to non-DOT containers in industrial plants? General provisions applicable to systems in industrial plants (of 2,000 gallons water capacity and more) and to bulk filling plants.

(1) When standard watch service is provided, it must be extended to the LP-gas installation and personnel shall be properly trained.

(2) If loading and unloading are normally done during the night, adequate lights must be provided to illuminate storage containers, control valves, and other equipment.

(3) Suitable roadways or means of access for extinguishing equipment such as wheeled extinguishers or fire department apparatus must be provided.

(4) To minimize trespassing or tampering, the area that includes container accessories, pumping equipment, loading and unloading facilities, and cylinder-filling facilities must be enclosed with at least a 6-foot-high industrial fence unless otherwise adequately protected. There must be at least two means of emergency access.

WAC 296-307-42021 What fire protection must be provided for non-DOT containers? (1) Each bulk plant must have at least one approved portable fire extinguisher with a minimum rating of 12-B, C.

(2) In industrial installations involving containers of 150,000 gallons aggregate water capacity or more, you must provide an adequate supply of water at the container site for fire protection in the container area, unless other adequate means for fire control are provided. Water hydrants must be readily accessible and spaced to provide water protection for all containers. Enough fire hose must be provided to facilitate easy movement of the hose in the container area. You should equip the outlet of each hose line with a combination fog nozzle. A shelter must be provided to protect the hose and its conveyor from the weather.

WAC 296-307-42023 What other requirements apply to non-DOT containers? (1) Aboveground containers must be kept properly painted.

(2) Vaporizers for internal combustion engines must meet the requirements of WAC 296-307-42515.

(3) Gas regulating and mixing equipment for internal combustion engines must meet the requirements of WAC 296-307-42517.

(4) Where vaporized gas on the low-pressure side of the system may condense to a liquid at normal operating temperatures and pressures, means must be provided to revaporize condensate.

(5) You must protect LP-gas systems against damage from vehicular traffic.

(6) Avoid the use of pits when possible, except pits fitted with automatic flammable vapor detecting devices. No drains or blowoff lines must be directed into or in proximity to sewer systems used for other purposes.

WAC 296-307-42501 What does this section cover? (1) WAC 296-307-425 applies to internal combustion engines, fuel containers, and pertinent equipment for the use of LP-gases as a motor fuel on easily movable, readily portable units including self-propelled vehicles. This section does not apply to containers for transportation of LP-gases nor to marine fuel use.

(2) All uses of LP-gas as a motor fuel must meet all requirements of WAC 296-307-410 (unless otherwise indicated) and the additional requirements of this section.

WAC 296-307-42503 What general requirements apply to LP-gas used as a motor fuel? (1) Fuel may be used
from the cargo tank of a truck while in transit, but not from cargo tanks on trailers or semitrailers. Fuel may be used from the cargo tanks to operate stationary engines if the wheels are securely blocked.

(2) Passenger-carrying vehicles must not be fueled while passengers are on board.

(3) Industrial trucks (including lift trucks) equipped with permanently mounted fuel containers must be charged outdoors. Charging equipment must meet the requirements of WAC 296-307-440.

(4) LP-gas fueled industrial trucks must comply with the Standard for Type Designations, Areas of Use, Maintenance and Operation of Powered Industrial Trucks, NFPA 505-1969.

(5) Engines on vehicles must be shut down while fueling if the fueling operation involves venting to the atmosphere.

[Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.060. 96-22-048, § 296-306A-42507, filed 10/31/96, effective 12/1/96.]

WAC 296-307-42505 How must fuel containers be designed and classified? (1) Containers must meet the following requirements:

- **Minimum design pressure of container lb. per sp. in. gauge**

<table>
<thead>
<tr>
<th>Container type</th>
<th>For gases with vapor press. Not to exceed lb. per sp. in. gauge at 100°F (37.8°C)</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Container type</th>
<th>Minimum design pressure of container lb. per sp. in. gauge</th>
</tr>
</thead>
<tbody>
<tr>
<td>(1) Container valves and accessories?</td>
<td>Minimum design pressure of containers shall be 100% of the container type designation when constructed under:</td>
</tr>
<tr>
<td>2. All editions of the API-ASME Code.</td>
<td>3. Containers from which only vapor is to be withdrawn must be installed and equipped with suitable connections to minimize the accidental withdrawal of liquid.</td>
</tr>
<tr>
<td>3. Construction of containers under the API-ASME Code is prohibited after July 1, 1961.</td>
<td>5. Containers from which only vapor is to be withdrawn must be installed and equipped with suitable connections to minimize the accidental withdrawal of liquid.</td>
</tr>
</tbody>
</table>

**Exception:** Fuel containers for use in industrial trucks (including lift trucks) shall be either DOT containers authorized for LP-gas service having a minimum service pressure of 240 psig or minimum Container Type 250. Under 1950 and later ASME Codes, this means a 312.5-psig design pressure container.

(2) DOT containers used as fuel containers must meet all requirements of this section.

(3) All container inlets and outlets except safety-relief valves and gauging devices must be labeled to designate whether they communicate with vapor or liquid space. (Labels may be on valves.)

WAC 296-307-42507 How must fuel containers be installed? (1) Containers must be located to minimize the possibility of damage to the container. Containers located in the rear of trucks and buses, when protected by substantial bumpers meet this requirement. Fuel containers on passenger-carrying vehicles must be installed as far from the engine as is practical, and the passenger space and any space containing radio equipment must be sealed from the container space to prevent direct seepage of gas to these spaces. The container compartment must be vented to the outside. In case the fuel container is mounted near the engine or the exhaust system, the container must be shielded against direct heat radiation.

(2) Containers must be installed with as much clearance as practical and at least the minimum road clearance of the vehicle under maximum spring deflection. This minimum clearance must be to the bottom of the container or to the lowest fitting on the container or housing, whichever is lower.

(3) Permanent and removable fuel containers must be securely mounted to prevent jarring loose, slipping, or rotating, and the fastenings must be designed and constructed to withstand static loading in any direction equal to twice the weight of the tank and attachments when filled with fuel using a safety factor of at least four based on the ultimate strength of the material to be used. Field welding, when necessary, must be made only on saddle plates, lugs or brackets, attached to the container by the manufacturer.

(4) Fuel containers on buses must be permanently installed.

(5) Containers from which only vapor is to be withdrawn must be installed and equipped with suitable connections to minimize the accidental withdrawal of liquid.

WAC 296-307-42509 What requirements apply to valves and accessories? (1) Container valves and accessories must have a rated working pressure of at least 250 psig, and must be suitable for LP-gas service.

(2) The filling connection must be fitted with an approved double back-pressure check valve, or a positive shutoff in conjunction with an internal back-pressure check valve. On a removable container the filler valve may be a hand operated shut-off valve with an internal excess flow valve. Main shut-off valves on the container on liquid and vapor must be readily accessible.

(3) Filling connections equipped with approved automatic back-pressure check valves, and safety-relief valves, all connections to the containers having openings for the flow of gas in excess of a No. 54 drill size must have approved automatic excess flow valves to prevent discharge of content in case connections are broken.

(4) Liquid-level gauging devices must meet the following requirements:

(a) Variable liquid-level gauges that require the venting of fuel to the atmosphere are prohibited on fuel containers of industrial trucks (including lift trucks).

(b) On portable containers that may be filled in the vertical and/or horizontal position, the fixed liquid-level gauge must indicate maximum permitted filling level for both verti-
c) For containers used solely in farm tractor service and charged at a point at least 50 feet from any important building, the fixed liquid-level gauging device may be constructed so that the outward flow of container content exceeds that passed by a No. 54 drill size opening, but must never exceed that passed by a No. 31 drill-size opening. An excess flow valve is not required. Fittings equipped with restricted drill size opening and the container on which they are used must be marked to indicate the size of the opening.

(d) All valves and connections on containers must be adequately protected to prevent damage due to accidental contact with stationary objects or from loose objects thrown up from the road. All valves must be safeguarded against damage due to collision, overturning or other accident. Farm tractors where parts of the vehicle provide protection to valves and fittings meet this requirement. However, on removable type containers the protection for the fittings must be permanently attached to the container.

(e) You should normally exchange removable fuel outdoors. When removable fuel containers are used, means shall be provided in the fuel system to minimize the escape of fuel when the containers are exchanged. You must use one of the following methods:

(i) Using an approved automatic quick-closing coupling (a type closing in both directions when uncoupled) in the fuel line; or

(ii) Closing the valve at the fuel container and allowing the engine to run until the fuel in the line is consumed.

WAC 296-307-42511 What requirements apply to piping, tubing, and fittings? (1) Pipe from fuel container to first-stage regulator must be at least schedule 80 wrought iron or steel (black or galvanized), brass or copper; or seamless copper, brass, or steel tubing. Steel tubing must have a minimum wall thickness of 0.049 inch. Steel pipe or tubing must be adequately protected against exterior corrosion. Copper tubing must be types K or L or equivalent with a minimum wall thickness of 0.032 inch. Approved flexible connections may be used between container and regulator or between regulator and gas-air mixer. Using aluminum pipe or tubing is prohibited. For removable containers, an approved flexible connection must be used between the container and the fuel line.

(2) All piping must be installed, braced, and supported to minimize vibration strains or wear.

WAC 296-307-42513 What requirements apply to safety devices? (1) Spring-loaded internal safety-relief valves must be used on all motor fuel containers.

(2) The discharge outlet from safety-relief valves must be located on the outside of enclosed spaces and as far as practical from possible sources of ignition, and vented upward within 45 degrees of the vertical to prevent impingement of escaping gas upon containers, or parts of vehicles, or on vehicles in adjacent lines of traffic. A rain cap or other protector must be used to keep water and dirt from collecting in the valve.

(3) When a discharge line from the container safety-relief valve is used, the line shall be metallic, other than aluminum, and must be sized, located, and maintained so as not to restrict the required flow of gas from the safety-relief valve. The discharge line must be able to withstand the pressure resulting from the discharge of vapor when the safety-relief valve is in the full open position. Flexible metal hose or tubing must be used when necessary.

(4) Portable containers equipped for volumetric filling may be filled in either the vertical or horizontal position only when oriented to place the safety-relief valve in communication with the vapor space.

WAC 296-307-42515 What requirements apply to vaporizers? (1) Vaporizers, their parts, and other devices that may be subjected to container pressure must have a design pressure of at least 250 psig.

(2) Each vaporizer must have a valve or suitable plug that will permit substantially complete draining of the vaporizer. It must be located at or near the lowest portion of the section occupied by the water or other heating medium.

(3) Vaporizers must be securely fastened to minimize the possibility of loosening.

(4) Each vaporizer must be permanently marked at a visible point as follows:

(a) With the design pressure of the fuel-containing portion in psig.

(b) With the water capacity of the fuel-containing portion of the vaporizer in pounds.

(5) Devices to supply heat directly to a fuel container must have an automatic device to cut off the supply of heat before the pressure inside the fuel container reaches 80% of the start-to-discharge pressure setting of the safety-relief device on the fuel container.

(6) Engine exhaust gases may be used as a direct source of heat supply for the vaporization of fuel if the materials of construction of those parts of the vaporizer in contact with exhaust gases are resistant to the corrosive action of exhaust gases and the vaporizer system is designed to prevent excessive pressures.

(7) Fusible plugs are prohibited on vaporizers.

WAC 296-307-42517 What requirements apply to gas regulating and mixing equipment? (1) Approved automatic pressure reducing equipment must be installed securely between the fuel supply container and gas-air mixer to reduce the pressure of the fuel delivered to the gas-air mixer.

(2) An approved automatic shut-off valve must be provided in the fuel system at some point ahead of the inlet of the gas-air mixer, designed to prevent flow of fuel to the mixer.
when the ignition is off and the engine is not running. For industrial trucks and engines operating in buildings other than those used exclusively to house engines, the automatic shut-off valve must be designed to operate if the engine stops. Atmospheric regulators (zero governors) are adequate as an automatic shut-off valve only in cases of outdoor operation such as farm tractors, construction equipment, irrigation pump engines, and other outdoor stationary engine installations.

(3) The source of air for combustion must be completely isolated from the passenger compartment, ventilating system, or air-conditioning system.

WAC 296-307-42519 What is the maximum container capacity allowed? A single fuel container used on passenger carrying vehicles must have a maximum of 200 gallons water capacity. A single fuel container on other vehicles normally operating on the highway must have a maximum of 300 gallons water capacity except as provided in WAC 296-307-42503(1).

WAC 296-307-42523 What requirements apply to portable engines used indoors? (1) Portable engines may be used in buildings only for emergency use, and according to WAC 296-307-42521.

(2) Exhaust gases must be discharged outside the building or to an area where they will not constitute a hazard.

(3) Provision must be made to supply sufficient air for combustion and cooling.

(4) An approved automatic shut-off valve must be provided in the fuel system ahead of the engine, designed to prevent flow of fuel to the engine when the ignition is off or if the engine should stop.

WAC 296-307-42525 What requirements apply to industrial trucks used indoors? (1) LP-gas-fueled industrial trucks may be used in buildings and structures.

(2) No more than two LP-gas containers must be used on an industrial truck for motor fuel purposes.

(3) LP-gas-fueled industrial trucks may be used in buildings frequented by the public, when occupied by the public. The total water capacity of containers on each industrial truck must be a maximum of 105 pounds (nominal 45 pounds LP-gas).

(4) Trucks must be attended at all times in areas occupied by the public.

(5) Industrial trucks must not be parked and left unattended in areas of possible excessive heat or sources of ignition.

WAC 296-307-42527 How must LP-gas-fueled vehicles be garaged? (1) LP-gas-fueled vehicles may be stored or serviced inside garages if there are no leaks in the fuel system and the fuel tanks are not filled beyond the maximum filling capacity allowed.

(2) LP-gas-fueled vehicles being repaired in garages must have the container shut-off valve closed except when fuel is required for engine operation.

(3) Such vehicles must not be parked near sources of heat, open flames, or similar sources of ignition or near open pits unless such pits are adequately ventilated.

WAC 296-307-430 Storage of containers awaiting use or resale.

WAC 296-307-43001 What does this section cover? WAC 296-307-430 applies to the storage of portable containers a maximum of 1,000 pounds water capacity, filled or partially filled, at user location but not connected for use, or in storage for resale by dealers or resellers. This section does not apply to containers stored at charging plants or at plants devoted primarily to the storage and distribution of LP-gas or other petroleum products.

WAC 296-307-43003 What general requirements apply to storage of containers? (1) Containers in storage must be located to minimize exposure to excessive temperature rise, physical damage, or tampering.

(2) Containers stored inside must be located away from exits, stairways, or in areas normally used or intended for the safe exit of people.
(3) Container valves must be protected while in storage as follows:
   (a) By setting into recess of container to prevent the possibility of their being struck if the container is dropped upon a flat surface; or
   (b) By ventilated cap or collar, fastened to container capable of withstanding blow from any direction equivalent to that of a thirty-pound weight dropped four feet. Construction must be such that a blow will not be transmitted to a valve or other connection.

(4) The outlet valves of containers in storage must be closed.

(5) Empty containers that have been in LP-gas service should preferably be stored in the open. When stored inside, they must be considered full containers for the purpose of determining the maximum quantity of LP-gas permitted by this section.

(6) Each opening from storage rooms to other parts of the building must be protected by a listed one and one-half hour "(B)" fire door.

(7) Such rooms must have no open flames for heating or lighting.

(8) Such storage rooms must not be located adjoining the line of property occupied by schools, churches, hospitals, athletic fields or other points of public gathering.

WAC 296-307-43005 How must containers be stored within buildings frequented by the public? DOT containers with a maximum individual water capacity of 2-1/2 pounds, used with completely self-contained hand torches and similar applications, may be stored or displayed in a building frequented by the public. The display of such containers must be limited to a total of 24 units of each brand and size. The total quantity on display and in storage must not exceed 200 pounds LP-gas.

WAC 296-307-43007 How must containers be stored in buildings not frequented by the public? (1) The quantity of LP-gas stored must be a maximum of 300 pounds (approximately 2,550 cubic feet in vapor form), except when stored within special buildings or rooms.

(2) Containers carried as a part of service equipment on highway mobile vehicles are not considered in the total storage capacity of the vehicles. All container valves must be limited to one container per vehicle with a maximum LP-gas capacity if the vehicles are stored in private garages, and are limited to one container per vehicle with a maximum LP-gas capacity of 100 pounds. All container valves must be closed.

WAC 296-307-43009 How must containers be stored within special buildings or rooms? (1) The quantity of LP-gas stored in special buildings or rooms must be a maximum of 10,000 pounds.

(2) The walls, floors, and ceilings of container storage rooms that are within or adjacent to other parts of the building must be constructed of material having at least a two-hour fire resistance rating.

(3) At least 10% of the exterior walls or roof must be of explosion relieving construction.

(4) Such rooms must have no open flames for heating or lighting.

(5) The floors of such rooms must not be below ground level. Any space below the floor must be of solid fill or properly ventilated to the open air.

WAC 296-307-43011 How must containers be stored outdoors? (1) Storage outside of buildings, for containers awaiting use or resale, must be located according to the table below with respect to:

(a) The nearest important building or group of buildings;
(b) The line of adjoining property that may be built on;
(c) Busy thoroughfares;
(d) The line of adjoining property occupied by schools, churches, hospitals, athletic fields, or other points of public gathering.

WAC 296-307-43013 What fire protection must be provided for stored containers? Storage locations other than supply depots separated and located apart from dealer, reseller, or user establishments must have at least one approved portable fire extinguisher having a minimum rating of 8-B, C.

WAC 296-307-4335 LP-gas system installations on commercial vehicles.

[Title 296 WAC—p. 2520]
WAC 296-307-43501 What does this section cover?
(1) WAC 296-307-435 applies to:
   (a) LP-gas system installations on vehicles (self-propelled, trailers, or semitrailers) used for commercial or construction purposes;
   (b) All exchangeable container systems with container capacities greater than 105 pounds water capacity (approximately 45 pounds LP-gas capacity); and
   (c) Systems using containers permanently mounted on vehicles.

   (2) All LP-gas installations on commercial vehicles must meet all requirements of WAC 296-307-410 (unless otherwise indicated) and the additional requirements of this section. When such a vehicle is permanently parked, and LP-gas is supplied from a system not mounted on and secured to the unit, WAC 296-307-415 and 296-307-420 also apply.

(3) This section does not apply to LP-gas motor fuel systems covered by WAC 296-307-425.

WAC 296-307-43503 How must containers be constructed? Containers must be constructed according to WAC 296-307-41011, and marked according to the applicable requirements of WAC 296-307-41015, and must also meet the following:

   (1) Containers designed for use as portable cylinders must be constructed according to DOT specifications.

   (2) All other containers whether designed for permanent mounting, or for portable or semiportable use (such as skid tanks), must be constructed as provided for by WAC 296-307-41009(4) and 296-307-41011(1).

   (3) Nonrecessed container fittings and accessories must be protected against damage by either:
      (a) Their location;
      (b) The vehicle frame or bumper; or
      (c) Protective housing. The housing must meet the requirements under which the tanks are fabricated with respect to design and construction and must be designed to withstand static loading in any direction equal to twice the weight of the tank and attachments when filled with the lading at a safety factor of at least four, based on the ultimate strength of the material used. The housing must have a weather cover if necessary to ensure proper operation of valves and safety devices.

   (4) Manually operated shut-off valves or self-closing internal valves must be closed except during transfer operations.

   (5) Permanently installed containers must meet the following requirements:
      (a) Tank motor vehicles with frames not made integral with the tank, as by welding, must have turnbuckles or similar positive devices for drawing the tank down tight on the frame. In addition, suitable stops or anchors must be attached to the frame and/or the tank to prevent relative motion between them from starting, stopping, and turning. The stops and anchors must be installed to be accessible for inspection and maintenance.

(b) Any tank motor vehicle designed and constructed so that the cargo tank constitutes the stress member used instead of a frame must be supported by external cradles enclosing at least 120 degrees of the shell circumference. The design calculations must include beam stress, shear stress, torsion stress, bending moment, and acceleration stress for the cargo tank as a whole using a factor of safety of four, based on the ultimate tensile strength of the material. Maximum concentrated stresses that might be created at pads and cradles due to shear, bending, and torsion shall also be calculated according to Appendix G of the American Society of Mechanical Engineers, Unfired Pressure Vessel Code, 1968. Fully loaded vehicles must be assumed to be operating under highway conditions equal to two "g" loading. The effects of fatigue shall be taken into consideration. Cargo tanks mounted on frames may be supported by upright supports attached to pads if these factors are taken into account.

   (c) Where any tank support is attached to any part of a tank head, the stresses imposed upon the head must be provided for as required above.

(d) Tank supports, stops, anchors, and bumpers must not be welded directly to the tank but must be attached by means of pads of the same material as the tank. The pad thickness must be at least 1/4 inch, or the thickness of the shell material if less, and no greater than the shell material. Each pad must extend at least four times its thickness, in each direction, beyond the weld attaching the support, bumper, stop, or anchor. Each pad must be preformed to an inside radius no greater than the outside radius of the tank at the place of attachment. Each pad corner must be rounded to a radius at least one-fourth the width of the pad, and no greater than one-half the width of the pad. Weepholes and tell-tale holes, if used, must be drilled or punched before the pads are attached to the tank. Each pad must be attached to the tank by continuous fillet welding using filler material having properties that meet the recommendations of the maker of the shell and head material.

(6) Portable or semiportable containers must meet the applicable requirements of WAC 296-307-42507(3). Containers designed for permanent installation as part of systems under WAC 296-307-420 are prohibited.

(a) Filling connections must have an approved automatic back pressure check valve, excess flow check valve, or quick closing internal valve to prevent excessive escape of gas in case the filling connection is broken.

Exception: Where the filling and discharge connect on a common opening in the container shell, and the opening is fitted with a quick-closing internal valve, the automatic valve is not required.

Every inlet and outlet connection must have a manually or automatically operated shut-off valve. Liquid discharge openings, except those for engine fuel lines, on tanks built after September 1, 1965, must be fitted with a remotely controlled internal shut-off valve. Valves must meet the following requirements:

(i) The seat of the valve must be inside the tank, or in the opening nozzle or flange, or in a companion flange bolted to the nozzle or flange.

(ii) All parts of the valve inside the tank, nozzle, or companion flange must be made of material that protects against corrosion or other deterioration in the presence of the lading.
(iii) The parts must be arranged so that damage to parts exterior to the tank will not prevent effective seating of the valve.

(iv) The valve may be operated mechanically, by hydraulically, or by air, or gas pressure.

(v) The valve must have remote means of automatic closure, both mechanical and thermal, in at least two places for tanks over 3,500 gallons water capacity. These remote control stations must be located at each end of the tank and diagonally opposite. The thermal control mechanism must have a fusible element with a melting point between 220°F and 208°F. At least one remote control station must be provided for tanks of 3,500 gallons water capacity or less, and such actuating means may be mechanical.

(b) All other connections to containers, except those used for gauging devices, thermometer wells, safety-relief devices, and plugged openings, must have suitable automatic excess flow valves, or may instead be fitted with quick-closing internal valves.

The control mechanism for the internal valve must have a secondary control, remote from the fill or discharge connections (for use in the event of accidents or fire during delivery operations), and such control mechanism must have a fusible element with a melting point not over 220°F or less than 208°F.

(c) Excess flow valves must close automatically at the rated flow of vapor or liquid as specified by the valve manufacturers. The flow rating of the piping beyond the excess flow valve must be greater than that of the excess flow valve and such rating must include valves, fittings, and hose. Exception: When branching or necessary restrictions are incorporated in a piping system so that flow ratings are less than that of the excess flow valve and the tank, then additional excess flow valves must be installed in the piping where such flow rate is reduced.

(d) Container inlets and outlets, except those used for safety-relief valves, liquid-level gauging devices, and pressure gauges, must be labeled to designate whether they communicate with vapor or liquid space when the container is filled to maximum permitted filling density. Labels may be on the valves.

WAC 296-307-43505 What is the maximum capacity allowed for LP-gas installations on commercial vehicles? A single fuel container used on passenger carrying vehicles must not exceed 200 gallons water capacity.

WAC 296-307-43507 Where must systems be located? (1) Containers must not be installed, transported, or stored (even temporarily) inside any vehicle covered by these standards except as provided by the DOT regulations.

(2) Containers, control valves, and regulating equipment comprising a complete system must be suitably protected against damage and weather. Systems may be installed in a recess vaportight to the inside of the vehicle and accessible from and vented to the outside.

(3) Systems installed outside of mobile units must be located so that discharge from safety-relief devices must be at least 3 feet horizontally away from any opening into the unit below the level of such discharge. When the system is located in a recess vaportight to the inside, vent openings in the recess must be at least 3 feet horizontally away from any opening into the mobile unit below the level of these vents.

(4) There must be no fuel connection between tractor and trailer or other vehicle units.

(5) The container or container carrier must be secured in place by fastenings designed and constructed with a minimum safety factor of four to withstand loading in any direction equal to twice the weight of the container when filled to normal capacity with LP-gas.

WAC 296-307-43509 What requirements apply to valves and accessories? Container valves and accessories must be provided, protected and mounted as follows:

(1) Systems using DOT cylinders according to WAC 296-307-41511.

(2) All other systems according to WAC 296-307-42005 (2) through (8).

(3) Portable, semipermanent and permanently mounted containers shall be mounted and protected as provided under WAC 296-307-43503 (2), (5), and (6).

WAC 296-307-43511 What requirements apply to safety devices? (1) DOT containers must have safety-relief devices as required by DOT regulations.

(2) A final stage regulator of an LP-gas system (excluding any appliance regulator) must have, on the low-pressure side, a relief valve that is set to start to discharge within the limits specified in Table U-7.

(3) The relief valve and space above the regulator and relief valve diaphragms must be vented to the outside air and terminate at a position to minimize the possibility of vapors accumulating at sources of ignition.

(4) Whenever equipment such as a cargo heater or cooler on commercial vehicles is designed to be in operation while in transit, suitable means to stop the flow such as an excess flow valve or other device, must be installed. This device will be actuated to stop the flow in the event of the break in the fuel supply line. All excess flow valves must comply with WAC 296-307-41019(3).

WAC 296-307-43513 What types of systems may be used on commercial vehicles? Commercial vehicles must use either vapor withdrawal or liquid withdrawal systems.

WAC 296-307-43515 What requirements apply to enclosures and mounting? (1) Housing or enclosures must be designed to provide proper ventilation.

(2) Hoods, domes, or removable portions of cabinets must have means to keep them firmly in place during transit.

(3) The assembly must hold the containers firmly in position and prevent their movement during transit according to WAC 296-307-42507(3).

(4) Containers must be mounted on a substantial support or base secured firmly to the vehicle chassis. Neither the container nor its support must extend below the frame.

[Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-43515, filed 10/31/96, effective 12/1/96.]

WAC 296-307-43517 What requirements apply to piping, tubing, and fittings? (1) Regulators must be connected directly to the container valve outlet or mounted securely by means of support bracket and connected to the container valve or valves with a listed high pressure flexible connector.

(2) Provision must be made between the regulator outlet and the gas service lines by either a flexible connector or a tubing loop to provide for expansion, contraction, jarring, and vibration.

(3) Aluminum alloy piping is prohibited. Steel tubing must have a minimum wall thickness of 0.049 inch. Steel piping or tubing must be adequately protected against exterior corrosion.

(4) Approved gas tubing fittings must be used for tubing connections.

(5) The fuel line must be firmly fastened in a protected location and where under the vehicle and outside and below any insulation or false bottom, fastenings must prevent abrasion or damage to the gas line due to vibration. Where the fuel line passes through structural members or floors, a rubber grommet or equivalent must be installed to prevent chafing.

(6) The fuel line must be installed to enter the vehicle through the floor directly beneath or adjacent to the appliance that it serves. When a branch line is required, the tee connection must be in the main fuel line and located under the floor and outside the vehicle.

(7) All parts of the system assembly must be designed and secured to preclude such parts working loose during transit.

WAC 296-307-43519 What requirements apply to appliances? (1) LP-gas appliances must be approved for use on commercial vehicles.

(2) In vehicles not intended for human occupancy, where the gas-fired heating appliance is used to protect the cargo, such heater may be unvented, but provision must be made to dispose of the products of combustion to the outside.

(3) In vehicles intended for human occupancy, all gas-fired heating appliances, including water heaters, must be designed or installed to provide for complete separation of the combustion system from the atmosphere of the living space. Such appliances must be installed with the combustion air inlet assembly furnished as a component of the appliance, and with either:

(a) The flue gas outlet assembly furnished as a component of the appliance; or

(b) A listed roof jack if the appliance is listed for such use.

The combustion air inlet assembly, flue gas outlet assembly, and roof jack must extend to the outside atmosphere.

(4) Provision must be made to ensure an adequate supply of outside air for combustion.

(5) All gas-fired heating appliances and water heaters must have an approved automatic device designed to shut off the flow of gas to the main burner and to the pilot in the event the pilot flame is extinguished.

(6) Gas-fired appliances installed in the cargo space must be readily accessible.

(7) Appliances must be constructed or protected to minimize the possible damage or impaired operation resulting from cargo shifting or handling.

(8) Appliances inside the vehicle must be located so that a fire at an appliance will not block the exit route.

WAC 296-307-43521 What general precautions must be followed for LP-gas system installations on commercial vehicles? (1) DOT containers must be marked, maintained, and requalified for use according to DOT regulations.

(2) Containers that have not been requalified according to DOT regulations must be removed from service. Requalified containers must be stamped with the date of requalification. When DOT cylinders are requalified by retesting, the retest must be made according to DOT regulations.

(3) Containers must not be charged with fuel unless they bear the proper markings of the code under which they were constructed, and with their water capacity. In the case of cylinders or portable containers filled by weight, the container must be marked with its tareweight.

(4) DOT containers that have been involved in a fire must not be recharged until they have been requalified for service according to DOT regulations.

(5) API-ASME containers or ASME containers that have been involved in a fire must not be recharged until they have been retested according to the requirements for their original hydrostatic test and found to be suitable for continued service.

"API-ASME (ASME) container" means a container constructed according to the Rules for Construction of Unfired Pressure Vessels, section VIII, Division 1, American Society for Pressure Vessels and Piping. 97-09-013, recodified as § 296-307-43521, filed 4/7/97, effective 4/7/97. Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-43517, filed 10/31/96, effective 12/1/96.}
of Mechanical Engineers (ASME) Boiler and Pressure Vessel Code, 1968 edition.

(6) Containers must not be charged without the consent of the owner.

(7) A permanent caution plate must be provided on the appliance or adjacent to the container outside of any enclosure. It must include the word "caution" and the following or similar instructions.

(a) Be sure all appliance valves are closed before opening container valve.

(b) Connections at appliances, regulators, and containers must be checked periodically for leaks with soapy water or its equivalent.

(c) A match or flame must not be used to check for leaks.

(d) Container valves must be closed except when the equipment is in use.

WAC 296-307-43523 How must containers be charged? Containers must be charged according to DOT specifications.

WAC 296-307-43525 What fire protection must be provided for mobile cook units? Mobile cook units must have at least one approved portable fire extinguisher having a minimum rating of 8-B, C.

WAC 296-307-440 LP-gas service stations.

WAC 296-307-44001 What does this section cover? WAC 296-307-440 applies to storage containers, dispensing devices, and pertinent equipment in service stations where LP-gas is stored and dispensed into fuel tanks of motor vehicles. LP-gas service stations must meet all requirements of WAC 296-307-410 and the requirements of this section.

WAC 296-307-44003 How must storage containers be designed and classified? Storage containers must be designed and classified according to the following table:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Not to exceed lb. per sp. in. gauge 100°F (37.8°C)</td>
<td>Container lb. per sp. in. gauge</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>1</td>
</tr>
</tbody>
</table>

1Container type may be increased by increments of 25. The minimum design pressure of containers shall be 100% of the container type designation when constructed under 1949 or earlier editions of ASME Code (Par. U-68 and U-69). The minimum design pressure of containers shall be 125% of the container type designation when constructed under: 1. The 1949 ASME Code (Par. U-200 and U-201); 2. 1950, 1952, 1956, 1959, 1962, 1965, and 1968 (Division I) editions of the ASME Code, and 3. All editions of the API-ASME Code.

2Construction of containers under the API-ASME Code is not authorized after July 1, 1961.

WAC 296-307-44005 What requirements apply to valves and accessories? (1) A filling connection on the container must be fitted with one of the following:

(a) A combination back-pressure check and excess flow valve.

(b) One double or two single back-pressure valves.

(c) A positive shut-off valve, in conjunction with either:

(i) An internal back-pressure valve; or

(ii) An internal excess flow valve.

Instead of an excess flow valve, filling connections may be fitted with a quick-closing internal valve that only opens during operating periods. The mechanism for such valves may have a secondary control that will close automatically in case of fire. The melting point for a fusible plug must be a maximum of 220°F.

(2) A filling pipe inlet terminal off the container must have a positive shut-off valve and either:

(a) A back pressure check valve; or

(b) An excess flow check valve.

(3) All openings in the container must have approved excess flow check valves.

Exceptions: (a) Filling connections;

(b) Safety-relief connections;

(c) Liquid-level gauging devices; and

(d) Pressure gauge connections.

(4) All container inlets and outlets must be labeled to designate whether they connect with vapor or liquid (labels may be on valves).

Exceptions: (a) Safety-relief valves;

(b) Liquid-level gauging devices; and

(c) Pressure gauges.

(5) Each storage container must have a suitable pressure gauge.

(2007 Ed.)
WAC 296-307-44007 What requirements apply to safety devices? (1) All safety-relief devices must be installed as follows:
   (a) On the container and directly connected with the vapor space.
   (b) Safety-relief valves and discharge piping shall be protected against physical damage. The outlet must have loose-fitting rain caps. There shall be no return bends or restrictions in the discharge piping.
   (c) The discharge from two or more safety-relief valves with the same pressure settings may be run into a common discharge header. The cross-sectional area of such header must be at least equal to the sum of the individual discharges.
   (d) Discharge from a safety-relief device that terminates in or beneath any building is prohibited.
   (2) Aboveground containers must have safety-relief valves as follows:
      (a) The rate of discharge, which may be provided by one or more valves, must be at least that specified in WAC 296-307-41025(2).
      (b) The discharge from safety-relief valves must be vented upward to the open air to prevent impingement of escaping gas upon the container. You must use loose-fitting rain caps. On a container having a water capacity greater than 2,000 gallons, the discharge from the safety-relief valves must be vented upward away from the container to a point at least 7 feet above the container. Provisions must be made so that any liquid or condensate accumulation inside the relief valve or its discharge pipe will not render the valve inoperative. If a drain is used, you must protect the container, adjacent containers, piping, or equipment against impingement of flame resulting from ignition of the product escaping from the drain.
      (3) Underground containers must have safety-relief valves as follows:
         (a) The discharge from safety-relief valves must be piped upward to a point at least 10 feet above the ground. The discharge lines or pipes must be adequately supported and protected against physical damage.
         (b) In areas where the manhole or housing may flood, the discharge from regulator vent lines should be above the highest probable water level.
         (c) If no liquid is put into a container until after it is buried and covered, the rate of discharge of the relief valves may be reduced to at least 30 percent of the rate shown in WAC 296-307-41025(2). If liquid fuel is present during installation of containers, the rate of discharge must be the same as for aboveground containers. Only empty containers may be uncovered.

WAC 296-307-44009 What is the maximum capacity allowed for containers? Individual storage containers must be a maximum of 30,000 gallons water capacity.

WAC 296-307-44011 How must storage containers be installed? (1) Each storage container used exclusively in service station operation must comply with the following table. This table outlines the minimum distances from a container to a building, group of buildings, or adjoining property lines that may be built on.

(a) Readily ignitable material including weeds and long dry grass, must be removed within 10 feet of containers.
(b) The minimum separation between LP-gas containers and flammable liquid tanks must be 20 feet and the minimum separation between a container and the centerline of the dike must be 10 feet.
(c) LP-gas containers located near flammable liquid containers must be protected against the flow or accumulation of flammable liquids by diking, diversion curbs, or grading.
(d) LP-gas containers located within diked areas for flammable liquid containers are prohibited.
(e) Field welding is permitted only on saddle plates or brackets that were applied by the container manufacturer.
(f) When permanently installed containers are interconnected, you must allow for expansion, contraction, vibration, and settling of containers and interconnecting piping. Where flexible connections are used, they must be approved and designed for a bursting pressure of at least five times the vapor pressure of the product at 100°F. Using nonmetallic hose is prohibited for interconnecting containers.
(g) Where high water table or flood conditions may be encountered, you must protect against container flotation.
(2) Aboveground containers must be installed according to this section.
   (a) Containers may be installed horizontally or vertically.
   (b) Containers must be protected by crash rails or guards to prevent physical damage unless they are protected by location. Servicing vehicles within 10 feet of containers is prohibited.
   (c) Container foundations must be of substantial masonry or other noncombustible material. Containers must be mounted on saddles that permit expansion and contraction, and must provide against excess stresses. Corrosion protection must be provided for tank-mounting areas. Structural metal container supports must be protected against fire.

Exception: This protection is not required on prefabricated storage and pump assemblies, mounted on a common base, with container bottom a maximum of 24 inches above ground with water capacity of 2,000 gallons or less, if the piping connected to the storage and pump assembly is flexible enough to minimize breakage or leakage in case container supports fail.

(3) Underground containers must be installed according to this section.
   (a) Containers must be given a protective coating before being placed underground. This coating must be equivalent to hot-dip galvanizing or to two coatings of red lead followed by
a heavy coating of coal tar or asphalt. During installation, take care to minimize abrasion or other damage to the coating. Repair coating damage before back-filling.

(b) Containers must be set on a firm foundation (firm earth may be used) and surrounded with earth or sand firmly tamped in place. Backfill should be free of rocks or other abrasive materials.

(c) A minimum of 2 feet of earth cover must be provided. Where ground conditions make impractical, equivalent protection against physical damage must be provided. The portion of the container to which manhole and other connections are attached may be left uncovered. If there is vehicle traffic at the site, containers must be protected by a concrete slab or other cover to prevent the weight of a loaded vehicle imposing a load on the container shell.

WAC 296-307-44013 What equipment must be protected against tampering? Valves, regulators, gauges, and other container fittings must be protected against tampering and physical damage.

WAC 296-307-44015 What requirements apply to the transport truck unloading point? (1) During unloading, the transport truck must not be parked on public thoroughfares and must be at least 5 feet from storage containers. The truck must be positioned so that shut-off valves are accessible.

(2) The filling pipe inlet terminal must not be located within a building nor within 10 feet of any building or driveway. It must be protected against physical damage.

WAC 296-307-44017 What requirements apply to piping, valves, and fittings? (1) Piping may be underground, aboveground, or a combination of both. It must be well supported and protected against physical damage and corrosion.

(2) Piping laid beneath driveways must be installed to prevent physical damage by vehicles.

(3) Piping must be wrought iron or steel (black or galvanized), brass or copper pipe; or seamless copper, brass, or steel tubing and must be suitable for a minimum pressure of 250 psig. Pipe joints may be screwed, flanged, brazed, or welded. The use of aluminum alloy piping or tubing is prohibited.

(4) All shut-off valves (liquid or gas) must be suitable for LP-gas service and designed for at least the maximum pressure to which they may be subjected. Valves that may be subjected to container pressure must have a rated working pressure of at least 250 psig.

(5) All materials used for valve seats, packing, gaskets, diaphragms, etc., must be resistant to the action of LP-gas.

(6) Fittings must be steel, malleable iron, or brass having a minimum working pressure of 250 psig. Cast iron pipe fittings, such as els, tees and unions must not be used.

(7) All piping must be tested after assembly and proved free from leaks at least at the normal operating pressures.

(8) You must allow for expansion, contraction, jarring, and vibration, and for settling. You may use flexible connections.

WAC 296-307-44019 What requirements apply to pumps and accessory equipment? All pumps and accessory equipment must be suitable for LP-gas service, and designed for at least the maximum pressure to which they may be subjected. Accessories must have a minimum rated working pressure of 250 psig. Positive displacement pumps must have suitable pressure actuated bypass valves permitting flow from pump discharge to storage container or pump suction.

WAC 296-307-44021 What requirements apply to LP-gas dispensing devices? (1) Meters, vapor separators, valves, and fittings in the dispenser must be suitable for LP-gas service and must be designed for a minimum working pressure of 250 psig.

(2) Provisions must be made for venting LP-gas from a dispensing device to a safe location.

(3) Pumps used to transfer LP-gas must allow control of the flow and prevent leakage or accidental discharge. Means must be provided outside the dispensing device to readily shut off the power in the event of fire or accident.

(4) A manual shut-off valve and an excess flow check valve must be installed downstream of the pump and ahead of the dispenser inlet.

(a) Dispensing hose must be resistant to the action of LP-gas in the liquid phase and designed for a minimum bursting pressure of 1,250 psig.

(b) An excess flow check valve or automatic shut-off valve must be installed at the terminus of the liquid line at the point of attachment of the dispensing hose.

(5) LP-gas dispensing devices must be located at least 10 feet from aboveground storage containers greater than 2,000 gallons water capacity. The dispensing devices must be at least 20 feet from any building (not including canopies), basement, cellar, pit, or line of adjoining property that may be built on and at least 10 feet from sidewalks, streets, or thoroughfares. No drains or blowoff lines must be directed into or in proximity to the sewer systems used for other purposes.

(a) LP-gas dispensing devices must be installed on a concrete foundation or as part of a complete storage and dispensing assembly mounted on a common base, and must be adequately protected from physical damage.

(b) LP-gas dispensing devices must not be installed within a building.

Exception: Dispensing devices may be located under a weather shelter or canopy if the area is not enclosed on more than two sides. If the enclosing sides are adjacent, the area shall be properly ventilated.

[Title 296 WAC—p. 2526]
(6) Dispensing LP-gas into the fuel container of a vehicle shall be performed by a competent attendant who shall remain at the LP-gas dispenser during the entire transfer operation.

WAC 296-307-44023 Is smoking allowed at LP-gas service stations? Smoking is prohibited on the driveway of service stations in the dispensing areas or transport truck unloading areas. Conspicuous signs prohibiting smoking must be posted within sight of the customer being served. Letters on such signs must be at least 4 inches high. The motors of all vehicles being fueled must be shut off during the fueling operations.

WAC 296-307-44025 What fire protection must be provided at LP-gas service stations? Each service station must have at least one approved portable fire extinguisher with at least an 8-B, C, rating.

Part U-3 Other Hazardous Materials

Dipping and Coating Operations (Dip Tanks)

IMPORTANT: A dip tank is a container holding a liquid other than plain water that is used for dipping or coating. An object may be completely or partially immersed (in a dip tank) or it may be suspended in a vapor coming from the tank.

Exemption: Dip tanks that use a molten material (molten metal, alloy, salt, etc.) are not covered by this chapter.

This chapter applies to:

- A dip tank that uses a liquid other than plain water, or
- The vapor of the liquid, to:
  - Clean an object
  - Coat an object
  - Alter the surface of an object
  OR
  - Change the character of an object.

- Draining or drying an object that has been dipped or coated.

Examples of covered dipping and coating operations include, but are not limited to:

- Paint dipping
- Anodizing
- Pickling
- Quenching
- Tanning
- Degreasing
- Stripping
- Cleaning

Dyeing.

Reference: You have to do a hazard assessment to identify hazards or potential hazards in your workplace and determine if PPE is necessary to protect your employees. See personal protective equipment (PPE), WAC 296-307-100 through 296-307-10025.

WAC 296-307-450 General requirements.

Summary.

Your responsibility: Safeguard employees working with dip tanks.

You must:

CONSTRUCTION

Construct safe dip tanks WAC 296-307-45005

VENTILATION

Provide proper ventilation for the vapor area WAC 296-307-45010

Take additional precautions if you recirculate ventilation system exhaust air into the workplace WAC 296-307-45015

Take additional precautions when using an exhaust hood WAC 296-307-45020

INSPECTION

Periodically inspect your dip tanks and associated equipment and correct any deficiencies WAC 296-307-45025

FIRST AID

Make sure employees working near dip tanks know appropriate first-aid procedures WAC 296-307-45030

CLEANING

Prepare dip tanks before cleaning WAC 296-307-45035

WELDING

Protect employees during welding, burning or other work using open flames WAC 296-307-45045

LIQUIDS HARMFUL TO SKIN

Provide additional protection for employees working near dip tanks that use liquid that may burn, irritate, or otherwise harm the skin WAC 296-307-45050.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 03-10-068, § 296-307-445, filed 5/6/03, effective 8/1/03.]

WAC 296-307-45005 Construct safe dip tanks.

You must:

- Make sure dip tanks, including any drain boards, are strong enough to support the expected load.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 03-10-068, § 296-307-45005, filed 5/6/03, effective 8/1/03; 97-09-013, recodified as § 296-307-45005, filed 4/7/97, effective 4/7/97. Statutory Authority: RCW 49.17.040, [49.17.050 and [49.17.060. 96-22-048, § 296-306A-45005, filed 10/31/96, effective 12/1/96.]
Ventilation

WAC 296-307-45010 Provide proper ventilation for the vapor area.
You must:
• Make sure mechanical ventilation meets the requirements of one or more of the following standards:
  – NFPA 34-1995, Standard for Dipping and Coating Processes Using Flammable or Combustible Liquids

Note: Some, or all, of the consensus standards (such as ANSI and NFPA) may have been revised. If you comply with a later version of a consensus standard, you will be considered to have complied with any previous version of the same consensus standard.

You must:
• Limit the vapor area to the smallest practical space by using mechanical ventilation
• Keep airborne concentration of any substance below twenty-five percent of its lower flammable limit (LFL)
• Make sure mechanical ventilation draws the flow of air into a hood or exhaust duct
• Have a separate exhaust system for each dip tank if the combination of substances being removed could cause a:
  – Fire
  – Explosion
OR
  – Potentially hazardous chemical reaction.

Reference: You need to keep employee exposure within safe levels when the liquid in a dip tank creates an exposure hazard. See Respiratory hazards, chapter 296-307 WAC, Part Y-6.

Note: You may use a tank cover or material that floats on the surface of the liquid to replace or assist ventilation. The method or combination of methods you choose has to maintain the airborne concentration of the hazardous material and the employee's exposure within safe limits.

WAC 296-307-45015 Take additional precautions if you recirculate ventilation system exhaust air into the workplace.
You must:
• Only recirculate air that contains no substance at a concentration that could pose a health or safety hazard to employees
• Make sure any exhaust system that recirculates air into the workplace:
  – Passes the air through a device that removes contaminants
  – Sounds an alarm and automatically shuts down the dip tank operation, if the vapor concentration of any substance in the exhaust air exceeds twenty-five percent of its LFL
  – Monitors the concentration of vapor from flammable or combustible liquids with approved equipment.

Note: The LFL concentration in the air must be determined after the air passes through the air-cleaning device and before the air reenters the workspace

• Most substances will pose a health hazard at a concentration far below twenty-five percent of its LFL.

WAC 296-307-45020 Take additional precautions when using an exhaust hood.
You must:
• Make sure each room with an exhaust hood has a source of outside air that:
  – Enters the room in a way that will not interfere with the function of the hood
  – Replaces at least ninety percent of the air taken in through the hood.

WAC 296-307-45025 Periodically inspect your dip tanks and associated equipment and correct any deficiencies.
You must:
• Inspect or test your dip tanks and associated equipment periodically, including:
  – Covers
  – Overflow pipes
  – Bottom drains and valves
  – Electrical wiring, equipment, and grounding connections
  – Ventilating systems
  – Fire extinguishing equipment.
• Inspect the hoods and ductwork of the ventilation system for corrosion and damage and make sure the airflow is adequate:
  – At least quarterly during operation
  – Prior to operation after a prolonged shutdown.
• Promptly fix any deficiencies found.

WAC 296-307-45030 Make sure employees working near dip tanks know appropriate first-aid procedures.
You must:
• Make sure your employees know the appropriate first-aid procedures for the hazards of your dipping and coating operations.

First Aid

WAC 296-307-45030 Make sure employees working near dip tanks know appropriate first-aid procedures.
You must:
• Make sure your employees know the appropriate first-aid procedures for the hazards of your dipping and coating operations.

Note: First-aid procedures are contained in the material safety data sheet (MSDS) for the chemicals used in the dip tank
• First-aid supplies appropriate for the hazards of the dipping or coating operation need to be located near the dip tank to be considered "readily available" as required by WAC 296-307-03920.

Reference: There are additional requirements that may include providing emergency washing facilities and employee training. See first aid, WAC 296-307-039, and employer chemical hazard communication, WAC 296-307-550.

Cleaning

WAC 296-307-45035 Prepare dip tanks before cleaning. You must:
(1) Drain the contents of the tank and open any cleanout doors.
(2) Ventilate the tank to clear any accumulated hazardous vapors.

Reference: There may be requirements that apply before an employee enters a dip tank. See Confined spaces, WAC 296-307-642 and safety procedures, WAC 296-307-320.

Welding

WAC 296-307-45045 Protect employees during welding, burning, or other work using open flames. You must:
• Make sure the dip tank and the area around it are thoroughly cleaned of solvents and vapors before performing work involving:
  – Welding
  – Burning
  OR
  – Open flames.

Reference: There are additional requirements for this type of work. See Welding, cutting and brazing, WAC 296-307-475, and Respirators, chapter 296-307 WAC, Part Y-5.

Liquids Harmful to Skin

WAC 296-307-45050 Protect employees that use liquids that may burn, irritate, or otherwise harm the skin. You must:
(1) Make sure washing facilities, including hot water, are available for every ten employees that work with dip tank liquids.
(2) Satisfy medical requirements:
  • Make sure an employee with any small skin abrasion, cut, rash, or open sore receives treatment by a properly designated person
  • Make sure an employee with a sore, burn, or other skin lesion that needs medical treatment, has a physician’s approval before they perform their regular work
  • Make sure employees who work with chromic acid receive periodic examinations of their exposed body parts, especially their nostrils.

Note: Periodic means on a yearly basis unless otherwise indicated
• Any time chromic acid spills onto an employee’s skin or their clothing is saturated, a physician should be responsible for evaluating and monitoring the area where chromic acid made contact with the skin.

You must:
(3) Provide lockers or other storage space to prevent contamination of street clothes.

Reference: You have to do a hazard assessment to identify hazards or potential hazards in your workplace and determine if PPE is necessary to protect your employees. See Personal protective equipment (PPE), WAC 296-307-100.

WAC 296-307-455 Additional requirements for dip tanks using flammable or combustible liquids.

Summary.
IMPORTANT:
This section applies to:
• Flammable and combustible liquids (flashpoint below 200°F)
• Liquids that have a flashpoint of 200°F (93.3°C) or higher if you:
  – Heat the liquid
  – Dip a heated object in the tank

Your responsibility:
Safeguard employees working with dip tanks containing flammable or combustible liquids

You must:
CONSTRUCTION
Include additional safeguards when constructing dip tanks

WAC 296-307-45505 Provide overflow pipes
WAC 296-307-45510 Provide bottom drains

FIRE PROTECTION
Provide fire protection in the vapor area
WAC 296-307-45520
Provide additional fire protection for large dip tanks
WAC 296-307-45525

ELECTRICAL WIRING AND EQUIPMENT AND SOURCES OF IGNITION
Prevent static electricity sparks or arcs when adding liquids to a dip tank
WAC 296-307-45535
Control ignition sources
WAC 296-307-45540
Provide safe wiring and electrical equipment where the liquid can drip or splash
WAC 296-307-45545

HOUSEKEEPING
Keep the area around dip tanks clear of combustible material and properly dispose of waste
WAC 296-307-45550

HEATING LIQUID
Make sure heating the liquid in your dip tanks does not cause a fire
WAC 296-307-45555

(2007 Ed.)
HEAT DRYING
Make sure a heating system used for drying objects does not cause a fire

WAC 296-307-45560

CONVEYORS
Make sure the conveyor system for dip tanks is safe

WAC 296-307-45565

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 03-10-068, § 296-307-455, filed 5/6/03, effective 8/1/03.]

Construction

WAC 296-307-45505 Include additional safeguards when constructing dip tanks.

You must:
(1) Make sure the dip tank, drain boards (if provided), and supports are made of noncombustible material.
(2) Make sure piping connections on drains and overflow pipes allow easy access to the inside of the pipe for inspection and cleaning.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 03-10-068, § 296-307-45505, filed 5/6/03, effective 8/1/03.]

WAC 296-307-45510 Provide overflow pipes.

You must:
• Provide an overflow pipe on dip tanks that:
  – Hold more than one hundred fifty gallons of liquid
  OR
  – Have more than ten square feet of liquid surface area.
• Make sure the overflow pipe is:
  – Properly trapped
  – Able to prevent the dip tank from overflowing
  – Three inches or more (7.6 cm) in diameter
  – Discharged to a safe location.

Note: Discharged to a safe location could be a:
  • Safe location outside the building
  OR
  • Closed, properly vented salvage tank or tanks that can hold more than the dip tank.

You must:
• Make sure the bottom of the overflow pipe is at least six inches (15.2 cm) below the top of the tank.

Note: The overflow pipe should be large enough to remove water applied to the liquid surface of the dip tank from automatic sprinklers or other sources in the event of fire. Smaller dip tanks should be equipped with overflow pipes, if practical.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 03-10-068, § 296-307-45510, filed 5/6/03, effective 8/1/03.]

WAC 296-307-45515 Provide bottom drains.

Exemption: A bottom drain is not required if:
  – The viscosity of the liquid makes it impractical to empty the tank by gravity or pumping
  OR
  – The dip tank has an automatic closing cover that meets the requirements of WAC 296-307-45530.

You must:
• Provide a bottom drain on all dip tanks that hold more than five hundred gallons of liquid
• Make sure the bottom drain:
  – Is properly trapped
  – Will empty the dip tank during a fire
  – Has pipes large enough to empty the tank within five minutes

[Title 296 WAC—p. 2530]

Fire Protection

WAC 296-307-45520 Provide fire protection in the vapor area.

You must:
• Provide a manual fire extinguisher near the tank that is suitable for putting out flammable and combustible liquid fires.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 03-10-068, § 296-307-45520, filed 5/6/03, effective 8/1/03.]

WAC 296-307-45525 Provide additional fire protection for large dip tanks.

You must:
• Provide at least one automatic fire extinguishing system or an automatic dip tank cover if the tank:
  – Holds one hundred fifty gallons or more of liquid
  OR
  – Has four square feet or more of liquid surface area.
• Make sure automatic fire extinguishing systems or automatic dip tank covers meet the requirements of Table 1.

Exemption: An automatic fire extinguishing system or an automatic dip tank cover is not required for a hardening or tempering tank that:
  • Holds less than five hundred gallons
  OR
  • Has less than twenty-five square feet of liquid surface area.

Table 1: Automatic Fire Protection System Requirements

<table>
<thead>
<tr>
<th>If you provide:</th>
<th>Then you must:</th>

(2007 Ed.)
Electrical Wiring and Equipment and Sources of Ignition  

WAC 296-307-45535 Prevent static electricity sparks or arcs when adding liquids to a dip tank.  
You must:  
• Make sure any portable container used to add liquid to the tank is:  
  – Electrically bonded to the dip tank  
  – Positively grounded.

Reference: Electrical wiring and equipment has to meet the requirements of the applicable hazardous (classified) location. See Hazardous (classified) locations, WAC 296-307-37209.

You must:  
(3) Prohibit smoking in any vapor area:  
• Post an easily seen "NO SMOKING" sign near each dip tank.

WAC 296-307-45545 Provide safe electrical wiring and equipment where the liquid can drip or splash.  
You must:  
• Make sure all electrical wiring and equipment in the vapor area is approved for areas that have:  
  – Deposits of easily ignited residue  
  – Explosive vapor.

Exemption: This does not apply to wiring that is:  
  – In rigid conduit, threaded boxes or fittings  
  – Has no taps, splices, or terminal connections.

You must:  
(1) Make sure the area surrounding dip tanks is:  
• Completely free of combustible debris  
• As free of combustible stock as possible.

(2) Provide approved metal waste cans that are:  
• Used for immediate disposal of rags and other material contaminated with liquids from dipping or coating operations  
• Empty and the contents properly disposed of at the end of each shift.

Heating Liquid  

WAC 296-307-45555 Make sure heating the liquid in your dip tanks does not cause a fire.  
You must:  
• Keep the temperature of the liquid in the dip tank:  
  – Below the liquid's boiling point  
  – At least 100°F below the liquid's autoignition temperature.

Heat Drying  

WAC 296-307-45560 Make sure a heating system used for drying objects does not cause a fire.  
You must:  
• Make sure the heating system used in a drying operation that could cause ignition:  
  – Has adequate mechanical ventilation that operates before and during the drying operation  
  – Shuts down automatically if a ventilating fan fails to maintain adequate ventilation  

Conveyors  

WAC 296-307-45565 Make sure conveyor systems are safe.  
You must:  
• Make sure the conveyor system shuts down automatically if:  
  – The ventilation system fails to maintain adequate ventilation  
  OR  
  – There is a fire.

WAC 296-307-460 Additional requirements for dip tanks used for specific processes.  
Summary.  
Your responsibility:  
Safeguard employees working with dip tanks used for specific processes  
You must:  
HARDENING OR TEMPERING  
Meet specific requirements if you use a hardening or tempering tank  

WAC 296-307-46005
VAPOR DEGREASING

Provide additional safeguards for vapor degreasing tanks

WAC 296-307-46025

SPRAY CLEANING OR DEGREASING

Control liquid spray over an open surface cleaning or degreasing tank

WAC 296-307-46030.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 03-10-068, § 296-307-460, filed 5/6/03, effective 8/1/03.]

Hardening or Tempering

WAC 296-307-46005 Meet specific requirements if you use a hardening or tempering tank.

You must:

(1) Provide an automatic fire extinguishing system or an automatic dip tank cover for any hardening and tempering tank that uses flammable or combustible liquids and:
   - Holds five hundred gallons (1893 L) or more of liquid
   - Has twenty-five square feet (2.37 m²) or more of liquid surface area.
(2) Prevent fires.
   • Make sure hardening and tempering tanks are:
     - Not located on or near combustible flooring
     - Located as far away as practical from furnaces
     - Equipped with noncombustible hoods and vents (or equally effective devices) for venting to the outside.
   • Treat vent ducts as flues and keep them away from combustible material, particularly roofs.
(3) Make sure air under pressure is not used to:
   • Fill the tank
   OR
   • Agitate the liquid in the tank.
(4) Equip each tank with an alarm that will sound when the temperature is within 50°F (10°C) of the liquid’s flashpoint (alarm set point).
(5) Make sure a limit switch shuts down conveyors supplying work to the tank when the temperature reaches the alarm setpoint, if operationally practical.
(6) Have a circulating cooling system if the temperature of the liquid can exceed the alarm set point.

Note: The bottom drain of the tank may be combined with the oil circulating system if the requirements for bottom drains in WAC 296-307-45515 are satisfied.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 03-10-068, § 296-307-460, filed 5/6/03, effective 8/1/03.]

Vapor Degreasing

WAC 296-307-46025 Provide additional safeguards for vapor degreasing tanks.

You must:

(1) Make sure, if the tank has a condenser or a vapor-level thermostat, that it keeps the vapor level at least:
   • Thirty-six inches (91 cm) below the top of the tank if the width of the tank is seventy-two inches or more
   OR
   • One-half the tank width below the top of the tank if the tank is less than seventy-two inches wide.
(2) Make sure, if you use gas as a fuel to heat the tank liquid, that the combustion chamber is airtight (except for the flue opening) to prevent solvent vapors from entering the air-fuel mixture.
(3) Make sure the exhaust flue:
   • Is made of corrosion-resistant material
   • Extends to the outside
   • Has a draft diverter if mechanical exhaust is used.
(4) Take special precautions to keep solvent vapors from mixing with the combustion air of the heater if chlorinated or fluorinated hydrocarbon solvents (for example, trichloroethylene or freon) are used in the dip tank.
(5) Keep the temperature of the heating element low enough to keep a solvent or mixture from:
   • Decomposing
   OR
   • Generating excessive vapor.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 03-10-068, § 296-307-46025, filed 5/6/03, effective 8/1/03.]

Spray Cleaning or Degreasing

WAC 296-307-46030 Control liquid spray over an open surface cleaning or degreasing tank.

You must:

• Control the spray to the greatest extent feasible by:
  – Enclosing the spraying operation as completely as possible
  – Using mechanical ventilation to provide enough inward air velocity to prevent the spray from leaving the vapor area.

Note: Mechanical baffles may be used to help prevent the discharge of spray.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 03-10-068, § 296-307-46030, filed 5/6/03, effective 8/1/03.]

ACGIH: American Conference of Governmental Industrial Hygienists.

Adjacent area: Any area within twenty feet (6.1 m) of a vapor area that is not separated from the vapor area by tight partitions.

Approved: Approved or listed by a nationally recognized testing laboratory. Refer to Federal Regulation 29 CFR 1910.7, for definition of nationally recognized testing laboratory.

Autoignition temperature: The minimum temperature required to cause self-sustained combustion without any other source of heat.

Combustible liquid: A liquid having a flashpoint of at least 100°F (37.8°C) and below 200°F (93.3°C). Mixtures with at least ninety-nine percent of their components having flashpoints of 200°F (93.3°C) or higher are not considered combustible liquids.

Detearing: A process for removing excess wet coating material from the bottom edge of a dipped or coated object or material by passing it through an electrostatic field.

(2007 Ed.)
Dip tank: A container holding a liquid other than plain water that is used for dipping or coating. An object may be immersed (or partially immersed) in a dip tank or it may be suspended in a vapor coming from the tank.

Flammable liquid: Any liquid having a flashpoint below 100°F (37.8°C), except any mixture having components with flashpoints of 100°F (37.8°C) or higher, the total of which make up ninety-nine percent or more of the total volume of the mixture.

Flashpoint: The minimum temperature at which a liquid gives off a vapor in sufficient concentration to ignite when tested by any of the measurement methods described in the definition of flashpoint in WAC 296-307-55060.

Lower flammable limit: The lowest concentration of a material that will propagate a flame. The LFL is usually expressed as a percent by volume of the material in air (or other oxidant).

Vapor area: Any area in the vicinity of dip tanks, their drain boards or associated drying, conveying, or other equipment where the vapor concentration could exceed twenty-five percent of the lower flammable limit (LFL) for the liquid in the tank.

You: Means the employer.

Part V
Welding

WAC 296-307-475 Welding, cutting, and brazing.

WAC 296-307-480 Installation and operation of oxygen fuel gas systems for welding and cutting.

WAC 296-307-48001 What general requirements apply to oxygen fuel gas systems? (1) Explosive mixtures of fuel gases and air or oxygen must be guarded against. No accessory that allows air or oxygen to mix with flammable gases prior to use must be allowed unless approved for that purpose.

Exception: Air or oxygen may mix with flammable gases at the burner or in a standard torch.

(2) Acetylene must never be generated, piped (except in approved cylinder manifolds) or used at a pressure in excess of 15 psi gauge pressure or 30 psi absolute pressure. (The 30 psi absolute pressure limit is intended to prevent unsafe use of acetylene in pressurized chambers such as caissons, underground excavations or tunnel construction.) Using liquid acetylene is prohibited.

Exception: This requirement does not apply to storage of acetylene dissolved in a suitable solvent in cylinders manufactured and maintained according to DOT requirements, or to acetylene for chemical use.

(3) Only approved apparatus such as torches, regulators or pressure-reducing valves, acetylene generators, and manifolds must be used. Replacement tips may be used on approved torches, if the replacement tips are made to the same specifications as the original, or when replacements are used with convertor/adaptors that meet the same specifications.

(4) Before leaving any employee in charge of the oxygen or fuel-gas supply equipment, including generators, and oxygen or fuel-gas distribution piping systems, you must ensure that the employee has received proper instruction and is competent to do the work. Rules and instructions covering the operation and maintenance of oxygen or fuel-gas supply equipment including generators, and oxygen or fuel-gas distribution piping systems must be readily available.
WAC 296-307-48009  How must oxygen cylinders be stored?  (1) Oxygen cylinders must not be stored near highly combustible material, especially oil or grease; or near reserve stocks of carbide and acetylene or other fuel-gas cylinders, or near any other substance likely to cause or accelerate fire; or in an acetylene generator compartment.

(2) Oxygen cylinders stored in outside generator houses must be separated from the generator or carbide storage rooms by a noncombustible partition having a fire-resistance rating of at least one hour. This partition must be without openings and must be gastight.

(3) Oxygen cylinders in storage must be separated from fuel-gas cylinders or combustible materials (especially oil or grease), a minimum of 20 feet or by a noncombustible barrier at least five feet high having a fire-resistance rating of at least one-half hour. (Cylinders "in-use," secured to a hand truck or structural member, with regulators, hoses, and torch temporarily removed for security purposes overnight or weekends, are not considered "in-storage.")

(4) Where a liquid oxygen system is to be used to supply gaseous oxygen for welding or cutting and the system has a storage capacity of more than 13,000 cubic feet of oxygen (measured at 14.7 psia and 70°F), connected in service or ready for service, or more than 25,000 cubic feet of oxygen (measured at 14.7 psia and 70°F), including unconnected reserves on hand at the site, it must meet the requirements of the Standard for Bulk Oxygen Systems at Consumer Sites, NFPA No. 566-1965.

WAC 296-307-48011  What general operating procedures apply to working with cylinders and containers?  (1) The numbers and markings stamped into cylinders must not be tampered with.

(2) Cylinders, cylinder valves, couplings, regulators, hose, and apparatus must be kept free from oily or greasy substances. Oxygen cylinders or apparatus must not be handled with oily hands or gloves. A jet of oxygen must never be permitted to strike an oily surface, greasy clothes, or enter a fuel oil or other storage tank.

(3) Cylinders must be kept far enough away from the actual welding or cutting operation so that sparks, hot slag, or flame will not reach them, or fire-resistant shields must be provided.

(4) No person, other than the gas supplier, may attempt to mix gases in a cylinder. No one, except the owner of the cylinder or person authorized by the owner, may refill a cylinder.

(5) Cylinders must not be placed where they might become part of an electric circuit. Contacts with third rails, trolley wires, etc., must be avoided.

(6) Fuel-gas cylinders must be placed with valve end up whenever they are in use. Liquefied gases must be stored and shipped with the valve end up.

(7) A suitable cylinder truck, chain, or other steadying device must be used to prevent cylinders from being knocked over while in use.

WAC 296-307-48013  What requirements apply to safety devices on cylinders?  (1) Valve-protection caps must not be used for lifting cylinders from one vertical position to another. Bars must not be used under valves or valve-protection caps to pry cylinders loose when frozen to the ground or otherwise fixed; we recommend using warm (not boiling) water. Valve-protection caps are designed to protect cylinder valves from damage.

(2) Cylinders without fixed hand wheels must have keys, handles, or nonadjustable wrenches on valve stems while these cylinders are in service. In multiple cylinder installations only one key or handle is required for each manifold.

(3) No one may tamper with safety devices in cylinders or valves.

(4) Nothing may be placed on top of an acetylene cylinder when in use that may damage the safety device or interfere with the quick closing of the valve.

(5) Where a special wrench is required it must be left in position on the stem of the valve while the cylinder is in use so that the fuel-gas flow can be quickly turned off in case of emergency. In the case of manifolded or coupled cylinders at least one such wrench must always be available for immediate use.

(6) Cylinders with leaking fuse plugs or other leaking safety devices should be plainly marked with a warning not to approach them with a lighted cigarette or other source of ignition. You should notify the supplier promptly and follow the supplier’s instructions as to their return.
WAC 296-307-48015 How must cylinders be transported? (1) When transporting cylinders by a crane or derrick, a cradle, boat, or suitable platform must be used. Slings or electric magnets are prohibited for this purpose. Valve-protection caps, where cylinder is designed to accept a cap, must be in place. (2) Unless cylinders are secured on a special truck, regulators must be removed and valve-protection caps, when provided for, must be in place before cylinders are moved. (3) When cylinders are transported by powered vehicle they must be secured in a vertical position.

WAC 296-307-48017 How must cylinders be handled? (1) Cylinders must not be dropped or struck or permitted to strike each other violently. (2) Cylinders must be handled carefully. Cylinders must not be subjected to rough handling, knocks, or falls that are liable to damage the cylinder, valve or safety devices and cause leakage. (3) Cylinders must never be used as rollers or supports, whether full or empty.

WAC 296-307-48019 What requirements apply to cylinder valves? (1) Cylinder valves must be closed before moving cylinders. (2) Cylinder valves must be closed when work is finished. (3) Valves of empty cylinders must be closed. (4) A hammer or wrench must not be used to open cylinder valves. If valves cannot be opened by hand, the supplier must be notified. (5) Cylinder valves must not be tampered with nor should any attempt be made to repair them. If you have trouble with a cylinder, you should send a report to the supplier indicating the character of the trouble and the cylinder's serial number. You must follow the supplier's instructions on what to do with the cylinder. (6) Complete removal of the stem from a diaphragm-type cylinder valve must be avoided. (7) If cylinders are found to have leaky valves or fittings that cannot be stopped by closing of the valve, the cylinders must be taken outdoors away from sources of ignition and slowly emptied. (8) The cylinder valve must always be opened slowly. (9) An acetylene cylinder valve must not be opened more than one and one-half turns of the spindle, and preferably no more than three-fourths of a turn.

WAC 296-307-48021 What requirements apply to fuel-gas manifolds? (1) Manifolds must be approved either separately for each component part or as an assembled unit. (2) Fuel-gas cylinders connected to one manifold inside a building must be limited to a maximum total capacity of 300 pounds of LP-gas or 3,000 cubic feet of other fuel-gas. More than one such manifold with connected cylinders may be located in the same room if the manifolds are at least 50 feet apart or separated by a noncombustible barrier at least 5 feet high having a fire-resistance rating of at least one-half hour. (3) Exception: Fuel-gas cylinders connected to one manifold having an aggregate capacity exceeding 300 pounds of LP-gas or 3,000 cubic feet of other fuel-gas must be located outdoors, or in a separate building or room constructed according to 252 (a)(8) and (9) CFR. (4) Separate manifold buildings or rooms may also be used for the storage of drums of calcium carbide and cylinders containing fuel gases as provided in WAC 296-307-48007. Such buildings or rooms must have no open flames for heating or lighting and must be well ventilated. (5) High-pressure fuel-gas manifolds must have approved pressure regulating devices.

WAC 296-307-48025 What requirements apply to high pressure oxygen manifolds? This section applies to cylinders with a DOT service pressure above 200 psig. (1) Manifolds must be approved either separately for each component or as an assembled unit. (2) Oxygen manifolds must not be located in an acetylene generator room. Oxygen manifolds must be separated from fuel-gas cylinders or combustible materials (especially oil or grease), a minimum distance of 20 feet or by a noncombustible barrier at least 5 feet high having a fire-resistance rating of at least one-half hour.
(3) Oxygen cylinders connected to one manifold must be limited to a total gas capacity of 6,000 cubic feet. More than one such manifold with connected cylinders may be located in the same room if the manifolds are at least 50 feet apart or separated by a noncombustible barrier at least 5 feet high having a fire-resistance rating of at least one-half hour.

(4) Exception: An oxygen manifold, to which cylinders having an aggregate capacity of more than 6,000 cubic feet of oxygen are connected, should be located outdoors or in a separate noncombustible building. Such a manifold, if located inside a building having other occupancy, must be located in a separate room of noncombustible construction having a fire-resistance rating of at least one-half hour or in an area with no combustible material within 20 feet of the manifold.

(5) An oxygen manifold or oxygen bulk supply system that has storage capacity of more than 13,000 cubic feet of oxygen (measured at 14.7 psia and 70°F), connected in service or ready for service, or more than 25,000 cubic feet of oxygen (measured at 14.7 psia and 70°F), including unconnected reserves on hand at the site, must meet the requirements of the Standard for Bulk Oxygen Systems at Consumer Sites, NFPA No. 566-1965.

(6) High-pressure oxygen manifolds must have approved pressure-regulating devices.

WAC 296-307-48027 What requirements apply to low pressure oxygen manifolds? This section applies to cylinders with a maximum DOT service pressure of 200 psig.

(1) Manifolds must be of substantial construction suitable for use with oxygen at a pressure of 250 psig. They must have a minimum bursting pressure of 1,000 psig and must be protected by a safety-relief device that will relieve at a maximum pressure of 500 psig.

Note: DOT-4L200 cylinders have safety devices that relieve at a maximum pressure of 250 psig (or 235 psig if vacuum insulation is used).

(2) Hose and hose connections subject to cylinder pressure must meet the requirements of WAC 296-307-48049. Hose must have a minimum bursting pressure of 1,000 psig.

(3) The assembled manifold including leads must be tested and proven gas-tight at a pressure of 300 psig. The fluid used for testing oxygen manifolds must be oil-free and not combustible.

(4) The location of manifolds must meet the requirements of WAC 296-307-48025.

(5) The following sign must be conspicuously posted at each manifold:

Low-Pressure Manifold
Do Not Connect High-Pressure Cylinders
Maximum Pressure—250 PSIG

WAC 296-307-48029 What requirements apply to manifolding portable outlet headers? (1) Portable outlet headers must not be used indoors except for temporary service where the conditions preclude a direct supply from outlets located on the service piping system.

(2) Each outlet on the service piping from which oxygen or fuel-gas is withdrawn to supply a portable outlet header must have a readily accessible shut-off valve.

(3) Hose and hose connections used for connecting the portable outlet header to the service piping must meet the requirements of WAC 296-307-48051.

(4) Master shut-off valves for both oxygen and fuel-gas must be provided at the entry end of the portable outlet header.

(5) Portable outlet headers for fuel-gas service must have an approved hydraulic back-pressure valve installed at the inlet and preceding the service outlets, unless an approved pressure-reducing regulator, an approved backflow check valve, or an approved hydraulic back-pressure valve is installed at each outlet. Outlets provided on headers for oxygen service may be fitted for use with pressure-reducing regulators or for direct hose connection.

(6) Each service outlet on portable outlet headers must have a valve assembly that includes a detachable outlet seal cap, chained or otherwise attached to the body of the valve.

(8) Portable outlet headers must have frames that will support the equipment securely in the correct operating position and protect them from damage during handling and operation.

WAC 296-307-48031 What operating procedures apply to cylinder manifolds? (1) Cylinder manifolds must be installed under the supervision of someone familiar with the proper practices of construction and use.

(2) All component parts used in the methods of manifolding described in WAC 296-307-48023 must have the materials, design and construction approved either separately or as an assembled unit.

(3) All manifolds and parts used in methods of manifolding must be used only for the gas or gases for which they are approved.

(4) When acetylene cylinders are coupled, approved flash arresters must be installed between each cylinder and the coupler block. For outdoor use only, and when the number of cylinders coupled does not exceed three, one flash arrester installed between the coupler block and regulator is acceptable.

(5) Each fuel-gas cylinder lead should have a backflow check valve.

(6) The maximum aggregate capacity of fuel-gas cylinders connected to a portable manifold inside a building must be 3,000 cubic feet of gas.
(7) Acetylene and liquefied fuel-gas cylinders must be manifolded vertically.

(8) The pressure in the gas cylinders connected to and discharged simultaneously through a common manifold must be approximately equal.

WAC 296-307-48033 How must service piping systems be designed? (1) Piping and fittings must comply with Section 2, Industrial Gas and Air Piping Systems, of the American National Standard Code for Pressure Piping, ANSI B 31.1-1967, if they do not conflict with subsections (2) and (3) of this section.

(2) Pipe must be at least Schedule 40 and fittings must be at least standard weight in sizes up to and including 6-inch nominal.

(3) Copper tubing must be Types K or L according to the Standard Specification for Seamless Copper Water Tube, ASTM B88-66a.

(4) Piping must be steel, wrought iron, brass or copper pipe, or seamless copper, brass or stainless steel tubing, except as provided in subsections (5) through (9) of this section.

(5) Oxygen piping and fittings at pressures in excess of 700 psig, must be stainless steel or copper alloys.

(6) Hose connections and hose complying with WAC 296-307-48051 may be used to connect the outlet of a manifold pressure regulator to piping if the working pressure of the piping is 250 psig or less and the length of the hose is a maximum of 5 feet. Hose must have a minimum bursting pressure of 1,000 psig.

(7) When oxygen is supplied to a service piping system from a low-pressure oxygen manifold without an intervening pressure regulating device, the piping system must have a minimum design pressure of 250 psig. A pressure regulating device must be used at each station outlet when the connected equipment is for use at pressures less than 250 psig.

(8) Piping for acetylene or acetylenic compounds must be steel or wrought iron.

(9) Unalloyed copper must only be used for acetylene or acetylenic compounds in listed equipment.

WAC 296-307-48035 What requirements apply to piping joints? (1) Joints in steel or wrought iron piping must be welded, threaded or flanged. Fittings, such as ells, tees, couplings, and unions, must be rolled, forged or cast steel, malleable iron or nodular iron. Gray or white cast iron fittings are prohibited.

(2) Joints in brass or copper pipe must be welded, brazed, threaded, or flanged. Socket type joints must be brazed with silver-brazing alloy or similar high melting point (not less than 800°F) filler metal.

(3) Joints in seamless copper, brass, or stainless steel tubing must be approved gas tubing fittings or the joints must be brazed. Socket type joints must be brazed with silver-brazing alloy or similar high melting point (not less than 800°F) filler metal.

WAC 296-307-48037 How must service piping systems be installed? (1) Distribution lines must be installed and maintained in a safe operating condition.

(2) Piping may be above or below ground. All piping must be run as directly as practical, protected against physical damage, with an allowance for expansion and contraction, jarring and vibration. Pipe laid underground in earth must be below the frost line and protected against corrosion. After assembly, piping must be thoroughly blown out with air or nitrogen to remove foreign materials. For oxygen piping, only oil-free air, oil-free nitrogen, or oil-free carbon dioxide must be used.

(3) Only piping that has been welded or brazed must be installed in tunnels, trenches or ducts. Shut-off valves must be located outside such conduits. Oxygen piping may be placed in the same tunnel, trench or duct with fuel-gas pipelines, if there is good natural or forced ventilation.

(4) Low points in piping carrying moist gas must be drained into drip pots constructed to permit pumping or draining out the condensate at necessary intervals. Drain valves must be installed for this purpose having outlets normally closed with screw caps or plugs. Open end valves or petcocks are prohibited, except that in drips located outdoors, underground, and not readily accessible, valves may be used at such points if they have means to secure them in the closed position. Pipes leading to the surface of the ground must be cased or jacketed where necessary to prevent loosening or breaking.

(5) Gas cocks or valves must be provided for all buildings at points where they will be readily accessible for shutting off the gas supply to these buildings in any emergency. Underground valve boxes or manholes should be avoided wherever possible. There must be a shut-off valve in the discharge line from the generator, gas holder, manifold or other source of supply.

(6) Shut-off valves must not be installed in safety-relief lines in such a manner that the safety-relief device can be rendered ineffective.

(7) Fittings and lengths of pipe must be examined internally before assembly and, if necessary, freed from scale or dirt. Oxygen piping and fittings must be washed out with a suitable solution that will effectively remove grease and dirt but will not react with oxygen.

Note: Hot water solutions of caustic soda or trisodium phosphate are effective for this purpose.

(8) Piping must be thoroughly blown out after assembly to remove foreign materials. For oxygen piping, oil-free air, oil-free nitrogen, or oil-free carbon dioxide must be used. For other piping, air or inert gas may be used.

[Title 296 WAC—p. 2537]
When flammable gas lines or other parts of equipment are being purged of air or gas, open lights or other sources of ignition are prohibited near uncapped openings.

(10) No welding or cutting must be performed on an acetylene or oxygen pipeline, including the attachment of hangers or supports, until the line has been purged. Only oil-free air, oil-free nitrogen, or oil-free carbon dioxide must be used to purge oxygen lines.

WAC 296-307-48039 How must service piping systems be painted and marked?

(1) Underground pipe and tubing and outdoor ferrous pipe and tubing must be covered or painted with a suitable material for protection against corrosion.

(2) Aboveground piping systems must be marked according to the American National Standard Scheme for the Identification of Piping Systems, ANSI A 13.1-1956.

(3) Station outlets must be marked to indicate the name of the gas.

WAC 296-307-48041 How must service piping systems be tested?

(1) Piping systems must be tested and proved gastight at 1-1/2 times the maximum operating pressure, and must be thoroughly purged of air before being placed in service. The material used for testing oxygen lines must be oil free and noncombustible. Flames must not be used to detect leaks.

(2) When flammable gas lines or other parts of equipment are being purged of air or gas, sources of ignition are prohibited near uncapped openings.

WAC 296-307-48043 How must equipment be installed? Equipment shall be installed and used only in the service for which it is approved and as recommended by the manufacturer.

WAC 296-307-48045 How must service piping systems be protected? Service piping systems must be protected by pressure relief devices set to function at not more than the design pressure of the systems and discharging upwards to a safe location.

WAC 296-307-48047 What requirements apply to piping protective equipment?

(1) The fuel-gas and oxygen piping systems, including portable outlet headers must incorporate the protective equipment shown in Figures V-1, V-2, and V-3.

When only a portion of a fuel-gas system is to be used with oxygen, only that portion must meet this requirement.

(2) Approved protective equipment (designated PF in Figs. V-1, V-2, and V-3) must be installed in fuel-gas piping to prevent:

(a) Backflow of oxygen into the fuel-gas supply system;
(b) Passage of a flash back into the fuel-gas supply system; and
(c) Excessive back pressure of oxygen in the fuel-gas supply system. The three functions of the protective equipment may be combined in one device or may be provided by separate devices.
PF = Protective equipment in fuel-gas piping
VF = Fuel-gas station outlet valve
VO = Oxygen station outlet valve
SF = Backflow prevention device(s) at fuel-gas station outlet
SO = Backflow prevention device(s) at oxygen station outlet

(3) The protective equipment must be located in the main supply line, as in Figure 1 or at the head of each branch line, as in Figure 2 or at each location where fuel-gas is withdrawn, as in Figure 3. Where branch lines are of 2-inch pipe size or larger or of substantial length, protective equipment (designated as PF) shall be located as shown in either 2 or 3.

(4) Backflow protection must be provided by an approved device that will prevent oxygen from flowing into the fuel-gas system or fuel from flowing into the oxygen system (see SF, Figs. 1 and 2).

(5) Flash-back protection must be provided by an approved device that will prevent flame from passing into the fuel-gas system.

(6) Back-pressure protection must be provided by an approved pressure-relief device set at a pressure not greater than the pressure rating of the backflow or the flashback protection device, whichever is lower. The pressure-relief device must be located on the downstream side of the backflow and flashback protection devices. The vent from the pressure-relief device must be at least as large as the relief device inlet and must be installed without low points that may collect moisture. If low points are unavoidable, drip pots with drains closed with screw plugs or caps shall be installed at the low points. The vent terminus must not endanger personnel or property through gas discharge; must be located away from ignition sources; and must terminate in a hood or bend.

(7) If pipeline protective equipment incorporates a liquid, the liquid level must be maintained, and a suitable anti-freeze may be used to prevent freezing.

(8) Fuel-gas for use with equipment not requiring oxygen must be withdrawn upstream of the piping protective devices.

WAC 296-307-48049 What requirements apply to station outlet protective equipment? (1) A check valve pressure regulator, hydraulic seal, or combination of these devices must be provided at each station outlet, including those on portable headers, to prevent backflow, as shown in Figures 1, 2, and 3 and designated as PF and SO.

(2) When approved pipeline protective equipment (designated PF) is located at the station outlet as in Figure 3, no additional check valve, pressure regulator, or hydraulic seal is required.

(3) Each station outlet must have a shut-off valve (designated VF and VO) installed on the upstream side of other station outlet equipment.

(4) If the station outlet is equipped with a detachable regulator, the outlet must terminate in a union connection that meets the requirements of the Standard Hose Connection Specifications, 1957, Compressed Gas Association.

(5) If the station outlet is connected directly to a hose, the outlet must terminate in a union connection that meets the requirements of the Standard Hose Connection Specifications, 1957, Compressed Gas Association.

(6) Station outlets may terminate in pipe threads to which permanent connections are to be made, such as to a machine.

(7) Station outlets must have a detachable outlet seal cap secured in place. This cap must be used to seal the outlet except when a hose, a regulator, or piping is attached.

(8) Where station outlets are equipped with approved backflow and flashback protective devices, as many as four torches may be supplied from one station outlet through rigid piping, if each outlet from such piping, is equipped with a shut-off valve and if the fuel-gas capacity of any one torch does not exceed 15 cubic feet per hour. This rule does not apply to machines.

[97-09-013, recodified as § 296-307-48049, filed 4/7/97, effective 4/7/97.]

Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-48049, filed 10/31/96, effective 12/1/96.]

(2) The generally recognized colors are red for acetylene and other fuel-gas hose, green for oxygen hose, and black for inert-gas and air hose.

(3) When parallel lengths of oxygen and acetylene hose are taped together for convenience and to prevent tangling, a maximum of 4 inches out of 12 inches must be covered by tape.

(4) Hose connections must meet the requirements of the Standard Hose Connection Specifications, 1957, Compressed Gas Association.

(5) Hose connections must be clamped or otherwise securely fastened so they will withstand, without leakage, twice the pressure to which they are normally subjected in service, but never less than a pressure of 300 psi. Oil-free air or an oil-free inert gas must be used for the test.

(6) Hose showing leaks, burns, worn places, or other defects rendering it unfit for service must be repaired or replaced.

[97-09-013, recodified as § 296-307-48051, filed 4/7/97, effective 4/7/97.]

Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-48051, filed 10/31/96, effective 12/1/96.]

WAC 296-307-48053 What requirements apply to pressure-reducing regulators? (1) Pressure-reducing regulators must be used only for the gas and pressures for which they are intended. The regulator inlet connections must meet the requirements of the Regulator Connection Standards, 1958, Compressed Gas Association.

(2) When regulators or parts of regulators, including gauges, need repair, the work must be performed by skilled mechanics who have been properly instructed.

(3) Gauges on oxygen regulators must be marked "USE NO OIL."

(4) Union nuts and connections on regulators must be inspected before use to detect faulty seats that may cause leakage of gas when the regulators are attached to the cylinder valves. Damaged nuts or connections must be destroyed.
WAC 296-307-485 Installation and operation of resistance welding equipment.

WAC 296-307-48501 What general requirements apply to resistance welding equipment? (1) All equipment must be installed by a qualified electrician according to the requirements of chapter 296-307 WAC Part T. There must be a safety-type disconnecting switch or a circuit breaker or circuit interrupter to open each power circuit to the machine, conveniently located at or near the machine, so that the power can be shut off when the machine or its controls are to be serviced.

(2) Ignitron tubes used in resistance welding equipment must have a thermal protection switch.

(3) Employees designated to operate resistance welding equipment must have been properly instructed and judged competent to operate such equipment.

(4) Controls of all automatic or air and hydraulic clamps must be arranged or guarded to prevent the operator from accidentally activating them.

WAC 296-307-48503 What requirements apply to portable welding machines? (1) All portable welding guns must have suitable counter-balanced devices for supporting the guns, including cables, unless the design of the gun or fixture makes counterbalancing impractical or unnecessary.

(2) All portable welding guns, transformers, and related equipment that is suspended from overhead structures, eye beams, or trolleys must have safety chains or cables. Safety chains or cables shall be able to support the total shock load in the event of failure of any component of the supporting system.

(3) When trolleys are used to support portable welding equipment, they must have suitable forged steel clevis for the attachment of safety chains. Each clevis must be able to support the total shock load of the suspended equipment in the event of trolley failure.

(4) All initiating switches, including retraction and dual schedule switches, located on the portable welding gun must have suitable guards able to prevent accidental initiation through contact with fixturing, operator's clothing, etc. Initiating switch voltage must be a maximum of 24 volts.

(5) The movable holder, where it enters the gun frame, must have enough clearance to prevent the shearing of the operator's fingers if placed on the operating movable holder.

(6) The secondary and case of all portable welding transformers must be grounded. Secondary grounding may be by center tapped secondary or by a center tapped grounding reactor connected across the secondary.

Note: You may ensure that your equipment is designed for safety by choosing equipment that complies with the Requirements for Electric Arc-Welding Apparatus, NEMA EW-1-1962, National Electrical Manufacturers Association or the Safety Standard for Transformer-Type Arc-Welding Machines, ANSI C33.2-1956, Underwriters' Laboratories.

(1) Standard machines for arc welding service must be designed and constructed to carry their rated load with rated temperature rises where the temperature of the cooling air is...
WAC 296-307-49003 What voltages must arc welding equipment use? Open circuit (no load) voltages of arc welding and cutting equipment should be as low as possible consistent with satisfactory welding or cutting being done. Following are the maximum limits:

(1) For alternating-current machines:
   (a) Manual arc welding and cutting—80 volts.
   (b) Automatic (machine or mechanized) arc welding and cutting—100 volts.

(2) For direct-current machines:
   (a) Manual arc welding and cutting—100 volts.
   (b) Automatic (machine or mechanized) arc welding and cutting—100 volts.

(3) When special welding and cutting processes require values of open circuit voltages higher than the above, means must be provided to prevent the operator from making accidental contact with the high voltage by adequate insulation or other means.

Note: For a.c. welding under wet conditions or warm surroundings where perspiration is a factor, the use of reliable automatic controls for reducing no load voltage is recommended to reduce the shock hazard.

WAC 296-307-49005 How must arc welding equipment be designed? (1) A controller integrally mounted in an electric motor driven welder must be able to carry the rated motor current, must be able to make and interrupt stalled rotor current of the motor, and may serve as the running overload device if provided with the number of over-current units as specified by chapter 296-307 WAC Part T. Starters with magnetic undervoltage release should be used with machines installed more than one to a circuit to prevent circuit overload caused by simultaneously starting several motors upon return of voltage.

(2) On all types of arc welding machines, control apparatus must be enclosed except for the operating wheels, levers, or handles.

Note: Control handles and wheels should be large enough to be easily grasped by a gloved hand.

(2007 Ed.)

(3) Input power terminals, tap change devices, and live metal parts connected to input circuits must be completely enclosed and accessible only by tools.

(4) Terminals for welding leads should be protected from accidental electrical contact by employees or by metal objects i.e., vehicles, crane hooks, etc. You may provide protection with:
   • Dead-front receptacles for plug connections;
   • Recessed openings with nonremovable hinged covers;
   • Heavy insulating sleeving or taping; or
   • Other equivalent electrical and mechanical protection.

If a welding lead terminal that is intended to be used exclusively for connection to the work is connected to the grounded enclosure, it must be done by a conductor at least two AWG sizes smaller than the grounding conductor and the terminal must be marked to indicate that it is grounded.

(5) No connections for portable control devices (such as push buttons to be carried by the operator) must be connected to an a.c. circuit of higher than 120 volts. Exposed metal parts of portable control devices operating on circuits above 50 volts must be grounded by a grounding conductor in the control cable.

(6) Auto transformers or a.c. reactors must not be used to draw welding current directly from any a.c. power source having a voltage exceeding 80 volts.

WAC 296-307-49007 How must arc welding equipment be installed? Arc welding equipment, including the power supply, must be installed according to the requirements of chapter 296-307 WAC Part T.

(2) Conduits containing electrical conductors must not be used for completing a work-lead circuit. Pipelines must not be used as a permanent part of a work-lead circuit, but may be used during construction, extension or repair if current is not carried through threaded joints, flanged bolted joints, or caulked joints and special precautions are used to avoid sparking at connection of the work-lead cable.

(3) Using chains, wire ropes, cranes, hoists, and elevators to carry welding current is prohibited.

(4) Where a structure, conveyor, or fixture is regularly used as a welding current return circuit, joints must be bonded or provided with adequate current collecting devices and appropriate periodic inspection should be conducted to ensure that no electrocution, shock, or fire hazard exists.

(2007 Ed.)
(5) All ground connections must be checked to determine that they are mechanically strong and electrically adequate for the required current.

[WAC 296-307-49011] WAC 296-307-49011 What requirements apply to supply connections and conductors? (1) A disconnecting switch or controller must be provided at or near each welding machine without a switch or controller mounted as an integral part of the machine. The switch must meet the requirements of chapter 296-307 WAC Part T. Overcurrent protection must be provided as specified in chapter 296-307 WAC Part T. A disconnect switch with overload protection or equivalent disconnect and protection means, permitted by chapter 296-307 WAC Part T must be provided for each outlet intended for connection to a portable welding machine.

(2) For individual welding machines, the rated current-carrying capacity of the supply conductors must be at least that of the rated primary current of the welding machines.

(3) For groups of welding machines, the rated current-carrying capacity of conductors may be less than the sum of the rated primary currents of the welding machines supplied. The conductor rating must be determined according to the machine loading based on the use to be made of each welding machine and the allowance permissible in the event that all the welding machines supplied by the conductors will not be in use at the same time.

(4) In operations involving several welders on one structure, d.c. welding process requirements may require the use of both polarities; or supply circuit limitations for a.c. welding may require distribution of machines among the phases of the supply circuit. In such cases, no load voltages between electrode holders will be two times normal in d.c. or 1.4, 1.73, or 2 times normal on a.c. machines. Similar voltage differences will exist if both a.c. and d.c. welding are done on the same structure.

(a) All d.c. machines must be connected with the same polarity.

(b) All a.c. machines must be connected to the same phase of the supply circuit and with the same instantaneous polarity.

(2) Before starting operations, all connections to the machine must be checked to make certain they are properly made. The work lead must be firmly attached to the work; magnetic work clamps shall be freed from adherent metal particles of spatter on contact surfaces. Coiled welding cable must be spread out before use to avoid serious overheating and damage to insulation.

(3) You must ensure that the welding machine frame grounding is checked with special attention given to safety ground connections of portable machines.

(4) Cylinders must be kept away from radiators, piping systems, layout tables, etc., that may be used for grounding electric circuits. Any practice such as the tapping of an electrode against a cylinder to strike an arc is prohibited.

(5) There must be no leaks of cooling water, shielding gas or engine fuel.

(6) You must ensure that the machine has proper switching equipment for shutting down.

(7) Printed rules and instructions covering operation of equipment supplied by the manufacturers must be strictly followed.

(8) Electrode holders when not in use must be placed so that they cannot make electrical contact with persons, conducting objects, fuel or compressed gas tanks.

(9) Cables with splices within 10 feet of the holder are prohibited. The welder should not coil or loop welding electrode cable around parts of the body.

[WAC 296-307-49015] WAC 296-307-49015 How must arc welding equipment be maintained? (1) The operator should report any equipment defect or safety hazard to the supervisor and discontinue using the equipment until its safety is ensured. Repairs must be made only by qualified persons.

(2) Machines that have become wet must be thoroughly dried and tested before being used.

(3) Work and electrode lead cables should be frequently inspected for wear and damage. Cables with damaged insulation or exposed bare conductors must be replaced. Lengths of work and electrode cables must be joined by connecting means specifically intended for the purpose. The connecting means must have insulation adequate for the service conditions.

The basic precautions for fire prevention in welding or cutting work are:

1. If the object to be welded or cut cannot readily be moved, all movable fire hazards in the vicinity must be taken to a safe place.

2. If the object to be welded or cut cannot be moved and if all the fire hazards cannot be removed, then guards must be used to confine the heat, sparks, and slag, and to protect the fire hazards.

3. If the requirements of this section cannot be met, then welding and cutting are prohibited.

[WAC 296-307-49503 What special fire prevention precautions must be taken? When the nature of the work to be performed falls within the scope of WAC 296-307-49501(2), certain additional precautions may be necessary:

1. Wherever there are floor openings or cracks in the flooring that cannot be closed, precautions must be taken so that no readily combustible materials on the floor below will be exposed to sparks that drop through. The same precautions must be observed with regard to cracks or holes in walls, open doorways, and open or broken windows.

2. Suitable fire extinguishing equipment must be maintained in a state of readiness for instant use. Such equipment may consist of pails of water, buckets of sand, hose, or portable extinguishers depending upon the nature and quantity of the combustible material exposed.

3. The following requirements apply to fire watch:
   (a) Fire watchers are required whenever welding or cutting is performed in locations where other than a minor fire might develop, or any of the following conditions exist:
      (i) Appreciable combustible material, in building construction or contents, closer than 35 feet to the point of operation.
      (ii) Appreciable combustibles are more than 35 feet away but are easily ignited by sparks.
      (iii) Wall or floor openings within a 35-foot radius expose combustible material in adjacent areas including concealed spaces in walls or floors.
      (iv) Combustible materials are adjacent to the opposite side of metal partitions, walls, ceilings, or roofs and are likely to be ignited by conduction or radiation.
   (b) Fire watchers must have fire extinguishing equipment readily available and be trained in its use. They must be familiar with facilities for sounding an alarm in the event of a fire. They must watch for fires in all exposed areas, try to extinguish them only when obviously within the capacity of the equipment available, or otherwise sound the alarm. A fire watch must be maintained for at least a half hour after completion of welding or cutting operations to detect and extinguish possible smoldering fires.
   (4) Before cutting or welding is permitted, the area must be inspected by the individual responsible for authorizing cutting and welding operations. The responsible individual must designate precautions to be followed in granting authorization to proceed, preferably in the form of a written permit.

5. Where combustible materials such as paper clippings, wood shavings, or textile fibers are on the floor, the floor must be swept clean for a radius of 35 feet. Combustible floors must be kept wet, covered with damp sand, or protected by fire-resistant shields. Where floors have been wet down, employees operating arc welding or cutting equipment must be protected from possible shock.

6. Cutting and welding are prohibited in the following situations:
   (a) In areas not authorized by management.
   (b) In sprinklered buildings while such protection is impaired.
   (c) In the presence of explosive atmospheres (mixtures of flammable gases, vapors, liquids, or dusts with air), or where explosive atmospheres may develop inside uncleaned or improperly prepared tanks or equipment that have previously contained such materials, or that may develop in areas with an accumulation of combustible dusts.
   (d) In areas near the storage of large quantities of exposed, readily ignitable materials such as bulk sulphur, baled paper, or cotton.

7. Where practical, all combustibles must be relocated at least 35 feet from the worksite. Where relocation is impractical, combustibles must be protected with flame-proofed covers or otherwise shielded with metal or asbestos guards or curtains. Edges of covers at the floor should be tight to prevent sparks from going under them. This precaution is also important at overlaps where several covers are used to protect a large pile.

8. Ducts and conveyor systems that might carry sparks to distant combustibles must be suitably protected or shut down.

9. Where cutting or welding is done near walls, partitions, ceiling, or roof of combustible construction, fire-resistant shields or guards must be provided to prevent ignition.

10. If welding is to be done on a metal wall, partition, ceiling, or roof, precautions must be taken to prevent ignition of combustibles on the other side, due to conduction or radiation, preferably by relocating combustibles. Where combustibles are not relocated, a fire watch on the opposite side from the work must be provided.

11. Welding must not be attempted on a metal partition, wall, ceiling, or roof having a combustible covering nor on walls or partitions of combustible sandwich-type panel construction.

12. Cutting or welding on pipes or other metal in contact with combustible walls, partitions, ceilings or roofs must not be undertaken if the work is close enough to cause ignition by conduction.

13. You are responsible for the safe use of cutting and welding equipment on your property and:
   (a) Based on fire potentials of plant facilities, you must establish areas and procedures for cutting and welding;
   (b) You must designate an individual responsible for authorizing cutting and welding operations in areas not specifically designed for such processes;
   (c) You must insist that cutters or welders and their supervisors are suitably trained in the safe operation of their equipment and the safe use of the process; and

(2007 Ed.)
WAC 296-307-49505 What precautions must be taken when welding or cutting containers? (1) No welding, cutting, or other hot work may be performed on used drums, barrels, tanks or other containers until they have been cleaned thoroughly enough to be certain that there are no flammable materials present or any substances such as greases, tars, acids, or other materials which when subjected to heat, might produce flammable or toxic vapors. Any pipe lines or connections to the drum or vessel must be disconnected or blanked.

(2) All hollow spaces, cavities, or containers must be vented to permit the escape of air or gases before preheating, cutting or welding. Purging with inert gas is recommended.

WAC 296-307-49507 What precautions must be taken when welding in confined spaces? (1) When arc welding work is stopped for a substantial time, such as during lunch or overnight, all electrodes must be removed from the holders and the holders carefully located so that accidental contact cannot occur and the machine be disconnected from the power source.

(2) In order to eliminate the possibility of gas escaping through leaks or improperly closed valves, when gas welding or cutting, the torch valves must be closed and the gas supply to the torch positively shut off at some point outside the confined area whenever the torch is not to be used for a substantial period of time, such as during lunch hour or overnight. Where practical, the torch and hose must also be removed from the confined space.
(6) Cover lenses or plates should be provided to protect each helmet, hand shield, or goggle filter lens or plate.

(7) All glass for lenses must be tempered, substantially free from scratches, air bubbles, waves and other flaws. Except when a lens is ground to provide proper optical correction for defective vision, the front and rear surfaces of lenses and windows must be smooth and parallel.

(8) Lenses must be marked with the source and shade.

(9) Following is a guide to select proper shade numbers. Individual needs may vary.

<table>

Note: In gas welding or oxygen cutting where the torch produces a high yellow light it is desirable to use a filter or lens that absorbs the yellow or sodium line in the visible light of the operation.

(11) Where the work permits, an arc welder should be enclosed in an individual booth painted with a finish of low-reflectivity such as zinc oxide (an important factor for absorbing ultraviolet radiations) and lamp black, or must be enclosed with noncombustible screens similarly painted. Booths and screens must permit circulation of air at floor level. Employees or other persons adjacent to the welding areas must be protected from the rays by noncombustible or flameproof screens or shields or must be required to wear appropriate goggles.

WAC 296-307-50005 What protective clothing must welders wear? (1) Employees exposed to the hazards created by welding, cutting, or brazing operations must be protected by personal protective equipment according to the requirements of chapter 296-307 WAC Part H. Appropriate protective clothing required for any welding operation will vary with the size, nature and location of the work to be performed.

(2) The following suggestions may be helpful when choosing protective clothing:

(a) Except when engaged in light work, all welders should wear flameproof gauntlet gloves.

(b) Flameproof aprons made of leather, asbestos, or other suitable material may help to protect against radiated heat and sparks.

(c) Woolen clothing is better than cotton because it is less easily ignited and helps to protect the welder from changes in temperature. Cotton clothing, if used, should be chemically treated to reduce its combustibility. All outer clothing such as jumpers or overalls should be reasonably free from oil or grease.

(d) Sparks may lodge in rolled-up sleeves, pockets, or cuffs. Therefore sleeves and collars should be buttoned, and clothing should have no front pockets. Trousers or overalls should be uncuffed.

(e) For heavy work, fire-resistant leggings, high boots, or other equivalent means should be used.

(f) In production work a sheet metal screen, high boots, or other equivalent means should be used.

(g) Caps or shoulder covers made of leather or other suitable materials should be worn during overhead welding or cutting operations. Leather skull caps may be worn under helmets to prevent head burns.

(h) For welding and cutting overhead or in extremely confined spaces, ear protection is sometimes desirable.

(i) Where there is exposure to sharp or heavy falling objects, or a hazard of bumping in confined spaces, hard hats or head protectors must be used.

WAC 296-307-50007 What other requirements apply to employee protection? (1) You must ensure that a welder or helper working on platforms, scaffolds, or runways is protected against falling by using railings, safety belts, life lines, or other equally effective safeguards.

(2) Welders must place welding cable and other equipment so that it is clear of passageways, ladders, and stairways.

WAC 296-307-50009 What employee protection must be provided in confined spaces? "Confined space" means a relatively small or restricted space such as a tank, boiler, pressure vessel, or small compartment of a ship.

(1) Confined spaces must be ventilated. For ventilation requirements see WAC 296-307-50011 through 296-307-50029.

(2) When welding or cutting in a confined space, the gas cylinders and welding machines must be left outside. Before operations are started, heavy portable equipment mounted on wheels must be securely blocked to prevent accidental movement.
(3) Where a welder must enter a confined space through a manhole or other small opening, means must be provided for quickly removing the welder in case of emergency. When safety belts and lifelines are used, they must be attached so that the welder's body cannot be jammed in a small exit opening. An attendant with a preplanned rescue procedure must be stationed outside to observe the welder at all times and be able to put rescue operations into effect.

(4) After welding operations are completed, the welder must mark the hot metal or provide some other means of warning other employees.

WAC 296-307-50011 What general requirements apply to welding ventilation? (1) The following three factors in arc and gas welding must be considered when determining the amount of contamination to which welders may be exposed:

(a) Dimensions of space in which welding is to be done (especially ceiling height);
(b) Number of welders; and
(c) The possibility of hazardous fumes, gases, or dust according to the metals involved.

(2) Other factors involved may require ventilation or respiratory protective devices as needed to meet the requirements of this section. Such factors include:

(a) Atmospheric conditions;
(b) Heat generated; and
(c) Presence of volatile solvents.

(3) When welding must be performed in a space entirely screened on all sides, the screens must be arranged so that no serious restriction of ventilation exists. The screens should be mounted so that they are about 2 feet above the floor unless the work is performed at so low a level that the screen must be extended nearer to the floor to protect nearby employees from the glare of welding.

(4) Local exhaust or general ventilating systems must be provided and arranged to keep the amount of toxic fumes, gases, or dusts below the maximum allowable in chapter 296-62 WAC.

Note: A number of potentially hazardous materials are employed in fluxes, coatings, coverings, and filler metals used in welding and cutting or are released to the atmosphere during welding and cutting. These include but are not limited to the materials itemized in WAC 296-307-50019 through 296-307-50029.

(5) You must determine which potentially hazardous materials are associated with welding and cutting and inform employees through signs, labels or other appropriate means.

(a) Welding may produce fumes and gases hazardous to health. Avoid breathing these fumes and gases. Use adequate ventilation. See ANSI Z 49.1-1967, Safety in Welding and Cutting, published by the American Welding Society.

(b) Brazing (welding) filler metals containing cadmium in significant amounts must carry the following notice on tags, boxes, or other containers:

WARNING
CONTAINS CADMIUM—POISONOUS FUMES MAY BE FORMED ON HEATING

• Do not breathe fumes. Use only with adequate ventilation such as fume collectors, exhaust ventilators, or air-supplied respirators. See ANSI Z 49.1-1967.
• If chest pain, cough, or fever develops after use call physician immediately.
• Keep children away when using.

(c) Brazing and gas welding fluxes containing fluorine compounds must have a cautionary wording to indicate that they contain fluorine compounds. The American Welding Society recommends the following for brazing and gas welding fluxes:

CAUTION
CONTAINS FLUORIDES
This flux when heated gives off fumes that may irritate eyes, nose and throat.
• Avoid fumes. Use only in well-ventilated spaces.
• Avoid contact of flux with eyes or skin.
• Do not take internally.

WAC 296-307-50013 What ventilation must be provided for general welding and cutting? (1) Mechanical ventilation must be provided when welding or cutting is done on metals not covered in WAC 296-307-50019 through 296-307-50029 in the following locations:

(a) In a space of less than 10,000 cubic feet per welder.
(b) In a room with a ceiling height of less than 16 feet.
(c) In confined spaces or where the welding space contains partitions, balconies, or other structural barriers to the extent that they significantly obstruct cross-ventilation.

(2) Ventilation must be at the minimum rate of 2,000 cubic feet per minute per welder.

Exception: This requirement does not apply where local exhaust hoods and booths that meet the requirements of WAC 296-307-50015, or airline respirators approved by the Mine Safety and Health Administration (MSHA) and the National Institute for Occupational Safety and Health (NIOSH) for such purposes are provided. Natural ventilation is considered sufficient for welding or cutting operations where the restrictions in subsection (1) of this section are not present.

WAC 296-307-50015 What requirements apply to local exhaust hoods and booths? Mechanical local exhaust ventilation may be provided by either of the following:

(1) Freely movable hoods intended to be placed by the welder as near as practical to the work being welded and provided with a rate of airflow sufficient to maintain a velocity in the direction of the hood of 100 linear feet per minute in the zone of welding where the hood is at its most remote dis-
WAC 296-307-50017 What ventilation must be provided in confined spaces? (1) All welding and cutting operations carried on in confined spaces must be adequately ventilated to prevent the accumulation of toxic materials or possible oxygen deficiency. This applies to welders, helpers, and other employees in the immediate vicinity. All replacement air must be clean and respirable.

(2) In circumstances where it is impossible to provide such ventilation, airline respirators or hose masks approved by the Mine Safety and Health Administration (MSHA) and the National Institute for Occupational Safety and Health (NIOSH) for this purpose must be used.

(3) In areas immediately hazardous to life, hose masks with blowers or self-contained breathing equipment must be used. The breathing equipment must be approved by the Mine Safety and Health Administration (MSHA) and the National Institute for Occupational Safety and Health (NIOSH).

(4) Where welding operations are carried on in confined spaces and where welders and helpers are provided with hose masks, hose masks with blowers or self-contained breathing equipment approved by the Mine Safety and Health Administration (MSHA) and the National Institute for Occupational Safety and Health (NIOSH), an employee must be stationed on the outside of such confined spaces to ensure the safety of those working within.

(5) Oxygen must not be used for ventilation.

WAC 296-307-50019 What requirements apply to welding fluorine compounds? In confined spaces, welding or cutting involving fluxes, coverings, or other materials that contain fluorine compounds must be done according to WAC 296-307-50017.

"Fluorine compound" means a compound that contains fluorine as an element in chemical combination, not as a free gas.

Note: The need for local exhaust ventilation or airline respirators for welding or cutting in other than confined spaces will depend on the circumstances. However, such protection is desirable for fixed-location production welding and for all production welding on stainless steels. Where air samples taken at the welding location indicate that the fluorides liberated are below the maximum allowable concentration, such protection is not necessary.

WAC 296-307-50021 What requirements apply to welding zinc? (1) In confined spaces welding or cutting involving zinc-bearing base or filler metals or metals coated with zinc-bearing materials must be done according to WAC 296-307-50017.

(2) Indoors, welding or cutting involving zinc-bearing base or filler metals coated with zinc-bearing materials must be done according to WAC 296-307-50015.

WAC 296-307-50023 What requirements apply to welding lead? (1) In confined spaces, welding involving lead-base metals (erroneously called lead-burning) must be done according to WAC 296-307-50017.

(2) Indoors, welding involving lead-base metals must be done according to WAC 296-307-50015.

(3) In confined spaces or indoors, welding or cutting involving metals containing lead, other than as an impurity, or involving metals coated with lead-bearing materials, including paint, must be done using local exhaust ventilation or airline respirators. Outdoors, such operations must be done using respiratory protective equipment approved by the Mine Safety and Health Administration (MSHA) and the National Institute for Occupational Safety and Health (NIOSH) for such purposes. In all cases, employees in the immediate vicinity of the cutting operation must be protected as necessary by local exhaust ventilation or airline respirators.

Note: See chapter 296-62 WAC for additional requirements on lead.

WAC 296-307-50025 What requirements apply to welding beryllium? Welding or cutting indoors, outdoors, or in confined spaces involving beryllium-containing base or filler metals must be done using local exhaust ventilation and airline respirators unless atmospheric tests under the most adverse conditions have established that employee exposure
is within the acceptable concentrations defined by WAC 296-307-62625. In all cases, employees in the immediate vicinity of the welding or cutting operations must be protected as necessary by local exhaust ventilation or airline respirators.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-50025, filed 12/21/04, effective 4/2/05. 97-09-013, recodified as § 296-307-50025, filed 4/7/97, effective 4/7/97. Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-50025, filed 10/31/96, effective 12/1/96.]

WAC 296-307-50027 What requirements apply to welding cadmium? (1) Welding or cutting indoors or in confined spaces involving cadmium-bearing or cadmium-coated base metals must be done using local exhaust ventilation or airline respirators unless atmospheric tests under the most adverse conditions have established that employee exposure is within the acceptable concentrations defined by chapter 296-62 WAC. Outdoors, such operations must be done using respiratory protective equipment such as fume respirators approved by the Mine Safety and Health Administration (MSHA) and the National Institute for Occupational Safety and Health (NIOSH) for such purposes.

(2) Welding (brazing) involving cadmium-bearing filler metals must be done using ventilation as prescribed in WAC 296-307-50015 or 296-307-50017 if the work is to be done in a confined space.

Note: See chapter 296-62 WAC for additional requirements on cadmium.

WAC 296-307-50029 What requirements apply to welding mercury? Welding or cutting indoors or in a confined space involving metals coated with mercury-bearing materials, including paint, must be done using local exhaust ventilation or airline respirators unless atmospheric tests under the most adverse conditions have established that employee exposure is within the acceptable concentrations defined by WAC 296-307-62625. Outdoors, such operations must be done using respiratory protective equipment approved by the Mine Safety and Health Administration (MSHA) and the National Institute for Occupational Safety and Health (NIOSH) for such purposes.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-50029, filed 12/21/04, effective 4/2/05. 97-09-013, recodified as § 296-307-50029, filed 4/7/97, effective 4/7/97. Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-50029, filed 10/31/96, effective 12/1/96.]

Part W

Powered Industrial Trucks (Forklifts)

WAC 296-307-520 Powered industrial trucks (forklifts).

WAC 296-307-52001 What does this section cover? WAC 296-307-520 applies to all powered industrial trucks used in agricultural operations.

WAC 296-307-52003 What is a "powered industrial truck"? "Powered industrial truck" (or "truck") means a fork truck, industrial tractor, platform lift truck, motorized hand truck, or other specialized industrial trucks, powered by electric motors or internal combustion engines. The definition does not include compressed gas-operated industrial trucks, tractor-mounted forklifts, or vehicles intended primarily for earth moving or over-the-road hauling.

WAC 296-307-52005 What manufacturer's requirements apply to powered industrial trucks? (1) All powered industrial trucks in use by an employer must meet the applicable requirements of design, construction and stability as defined by the American National Standards Institute B56.1-1969, Safety Standards for Powered Industrial Trucks, except for vehicles intended primarily for earth moving or over-the-road hauling. All new powered industrial trucks acquired and used by an employer on or after March 1, 2000, must meet the applicable requirements of design, construction and stability as defined in ASME B56.1-1993. The employer must ensure that all powered industrial trucks are inspected, maintained and operated in accordance with this section and the manufacturer's recommendations and specifications.

(2) Approved trucks must have a label indicating approval by the testing laboratory as meeting the specifications and requirements of ANSI B56.1-1969.

(3) Modifications or additions must only be performed with the manufacturer's prior written approval. When modifications or additions are made, capacity, operation, and maintenance instruction plates, tags, or decals must be changed accordingly.

(4) If the truck is equipped with front-end attachments other than factory installed attachments, it must be marked to identify the attachments and show the approximate weight of the truck and attachment combination at maximum elevation with the load centered from side to side.

(5) The user must ensure that all nameplates and markings are in place and legible.

WAC 296-307-52007 What are the classifications of powered industrial trucks? Powered industrial trucks are identified according to the following classifications:
(1) "D" refers to trucks that are diesel engine powered that have minimum safeguards against inherent fire hazards.

(2) "DS" refers to diesel powered trucks that, in addition to meeting all the requirements for the type D trucks, with additional safeguards to the exhaust, fuel, and electrical systems.

(3) "DY" refers to diesel powered trucks that have all the safeguards of the DS trucks; in addition, any electrical equipment is completely enclosed. They are equipped with temperature limitation features.

(4) "E" refers to electrically powered trucks with minimum acceptable safeguards against inherent fire hazards.

(5) "ES" refers to electrically powered trucks that, in addition to all of the requirements for the E trucks, are provided with additional safeguards to the electrical system to prevent emission of hazardous sparks and to limit surface temperatures.

(6) "EE" refers to electrically powered trucks that have, in addition to all of the requirements for the E and ES type trucks, have their electric motors and all other electrical equipment completely enclosed.

(7) "EX" refers to electrically powered trucks that differ from E, ES, or EE type trucks in that the electrical fittings and equipment are so designed, constructed, and assembled to be used in atmospheres containing flammable vapors or dusts.

(8) "G" refers to gasoline powered trucks that have minimum acceptable safeguards against inherent fire hazards.

(9) "GS" refers to gasoline powered trucks with additional safeguards to the exhaust, fuel, and electrical systems.

(10) "LP" refers to liquefied petroleum gas-powered trucks that have minimum acceptable safeguards against inherent fire hazards.

(11) "LPS" refers to LP-gas powered trucks that in addition to meeting the requirements for LP trucks, are provided with additional safeguards to the exhaust, fuel, and electrical systems.

WAC 296-307-52009 What must a user consider before choosing a powered industrial truck? Before choosing the industrial truck to use, the user must determine whether the atmosphere or location is hazardous or nonhazardous. The type of industrial truck must be chosen according to the requirements of WAC 296-307-52011.

WAC 296-307-52011 What requirements determine which trucks to use in specific hazardous environments? Following are the minimum truck types required in specific hazardous environments. You may choose to use industrial trucks having greater safeguards. Tables W-1 and W-2 give specific vehicle usage information by Group and Class.

### TABLE W-1

**SUMMARY TABLE ON USE OF INDUSTRIAL TRUCKS IN VARIOUS LOCATIONS**

**Trucks conforming to these types may also be used.**

1. Powered industrial trucks are prohibited in atmospheres with a hazardous concentration of:
   - Acetaldehyde,
   - Acetylene,
   - Butadiene,
   - Cyclopropane,
   - Diethyl ether,
   - Ethylene,
   - Ethylene oxide,
   - Hydrogen (or gases or vapors equivalent in hazard to hydrogen, such as manufactured gas),
   - Isoprene,
   - Propylene oxide, or
   - Unsymmetrical dimethyl hydrazine (UDMH).
   (a) Only approved EX trucks, or other trucks approved by the manufacturer, may be used in atmospheres containing hazardous concentrations of metal dust, including:
      - Aluminum, magnesium, and their commercial alloys;
      - Other dusts of similarly hazardous characteristics; or
      - In atmospheres containing:
        - Carbon black,
        - Coal, or
        - Coke dust.
   (b) In atmospheres where dust of magnesium, aluminum or aluminum bronze may be present, fuses, switches, motor controllers, and circuit breakers of trucks must have enclosures specifically approved for such locations.
2. Only approved EX trucks, or other trucks approved by the manufacturer, may be used in atmospheres containing:
   - Acetone,
   - Acrylonitrile,
   - Alcohol,
   - Ammonia,
   - Benzine,
   - Benzol,
   - Butane,
   - Ethylene dichloride,
   - Gasoline,
   - Hexane,
   - Lacquer solvent vapors,
   - Naphtha,
   - Natural gas,
   - Propane,
   - Propylene,
   - Styrene,
   - Vinyl acetate,
   - Vinyl chloride, or
   - Xylenes
   in quantities sufficient to produce explosive or ignitable mixtures.
3. Only approved DY, EE, or EX trucks, or other trucks approved by the manufacturer, may be used in locations where volatile flammable liquids or flammable gases are handled, processed or used, if the hazardous liquids, vapors or gases are normally confined within closed containers or closed systems from which they can escape only in case of accidental rupture or breakdown, or in case of abnormal equipment operation.
   - Only approved DY, EE, or EX trucks, or other trucks approved by the manufacturer, may also be used in locations in which hazardous concentrations of gases or vapors are normally prevented by mechanical ventilation but that might become hazardous through failure or abnormal operation of the ventilating equipment.
4. Only approved DS, ES, GS, or LPS trucks, or other trucks approved by the manufacturer, may be used in locations used for the storage of hazardous liquids in sealed containers or liquefied or compressed gases in containers. This classification includes locations where volatile flammable liquids or flammable gases or vapors are used but are hazardous only in case of an accident or an unusual operation condition.
   The quantity of hazardous material that might escape in case of accident, the adequacy of ventilating equipment, the total area involved, and the business's history of explosions or fires are all factors that should be considered in determining which truck has sufficient safeguards for the location.

---

*Title 296 WAC—p. 2550* (2007 Ed.)
(a) Only approved EX trucks, or other trucks approved by the manufacturer, may be used in atmospheres in which combustible dust is or may be suspended in quantities sufficient to produce explosive or ignitable mixtures, or where mechanical failure or abnormal operation of machinery or equipment might cause such mixtures to be produced.

(b) The EX classification, or other trucks approved by the manufacturer as having equal or greater safeguards, usually includes the working areas of:

- Grain handling and storage plants,
- Rooms containing grinders or pulverizers,
- Cleaners,
- Graders,
- Scalpers,
- Open conveyors or spouts,
- Open bins or hoppers,
- Mixers or blenders,
- Automatic or hopper scales,
- Packing machinery,
- Elevator heads and boots,
- Stock distributors,
- Dust and stock collectors (except all-metal collectors vented to the outside),

and all similar dust producing machinery and equipment in:

- Grain processing plants,
- Starch plants,
- Sugar pulverizing plants,
- Malting plants,
- Hay grinding plants, and other similar locations; and,
- Areas where combustible dust may, under normal operating conditions, be present in the air in quantities sufficient to produce explosive or ignitable mixtures.

(5) Only approved DY, EE, or EX trucks, or other trucks approved by the manufacturer, may be used in atmospheres in which deposits or accumulations of combustible dust may be ignited by arcs or sparks from the truck, if combustible dust will not normally be suspended or thrown into suspension by the normal operation of equipment or apparatus in quantities sufficient to produce explosive or ignitable mixtures.

(6) Only approved DY, EE, or EX trucks, or other trucks approved by the manufacturer, may be used in locations with easily ignitable fibers or flyings if the fibers or flyings are not likely to be suspended in quantities sufficient to produce ignitable mixtures.

(7) Only approved DS, DY, ES, EE, EX, GS, or LPS trucks, or other trucks approved by the manufacturer, may be used in locations, including outside storage, where easily ignitable fibers are stored or handled, but are not processed or manufactured. E trucks that have been previously used in these locations may continue to be used.

(8) If storage warehouses and outside storage locations are hazardous, the specified approved truck, or other truck approved by the manufacturer, must be used. If not classified as hazardous, any approved D, E, G, or LP truck, or other truck approved by the manufacturer, may be used, or trucks meeting the requirements for these types may be used.

WAC 296-307-52013 In what environments may converted trucks be used? When powered industrial trucks that were originally approved to use gasoline are converted to use LP-gas according to WAC 296-307-52047(12), they may be used in locations where G, GS or LP, and LPS trucks are specified.

WAC 296-307-52015 What requirements apply to overhead safety guards? (1) High-lift rider trucks must be fitted with an overhead guard manufactured according to WAC 296-307-52005(1), unless operating conditions do not permit.

(2) An overhead guard must be used as protection against falling objects.

Note: An overhead guard is intended to offer protection from the impact of small packages, boxes, bagged material, and other objects involved in the job, but not to withstand the impact of a falling capacity load.

WAC 296-307-52017 What requirements apply to load backrests? (1) A load backrest extension must be used whenever necessary to minimize the possibility of the load or part of it from falling rearward.

(2) If the type of load presents a hazard, the user must equip fork trucks with a vertical load backrest extension manufactured according to WAC 296-307-52005(1).

WAC 296-307-52019 What requirements apply to fuel handling and storage? (1) You must ensure that liquid fuels such as gasoline and diesel fuel are stored and handled according to NFPA Flammable and Combustible Liquids Code (NFPA No. 30–1996).

(2) You must ensure that LP-gas fuel is stored and handled according to NFPA Storage and Handling of Liquefied Petroleum Gases (NFPA No. 58–1998).

WAC 296-307-52021 What requirements apply to lighting for operating areas? (1) Adequate lighting should be provided in operating areas. (See ANSI Practice for Industrial Lighting, ANSI/IES RP-7 1990.)
(2) Where general lighting is inadequate, directional lighting must be provided on the truck.

WAC 296-307-52023  What level of carbon monoxide gas is allowed? Concentration levels of carbon monoxide gas created by truck operations must not exceed the levels specified in WAC 296-62-075, Part L (general occupational health standards).

Note: Questions concerning degree of concentration and methods of sampling should be referred to a qualified industrial hygienist.

WAC 296-307-52025  What requirements apply to dockboards (bridge plates)? (1) Portable and powered dockboards must be strong enough to support the load carried on them.

(2) Portable dockboards must be secured in position, either by anchors or anti-slipping devices.

(3) Powered dockboards must meet the design and construction requirements of Commercial Standard CS202-56 (1956) "Industrial Lifts and Hinged Loading Ramps" published by the U.S. Department of Commerce.

(4) Dockboard or bridge plates must be driven over carefully and slowly and their rated capacity never exceeded.

(5) Portable dockboards must have handholds for safe handling.

(6) Railroad cars must be kept stationary while dockboards or bridge plates are in position.

WAC 296-307-52027  What rules apply to loading trucks, trailers, and railroad cars with powered industrial trucks? (1) Wheel stops or other positive protection must be provided to prevent railroad cars from moving during loading or unloading.

(2) Fixed jacks may be necessary to support a semi-trailer and prevent up-ending during loading or unloading if the trailer is not coupled to a tractor.

(3) Many truck-trailers are equipped with a rear-end protection device to prevent cars from wedging underneath during a collision. These protection devices must be used with equipment that secures the truck-trailer to the loading dock. Wheel chocks are not required under the following conditions:

(a) Trucks or trailers are secured to the loading dock with a mechanical system that prevents movement away from the dock during loading, unloading, and boarding.

(b) All of the mechanical equipment is installed, maintained, and used as recommended by the manufacturer.

(c) Any damaged mechanical equipment is removed from service immediately and is not used to secure trucks and trailers.

(4) The flooring of trucks, trailers, and railroad cars must be checked for breaks and weakness before use.

WAC 296-307-52029  What are the operator training requirements for powered industrial trucks? (1) Safe operation.

(a) The employer must ensure that each powered industrial truck operator is trained in the safe operation of a powered industrial truck, and is competent to operate a powered industrial truck safely.

(b) Prior to permitting an employee to operate a powered industrial truck (except for training purposes), the employer must ensure that each operator has successfully completed the training required by this section.

(2) Training program implementation.

(a) Trainees may operate a powered industrial truck only under the direct supervision of persons who have the knowledge, training, and experience to train operators and where such operation does not endanger the trainee or other employees.

Note: The employer, or any other qualified person of the employer's choosing, may give required training and evaluation.

(b) Training must consist of formal instruction and/or practical training, conveyed in a manner that the trainee understands.

Note: Formal instruction may include lecture, discussion, interactive computer learning, video tape and/or written material. Practical training may include demonstrations performed by the trainer and practical exercises performed by the trainee.

(3) Training program content. Powered industrial truck operators must receive initial training in the topics that follow, except in topics that the employer can demonstrate are not applicable to safe operation of the truck in the employer's workplace.

(a) Truck-related topics:

• Operating instructions, warnings and precautions for the types of truck the operator will be authorized to operate;

• Differences between the truck and the automobile;

• Truck controls and instrumentation: Where they are located, what they do, and how they work;

• Engine or motor operation;

• Steering and maneuvering;

• Visibility (including restrictions due to loading);

• Fork and attachment adaptation, operation, and use limitations;

• Vehicle capacity;

• Vehicle stability;

• Any vehicle inspection and maintenance that the operator will be required to perform;

• Refueling and/or charging and recharging of batteries;

• Operating limitations;
The employer must ensure that operators of powered industrial trucks are trained, as has previously received training in a topic specified in subsection (3) of this section, and such training is appropriate to the case of a powered industrial truck, the distance is measured as the number of feet of rise or fall over a hundred foot horizontal distance (the slope is expressed as a percent).

"Center of gravity" means the point on an object at which all of the object's weight is concentrated. For symmetrical loads, the center of gravity is at the middle of the load.

"Counterweight" means the weight that is built into the truck's basic structure and is used to offset the load's weight and to maximize the vehicle's resistance to tipping over.

"Fulcrum" means the truck's axis of rotation when it tips over.

"Grade" means the slope of a surface, which is usually measured as the number of feet of rise or fall over a hundred foot horizontal distance (the slope is expressed as a percent).

"Lateral stability" means a truck's resistance to overturning sideways.

"Line of action" means an imaginary vertical line through an object's center of gravity.

"Load center" means the horizontal distance from the load's edge (or the fork's or other attachment's vertical face) to the line of action through the load's center of gravity.

"Longitudinal stability" means the truck's resistance to overturning forward or rearward.

"Moment" means the product of the object's weight times the distance from a fixed point (usually the fulcrum). In the case of a powered industrial truck, the distance is measured from the point at which the truck will tip over to the object's line of action. The distance is always measured perpendicular to the line of action.

"Track" means the distance between the wheels on the same axle of the truck.

"Wheelbase" means the distance between the centerline of the vehicle's front and rear wheels.

(2) General.

(a) Determining the stability of a powered industrial truck is simple once a few basic principles are understood. There are many factors that contribute to a vehicle's stability: The vehicle's wheelbase, track, and height; the load's weight distribution; and the vehicle's counterweight location (if the vehicle is so equipped).

(b) The "stability triangle," used in most stability discussions, demonstrates stability simply (see Figures 1 and 2).

(3) Basic principles.

(a) Whether an object is stable depends on the object's "moment" (see definitions, this section) at one end of a system being greater than, equal to, or smaller than the object's moment at the system's other end. This principle can be seen in the way a seesaw or teeter-totter works: That is, if the product of the load and distance from the fulcrum (moment) is equal to the moment at the device's other end, the device is balanced and it will not move. However, if there is a greater moment at one end of the device, the device will try to move downward at the end with the greater moment.

(b) The longitudinal stability of a counterbalanced powered industrial truck depends on the vehicle's moment and the
Load's moment. In other words, if the mathematic product of the load-moment (the distance from the front wheels, the approximate point at which the vehicle would tip forward) to the load's center of gravity times the load's weight is less than the vehicle's moment, the system is balanced and will not tip forward. However, if the load's moment is greater than the vehicle's moment, the greater load-moment will force the vehicle to tip forward.

(4) The stability triangle.
(a) Almost all counterbalanced powered industrial trucks have a three-point suspension system, that is, the vehicle is supported at three points. This is true even if the vehicle has four wheels. The truck's steer axle is attached to the truck by a pivot pin in the axle's center. When the points are connected with imaginary lines, this three-point support forms a triangle called the stability triangle. Figure 1 depicts the stability triangle.

![Figure 1](image1.png)

Notes: 1. When the vehicle is loaded, the combined center of gravity shifts toward line B-C. Theoretically, the maximum load will result in the center of gravity at the line B-C. In actual practice, the combined center of gravity should never be at line B-C.
2. The addition of additional counterweight will cause the truck center of gravity to shift toward point A and result in a truck that is less stable laterally.

(b) When the vehicle's line of action, or load center, falls within the stability triangle, the vehicle is stable and will not tip over. However, when the vehicle's line of action or the vehicle/load combination falls outside the stability triangle, the vehicle is unstable and may tip over.

![Figure 2](image2.png)

(5) Longitudinal stability.
(a) The axis of rotation when a truck tips forward is the front wheels' points of contact with the pavement. When a powered industrial truck tips forward, the truck will rotate about this line. When a truck is stable, the vehicle-moment must exceed the load-moment. As long as the vehicle-moment is equal to or exceeds the load-moment, the vehicle will not tip over. On the other hand, if the load-moment slightly exceeds the vehicle-moment, the truck will begin to tip forward, thereby causing the rear to lose contact with the floor or ground and resulting in loss of steering control. If the load-moment greatly exceeds the vehicle-moment, the truck will tip forward.

(b) To determine the maximum safe load-moment, the truck manufacturer normally rates the truck at a maximum load at a given distance from the front face of the forks. The specified distance from the front face of the forks to the line of action of the load is commonly called the load center. Because larger trucks normally handle loads that are physically larger, these vehicles have greater load centers. Trucks with a capacity of 30,000 pounds or less are normally rated at a given load weight at a 24-inch load center. Trucks with a capacity greater than 30,000 pounds are normally rated at a given load weight at a 36- or 48-inch load center. To safely operate the vehicle, the operator should always check the data plate to determine the maximum allowable weight at the rated load center.

(c) Although the true load-moment distance is measured from the front wheels, this distance is greater than the distance from the front face of the forks. Calculating the maximum allowable load-moment using the load-center distance always provides a lower load-moment than the truck was designed to handle. When handling unusual loads, such as those that are larger than 48 inches long (the center of gravity is greater than 24 inches) or that have an offset center of gravity, etc., a maximum allowable load-moment should be calculated and used to determine whether a load can be safely handled. For example, if an operator is operating a 3,000-pound capacity truck (with a 24-inch load center), the maximum allowable load-moment is 72,000 inch-pounds (3,000 times 24). If a load is 60 inches long (30-inch load center), then the maximum that this load can weigh is 2,400 pounds (72,000 divided by 30).

(6) Lateral stability.
(a) The vehicle's lateral stability is determined by the line of action's position (a vertical line that passes through the combined vehicle's and load's center of gravity) relative to the stability triangle. When the vehicle is not loaded, the truck's center of gravity location is the only factor to be considered in determining the truck's stability. As long as the line of action of the combined vehicle's and load's center of gravity falls within the stability triangle, the truck is stable and will not tip over. However, if the line of action falls outside the stability triangle, the truck is not stable and may tip over. Refer to Figure 3.

(b) Factors that affect the vehicle's lateral stability include the load's placement on the truck, the height of the load above the surface on which the vehicle is operating, and the vehicle's degree of lean.

[Title 296 WAC—p. 2554]
(7) Dynamic stability.

(a) Up to this point, the stability of a powered industrial truck has been discussed without considering the dynamic forces that result when the vehicle and load are put into motion. The weight's transfer and the resultant shift in the center of gravity due to the dynamic forces created when the machine is moving, braking, cornering, lifting, tilting, and lowering loads, etc., are important stability considerations.

(b) When determining whether a load can be safely handled, the operator should exercise extra caution when handling loads that cause the vehicle to approach its maximum design characteristics. For example, if an operator must handle a maximum load, the load should be carried at the lowest position possible, the truck should be accelerated slowly and evenly, and the forks should be tilted forward cautiously. However, no precise rules can be formulated to cover all of these eventualities.

[Statutory Authority: RCW 49.17.040, [49.17.050 and [49.17.060. 00-01-176, § 296-307-52030, filed 4/7/97, effective 4/7/97.]

WAC 296-307-52031 What requirements apply to operating powered industrial trucks? (1) No operator may drive a truck up to anyone standing in front of a fixed object.

(2) No one may stand or pass under the elevated portion of any truck, whether loaded or empty.

(3) Employers must not allow people to ride on powered industrial trucks unless a safe place to ride is provided.

(4) Employers must prohibit employees from placing any body parts between the uprights of the mast or outside the running lines of the truck.

(5) When an operator leaves a powered industrial truck unattended:

(a) The load must be fully lowered;

(b) The controls must be neutralized;

(c) The power must be shut off; and

(d) The brakes must be set.

(e) If the truck is parked on an incline, the wheels must be blocked.

A powered industrial truck is "unattended" when the operator is 25 feet or more away from the vehicle, which remains in view, or whenever the operator leaves the vehicle and it is not in view.

(6) When a truck operator is dismounted, within 25 feet of the truck, and still in view, the load must be fully lowered, the controls must be neutralized, and the brakes must be set to prevent movement.

(7) The operator must maintain a safe distance from the edge of ramps or platforms while operating on any elevated dock, or platform or freight car.

(8) There must be enough headroom for trucks to operate under overhead installations, lights, pipes, sprinkler systems, or other overhead projections.

(9) An active operator protection restraint device (such as a seatbelt or lap-bar) or system must be used, when provided.

[Statutory Authority: RCW 49.17.010, [49.17.040 and [49.17.050. 00-01-176, § 296-307-52030, filed 12/21/99, effective 3/1/00.]

WAC 296-307-52033 When may trucks be used to open or close freight car doors? Trucks may only be used for opening or closing freight car doors with an approved device that meets the following requirements:

(1) The door opening or closing device requires that the force applied by the device to the door is parallel to the door travel.

(2) The truck operator is trained in the use of the door opening or closing device and keeps the operation in full view while opening and closing.

(3) The area is clear of people while the door is moved with a device.

(4) Employees on the platform are protected from falling objects according to the operating conditions.

(5) A safety platform is firmly secured to the lifting carriage or forks.

(6) The truck is equipped with vertical only, or vertical and horizontal controls elevatable with the lifting carriage or forks.

(7) The area is clear of people while opening and closing.

(8) A powered industrial truck is "unattended" when the operator is 25 feet or more away from the vehicle, which remains in view, or whenever the operator leaves the vehicle and it is not in view.

WAC 296-307-52035 What requirements apply to lifting employees on the forks of trucks? Employees may be lifted on the lifting carriage or forks of a powered industrial truck under the following conditions:

(1) The truck is equipped with vertical only, or vertical and horizontal controls elevatable with the lifting carriage or forks.

(2) A safety platform is firmly secured to the lifting carriage or forks.

(3) Employees on the platform have a mechanism to shut off power to the truck.

(4) Employees on the platform are protected from falling objects according to the operating conditions.

(5) An active operator protection restraint device (such as a seatbelt or lap-bar) or system must be used, when provided.

(6) The truck is equipped with vertical only, or vertical and horizontal controls elevatable with the lifting carriage or forks.

(7) The area is clear of people while opening and closing.

WAC 296-307-52037 What requirements apply to using platforms for hoisting employees? A platform built specifically for hoisting employees may be used to lift employees when:

(1) The platform is securely attached to the forks and has standard guardrails and toeboards installed on all sides.

(2) The hydraulic system is designed so that the lift mechanism is designed so that the lift mechanism will not drop faster than 135 feet per minute in the event of a failure in any part of the system. Forklifts used for elevating work platforms are identified as meeting this requirement.

(3) A safety strap is installed or the control lever is locked to prevent the boom from tilting.

(4) An operator attends the lift equipment while employees are on the platform.

(5) The operator is in the normal operating position while raising or lowering the platform.

(6) The vehicle remains stationary while employees are on the platform.

Exception: Inching or maneuvering at very slow speed is permissible.

(7) The area between employees on the platform and the mast is adequately guarded to prevent contact with chains or other shear points.

[Title 296 WAC—p. 2555]
WAC 296-307-52039 What requirements apply to traveling in a powered industrial truck? (1) The operator must maintain a safe distance of approximately three truck lengths from the truck ahead. The truck must be kept under control at all times.

(2) The operator must yield the right of way to ambulances, fire trucks, or other vehicles in emergency situations.

(3) Passing other trucks traveling in the same direction at intersections, blind spots, or other dangerous locations is prohibited.

(4) Railroad tracks must be crossed diagonally wherever possible. The operator must not park closer than 8 feet from the center of railroad tracks.

(5) The operator must look in the direction of, and keep a clear view of, the path of travel.

(6) Stunt driving and horseplay are prohibited.

(7) The operator must approach elevators slowly, and then enter squarely after the elevator car is properly leveled. Once on the elevator, the operator must neutralize controls, shut off power, and set the brakes.

(8) Motorized hand trucks must enter elevator or other confined areas with load end forward.

(9) The operator must avoid running over loose objects on the roadway surface.

(10) Access to fire aisles, stairways, and fire equipment must be kept clear.

WAC 296-307-52041 What requirements apply to traveling speeds of powered industrial trucks? (1) The operator must observe all traffic regulations, including authorized plant speed limits.

(2) The operator must slow down and sound the horn at cross aisles and other locations where vision is obstructed. If the load obstructs a forward view, the driver must travel with the load trailing.

Exception: If traveling with the load trailing creates new hazards, it is not required.

(3) The operator must ascend and descend grades slowly.

(a) At grades over 10 percent, loaded trucks must be driven with the load upgrade.

(b) Unloaded trucks should be operated on all grades with the load carrier downgrade.

(c) On all grades the load and load carrier must be tilted back if applicable, and raised only as far as necessary to clear the road surface.

(4) Under all travel conditions, the truck must be operated at a speed that will permit it to be stopped safely.

(5) The driver must slow down for wet and slippery floors.

(6) While negotiating turns, the operator must slow to a safe speed and turn the wheel in a smooth, sweeping motion.

WAC 296-307-52043 What requirements apply to loading powered industrial trucks? (1) All loads must be stable or safely arranged. Exercise caution when handling off-center loads that cannot be centered.

(2) All loads must be within the rated capacity of the truck.

(3) Take care securing, manipulating, positioning, and transporting loads when attachments are used. Trucks with attachments must be operated as partially loaded trucks when not handling a load.

(4) Place the load carrier under the load as far as possible. Tilt the mast backward to stabilize the load.

(5) Use extreme care when tilting the load forward or backward, particularly when high tiering. Avoid tilting the load forward with the load carrier elevated except to pick up a load, or when the load is in a deposit position over a rack or stack. When stacking or tiering, use only enough backward tilt to stabilize the load.

WAC 296-307-52045 What requirements apply to servicing powered industrial trucks? (1) Powered industrial trucks that need repairs, are defective, or in any way unsafe must be taken out of service until restored to safe operating condition.

(2) Stop the engine before filling fuel tanks. Avoid spilling fuel.

(3) When oil or fuel spills, wash the spill away carefully or evaporate the spill completely and replace the fuel tank cap before restarting engine.

(4) No truck may be operated with a leak in the fuel system.

(5) Open flames are prohibited for checking electrolyte level in storage batteries or gasoline level in fuel tanks.

[Statutory Authority: RCW 49.17.040, 49.17.050 and 49.17.060. 96-22-048, § 296-306A-52045, filed 10/31/96, effective 12/1/96.]

WAC 296-307-52047 What requirements apply to maintaining powered industrial trucks? (1) Powered industrial trucks must be removed from service when not in safe operating condition. All repairs must be made by an authorized employee.

(2) No repairs may be made in Class I, II, and III locations.

(3) When repairs to fuel and ignition systems of industrial trucks involve fire hazards, the repairs must be conducted only in designated locations.

(4) Trucks in need of repairs to the electrical system must have the battery disconnected prior to repair.

(5) Industrial truck parts must be replaced only by parts of equivalent safety.

(6) Industrial trucks must not be altered so that the relative positions of parts are different from when they were manufactured. Industrial trucks must not have parts added or eliminated, except as provided in WAC 296-307-52005. Fork trucks must not have additional counterweighting added unless approved by the truck manufacturer.

(7) Industrial trucks must be examined at least daily before being placed in service. Industrial trucks must not be placed in service if the examination shows any unsafe condition.

Where industrial trucks are used on a round-the-clock basis, they shall be examined after each shift. Defects must be immediately reported and corrected.

(8) Water mufflers must be filled daily or as frequently as necessary to prevent the water supply from dropping below 75 percent. Vehicles must not be operated if muffler screens or other parts are clogged. Any vehicle that emits hazardous sparks or flames from the exhaust system must immediately be removed from service until the emission of such sparks and flames has been eliminated.

(9) When the temperature of any part of any truck exceeds its normal operating temperature, the vehicle must be removed from service until the cause for overheating has been eliminated.

(10) Industrial trucks must be kept clean and free of excess accumulations of combustible materials, oil, and grease. Noncombustible agents should be used for cleaning trucks. Low flash point (below 100°F) solvents must not be used. High flash point (at or above 100°F) solvents may be used. Take precautions regarding toxicity, ventilation, and fire hazard according to the agent or solvent used.

(11) Industrial trucks originally approved to use gasoline fuel may be converted to use LP-gas fuel if the converted truck has the features specified for LP or LPS designated trucks. The converted equipment must be approved. You may find a description of the conversion system and the recommended method of installation in the "listed by report" of a nationally recognized testing laboratory.

Part X
Rim Wheel Servicing

WAC 296-307-530 Rim wheel servicing.

WAC 296-307-53001 What does this section cover? WAC 296-307-530 applies to the servicing of multipiece and single-piece rim wheels used on large vehicles such as trucks, tractors, trailers, buses and off-road machines. It does not apply to servicing rim wheels used on automobiles, or on pickup trucks and vans with automobile tires or truck tires designated "LT."

WAC 296-307-53003 What definitions apply to rim wheel servicing? "Barrier" means a fence, wall, or structure placed between a single-piece rim wheel and an employee during tire inflation, to contain the rim wheel components in the event of the sudden release of the contained air of the single-piece rim wheel.

"Charts" means the United States Department of Labor, Occupational Safety and Health Administration (OSHA) publications entitled "Demounting and Mounting Procedures for Truck/Bus Tires" and "Multi-Piece Rim Matching Chart," the National Highway Traffic Safety Administration (NHTSA) publications entitled "Demounting and Mounting Procedures for Truck/Bus Tires" and "Multi-Piece Rim Matching Chart," or any other poster that contains at least the same instructions, safety precautions and other information contained in the charts that is applicable to the types of wheels being serviced.

"Installing a rim wheel" means the transfer and attachment of an assembled rim wheel onto a vehicle axle hub. "Removing" means the opposite of installing.

"Mounting a tire" means the assembly or putting together of the wheel and tire components to form a rim wheel, including inflation. "Demounting" means the opposite of mounting.

"Multipiece rim wheel" means the assembly of a multipiece wheel with the tire tube and other components.

"Multipiece wheel" means a vehicle wheel consisting of two or more parts, one of which is a side or locking ring designed to hold the tire on the wheel by interlocking components, when the tire is inflated.

"Restraining device" means a cage, rack, assembly of bars, or other components that will constrain all rim wheel components during an explosive separation of a multipiece rim wheel, or during the sudden release of the contained air of a single-piece rim wheel.

"Rim manual" means a publication containing instructions from the manufacturer or other qualified organization for correct mounting, demounting, maintenance, and safety precautions peculiar to the type of wheel being serviced.

"Rim wheel" means an assembly of tire, tube and liner (where appropriate), and wheel components.

"Service" or "servicing" means the mounting and demounting of rim wheels, and related activities such as inflating, deflating, installing, removing, and handling.

"Service area" means that part of an employer's premises used for the servicing of rim wheels, or any other place where an employee services rim wheels.

"Single-piece rim wheel" means the assembly of single-piece rim wheel with the tire and other components.

"Single-piece wheel" means a vehicle wheel consisting of one part, designed to hold the tire on the wheel when the tire is inflated.

"Trajectory" means:
• Any potential path that a rim wheel component may travel during an explosive separation, or the sudden release of the pressurized air; or
• An area at which an air blast from a single-piece rim wheel may be released.

The trajectory may deviate from paths that are perpendicular to the assembled position of the rim wheel. (See Figure for examples of trajectories.)
"Wheel" means the part of a rim wheel that provides the method of attachment of the assembly to the axle of a vehicle and also provides the means to contain the inflated portion of the assembly (i.e., the tire and/or tube).

[Statutory Authority: RCW 49.17.040, [49.17.]050 and [49.17.]060. 96-22-048, § 296-306A-53003, filed 10/31/96, effective 12/1/96.]

**WAC 296-307-53005 What training must an employer provide for employees who service rim wheels?**

(1) You must implement a training program that covers at least the following:

(a) The hazards involved in servicing rim wheels;

(b) The safe operating procedures for the types of wheel serviced, described in WAC 296-307-53013 and 296-307-53015; and

(c) The applicable data contained in the charts (rim manuals) and the contents of this standard.

(2) You must ensure that each employee demonstrates and maintains the ability to service rim wheels safely, including the following:

(a) Demounting tires (including deflation);

(b) Inspecting and identifying the rim wheel components;

(c) Mounting tires (including inflation with a restraining device or other safeguard required by this section);

(d) Using the restraining device and other equipment required by this section;

(e) Handling rim wheels;

(f) Inflating the tire when a single-piece rim wheel is mounted on a vehicle;

(g) Understanding the necessity of standing outside the trajectory both during inflation of the tire and during inspection of the rim wheel following inflation; and

(h) Installing and removing rim wheels.

(3) If you believe that any employee is unable to read and understand the charts or rim manual, you must instruct the employee in the contents of the charts and rim manual in a manner that the employee can understand.

(4) You must evaluate each employee's ability to perform these tasks safely, and provide additional training as necessary to ensure that each employee maintains proficiency.

**WAC 296-307-53007 What requirements apply to restraining devices?**

(1) You must furnish a restraining device for inflating tires on multipiece wheels.

(2) You must provide a restraining device for inflating tires on single-piece wheels unless the rim wheel will be bolted onto a vehicle during inflation.

(3) Restraining devices must:

(a) Withstand the force of a rim wheel separation occurring at 150% of the maximum tire pressure for the rim wheel being serviced.

(b) Prevent the rim wheel components from being thrown out of the device.

(c) The restraining device is visually inspected before each day's use and after any rim wheel separation or sudden release of contained air. Any damaged restraining device is immediately removed from service.

(d) If the restraining device is removed from service, it is not returned to service until repaired and reinspected. If the restraining device requires structural repair, it is not returned to service until certified by either the manufacturer or a registered professional engineer to meet the strength requirements of (a) of this subsection.

WAC 296-307-53009 What other equipment must an employer provide for rim wheel servicing? (1) You must furnish an air line assembly and ensure that employees use it for inflating tire.

(2) The air line assembly must contain the following components:
(a) A clip-on chuck;
(b) An in-line valve with a pressure gauge or a presettable regulator; and
(c) Enough hose between the clip-on chuck and the in-line valve (if one is used) to allow the employee to stand outside the trajectory.

(3) Current charts or rim manuals for the types of wheels being serviced shall be available in the service area.

(4) You must furnish the tools recommended in the rim manual for the type of wheel being serviced and ensure that they are the only tools used to service rim wheels.

(5) Tires may be inflated outside a restraining device only to pressure sufficient to force the tire bead onto the rim ledge and to create an airtight seal with the tire and bead.

(6) Whenever a rim wheel is in a restraining device, the employee must not rest any part of the body or equipment on the restraining device.

(7) After tire inflation, inspect the tire and wheel components while still within the restraining device. Ensure that they are properly seated and locked. If further adjustment to the tire or wheel components is necessary, deflate the tire by removing the valve core before making adjustments.

(8) Never correct the seating of side and lock rings by hammering, striking, or forcing the components while the tire is pressurized.

(9) Cracked, broken, bent, or otherwise damaged rim components shall not be reworked, welded, brazed, or otherwise heated.

WAC 296-307-53011 What requirements apply to wheel component assembly? (1) You must ensure that multipiece wheel components are not interchanged except as provided in the charts or rim manual.

(2) Multipiece wheel components and single-piece wheels must be inspected prior to assembly. Any wheel or wheel component that is bent out of shape, pitted from corrosion, broken, or cracked shall not be used. Mark damaged wheels or components "unserviceable" and remove from the service area. Replace damaged or leaky valves.

(3) Rim flanges, rim gutters, rings, bead seating surfaces and the bead areas of tires must be free of any dirt, surface rust, scale or loose or flaked rubber build-up prior to mounting and inflation.

(4) The size (bead diameter and tire/wheel widths) and type of both the tire and the wheel must be checked for compatibility before assembly.

WAC 296-307-53013 What are the safe operating procedures for servicing multipiece rim wheels? You must establish safe operating procedures for servicing multipiece rim wheels, and ensure that employees are instructed in and follow the procedures. Your procedures must include at least the following:

(1) Before demounting, remove the valve core to completely deflate the tire.

(2) Mount and demount tires only from the narrow ledge side of the wheel. Take care to avoid damaging the tire beads while mounting. Only mount tires on compatible wheels of matching bead diameter and width.

(3) Apply nonflammable rubber lubricant to bead and wheel mating surfaces before rim wheel assembly, unless the tire or wheel manufacturer recommends against it.

(4) When using a tire changing machine, inflate tires only to the minimum pressure necessary to force the tire bead onto the rim ledge while on the tire changing machine.

(5) When using a bead expander, remove the bead expander before the valve core is installed and as soon as the rim wheel becomes airtight (the tire bead slips onto the bead seat).

(6) Always inflate tires within a restraining device, positioned behind a barrier, or bolted on the vehicle with the lug nuts fully tightened.

(7) Inflate tires only when the trajectory area is clear of flat, solid objects.

(8) Employees stay out of the trajectory when inflating a tire.
(9) Tires must not be inflated to more than the inflation pressure stamped in the sidewall unless a higher pressure is recommended by the manufacturer.

(10) Tires must not be inflated above the maximum pressure recommended by the manufacturer to seat the tire bead firmly against the rim flange.

(11) Heat must not be applied to a single-piece wheel.

(12) Cracked, broken, bent, or otherwise damaged wheels must not be reworked, welded, brazed, or otherwise heated.

**WAC 296-307-53017 How can an employer order the OSHA charts?** OSHA charts are available through OSHA area offices. You may find the address and telephone number of the nearest OSHA office in the local telephone directory under U.S. Government, U.S. Department of Labor, Occupational Safety and Health Administration. Single copies are available without charge.

If you want multiple copies of these charts, you may order them from the Publications Office, U.S. Department of Labor, Room N3101, Washington, D.C. 20210. Telephone: (202) 523-9667.

**Part Y Occupational Health Standards**

**Part Y-1 Employer Chemical Hazard Communication**

**WAC 296-307-550 Employer chemical hazard communication—Introduction.** Important:

Thousands of chemicals can be found in today's workplaces. These chemicals may have the capacity to cause health problems, from minor skin irritations to serious injuries or diseases like cancer.

The employer chemical hazard communication rule was developed to make sure employers and employees are informed about chemical hazards in the workplace.

This rule applies to:

- Employers engaged in businesses where chemicals are used, distributed, or produced for use or distribution.
- Contractors or subcontractors that work for employers engaged in businesses where chemicals are used, distributed, or produced for use or distribution.

Note:

- If you produce, import, distribute and/or repackage chemicals, or choose not to rely on labels or material safety data sheets provided by the manufacturer or importer, you must comply with Material safety data sheets and label preparation, WAC 296-307-560 through 296-307-56050.
- You may withhold trade secret information under certain circumstances, see Trade secrets, WAC 296-62-053, to find out what information may be withheld as a trade secret and what information must be released.

**EXEMPTIONS:**

- For the purposes of this employer hazard communication rule, if you are engaged in agricultural production of crops or livestock, “employee” does not mean:
  - Immediate family members of the officers of any corporation, partnership, sole proprietorship or other business entity or officers of any closely held corporation.
  - Certain products, chemicals, or items are exempt from this rule. Below is a summarized list of these exemptions. See WAC 296-307-55005 at the end of this rule to get complete information about these exemptions:
    - Any hazardous waste or substance
    - Tobacco or tobacco products
    - Wood or wood products that are not chemically treated and will not be processed, for example, by sawing and sanding
    - Food or alcoholic beverages
    - Some drugs, such as retail or prescription medications
    - Retail cosmetics
    - Ionizing and nonionizing radiation
    - Biological hazards
    - Any consumer product or hazardous substance when workplace exposure is the same as that of a consumer
    - Retail products used in offices in the same manner and frequency used by consumers can be termed “consumer products.” Consumer products include things such as: Correction fluid, glass cleaner, and dishwashing liquid.

**Example:**

If you use a household cleaner in your workplace in the same way that a consumer would use it when cleaning their house, the exposure should be the same as the consumer’s. (“In the same way” means using the household cleaner in the same manner and frequency.) A janitor using a household cleaner, such as bleach, throughout the day, is not considered to be consumer use.

- Manufactured items that remain intact are exempt for this rule.

The following are examples:

<table>
<thead>
<tr>
<th>Item</th>
<th>Covered by this rule</th>
<th>Not covered by this rule</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brick</td>
<td>sawed or cut in half</td>
<td>used whole or intact</td>
</tr>
<tr>
<td>Pipe</td>
<td>cut by a torch</td>
<td>bent with a tube bender</td>
</tr>
<tr>
<td>Nylon rope</td>
<td>burning the ends</td>
<td>tying a knot</td>
</tr>
</tbody>
</table>

- Manufactured items that are fluids or in the form of particles are not exempt for this rule.

**Your responsibility:**

To inform and train your employees about the hazards of chemicals they may be exposed to during normal working conditions, or in foreseeable emergencies by:

- Making a list of the hazardous chemicals present in your workplace
- Preparing a written Chemical Hazard Communication Program for your workplace
- Informing your employees about this rule and your program
- Providing training to your employees about working in the presence of hazardous chemicals
- Getting and keeping the material safety data sheets (MSDSs) for the hazardous chemicals
- Making sure that labels on containers of hazardous chemicals are in place and easy to read

**You must:**

Develop, implement, maintain, and make available a written Chemical Hazard Communication Program

**WAC 296-307-55005**

Identify and list all the hazardous chemicals present in your workplace

**WAC 296-307-55010**

Obtain and maintain material safety data sheets (MSDSs) for each hazardous chemical used

**WAC 296-307-55015**

Make sure that material safety data sheets (MSDSs) are readily accessible to your employees

**WAC 296-307-55020**

Label containers holding hazardous chemicals

**WAC 296-307-55025**

(2007 Ed.)
Inform and train your employees about hazardous chemicals in your workplace

WAC 296-307-55030

Follow these rules for laboratories using hazardous chemicals

WAC 296-307-55035

Follow these rules for handling chemicals in factory sealed containers

WAC 296-307-55040

The department must:

Translate certain chemical hazard communication documents upon request

WAC 296-307-55045

Attempt to obtain a material safety data sheet (MSDS) upon request

WAC 296-307-55050

Exemption: Items or chemicals exempt from the rule, and exemptions from labeling

WAC 296-307-55055

Definitions

WAC 296-307-55060

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-17-033, § 296-307-550, filed 8/8/01, effective 9/1/01.]

WAC 296-307-55005 Develop, implement, maintain, and make available a written Chemical Hazard Communication Program. You must:

• Develop, implement, maintain, and make available a written Chemical Hazard Communication Program specifically for your workplace. The Chemical Hazard Communication Program must, at a minimum, include:
  - A list of hazardous chemicals known to be present in your workplace
  - Procedures for making sure all containers are properly labeled
  - A description of how you are going to obtain and maintain your material safety data sheets (MSDSs)
  - A description of how you are going to train and inform your employees about hazardous chemicals in their workplace
  - A description of how you are going to inform your employees about:
    ♦ Chemical hazards used during nonroutine tasks
    ♦ The hazards associated with chemicals contained in unlabeled pipes in their work areas

You must:

• Make sure your written Chemical Hazard Communication Program includes the following communication methods you will apply if you produce, use, or store hazardous chemicals at your workplace(s) in such a way that the employees of other employer(s) may be exposed:
  - Provide the other employer(s) with a copy of the relevant material safety data sheets (MSDSs), or provide access to the MSDSs in a central location at the workplace
  - Inform the other employer(s) of any precautionary measures that need to be taken to protect employees during normal operating conditions and in foreseeable emergencies
  - Describe how to inform the other employer(s) of the labeling system used in the workplace

Note:

• Examples of employees of other employers who could be exposed to chemical hazards that you produce, use, or store in your workplace include employees of construction companies, cleaning services, or maintenance contractors visiting or working on-site.

• Your employees have the right to get chemical hazard communication information from other employers at workplaces where they are working; and employees of other employers have the right to get the information from you when they are working at your workplace.

• Include in your written Chemical Hazard Communication Program the methods that you will use to share information with other employers and their employees at your workplace(s) regarding:
  – Access to MSDSs
  – Precautionary measures such as personal protective equipment (PPE) and emergency plans
  – Any labeling systems used at the workplace.

If you rely on another employer’s chemical hazard communication program to share the information required and the program meets the requirements of this rule, document in your own written Chemical Hazard Communication Program.

You must:

• Make your Chemical Hazard Communication Program available to your employees.

Note:

Where employees must travel between workplaces during a workshift, that is, if their work is carried out at more than one geographical location, the written Chemical Hazard Communication Program may be kept at the primary workplace facility.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-17-033, § 296-307-5505, filed 8/8/01, effective 9/1/01.]

WAC 296-307-55010 Identify and list all the hazardous chemicals present in your workplace. You must:

• Identify all hazardous chemicals in your workplace. This includes any chemical that is known to be present in your workplace in such a way that employees may be exposed to it under normal conditions of use or in a foreseeable emergency.

• Create a list of these chemicals using the chemical or common name on the material safety data sheet (MSDS). This list:
  – Must be compiled for the workplace as a whole, or for individual work areas.
  – Is necessary to make sure that all hazardous chemicals are identified and that MSDS, and labeling rules are met.
  – Must be current.

Note:

The following are some ways to determine whether a product is hazardous:

• Look for words or “hazard coding” that indicate that the chemical is flammable, an irritant, corrosive, carcinogenic, etc. "Hazard coding" refers to words, numbers, or colors that tell you a chemical is dangerous.

• Check the product's MSDS for hazard information.

Examples of hazardous chemicals are: Acids, adhesives, caustics, fuels, paints, varnishes, shellacs and pesticides. Too many other classes of hazardous chemicals exist to list them all here. If you have any questions about a chemical you have at your workplace, contact your local L&I office.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-17-033, § 296-307-55010, filed 8/8/01, effective 9/1/01.]

WAC 296-307-55015 Obtain and maintain material safety data sheets (MSDSS) for each hazardous chemical used.

You must:

[Title 296 WAC—p. 2561]
• Obtain a MSDS for each hazardous chemical used as soon as possible if the MSDS is not provided with the shipment of a hazardous chemical from the chemical manufacturer or importer.

Note:
• To obtain a MSDS, you may try calling the manufacturer or checking their web site.
• If you have a commercial account with a retailer or wholesaler, you have the right to request and receive a MSDS about hazardous chemicals you purchase.
• If a chemical is purchased from a retailer with no commercial accounts, you have the right to request and receive the manufacturer's name and address so that you can contact them and request a MSDS for the chemical.
• Whoever prepares the MSDS is required to mark all blocks on the form, even if there is no relevant information for that section.
• If you have problems getting a MSDS within 30 calendar days after making a written request to the chemical manufacturer, importer, or distributor, you can get help from WISHA. You may contact your local regional office for assistance or make a written request for assistance to the: Department of Labor and Industries Right-to-Know Program P.O. Box 44610 Olympia, Washington 98504-4610

Include in your request:
– A copy of the purchaser's written request to the chemical manufacturer, importer, or distributor
– The name of the product suspected of containing a hazardous chemical
– The identification number of the product, if available
– A copy of the product label, if available
– The name and address of the chemical manufacturer, importer, or distributor from whom the product was obtained

You must:
• Maintain a MSDS for each hazardous chemical:
  - Keep copies of the required MSDSs for each hazardous chemical present in your workplace. These may be kept in any form, including as a part of operating procedures.
  - Each MSDS must be in English. You may also keep copies in other languages.

Note:
• If you choose not to rely on MSDSs or labels provided by the manufacturer or importer, you must comply with the chemical hazard communication standard for manufacturers, importers, and distributors, WAC 296-307-560 through 296-307-56050.
• It may be more appropriate to address the hazards of a process rather than individual hazardous chemicals. MSDSs can be designed to cover groups of hazardous chemicals in a work area.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-17-033, § 296-307-55020, filed 8/8/01, effective 9/1/01.]

WAC 296-307-55025 Label containers holding hazardous chemicals.

EXEMPTIONS: The following is a summary of items that are exempt from this rule. For complete information about each of these, see WAC 296-307-55055.
– Pesticides, when labeled as required by the Environmental Protection Agency (EPA)
– Food, food additives, color additives, drugs, cosmetics, or medical/兽ivinary devices or products
– Alcoholic beverages not intended for industrial use
– Consumer products labeled, as required, by the Consumer Product Safety Commission
– Agriculture or vegetable seeds treated and labeled as required by the Federal Seed Act

Note: You are not required to label portable containers into which hazardous chemicals are transferred from labeled containers, if the chemical is used and controlled by the employee who performed the transfer within the same shift.

You must:
• Make sure that each container of hazardous chemicals in the workplace is labeled, tagged, or marked with the following information:
  – The identity of the hazardous chemical(s) using either the chemical or common name

Note: You are not required to list each component in a hazardous mixture on the label. If a mixture is referred to on a material safety data sheet (MSDS) by a product name, then the product name should be used as the identifier.

– Appropriate hazard warnings which give general information about the relevant health and physical hazards of the chemicals. This includes health effects information, such as information about organs most likely to be affected by the chemicals.

EXAMPLES OF LABEL:

Name of Chemical
Physical Hazards
Health Hazards;
• Health effects information
• Affected Target Organs

– For individual stationary process containers, you may use alternate labeling methods such as:
  ◆ Signs
  ◆ Placards
  ◆ Process sheets
  ◆ Batch tickets
  ◆ Operating procedures or
WAC 296-307-55030 Inform and train your employees about hazardous chemicals in your workplace.

Note: The employer chemical hazard communication information and training requirements also apply to pesticides. Employers who have employees who are exposed to pesticides must be in compliance with this rule and the worker protection standards, WAC 296-307-12040.

You must:
• Provide employees with effective information on hazardous chemicals in their work area at the time of their initial job assignment. Whenever a new physical or health hazard related to chemical exposure is introduced into their employees’ work areas, information must be provided.
  – Inform employees of:
    ✦ The requirements of this rule.
    ✦ Any operations in their work area where hazardous chemicals are present.
    ✦ The location and availability of your written Chemical Hazard Communication Program, including the list(s) of hazardous chemicals and material safety data sheets (MSDSs) required by this rule.
  • Provide employees with effective training about hazardous chemicals in their work area at the time of their initial job assignment. Whenever a new physical or health hazard related to chemical exposure is introduced, the employees must be trained.
    – Make sure that employee training includes:
      – Methods and observations that may be used to detect the presence or release of a hazardous chemical in the work area. Examples of these methods and observations may include:
        ✦ Monitoring conducted by you
        ✦ Continuous monitoring devices
        ✦ Visual appearance or odor of hazardous chemicals when being released
          – Physical and health hazards of the chemicals in the work area, including the likely physical symptoms or effects of overexposure
          – Steps employees can take to protect themselves from the chemical hazards in your workplace, including specific procedures implemented by you to protect employees from exposure to hazardous chemicals. Specific procedures may include:
            ■ Appropriate work practices
            ■ Engineering controls
            ■ Emergency procedures
            ■ Personal protective equipment to be used
              – Details of the Chemical Hazard Communication Program developed by you, including an explanation of the labeling system and the MSDS, and how employees can obtain and use the appropriate hazard information.
        – Tailor information and training to the types of hazards to which employees will be exposed. The information and training may be designed to cover categories of hazards, such as flammability or cancer-causing potential, or it may address specific chemicals. Chemical-specific information must always be available through labels and MSDSs.
        – Make reasonable efforts to post notices in your employees’ native languages (as provided by the department) if those employees have trouble communicating in English.

Note:
• You may use words, pictures, symbols or any combination to communicate the hazards of the chemical. Be sure to train your employees so they can demonstrate a knowledge of the labeling system you use.

You must:
• Not remove or deface existing labels on incoming containers of hazardous chemicals (such as those marked with United States Department of Transportation (USDOT) markings, placards, and labels), unless the container is immediately labeled with the required information. You do not need to put on new labels if existing labels already provide the required information. If the package or container is sufficiently cleaned of residue and purged of vapors to remove any potential health or physical hazard, existing labels can be removed.
  • Make sure that labels or other forms of warning are legible, in English, and prominently displayed on the container, or readily available in the work area throughout each work shift.

Note:
• Employers with non-English speaking employees may use other languages in the warning information in addition to the English language.

You must:
• Make sure if the hazardous chemical is regulated by WISHA or OSHA in a substance-specific health rule, that the labels or other warnings are used according to those rules.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-17-033, § 296-307-55025, filed 8/8/01, effective 9/1/01.]
Note:

- Interactive computer-based training or training videos can be used provided they are effective.
- Your MSDSs may not have WISHA permissible exposure limits (PELs) listed. In some cases, WISHA PELs are stricter than the OSHA PELs and other exposure limits listed on the MSDSs you receive. If this is the case, you must refer to the WISHA PEL table, WAC 296-307-62625, for the appropriate exposure limits to be covered during training.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060, 05-01-166, § 296-307-55030, filed 12/21/04, effective 4/2/05; 03-10-068, § 296-307-55030, filed 5/6/03, effective 8/1/03. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-17-033, § 296-307-55030, filed 8/8/01, effective 9/1/01.]

WAC 296-307-55035 Follow these rules for laboratories using hazardous chemicals.

Note: Laboratories are required to have a written chemical hygiene plan under chapter 296-828 WAC. Hazardous chemicals in laboratories, if applicable. They are not required to have a written Chemical Hazard Communication Program. You may combine your Accident Prevention Program and Chemical Hazard Communication Program to assist you in developing a Chemical Hygiene Plan for your laboratory.

You must:

1. Make sure that labels on incoming containers of hazardous chemicals are in place and readable.
2. Maintain material safety data sheets (MSDSs) received with incoming shipments of hazardous chemicals and make them available to laboratory employees when they are in their work areas.
3. Provide laboratory employees with information and training as described in: "Inform and train your employees about hazardous chemicals in your workplace," WAC 296-307-55030, except for the part about the location and availability of the written Chemical Hazard Communication Program.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 05-02-060, § 296-307-55035, filed 1/3/06, effective 4/1/06; 05-01-166, § 296-307-55035, filed 12/21/04, effective 4/2/05; Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-17-033, § 296-307-55035, filed 8/8/01, effective 9/1/01.]

WAC 296-307-55040 Follow these rules for handling chemicals in factory-sealed containers. You must:

This applies to situations where employees only handle chemicals in factory-sealed containers that are not opened under normal use (such as those found in marine cargo handling, trucking, warehousing, or retail sales).

You must:

1. Make sure that labels on incoming containers of hazardous chemicals are in place and readable.
2. Keep or obtain material safety data sheets.
   - Keep any MSDSs that are received with incoming shipments of the sealed containers of hazardous chemicals
   - If a factory-sealed container of hazardous chemicals comes without a MSDS, obtain one as soon as possible, if an employee requests it
   - Interactive computer-based training or training videos can be used provided they are effective.

[Title 296 WAC—p. 2564]
and other rules for the accumulation, handling, and management of hazardous waste.

– Any hazardous waste, defined by the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976, as amended (42 U.S.C. 6901 et seq.), when subject to regulations issued under that act by the Environmental Protection Agency.

– Any hazardous substance, defined by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. 9601 et seq.), when the hazardous substance is the focus of remedial or removal action being conducted under CERCLA in accordance with Environmental Protection Agency regulations.

– Tobacco or tobacco products.

– Wood or wood products, including lumber that will not be processed, where the chemical manufacturer or importer can establish that the only hazard they pose to the employees is the potential for flammability or combustibility. Wood or wood products that have been treated with hazardous chemicals covered by this rule, and wood that may be subsequently sawed or cut, generating dust, are not exempt.

– Articles, meaning manufactured items other than a fluid or particle that:
  ♦ Are formed to a specific shape or design during manufacture;
  ♦ Have end use function(s) dependent in whole or in part upon their shape or design during end use; and
  ♦ Under normal conditions of use, do not release more than very small quantities, for example minute or trace amounts of a hazardous chemical such as emissions from a marking pen or a newly varnished wood chair, and do not pose a physical hazard or health risk to employees.

– Food or alcoholic beverages that are sold, used, or prepared in a retail establishment such as a grocery store, restaurant, or drinking place, and foods intended for personal consumption by employees while in the workplace.

– Any drug, defined in the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 301 et seq.), when it is in solid, final form for direct administration to the patient (for example, tablets or pills); drugs that are packaged by the chemical manufacturer for sale to consumers in a retail establishment (for example over-the-counter drugs); and drugs intended for personal consumption by employees while in the workplace (for example, first-aid supplies). Aerosolized or cytotoxic drugs administered by a health care worker are not excluded.

– Cosmetics packaged for sale to consumers in a retail establishment, and cosmetics intended for personal consumption by employees while in the workplace.

– Ionizing and nonionizing radiation.

– Biological hazards.

• This rule does not require labeling of the following chemicals:
  – Any pesticide, defined in the Federal Insecticide, Fungicide, and Rodenticide Act (7 U.S.C. 136 et seq.), when subject to the labeling requirements of that act and labeling regulations issued under that act by the Environmental Protection Agency.

– Any chemical substance or mixture, in the Toxic Substance Control Act (15 U.S.C. 2601 et seq.), when subject to the labeling requirements of that act, and labeling requirements issued under that act by the Environmental Protection Agency.

– Any food, food additive, color additive, drug, cosmetic, or medical/veterinary device or product, including materials intended for use as ingredients in such products (for example, flavors and fragrances), as such terms are defined in the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 301 et seq.) or the Virus-Serum Toxin Act of 1913 (21 U.S.C. 151 et seq.) and regulations issued under those acts, when they are subject to the labeling requirements under those acts by either the Food and Drug Administration or the Department of Agriculture.

– Any distilled spirits (beverage alcohols), wine, or malt beverage intended for nonindustrial use, defined in the Federal Alcohol Administration Act (27 U.S.C. 201 et seq.) and regulations issued under that act, when subject to the labeling requirements of that act and labeling regulations issued under that act by the Bureau of Alcohol, Tobacco, and Firearms.

– Any consumer product or hazardous substance, as defined in the Consumer Product Safety Act (15 U.S.C. 2051 et seq.) and Federal Hazardous Substances Act (15 U.S.C. 1261 et seq.) respectively, when subject to a consumer product safety rule or labeling requirement of those acts, or regulations issued under those acts by the Consumer Product Safety Commission.

– Agricultural or vegetable seed treated with pesticides and labeled in accordance with the Federal Seed Act (7 U.S.C. 1551 et seq.), and the labeling requirements issued under that act by the Department of Agriculture.

WAC 296-307-55060 Definitions.

Chemical
• An element or mixture of elements
OR
• A compound or mixture of compounds
OR
• A mixture of elements and compounds

Included are manufactured items (such as bricks, welding rods, and sheet metal) that are not exempt as an article.

Chemical manufacturer
An employer with a workplace where one or more chemicals are produced for use or distribution.

Chemical name
• The scientific designation of a chemical developed by the:
  – International Union of Pure and Applied Chemistry (IUPAC)
OR
  – Chemical abstracts service (CAS) rules of nomenclature
OR
  – A name that clearly identifies the chemical for the purpose of conducting a hazard evaluation.

Combustible liquid
Liquids with a flashpoint of at least 100°F (37.8°C) and below 200°F (93.3°C). A mixture with at least 99% of its components having flashpoints of 200°F (93.3°C), or higher, is not considered a combustible liquid.

(2007 Ed.)
Commercial account
An arrangement where a retailer is selling hazardous chemicals to an employer
• Generally in large quantities over time
OR
• At costs below regular retail price.
Common name
Any designation or identification used to identify a chemical other than the chemical name, such as a:
• Code name or number
OR
• Trade or brand name
OR
• Generic name.
Compressed gas
A contained gas or mixture of gases with an absolute pressure greater than:
• 40 psi at 70°F (21.1°C)
OR
• 104 psi at 130°F (54.4°C) regardless of the pressure at 70°F (21.1°C)
OR
A liquid with a vapor pressure greater than 40 psi at 100°F (37.8°C) as determined by ASTM D323-72.
Container
A vessel, other than a pipe or piping system, that holds a hazardous chemical. Examples include:
• Bags
• Barrels
• Bottles
• Boxes
• Cans
• Cylinders
• Drums
• Rail cars
• Reaction vessels
• Storage tanks.
Designated representative
• An individual or organization with written authorization from an employee.
OR
• A recognized or certified collective bargaining agent (not necessarily authorized by an employee).
OR
• A legal representative of a deceased or legally incapacitated employee.
Director
The director means the director of the department of labor and industries or their designee.
Distributor
A business, other than a chemical manufacturer or importer, that supplies hazardous chemicals to other distributors or to employers. See WAC 296-307-560 through 296-307-56050 for requirements dealing with manufacturers, distributors and importers - hazard communication.
Employee
The term employee and other terms of like meaning, unless the context of the provision containing such term indicates otherwise, means an employee of an employer who is employed in the business of his or her employer whether by way of manual labor or otherwise and every person in this state who is engaged in the employment of or who is working under an independent contract the essence of which is personal labor for an employer under this standard whether by way of manual labor or otherwise.
Employer
An employer is any person, firm, corporation, partnership, business trust, legal representative, or other business entity which engages in any business, industry, profession, or activity in this state and employs one or more employees or who contracts with one or more persons, the essence of which is the personal labor of such person or persons and includes the state, counties, cities, and all municipal corporations, public corporations, political subdivisions of the state, and charitable organizations: Provided, That any persons, partnership, or business entity not having employees, and who is covered by the Industrial Insurance Act must be considered both an employer and an employee.
Explosive
A chemical that causes a sudden, almost instant release of pressure, gas, and heat when exposed to a sudden shock, pressure, or high temperature.
Exposure or exposed
An employee has been, or may have possibly been, subjected to a hazardous chemical, toxic substance or harmful physical agent while working. An employee could have been exposed to hazardous chemicals, toxic substances, or harmful physical agents in any of the following ways:
• Inhalation
• Ingestion
• Skin contact
• Absorption
• Related means.
The terms exposure and exposed only cover workplace exposure involving a toxic substance or harmful physical agent in the workplace different from typical nonoccupational situations in the way it is:
• Used
• Handled
• Stored
• Generated
OR
• Present.
Flammable
A chemical in one of the following categories:
• Aerosols that, when tested using a method described in 16 CFR 1500.45, yield either a:
  • Flame projection of more than eighteen inches at full valve opening
  OR
  • A flashback (a flame extending back to the valve) at any degree of valve opening
• Gases that, at the temperature and pressure of the surrounding area, form a:
  • Flammable mixture with air at a concentration of thirteen percent, by volume, or less
  OR
  • Range of flammable mixtures with air wider than twelve percent, by volume, regardless of the lower limit
• Liquids with a flashpoint below 100°F (37.8°C). A mixture with at least ninety-nine percent of its components
having flashpoints of 100°F (37.8°C), or higher, is not considered a flammable liquid

• Solids, other than blasting agents or explosives, as defined in WAC 296-52-417 or CFR 1910.109(a), that:
  – Is likely to cause fire through friction, moisture, absorption, spontaneous chemical change or retained heat from manufacturing or processing
  OR
  – That can be readily ignited (and when ignited burns so vigorously and persistently that it creates a serious hazard)
  OR
  – When tested by the method described in 16 CFR 1500.44, ignite and burn with a self-sustained flame at a rate greater than one-tenth of an inch per second along its major axis.

Flashpoint
• The minimum temperature at which a liquid gives off an ignitable concentration of vapor, when tested by any of the following measurement methods:
  – Tagliabue closed tester. Use this for liquids with a viscosity less than 45 Saybolt Universal Seconds (SUS) at 100°F (37.8°C), that do not contain suspended solids and do not tend to form a surface film under test. See American National Standard Method of Test for Flashpoint by Tag Closed Tester, Z11.24.1979 (ASTM D 56-79)
  – Pensky-Martens closed tester for liquids with a viscosity equal to, or greater than, 45 SUS at 100°F (37.8°C), or for liquids that contain suspended solids, or have a tendency to form a surface film under test. See American National Standard Method of Test for Flashpoint by Pensky-Martens Closed Tester, Z11.7.1979 (ASTM D 93-79)
  Organic peroxides, which undergo auto accelerating thermal decomposition, are excluded from any of the flashpoint measurement methods specified above.

Foreseeable emergency
Any potential event that could result in an uncontrolled release of a hazardous chemical into the workplace. Examples of foreseeable emergencies include equipment failure, rupture of containers, or failure of control equipment.

Hazardous chemical
A chemical, which is a physical or health hazard.

Hazard warning
Words, pictures, or symbols (alone or in combination), that appear on labels (or other forms of warning such as placards or tags) that communicate specific physical and health hazard(s), (including target organ effects), associated with chemical(s) in a container.

Health hazard
A chemical that may cause health effects in short or long-term exposed employees based on statistically significant evidence from a single study conducted by using established scientific principles. Health hazards include, but are not limited to, any of the following:
• Carcinogens
• Toxic or highly toxic substances
• Reproductive toxins
• Irritants
• Corrosives
• Sensitizers
• Hepatotoxins (liver toxins)
• Nephrotoxins (kidney toxins)
• Neurotoxins (nervous system toxins)
• Substances that act on the hematopoietic system (blood or blood forming system)
• Substances that can damage the lungs, skin, eyes, or mucous membranes.

Identity
A chemical or common name listed on the material safety data sheet (MSDS) and label.

Importer
The first business within the customs territory of the USA that:
• Receives hazardous chemicals produced in other countries
  AND
• Supplies them to manufacturers, distributors or employers within the USA.

Material safety data sheet (MSDS)
Written, printed or electronic information (on paper, microfiche, or on-screen) that informs manufacturers, distributors or employers about the chemical, its hazards and protective measures as required by this rule.

Mixture
A combination of 2 or more chemicals that retain their chemical identity after being combined.

Organic peroxide
An organic compound containing the bivalent-0-0-structure. It may be considered a structural derivative of hydrogen peroxide if one or both of the hydrogen atoms has been replaced by an organic radical.

Oxidizer
A chemical, other than a blasting agent or explosive as defined in WAC 296-52-417 or CFR 1910.109(a), that starts or promotes combustion in other materials, causing fire either of itself or through the release of oxygen or other gases.

Permissible exposure limits (PELs)
See WAC 296-307-628 for the definition of this term.

Physical hazard
A chemical that has scientifically valid evidence to show it is one of the following:
• A combustible liquid
• A compressed gas
• Explosive
• Flammable
• An organic peroxide
• An oxidizer
• Pyrophoric
• Unstable (reactive)
• Water reactive.

Produce
To do one or more of the following:
• Manufacture
• Process
• Formulate
• Blend
• Extract
• Generate
• Emit
• Repackage.
Purchaser
An employer who buys one or more hazardous chemicals to use in their workplace.

Pyrophoric
Chemicals that ignite spontaneously in the air at a temperature of 130°F (54.4°C) or below.

Responsible party
Someone who can provide more information about the hazardous chemical and appropriate emergency procedures.

Specific chemical identity
This term applies to chemical substances. It can mean the:
• Chemical name
• Chemical abstracts service (CAS) registry number
• Any other information that reveals the precise chemical designation of the substance.

Trade secret
Any confidential:
• Formula
• Pattern
• Process
• Device
• Information
• Collection of information.

The trade secret is used in an employer's business and gives an opportunity to gain an advantage over competitors who do not know or use it.

See WAC 296-62-053 for requirements dealing with trade secrets.

Unstable (reactive)
A chemical in its pure state, or as produced or transported, that will vigorously polymerize, decompose, condense, or become self-reactive under conditions of shocks, pressure or temperature.

Use
To do one or more of the following:
• Package
• Handle
• React
• Emit
• Extract
• Generate as a by-product
• Transfer.

Water-reactive
A chemical that reacts with water to release a gas that is either flammable or presents a health hazard.

Work area
A room or defined space in a workplace where hazardous chemicals are produced or used, and where employees are present.

Workplace
The term workplace means an establishment, job site, or project, at one geographical location containing one or more work areas.

WAC 296-307-560 Scope. This chapter sets minimum requirements for content and distribution of material safety data sheets (MSDSs) and labels for hazardous chemicals.

- This chapter applies when you do one or more of the following:
  - Import, produce, or repackage chemicals, including manufactured items (such as bricks, welding rods, and sheet metal) that are not exempt as articles
  - Sell or distribute hazardous chemicals to manufacturers, distributors or employers
  - Choose not to rely on material safety data sheets (MSDSs) provided by the importer, manufacturer or distributor.

Note:
- You are not required to evaluate chemicals or create MSDSs for chemicals you did not produce or import. If you decide to evaluate chemicals or create MSDSs, then the requirements of this chapter will apply to you.
- Use Table 2 to determine which sections in this chapter apply to your workplace.

Exemptions:
- All of the following are always exempt from this chapter:
  - Ionizing and nonionizing radiation
  - Biological hazards
  - Tobacco and tobacco products
- The chemicals and items listed in Table 1 are exempt from this chapter under the conditions specified.

### Table 1

WAC 296-307-56005 Hazard evaluation.

Your responsibility:
To make sure the hazardous chemicals are identified.

You must:
Conduct complete hazard evaluations

WAC 296-307-56010
Provide access to hazard evaluation procedures

WAC 296-307-56015

• Choose to NOT rely on MSDSs provided by the importer, manufacturer or distributor

Table 2

– Employers (includes retail or wholesale transactions) X X

• Choose to NOT rely on MSDSs provided by the importer, manufacturer or distributor X X

Table 3
Criteria for Hazard Evidence

<table>
<thead>
<tr>
<th>Hazard</th>
<th>Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Health hazard</td>
<td>• Where available, use human case reports of health effects AND</td>
</tr>
<tr>
<td></td>
<td>• One or more studies that</td>
</tr>
<tr>
<td></td>
<td>– Are based on human populations, if available, and animal populations1,2</td>
</tr>
<tr>
<td></td>
<td>– Report statistically significant conclusions of a hazardous effect or health hazard (as defined in this rule) AND</td>
</tr>
<tr>
<td></td>
<td>– Have been conducted following established scientific principles</td>
</tr>
<tr>
<td>Physical hazard</td>
<td>• Valid evidence that shows a chemical is any one of the following3:</td>
</tr>
<tr>
<td></td>
<td>– A combustible liquid</td>
</tr>
<tr>
<td></td>
<td>– A compressed gas</td>
</tr>
<tr>
<td></td>
<td>– Explosive</td>
</tr>
<tr>
<td></td>
<td>– Flammable</td>
</tr>
<tr>
<td></td>
<td>– An organic peroxide</td>
</tr>
<tr>
<td></td>
<td>– An oxidizer</td>
</tr>
<tr>
<td></td>
<td>– Pyrophoric</td>
</tr>
<tr>
<td></td>
<td>– Unstable (reactive)</td>
</tr>
<tr>
<td></td>
<td>– Water-reactive</td>
</tr>
</tbody>
</table>

1If human data is not available, use results of tests done on animals and other available studies to predict health effects on employees (for example, effects resulting from short and long-term exposures to chemicals).

2In vitro studies alone do not generally form the basis of a finding of hazard.

3These terms are defined in WAC 296-307-56050.

Chemicals identified in the sources listed in Table 4 must be assumed to be hazardous (including carcinogens and potential carcinogens).

Table 4
Information Sources Identifying Hazardous Chemicals

• Sources that address a broad range of hazard categories:
  – Chapter 296-62 WAC, General Occupational Health Standards, WISHA
  – 29 CFR Part 1910, Subpart Z, Toxic and Hazardous Substances, Occupational Safety and Health Administration (OSHA)
  – Threshold Limit Values for Chemical Substances and Physical Agents in the Work Environment, American Conference of Governmental Industrial Hygienists (ACGIH) (latest edition).

• Sources that identify carcinogens or potential carcinogens:
Chemicals meeting Table 5 definitions, along with the criteria for established evidence in Table 3, must be regarded as hazardous.

**Table 5 is NOT intended to present all hazard categories or test methods.** Available scientific data involving other test methods and animal species must also be evaluated to determine a chemical's hazards.

### Table 4

**Information Sources Identifying Hazardous Chemicals**

- Chapter 296-62 WAC, General Occupational Health Standards, WISHA
- 29 CFR Part 1910, Subpart Z, Toxic and Hazardous Substances, Occupational Safety and Health Administration (OSHA)
- National Toxicology Program (NTP), Annual Report on Carcinogens (latest edition)
- International Agency for Research on Cancer (IARC) Monographs (latest editions).

**Note:**

The *Registry of Toxic Effects of Chemical Substances* is published by the National Institute for Occupational Safety and Health (NIOSH) and identifies chemicals found to be potential carcinogens by the NTP and IARC.

### Table 5

**Standard Health Hazard Categories**

<table>
<thead>
<tr>
<th>A chemical is considered to be</th>
<th>If</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>• Carcinogen</strong></td>
<td>• The International Agency for Research on Cancer (IARC) considers it to be a carcinogen OR • The National Toxicity Program (NTP) (latest edition) lists it as a carcinogen OR • It is regulated by WISHA or OSHA as a carcinogen</td>
</tr>
<tr>
<td><strong>• Corrosive</strong></td>
<td>• It causes visible destruction of, or irreversible alterations in, living tissue (not inanimate surfaces) by chemical action at the site of contact Example: A chemical is corrosive if tested on the intact skin of albino rabbits by a method described by the U.S. Department of Transportation (in Appendix A to 49 CFR Part 173) and it destroys or changes (irreversibly) the structure of the tissue at the contact site after a four-hour exposure period</td>
</tr>
<tr>
<td><strong>• Highly toxic</strong></td>
<td>• It has a median lethal dose (LD50) greater than 50 milligrams per kilogram, but no more than 500 milligrams per kilogram of body weight, when administered orally to albino rats weighing between 200 - 300 grams each OR • It has a median lethal dose (LD50) greater than 200 milligrams per kilogram, but not more than 1,000 milligrams per kilogram, of body weight when administered by continuous contact for twenty-four hours (or less if death occurs within twenty-four hours) with the bare skin of albino rabbits weighing between 2 - 3 kilograms each OR • It has a median lethal concentration (LC50), in air: Greater than 200 parts per million, but not more than 2,000 parts per million (by volume of gas or vapor) OR • It has a median lethal concentration (LC50), in air: Greater than 2 milligrams per liter, but not more than 20 milligrams per liter, of mist, fume, or dust, when administered by continuous inhalation for one hour (or less if death occurs within one hour) to albino rats, weighing between 200 - 300 grams each OR • It has a median lethal concentration of (LC50), in air, of: 200 parts per million (by volume), or less, of gas or vapor</td>
</tr>
</tbody>
</table>
### Table 5
Standard Health Hazard Categories

<table>
<thead>
<tr>
<th>A chemical is considered to be</th>
<th>If</th>
</tr>
</thead>
<tbody>
<tr>
<td>• An irritant</td>
<td>• It is NOT corrosive, but causes a reversible inflammatory effect on living tissue by chemical action at the contact site. Examples: The chemical is a skin irritant when tested on the intact skin of albino rabbits (by the methods of 16 CFR 1500.41) for four hours exposure (or by other appropriate techniques), and the exposure results in an empirical score of five or more. – A chemical is an eye irritant if so determined under the procedure listed in 16 CFR 1500.42 or other appropriate techniques.</td>
</tr>
<tr>
<td>• A sensitizer</td>
<td>• It causes a substantial proportion of exposed people or animals to develop an allergic reaction in normal tissue after repeated exposure.</td>
</tr>
</tbody>
</table>

Categories provided in Table 6 illustrate the broad range of target organ effects that must be considered when conducting hazard evaluations. Chemicals meeting Table 6 definitions, along with the criteria for established evidence in Table 3, must be regarded as hazardous.

Examples provided in Table 6 are NOT intended to be a complete list.

### Table 6
Examples of Target Organ Effect Categories

<table>
<thead>

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 03-10-068, § 296-307-56010, filed 5/6/03, effective 8/1/03.]

### Table 7
Criteria for Evaluating Chemical Mixtures

<table>
<thead>
<tr>
<th>If a mixture</th>
<th>Then</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Has been thoroughly tested as a whole for a physical or health hazard</td>
<td>• You must use those results</td>
</tr>
<tr>
<td>• Has NOT been tested as a whole for a health hazard</td>
<td>• You must: – Evaluate EACH ingredient in the mixture to determine the hazards – Consider the mixture to have the same hazard as each ingredient determined to be hazardous</td>
</tr>
<tr>
<td>• Has NOT been tested as a whole for physical hazards</td>
<td>• You must: – Use any scientifically valid data available to evaluate the potential physical hazards of the mixture</td>
</tr>
</tbody>
</table>

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 03-10-068, § 296-307-56015, filed 5/6/03, effective 8/1/03.]

### WAC 296-307-56015
Provide access to hazard evaluation procedures.

You must:

• Provide access to your written hazard evaluation procedures when requested by any of the following:
  – Employees
  – Designated representatives of employees
  – Representatives of the department of labor and industries
  – Representatives of the National Institute for Occupational Safety and Health (NIOSH).

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 03-10-068, § 296-307-56015, filed 5/6/03, effective 8/1/03.]

(2007 Ed.)
**WAC 296-307-56020 Material safety data sheets.**

**Your responsibility:**
To provide complete and accurate material safety data sheets (MSDSs).

**You must:**
- Develop or obtain MSDSs
- Provide MSDSs
- Follow-up if an MSDS is not provided

WAC 296-307-56025 Develop or obtain material safety data sheets (MSDSs).

**You must:**
- Develop or obtain a complete and accurate material safety data sheet (MSDS) for each hazardous chemical or mixture according to ALL of the following:
  - ALL information in Table 8 must be completed. If there is no relevant information for a required item, this must be noted. Blank spaces are not permitted.

  **Note:**
  - No specific format is required for MSDSs; however, an example format (OSHA form 174) can be found online at: http://www.osha.gov
  - One MSDS can be developed for a group of complex mixtures (for example, jet fuels or crude oil) if the health and physical hazards of the mixtures are similar (the amounts of chemicals in the mixture may vary).
  - Content of MSDSs must accurately represent the available scientific evidence.

  **Note:**
  - You may report results of scientifically valid studies that tend to refute findings of hazards.
  - MSDSSs must be in English.

**You must:**
- Revise an MSDS when you become aware of new and significant information regarding the hazards of a chemical, or how to protect against the hazards
  - Within three months after you first become aware of the information
  - Before the chemical is reintroduced into the workplace if the chemical is no longer being used, produced or imported.

---

**Table 8**

<table>
<thead>
<tr>

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060, 03-10-068, § 296-307-56020, filed 5/6/03, effective 8/1/03.]

---

[Title 296 WAC—p. 2573]
WAC 296-307-56030 Provider MSDSs for products shipped, transferred or sold over-the-counter.

You must:
- Provide the correct MSDS to manufacturers, distributors and employers:
  - With the initial shipment or transfer of the product
  AND
  - With the first shipment or transfer after an MSDS is updated
  AND
  - Whenever one is requested.

Note: MSDSs may be provided separately from containers as long as they are provided before or at the same time as the containers. For example, you may fax, or e-mail the MSDS.
- You are NOT required to provide MSDSs to retailers who inform you that:
  - Do not sell the product to commercial accounts
  AND
  - Do not open the sealed product containers for use in their workplace.

You must:
- Follow the requirements in Table 9 for chemicals sold over-the-counter.

WAC 296-307-56035 Follow-up if an MSDS is not provided.

You must:
- Obtain an MSDS from the chemical manufacturer, distributor or importer as soon as possible, if an MSDS is not provided for a shipment labeled as a hazardous chemical.

WAC 296-307-56040 Labeling.

Your responsibility:
To provide employers with containers of hazardous chemicals that are properly labeled.

WAC 296-307-56045 Label containers of hazardous chemicals.

Exemption: Containers are exempt from this section if all hazardous contents are listed in Table 11.

You must:
- Make sure every container of hazardous chemicals leaving the workplace is properly labeled. This includes all of the following:
  - The identity of the hazardous chemical (the chemical or common name) that matches the identity used on the MSDS
  - An appropriate hazard warning
  - The name and address of the chemical manufacturer, importer, or other responsible party

---

Table 8

<table>

<tr>
<td><strong>• Generally applicable and appropriate control measures known to the employer preparing the MSDS, including ALL of the following:</strong></td>
</tr>
<tr>
<td>- Engineering controls (for example, general or local exhaust ventilation)</td>
</tr>
<tr>
<td>- Work practices</td>
</tr>
<tr>
<td>- Personal protective equipment (PPE)</td>
</tr>
<tr>
<td>- Personal hygiene practices</td>
</tr>
<tr>
<td>- Protective measures during repair and maintenance of contaminated equipment</td>
</tr>
</tbody>
</table>

Note:
1. The identities of some chemicals may be protected as trade secret information (see chapter 296-62 WAC, Part B-1, Trade secrets).
2. WISHA PEL categories are defined, and values are provided, in chapter 296-307 WAC, Part Y-6.
3. A "skin notation" listed with either an ACGIH TLV or WISHA/OSHA PEL indicates that skin absorption is a primary route of exposure.
4. Examples of:
   - Short-term health effects (or hazards) include eye irritation, skin damage caused by contact with corrosives, narcosis, sensitization, and lethal dose.
   - Long-term health effects (or hazards) include cancer, liver degeneration; and silicosis.
5. Signs and symptoms of exposure to hazardous substances include those that:
   - Can be measured such as decreased pulmonary function
   - Are subjective such as feeling short of breath.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 03-10-068, § 296-307-56035, filed 5/6/03, effective 8/1/03.]

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 03-10-068, § 296-307-56030, filed 5/6/03, effective 8/1/03.]
– Make sure labeling does not conflict with the requirements of:
  • The Hazardous Materials Transportation Act (49 U.S.C. 1801 et seq.)
  AND
  • Regulations issued under the act by the U.S. Department of Transportation (Title 49 of the Code of Federal Regulations, Parts 171 through 180). See http://www.dot.gov
  – Revise labels within three months of becoming aware of new and significant information about chemical hazards
  – Provide revised labels on containers beginning with the first shipment after a revision, to manufacturers, distributors or employers
  – Revise the label when a chemical is not currently used, produced or imported, before:
    • You resume shipping (or transferring) the chemical
    OR
    • The chemical is reintroduced in the workplace
      – Label information
      • Clearly written in English
      AND
      • Prominently displayed on the container.

Reference: Additional labeling requirements for specific hazardous chemicals (for example, asbestos and cadmium) are found in chapter 296-62 WAC, General occupational health standards (see parts F, G, and I-1 of that chapter).

Note: When the conditions specified in Table 10 are met for the solid material products listed, you are not required to provide labels for every shipment.

### Table 10
Labeling for Solid Materials

**WAC 296-307-56050 Definitions.** The following definitions apply to this chapter:

**Article (manufactured item)**
A manufactured item that
• Is not a fluid or particle
  AND
• Is formed to a specific shape or design during manufacture for a particular end use function
  AND
• Releases only trace amounts of a hazardous chemical during normal use and does not pose a physical or health risk to employees.

**Chemical**
• An element or mixture of elements
OR
• A compound or mixture of compounds
OR
• A mixture of elements and compounds
Included are manufactured items (such as bricks, welding rods and sheet metal) that are not exempt as an article.
Chemical name
• The scientific designation of a chemical developed by
  – International union of pure and applied chemistry
    (IUPAC)
  OR
  – Chemical abstracts service (CAS) rules of nomenclature
OR
• A name that clearly identifies the chemical for the purpose of conducting a hazard evaluation.

Combustible liquid
Liquids with a flashpoint of at least 100°F (37.8°C) and below 200°F (93.3°C). A mixture with at least 99% of its components having flashpoints of 200°F (93.3°C), or higher, is not considered a combustible liquid.

Commercial account
An arrangement where a retailer is selling hazardous chemicals to an employer
• Generally in large quantities over time
OR
• At costs below regular retail price.
Common name
Any designation or identification used to identify a chemical other than the chemical name, such as a
• Code name or number
OR
• Trade or brand name
OR
• Generic name.
Compressed gas
• A contained gas or mixture of gases with an absolute pressure greater than:
  – 40 psi at 70°F (21.1°C)
  OR
  – 104 psi at 130°F (54.4°C) regardless of the pressure at 70°F (21.1°C)
OR
• A liquid with a vapor pressure greater than 40 psi at 100°F (37.8°C), as determined by ASTM D323-72.

Container
A vessel, other than a pipe or piping system, that holds a hazardous chemical. Examples include:
• Bags
• Barrels
• Bottles
• Boxes
• Cans
• Cylinders
• Drums
• Reaction vessels
• Storage tanks
• Rail cars.

Designated representative
• An individual or organization with written authorization from an employee
OR
• A recognized or certified collective bargaining agent (not necessarily authorized by an employee)
OR
• A legal representative of a deceased or legally incapacitated employee.

Distributor
A business that supplies hazardous chemicals to other employers. Included are employers who conduct retail and wholesale transactions.

Explosive
A chemical that causes a sudden, almost instant release of pressure, gas, and heat when exposed to a sudden shock, pressure, or high temperature.

Flammable
A chemical in one of the following categories:
• Aerosols that, when tested using a method described in 16 CFR 1500.45, yield either a:
  – Flame projection of more than eighteen inches at full valve opening
  OR
  – A flashback (a flame extending back to the valve) at any degree of valve opening
• Gases that, at the temperature and pressure of the surrounding area, form a:
  – Flammable mixture with air at a concentration of thirteen percent, by volume, or less
  OR
  – Range of flammable mixtures with air wider than twelve percent, by volume, regardless of the lower limit
• Liquids with a flashpoint below 100°F (37.8°C). A mixture with at least ninety-nine percent of its components having flashpoints of 100°F (37.8°C), or higher, is not considered a flammable liquid
• Solids, other than blasting agents or explosives, as defined in WAC 296-52-417 or 29 CFR 1910.109(a), that:
  – Is likely to cause fire through friction, moisture, absorption, spontaneous chemical change or retained heat from manufacturing or processing
  OR
  – That can be readily ignited (and when ignited burns so vigorously and persistently that it creates a serious hazard)
  OR
  – When tested by the method described in 16 CFR 1500.44, ignite and burn with a self-sustained flame at a rate greater than 1/10th of an inch per second along its major axis.
Flashpoint
The minimum temperature at which a liquid gives off an ignitable concentration of vapor, when tested by any of the following measurement methods:
• Tagliabue closed tester. Use this for liquids with a viscosity less than 45 Saybolt Universal Seconds (SUS) at 100°F (37.8°C), that do not contain suspended solids and do not tend to form a surface film under test. See American National Standard Method of Test for Flashpoint by Tag Closed Tester, Z11.24-1979 (ASTM D 56-79)
• Pensky-Martens closed tester. Use this for liquids with a viscosity equal to, or greater than, 45 SUS at 100°F (37.8°C) or for liquids that contain suspended solids or have a tendency to form a surface film under test. See American National Standard Method of Test for Flashpoint by Pensky-Martens Closed Tester, Z11.7-1979 (ASTM D 93-79).

• Setash flash closed tester. See American National Standard Method of Test for Flashpoint by Setash flash Closed Tester (ASTM D 3278-78).

Organic peroxides, which undergo auto accelerating thermal decomposition, are excluded from any of the flashpoint measurement methods specified above.

**Hazardous chemical**
A chemical, which is a physical or health hazard.

**Hazard warning**
Words, pictures or symbols (alone or in combination) that appear on labels (or other forms of warning such as placards or tags) that communicate specific physical and health hazards (including target organ effects) associated with chemicals in a container.

**Health hazard**
A chemical that may cause health effects in short or long-term exposed employees based on statistically significant evidence from a single study conducted by using established scientific principles.

Health hazards include, but are not limited to, any of the following:
- Carcinogens
- Toxic or highly toxic substances
- Reproductive toxins
- Irritants
- Corrosives
- Sensitizers
- Hepatotoxins (liver toxins)
- Nephrotoxins (kidney toxins)
- Neurotoxins (nervous system toxins)
- Substances that act on the hematopoietic system (blood or blood forming system)
- Substances that can damage the lungs, skin, eyes, or mucous membranes.

**Identity**
A chemical or common name listed on the material safety data sheet (MSDS) and label.

**Importer**
The first business, within the Customs Territory of the United States, that receives hazardous chemicals produced in other countries and supplies them to manufacturers, distributors or employers within the United States.

**Label**
Written, printed, or graphic material displayed on, or attached to, a container of hazardous chemicals.

**Manufacturer**
An employer with a workplace where one or more chemicals (including items not exempt as "articles," see Table 1 in this part) are produced for use or distribution.

**Material safety data sheet (MSDS)**
Written, printed or electronic information (on paper, microfiche, or on-screen) that informs manufacturers, distributors or employers about the chemical, its hazards and protective measures as required by this rule.

**Mixture**
A combination of two or more chemicals that retain their chemical identity after being combined.

**Organic peroxide**
An organic compound containing the bivalent-O-O-structure. It may be considered a structural derivative of hydrogen peroxide if one or both of the hydrogen atoms has been replaced by an organic radical.

**Oxidizer**
A chemical, other than a blasting agent or explosive as defined in WAC 296-52-417 or 29 CFR 1910.109(a), that starts or promotes combustion in other materials, causing fire either of itself or through the release of oxygen or other gases.

**Permissible exposure limits**
See WAC 296-307-628, for definition of this term.

**Physical hazards**
A chemical that has scientifically valid evidence to show it is one of the following:
- A combustible liquid
- A compressed gas
- Explosive
- Flammable
- An organic peroxide
- An oxidizer
- Pyrophoric
- Unstable (reactive)
- Water-reactive.

**Produce**
To do one or more of the following:
- Manufacture
- Process
- Formulate
- Blend
- Extract
- Generate
- Emit
- Repackage.

**Pyrophoric**
Chemicals that ignite spontaneously in the air at a temperature of 130°F (54.4°C) or below.

**Responsible party**
Someone who can provide more information about the hazardous chemical and appropriate emergency procedures.

**Retailer**
See "distributor."

**Threshold limit values (TLVs)**
Airborne concentrations of substances established by the American Conference of Governmental Industrial Hygienists (ACGIH), and represent conditions under which it is believed that nearly all workers may be repeatedly exposed day after day without adverse health effects.

TLVs are specified in the most recent edition of the Threshold Limit Values for Chemical Substances and Physical Agents and Biological Exposure Indices and include the following categories:
- Threshold limit value-time-weighted average (TLV-TWA)
- Threshold limit value-short-term exposure limit (TLV-STEL)
- Threshold limit value-ceiling (TLV-C).
Unstable (reactive)
A chemical in its pure state, or as produced or transported, that will vigorously polymerize, decompose, condense, or become self-reactive under conditions of shocks, pressure or temperature.

Use
To do one or more of the following:
• Package
• Handle
• React
• Emit
• Extract
• Generate as a by-product
• Transfer.

Water-reactive
A chemical that reacts with water to release a gas that is either flammable or presents a heath hazard.

Wholesaler
See "distributor."

Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 01-17-033, § 296-307-570, filed 8/8/01, effective 9/1/01.

WAC 296-307-570 Lighting rule. Your responsibility:
To provide an maintain adequate lighting in your workplace.

Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-17-033, § 296-307-570, filed 8/8/01, effective 9/1/01.

WAC 296-307-57005 Provide and maintain adequate lighting.

Note: This section establishes minimal levels of lighting for safety purposes only. Guidelines pertaining to optimal levels of lighting and illumination may be found in Practice for Industrial Lighting, ANSI/IES RP7-1979.

You must:
• Provide and maintain adequate lighting for all work activities in your workplace. See the following table.

<table>
<thead>
<tr>
<th>Lighting Table</th>
<th>Minimum Acceptable average lighting level in an area:</th>
<th>Any one single measurement used to determine the average lighting level* cannot be less than:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Activity</td>
<td>(Foot-candles)</td>
<td>(Foot-candles)</td>
</tr>
<tr>
<td>Indoor task</td>
<td>10</td>
<td>5</td>
</tr>
<tr>
<td>Outdoor task</td>
<td>5</td>
<td>2.5</td>
</tr>
<tr>
<td>Nontask activities for both indoor and outdoor</td>
<td>3</td>
<td>1.5</td>
</tr>
</tbody>
</table>

• Lighting levels must be measured at thirty inches above the floor/working surface or at the task.

You must:
• Have adequate light for employees to see nearby objects that might be potential hazards or to see to operate emergency controls or other equipment, if general lighting is not available.

Note: • Lighting levels can be measured with a light meter.
• Conversion information: 1 foot candle = 1 lumen incident per square foot = 10.76 lux.

Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-17-033, § 296-307-57005, filed 8/8/01, effective 9/1/01.

WAC 296-307-590 Environmental tobacco smoke in the office—Summary.

Your responsibility:
To eliminate exposure to environmental tobacco smoke in your office work environment

You must:
Prohibit tobacco smoke in your office work environment.

WAC 296-307-59005

Note: This rule does not preempt any federal, state, municipal, or other local authority's regulation of indoor smoking that is more protective than this section.

Definitions: Office work environment is an indoor or enclosed occupied space where clerical work, administration, or business is carried out.

Smoking
A person is smoking if they are:
• Lighting up
• Inhaling
• Exhaling
• Carrying a pipe, cigar or cigarette of any kind that is burning.

Link: For work environments outside the office, contact your local health department using the link http://www.secondhandsmokesyou.com or by calling them directly.

Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050. 06-22-023, § 296-307-590, filed 10/24/06, effective 12/1/06. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-17-033, § 296-307-59005, filed 8/8/01, effective 9/1/01.

WAC 296-307-59005 Prohibit tobacco smoke in your office work environment.

EXEMPTION: The minimum criteria specified in this rule do not apply to outdoor structures provided for smokers such as gazebos or lean-tos that maintain the twenty-five-feet distance from entrances, exits, windows that open, and ventilation intakes that serve an enclosed area where smoking is prohibited.

You must:
(1) Prohibit smoking in your office work environment.
(2) Use administrative controls to prevent tobacco smoke from entering your office from outside the building.

• Make sure that outside smoking areas used by your employees are at least twenty-five feet from entrances, exits, windows that open, and ventilation intakes that serve an enclosed area where smoking is prohibited.

Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050. 06-22-023, § 296-307-59005, filed 10/24/06, effective 12/1/06. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-17-033, § 296-307-59005, filed 8/8/01, effective 9/1/01.
Title 296 WAC: Labor and Industries, Department of

Part Y-3
Lighting

Part Y-4
Environmental Tobacco Smoke in the Office

Part Y-5
Respirators

WAC 296-307-594 Scope. This part applies to all use of respirators at work.

IMPORTANT:

Before you decide to use respirators, you are required to evaluate respiratory hazards and implement control methods as outlined in WAC 296-307-624 through 296-307-628, Respiratory hazards.

The term "respiratory hazards" will be used throughout this part to refer to oxygen deficient conditions and harmful airborne hazards.

Definition:
Respirators are a type of personal protective equipment designed to protect the wearer from respiratory hazards.

You can use Table 1 for general guidance on which sections apply to you.

Table 1
Sections that apply to your workplace

<table>
<thead>
<tr>
<th>If employees...</th>
<th>Then the sections marked with an &quot;X&quot; apply...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Request and are permitted to voluntarily use filtering-facepiece respirators, and are not exposed to a respiratory hazard</td>

</tr>
<tr>
<td>Would use an escape respirator in an emergency</td>
<td></td>
</tr>
</tbody>
</table>

Reference: See WAC 296-307-100, Personal protective equipment (PPE) to find requirements for other types of personal protective equipment (PPE), such as eye, hand, and head protection.

WAC 296-307-596 Respirator program administrator.

Your responsibility:
To make sure a capable individual is in charge of respirator program development and management.

WAC 296-307-59605 Designate a program administrator.

Exemption: You do not need to designate a program administrator if employees use only filtering-facepiece respirators and do so only as voluntary use.

Definition:
Voluntary use is respirator use that is requested by the employee AND permitted by the employer when NO respiratory hazard exists.

You must:
• Designate a program administrator who has overall responsibility for your program and has sufficient training or experience to:
  – Oversee program development and coordinate implementation
  – Conduct required evaluations of program effectiveness outlined in WAC 296-307-60005.

WAC 296-307-598 Voluntary respirator use requirements. Your responsibility:
To make sure voluntary use of respirators by employees does not create job safety or health hazards.

• Interfere with an employee's ability to work safely,

You must:
You must: Make sure voluntary use of respirators is safe WAC 296-307-59805
Keep voluntary use respirator program records WAC 296-307-59810.

IMPORTANT:
• Respirator use is NOT voluntary if a respiratory hazard, such as exposure to a substance over the permissible exposure limit (PEL) or hazardous exposure to an airborne biological hazard, is present.
  – To evaluate respiratory hazards in your workplace, see WAC 296-307-624, Respiratory hazards.
  – Some requirements in this section do not apply if only filtering-facepiece respirators are used voluntarily. Some filtering-facepiece respirators are equipped with a sorbent layer for absorbing "nuisance" organic vapors. These can be used for voluntary use, but are not NIOSH certified for protection against hazardous concentrations of organic vapor.

WAC 296-307-59805 Make sure voluntary use of respirators is safe.

Definition:
Voluntary use is respirator use that is requested by the employee AND permitted by the employer when NO respiratory hazard exists.

IMPORTANT: If you choose to require respirator use, use is NOT voluntary and the required use sections of this part apply.

You must:
(1) Make sure voluntary respirator use does NOT: such as restricting necessary vision or radio communication
A NIOSH approval label will appear on or in the respirator packaging. It will tell you what protective information in Table 2 at no cost to them.

**You must:**
(2) Provide all voluntary respirator users with the advisory information in Table 2 at no cost to them.

**Note:** If you have provided employees with the advisory information required in the previous section, WAC 296-307-598, you do not need to provide the additional information in Table 2 to those employees.

**You must:**
(3) Develop and maintain a written program that includes the following:

- Medical evaluation provisions as specified in WAC 296-307-604.

---

Table 2

**Advisory Information for Employees Who Voluntarily Use Respirators**

- Respirators protect against airborne hazards when properly selected and used. WISHA recommends voluntary use of respirators when exposure to substances is below WISHA permissible exposure limits (PELs) because respirators can provide you an additional level of comfort and protection.
- If you choose to voluntarily use a respirator (whether it is provided by you or your employer) be aware that *respirators can create hazards for you*, the user. You can avoid these hazards if you know how to use your respirator properly AND how to keep it clean. Take these steps:
  - Read and follow all instructions provided by the manufacturer about use, maintenance (cleaning and care), and warnings regarding the respirator's limitations.
  - Choose respirators that have been certified for use to protect against the substance of concern. The National Institute for Occupational Safety and Health (NIOSH) certifies respirators. If a respirator is not certified by NIOSH, you have no guarantee that it meets minimum design and performance standards for workplace use.
    - A NIOSH approval label will appear on or in the respirator packaging. It will tell you what protection the respirator provides.
    - Keep track of your respirator so you do not mistakenly use someone else's.
  - DO NOT wear your respirator into:
    - Atmospheres containing hazards that your respirator is not designed to protect against.
      For example, a respirator designed to filter dust particles will not protect you against solvent vapor, smoke or oxygen deficiency.
    - Situations where respirator use is required.

---

**WAC 296-307-59810 Keep voluntary use program records.**

**Exemption:** If employees use only filtering-facepiece respirators voluntarily, you do not need to follow these record-keeping requirements.

**You must:**
- Keep copies of:
  - Your current written respirator program
  - Written recommendations from the LHCP
- Allow records required by this section to be examined and copied by affected employees and their representatives.

---

**WAC 296-307-600 Keep written respirator program and recordkeeping.**

**Your responsibility:**

---

**WAC 296-307-60005 Develop and maintain a written program.**

**Exemption:** This section does NOT apply to respirator use that is voluntary. See WAC 296-307-59805 for voluntary use program requirements.
You must:
(1) Develop a complete worksite-specific written respiratory protection program that includes the applicable elements listed in Table 3.

Note: Pay for respirators, medical evaluations, fit testing, training, maintenance, travel costs, and wages.

You must:
(2) Keep your program current and effective by evaluating it and making corrections. Do ALL of the following:
- Make sure procedures and program specifications are followed and appropriate.
- Make sure selected respirators continue to be effective in protecting employees. For example:
  - If changes in work area conditions, level of employee exposure, or employee physical stress have occurred, you need to reevaluate your respirator selection.
- Have supervisors periodically monitor employee respirator use to make sure employees are using them properly.
- Regularly ask employees required to use respirators about their views concerning program effectiveness and whether they have problems with:
  - Respirator fit during use
  - Any effects of respirator use on work performance
  - Respirators being appropriate for the hazards encountered
  - Proper use under current worksite conditions
  - Proper maintenance.
- When developing your written program include applicable elements listed in Table 3.

### Table 3: Required Elements for Required-Use Respirator Programs

<table>
<thead>
<tr>
<th>• Selection:</th>

</tr>
<tr>
<td>- When to discard respirators</td>
</tr>
<tr>
<td>- A cartridge or canister change schedule IF air-purifying respirators are selected for use against gas or vapor contaminants AND an end-of-service-life-indicator (ESLI) is not available. In addition, provide:</td>
</tr>
<tr>
<td>- The data and other information you relied on to calculate change schedule values (for example, highest contaminant concentration estimates, duration of employee respirator use, expected maximum humidity levels, user breathing rates, and safety factors)</td>
</tr>
</tbody>
</table>

| • Procedures to ensure a safe air quantity and quality IF atmosphere-supplying respirators (air-line or SCBA) are selected |
| • Procedures for evaluating program effectiveness on a regular basis |

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-60005, filed 12/21/04, effective 4/2/05.]

**WAC 296-307-60010 Keep respirator program records.**

You must:
- Keep the following records:
  - Your current respirator program
  - Each employee's current fit test record, if fit testing is conducted. Fit test records must include:
    - Employee name
    - Test date
Respirator Selection Process

**Step 1:** If your only respirator use is for escape, skip to **Step 8** to select appropriate respirators.

**Step 2:** If the respiratory hazard is a biological aerosol, such as TB (tuberculosis), anthrax, psittacosis (parrot fever), or hanta virus, select a respirator appropriate for **nonemergency** activities recognized to present a health risk to workers AND skip to **Step 8**.

• If respirator use will occur during **emergencies**, skip to **Step 8** and document the analysis used to select the appropriate respirator.

• Use Centers for Disease Control (CDC) selection guidance for exposures to specific biological agents when this guidance exists. Visit http://www.cdc.gov.

**Step 3:** If the respiratory hazard is a pesticide, follow the respirator specification on the pesticide label AND skip to **Step 9**.

**Step 4:** Determine the expected exposure concentration for each respiratory hazard of concern. Use the results from the evaluation required by WAC 296-307-624, Respiratory hazards.

**Step 5:** Determine if the respiratory hazard is classified as IDLH; if it is **NOT** IDLH skip to **Step 7**.

• The respiratory hazard is classified as IDLH if:
  – The atmosphere is oxygen deficient or oxygen enriched
  OR
  – You **CANNOT** measure or estimate your expected exposure concentration
  OR

**Step 7:** Identify respirator types with assigned protection factors (APFs) from Table 5 that are appropriate to protect employees from the expected exposure concentration.

**Step 8:** Consider hazards that could require selection of specific respirator types. For example, select full-facepiece respirators to prevent eye irritation or abrasive blasting helmets to provide particle rebound protection.

**Step 9:** Evaluate user and workplace factors that might compromise respirator performance, reliability or safety.

• If the respiratory hazard is a pesticide, follow the requirements on the pesticide label and skip to **Step 11**. Examples:
  – High humidity or temperature extremes in the workplace.
  – Necessary voice communication.
  – High traffic areas and moving machinery.
  – Time or distance for escape.

**Step 10:** Follow Table 6 requirements to select an air-purifying respirator.

• If Table 6 requirements cannot be met, you must select an air-line respirator or an SCBA.

**Step 11:** Make sure respirators you select are certified by the National Institute for Occupational Safety and Health (NIOSH).

• To maintain certification, make sure the respirator is used according to cautions and limitations specified on the NIOSH approval label.

___

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-60205, filed 12/21/04, effective 4/2/05.]
Use Table 5 to identify the assigned protection factor for different types of respirators.

</tr>
</tbody>
</table>

WAC 296-307-604 Medical evaluations.
Your responsibility:
To make sure a respirator used under your specific worksite conditions is not a health risk to employees.

Exemption: This section does NOT apply to employees who only use:
• Filtering-facepiece respirators voluntarily. See WAC 296-307-598 of this part for voluntary use requirements
OR
• Escape-only respirators that are mouthpiece, loose-fitting, or hooded respirators.

IMPORTANT:
• Using a respirator can create physical risks for an employee each time it is worn. The extent of these risks depends on these factors:
  • Type of respirator
  • Environmental conditions at the worksite
  • Physical demands of the work
- Use of other protective clothing
- Employee's health status.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060, 05-01-166, § 296-307-604, filed 12/21/04, effective 4/2/05.]

WAC 296-307-60405 Provide medical evaluations.

IMPORTANT:
If you have provided an employee with a medical evaluation addressing respirator use, as required by another chapter, that evaluation will meet the requirements of this section.

You must:
• Follow the medical evaluation process, Steps 1 through 7 in this section, to provide medical evaluations for employees at no cost to them.

Medical Evaluation Process

Step 1: Identify employees who need medical evaluations and determine the frequency of evaluations from Table 7. Include employees who:
• Are required to use respirators
OR
• Voluntarily use respirators that are not filtering-face-piece respirators

Note: You may use a previous employer's medical evaluation for an employee if you can:
• Show the employee's previous work and use conditions were substantially similar to yours
AND
• Obtain a copy of the licensed healthcare professional's (LHCP's) written recommendation approving the employee's use of the respirator chosen by you.

Step 2: Identify a licensed healthcare professional (LHCP) to perform your medical evaluations.

Note: If you select a different LHCP, you do not need to have new medical evaluations done.

Step 3: Make sure your LHCP has the following information before the evaluation is completed:
• Information describing the respirators employees may use, including the weight and type.
• How the respirators will be used, including:
  – How often the respirator will be used, for example, daily, or once a month
  – The duration of respirator use, for example, a minimum of one hour, or up to twelve hours
  – The employee's expected physical work effort
  – Additional personal protective clothing and equipment to be worn
  – Temperature and humidity extremes expected during use
• A copy of your written respiratory protection program and this part.

Note: You may choose to send the questionnaire to the LHCP ahead of time, giving time to review it and add any necessary questions
• The LHCP determines what questions to add to the questionnaire, if any; however, questions in Parts 1-3 may not be deleted or substantially altered.

Step 4: Administer the medical questionnaire in WAC 296-307-61605 to employees, or provide them a medical exam that obtains the same information.

Note: You may use on-line questionnaires if the questions are the same and requirements of this section are met.

• Administer the examination or questionnaire at no cost to employees:
  – During the employee's normal working hours
  – At a time and place convenient to the employee
• Maintain employee confidentiality during examination or questionnaire administration:
  – Do not view employee's answers on the questionnaire
  – Do not act in a manner that may be considered a breach of confidentiality

Note: Providing confidentiality is important for securing successful medical evaluations. It helps make sure the LHCP gets complete and dependable answers on the questionnaire.

• Make sure employees understand the content of the questionnaire.
• Provide the employee with an opportunity to discuss the questionnaire or exam results with the LHCP.

Step 5: Provide follow-up evaluation for employees when:
• The LHCP needs more information to make a final recommendation

OR
• An employee gives any positive response to questions 1-8 in Part 2 or to questions 1-6 in Part 3 of the WISHA medical evaluation questionnaire in WAC 296-307-61605.

Note: Follow-up may include:
• Employee consultation with the LHCP such as a telephone conversation to evaluate positive questionnaire responses
• Medical exams
• Medical tests or other diagnostic procedures.

Step 6: Obtain a written recommendation from the LHCP that contains only the following medical information:
• Whether or not the employee is medically able to use the respirator
• Any limitations of respirator use for the employee
• What future medical evaluations, if any, are needed
• A statement that the employee has been provided a copy of the written recommendation.

Step 7: Provide a powered, air-purifying respirator (PAPR) when the LHCP determines the employee should not wear a negative-pressure air-purifying respirator and is able to wear a PAPR.

Note: You may discontinue medical evaluations for an employee when the employee no longer uses a respirator.
• If you have staff conducting your medical evaluations, they may keep completed questionnaires and findings as confidential medical records, if they are maintained separately from other records.

Use Table 7 to determine medical evaluation frequency.

Table 7
Evaluation Frequency

(2007 Ed.)
### WAC 296-307-606 Fit testing.
#### Your responsibility:
To make sure negative and positive-pressure tight-fitting respirators can provide an adequate fit and acceptable level of comfort to employees.

**Exemption:** This section does **not** apply to any respirators that are:
- Voluntarily used. See WAC 296-307-598 for voluntary use requirements.
- Mouthpiece respirators.

### WAC 296-307-60605 Conduct fit testing.
#### You must:
- Provide, at no cost to the employee, fit tests for **ALL** tight-fitting respirators on the following schedule:
  - Before employees are assigned duties that may require the use of respirators
  - At least every twelve months after initial testing
  - Whenever any of the following occurs:
    - A different respirator facepiece is chosen such as a different type, model, style, or size
    - You become aware of a physical change in an employee that could affect respirator fit. For example, you may observe, or be told about, facial scarring, dental changes, cosmetic surgery, or obvious weight changes
    - An employee notifies you, or your LHCP, that the respirator fit is unacceptable. During the retest, you must give an employee reasonable opportunity to select a different respirator facepiece (size, model, etc.).

#### Note:
You may accept a fit test completed by a previous employer IF:
- You obtain written documentation of the fit test
- The results of the fit test are not more than twelve months old
- The employee will use the same respirator (the same type, model, style, and size)
- The fit test was conducted in a way that meets the requirements of WAC 296-307-606 and 296-307-62010.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-60405, filed 12/21/04, effective 4/2/05.]

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-606, filed 12/21/04, effective 4/2/05.]

#### WAC 296-307-6070 Training.
#### Your responsibility:
To make sure employees who are required to use respirators understand and can demonstrate proper respirator use and maintenance.

**IMPORTANT:**
This section applies to employees who voluntarily use respirators only when training is necessary to prevent the respirator from creating a hazard. See WAC 296-307-598 for voluntary use requirements.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-60805, filed 12/21/04, effective 4/2/05.]

#### WAC 296-307-60805 Provide effective training.
#### You must:
- Train employees, based on their duties, if they do any of the following:
  - Use respirators
The employee has not retained knowledge or skills necessary to understand.

Note: • Training may be provided using audiovisuals, slide presentations, formal classroom instruction, informal discussions during safety meetings, training programs conducted by outside sources, or a combination of these methods.
   • You may have instructors available when using video or automated training methods to:
     Encourage and provide responses to questions for the benefit of employees
     Evaluate employees' understanding of the material
     Provide other instructional interaction to employees.

You must:
• Make sure a qualified instructor provides training
• Provide training, at no cost to the employee, at these times:
   – Initially, before worksite respirator use begins
   – Periodically, within twelve months of the previous training
   – Additionally, when the following occur:
     ■ The employee has not retained knowledge or skills
     ■ Changes in the worksite, or type of respirator make previous training incomplete or obsolete.

Note: • You may accept an employee's previous training, such as training provided by another employer, to satisfy the initial training requirement if:
   – You can demonstrate the employee received training within the past twelve months
     AND
   – The employee can demonstrate the knowledge and skills to use required respirators effectively.
   • If you accept an employee's previous training to satisfy the initial training requirement, you are still responsible for providing periodic, and additional training when needed. Periodic training would need to be provided within twelve months of the employee's previous training.

You must:
• Make sure employees can demonstrate the following knowledge and skills as required by their duties:
  – Why the respirator is necessary. Include, for example, information identifying respiratory hazards such as hazardous chemicals, the extent of the employee's exposure, and potential health effects and symptoms
  – The respirator's capabilities and limitations. Include, for example, how the respirator provides protection and why air-purifying respirators cannot be used in oxygen-deficient conditions
  – How improper fit, use, or maintenance can compromise the respirator's effectiveness and reliability
  – How to properly inspect, put on, seal check, use, and remove the respirator
  – How to clean, disinfect, repair, and store the respirator, or how to get this done by someone else
  – How to use the respirator effectively in emergency situations; including what to do when a respirator fails and where emergency respirators are stored
  – Medical signs and symptoms that may limit or prevent the effective use of respirators such as shortness of breath or dizziness
  – The employer's general obligations under this part. For example, developing a written program, selecting appropriate respirators, and providing medical evaluations.

WAC 296-307-610 Maintenance.
Your responsibility:
To make sure respirators are maintained so they will function properly and not create health hazards such as skin irritation.

You must:
Maintain respirators in a clean and reliable condition
WAC 296-307-61005
Store respirators properly
WAC 296-307-61010
Inspect and repair respirators
WAC 296-307-61015

IMPORTANT:
This section applies to employees who voluntarily use respirators only when maintenance is necessary to prevent the respirator from creating a hazard. See WAC 296-307-598 for voluntary use requirements.

WAC 296-307-61005 Maintain respirators in a clean and reliable condition.

You must:
• Make sure respirators are kept, at no cost to the employee, clean, sanitary and in good working order. Do at least the following:
   – Clean and disinfect respirators as often as specified in Table 8 of this section.

Note: • Use required cleaning and disinfecting procedures in WAC 296-307-62015, or the manufacturer's procedures that:
   – Result in a clean and sanitary respirator
   – Do not damage the respirator
   – Do not harm the user
   – Automated cleaning and disinfecting are permitted
   – Cleaning and disinfecting may be done by a central facility as long as you make sure respirators provided are clean, sanitary, and function properly.

You must:
• Make sure respirators are assembled properly after cleaning or disinfecting.

Use Table 8 to determine how often to clean and disinfect respirators.

Table 8

Required Frequencies for Cleaning and Disinfecting Respirators

<table>
<thead>
<tr>
<th>If, the respirator will be . . .</th>
<th>Then, clean and disinfect the respirator . . .</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Used exclusively by one employee</td>
<td>• As often as needed to:</td>
</tr>
<tr>
<td>OR</td>
<td>– Keep it clean and functional AND</td>
</tr>
<tr>
<td>OR</td>
<td>– To prevent health hazards such as skin irritation</td>
</tr>
<tr>
<td>OR</td>
<td>• Before it is worn by another employee</td>
</tr>
</tbody>
</table>

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-60805, filed 12/21/04, effective 4/2/05.]

(2007 Ed.)
Use only NIOSH-certified parts
• Before Each use so the respirator is immediately ready for use at all times

<table>
<thead>
<tr>
<th>If the respirator will be . . .</th>
<th>Then, clean and disinfect the respirator . . .</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Used for fit-testing or training</td>
<td></td>
</tr>
<tr>
<td>• Shared for emergency use</td>
<td>• After each use</td>

</table>

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-61005, filed 12/21/04, effective 4/2/05.]

WAC 296-307-61010 Store respirators properly.
You must:
• Store respirators to protect them from ALL of the following:
  – Deformation of the facepiece or exhalation valve
  – Sunlight or extreme temperatures or other conditions
  – Contamination such as dust or damaging chemicals
  – Excessive moisture.

Note: Use coffee cans, sealable plastic bags, or other suitable means of protection.

You must:
• Follow these additional requirements for emergency respirators:
  – Keep respirators accessible to the work area
  – Store respirators in compartments or with covers clearly marked as containing emergency respirators
  – Follow additional storage instructions from the respirator manufacturer
  – Store an adequate number of emergency respirators in each area where they may be needed.

Note: Emergency respirators include mouthpiece respirators and other respirators that are limited to escape-only use by their NIOSH certification.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-61010, filed 12/21/04, effective 4/2/05.]

WAC 296-307-61015 Inspect and repair respirators.
You must:
• Conduct respirator inspections as often as specified in Table 9.
• Make sure respirator inspections cover all of the following:
  – Respirator function
  – Tightness of connections
  – The condition of the facepiece, headstraps, valves, connecting tubes, and cartridge, canisters or filters
  – Pliability and deterioration of elastomeric parts
  – Maintenance of air or oxygen cylinders
  – Making sure SCBA air cylinders are at ninety percent of the manufacturer's recommended pressure level
  – Proper functioning of SCBA regulators when air-flow is activated
  – Proper functioning of SCBA low-pressure warning devices when activated
• Certify inspections for emergency respirators by documenting the following:
  – Inspection date
  – Serial number of each respirator or other identifying information
  – Inspector's name or signature
  – Inspection findings

• Repair or replace any respirator that is not functioning properly before the employee returns to a situation where respirators are required.
  – If respirators fail inspection or are not functioning properly during use due to problems such as leakage, vapor or gas breakthrough, or increased breathing resistance, ALL of the following apply:
    ■ Do NOT permit such respirators to be used until properly repaired or adjusted
    ■ Use only NIOSH-certified parts
    ■ Make sure repairs and adjustments are made by appropriately trained individuals
    – Use the manufacturer or a technician trained by the manufacturer to repair or adjust reducing and admission valves, regulators, and warning devices on SCBAs or air-line respirators.
    – Follow the manufacturer's recommendations and specifications for the type and extent of repairs.

Use Table 9 to determine how often to inspect respirators.

Table 9

Required Frequencies for Respirator Inspections

<table>
<thead>
<tr>
<th>If the respirator is . . .</th>
<th>Then inspect . . .</th>
</tr>
</thead>
<tbody>
<tr>
<td>A SCBA in any use</td>
<td>• Before each use AND • During cleaning OR • Monthly if NOT used</td>
</tr>
<tr>
<td>Used for nonemergencies, including day-to-day or infrequent use</td>

</tr>
<tr>
<td>Used only for emergencies</td>
<td>• Check for proper function before and after each use AND • Inspect at least monthly as instructed by the manufacturer</td>
</tr>
<tr>
<td>Used for escape-only purposes</td>
<td>• Before carrying into a work place for use</td>
</tr>
</tbody>
</table>

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-61015, filed 12/21/04, effective 4/2/05.]

WAC 296-307-612 Safe use and removal of respirators.
Your responsibility:
To make sure respirator use and removal is safe.

Exemption: These sections do NOT apply to employees who voluntarily use any type of respirator. See WAC 296-307-598 for voluntary use requirements.

You must:
• Prevent sealing problems with tight-fitting respirators

WAC 296-307-61205
Make sure employees leave the use area before removing respirators
WAC 296-307-61210.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-61210, filed 12/21/04, effective 4/2/05.]

WAC 296-307-61205 Prevent sealing problems with tight-fitting respirators.
You must:
• Make sure employees use the procedure in WAC 296-307-62020 to perform a user seal check each time they put on their tight-fitting respirator.
• Make sure you do NOT permit respirator use if employees have a characteristic that interferes with the respirator facepiece seal or valve function. For example, stubble, moustaches, sideburns, bangs, hairlines, or scars between the face and the sealing surface of the respirator will affect the seal.
• Make sure corrective glasses or personal protective equipment (PPE) do NOT interfere with the facepiece seal. Examples of PPE include safety glasses, goggles, face-shields, clothing, and hard hats.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-61205, filed 12/21/04, effective 4/2/05.]

WAC 296-307-61210 Make sure employees leave the use area before removing respirators.
You must:
• Make sure employees leave the use area for any of these reasons:
  – To replace air-purifying filters, cartridges, or canisters
  – When they smell or taste (detect) vapor or gas leakage from, for example, cartridges, canister, or the facepiece seal
  – When they detect changes in breathing resistance
  – To readjust their respirators
  – To wash their faces and respirators as necessary to prevent skin or eye irritation
  – If they become ill
  – If they experience sensations of dizziness, nausea, weakness, breathing difficulty, coughing, sneezing, vomiting, fever, or chills.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-61210, filed 12/21/04, effective 4/2/05.]

WAC 296-307-614 Standby requirements for immediately dangerous to life or health (IDLH) conditions.
Your responsibility:
To provide adequate assistance to employees using respirators in conditions immediately dangerous to life or health (IDLH).
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-614, filed 12/21/04, effective 4/2/05.]

WAC 296-307-61405 Provide standby assistance in immediately dangerous to life or health (IDLH) conditions.
IMPORTANT:
WISHA currently uses the IDLH values in the 1990 NIOSH Pocket Guide to Chemical Hazards to determine the existence of IDLH conditions. You may use more recent editions of this guide. Visit www.cdc.gov/niosh for more information.

You must:
• Provide at least two standby employees outside the IDLH area.

Note: You need only one standby employee if the IDLH condition is well characterized, will remain stable and you can show one employee can adequately do all of the following:
• Monitor employees in the IDLH area
• Implement communication
• Initiate rescue duties.

• Train and equip standby employees to provide effective emergency rescue. Equip them with:
  – A pressure-demand SCBA or a pressure-demand airline respirator with an auxiliary SCBA, for each standby employee
  – Appropriate retrieval equipment, when it would help with the effective rescue of the entrant, or an equivalent means of rescue
• Make sure standby employees maintain visual, voice, or signal line communication with employees in the IDLH area
• Make sure that in the event of an emergency:
  – Standby employees notify you or your designee before they enter the IDLH area to provide emergency rescue
  – You provide necessary assistance when notified.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-61405, filed 12/21/04, effective 4/2/05.]

WAC 296-307-616 Air quality for self-contained breathing apparatus (SCBA) and air-line respirators.
Your responsibility:
To provide employees who use SCBAs or air-line respirators with an acceptable air supply.

You must:
Make sure breathing air and oxygen meet established specifications
WAC 296-307-61605
Prevent conditions that could create a hazardous breathing air supply
WAC 296-307-61610
Make sure compressors do not create a hazardous breathing air supply
WAC 296-307-61615.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-616, filed 12/21/04, effective 4/2/05.]

WAC 296-307-61605 Make sure breathing air and oxygen meet established specifications.
You must:
• Make sure that all SCBAs and air-line respirators are provided with safe breathing air and oxygen according to the following:
  – Compressed breathing air must meet the following specifications for Grade D air:
    ■ Oxygen (volume/volume) within 19.5-23.5%
    ■ Hydrocarbon (condensed): NO MORE than five milligrams per cubic meter of air
    ■ Carbon monoxide (CO): NO MORE than ten parts per million (ppm)
    ■ Carbon dioxide (CO2): NO MORE than 1,000 ppm
    ■ No noticeable odor

(2007 Ed.)
You must:
- Make sure the moisture content of the air supplied meets the following:
  - Air supplied to respirators from cylinders must NOT exceed a dew point of \(-50^\circ \text{F} \) (or \(-45.6^\circ \text{C} \)) at 1 atmospheric pressure.
  - Compressor supplied air must NOT exceed a dew point of \(10^\circ \text{F} \) (or \(5.6^\circ \text{C} \)) BELOW the use temperature at 1 atmospheric pressure.
- Cylinders obtained from a supplier of breathing air must have a certificate of analysis that verifies each cylinder's contents meet Grade D and dew point standards.
- Compressed and liquid oxygen must meet the United States Pharmacopoeia requirements for medical or breathing oxygen.

Reference: See the American National Standards Institute - Compressed Gas Association Commodity Specification for Air (G-7.1.1989) for more information. Contact your local library to access a copy.

IMPORTANT:
- Ambient-air movers (or pumps) used to supply air to respirators must be used according to the manufacturer's instructions.
- Respirators used with ambient-air movers must be approved by NIOSH to operate within the pressure ranges of the air mover.

You must:
(1) Locate or modify compressor intakes so they will not pick up contaminated air OR exhaust gases such as carbon monoxide from:
- Fuel-powered vehicles
OR
- The internal combustion motor of the compressor
OR
- Other contaminant sources in the area, for example, a ventilation system discharge.

Note: You may need to reposition the compressor's intake or engine exhaust pipe or outlet, especially if they are located near each other.
- Be aware that exhaust gases may not adequately disperse when the compressor is operated in:
  - An enclosed space such as a small room, a corner, or near a wall
  - In turbulent wind conditions.

You must:
(2) Equip compressors with suitable air-purifying filters, water traps, and sorbents (such as charcoal beds) and maintain them as follows:
- Periodically change or clean them according to the manufacturer or supplier's instructions
- Keep a tag at the compressor with the following information:
  - When the sorbent and filters were last replaced or cleaned
  - The date of the most recent changes or cleaning
  - The signature of the person authorized by the employer to perform changes or cleaning.

Note: To be sure you are providing the recommended operating pressure for respirators, you may need to install a delivery pressure gauge at the point where the manifold respirator hose is attached.

You must:
(3) Make sure the carbon monoxide (CO) level in breathing air from compressors does NOT exceed ten parts per million (ppm).

Note: If you do not have a reliable CO-free area available for locating your compressor intake, consider these examples of methods to prevent CO contamination of the air supply:
- Use of continuous and effective carbon monoxide alarms and filters
- Conduct frequent monitoring of air quality
- Use a CO converter (converts CO to carbon dioxide).

You must:
- Maintain CO levels in oil lubricated compressors by using at least one of the following:
  - An effective CO alarm
  - An effective high temperature alarm AND testing the air supply often enough to see if CO levels exceed ten ppm.

Note: How often to test depends on a number of considerations, for example:
- Compressor age
- Maintenance history of the compressor
- Stability of CO readings
- If the CO or high temperature alarm cannot be heard by the employee, a flashing light or other effective alternative to an audio alarm needs to be used
• Safeguards, such as alarms, are necessary to prevent CO contamination resulting from compressor overheating.
  • Any type of oil-lubricated compressor, such as screw or piston types, may produce dangerous levels of CO if overheating occurs.
    – Old compressors are known to leak oil due to worn parts, increasing the possibility for overheating. Newer compressors may also overheat if maintenance practices are poor. For example, poor maintenance practices may lead to disconnected or incorrectly set alarms, inoperative shut-offs, or an impaired cooling system.
    • You need to instruct employees to move to a safe area when the alarm sounds AND to stop using respirators.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-61605, filed 12/21/04, effective 4/2/05.]

WAC 296-307-618 Labeling of air-purifying respirator filters, cartridges, and canisters.
Your responsibility:
To make sure employees, their supervisors, and program administrators can easily check for the correct air-purifying filters, cartridges, and canisters on respirators.
Exemption: This section does NOT apply to filtering-facepiece respirators when used voluntarily. See WAC 296-307-598 for voluntary use requirements.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-61805, filed 12/21/04, effective 4/2/05.]

WAC 296-307-61805 Keep labels readable on respirator filters, cartridges, and canisters during use.
You must:
• Make sure the NIOSH certification labeling and color-coding on air-purifying respirator filters, cartridges, and canisters remains readable and intact during use.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-61805, filed 12/21/04, effective 4/2/05.]

WAC 296-307-620 Required procedures for respiratory protection program.
Your responsibility:
To use the procedures and questionnaire provided in this section when implementing your respiratory protection program.
You must:
Use this medical questionnaire for medical evaluations WAC 296-307-62005
Follow these fit-testing procedures for tight-fitting respirators
  WAC 296-307-62010
Follow procedures established for cleaning and disinfecting respirators
  WAC 296-307-62015
Follow procedures established for seal checking respirators

WAC 296-307-62020.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-620, filed 12/21/04, effective 4/2/05.]

WAC 296-307-62005 Use this medical questionnaire for medical evaluations.
You must:
• Use the medical questionnaire in Table 10 when conducting medical evaluations.

Note: • You may use a physical exam instead of this questionnaire if the exam covers the same information as the questionnaire.
• You may use on-line questionnaires if the questions are the same and the requirements in WAC 296-307-604 of this part are met.
• You may choose to send the questionnaire to the LCHP ahead of time, giving time to review it and add any necessary questions.
• The LHCP determines what questions to add to the questionnaire, if any; however, questions in Parts 1-3 may not be deleted or substantially altered.

Table 10
WISHA Medical Evaluation Questionnaire

Employer instructions:
• You may use on-line questionnaires if the requirements in WAC 296-307-60405 are met.
• You must tell your employee how to deliver or send the completed questionnaire to the healthcare provider you have selected.
• You must NOT review employees' questionnaires.

Healthcare provider's instructions:
• Review the information in this questionnaire and any additional information provided to you by the employer.
• You may add questions to this questionnaire at your discretion; HOWEVER, questions in Parts 1-3 may not be deleted or substantially altered.
• Follow-up evaluation is required for any positive response to questions 1-8 in Part 2, or questions 1-6 in Part 3. This might include: Phone consultations to evaluate positive responses, medical tests, and diagnostic procedures.
• When your evaluation is complete, send a copy of your written recommendation to the employer AND employee.

Employee information and instructions:
• Your employer must allow you to answer this questionnaire during normal working hours, or at a time and place that's convenient to you.
• Your employer or supervisor must not look at or review your answers at any time.

Part 1 - Employee Background Information
ALL employees must complete this part
Please print

1. Today's date: __________________
2. Your name: __________________
3. Your age (to nearest year): _____
4. Sex (circle one): Male / Female
5. Your height: _____ ft. _____ in.
6. Your weight: _____ lbs.
7. Your job title: __________________

(2007 Ed.)
8. A phone number where you can be reached by the healthcare professional who reviews this questionnaire (include Area Code): __________

9. The best time to call you at this number: __________

10. Has your employer told you how to contact the healthcare professional who will review this questionnaire?  Yes / No

11. Check the type of respirator(s) you will be using:
   a. ___ N, R, or P filtering-facepiece respirator (for example, a dust mask, or an N95 filtering-facepiece respirator).
   b. Check all that apply.
      ❏ Half mask  ❏ Full facepiece mask  ❏ Helmet hood  ❏ Escape
      ❏ Nonpowered cartridge or canister  ❏ Powered air-purifying cartridge respirator (PAPR)
      ❏ Supplied-air or Air-line
      Self-contained breathing apparatus (SCBA):  ❏ Demand or ❏ Pressure demand
      Other: __________

12. Have you previously worn a respirator?  Yes / No

If "yes," describe what type(s):

Part 2 - General Health Information
ALL employees must complete this part
Please circle "Yes" or "No"

1. Do you currently smoke tobacco, or have you smoked tobacco in the last month?  Yes / No
2. Have you ever had any of the following conditions?
   a. Seizures (fits):  Yes / No
   b. Diabetes (sugar disease):  Yes / No
   c. Allergic reactions that interfere with your breathing:  Yes / No
   d. Claustrophobia (fear of closed-in places):  Yes / No
   e. Trouble smelling odors:  Yes / No
3. Have you ever had any of the following pulmonary or lung problems?
   a. Asbestosis:  Yes / No
   b. Asthma:  Yes / No
   c. Chronic bronchitis:  Yes / No
   d. Emphysema:  Yes / No
   e. Pneumonia:  Yes / No
   f. Tuberculosis:  Yes / No
   g. Silicosis:  Yes / No
   h. Pneumothorax (collapsed lung):  Yes / No
   i. Lung cancer:  Yes / No
   j. Broken ribs:  Yes / No
   k. Any chest injuries or surgeries:  Yes / No
   l. Any other lung problem that you have been told about:  Yes / No
4. Do you currently have any of the following symptoms of pulmonary or lung illness?
   a. Shortness of breath:  Yes / No
   b. Shortness of breath when walking fast on level ground or walking up a slight hill or incline:  Yes / No
   c. Shortness of breath when walking with other people at an ordinary pace on level ground:  Yes / No
   d. Have to stop for breath when walking at your own pace on level ground:  Yes / No
   e. Shortness of breath when washing or dressing yourself:  Yes / No
   f. Shortness of breath that interferes with your job:  Yes / No
   g. Coughing that produces phlegm (thick sputum):  Yes / No
   h. Coughing that wakes you early in the morning:  Yes / No
   i. Coughing that occurs mostly when you are lying down:  Yes / No
   j. Coughing up blood in the last month:  Yes / No
   k. Wheezing:  Yes / No
   l. Wheezing that interferes with your job:  Yes / No
   m. Chest pain when you breathe deeply:  Yes / No
   n. Any other symptoms that you think may be related to lung problems:  Yes / No
5. Have you ever had any of the following cardiovascular or heart problems?  Yes / No
   a. Heart attack:  Yes / No
   b. Stroke:  Yes / No
   c. Angina:  Yes / No
   d. Heart failure:  Yes / No
   e. Swelling in your legs or feet (not caused by walking):  Yes / No
   f. Heart arrhythmia (heart beating irregularly):  Yes / No
   g. High blood pressure:  Yes / No

**Part 4 - Discretionary Questions**

Complete questions in this part ONLY IF your employer's healthcare provider says they are necessary

<table>
<thead>
<tr>
<th>Question</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. In your present job, are you working at high altitudes (over 5,000 feet) or in a place that has lower than normal amounts of oxygen?</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>If &quot;yes,&quot; do you have feelings of dizziness, shortness of breath, pounding in your chest, or other symptoms when you are working under these conditions:</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>2. Have you ever been exposed (at work or home) to hazardous solvents, hazardous airborne chemicals (such as gases, fumes, or dust), OR have you come into skin contact with hazardous chemicals?</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>If &quot;yes,&quot; name the chemicals, if you know them:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3. Have you ever worked with any of the materials, or under any of the conditions, listed below:</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>a. Asbestos?</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>b. Silica (for example, in sandblasting)?</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>c. Tungsten/cobalt (for example, grinding or welding this material)?</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>d. Beryllium?</td>
<td>Yes</td>
<td>No</td>
</tr>
<tr>
<td>e. Aluminum?</td>
<td>Yes / No</td>
<td></td>
</tr>
<tr>

<tr>
<td>g. Iron?</td>
<td>Yes / No</td>
<td></td>
</tr>
<tr>
<td>h. Tin?</td>
<td>Yes / No</td>
<td></td>
</tr>
<tr>
<td>i. Dusty environments?</td>
<td>Yes / No</td>
<td></td>
</tr>
<tr>
<td>j. Any other hazardous exposures?</td>
<td>Yes / No</td>
<td></td>
</tr>
</tbody>
</table>

If "yes," describe these exposures: ____________________________

4. List any second jobs or side businesses you have: ____________________________

5. List your previous occupations: ____________________________

6. List your current and previous hobbies: ____________________________

7. Have you been in the military services? | Yes / No |

If "yes," were you exposed to biological or chemical agents (either in training or combat)? | Yes / No |

8. Have you ever worked on a HAZMAT team? | Yes / No |

9. Other than medications for breathing and lung problems, heart trouble, blood pressure, and seizures mentioned earlier in this questionnaire, are you taking any other medications for any reason (including over-the-counter medications)? | Yes / No |

If "yes," name the medications if you know them: ____________________________

10. Will you be using any of the following items with your respirator(s)?

   a. HEPA filters: | Yes / No |

   b. Canisters (for example, gas masks): | Yes / No |

   c. Cartridges: | Yes / No |

11. How often are you expected to use the respirator(s)?

   a. Escape-only (no rescue): | Yes / No |

   b. Emergency rescue only: | Yes / No |

   c. Less than 5 hours per week: | Yes / No |

   d. Less than 2 hours per day: | Yes / No |

   e. 2 to 4 hours per day: | Yes / No |

   f. Over 4 hours per day: | Yes / No |

12. During the period you are using the respirator(s), is your work effort:

   a. Light (less than 200 kcal per hour): | Yes / No |

      If "yes," how long does this period last during the average shift: ___ hrs. ___ mins.

      Examples of a light work effort are sitting while writing, typing, drafting, or performing light assembly work; or standing while operating a drill press (1-3 lbs.) or controlling machines.

   b. Moderate (200 to 350 kcal per hour): | Yes / No |

      If "yes," how long does this period last during the average shift: ___ hrs. ___ mins.

      Examples of moderate work effort are sitting while nailing or filing; driving a truck or bus in urban traffic; standing while drilling, nailing, performing assembly work, or transferring a moderate load (about 35 lbs.) at trunk level; walking on a level surface about 2 mph or down a 5-degree grade about 3 mph; or pushing a wheelbarrow with a heavy load (about 100 lbs.) on a level surface.

   c. Heavy (above 350 kcal per hour): | Yes / No |

      If "yes," how long does this period last during the average shift: ___ hrs. ___ mins.

      Examples of heavy work are lifting a heavy load (about 50 lbs.) from the floor to your waist or shoulder; working on a loading dock; shoveling; standing while bricklaying or chipping castings; walking up an 8-degree grade about 2 mph; climbing stairs with a heavy load (about 50 lbs.).

13. Will you be wearing protective clothing and/or equipment (other than the respirator) when you are using your respirator? | Yes / No |

If "yes," describe this protective clothing and/or equipment: ____________________________

14. Will you be working under hot conditions (temperature exceeding 77°F): | Yes / No |

15. Will you be working under humid conditions: | Yes / No |

16. Describe the work you will be doing while using your respirator(s): ____________________________

17. Describe any special or hazardous conditions you might encounter when you are using your respirator(s) (for example, confined spaces, life-threatening gases): ____________________________

18. Provide the following information, if you know it, for each toxic substance that you will be exposed to when you are using your respirator(s):

   a. Name of the first toxic substance: ____________________________

   b. Estimated maximum exposure level per shift: ____________________________

   c. Duration of exposure per shift: ____________________________

   d. Name of the second toxic substance: ____________________________
Estimated maximum exposure level per shift: ____________
Duration of exposure per shift: ____________
Name of the third toxic substance: ____________
Estimated maximum exposure level per shift: ____________
Duration of exposure per shift: ____________
The name of any other toxic substances that you will be exposed to while using your respirator: ____________
19. Describe any special responsibilities you will have while using your respirator(s) that may affect the safety and well-being of others (for example, rescue, security).

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-62010, filed 12/21/04, effective 4/2/05.]

### WAC 296-307-62010 Follow these fit-testing procedures for tight-fitting respirators.

**IMPORTANT:**
- This section contains procedural requirements that apply during actual fit testing.
- See WAC 296-307-606 of this part for fit-testing requirements that apply to your overall program.

**Exemptions:** This section does **NOT** apply to employees who:
- Voluntarily use respirators
- Are required to use mouthpiece respirators.

**You must:**
- Conduct fit testing according to all of the following:
  - Follow the procedure in Table 11 to choose a respirator for fit testing:
    - Prior to conducting fit tests
    - Any time your employee must select a different respirator such as when a previously selected respirator fails a test
  - Select and follow at least one of the following fit test procedures:
    - Qualitative fit-test procedures:
      - Isoamyl acetate vapor (IAA, banana oil) in Table 12
      - Saccharine aerosol in Table 13
      - Bitrex™ aerosol in Table 14
      - Irritant smoke in Table 15
    - Quantitative fit-test procedures:
      - Ambient aerosol condensation nuclei counter such as the Portacount™, in Table 16
      - Controlled negative pressure (CNP) such as the Fit-Tester 3000™, in Table 17
      - Generated aerosol in Table 18
    - Make sure employees perform the appropriate fit-test exercises listed in Table 19.
    - Clean and maintain equipment according to the manufacturer's instructions.
    - Make sure during fit testing employees wear any safety equipment that could:
      - Interfere with respirator fit
      - Be worn in the workplace. For example, chemical splash goggles.
    - Check, prior to fit testing, for conditions that may interfere with the respirator seal or valve functions. If you find such conditions, do **NOT** conduct fit testing for that individual.

**Note:** Examples of conditions that may interfere with the respirator seal or valve functions include:
- Moustache, stubble, sideburns, bangs, hairline, and other types of facial hair in areas where the respirator facepiece seals or that interfere with valve function
- Temple bars of corrective eyewear or headgear that extend through the face seal area.

### Table 11

#### Procedure for Choosing a Respirator for Fit Testing

1. **Inform** the employee:
   - To choose the most comfortable respirator that provides an adequate fit
   - That each respirator sample represents a different size and, if more than one model is supplied, a different shape
   - That if fitted and used properly, the respirator chosen will provide adequate protection

2. **Provide** a mirror and show the employee how to:
   - Put on the respirator
   - Position the respirator on the face
   - Set strap tension.

**Note:**
This instruction does **NOT** take the place of the employee's formal training since it is only a review.

3. **Review** with the employee how to check for a comfortable fit around the nose, cheeks and other areas on the face.
   - Tell the employee the respirator should be comfortable while talking or wearing eye protection.

4. **Have the employee** hold each facepiece against the face, taking enough time to compare the fit of each. The employee can then either:
   - Reject any facepiece that clearly does not feel comfortable or fit adequately
   - Choose which facepiece is most acceptable and which is less acceptable, if any.

**Note:**
- Supply as many respirator models and sizes as needed to make sure the employee finds a respirator that's acceptable and fits correctly
- To save time later, during this step note the more acceptable facepieces in case the one chosen fails the fit test or proves unacceptable later.

5. **Have the employee wear** the most acceptable respirator for AT LEAST 5 minutes to evaluate comfort and fit. Do **ALL** of the following during this time:
   - Ask the employee to observe and comment about the comfort and fit:
     - Around the nose, cheeks, and other areas on the face
     - When talking or wearing eye protection
   - Have the employee put on the respirator and adjust the straps until they show proficiency
   - Evaluate the respirator's general fit by checking:
     - Proper chin placement

(2007 Ed.)
Procedure for Choosing a Respirator for Fit Testing

- Properly tightened straps (do NOT over tighten)
- Acceptable fit across the nose bridge
- Respirator size; it must span the distance from nose to chin
- To see if the respirator stays in position
  • Have the employee complete a successful seal check as specified in WAC 296-307-62020 of this chapter
  • Prior to the seal check they must settle the respirator on their face by taking a few slow deep breaths WHILE SLOWLY:
    ■ Moving their head from side-to-side
    ■ Up and down.
  6. If the employee finds the respirator unacceptable, allow the employee to select another one and return to Step 5. Otherwise, proceed to Step 7.
  7. Before starting the fit test, you must:
    • Describe the fit test including screening procedures, employee responsibilities, and test exercises
    AND
    • Make sure the employee wears the respirator AT LEAST five minutes.

Table 12

Isoamyl Acetate (Banana Oil) Vapor Test Procedure

Important:
- This is a qualitative fit-test (QLFT) procedure
- The success of this test depends on preserving the employee's odor sensitivity to isoamyl acetate (IAA) vapor
  • Vapor accumulations in ambient air can decrease odor sensitivity. To prevent this:
    ■ Prepare ALL solutions in a location separate from screening and test areas
    ■ Conduct screening and tests in separate well-ventilated rooms. For example, use an exhaust fan or laboratory hood to prevent IAA vapor from accumulating in the room air
    • Always use odor-free water, for example, distilled or spring water that's 25°C (77°F).
    • Isoamyl acetate is also known as isopentyl acetate.

Screening Preparations

Important:
Odor threshold screening determines if the employee can detect weak concentrations of IAA vapor.
1. Choose an appropriate location to conduct screening.
   • Conduct screening and tests in separate well-ventilated rooms.
2. Prepare a stock solution AT LEAST weekly as follows:
   • Add one milliliter (ml) of pure IAA to 800 ml of odor-free water in a one-liter glass jar with a metal lid using a measuring dropper or pipette
   • Seal the jar with the lid and shake it for 30 seconds
   • Clean the dropper or pipette.
3. Prepare the odor test solution daily as follows:
   • Add 0.4 ml from the stock solution to 500 ml of water in a one liter glass jar with a metal lid using a clean pipette or dropper
   • Seal the jar with the lid and shake it for 30 seconds

Isoamyl Acetate (Banana Oil) Vapor Test Procedure

- Let this solution stand for 2-3 minutes so the IAA concentration above the liquid reaches equilibrium
- Label this jar so you know the contents but the employee cannot know its contents, for example, "1."

Note:
To maintain the integrity of the test, use labels that peel off easily AND periodically switch the labels.
4. Prepare a "test blank" solution as follows:
   • Add 500 ml of odor-free water to a one liter glass jar with a metal lid
   • Seal the jar
   • Label the jar so you know the contents but the employee cannot know its contents.
5. Type or neatly print the following instructions on a card and place it on the table in front of the two test jars:
   "The purpose of this test is to find out if you can smell banana oil at a low concentration. While both jars contain water, one ALSO contains a small amount of banana oil. Make sure the lid is secure then pick up a jar and shake it for two seconds. Open the jar and sniff at the opening. Repeat this for the second jar. Tell the individual conducting the fit test which jar contains banana oil."

Test Preparations

6. Choose an appropriate location to conduct fit testing.
   • Conduct screening and tests in separate well-ventilated rooms.
7. Assemble the fit test enclosure in the room.
   • Invert a clear 55-gallon drum liner over a circular 2-foot diameter frame made of plywood or other lightweight rigid material OR construct a similar enclosure using plastic sheeting
   • Hang the frame with the plastic covering so the top of the enclosure is about six inches above the employee's head
   • Attach a small hook inside top center of the enclosure
   • Tape a copy of the test exercises (see Table 28) to the inside of the test enclosure where the employee can read it.
8. Have organic vapor cartridges or equivalent on hand for each employee's chosen respirator.
9. Have ready a 6 x 5-inch piece of paper towel or other porous absorbent single-ply material AND 0.75 ml of pure IAA. DO NOT apply IAA yet.

Note:
As an alternative to using the paper towel, you may use an IAA test swab OR ampoule if it has been demonstrated to generate an equivalent test concentration.

Screening

10. Have the employee, while NOT wearing a respirator, follow the instructions on the card provided.
    • If the employee correctly identifies the jar containing IAA, proceed to conduct testing (Step 11)
    • If the employee is NOT able to correctly identify the jar containing IAA, you must STOP and use a different fit test protocol.
At this stage, if the employee fails the fit test, Step 14, stop. OR

- If they detect IAA, the test is valid.
- When exiting the employee must remove the paper towel and give it to the individual conducting the fit test. This prevents IAA vapor from building up in the enclosure during subsequent tests.
- The individual conducting the fit test must keep used paper towels in a self-sealing plastic bag to prevent area contamination.
- If the employee detects IAA during any test exercise, the fit test has FAILED. STOP and have the employee do the following:
  - Before leaving the enclosure, have the employee break the respirator seal and inhale. If they detect IAA, the test is valid.
  - When exiting the employee must remove the paper towel and give it to the individual conducting the fit test. This prevents IAA vapor from building up in the enclosure during subsequent tests.

- The individual conducting the fit test must keep used paper towels in a self-sealing plastic bag to prevent area contamination.
- If the employee detects IAA during any test exercise, the fit test has FAILED. STOP and have the employee do the following:
  - Quickly return to the selection room to remove the respirator. This avoids decreasing the employee's odor sensitivity.
  - Select another respirator.
  - Repeat screening and testing.
  - At this stage, if the employee fails the screening part of this procedure, the employee can repeat it AFTER waiting at least five minutes for odor sensitivity to return.

---

### Table 13

#### Saccharin Aerosol Test Procedure

**Screening Preparations**

**Important:**
- This is a qualitative fit-test (QLFT) procedure.
- Taste threshold screening determines whether the employee being tested can detect the taste of saccharin.
  - The employee must NOT eat, smoke, chew gum or drink anything but plain water for at least fifteen minutes BEFORE the fit test. Sweet foods or drink consumed before the test may make the employee unable to detect saccharin during screening.
  - Nebulizers must be thoroughly rinsed in water and shaken dry.

**Test**

1. Obtain a test enclosure (hood) that meets the following specifications:
   - Twelve inches in diameter by fourteen inches tall.
   - A clear front portion.
   - Enough space inside to allow free movement of the head when a respirator is worn.
   - A 3/4 inch (or 1.9 centimeter) hole to accommodate the nebulizer nozzle. The hole must line up in front of the wearer's nose and mouth.

   **Note:**
   - An enclosure similar to the 3M hood assembly, parts #FT 14 and #FT 15 combined, meets these specifications.
   - This enclosure can also be used for testing.

2. Obtain and assemble two clean DeVilbiss Model 40 Inhalation Medication Nebulizers OR equivalent.

3. Prepare the screening solution as follows:
   - Dissolve 83.0 milligrams of sodium saccharin USP in 100 ml of warm distilled water.
   - OR
   - If you have already prepared the fit-test solution, you can make the screening solution by adding 1 ml of this solution to 100 ml of distilled water.

4. Add about 1 ml of the screening solution to one of the nebulizers.
   - Mark this nebulizer to distinguish it from the one to be used for fit testing.

5. Prepare the fit-test solution as follows:
   - Add 83.0 grams of sodium saccharin to 100 ml of warm water.

6. Add about 1 ml of the test solution to the second nebulizer.
   - Mark this nebulizer to distinguish it from the one used for screening.

7. Have particulate filters ready for the employee's chosen respirator or have filtering-facepiece respirators ready.

8. Have the employee, while NOT wearing a respirator, put on the test enclosure.

9. Instruct the employee to:
   - Breath through a slightly open mouth with tongue extended during screening AND testing.
   - Immediately report when a sweet taste is detected.

10. Insert the nebulizer into the front hole of the test enclosure, then administer saccharin as follows:
    - Direct the nozzle away from the employee's nose and mouth.
    - Complete 10 squeezes in rapid succession.
    - Each time firmly squeeze the bulb so it collapses completely, then release and allow it to fully expand.

11. Ask the employee to:
    - Release the bulb so it collapses completely.
    - If YES, screening is completed. Proceed to conduct testing, Step 14, AFTER you:
      - Ask the employee to remember the taste for reference during the fit test.
Saccharin Aerosol Test Procedure

- Note the employee's taste threshold as "10" regardless of the number of squeezes actually completed
  - If NO, screening must continue. Proceed to Step 12.
  12. Repeat with 10 more squeezes. Then follow Step 11 again; EXCEPT this time note the employee's taste threshold as "20" if a sweet taste is reported.
  - If a sweet taste is still NOT detected, repeat with 10 more squeezes and follow Step 11 one last time; EXCEPT this time note "30" for the taste threshold if a sweet taste is reported.
  13. If NO sweet taste is reported after 30 squeezes, you must STOP and choose a different fit-test protocol for the employee.

Test

Important!
- Periodically check nebulizers to make sure they do not clog during use. A test is NOT valid if the nebulizer is clogged at the end of the test.
  14. Have the employee attach particulate filters, put on, properly adjust, and seal check the respirator. Have the employee put on the test enclosure (hood).
  15. Instruct the employee to immediately report if a sweet taste is detected.
  16. Insert the nebulizer into the front hole of the test enclosure AND administer the same number of squeezes, either 10, 20, or 30, as noted during screening.
  17. Have the employee perform the appropriate fit-test exercises as described in Table 19. During this step:
    - Replenish the aerosol in the hood EVERY 30 seconds using 1/2 the number of squeezes used in Step 16, either 5, 10, or 15
    - The employee must report if a sweet taste is detected:
      - If NO saccharin is tasted, the test has been PASSED
      ■ If saccharin is tasted the test has FAILED, have the employee select another respirator AND
      ■ Repeat screening and testing.

Table 14

Bitrex™ Aerosol Test Procedure

Important!
- This is a qualitative fit-test (QLFT) procedure
- Bitrex™ (denatonium benzoate) is routinely used as a taste aversion agent in household liquids that children shouldn't drink and is endorsed by the American Medical Association, the National Safety Council, and the American Association of Poison Control Centers
  - The employee must NOT eat, smoke, chew gum or drink anything but plain water for at least fifteen minutes BEFORE the fit test.

Screening Preparations

Important!
- Taste threshold screening determines whether the employee being tested can detect the taste of Bitrex™
- Nebulizers must be thoroughly rinsed in water and shaken dry:

---

Bitrex™ Aerosol Test Procedure

- Each morning and afternoon

OR
- At least every four hours.
  - You may use commercially prepared solutions if they meet the requirements in this procedure.

1. Obtain a test enclosure that meets the following specifications:
- Twelve inches in diameter by fourteen inches tall
- A clear front portion
- Enough space inside the front to allow free movement of the head when a respirator is worn
- 3/4 inch (or 1.9 centimeter) hole to accommodate the nebulizer nozzle. The hole must line up in front of the wearer's nose and mouth.

Note:
- An enclosure similar to the 3M hood assembly, parts #FT 14 and #FT 15 combined, meets these specifications
- This enclosure can also be used for testing.

2. Obtain and assemble two clean DeVilbiss Model 40 Inhalation Medication Nebulizers OR equivalent:

3. Prepare the screening solution as follows:
- Make up a 5% salt solution by dissolving 5.0 grams of salt (sodium chloride) into 100 ml of distilled water
- Dissolve 13.5 milligrams of Bitrex™ in the salt solution.

4. Add about 1 ml of the screening solution to one of the nebulizers.
- Mark this nebulizer to distinguish it from the one to be used for fit testing.

Screening

Important:
The employee must NOT eat, smoke, chew gum or drink anything but plain water for at least fifteen minutes

BEFORE the screening and test

8. Have the employee, while NOT wearing a respirator, put on the test enclosure.

9. Instruct the employee to:
- Breathe through a slightly opened mouth with tongue extended during screening AND testing
- Immediately report when a bitter taste is detected.

10. Insert the nebulizer into the front hole of the test enclosure AND administer Bitrex™ as follows:
- Direct the nozzle away from the employee's nose and mouth
- Complete 10 squeezes in rapid succession
- Each time firmly squeeze the bulb so it collapses completely, then release and allow it to fully expand.
Irritant Smoke (Stannic Chloride) Test Procedure

• Conduct fit testing in an area with adequate ventilation to prevent exposure of the individual conducting the fit test and build-up of irritant smoke in the ambient air.

Screening AND Test Preparations

Important:

Sensitivity screening is necessary to determine whether the employee can detect a weak concentration of irritant smoke AND whether any gross facepiece leakage is detected.

1. Obtain only stannic chloride (ventilation) smoke tubes, AND an aspirator squeeze bulb OR use a low-flow air pump set to deliver 200 milliliters of air flow per minute.

2. Equip the employee's chosen respirator with P100 series filters if a negative pressure air-purifying respirator will be tested. If a powered air-purifying respirator (PAPR) will be tested equip the respirator with high-efficiency particulate air (HEPA) filters.

Screening

Important!

When performing sensitivity screening checks use only the MINIMUM amount of smoke necessary to elicit a response from the employee.

3. Advise the employee that the smoke can be irritating to eyes, lungs, and nasal passages AND instruct the employee to keep eyes closed while exposed.

4. Break both ends of the ventilation smoke tube AND fit a short piece of plastic tubing, for example, two-to-six inches of tygon tubing, over one end to prevent exposure to the sharp end of the tube. Connect the other end to an aspirator bulb or a low-flow air pump set to deliver a flow of 200 ml per minute.

5. While the employee is NOT wearing a respirator, have the employee smell a weak concentration of irritant smoke to become familiar with its irritating properties.

• Carefully direct a small amount of irritant smoke toward the employee.

Test

Test 6. Have the employee attach respirator filters, put on, adjust, and seal check the respirator without assistance. The employee must be proficient at these tasks.

7. Remind the employee to keep eyes closed during testing.

8. Direct a stream of irritant smoke toward the respirator's face seal area as follows:

• Begin at least 12 inches from the facepiece AND move the smoke around the whole perimeter of the mask

• Gradually make two more passes around the perimeter of the facepiece, moving to within 6 inches of the respirator

• STOP at any time the employee detects smoke in the facepiece. If this occurs a different respirator will need to be chosen and tested, beginning with sensitivity screening.

9. Have the employee perform appropriate fit-test exercises in Table 19 IF the employee has NOT had an involuntary response such as evidence of coughing, flinching, or other response, OR detected smoke in the facepiece

• Continue to direct smoke from a distance of 6 inches around the facepiece perimeter

Table 15

Irritant Smoke (Stannic Chloride) Test Procedure

Important:

• DO NOT USE A TEST ENCLOSURE OR HOOD FOR THIS FIT TEST!

• This is a qualitative fit-test (QLFT) procedure

• During this test an employee is exposed to irritating smoke containing hydrochloric acid produced by a stannic chloride ventilation smoke tube to detect leakage. The smoke will irritate eyes, lungs, and nasal passages

• Employee sensitivity varies, and certain employees may respond more intensely than others exposed to irritant smoke. The individual conducting the fit test must take precautions to minimize the employees' exposure to irritant smoke

• If YES, screening is completed. Proceed to conduct testing, Step 14, AFTER you:

  – Ask the employee to remember the taste for reference during the fit test

  – Note the employee's taste threshold as "10," regardless of the number of squeezes actually completed

• If NO, screening must continue. Proceed to Step 12.

12. Repeat with 10 more squeezes. Then follow Step 11 again; EXCEPT this time note the employee's taste threshold as "20" IF a bitter taste is reported.

• If a bitter taste is still NOT detected repeat with 10 more squeezes and follow Step 11 one last time;

• EXCEPT this time note "30" for the taste threshold IF a bitter taste is reported.

13. If NO bitter taste is reported after 30 squeezes, you must STOP and choose a different fit-test protocol for the employee.

14. Have the employee attach particulate filters, put on, properly adjust, and seal check the respirator. Have the employee put on the test enclosure.

15. Instruct the employee to:

• Breathe through a slightly opened mouth with tongue extended during screening AND testing

• Immediately report when a bitter taste is detected.

16. Insert the nebulizer into the front hole of the test enclosure AND administer the same number of squeezes, either 10, 20, or 30, as noted during screening.

17. Have the employee perform the appropriate fit-test exercises as described in Table 19. During this step:

• Replenish the aerosol in the hood EVERY 30 seconds using 1/2 the number of squeezes used in Step 16, either 5, 10, or 15

• The employee must report if a bitter taste is detected:

  – If NO Bitrex™ is tasted, the test has been PASSED

  – If Bitrex™ is tasted the test has FAILED. Have the employee:

  ■ Select another respirator

  ■ Repeat all screening and testing steps.
Irritant Smoke (Stannic Chloride) Test Procedure

- If smoke is detected at any time the test has FAILED. A different respirator must be chosen and tested, starting with sensitivity screening
- If NO smoke is detected proceed to Step 10.

10. Have the employee remove the respirator AND perform another sensitivity screening check as follows:
   • Continue to use the smoke tube used for fit testing
   • Carefully direct a SMALL amount of irritant smoke toward the employee
     – The test has been PASSED IF the employee responds to the smoke
     – The fit test is VOIDED IF the employee does NOT respond to the smoke.

Table 16

Ambient Aerosol Condensation Nuclei Counter (Porta-count™) Test Procedure

Important:
   • This is a quantitative (QNFT) fit-test procedure
   • This method uses a particle counting instrument that measures and compares the particle concentration both inside and outside the respirator facepiece while the employee performs a series of test exercises
   • Particles in the ambient air are used as the test aerosol.

Test Preparations

1. Obtain a test instrument such as a Portacount™.
2. Have probed respirators available for each respirator model and size the employer uses, OR have a sampling adapter available if the employee's actual or chosen respirator will be tested.

Note:
   • A probed respirator has a special fitting installed on the facepiece designed to connect with the end of the test instrument's plastic sampling tube so that air samples can be taken inside the facepiece. Probed respirators can be obtained from the respirator manufacturer, or distributor, AND can only be used for fit-testing purposes
   • Contact TSI Inc., OR the respirator's manufacturer to obtain probed respirators or facepiece sampling adapters.

3. Follow the test instrument manufacturer's instructions for test preparation, including particle, zero, and system checks. Make sure the instrument's pass OR fail criterion is programmed to the following MINIMUM performance levels:
   • For half-facepiece respirators, an overall minimum fit factor of 100 as a passing level
   • For full-facepiece respirators, an overall minimum fit factor of 500 as a passing level

4. Have high-efficiency particulate air (HEPA) filters, OR other respirator filters available that are capable of preventing significant penetration by particles generated by the test instrument such as, P100 or N95 series filters.
   • If you'll use a sampling adapter instead of probed respirators be sure to have the correct type for the respirators chosen.

Ambient Aerosol Condensation Nuclei Counter (Porta-count™) Test Procedure

Test

5. Properly attach the sampling line to the facepiece probe or sampling adapter.
6. Have the employee attach respirator filters, put on, properly adjust, and wear the respirator five minutes BEFORE the fit test. During this time you and the employee must evaluate the respirator's general fit by checking:
   • Proper chin placement
   • Properly tightened straps (do NOT over tighten)
   • Acceptable fit across the nose bridge
   • Respirator size. It must span the distance from nose to chin
   • To see if the respirator stays in position.

Note:
Wearing the respirator for five minutes permits the employee to make certain the respirator is comfortable AND allows for purging of ambient particles trapped inside the facepiece.

7. Have the employee perform a seal check. Make sure the sampling line is crimped to avoid leakage during the seal check. If NO leakage is detected, proceed to Step 8. If leakage is detected:
   • Determine the cause
   • If leakage is due to a poorly fitting facepiece, have the employee:
     – Choose another respirator size or model
     – Start again at Step 6.

8. Start the fit test cycle.
   • Follow the manufacturer's instructions for operating the test instrument
   • Have the employee perform the appropriate fit-test exercises in Table 19
     – The test instrument will automatically stop and calculate the overall fit factor. Use this result to determine whether or not the test is passed

   ■ The test has been PASSED if the overall fit factor is at least 100 for a half facepiece, OR 500 for a full facepiece
   ■ The test has FAILED if the overall fit factor is below 100 for a half facepiece or 500 for a full facepiece.

Note:
If the test has failed, have the employee select another respirator model or size following Table 11 AND repeat this procedure.

Table 17

Controlled Negative Pressure (CNP) Test Procedure

Important!
   • This is a quantitative fit-test (QNFT) procedure
   • This method determines respirator fit by measuring how much the facepiece leaks when it is subject to a slight negative pressure AFTER various premeasurement activities
   • Measurements occur while employees remain still AND hold their breath for 10 seconds

[Title 296 WAC—p. 2600] (2007 Ed.)
Test Preparations

1. Make sure the individual conducting the fit test is thoroughly trained to perform this test.
2. Obtain a CNP test instrument such as a FitTester 3000™. Make sure:
   - Defaults are set at:
     - -15mm (-0.58 inches) of water test pressure
     - A modeled inspiratory flow rate of 53.8 liters per minute
   - It has an effective audio warning device that signals when employees fail to hold their breath.
   
   **Note:**
   - You are not required to obtain test recording and printing equipment such as computers or printers.
   - Hand recording results is acceptable
   - To see default settings, check the instrument's "REDON protocol."
3. Obtain facepiece adapters appropriate for each test respirator.

   **Note:**
   - Adapters are either a one-piece (for SCBA facepieces), or two-piece (for dual cartridge facepieces) device providing a manifold and breathing valve system. For positive pressure respirators, you will need to obtain an additional fitting, available from the respirator manufacturer, to convert the facepiece to negative pressure.
   - To obtain adapters, contact the CNP instrument's distributor, Occupational Health Dynamics, or the respirator manufacturer.

Test

**Important!**

After the test, you must ask the employee about the comfort of the respirator and if the respirator has become unacceptable, another size or model must be chosen and tested.

4. Explain the test procedure to the employee.
5. Train the employee on how to hold a breath for at least 20 seconds.
6. Prepare the respirator for the fit test as follows:
   - Remove or prop open the inhalation valves. If a breathing tube is present, disconnect it
   - Replace cartridges, if present, with the manifold and breathing valve adapter
     - For positive pressure facepieces, mount the manufacturer's additional fitting followed by the manifold-breathing valve adapter
   - Connect the respirator to the CNP device according to the CNP instrument manufacturer's directions.
7. Have the employee put on, adjust, and seal check the respirator.
8. Turn on the instrument and have the employee stand and perform the fit-test exercises in Table 19.
9. Interpret the test results:
   - The test is **PASSED IF** the overall fit factor obtained is at least 100 for a half facepiece, or at least 500 for a full facepiece

Controlled Negative Pressure (CNP) Test Procedure

- No test aerosols are used. Respirator cartridges aren't needed for this test.

Controlled Negative Pressure (CNP) Test Procedure

- The test has **FAILED IF** the fit factor is less than 100 for a half facepiece; 500 for a full facepiece
  - If the test has **FAILED** you must have the employee select another respirator model or size following the steps in Table 11 and repeat this procedure, starting at Step 6.
### Table 18

#### Generated Aerosol Test Procedure

**Important:**
- This is a quantitative (QNFT) fit-test procedure
- In this method, a test aerosol is used to challenge the facepiece seal while aerosol concentrations inside and outside the facepiece are measured during test exercises
- Special equipment is needed to generate, disperse, detect, and measure test aerosols.

#### Test Preparations

1. **Test aerosol.**
   - Use a particulate, for example, corn oil, polyethylene glycol 400, di-2-ethyl hexyl sebacate, or sodium chloride.

2. **Instrumentation.**
   - **Do ALL** the following:
     - Obtain and use aerosol generation, dilution, and measurement systems appropriate for particulates
     - Use an aerosol-generating instrument that will maintain test concentrations within a 10% variation
     - Select a sampling instrument that allows for a computer record or strip chart record to be created
       - The record must show the rise and fall of test agent concentration during each inhalation and exhalation at fit factors of at least 2000.
       - **Note:** Integrators, or computers that integrate the amount of test agent penetration leakage into the respirator for each exercise, may be used if a record of the readings is made.
     - Minimize the time interval between the activity and the recording of the activity so you can clearly connect what you see to what is being recorded. For example, use a small diameter and length of sampling line.

3. **Test enclosure.**
   - **Do ALL** the following:
     - Make sure the enclosure is equipped and constructed to effectively:
       - Maintain a uniform concentration of the test agent inside the enclosure. For example, the enclosure must be large enough to allow **ALL** employees freedom of movement during testing **WITHOUT** disturbing the test concentration or measurement instrument
       - Keep the test agent from contaminating the air outside the enclosure. For example, use a HEPA filter to purify exhausted air
       - Allow the individual conducting the fit test to view the employee during the test
     - Make sure the tubing used to collect samples from the enclosure AND respirator is the same material, diameter, AND length. This makes the effect of aerosol loss caused by deposition in each sample line equal
     - If sodium chloride is used, relative humidity inside the enclosure must be kept below 50%.

4. **Prepare test respirators.**
   - **Do ALL** the following:
     - Inspect test respirators regularly for missing parts AND damage
     - Keep test respirators in proper working order
     - Make sure in-mask sampling probes are:
       - Designed and installed so the air sample will be drawn from the employee's breathing zone; midway between the nose and mouth
       - The probe extends inside the facepiece at least 1/4 inch
     - Make sure sampling ports such as probes, or adapters on respirators are constructed and installed so they do **NOT:**
       - Block air flow into the sampling line
       - Leak
       - Interfere with the respirator's fit or performance
   - Have high efficiency particulate air (HEPA) filters OR P100 series filter available
     - Replace filters when increased breathing resistance is detected OR when the test agent has altered the filter material's integrity.

#### Test

**Important!**
- Throughout the test, maintain the employee's exposure to any test agent below the established exposure limit. Exposures allowed must be based on exposure time and exposure limit duration
- If a single peak penetration exceeds 5% for half facepieces OR 1% for full facepieces:
  - **STOP** the test
  - Have the employee select another respirator for testing.

5. **Have the employee**
   - Attach filters, put on, adjust, and seal check the respirator.
   - Be sure to crimp the sampling line to avoid pressure leaks during the seal check
   - Have the employee adjust the respirator straps, without assistance, so the fit is comfortable. Do **NOT** over tighten.
### Generated Aerosol Test Procedure

6. **OPTIONAL Step.** To save time conduct a screening test to quickly identify poorly fitting respirators.

   **Note:**
   You may use a qualitative screening test OR an ambient aerosol condensation nuclei counter instrument in the count mode.

7. Make sure test aerosol concentration is reasonably stable.
   - If a canopy or shower curtain enclosure is used, determine stability of the test aerosol concentration **AFTER** the employee enters the enclosure.
8. Have the employee enter the test enclosure and connect the respirator to the sample lines.
9. Immediately after entering the enclosure measure test aerosol concentration inside the respirator.
   - Make sure the peak penetration does **NOT** exceed 5% for half facepieces, **OR** 1% for full facepieces.
10. Have employee perform the appropriate fit-test exercises in Table 19.
   - Do **NOT** adjust the respirator once exercises begin.
11. Calculate the overall fit factor as specified in Steps 12-13. The fit test is:
   - **PASSED IF** the minimum fit factor of 100 for half facepieces **OR** 500 for full facepieces is obtained
   - **IF** a passing fit factor is **NOT** obtained, the test has **FAILED** and you must have the employee select and test another respirator.

### Calculations

**Important!**
- Do **NOT** count the grimace exercise measurements during these calculations
- Take into account the limitations of instrument detection when determining fit factors.

12. Calculate individual fit factors for **EACH** exercise by applying the following:
    
    Exercise fit factor ($ffE$) = Average test enclosure concentration

    **Test aerosol concentration inside the respirator**
    - To determine the average test enclosure concentration use one of the following methods:
      - Arithmetic average of the concentration before and after each **test** (an average of two values per entire test)
      - Arithmetic average of concentration before and after each **exercise** (an average of two values per exercise)
      - True average measured continuously during the respirator sample
    - Determine the test aerosol concentration inside the respirator in one of the following ways:
      - Average peak penetration values. Determine aerosol penetration for each exercise by:
        - Using integrators or computers that calculate the actual test agent penetration
        - Average the peak heights shown on the strip chart recording, graph, or by computer integration
      - Maximum peak penetration. Use strip chart recordings to determine the highest peak penetration for each exercise and use this value
      - Area under the peaks. Use computerized integration or other appropriate calculations to integrate the area under individual peaks for each exercise.

13. Using individual exercise fit factors ($ffE$) calculate the **overall fit factor** by doing **ALL** of the following:
    - Convert each exercise fit factor to a penetration value
    - Determine the average penetration value
    - Convert the average penetration value back to a fit factor
    **OR**
    - Use this equation to calculate the **overall fit factor**:
      \[
      \text{Overall fit factor} = \frac{1}{\frac{1}{ffE1} + \frac{1}{ffE2} + \frac{1}{ffE3} \ldots + \frac{1}{ffEn}}
      \]

### Table 19

**Fit-Test Exercises**

**Important:**
- This list applies when you use any fit test
- Employees tested must perform **ALL** exercises marked with an "X" as described for the fit-test procedure used
  - Once exercises begin, any adjustments made void the test **AND** you must begin again
  - After test exercises are completed, you must ask the employee about the comfort of the respirator. If it has become unacceptable, have the employee choose another one for testing
- When the controlled negative pressure procedure is used, **STOP and repeat** the test if the employee adjusts the respirator **OR** takes a breath and fails to hold it for 10 seconds
• Controlled negative pressure tests conducted according to the method published in 29 CFR 1910.134, Appendix A are an acceptable alternative to the method outlined below.

The Rainbow Passage:
"When the sunlight strikes raindrops in the air, they act like a prism and form a rainbow. The rainbow is a division of white light into many beautiful colors. These take the shape of a long round arch, with its path high above, and its two ends apparently beyond the horizon. There is, according to legend, a boiling pot of gold at one end. People look, but no one ever finds it. When a man looks for something beyond reach, his friends say he is looking for the pot of gold at the end of the rainbow."

Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-62010, filed 12/21/04, effective 4/2/05.

WAC 296-307-62015  Follow procedures established for cleaning and disinfecting respirators.
You must:
• Follow the procedure in Table 20 for cleaning and disinfecting respirators.

Table 20
Respirator Cleaning Procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Task</th>
</tr>
</thead>
</table>
| 1.   | Remove filters, cartridges, canisters, speaking diaphragms, demand and pressure valve assemblies, hoses, or any components recommended by the manufacturer.  
• Discard or repair any defective parts. |
| 2.   | Wash components in warm (43°C (110°F) maximum) water with a mild detergent or with a cleaner recommended by the manufacturer  
• A stiff bristle (not wire) brush may be used to help remove the dirt  
• If the detergent or cleaner does not contain a disinfecting agent, respirator components should be immersed for two minutes in one of the following:  
  – A bleach solution (concentration of 50 parts per million of chlorine). Make this by adding approximately one milliliter of laundry bleach to one liter of water at 43°C (110°F)  
  – A solution of iodine (50 parts per million iodine). Make this in two steps:  
    ■ First, make a tincture of iodine by adding 6-8 grams of solid ammonium iodide and/or potassium iodide to 100 cc of 45% alcohol approximately  
    ■ Second, add 0.8 milliliters of the tincture to one liter of water at 43°C (110°F) to get the final solution  
  – Other commercially available cleansers of equivalent disinfectant quality when used as directed, if their use is recommended or approved by the respirator manufacturer. |
| 3.   | Rinse components thoroughly in clean, warm (43°C (110°F) maximum), preferably, running water.  
Note: The importance of thorough rinsing cannot be overemphasized. Detergents or disinfectants that dry on facepieces could cause dermatitis. In addition, some disinfectants may cause deterioration of rubber or corrosion of metal parts, if not completely removed.  
\[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-62010, filed 12/21/04, effective 4/2/05.\] |
| 4.   | Drain components. |
| 5.   | Air-dry components or hand dry components with a clean, lint-free cloth. |
| 6.   | Reassemble the facepiece components.  
• Replace filters, cartridges, and canisters, if necessary (for testing). |
| 7.   | Test the respirator to make sure all components work properly. |

WAC 296-307-62020  Follow procedures established for seal checking respirators.

IMPORTANT:  
• User seal checks are NOT a substitute for fit tests. See WAC 296-307-62010 for fit test procedures.  
• You may use a seal check procedure recommended by the respirator manufacturer INSTEAD of the procedure outlined in Table 21 if you can demonstrate the procedure is based on a scientific study that, for example, demonstrates the procedure effectively identifies respirators that fit poorly when put on or adjusted.
You must:  
• Make sure employees perform a user seal check as outlined in Table 21, EACH TIME the respirator is worn, to make sure the seal is adequate.  

(2007 Ed.)

[Title 296 WAC—p. 2605]
The element or filtering facepiece is designed to remove specific contaminants, such as particles, vapors, or gases, from air that passes through it.

**Air-line respirator**

An atmosphere-supplying respirator for which breathing air is drawn from a source separate from and not worn by the user, such as:

- A cylinder or a tank
- A compressor
- An uncontaminated environment.

**Air supplied respirator (see air-line respirator)**

**Assigned protection factor (APF)**

Indicates the expected level of workplace respiratory protection WHEN the respirator is:

- Functioning properly
- Fitted to the user
- Worn by trained individuals
- Used with the limitations specified on the NIOSH approval label.

**Atmosphere-supplying respirator**

A respirator that supplies the user with breathing air from sources, such as:

- A cylinder or a tank
- A compressor
- An uncontaminated environment.

**Breathing air**

Air supplied to an atmosphere-supplying respirator. This air meets the specifications found in WAC 296-307-616.

**Canister or cartridge (air-purifying)**

Part of an air-purifying respirator that consists of a container holding materials such as fiber, treated charcoal, or a combination of the two, that removes contaminants from the air passing through the cartridge or canister.

**Cartridge respirator (see also air-purifying respirator)**

An air-purifying respirator equipped with one or more cartridges. These respirators have a facepiece made from silicone, rubber or other plastic-like materials.

**Demand respirator**

An atmosphere-supplying respirator that sends breathing air to the facepiece only when suction (negative pressure) is created inside the facepiece by inhalation. Demand respirators are "negative pressure" respirators.

**Dust mask**

A name used to refer to filtering-facepiece respirators. Dust masks may or may not be NIOSH certified. See filtering facepiece.

**Emergency respirator**

Respirators suitable for rescue, escape, or other activities during emergency situations.

**Emergency situation**

Any occurrence that could OR does result in a significant uncontrolled release of an airborne contaminant. Causes of emergency situations include, but are not limited to, equipment failure, rupture of containers, or failure of control equipment.
End-of-service-life indicator (ESLI)
A system that warns the air-purifying respirator user that cartridges or canisters must be changed. An example of an ESLI is a dot on the respirator cartridge that changes color.

Escape-only respirator
A respirator that can only be used to exit during emergencies. Look for this use limitation on the respirator's NIOSH approval label.

Exposed, or exposure
The contact an employee has with a toxic substance, harmful physical agent, or oxygen deficient condition. Exposure can occur through various routes of entry, such as inhalation, ingestion, skin contact, or skin absorption.

Filter
Fibrous material that removes dust, spray, mist, fume, fog, smoke particles, OR other aerosols from the air.

Filtering-facepiece respirator
A tight-fitting, half-facepiece, negative-pressure, particulate air-purifying respirator with the facepiece MAINLY composed of filter material. These respirators do not use cartridges or canisters and may have sealing surfaces composed of rubber, silicone or other plastic-like materials. They are sometimes referred to as "dust masks."

Fit factor
A number providing an estimate of fit for a particular respiratory inlet covering to a specific individual during quantitative fit testing.

Fit test (see also qualitative fit test and quantitative fit test)
Fit testing is an activity where the facepiece seal of a respirator is challenged, using a WISHA accepted procedure, to determine if the respirator provides an adequate seal.

Full-facepiece respirator
A tight-fitting respirator that covers the wearer's nose, mouth, and eyes.

Gas mask
An air-purifying respirator equipped with one or more canisters. These respirators have a facepiece made from silicone, rubber OR other plastic-like materials.

Half-facepiece respirator
A tight-fitting respirator that only covers the wearer's nose and mouth.

Helmet
The rigid part of a respirator that covers the wearer's head AND also provides head protection against impact or penetration.

High-efficiency particulate air filter (HEPA)
A powered air purifying respirator (PAPR) filter that removes at least 99.97% of monodisperse diocyl phthalate (DOP) particles with a mean particle diameter of 0.3 micrometer from contaminated air.

Note: Filters designated, under 42 CFR Part 84, as an "N100," "R100," or "P100" provide the same filter efficiency (99.97%) as HEPA filters.

Hood
The part of a respirator that completely covers the wearer's head and neck AND may also cover some or all of the shoulders and torso.

Immediately dangerous to life or health (IDLH)
An atmospheric condition that would:
• Cause an immediate threat to life
• Cause permanent or delayed adverse health effects
• Interfere with an employee's ability to escape.

Licensed healthcare professional (LHCP)
An individual whose legally permitted scope of medical practice allows him or her to provide SOME OR ALL of the healthcare services required for respirator users' medical evaluations.

Loose-fitting facepiece
A respiratory inlet covering that is designed to form a partial seal with the face.

Negative-pressure respirator
Any tight-fitting respirator in which the air pressure inside the facepiece is less than the air pressure outside the respirator during inhalation.

NIOSH
The National Institute for Occupational Safety and Health. NIOSH is the federal agency that certifies respirators for occupational use.

Oxygen deficient
An atmosphere with an oxygen content below 19.5% by volume.

Permissible exposure limit (PEL)
Permissible exposure limits (PELs) are employee exposures to toxic substances or harmful agents that must not be exceeded. PELs are specified in applicable WISHA chapters.

Positive-pressure respirator
A respirator in which the air pressure inside the respiratory-inlet covering is greater than the air pressure outside the respirator.

Powered air-purifying respirators (PAPRs)
An air-purifying respirator equipped with a blower that draws ambient air through cartridges or canisters. These respirators, as a group, are NOT classified as positive pressure respirators and must not be used as such.

Pressure-demand respirator
A positive-pressure atmosphere-supplying respirator that sends breathing air to the respiratory inlet covering when the positive pressure is reduced inside the facepiece by inhalation or leakage.

Qualitative fit test (QLFT)
A test that determines the adequacy of respirator fit for an individual. The test relies on the employee's ability to detect a test substance. Test results are either "pass" or "fail."

Quantitative fit test (QNFT)
A test that determines the adequacy of respirator fit for an individual. The test relies on specialized equipment that performs numeric measurements of leakage into the respiratory inlet covering. Test results are used to calculate a "fit factor."

Respiratory hazard
Harmful airborne hazards and oxygen deficiency that are addressed in WAC 296-307-624. Identifying and controlling airborne hazards and oxygen deficiency.

Required use
Respirator use:
• That is necessary to protect employees from respiratory hazards
• OR
Respirator
A type of personal protective equipment designed to protect the wearer from harmful airborne hazards, oxygen deficiency, or both.

Respiratory inlet covering
The part of a respirator that forms the protective barrier between the user's respiratory tract and an air-purifying device or breathing air source or both. The respiratory inlet covering may be a facepiece, helmet, hood, suit, or mouthpiece respirator with nose clamp.

Seal check
Actions conducted by the respirator user each time the respirator is put on, to determine if the respirator is properly seated on the face.

Self-contained breathing apparatus (SCBA)
An atmosphere-supplying respirator designed for the breathing air source, to be carried by the user.

Service-life
The period of time that a respirator, filter or sorbent, or other respiratory equipment provides adequate protection to the wearer. For example, the period of time that sorbent cartridge is effective for removing a harmful substance from the air.

Sorbent
Rigid, porous material, such as charcoal, used to remove vapor or gas from the air.

Supplied-air respirator (see air-line respirator)
Tight-fitting facepiece
A respiratory inlet covering forming a complete seal with the face or neck. Mouthpiece respirators aren't tight-fitting facepieces.

Voluntary use
Respirator use that is requested by the employee and permitted by the employer when no respiratory hazard exists.

Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-622, filed 12/21/04, effective 4/2/05.

Updated: 06-08-08, § 296-307-624, filed 4/4/06, effective 9/1/06; 05-01-166, § 296-307-624, filed 12/21/04, effective 4/2/05.
Your responsibility:
To protect your employees from exposure to respiratory hazards in the workplace by identifying and controlling the hazards.

You must:
Identify and evaluate employee exposures
WAC 296-307-62605
Control employee exposures
WAC 296-307-62610
Use respirators
WAC 296-307-62615
Notify employees
WAC 296-307-62620
Permissible exposure limits of air contaminants
WAC 296-307-62625.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-626, filed 12/21/04, effective 4/2/05.]

WAC 296-307-62605 Identify and evaluate respiratory hazards.

You must:
• Make sure employees are protected from potentially hazardous exposure while you perform your evaluation
• Perform your evaluation without considering the protection provided to employees by a respirator
• Determine the form of the hazard, such as dust, mist, gas, oxygen deficiency, or biological agent
• Make sure you consider:
  – Potential emergency and rescue situations that may occur, such as equipment or power failures, uncontrolled chemical reactions, fire, explosion, or human error
  – Workplace conditions such as work processes, types of material, control methods, work practices and environmental conditions.
• Determine or reasonably estimate whether any employee is or could be exposed to any of the following:
  – Any airborne substance above a permissible exposure limit (PEL) listed in Table 3
  – A substance at or above the action level (AL) specified in the rule for that substance
  – Any other respiratory hazard.
• Use any of the following to determine employee exposure:
  – Information that would allow an estimate of the level of employee exposure, such as MSDSs or pesticide labels, observations, measurements or calculations
  – Data demonstrating that a particular product, material or activity cannot result in employee exposure at or above the AL or PEL
  – Personal air samples that represent an employee’s usual or worst case exposure for the entire shift.

Note:
• Rules for specific substances may contain additional requirements for determining employee exposure.
• Use methods of sampling and analysis that have been validated by the laboratory performing the analysis.
• Samples from a representative group of employees may be used for other employees performing the same work activities when the duration and level of exposure are similar.

E_{m} = C_{1} + C_{2} + ... + C_{n}
L_{1} L_{2} ...

The symbol Is the . . .
E Equivalent exposure for the mixture. When the value of E is greater than 1, a respiratory hazard is present.
C Concentration of a particular substance.
L TWA, STEL, or ceiling for that substance from Table 3.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-62605, filed 12/21/04, effective 4/2/05.]

WAC 296-307-62610 Control employee exposures.

You must:
• Use feasible controls to protect employees from exposure to respiratory hazards by:
  – Reducing employee exposure to a level that removes the respiratory hazard, such as to a level below the permissible exposure limit (PEL) in Table 3;
  OR
  – Reducing the exposure to the lowest achievable level, when the respiratory hazard cannot be removed.

Note: The following table gives you examples of control methods.

Table 1
Examples of Possible Controls

<table>
<thead>
<tr>
<th>Control:</th>
<th>For example:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Using a different chemical (substitution)</td>
<td>• Choose a chemical with a lower evaporation rate or vapor pressure. • Choose a chemical without hazardous ingredients.</td>
</tr>
<tr>
<td>Changing a process to lessen emissions</td>
<td>• Use hand rolling or paint dipping instead of paint spraying. • Bolt items instead of welding them.</td>
</tr>
<tr>
<td>Separating employees from emissions areas and sources</td>
<td>• Use control rooms. • Build an enclosure around process machinery or other emissions sources. • Automate a process.</td>
</tr>
<tr>
<td>Removing emissions at or near the source (local exhaust ventilation)</td>
<td>• Install exhaust hoods or slots to capture emissions. • Use an exhausted enclosure (like a blasting cabinet or laboratory hood).</td>
</tr>
<tr>
<td>Diluting and removing emissions in the work area (general exhaust ventilation)</td>
<td>• Allow natural air movement to create an adequate airflow through an area. • Use mechanical fans.</td>
</tr>
</tbody>
</table>
**WAC 296-307-62615 Use respirators.**

**You must:**
- Require employees to use respiratory protection when respiratory hazards have not been removed using feasible controls. For example, use respirators at any of the following times:
  - While controls are being evaluated or put in place
  - When the respiratory hazard is not completely removed
  - When controls are not feasible.

**Reference:** See WAC 296-307-594, Respirators, for respirator program requirements.

---

**WAC 296-307-62620 Notify employees.**

**You must:**
- Notify employees who are or may be exposed to respiratory hazards, as specified in Table 2.

**Note:**
- The notification may be provided either individually, to a group, or by posting of results in an appropriate location that's accessible to affected employees.

**Table 2 Notification Requirements**

<table>
<thead>
<tr>
<th>Notify employees of:</th>
<th>As follows:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Any exposure result above a permissible exposure limit (PEL)</td>
<td>Within five business days, after the employee's exposure result is known to the employer</td>
</tr>
<tr>
<td>The corrective action being taken to reduce employee exposure to or below the PEL</td>
<td>Within fifteen business days, after the employee's exposure result is known to the employer</td>
</tr>
<tr>
<td>The schedule for completion of the corrective action and any reasons why exposures cannot be lowered to below the PEL</td>
<td>In writing, as specified in the rule specific to the substance</td>
</tr>
</tbody>
</table>

**WAC 296-307-62625 Permissible exposure limits of air contaminants.**

**IMPORTANT:**
The following information applies to Table 3, Permissible Exposure Limits for Air Contaminants.

- Exposure needs to be determined from personal air samples taken in the breathing zone or from monitoring representative of the employee's breathing zone.
- Ppm refers to parts of vapor or gas per million parts of air by volume, at 25 degrees C and 760 mm Hg pressure.
- Mg/m$^3$ refers to milligrams of substance per cubic meter of air.
- For a metal that is measured as the metal itself, only the CAS number for the metal is given. The CAS numbers for individual compounds of the metal are not provided. For more information about CAS registry numbers see the web site: http://www.cas.org.

- Time weighted averages (TWA$^8$) represent the maximum allowed average exposure for any 8-hour time period. For work periods longer than 8 hours the TWA$^8$ needs to be determined using the 8 continuous hours with the highest average concentration.
- Short-term exposure limits (STEL) represent maximum allowed average exposure for any fifteen-minute period, unless another time period is noted in Table 3.
- The ceiling represents the maximum allowed exposure for the shortest time period that can feasibly be measured.
- An "X" in the "skin" column indicates the substance can be absorbed through the skin, either by airborne or direct contact.
- Requirements for the use of gloves, coveralls, goggles, and other personal protective equipment can be found in WAC 296-307-100.
- The respirable fraction of particulate is measured by sampling with a size-selector having the following characteristics:

<table>
<thead>
<tr>
<th>Mean aerodynamic diameter in micrometers</th>
<th>Percent passing the selector</th>
</tr>
</thead>

*Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 06-08-087, § 296-307-62625, filed 4/4/06, effective 9/1/06; 05-01-166, § 296-307-62625, filed 12/21/04, effective 4/2/05.*
WAC 296-307-628 Definitions.

Ceiling - An exposure limit, measured over the shortest time period feasible, that must not be exceeded during any part of the employee's workday.

Dust - Solid particles suspended in air. Dusts are generated by handling, drilling, crushing, grinding, rapid impact, detonation, or decrepitation of organic or inorganic materials such as rock, ore, metal, coal, wood, grain, etc.

Exposed or exposure - The contact an employee has with a toxic substance, harmful physical agent or oxygen deficient condition. Exposure can occur through various routes of entry, such as inhalation, ingestion, skin contact, or skin absorption.

Fume - Solid particles suspended in air, generated by condensation from the gaseous state, generally after volatilization from molten metals, etc.

Gas - A normally formless fluid which can be changed to the liquid or solid state by the effect of increased pressure or decreased temperature or both.

Mist - Liquid droplets suspended in air, generated by condensation from the gaseous to the liquid state or by breaking up a liquid into a dispersed state, such as by splashing, foaming, spraying or atomizing.

Oxygen deficient - An atmosphere with an oxygen content below 19.5% by volume.

Permissible exposure limits (PEL) - Permissible exposure limits (PELs) are employee exposures to toxic substances or harmful agents that must not be exceeded. PELs are specified in applicable WISHA rules.

Short-term exposure limit (STEL) - An exposure limit averaged over a short time period (usually measured for 15 minutes) that must not be exceeded during any part of an employee's workday.

Time weighted average (TWA) - An exposure limit averaged over 8 hours that must not be exceeded during an employee's workday.

Toxic substance - Any chemical substance or biological agent, such as bacteria, virus, and fungus, which is any of the following:
- Listed in the latest edition of the National Institute for Occupational Safety and Health (NIOSH) Registry of Toxic Effects of Chemical Substances (RTECS)
- Shows positive evidence of an acute or chronic health hazard in testing conducted by, or known to, the employer.

The subject of a material safety data sheet kept by or known to the employer showing the material may pose a hazard to human health.

Vapor - The gaseous form of a substance that is normally in the solid or liquid state.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-628, filed 12/21/04, effective 4/2/05.]

Part Y-7

Hearing Loss Prevention (Noise)

WAC 296-307-630 Scope. The purpose of this part is to:
- Prevent employee hearing loss by minimizing employee noise exposures
 AND
- Make sure employees exposed to noise are protected.

These goals are accomplished by:
- Measuring and computing the employee noise exposure from all equipment and machinery in the workplace, as well as any other noise sources in the work area
- Protecting employees from noise exposure by using feasible noise controls
- Making sure employees use hearing protection, if you cannot feasibly control the noise
- Training employees about hearing loss prevention
- Evaluating your hearing loss prevention efforts by tracking employee hearing or periodically reviewing controls and protection
- Making appropriate corrections to your program.

Reference: Table 1 will help you determine the hearing loss prevention requirements for your workplace. For the specific requirements associated with Noise Evaluation Criteria, see WAC 296-307-63410 of this part.

Table 1

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Description</th>
<th>Requirements</th>
</tr>
</thead>
</table>
| 85 dBA TWA | Full-day employee noise exposure dose. If you have one or more employees whose exposure equals or exceeds this level, you must have a hearing loss prevention program | - Hearing protection
- Training
- Audiometric testing |
| 90 dBA TWA | Full-day employee noise exposure dose. If you have one or more employees whose exposure equals or exceeds this level, you must reduce employee noise exposures in the workplace | - Noise controls AND
- Hearing protection
- Training
- Audiometric testing |
| 115 dBA measured using slow response | Extreme noise level (greater than one second in duration) | - Hearing protection
- Signs posted in work areas warning of exposure |
| 140 dBC measured using fast response | Extreme impulse or impact noise (less than one second in duration) | Hearing protection |

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-630, filed 12/21/04, effective 4/2/05.]

Hearing Loss Prevention Program

WAC 296-307-632 Summary.

Your responsibility:
To prevent employee hearing loss by minimizing, and providing protection from, noise exposures.

You must:
Conduct employee noise exposure monitoring
WAC 296-307-63205

(2007 Ed.)
Control employee noise exposures that equal or exceed 90 dBA TWA₈
WAC 296-307-63210
Make sure employees use hearing protection when their noise exposure equals or exceed 85 dBA TWA₈
WAC 296-307-63215
Make sure exposed employees receive training about noise and hearing protection
WAC 296-307-63220
Make sure warning signs are posted for areas with noise levels that equal or exceed 115 dBA
WAC 296-307-63225
Arrange for oversight of audiometric testing
WAC 296-307-63230
Identify and correct deficiencies in your hearing loss prevention program
WAC 296-307-63235
Document your hearing loss prevention activities
WAC 296-307-63240.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-632, filed 12/21/04, effective 4/2/05.]

You must:
• Conduct employee noise exposure monitoring to determine the employee's actual exposure when reasonable information indicates that any employee's exposure may equal or exceed 85 dBA TWA₈.

Note: • Representative monitoring may be used where several employees perform the same tasks in substantially similar conditions
• Examples of information or situations that can indicate exposures which equal or exceed 85 dBA TWA₈. include:
  – Noise in the workplace that interferes with people speaking, even at close range
  – Information from the manufacturer of equipment you use in the workplace that indicates high noise levels for machines in use
  – Reports from employees of ringing in their ears or temporary hearing loss
  – Warnings or alarms that are difficult to hear
  – Noise in the workplace that interferes with people speaking
  – Use of tools and equipment such as the following:
    ▪ Heavy equipment or machinery
    ▪ Fuel-powered hand tools
    ▪ Compressed air-driven tools or equipment in frequent use
    ▪ Power saws, grinders or chippers
    ▪ Powder-actuated tools.

You must:
• Follow applicable guidance in WAC 296-307-634 when conducting noise exposure monitoring
• Make sure your sampling for noise exposure monitoring identifies:
  – All employees whose exposure equals or exceeds the following:
    ▪ 85 dBA TWA₈ (noise dosimetry, providing an average exposure over an eight-hour time period)
    ▪ 115 dBA (slow response sound level meter, identifying short-term noise exposures)
    ▪ 140 dBC (fast response sound level meter, identifying almost instantaneous noise exposures).
  – Exposure levels for selection of hearing protection.
• Provide exposed employees and their representatives with an opportunity to observe any measurements of employee noise exposure that are conducted
• Notify each employee whose exposure equals or exceeds 85 dBA TWA₈ of the monitoring results within five working days of when you receive the results
• Conduct additional noise monitoring whenever a change in production, process, equipment or controls, may reasonably be expected to result in:
  – Additional employees whose exposure equals or exceeds 85 dBA TWA₈
  – Employees exposed to higher level of noise requiring more effective hearing protection.

Note: Conditions that may be expected to increase exposure include:
• Adding machinery to the work area
• Increasing production rates
• Removal or deterioration of noise control devices
• Increased use of noisy equipment
• Change in work schedule
• Change of job duties.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63205, filed 12/21/04, effective 4/2/05.]

WAC 296-307-63210 Control employee noise exposures that equal or exceed 90 dBA TWA₈.

IMPORTANT:
Hearing protection provides a barrier to noise and protects employees but is not considered a control of the noise hazard. Separate requirements apply to hearing protection and are found in WAC 296-307-63215.

You must:
• Reduce employee noise exposure, using feasible controls, wherever exposure equals or exceeds 90 dBA TWA₈.

Note: • Once noise exposures are brought below 90 dBA TWA₈, no further reduction is required. However, further reduction of noise may reduce the need for other hearing loss prevention requirements.
• Controls that eliminate noise at the source or establish a permanent barrier to noise are typically more reliable. For example:
  – Replacing noisy equipment with quiet equipment
  – Using silencers and mufflers
  – Installing enclosures
  – Damping noisy equipment and parts.
• Other controls and work practices may also be useful for reducing noise exposures. Examples include:
  – Employee rotation
  – Limiting use of noisy equipment
  – Rescheduling work.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63210, filed 12/21/04, effective 4/2/05.]

WAC 296-307-63215 Make sure employees use hearing protection when their noise exposure equals or exceeds 85 dBA TWA₈.

You must:
• Make sure employees wear hearing protectors that will provide sufficient protection when exposure equals or exceeds:
  – 85 dBA TWA₈ (noise dosimetry, providing an average exposure over an eight-hour time period)
  – 115 dBA (slow response sound level meter, identifying short-term noise exposures)
  – 140 dBC (fast response sound level meter, identifying almost instantaneous noise exposures).

[Title 296 WAC—p. 2626]
Different levels of hearing protection needed in order to reduce all employee exposures to a level below 85 dBA TWA:

- Different sizes
- Different working conditions.
- Consider requests of the employees regarding:
  - Physical comfort
  - Environmental conditions
  - Medical needs
  - Communication requirements.

Note: Hearing protector selection should include earplugs, earcaps and earmuffs.

You must:
- Provide hearing protection at no cost to employees
- Supervise employees to make sure that hearing protection is used correctly
  - Make sure hearing protectors are:
    - Properly chosen for fit
    - Replaced as necessary.
  - Make sure all hearing protection is sufficient to reduce the employee’s equivalent eight-hour noise exposure to 85 dBA or less. When using the A-weighted exposure measurements, reported as “dBA TWA,” the reduction in noise exposure by hearing protectors is given by Table 2:

### Table 2
Effective Protection of Hearing Protectors

<table>
<thead>
<tr>
<th>Type of hearing protection (earplugs, earcaps or earmuffs)</th>
<th>Effective protection</th>
</tr>
</thead>
<tbody>
<tr>
<td>Single hearing protection (earplugs, earcaps or earmuffs)</td>
<td>7 dB less than the manufacturer assigned noise reduction rating (NRR); for example, earplugs with an NRR of 20 dB are considered to reduce employee exposures of 95 dBA TWA to 82 dBA TWA.</td>
</tr>
<tr>
<td>Dual hearing protection (earplug and earmuff worn together)</td>
<td>2 dB less than the higher NRR of the two protectors; for example, earplugs with an NRR of 20 dB and earmuffs with an NRR of 12 dB are considered to reduce employee exposures of 100 dBA TWA to 82 dBA TWA.</td>
</tr>
</tbody>
</table>

- In addition to protection based on daily noise dose, make sure hearing protection has an NRR of at least 20 dB when exposures involve noise that equals or exceeds 115 dBA (slow response sound level meter) or 140 dBC (fast response sound level meter).

Note: You may also evaluate hearing protection by using the other methods given in the NIOSH Compendium of Hearing Protection (DHHS (NIOSH) Publication No. 95-105 or online at http://www.cdc.gov/niosh/topics/noise/hpcomp.html. These methods require additional monitoring and are more complex, but provide a more thorough evaluation of protection. This may be useful in cases where communication is critical or for evaluating hearing protection for employees with hearing impairment.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63215, filed 12/21/04, effective 4/2/05.]

**WAC 296-307-63220 Make sure exposed employees receive training about noise and hearing protection.**
You must:
- Train all employees whose noise exposure equals or exceeds 85 dBA TWA:
  - Provide training when an employee is first assigned to a position involving noise exposure that equals or exceeds 85 dBA TWA, and at least annually after that
  - Update information provided in the training program to be consistent with changes in controls, hearing protectors and work processes
  - Make sure your noise and hearing protection training includes:
    - The effects of noise on hearing (including both occupational and nonoccupational exposures)
    - Noise controls used in your workplace
    - The purpose of hearing protectors: The advantages, disadvantages, and attenuation of various types
    - Instructions about selecting, fitting, using, and caring for hearing protection
    - The purpose and procedures for program evaluation including audiometric testing and hearing protection auditing when you choose to rely upon auditing (see WAC 296-307-638)
    - The employees’ right to access records kept by the employer.
  - Maintain a written program describing initial and refresher training.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63220, filed 12/21/04, effective 4/2/05.]

**WAC 296-307-63225 Make sure warning signs are posted for areas where noise levels equal or exceed 115 dBA.**
You must:
- Make sure warning signs are posted at the entrances or boundaries of all well-defined work areas where employees may be exposed to noise that equals or exceeds 115 dBA (measured using a sound level meter with slow response).
  - Warning signs must clearly indicate that the area is a high noise area and that hearing protectors are required.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63225, filed 12/21/04, effective 4/2/05.]

**WAC 296-307-63230 Arrange for oversight of audiometric testing.**
You must:
- Make sure audiometric testing as described by WAC 296-307-636 is supervised and reviewed by one of the following licensed or certified individuals:
  - An audiologist
  - An otolaryngologist
  - Another qualified physician.
- Make sure audiograms are conducted by one of the above individuals or by a technician certified by the Council.
of Accreditation in Occupational Hearing Conservation (CAOHC) and responsible to a qualified reviewer.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63230, filed 12/21/04, effective 4/2/05.]

WAC 296-307-63235 Identify and correct deficiencies in your hearing loss prevention program.

You must:
- Use audiometric testing to identify hearing loss, which may indicate program deficiencies
- Take appropriate actions when deficiencies are found with your program.
  - A deficiency may be indicated when:
  - Any employee experiences measurable hearing loss indicated by a standard threshold shift
  OR
  - Any employee isn’t wearing appropriate hearing protection during an audit when auditing is used in place of baseline audiograms for short term employees (see WAC 296-307-638, Option to audiometric testing).

Note: A standard threshold shift or audit deficiency does not necessarily indicate that a significant hearing loss has occurred. These criteria are intended to help identify where there may be flaws in your hearing loss prevention program that can be fixed before permanent hearing loss occurs. There are additional statistical tools and tests that may be used to improve the effectiveness of your program. Staff conducting audiometric testing and auditing may be able to suggest additional ways to improve your hearing loss prevention program and tailor it to your worksite.

You must:
- Evaluate the following, at a minimum, when responding to a standard threshold shift:
  - Employee noise exposure measurements
  - Noise controls in the work area
  - The selection of hearing protection available and refit employees as necessary
  - Employee training on noise and the use of hearing protection and conduct additional training as necessary.

Reference: You may use the option of auditing hearing protection (see WAC 296-307-638) for employees hired or transferred to jobs with noise exposure for less than one year. You may also use audiograms provided by a third-party hearing loss prevention program in some circumstances. Details of these program options are found in WAC 296-307-638, Options to audiometric testing.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63235, filed 12/21/04, effective 4/2/05.]

WAC 296-307-63240 Document your hearing loss prevention activities.

You must:
- Create and retain records documenting noise exposures. Include, at a minimum:
  - Exposure measurements required by this part for at least two years and for as long as you rely upon them to determine employee exposure
  - Audiometric test records for the duration of employment for the affected employees
  - Hearing protection audits, if you choose to rely upon them, for the duration of employment of the affected employees.

Note: You need to keep as complete a record as possible. Records developed under previous rules or in other jurisdictions need to be kept, even when they do not fulfill the full requirements of this part. Similarly, records found to have errors in collection or processing need to be kept if they provide an indication of employee exposure or medical condition not found in other records.
- You may want to consider your other business needs, such as worker's compensation claims management, before discarding these records.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63240, filed 12/21/04, effective 4/2/05.]

Noise Measurement and Computation

WAC 296-307-634 Summary.

Your responsibility:
Conduct noise monitoring or measurement to evaluate employee exposures in your workplace.

You must:
- Make sure that noise-measuring equipment meets recognized standards
  - Measure employee noise exposure
  - Use these equations when estimating full-day noise exposure from sound level measurements

WAC 296-307-634 Summary

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-634, filed 12/21/04, effective 4/2/05.]

WAC 296-307-63405 Make sure that noise-measuring equipment meets recognized standards.

You must:
- Make sure that noise dosimetry equipment meets these specifications:
  - Dosimeters must be equipment class 2AS-90/80-5 of the American National Rule Specification for Personal Noise Dosimeters, ANSI S1.25-1991, such dosimeters are normally marked "Type 2."
  - Make sure any dosimeter you use is Type 2 equipment that:
    - Uses slow integration and A-weighting of sound levels.
    - Has the criterion level set to 90 dB, so the dosimeter will report a constant 8-hour exposure of 90 dBA as a 100% dose.
    - Uses a 5 dB exchange rate for averaging of noise levels over the sample period.

WAC 296-307-63405 Make sure that noise-measuring equipment meets recognized standards.

Note: Make sure any dosimeter you use is Type 2 equipment that:
- Uses slow integration and A-weighting of sound levels.
- Has the criterion level set to 90 dB, so the dosimeter will report a constant 8-hour exposure at 90 dBA as a 100% dose.
- Uses a 5 dB exchange rate for averaging of noise levels over the sample period.

You must:
- Make sure that sound level meters meet these specifications:
  - American National Standard Specification for Sound Level Meters, S1.4-1984, Type 2 requirements for sound level meters, such sound level meters are normally marked "Type 2."
  - For continuous noise measurements, the meter must be capable of measuring A-weighted sound levels with slow response
  - For impulse or impact noise measurements, the meter must be capable of indicating maximum C-weighted sound level measurements with fast response.
  - Calibrate dosimeters and sound level meters used to monitor employee noise exposure:
    - Before and after each day’s use
    - Following the instrument manufacturer’s calibration instructions.
Note:  
• You may conduct dosimetry using an exchange rate less than 5 dB and compare the results directly to the noise evaluation criteria in Table 1
• For measuring impulse and impact noise you may also use a sound level meter set to measure maximum impulse C-weighted sound levels or peak C-weighted sound levels.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63410, filed 12/21/04, effective 4/2/05.]

WAC 296-307-63410 Measure employee noise exposure.

IMPORTANT:
A noise dosimeter is the basis for determining total daily noise exposure for employees. However, where you have constant noise levels, you may estimate employee noise exposure using measurements from a sound level meter. Calculation of the employee noise exposure must be consistent with WAC 296-307-63415.

You must:
• Include all:
  – Workplace noise from equipment and machinery in use
  – Other noise from sources necessary to perform the work
  – Noise outside the control of the exposed employees.
• Use a noise dosimeter when necessary to measure employee noise dose
• Use a sound level meter to evaluate continuous and impulse noise levels
• Identify all employees whose exposures equal or exceed the Noise Evaluation Criteria as follows:

### Noise Evaluation Criteria

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Description</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>85 dBA TWA₈</td>

</tbody>
</table>

WAC 296-307-63415 Use these equations when estimating full-day noise exposure from sound level measurements.

You must:
• Compute employee's full-day noise exposure by using the appropriate equations from Table 3 "Noise Dose Computation" when using a sound level meter to estimate noise dose.

### Table 3 Noise Dose Computation

<table>
<thead>
<tr>
<th>Description</th>
<th>Equation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Compute the noise dose based on several time periods of constant noise during the shift</td>
<td>The total noise dose over the work day, as a percentage, is given by the following equation where Cₙ indicates the total time of exposure at a specific noise level, and Tₙ indicates the reference duration for that level. D = 100*(C₁/T₁) + (C₂/T₂) + (C₃/T₃) + ... + (Cₙ/Tₙ)</td>
</tr>
<tr>
<td>The reference duration is equal to the time of exposure to continuous noise at a specific sound level that will result in a one hundred percent dose</td>
<td>The reference duration, T, for sound level, L, is given in hours by the equation: T = 8/(2^((L - 90)/5))</td>
</tr>
<tr>
<td>Given a noise dose as a percentage, compute the equivalent eight-hour time weighted average noise level</td>
<td>The equivalent eight-hour time weighted average, TWA₈, is computed from the dose, D, by the equation: TWA₈ = 16.61* Log₁₀(D/100) + 90</td>
</tr>
</tbody>
</table>

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63415, filed 12/21/04, effective 4/2/05.]

### Audiometric Testing

WAC 296-307-636 Summary.

Your responsibility:
To conduct audiometric testing of employees exposed to noise to make sure that their hearing protection is effective.

You must:
Provide audiometric testing at no cost to employees
WAC 296-307-63605
Establish a baseline audiogram for each exposed employee
WAC 296-307-63610
Conduct annual audiograms
WAC 296-307-63615
Review audiograms that indicate a standard threshold shift
WAC 296-307-63620
Keep the baseline audiogram without revision, unless annual audiograms indicate a persistent threshold shift or a significant improvement in hearing
WAC 296-307-63625

[Title 296 WAC—p. 2629]
Make sure a record is kept of audiometric tests

WAC 296-307-63630

Make sure audiometric testing equipment meets these requirements

WAC 296-307-63635.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-636, filed 12/21/04, effective 4/2/05.]

WAC 296-307-63605 Provide audiometric testing at no cost to employees.

You must:

• Provide audiograms, including any required travel or necessary additional examinations or testing, at no cost to exposed employees.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63605, filed 12/21/04, effective 4/2/05.]

WAC 296-307-63610 Establish a baseline audiogram for each exposed employee.

You must:

• Conduct a baseline audiogram when an employee is first assigned to work involving noise exposures that equal or exceed 85 dBA TWA.

  – Make sure this audiogram is completed no more than one hundred eighty days after the employee is first assigned

  OR

  – Make sure employee is covered by a hearing protection audit program (as described by WAC 296-307-638 and available as an alternative only for employees hired for less than one year).

Note: Employers who utilize mobile test units are allowed up to one year to obtain a valid baseline audiogram for each exposed employee. The employees must still be given training and hearing protection as required by this part.

You must:

• Make sure employees are not exposed to workplace noise at least fourteen hours before testing to establish a baseline audiogram.

  – Hearing protectors may be used to accomplish this.

• Notify employees of the need to avoid high levels of nonoccupational noise exposure (such as loud music, headphones, guns, power tools, motorcycles, etc.) during the fourteen-hour period immediately preceding the baseline audiometric examination.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63610, filed 12/21/04, effective 4/2/05.]

WAC 296-307-63615 Conduct annual audiograms.

You must:

• Conduct annual audiograms for employees as long as they continue to be exposed to noise that equals or exceeds 85 dBA TWA.

Note: Annual audiometric testing may be conducted at any time during the work shift. By conducting the annual audiogram during the work shift with the employee exposed to typical noise for their job, the test may record a temporary threshold shift. This makes the test more sensitive to potential hearing loss and may help you improve employee protection before a permanent threshold shift occurs. A suspected temporary shift is one reason an employer may choose to retest employee hearing.

You must:

• Make sure each employee is informed of the results of his or her audiometric test.

  – Include whether or not there has been a hearing level decrease or improvement since their previous test.

• Make sure each employee’s annual audiogram is compared to his or her baseline audiogram by an audiologist, otolaryngologist, another qualified physician, or the technician conducting the test to determine if a standard threshold shift has occurred.

  – If the annual audiogram indicates that an employee has suffered a standard threshold shift, you may obtain a retest within thirty days and consider the results of the retest as the annual audiogram.

  • Make sure that an audiologist, otolaryngologist, or other qualified physician sees any annual audiogram that indicates a standard threshold shift.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63615, filed 12/21/04, effective 4/2/05.]

WAC 296-307-63620 Review audiograms that indicate a standard threshold shift.

You must:

• Make sure the healthcare professional supervising audiograms has:

  – A copy of this part

  – The baseline audiogram and most recent audiogram of the employee to be evaluated

  – Background noise level records for the testing room

  – Calibration records for the audiometer.

• Obtain an opinion from the healthcare professional supervising audiograms as to whether the audiograms indicate possible occupational hearing loss and any recommendations for changes in hearing protection.

• Pay for any clinical audiological evaluation or otological examination required by the reviewer, if:

  – Additional review is necessary to evaluate the cause of hearing loss

  OR

  – If there is indication of a medical condition of the ear caused or aggravated by the wearing of hearing protectors.

  • Inform the employee in writing of the existence of a standard threshold shift within twenty-one calendar days of the determination.

  • Make arrangements for the reviewer to communicate to the employee any suspected medical conditions that are found unrelated to your workplace. This information is confidential and must be handled appropriately.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63620, filed 12/21/04, effective 4/2/05.]

WAC 296-307-63625 Keep the baseline audiogram without revision, unless annual audiograms indicate a persistent threshold shift or a significant improvement in hearing.

You must:

• Keep the baseline audiogram without revision, unless a qualified reviewer determines:

  – The standard threshold shift revealed by the audiogram is persistent

  OR

[Title 296 WAC—p. 2630]
The hearing threshold shown in the annual audiogram indicates significant improvement over the baseline audiogram.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63625, filed 12/21/04, effective 4/2/05.]

**WAC 296-307-63630**  Make sure a record is kept of audiometric tests.

You must:

- Retain a legible copy of all employee audiograms conducted under this part.
- Make sure the record includes:
  - Name and job classification of the employee
  - Date of the audiogram
  - The examiner's name
  - Date of the last acoustic or exhaustive calibration of the audiometer
  - Employee's most recent noise exposure assessment
  - The background sound pressure levels in audiometric test rooms

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63630, filed 12/21/04, effective 4/2/05.]

**WAC 296-307-63635**  Make sure audiometric testing equipment meets these requirements.

You must:

- Use pure tone, air conduction, hearing threshold examinations, with test frequencies including as a minimum 500, 1000, 2000, 3000, 4000, and 6000 Hz
- Tests at each frequency must be taken separately for each ear
- Supra-aural headphones must be used.
- Conduct audiometric tests with audiometers (including microprocessor audiometers) that meet the specifications of, and are maintained and used according to, American National Standard Specification for Audiometers, S3.6-1996
- Check the functional operation of the audiometer each day before use by doing all of the following:
  - Make sure the audiometer's output is free from distorted or unwanted sound
  - Test either a person with known, stable hearing thresholds or a bio-acoustic simulator
  - Perform acoustic calibration for deviations of 10 dB or greater.
- Audiometer calibration must be checked acoustically at least annually to verify continued conformance with ANSI S3.6-1996. Test frequencies below 500 Hz and above 6000 Hz may be omitted from this check
- An exhaustive calibration must be performed at least every two years according to the American National Standard Specification for Audiometers, S3.6-1996. Test frequencies below 500 Hz and above 6000 Hz may be omitted from the calibration
- Provide audiometric test rooms that meet the requirements of ANSI S3.1-1999 American National Standard Maximum Permissible Ambient Noise Levels for Audiometric Test Rooms using the following table of Maximum Ambient Sound Pressure Levels:

![Table 4: Maximum Ambient Sound Pressure Levels](image)

<table>
<thead>
<tr>
<th>Frequency (Hz)</th>
<th>500</th>
<th>1000</th>
<th>2000</th>
<th>4000</th>
<th>8000</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sound Pressure Level (dB)</td>
<td>40</td>
<td>40</td>
<td>47</td>
<td>57</td>
<td>62</td>
</tr>
</tbody>
</table>

Note: The American Industrial Hygiene Association and National Hearing Conservation Association recommend conducting audiograms using the requirements of ANSI S3.1-1999 American National Standard Maximum Permissible Ambient Noise Levels for Audiometric Test Rooms with adjustments at only 500 Hz and below.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63635, filed 12/21/04, effective 4/2/05.]

**Options to Audiometric Testing**

**WAC 296-307-638**  Summary.

Your responsibility:

This section provides options to baseline audiometric testing for employees assigned to duties with noise exposures for less than one year. These program options may also be used to provide added assessment of longer-term employees in addition to audiometric testing.

The requirements of this section apply only if you decide to use auditing or a third-party hearing loss prevention program and do not conduct baseline audiometric testing for those employees.

**Hearing Protection Audits**

You must:

- Conduct hearing protection audits at least quarterly
- Make sure staff conducting audits are properly trained
- Assess the hearing protection used by each employee during audits
- Document your hearing protection audits
- Make sure third-party hearing loss prevention programs meet the following requirements
- WAC 296-307-63810
- WAC 296-307-63805
- WAC 296-307-63815
- WAC 296-307-63820

**Third-Party Audiometric Testing**

You must:

- Make sure third-party hearing loss prevention programs are in place
- WAC 296-307-63825

**IMPORTANT:**

Hearing protection audits are a tool for use in evaluating your hearing loss prevention program in cases where audiometric testing does not provide a useful measure. For example, if most of your employees are hired on a temporary basis for a few months at a time, audiometric testing may not identify the small changes in hearing acuity that could occur. Auditing provides an alternative to audiometric testing in these cases.

Auditing is not required unless you use it in place of baseline audiometric testing for employees hired for a period of less than one year and is permitted as a substitute for audiometric testing only for these employees.

**Third-party hearing loss prevention programs** are full hearing loss prevention programs and are distinct from audiometric testing provided by third parties as part of your own hearing loss prevention program. These programs may...
be organized by labor groups, trade associations, labor-management cooperatives, or other organizations to:

- Cover a specific group of employees
- OR
- Combine efforts for several employers with common employees.

Although you remain responsible for the program, third-party programs can have at least two benefits over running your own program:

- The audiometric testing is portable between the participating employers so new testing will not be needed when an employee changes employers
- Employees who only work for short periods for any one employer can be monitored under the group program over a longer period of time increasing the effectiveness of the audiometric testing in preventing hearing loss for these employees.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-638, filed 12/21/04, effective 4/2/05.]

**WAC 296-307-63805 Conduct hearing protection audits at least quarterly.**

**You must:**

- Conduct audits at least quarterly to provide a representative assessment of your workplace
  - The assessment is representative if it:
    - Covers all processes and work activities in your business at full production levels
    - Covers all employees present on the audit day.
    - If your business is mobile or involves variable processes, auditing may need to be repeated more often than quarterly
    - Auditing does not need to be repeated more than monthly as long as a reasonable effort is made to cover:
      - The activities with greatest exposure
      - As many employees as possible.
    - Assess exposures and hearing protection for the full shift for each employee covered at the time of the audit.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63805, filed 12/21/04, effective 4/2/05.]

**WAC 296-307-63810 Make sure staff conducting audits are properly trained.**

**You must:**

- Make sure staff conducting hearing protection audits:
  - Can demonstrate competence in:
    - Evaluating hearing protection attenuation
    - Evaluating hearing protector choices
    - Assessing the correct use of hearing protectors.
  - Are certified by the Council for Accreditation in Occupational Hearing Conservation (CAOHC) or have training in the following areas:
    - Noise and hearing loss prevention
    - Washington state noise regulations
    - Hearing protectors
    - Fitting of hearing protectors
    - Basic noise measurement
    - Hearing loss prevention recordkeeping.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63810, filed 12/21/04, effective 4/2/05.]

**WAC 296-307-63815 Assess the hearing protection used by each employee during audits.**

**You must:**

- Confirm that:
  - Current site conditions during audits are consistent with conditions existing during noise monitoring
  - The hearing protection used by the employee is sufficient and appropriate for the conditions
  - The hearing protection is worn properly
  - The employees are satisfied with the performance and comfort of the hearing protection.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63815, filed 12/21/04, effective 4/2/05.]

**WAC 296-307-63820 Document your hearing protection audits.**

**You must:**

- Keep a record of audit results for each employee assessed for the length of their employment and for the length of time you will rely upon the audit results
  - Include the following information in the record:
    - The make and model of the hearing protectors
    - The size of the protectors
    - Average noise exposure of the employee
    - Any problems found with use of the hearing protection
    - Any comments or complaints from the employee regarding the hearing protection.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-63820, filed 12/21/04, effective 4/2/05.]

**Third-party Audiometric Tests**

**WAC 296-307-63825 Make sure third-party hearing loss prevention programs meet the following requirements.**

**IMPORTANT:**

Third-party hearing loss prevention programs are intended:

- For short-term employees hired or assigned to duties having noise exposures for less than one year

**AND**

- For seasonal employees.

However, other employees may be included as long as you meet all requirements for hearing loss follow-ups and recordkeeping.

**You must:**

- Make sure that the third-party program is:
  - Equivalent to an employer program as required by this part
  - Uses audiometric testing to evaluate hearing loss.
  - Make sure a licensed or certified audiologist, otolaryngologist, or other qualified physician administers the third-party program
  - Make sure the third-party program has written procedures for:
    - Communicating with participating employers of program requirements

(2007 Ed.)
WAC 296-307-640 Noise definitions.

A-weighted - An adjustment to sound level measurements that reflects the sensitivity of the human ear. Used for evaluating continuous or average noise levels.

Audigram - A chart, graph, or table resulting from an audimetric test showing an individual's hearing threshold levels as a function of frequency.

Audiologist - A professional, specializing in the study and rehabilitation of hearing, who is certified by the American Speech, Hearing, and Language Association, or the American Academy of Audiology, and is licensed by the state board of examiners.

Baseline audiogram - The audiogram against which future audiograms are compared. The baseline audiogram is collected when an employee is first assigned to work with noise exposure. The baseline audiogram may be revised if persistent standard threshold shift (STS) of improvement is found.

Continuous noise - Noise with peaks spaced no more than one second apart. Continuous noise is measured using sound level meters and noise dosimeters with the slow response setting.

Criterion sound level - A sound level of ninety decibels. An eight-hour exposure to constant 90 dBA noise is a one hundred percent noise dose exposure.

C-weighted - An adjustment to sound level measurements that evenly represents frequencies within the range of human hearing. Used for evaluating impact or impulse noise.

Decibel (dB) - Unit of measurement of sound level. A-weighting, adjusting for the sensitivity of the human ear, is indicated as "dBA." C-weighting, an even reading across the frequencies of human hearing, is indicated as "dBC."

Fast response - A setting for a sound level meter that will allow the meter to respond to noise events of less than one second. Used for evaluating impulse and impact noise levels.

Hertz (Hz) - Unit of measurement of frequency, numerically equal to cycles per second.

Impulsive or impact noise - Noise levels which involve maxima at intervals greater than one second. Impulse and impact noise are measured using the fast response setting on a sound level meter.

Noise dose - The total noise exposure received by an employee during their shift. It can be expressed as a percentage indicating the ratio of exposure received to the noise exposure received in an eight-hour exposure to constant noise at 90 dBA. It may also be expressed as the sound level that would produce the equivalent exposure during an eight-hour period (TWA). 

Noise dosimeter - An instrument that integrates a function of sound pressure over a period of time in such a manner that it directly indicates a noise dose.

Occupational hearing loss - A reduction in the ability of an individual to hear either caused or contributed to by exposure in the work environment.

Otolaryngologist - A physician specializing in diagnosis and treatment of disorders of the ear, nose and throat.

Permanent threshold shift - A hearing level change that has become persistent and is not expected to improve.

Qualified reviewer - An audiologist, otolaryngologist, or other qualified physician who has experience and training in evaluating occupational audiograms.

Slow response - A setting for sound level meters and dosimeters in which the meter does not register events of less than about one second. Used for evaluating continuous and average noise levels.

Sound level - The intensity of noise as indicated by a sound level meter.

Sound level meter - An instrument that measures sound levels.

Standard threshold shift (STS) - A hearing level change, relative to the baseline audiogram, of an average of 10 dB or more at 2000, 3000, and 4000 Hz in either ear.

Temporary threshold shift - A hearing level change that improves. A temporary threshold shift may occur with exposure to noise and hearing will return to normal within a few days. Temporary threshold shifts can be indicators of exposures that lead to permanent hearing loss.

TWA - Equivalent eight-hour time-weighted average sound level - That sound level, which if constant over an eight-hour period, would result in the same noise dose measured in an environment where the noise level varies.

Part Y-8 Confined Spaces

WAC 296-307-642 Scope. This part applies to all confined spaces and provides requirements to protect employees from the hazards of entering and working in confined spaces. This part applies in any of the following circumstances:

• You have confined spaces in your workplace.

• Your employees will enter another employer's confined spaces.

• A contractor will enter your confined spaces.

• You provide confined space rescue services.

You can use Table 1 to help you decide which requirements to follow for confined spaces.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-640, filed 12/21/04, effective 4/2/05.]

[Title 296 WAC—p. 2633]
Table 1

Requirements for Confined Spaces

<table>
<thead>
<tr>
<th>For confined spaces that are</th>
<th>The requirements in the following sections apply</th>
</tr>
</thead>
<tbody>
<tr>
<td>Permit-required confined spaces</td>
<td>644 646 648 650 652 654</td>

<tr>
<td>Nonpermit confined spaces</td>
<td>X     X     X     X     X     X</td>
</tr>
<tr>
<td>Never entered</td>
<td>X</td>
</tr>
</tbody>
</table>

If you only:

| Use alternate entry procedures | X     X     X     |
| Have a contractor enter your space | X     |
| Are a rescue service provider   | X     X     X     |

**Definition:**

A **confined space** is a space that is ALL of the following:

- Large enough and arranged so an employee could fully enter the space and work.
- Has limited or restricted entry or exit. Examples of spaces with limited or restricted entry are tanks, vessels, silos, storage bins, hoppers, vaults, excavations, and pits.
- Not primarily designed for human occupancy.

**Note:**

- Requirements in other chapters may apply to your work. You will find some safety and health requirements are addressed on a broad level in this part, while being addressed for a specific application in another rule. When this happens, both requirements apply and should not conflict. When a conflict does occur, you need to follow the more specific requirement.
- If you are uncertain which requirements to follow, contact your local labor and industries (L&I) office.

**WAC 296-307-644 Summary.** Identifying and controlling permit-required confined spaces.

**Your responsibility:**

To identify your permit-required confined spaces and control employee entry.

**You must:**

Identify permit-required confined spaces.

WAC 296-307-64402

Inform employees and control entry to permit-required confined spaces.

WAC 296-307-64404

Follow these requirements when you contract with another employer to enter your confined space.

WAC 296-307-64406

**WAC 296-307-64402 Identify permit-required confined spaces.**

**IMPORTANT:**

If your workplace contains only nonpermit confined spaces and your employees do not enter another employer's confined space, you may follow only the requirements in:

- WAC 296-307-644, Identifying and controlling permit-required confined spaces; and
- WAC 296-307-654, Nonpermit confined space requirements.

**You must:**

- Identify all permit-required confined spaces in your workplace.
- Assume any confined space is a permit-required confined space, unless you determine the space to be a nonpermit confined space.
  - If you enter the space to determine the hazards, follow the requirements in WAC 296-307-650, Permit entry procedures.
  - If you evaluate the confined space and there are no potential or actual hazards, you can consider it to be a nonpermit confined space.
- Document your determination that the space is nonpermit, as required by WAC 296-307-654.

**Definitions:**

A **permit-required confined space or permit space** is a confined space that has one or more of the following characteristics capable of causing death or serious physical harm:

- Contains or has a potential to contain a hazardous atmosphere.
- Contains a material with the potential for engulfing someone who enters the space.
- Has an internal configuration that could allow someone entering to be trapped or asphyxiated by inwardly converging walls or by a floor, which slopes downward and tapers to a smaller cross-section.
- Contains any physical hazard. This includes any recognized health or safety hazards including engulfment in solid or liquid material, electrical shock, or moving parts.
- Contains any other recognized safety or health hazard that could either:
  - Impair the ability to self rescue;
  - Result in a situation that presents an immediate danger to life or health.

A **nonpermit confined space** is a confined space that does NOT contain actual hazards or potential hazards capable of causing death or serious physical harm.

**WAC 296-307-64404 Inform employees and control entry to permit-required confined spaces.**

**You must:**

(1) Provide information about confined spaces as follows:

[Title 296 WAC—p. 2634]
Safety Standards for Agriculture 296-307-64604

• Make available to affected employees and their authorized representatives all information and documents required by this part.
  • Inform affected employees about the existence, location, and danger of any permit-required confined spaces in your workplace by:
    – Posting danger signs; or
    – Using any other equally effective means to inform employees.
  
  Note: A sign reading "Danger-Permit Required Confined Space, DO NOT ENTER" or using pictures or other similar wording employees can understand would satisfy the requirement for a sign.

  You must:
  (2) Take effective measures to prevent unauthorized employees from entering permit-required confined spaces.
  
  Note: Examples of measures to prevent employee entry include padlocks, bolted covers, special tools to remove covers, and providing employee training.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-64404, filed 12/21/04, effective 4/2/05.]

WAC 296-307-64406 Follow these requirements when you contract with another employer to enter your confined space.

IMPORTANT:
The contractor is responsible for following all confined space requirements in this part and in other rules that apply.

You must:
• Do all of the following if you arrange to have another employer (contractor) perform work that involves entry into your permit-required confined space:
  – Inform the contractor:
    ■ That the workplace contains permit-required confined spaces and entry is allowed only if the applicable requirements of this part are met.
    ■ Of the identified hazards and your experience with each permit-required confined space.
    ■ Of any precautions or procedures you require for the protection of employees in or near spaces where the contractor will be working.
    – Coordinate entry operations with the contractor, when either employees or employers from the different companies will be working in or near permit-required confined spaces.
    – Discuss entry operations with the contractor when they are complete. Include the following in your discussion:
      ■ The program followed during confined space entry; and
      ■ Any hazards confronted or created.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-64406, filed 12/21/04, effective 4/2/05.]

Permit-required Confined Space Program

WAC 296-307-646 Summary.

Your responsibility:
To develop your permit-required confined space program and practices.

IMPORTANT:
This section applies if employees will enter a permit-required confined space.

• Inform the host employer, either through a debriefing

You must:
Develop a written permit-required confined space program.

WAC 296-307-64602 Meet these additional requirements if your employees enter another employer's confined space.

WAC 296-307-64604 Develop a written permit-required confined space program.

IMPORTANT:
• Identify and evaluate the hazards of permit-required confined spaces and the work performed, to assist you in developing your entry program.

You must:
• Develop a written program, before employees enter, that describes the means, procedures, and practices you use for the safe entry of permit-required confined spaces as required by this part. Include the following when applicable to your confined space entry program:
  – Documentation of permit entry procedures.
  – Documentation used for alternate entry procedures.
  – How to reclassify permit-required confined spaces to nonpermit spaces.
  – Designation of employee roles, such as entrants, attendants, entry supervisors, rescuers, or those who test or monitor the atmosphere in a permit-required space.
  – Identification of designated employee duties.
  – Training employees on their designated roles.
  – How to identify and evaluate hazards.
  – Use and maintenance of equipment.
  – How to prevent unauthorized entry.
  – How to coordinate entry with another employer.
  – How to rescue entrants.

Note: For alternate entry, your written program only needs to meet the requirements of WAC 296-307-648, Employee training, and WAC 296-307-652, Alternate entry procedures, of this part.

You must:
• Consult with affected employees and their authorized representatives when developing and implementing all aspects of your permit-required confined space program.
• Make the written program available to employees and their authorized representatives.
• Update your written program as necessary.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-64602, filed 12/21/04, effective 4/2/05.]

WAC 296-307-64604 Meet these additional requirements if your employees enter another employer's confined space.

You must:
• Obtain any available information about permit-required confined space hazards and entry operations from the host employer.
  • Coordinate entry operations with any other employers whose employees will be working in or near the permit-required confined space.

or during entry operations, about:

(2007 Ed.)
– The entry program you will follow; and
– Any hazards you confronted or created in the space
during entry operations.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-64604, filed 12/21/04, effective 4/2/05.]

Employee Training

WAC 296-307-648 Summary.
Your responsibility:
To make sure employees are trained to perform their
designated roles safely.
You must:
Provide employee training.
WAC 296-307-64802
Certify employee proficiency.
WAC 296-307-64804

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-648, filed 12/21/04, effective 4/2/05.]

WAC 296-307-64802 Provide employee training.
You must:
• Provide training to each employee involved in permit-
required confined space activities, so they acquire the under-
standing, knowledge and skills necessary to safely perform
assigned duties.
  – Establish employee proficiency in their confined space
duties.
  – Introduce new or revised procedures as necessary.
Note: • Employers can determine employee proficiency by:
  – Observing employee performance during training exer-
cises that simulate actual confined space conditions.
  – A comprehensive written examination; or
  – Any other method that is effective for the employer.
You must:
• Provide training at the following times:
  – Before an employee is first assigned to duties covered
by this part.
  – Before there is a change in an employee's assigned
duties.
  – When there is a permit-required confined space hazard
for which the employee has not already been trained.
  – If you have reason to believe that there are either:
    ■ Deviations from your procedures for permit-required
    confined space entry; or
    ■ Employee knowledge or use of your procedures is
      inadequate.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-648, filed 12/21/04, effective 4/2/05.]

WAC 296-307-64804 Certify employee proficiency.
You must:
• Certify employee proficiency in their assigned duties.
• Make sure the certification:
  – Contains each employee's name, the trainer's written or
electronic signature or initials, and the dates of training.
  – Is available for inspection by employees and their
authorized representatives.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-648, filed 12/21/04, effective 4/2/05.]

Permit Entry Procedures

WAC 296-307-650 Summary.
Your responsibility:
To establish procedures for the safe permit-required
entry of confined spaces.
Implement procedures for entry permits.
WAC 296-307-65002
Use an entry permit that contains all required informa-
tion.
WAC 296-307-65004
Keep and review your entry permits.
WAC 296-307-65006
Prevent unauthorized entry.
WAC 296-307-65008
Provide, maintain, and use proper equipment.
WAC 296-307-65010
Evaluate and control hazards for safe entry.
WAC 296-307-65012
Make sure you have adequate rescue and emergency ser-
VICES available.
WAC 296-307-65014
Use nonentry rescue systems or methods whenever pos-
sible.
WAC 296-307-65016
Make sure entry supervisors perform their responsibili-
ties and duties.
WAC 296-307-65018
Provide an attendant outside the permit-required con-
 fined space.
WAC 296-307-65020
Make sure entrants know the hazardous conditions and
their duties.
WAC 296-307-65022
Implement procedures for ending entry.
WAC 296-307-65024

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-650, filed 12/21/04, effective 4/2/05.]

WAC 296-307-65002 Implement procedures for
entry permits.
You must:
• Identify and evaluate, before employees enter, potential
hazards from:
  – The permit-required confined space; and
  – The work to be performed.
• Complete an entry permit before entry is authorized,
documenting that you have completed the means, procedures
and practices necessary for safe entry and work.
• Make sure that entrants or their representatives have an
opportunity to observe any monitoring or testing, or any
actions to eliminate or control hazards, performed to com-
plete the permit.
• Identify the entry supervisor.
  – Make sure the entry supervisor signs the entry permit,
authorizing entry, before the space is entered.
  • Make the completed permit available to entrants or
their authorized representatives at the time of entry.
  – Do this by either posting the completed permit at the
entry location, or by any other equally effective means.
• Make sure the duration of the permit does not exceed the time required to complete the assigned task or job identified on the permit.
• Note any problems encountered during an entry operation on the permit. Use the information to make appropriate revisions to your program, entry operations, means, systems, procedures and practices.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-65002, filed 12/21/04, effective 4/2/05.]

WAC 296-307-65004 Use an entry permit that contains all required information.

You must:
• Make sure your entry permit identifies all of the following that apply to your entry operation:
  – The space to be entered.
  – Purpose of the entry.
  – Date and the authorized duration of the entry permit.
  – Hazards of the space to be entered.
  – Acceptable entry conditions.
  – Results of initial and periodic tests performed to evaluate and identify the hazards and conditions of the space, accompanied by the names or initials of the testers and by an indication of when the tests were performed.
  – Appropriate measures used before entry to isolate the space, and eliminate or control hazards.
• Examples of appropriate measures include the lockout or tagging of equipment and procedures for purging, inerting, ventilating, and flushing permit-required confined spaces.
  – Names of entrants and current attendants.
• Other means include the use of rosters or tracking systems as long as the attendant can determine quickly and accurately, for the duration of the permit, which entrants are inside the space.
  – The current entry supervisor.
  – A space for the signature or initials of the original supervisor authorizing entry.
  – Communication procedures for entrants and attendants to maintain contact during the entry.
  – Equipment provided for safe entry, such as:
    ■ Personal protective equipment (PPE).
    ■ Testing equipment.
    ■ Communications equipment.
    ■ Alarm systems.
    ■ Rescue equipment.
  – Rescue and emergency services available, and how to contact them. Include equipment to use, and names and contact information.
  – Other information needed for safety in the particular confined space.
  – Additional permits issued for work in the space, such as for hot work.
  – Note any problems encountered during an entry operation on the permit. Use the information to make appropriate revisions to your program, entry operations, means, systems, procedures and practices.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-65004, filed 12/21/04, effective 4/2/05.]

WAC 296-307-65006 Keep and review your entry permits.

You must:
• Keep entry permits for at least one year.

WAC 296-307-65008 Prevent unauthorized entry.

You must:
• Review canceled entry permits within one year following each entry to evaluate:
  – Your permit-required confined space program.
  – The protection provided to employees entering permit-required confined spaces.
• Update your written permit-required confined space entry program as necessary.

You must:
• Implement measures necessary to prevent unauthorized entry into permit-required confined spaces, when conducting authorized entry.

Note: Employers may perform a single annual review covering all entries performed during a twelve-month period. If no entry is performed during a twelve-month period, no review is necessary.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-65006, filed 12/21/04, effective 4/2/05.]

WAC 296-307-65010 Provide, maintain, and use proper equipment.

You must:
• Provide the equipment in Table 2, when needed and at no cost to employees.
• Make sure that employees use provided equipment properly.
• Maintain the provided equipment.

Table 2  
Equipment Provided to Employees at No Cost

<table>

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-65010, filed 12/21/04, effective 4/2/05.]

WAC 296-307-65012 Evaluate and control hazards for safe entry.

- Evaluate and control hazards for safe entry into permit-required confined spaces by doing all the following:
  - Test for atmospheric hazards, in this order:
    - Oxygen.
    - Combustible gases and vapors.
    - Toxic gases and vapors.
  - Provide each entrant or their authorized representative an opportunity to observe any of the following:
    - Preentry testing.
    - Subsequent testing.
    - Monitoring of permit-required spaces.
  - Reevaluate the permit-required space in the presence of any entrant, or their authorized representative, who requests this to be done because they have reason to believe that the evaluation of that space may not have been adequate.
  - Upon request, immediately provide each entrant or their authorized representative, with the results of any testing required by this rule.
  - Continuously monitor conditions in areas where entrants are working, when isolation of the space is not feasible.
    - Examples would be a large space or space that is part of a continuous system, such as a sewer.
    - Evaluate space conditions during entry as follows:

[Title 296 WAC—p. 2638]
– Proficient as an entrant of permit-required confined spaces.
– Able to safely perform assigned rescue and emergency duties.
– Knowledgeable in basic first aid and cardiopulmonary resuscitation (CPR).

• Practice sessions for permit-required confined space rescues at least once every twelve months where dummies, manikins, or actual persons are removed from either:
  – The actual permit spaces; or
  – Representative permit spaces that simulate the opening size, configuration, and accessibility, of permit spaces where rescue will be performed.

(3) Establish procedures for:
• Contacting rescue and emergency services.
• Rescuing entrants from permit-required confined spaces.
• Providing necessary emergency services to rescued entrants.
• Preventing unauthorized persons from attempting a rescue.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-65014, filed 12/21/04, effective 4/2/05.]

WAC 296-307-65016 Use nonentry rescue systems or methods whenever possible.

You must:
• Use nonentry retrieval systems or methods to rescue entrants in a permit-required confined space unless this:
  – Would increase the overall risk of injury to entrants; or
  – Would not contribute to the rescue of the entrant.
• Make sure each entrant uses a chest or full-body harness, with a retrieval line attached to the harness at one of the following locations:
  – At the center of the employee's back, near shoulder level.
  – Above the employee's head.
  – At another point which presents a profile small enough for the successful removal of the employee.
  – Attach the retrieval line to a mechanical device or fixed point outside the space, so rescue can begin as soon as necessary.
• Make sure a mechanical device is available to retrieve entrants from vertical spaces more than five feet (1.52 m) deep.

Note: When you can demonstrate that the use of a chest or full-body harness is not feasible or creates a greater hazard, then you may use wristlets or another method shown to be the safest and most effective alternative.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-65016, filed 12/21/04, effective 4/2/05.]

WAC 296-307-65018 Make sure entry supervisors perform their responsibilities and duties.

You must:
• Make sure that an entry supervisor:
  – Authorizes the entry into a permit-required confined space by signing the entry permit.
  – Oversees entry operations.

– Knows about the hazards that may be faced during entry, including the mode, signs or symptoms, and consequences of the exposure.
– Verifies and checks all of the following:
  ■ The appropriate entries have been made on the permit.
  ■ All tests specified by the permit have been conducted.
  ■ All procedures and equipment specified by the permit are in place before approving the permit and allowing entry to the space.
– Terminates the entry and cancels the permit when:
  ■ The assigned task or job has been completed.
  ■ A condition in the space that is not covered by the entry permit is discovered.
– Verifies that rescue services are available and that there is a way to contact them.
– Removes unauthorized individuals who enter or attempt to enter the permit-required confined space during entry operations.
– Determines that entry operations remain consistent with the terms of the entry permit and acceptable entry conditions are maintained:
  ■ Whenever responsibility for a permit-required space entry operation is transferred; and
  ■ At regular intervals dictated by the hazards and operations performed within the space.

Note: • Make sure entry supervisors have the required knowledge and proficiency to perform the job duties and responsibilities required by this part.
  • The entry supervisor may also perform other duties under this part, such as attendant or entrant, if they are trained and proficient in those duties.
  • The responsibility of the entry supervisor may be passed from one supervisor to another during an entry operation.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-65018, filed 12/21/04, effective 4/2/05.]

WAC 296-307-65020 Provide an attendant outside the permit-required confined space.

IMPORTANT:
• The number of attendants assigned should be tailored to the requirements of the space and the work performed.
• You need to assess if it is appropriate or possible to have multiple permit spaces monitored by a single attendant, or have an attendant stationed at a location outside each space. Video cameras and radios are examples of tools that may assist an attendant monitoring more than one space.
• Attendants may be stationed at any location outside the permit-required confined space if the duties described in this section can be effectively performed for each space that is monitored.

You must:
• Provide at least one attendant outside the permit-required confined space during entry operations.
• Make sure each permit-required confined space attendant:
  – Understands the hazards that may be faced during entry, including the mode, signs or symptoms, and results of exposure to the hazards.
  – Is aware of the behavioral effects of exposure to the hazard.
  – Continuously maintains an accurate count of entrants in the space.

(2007 Ed.)
WAC 296-307-65022 Make sure entrants know the hazardous conditions and their duties.

You must:
• Make sure that all entrants:
  – Know the hazards they may face during entry, including the mode, signs or symptoms, and results of exposure to the hazards.
  – Use equipment properly.
  – Communicate with the attendant as necessary so the attendant can:
    ■ Monitor entrant status.
    ■ Alert entrants of the need to evacuate.
    – Alert the attendant whenever either of these situations exist:
      ■ A warning sign or symptom of exposure to a dangerous situation such as, behavioral changes, euphoria, giddiness potentially from lack of oxygen or exposure to solvents.
      ■ A prohibited condition.
      – Exit from the permit-required confined space as quickly as possible when one of the following occurs:
        ■ The attendant or entry supervisor gives an order to evacuate.

  – Maintains an accurate record of who is in the permit-required confined space.
  – Communicates with entrants as necessary to monitor their status or alert them of the need to evacuate the space.
  – Monitors activities inside and outside the space to determine if it is safe for entrants to remain in the space.
  – Orders entrants to evacuate the space immediately if any of the following conditions occur:
    ■ A prohibited condition.
    ■ The behavioral effects of hazardous exposure on an entrant.
    ■ A situation outside the space that could endanger entrants.
    ■ The attendant cannot effectively and safely perform all the duties required in this part.
  – Takes the following actions when unauthorized persons approach or enter a space:
    ■ Warns unauthorized persons to stay away from the space.
    ■ Tells the unauthorized persons to exit immediately if they have entered the space.
    ■ Informs entrants and the entry supervisor if unauthorized persons have entered the space.
    – Performs nonentry rescues as specified by your rescue procedure.
    – Has the means to respond to an emergency affecting one or more of the permit spaces being monitored without preventing performance of the attendant's duties to the other spaces being monitored.
    – Carries out no duties that might interfere with their primary duty to monitor and protect the entrants.
    – Calls for rescue and other emergency services as soon as entrants may need assistance to escape from the space.
    – Monitors entry operations until relieved by another attendant or all entrants are out of the space.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-65020, filed 12/21/04, effective 4/2/05.]

WAC 296-307-65024 Implement procedures for ending entry.

You must:
• Make sure you terminate the entry when entry operations are completed, including securing an entrance cover and canceling the permit.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-65024, filed 12/21/04, effective 4/2/05.]

WAC 296-307-652 Alternate entry procedures.

Summary:
Your responsibility:
To choose alternate entry procedures for spaces where the only hazard is a hazardous atmosphere.

IMPORTANT:
In addition to this section, you also need to meet the requirements in the following sections of this part:
  – WAC 296-307-646, Permit-required confined space program.

You must:
Make sure the following conditions are met if using alternate entry procedures.

WAC 296-307-65202 Follow these alternate entry procedures for permit-required confined spaces.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-652, filed 12/21/04, effective 4/2/05.]

WAC 296-307-65202 Make sure the following conditions are met if using alternate entry procedures.

You must:
• Make sure, when using alternate entry procedures, instead of permit entry procedures, that you have monitoring and inspection data that supports the following:
  – That the only hazard of the permit-required confined space is an actual or potentially hazardous atmosphere.
  – That continuous forced air ventilation alone is all that is needed to maintain the permit-required confined space for safe entry.
  – Make sure an entry to obtain monitoring and inspection data or to eliminate hazards is performed according to WAC 296-307-500, Permit entry procedures.
  – Make sure all documentation produced is available to each affected employee and their authorized representative.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-65202, filed 12/21/04, effective 4/2/05.]
WAC 296-307-65204 Follow these alternate entry procedures for permit-required confined spaces.

You must:
- Use the following alternate entry procedures:
  - Eliminate any unsafe conditions before removing an entrance cover.
  - When entrance covers are removed, promptly guard the opening with a railing, temporary cover, or other temporary barrier to prevent accidental falls through the opening and protect entrants from objects falling into the space.
  - Certify that preentry measures have been taken (such as safe removal of the cover and having protection needed to gather preentry data), with the date, location of the space, and signature of the person certifying.
  - Make the preentry certification available before entry to each entrant.
  - Before an employee enters the confined space, test the internal atmosphere with a calibrated, direct-reading instrument for all of the following, in this order:
    - Oxygen content.
    - Flammable gases and vapors.
    - Potential toxic air contaminants.
    - Provide entrants, or their authorized representatives, with an opportunity to observe the preentry and periodic testing.
  - Make sure the atmosphere within the space is not hazardous when entrants are present.
  - Use continuous forced air ventilation, as follows:
    - Wait until the forced air ventilation has removed any hazardous atmosphere before allowing entrants into the space.
    - Direct forced air ventilation toward the immediate areas where employees are, or will be, and continue ventilation until all employees have left the space.
  - Provide the air supply from a clean source and make sure it does not increase hazards in the space.
  - Test the atmosphere within the space as needed to make sure hazards do not accumulate.
  - If a hazardous atmosphere is detected during entry, do all of the following:
    - Evacuate employees from the space immediately.
    - Evaluate the space to determine how the hazardous atmosphere developed.
    - Implement measures to protect employees from the hazardous atmosphere before continuing the entry operation.
    - Verify the space is safe for entry before continuing the entry operation.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-65204, filed 12/21/04, effective 4/2/05.]

WAC 296-307-65402 These requirements when classifying a confined space as a nonpermit confined space.

You must:
- Make sure the confined space meets these conditions to be classified as nonpermit confined spaces:
  - The confined space does not contain an actual or potential hazardous atmosphere.
  - The confined space does not contain hazards capable of causing death or serious physical harm. This includes any recognized health or safety hazards including engulfment in solid or liquid material, electrical shock, or moving parts.
  - If you must enter to remove hazards, the space must be treated as a permit-required confined space until hazards have been eliminated.

Note:
- Controlling atmospheric hazards through forced air ventilation does not eliminate the hazards.
- You should evaluate the use of lockout-tagout, as covered in WAC 296-307-320, to determine if using it fully eliminates the hazard.
- You are allowed to use alternate entry procedures covered in WAC 296-307-652, if you can demonstrate that forced air ventilation alone will control all hazards in the space.

You must:
- Document how you determined the confined space contained no permit-required confined space hazards. Certify this documentation with the following:
  - Date.
  - Location of the space.
  - Signature of the person making the determination.
  - Make the certification available to each entrant, or their authorized representative.

Note: This certification must be completed every time a permit-required confined space is reclassified as a nonpermit space.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-65402, filed 12/21/04, effective 4/2/05.]

WAC 296-307-65404 Reevaluate nonpermit confined spaces if hazards develop.

You must:
- Reclassify a nonpermit confined space to a permit-required confined space, if necessary, when changes in the use or configuration of the space increase the hazards to entrants.
  - Make sure all employees exit the space if hazards develop. You must then reevaluate the space and determine whether it must be reclassified as a permit-required confined space.
WAC 296-307-656 Definitions.

Acceptable entry conditions:
The conditions that must exist in a permit-required confined space to allow safe entry and work.

Attendant:
An individual stationed outside one or more permit-required confined spaces to monitor the entrants.

Blanking or binding:
The absolute closure of a pipe, line, or duct by fastening a solid plate (such as a spectacle blind or a skillet blind) that completely covers the bore. It is capable of withstanding the maximum pressure of the pipe, line, or duct with no leakage beyond the plate.

Confined space:
A space that is all of the following:
• Large enough and arranged so an employee could fully enter the space and work.
• Has limited or restricted entry or exit. Examples of spaces with limited or restricted entry are tanks, vessels, silos, storage bins, hoppers, vaults, excavations, and pits.
• Not primarily designed for human occupancy.

Double block and bleed:
The closure of a line, duct, or pipe by closing and locking or tagging two in-line valves and by opening and locking or tagging a drain or vent valve in the line between the two closed valves.

Emergency:
Any occurrence (including any failure of hazard control or monitoring equipment) or event internal or external to the permit-required confined space that could endanger authorized entrants.

Engulfment:
The surrounding capture of a person by a liquid or finely divided (flowable) solid substance that can be inhaled to cause death by filling or plugging the respiratory system or that can exert enough force on the body to cause death by strangulation, constriction, or crushing.

Enter (entry):
The action by which a person passes through an opening into a permit-required confined space and includes work activities in that space. Entry is considered to have occurred as soon as any part of the entrant's body breaks the plane of an opening into the space.

Note: If the opening is large enough for the worker to fully enter the space, a permit is required even for partial body entry. Permits are not required for partial body entry where the opening is not large enough for full entry, although other rules such as lockout-tagout, WAC 296-307-320 or respiratory hazards, WAC 296-307-624 may apply.

Entrant:
An employee who is authorized by the employer to enter a permit-required confined space.

Entry permit (permit):
The written or printed document that is provided by you to allow and control entry into a permit-required confined space and that contains the information required in WAC 296-307-650, Permit entry procedures.

Entry supervisor:
The person (such as the employer, crew leader, or crew chief) responsible for:
• Determining if acceptable entry conditions are present at a permit-required confined space where entry is planned;
• Authorizing entry and overseeing entry operations; and
• Terminating entry as required.

Hazardous atmosphere:
An atmosphere that may expose employees to the risk of death, incapacitation, impairment of ability to self-rescue (that is, escape unaided from a permit-required confined space), injury, or acute illness caused by one or more of the following:
• Flammable gas, vapor, or mist in excess of ten percent of its lower flammable limit (LFL).
• Airborne combustible dust at a concentration that meets or exceeds its LFL.

Note: This concentration may be approximated as a condition in which the dust obscures vision at a distance of five feet (1.52 m) or less.

• Atmospheric oxygen concentration below 19.5 percent or above 23.5 percent.
• Atmospheric concentration of any substance which may exceed a permissible exposure limit. For additional information about atmospheric concentration, see chapter 296-62 WAC, Parts F, G, and I, General occupational health standards and WAC 296-307-624, Respiratory hazards.

Note: An airborne concentration of a substance that is not capable of causing death, incapacitation, impairment of ability to self-rescue, injury, or acute illness due to its health effects is not covered by this definition.

• Any other atmospheric condition that is immediately dangerous to life or health.

Note: You can find guidance on establishing acceptable atmospheric conditions for air contaminants, which have no WISHA-determined doses or permissible exposure limits using other sources of information, such as:
• Material safety data sheets required by WAC 296-307-590, Employer chemical hazard communication.
• Published information.
• Internal documents.

Hot work permit:
A written authorization to perform operations, for example, riveting, welding, cutting, burning, and heating, that can provide a source of ignition.

Immediately dangerous to life or health (IDLH):
Any of the following conditions:
• An immediate or delayed threat to life.
• Anything that would cause irreversible adverse health effects.
• Anything that would interfere with an individual's ability to escape unaided from a permit-required confined space.

Note: Some materials - hydrogen fluoride gas and cadmium vapor, for example - may produce immediate transient effects that, even if severe, may pass without medical attention, but are followed by sudden, possibly fatal collapse twelve to seventy-two hours after exposure. The victim "feels normal" after recovery from transient effects until collapse. Such materials in hazardous quantities are considered to be "immediately" dangerous to life or health (IDLH).

Inerting:
The displacement of the atmosphere in a permit-required confined space by a noncombustible gas (such as nitrogen) to such an extent that the resulting atmosphere is noncombustible.
Note: This procedure produces an IDLH oxygen-deficient atmosphere.

Isolation:
The process by which a permit-required confined space is removed from service and completely protected against the release of energy and material into the space by such means as: Blanking or blinding; misaligning or removing sections of lines, pipes, or ducts; a double block and bleed system; lockout or tagout of all sources of energy; or blocking or disconnecting all mechanical linkages.

Line breaking:
The intentional opening of a pipe, line, or duct that is or has been carrying flammable, corrosive, or toxic material, an inert gas, or any fluid at a volume, pressure, or temperature capable of causing injury.

Nonpermit confined space:
A confined space that does NOT contain actual hazards or potential hazards capable of causing death or serious physical harm.

Oxygen deficient atmosphere:
An atmosphere containing less than 19.5 percent oxygen by volume.

Oxygen enriched atmosphere:
An atmosphere containing more than 23.5 percent oxygen by volume.

Permit-required confined space or permit space:
A confined space that has one or more of the following characteristics capable of causing death or serious physical harm:
• Contains or has a potential to contain a hazardous atmosphere.
• Contains a material with the potential for engulfing someone who enters.
• Has an internal configuration that could allow someone entering to be trapped or asphyxiated by inwardly converging walls or by a floor, which slopes downward and tapers to a smaller cross section.
• Contains any physical hazard. This includes any recognized health or safety hazards including engulfment in solid or liquid material, electrical shock, or moving parts.
• Contains any other recognized serious safety or health hazard that could either:
  – Impair the ability to self-rescue; or
  – Result in a situation that presents an immediate danger to life or health.

Permit-required confined space program:
An overall program for:
• Controlling and appropriately protecting employees from permit-required confined space hazards; and
• Regulating employee entry into permit-required confined spaces.

Prohibited condition:
Any condition in a permit-required confined space that is not allowed by the permit during the authorized entry period.

Rescue service:
The personnel designated to rescue employees from permit-required confined spaces.

Retrieval system:
The equipment used for nonentry rescue of persons from permit-required confined spaces, such as a retrieval line, full-body harness or wristlets, and a lifting device or anchor.

Testing:
The process of identifying and evaluating the hazards that entrants may be exposed to in a permit-required confined space. Testing includes specifying the tests that are to be performed in the permit-required confined space.

Note: Testing allows employers to devise and implement adequate controls to protect entrants during entry, and to determine if acceptable entry conditions are present.

Part Y-10
Emergency Response

To state the minimum requirements that help you protect the safety and health of your employees during a response to hazardous substance releases in your workplace or any other location.

Do the requirements of this rule apply to your workplace?
This section applies if your employees are, or could become, involved in responding to uncontrolled releases of hazardous substances in your workplace or any other location. Use the scope flow chart, and definitions that follow, to determine if this section applies to your workplace(s). Defined words are italicized in the flow chart.
*The flow chart references other rules applicable to your workplace depending on conditions and hazards.

Examples include:
- Chapter 296-828 WAC, Hazardous chemicals in laboratories

Definitions applicable to the flow chart (see WAC 296-307-70480 for additional definitions used in this section):

**Danger area**
Areas where conditions pose a serious danger to employees, such as areas where:
- Immediately dangerous to life or health (IDLH) conditions could exist
  OR
- High levels of exposure to toxic substances could exist
  OR
- There is a potential for exceeding the lower explosive limit (LEL), also known as the lower flammability limit (LFL), of a substance.

**Emergency response**
A response to an anticipated release of a hazardous substance that is, or could become, an uncontrolled release.

**Hazardous substance**
Any biological, radiological, or chemical substance that can have adverse effects on humans. (See WAC 296-307-70480 for a more specific definition.)

**Immediately dangerous to life or health (IDLH)**
Any atmospheric condition that would:
- Cause an immediate threat to life
- Cause permanent or delayed adverse health effects
- Interfere with an employee's ability to escape.

**Incidental release**
A release that can be safely controlled at the time of the release and does not have the potential to become an uncontrolled release.

Example of a situation that results in an incidental release:
A tanker truck is receiving a load of hazardous liquid when a leak occurs. The driver knows the only hazard from the liquid is minor skin irritation.
employer has trained the driver on procedures and provided equipment to use for a release of this quantity. The driver puts on skin protection and stops the leak. A spill kit is used to contain, absorb, and pick up the spilled material for disposal.

**Limited action**

Action necessary to:
- Secure an operation during emergency responses,
- Prevent an incident from increasing in severity.

Examples include shutting down processes and closing emergency valves.

**Release**

A spill, leak, or other type of hazardous substance discharge.

**Uncontrolled release**

A release where significant safety and health risks could be created. Releases of hazardous substances that are either incidental or could not create a safety or health hazard (i.e., fire, explosion or chemical exposure) are not considered to be uncontrolled releases.

Examples of conditions that could create a significant safety and health risk:
- Large-quantity releases
- Small-releases that could be highly toxic
- Airborne exposures that could exceed a WISHA permissible exposure limit or a published exposure limit and employees are not adequately trained or equipped to control the release.

Example of an uncontrolled release:

A forklift driver knocks over a container of a solvent-based liquid, releasing the contents onto the warehouse floor. The driver has been trained to recognize the vapor is flammable and moderately toxic when inhaled. The driver has not been trained or provided appropriate equipment to address this type of spill. In this situation, it is not safe for the driver to attempt a response. The driver needs to notify someone of the release so an emergency response can be initiated.

**Workplace**

- A fixed facility
- A temporary location (such as a traffic corridor)
- Locations where employees respond to emergencies.

**Summary:**

**Your responsibility:**

To anticipate, plan for, and manage emergency response operations so employees are protected from hazardous substances and conditions.

Note:

Other chapters may apply to your workplace, such as:
- Chapter 296-62 WAC, General occupational health standards.

You will find some safety and health requirements (for example, personal protective equipment) are addressed on a general level in the core rules, while being addressed for a specific application in this section. When this happens, both requirements apply and should not conflict.

If you are uncertain which requirements to follow, you must comply with the more protective requirement. Contact your local L&I office if you need assistance in making this determination.

**You must:**

- WAC 296-307-70410 Planning
- WAC 296-307-70415 Training
- WAC 296-307-70420 Medical surveillance
- WAC 296-307-70425 Keep records
- WAC 296-307-70430 Incident requirements
- WAC 296-307-70435 Implement and maintain an incident command system (ICS) (incident command system)
- WAC 296-307-70440 Prepare skilled support personnel
- WAC 296-307-70445 Make sure the incident commander oversees activities during the response
- WAC 296-307-70450 Use the buddy system in danger areas
- WAC 296-307-70455 Provide rescue and medical assistance
- WAC 296-307-70460 Personal protective equipment
- WAC 296-307-70465 Control hazards created by personal protective equipment (PPE)
- WAC 296-307-70470 Use personal protective equipment (PPE) properly
- WAC 296-307-70475 Postemergency response

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 06-02-060, § 296-307-704, filed 1/3/06, effective 4/1/06; 05-01-166, § 296-307-704, filed 12/21/04, effective 4/2/05.]

**WAC 296-307-70410 Planning.** Develop an emergency response plan.

**Note:**

- You may already have an emergency response plan, such as required by chapter 296-843 WAC, Hazardous waste operations or by state and locally coordinated response efforts (Section 303 of Superfund Amendments and Reauthorization Act (SARA), Title III). You may use those plans to comply with this section, if they include the items listed below.
- Before a written emergency response plan can be developed, you will need to anticipate the types of uncontrolled releases that employees could encounter in your workplace(s).

**You must:**

(1) Make sure your plan is written and adequately addresses, as a minimum, all of the following:
- Preemergency planning and coordination with additional responders (including personnel from other employers such as: Fire departments, law enforcement agencies, emergency medical services, and state or federal agencies).
- Personnel roles, (see Table 1) and lines of authority and communications for all affected parties including responders.
- Employee training (see WAC 296-307-70415, train your employees), for more detail:

**Note:**

- Responders' level of training depends on the duties and roles the employer assigns.
- Training for the employees' role should address the competencies specified in Tables 3 through 6.
- Training on specific substances may be appropriate depending on the number and characteristics of hazardous substances expected to be encountered. For example, if employees may only respond to one substance, you could provide training (covering the knowledge and skills speci-
fied in Tables 3 through 6) relevant to that single substance. If employees might respond to a range of hazardous substances, training may be required to cover categories of hazardous substances.

You must:

- Videos and automated training methods (for example: Interactive computer based programs) may be used in training; however, instructors must be readily available to:
  - Encourage and provide responses to questions for the benefit of the group
  - Evaluate employees' understanding of the material
  - Provide instructional interaction to the group.
- Immediate emergency procedures including:
  - Methods of alerting employees (see WAC 296-307-345, Employee alarm systems) and outside responders
  - Procedures for limited action (emergency prevention).

Note: Limited action includes shutting down processes, closing emergency valves and other critical actions to secure the operation, or prevent the incident from increasing in severity.

<table>
<thead>
<tr>
<th>Limited Action and Employee Roles</th>
<th>If . . .</th>
<th>Then employees involved would be:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Limited action could be conducted in the danger area</td>
<td>Considered emergency responders</td>
<td></td>
</tr>
<tr>
<td>Limited action will not be conducted in IDLH conditions</td>
<td>Considered evacuees, not emergency responders</td>
<td></td>
</tr>
</tbody>
</table>

- Details of who will evacuate immediately and who will remain behind for limited action
- Evacuation routes and procedures
- How to establish safe distances and places of refuge (for example, during emergency response the incident commander (IC) decides to make changes based on new developments, i.e., changes in the wind direction).

You must:

- Methods of securing and controlling access to the site
- Emergency medical treatment and first aid
- A complete personal protective equipment (PPE) program that addresses:
  - Selection of PPE including selection criteria to be used and the identification, specified use and limitations of the PPE selected
  - Training on proper use of PPE (including maintenance)
  - Hazards created by wearing PPE including heat stress during temperature extremes, and/or other appropriate medical considerations
  - Criteria used for determining the proper fit of PPE
  - Procedures covering proper use of PPE including procedures for inspection, putting it on (donning) and removing it (doffing)
  - Maintenance of PPE including procedures for decontamination, disposal and storage
  - Methods used to evaluate the effectiveness of your PPE program.

Note:
- If a manufacturer's printed information or WISHA rule adequately addresses procedural requirements (such as donning or doffing for PPE), it is not necessary to rewrite this into your program; simply attach the printed information.
- You may use written procedures provided by the equipment manufacturer when they meet the requirements of other chapters, including chapter 296-307 WAC, Part Y-5, Respirators.

- Emergency equipment
- Emergency response procedures
- Decontamination procedures determined by a hazardous materials specialist or other qualified individual
- Methods to critically assess the response and conduct appropriate follow-up.

You must:

(2) Make your written emergency response plan available to employees, their representatives, and WISHA personnel for inspecting or copying.

Note: In situations where multiple employers could respond to an incident, all plans should consistently address:

- Who will be designated as the incident commander (IC)
- If, when, and how transfer of the incident commander (IC) position will take place.

<table>
<thead>
<tr>
<th>Table 1 Roles and Duties of Emergency Responders</th>
</tr>
</thead>
<tbody>
<tr>
<td>If the employee's role is:</td>
</tr>
<tr>
<td>-----------------------------------------------</td>
</tr>
</tbody>
</table>
| First responder at the awareness level | • Are likely to witness or discover a hazardous substance release
  • Are trained to initiate an emergency response by notifying the proper authorities of the release
  • Take no further action beyond notifying the authorities |
| First responder at the operations level | • Respond to actual or potential releases in order to protect nearby persons, property, and/or the environment from the effects of the release
  • Are trained to respond defensively, without trying to stop the release
  • May try to:
    - Confine the release from a safe distance
    - Keep it from spreading
    - Protect others from hazardous exposures |
| Hazardous materials technician | • Respond to releases or potential releases, with the intent of stopping the release
  • Are trained to approach the point of release offensively in order to, either:
    - Plug
    - Patch
    - Stop the release using other methods |

<tr>
<td>Skilled support personnel</td>
<td>• Are needed to perform an immediate, specific emergency support task at the site</td>
</tr>
<tr>
<td></td>
<td>• Are skilled in the operation of equipment including:</td>
</tr>
<tr>
<td></td>
<td>- Earth moving equipment</td>
</tr>
<tr>
<td></td>
<td>- Cranes</td>
</tr>
<tr>
<td></td>
<td>- Hoisting equipment</td>
</tr>
<tr>
<td>Incident safety officer</td>
<td>• Are designated by the incident commander</td>
</tr>
<tr>
<td></td>
<td>• Are knowledgeable in operations being implemented at the site</td>
</tr>
<tr>
<td></td>
<td>• Have specific responsibility to</td>
</tr>
<tr>
<td></td>
<td>- Identify and evaluate hazards</td>
</tr>
<tr>
<td></td>
<td>- Provide direction on employee safety matters</td>
</tr>
</tbody>
</table>

**Note:** Use Tables 3 through 6 to identify your employees' training competencies. You may conduct training internally, or use outside training services to comply with this section. When outside trainers are hired, you are still responsible for making sure the requirements of this section are met. For example, employers may compare the course outline to the competencies listed in Tables 3 through 6.

**Exemption:** Skilled support employees are not covered by the training requirements of this section (see WAC 296-307-70440).

**Initial training:**

- Provide initial training before the employee is allowed to participate in an actual emergency response operation.

  **Note:** When first responders at the awareness or operations level have sufficient experience to objectively demonstrate competencies specified in Table 3, you may accept experience instead of training.

- Make sure initial training adequately addresses the competencies in Tables 3 through 6 and the minimum training durations in Table 2.
- Certify that employees objectively demonstrate competencies specified in Tables 3 through 6 (except for employees trained as first responders at the awareness level).

**You must:**

Retraining (refresher) training:

- Provide retraining annually.
- Make sure retraining covers necessary content.
- Document training or demonstrated competency.

**Note:** Retraining is not required when employees demonstrate competencies annually and a record is kept of the demonstration methodology used.

**You must:**

**Trainer qualifications:**

- Verify trainers have satisfactorily completed an instructors' training course for the subjects they teach. For example, courses offered by the United States National Academy, or equivalent courses are acceptable.

  **OR**

- Have the educational and instructional experience necessary for training.

**Specialist employees:**

- Specialist employees who have been sent to the scene to advise or assist must receive training or demonstrate competency in their specialty, annually.

</tbody>
</table>
WAC 296-307-70420 Medical surveillance. Provide medical surveillance to employees.

You must:
(1) Provide medical surveillance for employees to comply with Tables 7 and 8, and the following:
   • Make medical surveillance available at:
     – Reasonable times and places.
     – No cost to employees, including travel associated costs such as mileage, gas or bus fare if the employee is required to travel off site
     AND
     – Wages for additional time spent outside of employees' normal work hours.
   • Make sure a licensed physician performs or supervises exams and procedures.
   • Give complete information to the examining physician including:
     – A copy of this section.
     – A description of the employee's duties that relate to hazardous substance exposure.
     – The hazardous substance exposure levels anticipated for the employee.
   • A description of the personal protective equipment (PPE) the employee could use.
   • Information available from previous medical examinations.
   • The medical evaluation information required by chapter 296-307 WAC, Part Y-5, Respirators.
     • Medical exams must include, at a minimum:
       – A medical history.
       – A work history (or updated history if on file).
       – A special emphasis on:
         ■ Assessment of symptoms related to handling hazardous substances.
         ■ Health hazards.
         ■ Evaluation of fitness for duty (including the ability to wear any personal protective equipment (PPE) or other conditions that may be expected at the workplace).
         – Other content as determined by the examining physician.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-70415, filed 12/21/04, effective 4/2/05.]
You must:
(2) Obtain the physician's written opinion and give a copy to the employee that includes:
• A statement of whether or not medical conditions were found which would increase the employee's risk for impairment during emergency response work or respirator use.
  – Do not include specific findings or diagnoses unrelated to occupational exposures.

Table 7
Medical Surveillance for Employee Categories

<table>
<thead>
<tr>
<th>If the employee is covered by this section and is:</th>
<th>Then you must:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Exposed for at least 30 days a year to health hazards or hazardous substances at or above the permissible exposure limit or published exposure levels (even when respirators are used), OR • Required to wear a respirator for at least 30 days a year.*</td>
<td>• Offer standard medical surveillance as specified in Table 8.*</td>
</tr>
<tr>
<td>• A hazardous materials (HAZMAT) team member. • A hazardous materials specialist.</td>
<td>• Provide standard medical surveillance as specified in Table 8.</td>
</tr>
<tr>
<td>• An emergency responder who shows immediate or delayed signs or symptoms possibly resulting from exposure to hazardous substances during an incident.</td>
<td>• Provide incident-specific medical surveillance as specified in Table 8.</td>
</tr>
<tr>
<td>• Not an emergency responder and: – May be injured. – Shows immediate or delayed signs or symptoms possibly resulting from exposure to hazardous substances. – May have been exposed to hazardous substances at concentrations above the permissible exposure limits (PELs) or the published exposure levels without appropriate PPE.</td>
<td>• Offer incident-specific medical surveillance as specified in Table 8.</td>
</tr>
</tbody>
</table>

*Note: A medical evaluation for respirator use is required by chapter 296-307 WAC, Part Y-5, Respiratory protection, for those employees who have not been cleared for respirator use during medical surveillance activities.

Table 8
Frequency of Exams and Consultations

<table>
<thead>
<tr>
<th>If the employee is covered by:</th>
<th>Then medical surveillance must include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Standard medical surveillance</td>
<td>Exams and consultations: • Before assignment. <strong>Note:</strong> If the employee is a hazardous materials (HAZMAT) team member or a hazardous materials specialist, the employee must receive a baseline physical examination. • At least every 12 months after their initial assignment unless the physician believes a shorter, or longer interval (but no more than 24 months) is appropriate. • Whenever employees are reassigned to an area where they will no longer be covered by medical surveillance and they have not been examined within the past 6 months. • As soon as possible after an employee reports: – Signs or symptoms of possible overexposure to hazardous substances or health hazards. – Injury. – Exposure above the permissible exposure limits or published exposure levels. • At the termination of their employment unless they were examined within the past 6 months.</td>
</tr>
<tr>
<td>• Incident-specific medical surveillance</td>
<td>Medical consultations and exams: • As soon as possible following the incident or development of signs or symptoms. • At additional times, if the physician determines follow-up is medically necessary.</td>

</table>

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-70420, filed 12/21/04, effective 4/2/05.]
WAC 296-307-70425  Keep records.
You must:
• Keep a record of:
  – Name and Social Security number of the employee receiving medical surveillance
  – Physicians' written opinions, recommended limitations, and results of examinations and tests
  – Any employee medical complaints regarding hazardous substance exposures
  – A copy of all information given to the examining physician (except a copy of this section).
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-70425, filed 12/21/04, effective 4/2/05.]

WAC 296-307-70430  Incident requirements. Recognize emergencies and initiate a response.
You must:
• Make sure employees follow procedures in your emergency response plan to:
  – Recognize when an emergency response must be initiated
  – Notify employees, and others designated in your plan, of the release
  – Follow immediate emergency procedures
  – Prevent the incident from increasing in severity or to secure the operation.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-70430, filed 12/21/04, effective 4/2/05.]

WAC 296-307-70435  Implement and maintain an incident command system (ICS).
You must:
(1) Make sure a single individual, acting as the incident commander (IC), is in charge of the site-specific incident command system (ICS) and acts within their designated role and training level.
Note: • For multiemployer worksites:
  – The IC has responsibility for controlling emergency response operations at the site for all employers.
  – Emergency response plans should be consistent in designating who assumes the IC position.
    ■ If the first employee arriving at the scene is not trained as an IC (see Table 5, Training Requirements for Incident Commanders and Specialist Employees, WAC 296-307-70415), they may take control of the incident within their designated role and training level.
(2) Make sure all employers' emergency responders and their communications are coordinated and controlled by the IC.
Note: The IC may delegate tasks to subordinates (within their training level).
You must:
(3) Make sure each employer at the scene has designated a representative to assist the IC.
(4) Establish security and control of the site as specified in your written emergency response plan.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-70435, filed 12/21/04, effective 4/2/05.]

WAC 296-307-70440  Prepare skilled support personnel.
You must:
(1) Make sure that your skilled support personnel (including those employees who are not regularly employed by you) who could be exposed to on-scene hazards are given an initial briefing at the site before they participate in any emergency response. The initial briefing must include:
• What chemical hazards are involved
• What duties are to be performed
• Instruction in the wearing of appropriate personal protective equipment.
Note: Skilled support personnel do not need to comply with the other training requirements of this section.
(2) Make sure the safety and health precautions given to your employees are also given to skilled support personnel.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-70440, filed 12/21/04, effective 4/2/05.]

WAC 296-307-70445  Make sure the incident commander oversees activities during the response. The employer of the incident commander (IC) must:
(1) Identify all hazardous substances and conditions present, within their training level, using site analysis and maximum exposure limits, when appropriate.
(2) Implement emergency response procedures appropriate to the hazardous substances and conditions present, such as:
• Procedures that address the use of engineering controls, hazardous substance handling, and new technologies
• Procedures that address decontamination
• Procedures that address PPE
• Procedures that limit the number of personnel to those who are actively performing emergency response operations, in areas where exposure could exist.
(3) Designate an incident safety officer (ISO).
• Make sure the ISO demonstrates knowledge about operations being implemented at the emergency response site. They must:
  – Identify and evaluate hazards
  – Communicate with the IC about hazards, immediately informing the IC of corrective actions that must be taken when conditions are judged to be:
    ■ An imminent danger
    OR
    ■ Immediately dangerous to life or health (IDLH).
  – Provide direction about the safety of operations.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-70445, filed 12/21/04, effective 4/2/05.]

WAC 296-307-70450  Use the buddy system in danger areas.
You must:
• Make sure operations and tasks (including limited actions) in danger areas are conducted using the buddy system in teams of two or more.

(2007 Ed.)
Definition: Danger areas are areas where conditions pose a serious danger to employees, such as areas where:
- Immediately dangerous to life or health (IDLH) conditions could exist.
- High levels of exposure to toxic substances could exist.
- There is a potential for exceeding the lower explosive limit (LEL), also known as the lower flammability limit (LFL) of a hazardous substance.

WAC 296-307-70455 Provide rescue and medical assistance.
You must:
(1) Provide stand-by employees equipped with the same level of personal protective equipment (PPE) as the entrants, for assistance or rescue.

Note:
- The buddy system applies to stand-by employees (WAC 296-307-70450).
- One of the two stand-by employees can be assigned to another task provided it does not interfere with the performance of the stand-by role.
- Rescue equipment should be selected and provided based on the types of rescue situations that could occur.

You must:
(2) Make sure employees trained in first aid are readily available with necessary medical equipment and have a way to transport the injured.

Note:
- Employers who require their employees to provide first aid must comply with the bloodborne pathogen rule, chapter 296-823 WAC.

WAC 296-307-70460 Personal protective equipment.
You must:
- Provide employees with appropriate PPE and make sure it is used if hazards could be present.
- Select PPE (such as respirators, gloves, protective suits and other PPE) based on:
  - An evaluation of the performance characteristics (such as breakthrough time and hazardous substance-specificity of the material or item) relevant to the requirements and limitations of the site.
  - Task-specific conditions and durations.
  - The hazards and potential hazards of the site (see Table 9, Selecting PPE for Specific Hazards).
- Select totally encapsulating chemical protective (TECP) suits, as specified in Table 9, that:
  - Maintain positive air pressure.
  - Prevent inward test gas leakage of more than 0.5 percent.

Note:
- Follow the manufacturer's recommended procedure for testing a TECP suit's ability to maintain positive air pressure and prevent inward gas leakage. Other established test protocols for these suits, for example NFPA 1991 and ASTM F1052-97, may also be used.

Table 9
Selecting PPE for Specific Hazards

<table>
<thead>
<tr>
<th>If:</th>
<th>Then use:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inhalation hazards could be present.</td>
<td>• Positive-pressure (pressure-demand) self-contained breathing apparatus (SCBA) OR • A decreased level of respiratory protection only when the incident commander determines, from air monitoring results, that employees will be adequately protected.</td>
</tr>
<tr>
<td>Chemical exposure levels will create a substantial possibility of: • Immediate death. • Immediate serious illness or injury. • Reduced ability to escape.</td>
<td>Either positive-pressure (pressure-demand): • SCBA • Air-line respirators equipped with an escape air supply.</td>
</tr>
<tr>
<td>Skin absorption of a hazardous substance may result in a substantial possibility of: • Immediate death. • Immediate serious illness or injury. • Reduced ability to escape.</td>
<td>Protection equivalent to Level A including a totally encapsulating chemical protective (TECP) suit.</td>
</tr>
</tbody>
</table>

WAC 296-307-70465 Control hazards created by personal protective equipment (PPE).
You must:
- Control hazards created by the use of PPE, including:
  - Heat stress due to extremely high temperatures.
  - Any other employee health hazard and consideration.

WAC 296-307-70470 Use personal protective equipment (PPE) properly.
You must:
(1) Make sure employees inspect PPE before, during and after use, following your plan's procedures.

(2) Make sure employees put on (don) and remove (doff) PPE following your plan's procedures.

(3) Make sure employees do not interchange self-contained breathing apparatus (SCBA) air cylinders from different manufacturers, unless all of the following apply:
   • There is a life-saving emergency
   • You need a supplemental air supply
   • The cylinders are of the same capacity and pressure rating.

(4) Make sure compressed air cylinders used with SCBAs meet the testing and service life requirements of the United States Department of Transportation (USDOT). Search at: http://www.dot.gov.
   Note: You can also check with the cylinder manufacturers to obtain USDOT test and service life specifications.

You must:
(5) Make sure PPE is maintained in a safe and reliable condition using your plan's procedures. PPE maintenance includes:
   • Decontamination
   • Cleaning

Table 10
Rules that Apply to Postemergency Response Activities

<table>
<thead>
<tr>
<th>When postemergency response cleanup is performed by employees who were not part of the initial emergency response and:</th>
<th>The following rules or requirements apply:</th>
</tr>
</thead>
<tbody>
<tr>
<td>It is necessary to remove hazardous substances, health hazards and contaminated materials (example: Soil) from the site.</td>
<td>Chapter 296-843 WAC, Hazardous waste operations.</td>
</tr>
</tbody>
</table>
| Cleanup is done on plant property using plant or workplace employees AND It is not necessary to remove hazardous substances, health hazards and contaminated materials from the site. | For training:
   • WAC 296-307-35015 and 296-307-35018, Employee emergency action plans
   • Chapter 296-307 WAC, Part Y-5, Respiratory protection
   • WAC 296-307-550, Employer chemical hazard communication
   • Other appropriate training requirements relevant to personal protective equipment (PPE) and decontamination For equipment:
     • Make sure that all equipment used for clean-up work is serviced and inspected before use. |

(Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-70475, filed 12/21/04, effective 4/2/05.)
Emergency response
An organized response to an anticipated release of a hazardous substance that is, or could become, an uncontrolled release.

Emergency response plan
A written plan that requires coordination between emergency response participants, and contains procedures, criteria, and other information that will be applied to emergency response operations. Each employer's plan should be compatible with local and state plans.

Engineering controls
Methods of controlling employee exposures by modifying the source or reducing the quantity of contaminants.

HAZMAT team (HAZMAT team)
A group of employees who are expected to perform responses to releases, or possible releases, of hazardous substances for the purpose of control and stabilization. As a result of their duties, HAZMAT team members may have close contact with hazardous substances.

Note: A HAZMAT team may be a separate component of a fire brigade or fire department.

Hazardous substance
Any of the following substances that could adversely affect an exposed employee's health or safety:
- Substances defined under section 101(14) of the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA) or "Superfund" Act (visit: http://www.epa.gov)
- Biological or other disease-causing agents released that could reasonably be expected to cause death, disease, behavioral abnormalities, cancer, genetic mutation, physiological malfunctions (including malfunctions in reproduction) or physical deformations in a person or their offspring when the person:
  - Is directly exposed to the agent in the environment
  - Directly ingests, inhales, or assimilates the agent from the environment
  - Indirectly ingests the agent through a food chain
- Substances listed by the United States Department of Transportation as hazardous materials under Title 49 (Transportation) in the Code of Federal Regulations (CFR), Part 172, section 101 and appendices (visit: http://www.nara.gov and search for "List of CFR subjects")
- Hazardous wastes as defined in this section.

Hazardous waste
A substance designated by chapter 173-303 WAC, Dangerous waste regulations, department of ecology, as a dangerous waste or an extremely hazardous waste and any waste fitting the definition of "health hazard" in this section.

Note: For department of ecology regulations, visit: http://www.ecy.wa.gov.

Health hazard
A chemical, a mixture of chemicals, or a pathogen for which there is statistically significant evidence, based on at least one study conducted according to established scientific principles, that acute or chronic health effects may occur in exposed employees.

The term "health hazard" includes stress due to temperature extremes and chemicals that are:
- Carcinogens
- Toxic or highly toxic agents
- Reproductive toxins, irritants, corrosives, sensizers, hepatotoxins, nephrotoxins, or neurotoxins
- Agents acting on the hematopoietic system agents that damage lungs, skin, eyes, or mucous membranes. (Detailed definitions of these chemical terms can be found in the Safety and health core rules, WAC 296-307-550, chemical hazard communication.)

Immediately dangerous to life or health (IDLH)
Any atmospheric condition that would:
- Cause an immediate threat to life
- Cause permanent or delayed adverse health effects
- Interfere with an employee's ability to escape.

Incident command system (ICS)
An organized approach to control and manage operations at an emergency response incident.

Incidental release
A release that can be safely controlled at the time of the release and does not have the potential to become an uncontrolled release.

Note: Example of a situation that results in an incidental release:
A tanker truck is receiving a load of hazardous liquid when a leak occurs. The driver knows the only hazard from the liquid is minor skin irritation. The employer has trained the driver on procedures and provided equipment to use for a release of this quantity. The driver puts on skin protection and stops the leak. A spill kit is used to contain, absorb, and pick up the spilled material for disposal.

Limited action
Action necessary to:
- Secure an operation during emergency responses,
- Prevent an incident from increasing in severity.
Examples include shutting down processes and closing emergency valves.

Lines of authority
A preestablished ranking of individuals, qualified to assume a commanding role during an emergency response, noted in an emergency response plan and implemented during a response. This is most important when responders from multiple employers could participate in an emergency response.

Lower explosive limit (LEL)
See lower flammable limit (LFL).

Lower flammable limit (LFL)
The lowest concentration of a material that will propagate a flame. The LFL is usually expressed as a percent (by volume) of the material in air (or other oxidant).

Must
Must means mandatory.

Permissible exposure limit (PEL)
Means the established time-weighted-average (TWA) concentration or ceiling concentration of a contaminant that must not be exceeded.
The exposure, inhalation, or dermal permissible limit specified in chapter 296-307 WAC, Part Y-6, Respiratory hazards.

Personal protective equipment (PPE)
Protective items designed to be worn by the user to protect them against airborne, skin contact and other hazards.

[Title 296 WAC—p. 2654]
This includes items such as respiratory protection, protective suits, gloves, eye protection, etc.

**Postemergency response**

The stage of the emergency response where the immediate threat from the release has been stabilized or eliminated, and cleanup of the site has started.

**Published exposure level**

Exposure limits published in "National Institute for Occupational Safety and Health (NIOSH) Recommendations for Occupational Safety and Health" (DHHS publication #92-100, 1992).

If an exposure limit is not published by NIOSH, then "published exposure level" means the exposure limits published by the American Conference of Governmental Industrial Hygienists (ACGIH) in "TLVs and BEIs-Threshold Limit Values for Chemical Substances and Physical Agents" (1999 edition).

**Release**

A spill, leak, or other type of hazardous substance discharge.

**Uncontrolled release**

A release where significant safety and health risks could be created. Releases of hazardous substances that are either incidental or could not create a safety or health hazard (i.e., fire, explosion or chemical exposure) are not considered to be uncontrolled releases.

Examples of conditions that could create a significant safety and health risk:

- Large-quantity releases
- Small releases that could be highly toxic
- Airborne exposures that could exceed a WISHA permissible exposure limit or a published exposure limit and employees are not adequately trained or equipped to control the release.

Example of an uncontrolled release:

A forklift driver knocks over a container of a solvent-based liquid, releasing the contents onto the warehouse floor. The driver has been trained to recognize the vapor is flammable and moderately toxic when inhaled. The driver has not been trained or provided appropriate equipment to address this type of spill. In this situation, it is not safe for the driver to attempt a response. The driver needs to notify someone of the release so an emergency response can be initiated.

**Workplace**

- A fixed facility
  - OR
    - A temporary location (such as a traffic corridor)
  - OR
    - Locations where employees respond to emergencies.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-01-166, § 296-307-70480, filed 12/21/04, effective 4/2/05.]

(2007 Ed.)
WAC 296-310-020 Application for initial and renewed licenses. (1) To obtain a license, a contractor must:
   (a) Complete an application for a license;
   (b) Provide the information required by RCW 19.30.030 (1), (6), and (7);
   (c) Obtain a surety bond or provide other acceptable security to the department. If the contractor obtains a bond, it must submit the original bond to the department;
   (d) Obtain insurance and supply the information required by WAC 296-310-040(2) if the contractor seeks a license to transport workers; and
   (e) Pay the fee set by WAC 296-310-060.

   (2) The department shall send a renewal notice to the contractor's last recorded address at least forty-five days before the contractor's license expires. The contractor may renew its license if it submits the renewal notice and provides the materials required in subsection (1)(b), (c), (d) if appropriate, and (e) of this section.

   (3) The contractor must submit all materials to the department in one package. Each of the materials must name the contractor exactly as it is named on the application for license or the renewal notice. If the contractor is renewing its license, each of the materials must include the contractor's license number. If any of the materials are missing, do not properly name the contractor, or do not include the license number, the department shall refuse to license or renew the license of the contractor.

   (4) The bond and the insurance policy must expire no sooner than the expiration date of the license for which the contractor has applied.

   (5) Applications for issuance or renewal of a license must be sent to:

       Department of Labor and Industries
       ESAC Division
       General Administration Building
       Olympia WA 98504

   [Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-020, filed 12/11/85.]  

WAC 296-310-030 Denial of license. (1) The department may refuse to issue or renew a license for the reasons listed in RCW 19.30.050 and 19.30.060. If the department refuses a license for any of these reasons, it shall serve on the contractor a notice of denial of license. The notice of denial of license shall:

   (a) Describe concisely the ground for denial of the license; and
   (b) Specify the statutory authority for the denial.

The notice of denial shall inform the contractor that it may request a hearing pursuant to WAC 296-310-160 on the denial. The notice shall specify that if no hearing is requested within thirty days of the date of issuance of the notice the director shall issue a final, unappealable order denying the license.

(2) The department also shall refuse to issue a license to or renew the license of a contractor who fails to comply with WAC 296-310-020. The department shall inform the contractor of the problem either in writing or, if appropriate, orally. Because compliance with WAC 296-310-020 involves technical requirements that are entirely within the control of the contractor, no hearing shall be granted on a failure to comply.

   [Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-030, filed 12/11/85.]

WAC 296-310-040 Requirements for a license to transport employees. (1) A contractor who intends to transport employees must obtain liability insurance. The department shall require public liability and property damage insurance that provides coverage, for each single occurrence and for each vehicle used to transport employees, in the following minimum amounts:

   (a) $50,000 for injury or damage to property;
   (b) $100,000 for injury or damage, including death, to any one person; and
   (c) $500,000 for injury or damage, including death, to more than one person.

(2) The contractor must also provide to the department evidence of the insurance policy or policies.

   [Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-040, filed 12/11/85.]

WAC 296-310-050 Amount of bond or security. (1) A contractor must provide a bond or security in the following minimum amount:

   (a) If the contractor employs or intends to employ:
      (i) From one to ten employees: $ 5,000
      (ii) From eleven to fifty employees: $10,000
      (iii) From fifty-one to one hundred employees: $15,000
      (iv) Over one hundred employees: $20,000

   (b) If the contractor does not employ agricultural employees, but only recruits, solicits, supplies, transports, or hires employees for another person, and that person takes complete responsibility for payment of wages to the employees, the contractor shall obtain a $5,000 bond or other security.

(2) If the contractor obtains a two-year license, the bond or security shall be twice the minimum amounts stated in subsection (1) of this section.

(3) The department may order the contractor to obtain a bond or security for an amount greater than the minimums set by subsections (1) and (2) of this section if the security or bond is insufficient to satisfy the contractor's potential liability for the license period. If the department determines that an increased bond is necessary, it shall serve on the contractor a notice to increase bond or security. The notice shall:

   (a) Describe concisely the reasons an increase in the bond or security is necessary;
   (b) Specify the statutory authority for the required increase; and
   (c) Grant the contractor thirty days from the date of issuance of the notice to obtain and provide to the department the increased bond or security.

The notice shall inform the contractor that it may request a hearing pursuant to WAC 296-310-160 on the order to increase the bond or security. The notice shall specify that if no hearing is requested within thirty days of the date of issuance of the notice the director shall issue a final, unappealable order requiring the contractor to submit the increased bond or security. The notice shall also specify that, if the con-
tractor neither appeals nor obtains the increased bond or security within the thirty days, the department shall suspend the contractor's license.

(4) If the director issues a final, unappealed decision raising the amount of the bond or security, the raised amount shall be required for all license periods after the date of issuance of the final decision unless the decision specifically states otherwise. A contractor may, if the circumstances that led to the increased amount change, file with the department a written petition to lower the amount. The petition shall specify the grounds that justify a lowering of the bond or security. The department shall investigate the petition and shall issue a new notice stating its decision on the bond amount. The contractor, if aggrieved, may appeal this new notice as provided in subsection (3) of this section.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-050, filed 12/11/85.]

WAC 296-310-060 Fees. (1) The fee for a one-year license is:

(a) For a contractor engaged in forestation or reforestation: $100.00
(b) For all other contractors: $35.00
(2) The fee for a two year license is:
(a) For a contractor engaged in forestation or reforestation: $200.00
(b) For all other contractors: $70.00

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-060, filed 12/11/85.]

WAC 296-310-070 Duplicate licenses. If a contractor loses its license, or if the license is stolen or destroyed, the contractor may obtain a duplicate license upon application to the department. The application must specify the reason a duplicate is necessary.

The duplicate license shall be stamped prominently with the word "duplicate." A new contractor license number shall be supplied to the contractor.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-070, filed 12/11/85.]

WAC 296-310-080 Length of license period. A contractor who is obtaining its initial license shall be licensed for one year only. A contractor who is renewing its license may choose to obtain either a one-year or two-year license, unless the department informs the contractor that it may obtain only a one-year license.

All one-year licenses shall expire on December 31 of the year of issuance. All two-year licenses shall expire on December 31 of the year following the year of issuance.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-080, filed 12/11/85.]

WAC 296-310-090 Change in business structure, name, address, or number of employees. (1) If a contractor changes its business structure (for example, if it changes from a partnership to a corporation, or if the partners in a partnership change), the contractor must apply for a new license in the manner required by WAC 296-310-020. If a contractor does not obtain a new license after a change in its business structure, its previous license may be invalid.

(2) If a contractor changes its name or address, it must notify the department within ten days.

(3) If a contractor begins employing agricultural employees, or increases the number of its employees, so that the bond or security is insufficient for that number of employees, the contractor must obtain a new bond or security in the amount required by WAC 296-310-050 and submit it to the department. The department need not issue a notice to increase the amount of bond or security in this situation.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-090, filed 12/11/85.]

WAC 296-310-100 Cancellation of insurance or bond. (1) No surety company may cancel any bond issued to a contractor pursuant to RCW 19.30.040, unless the contractor previously submits another bond or other security, for the same amount, that covers the contractor's liability for the same period as that for the bond that is to be cancelled.

(2) A cancellation of a surety bond or insurance policy is effective thirty days after the department receives the cancellation notice, if the cancellation notice contains the following information:

(a) The name of the contractor, exactly as it appears on the contractor's license;
(b) The contractor's license number;
(c) The contractor's business address;
(d) The number of the bond or insurance policy that is to be cancelled;
(e) The effective date of the bond or insurance policy that is to be cancelled; and
(f) If the cancellation is of a surety bond, a certification that the contractor has previously obtained and submitted to the department a new bond or other security as required by subsection (1) of this section.

(3) To help the department process cancellations, the information in subsection (2) of this section should be provided in the order shown.

(4) The insurance and bonding companies should send cancellation notices to the department by certified or registered mail.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-100, filed 12/11/85.]

WAC 296-310-110 Refund of security deposited with the department. (1) If a contractor is secured, the department shall release its interest in the security three years after the contractor's last license expired. The department shall not release its interest, however, if an unsatisfied judgment or claim is outstanding against the contractor.

(2) The department shall in any case release its interest in the security three years after the contractor's license expired. The department shall not release its interest, however, if an unsatisfied judgment or claim is outstanding against the contractor.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-110, filed 12/11/85.]

[Title 296 WAC—p. 2657]
WAC 296-310-120 Revocation or suspension of license. (1) The department may revoke a contractor's license for the reasons listed in RCW 19.30.050(1) and 19.30.060. If the department revokes a license, it shall serve on the contractor a notice of revocation. The notice of revocation shall:

(a) Describe concisely the ground for the revocation; and
(b) Specify the statutory authority for the revocation.

The notice of revocation shall inform the contractor that it may request a hearing on the revocation. The notice shall specify that if no hearing is requested within thirty days after the date of issuance of the notice, the director shall issue a final, unappealable order revoking the contractor's license. The hearing may be requested pursuant to WAC 296-310-160.

(2) A contractor is entitled to retain its license only if it remains in compliance with the bonding and insurance requirements of RCW 19.30.030 and 19.30.040. If a contractor's surety bond or other security is impaired or becomes insufficient, the contractor's insurance policy is cancelled, or the contractor transports employees without insurance, the department shall suspend the contractor's license until the contractor obtains a new bond, other security, or insurance policy, eliminates the impairment to the bond or security, or ceases to transport workers. The contractor may not do business while its license is suspended.

The department shall inform the contractor in writing of the suspension and of the steps the contractor must take to remove the suspension. The contractor may not appeal a suspension of licensing.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-120, filed 12/11/85.]

WAC 296-310-130 Submission of complaint. Any person may submit to the department a complaint alleging a violation of chapter 19.30 RCW or challenging an application for a license. The complaint must describe the alleged violation or ground for denying a license, and must identify the alleged violator or applicant. It would aid the department's investigation if the complaint also specifies:

(1) The name and address of the complainant; and
(2) The address of the alleged violator or applicant.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-130, filed 12/11/85.]

WAC 296-310-140 Investigation of complaint. The department shall investigate a complaint unless the complaint was submitted more than three years after the date of the alleged violation. The department shall not investigate any complaint filed more than three years after the date of the violation.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-140, filed 12/11/85.]

WAC 296-310-150 Notice of violation. (1) If the department determines that there is reasonable cause to believe that chapter 19.30 RCW has been violated, the department shall serve on the violator a notice of violation. The notice of violation shall:

(a) Describe concisely the violation;
(b) Specify which statute was violated;
(c) If known, identify the employees who were affected by the violation;
(d) If known and applicable, state the amount of unpaid wages or damages the violator owes;
(e) State the penalty, if any, the department will assess for the violation; and
(f) State whether the contractor's license is being revoked as a result of the violation.

(2) If the notice alleges that the contractor owes unpaid wages or damages, the department shall serve a copy of the notice of violation on the violator's surety bond company.

(3) The notice of violation shall inform the violator and, if applicable, its surety that they may request a hearing on the violation, the amount of unpaid wages or damages owed, or the penalty assessed. The notice shall specify that if no hearing is requested within thirty days after the date the notice was issued the director shall issue a final, unappealable order finding that the violation did occur, ordering the violator to pay any unpaid wages or damages, and assessing penalties.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-150, filed 12/11/85.]

WAC 296-310-160 Appeal of notices. (1) The contractor or violator, or the violator's surety if the surety has an interest in the matter, may request a hearing on the matter asserted in a notice of denial of license, a notice of revocation, a notice of increased bond amount, or a notice of violation. One original and four copies of the request must be filed with the director within thirty days after the date the department issued the notice. A party requesting a hearing on a notice of violation must also serve a copy of the request on the surety or the violator as appropriate.

(2) The request for hearing must be in writing and must specify:

(a) The name and address of the party requesting the hearing;
(b) The name and date of issuance of the notice that is being appealed;
(c) The matters contained in the notice that the requestor believes are erroneous;
(d) The reasons the notice is erroneous; and
(e) If a surety is appealing a notice of violation, the name and address of the violating contractor.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-160, filed 12/11/85.]

WAC 296-310-170 Hearing on appeal of notice. (1) The director may hear an appeal personally or may delegate the authority to hold the hearing and draft a proposed decision to an administrative law judge pursuant to chapter 34.12 RCW. The plaintiff at the hearing shall be the department and the defendants shall be the contractor or the violator and its surety. The department shall have the burden of proving, by a preponderance of the evidence, that the matters stated in the notice occurred.

(2) Any person who has standing may, upon motion, be allowed to intervene as a plaintiff in a hearing on a notice of violation. Any interested person, whether or not admitted as a plaintiff, may submit written arguments and affidavits in any hearing.

[Title 296 WAC—p. 2658]
(3) The hearing shall be conducted in accordance with the uniform procedure rules, chapter 1-08 WAC.

(4) If the director presides over the hearing, the director shall issue a final decision that includes findings of fact and conclusions of law and, if appropriate for a violation, an order to pay unpaid wages, damages, or a penalty.

(5) If an administrative law judge presides over the hearing, she or he shall issue a proposed decision that includes findings of fact and conclusions of law and, if appropriate for a violation, an order to pay unpaid wages, damages, or a penalty. The proposed decision shall be served on the contractor or the violator and its surety, the department, and any persons who have intervened as plaintiffs. Any of these parties, if aggrieved by the proposed decision, may appeal to the director within thirty days after the date of issuance of the proposed decision. If none of the parties appeals within thirty days, the proposed decision may not be appealed either to the director or the courts. A copy of the proposed decision shall also be mailed to all persons who submitted written arguments or affidavits at the hearing.

(6) An appellant must file with the director an original and four copies of its notice of appeal. The notice of appeal must specify which findings and conclusions are erroneous. The appellant must attach to the notice the written arguments supporting its appeal.

The appellant must serve a copy of the notice of appeal and the arguments on the other parties. The respondent parties must file with the director their written arguments within thirty days after the date the notice of appeal and the arguments were served upon them.

(7) The director shall review the proposed decision in accordance with the Administrative Procedure Act, chapter 34.04 RCW. The director may: Require the parties to specify the portions of the record on which the parties rely; require the parties to submit additional information by affidavit or certificate; remand the matter to the administrative law judge for further proceedings; and require a department employee to prepare a summary of the record for the department to review. The director may allow the parties to present oral arguments as well as the written arguments. The director shall issue a final decision that can affirm, modify, or reverse the proposed decision.

(8) The director shall serve the final decision on all parties. Any aggrieved party may appeal the final decision to superior court pursuant to RCW 34.04.130 unless the final decision affirms an unappealed proposed decision. If no party appeals within the period set by RCW 34.04.130, the director's decision is conclusive and binding on all parties. The director shall also mail a copy of the final decision to all persons who submitted written arguments or affidavits at the hearing.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-170, filed 12/11/85.]

WAC 296-310-180 Effect of final decision. If the director issues a final decision that includes a finding that a violator owes unpaid wages or damages, and the finding is not appealed or is affirmed by the courts, the finding and the decision are res judicata in any action by the department, or by any other person who was a plaintiff at the hearing, against the violator and its surety to recover the unpaid wages or damages. The finding and decision are not res judicata in any action by a person who was not a party at the hearing.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-180, filed 12/11/85.]

WAC 296-310-190 Suit by department for unpaid wages or damages. (1) RCW 19.30.160(4) authorizes the department to sue a violator and its surety on behalf of an employee to recover unpaid wages and other damages. The department is not required to bring suit and, in its sole discretion, may decide not to do so in any case. The department also shall not sue on behalf of any employee who has already brought a suit against the violator and its surety in the matter.

(2) The department may file a suit against the violator and its surety at any time and without regard to whether administrative proceedings have been exhausted.

(3) The department may include in any suit a request for an injunction against the violator.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-190, filed 12/11/85.]

WAC 296-310-200 Procedures for filing suit against a contractor. (1) A suit against a contractor and its bond or security for unpaid wages or damages may be brought in any court with jurisdiction. The venue may be in the county in which the claim arose, or in which either the damaged person or the defendant resides.

(2) When a contractor is sued, the plaintiff must serve the summons and complaint on the contractor and its surety by serving three copies of the summons and complaint by certified or registered mail on the department. The department shall not accept personal service of the summons and complaint.

(3) The department may be unable to process a summons and complaint if the summons and complaint do not contain the following information:

(a) The contractor's name exactly as it appears on the contractor's license;
(b) The contractor's business address;
(c) The names of the owners, partners, or officers of the contractor; and
(d) The contractor's license number.

If the suit names a surety as a defendant, the summons and complaint should also include:

(e) The name and address of the surety that issued the contractor's bond;
(f) The bond number; and
(g) The effective date of the bond.

If the information is insufficient for the department to identify the contractor or surety that is being sued, the department shall not attempt to serve the summons and complaint and shall return them to the plaintiff.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-200, filed 12/11/85.]

WAC 296-310-210 Collection of judgments. (1) If a contractor is secured, a plaintiff who has received a final judgment against a contractor may satisfy the judgment out of the security held by the department.

(2007 Ed.)
(2) The department shall satisfy a final judgment if the plaintiff serves on the department three certified copies of the unsatisfied judgment. The plaintiff must include the following information with the copies of the judgment:
   (a) The name of the contractor, exactly as it appears on the contractor's license;
   (b) The contractor's business address;
   (c) The names of the owners, partners, or officers of the contractor;
   (d) The contractor's license number; and
   (e) The exact amount of the judgment awarded by the court, including attorney's fees and interest.

If the department does not receive sufficient information to enable it to pay the judgment, it shall inform the plaintiff that more information is needed.

(3) If a contractor is bonded, a plaintiff can satisfy a final judgment only against the contractor or the bonding company. The department can neither satisfy the judgment nor, unless the department itself is the plaintiff, force the contractor or the bonding company to pay the judgment. The plaintiff must join the bonding company in the suit if it wants the bonding company to pay the judgment.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-220, filed 12/11/85.]

WAC 296-310-220 Priority for payment of judgments. RCW 19.30.170 contains two different provisions for priority in paying judgments from the contractor's bond or security.

(1) If a contractor is secured, the department shall satisfy final judgments against the contractor in the order the department receives the judgments.

(2) If a contractor is bonded, claims for unpaid wages and benefits are satisfied first, claims for damages are satisfied second, and claims for costs and attorney's fees are satisfied last. No claim in a lesser category may be satisfied until all pending claims in the preceding categories are satisfied, unless the total amount of all pending claims in the preceding categories is less than the amount of the bond that remains unimpaired.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-220, filed 12/11/85.]

WAC 296-310-230 Civil penalties. (1) In determining the amount of any civil penalty to be imposed under RCW 19.30.160 the department shall consider the following factors:

(a) Previous violations by the violator;
(b) The history of the violator in taking all necessary measures to prevent or correct violations;
(c) The magnitude and seriousness of the violation;
(d) The remedial purpose of chapter 19.30 RCW;
(e) Any mitigating circumstances; and
(f) Any other factors the department considers relevant.

(2) It is the violator's responsibility to inform the department of mitigating evidence.

(3) The penalties for acting as a contractor without a license, or for transporting employees without an endorsement to do so, are:

(a) Up to $500 for the first violation;
(b) Up to $750 for the second violation; and
(c) Up to $1000 for the third and any further violations.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-230, filed 12/11/85.]

WAC 296-310-240 Adjustment of controversies. (1) Upon receipt of a complaint or on its own motion, the department shall attempt to adjust equitably a controversy between a contractor and its employees.

(2) No particular form of proceeding is necessary for resolving disputes. The supervisor of employment standards shall, in each case, use his or her best judgment in designing a procedure. However, in every case in which the supervisor determines that a hearing should be held, the supervisor shall notify the affected persons, or their representatives, of the time, date, place, and purpose of the hearing.

(3) A hearing shall be informal and shall not be subject to chapter 34.04 RCW. The supervisor's suggestions for resolution are advisory and not binding, and may not be appealed to any person or court.

(4) The director may delegate the resolution of any particular case to a person other than the supervisor of employment standards. That person shall have the same authority as the supervisor to determine the form of the proceeding.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-240, filed 12/11/85.]

WAC 296-310-250 Filing and service. All papers required to be filed with the director under this chapter or chapter 19.30 RCW shall be addressed to Director, Department of Labor and Industries, General Administration Building, Olympia, WA 98504.

Filing and service may be made as provided in WAC 1-08-090 through 1-08-140.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-250, filed 12/11/85.]

WAC 296-310-260 Liability of person who uses services of unlicensed contractor. (1) A person who knowingly uses the services of an unlicensed contractor is liable for unpaid wages, damages, and civil and criminal penalties to the same extent as the unlicensed contractor.

(2) Pursuant to RCW 19.30.200, a person may prove lack of knowledge by proving that she or he relied on a license issued by the department under chapter 19.30 RCW, or upon the department's representation that the contractor was licensed. The department shall not make oral representations that a contractor is or is not licensed. All representations by the department that a contractor is licensed shall be made in writing and shall be signed by the director or the employment standards supervisor or the assistant director. The department shall not accept reliance on a supposed oral representation as proof in any administrative enforcement proceeding.

[Statutory Authority: RCW 19.30.130. 86-01-027 (Order 85-34), § 296-310-260, filed 12/11/85.]

WAC 296-310-270 Inspection of records. A contractor or any person using a contractor's services shall allow a representative of the department to inspect at any reasonable time the records it is required to keep by chapter 19.30 RCW.

296-350-35010 Application for extension of abatement date(s). [Statutory Authority: Chapter 49.17 RCW. 94-15-096 (Order 94-07), § 296-350-35010, filed 7/20/94, effective 9/20/94. Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-350-35010, filed 11/13/80; Order 76-29, § 296-350-35010, filed 9/30/76; Order 75-14, § 296-350-35010, filed 4/14/75. Repealed by 01-11-038, filed 5/9/01, effective 9/1/01. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050.

296-350-35015 Extension of abatement date(s)—Application—Timeliness. [Order 76-29, § 296-350-35015, filed 9/30/76; Order 75-14, § 296-350-35015, filed 4/14/75.] Repealed by 01-11-038, filed 5/9/01, effective 9/1/01. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050.

296-350-35020 Extension of abatement date(s)—Application—Service. [Order 75-14, § 296-350-35020, filed 4/14/75.] Repealed by 01-11-038, filed 5/9/01, effective 9/1/01. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050.

296-350-35025 Extension of abatement date(s)—Application—Contents. [Order 75-14, § 296-350-35025, filed 4/14/75.] Repealed by 01-11-038, filed 5/9/01, effective 9/1/01. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050.

296-350-35030 Extension of abatement date(s)—Provisional determination. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-350-35030, filed 11/13/80; Order 75-14, § 296-350-35030, filed 4/14/75.] Repealed by 01-11-038, filed 5/9/01, effective 9/1/01. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050.

296-350-35035 Extension of abatement date(s)—Notice of application—Notice of opportunity for hearing—Notice of provisional determination. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-350-35035, filed 4/14/75. Repealed by 01-11-038, filed 5/9/01, effective 9/1/01. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050.

296-350-35040 Extension of abatement date(s)—Posting. [Order 75-14, § 296-350-35040, filed 4/14/75.] Repealed by 01-11-038, filed 5/9/01, effective 9/1/01. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050.

296-350-35045 Extension of abatement date(s)—Notice of hearing. [Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-350-35045, filed 11/13/80; Order 75-14, § 296-350-35045, filed 4/14/75.] Repealed by 01-11-038, filed 5/9/01, effective 9/1/01. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050.

296-350-35050 Extension of abatement date(s)—Hearings. [Statutory Authority: Chapter 49.17 RCW. 94-15-096 (Order 94-07), § 296-350-35050, filed 7/20/94, effective 9/20/94. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 42.30 and 43.22 RCW. 80-17-014 (Order 80-20), § 296-350-35050, filed 11/13/80; Order 75-14, § 296-350-35050, filed 4/14/75.] Repealed by 01-11-038, filed 5/9/01, effective 9/1/01. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050.

Title 296 WAC: Labor and Industries, Department of

296-350-70025 Interim orders—Description and requesting. (1) You may request an interim order when requesting a permanent or temporary variance, or anytime after. Interim orders allow you to vary from existing WISHA requirements until we make a final decision on your variance request.

(2) We may choose to issue an interim order in response to a variance request, even when the interim order was not specifically requested.

(3) Our decision to grant or deny an interim order will not restrict our decision on a permanent or temporary variance request.

(4) Interim orders will be effective until revoked or until we approve or deny your variance request.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 00-11-098, § 296-350-70025, filed 5/17/00, effective 8/1/00.]

VARIANCES FROM WISHA RULES

Chapter 296-360 WAC DISCRIMINATION, PURSUANT TO RCW 49.17.160

WAC

296-360-005 Definitions. For the purposes of this chapter.

(1) "Assistant director" - the assistant director for the division of consultation and compliance.

(2) "Division" - the division of consultation and compliance of the department of labor and industries.

[Statutory Authority: Chapter 49.17 RCW. 94-15-096 (Order 94-07), § 296-360-005, filed 7/20/94, effective 9/20/94. Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 43.22 and 42.30 RCW. 80-17-015 (Order 80-21), § 296-360-005, filed 11/13/80.]

296-360-010 Introduction. (1) Chapter 49.17 RCW, the Washington Industrial Safety and Health Act (WISHA), is designed to regulate employment conditions affecting industrial safety and health and to achieve safer and healthier work places throughout the state. WISHA requires every person who has employees to furnish each of his or her employees employment and a place of employment free from recognized hazards that are causing or likely to cause death or serious physical harm, and to comply with industrial safety and health standards promulgated under WISHA.

(2) Employees and representatives of employees are afforded a wide range of substantive and procedural rights under WISHA. Effective implementation of WISHA and achievement of its goals depend in large part upon the active but orderly participation of employees, individually and through their representatives.

(3) This chapter deals essentially with the rights of employees afforded under RCW 49.17.160. RCW 49.17.160 prohibits reprisals, in any form, against employees who exercise rights under WISHA. The purpose of this chapter is to make available in one place interpretations of the various provisions of section 16 of WISHA that will guide the assistant director in the performance of his or her duties thereunder.

[Statutory Authority: RCW 49.17.040, 49.17.050, 49.17.240, chapters 43.22 and 42.30 RCW. 80-17-015 (Order 80-21), § 296-360-010, filed 11/13/80.]

296-360-020 General requirements of RCW 49.17.160 of WISHA. RCW 49.17.160 provides that no per-
son shall discharge or in any manner discriminate against any employee because the employee has filed any complaint under or related to WISHA, instituted or caused to be instituted any proceeding under or related to WISHA, testified or is about to testify in any proceeding under or related to WISHA, or exercised on his or her own behalf or on behalf of others any right afforded by WISHA. Any employee who believes that he/she has been discriminated against in violation of section 16 of WISHA may, within thirty days after the violation occurs, file a complaint with the assistant director alleging the violation. The division shall investigate the complaint and, if the assistant director determines that section 16 of WISHA has been violated, the division may bring a civil action against the violator in superior court. The suit may ask the court to restrain violations of RCW 49.17.160 and to grant other appropriate relief, including rehiring or reinstating the employee to his or her former position with back pay.

WAC 296-360-030 Filing a complaint of discrimination. (1) Who may file. A complaint of RCW 49.17.160 discrimination may be filed by the employee him- or herself, or by a representative authorized to do so on his or her behalf.

(2) Nature of filing. No particular form of complaint is required.

(3) Place of filing. The complaint should be filed with the division.

(4) Time for filing. RCW 49.17.160(3) provides that an employee who believes that he or she has been discriminated against in violation of RCW 49.17.160 “may, within thirty days after such violation occurs” file a complaint with the assistant director. A major purpose of the thirty-day period is to allow the assistant director to decline to entertain complaints that have become stale. Accordingly, the division will presume that complaints not filed within thirty days of an alleged violation are untimely. There may be circumstances, however, that justify tolling the thirty-day period on recognized equitable principles or because strongly extenuating circumstances exist, e.g., where the employer has concealed, or misled the employee regarding the grounds for, discharge or other adverse action. In the absence of circumstances justifying a tolling of the thirty-day period, the division shall not accept untimely complaints.

WAC 296-360-040 Notification of assistant director’s determination. (1) RCW 49.17.160(3) provides that the assistant director is to notify a complainant within ninety days of the complaint of his determination whether prohibited discrimination has occurred. This ninety-day provision is directory, not mandatory. Although every effort will be made to notify complainants of the assistant director’s determination within ninety days, there may be instances when it is not possible to do so.

(2) If a complainant receives a determination from the assistant director that prohibited discrimination has not occurred, the complainant may file a written request for review by the director within fifteen working days of receipt of the determination. The request for review must set forth the basis for the request. The request shall be filed by mailing or delivering the request to the Director of Labor and Industries, P.O. Box 44000, Olympia, Washington 98504-4000. Upon review the director may set aside the assistant director’s determination, remand the matter for further investigation, or affirm the determination of the assistant director. The director shall notify the complainant of the decision after review.

WAC 296-360-050 Withdrawal of complaint. Enforcing the provisions of RCW 49.17.160 is not only a matter of protecting rights of individual employees, but also of protecting the public interest. Attempts by an employee to withdraw a filed complaint will not necessarily result in termination of the division’s investigation. The division’s jurisdiction cannot be foreclosed as a matter of law by unilateral action of the employee. However, a voluntary and uncoerced request from a complainant to withdraw his/her complaint shall generally be accepted.

WAC 296-360-060 Arbitration or other agency proceedings. (1) General.

(a) An employee who files a complaint under RCW 49.17.160 may pursue remedies under grievance arbitration proceedings in collective bargaining agreements, and may also resort to other agencies, such as the National Labor Relations Board, for relief. The division’s jurisdiction to entertain RCW 49.17.160 complaints, to investigate, and to determine whether discrimination has occurred, is independent of the jurisdiction of other agencies or bodies. The division may file an action in superior court regardless of the pendency of other proceedings.

(b) Where it is possible, however, the division favors voluntary resolution of disputes under procedures in collective bargaining agreements. Also, the division should defer to the jurisdiction of other forums established to resolve disputes that may also be related to RCW 49.17.160 complaints. Thus, where a complainant is pursuing remedies other than those provided by RCW 49.17.160 it may be proper to postpone the assistant director’s determination whether discrimination has occurred, and defer to the results of such proceedings.

(2) Postponement of determination. Postponement of determination is justified where the rights asserted in other proceedings are substantially the same as rights under RCW 49.17.160 and those proceedings are not likely to violate the rights guaranteed by RCW 49.17.160. The factual issues in the such proceedings must be substantially the same as those raised by the RCW 49.17.160 complaint, and the forum hearing the matter must have the power to determine the ultimate issue of discrimination.
(3) Deferral to outcome of other proceedings. Determinations to defer to the outcome of another proceeding begun by a complainant must be made after careful scrutiny. It must be clear that the proceeding dealt adequately with all factual issues, that it was fair, regular, and free of procedural infirmities, and that its outcome did not violate the purpose and policy of WISHA. If another action begun by a complainant is dismissed without an adjudicatory hearing on the merits, the division will not necessarily regard the dismissal as determinative of the merits of the RCW 49.17.160 complaint.

WAC 296-360-070 Persons prohibited from discriminating. RCW 49.17.160 specifically states that "no person shall discharge or in any manner discriminate against any employee" because the employee has exercised rights under WISHA. RCW 49.17.020(5), defines "person" as "one or more individuals, partnerships, associations, corporations, business trusts, legal representatives, or any organized group of persons." Consequently, the prohibitions of RCW 49.17.160 are not limited to actions taken by employers against their own employees. A person may be charged with discriminating against an employee of another person. RCW 49.17.160 extends to such entities as organizations representing employees in collective bargaining, employment agencies, or any other person in a position to discriminate against an employee. See Meek v. United States, 136 F.2d 679 (6th Cir., 1943); Bowe v. Judson C. Burns, 137 F.2d 37 (3rd Cir., 1943).

WAC 296-360-080 Persons protected by RCW 49.17.160. (1) All employees are afforded the full protection of RCW 49.17.160. WISHA defines an employee as "an employee of an employer who is employed in a business of his/her employer which affects commerce." RCW 49.17.020 (4). WISHA does not define "employ"; however, the broad remedial nature of WISHA demonstrates a clear intent that the existence of an employment relationship, for purposes of RCW 49.17.160, is to be based upon economic realities rather than upon common law doctrines and concepts. See U.S. v. Silk, 331 U.S. 704 (1947); Rutherford Food Corporation v. McComb, 331 U.S. 722 (1947).

(2) For purposes of RCW 49.17.160, an applicant for employment could be considered an employee. See NLRB v. Lamar Creamery, 246 F.2d 8 (5th Cir., 1957).

WAC 296-360-090 Unprotected activities distinguished. (1) An employer or others may base actions that adversely affect an employee upon nondiscriminatory grounds. An employee's engagement in activities protected by WISHA does not automatically render him/her immune from discharge or discipline for legitimate reasons, or from adverse action dictated by nonprohibited considerations. See NLRB v. Dixie Motor Corp. 128 F.2d 201 (5th Cir., 1942).

(2) To establish a violation of RCW 49.17.160, the employee's engagement in protected activity need not be the sole consideration behind discharge or other adverse action. If protected activity was a substantial reason for the action, or if the discharge or other adverse action would not have taken place "but for" the employee's engagement in protected activity, RCW 49.17.160 has been violated.

WAC 296-360-100 Discrimination because of a complaint under or related to WISHA. RCW 49.17.160 prohibits discharge of, or discrimination against, an employee because the employee has filed any complaint under or related to this act.

(1) An example of a complaint made "under" WISHA would be an employee request for inspection pursuant to section 11 (RCW 49.17.110). This is not the only type of complaint protected by RCW 49.17.160, however. The range of complaints "related to" WISHA is commensurate with the broad remedial purposes of this legislation and the sweeping scope of its application.

(2) Complaints registered with other state or federal agencies that have the authority to regulate or investigate industrial safety and health conditions are complaints "related to" WISHA.

(3) The protection offered employees by WISHA would be seriously undermined if employees were discouraged from lodging complaints about industrial safety and health matters with their employers. Complaints to employers, if made in good faith, are related to WISHA, and an employee is protected against discharge or discrimination caused by a complaint to the employer.

(4) To come within the protection of RCW 49.17.160, a complaint must relate to conditions at the work place, as distinguished from complaints touching only upon general public safety and health.

WAC 296-360-110 Discrimination because of a proceeding under or related to the act. (1) RCW 49.17.160 prohibits discharge of, or discrimination against, any employee because the employee has "instituted or caused to be instituted any proceeding under or related to WISHA." Proceedings that can arise specifically under WISHA include inspections of worksites under RCW 49.17.070, employee contest of an abatement date under RCW 49.17.140, employee initiation of proceedings for promulgation of an industrial safety and health standard, employee application for modification or revocation of a variance under RCW 49.17.080, employee judicial challenge of a standard, and employee appeal of board of industrial insurance appeals order under RCW 49.17.140. In determining whether a "proceeding" is "related to" WISHA, the considerations discussed in WAC 296-360-100 are also applicable.
Discrimination, Pursuant to RCW 49.17.160

(2) An employee need not directly institute a proceeding. It is sufficient if he or she sets into motion acts of others that result in proceedings under or related to WISHA.

WAC 296-360-120 Discrimination because of testimony. RCW 49.17.160 prohibits discharge of, or discrimination against, any employee because the employee "has testified or is about to testify" in proceedings under or related to WISHA. This protection is not limited to testimony in proceedings instituted or caused to be instituted by the employee, but extends to any statements given in the course of judicial, quasijudicial, and administrative proceedings, including inspections, investigations, administrative adjudications, and rules hearings.

WAC 296-360-130 Discrimination because of exercise of any right afforded by WISHA—In general. In addition to protecting employees who file complaints, institute proceedings, or testify in proceedings under or related to WISHA, RCW 49.17.160 also protects employees from discrimination occurring because of the exercise "of any right afforded by this chapter." Certain rights are explicitly stated in WISHA. Other rights exist by necessary implication. For example, employees may request information from the occupational safety and health administration or the department of labor and industries. Also, employees interviewed by agents of the division in the course of inspections or investigations cannot subsequently be discriminated against because of their cooperation.

WAC 296-360-140 Discrimination because of exercise of right afforded by WISHA—Walkaround pay. Employee participation in walkaround inspections under RCW 49.17.100 is essential. Employees are a vital source of information to the division about work place hazards. Employees must be able freely to exercise their statutory right to participate in walkarounds without fear of economic loss, such as the denial of pay for the time spent helping WISHA inspectors during the walkaround. To ensure the unimpeded flow of information to the inspectors, and the unfettered statutory right of employees to participate in walkaround inspections, an employer's failure to pay employees for time they spend in walkaround inspections is discrimination under RCW 49.17.160. In addition, an employer's failure to pay employees for time spent in other inspection-related activities, such as answering questions of inspectors or participating in the opening and closing conferences, is discrimination under RCW 49.17.160.

WAC 296-360-150 Discrimination because of exercise of right afforded by WISHA—Refusal to work in an unsafe condition. (1) Review of WISHA and examination of the legislative history discloses that, as a general matter, WISHA grants no specific right to employees to walk off the job because of potential unsafe conditions at the work place. A hazardous condition that may violate WISHA will ordinarily be corrected by the employer, once brought to its attention. If the employer does not correct a hazard, or if there is a dispute about the existence of a hazard, the employee normally can ask the division to inspect the work place pursuant to RCW 49.17.110, or can seek help from other public agencies that have responsibility for safety and health. Under such circumstances, an employer would not violate RCW 49.17.160 by disciplining an employee who refuses to work because of an alleged safety or health hazard.

(2) Occasions arise, however, when an employee is confronted with a choice between not performing assigned tasks or subjecting him- or herself to serious injury or death arising from a hazard at the work place. If the employee, with no reasonable alternative, refuses in good faith to expose him- or herself to the dangerous condition, he or she is protected against subsequent discrimination.

(3) An employee's refusal to work is protected if he or she meets the following requirements:
   (a) The refusal to work must be in good faith, and must not be a disguised attempt to harass the employer or disrupt the employer's business;
   (b) The hazard causing the employee's apprehension of death or injury must be such that a reasonable person, under the circumstances then confronting the employee, would conclude that there is a real danger of death or serious injury; and
   (c) There must be insufficient time, due to the urgency of the situation, to eliminate the danger through resort to regular statutory enforcement channels.

   (4) As indicated in subsection (3), an employee's refusal to work is not protected unless it is a good faith response to a hazardous condition. To determine whether an employee has acted in good faith, the division will consider, among other factors, whether the employee:
      (a) Asked the employer to correct the hazard;
      (b) Asked for other work;
      (c) Remained on the job until ordered to leave by the employer; or
      (d) Informed the employer that, if the hazard was not corrected, the employee would refuse to work.

The lack of one or more of these factors shall not necessarily preclude a finding of good faith if other factors do establish good faith. The division will also consider whether the employer knew that the hazard could cause serious injury or death, or that the hazard was prescribed by a specific safety standard promulgated under WISHA or any other law that relates to the safety and health of a place of employment.

WAC 296-360-160 Payment of damages to employee discriminated against. (1) If an employer discriminates against an employee such that the employee earns less than he or she would have earned absent the discrimination, the employer shall pay the employee the difference between the wages that the employee would have earned absent the dis-
WAC 296-360-170 Employee's refusal to comply with safety rules. An employee who refuses to comply with industrial safety and health standards or valid safety rules implemented by the employer in furtherance of WISHA is not exercising a right afforded by WISHA. Discipline taken by employers solely in response to an employee's refusal to comply with appropriate safety rules and regulations is not discrimination prohibited by RCW 49.17.160. This situation should be distinguished from refusals to work discussed in WAC 296-360-150.

WAC 296-400A-005 What definitions do I need to know to understand these rules? Unless a different meaning is clearly required by the context, the following terms and definitions are important:

"Advisory board" is the state advisory board of plumbers.

"Audit" means an assessment, evaluation, examination or investigation of, contractor's accounts, books and records for the purpose of verifying the contractor's compliance with RCW 18.106.320.

"Backflow assembly" or "backflow prevention assembly" or "backflow preventer" is a device as described in the Uniform Plumbing Code used to prevent the undesired reversal of flow of water or other substances through a cross-connection into the public water system or consumer's potable water system.

"Backflow assembly tester" is an individual certified by the department of health to perform tests to backflow assemblies.

"Continuing education" is approved plumbing and electrical courses for journeyman, domestic pump specialty plumber, and residential specialty plumbers, to meet the requirements to maintain their plumbing certification and for trainees or individuals to become certified plumbers in Washington.

"Continuing education course provider" is an entity approved by the department, in consultation with the state advisory board of plumbers, to provide continuing education training for journeyman, domestic pump specialty plumbers, residential specialty plumbers, and trainees. All training course providers must comply with the requirements in WAC 296-400A-028.

"Continuity affidavit" is a form developed by the department that is used to verify whether medical gas pipe installation work (brazing process) has been performed biamially. This form is provided to the department annually by the person holding the medical gas piping installer endorsement and requires the signature of the employer of the medical gas piping installer or another qualified verifier as determined by the department. Continuity is a visual examination by the employer of the brazing that was performed.
"Contractor" means any person, corporate or otherwise, who engages in, or offers or advertises to engage in, any work covered by the provisions of chapter 18.106 RCW by way of trade or business, or any person, corporate or otherwise, who employs anyone, or offers or advertises to employ anyone, to engage in any work covered by the provisions of chapter 18.106 RCW and is registered as a contractor under chapter 18.27 RCW.

"Dispatcher" means the contractor's employee who authorized the work assignment of the person employed in violation of chapter 18.106 RCW.

"Department" is the department of labor and industries.

"Director" is the director of the department of labor and industries.

"Journeyman plumber" is anyone who has learned the commercial plumbing trade and has been issued a journeyman certificate of competency by the department. A journeyman plumber may work on plumbing projects including residential, commercial and industrial worksite locations.

"Medical gas piping installer" is anyone who has been issued a medical gas piping installer endorsement of competency by the department.

"Medical gas piping systems" are piping systems that convey or involve oxygen, nitrous oxide, high pressure nitrogen, medical compressed air, or medical vacuum systems.

"Plumbing" is that craft involved in installing, altering, repairing and renovating potable water systems, liquid waste systems and medical gas piping systems within a building. The installation of water softening or water treatment equipment into a water system is not considered plumbing.

"Records" include, but are not limited to, all bids, invoices, billing receipts, time cards and payroll records that show the work was performed, advertised, or bid.

"Specialty plumber" is anyone who has been issued a specialty plumbers certificate of competency by the department limited to:

(a) Installation, maintenance and repair of plumbing for single-family dwellings, duplexes and apartment buildings which do not exceed three stories; or

(b) Maintenance and repair of backflow assemblies located within a residential or commercial building or structure. For the purposes of this subsection, "maintenance and repair" includes cleaning and replacing internal parts of an assembly, but does not include installing or replacing backflow assemblies.

(c) "Domestic pump specialty" means the installation, maintenance, and repair of a domestic water pumping system consisting of the pressurization, treatment, and filtration components of a domestic water system consisting of: One or more pumps; pressure, storage, and other tanks; filtration and treatment equipment; if appropriate, a pitless adapter; along with valves, transducers, and other plumbing components that:

(i) Are used to acquire, treat, store, or move water suitable for either drinking or other domestic purposes, including irrigation, to:

(A) A single-family dwelling, duplex, or other similar place of residence;

(B) A public water system, as defined in RCW 70.119.020 and as limited under RCW 70.119.040; or

(C) A farm owned and operated by a person whose primary residence is located within thirty miles of any part of the farm;

(ii) Are located within the interior space, including but not limited to an attic, basement, crawl space, or garage, of a residential structure, which space is separated from the living area of the residence by a lockable entrance and fixed walls, ceiling, or floor;

(iii) If located within the interior space of a residential structure, are connected to a plumbing distribution system supplied and installed into the interior space by either:

(A) A person who, pursuant to RCW 18.106.070 or 18.106.090, possesses a valid temporary permit or certificate of competency as a journeyman plumber, specialty plumber, or trainee, as defined in this chapter; or

(B) A person exempt from the requirement to obtain a certified plumber to do such plumbing work under RCW 18.106.150.

For the purposes of the domestic pump specialty, residential structure includes any improvement to real property where that property is primarily used as a residence.

"Supervision" for the purpose of these rules means within sight or sound. Supervision requirements are met when the supervising plumber is on the premises and within sight or sound of the individual who is being trained.

"Training course provider" is an entity approved by the department, in consultation with the state advisory board of plumbers, to provide medical gas piping installer training. All training course providers must comply with the requirements in WAC 296-400A-026.

"Trainee plumber" is anyone who has been issued a trainee certificate and is learning or being trained in the plumbing trade with direct supervision of either a journeyman plumber or specialty plumber working in their specialty.

WAC 296-400A-010 Plumbing certificate types and scope of work.

(1) Journeyman plumber (PL01): A journeyman plumber may work on all phases of plumbing projects including residential, commercial and industrial worksite locations. A plumber trainee must have a training certificate in order to perform plumbing work under the supervision of a certified journeyman plumber.

(2) Residential specialty plumber (PL02): Installation, maintenance and repair of all phases of plumbing for single-family dwellings, duplexes and apartment buildings which do not exceed three stories. A plumber trainee must have a training certificate in order to perform plumbing work as a residential specialty plumber under the supervision of a certified residential or journeyman plumber.

(3) Backflow specialty plumber (PL30): Maintenance and repair of backflow assemblies located within a residential
or commercial building or structure. For the purposes of this subsection, "maintenance and repair" includes cleaning and replacing internal parts of an assembly, but does not include installing or replacing backflow assemblies. A plumber trainee must have a PT31 certificate in order to do work as a backflow specialty plumber under the supervision of a certified backflow specialty plumber, certified residential specialty plumber or certified journeyman plumber. PT31 trainee requires one hundred percent supervision.

(4) **Pump and irrigation specialty plumber (PL03):** Installation, maintenance and repair of equipment that is used to acquire, treat, store, or move water suitable for either drinking or other domestic purposes, including irrigation or to a domestic water pumping system consisting of the pressurization, treatment, and filtration components of a domestic water system consisting of: One or more pumps; pressure, storage, and other tanks; filtration and treatment equipment. For the purposes of this subsection, if located within the interior space of a residential structure as stated in RCW 18.106.010 (10)(c), only the equipment and piping defined by RCW 18.106.010 (10)(c) are included in this specialty and other parts of the system must be worked on by the appropriate certification.

(5) **Limited volume domestic pump specialty plumber (PL03A):** Installation, maintenance and repair of equipment that is used to acquire, treat, store, or move water suitable for either drinking or other domestic purposes on pumping systems not exceeding one hundred gallons per minute. A domestic water pumping system consisting of the pressurization, treatment, and filtration components of a domestic water system consisting of: One or more pumps; pressure, storage, and other tanks; filtration and treatment equipment. For the purposes of this subsection, if located within the interior space of a residential structure as stated in RCW 18.106.010 (10)(c), only the equipment and piping to stated equipment in this locked room can be worked on by this certification; other parts of the system must be worked on by the appropriate certification.

(6) **Plumber trainee (PT00, PT03, PT03A, and PT31):** Is an individual learning the trade or craft of plumbing. Trainees are required to have and maintain a valid plumber's training certificate. Trainees will be accredited for those hours worked within the scope of their supervising plumber. Any plumber trainee may perform plumbing work within the scope of their supervising journeyman or specialty plumber. A trainee shall keep a record of the hours worked as a trainee as required by WAC 296-400A-120(3).

(7) **Certified journeyman electricians, certified residential specialty electricians, or electrical trainees (EL01 and EL02):** According to RCW 18.106.150 (2)(b), a current plumbing certificate of competency or apprentice permit is not required for: Certified journeyman electricians, certified residential specialty electricians, or electrical trainees working for an electrical contractor and performing exempt work under RCW 18.27.090(18). A plumber trainee must have a ET00 certificate in order to work with a journeyman electrician, residential specialty electrician, or electrical trainee. The plumbing work must be directly and immediately appropriate to the like-in-kind replacement of a household fixture or its component(s) that requires limited power and waste/water connections.

An example would be replacing the heating element (a component) of an electric hot water heater. An electrician performing a like-in-kind replacement of an electric hot water tank could only disconnect and then reconnect the water supply lines to the tank and drain line from the temperature and pressure relief valve. Gas hot water tanks are not part of the electrician's exemption.

[Statutory Authority: RCW 18.106.040, 18.106.140, 06-24-040, § 296-400A-010, filed 11/30/06, effective 12/31/06.]

**WAC 296-400A-020 How do I obtain a certificate of competency?** You can obtain a certificate of competency by completing the following requirements for:

(1) Journeyman and specialty plumber certificate (excluding backflow assembly maintenance and repair specialty certification):

(a) Submitting a competency examination application to the department;

(b) Paying the examination fee shown in WAC 296-400A-045(1);

(c) Submitting the required evidence of competency and experience to the department as required under WAC 296-400A-120 and 296-400A-121;

(d) Passing the competency examination;

(e) Providing documentation to the department with continuing education requirements;

(f) In lieu of (a), (b) and (c) of this subsection and with the approval of the advisory board, the department may accept the successful passage of an examination administered by a nationally recognized testing entity; and

(g) For domestic pump specialty plumbers, in lieu of (a), (b) and (c) of this subsection and with the approval of the advisory board, the department may accept a certification issued by professional trade association.

(2) Backflow assembly maintenance and repair specialty certificate:

(a) Submitting a competency examination application to the department;

(b) Paying the application and certificate fee shown in WAC 296-400A-045(2); and

(c) Passing the competency examination.

**WAC 296-400A-021 How do I obtain a medical gas piping installer endorsement? (Only journeyman plumbers holding active state of Washington certification may apply for this endorsement.)**

You can obtain a medical gas piping installer endorsement by completing the following requirements:

(1) Submit an application to the department; and

(2) Pay the examination application fee shown in WAC 296-400A-045; and

(3) Submit the required evidence of approved training to the department; and

[Title 296 WAC—p. 2670] (2007 Ed.)
WAC 296-400A-022 What procedure is required for renewal of a journeyman medical gas endorsement? (1) Maintain an active Washington state journeyman certification;
(2) Submit affidavit of continuity;
(3) Submit affidavit of review of current medical gas code adopted by the Washington state building code council;
(4) Pay the appropriate fee: If renewal occurs before expiration of current endorsement, the renewal fee shown in WAC 296-400A-045; if renewal occurs within ninety days of expiration of current endorsement, you must pay a double renewal fee; if the current endorsement has expired for ninety-one days or more, you must take an examination relating to medical gas installation administered by the department and pay the examination application fee shown in WAC 296-400A-045; and
(5) Contractors shall accurately verify and attest to brazing performed by the journeyman by sending an affidavit to the department.

WAC 296-400A-023 What process is required for renewal of journeyman, domestic pump specialty, and residential specialty plumber certificates of competency? (1) An individual must apply for renewal of their plumbing certificate before the expiration date of the certificate. The individual may not apply for renewal more than ninety days prior to the expiration date. Journeyman and residential specialty plumber certificates are renewed every two years. Domestic pump specialty plumber certificates are renewed every three years.
(2) An individual may renew their certificate within ninety days after the expiration date without reexamination if the individual pays the late renewal fee listed in WAC 296-400A-045.
(3) All applications for renewal received more than ninety days after the expiration date of the plumbing certificate require that the plumber pass the appropriate competency examination before being recertified.
(4) All applicants for plumbing certificate renewal must:
(a) Submit a complete renewal application;
(b) Pay all appropriate fees; and
(c) Provide accurate evidence on the renewal form that the individual has completed the continuing education requirements described in WAC 296-400A-028.

If an individual files inaccurate or false evidence of continuing education information when renewing a plumbing certificate, the individual's plumbing certificate may be suspended or revoked.
(5) A journeyman, domestic pump specialty, or residential specialty plumber certificate holder who has not completed the required hours of continuing education prior to the renewal date must pay a doubled fee according to RCW 18.106.070. Also, if the required hours of continuing education are not completed within ninety days after the expiration date the applicant will be required to retake the examination and pay the appropriate fees prior to being placed in active status.
(6) An individual may renew a suspended plumbing certificate by submitting a complete renewal application including obtaining and submitting the continuing education required for renewal. However, the certificate will remain in a suspended status for the duration of the suspension period.
(7) An individual may not renew a revoked plumbing certificate.

WAC 296-400A-025 Who approves medical gas piping installer endorsement training courses? RCW 18.106.050 authorizes the department to:
(1) Approve training courses for the medical gas piping installer endorsement; and
(2) Set training course fees.

WAC 296-400A-026 What training course approval procedures for medical gas will the department follow? (1) The department will review and approve courses submitted by training course providers that offer medical gas piping systems training. Course approvals will be decided in consultation with the state advisory board of plumbers.
(2) All providers seeking course approval, must submit the required information (see subsection (5) of this section) to the department at least thirty days before a regularly scheduled advisory board meeting. No course can be offered as meeting the requirements of a medical gas endorsement until it has been approved.
(3) All material required for approval will be reviewed without testimony and the review will be based solely upon the information submitted. Once reviewed, the department has five working days to give a provider written notification of acceptance or rejection. In the case of rejection, the department must specify its reasons.
(4) If a provider has a course rejected, it may request a hearing before the advisory board at the next regularly scheduled meeting. Any information supporting the provider's position, which was not included with the original approval request, must be submitted to the board at least twenty days before the meeting at which the hearing will be held.

At the hearing, the department and the provider may produce witnesses and give testimony. The hearing must be conducted according to chapter 34.05 RCW. The board must
base its decision upon the testimony and evidence presented and must notify the parties immediately upon reaching its decision. A majority of the board is necessary to render a decision.

(5) Specific course approval criteria:
   (a) All training courses must conform to and be based upon current standards and requirements governing the installation of medical gas piping systems.
   (b) All course approval requests must include:
      (i) A general description of the course including its scope, the instructional materials to be used and the instructional methods to be followed; and
      (ii) A copy of the complete medical gas piping installer training curriculum; and
   (iii) A detailed course outline; and
   (iv) The name and qualifications of the course instructor(s); and
   (v) The locations where the course will be taught; and
   (vi) The days and hours the course will be offered; and
   (vii) The specific fees associated with the course, as well as, the total cost of the course.
   (c) All fees for approved training courses must be reasonable and in line with fees charged for other comparable code based training courses.

(6) Training courses are approved for a three-year period.

(7) A provider, whose courses are approved, must give the department literature describing the courses so the department can share this information to prospective applicants.

(8) It is the responsibility of the provider to annually review and update its courses and to notify the department of any changes.

(9) The department may withdraw its approval of any training course if it determines the provider is no longer in compliance with the requirements of this chapter. If the department withdraws its approval of a training course, it must give the provider written notification of the withdrawal specifying the reasons for its decision. If the department withdraws its approval of a training course the provider may request a hearing before the advisory board at the next regularly scheduled meeting. Any information supporting the provider's position must be submitted to the board at least twenty days before the meeting at which the hearing will be held. At the hearing the department and the provider may produce witnesses and give testimony. The hearing must be conducted according to chapter 34.05 RCW. The board must base its decision upon the testimony and evidence presented and must notify the parties immediately upon reaching its decision. A majority of the board is necessary to render a decision.

WAC 296-400A-027 Where can I obtain information regarding department approved training course providers? The department will produce a list of all approved training course providers and/or course contact persons. This list will be available to all applicants who request it. It will also be available at all department service locations.

WAC 296-400A-028 What are the requirements for continuing education and classroom training?

What are the general and continuing education course requirements for journeyman, residential specialty plumbers, domestic pump specialty plumbers, and plumber trainees?

   (1) Journeyman, residential specialty plumber, domestic pump specialty plumber, and plumber trainee.
   (a) To be eligible for renewal of a journeyman plumber or residential specialty plumber certificate, the individual must have completed at least sixteen hours of approved continuing education for each two years of the prior certification period. Individuals will be required in the prior two-year period to have completed at least eight hours of plumbing code and at least four hours of electrical code from the currently adopted Washington state plumbing and electrical codes. The remaining four hours may be plumbing or electrical trade related classes.
   (b) Domestic pump specialty plumbers shall renew their domestic pump specialty certificate once every three years, on or before the individual's birthday. Individuals will be required to complete at least four hours of approved continuing education in plumbing for each year prior to the certification period and at least four hours of approved continuing education in electrical for each year prior to the certification.
   (c) Plumber trainees must complete at least eight hours per year of classroom training from an approved continuing education course for each year of the prior certification period. Trainee will be required during a two-year period to complete at least eight hours of plumbing code and at least four hours of electrical code from the currently adopted Washington state plumbing and electrical codes. The remaining four hours may be plumbing or electrical trade related classes.

   Domestic pump specialty plumber trainee must have eight hours of plumbing continuing education and eight hours of electrical continuing education, which totals sixteen hours of continuing education for a two-year renewal.
   (d) Any portion of a year of a prior plumber certification period is equal to one year for the purposes of the required continuing education.

   (2) An individual will not be given credit for the same approved continuing education course taken more than once in the two years prior to the renewal date. No credit will be granted for any course not approved by the department.

   (3) Continuing education requirements do not apply to backflow specialty plumbers under chapter 18.106 RCW and this chapter.

   Note: Subsections (1), (2) and (3) of this section take effect July 1, 2005.

Approval process - continuing education course.

   (4) The advisory board of plumbers or plumbing board subcommittee will review each continuing education course. The advisory board of plumbers or plumbing board subcommittee will recommend approval or disapproval to the depart-
ment. The department will either approve or disapprove the course.

(5) To be considered for approval, a continuing education course must consist of not less than two hours of instruction and must be open to monitoring by a representative of the department and/or the plumbing board at no charge. If the department determines that the continuing education course does not meet or exceed the minimum requirements for approval, the department may revoke the course approval or reduce the number of credited hours.

(6) Approved courses must be based on:
(a) Currently adopted edition of the Uniform Plumbing Code and National Electrical Code;
(b) Chapters 18.106 or 19.28 RCW or chapters 296-400A or 296-46B WAC; or
(c) Materials and methods as they pertain to the industrial practices of plumbing or electrical construction, building management systems, plumbing or electrical maintenance, or workplace health and safety.

(7) Code-update courses must be based on the entire currently adopted Uniform Plumbing Code or National Electrical Code.

Application - for continuing education course approval.

(8) All applications for course approval must be on forms provided by the department. The plumbing board and the department will only consider the written information submitted with the application when considering approval of the continuing education training course.

(9) The department will provide continuing education application forms to sponsors upon request. The course sponsor must submit an original completed application for course approval and three copies (unless submitted electronically using department prescribed technology) to the department. The department must receive the complete course application from the sponsor in writing at least forty-five days before the first class requested for approval is offered.

(10) A complete application for course approval must include:
(a) The appropriate course application fee;
(b) Course title, number of classroom instruction hours, and whether the training is open to the public;
(c) Sponsor's name, address, contact's name and phone number;
(d) Course outline (general description of the training, including specific Uniform Plumbing Code or National Electrical Code articles referenced);
(e) Lists of resources (texts, references, visual aids);
(f) Names and qualifications of instructors. Course instructors must show prior instructor qualification and experience similar to that required by the work force training and education coordinating board under chapter 28C.10 RCW;
(g) Any additional documentation to be considered; and
(h) A sample copy of the completion certificate issued to the course participants.

(11) The course sponsor seeking approval of a continuing education course will be notified of the subcommittee's decision within five days of the completed review of the application.

(12) If the application is not approved, the rejection notice will include an explanation of the reason(s) for rejection. If the course sponsor disagrees with the subcommittee's decision, the course sponsor may request a reconsideration hearing by the full plumbing board. A request to appeal course rejection must be received by the department forty-five days before a regularly scheduled board meeting. The course sponsor must submit, to the department, any additional information to be considered during the hearing, in writing, at least thirty days before the board hearing. The course sponsor must provide at least twenty copies of any written information to be submitted to the board.

Offering - continuing education course.

(13) The course sponsor may offer an approved course for up to three years without additional approval. However, if the course is classified as code-update or code-related and a new edition of the Uniform Plumbing Code or National Electrical Code is adopted within the course approval period, the course approval will be considered automatically revoked and the course sponsor must submit a new application for review by the department and approval by the plumbing board subcommittee.

(14) A continuing education course attended or completed by an individual before final approval by the plumbing board subcommittee cannot be used to meet the plumbing certificate renewal requirements.

Documentation - Washington approved training course attendance/completion.

(15) The department is not responsible for providing verification of an individual's continuing education history with the course sponsor.

(16) The course sponsor must provide the department with an accurate and typed course attendance/completion roster for each course given.
(a) The attendance/completion roster must be provided within thirty days of course completion.
(b) In addition, the course sponsor must provide the attendance/completion roster in an electronic format provided by the department.
(c) The attendance/completion roster must show each participant's name, Washington certificate number, course number, location of course, date of completion, and instructor's name. The typed roster must contain the signature of the course sponsor's authorized representative.

(17) If the course sponsor fails to submit the required attendance/completion rosters within thirty days of the course completion, the department may revoke or suspend the course approval.

(18) Course sponsors must award a certificate to each participant completing the course from which the participant will be able to obtain:
(a) Name of course sponsor;
(b) Name of course;
(c) Date of course;
(d) Course approval number;
(e) The number of continuing education units; and
(f) The type of continuing education units.

(19) The department will only use a copy of the sponsor's attendance/completion roster as final evidence that the participant completed the training course.
(20) The department will keep submitted rosters of the continuing education courses on file only for audit purposes. The department is not responsible for the original of any completion certificate issued.

Documentation - out-of-state training course attendance/completion.

(21) To apply continuing education units earned out-of-state from course sponsors who do not have state of Washington approved courses, one of the following conditions must be met:

(a) The individual must request that the course sponsor submit a complete continuing education course application and requirements as described in this section for in-state courses.

Application for course approval will not be considered more than three years after the date of the course.

(b) The department must have entered into a reciprocal agreement with the state providing course approval.

The participant must provide a copy of an accurate and completed award or certificate from the course sponsor identifying the course location, date of completion, participant's name, and Washington certificate number. The department will only accept a copy of the sponsor's certificate or form as evidence that the participant attended and completed the course.

WAC 296-400A-029 What is the implementation schedule for the continuing education course requirements?

• Individuals that renew between July 1, 2005, and June 30, 2006, are required to complete eight hours of continuing education courses.

• Effective July 1, 2006, all renewals will require sixteen hours of continuing education.

WAC 296-400A-030 Do I need a temporary permit?

You need a temporary permit if you are an active out-of-state journeyman plumber, domestic pump specialty plumber, or a residential specialty plumber residing in a state that does not have a reciprocal agreement with Washington and you would like to work as a plumber in Washington. Temporary permits are not issued for installers of medical gas piping systems.

Temporary permits are not issued for the backflow assembly maintenance and repair specialty. Therefore, WAC 296-400A-030 through 296-400A-033 do not apply to this specialty.

WAC 296-400A-031 How do I qualify for a temporary permit? To qualify for a temporary permit, you must:

(1) Have an active state-issued journeyman plumber, domestic pump specialty plumber, or a residential specialty plumber certificate;

(2) Give the department sufficient qualifying evidence for a journeyman plumber, domestic pump specialty plumber, or a residential specialty plumber certificate of competency;

(3) Never have taken the journeyman plumber, domestic pump specialty plumber, or a residential specialty plumber competency examination in Washington state; and

(4) Not be an apprentice plumber.

WAC 296-400A-032 How do I obtain a temporary permit? If you qualify, you can obtain a temporary permit by applying to the department and paying both the examination application fee and the temporary permit fee shown in WAC 296-400A-045.

WAC 296-400A-033 What is the duration of a temporary permit? A temporary permit is valid for ninety days and is nonrenewable.

WAC 296-400A-035 How can I be placed on inactive status? To be placed on inactive status, you must meet these three requirements:

(1) You must currently be a certified plumber;

(2) Have your inactive status request submitted and approved by the department prior to the expiration date of your plumbing certificate; and

(3) Not be working in the plumbing trade.

Inactive status means that you are not currently working in the plumbing trade and you are not required to pay the annual certificate renewal fee. If you have been in inactive status for less than five years, you may return to active status, without reexamination, by paying the reinstatement fee shown in WAC 296-400A-045. If you have been in inactive status for five or more years, you are required to reapply and pass the competency examination pursuant to WAC 296-400A-020 and pay the appropriate fees shown in WAC 296-400A-045.
(4) Required to meet a minimum of sixteen hours continuing education with four of the hours being in electrical training before being reinstated.

WAC 296-400A-036 How can I maintain my plumbing certificate as an honorary accomplishment? (1) To maintain your plumbing certificate as an honorary accomplishment, you must meet the following four requirements:

(a) You must renew your certificate on or before your renewal date and pay the current fee as established in WAC 296-400A-045.

(b) You must provide the department with a signed affidavit stating you aren't working in the plumbing trade.

(c) The affidavit must state you are not acting in a supervisory manner for any person working in the plumbing trade.

(2) If you return to work, you must provide the proper documentation of sixteen hours continuing education with a minimum of eight hours plumbing code, a minimum of four hours industry-related electrical, and four hours industry-related plumbing from the approved list of courses from the department of labor and industries plumbing certification program.

(3) If you are found working in the plumbing trade while your certificate is in honorary status, your certificate will be revoked.

[Statutory Authority: RCW 18.106.040, 18.106.140. 06-24-040, § 296-400A-036, filed 11/30/06, effective 12/31/06.]

WAC 296-400A-045 What fees will I have to pay? The following are the department's plumbers fees:

(2007 Ed.)
WAC 296-400A-050 When does the advisory board of plumbers meet? The advisory board of plumbers meets every quarter on the third Tuesday of January, April, July and October.

WAC 296-400A-070 Can I work as a certified plumber in Washington without taking the Washington state plumbers' competency examination? You may be eligible to work in Washington state without taking an examination if:

(1) You have a current plumbers certificate or license from another state; and

(2) That state has a current reciprocal agreement with the department of labor and industries; and

(3) You pay the reciprocity application fee and journeyman or specialty certificate fee shown in WAC 296-400A-045.

The director of labor and industries negotiates reciprocal agreements with states that have equivalent requirements for certification and licensing of journeyman and specialty plumbers. The agreement allows plumbers from those states to work in Washington and Washington-certified plumbers to work in the other state without taking competency examinations. To find out if your state has an agreement with the department, contact the plumber's certification clerk at the department's Tumwater, WA headquarters.

Reciprocity agreements cannot be used to take the Washington state competency examination instead of the examination in your home state.

(a) Those actively certified by the department of health on or before July 1, 2001, as backflow assembly testers and registered as a contractor under chapter 18.27 RCW or employed by a registered contractor, may perform maintenance and repair of backflow prevention assemblies, without being a certified plumber under chapter 18.106 RCW and these rules, until January 1, 2003.

(b) After January 1, 2003, backflow assembly testers exempted under (a) of this subsection are required to meet the eligibility requirements for a specialty plumber's certificate of competency under chapter 18.106 RCW and these rules.

WAC 296-400A-100 For certification purposes, how are "years of employment" computed and documented? (1) For certification purposes, 2,000 hours of employment is considered one year. See RCW 18.106.070(2).

(2) When you renew your certificate, you must document your previous years' plumbing work by accurately completing the department's approved form and submitting it to the department.

(3) If you have completed a one, two, three, four or more years plumbing construction trainee program, you must have the necessary training hours for the year in which you are registered. See RCW 18.106.040.

(4) Subsections (1) through (3) of this section do not apply to the backflow assembly maintenance and repair specialty certification as years of employment are not required for this specialty. Applicants for this specialty designation are

[Title 296 WAC—p. 2676]
required to have fulfilled the requirements in WAC 296-400A-122 and pay the applicable fees in WAC 296-400A-043(2).

(5) Experience obtained as a backflow assembly maintenance and repair specialty may not be applied toward journeyman or specialty plumber certification.

WAC 296-400A-110 Does previous work experience count toward my trainee certificate? If your work experience was in plumbing construction, you will be given credit for all verifiable hours that are properly submitted on the department's approved form. Plumber trainee hours accumulated in the state of Washington will be credited only if an active Washington state trainee card was in place when the work occurred. (Refer to the definition of"plumbing" in WAC 296-400A-005.)

WAC 296-400A-120 What do I need to know about plumber trainee certificates (excluding backflow assembly maintenance and repair specialty certification)? (1) Journeyman and specialty plumber trainee certification:

(a) The department issues separate trainee certificates once a year.

(b) The plumbing trainee may not apply for renewal more than ninety days prior to the expiration date. Journeyman, residential specialty, and backflow specialty plumber trainee certificates are valid for one year. Domestic pump specialty plumber trainee certificates is valid for two years.

(c) All applicants for trainee certificate of renewal must:

(i) Submit a complete renewal application;

(ii) Pay all appropriate fees; and

(iii) Provide accurate evidence on the renewal form that the individual has completed the continuing education requirements described in chapter 296-400A WAC.

(d) If an individual files inaccurate or false evidence of continuing education information when renewing a plumbing trainee certificate, the individual’s certificate may be suspended or revoked.

(e) An individual who has not completed the required hours of continuing education cannot renew a trainee certificate.

(f) Individuals will not be able to apply to test for journeyman plumber, domestic pump specialty plumber, or residential specialty plumber certificates until the continuing education requirements have been met.

(g) If continuing education hours have not been met, trainee certificates will become expired and any experience obtained by the trainee in expired status will not be credited toward plumbing certificate application.

(h) An individual may renew an expired certificate of competency by submitting a complete renewal application including obtaining and submitting the continuing education required for renewal. However, the certificate will remain in an expired status for the duration of the expired period.

(i) An individual may not renew a revoked trainee certificate.

(j) Apprentices registered in an approved program according to chapter 49.04 RCW who are obtaining classroom training consistent with the continuing education requirements under chapter 18.106 RCW and this chapter, as approved by the department, are deemed to have met the continuing education requirements necessary to renew a trainee certificate.

(k) If you are a trainee applying for a journeyman certificate, you must complete a minimum of two of the required four years in commercial plumbing experience.

(l) A certified residential specialty plumber or domestic pump specialty plumber working on a commercial job site may work as a journeyman trainee only if they have a current trainee certificate on their person while performing commercial plumbing work.

(m) On a job site, the ratio of certified plumbers to non-certified plumbers must be:

(i) One residential specialty plumber or journeyman working on a residential plumbing job site may supervise no more than two trainees.

(ii) One journeyman plumber working on a commercial job site may supervise no more than one trainee or one residential specialty plumber who holds a current trainee certificate.

(iii) One appropriate domestic pump specialty plumber or one journeyman plumber working on a domestic pump system may supervise no more than two trainees.

(n) A plumber trainee who has a current trainee certificate with the state of Washington and has successfully completed or is enrolled in an approved medical gas piping installer training course may work on medical gas piping systems. Work may only occur when there is direct supervision by an active Washington state certified journeyman plumber with an active medical gas piping installer endorsement issued by the department. Supervision must be one hundred percent of the working day on a one-to-one ratio.

(2) Trainee work hours. Journeyman, residential specialty, and backflow specialty plumber trainee shall renew the certificate annually but not more than ninety days before the expiration date. Domestic pump specialty plumber trainee shall renew the certificate every two years but not more than ninety days before the expiration date.

(a) An annual fee shall be charged for the issuance or renewal of the certificate.

(b) The trainee will not be issued a renewed or reinstated training certificate if the individual owes the department money as a result of an outstanding final judgment.

(c) Trainee hours will not be credited if the trainee owes outstanding penalties for violations of this chapter.

(3) At the time of renewal, the holder shall provide the department with an accurate list of the holder’s employers in the plumbing construction industry for the previous annual period. The individual must submit a completed, signed, and notarized affidavit(s) of experience. The affidavit of experience must accurately attest to:

(2007 Ed.)
(a) The plumbing installation work performed for each employer the individual worked for in the plumbing trade during the previous period;
(b) The correct plumbing category the individual worked in; and
(c) The actual number of hours worked in each category, worked under the proper supervision of a Washington certified journeyman plumber, certified domestic pump specialty plumber, or residential specialty plumber.

(4) The trainee should ask each employer and/or apprenticeship-training director for an accurately completed, signed, and notarized affidavit of experience for the previous certification period. The employer(s) or apprenticeship training director(s) must provide the previous period’s affidavit of experience to the individual within twenty days of the request.

(5) If hours for previous period are not submitted within the thirty days after renewing a plumbing training certificate, the individual may not receive credit for these previous period hours.

WAC 296-400A-121 What do I need to know about trainee experience and plumber examination requirements for the journeyman and specialty plumber (excluding the backflow assembly maintenance and repair specialty)? (1) If you possess a trainee certificate:

(a) You may take the residential specialty plumber examination after completing 6,000 hours of documented training.
(b) You may take the journeyman examination after completing 8,000 hours of documented training which must include 4,000 hours of commercial plumbing experience.

(2) All journeyman trainees must work under the direct supervision of a journeyman plumber until they have completed 8,000 hours of training. When 8,000 training hours have been completed, the trainee must take the journeyman examination. Any trainee who has failed the journeyman plumber examination cannot retake the examination for at least one month and must work under the direct supervision of a journeyman plumber until the examination is passed.

(3) To be eligible for the residential specialty plumber’s examination, a residential specialty trainee must complete 6,000 hours of training under the direct supervision of either a certified specialty plumber or a journeyman plumber. Any residential specialty trainee who has failed the residential specialty examination, cannot retake the examination for at least one month and must work under the direct supervision of a certified plumber until the examination is passed.

(4) For domestic pump specialty plumbers:

(a) To be eligible for a limited volume domestic pump specialty plumbers examination defined by RCW 18.106.010

(10)(c), the trainee must complete 2,000 hours practical experience working under the direct supervision of a certified limited volume domestic pump specialty plumber, a certified unrestricted domestic pump specialty plumber, or a journeyman plumber on pumping systems not exceeding one hundred gallons per minute. The experience may be obtained at the same time the individual is meeting the experience required by RCW 19.28.191, or equivalent experience may be accepted as determined by rule by the department in consultation with the advisory board.

(b) To be eligible for an unrestricted domestic pump specialty plumbers examination defined by RCW 18.106.010 (10)(c), the trainee must complete 4,000 hours practical experience working under the direct supervision of a certified unrestricted domestic pump specialty plumber or a journeyman plumber on pumping systems. The experience may be obtained at the same time the individual is meeting the experience required by RCW 19.28.191 or equivalent experience may be accepted as determined by rule by the department in consultation with the advisory board.

(5) Effective January 1, 2005, all plumber trainees will be required to meet the current hour requirements to test.

(6) Apprentice/trade school endorsement requirements. An individual who has a current journeyman plumber, domestic pump specialty plumber, or residential specialty plumber trainee certificate and who has successfully completed or is currently enrolled in an approved apprenticeship program or in a technical school program in the plumbing construction trade in a school approved by the work force training and education coordinating board, may work without direct on-site supervision during the last six months of meeting the practical experience requirements of this chapter. In order to work without direct on-site supervision applicable to the type (residential or journeyman) of training hours for which certification is being sought by the individual, this individual must obtain an apprentice/trade school trainee endorsement by submitting the applicable forms provided by the department and paying the applicable fees. This individual may work without direct on-site supervision until he or she receives the remaining hours required to be eligible to take the applicable examination. This individual may not supervise trainees. (See RCW 18.106.070.)

(7) Any applicant (trainee, specialty plumber or journeyman) who fails an examination, will be required to wait at least until the next scheduled examination date and location. Examinations are held the first Thursday of every month, unless that date falls on a holiday. Applications shall be submitted and received by the plumbing certification program office two weeks before the next scheduled date.

WAC 296-400A-122 What do I need to know about trainee experience and the backflow assembly maintenance and repair specialty examination requirements?

(1) A trainee certificate must be obtained by an individual
performing backflow assembly maintenance and repair work who is not a certified plumber. The individual must work under the direct supervision of a certified backflow assembly maintenance and repair specialty, journeyman plumber, or residential specialty plumber for a minimum of one hundred percent of each working day while the backflow assembly maintenance and repair work is being performed.

(2) Each applicant for a backflow assembly maintenance and repair specialty certificate must furnish written evidence that he or she has a valid backflow assembly tester certification administered and enforced by the department of health.

(3) Any applicant who fails an examination will be required to wait at least until the next scheduled examination date and location. Examinations are held the first Thursday of every month, unless that date falls on a holiday. In the event of a holiday, the examination will be held on the second Thursday of the month. Applications shall be submitted and received by the plumbing certification program office two weeks before the next scheduled examination date.

WAC 296-400A-130 What if I make a false statement or a material misrepresentation on an application, an employment report or a trainee certificate? (1) All required applications and annual statements of employment hours are made under oath. Making false statements and/or material misrepresentations carry serious consequences. Any person who knowingly makes a false statement or material misrepresentation on an application, an affidavit of experience or a trainee certificate may have their certificate suspended, revoked, and/or be referred to the county prosecutor for criminal prosecution. In addition, the department may issue an infraction for a violation of this chapter.

(2) The annual statements of employment described in subsection (1) of this section do not apply to the backflow assembly maintenance and repair specialty certification.

WAC 296-400A-135 How does the department enforce trainee supervision? (1) A journeyman plumber on each and every commercial job site shall supervise either a residential specialty plumber or a domestic pump specialty plumber with a current plumber trainee card or trainee with a current plumber trainee card.

(a) The ratio on each residential specialty job site shall be not more than two trainees with current plumber trainee cards on any one residential specialty job site for every certified journeyman plumber or residential specialty plumber on that site.

(b) The time of supervision shall be a minimum of seventy-five percent of the time spent on each and every job site.

(2) A journeyman plumber with current medical gas endorsement may supervise either a residential specialty plumber with a current trainee card or a plumber trainee with a current trainee card.

(a) The residential specialty plumber or the plumber trainee has to have successfully completed or is currently enrolled in an approved medical gas piping installer training course approved by the department.

(b) The residential specialty plumber or other plumber trainee is under the direct supervision of a certified medical gas journeyman plumber on one-to-one ratio for one hundred percent of the time on each and every medical gas site.

(3) Each certified trainee is directly supervised by either a certified specialty plumber or a certified journeyman plumber on each and every domestic pump job site.

(a) The ratio on each domestic pump job site shall be not more than two trainees with current plumber trainee cards on any one residential specialty job site for every certified journeyman plumber or appropriate domestic specialty plumber on that site.

(b) The time of supervision shall be a minimum of seventy-five percent of the time spent on each and every job site. Restricted domestic pump specialty trainees who have completed at least seven hundred twenty hours of on-the-job training and passed the competency examination required by WAC 296-400A-020 may work unsupervised for the remainder of the time required for work experience to become a restricted domestic pump specialty plumber.

WAC 296-400A-140 How does the department enforce plumbers certification requirements? The department enforces plumber certification requirements by means of job-site inspections conducted by an authorized representative of the department. The representative must determine whether:

(1) Each person doing plumbing work has a proper certificate on their person; and

(2) The ratio of certified specialty and/or journeyman plumbers to certified trainees is correct; and

(3) Each certified trainee is directly supervised by either a certified specialty plumber or a certified journeyman; and
(4) Persons who are installing medical gas piping systems have active medical gas piping installer endorsements in addition to their active plumber certification.

(5) Persons who are certified as backflow assembly maintenance and repair specialties must have an active backflow assembly tester certification from the department of health.

WAC 296-400A-150 May the department audit the records of a contractor? Yes, for any reason such as: Dispatching, ratio, supervision, excessive hours, and certification. The department may audit the records of contractors as authorized under RCW 18.106.320 when the department has reason to believe that a violation of the plumbing certification laws has occurred.

[Statutory Authority: RCW 18.106.040, 18.106.140, 2002 c 82, and 2003 c 399. 04-12-046, § 296-400A-150, filed 5/28/04, effective 6/30/04.]

WAC 296-400A-155 Audit of trainee hours. (1) The department, under RCW 18.106.320, may audit the employment records of the plumbing contractor or employer who verified the plumbing trainee hours.

(2) Every contractor must keep a record of trainee employment so the department may obtain the necessary information to verify plumbing trainee work experience.

(a) The contractor must keep the records of jobs performed for at least five years.

(b) Upon request, these records must be made available to the department for inspection within seven business days.

(3) The contractor must maintain time cards or similar records to verify:

(a) The number of hours the trainee worked as a supervised trainee by category.

(b) The type of plumbing work the trainee performed (e.g., commercial or residential).

(4) Any information obtained from the trainee's contractor or employer during the audit under the provisions of RCW 18.106.320 is confidential and is not open to public inspection under chapter 42.17 RCW.

(5) The department's audit may include, but will not be limited to, the following:

(a) An audit to determine whether the trainee was employed by the contractor or employer during the period for which the hours were submitted, the actual number of hours the trainee worked, and the category of plumbing work performed; and

(b) An audit covering a specific time period and examination of a contractor's or employer's books and records which may include their reporting of the trainee's payroll hours required for industrial insurance, employment security or prevailing wage purposes.

[Statutory Authority: RCW 18.106.040, 18.106.140, 2002 c 82, and 2003 c 399. 04-12-046, § 296-400A-155, filed 5/28/04, effective 6/30/04.]

WAC 296-400A-300 What procedures does the department follow when issuing a notice of infraction? (1) If an authorized representative of the department determines that an individual has violated plumber certification requirements, including medical gas piping installer endorsement requirements, the department must issue a notice of infraction describing the reasons for the infraction.

(2) For plumber certification violations, the department may issue a notice of infraction to either:

(a) An individual who is installing medical gas piping systems without a current plumber certificate and a current medical gas piping installer endorsement; or

(b) The employer of the individual who is installing medical gas piping systems without a current plumber certificate; or

(c) The employer's authorizing agent or foreman that made the work assignment to the individual who is installing medical gas piping without a current plumber certificate.

(3) For medical gas piping installer endorsement violations, the department may issue a notice of infraction to either:

(a) An individual who is installing medical gas piping systems without a current plumber certificate and a current medical gas piping installer endorsement; or

(b) The employer of the individual who is installing medical gas piping systems without a current plumber certificate and a current medical gas piping installer endorsement; or

(c) The employer's authorizing agent or foreman that made the work assignment to the individual who is installing medical gas piping systems without a current plumber certificate; or

(4) The department may issue an infraction to a contractor advertising or performing work under this chapter or chapter 18.27 RCW who is not properly registered under chapter 18.27 RCW.

(5) An individual may appeal a notice of infraction by complying with the appropriate provisions of RCW 18.106-220.

(6) If good cause is shown, an administrative law judge may waive, reduce or suspend any monetary penalties resulting from the infraction.

(7) Any monetary penalties collected under this chapter, must be deposited in the plumbing certificate fund.

WAC 296-400A-400 What are the monetary penalties for violating certification requirements? (1) A person cited for an infraction under RCW 18.106.020 or 18.106.320 shall be assessed a monetary penalty based upon the following schedule:

(a) Individual

First Infraction $250.00

Second Infraction $500.00

Third Infraction $750.00

Fourth and each additional infraction Not more than $1,000.00

296-403A-140 Temporary operating permit.
296-403A-150 Fees.
296-403A-160 Appeals.

(2007 Ed.)

WAC 296-403A-100 Definitions. Definitions as found in ASTM F 747-97 Standard Terminology Related to Amusement Rides and Devices are adopted in addition to the following:

(1) "Air supported" structure or device means an amusement device that incorporates a structural and mechanical system and employs a high-strength fabric or film that achieves its strength, shape and stability by pretensioning with internal air pressure (inflation).

(2) "Amusement ride" means any vehicle, boat, or other mechanical or air supported device moving upon or within a structure, along cables or rails, through the air by centrifugal force or otherwise, or across water, that is used to convey one or more individuals for amusement, entertainment, diversion, or recreation. For purposes of this chapter, "boats" does not refer to personal watercraft or vessels operated on the waters of this state according to chapter 79A.60 RCW. Examples of an amusement ride include, but are not limited to, devices commonly known as skyrides, ferris wheels, carousels, parachute towers, tunnels of love, roller coasters, mechanical bulls, gyrotro, space balls, bungee operated, simulatoirs and similar devices.

Conveyances for persons in recreational winter sports activities such as: Ski lifts, ski tows, j-bars, t-bars, and similar devices subject to regulation under chapter 70.88 RCW are not amusement rides. Any single-passenger coin-operated ride that is manually, mechanically, or electrically operated and customarily placed in a public location that does not normally require the supervision or services of an operator is not an amusement ride. Nonmechanized playground equipment including, but not limited to, swings, seesaws, stationary spring-mounted animal features, rider-propelled merry-go-rounds, climbers, slides, trampolines, and physical fitness devices are not amusement rides. Permanent water slides are not amusement rides. Animal rides such as: Pony rides, riding stables, hay rides and elephant rides are not amusement rides.

(a) "Portable amusement ride" means an amusement ride which is relocated at least once per year with or without disassembly.

(b) "Permanent amusement ride" means an amusement ride which is erected to remain a lasting part of the premises.

(3) "Amusement structure" means any electrical, mechanical, nonmechanical, or air-supported device or any combinations thereof operated for revenue and to provide amusement or entertainment to viewers or audiences at carnivals, fairs, or amusement parks. A game or concession where a member of the public performs an act or makes a purchase is not an amusement structure. Examples of an amusement
structure include, but are not limited to, structures commonly known as permanent steel or wooden roller coasters, a permanent dark ride or fun house, a permanent drop tower, or a permanent building enclosing a portable amusement device.

(4) "ASTM" means the American Society for Testing and Materials (F-24 committee) as it relates to amusement rides and devices. Copies of the ASTM are available from ASTM International, 100 Barr Harbor Drive, P.O. Box C700, West Conshohocken, Pennsylvania 19428-2959.

(5) "Authority having jurisdiction" means the department.

(6) "Carnival" means a mobile enterprise principally devoted to offering amusement or entertainment to patrons in, upon, or by means of portable amusement rides or structures.

(7) "Certificate of inspection" means a document given under oath or affirmation from an insurer or a person with whom the insurer has contracted to make a safety inspection of the amusement ride or structure. The certificate must contain: The name, address and signature of the inspector, the complete description of the amusement ride or structure and the name and address of the owner or operator.

(8) "Certificate of insurance" means a document certifying that the insurance required by chapter 67.42 RCW is in effect. Copies of this document/form are available from the department upon request.

(9) "Department" means the department of labor and industries.

(10) "Insurance policy" means an insurance policy written by an insurer authorized to do business in this state under Title 48 RCW.

(11) "Major modification" means any change to the original configuration or layout of components or replacement of components that are not like-for-like.

(13) "Operating permit" means a permit that is issued by the department.

(14) "Operating permit decal" is a decal issued by the department that must be affixed on or adjacent to the control panel of the amusement ride or structure in a location visible to the patrons of the ride or structure.

(15) "RCW" means the Revised Code of Washington. Copies of RCWs are available from the office of the code reviser.

(16) "Safety inspection" means a procedure to be conducted by a safety inspector to determine whether an amusement ride or device is assembled, maintained, tested, operated, and inspected in accordance with the current ASTM standards, the manufacturer's or insurer's standards, and this chapter, whichever is the most stringent, and that determines the current operational safety of the ride or device.

(17) "Safety inspector" and "amusement ride inspector" both mean a third-party inspector authorized by the department to conduct safety inspections of amusement rides or devices in compliance with this chapter. The inspector must be an independent, third party with no organizational, managerial, financial, design, or promotional affiliation with the amusement ride or amusement structure being inspected.

The inspector must not be a principal, owner, or employee of any amusement company or manufacturer doing business in the state of Washington, unless authorized by the department to conduct specific inspections on a case-by-case basis.

Inspectors who have installed, modified or repaired an amusement ride or structure may not perform the initial inspection on the equipment they have installed, modified, or repaired. The inspector must have an adequate diversity of clients or activity so that the loss or award of a specific contract regarding amusement ride or amusement structure safety certification would not be a deciding factor in the financial well being of the inspector.

(18) "WAC" means the Washington Administrative Code. Copies of WACs are available from the department and the office of the code reviser.

WAC 296-403A-110 Insurance. The following are the requirements for insurance for amusement rides and structures:

(1) An original copy of the insurance policy in an amount not less than one million dollars per occurrence from an insurer authorized to do business in the state of Washington must be filed with the department.

(2) A certificate of insurance must be presented to either the sponsor, lessor, landowner or other person responsible for an amusement ride being offered for use by the public.

(3) The insurance company must notify the department at least thirty days before canceling or revokeing a policy and upon the nonrenewal of the policy.

(4) If the insurance company withdraws, cancels, revokes, suspends, or excludes coverage of any ride(s) from any policy furnished to the department, such withdrawal, cancellation, revocation, suspension, or exclusion must be plainly stated in documents furnished to the department.

(5) The department must be notified within twenty-four hours of the withdrawal, cancellation, revocation, suspension, or exclusion of insurance coverage of an amusement ride or structure for which an operating permit has been issued by the department.

WAC 296-403A-120 Application for and renewal of operating permit. (1) The person(s) making application for an operating permit for an amusement structure or an amusement ride must provide the following documentation on an application form provided by the department and pay the appropriate fee:

(a) The name, address and telephone number of the owner or operator of the amusement ride or structure together with the name and signature of the applicant.

(b) Description of amusement ride or structure. Each amusement ride or structure must be individually identified:

[Title 296 WAC—p. 2682]
Amusement Rides or Structures 296-403A-170

(i) By a trade name or title and a narrative description from which the amusement structure or ride can be identified; and

(ii) A serial number which is welded onto the frame or contained on an identification plate which is permanently affixed to the amusement structure or ride.

(c) Certificate of inspection. The amusement ride inspector or insurer per RCW 67.42.020(2) must certify that the amusement ride or structure has been inspected for safety and meets the standards for compliance with all applicable requirements of the National Electrical Code and this chapter, manufacturer's specifications, American Society of Testing and Materials (ASTM) Standards on Amusement Rides and Devices, and insurance company inspection requirements.

(d) Amusement rides or structures that undergo major modification must be recertified by an amusement ride inspector or insurer per RCW 67.42.020(2) before being placed into operation.

(2) Renewal of operating permit. An operating permit may be renewed before the expiration date by submitting an application with the proper fee and a certificate of safety inspection. The safety inspection must have been performed within thirty days before the expiration date of the operating permit.

WAC 296-403A-130 Operating permit. An amusement ride or structure must not be operated unless the owner or operator has obtained an operating permit and an operating permit decal is posted on the ride, unless a temporary operating permit has been issued as outlined in WAC 296-403A-140. The owner or operator of the amusement ride or structure must have available for inspection, at the location where the amusement ride or structure is to be operated, a copy of the operating permit for each amusement ride or structure. Each operating permit that has been issued to an owner or operator is valid for one year from the date of issue or the date of inspection whichever is less, unless revoked. The operating permit will become null and void in the event that the insurance policy is canceled or is no longer in effect or if an amusement ride or structure is materially rebuilt or materially modified.

WAC 296-403A-140 Temporary operating permit. A temporary operating permit expires after fifteen days and will not be renewed or extended unless authorized by the chief electrical inspector. The department electrical section may issue a temporary operating permit when:

(1) The insurance policy required by chapter 67.42 RCW is on file with the department; and

(2) The safety inspection of the amusement ride or structure has been performed within the last year; and

(3) The department has received a complete application for an operating permit.

(2007 Ed.)
devices, including responsibility for erection, assembly, disassembly; personnel supervision responsibility for erection, maintenance, and operating functions; or

(4) Not less than ten years documented practical experience in the design, construction, maintenance, repair, field inspection, and operation of amusement rides and devices as an authorized representative of a recognized amusement ride manufacturer; and

(5) In addition to the above criteria an amusement ride inspector must be certified by the department after demonstrating competency by:

(a) Passing a competency examination administered by the department; or

(b) Passing a test administered by the National Association of Amusement Ride Safety Officials for NAARSO Level II or other certification organizations recognized by the department, as an amusement ride inspector.

Those individuals who are certified by the department before December 31, 2000, will have until December 31, 2003, to take and successfully pass one of the examinations in (a) or (b) of this subsection. Individuals with at least ten years as an amusement ride inspector may become certified without testing if they were certified with the department on December 31, 2000.

(6) An amusement ride inspector may work without certification, as a trainee, if directly and continually supervised during the inspection process by a certified amusement ride inspector.

(7) This section does not apply to insurers or a person with whom the insurer has contracted with per RCW 67.42.-020(2).

**WAC 296-403A-180 Safety and maintenance seminar.** Every amusement ride inspector must annually attend at least one amusement ride safety and maintenance seminar sponsored by the Amusement Industry Manufacturers and Equipment Suppliers, Northwestern Showman’s Club, National Association of Amusement Ride Safety Officials, International Association of Amusement Parks and Attractions, or an equivalent approved by the department. All experience and schooling must be documented and verified and must be furnished to the department with an application for an amusement ride inspector certificate.

**WAC 296-403A-190 Safety standards for amusement rides and amusement structures.** (1) A certified amusement ride inspector will inspect amusement rides and structures for safety. Amusement rides and structures must comply with all applicable requirements of the National Electrical Code and this chapter, manufacturer’s specifications, American Society of Testing and Materials (ASTM) Standards on Amusement Rides and Devices, insurance company inspection requirements, and the requirements established by the local authority having jurisdiction.

(2) The amusement ride inspector must verify the correction of all deficiencies noted on the application for an amusement ride operating decal. The correction of any deficiencies must be completed within fifteen calendar days unless the inspector has determined that deficiencies are of a serious nature that will prohibit operation of the amusement ride or amusement structure. The period to correct deficiencies may be extended for a specific period at the discretion of the safety inspector and/or the department. The amusement ride inspector must report to the department any amusement ride or structure that is not allowed to operate because of serious safety deficiencies. Any deficiencies must be reinspected by the amusement ride inspector/company or other qualified inspector/company authorized by the original ride inspector/company.

**WAC 296-403A-195 Incident reporting.** (1) Amusement structure/ride owner(s) and/or operator(s) must report to the department:

(a) Any incident or accident where evacuation of a ride results from an electrical or mechanical malfunction or when emergency personnel are required to assist in the evacuation; and

(b) Any incident/accident involving an amusement ride or structure involving personal injury that requires medical treatment, other than ordinary first aid. Medical treatment other than ordinary first aid means treatment beyond that which occurs at the location of the incident/accident and is provided by or under the supervision of a physician licensed to practice medicine, and the treatment is in response to a medical concern that is related directly to the incident/accident.

(2) Reports meeting the above criteria must be made in writing within twenty-four hours after any incident/accident. This report may be faxed to a phone number supplied by the department followed by the original report in the mail. The report must include a detailed description of all available facts regarding the incident/accident for review by the department. After review, the department may require the amusement ride or structure to be inspected by an amusement ride inspector before continuing the operation of the ride or structure. When the department revokes a ride operating permit, a complete and detailed account of the incident/accident must be provided to the department before a new operating permit will be issued following an incident/accident.

**WAC 296-403A-200 Reciprocal certificate.** The department may upon proper application, issue an amusement ride inspector certificate to an individual who meets the minimum qualifications as set forth in this chapter and who possesses a current, valid amusement ride inspector certifi-
cate in a state or province which has equal or higher standards for amusement ride inspectors as those contained in this chapter. No amusement ride inspection examination will be required of those persons who qualify for a reciprocal amusement ride inspector certificate.

WAC 296-403A-210 Revocation and suspension of certification of amusement ride inspectors—Reinstatement. (1) An amusement ride inspector's certificate of competency may be suspended or revoked for cause such as: Certifying the safety of an unsafe ride, falsifying records or reports or certifying an amusement ride or structure which he or she has not personally inspected.

(2) The suspension or revocation of a certificate of competency that is not contested will be suspended or revoked immediately. If the suspension or revocation of a certificate of competency is contested, the suspension or revocation will not occur until after a hearing has been held before the department. The inspector and his or her employer are entitled to appear at such hearings and to be heard.

(3) The department must deliver to both the inspector charged and to his or her employer (if known), not less than ten days prior to the hearing, a written notice of the charges and of the time and place of such hearing.

(4) An inspector whose certificate of competency has been suspended may apply for reinstatement not less than ninety days after the time of suspension. If the certificate of competency has been revoked, the inspector will need to reapply for certification according to this chapter.

WAC 296-403A-220 Fees for examination, certification, and renewal of certification for inspectors. (1) Fee for each application for inspector's certificate of competency and examination, one hundred dollars.

(2) Application fee (nonrefundable), twenty dollars.

(3) Fee for annual renewal of certificate of competency or reciprocal inspector certificate, twenty dollars.

WAC 296-403A-230 Electrical requirements for amusement rides and amusement structures. (1) Electrical distribution system. Service equipment, separately derived systems, feeders and circuits for each amusement ride, amusement structure or concession must comply with all applicable requirements of the National Electrical Code and chapter 296-46A WAC, as amended.

(2) Flexible multiconductor cords must be connected to equipment by approved connectors designed for the purpose or by listed cord caps. Individual conductors of multiconductor cords in sizes #2 AWG and larger are permitted to be connected by listed and labeled connection systems in accordance with Article 520-53(k) of the National Electrical Code. Where conductors are connected individually by such connection systems, the outer jacket of multiconductor cord must be secured to the electrical equipment independent from the receptacles and plugs by approved cable grips that are installed in a manner to prevent pressure from being applied to the receptacles and plugs.

(3) Individual, single conductor, insulated, portable power cable, in addition to complying with Section 525-13 of the National Electrical Code, must comply with the following:

(a) All conductors of the feeder or circuit including the equipment grounding conductor must originate in the same electrical equipment and terminate in the same equipment.

(b) All conductors of the feeder or circuit including the ungrounded, grounded, and equipment grounding conductors must run together, except for portions installed within approved cable protection systems.

(c) The cables must be secured to the electrical equipment independent from the cable receptacles and plugs by approved cable grips that prevent pressure from being applied to the connectors.

(d) The cables must be connected to electrical equipment by approved listed and labeled connection systems in compliance with Section 520-53(k) of the National Electrical Code.

(4) Disconnecting means. A separate, enclosed, externally operable fused switch or circuit breaker must be installed on each amusement ride, structure or concession to disconnect all electrical equipment. The disconnecting means must be readily accessible and identifiable as the disconnecting means. The disconnecting means is not required to be readily accessible when a disconnecting means meeting the requirements of NEC 525-30 is also installed. Where more than one power supply is employed, the disconnecting means must be grouped.

(5) Rotating equipment. Components of amusement rides or structures that rotate more than three hundred sixty degrees and which have electrically operated equipment, must be supplied by approved collector rings that are totally enclosed or located so they are accessible to authorized personnel only. The collector rings must be factory produced with an equipment grounding segment having a voltage and current rating that equals or exceeds the rating of the current carrying segments. Collector rings must have an ampacity not less than one hundred twenty-five percent of the full-load current of the largest device served plus the full-load current of all other devices served. Collector rings for control and signal purposes must have an ampacity not less than one hundred twenty-five percent of the full-load current of the largest device served plus the full-load current of all other devices served.

(6) Equipment grounding. All noncurrent carrying metal parts of amusement rides and structures must be grounded by an equipment grounding conductor routed with the feeder or circuit conductors in accordance with the National Electrical Code and these rules. The metallic structure must not be used as a current carrying conductor.

EXCEPTION: The metallic structure is permitted to be used as the return path for low voltage systems that do not exceed thirty volts, provided that the ungrounded conductors are protected by an overcurrent device in accordance
with the National Electrical Code and the system is factory built for such use.

(7) Existing concessions or games electrical systems must comply with the National Electrical Code and must be maintained in full compliance with codes and standards in effect at the time they were manufactured. When new concessions or games are purchased, manufactured or constructed, or where existing concessions or games have major modification, the electrical system must comply with this chapter and the edition of the National Electrical Code in effect at the time. All concessions and games must be identified in or on the disconnecting means and in records furnished to the department with the edition of the National Electrical Code the electrical system is intended to comply with, or be certified and labeled by the department as a factory assembled structure.

WAC 296-403A-240 Department on-site electrical inspection. (1) Department on-site electrical inspection will be done each time an amusement ride or structure is set up. Fees will be paid in accordance with chapter 296-46A WAC, as amended. An on-site electrical inspection permit and fee is not required for any amusement ride or structure when all of the following conditions are met:

(a) The ride is equipped with a supply cord that does not exceed 120 volts or 20 amps.
(b) The amusement ride inspector, on the operating permit application, has documented the size and length of the supply cord.
(c) No extension cords are used to supply the equipment.
(d) The amusement ride or structure has a current amusement ride operating permit decal.
(e) Itinerary for set-up locations must be made available to the chief electrical inspector upon request.
(f) Amusement rides that are leased and set up for private use (not operated for revenue) must also comply with the following in addition to the on-site inspection and operating permit requirements established by this chapter:

(a) The lessor must provide the lessee with manufacturer's set up instructions.
(b) The lessor or their authorized agent is responsible for providing proper set up and tear down of each amusement ride or structure (authorized agents must be under written contract to the owner or operator).
(c) The lessor is responsible to maintain proper documentation assuring that each lessee has been provided with proper manufacturer's instructions for operating and setting up each individual leased amusement ride or structure.

Chapter 296-800 WAC

SAFETY AND HEALTH CORE RULES

WAC 296-800-100 Introduction.

[Title 296 WAC—p. 2686] (2007 Ed.)
LUNCHROOMS AND PERSONAL SERVICE ROOMS

296-800-23060 Provide a separate lunchroom if employees are exposed to toxic substances if they are allowed to eat and drink on the job site.
296-800-23065 Provide showers when required for employees working with chemicals.
296-800-23070 Provide change rooms when required.
296-800-23075 Make sure any work clothes you provide are dry.

ENVIRONMENTAL TOBACCO SMOKE IN THE OFFICE

296-800-240 Summary.
296-800-24005 Prohibit tobacco smoke in your office work environment.

STAIRS AND STAIR RAILINGS

296-800-250 Summary.
296-800-25005 Provide fixed stairs where required.
296-800-25010 Provide stairs that minimize hazards.
296-800-25015 Provide handrails and stair railings.

FLOOR OPENINGS, FLOOR HOLES AND OPEN-SIDED FLOORS

296-800-260 Summary.
296-800-26005 Guard or cover floor openings and floor holes.
296-800-26010 Protect open-sided floors and platforms.

BASIC ELECTRICAL RULES

296-800-270 Basic electrical rules.
296-800-28005 Inspect all electrical equipment your employees use to make sure the equipment is safe.
296-800-28010 Make sure all electrical equipment is used for its approved or listed purpose.
296-800-28015 Make sure electrical equipment used or located in wet or damp locations is designed for such use.
296-800-28020 Make sure electrical equipment that is not marked is not used.
296-800-28022 Identify disconnecting means.
296-800-28025 Maintain electrical fittings, boxes, cabinets and outlets in good condition.
296-800-28030 Maintain all flexible cords and cables in good condition and use safely.
296-800-28035 Guard electrical equipment to prevent your employees from electrical hazards.
296-800-28040 Make sure electrical equipment is effectively grounded.
296-800-28045 Make sure electrical equipment has overcurrent protection.

PORTABLE FIRE EXTINGUISHERS

296-800-300 Summary—Portable fire extinguishers.
296-800-30005 Provide portable fire extinguishers in your workplace.
296-800-30010 Select and distribute portable fire extinguishers in your workplace.
296-800-30015 Make sure that portable fire extinguishers are kept fully charged, in operable condition, and left in their designated places.
296-800-30020 Make sure portable fire extinguishers are kept fully charged, in operable condition, and left in their designated places.
296-800-30025 Inspect and test all portable fire extinguishers.
296-800-30030 Inspect and test all portable fire extinguishers.
296-800-30035 Train your employees to use portable fire extinguishers.

EXIT ROUTES AND EMPLOYEE ALARM SYSTEMS

296-800-310 Summary.

EXIT ROUTES

296-800-31005 Provide an adequate number of exit routes.
296-800-31010 Make sure that exit routes are large enough.
296-800-31015 Make sure that exit routes meet their specific design and construction requirements.
296-800-31020 Make sure that each exit route leads outside.
296-800-31025 Provide unobstructed access to exit routes.
296-800-31030 Exit doors must be readily opened from the inside.
296-800-31035 Use side-hinged doors to connect rooms to exit routes.
296-800-31040 Provide outdoor exit routes that meet these requirements.
Chapter 296-800 Title 296 WAC: Labor and Industries, Department of

296-800-3045 Minimize danger to employees while they are using emergency exit routes.

296-800-3050 Mark exits adequately.

296-800-3055 Provide adequate lighting for exit routes and signs.

296-800-3060 Maintain the fire retardant properties of paints or other coatings.

296-800-3065 Maintain emergency safeguards.

296-800-3067 Provide doors in freezer or refrigerated rooms that open from the inside.

296-800-3070 Install and maintain an appropriate employee alarm system.

296-800-3075 Establish procedures for sounding emergency alarms.

296-800-3080 Test the employee alarm system.

**ACCIDENT REPORTING AND INVESTIGATING**

296-800-320 Summary.

296-800-32005 Report the death, probable death of any employee, or the in-patient hospitalization of 2 or more employees within 8 hours.

296-800-32010 Make sure that any equipment involved in an accident is not moved.

296-800-32015 Assign people to assist the department of labor and industries.

296-800-32020 Conduct a preliminary investigation for all serious injuries.

296-800-32025 Document the preliminary investigation findings.

**RELEASING ACCIDENT INVESTIGATION REPORTS**

296-800-330 Releasing accident investigation reports.

**PROTECTING THE IDENTITY OF THE SOURCE OF CONFIDENTIAL INFORMATION**

296-800-340 Protecting the identity of the source of confidential information.

**USING STANDARDS FROM NATIONAL ORGANIZATIONS AND FEDERAL AGENCIES**

296-800-360 Rule.

296-800-36005 Comply with standards national organizations or federal agencies when referenced in WISHA rules.

296-800-370 Definitions.

**DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER**

296-800-3005 Establish a safety committee or have safety meetings.

**DISPOSITION OF SECTIONS FORMERLY CODIFIED IN THIS CHAPTER**

296-800-5025 Provide a first-aid station when required. [Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17]-050. 01-11-038, § 296-800-5025, filed 5/9/01, effective 9/1/01.] Repealed by 05-20-068, filed 10/4/05, effective 1/1/06. Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. Later promulgation, see chapter 296-876 WAC.

WAC 296-800-100  Introduction. The WISHA Core Rules: Your foundation for a safe and healthful workplace. This book contains 26 basic safety and health rules that affect all employers and should cover almost everything small, nonmanufacturing employers need for a safe and healthful workplace. These core rules include requirements for your Accident Prevention Program, personal protective equipment, first aid, and hazard communication program.

Note: You may need to comply with other WISHA rules. For a complete list of WISHA rules, see the resources section of this book.
Why does workplace safety and health matter to you?

On average, two people lose their lives every week in job-related incidents in Washington state. Each year, more than 250,000 workers’ compensation claims are accepted for work-related injuries and illnesses. Medical care and wage replacement for these injured workers costs more than a billion dollars. The indirect costs of workplace injuries are even larger in terms of lost quality of life, personal financial ruin, operating costs of business, and decreased profitability. Employers and employees who work together to identify and control hazards on the job can save lives and money while improving business and productivity.

What are L&I and WISHA?

The department of labor and industries (L&I) is a state agency that provides many different services:

- Workplace safety and health, including inspections and enforcement, consultation, technical assistance, training, education and grants. (WISHA)
- Workers’ compensation (or industrial insurance), including claims management, rate setting, medical payments, and research.
- Specialty compliance services, including contractor registration, electrical inspections, boiler and elevator inspections, apprenticeship programs and employment standards.

Many of these services are available from L&I’s twenty-two regional offices (see the resource section of this book for a list of regional offices).

In 1973, the legislature passed the Washington Industrial Safety and Health Act or WISHA (Revised Code of Washington (chapter 49.17 RCW)). WISHA requires employers to provide safe and healthful workplaces for all employees. It gives L&I the responsibility to establish and enforce workplace safety and health rules. These rules are the Washington Administrative Code (WAC).

How does WISHA work?

WISHA covers nearly all employers and employees in Washington, including employees who work for the state, counties, and cities. L&I inspectors enforce WISHA rules by inspecting workplaces without advance notice including investigations of work-related deaths, injuries, and employees’ complaints. When WISHA inspectors find a violation in a workplace, they issue a citation to the employer and a penalty may be assessed. If you have questions about whether you are covered by WISHA, call 1-800-4BE SAFE (1-800-423-7233) or a local office of L&I.

What is OSHA and its relationship to WISHA?

The U.S. Congress created the Occupational Safety and Health Administration (OSHA) in 1971 to develop and enforce workplace safety and health rules throughout the country. States may choose to run their own safety and health programs as long as they are at least as effective as OSHA. Washington state has chosen to run its own program and most employers in the state, therefore, are subject to enforcement by L&I and not by federal OSHA.

In Washington state, OSHA covers workplaces with federal employees, nonfederal employees working on federal reservations and military bases, employees working on floating worksites (floating dry docks, fishing boats, construction barges), and employees working for tribal employers on tribal lands.

Does WISHA apply to you?

WISHA applies to almost every employer and employee in Washington. WISHA applies to you if:

- You hire someone to work for you as an employee, including workers from a temporary agency.
- You are hired to work for someone as their employee.
- You own your own business or you are a corporate officer and have elected industrial insurance coverage for yourself.
- You have a contract with someone else that primarily involves personal labor, even though you are not required to pay industrial insurance or unemployment insurance premiums.
- You volunteer your personal labor, or you have volunteers working for you who receive any benefit or compensation.

If you have any questions about your particular situation, call 1-800-4BE SAFE (1-800-423-7233) or contact your local office of L&I for help. See the resource section of this book for a complete list of L&I offices.

Are there other safety and health rules I need to know about?

In addition to the rules in the WISHA Safety and Health Core Rules book, there are other general WISHA rules that may apply to employers, depending upon the industry and workplace activities. See the resource section of this book for a complete list of WISHA rules or go to the web site for all the state rules administered by L&I at http://www.wa.gov/lni/home/wacs.htm. If you have questions about these rules or would like copies of them, call 1-800-4BE SAFE (1-800-423-7233) or your local office of L&I.

How do the WISHA rules relate to fire, building and electrical codes?

Fire codes: WISHA rules contain basic requirements for portable fire extinguishers, exit routes, housekeeping, storage, stairs and electrical hazards for the protection of employees in your workplace. The rules contained in this book are the most basic requirements to make sure that as an employer you provide a safe and healthy work environment. However, these are not the only rules regarding the requirements for portable fire extinguishers, exit routes, housekeeping, storage, stairs and electrical equipment. The fire marshal and local fire authorities enforce the Uniform Fire Code (UFC). WISHA and UFC differ in some areas, for example UFC requires exit sign lettering to be 6” or more and WISHA only states that the letters have to be clearly visible. Fire codes have more detailed and extensive requirements for the protection of the public than WISHA. Some codes overlap with WISHA requirements.

Building and electrical codes: WISHA rules are minimum requirements regardless of when the building was built or remodeled. Buildings must also comply with building and electrical codes at the time of construction. If you remodel, you must comply with the building and electrical codes applicable at that time. Building authorities and electrical inspection authorities enforce rules from the Uniform Building Code (UBC), and the National Electrical Code (NEC).

You are encouraged to call your local fire, building or electrical authority. For more information on the requirements in your area look in the government section of your
phone book. Copies of these codes are available at your local library.

**How can WISHA help employers and employees?**

Employers can ask WISHA safety and health consultation staff for free, confidential consulting services in your workplace. WISHA safety and health professionals can examine your workplace and make recommendations about how to comply with WISHA rules. If the consultant finds hazards, the employer will be given a reasonable period of time to correct the hazard without citation or penalty.

Sometimes you might have to wait for an appointment because of the demand for these services. You still must provide a safe workplace while you wait for a consultation.

WISHA offers a wide variety of free services:
- Safety and health workshops held in locations throughout the state
- A comprehensive safety and health video lending library
- Safety and health publications geared for both employer and employee
- Web site with on-line publications and learning opportunities

**EMPLOYER RESPONSIBILITIES: SAFE WORKPLACE**

**WAC 296-800-110 Employer responsibilities: Safe workplace—Summary.**

**Your responsibility:**

To provide a safe and healthy workplace free from recognized hazards.

**IMPORTANT:**

Use these rules where there are no specific rules applicable to the particular hazard.

You must:
- Provide a workplace free from recognized hazards.
  
  **WAC 296-800-11005.**

- Provide and use means to make your workplace safe.
  
  **WAC 296-800-11010.**

- Prohibit employees from entering, or being in, any workplace that is not safe.
  
  **WAC 296-800-11015.**

- Construct your workplace so it is safe.
  
  **WAC 296-800-11020.**

- Prohibit alcohol and narcotics from your workplace.
  
  **WAC 296-800-11025.**

- Prohibit employees from using tools and equipment that are not safe.
  
  **WAC 296-800-11030.**

- Establish, supervise, and enforce rules that lead to a safe and healthy work environment that are effective in practice.
  
  **WAC 296-800-11035.**

- Control chemical agents.

**WAC 296-800-11040.**

Protect employees from biological agents.

**WAC 296-800-11045.**

**Note:** Employees may discuss and participate in any WISHA safety and health related practice and may refuse to perform dangerous tasks without fear of discrimination. Discrimination includes: Dismissal, demotion, loss of seniority, denial of a promotion, harassment, etc. see chapter 296-360 WAC, Discrimination pursuant to RCW 49.17.160, for a complete description of discrimination and the department's responsibility to protect employees.

**WAC 296-800-11005 Provide a workplace free from recognized hazards.** You must:

- Provide your employees a workplace free from recognized hazards that are causing, or are likely to cause, serious injury or death.

**Note:** A hazard is recognized if it is commonly known in the employer's industry, or if there is evidence that the employer knew or should have known of the existence of the hazard, or if it can be established that any reasonable person would have recognized the hazard.

**WAC 296-800-11010 Provide and use means to make your workplace safe.** You must:

- Provide and use safety devices, safeguards, and use work practices, methods, processes, and means that are reasonably adequate to make your workplace safe.
  
  - Do not remove, displace, damage, destroy or carry off any safety device, safeguard, notice or warning, furnished for use in any employment or place of employment.
  
  - Do not interfere with use of any of the above.
  
  - Do not interfere with the use of any method or process adopted for the protection of any employee.
  
  - Do everything reasonably necessary to protect the life and safety of your employees.

**WAC 296-800-11015 Prohibit employees from entering, or being in, any workplace that is not safe.** You must:

- Prohibit employees from entering, or being in, any workplace that is not safe.

**WAC 296-800-11020 Construct your workplace so it is safe.**

- Not construct, or cause to be constructed, a workplace that is not safe.
  
  This rule applies to employers, owners, and renters of property used as a place of employment.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-11020, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-11020, filed 5/9/01, effective 9/1/01.]

(2007 Ed.)
WAC 296-800-11025 Prohibit alcohol and narcotics from your workplace. You must:
- Prohibit alcohol and narcotics from your workplace, except in industries and businesses that produce, distribute, or sell alcohol and narcotic drugs.
- Prohibit employees under the influence of alcohol or narcotics from the worksite.

EXEMPTION: Employees who are taking prescription drugs, as directed by a physician or dentist, are exempt from this section, if the employees are not a danger to themselves or other employees.

[Statutory Authority: RCW 49.17.010, 49.17.040, and 49.17.050. 01-11-038, § 296-800-11025, filed 5/9/01, effective 9/1/01.]

WAC 296-800-11030 Prohibit employees from using tools and equipment that are not safe.
You must:
- Take responsibility for the safe condition of tools and equipment used by employees.

Note: This applies to all equipment, materials, tools, and machinery whether owned by the employer or another firm or individual.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 03-18-090, § 296-800-11030, filed 9/2/03, effective 11/1/03. Statutory Authority: RCW 49.17.010, 49.17.040, and 49.17.050. 01-11-038, § 296-800-11030, filed 5/9/01, effective 9/1/01.]

WAC 296-800-11035 Establish, supervise, and enforce rules that lead to a safe and healthy work environment that are effective in practice. You must:
- Establish, supervise, and enforce rules that lead to a safe and healthy work environment that are effective in practice.

[Statutory Authority: RCW 49.17.010, 49.17.040, and 49.17.050. 01-11-038, § 296-800-11035, filed 5/9/01, effective 9/1/01.]

WAC 296-800-11040 Control chemical agents. You must:
- Control chemical agents in a manner that they will not present a hazard to your workers; or
- Protect workers from the hazard of contact with, or exposure to, chemical agents.

Note: Pesticides are considered to be chemical agents. As required by this rule, you must control them or provide protection to workers from exposure to pesticide hazards. Pesticide manufacturers supply precautionary statements in the information provided with the pesticide that tells you how to protect your workers from these hazards.

[Statutory Authority: RCW 49.17.010, 49.17.040, and 49.17.050. 02-16-047, § 296-800-11040, filed 8/1/02, effective 10/1/02.]

WAC 296-800-11045 Protect employees from biological agents.
You must:
1. Protect employees from exposure to hazardous concentrations of biological agents that may result from processing, handling or using materials or waste.

Note: Potential exposure to biological agents occurs during cleanup, or other tasks, where employees handle:
- Animals or animal waste
- Body fluids
- Biological agents in a medical research lab
- Mold or mildew
Check The Center of Disease Control web site (www.cdc.gov) to find published guidelines and information on safe handling and protection from specific biological agents (examples: Hanta virus, TB).

You must:
2. Warn employees of biohazards.
   - Use signs, tags, or labels to identify:
     - The actual or potential presence of a biohazard;
     AND
     - Equipment, containers, rooms, materials, experimental animals, or any combinations of these that contain viable hazardous agents.

Definition:
Biohazard means those infectious agents presenting a risk or potential risk of death, injury or illness to employees.
You must:
- Make sure the sign, tag, or label includes the biohazard symbol that is designed and proportioned in the illustration that follows.

You must:
- Make sure there is sufficient contrast for the symbol to be clearly defined, if the sign, tag, or label has a background color.

Reference: Additional requirements for biohazard signs, tags, and labels may apply. See WAC 296-823-14025 and 296-823-18040 of the Bloodborne Pathogens book.

Note: It's recommended that the sign, tag, or label have a key color of fluorescent orange or orange-red and lettering or symbols in a contrasting color.
- Appropriate wording may be used in association with the symbol to indicate:
  - The nature or identity of the hazard;
  - Name of individual responsible for its control;
  - Precautionary information;
  OR
  - Other information.
- This information should not be written on the symbol.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 04-18-080, § 296-800-11045, filed 8/31/04, effective 11/1/04. Statutory Authority: RCW 49.17.010, 49.17.040, and 49.17.050. 02-16-047, § 296-800-11045, filed 8/1/02, effective 10/1/02.]
EMPLOYEE RESPONSIBILITIES

WAC 296-800-120 Rule. Employee's responsibility:
To play an active role in creating a safe and healthy workplace and comply with all applicable safety and health rules.

Note: Employees may discuss and participate in any WISHA safety and health related practice and may refuse to perform dangerous tasks without fear of discrimination. Discrimination includes: Dismissal, demotion, loss of seniority, denial of a promotion, harassment, etc. (see chapter 296-360 WAC, Discrimination) pursuant to RCW 49.17.160 for a complete description of discrimination and the department's responsibility to protect employees.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-120, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-120, filed 5/9/01, effective 9/1/01.]

WAC 296-800-12005 Employee responsibilities.
Employees must:
• Study and follow all safe practices that apply to their work.
• Coordinate and cooperate with all other employees in the workplace to try to eliminate on-the-job injuries and illnesses.
• Apply the principles of accident prevention in their daily work and use proper safety devices and protective equipment as required by their employment or employer.
• Take care of all personal protective equipment (PPE) properly.
• Not wear torn or loose clothing while working around machinery.

Note: Things such as clothing, hair, and jewelry can get caught in machinery and be a hazard on the job.

Employees must:
• Report promptly to their supervisor every industrial injury or occupational illness.
• Not remove, displace, damage, or destroy or carry off any safeguard, notice, or warning provided to make the workplace safe.
• Not interfere with use of any safeguard by anyone in the workplace.
• Not interfere with the use of any work practice designed to protect them from injuries.
• Do everything reasonably necessary to protect the life and safety of employees.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-120, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-120, filed 5/9/01, effective 9/1/01.]

SAFETY COMMITTEES AND SAFETY MEETINGS

WAC 296-800-130 Safety committees/safety meetings—Summary. Important:
This rule requires you to have a method of communicating and evaluating safety and health issues brought up by you or your employees in your workplace. Larger employers must establish a safety committee. Smaller employers have the choice of either establishing a safety committee or holding safety meetings with a management representative present.

There is a difference between a safety committee and a safety meeting.

• A safety committee is an organizational structure where members represent a group. This gives everyone a voice but keeps the meeting size to an effective number of participants.
• A safety meeting includes all employees and a management person is there to ensure that issues are addressed. Typically, the safety committee is an effective safety management tool for a larger employer and safety meetings are more effective for a smaller employer.

Your responsibility:
To establish a safety committee or hold safety meetings to create and maintain a safe and healthy workplace for all employees.

You must:
Establish and conduct safety committees.

WAC 296-800-13020.
Follow these rules to conduct safety meetings.

WAC 296-800-13025.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-130, filed 8/1/02, effective 10/1/02; 01-11-038, § 296-800-130, filed 5/9/01, effective 9/1/01.]

WAC 296-800-13020 Establish and conduct safety committees. You must:

<table>
<thead>
<tr>
<th>If:</th>
<th>Then:</th>
</tr>
</thead>
<tbody>
<tr>
<td>You employ 11 or more employees on the same shift at the same location</td>
<td>You must establish a safety committee</td>
</tr>
</tbody>
</table>

(1) Establish a safety committee.
• Make sure your committee:
  – Has employee-elected and employer-selected members.
  • The number of employee-elected members must equal or exceed the number of employer-selected members.
  – The term of employee-elected members must be a maximum of one year. (There is no limit to the number of terms a representative can serve.)
  • If there is an employee-elected member vacancy, a new member must be elected prior to the next scheduled meeting.
  – Has an elected chairperson.
  – Determines how often, when, and where, the safety committee will meet.

Note: Employees selected by the employees bargaining representative or union qualify as employee-elected.

(2) Cover these topics:
• Review safety and health inspection reports to help correct safety hazards.
• Evaluate the accident investigations conducted since the last meeting to determine if the cause(s) of the unsafe situation was identified and corrected.

[Title 296 WAC—p. 2694] (2007 Ed.)
• Evaluate your workplace accident and illness prevention program and discuss recommendations for improvement, if needed.
  • Document attendance.
  • Write down subjects discussed.
  (3) Record meetings.
  • Prepare minutes from each safety committee and:
    – Preserve them for one year.
    – Make them available for review by safety and health consultation personnel of the department of labor and industries.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-13025, filed 8/1/02, effective 10/1/02.]

**WAC 296-800-13025** Follow these rules to conduct safety meetings. You must:

(1) Do the following for safety meetings.
• Make sure your safety meetings:
  – Are held monthly. You may meet more often to discuss safety issues as they come up.
  – Have at least one management representative.
(2) Cover these topics.
• Review safety and health inspection reports to help correct safety hazards.
• Evaluate the accident investigations conducted since the last meeting to determine if the cause(s) of the unsafe situation was identified and corrected.
• Evaluate your workplace accident and illness prevention program and discuss recommendations for improvement, if needed.
  • Document attendance.
  • Write down subjects discussed.

Note: There are no formal documentation requirements for safety meetings except for writing down who attended and the topics discussed.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-13025, filed 8/1/02, effective 10/1/02.]

**ACCIDENT PREVENTION PROGRAM**

**WAC 296-800-140** Accident prevention program.

Summary.
Your responsibility: To establish, supervise and enforce an accident prevention program (APP) that is effective in practice. (You may call this your total safety and health plan.)

You must:

Develop a formal, written accident prevention program (APP).

**WAC 296-800-14005.**
Develop, supervise, implement, and enforce safety and health training programs that are effective in practice.

**WAC 296-800-14020.**
Make sure your accident prevention program (APP) is effective in practice.

**WAC 296-800-14025.**

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-140, filed 5/9/01, effective 9/1/01.]

**WAC 296-800-14005** Develop a formal, written accident prevention program. You must:
• Develop a formal accident prevention program that is outlined in writing. The program must be tailored to the needs of your particular workplace or operation and to the types of hazards involved.
  
  Note: The term "accident prevention program" refers to your written plan to prevent accidents, illnesses, and injuries on the job. Your accident prevention program may be known as your safety and health plan, injury prevention program, or by some other name.

You must:
• Make sure your Accident Prevention Program contains at least the following elements:
  – A safety orientation:
    ◆ A description of your total safety and health program.
    ◆ On-the-job orientation showing employees what they need to know to perform their initial job assignments safely.
    ◆ How and when to report on-the-job injuries including instruction about the location of first-aid facilities in your workplace.
    ◆ How to report unsafe conditions and practices.
    ◆ The use and care of required personal protective equipment (PPE).
    ◆ What to do in an emergency, including how to exit the workplace.
    ◆ Identification of hazardous gases, chemicals, or materials used on-the-job and instruction about the safe use and emergency action to take after accidental exposure.
  – A safety and health committee.

(**WAC 296-800-130.**)

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-1405, filed 5/9/01, effective 9/1/01.]

**WAC 296-800-14020** Develop, supervise, implement, and enforce safety and health training programs that are effective in practice. You must:
• Develop, supervise, implement, and enforce training programs to improve the skill, awareness, and competency of all your employees in the field of occupational safety and health.
  
  You must:
  • Make sure training includes on-the-job instruction to employees prior to their job assignment about hazards such as:
    – Safe use of powered materials-handling equipment, such as forklifts, backhoes, etc.
    – Safe use of machine tool operations.
    – Use of toxic materials.
    – Operation of utility systems.
WAC 296-800-14025 Make sure your accident prevention program is effective in practice. You must:

- Establish, supervise, and enforce your accident prevention program in a manner that is effective in practice.

WAC 296-800-150 Rule summary. Your responsibility: Make sure first-aid trained personnel are available to provide quick and effective first aid.

You must:
- Make sure that first-aid trained personnel are available to provide quick and effective first aid.

WAC 296-800-15050 [296-800-15055].

Make sure appropriate first-aid supplies are readily available.

WAC 296-800-15020.

Make sure emergency washing facilities are functional and readily accessible.

WAC 296-800-15030.

Inspect and activate your emergency washing facilities.

WAC 296-800-15035.

Make sure supplemental flushing equipment provides sufficient water.

WAC 296-800-15040.

Note: Employers who require their employees to provide first aid must comply with chapter 296-823 WAC, Occupational exposure to bloodborne pathogens.

Your workplace may be covered by separate industry specific rules:

- Your workplace may be covered by separate first-aid rules. If you do any of the types of work listed below, you must follow separate industry specific rules:

<table>
<thead>
<tr>
<th>Industry</th>
<th>Chapter (WAC)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Agriculture</td>
<td>296-307</td>
</tr>
<tr>
<td>Compressed air</td>
<td>296-36</td>
</tr>
<tr>
<td>Construction</td>
<td>296-155</td>
</tr>
<tr>
<td>Fire fighting</td>
<td>296-305</td>
</tr>
<tr>
<td>Logging</td>
<td>296-54</td>
</tr>
<tr>
<td>Sawmill</td>
<td>296-78</td>
</tr>
<tr>
<td>Ship building and repairing</td>
<td>296-304</td>
</tr>
</tbody>
</table>

You can get copies of these rules by calling 1-800-4BE SAFE (1-800-423-7233), or by going to http://www.lni.wa.gov.

Note: Chemicals that require emergency washing facilities:
- You can determine whether chemicals in your workplace require emergency washing facilities by looking at the material safety data sheet (MSDS) or similar documents. The MSDS contains information about first-aid requirements and emergency flushing of skin or eyes.
- For chemicals developed in the workplace, the following resources provide information about first-aid requirements:
  - NIOSH Pocket Guide to Chemical Hazards
  - DIHS (NIOSH) Publication No. 97-140
  - Threshold Limit Values for Chemical Substances and Physical Agents American Conference of Governmental Industrial Hygienists (ACGIH)

WAC 296-800-15005 Make sure that first-aid trained personnel are available to provide quick and effective first aid.

You must:

Comply with the first-aid training requirements of 29 CFR 1910.151(b) which states:

"In the absence of an infirmary, clinic, or hospital in near proximity to the workplace, which is used for the treatment of all injured employees, a person or persons shall be adequately trained to render first aid."

WAC 296-800-15020 Make sure appropriate first-aid supplies are readily available. You must:

- Make sure first-aid supplies are readily available.
- Make sure first-aid supplies at your workplace are appropriate to:
  - Your occupational setting.
  - The response time of your emergency medical services.

Note: First-aid kits from your local retailer or safety supplier should be adequate for most nonindustrial employers.

You must:
- Make sure that first-aid supplies are:
  - Easily accessible to all your employees.
  - Stored in containers that protect them from damage, deterioration, or contamination. Containers must be clearly marked, not locked, and may be sealed.
  - Able to be moved to the location of an injured or acutely ill worker.

WAC 296-800-15030 Make sure emergency washing facilities are functional and readily accessible. You must:

- Provide an emergency shower:
  - When there is potential for major portions of an employee's body to contact corrosives, strong irritants, or toxic chemicals.
    - That delivers water to cascade over the user's entire body at a minimum rate of 20 gallons (75 liters) per minute for fifteen minutes or more.
    - Provide an emergency eyewash:
      - When there is potential for an employee's eyes to be exposed to corrosives, strong irritants, or toxic chemicals.
      - That irrigates and flushes both eyes simultaneously while the user holds their eyes open.
      - With an on-off valve that activates in one second or less and remains on without user assistance until intentionally turned off.
      - That delivers at least 0.4 gallons (1.5 liters) of water per minute for fifteen minutes or more.
You must:
• Make sure emergency washing facilities:
  – Are located so that it takes no more than ten seconds to reach.
  – Are kept free of obstacles blocking their use.
  – Function correctly.
  – Provide the quality and quantity of water that is satisfactory for emergency washing purposes.

Note:
• If water in emergency washing facilities is allowed to freeze, they will not function correctly. Precautions need to be taken to prevent this from happening.
• The travel distance to an emergency washing facility should be no more than fifty feet (15.25 meters).
• For further information on the design, installation, and maintenance of emergency washing facilities, see American National Standards Institute (ANSI) publication Z358.1 - 1998, "Emergency Eyewash and Shower Equipment. Emergency washing facilities that are designed to meet ANSI Z358.1 - 1998 also meet the requirements of this standard. The ANSI standard can be obtained from the American National Standards Institute, 1430 Broadway, New York, New York 10018.
• Training in the location and use of your emergency washing facilities is required under the employer chemical hazard communication rule, WAC 296-800-170, and the accident prevention program rule, WAC 296-800-140.
• All emergency washing facilities using "not fit for drinking" (nonpotable) water must have signs stating the water is "not fit for drinking." See WAC 296-800-23010.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-15035, filed 8/1/02, effective 10/1/02.]

WAC 296-800-15035 Inspect and activate your emergency washing facilities. You must:
• Make sure all plumbed emergency washing facilities are inspected once a year to make sure they function correctly.

Note:
Inspections should include:
• Examination of the piping
• Making sure that water is available at the appropriate temperature and quality
• Activation to check that the valves and other hardware work properly
• Checking the water flow rate.

You must:
• Make sure plumbed emergency eyewashes and hand-held drench hoses are activated weekly to check the proper functioning of the valves, hardware, and availability of water
• Make sure all self-contained eyewash equipment and personal eyewash units are inspected and maintained according to manufacturer instructions.
  – Inspections to check proper operation must be done once a year
  – Sealed personal eyewashes must be replaced after the manufacturer’s expiration date.

Note:
Most manufacturers recommend replacing fluid in open self-contained eyewashes every six months. The period for sealed containers is typically two years.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-15035, filed 8/1/02, effective 10/1/02.]

WAC 296-800-15040 Make sure supplemental flushing equipment provides sufficient water.

Note:
Supplemental flushing equipment cannot be used in place of required emergency showers or eyewashes.

You must:
• Make sure hand-held drench hoses deliver at least 3.0 gallons (11.4 liters) of water per minute for fifteen minutes or more.

Note: Why use a drench hose? A drench hose is useful when:
• The spill is small and does not require an emergency shower
• Used with a shower for local rinsing, particularly on the lower extremities.

You must:
• Make sure personal eyewash equipment delivers only clean water or other medically approved eye flushing solutions.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-15040, filed 8/1/02, effective 10/1/02.]

PERSONAL PROTECTIVE EQUIPMENT (PPE)

WAC 296-800-160 Summary. Your responsibility: To make sure that your employees have, use, and care for the appropriate personal protective equipment (PPE).

PPE is an item or items used to protect the eyes, face, head, body, arms, hands, legs, and feet such as goggles, helmets, head covers, gloves, rubber slickers, disposable coveralls, safety shoes, protective shields, and barriers.

You must:
• Do a hazard assessment for PPE.
  WAC 296-800-16005.
• Document your hazard assessment for PPE.
  WAC 296-800-16010.
• Select appropriate PPE for your employees.
  WAC 296-800-16015.
• Provide PPE to your employees.
  WAC 296-800-16020.
• Train your employees to use PPE.
  WAC 296-800-16025.
• Retrain employees to use PPE, if necessary.
  WAC 296-800-16030.
• Document PPE training.
  WAC 296-800-16035.
• Require your employees to use necessary PPE on the job.
  WAC 296-800-16040.
• Keep your PPE safe and in good condition.
  WAC 296-800-16045.
• Make sure your employees use appropriate face and eye protection.
  WAC 296-800-16050.
• Make sure your employees use appropriate head protection.
  WAC 296-800-16055.
• Make sure your employees use appropriate foot protection.
  WAC 296-800-16060.
• Make sure your employees use appropriate hand protection.
  WAC 296-800-16065.
• Make sure your employees are protected from drowning.
  WAC 296-800-16070.

Exemption:
• WAC 296-800-16015, 296-800-16025, 296-800-16030, and 296-800-16035 do not apply to electrical protective equipment or respiratory protection. See chapters 296-24 WAC, Part L and chapter 296-842 WAC, for rules about these types of protective equipment.

[Title 296 WAC—p. 2697]
WAC 296-800-16005 Do a hazard assessment for PPE. You must:

- Look for and identify hazards or potential hazards in your workplace and determine if PPE is necessary on the job.

Note: PPE alone should not be relied on to provide protection for your employees. PPE should be used after all other reasonable means of reducing hazards have been carried out. Identifying hazards in your workplace should be built into your regular routine. You should take active steps to get rid of all identified hazards. For example, you can:
  - Consider other ways to get hazardous jobs done.
  - Reduce hazardous materials or processes.
  - Apply engineering controls to reduce or eliminate hazards.

WAC 296-800-16010 Document your hazard assessment for PPE. You must:

- Verify that a hazard assessment for PPE has been done at your workplace and complete a written certification (paper or electronic format) that includes the:
  - Name of the workplace
  - Address of the workplace you inspected for hazards
  - Name of person certifying that a workplace hazard assessment was done
  - Date(s) the workplace hazard assessment was done
  - Statement identifying the document as the certification of hazard assessment for PPE for the workplace

WAC 296-800-16015 Select appropriate PPE for your employees. You must:

1. Select appropriate PPE.
2. Select appropriate PPE for your employees if hazards are present, or likely to be present.
3. Select PPE for each at-risk employee to use for protection from the hazards identified in your workplace hazard assessment.

(2) Select PPE that properly fits each at-risk employee.

Note: The hazards in your workplace have special rules that apply to them. For information about PPE for specific workplaces, see these WISHA rule books:

WAC 296-800-16020 Provide PPE to your employees. You must:

- Provide PPE wherever hazards exist from:
  - Processes or the environment
  - Chemical hazards
  - Radiological hazards or
  - Mechanical irritants that could cause injury or impairment to the function of any body part through absorption, inhalation, or physical contact.

- Provide necessary PPE to employees at no cost to the employee if the PPE:
  - Will be used to protect against hazardous materials
  - Is the type that would not reasonably or normally be worn away from the workplace, such as single use or disposable PPE.

Note: Examples of PPE that the employer must provide are:

- Boots or gloves that could become contaminated with hazardous materials in the workplace.
- Safety glasses, goggles, and nonprescription protective eye wear.
- Goggles that fit over prescription eye wear.
- Hard hats.
- Full body harnesses and lanyards.
- Single use or disposable PPE such as plastic type gloves used in the food service or medical industries. Examples of PPE that the employer may not have to provide are:
  - Coats to protect against inclement weather.
  - Leather boots, with or without steel toes, that will not become contaminated on the job.
  - Prescription protective eye wear (except as part of a full face piece or hooded respirator).

WAC 296-800-16025 Train your employees to use PPE. You must:

- Communicate your PPE selection decision to each at-risk employee.

- Provide training to each employee who is required to use PPE on the job. Each affected employee must be trained to know at least the following:
  - When PPE is necessary
  - What PPE is necessary
  - How to put on, take off, adjust, and wear PPE
– Limitations of PPE
– Proper care, maintenance, useful life, and disposal of PPE.

• Make sure before an employee is allowed to perform work requiring the use of PPE that the employee can:
  – Demonstrate an understanding of the training specified above; and
  – Demonstrate the ability to use PPE properly.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-16040, filed 5/9/01, effective 9/1/01.]

WAC 296-800-16030 Retrain employees to use PPE, if necessary. You must:
• Retrain an employee when you have reason to believe the understanding, motivation, and skills required to use the PPE has not been retained. Circumstances where retraining is required include:
  – Changes in the workplace that make previous training out of date.
  – Changes in the types of PPE to be used make previous training out of date.
  – Work habits or demonstrated knowledge indicate that the employee has not retained the necessary understanding, skill, or motivation to use PPE.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-16030, filed 5/9/01, effective 9/1/01.]

WAC 296-800-16035 Document PPE training. You must:
• Document in writing that each employee using PPE has received and understood the required training.

This documentation must include:
– Name of each employee
– Date(s) of training
– Subject of the training

Note: Documentation may be stored on a computer as long as it is available to safety and health personnel from the department of labor and industries.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-16035, filed 5/9/01, effective 9/1/01.]

WAC 296-800-16040 Require your employees to use necessary PPE on the job. You must:
• Require your employees to use necessary PPE on the job.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-16040, filed 5/9/01, effective 9/1/01.]

WAC 296-800-16045 Keep PPE in safe and good condition. You must:
• Make sure all PPE is safe for the work to be performed.

It must:
– Be durable.
– Fit snugly.
– Not interfere with the employee's movements.
– Make sure PPE is used and maintained in a clean and reliable condition.
– Defective equipment MUST NOT be used.

• Make sure if employees provide their own PPE, that it is adequate for the workplace hazards, and maintained in a clean and reliable condition.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-16045, filed 5/9/01, effective 9/1/01.]

WAC 296-800-16050 Make your employees use appropriate eye and face protection. You must:
• Make sure that employees exposed to hazards that could injure their eyes and/or face use appropriate protection. Examples of these hazards include:
  – Flying particles.
  – Molten metal.
  – Liquid chemicals.
  – Acids or caustic liquids.
  – Chemical gases or vapors.
  – Any light that could injure the eyes such as lasers, ultraviolet, or infrared light.
  – Objects that puncture.
  – Make sure employees exposed to hazards from flying objects have eye protection with side protection, such as safety glasses with clip-on or slide-on side shields.
  – Make sure eye protection for employees who wear prescription lenses:
    – Incorporates the prescription into the design of the eye protection;
    – Is large enough to be worn over the prescription lenses without disturbing them.
  – Make sure PPE used to protect the eyes and face meet the following specific ANSI (American National Standards Institute) standards. Most commercially available PPE is marked with the specific ANSI requirements.
    – If you use eye or face protection that does not meet these ANSI standards, you must show they are equally effective.

Note: ANSI is the American National Standards Institute that publishes nationally recognized safety and health requirements. Their address is:
ANSI (American National Standards Institute)
1819 L Street NW
Washington, DC 20036
Phone: (202) 293-8020
Fax: (202) 293-9287
http://www.ansi.org

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-16050, filed 8/1/02, effective 10/1/02; 01-23-060, § 296-800-16050, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-16050, filed 5/9/01, effective 9/1/01.]

WAC 296-800-16055 Make sure your employees use appropriate head protection. You must:
• Make sure employees wear appropriate protective helmets.
  – Where employees are exposed to hazards that could cause a head injury. Examples of this type of hazard include:
    – Flying or propelled objects.
    – Falling objects or materials.
    – Where employees are working around or under scaffolds or other overhead structures.
• That helmets meet the following specific ANSI standards (most commercially available PPE is marked with specific ANSI requirements):
  – If you use protective helmets that do not meet these ANSI standards, you must show they are equally effective.

(2) Make sure employees working near exposed electrical conductors that could contact their head wear a protective helmet designed (that meet the above ANSI standards) to reduce electrical shock hazard.

• Caps with metal buttons or metal visors must not be worn around electrical hazards.

(3) Make sure employees working around machinery or in locations that present a hair-catching or fire hazard wear caps or head coverings that completely cover their hair.

• Employees must wear a hair net that controls all loose ends when:
  – Hair is as long as the radius of pressure rolls with exposed in-running nip points.
  – Hair is twice as long as the circumference of exposed revolving shafts or tools in fixed machines.

• Employees must wear a hair covering of solid material when:
  – The employee is exposed to an ignition source and may run into an area containing class-1 flammable liquids, such as ether, benzene, or combustible atmospheres if their hair is on fire.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-16055, filed 5/9/01, effective 9/1/01.]

WAC 296-800-16060 Make sure your employees use appropriate foot protection. You must:

(1) Use appropriate foot protection.

• Where employees are exposed to hazards that could injure their feet. Examples of these hazards are:
  – Falling objects
  – Rolling objects
  – Piercing/cutting injuries
  – Electrical hazards

• That meets specific ANSI requirements. (Most commercially available PPE is marked with specific ANSI requirements.)
  – If you use foot protection that does not meet these ANSI standards, you must show it is equally effective.

(2) Make sure your employees wear calks or other suitable footwear to protect against slipping while they are working on top of logs.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-16060, filed 5/9/01, effective 9/1/01.]

WAC 296-800-16065 Make sure your employees use appropriate hand protection. You must:

• Make sure employees exposed to hazards that could injure their hands use appropriate hand protection. Examples of these hazards include:
  – Absorbing harmful substances
  – Severe cuts, lacerations or abrasions
  – Punctures
  – Chemical burns and/or thermal burns
  – Harmful temperature extremes

• Make sure when choosing hand protection, you consider how well the hand protection performs relative to the:
  – Task
  – Conditions present
  – Duration of use
  – Hazards
  – Potential hazards

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-16065, filed 5/9/01, effective 9/1/01.]

WAC 296-800-16070 Make sure your employees are protected from drowning. You must:

(1) Provide and make sure your employees wear personal flotation devices (PFD).

• When they work in areas where the danger of drowning exists, such as:
  – On the water.
  – Over the water.
  – Alongside the water.

Note: Employees are not exposed to the danger of drowning when:
  – Employees are working behind standard height and strength guardrails.
  – Employees are working inside operating cabs or stations that eliminate the possibility of accidentally falling into the water.
  – Employees are wearing an approved safety belt with a lifeline attached that prevents the possibility of accidentally falling into the water.

You must:

• Provide your employees with PFDs approved by the United States Coast Guard for use on commercial or merchant vessels. The following are appropriate or allowable United States Coast Guard-approved PFDs:

<table>
<thead>
<tr>
<th>Type of PFD</th>
<th>General Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type I</td>
<td>Off-shore life jacket - effective for all waters or where rescue may be delayed.</td>
</tr>
<tr>
<td>Type II</td>
<td>Near-shore buoyant vest - intended for calm, inland water or where there is a good chance of quick rescue.</td>
</tr>
<tr>
<td>Type III</td>
<td>Flotation aid - good for calm, inland water, or where there is a good chance of rescue.</td>
</tr>
<tr>
<td>Type V</td>
<td>Flotation aids such as boardsailing vests, deck suits, work vests and inflatable PFDs marked for commercial use.</td>
</tr>
</tbody>
</table>
Note: • Commercially available PFDs are marked or imprinted with the type of PFD.  
• Type IV PFDs are throwable devices. They are used to aid persons who have fallen into the water.

You must:  
• Inspect PFDs before and after each use for defects and make sure that defective PFDs are not used.  
(2) Provide approved life rings with an attached line on all docks, walkways, and fixed installations on or adjacent to water more than five feet deep.
  • Life rings must:  
    – Be United States Coast Guard approved 30 inch size.  
    – Have attached lines that are at least 90 feet in length.  
    – Have attached lines at least 1/4 inch in diameter.  
    – Have attached lines with a minimum breaking strength of 500 pounds.  
    – Be spaced no more than 200 feet apart.  
    – Be kept in easily visible and readily accessible locations.  
  • Life rings and attached lines must:  
    – Be maintained to retain at least 75 percent of their designed buoyancy and strength.  
    – Be provided in the immediate vicinity when employees are assigned work at other casual locations where the risk of drowning exists.  
    – Work assigned over water where the vertical drop from an accidental fall would be more than 50 feet, must be subject to specific procedures as approved by the department.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-16070, filed 8/1/02, effective 10/1/02; 01-11-038, § 296-800-16070, filed 5/9/01, effective 9/1/01.]

EMPLOYER—CHEMICAL HAZARD COMMUNICATION INTRODUCTION

WAC 296-800-170 Employer chemical hazard communication—Introduction.

IMPORTANT:

Thousands of chemicals can be found in today’s workplaces. These chemicals may have the capacity to cause health problems, from minor skin irritations to serious injuries or diseases like cancer. You should review the type of chemicals you use and consider using less hazardous chemicals (such as less toxic and nonflammable chemicals).

The Employer Chemical Hazard Communication rule was developed to make sure employers and employees are informed about chemical hazards in the workplace.

This rule applies to:  
• Employers engaged in businesses where chemicals are used, distributed, or produced for use or distribution.  
• Contractors or subcontractors that work for employers engaged in businesses where chemicals are used, distributed, or produced for use or distribution.

Exemptions:  
• Certain products, chemicals, or items are exempt from this rule. Below is a summarized list of these exemptions. See WAC 296-800-17055 at the end of this rule to get complete information about these exemptions:  
  – Any hazardous waste or substance  
  – Tobacco or tobacco products  
  – Wood or wood products that are not chemically treated and will not be processed, for example, by sawing and sanding  
  – Food or alcoholic beverages  
• Some drugs, such as retail or prescription medications  
• Retail cosmetics  
• Ionizing and nonionizing radiation  
• Biological hazards  
• Any consumer product or hazardous substance when workplace exposure is the same as that of a consumer  
  – Retail products used in offices in the same manner and frequency used by consumers can be termed “consumer products,” and include things such as:  
    Correction fluid, glass cleaner, and dishwashing liquid.  
  Example:  If you use a household cleaner in your workplace in the same manner and frequency that a consumer would use it when cleaning their house, your exposure should be the same as the consumer’s, you are exempt. A janitor using a household cleaner, such as bleach, throughout the day, is not considered to be a consumer, and is not exempt.  
  – Manufactured items that remain intact are exempt from this rule.  
  – Manufactured items that are fluids or in the form of particles are not exempt from this rule.

The following are examples:

<table>
<thead>
<tr>
<th>Item</th>
<th>Covered by this rule</th>
<th>Not covered by this rule</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brick</td>
<td>Sawed or cut in half</td>
<td>Used whole or intact</td>
</tr>
<tr>
<td>Pipe</td>
<td>Cut by a torch</td>
<td>Bent with a tube bender</td>
</tr>
<tr>
<td>Nylon Rope</td>
<td>Burning the ends</td>
<td>Tying a knot</td>
</tr>
</tbody>
</table>

Reference:  
• If you produce, import, distribute and/or repackage chemicals, or choose not to rely on labels or material safety data sheets provided by the manufacturer or importer, you must comply with chemical hazard communication for manufacturers, importers and distributors, WAC 296-62-054.
• You may withhold trade secret information under certain circumstances. See trade secrets, WAC 296-62-053, to find out what information may be withheld as a trade secret and what information must be released.

Your responsibility:

To inform and train your employees about the hazards of chemicals they may be exposed to during normal working conditions, or in foreseeable emergencies by:

• Making a list of the hazardous chemicals present in your workplace  
• Preparing a written Chemical Hazard Communication Program for your workplace  
• Informing your employees about this rule and your program  
• Providing training to your employees about working in the presence of hazardous chemicals  
• Getting and keeping the material safety data sheets (MSDSs) for the hazardous chemicals  
• Making sure that labels on containers of hazardous chemicals are in place and easy to read.

You must:

Develop, implement, maintain, and make available a written Chemical Hazard Communication Program.  

WAC 296-800-17005.

Include multiemployer workplaces in your program if necessary.  

WAC 296-800-17007.  

Identify and list all the hazardous chemicals present in your workplace.  

WAC 296-800-17010.

Obtain and maintain material safety data sheets (MSDS) for each hazardous chemical used.
WAC 296-800-17015. Make sure that material safety data sheets (MSDS) are readily accessible to your employees and NIOSH.

WAC 296-800-17020. Label containers holding hazardous chemicals.

WAC 296-800-17025. Inform and train your employees about hazardous chemicals in your workplace.

WAC 296-800-17030. Follow these rules for laboratories using hazardous chemicals.

WAC 296-800-17035. Follow these rules for handling chemicals in factory sealed containers.

WAC 296-800-17040. The department must:

- Translate certain chemical hazard communication documents upon request.
- Attempt to obtain a material safety data sheet (MSDS) upon request.
- Exemption: Items or chemicals exempt from the rule, and exemptions from labeling.

WAC 296-800-17050. Attempt to obtain a material safety data sheet (MSDS) in a specified location.

WAC 296-800-17055. [Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 03-18-090, § 296-800-170, filed 9/2/03, effective 11/1/03. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-17005, filed 9/2/03, effective 12/1/03; 01-11-038, § 296-800-17005, filed 5/9/01, effective 9/1/01.]

WAC 296-800-17005 Develop, implement, maintain, and make available a written Chemical Hazard Communication Program.

You must:
- Develop, implement, maintain, and make available a written Chemical Hazard Communication Program specific to your workplace. The Chemical Hazard Communication Program must, at a minimum, include:
  - A list of hazardous chemicals known to be present in your workplace.
  - Procedures for making sure all containers are properly labeled.
  - A description of how you are going to obtain and maintain your material safety data sheets (MSDSs).
  - A description of how you are going to train and inform your employees about hazardous chemicals in their workplace.
  - A description of how you are going to inform your employees about:
    - Chemical hazards used during nonroutine tasks.
    - The hazards associated with chemicals contained in unlabeled pipes in employee work areas.

You must:
- Make your Chemical Hazard Communication Program available to your employees.

Note: You must make the written Chemical Hazard Communication Program available, upon request, to employees, their designated representatives, the department and NIOSH, in accordance with the requirements of chapter 296-802 WAC, Employee medical and exposure records.

- Where employees must travel between workplaces during a workshift, that is, if their work is carried out at more than one geographical location, the written Chemical Hazard Communication Program may be kept at the primary workplace facility.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-10-026, § 296-800-17005, filed 4/27/04, effective 8/1/04; 03-18-090, § 296-800-17005, filed 9/2/03, effective 11/1/03. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-17005, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-17005, filed 5/9/01, effective 9/1/01.]

WAC 296-800-17007 Include multiprovider workplaces in your program if necessary.

IMPORTANT:
- Sharing chemical hazard information at multiprovider workplaces is required for the success of your hazard communication program and the success of other employers' programs.
- This section applies to a site where you or your employees work if:
  - Your employees may be exposed to hazardous chemicals used by another employer;
  - Another employer's employees may be exposed to hazardous chemicals you or your employees use.

Examples include employees of construction companies, cleaning services, or maintenance contractors visiting or working on-site.

You must:
- Include, in your written Chemical Hazard Communication Program, the methods you will use to share the following hazard information with other employers when their employees share a workplace with you and are potentially exposed to chemicals you produce, use, or store:
  - How you will provide other employers with a copy of the relevant material safety data sheets (MSDSs), or provide access to the MSDSs in a specified location.
  - How you will inform the other employers of any precautionary measures needed to protect employees during normal operating conditions and in foreseeable emergencies.
  - A description of how you will inform other employers of the labeling system you use.

Note: You may rely on another employer's Chemical Hazard Communication Program to share the information required if the program meets the requirements of this rule.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 03-18-090, § 296-800-17007, filed 9/2/03, effective 11/1/03.]

WAC 296-800-17010 Identify and list all the hazardous chemicals present in your workplace. You must:
- Identify all hazardous chemicals at your workplace.
- This includes any chemical that is known to be present in your workplace in such a way that employees may be exposed to it under normal conditions of use or foreseeably.
  - A description of the chemicals using the chemical or common name on the material safety data sheet (MSDS).

This list:
- Must be compiled for the workplace as a whole, or for individual work areas.

[Title 296 WAC—p. 2702] (2007 Ed.)
– Is necessary to make sure that all hazardous chemicals are identified and that MSDS, and labeling rules are met.

– Must be current.

**Note:** The following are some ways to determine whether a product is hazardous:

• Look for words on the label, such as "CAUTION," "WARNING," or "DANGER."

• Look for words or "hazard coding" that indicate that the chemical is flammable, an irritant, corrosive, carcinogenic, etc. "Hazard coding" refers to words, numbers, or colors that tell you a chemical is dangerous.

• Check the product's MSDS for hazard information.

Examples of hazardous chemicals are: Acids, adhesives, caustics, fuels, paints, varnishes, shells and pesticides. Too many other classes of hazardous chemicals exist to list them all here. If you have any questions about a chemical you have at your workplace, contact your local L&I office (see the resource section of this book).

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-17010, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-17015, filed 5/9/01, effective 9/1/01.]

### WAC 296-800-17015 Obtain and maintain material safety data sheets (MSDSs) for each hazardous chemical used.

**Note:** MSDSs are a type of employee exposure record. Therefore, you must comply with the material safety data sheets (MSDSs) as exposure records, WAC 296-800-180, located in this book.

**You must:**

• Obtain a MSDS for each hazardous chemical used as soon as possible if the MSDS is not provided with the shipment of a hazardous chemical, from the chemical manufacturer or importer.

**Note:**

• To obtain a MSDS, you may try calling the manufacturer or checking their web site.

• If you have a commercial account with a retailer or wholesaler, you have the right to request and receive a MSDS about hazardous chemicals you purchase.

• If a chemical is purchased from a retailer with no commercial accounts, you have the right to request and receive the manufacturer's name and address so that you can contact them and request a MSDS for the chemical.

• Whoever prepares the MSDS is required to mark all blocks on the form, even if there is no relevant information for that section. If you have problems getting a MSDS within 30 calendar days after making a written request to the chemical manufacturer, importer, or distributor, you can get help from WISHA.

You may contact your local regional office for assistance or make a written request for assistance to the Department of Labor and Industries Right-to-Know Program P.O. Box 44610 Olympia, Washington 98504-4610.

Include in your request:

– A copy of the purchaser's written request to the chemical manufacturer, importer, or distributor.

– The name of the product suspected of containing a hazardous chemical.

– The identification number of the product, if available.

– A copy of the product label, if available.

– The name and address of the chemical manufacturer, importer, or distributor from whom the product was obtained.

**You must:**

• Maintain a MSDS for each hazardous chemical:

– Keep copies of the required MSDSs for each hazardous chemical present in your workplace.

– Each MSDS must be in English. You may also keep copies in other languages.

(2007 Ed.)

### WAC 296-800-17020 Make sure material safety data sheets (MSDSs) are readily accessible to your employees and NIOSH.

**You must:**

• Make sure that MSDSs are readily accessible, easily obtained without delay during each work shift by employees when they are in their work area(s).

• Make sure that employees, who must travel between workplaces during a work shift, such as when their work is carried out at more than one geographical location, can immediately obtain the required MSDS information in an emergency. (MSDSs may be kept at a central location at the primary workplace facility and accessed by means such as voice communication or laptop computer.)

**Note:**

• Electronic access (such as computer or fax), microfiche, and other alternatives to maintaining paper copies of the MSDSs are permitted as long as they do not create barriers to immediate employee access in each workplace.

• Barriers to immediate access of electronic MSDSs may include:

  – Power outages

  – Equipment failure

  – System delays

  – Deficient user knowledge to operate equipment

  – Location of equipment outside the work area.

Solutions to eliminating these and other possible barriers to access may require the availability of back-up systems, employee training, and providing access equipment in the work areas.

**You must:**

• Make MSDSs readily available, when requested, to representatives of the National Institute for Occupational Safety and Health (NIOSH).

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 03-18-090, § 296-800-17015, filed 9/2/03, effective 11/1/03. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-17015, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-17015, filed 5/9/01, effective 9/1/01.]

### WAC 296-800-17025 Label containers holding hazardous chemicals.

**Exemptions:**

• The following is a summary of items that are exempt from this rule:

  – Pesticides, when labeled as required by the Environmental Protection Agency (EPA).

  – Food, food additives, color additives, drugs, cosmetics, or medical/veterinary devices or products.

  – Alcoholic beverages not intended for industrial use.

  – Consumer products labeled as required by the Consumer Product Safety Commission.

  – Agriculture or vegetable seeds treated and labeled as required by the Federal Seed Act.

For complete information about each of these, see WAC 296-800-17055.

**Note:** You are not required to label portable containers into which hazardous chemicals are transferred from labeled containers, if the chemical is used and controlled by the same employee who performed the transfer within the same shift.

**You must:**

(2007 Ed.)
Employers with non-English speaking employees may use labeling, tagging, or marking with the following:

- The identity of the hazardous chemical(s) using either the chemical or common name.
- Appropriate hazard warnings which give general information about the relevant health and physical hazards of the chemicals. This includes health effects information, such as information about organs most likely to be affected by the chemicals.
- For individual stationary process containers, you may use alternate labeling methods such as:
  - Signs
  - Placards
  - Process sheets
  - Batch tickets
  - Operating procedures or
  - Other such written materials, as long as the alternate method identifies the containers and conveys the required label information.

Note: You do not need to put on new labels if existing labels already provide the required information.
You are not required to list each component in a hazardous mixture on the label. If a mixture is referred to on an MSDS by a product name, then the product name should be used as the identifier.
You may use words, pictures, symbols, or any combination of these, to communicate the hazards of the chemical.

Sample Container Labels

- Be sure to train your employees so they can demonstrate a knowledge of the labeling system you use.
- Some alternative labeling systems do not communicate target organ information, so the employee will have to rely on training provided by the employer to obtain this information.

You must:
- Not remove or deface existing labels on incoming containers of hazardous chemicals unless the container is immediately labeled with the required information.

Make sure that each container of hazardous chemicals in the workplace is labeled, tagged, or marked with the following information:

- The identity of the hazardous chemical(s) using either the chemical or common name.
- Appropriate hazard warnings which give general information about the relevant health and physical hazards of the chemicals. This includes health effects information, such as information about organs most likely to be affected by the chemicals.
- For individual stationary process containers, you may use alternate labeling methods such as:
  - Signs
  - Placards
  - Process sheets
  - Batch tickets
  - Operating procedures or
  - Other such written materials, as long as the alternate method identifies the containers and conveys the required label information.

Note: You do not need to put on new labels if existing labels already provide the required information.
You are not required to list each component in a hazardous mixture on the label. If a mixture is referred to on an MSDS by a product name, then the product name should be used as the identifier.
You may use words, pictures, symbols, or any combination of these, to communicate the hazards of the chemical.

Sample Container Labels

- Be sure to train your employees so they can demonstrate a knowledge of the labeling system you use.
- Some alternative labeling systems do not communicate target organ information, so the employee will have to rely on training provided by the employer to obtain this information.

You must:
- Not remove or deface existing labels on incoming containers of hazardous chemicals unless the container is immediately labeled with the required information.

Make sure that labels or other forms of warning are legible, in English, and prominently displayed on the container, or readily available in the work area throughout each work shift.

Note: Employers with non-English speaking employees may use other languages in the warning information in addition to the English language.

Make sure if the hazardous chemical is regulated by WISHA or OSHA in a substance-specific health rule, that the labels or other warnings are used according to those rules.

WAC 296-800-17030 Inform and train your employees about hazardous chemicals in your workplace. You must:
- Provide employees with effective information on hazardous chemicals in their work area at the time of their initial job assignment. Whenever a new physical or health hazard related to chemical exposure is introduced into their employees’ work areas, information must be provided.
  - Inform employees of:
    - The requirements of this rule
    - Any operations in their work area where hazardous chemicals are present
    - The location and availability of your written Chemical Hazard Communication Program, including the list(s) of hazardous chemicals and material safety data sheets (MSDSs) required by this rule.
  - Provide employees with effective training about hazardous chemicals in their work area at the time of their initial job assignment. Whenever a new physical or health hazard related to chemical exposure is introduced, the employees must be trained.
  - Make sure employee training includes:
    - Methods and observations that may be used to detect the presence or release of a hazardous chemical in the work area. Examples of these methods and observations may include:
      - Monitoring conducted by you
      - Continuous monitoring devices
      - Visual appearance or odor of hazardous chemicals when being released
        - Physical and health hazards of the chemicals in the work area, including the likely physical symptoms or effects of overexposure
        - Steps employees can take to protect themselves from the chemical hazards in your workplace, including specific procedures implemented by you to protect employees from exposure to hazardous chemicals. Specific procedures may include:
          - Appropriate work practices
          - Engineering controls
          - Emergency procedures
          - Personal protective equipment to be used
          - Details of the chemical hazard communication program developed by you, including an explanation of the labeling system and the MSDS, and how employees can obtain and use the appropriate hazard information.

(2007 Ed.)
• Tailor information and training to the types of hazards to which employees will be exposed. The information and training may be designed to cover categories of hazards, such as flammability or cancer-causing potential, or it may address specific chemicals. Chemical-specific information must always be available through labels and MSDSs.

• Make reasonable efforts to post notices in your employees’ native languages (as provided by the department) if those employees have trouble communicating in English.

Note: • Interactive computer-based training or training videos can be used provided they are effective.

• Your MSDSs may not have WISHA permissible exposure limits (PELs) listed. In some cases, WISHA PELs are stricter than the OSHA PELs and other exposure limits listed on the MSDSs you receive. If this is the case, you must refer to the WISHA PEL table, WAC 296-62-075, for the appropriate exposure limits to be covered during training.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-17030, filed 8/1/02, effective 10/1/02; 01-23-060, § 296-800-17030, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-17030, filed 5/9/01, effective 9/1/01.]

WAC 296-800-17035 Follow these rules for laboratories using hazardous chemicals.

Note: • Laboratories are required to have a written chemical hygiene plan under chapter 296-828 WAC, if applicable. They are not required to have a written Chemical Hazard Communication Program.

• You may combine your accident prevention program and chemical hazard communication program to assist you in developing a chemical hygiene plan for your laboratory.

You must:

(1) Make sure that labels on incoming containers of hazardous chemicals are in place and readable.

(2) Maintain material safety data sheets (MSDSs) received with incoming shipments of hazardous chemicals and make them readily accessible to laboratory employees when they are in their work areas.

(3) Provide laboratory employees with information and training as described in: "Inform and train your employees about hazardous chemicals in your workplace." WAC 296-800-17030. You do not have to cover the location and the availability of the Hazard Communication Program.

[Statutory Authority: RCW 49.17.010, 49.17.040, and 49.17.050. 01-23-060, § 296-800-17035, filed 1/3/06, effective 4/1/06. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-17035, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-17035, filed 5/9/01, effective 9/1/01.]

WAC 296-800-17040 Follow these rules for handling chemicals in factory-sealed containers. This applies to situations where employees only handle chemicals in factory-sealed containers that are not opened under normal use (such as those found in marine cargo handling, trucking, warehousing, or retail sales).

You must:

(1) Make sure that labels on incoming containers of hazardous chemicals are in place and readable.

(2) Keep or obtain material safety data sheets (MSDSs).

(2007 Ed.)

• Keep any MSDSs that are received with incoming shipments of the sealed containers of hazardous chemicals.

• If a factory-sealed container of hazardous chemicals comes without a MSDS, obtain one as soon as possible, if an employee requests it.

(3) Make sure that the MSDSs are readily accessible during each work shift to employees when they are in their work area(s).

(4) Inform and train your employees about hazardous chemicals in your workplace, to protect them in case of a hazardous chemical spill or leak from a factory-sealed container. You do not have to cover the location and availability of the written Chemical Hazard Communication Program.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-17040, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-17040, filed 5/9/01, effective 9/1/01.]

WAC 296-800-17045 Translate certain chemical hazard communication documents upon request. The department must:

• Upon receipt of a written or verbal request, prepare and make available (within available resources) to employers or the public, a translation into Cambodian, Chinese, Korean, Spanish, or Vietnamese of any of the following:

  – An employer's written Chemical Hazard Communication Program.

  – A material safety data sheet or

  – Written materials prepared by the department to inform employees of their rights described in this rule, regarding chemical hazard communication.

Note: Written requests for translations should be directed to:

Department of Labor and Industries
Right-to-Know Program
P.O. Box 44610
Olympia, Washington 98504-4610.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-17045, filed 5/9/01, effective 9/1/01.]

WAC 296-800-17050 Attempt to obtain a material safety data sheet (MSDS) upon request. The department must:

• Upon receipt of an employer's written request for a material safety data sheet, attempt to obtain the MSDS from the chemical manufacturer, importer, or distributor. When the department receives the MSDS, the department must forward a copy of it to the purchaser at no cost. Small business employers will be given priority for this service.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-17050, filed 5/9/01, effective 9/1/01.]

WAC 296-800-17055 Items or chemicals exempt from the rule, and exemptions from labeling.

• Listed below are the full descriptions of the items or chemicals that are exempt, or not covered, by this rule:

  – Any consumer product or hazardous substance, defined in the Consumer Product Safety Act (15 U.S.C. 2051 et seq.) and Federal Hazardous Substance Act (15 U.S.C. 1261 et seq.) respectively, where you can show that it is used in the workplace for the purpose intended by the chemical manufacturer or importer of the product, and the use results in a duration and frequency of exposure that is not greater
than the range of exposures that could reasonably be experienced by consumers when used for the purpose intended.

– Any hazardous waste defined by the Hazardous Waste Management Act chapter 70.105 RCW, when subject to regulations issued under that act by the department of ecology that describes specific safety, labeling, personnel training, and other rules for the accumulation, handling and management of hazardous waste.

– Any hazardous waste defined by the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976, as amended (42 U.S.C. 6901 et seq.), when subject to regulations issued under that act by the Environmental Protection Agency.

– Any hazardous substance defined by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. 9601 et seq.), when the hazardous substance is the focus of remedial or removal action being conducted under CERCLA in accordance with Environmental Protection Agency regulations.

– Tobacco or tobacco products.

– Wood or wood products, including lumber that will not be processed, where the chemical manufacturer or importer can establish that the only hazard they pose to the employees is the potential for flammability or combustibility. Wood or wood products that have been treated with hazardous chemicals covered by this rule, and wood that may be subsequently sawed or cut, generating dust, are not exempted.

– Articles, meaning manufactured items other than a fluid or particle that:
  ✦ Are formed to a specific shape or design during manufacture;
  ✦ Have end use function(s) dependent in whole or in part upon their shape or design during end use; and
  ✦ Under normal conditions of use, do not release more than very small quantities, for example, minute or trace amounts of a hazardous chemical such as, emissions from a marking pen or a newly varnished wood chair, and do not pose a physical hazard or health risk to employees
  – Food or alcoholic beverages that are sold, used, or prepared in a retail establishment such as a grocery store, restaurant, or drinking place, and foods intended for personal consumption by employees while in the workplace.

– Any drug, defined in the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 301 et seq.), when it is in solid, final form for direct administration to the patient (for example, tablets or pills); drugs that are packaged by the chemical manufacturer for sale to consumers in a retail establishment (for example, over-the-counter drugs); and drugs intended for personal consumption by employees while in the workplace (for example, first-aid supplies). Aerosolized or cytotoxic drugs administered by a health care worker are not excluded.

– Cosmetics packaged for sale to consumers in a retail establishment, and cosmetics intended for personal consumption by employees while in the workplace.

– Ionizing and nonionizing radiation.

– Biological hazards.

• This rule does not require labeling of the following chemicals:
  – Any pesticide defined in the Federal Insecticide, Fungicide, and Rodenticide Act (7 U.S.C. 136 et seq.), when subject to the labeling requirements of that act and labeling regulations issued under that act by the Environmental Protection Agency.

  – Any chemical substance or mixture defined in the Toxic Substance Control Act (15 U.S.C. 2601 et seq.), when subject to the labeling requirements of that act, and labeling requirements issued under that act by the Environmental Protection Agency.

  – Any food, food additive, color additive, drug, cosmetic, or medical/veterinary device or product, including materials intended for use as ingredients in such products (for example, flavors and fragrances), are defined in the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 301 et seq.) or the Virus-Serum Toxin Act of 1913 (21 U.S.C. 151 et seq.) and regulations issued under those acts, when they are subject to the labeling requirements under those acts by either the Food and Drug Administration or the Department of Agriculture.

  – Agricultural or vegetable seed treated with pesticides and labeled in accordance with the Federal Seed Act (7 U.S.C. 1551 et seq.) and the labeling requirements issued under that act by the Department of Agriculture.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-17055, filed 5/9/01, effective 9/1/01.]

WAC 296-800-180 Material safety data sheets (MSDSs) as exposure records. Important: Exposure records contain information about employees’ exposure to toxic substances or harmful physical agents. Material safety data sheets (MSDSs) are one type of exposure record. The preservation of and access to exposure records is necessary to improve detection, treatment, and prevention of occupational diseases.

This rule supplements the chemical hazard communication rule by extending access to MSDSs, or their alternative, after employment and after the hazardous chemical is no longer used in the workplace.

Your responsibility:
To preserve and provide access to material safety data sheets (MSDSs) or their alternative as exposure records.

You must:
Preserve exposure records for at least 30 years.
WAC 296-800-18005.
Inform current employees of exposure records.
WAC 296-800-18010.
Provide access to exposure records.
WAC 296-800-18015.
Transfer records when ceasing to do business.
WAC 296-800-18020.
WAC 296-800-18005  Preserve exposure records for at least 30 years. You must:

• Keep material safety data sheets (MSDSs) and analysis using MSDSs for at least thirty years, including current, former, and future employers receiving transferred records. Preserve MSDSs in any form, as long as the information is not altered and is retrievable. You may keep alternative records instead of MSDSs concerning the identity of a substance. The alternative record must also be kept for thirty years and contain the following information:
  – Some record of the identity (chemical name, if known) of a substance or agent
  – Where the substance or agent was used
  – When the substance or agent was used

Note: Keeping alternative records may be less work than you think. When developing your hazard communication program's list of hazardous chemicals (WAC 296-800-17010), add the "where used" and "when used" information required by this rule.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-18010, filed 8/1/02, effective 10/1/02; 01-11-038, § 296-800-18010, filed 5/9/01, effective 9/1/01.]

WAC 296-800-18010  Inform current employees of exposure records. You must:

• Inform current employees who are, or will be exposed to a toxic chemical of:

  Note: A chemical is toxic if:
  • The latest printed edition of the National Institute for Occupational Safety and Health (NIOSH) Registry of Toxic Effects of Chemical Substances (RTECS) lists the substance. This may be obtained on-line, CD-ROM, or on a computer tape.
  • Testing by or known to the employer has shown positive evidence that the substance is an acute or chronic health hazard.
  • A material safety data sheet (MSDS) kept by or known to the employer shows the material may be a hazard to human health.
  – The existence, location, and availability of MSDSs or alternative records, and any other records covered by this rule.
  – The person responsible for maintaining and providing access to records.
  – Exposure records when the employee first enters into employment and then once a year thereafter.
  – Existence and their rights of access to these records.

Note: Informing employees of the availability of these records may be accomplished by posting, group discussion or by individual notifications.

You must:

• Keep a copy of this rule and make copies available upon request to employees.
• Distribute to employees any informational materials about this rule that are made available to the employer by the department.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-18010, filed 8/1/02, effective 10/1/02; 01-11-038, § 296-800-18010, filed 5/9/01, effective 9/1/01.]

WAC 296-800-18015  Provide access to exposure records. You must:

• Provide access, whenever requested by an employee or their designated representative, to a relevant exposure record:
  – In a reasonable time, place, and manner.
  – Within fifteen working days. If the employer cannot meet this requirement, they must inform the requesting party of the reason for the delay and the earliest date the record will be made available.

Note: Employee means any current, former or transferred worker.
• A relevant exposure record is an MSDS or its alternative or analysis using MSDSs or their alternative.

You must:

• Make sure labor and industries has prompt access to any exposure records and related analysis. This must be done without violation of any rights under the Constitution or the Washington Industrial Safety and Health Act that the employer chooses to exercise.

Note: Nothing in this rule is meant to prevent employees and collective bargaining agents from getting access to information beyond that is required by this rule.

You must:

• Make sure that whenever an employee or designated representative requests an initial copy of an exposure record, related analysis or new information added to the record:
  – A copy of the record is provided without cost to the employee or their representative or
  – The facilities are made available for copying without cost to the employee or their representative or
  – The record is loaned to the employee or their representative for a reasonable time to enable a copy to be made.

Note: Whenever a record has been previously provided without cost to an employee or designated representative, and they request additional copies, the employer may charge reasonable, non-discriminatory administrative costs (e.g., search and copying expenses, but no overhead expenses).

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-18010, filed 8/1/02, effective 10/1/02; 01-11-038, § 296-800-18010, filed 5/9/01, effective 9/1/01.]

WAC 296-800-18020  Transfer records when ceasing to do business. You must:

• Transfer all material safety data sheets (MSDSs) as exposure records to the successor employer, who must do the following to these records:
  – Received
  – Preserve
  – Keep unchanged
  – If there is no successor to receive and preserve the employee exposure records:

296-800-18020

(2007 Ed.)
SAFETY BULLETIN BOARD

WAC 296-800-190 Summary/rule. Your responsibility: To provide a safety bulletin board.
[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-19005, filed 5/9/01, effective 9/1/01.]

WAC 296-800-19005 Provide a safety bulletin board in your workplace. You must:
• Install and maintain a safety bulletin board in every fixed workplace (establishment) that has eight or more employees. Make sure the safety bulletin board is large enough to post information such as the following:
  – Safety bulletins
  – Safety newsletters
  – Safety posters
  – Accident statistics
  – Other safety educational material.

Note: You may want to post your emergency phone numbers on the safety bulletin board.
[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-19005, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-20005, filed 5/9/01, effective 9/1/01.]

WISHA POSTER

WAC 296-800-200 WISHA poster. Your responsibility: To post the WISHA poster, which informs your employees of their job safety and health protection rights.
[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-20005, filed 5/9/01, effective 9/1/01.]

WAC 296-800-20005 Post and keep a WISHA poster in your workplace. You must:
• Post it where it can easily be seen by employees and keep it in good condition.

Note:
• Other programs within labor and industries may require other workplace posters. These are:
  – Job safety and health protection
  – Notice to employees—If a job injury occurs
  – Your rights as a nonagricultural worker
  – You can obtain a free copy of labor and industries posters from any labor and industries office or by printing it off our web site (http://www.lni.wa.gov/ipub/101-054-000.htm).
  You can find the labor and industries office closest to you by:
  • Checking the resource section of this book for regional offices.
  OR
  – Calling 1-800-4BE SAFE (1-800-423-7233)
  OR
  – http://www.lni.wa.gov/wisha/question.htm/contact.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-20005, filed 8/1/02, effective 10/1/02; 01-23-060, § 296-800-20005, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-20005, filed 5/9/01, effective 9/1/01.]

LIGHTING

WAC 296-800-210 Lighting. Your responsibility: To provide and maintain adequate lighting in your workplace.
[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-21005, filed 5/9/01, effective 9/1/01.]

WAC 296-800-21005 Provide and maintain adequate lighting.

Note: This section establishes minimal levels of lighting for safety purposes only. Guidelines pertaining to optimal levels of lighting and illumination may be found in Practice for Industrial Lighting, ANSI/IES RP7-1979. (See the resource section of this book on how to contact ANSI.)

You must:
• Provide and maintain adequate lighting for all work activities in your workplace. See the following table.

<table>
<thead>
<tr>
<th>Activity</th>
<th>Minimum acceptable average lighting level in an area:</th>
<th>Any one single measurement used to determine the average lighting level* cannot be less than:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Indoor task</td>
<td>10</td>
<td>(Foot-candles)</td>
</tr>
<tr>
<td>Outdoor task</td>
<td>5</td>
<td>2.5</td>
</tr>
<tr>
<td>Nontask activities for both indoor and outdoor</td>
<td>3</td>
<td>1.5</td>
</tr>
</tbody>
</table>

* Lighting levels must be measured at thirty inches above the floor/working surface at the task.

You must:
• Have adequate light for employees to see nearby objects that might be potential hazards or to see to operate emergency controls or other equipment, if general lighting is not available.

Note: Lighting levels can be measured with a light meter. Conversion information: 1 foot-candle = 1 lumen incident per square foot = 10.76 lux.
[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-21005, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-21005, filed 5/9/01, effective 9/1/01.]

HOUSEKEEPING, DRAINAGE, AND STORAGE

WAC 296-800-220 Housekeeping, drainage, and storage—Summary. Your responsibility: To provide your employees with a clean, dry, pest-free workplace.

Note: The introduction has important information about building, electrical, and fire codes that may apply to you in addition to WISHA rules. See "How do the WISHA rules relate to building, fire, and electrical codes" in the introduction section of this book.

You must:
Housekeeping
Keep your workplace clean.

WAC 296-800-22005
Sweep and clean your workplace to minimize dust.

WAC 296-800-22010.

Keep your workplace free of obstacles that interfere with cleaning.

WAC 296-800-22015.

Control pests in your workplace.

WAC 296-800-22020.

Make sure floors are maintained in a safe condition.

WAC 296-800-22022.

Storage areas

Store things safely.

WAC 296-800-22035.

Control vegetation in your storage areas.

WAC 296-800-22040.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-22025, filed 5/9/01, effective 9/1/01.]

WAC 296-800-22005 Keep your workplace clean. You must:

• Keep all areas of your workplace, passageways, storage rooms, and service rooms in a clean, orderly and sanitary condition to the extent the nature of the work allows.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-22005, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-22020, filed 5/9/01, effective 9/1/01.]

WAC 296-800-22010 Sweep and clean your workplace to minimize dust. You must:

• Sweep and clean your workplace in a way that minimizes dust in the air as much as possible.

• When practical, clean after hours so that your employees are not exposed to dust in the air on the job.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-22010, filed 5/9/01, effective 9/1/01.]

WAC 296-800-22015 Keep your workplace free of obstacles that interfere with cleaning. You must:

• Keep your workplace clear of obstructions such as nails, splinters, loose boards and unnecessary holes and openings to make cleaning easier and more effective.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-22015, filed 5/9/01, effective 9/1/01.]

WAC 296-800-22020 Control pests in your workplace. You must:

• Make sure each building in your workplace is constructed, equipped and maintained so it restricts pests from entering or living in it. Pests include animals such as:
  – Rodents (rats, mice, and squirrels)
  – Birds (starlings, pigeons, and swallows)
  – Insects (bees, wasps, and mosquitoes)

• Take steps to effectively control pests in your workplace, if they are detected.

  – Carry out a continuing and effective control program in the areas of your workplace where pests have been detected.

  – Secure stored items such as bundles, containers, and bags to prevent them from falling, sliding, or collapsing by doing one or more of the following:
    – Stacking
    – Racking
    – Blocking
    – Interlocking
    – Otherwise securing them

• By handling dead or live pests including their waste products, attached parasites and other contaminated materials, your employees may be exposed to certain health risks. These risks include, but are not limited to: Hanta virus, rabies, lyme disease and psittacosis. Contact your local L&I office (see resource section of this book) or the public health department for more information about health risks and proper pest handling and disposal techniques.

• “Workplace” includes storage areas.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-22020, filed 5/9/01, effective 9/1/01.]

WAC 296-800-22022 Make sure floors are maintained in a safe condition. You must:

• Make sure floors are kept free of debris. This includes:
  – Buildings
  – Platforms
  – Walkways and driveways
  – Storage yards
  – Docks

• Use a nonslip coating on all polished floors.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-22022, filed 5/9/01, effective 9/1/01.]

DRAINAGE

WAC 296-800-22025 Keep your workroom floors dry, when practical. You must:

• Do the following to help keep your employees dry if wet processes are used in your work area:
  – Maintain drainage away from the work area; and
  – Provide false floors, platforms, or other dry places where employees can stand, where practical, or
    – Provide appropriate waterproof footgear.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-22025, filed 5/9/01, effective 9/1/01.]

WAC 296-800-22030 Provide proper drainage. You must:

• Provide all areas where employees work, such as yards, basements, or garages, with adequate drainage.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-22030, filed 5/9/01, effective 9/1/01.]

STORAGE AREAS

WAC 296-800-22035 Store things safely. You must:

• Store materials so they do not create a hazard.

• Keep workplace storage areas free from accumulation of materials that could create hazards from tripping, fire, or explosion.

• Secure stored items such as bundles, containers, and bags to prevent them from falling, sliding, or collapsing by doing one or more of the following:
  – Stacking
  – Racking
  – Blocking
  – Interlocking
  – Otherwise securing them

• Make sure stored items are limited in height so that they are stable and secure to prevent sliding or collapse.

[Title 296 WAC—p. 2709]
WAC 296-800-22040 Control vegetation in your storage areas. You must:

- Control vegetation in your storage areas when necessary to create a safe working environment.

Sanitation and hygiene facilities and procedures

WAC 296-800-230 Summary.

Your responsibility:

To provide safe drinking (potable) water, bathrooms, washing facilities, eating areas and garbage and waste disposal in your workplace.

You must:

General requirements for all workplaces.

Drinking water

Provide safe drinking (potable) water in your workplace. WAC 296-800-23005.

Clearly mark water outlets that are not fit for drinking (nonpotable). WAC 296-800-23010.

Make sure systems delivering not fit for drinking (nonpotable) water prevent backflow into drinking water systems. WAC 296-800-23015.

Bathrooms and washing facilities

Provide bathrooms for your employees. WAC 296-800-23020.

Provide convenient, clean washing facilities. WAC 296-800-23025.

Eating areas and food service

Make sure eating areas are safe and healthy. WAC 296-800-23040.

Follow these requirements if you provide food service to your employees. WAC 296-800-23045.

Garbage and waste disposal

Dispose of garbage and waste safely. WAC 296-800-23050.

Remove garbage and waste in a way that does not create a health hazard. WAC 296-800-23055.
(3) Prohibit employees from:
- Using shared drinking cups or utensils.
- Using open containers such as barrels, pails, and tanks that require employees to dip or pour drinking water, even if the containers have covers.

**Definition:**
- Potable water is water that you can safely drink that meets specific safety standards prescribed by the United States Environmental Protection Agency's National Interim Primary Drinking Water Regulations, published in 40 CFR Part 141, and 40 CFR 147.2400.
- Personal service rooms are used for activities not directly connected with a business' production or service function such as first aid, medical services, dressing, showering, bathrooms, washing and eating.

**WAC 296-800-23010** Clearly mark the water outlets that are not fit for drinking (nonpotable).
You must:
1. Mark water outlets that are not fit for drinking (nonpotable), such as those used for industrial processes or fire fighting, so they will not be used for:
   - Drinking
   - Washing themselves, except in emergencies
   - Cooking
   - Washing food, eating utensils, or clothing.
2. Prohibit the use of nonpotable water containing substances that could create unsafe conditions such as:
   - Concentrations of chemicals, such as lead or chlorine
   - Fecal coliform bacteria.

**Note:** As long as the nonpotable water is free of substances that could create unsafe conditions, the water can be used for cleaning both:
- Work premises used for activities other than food preparation or processing
- Personal service rooms, such as bathrooms.

**Reference:** You may need to follow additional requirements for emergency washing facilities. See WAC 296-800-150 First aid, for more information.

**WAC 296-800-23015** Make sure that systems delivering not-fit-for-drinking (nonpotable) water prevent backflow into drinking water systems. You must:
- Make sure that systems delivering not-fit-for-drinking (nonpotable) water prevent backflow into drinking water systems.

**BATHROOMS AND WASHING FACILITIES**

**WAC 296-800-23020** Provide bathrooms for your employees.

**Exemption:** You do not have to provide bathrooms:
For mobile crews or at work locations not normally attended by employees, if there is transportation immediately available to nearby bathrooms that meet the requirements of this section.

**You must:**
1. Provide bathrooms with the appropriate number of toilets for your employees at every workplace based on Table 1.
   - Have an appropriate number of toilets for each gender, based on the number of male and female employees at your workplace.
     - For example, if you have thirty-seven men and seventeen women, you need to have three toilets for the men and two toilets for the women, based on Table 1.
   - Make sure each toilet is in a separate compartment with a door and walls or partitions for privacy.

<table>
<thead>
<tr>
<th>Maximum Number of Employees Present at Any One Time During a Shift</th>
<th>Minimum Number of Toilets Required</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 to 15</td>
<td>1</td>
</tr>
<tr>
<td>16 to 35</td>
<td>2</td>
</tr>
<tr>
<td>36 to 55</td>
<td>3</td>
</tr>
<tr>

<td>4</td>
</tr>
<tr>
<td>81 to 110</td>
<td>5</td>
</tr>
<tr>
<td>111 to 150</td>
<td>6</td>
</tr>
<tr>
<td>Over 150</td>
<td>One additional toilet for each additional 40 employees</td>
</tr>
</tbody>
</table>

**Note:** A shared bathroom (multiple toilets without enclosures) counts as one toilet no matter how many toilets it contains. In bathrooms used only by men, urinals may be substituted for up to 1/3 of the required toilets.
You must:
(2) Provide toilet paper and a toilet paper roll holder for each toilet.
(3) Make sure bathrooms are maintained in a clean and sanitary condition.
(4) Make sure the sewage disposal method does not endanger the health of employees.
Exemption: Separate bathrooms for men and women are not required if the bathroom:
• Will only be occupied by one person at a time.
• Can be locked from the inside.
• Contains at least one toilet.

WAC 296-800-23025 Provide convenient and clean washing facilities.
Exemption: You do not have to provide washing facilities for:
• Mobile crews or work locations not normally attended by employees, if there is immediately available transportation to nearby washing facilities that meet the requirements of this rule.

You must:
• Provide convenient and clean washing facilities for employees including:
  – Sinks or basins for personal washing
  – Hot and cold water, or lukewarm (tepid), running water in each sink and basin
  – Hand soap or similar cleaning agents
  – One of the following:
    • Individual paper or cloth hand towels
    • Individual sections of clean continuous cloth toweling
    • Warm air blowers for drying hands, located near the sinks and basins.

WAC 296-800-23040 Make sure eating areas are safe and healthy.
You must:
(1) Make sure employees are not allowed to eat and drink in:
  • Bathrooms.
  • Areas exposed to toxic substances.
(2) Make sure food is not stored in bathrooms or areas exposed to toxic substances.

WAC 296-800-23045 Follow these requirements if you provide food service to your employees.
You must:
• Make sure all food service facilities and operations you make available follow sound hygiene principles.
• Make sure the food is:
  – Unspoiled.
  – Protected from contamination during processing, preparation, handling, and storage.

WAC 296-800-23050 Dispose of garbage and waste safely.
You must:
(1) Make sure garbage containers are:
  • Kept in a clean and sanitary condition.
  • Made from smooth, corrosion resistant materials.
  • Easily cleaned or are disposable.
  • Equipped with a solid tight-fitting cover unless you can keep them in a sanitary condition without a cover.
(2) Provide enough garbage containers to make sure they:
  • Are conveniently located to encourage their use.
  • Won’t be overfilled.

WAC 296-800-23055 Remove garbage and waste in a way that does not create a health hazard.
You must:
• Remove all sweepings, solid and liquid wastes, refuse, and garbage as often as needed to keep the workplace in a sanitary condition.

WAC 296-800-23060 Provide a separate lunchroom if employees are exposed to toxic substances if they are allowed to eat and drink on the job site.
You must:
(1) Provide a lunchroom separate from the work area if employees are exposed to toxic substances.
(2) Use Table 2 to determine the required square footage in your lunchroom based on the number of employees using the room at any one time.

### Table 2: Maximum Number of Employees Using Lunchroom at One Time

<table>

Note: You do not have to provide a separate lunchroom if it is convenient for employees to leave the workplace to eat and drink.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 03-18-090, § 296-800-23060, filed 9/2/03, effective 11/1/03.]
WAC 296-800-23065 Provide showers when required for employees working with chemicals.

You must:
- Provide showers for employees if:
  - They work with chemicals that could cause an occupational illness;
  - AND
  - The chemicals remain on the skin between work shifts.
  - Make sure employees who work with such chemicals shower at the end of their shifts.
  - Make sure showers have:
    - Soap or other cleansing agents.
    - Hot and cold water with a common discharge line.
  - Provide individual, clean towels for each employee who is required to shower.
  - Provide at least one shower for every ten employees (or every fraction of 10) of each gender.

Note: Table 3 shows the number of showers to provide based on a "fraction of 10."

WAC 296-800-23070 Provide change rooms when required.

You must:
- Provide change rooms when employees are required by a particular standard to wear protective clothing because of the possibility of contamination with toxic materials.
- Make sure change rooms have separate storage facilities for street clothes and protective clothing.

WAC 296-800-23075 Make sure any work clothes you provide are dry.

You must:
- Make sure when providing work clothes to employees that the clothing provided is dry if the clothing:
  - Gets wet during use;
  - OR
  - Is washed before it is reused.

ENVIRONMENTAL TOBACCO SMOKE IN THE OFFICE

WAC 296-800-240 Summary. Your responsibility: To eliminate exposure to environmental tobacco smoke in your office work environment.

You must:
- Prohibit tobacco smoke in your office work environment WAC 296-800-24005.

Note: This rule does not preempt any federal, state, municipal, or other local authority’s regulation of indoor smoking that is more protective than this section.

Definition: Office work environment is an indoor or enclosed occupied space where clerical work, administration, or business is carried out. In addition, it includes:
- Other workplace spaces controlled by the employer and used by office workers, such as cafeterias, meeting rooms, and washrooms.
- Office areas of manufacturing and production facilities, not including process areas.
- Office areas of businesses such as food and beverage establishments, agricultural operations, construction, commercial trade, services, etc.

Link:
For work environments outside the office, contact your local health department using the link http://www.secondhandsmokesyou.com or by calling them directly.

WAC 296-800-24005 Prohibit tobacco smoke in your office work environment. Exemption: The minimum criteria specified in this rule do not apply to outdoor structures provided for smokers such as gazebos or lean-tos that maintain the twenty-five feet distance from entrances, exits, windows that open, and ventilation intakes that serve an enclosed area where smoking is prohibited.

You must:
1) Prohibit smoking in your office work environment
2) Use administrative controls to prevent tobacco smoke from entering your office from outside the building.
- Make sure that outside smoking areas used by your employees are at least twenty-five feet from entrances, exits, windows that open, and ventilation intakes that serve an enclosed area where smoking is prohibited.

STAIRS AND STAIR RAILINGS

WAC 296-800-250 Summary. Your responsibility: To make sure stairs used by employees are safe

You must:
- Provide fixed stairs where required
- Provide stairs that minimize hazards
- Provide handrails and stair railings

Exemptions: This rule does not apply to:
- Stairs used exclusively for fire exit purposes
- Construction operations (See WAC 296-24-76503 for the specifications for the safe design and construction of fixed general industrial stairs.)
- Nonindustrial and monumental stairs are excluded as they are not industrial stairs; however, when public and private building stairs are located at loading or receiving docks, in maintenance areas, etc., or are used exclusively by employees, the requirements of this rule must apply.

Note: The introduction has important information about building, electrical and fire codes that may apply to you in addition to WISHA rules. See “How do the WISHA rules relate to building, fire, and electrical codes” in the introduction section of this book.

(2007 Ed.)
WAC 296-800-25005 Provide fixed stairs where required. You must:

- Install fixed stairs where:
  - Employees travel between different levels on a predictable and regular basis.
  - Access to platforms is required to give routine attention to equipment under operation.
  - Daily movement between elevations is required to gauge, inspect, and maintain equipment where those work assignments may expose employees to acids, caustics, gases, or other harmful substances.
  - Carrying tools or equipment by hand is a normal work requirement.

- Not use spiral stairways except as secondary exit routes.

Note:

- You can use fixed ladders for climbing elevated structures, such as tanks, towers, and overhead traveling cranes, when their use is common practice in your industry.
- You can use winding stairways on tanks and similar round structures if the structure's diameter is at least five feet.
- You could use a spiral stairway as an exit route in a restricted area that lacks room for a conventional stairway.

Definitions:

- A stairway or fixed stairs is a series of steps and landings:
  - Leading from one level or floor to another.
  - Leading to platforms, pits, boiler rooms, crossovers, or around machinery, tanks, and other equipment.
  - Used more or less continuously or routinely by employees or only occasionally by specific individuals.
  - With three or more risers.
- A riser is the vertical part of the step at the back of a tread that rises to the front of the tread above.
- A tread is the horizontal part of the step. Tread width is the distance from the front of the tread to the back.

WAC 296-800-25010 Provide stairs that minimize hazards. You must:

1. Make sure stairs have slip-resistant treads.
2. Make sure that stairs with four or more risers have:
   - Railings on the open sides of all exposed stairways and stair platforms
   - Handrails on at least one side of closed stairways, preferably on the right side as you go down the stairs, if both sides are enclosed.
   - One stair railing on each side, if both sides are open.
3. Provide a platform where doors or gates open directly on a stairway. The swing of the door must not reduce the effective width of the platform to less than 20 inches.

Note: To see all of the rules for building fixed stairs, refer to WAC 296-24-75011 and 296-24-765 of the General safety and health standard.

WAC 296-800-25015 Provide handrails and stair railings.

Exemption: Vehicle service pit stairways are exempt from the rules for stairway railing and guards, if they would prevent a vehicle from moving into a position over the pit.

Definition:

- A handrail is a single bar or pipe on brackets from a wall or partition to provide a continuous handhold for persons using a stair.
- A stair railing is a vertical barrier attached to a stairway with an open side, to prevent falls. The top surface of the stair railing is used as a handrail.

You must:

- Make sure stairways less than forty-four inches wide have:
  - At least one handrail, preferably on your right side as you go down the stairs, if both sides are enclosed.
  - One handrail on each enclosed side.
- Make sure stairways more than forty-four inches wide but less than eighty-eight inches wide have:
  - One handrail on each enclosed side.
  - One handrail on each open side.
  - Make sure stairways at least eighty-eight inches wide have:
    - One handrail on each enclosed side.
– One stair railing on each open side.
– One intermediate stair railing located approximately midway of the width.

• Equip winding stairs with a handrail, offset to prevent walking on all portions of the treads, less than six inches wide.

Reference: Railings must consist of a top rail, intermediate rail, and posts. To see all of the rules for building handrails and stairway railings, refer to WAC 296-24-75011, of the general safety and health standard.

FLOOR OPENINGS, FLOOR HOLES AND OPEN-SIDED FLOORS

WAC 296-800-260 Summary. Your responsibility: To safely guard floor openings, floor holes, and open-sided floors in your workplace.

You must:
Guard or cover floor openings and floor holes.

WAC 296-800-26005. Protect open-sided floors and platforms.

WAC 296-800-26010.

WAC 296-800-26005 Guard or cover floor openings and floor holes.

Definition: A floor opening is an opening in any floor, platform, pavement, or yard that measures at least twelve inches in its smallest dimension and through which a person can fall.

Examples of floor openings are:
• Hatchways
• Stair or ladder openings
• Pits
• Large manholes.

The following are not considered floor openings:
• Openings occupied by elevators
• Dumbwaiters
• Conveyors
• Machinery
• Containers

A floor hole is an opening in any floor, platform, pavement, or yard that measures at least one inch but less than twelve inches at its smallest dimension and through which materials and tools (but not people) can fall.

Examples of floor holes are:
• Belt holes
• Pipe openings
• Slot openings

You must:
(1) Guard stairway floor openings, temporary floor openings and floor holes.

• Protect all stairway floor openings with a railing. The railing must protect all open sides except the stairway entrance side.

(2) Prevent tools and materials from falling through a floor hole. The floor hole must be protected by a cover that leaves an opening no more than one inch wide and is securely held in place. This applies only to floor holes that persons

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-260, filed 5/9/01, effective 9/1/01.]

30 DEGREES OR LESS

COVER

A cover that projects above the surface must be beveled to reduce the tripping hazard.

[Title 296 WAC—p. 2715]
cannot accidentally walk into on account of fixed machinery, equipment, or walls.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-26005, filed 5/9/01, effective 9/1/01.]

WAC 296-800-26010 Protect open-sided floors and platforms.

You must:
1. Guard open-sided floors and platforms.
   • Guard open-sided floors and platforms four feet or more above adjacent floor or ground level by a railing. The entrance to a ramp, stairway, or fixed ladder does not need a railing.
   • Guard open-sided floors, walkways and platforms above or adjacent to dangerous equipment, pickling or galvanizing tanks, degreasing units, and other similar hazards, regardless of height with a railing and toeboard.

2. Make sure tools and loose materials are not left on overhead platforms and scaffolds.

Note: Where the guarding rules above do not apply because employees exposure to falls is infrequent (not on a predictable and regular basis), you must comply with the Personal Protective Equipment (PPE) rules (WAC 296-800-160) or other effective fall protection must be provided.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-26010, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-27005, filed 5/9/01, effective 9/1/01.

WAC 296-800-270 Summary. Your responsibility: To make sure that the buildings, floors, and other structures in your workplace are safe, well-built, and not overloaded

You must:
Not overload floors or roofs
WAC 296-800-27005.
Make sure that floors are safe
WAC 296-800-27010.
Make sure floors can support equipment that moves or has motion
WAC 296-800-27015.
Post approved load limits (weight limits) for floors
WAC 296-800-27020.

Note: The introduction has important information about fire, building and electrical codes that may apply to you in addition to WISHA rules. See "How do the WISHA rules relate to fire, building and electrical codes" in the introduction section of this book.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-270, filed 5/9/01, effective 9/1/01.]

WAC 296-800-27005 Do not overload floors or roofs.
You must:
• Prohibit overloading roofs and floors of any building or other structure with more weight than is approved by the building official.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-27005, filed 5/9/01, effective 9/1/01.]

WAC 296-800-27010 Make sure that floors are safe.
You must:
• Make sure that floors including their parts and structural members are safe.
• Make sure floors are of substantial construction and kept in good repair. This includes floors of:
  – Buildings
  – Platforms
  – Walks and driveways
  – Storage yards
  – Docks
• Make sure that structures are designed, constructed, and maintained to provide a safety factor of 4 times the imposed maximum strain.
  – If you notice bowing, cracking, or other indications of excessive strain on a structure, you must take action to make sure it is safe.

Note: This rule applies to all buildings or those that have had complete or major changes or repairs built after 5/7/74.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-27010, filed 5/9/01, effective 9/1/01.]

WAC 296-800-27015 Make sure floors can support equipment that moves or has motion. You must:
• Make sure flooring of buildings, ramps, docks, trestles and other fixed structures that supports equipment that moves or has motion such as vibration, must not be less than two and one-half inch material.

Note: Where flooring is covered by steel floor plates, 2-inch material may be used.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-27015, filed 5/9/01, effective 9/1/01.]

WAC 296-800-27020 Post approved load limits (weight limits) for floors. You must:
• Post approved load limits (weight limits) for floors used for mercantile, business, industrial or storage purposes in an obvious place.
• As the owner, or owner's agent, of a building (or other part of a workplace) post the load approved by the building official by:
  – Supplying and affixing a durable metal sign that is marked with the approved load.
  – Placing the metal sign in an obvious spot in the space to which it applies.

[Title 296 WAC—p. 2716]
– Replacing the metal sign if it is lost, defaced, damaged, or removed.

Note: This rule applies to the floor that supports shelving, but not to the shelves themselves.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-27020, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-27020, filed 5/9/01, effective 9/1/01.]

**BASIC ELECTRICAL RULES**

**WAC 296-800-280 Basic electrical rules.** Summary.

Your responsibility: To protect your employees from hazards when working with electrical equipment, tools, and appliances.

You must:

- Inspect all electrical equipment your employees use to make sure the equipment is safe.
- Make sure all electrical equipment is used for its approved or listed purpose.
- Make sure electrical equipment used or located in wet or damp locations is designed for such use.
- Make sure electrical equipment that is not marked by the manufacturer cannot be used.
- Identify disconnecting means.
- Maintain electrical fittings, boxes, cabinets, and outlets in good condition.
- Maintain all flexible cords and cables in good condition and use safely.
- Guard electrical equipment to prevent your employees from electrical hazards.
- Make sure electrical equipment is effectively grounded.
- Make sure electrical equipment has overcurrent protection.

**WAC 296-800-28005 Inspect all electrical equipment your employees use to make sure the equipment is safe.**

You must:

- Inspect electrical equipment to make sure there are no recognized hazards likely to cause your employees' death or serious physical harm. Determine the safety of the equipment by using the following list:
  - Has been approved or listed by a recognized testing laboratory, such as Underwriters Laboratories (UL) or other approving agency.
  - Is approved, or listed as approved, for the purpose it is being used.
  - Has strong and durable guards providing adequate protection including parts designed to enclose and protect other equipment.
  - Is insulated.
  - Will not overheat under conditions of use.
  - Will not produce arcs during normal use.
  - Is classified by:
    - Type
    - Size
    - Voltage
    - Current capacity
    - Specific use
    - Other factors

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-280, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-280, filed 5/9/01, effective 9/1/01.]

**WAC 296-800-28010 Make sure all electrical equipment is used for its approved or listed purpose.**

Definitions:
- Electrical outlets are places on an electric circuit where power is supplied to equipment through receptacles, sockets and outlets for attachment plugs.
- Receptacles are outlets that accept a plug to supply electric power to equipment through a cord or cable.

You must:

- Make sure electrical outlets are rated equal or greater to the electrical load supplied.
- Make sure the proper mating configuration exists when connecting the attachment plug to a receptacle.
- Make sure when electrical outlets, cord connectors, and receptacles are joined, they accept the attachment plug with the same voltage or current rating.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-28005, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-28005, filed 5/9/01, effective 9/1/01.]

(2007 Ed.)
WAC 296-800-28015 Make sure electrical equipment used or located in wet or damp locations is designed for such use. You must:

- Make sure fixtures and receptacles located in wet or damp locations are approved for such use. They must be constructed or installed so that water cannot enter or accumulate in wireways, lampholders, or other electrical parts.

- Make sure cabinets, fittings, boxes, and other enclosures in wet or damp locations are installed to prevent moisture or water from entering and accumulating inside.
  - In wet locations these enclosures must be weatherproof.
  - Switches, circuit breakers, and switchboards located in wet locations must be in weatherproof enclosures.

[Statutory Authority: RCW 49.17.010, 49.17.040, and 49.17.050. 01-11-038, § 296-800-28015, filed 5/9/01, effective 9/1/01.]

WAC 296-800-28020 Make sure electrical equipment that is not marked is not used. You must:

- Make sure markings are durable and appropriate to the environment.

- Appropriate markings include:
  - The manufacturer's name;
  - Trademark;
  - The organization responsible for the product;

[Statutory Authority: RCW 49.17.010, 49.17.040, and 49.17.050. 01-11-038, § 296-800-28020, filed 5/9/01, effective 9/1/01.]

<table>

</table>

Note: A 20-ampere “T-solt” outlet or cord connector may accept a 15-ampere attachment plug of the same voltage rating.

[Statutory Authority: RCW 49.17.010, 49.17.040, and 49.17.050. 01-23-060, § 296-800-28010, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-28010, filed 5/9/01, effective 9/1/01.]
and
– Voltage, current and wattage or other ratings as necessary.

WAC 296-800-28022  Identify disconnecting means.
You must:
• Make sure the disconnect means (such as on/off switches and circuit breakers) is marked to show when it is open and closed and what equipment it controls, unless located and arranged so the purpose is obvious.
• Make sure each service, feeder and branch circuit is marked, at its disconnecting means or overcurrent device, to show when the circuit is open and closed and what circuit it controls, unless located and arranged so the purpose is obvious.
• Make sure markings are durable and appropriate to the environment.

WAC 296-800-28025  Maintain electrical fittings, boxes, cabinets and outlets in good condition. You must:
(1) Do the following to covers and openings:
• Do the following when conductors enter boxes, cabinets, or fittings:
  – Protect the conductor (wires) from abrasion.
  – Effectively close the openings where conductors enter.
  – Effectively close all unused openings.
• Provide pull boxes, junction boxes, and fittings with covers approved for the purpose.
• Make sure each outlet box has a cover, faceplate, or fixture canopy in completed installations.
• Make sure covers for outlet boxes with openings for flexible cord pendants have bushings to protect the cord, or have a smooth and well rounded surface where the cord touches the opening.
• Ground metal covers.
(2) Make sure the area in front of electrical panels, circuit breaker boxes and similar equipment which operates at 600 volts or less:
• Has sufficient working area at least thirty inches wide for operation and maintenance of the equipment.
• Is kept clear and free of stored materials so that employees can access this equipment for servicing, adjustments or maintenance.
• Has at least one access route to provide free and unobstructed access.
• Has at least three feet of working space in front, measured from the exposed live parts or the enclosure front. (See the work clearance table on the following page.)
• Has adequate indoor lighting.
(WAC 296-800-210.)
• Has at least six feet three inches of headroom.
This table shows the area you must keep clear depending on the layout of the electrical equipment.

<table>
<thead>
<tr>
<th>Conditions*</th>
<th>0 - 150 volts to ground</th>
<th>151 - 600 volts to ground</th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>3 ft.</td>
<td>3 ft.</td>
</tr>
<tr>
<td>b</td>
<td>3 ft.</td>
<td>3 1/2 ft.</td>
</tr>
<tr>
<td>c</td>
<td>3 ft.</td>
<td>4 ft.</td>
</tr>
</tbody>
</table>

Minimum clear distances may be 2 feet 6 inches for equipment built or installed before 3/20/82.

* Conditions a, b, and c are as follows:
–a = Exposed live parts on one side and no live or grounded parts on the other side of the working space, or exposed live parts on both sides effectively guarded by suitable wood or other insulating material. Insulated wire or insulated bus bars operating at not over 300 volts are not considered live parts.
–b = Exposed live parts on one side and grounded parts on the other side.
–c = Exposed live parts on both sides of the workspace (not guarded as provided in condition (a) with the operator between the panels).

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-28022, filed 5/9/01, effective 9/1/01.]
296-800-28030  Maintain all flexible cords and cables in good condition and use safely.

Exemption: These rules do not apply to cords and cables that are an internal part of factory assembled appliances and equipment, like the windings on motors or wiring inside electrical panels.

Note: Flexible cords and cables are typically used to connect electrical equipment to a power source. These cords can have an electrical plug to connect to a power source or can be permanently wired into the power source. The terms flexible cords, extension cord, cables and electrical cords all refer to a type of flexible cord.

You must:
(1) Perform visual inspections.
   • On portable cord- and plug-connected equipment and extension cords before use on each work shift. Defects and damage to look for include:
     – Loose parts.
     – Deformed or missing pins.
     – External defects and damage.
     – Damage to the outer covering or insulation.
     – Pinched or crushed covering or insulation that might indicate internal damage.

Exemption: You do not need to visually inspect portable cord- and plug-connected equipment and extension cords that stay connected once in place and are not exposed to damage until they are moved.

You must:
   • Remove from service any defective or damaged cord until repaired and tested.
   • Make sure flexible cords and cables are used as described.

(2) Use.
   • Use flexible cords only as follows:
     – Wiring of equipment and appliances.
     – Data processing cables approved as a part of the data processing system.
     – Pendants.
     – Wiring for fixtures.
     – Connecting portable lamps or appliances to an approved outlet with an attachment plug.
     – Connecting stationary equipment that is frequently changed with an attachment plug energized from an approved outlet.
     – Preventing noise or vibration transmission.
     – Appliances that have been designed to permit removal for maintenance and repair if the appliance is equipped with an attachment plug energized from an approved outlet.
     – Elevator cables.
     – Wiring of cranes and hoists.

Common Acceptable Uses of Flexible Cords
You must:

- Not use flexible cords in the following ways:
  - As a substitute for fixed wiring of a structure.
  - To run through holes in walls, ceilings, or floors.
  - To run through doorways, windows, or similar openings.

- To attach to building surfaces.
- To conceal behind building walls, ceilings, or floors.
- To raise or lower equipment.
- Make sure flexible cords and cables are approved and suitable for:
  - The way they will be used.
  - The location where they will be used.
- Not fasten or hang cords and equipment in any way that could cause damage to the outer jacket or insulation of the cord.
- Make sure insulation on flexible cords and cables is intact.
- Make sure flexible cords and electrical cords are:
  - Connected to devices and fittings so that any pulling force on the cord is prevented from being directly transmitted to joints or terminal screws on the plug.
  - Used only in continuous lengths without splice or tap.
- Prohibit your employees from using wet hands to plug or unplug equipment or extension cords if the equipment is energized.

You must:

(3) Provide the following for temporary use.

- Make sure temporary electrical power and lighting installations that operate at 600 volts or less are used only:
  - During and for remodeling, maintenance, repair or demolition of buildings and similar activities.
  - Experimental or developmental work.
  - For no more than ninety days for:
    - Christmas decorative lighting.
    - Carnivals.
    - Other similar purposes.
- Make sure flexible cords and electrical cords used on a temporary basis are protected from accidental damage:
  - By avoiding sharp corners and projections
  - If they pass through doorways or other pinchpoints.

[Statutory Authority: RCW 49.17.010, 49.17.040, and 49.17.050. 01-23-060, § 296-800-28030, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-28030, filed 5/9/01, effective 9/1/01.]

WAC 296-800-28035 Guard electrical equipment to prevent your employees from electrical hazards. You must:

(1) Guard live parts of electric equipment operating at 50 volts or more against accidental contact by any of the following means:

- By approved cabinets or other forms of approved enclosures.
- By location in a room, vault, or similar enclosure that is accessible only to employees qualified to work on the equipment. Entrances to rooms and other guarded locations containing exposed live parts must be marked with conspicuous warning signs forbidding unqualified persons to enter.
  - By permanent, substantial partitions or screens so that only employees qualified to work on the equipment will have access within reach of the live parts. Any openings must prevent accidental contact with live parts by employees or objects employees carry.

You must:

(2) Make sure all electrical appliances, fixtures, lampholders, lamps, rosettes, and receptacles do not have live parts normally exposed to employee contact.

- Rosettes and cleat type lampholders at least 8 feet above the ground may have exposed parts.

(3) In locations where electric equipment would be exposed to physical damage, enclosures or guards must be so arranged and of such strength as to prevent such damage.

Live Parts Guarded by Distance

Exposed power

Exposed power

8 ft

FLOOR

[Statutory Authority: RCW 49.17.010, 49.17.040, and 49.17.050. 01-11-038, § 296-800-28035, filed 5/9/01, effective 9/1/01.]

WAC 296-800-28040 Make sure electrical equipment is effectively grounded. You must:

- Make sure the path to ground from circuits, equipment, and enclosures is permanent and continuous.
- Make sure equipment connected by cord and plug is grounded under these conditions:
  - Equipment with exposed noncurrent carrying metal parts.

[Title 296 WAC—p. 2721]
Cord and plug connected equipment which may become energized.
- Equipment that operates at over 150 volts to ground.
- Equipment in hazardous locations. (WAC 296-24-95613)

Exemption: This does not apply to guarded motors and metal frames of electrically heated appliances, if the appliance frames are permanently and effectively insulated from ground.

You must:
- Ground the following type of equipment:
  - Hand-held motor-operated tools
  - Refrigerators
  - Freezers
  - Air conditioners
  - Clothes washers and dryers
  - Dishwashers
  - Electrical aquarium equipment
  - Hedge clippers
  - Electric lawn mowers
  - Electric snow blowers
  - Wet scrubbers
  - Tools likely to be used in damp or wet locations
  - Appliances used by employees standing on the ground, on metal floors or working inside of metal tanks or boilers
  - Portable hand lamps

Note: Grounding can be achieved by: Using tools and appliances equipped with an equipment grounding conductor (three-prong plug and grounded electrical system).

You must:
- Make sure exposed metal parts of fixed equipment that do not conduct electricity, but may become energized, are grounded if the equipment is in a wet or damp location and is not isolated.
- Make sure ground wires are identified and look different than the other conductors (wires).
- Make sure grounded conductors are not attached to any terminal or lead to reverse polarity of the electrical outlet or receptacle. See illustration - Examples of wiring.
- Make sure grounding terminals or grounding-type devices on receptacles, cords, connectors, or attachments plugs are not used for purposes other than grounding.

EXAMPLES OF WIRING

[Title 296 WAC—p. 2722] (2007 Ed.)
WAC 296-800-28045 Make sure electrical equipment has overcurrent protection. You must:

- Make sure all electrical circuits that are rated at 600 volts or less have overcurrent protection.
- Protect conductors and equipment according to their ability to safely conduct electrical current.
- Make sure overcurrent devices do not interrupt the continuity of grounded conductors unless all conductors are opened at the same time, except for motor running overload protection.
  - Protect employees from electrical arcing or suddenly moving electrical parts by locating fuses and circuit breakers in safe places. If this is not possible, install shields on fuses and circuit breakers.
- Make sure the following fuses and thermo cutouts have disconnecting mechanisms:
  - All cartridge fuses accessible to nonqualified persons
  - All fuses on circuits over 150 volts to ground
  - All thermal cutouts on circuits over 150 volts to ground
  - The disconnecting mechanisms must be installed so you can disconnect the fuses or thermal cutouts without disrupting service to equipment and circuits unrelated to those protected by the overcurrent device.
- Provide easy access to overcurrent devices for each employee or authorized building management personnel.
  - Protect the overcurrent devices by locating them away from easily ignitable material.
  - They must be placed to avoid exposure to physical damage.
  - Make sure circuit breakers:
    - Clearly indicate when they are open (off) and closed (on)
    - That operate vertically are installed so the handle is in the "up" position when the breaker is closed (on). See WAC 296-24-95603 (2)(c) for more information
    - Used as switches in 120-volt, fluorescent lighting circuit must be approved for that purpose and marked "SWD."
    - That have arcing or suddenly moving parts, are shielded or located so employees will not get burned or injured by the operation of the circuit breaker.
  - Make sure fuses that have arcing or suddenly moving parts, are shielded or located so employees will not get burned or injured by the operation of the fuses.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-28040, filed 8/1/02, effective 10/1/02; 01-23-060, § 296-800-28040, filed 5/9/01, effective 9/1/01.]
PORTABLE FIRE EXTINGUISHERS

WAC 296-800-300 Summary—Portable fire extinguishers. Important:
The following WISHA rule applies to the placement, use, maintenance, and testing of portable fire extinguishers provided for the use of employees. Your local fire marshal also enforces fire codes which address fire safety that are more comprehensive and may go beyond WISHA rules.

Your responsibility:
To provide readily accessible, appropriate portable fire extinguishers for employees in your workplace

You must:
Provide portable fire extinguishers in your workplace
WAC 296-800-30005
Select and distribute portable fire extinguishers in your workplace
WAC 296-800-30010
Make sure that portable fire extinguishers are kept fully charged, in good operating condition, and left in their designated places
WAC 296-800-30015
Inspect and test all portable fire extinguishers
WAC 296-800-30020
Train your employees to use portable fire extinguishers
WAC 296-800-30025
Exemptions:
• You are exempt from the requirements of portable fire extinguishers if you have the following:
   – A written fire safety policy that requires the immediate and total evacuation of employees from the workplace when there is a fire alarm signal,
   AND
   – An emergency action plan and a fire prevention plan which meet the requirements of WAC 296-24-567
   AND
   – Portable fire extinguishers in your workplace that are not accessible for employee use
   • If another WISHA rule requires portable fire extinguishers, then you must comply with these requirements.
   • Where extinguishers are provided but are not intended for employee use and you have an emergency action plan and a fire prevention plan (which meet the requirements of WAC 296-24-567), then only the requirements of WAC 296-800-30020 apply.

Note: The introduction has important information about building, electrical and fire codes that may apply to you in addition to WISHA rules. See "How do the WISHA rules relate to building, fire and electrical codes" in the introduction section of this book.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-30005, filed 5/9/01, effective 9/1/01.]

WAC 296-800-30005 Provide portable fire extinguishers in your workplace. You must:
(1) Provide approved portable fire extinguishers for your workplace and distribute them so they are readily accessible
• Make sure that your portable fire extinguisher does not use extinguishing agents such as carbon tetrachloride or chlorobromomethane extinguishing agents. In addition, soda-acid foam, loaded stream, antifreeze and water extinguishers of the inverting type shall not be recharged or placed into service.
(2) Mount, locate, and identify portable fire extinguishers so employees can easily reach them, without being subjected to possible injury.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-30005, filed 5/9/01, effective 9/1/01.]

WAC 296-800-30010 Select and distribute portable fire extinguishers in your workplace. Exception:
• This does not apply to the portable fire extinguishers provided for employees to use outside of workplace buildings or structures.
• You are exempt from the distribution requirements of this rule if you have an emergency action plan (that meets requirements of WAC 296-24-567):
   – Which designates certain employees to be the only employees authorized to use the available portable fire extinguishers; and
   – Requires all other employees in the fire area to immediately evacuate the affected work area upon the sounding of the fire alarm

You must:
• Provide the correct type of portable fire extinguishers and distribute them in your workplace, depending on the type, size, and severity of fire that could occur
• The type of portable fire extinguishers you must have in your workplace depends on the types of fire hazards that exist in your workplace

Fire Extinguisher Distance Table

<table>
<thead>
<tr>
<th>Type of fire hazard extinguisher</th>
<th>Maximum distance from the fire hazard to a fire extinguisher</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type of fire hazard Wood, cloth, paper, rubber (Class A fire hazards)</td>
<td>No more than 75 feet (22.9 m) Note: You may use uniformly spaced standpipe systems or hose stations instead of Class A portable fire extinguishers, if they meet the requirements of WAC 296-24-602 or 296-24-607.</td>
</tr>
<tr>
<td>Liquids, grease, gases (Class B fire hazards)</td>
<td>No more than 50 feet (15.2 m) Note: You may choose to use a smaller fire extinguisher in lieu of that required for the 50 foot distance. If you choose to have the smaller fire extinguisher, the travel distance must not be greater than 30 feet. See UFC Standard 10 Chapter 3 for the basic minimum extinguisher rating allowed.</td>
</tr>
<tr>
<td>Live electrical equipment and circuits (Class C fire hazards)</td>
<td>Distribute any Class C portable fire extinguishers the same pattern that you have for any Class A or Class B fire hazards. Note: If the electrical equipment is deenergized, you may use a Class A or Class B portable fire extinguisher.</td>
</tr>
</tbody>
</table>

[Title 296 WAC—p. 2724] (2007 Ed.)
WAC 296-800-30015 Make sure that portable fire extinguishers are kept fully charged, in operable condition, and left in their designated places. You must:

- Make sure that fire extinguishers found with deficiencies are removed from service and replaced with a suitable fire extinguisher.

WAC 296-800-30020 Inspect and test all portable fire extinguishers. You must:

- Perform inspections:
  - Make sure that portable fire extinguishers or hose systems (used instead of fire extinguishers) are visually inspected monthly
- Perform maintenance checks:
  - Make sure that all portable fire extinguishers are subjected to an annual maintenance check
  - Keep records of all annual maintenance checks and make available to the department upon request
    - For 1 year after the last maintenance check;
    - For the life of the shell, whichever is less
  - Make sure that equal protection is provided when portable fire extinguishers are removed from service for maintenance and recharging

Exemption: Most stored pressure extinguishers do not require an internal examination. Examples of those that do require an internal examination are those containing a loaded stream agent.

You must:

- Perform hydrostatic testing:
  - Dry chemical extinguishers that have nonrefillable disposable containers are exempt from this requirement.
- Manually pressurized pumptanks are exempt from this requirement.
- Make sure that portable extinguishers are hydrostatically tested:
  - At the intervals listed in Table 1, of this section
  - Whenever they show evidence of corrosion or mechanical injury
  - Not perform hydrostatic testing on fire extinguishers if:
    - The unit has been repaired by soldering, welding, brazing, or use of patching compounds
    - The cylinder or shell threads are damaged
    - Corrosion has caused pitting, including corrosion under removable name plate assemblies
    - The extinguisher has been burned in a fire

Hydrostatic Test Table

<table>
<thead>
<tr>

</tbody>
</table>

Note: Due to a manufacturer's recall, stored pressure water extinguishers with fiberglass shell (pre-1976) are prohibited from hydrostatic testing.

WAC 296-800-30025 Train your employees to use portable fire extinguishers. You must:

- Train your employees where you have provided portable fire extinguisher for their use in:
  - The hazards involved with incipient stage fire fighting (the early stage of a fire when it can be extinguished by a portable fire extinguisher)
  - The general principles of fire extinguisher use

Note: Specific rules regarding conducting hydrostatic tests are covered in WAC 296-24-59212.
• Provide the training when they are first hired and then annually.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-310, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-310, filed 5/9/01, effective 9/1/01.]

EXIT ROUTES AND EMPLOYEE ALARM SYSTEMS

WAC 296-800-310 Summary. Your responsibility: To provide and maintain emergency exit routes and to install and maintain adequate employee alarm systems.

Exit routes:
You must:
Provide an adequate number of exit routes.
WAC 296-800-31005.
Make sure that exit routes are large enough.
WAC 296-800-31010.
Make sure that exit routes meet their specific design and construction requirements.
WAC 296-800-31015.
Make sure that each exit route leads outside.
WAC 296-800-31020.
Provide unobstructed access to exit routes.
WAC 296-800-31025.
Exit doors must be readily opened from the inside.
WAC 296-800-31030.
Use side-hinged doors to connect rooms to exit routes.
WAC 296-800-31035.
Provide outdoor exit routes that meet requirements.
WAC 296-800-31040.
Minimize danger to employees while they are using emergency exit routes.
WAC 296-800-31045.
Mark exits adequately.
WAC 296-800-31050.
Provide adequate lighting for exit routes and signs.
WAC 296-800-31053.
Maintain the fire retardant properties of paints or other coatings.
WAC 296-800-31055.
Maintain emergency safeguards.
WAC 296-800-31060.
Maintain exit routes during construction and repair.
WAC 296-800-31065.
Provide doors in freezer or refrigerated rooms that open from the inside.
WAC 296-800-31067.
Employee alarm systems:
You must:
Install and maintain an appropriate employee alarm system.
WAC 296-800-31070.
Establish procedures for sounding emergency alarms.
WAC 296-800-31075.
Test the employee alarm system.
WAC 296-800-31080.
Exemption: This rule does not apply to vehicles, vessels, or other mobile structures.

Note: The introduction has important information about codes" in the introduction section of this book.

WAC 296-800-31005 Provide an adequate number of exit routes. You must:
• Provide a minimum of two exit routes to provide different ways for employees to leave the workplace safely during an emergency (at least two of the exit routes must be remote from one another so employees can safely exit if one exit route becomes blocked or unavailable).
• Provide an adequate number (at least two) of exit routes, considering the kind, number, location and capacity, appropriate to each building according to the following conditions:
  – Number of employees
  – Size of building
  – Arrangement of workplace
  – Building occupancy

Note: A single exit route is permitted where the number of employees, the size of the building, its occupancy, or the arrangement of the workplace indicates that a single exit will allow all employees to exit safely during an emergency. Other means of escape, such as fire exits or accessible windows, should be available where only one exit route is provided.

WAC 296-800-31010 Make sure that exit routes are large enough. You must:
• Make sure each exit route is large enough to accommodate the maximum-permitted occupant load for each floor served by the route.
• Make sure the capacity of an exit route does not decrease at any point.
• Make sure an exit route is at least 6 feet 8 inches high at all points.
  – Make sure objects that stick out into the exit route, such as fans hanging from the ceilings or cabinets on walls, do not reduce the minimum height and width of the exit route.
• Make sure exit routes are at least 28 inches wide at all points between any handrails.
  – If necessary, routes must be wider than 28 inches to accommodate the expected occupant load.

WAC 296-800-31015 Make sure that exit routes meet their specific design and construction requirements. You must:
• Make sure each exit is a permanent part of the workplace.
• Make sure an exit route has only those openings necessary to permit access to, or exit from, occupied areas of the workplace.
• Make sure any opening into an exit through a fire wall is protected by a self-closing fire door that remains closed.
• Make sure each fire door, its frame, and its hardware is listed or approved by a nationally recognized testing laboratory.

• Make sure construction materials, used to separate an exit route, have at least:
  – One-hour fire resistance rating if the exit connects three stories or less.
  – Two-hour fire resistance rating if the exit connects four stories or more.

• Make sure employees are provided with stairs or a ramp, if the exit route is not substantially level.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-31015, filed 5/9/01, effective 9/1/01.]

WAC 296-800-31020 Make sure that each exit route leads outside. You must:
• Make sure that building exit routes lead:
  – Directly outside or to a street, walkway; or to an open space with access to the outside.
  – To streets, walkways, or open spaces large enough to accommodate all building occupants likely to use the exit.

• Make sure the exit routes clearly show the route employees use to leave the building in an emergency.

• Install a standard safeguard with a warning sign, if a doorway or corner of a building could allow an employee to walk in front of an engine or trolley.

• Use doors, partitions, or other effective means to show employees the correct route out of the building, if the stairs in your exit route lead anywhere but out of the building.

Note: If the stairs in your exit route lead past the exit to the basement, you might install a gate at the point they lead towards that basement. The gate could help your employees stay on the exit route taking them out of the building.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-31020, filed 5/9/01, effective 9/1/01.]

WAC 296-800-31025 Provide unobstructed access to exit routes. You must:
(1) Provide exit routes that are always free of obstructions so all employees can safely exit the building during an emergency.

(2) Make sure employees are not required to travel to a dead end or through a room that can be locked, such as a restroom.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-31020, filed 5/9/01, effective 9/1/01.]

WAC 296-800-31030 Exit doors must be readily opened from the inside.

Exemption: An exit door may be locked or blocked from the inside in a mental, penal, or correctional institution, if supervisory personnel are continuously on duty and a plan exists to remove employees and inmates during an emergency.

You must:
• Make sure all exit doors readily open from the inside without keys, tools, or special knowledge. A device that locks only from the outside, such as a panic bar, is permitted. An exit door must be free of any device or alarm that could restrict emergency use of an exit if the device or alarm fails.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-31030, filed 5/9/01, effective 9/1/01.]

(2007 Ed.)

WAC 296-800-31035 Use side-hinged doors to connect rooms to exit routes. You must:
• Use a side-hinged exit door to connect any room to an exit route. The door must swing out when the room:
  – Is occupied by more than fifty persons or
  – Contains highly flammable or explosive materials.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-23-060, § 296-800-31035, filed 11/20/01, effective 12/1/01; 01-11-038, § 296-800-31035, filed 5/9/01, effective 9/1/01.]

WAC 296-800-31040 Provide outdoor exit routes that meet these requirements. You must:
• Make sure an outdoor exit route (such as an interior balcony, porch, gallery, or roof) meets all requirements for an indoor exit route. In addition, an outdoor exit route must also:
  – Have guardrails to protect unenclosed sides.
  – Be covered if snow or ice is likely to accumulate without regular removal.
  – Be reasonably straight with smooth, solid, substantially level floors.
  – Have no dead ends more than twenty feet long that branch off of the exit route.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-31040, filed 5/9/01, effective 9/1/01.]

WAC 296-800-31045 Minimize danger to employees while they are using emergency exit routes. You must:
• Maintain each exit route to minimize danger to employees during an emergency.

• Keep each exit route free of explosive or highly flammable furnishings and decorations.

• Not require employees to travel toward areas where high hazard materials are stored, unless the route is protected by partitions or physical barriers. High hazard materials are materials that:
  – Burn quickly
  – Emit poisonous fumes when burned
  – Are explosive

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-31045, filed 5/9/01, effective 9/1/01.]

WAC 296-800-31050 Mark exits adequately. You must:
• Mark each exit with a clearly visible, distinctive sign reading "exit."

• Make sure the letters in the word "EXIT" are at least six inches high and 3/4 inch wide.

• Mark any doorway or passage that might be mistaken for an exit with "not an exit" or with an indication of its actual use.

• Make sure exit signs are a distinctive color.

• Make sure signs are posted and arranged along exit routes to adequately show how to get to the nearest exit and clearly indicate the direction of travel.

• Not obstruct or conceal exit signs in any way.

• Keep exit doors free of signs or decorations that obscure their visibility.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 03-18-090, § 296-800-31050, filed 9/2/03, effective 11/1/03. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-31050, filed 5/9/01, effective 9/1/01.]
WAC 296-800-31053  Provide adequate lighting for exit routes and signs. You must:
• Illuminate each exit route adequately and reliably.
• Have at least five foot-candles illumination from a reliable light source.
• Make sure any exit signs illuminated by artificial lights and made of translucent material (other than internally illuminated types)
  ‒ Have screens, discs or lens of at least twenty-five square inches in size; and
  ‒ Show red or other designated color on the approach side of the exit.
• Make sure brightly lit signs, displays, or objects in or near the line of vision do not distract attention from the exit sign.
• Make sure exit signs that are self-lighting have a minimum luminance surface value of .06 footlamberts.
[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-31053, filed 5/9/01, effective 9/1/01.]

WAC 296-800-31055  Maintain the fire retardant properties of paints or other coatings. You must:
• Maintain any paints or other coatings with fire retardant properties so they retain their fire retardant properties.
[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-31055, filed 5/9/01, effective 9/1/01.]

WAC 296-800-31060  Maintain emergency safeguards. You must:
• Maintain each safeguard in proper working order to protect employees during an emergency. Emergency safeguards include items such as:
  ‒ Sprinkler systems.
  ‒ Alarm systems.
  ‒ Fire doors.
  ‒ Exit lighting.
[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-31060, filed 5/9/01, effective 9/1/01.]

WAC 296-800-31065  Maintain exit routes during construction and repair. You must:
• Have enough exit routes that comply with these rules before letting your employees occupy a workplace under new construction.
• Make sure that employees do not occupy an existing workplace unless:
  ‒ All exits and existing fire protection are maintained; or
  ‒ Alternate fire protection is provided that ensures an equivalent level of safety.
• Make sure that flammable or explosive materials used during construction or repair do not expose employees to additional hazards or prevent emergency escape.
[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-31065, filed 5/9/01, effective 9/1/01.]

WAC 296-800-31067  Provide doors in freezer or refrigerated rooms that open from the inside. You must:
• Make sure that walk-in refrigerators or freezer rooms have doors with opening devices allowing them to be opened from the inside even when they are locked from the outside.
[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-31067, filed 5/9/01, effective 9/1/01.]

WAC 296-800-31070  Install and maintain an appropriate employee alarm system.
Exemptions: • If you have ten or fewer employees in a particular workplace, you can use direct voice communication to sound the alarm, if all employees can hear it. For this kind of workplace, you do not need a back-up system.
• In workplaces where employees would not otherwise be able to recognize audible or visible alarms, you can use tactile devices to alert them.

You must:
• Make sure that a working employee alarm system with a distinctive signal to warn employees of fire or other emergencies is installed and maintained, unless employees can see or smell a fire or other hazard.
• Make sure that the following systems meet the requirements of this rule, if you use them as your employee alarm system:
  ‒ Supervisory alarms
  ‒ Discharge alarms
  ‒ Detection systems required on fixed extinguishing systems
  ‒ Detection systems required on fire suppression systems
• Make sure that your employee alarm systems are:
  ‒ Providing enough warning to allow employees to safely escape from the workplace, the immediate work area, or both.
  ‒ Noticeable above surrounding noise or light levels by all employees in the affected portions of the workplace.
  ‒ Distinctive and recognizable as a signal, to evacuate the work area.
  ‒ Restored to working order as soon as possible, after each test or alarm.
  ‒ Supervised, if installed after July 1, 1982, and if it has that capacity.
  ‒ Able to alert assigned personnel whenever a malfunction exists in the system.
  ‒ Adequately warning employees of emergencies.
  ‒ Serviced, maintained, and tested by a person trained in the alarm system's design and functions to keep the system operating reliably and safely.
  ‒ In working order, except when undergoing repairs or maintenance.
  ‒ Warning employees of fire or other emergencies with a distinctive signal, if they are not able to see or smell a fire or other hazard.
  ‒ Manual actuation devices that, if provided, are unobstructed, easy to find, and readily accessible.
  ‒ Using alarm devices, components, combinations of devices, or systems with approved construction and installation. This applies to steam whistles, air horns, strobe lights, or similar lighting devices, as well as tactile devices.
  ‒ Supplied with spare alarm devices available to restore the system promptly if a component breaks, is worn, or destroyed.
  ‒ Kept in full operating condition by maintaining and replacing power supplies as often as necessary.

(2007 Ed.)
WAC 296-800-31075 Establish procedures for sounding emergency alarms. You must:

- Explain to each employee how to sound the alert for emergencies. Methods of reporting emergencies can include:
  - Manual pull box alarms.
  - Public address systems.
  - Radio.
  - Telephones.
- Post emergency numbers near telephones, employee notice boards, or other conspicuous locations, if you use telephones to report emergencies.
- Require that all emergency messages have priority over all nonemergency messages if the communication system also serves as an employee alarm system.

WAC 296-800-31080 Test the employee alarm system. You must:

- Test the reliability and adequacy of your employee alarm system every two months.
  - Use a different activation device in each test of a multiaction device system, so the entire alarm system gets tested.
- Make sure that supervised (monitored) employee alarm systems are tested at least once a year for reliability and adequacy.

ACCIDENT REPORTING AND INVESTIGATING

WAC 296-800-320 Summary. Your responsibility:
To report and conduct an investigation of certain types of accidents.

You must:
Report the death, or probable death, of any employee, or in-patient hospitalization of 2 or more employees within 8 hours
WAC 296-800-32005
Make sure that any equipment involved in an accident is not moved.
WAC 296-800-32010
Assign people to assist the department of labor and industries
WAC 296-800-32015
Conduct a preliminary investigation for all serious injuries
WAC 296-800-32020
Document the investigation findings
WAC 296-800-32025

Note: Contact the nearest office of the department of labor and industries personnel at 1-800-4BE SAFE or call Occupational Safety and Health Administration (OSHA) at 1-800-321-6742, to report the death, probable death of any employee or the in-patient hospitalization of 2 or more employees within 8 hours, after handling medical emergencies.

WAC 296-800-32005 Report the death, probable death of any employee, or the in-patient hospitalization of 2 or more employees within 8 hours. You must:
- Contact the nearest office of the department of labor and industries in person or by phone at 1-800-4BE SAFE to report within 8 hours of the work-related incident or accident,
  - A death
  - A probable death
  - 2 or more employees are admitted to the hospital, or
  - Contact the Occupational Safety and Health Administration (OSHA) by calling its central number at 1-800-321-6742.
- Provide the following information within 30 days concerning any accident involving a fatality or hospitalization of 2 or more employees:
  - Name of the work place
  - Location of the incident
  - Time and date of the incident
  - Number of fatalities or hospitalized employees
  - Contact person
  - Phone number
  - Brief description of the incident

Note: If you do not learn about the incident at the time it occurs, you must report the incident within 8 hours of the time it was reported to you, your agent, or employee.

WAC 296-800-32010 Make sure that any equipment involved in an accident is not moved. You must:
- Not move equipment involved in a work or work related accident or incident if any of the following results:
  - A death
  - A probable death
  - 2 or more employees are sent to the hospital
- Not move the equipment until a representative of the department of labor and industries investigates the incident and releases the equipment unless:
  - Moving the equipment is necessary to:
  - Remove any victims
  - Prevent further incidents and injuries

WAC 296-800-32015 Assign people to assist the department of labor and industries. You must:
- Assign witnesses and other employees to assist department of labor and industries personnel who arrive at the scene to investigate the incident involving:
  - A death
  - Probable death
  - 2 or more employees are sent to the hospital.
Include:
  - The immediate supervisor
  - Employees who were witnesses to the incident
— Other employees the investigator feels are necessary to complete the investigation

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-32020, filed 5/9/01, effective 9/1/01.]

WAC 296-800-32020 Conduct a preliminary investigation for all serious injuries. You must:

• Make sure your preliminary investigation is conducted to evaluate the facts relating to the cause of the incident by the following people:
  – A person designated by the employer
  – The immediate supervisor of the injured employee
  – Witnesses
  – An employee representative, such as a shop steward or other person chosen by the employees to represent them
  – Any other person who has the experience and skills.
• If the employee representative is the business agent of the employee bargaining unit and is unavailable to participate without delaying the investigation group, you may proceed, by using one of the following:
  – The shop steward
  – An employee representative member of your safety committee
  – A person selected by all employees to represent them

Note: A preliminary investigation includes noting information such as the following:
– Where did the accident or incident occur?
– What time did it occur?
– What people were present?
– What was the employee doing at the time of the accident or incident?
– What happened during the accident or incident?

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-32020, filed 5/9/01, effective 9/1/01.]

WAC 296-800-32025 Document the preliminary investigation findings. You must:

• Document the preliminary investigation findings for use at any formal investigation.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-16-047, § 296-800-32025, filed 8/1/02, effective 10/1/02; 01-11-038, § 296-800-32025, filed 5/9/01, effective 9/1/01.]

RELEASEING ACCIDENT INVESTIGATION REPORTS

WAC 296-800-330 Releasing accident investigation reports. The department must:

• Keep accident investigations and related reports confidential.
• Not freely release results of accident investigations and related reports that are confidential.
• Make available accident investigation reports, without the need of a court order, only to the following:
  – Injured workers, their legal representatives, or their labor organization representatives.
  – The legal representative or labor organization representative of a deceased worker.
  – The employer of any injured or deceased worker.
  – Any other employer or person whose actions or business operations are the subject of the report or investigation.
  – Any attorney representing a party in any pending legal action in which an investigative report constitutes material and relevant evidence.
  – Employees of governmental agencies in the performance of their official duties.
  – Any beneficiary of a deceased worker actually receiving benefits under the terms of Title 51 RCW, the Industrial Insurance Act.

Note: The records officer may provide accident investigation reports to the closest surviving member of the deceased worker's immediate family.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-330, filed 5/9/01, effective 9/1/01.]

WAC 296-800-340 Protecting the identity of the source of confidential information. The department must:

• Not reveal the source of information when a promise has been made to keep the identity of the source confidential.
• Not disclose information that would reveal the source's identity, whenever a department file contains an investigative report or information from a source under a promise of confidentiality.
  – The contents of an investigative report may be withheld only to the extent necessary to conceal the identity of the source.
  – When information is withheld, the records officer must give a general characterization of the information withheld, but must not reveal the identity of the information's source.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-340, filed 5/9/01, effective 9/1/01.]

USING STANDARDS FROM NATIONAL ORGANIZATIONS AND FEDERAL AGENCIES

WAC 296-800-360 Rule. Your responsibility: To use the safety and health standards from national organizations and federal agencies, when directed to by WISHA rules.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-360, filed 5/9/01, effective 9/1/01.]

WAC 296-800-36005 Comply with standards national organizations or of federal agencies when referenced in WISHA rules. You must:

• Use the following to be in compliance with WISHA rules:
  – The edition of the standard specified in the WISHA rule or
  – Any edition published after the edition specified in the WISHA rule.

Note: The specific standards referenced in the WISHA rules are available:
• For review at your local department of labor and industries office.
  • See http://www.wa.gov/lni/pa/direct.htm
  • Through the local library system
  • Through the issuing organization.

[Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 01-11-038, § 296-800-36005, filed 5/9/01, effective 9/1/01.]
WAC 296-800-370 Definitions.

Abatement Action Plans
Refers to your written plans for correcting a WISHA violation.

Abatement date
The date on the citation when you must comply with specific safety and health standards listed on the citation and notice of assessment or the corrective notice of redetermination.

Acceptable
As used in Electrical, WAC 296-800-280 means an installation or equipment is acceptable to the director of labor and industries, and approved:
- If it is accepted, or certified, or listed, or labeled, or otherwise determined to be safe by a nationally recognized testing laboratory; or
- With respect to an installation or equipment of a kind which no nationally recognized testing laboratory accepts, certifies, lists, labels, or determines to be safe, if it is inspected or tested by another federal agency, or by a state, municipal, or other local authority responsible for enforcing occupational safety provisions of the National Electrical Code, and found in compliance with the provisions of the National Electrical Code as applied in this section;

OR
- With respect to custom-made equipment or related installations which are designed, fabricated for, and intended for use by a particular customer, if it is determined to be safe for its intended use by its manufacturer on the basis of test data which the employer keeps and makes available for inspection to the director and his/her authorized representatives. Refer to federal regulation 29 CFR 1910.7 for definition of nationally recognized testing laboratory.

Accepted
As used in Electrical, WAC 296-800-280 means an installation is accepted if it has been inspected and found by a nationally recognized testing laboratory to conform to specified plans or to procedures of applicable codes.

Access
As used in material safety data sheets (MSDSs) as Exposure Records, WAC 296-800-180 means the right and opportunity to examine and copy exposure records.

Affected employees
As used in WISHA appeals, penalties and other procedural rules, WAC 296-800-350 means employees exposed to hazards identified as violations in a citation.

Analysis using exposure or medical records
- An analysis using exposure records or medical records can be any collection of data or a statistical study. It can be based on either:
  - Partial or complete information from individual employee exposure or medical records or
  - Information collected from health insurance claim records
- The analysis is not final until it has been:
  - Reported to the employer or
  - Completed by the person responsible for the analysis

ANSI
This is an acronym for the American National Standards Institute.

Approved means:
- Approved by the director of the department of labor and industries or their authorized representative, or by an organization that is specifically named in a rule, such as Underwriters' Laboratories (UL), Mine Safety and Health Administration (MSHA), or the National Institute for Occupational Safety and Health (NIOSH).
- As used in Electrical, WAC 296-800-280 means acceptable to the authority enforcing this section. The authority enforcing this section is the director of labor and industries. The definition of acceptable indicates what is acceptable to the director and therefore approved.

Assistant director
The assistant director for the WISHA services division at the department of labor and industries or his/her designated representative.

ASTM
This is an acronym for American Society for Testing and Materials.

Attachment plug or plug
As used in the basic electrical rules, WAC 296-800-280 means the attachment at the end of a flexible cord or cable that is part of a piece of electrical equipment. When it is inserted into an outlet or receptacle, it connects the conductors supplying electrical power from the outlet to the flexible cable.

Bare conductor
A conductor that does not have any covering or insulation.

Bathroom
A room maintained within or on the premises of any place of employment, containing toilets that flush for use by employees.

Biological agents
Organisms or their by-products.

Board
As used in WISHA appeals, penalties and other procedural rules, WAC 296-800-350 means the board of industrial insurance appeals.

Ceiling
An exposure limit that must not be exceeded during any part of the employee's workday. The ceiling must be determined over the shortest time period feasible and should not exceed fifteen minutes.

Certification
As used in WISHA appeals, penalties and other procedural rules, WAC 296-800-350 means refers to an employer's written statement describing when and how a citation violation was corrected.

CFR
This is an acronym for Code of Federal Regulations.

Chemical
Any element, chemical compound, or mixture of elements and/or compounds.

Chemical agents (airborne or contact)
A chemical agent is any of the following:
- Airborne chemical agent which is any of the following:
  - Dust - solid particles suspended in air, that are created by actions such as:
    - Handling.
    - Drilling.
• Crushing.
• Grinding.
• Rapid impact.
• Detonation.
• Decrepitation of organic or inorganic materials such as rock, ore, metal, coal, wood, and grain.
  – Fume - solid particles suspended in air, that are created by condensation from the gaseous state.
  – Gas - a normally formless fluid, such as air, which can be changed to the liquid or solid state by the effect of increased pressure or decreased temperature or both.
  – Mist - liquid droplets suspended in air. Mist is created by:
    • Condensation from the gaseous to the liquid state;
    OR
    • Converting a liquid into a dispersed state with actions such as splashing, foaming, spraying or atomizing.
  – Vapor - the gaseous form of a substance that is normally in the solid or liquid state.
• Contact chemical agent which is any of the following:
  – Corrosive - a substance that, upon contact, causes destruction of living tissue by chemical action, including acids with a pH of 2.5 or below or caustics with a pH of 11.0 or above.
  – Irritant - a substance that will induce a local inflammatory reaction upon immediate, prolonged, or repeated contact with normal living tissue.
  – Toxicant - a substance that has the inherent capacity to produce personal injury or illness to individuals by absorption through any body surface.

Chemical manufacturer
An employer with a workplace where one or more chemicals are produced for use or distribution.

Chemical name
The scientific designation of a chemical in accordance with one of the following:
• The nomenclature system developed by the International Union of Pure and Applied Chemistry (IUPAC)
• The Chemical Abstracts Service (CAS) rules of nomenclature
• A name which will clearly identify the chemical for the purpose of conducting a hazard evaluation.

Circuit breaker
• Is a device used to manually open or close a circuit. This device will also open the circuit automatically and without damage to the breaker when a predetermined overcurrent is applied. (600 volts nominal or less)
• Is a switching device capable of making, carrying, and breaking currents under normal circuit conditions, and also making, carrying for a specified time, and breaking currents under specified abnormal circuit conditions, such as those of short circuit. (Over 600 volts nominal)

Citation
Refers to the citation and notice issued to an employer for any violation of WISHA safety and health rules. A citation and notice may be referred to as a citation and notice of assessment but is more commonly referred to as a citation.

Combustible liquid
A combustible liquid has a flashpoint of at least 100°F (37.8°C) and below 200°F (93.3°C). Mixtures with at least 99% of their components having flashpoints of 200°F (93.3°C) or higher are not considered combustible liquids.

Commercial account
As used in Employer Chemical Hazard Communication, WAC 296-800-170 means an arrangement in which a retail distributor sells hazardous chemical(s) to an employer, generally in large quantities over time, and/or at costs that are below the regular retail price.

Common name
As used in Employer Chemical Hazard Communication, WAC 296-800-170 means any designation or identification such as:
• Code name
• Code number
• Trade name
• Brand name
• Generic name used to identify a chemical other than by its chemical name.

Compressed gas
A gas or mixture of gases that, when in a container, has an absolute pressure exceeding:
• 40 psi at 70°F (21.1°C)
  OR
• 104 psi at 130°F (54.4°C) regardless of the pressure at 70°F (21.1°C)
Compressed gas can also mean a liquid with a vapor pressure that exceeds 40 psi at 100°F (37.8°C)

Conductor
A wire that transfers electric power.

Container
As used in Employer Chemical Hazard Communication, WAC 296-800-170 means any container, except for pipes or piping systems, that contains a hazardous chemical. It can be any of the following:
• Bag
• Barrel
• Bottle
• Box
• Can
• Cylinder
• Drum
• Reaction vessel
• Storage tank

Correction date
The date by which a violation must be corrected. Final orders or extensions that give additional time to make corrections establish correction dates. A correction date established by an order of the board of industrial insurance appeals remains in effect during any court appeal unless the court suspends the date.

Corrective notice
Refers to a notice changing a citation and is issued by the department after a citation has been appealed.

Corrosive
A substance that, upon contact, causes destruction of living tissue by chemical action, including acids with a pH of 2.5 or below or caustics with a pH of 11.0 or above.

Covered conductor
A conductor that is covered by something else besides electrical insulation.
Damp location
As used in basic electrical rules, WAC 296-800-280 means partially protected areas that are exposed to moderate moisture. Outdoor examples include roofed open porches and marquees. Interior examples include basements and barns.

Department
Those portions of the department of labor and industries responsible for enforcing the Washington Industrial Safety Act (WISHA).

Designated representative
• Any individual or organization to which an employee gives written authorization.
• A recognized or certified collective bargaining agent without regard to written authorization.
• The legal representative of a deceased or legally incapacitated employee.

Director
The director means the director of the department of labor and industries or their designee.

Distributor
A business, other than a chemical manufacturer or importer, that supplies hazardous chemicals to other distributors or to employers.

Documentation
As used in WISHA appeals, penalties and other procedural rules, WAC 296-800-350 means material that you submit to prove that a correction is completed. Documentation includes, but is not limited to, photographs, receipts for materials and/or labor.

Dry location
As used in basic electrical rules, WAC 296-800-280 means areas not normally subjected to damp or wet conditions. Dry locations may become temporarily damp or wet, such as when constructing a building.

Dust
Solid particles suspended in air that are created by actions such as:
• Handling.
• Drilling.
• Crushing.
• Grinding.
• Rapid impact.
• Detonation.
• Decrepitation of organic or inorganic materials such as rock, ore, metal, coal, wood, and grain.

Emergency washing facilities
Emergency washing facilities are emergency showers, eyewashes, eye/face washes, hand-held drench hoses, or other similar units.

Electrical outlets
Places on an electric circuit where power is supplied to equipment through receptacles, sockets, and outlets for attachment plugs.

Employee
Based on chapter 49.17 RCW, the term employee and other terms of like meaning, unless the context of the provision containing such term indicates otherwise, means an employee of an employer who is employed in the business of his or her employer whether by way of manual labor or otherwise and every person in this state who is engaged in the employment of or who is working under an independent contractor the essence of which is personal labor for an employer under this standard whether by way of manual labor or otherwise.

Employee exposure record
As used in material safety data sheets (MSDSs) as exposure records, WAC 296-800-180 means a record containing any of the following kinds of information:
• Environmental (workplace) monitoring or measuring of a toxic substance or harmful physical agent, including personal area, grab, wipe, or other form of sampling, as well as related collection and analytical methodologies, calculations, and other background data relevant to interpretation of the results obtained;
• Biological monitoring results which directly assess the absorption of a toxic substance or harmful physical agent by body systems (e.g., the level of a chemical in the blood, urine, breath, hair, fingernails, etc.) but not including results which assess the biological effect of a substance or agent or which assess an employee’s use of alcohol or drugs;
• Material safety data sheets indicating that the material may pose a hazard to human health;
  OR
• In the absence of the above, a chemical inventory or any other record which reveals where and when used and the identity (e.g., chemical, common or trade name) of a toxic substance or harmful physical agent.

Employer
Based on chapter 49.17 RCW, an employer is any person, firm, corporation, partnership, business trust, legal representative, or other business entity which engages in any business, industry, profession, or activity in this state and employs one or more employees or who contracts with one or more persons, the essence of which is the personal labor of such person or persons and includes the state, counties, cities, and all municipal corporations, public corporations, political subdivisions of the state, and charitable organizations: Provided, That any persons, partnership, or business entity not having employees, and who is covered by the Industrial Insurance Act must be considered both an employer and an employee.

Exit
Provides a way of travel out of the workplace.

Exit route
A continuous and unobstructed path of exit travel from any point within a workplace to safety outside.

Explosive
A chemical that causes a sudden, almost instant release of pressure, gas, and heat when exposed to a sudden shock, pressure, or high temperature.

Exposed live parts
Electrical parts that are:
• Not suitably guarded, isolated, or insulated
  AND
• Capable of being accidentally touched or approached closer than a safe distance.

Exposed wiring methods
Involve working with electrical wires that are attached to surfaces or behind panels designed to allow access to the wires.

(2007 Ed.)
Exposure or exposed
As used in employer chemical hazard communication, WAC 296-800-170 and material safety data sheets (MSDSs) as exposure records, WAC 296-800-180. An employee has been, or may have possibly been, subjected to a hazardous chemical, toxic substance or harmful physical agent while working. An employee could have been exposed to hazardous chemicals, toxic substances, or harmful physical agents in any of the following ways:

- Inhalation
- Ingestion
- Skin contact
- Absorption
- Related means.

The terms exposure and exposed only cover workplace exposure involving a toxic substance or harmful physical agent in the workplace different from typical nonoccupational situations in the way it is:

- Used
- Handled
- Stored
- Generated
- Present

Exposure record
See definition for employee exposure record.

Extension ladder
A portable ladder with 2 or more sections and is not self-supporting. The 2 or more sections travel in guides or brackets that let you change the length. The size of a portable ladder is determined by adding together the length of each section.

Failure-to-abate
Any violation(s) resulting from not complying with an abatement date.

Final order
Any of the following (unless an employer or other party files a timely appeal):

- Citation and notice;
- Corrective notice;
- Decision and order from the board of industrial insurance appeals;
- Denial of petition for review from the board of industrial insurance appeals;
- Decision from a Washington State superior court, court of appeals, or the state supreme court.

Final order date
The date a final order is issued.

First aid
The extent of treatment you would expect from a person trained in basic first aid, using supplies from a first-aid kit.

Tests, such as X rays, must not be confused with treatment.

Flammable
A chemical covered by one of the following categories:

- Aerosol flammable means an aerosol that, when tested by the method described in 16 CFR 1500.45 yields either a flame projection more than 18 inches at full valve opening or a flashback (a flame extending back to the valve) at any degree of valve opening;
- Gas, flammable means:

- A gas that, at temperature and pressure of the surrounding area, forms a flammable mixture with air at a concentration of 13% by volume or less or
- A gas that, at temperature and pressure of the surrounding area, forms a range of flammable mixtures with air wider than 12% by volume, regardless of the lower limit.

- Liquid, flammable means any liquid having a flashpoint below 100°F (37.8°C), except any mixture having components with flashpoints of 100°F (37.8°C) or higher, the total of which make up 99% or more of the total volume of the mixture.

- Solid, flammable means a solid, other than a blasting agent or explosive as defined in 29 CFR 1910.109(a), that is likely to cause fire through friction, moisture absorption, spontaneous chemical change, or retained heat from manufacturing or processing, or which can be ignited readily. Solid, inflammable also means that when the substance is ignited, it burns so powerfully and persistently that it creates a serious hazard. A chemical must be considered to be a flammable solid if, when tested by the method described in 16 CFR 1500.44, it ignites and burns with a self-sustained flame at a rate greater than one-tenth of an inch per second along its major axis.

Flashpoint
- The minimum temperature at which a liquid gives off a vapor in sufficient concentration to ignite when tested by any of the following measurement methods:
  - Tagliabue closed tester: (See American National Standard Method of Test for Flash Point by Tag Closed Tester, Z11.24-1979 (ASTM D 56-79)) for liquids with a viscosity of less than 45 Saybolt Universal Seconds (SUS) at 100°F (37.8°C), that do not contain suspended solids and do not have a tendency to form a surface film under test; or
  - Pensky-Martens closed tester: (See American National Standard Method of Test for Flash Point by Pensky-Martens Closed Tester, Z11.7-1979 (ASTM D 93-79)) for liquids with a viscosity equal to or greater than 45 SUS at 100°F (37.8°C), or that contain suspended solids, or that have a tendency to form a surface film under test; or
  - Setashift closed tester: (See American National Standard Method of Test for Flash Point by Setashift Closed Tester (ASTM D 3273-78)).

Note: Organic peroxides, which undergo auto accelerating thermal decomposition, are excluded from any of the flashpoint measurement methods specified above.

Flexible cords and cables
Typically used to connect electrical equipment to an outlet or receptacle. These cords can have an attachment plug to connect to a power source or can be permanently wired into the power source. Flexible cords, extension cords, cables and electrical cords are all examples of flexible cord.

Floor hole
An opening in any floor, platform, pavement, or yard that measures at least one inch but less than 12 inches at its smallest dimension and through which materials and tools (but not people) can fall.

Examples of floor holes are:

- Belt holes
- Pipe openings
- Slot openings
Floor opening
An opening in any floor, platform, pavement, or yard that measures at least 12 inches in its smallest dimension and through which a person can fall.
Examples of floor openings are:
- Hatchways
- Stair or ladder openings
- Pits
- Large manholes
The following are NOT considered floor openings:
- Openings occupied by elevators
- Dumbwaiters
- Conveyors
- Machinery
- Containers

Foreseeable emergency
As used in Employer Chemical Hazard Communication, WAC 296-800-170 means any potential event that could result in an uncontrolled release of a hazardous chemical into the workplace. Examples of foreseeable emergencies include equipment failure, rupture of containers, or failure of control equipment.

Fume
Solid particles suspended in air that are created by condensation from the gaseous state.

Gas
A normally formless fluid, such as air, which can be changed to the liquid or solid state by the effect of increased pressure or decreased temperature or both.

Ground
As used in Electrical, WAC 296-800-280, a connection between an electrical circuit or equipment and the earth or other conducting body besides the earth. This connection can be intentional or accidental.

Grounded
A connection has been made between an electrical circuit or equipment and the earth or another conducting body besides the earth.

Grounded conductor
A system or circuit conductor that is intentionally grounded.

Ground-fault circuit-interrupter
A device whose function is to interrupt the electric circuit to the load when a fault current to ground exceeds some predetermined value that is less than that required to operate the overcurrent protective device of the supply circuit.

Grounding conductor
Is used to connect equipment or the grounded circuit of a wiring system to a grounding electrode or electrodes.

Grounding conductor, equipment
A conductor used to connect noncurrent-carrying metal parts of equipment, raceways, and other enclosures to the system grounded conductor and/or the grounding electrode conductor at the service equipment or at the source of a separately derived system.

Guarded
Covered, shielded, fenced, enclosed, or otherwise protected by means of suitable covers, casings, barriers, rails, screens, mats, or platforms to remove the likelihood of being accidentally touched or approached closer than a safe distance.

Hand-held drench hoses
Hand-held drench hoses are single-headed emergency washing devices connected to a flexible hose that can be used to irrigate and flush the face or other body parts.

Handrail
A single bar or pipe supported on brackets from a wall or partition to provide a continuous handhold for persons using a stair.

Harmful physical agent
Any physical stress such as noise, vibration, repetitive motion, heat, cold, ionizing and nonionizing radiation, and hypo- or hyperbaric pressure which:
- Is listed in the latest edition of the National Institute for Occupational Safety and Health (NIOSH) Registry of Toxic Effects of Chemical Substances (RTECS); or
- Has shown positive evidence of an acute or chronic health hazard in testing conducted by, or known to, the employer;

Hazard
Any condition, potential or inherent, which can cause injury, death, or occupational disease.

Hazard warning
As used in Employer Chemical Hazard Communication, WAC 296-800-170 can be a combination of words, pictures, symbols, or combination appearing on a label or other appropriate form of warning which shows the specific physical and health hazard(s), including target organ effects, of the chemical(s) in the container(s).

Hazardous chemical
Any chemical that is a physical or health hazard.

Health hazard
A chemical, mixture, biological agent, or physical agent that may cause health effects in short- or long-term exposed employees. Based on statistically significant evidence from at least one study conducted using established scientific principles. Health hazards include:
- Carcinogens
- Toxic or highly toxic agents
- Reproductive toxins
- Irritants
- Corrosives
- Sensitizers
- Hepatotoxins (liver toxins)
- Nephrotoxins (kidney toxins)
- Neurotoxins (nervous system toxins)
- Substances that act on the hematopoietic system (blood or blood-forming system)
- Substances that can damage the lungs, skin, eyes, or mucous membranes
- Hot or cold conditions.

Hospitalization
To be sent to, to go to, or be admitted to, a hospital or an equivalent medical facility and receive medical treatment.
beyond first-aid treatment, regardless of the length of stay in the hospital or medical facility.

Identity
As used in Employer Chemical Hazard Communication, WAC 296-800-170 means any chemical or common name listed on the material safety data sheet (MSDS) for the specific chemical. Each identity used must allow cross-references among the:
- Required list of hazardous chemicals
- Chemical label
- MSDSs

Imminent danger violation
Any violation(s) resulting from conditions or practices in any place of employment, which are such that a danger exists which could reasonably be expected to cause death or serious physical harm, immediately or before such danger can be eliminated through the enforcement procedures otherwise provided by the Washington Industrial Safety and Health Act.

Importer
The first business within the Customs Territory of the USA that:
- Receives hazardous chemicals produced in other countries
AND
- Supplies them to distributors or employers within the USA

Insulated
A conductor has been completely covered by a material that is recognized as electrical insulation and is thick enough based on:
- The amount of voltage involved
AND
- The type of covering material

Interim waiver
An order granted by the department allowing an employer to vary from WISHA requirements until the department decides to grant a permanent or temporary waiver.

Irritant
A substance that will induce a local inflammatory reaction upon immediate, prolonged, or repeated contact with normal living tissue.

Ladder
Consists of 2 side rails joined at regular intervals by crosspieces called steps, rungs, or cleats. These steps are used to climb up or down.

Listed
Equipment is listed if it:
- Is listed in a publication by a nationally recognized laboratory (such as UL, underwriters laboratory) that inspects the production of that type of equipment,
AND
- States the equipment meets nationally recognized standards or has been tested and found safe to use in a specific manner.

Material safety data sheet (MSDS)
Written, printed, or electronic information (on paper, microfiche, or on-screen) that informs manufacturers, distributors, employers or employees about a hazardous chemical, its hazards, and protective measures as required by material safety data sheet and label preparation, chapter 296-839 WAC.

Medical treatment
Treatment provided by a physician or by registered professional personnel under the standing orders of a physician. Medical treatment does not include first-aid treatment even if provided by a physician or registered professional personnel.

Mist
Liquid droplets suspended in air. Mist is created by:
- Condensation from the gaseous to the liquid state;
OR
- Converting a liquid into a dispersed state with actions such as splashing, foaming, spraying or atomizing.

Mixture
As used in Employer Chemical Hazard Communication, WAC 296-800-170, any combination of 2 or more chemicals (if that combination did not result from a chemical reaction).

Movable equipment
As used in WAC 296-800-35052, a hand-held or non-hand-held machine or device:
- That is powered or non-powered;
AND
- Can be moved within or between worksites

Must
Must means mandatory.

NEMA
These initials stand for National Electrical Manufacturing Association.

NFPA
This is an acronym for National Fire Protection Association.

Nose
The portion of the stair tread that projects over the face of the riser below it.

Occupational Safety and Health Administration (OSHA)
Created in 1970 when the U.S. Congress passed the Occupational Safety and Health Act, the Occupational Safety and Health Administration (OSHA) provides safety on the job for workers. OSHA oversees state plans (such as WISHA in Washington) that have elected to administer the safety and health program for their state. OSHA requires WISHA rules to be at least as effective as OSHA rules.

Office work environment
An indoor or enclosed occupied space where clerical work, administration, or business is carried out. In addition, it includes:
- Other workplace spaces controlled by the employer and used by office workers, such as cafeterias, meeting rooms, and washrooms.
- Office areas of manufacturing and production facilities, not including process areas.
- Office areas of businesses such as food and beverage establishments, agricultural operations, construction, commercial trade, services, etc.

Open riser
A stair step with an air space between treads has an open riser.

Organic peroxide
This is an organic compound containing the bivalent-0-0-structure. It may be considered a structural derivative of
hydrogen peroxide if one or both of the hydrogen atoms has been replaced by an organic radical.

**Outlet**

See definition for electrical outlets.

**Oxidizer**

A chemical other than a blasting agent or explosive as defined in WAC 296-52-60130 or CFR 1910.109(a), that starts or promotes combustion in other materials, causing fire either of itself or through the release of oxygen or other gases.

**Permissible exposure limits (PELs)**

Permissible exposure limits (PELs) are employee exposures to toxic substances or harmful physical agents that must not be exceeded. PELs are specified in applicable WISHA rules.

**Person**

Based on chapter 49.17 RCW, one or more individuals, partnerships, associations, corporations, business trusts, legal representatives, or any organized group of persons.

**Personal eyewash units**

Personal eyewash units are portable, supplementary units that support plumbed units or self-contained units, or both, by delivering immediate flushing for less than fifteen minutes.

**Personal service room**

Used for activities not directly connected with a business' production or service function such as:

- First aid
- Medical services
- Dressing
- Showering
- Bathrooms
- Washing
- Eating

**Personnel**

See the definition for employees.

**Physical hazard**

As used in Employer Chemical Hazard Communication, WAC 296-800-170 means a chemical that has scientifically valid evidence to show it is one of the following:

- Combustible liquid
- Compressed gas
- Explosive
- Flammable
- Organic peroxide
- Oxidizer
- Pyrophoric
- Unstable (reactive)
- Water reactive

**Platform**

Platform means an extended step or landing that breaks a continuous run of stairs.

**Plug**

See definition for attachment plug.

**Potable water**

**Predictable and regular basis**

Employee functions such as, but not limited to, inspection, service, repair and maintenance which are performed

- at least once every 2 weeks

OR

- 4 man-hours or more during any sequential 4-week period (to calculate man-hours multiply the number of employees by the number of hours during a 4-week period).

**Produce**

As used in Employer Chemical Hazard Communication, WAC 296-800-170, any one of the following:

- Manufacture
- Process
- Formulate
- Blend
- Extract
- Generate
- Emit
- Repackage

**Purchaser**

As used in Employer Chemical Hazard Communication, WAC 296-800-170, an employer who buys one or more hazardous chemicals to use in their workplace.

**Pyrophoric**

A chemical is pyrophoric if it will ignite spontaneously in the air when the temperature is 130°F (54.4°C) or below.

**Qualified person**

A person who has successfully demonstrated the ability to solve problems relating to the subject matter, work, or project, either by:

- Possession of a recognized degree, certificate, or professional standing;

OR

- Extensive knowledge, training and experience.

**Railing or standard railing**

A vertical barrier erected along exposed edges of a floor opening, wall opening, ramp, platform, or runway to prevent falls of persons.

**Reassume jurisdiction**

The department has decided to take back its control over a citation and notice being appealed.

**Receptacle or receptacle outlet**

As used in basic electrical rules, WAC 296-800-280 means outlets that accept a plug to supply electric power to equipment through a cord or cable.

**Record**

A record is any item, collection, or grouping of information. Examples include:

- Paper document
- Microfiche
- Microfilm
- X-ray film
- Computer record

**Repeat violation**

A violation is a repeat violation if the employer has been cited one or more times previously for a substantially similar hazard.

**Responsible party**

As used in employer chemical hazard communication, WAC 296-800-170. Someone who can provide appropriate
information about the hazardous chemical and emergency procedures.

**Rise**
The vertical distance from the top of a tread to the top of the next higher tread.

**Riser**
The vertical part of the step at the back of a tread that rises to the front of the tread above.

**Rungs**
Rungs are the cross pieces on ladders that are used to climb up and down the ladder.

**Runway**
An elevated walkway above the surrounding floor or ground level. Examples of runways are footwalks along shafting or walkways between buildings.

**Safety factor**
The term safety factor means the ratio of when something will break versus the actual working stress or safe load when it is used.

**Serious violation**
Serious violation must be deemed to exist in a workplace if there is a substantial probability that death or serious physical harm could result from a condition which exists, or from one or more practices, means, methods, operations, or processes which have been adopted or are in use in such workplace, unless the employer did not, and could not with the exercise of reasonable diligence, know of the presence of the violation.

**Short-term exposure limit (STEL)**
An exposure limit, averaged over a short time period (usually measured for 15 minutes) that must not be exceeded during any part of an employee's workday.

**Should**
Should means recommended.

**Single ladder**
A type of portable ladder with one section. It is distinguished by all of the following:
- It has one section
- It cannot support itself
- Its length cannot be adjusted

**Smoking**
A person is smoking if they are:
- Lighting up
- Inhaling
- Exhaling
- Carrying a pipe, cigar or cigarette of any kind that is burning

**Specific chemical identity**
This term applies to chemical substances. It can mean the:
- Chemical name
- Chemical Abstracts Service (CAS) registry number
- Any other information that reveals the precise chemical designation of the substance.

**Stair railing**
A vertical barrier attached to a stairway with an open side to prevent falls. The top surface of the stair railing is used as a handrail

**Stairs or stairway**
A series of steps and landings:
- leading to platforms, pits, boiler rooms, crossovers, or around machinery, tanks, and other equipment
- Used more or less continuously or routinely by employees, or only occasionally by specific individuals.
- With three or more risers

**Standard safeguard**
Safety devices that prevent hazards by their attachment to:
- Machinery
- Appliances
- Tools
- Buildings
- Equipment
These safeguards must be constructed of:
- Metal
- Wood
- Other suitable materials
The department makes the final determination about whether a safeguard is sufficient for its use.

**Step ladder**
A portable ladder with:
- Flat steps
- A hinge at the top allowing the ladder to fold out and support itself
- Its length that cannot be adjusted.

**Time weighted average (TWA)**
An exposure limit, averaged over 8 hours, that must not be exceeded during an employee's work shift.

**Toeboard**
A barrier at floor level along exposed edges of a floor opening, wall opening, platform, runway, or ramp, to prevent falls of materials.

**Toxic chemical**
As used in first aid, WAC 296-800-150, is a chemical that produces serious injury or illness when absorbed through any body surface.

**Toxic substance**
Any chemical substance or biological agent, such as bacteria, virus, and fungus, which is any of the following:
- Listed in the latest edition of the National Institute for Occupational Safety and Health (NIOSH) Registry of Toxic Effects of Chemical Substances (RTECS)
- Shows positive evidence of an acute or chronic health hazard in testing conducted by, or known to, the employer
- The subject of a material safety data sheet kept by or known to the employer showing the material may pose a hazard to human health.

**Toxicant**
A substance that has the inherent capacity to produce personal injury or illness to individuals by absorption through any body surface.

**Trade secret**
Any confidential:
- Formula
- Pattern
- Process
- Device
- Information
- Collection of information
The trade secret is used in an employer's business and gives an opportunity to gain an advantage over competitors who do not know or use it. See WAC 296-62-053 for requirements dealing with trade secrets.

**Tread**
As used in stairs and stair railings, WAC 296-800-250 means the horizontal part of the stair step.

**Tread run**
As used in stairs and stair railings, WAC 296-800-250 means the distance from the front of one stair tread to the front of an adjacent tread.

**Tread width**
The distance from front to rear of the same tread including the nose, if used.

**UL (Underwriters' Laboratories, Inc.)**
You will find these initials on electrical cords and equipment. The initials mean the cord or equipment meets the standards set by the Underwriters' Laboratories, Inc.

**Unstable (reactive)**
As used in employer chemical hazard communication, WAC 296-800-170. An unstable or reactive chemical is one that in its pure state, or as produced or transported, will vigorously polymerize, decompose, condense, or will become self-reactive under conditions of shocks, pressure or temperature.

**Use**
As used in employer chemical hazard communication, WAC 296-800-170, means to:
- Package
- Handle
- React
- Emit
- Extract
- Generate as a by-product
- Transfer.

**Vapor**
The gaseous form of a substance that is normally in the solid or liquid state.

**Voltage of a circuit**
The greatest effective potential difference between any two conductors or between a conductor and ground.

**Voltage to ground**
The voltage between a conductor and the point or conductor of the grounded circuit. For undergrounded circuits, it is the greatest voltage between the conductor and any other conductor of the circuit.

**Voltage, nominal**
Nominal voltage is a value assigned to a circuit or system to designate its voltage class (120/240, 480Y/277, 600, etc.). The actual circuit voltage can vary from the value if it is within a range that permits the equipment to continue operating in a satisfactory manner.

**WAC**
This is an acronym for Washington Administrative Code, which are rules developed to address state law.

**Water-reactive**
As used in Employer Chemical Hazard Communication, WAC 296-800-170, a water-reactive chemical reacts with water to release a gas that is either flammable or presents a health hazard.

**Watertight**
Constructed so that moisture will not enter the enclosure or container.

**Weatherproof**
Constructed or protected so that exposure to the weather will not interfere with successful operation. Rainproof, rain-tight, or watertight equipment can fulfill the requirements for weatherproof where varying weather conditions other than wetness, such as snow, ice, dust, or temperature extremes, are not a factor.

**Wet location**
As used in basic electrical rules, WAC 296-800-280 means:
- Underground installations or in concrete slabs or masonry that are in direct contact with the earth
- Locations that can be saturated by water or other liquids
- Unprotected locations exposed to the weather (like vehicle washing areas)

**WISHA**
This is an acronym for the Washington Industrial Safety and Health Act.

**Work area**
As used in employer chemical hazard communication, WAC 296-800-170, a room or defined space in a workplace where hazardous chemicals are produced or used, and where employees are present.

**Working days**
Means a calendar day, except Saturdays, Sundays, and legal holidays. Legal holidays include:
- New Year's Day - January 1
- Martin Luther King, Jr. Day
- Presidents' Day
- Memorial Day
- Independence Day - July 4
- Labor Day
- Veterans' Day - November 11
- Thanksgiving Day
- The day after Thanksgiving Day; and
- Christmas Day - December 25

The number of working days must be calculated by not counting the first working day and counting the last working day.

**Worker**
See the definition for employee.

**Workplace**
- The term workplace means:
  - Any plant, yard, premises, room, or other place where an employee or employees are employed for the performance of labor or service over which the employer has the right of access or control, and includes, but is not limited to, all workplaces covered by industrial insurance under Title 51 RCW, as now or hereafter amended.
  - As used in Employer Chemical Hazard Communication, WAC 296-800-170 means an establishment, job site, or project, at one geographical location containing one or more work areas.

**You**
See definition of employer.
Chapter 296-802 WAC

EMPLOYEE MEDICAL AND EXPOSURE RECORDS

WAC 296-802-100 Scope. The purpose of this chapter is to provide employees and their designated representatives the right to access relevant medical and exposure records. It also describes the procedures WISHA will follow when accessing confidential medical information.

This chapter applies to:

- All employers who make, maintain, contract for, or have access to records relating to employee exposure to toxic substances or harmful physical agents, whether or not they are required by specific occupational safety and health rules. These records include:
  - Employee medical records.
  - Employee exposure records.
  - Analyses of employee medical or exposure records.

IMPORTANT:

- The requirements of this chapter do not affect any other legal and ethical obligations the employer has to keep employee medical information confidential.

Exemption: Agricultural operations covered by chapter 296-307 WAC, Safety standards for agriculture, are exempt from the requirements of this chapter.

Reference:

- Requirements for material safety data sheets are found in WAC 296-800-180, Material safety data sheets (MSDSs) as exposure records.
- Additional information about accessing medical information can be found in chapter 70.02 RCW, Medical record—Health care information access and disclosure.

WAC 296-802-200 Keep employee medical and exposure records.

Summary:

Your responsibility:

To keep employee medical records, exposure records, and analyses.

IMPORTANT:

- Physicians or other health care personnel may keep medical records for you.
- You may keep information in any form as long as the information is retrievable.
- Unless a specific occupational safety and health rule provides a different time period, you must keep records for the period required by this chapter.

You must:

- Keep employee medical records
- Keep employee exposure records
- Keep analyses of medical or exposure records

WAC 296-802-20005 Keep employee medical records.

You must:

- Keep medical records for at least as long as the employee works for you plus thirty years.

Exemption: If an employee works for you for less than one year and you provide the records to them when they leave employment, you do not have to keep their medical records.

WAC 296-802-20010 Keep employee exposure records.

IMPORTANT:

- You do not need to keep the following records for any specific period:
  - Health insurance claims records maintained separately from your medical program and records.
  - Records of first-aid treatment, if made on-site by a nonphysician and if kept separately from the employee medical record.

You must:

- Keep chest X-ray films in their original state, such as film or electronic image.

WAC 296-802-20015 Keep employee exposure records.

You must:

- Keep employee exposure records for at least thirty years from the date the exposure record was made. These records include the following:
  - The sampling results.
  - The collection methodology (sampling plan).
  - A description of the analytical and mathematical methods used.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 08-04-026, § 296-802-200, filed 4/27/04, effective 8/1/04.]

[Title 296 WAC—p. 2740] (2007 Ed.)
Employee Medical and Exposure Records

296-802-40005

– Background data to environmental monitoring or measuring, such as laboratory reports and work sheets.

Note: You do not have to keep the actual background data for more than one year if you keep a summary of the data for thirty years.

You must:
Keep a record, for at least thirty years, of the identity of any toxic substance used in your workplace. Include:
• Where the substance was used.
• When the substance was used.

Note: The identity may be retained either as part of the exposure record or as a separate record.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-10-026, § 296-802-20015, filed 4/27/04, effective 8/1/04.]

WAC 296-802-20015 Keep analyses of medical or exposure records.
You must:
• Keep each analysis using medical or exposure records for at least thirty years.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-10-026, § 296-802-20015, filed 4/27/04, effective 8/1/04.]

WAC 296-802-300 Inform employees about records.
Summary:
Your responsibility:
To inform current employees about their medical and exposure records.
You must:
Inform current employees about their medical and exposure records
WAC 296-802-30005.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-10-026, § 296-802-300, filed 4/27/04, effective 8/1/04.]

WAC 296-802-30005 Inform current employees about their medical and exposure records.
You must:
• Inform employees covered by this rule about medical and exposure records when they first start employment, and then at least annually. Include the following information:
  – Where the records are located.
  – Who is responsible for the records.
  – Who to contact for access to the records.
  – Their rights to copy the records.
• Make copies of this rule available upon request to employees.
• Distribute to your employees any information about this chapter that you are given by the department.

Note: Some of the ways to inform employees that you have medical and exposure records include e-mail, letters, posters, or classroom training.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-10-026, § 296-802-30005, filed 4/27/04, effective 8/1/04.]

WAC 296-802-400 Provide employees access to records and analyses.
Summary:
Your Responsibility:
To provide employees access to records and analyses.

(2007 Ed.)
WAC 296-802-40010 Provide employee medical records.
You must:
• Make sure employees have access, upon request, to their own medical records.

Note: • A physician, nurse, or other responsible health care professional who maintains employee medical records may delete from requested medical records the identity of individuals who provided confidential information regarding an employee's health status.
• If a physician represents you and believes that providing an employee access to their specific diagnosis of a terminal illness or psychiatric condition could harm the employee, they may request that the record be released only to a designated representative having specific written authorization.
• The physician representing you may recommend that the employee or designated representative do one of the following:
  – Consult with the physician to review and discuss requested records.
  – Accept a summary of facts and opinions instead of requested records.
  – Accept the release of requested records only to another physician or designated representative.

You must:
• Make sure that individual employees are not identified in any portion of analyses that report the contents of employee medical records.
  – Identifying information includes both direct identifiers such as name, address, Social Security number, and payroll number, and other information that could reasonably be used in the circumstances to identify individual employees such as exact age, height, or weight.

Note: If it is not feasible to remove personal identifying information from a document, you do not have to provide the portions where personal identifiers cannot be moved.

You must:
• Provide designated representatives access to employee medical records when the employee provides specific written authorization.
  – If the written authorization does not contain an expiration date, it expires ninety days after it is signed.
  – Release only medical information that exists on the date of the written employee consent, unless the consent specifically states that future information may be released.

Note: An employee may revoke the specific written authorization in writing at any time.

WAC 296-802-40015 Provide employee exposure records.
You must:
• Provide requested exposure records that show the type and amount of toxic substances or harmful physical agents to which the employee is or has been exposed, for an employee's current or transfer work assignment.
  – In the absence of records specific to the employee, exposure records of other employees with the same job duties or related working conditions will be used to the extent necessary to respond to the request.
• Provide a designated representative, who does not have specific employee consent, access to employee exposure records only when a reasonable written request is made that includes the following:
  – The records requested.

– The occupational health need for accessing these records.

Note: Trade secret information may be withheld from exposure records. See chapter 296-816 WAC, Protecting trade secrets, for more information.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-10-026, § 296-802-40015, filed 4/27/04, effective 8/1/04.]

WAC 296-802-500 Respond to medical record access orders.
Summary:
IMPORTANT: This section describes how WISHA accesses employee medical records and your related rights and obligations.
Your responsibility:
To post written WISHA access orders.
You must:
Respond to WISHA access orders for employee medical records

WAC 296-802-50005. Content of WISHA written access orders

You must:
• Promptly respond to a written access order you receive from WISHA for personally identifiable employee medical information.
  – Post a copy of the cover letter you receive from WISHA for fifteen working days where employees can easily review it.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-10-026, § 296-802-50005, filed 4/27/04, effective 8/1/04.]

WAC 296-802-50010 Content of WISHA written access orders. A written access order from WISHA will contain at least the following information:
• The identity of employees whose medical information is being requested.
  – This may be either by name, job classification, time clock number, department, or similar identifier.
• A description of the medical information that will be examined.
  – The purpose for seeking access to this medical information.
  – Any additional evidence supporting access to the medical information.
• A step-by-step description of how the records will be obtained, copied, reviewed, and stored, specifying the following:
  – Who will be in charge of on-site review of the records, or who will take possession of the records for off-site review.
  – Where the records will be reviewed.
  – When review or receipt of the records is to take place.
  – If the records are to be reviewed on-site, what type of information will be copied and removed off-site.

[Title 296 WAC—p. 2742]
• How personal identifiers will be separated from the medical information and how long this information will be kept.
• The principal WISHA investigator's full name, business address and telephone number.
• The full names and titles of all individuals that will review the records.
• The WISHA industrial hygiene program manager's full name, business address and telephone number.

Note: WISHA does not need a written access order for the following types of employee medical records:
• Medical records and analyses that do not contain personal identification information.
• Examination of records to verify compliance with the medical surveillance requirements of another occupational health and safety rule.
• The following records when required by another occupational health and safety rule:
  – Medical opinions.
  – Biological monitoring results.
  – Results of medical examinations and laboratory tests.

WAC 296-802-600 Transfer and disposal of employee records.
Summary:
Your responsibility:
To transfer or dispose of employee medical and exposure records when you go out of business.
You must:
Transfer or dispose of employee medical and exposure records when you go out of business
WAC 296-802-60005.

WAC 296-802-60005 Transfer or dispose of employee medical and exposure records when you go out of business.
You must:
• Follow the requirements in Table 1 when transferring or disposing of records.

<table>
<thead>
<tr>
<th>If</th>
<th>Then</th>
</tr>
</thead>
<tbody>
<tr>
<td>Another employer continues the business when you go out of business</td>
<td>Transfer all employee records to that employer</td>
</tr>
<tr>
<td>No other employer continues the business when you go out of business</td>
<td>Do the following:</td>
</tr>
<tr>
<td></td>
<td>– Notify affected current employees of their rights of access to records at least three months prior to the termination of your business</td>
</tr>
<tr>
<td></td>
<td>AND EITHER:</td>
</tr>
<tr>
<td></td>
<td>– Notify WISHA in writing of your impending decision to dispose of records at least three months prior to your planned disposal;</td>
</tr>
</tbody>
</table>

Table 1 Transfer or Disposal of Records

Note: The address to notify WISHA in writing is:
Department of Labor & Industries/WISHA Services
Attention: Medical Records
P.O. Box 44610
Olympia, WA 98504-4610

WAC 296-802-900 Definitions.
Access
The right and opportunity to examine and copy an employee record.
Analysis using exposure or medical records
• Any collection of data or a statistical study based on either:
  – Information from individual employee exposure or medical records;
  OR
  – Information collected from health insurance claim records.
Designated representative
• Any individual or organization to which an employee gives written authorization.
• A recognized or certified collective bargaining agent without regard to written employee authorization.
• The legal representative of a deceased or legally incapacitated employee.
Employee exposure record
Means a record containing any of the following kinds of information:
• Environmental (workplace) monitoring or measuring of a toxic substance or harmful physical agent, including personal, area, grab, wipe, or other form of sampling, as well as related collection and analytical methodologies, calculations, and other background data relevant to interpretation of the results obtained.
• Biological monitoring results which directly assess the absorption of a toxic substance or harmful physical agent by body systems (such as the level of a chemical in the blood, urine, breath, hair, or fingernails) but not including results
which assess the biological effect of a substance or agent or which assess an employee's use of alcohol or drugs.
  • Material safety data sheets including that the material may pose a hazard to human health;
  OR
  • In the absence of the above:
    – A chemical inventory or any other record that reveals where and when used and the identity (e.g., chemical, common or trade name) of a toxic substance or harmful physical agent.
    – Exposure records of other employees with past or present job duties or related working conditions.

**Employee medical record**

A record concerning the health status of an employee which is made or maintained by a physician, nurse, or other health care personnel, or technician, including:

• Medical and employment questionnaires or histories (including job description and occupational exposures).
• The results of medical examinations (preemployment, preassignment, periodic, or episodic) and laboratory tests (including chest and other X-ray examinations taken for purposes of establishing a baseline or detecting occupational illness, and all biological monitoring not defined as an "employee exposure record").
• Medical opinions, diagnoses, progress notes, and recommendations.
  • First-aid records.
  • Descriptions of treatments and prescriptions.
  • Employee medical complaints.

An employee medical record does not include any of these types of medical information:

• Physical specimens (for example, blood or urine samples), which are routinely discarded as a part of normal medical practice.
• Records concerning health insurance claims if maintained separately from the employer’s medical program and its records, and not accessible to the employer by employee name or other direct personal identifier, such as Social Security number or payroll number.
• Records created solely in preparation for litigation that are privileged from discovery under applicable rules of procedure or evidence.
• Records concerning voluntary employee assistance programs, such as alcohol, drug abuse, or personal counseling programs, if maintained separately from the employer’s medical program and records.

**Exposure or exposed**

The contact an employee has with a toxic substance, harmful physical agent or oxygen deficient condition. Exposure can occur through various routes, such as inhalation, ingestion, skin contact, or skin absorption.

**First aid**

Any of the following are considered first aid:

• Using a nonprescription medication at nonprescription strength.
• Administering tetanus immunizations. Other immunizations, such as Hepatitis B vaccine or rabies vaccine, are considered medical treatment.
• Cleaning, flushing or soaking wounds on the surface of the skin.

• Using wound coverings such as bandages, Band-Aids™, or gauze pads.
• Using butterfly bandages or Steri-Strips™.
• Using hot or cold therapy.
• Using any nonrigid means of support, such as elastic bandages, wraps, or nonrigid back belts.
• Using temporary immobilization devices, such as splints, slings, neck collars, or back boards, while transporting an accident victim.
• Drilling a fingernail or toenail to relieve pressure.
• Draining fluid from a blister.
• Using eye patches.
• Removing foreign bodies from the eye using only irrigation or a cotton swab.
• Removing splinters or foreign material from areas other than the eye by irrigation, tweezers, cotton swabs or other simple means.
• Using finger guards.
• Using massages.
• Drinking fluids for relief of heat stress.

**Harmful physical agent**

Any physical stress such as noise, vibration, repetitive motion, heat, cold, ionizing and nonionizing radiation, and hypo- or hyperbaric pressure which:

• Is listed in the latest edition of the National Institute for Occupational Safety and Health (NIOSH) Registry of Toxic Effects of Chemical Substances (RTECS);
  OR
  • Has shown positive evidence of an acute or chronic health hazard in testing conducted by, or known to, the employer;
  OR
  • Is the subject of a material safety data sheet kept by or known to the employer showing that the material may pose a hazard to human health.

**Health professional**

A physician, occupational health nurse, industrial hygienist, toxicologist, or epidemiologist, who provides medical or other occupational health services to exposed employees.

**Record**

Any item, collection, or grouping of information. Examples include:

• Paper document.
• Microfiche.
• Microfilm.
• X-ray film.
• Computer record.

**Specific chemical identity**

Any other information that reveals the precise chemical designation of the substance, such as:

• Chemical name;
  OR
  • Chemical abstracts service (CAS) registry number.

**Specific written authorization**

A written authorization containing at least the following:

• The name and signature of the employee authorizing the release of medical information.
• The date of the written authorization.
• The name of the individual or organization that is authorized to release the medical information.
• The name of the designated representative (individual or organization) that is authorized to receive the information.
• A general description of the medical information that is authorized to be released.
• A general description of the purpose for the release of the medical information.
• A date or condition upon which the written authorization will expire.

Toxic substance
Any chemical substance or biological agent, such as bacteria, virus, and fungus, which is any of the following:
• Listed in the latest edition of the National Institute for Occupational Safety and Health (NIOSH) Registry of Toxic Effects of Chemical Substances (RTECS).
• Shows positive evidence of an acute or chronic health hazard in testing conducted by, or known to, the employer.
• The subject of a material safety data sheet kept by or known to the employer showing the material may pose a hazard to human health.

Trade secrets
Any confidential information that is used in an employer's business and gives an opportunity to gain an advantage over competitors who do not know or use it. It can be a:
• Formula.
• Pattern.
• Process.
• Device.
• Information.
• Collection of information.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-10-026, § 296-802-900, filed 4/27/04, effective 8/1/04.]

Chapter 296-803 WAC
LOCKOUT/TAGOUT
(CONTROL OF HAZARDOUS ENERGY)

WAC
296-803-100 Scope.
296-803-200 Summary.
296-803-20005 Establish a written energy control program.
296-803-300 Summary.
296-803-30005 Make sure new or modified machines and equipment can accept lockout devices.
296-803-400 Summary.
296-803-40005 Provide appropriate means to control energy.
296-803-40010 Make sure lockout and tagout devices meet these requirements.
296-803-40015 Make sure lockout devices meet these additional requirements.
296-803-40020 Make sure tagout devices meet these additional requirements.
296-803-500 Summary.
296-803-50005 Use energy control procedures.
296-803-50010 Meet these requirements when applying lockout or tagout devices.
296-803-50015 Meet these additional requirements when applying lockout devices.
296-803-50020 Meet these additional requirements when applying tagout devices.
296-803-50025 Protect employees from the hazards of stored and residual energy.
296-803-50030 Verify that the machine or equipment is safe before starting work.
296-803-50035 Meet these requirements when removing lockout or tagout devices and energizing the machine or equipment.

(2007 Ed.)

WAC 296-803-100 Scope. This chapter applies to the service and maintenance of machines and equipment, including piping systems, if employees could be injured by the:
– Unexpected energization or start up of the machine or equipment;
OR
– Release of stored energy.

Energy sources include mechanical, hydraulic, pneumatic, chemical, thermal, or other energy, including gravity.

Note:
• Machines and equipment include those that produce high intensity electromagnetic fields.
• When other Title 296 WAC standards require the use of lockout or tagout, they have to be used and supplemented by the procedural and training requirements of this chapter.

Exemption:
This chapter does not apply to:
• Construction activities covered by chapter 296-155 WAC, Safety standards for construction work.
• Agriculture activities covered by chapter 296-307 WAC, Safety standards for agriculture.
• Maritime activities covered by chapter 296-56 WAC, Safety standards—Longshore, stevedore and related waterfront operations and chapter 296-304 WAC, Safety standards for ship repairing, shipbuilding and shipbreaking.
• Oil and gas well drilling and servicing.
• Installations for generating, transmitting, and distributing electrical power (including related communication and metering equipment) that are controlled exclusively by electric utilities.
• Hot tap operations on pressurized pipelines used to transmit and distribute substances such as gas, steam, water, or petroleum products if the employer can demonstrate that all of the following apply:
  – Continuity of service is essential.
  – Shutdown of the system is impractical.
  – Proven effective employee protection is provided by following documented procedures and using special equipment.
  – Service and maintenance of fire alarm and extinguishing systems and their components if:
    – Other employees depend on these systems for fire safety; AND
    – Employees working on fire extinguishing systems are protected from the unexpected release of hazardous energy by appropriate alternative measures.
  – On electric equipment receiving power only through a cord and plug if:
    – Unplugging the equipment eliminates the possibility of unexpected energization, unexpected start up, or the release of stored energy; AND
    – The plug is kept under the exclusive control of the employee doing the service or maintenance.
  – Exposure to electrical hazards from electrical work on, near, or with conductors or equipment that is covered by chapter 296-24 WAC, General safety and health standards, Part L, Electrical.

[Title 296 WAC—p. 2745]
• Service and maintenance during normal production operations, if an employee is not required to:
  – Remove or bypass a guard or other safety device;
  OR
  – Place any body part into the point of operation or any other hazardous area created by machine operation.
• Minor tool changes, adjustments, and other minor service during normal production operations if:
  – They are routine, repetitive, and integral to the use of the equipment for production;
  AND
  – The work is done using measures which provide effective protection from hazards.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-15-105, § 296-803-100, filed 7/20/04, effective 11/1/04.]

WAC 296-803-200 Summary.
Your responsibility:
To establish an energy control program.

You must:
WAC 296-803-20005 Establish a written energy control program.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-15-105, § 296-803-200, filed 7/20/04, effective 11/1/04.]

WAC 296-803-20005 Establish a written energy control program.
You must:
• Establish a written energy control program to protect employees that service or maintain a machine or equipment from injury caused by the:
  – Unexpected energization or start up of the machine or equipment;
  OR
  – Release of stored energy.
• Make sure the program contains all of the following:
  – Energy control procedures as described in WAC 296-803-500.
  – Employee training as described in WAC 296-803-600.
  – Periodic reviews as described in WAC 296-803-700.
• Develop and document in writing energy control procedures to protect employees doing service or maintenance of a machine or equipment from potentially hazardous energy.
Exemption: You do not have to have written energy control procedures for a particular machine or equipment if all of the following apply:
• The machine or equipment has a single energy source that is easily identified and can be isolated.
• The machine or equipment is completely deenergized and deactivated by isolating and locking out the energy source.
• There's no stored or residual energy that could be a hazard to employees, and the machine or equipment cannot reaccumulate such energy after it's been shut down.
• The energy source can be locked out with a single lockout device.
• The machine or equipment is isolated from the energy source and locked out during service or maintenance.
• The authorized employee doing the service or maintenance has exclusive control of the lockout device.
• The service or maintenance does not create a hazard for other employees.
• The machine or equipment has never been unexpectedly energized or activated during service or maintenance.

You must:
• Make sure energy control procedures clearly and specifically outline:
  – The scope, purpose, authorization, rules, and techniques to control hazardous energy;
  AND
  – How you'll make sure employees follow the procedures.
  • Make sure energy control procedures specifically identify at least the following:
    – When the procedure must be used.
    – What the specific procedural steps are for:
    ■ Shutting down, isolating, blocking, and securing the machine or equipment.
    ■ Placing, removing, and transferring lockout or tagout devices and who is responsible for them.
    – How to test the machine or equipment to verify the effectiveness of lockout devices, tagout devices, and other energy control measures.

Note: Similar machines and equipment may be covered by a single written procedure if all of the following apply:
• They use the same type and magnitude of energy.
• They have the same or similar types of controls.
• The specific machines and equipment covered by the procedure are identified by at least type and location.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-15-105, § 296-803-2005, filed 7/20/04, effective 11/1/04.]

WAC 296-803-300 Summary.
Your responsibility:
To make sure new or modified machines and equipment can accept lockout devices.

You must:
WAC 296-803-30005 Make sure new or modified machines and equipment can accept lockout devices.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-15-105, § 296-803-300, filed 7/20/04, effective 11/1/04.]

WAC 296-803-30005 Make sure new or modified machines and equipment can accept lockout devices.
You must:
• Make sure energy-isolating devices designed to accept a lockout device are provided on machines and equipment that:
  – Are newly installed.
  – Have major repair.
  – Are renovated or modified.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-15-105, § 296-803-3005, filed 7/20/04, effective 11/1/04.]

WAC 296-803-400 Summary.
Your responsibility:
To provide appropriate lockout and tagout devices and means to control energy.

You must:
WAC 296-803-40005 Provide appropriate means to control energy.
WAC 296-803-40010 Make sure lockout and tagout devices meet these requirements.
WAC 296-803-40015 Make sure lockout devices meet these additional requirements.
WAC 296-803-40020 Make sure tagout devices meet these additional requirements.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-15-105, § 296-803-400, filed 7/20/04, effective 11/1/04.]
WAC 296-803-40005 Provide appropriate means to control energy.
You must:
• Provide the means necessary to isolate, secure, or block machines and equipment from energy sources.
Note: Examples of means to control energy include:
• Locks.
• Tags.
• Chains.
• Wedges.
• Key blocks.
• Adapter pins.
• Self-locking fasteners.
• Blind flanges.
• Cribbing.

WAC 296-803-40010 Make sure lockout and tagout devices meet these requirements.
You must:
• Make sure lockout and tagout devices meet all of the following:
  – Create no additional hazards.
  – Have a distinctive design or appearance.
  – Are the only devices used for controlling energy.
  – Are not used for any other purpose.
  – Are durable enough to withstand the environment they're used in for the maximum time they're expected to be used.
  – Are standardized within the facility by color, shape, or size.
  – Identify the person applying the device.

WAC 296-803-40015 Make sure lockout devices meet these additional requirements.
You must:
• Make sure lockout devices are strong enough so that removing them by other than the normal unlocking method requires:
  – Excessive force;
  OR
  – Unusual techniques such as the use of bolt cutters or other metal-cutting tools.

WAC 296-803-40020 Make sure tagout devices meet these additional requirements.
You must:
• Make sure all tags:
  – Use the same print and format within a facility.
  – Are constructed and printed so they will not deteriorate and the message on the tag remains legible when:
    ■ Exposed to weather.
    ■ Used in wet or damp locations.
    ■ Used in corrosive environments such as areas where acid or alkali chemicals are handled or stored.
  – Have a warning about not energizing the machine or equipment.

WAC 296-803-500 Summary.
Your responsibility:
To make sure energy control procedures are used and include these requirements.
You must:
ENERGY CONTROL PROCEDURES
WAC 296-803-50005 Use energy control procedures.
APPLYING LOCKOUT OR TAGOUT DEVICES
WAC 296-803-50010 Meet these requirements when applying lockout or tagout devices.
WAC 296-803-50015 Meet these additional requirements when applying lockout devices.
WAC 296-803-50020 Meet these additional requirements when applying tagout devices.
STORED ENERGY
WAC 296-803-50025 Protect employees from the hazards of stored and residual energy.
VERIFYING MACHINE ISOLATION
WAC 296-803-50030 Verify that the machine or equipment is safe before starting work.
REMOVING ENERGY CONTROL DEVICES
WAC 296-803-50035 Meet these requirements when removing lockout or tagout devices and energizing the machine or equipment.
TEMPORARY ENERGIZATION
WAC 296-803-50040 Meet these requirements if it's necessary to temporarily energize a machine, equipment, or component for testing or positioning.
SHIFT OR PERSONNEL CHANGES
WAC 296-803-50045 Protect employees during shift or personnel changes.
GROUP LOCKOUT/TAGOUT
WAC 296-803-50050 Protect employees working in a group.
WAC 296-803-50055 Meet these additional requirements if more than one group is used.
OUTSIDE EMPLOYEES
WAC 296-803-50060 Coordinate with outside employers servicing or maintaining your machines or equipment.
WAC 296-803-50005 Use energy control procedures. You must:

• Use energy control procedures to protect employees servicing or maintaining machines and equipment from potentially hazardous energy.

• Use a lockout system if an energy-isolating device can be locked out.

Exemption: A tagout system may be used instead of a lockout system if it meets all of the following:

• The tagout device is attached where you would have put the lockout device.

• The tagout system provides the same level of employee protection as a lockout system.

• You can demonstrate that the tagout system:
  – Meets all tagout requirements of this chapter.
  – Includes additional safety measures to provide the same level of safety as a lockout system.

Note: Additional safety measures used with the tagout system to provide protection equal to a lockout system could include actions such as:

• Removing part of the isolating circuit.

• Blocking a controlling switch.

• Opening an extra disconnecting device.

• Removing a valve handle.

You must:

• Use a tagout system if an energy-isolating device cannot be locked out.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-15-105, § 296-803-50005, filed 7/20/04, effective 11/1/04.]

WAC 296-803-50010 Meet these requirements when applying lockout or tagout devices.

You must:

• Make sure, before a machine or equipment is turned off, that the authorized employee knows all of the following:
  – Type and magnitude of the energy.
  – Hazards of the energy to be controlled.
  – Method or means to control the energy.

• Turn off or shut down the machine or equipment using established procedures.

• Completely isolate the machine or equipment from its energy sources using the appropriate energy-isolating devices after the machine or equipment has been turned off.

• Make sure you or the authorized employee notify affected employees that the machine or equipment is being locked or tagged out before the devices are applied.

• Make sure a lockout or tagout device is applied:
  – For each energy-isolating device.
  – Only by the authorized employee doing the service or maintenance.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-15-105, § 296-803-50010, filed 7/20/04, effective 11/1/04.]

WAC 296-803-50015 Meet these additional requirements when applying lockout devices.

You must:

• Make sure lockout devices hold the energy-isolating device in a “safe” or “off” position.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-15-105, § 296-803-50015, filed 7/20/04, effective 11/1/04.]

WAC 296-803-50020 Meet these additional requirements when applying tagout devices.

You must:

• Make sure a tagout device is put on an energy-isolating device so it clearly shows that moving the energy-isolating device from the “safe” or “off” position is prohibited.

• Make sure a tagout device, when used with an energy-isolating device that can be locked out, is fastened to the device at the same point a lock would have been attached.

• Make sure a tagout device that cannot be attached directly to an energy-isolating device is located:
  – As close as safely possible to the energy-isolating device;
  – In a position that is immediately obvious to anyone attempting to operate the energy-isolating device.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-15-105, § 296-803-50020, filed 7/20/04, effective 11/1/04.]

WAC 296-803-50025 Protect employees from the hazards of stored and residual energy.

You must:

• Make sure all potentially hazardous stored and residual energy is relieved, disconnected, restrained, or otherwise rendered safe after the lockout or tagout devices have been put on the energy-isolating devices.

• Continue to verify the isolation of machines and equipment that could reaccumulate stored energy to a hazardous level until:
  – Service or maintenance is completed;
  OR
  – The possibility of reaccumulating hazardous energy does not exist.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-15-105, § 296-803-50025, filed 7/20/04, effective 11/1/04.]

WAC 296-803-50030 Verify that the machine or equipment is safe before starting work.

You must:

• Make sure the authorized employee verifies that the machine or equipment that's been locked out or tagged out has been isolated from all energy sources and deenergized before starting work.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-15-105, § 296-803-50030, filed 7/20/04, effective 11/1/04.]

WAC 296-803-50035 Meet these requirements when removing lockout or tagout devices and energizing the machine or equipment.

You must:

• Make sure the authorized employee does the following before removing any lockout or tagout device:
  – Inspects the work area to make sure nonessential items have been removed;
  – Verifies the machine or equipment is in operating condition and ready to energize;

• Make sure only the authorized employee who applied a lockout or tagout device removes it.

[Title 296 WAC—p. 2748]
Exemption: The employer may have the lockout or tagout device removed by someone other than the authorized employee who applied it if all of the following conditions are met:
  • The energy control program has documented, specific procedures and training for this situation.
  • You can show that the specific procedures used are as safe as having the device removed by the authorized employee who applied it.
  • The specific procedures include at least the following:
    – Verifying the authorized employee who applied the device is not at the facility.
    – Making all reasonable efforts to contact and inform the authorized employee that the lockout or tagout device is being removed.
    – Making sure the authorized employee is informed, before resuming work at the facility, that the lockout or tagout device has been removed.

You must:
• Do the following before energizing or starting the machine or equipment:
  – Notify affected employees that the lockout or tagout devices have been removed.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-15-105, § 296-803-50035, filed 7/20/04, effective 11/1/04.]

WAC 296-803-50040 Meet these requirements if it's necessary to temporarily energize a machine, equipment, or component for testing or positioning.
You must:
• Follow your normal energy control procedures to:
  – Remove the lockout or tagout devices.
  – Energize the machine, equipment, or component.
  – Reapply the lockout or tagout devices when testing or positioning is completed.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-15-105, § 296-803-50040, filed 7/20/04, effective 11/1/04.]

WAC 296-803-50045 Protect employees during shift or personnel changes.
You must:
• Use specific procedures for shift or personnel changes to:
  – Make sure there's continuous lockout or tagout protection during the change;
  AND
  – Provide for the orderly transfer of lockout or tagout device protection between employees.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-15-105, § 296-803-50045, filed 7/20/04, effective 11/1/04.]

WAC 296-803-50050 Protect employees working in a group.
You must:
• Make sure your energy control procedures provide each member of a crew, craft, department, or other group with the same level of protection as that provided by an individual lockout or tagout device.
  • Make sure each authorized employee:
    – Puts a personal lockout or tagout device on the group lockout device, lockbox, or comparable mechanism before beginning work;
  AND
    – Does not remove it until they have finished work on the machine or equipment.
• Assign a primary authorized employee who:
  – Has overall responsibility for the service or maintenance;
  – Attaches their lockout or tagout device to the energy-isolating device when the equipment is deenergized and before any work begins;
  AND
  – Is the last person to remove their lockout or tagout device when the job is completed.

Definition:
The primary authorized employee is the authorized employee who has overall responsibility for meeting the requirements of the lockout/tagout procedures.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-15-105, § 296-803-50055, filed 7/20/04, effective 11/1/04.]

WAC 296-803-50055 Meet these additional requirements if more than one group is used.
You must:
• Do all of the following if more than one group works on a machine or equipment that has to be locked or tagged out:
  – Assign an authorized employee as the group coordinator with overall responsibility to:
    ■ Coordinate the different work groups;
    AND
    ■ Maintain continuous lockout or tagout protection.
    – Assign a primary authorized employee in each group who has:
      ■ Responsibility for the group of employees who are protected by a group lockout or tagout device;
      AND
      ■ A way to determine which employees of the group are exposed to the machine or equipment that's locked or tagged out.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-15-105, § 296-803-50055, filed 7/20/04, effective 11/1/04.]

WAC 296-803-50060 Coordinate with outside employers servicing or maintaining your machines or equipment.
You must:
• Do the following before allowing another employer's personnel to service or maintain machines or equipment if your energy control procedures require they be locked or tagged out:
  – Inform the outside employer of your lockout or tagout procedures.
  – Make sure the outside employer informs you of their lockout or tagout procedures.
  – Make sure you and the outside employer confirm that all employees understand and will follow the restrictions of the other employer's energy control program.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-15-105, § 296-803-50060, filed 7/20/04, effective 11/1/04.]

WAC 296-803-600 Summary.
Your responsibility:
To train employees on your energy control program.
You must:

WAC 296-803-60005 Provide and document employee training on the energy control program.

WAC 296-803-60010 Provide additional training if you use tagout devices.

WAC 296-803-60015 Retrain employees when necessary.

WAC 296-803-60005 Provide and document employee training on the energy control program.

You must:

• Train employees to make sure that they:
  – Understand the purpose and function of the energy control program;
  AND
  – Have the knowledge and skills necessary to carry out their program responsibilities.

• Train each authorized employee in:
  – The type and magnitude of energy available in the workplace.
  – Recognizing hazardous energy sources that apply.
  – Methods and means to isolate and control energy.

• Instruct each affected employee in the purpose and use of the energy control procedures.

• Instruct all employees who work or may work where energy control procedures might be used about the:
  – Procedures being used;
  AND
  – Prohibition against attempting to restart or reenergize a machine or equipment that's locked out or tagged out.

• Document that employee training has been done and kept up to date.
  – Include the employee's name and the training date.

WAC 296-803-60010 Provide additional training if you use tagout devices.

You must:

• Make sure employees are trained in the following:
  – Tags are warning devices and do not provide the same level of physical restraint as a lock.
  – When attached to energy-isolating devices, tags are not to be:
    ■ Removed without the approval of the authorized person responsible for it;
    OR
    ■ Bypassed, ignored, or otherwise defeated.
  – Tags need to be legible and understandable to be effective.
  – Tags may evoke a false sense of security.
  – The meaning of tags needs to be understood as part of the overall energy control program.
  – Tags and their means of attachment must be:
    ■ Securely attached to energy-isolating devices so they cannot be inadvertently or accidentally detached;
    AND
    ■ Made of materials that will withstand the environmental conditions they will be exposed to.

WAC 296-803-60015 Retrain employees when necessary.

You must:

• Retrain authorized and affected employees to introduce new or revised control methods and procedures when there's a change in any of the following:
  – Job assignments.
  – Machines, equipment, or processes that present a new hazard.
  – Energy control procedures.

• Retrain employees to reestablish proficiency when:
  – A periodic inspection shows the employee deviates from, or has inadequate knowledge of, the energy control procedures;
  OR
  – The employer has reason to believe retraining is necessary.

WAC 296-803-700 Summary.

Your responsibility:

To do periodic reviews to make sure employees know and use your energy control procedures.

You must:

WAC 296-803-70005 Perform and document periodic reviews to verify employees know and follow the energy control procedures.

WAC 296-803-70010 Do periodic reviews of procedures using lockout devices.

WAC 296-803-70015 Do periodic reviews of procedures using tagout devices.

WAC 296-803-70005 Perform and document periodic reviews to verify employees know and follow the energy control procedures.

You must:

• Do a periodic review at least annually to:
  – Make sure employees know and can apply the energy control procedures.
  – Correct any deviations or inadequacies identified.

Exemption: Energy control procedures used less frequently than once a year only need to be reviewed before being used.

You must:

• Have the periodic review done by an authorized employee other than the ones using the energy control procedure being reviewed.

• Document that periodic reviews have been done.
  – Include all of the following:
    ■ Machine or equipment the energy control procedure was used for.
    ■ Date of the review.
    ■ Employees included in the review.
    ■ Person doing the review.
WAC 296-803-70010 Do periodic reviews of procedures using lockout devices.

You must:
• Make sure, if a periodic review involves lockout devices, the reviewing employee reviews responsibilities with each authorized employee who uses the procedure.

Note: Periodic reviews of authorized employees using energy control procedures involving only lockout devices have to be done in a group meeting if desired.

WAC 296-803-70015 Do periodic reviews of procedures using tagout devices.

You must:
• Make sure, if a periodic review involves tagout devices, the reviewing employee reviews with each authorized and affected employee the:
  – Employee's responsibilities under the procedure;
  AND
  – Limitations of tagout devices.

Note: Periodic reviews of authorized and affected employees using energy control procedures involving tagout devices also have to be done with each employee individually.

Reference: See WAC 296-803-60010, Provide additional training if you use tagout devices, in this chapter for the limitations of tagout devices.

WAC 296-803-800 Definitions.

Affected employee. An employee who's required to operate, use, or be in the area where a machine or equipment could be locked or tagged out for service or maintenance.

Authorized employee. An employee who locks or tags out a machine or equipment to do service or maintenance.

Can be locked out. An energy-isolating device that can be locked in the "off" or "safe" position.

Employer. Based on chapter 49.17 RCW, an employer is any person, firm, corporation, partnership, business trust, legal representative, or other business entity which engages in any business, industry, profession, or activity in this state and employs one or more employees or who contracts with one or more persons, the essence of which is the personal labor of such person or persons and includes the state, counties, cities, and all municipal corporations, public corporations, political subdivisions of the state, and charitable organizations: Provided, That any persons, partnership, or business entity not having employees, and who is covered by the Industrial Insurance Act must be considered both an employer and an employee.

Energized. Connected to an energy source or containing residual or stored energy.

Energy-isolating device. A mechanical device that physically prevents transmitting or releasing energy. This includes, but is not limited to:
• Manually operated switches.
• Disconnect switches.
• Line valves.
• Blocks.
• Similar devices used to block or isolate energy.

Energy source. Any source of electrical, mechanical, hydraulic, pneumatic, chemical, thermal or other energy, including gravity.

Hot tap. A procedure which involves welding on pressurized pipelines, vessels, or tanks to install connections or accessories. It's commonly used to replace or add sections of pipeline used in air, gas, water, steam, and petrochemical distribution systems without interrupting service.

Lockout. Placing a lockout device on an energy-isolating device using an established procedure to make sure the machine or equipment cannot be operated until the lockout device is removed.

Lockout device. A device that uses a positive means, such as a key or combination lock, to hold an energy-isolating device in the "safe" or "off" position. This includes blank flanges and bolted slip blinds.

Normal production operations. Using a machine or equipment for its intended production function.

Primary authorized employee. An authorized employee who has overall responsibility for meeting the requirements of the lockout/tagout procedures.

Service and maintenance. Activities such as constructing, installing, setting-up, adjusting, modifying, maintaining, and servicing machines or equipment. It also includes lubricating, cleaning, unjamming, and making tool changes.

Setting-up. Work done to prepare a machine or equipment for normal production operations.

Tagout. Placing a tagout device on an energy-isolating device using an established procedure to indicate that the energy-isolating device and the machine or equipment being controlled may not be operated until the tagout device is removed.

Tagout device. A prominent warning device, such as a tag and a means of attachment. It can be securely fastened to an energy-isolating device to indicate that the energy-isolating device and the machine or equipment being controlled may not be operated until the tagout device is removed.

You. See definition of employer.

Chapter 296-806 WAC
MACHINE SAFETY

WAC 296-806-100 Scope.

REQUIREMENTS FOR ALL MACHINES

WAC 296-806-200 Summary.

WORKPLACE

296-806-20002 Secure machines designed to stay in one place.

296-806-20004 Protect employees from slipping hazards around machinery.

296-806-20006 Arrange work areas to avoid creating hazards.

MACHINE CONTROLS AND OPERATIONS

296-806-20008 Make sure operating controls meet these requirements.

(2007 Ed.)
Chapter 296-806  Title 296 WAC: Labor and Industries, Department of

296-806-20010  Protect employees from unintentional machine operation.
296-806-20012  Make sure emergency stop controls meet these requirements.
296-806-20014  Control machine vibration.
296-806-20016  Prevent overspeed conditions.
296-806-20018  Make sure hand feeding and retrieval tools meet these requirements.
296-806-20020  Protect employees who are adjusting or repairing machinery.

**POWER TRANSMISSION PARTS**

296-806-20022  Keep power transmission equipment in good working condition.
296-806-20024  Inspect power transmission parts.
296-806-20026  Protect employees lubricating moving machinery.

**SAFEGUARDING REQUIREMENTS**

296-806-20028  Safeguard employees from the point of operation.
296-806-20030  Safeguard employees from nip or shear point hazards.
296-806-20032  Safeguard employees from rotating or revolving parts.
296-806-20034  Safeguard employees from reciprocating or other moving parts.
296-806-20036  Safeguard employees from flying objects.
296-806-20038  Safeguard employees from falling objects.
296-806-20040  Safeguard employees from moving surfaces with hazards.

**SAFEGUARDING METHODS**

296-806-20042  Make sure guards meet these requirements.

**GENERAL REQUIREMENTS FOR CONVEYORS**

296-806-42002  Follow these requirements for conveyors.
296-806-42004  Provide emergency stops on conveyors.
296-806-42006  Label conveyor controls.
296-806-42008  Prohibit riding on conveyors.
296-806-42010  Provide safe access to conveyors.
296-806-42012  Provide backstop or antirunaway devices on incline, decline, or vertical conveyors.
296-806-42014  Make only safe alterations to conveyors.
296-806-42016  Inspect and replace worn conveyor parts.
296-806-42018  Follow these requirements for replacing conveyor parts.
296-806-42020  Follow these requirements for spill guards.
296-806-42022  Provide pedestrian overpasses for conveyors.
296-806-42024  Guard openings to hoppers and chutes.
296-806-42026  Install guideposts.

**BELT CONVEYORS**

296-806-42028  Guard nip points on belt conveyors.
296-806-42030  Install emergency stop controllers on overland belt conveyors.
296-806-42032  Install belt conveyor overpasses.

**CHAIN CONVEYORS**

296-806-42034  Safeguard chain conveyors.
296-806-42036  Guard return strands on chain conveyors.
296-806-42038  Guard chain conveyors that are used as a transfer mechanism.

**ELEVATOR CONVEYORS**

296-806-42040  Prevent material from falling off of elevator conveyors.

**INCLINED RECIPROCATING CONVEYORS (SHAKERS)**

296-806-42042  Provide protection where employees must load shakers.
296-806-42044  Provide grating over silo and bunker openings for shuttle conveyors.

**MOBILE CONVEYORS**

296-806-42046  Guard wheels and rails on mobile conveyors.
296-806-42050  Provide a detector for mobile conveyors.
296-806-42052  Provide safe access on mobile conveyors.

**PUSHER-BAR CONVEYORS**

296-806-42054  Guard pusher-bar conveyors.

**ROLLER CONVEYORS**

296-806-42056  Use speed controls for roller and wheel conveyors.

[Title 296 WAC—p. 2752] (2007 Ed.)
Machine Safety

Chapter 296-806

机 械 安 全 章 节 296-806

296-806-42060 Safeguard belt-driven live roller conveyors.
296-806-42062 Guard screw conveyors.
296-806-42064 Provide slack-cable switches on hoists.
296-806-42066 Block the skip bucket and counterweight guides.
296-806-42068 Protect against wire rope coming off sheaves.

SPECIFIC FOOD PROCESSING EQUIPMENT

296-806-42516 Make sure presence-sensing devices used to safeguard the point of operation meet these requirements.
296-806-42514 Make sure point-of-operation devices are effective.
296-806-42512 Make sure barrier guards meet these requirements.
296-806-42510 Make sure point-of-operation guards are properly designed and constructed.

296-806-42518 Follow these design requirements for bag lifts (bag arm elevators) and chutes.
296-806-42520 Follow these requirements for chain tackle.
296-806-42522 Safeguard conveyors.
296-806-42524 Use properly designed covers for screw conveyors (augers).
296-806-42526 Safeguard pallet jacks and hand trucks.

SPECIFIC FOOD PROCESSING EQUIPMENT

296-806-45002 Safeguard ironworkers point of operation.
296-806-45004 Follow these requirements for adjustable restrictors when safeguarding ironworkers.

296-806-45008 Safeguard power-clamping devices.
296-806-45010 Restrain extended workpieces on horizontal lathes.

FACILITIES

296-806-42502 Provide locks on chamber doors of large air conditioning units.
296-806-42504 Use proper door locks on rack-type bread coolers.
296-806-42506 Provide see-through panels on fermentation room doors.
296-806-42508 Cover exposed hot pipes.
296-806-42510 Provide extension piping on stationary lubrication fittings.

296-806-42518 Follow these design requirements for bag lifts (bag arm elevators) and chutes.
296-806-42520 Follow these requirements for chain tackle.
296-806-42522 Safeguard conveyors.
296-806-42524 Use properly designed covers for screw conveyors (augers).
296-806-42526 Safeguard pallet jacks and hand trucks.

SPECIFIC FOOD PROCESSING EQUIPMENT

296-806-45016 Use die keys and shims made of proper-grade material.
296-806-45018 Provide a safety cylinder head.
296-806-45020 Provide a shutoff valve.
296-806-45022 Provide a means for cylinder draining.

296-806-45024 Follow these requirements for pressure pipes.
296-806-45026 Follow these requirements when using board hammers.

296-806-45010 Safeguard power-clamping devices.
296-806-45014 Follow these requirements for manually operated valves and switches.

GENERAL REQUIREMENTS FOR FORGING

296-806-43002 Follow these safety requirements when using lead and lead casts.
296-806-43004 Properly inspect and maintain forging equipment.
296-806-43006 Use safety blocks on hammers and presses.
296-806-43008 Make sure tongs meet these requirements.
296-806-43010 Protect employees when removing scale.
296-806-43012 Provide adequate foundations for hammers and presses.
296-806-43014 Follow these requirements for manually operated valves and switches.

Hammers

296-806-43016 Use die keys and shims made of proper-grade material.
296-806-43018 Provide a safety cylinder head.
296-806-43020 Provide a shutoff valve.
296-806-43022 Provide a means for cylinder draining.

296-806-43024 Follow these requirements for pressure pipes.
296-806-43026 Follow these requirements when using board hammers.

OTHER FORGE FACILITY EQUIPMENT

296-806-43028 Protect against sparks from saws.

GARBAGE (WASTE) DISPOSALS

296-806-43502 Safeguard garbage (waste) disposal equipment.

GLUE SPREADERS

296-806-44002 Provide guards and automatic shutoffs on glue spreaders.

IRONWORKERS

296-806-44504 Follow these requirements for adjustable restrictors when safeguarding ironworkers.

LATHES

296-806-45010 Restrain extended workpieces on horizontal lathes.

WOODWORKING LATHES

296-806-45012 Guard cutting heads on profile lathes and swing-head lathes.
296-806-45014 Guard cutting heads on turning lathes.
296-806-45016 Guard automatic turning lathes.
296-806-45018 Guard wood lathes used for turning long pieces of stock.

MECHANICAL POWER PRESSES

296-806-45504 Safeguard presses that use unitized tooling.
296-806-45506 Protect operators from guidepost hazards.
296-806-45508 Safeguard the point of operation.
296-806-45510 Make sure point-of-operation guards are properly designed and constructed.
296-806-45512 Make sure barrier guards meet these requirements.
296-806-45514 Make sure point-of-operation devices are effective.
296-806-45516 Make sure presence-sensing devices used to safeguard the point of operation meet these requirements.

(2007 Ed.)
Chapter 296-806 Title 296 WAC: Labor and Industries, Department of

296-806-45518 Make sure pull-back devices used to safeguard the point of operation meet these requirements.
296-806-45520 Make sure restraint (holdout) devices used to safeguard the point of operation meet these requirements.
296-806-45522 Make sure two-hand control devices used to safeguard the point of operation meet these requirements.
296-806-45524 Make sure two-hand trip devices used to safeguard the point of operation meet these requirements.
296-806-45526 Provide additional safeguards when the operator puts one or both hands into the point of operation.

OPERATIONS

296-806-45528 Establish die setting procedures.
296-806-45530 Handle dies safely.
296-806-45532 Protect die setters during setup and tryout.
296-806-45534 Train press operators.
296-806-45536 Operate mechanical power presses safely.
296-806-45538 Provide tools and other means to protect press operators.
296-806-45540 Inspect and maintain presses.
296-806-45542 Make sure presses and operating practices used in the PSDI (presence sensing device initiation) mode of operation meet these requirements.

MILLS

296-806-460 Summary.
296-806-46002 Meet height requirements for mill rolls.
296-806-46004 Provide mill safety controls.
296-806-46006 Follow these stopping limit requirements for mills.

PRESS BRAKES

296-806-465 Summary.
296-806-46502 Provide auxiliary safety aids on press brakes.
296-806-46504 Safeguard the point of operation on press brakes.

SAFE DISTANCE SAFEGUARDING

296-806-46506 Follow this requirement when using safe distance safeguarding.
296-806-46508 Develop a safe distance safeguarding program for press brakes.
296-806-46510 Follow these requirements for safe distance training for press brakes.
296-806-46512 Require safe distance retraining for press brake operations.
296-806-46514 Conduct periodic safe distance inspections on press brakes.
296-806-46516 Supervise the safe distance program for press brakes.

ROLL-FORMING AND BENDING MACHINES

296-806-470 Summary.
296-806-47002 Follow these requirements for machine initiation.
296-806-47004 Safeguard nip points of roll-forming and bending machines.

SANDING MACHINES

296-806-475 Summary.
296-806-47502 Guard drum sanders.
296-806-47504 Guard disk sanders.
296-806-47506 Guard belt sanders.
296-806-47508 Follow these requirements for feed roll guarding.

SAWS AND CUTTING HEADS

296-806-480 Summary.

GENERAL REQUIREMENTS FOR ALL SAWS AND CUTTING HEADS

296-806-48002 Protect employees using saws and cutting heads.
296-806-48004 Make sure saws and cutting heads are sharpened and tensioned by qualified people.

SAWS

General Requirements for All Saws

296-806-48006 Make sure saws are safe to use.

Requirements for All Circular Saws

296-806-48008 Make sure all circular saws meet these requirements.
296-806-48010 Make sure circular saw gages meet these requirements.
296-806-48012 Safeguard hand-fed circular table saws.
296-806-48014 Provide kickback protection for employees using hand-fed circular table rip saws when ripping wood products.

Chapter 296-806 Title 296 WAC: Labor and Industries, Department of

296-806-48016 Safeguard self-feed circular saws.
296-806-48018 Provide kickback protection for self-feed circular rip saws when ripping wood products.
296-806-48020 Guard circular resaws.
296-806-48022 Provide spreaders for circular resaws.

Requirements for Specific Circular Saws

296-806-48024 Protect employees from automatic saw hazards.
296-806-48026 Guard inverted swing (jump) saws.
296-806-48028 Guard miter saws.
296-806-48030 Guard radial saws.
296-806-48032 Limit the travel of radial saws.
296-806-48034 Provide kickback protection for radial saws used for ripping wood products.
296-806-48036 Guard revolving double arbors saws.
296-806-48038 Guard swing saws.
296-806-48040 Limit the travel of swing saws.

Requirements for Band Saws and Drag Saws

296-806-48042 Make sure band saws meet these requirements.
296-806-48044 Protect employees from drag saw hazards.

CUTTING HEADS

General Requirements for All Cutting Heads

296-806-48046 Maintain and balance knives and cutting heads.

BORING AND MORTISING MACHINES

296-806-48048 Make sure boring and mortising machines meet these requirements.

CHIPPER AND HOG MILLS

296-806-48050 Follow these requirements for chipper mills.
296-806-48052 Follow these requirements for hog mills.
296-806-48054 Protect employees from falling into chipper and hog mills.

JOINTERS

296-806-48056 Make sure jointers with horizontal cutting heads meet these requirements.
296-806-48058 Guard horizontal cutting heads on hand-fed jointers.
296-806-48060 Guard vertical cutting heads on jointers.

MOLDING, STICKING AND MATCHING MACHINES

296-806-48062 Make sure molding, sticking and matching machines meet these requirements.

PANEL RAISERS AND OTHER SIMILAR MACHINES

296-806-48064 Guard hand-fed panel raisers and other similar machines.

PLANERS

296-806-48066 Make sure planers with a horizontal cutting head meet these requirements.
296-806-48068 Guard planers.
296-806-48070 Guard planer feed rolls.
296-806-48072 Provide kickback protection on planers running stock of varied thicknesses.

SHAPERS

296-806-48074 Make sure shapers meet these requirements.

TENONING MACHINES

296-806-48076 Guard tenoning machine feed chains and sprockets.
296-806-48078 Guard tenoning machines.

VENEER MACHINES

296-806-48080 Guard veneer cutters and wringer knives.
296-806-48082 Guard veneer clippers.
296-806-48084 Follow these requirements for guarding guillotine cutters.
296-806-48086 Provide mechanisms to stop power-driven guillotine cutters.
296-806-48088 Prohibit riders on veneer slicer carriages.

SEWING MACHINES

Summary.

296-806-485 Definitions.
Machine Safety 296-806-200

WAC 296-806-100 Scope. Machines and their moving parts create the potential for workplace injuries. Installed and used properly safeguards can protect workers by helping to reduce or control machine hazards.

This chapter applies if you have machines or machine operations in your workplace. For requirements on hand-held tools go to Portable power tools, chapter 296-807 WAC.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-100, filed 6/29/04, effective 1/1/05.]

REQUIREMENTS FOR ALL MACHINES

WAC 296-806-200 Summary. This section applies to all machines in your workplace. It is organized into the following four categories:
• General requirements.
• Safeguarding requirements.
• Safeguarding methods.
• Requirements for specific machine hazards.

Reference: • In addition to the requirements in this section, you need to refer to the following sections of this chapter in order to determine if additional requirements are listed for machines or operations in your workplace:
  – Additional requirements for some machines and machine operations, WAC 296-806-400.
  – For requirements that apply to hand-held tools, see Portable power tools, chapter 296-807 WAC.

Your responsibility:
To protect employees from machine hazards in your workplace.

You must:

GENERAL REQUIREMENTS

WORKPLACE
Secure machines designed to stay in one place WAC 296-806-20002.
Protect employees from slipping hazards around machinery WAC 296-806-20004.
Arrange work areas to avoid creating hazards WAC 296-806-20006.

MACHINE CONTROLS AND OPERATION
Make sure operating controls meet these requirements WAC 296-806-20008.
Protect employees from unintentional machine operation WAC 296-806-20010.
Make sure emergency stop controls meet these requirements WAC 296-806-20012.
Control machine vibration WAC 296-806-20014.
Prevent overspeed conditions WAC 296-806-20016.
Make sure hand feeding and retrieval tools meet these requirements WAC 296-806-20018.
Protect employees who are adjusting or repairing machinery WAC 296-806-20020.

POWER TRANSMISSION PARTS
Keep power transmission parts in good working condition WAC 296-806-20022.
Inspect power transmission parts WAC 296-806-20024.
Protect employees lubricating moving machinery WAC 296-806-20026.

SAFEGUARDING REQUIREMENTS

SAFEGUARD MACHINERY
Safeguard employees from the point of operation WAC 296-806-20028.
Safeguard employees from nip or shear point hazards WAC 296-806-20030.
Safeguard employees from rotating or revolving parts WAC 296-806-20032.
Safeguard employees from reciprocating or other moving parts WAC 296-806-20034.
Safeguard employees from flying objects WAC 296-806-20036.
Safeguard employees from falling objects WAC 296-806-20038.
Safeguard employees from hazards created by moving surfaces with hazards such as sharp edges, burrs, and protruding nails and bolts WAC 296-806-20040.

SAFEGUARDING METHODS
Guards
Make sure guards meet these requirements WAC 296-806-20042.

Devices
Make sure devices meet these requirements WAC 296-806-20044.
Make sure light curtains meet these requirements WAC 296-806-20046.
Make sure pressure-sensitive mats meet these requirements WAC 296-806-20048.
Make sure restraint or pullback devices meet these requirements WAC 296-806-20050.
Make sure two-hand devices meet these requirements WAC 296-806-20052.
Make sure devices used with barrier guards meet these requirements WAC 296-806-20054.

Distance
Make sure safeguarding by distance meets these requirements WAC 296-806-20056.
Make sure guardrails used for safeguarding meet these requirements WAC 296-806-20058.

REQUIREMENTS FOR SPECIFIC MACHINE HAZARDS

Fit arbors and mandrels to the machine WAC 296-806-30002.
Safeguard belt and rope drives WAC 296-806-30004.
Make sure belt or rope drives meet these requirements WAC 296-806-30006.
Protect employees while shifting belts on belt and pulley drives WAC 296-806-30008.
Make sure belt tighteners meet these requirements WAC 296-806-30010.

(2007 Ed.)
Safeguard cams, connecting rods, tail rods, and extension piston rods
WAC 296-806-30012.
Safeguard chain and sprocket drives
WAC 296-806-30014.
Safeguard fan blades
WAC 296-806-30016.
Safeguard flywheels
WAC 296-806-30018.
Safeguard gears
WAC 296-806-30020.
Safeguard projections on moving parts
WAC 296-806-30022.
Safeguard pulleys
WAC 296-806-30024.
Make sure pulleys meet these requirements
WAC 296-806-30026.
Safeguard revolving drums, barrels, and containers
WAC 296-806-30028.
Safeguard shafting
WAC 296-806-30030.
Make sure shafting meets these requirements
WAC 296-806-30032.
Safeguard unused keyways
WAC 296-806-30034.
Make sure revolving collars meet these requirements
WAC 296-806-30036.
Safeguard counterweights
WAC 296-806-30038.

[Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-20002, filed 6/29/04, effective 1/1/05.]

WAC 296-806-20002 Secure machines designed to stay in one place.
You must:
• Make sure machines designed to stay in one place are secured so they will not move or change position during use.

Exemption: Machines that have either rubber feet or foot pads made of nonskid (high coefficient of friction) or similar vibration dampening materials do not have to be secured as long as the machine will not tip, fall over, or walk (move).

[Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-20002, filed 6/29/04, effective 1/1/05.]

WAC 296-806-20004 Protect employees from slipping hazards around machinery.
You must:
• Make sure employees working around dangerous machines are protected from slipping on smooth, oily, or otherwise slippery floors by providing one of the following types of floor covering:
  – Nonslip matting.
  – Grating.
  – Nonslip composition flooring.
  – Some other effective floor treatment.

Reference: For additional requirements about housekeeping, personal protective equipment (PPE), and work practices, see the Safety and health core rules, chapter 296-800 WAC.

WAC 296-806-20006 Arrange work areas to avoid creating hazards.
You must:
• Make sure work areas around machinery are designed with enough space so each operator:
  – Can clean and handle material without interference from other workers or machines.
  – Does not have to stand in the way of passing traffic.
• Provide enough space so employees can bring in and remove materials safely.

Reference: For requirements that apply to aisles and passageways, see WAC 296-24-73505.

[Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-20006, filed 6/29/04, effective 1/1/05.]

WAC 296-806-20008 Make sure operating controls meet these requirements.
You must:
(1) Make sure each machine has a control that both:
• Stops the machine;
AND
• Can be reached by the operator without leaving the operator's position.
(2) Make sure the operator can easily reach all machine controls without reaching into a hazard area of the machine.

[Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-20008, filed 6/29/04, effective 1/1/05.]

WAC 296-806-20010 Protect employees from unintentional machine operation.
You must:
(1) Make sure foot-operated controls are located or guarded so that unintentional movement to the "ON" position is unlikely.
(2) Make sure machines will not automatically restart when power is restored after a power failure, if restarting would create a hazard for employees.

Note: Operating controls can be protected from unintentional movement by methods such as covers on foot treadles and collars around machinery start buttons.

[Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-20010, filed 6/29/04, effective 1/1/05.]

WAC 296-806-20012 Make sure emergency stop controls meet these requirements.
You must:
• Make sure emergency stop controls, if required, meet all the following:
  – Are red in color.
  – Are easily reached from the operator's normal work position.
  – Are kept in a good working condition.
  – Have to be manually reset before a machine can be restarted.
WAC 296-806-20014 Control machine vibration.
You must:
• Prevent excessive machine vibration that could create a hazard to employees.

WAC 296-806-20016 Prevent overspeed conditions.
You must:
• Operate tools and equipment within their rated speed.

Note: Actions that could cause an overspeed condition include:
• Installing a more powerful motor.
• Changing or increasing the power source.
• Changing attachment size or type, such as a blade or wheel.
  – The attachment speed (rpm) and motor speed (rpm) should match.

WAC 296-806-20018 Make sure hand feeding and retrieval tools meet these requirements.
You must:
• Make sure hand feeding and retrieval tools:
  – Are suitable for the work to be done.
  – Do not create a hazard when used.
  – Are of a size and shape that will keep the operator's hands outside the hazardous area.
  – Are constructed so they will not shatter if they come in contact with the machinery or tooling.

Note: Hand feeding and retrieval tools, such as push sticks or push blocks, can not be used instead of required safeguarding, unless a specific machine requirement allows it.

WAC 296-806-20020 Protect employees who are adjusting or repairing machinery.
Exemption: This rule does not apply if the machine has to be in motion to properly adjust it.

You must:
• Make sure power-driven machinery is completely stopped before either:
  – Making adjustments or repairs;
  OR
  – Removing material or refuse from the machine.

Reference: For requirements about maintaining and servicing machinery where the unexpected start-up, energization, or release of stored energy could injure an employee are in Lockout/tagout (control of hazardous energy), chapter 296-803 WAC.

WAC 296-806-20022 Keep power transmission equipment in good working condition.
Definition:
A power transmission part is a mechanical component of a system that provides motion to a part of a machine or piece of equipment.

You must:
• Make sure power transmission parts are kept in good working condition at all times.
• Keep bearings free from lost motion and well lubricated.

WAC 296-806-20024 Inspect power transmission parts.
You must:
• Inspect power transmission parts at least once every sixty days to make sure that all:
  – Safeguarding meets the requirements of this chapter.
  – Parts are in proper alignment.
  – Bolts and screws that hold power transmission parts together or support the system are tight.

WAC 296-806-20026 Protect employees lubricating moving machinery.
You must:
(1) Protect employees who lubricate moving machinery by:
  • Providing tools, such as oil cans or grease guns, that have spouts or necks that are long enough to keep the employees' hands out of hazardous areas.
  • Requiring employees to wear closely fitted clothing.

Note: Things such as clothing, hair, and jewelry can get caught in machinery and be a hazard on the job.

You must:
(2) Make sure drip cups and pans are securely fastened to the machinery.

WAC 296-806-20028 Safeguard employees from the point of operation.

IMPORTANT:
If a specific safeguarding method in this chapter is required for machinery or machine parts found in your workplace, follow the specific requirement.
In the absence of a specific safeguarding method required by this or some other chapter, you need to choose a method or combination of methods from the safeguarding requirements found in Safeguarding methods, WAC 296-806-20042 through 296-806-20058. Examples of safeguarding methods include:
• Guards.
• Devices.
• Safeguarding by distance.
• Safeguarding by location.

You must:
• Protect employees from hazards created by the point of operation by using one or more safeguarding methods.

SAFEGUARDING REQUIREMENTS

WAC 296-806-20028 Safeguard employees from the point of operation.

IMPORTANT:
If a specific safeguarding method in this chapter is required for machinery or machine parts found in your workplace, follow the specific requirement.
In the absence of a specific safeguarding method required by this or some other chapter, you need to choose a method or combination of methods from the safeguarding requirements found in Safeguarding methods, WAC 296-806-20042 through 296-806-20058. Examples of safeguarding methods include:
• Guards.
• Devices.
• Safeguarding by distance.
• Safeguarding by location.

You must:
• Protect employees from hazards created by the point of operation by using one or more safeguarding methods.

POWER TRANSMISSION PARTS

WAC 296-806-20022 Keep power transmission equipment in good working condition.
Definition:
SAFEGUARDING METHODS

Guards

WAC 296-806-20042 Make sure guards meet these requirements.
You must:

- Make sure guards do not create additional hazards such as sharp edges or pinch points between the guard and moving machine parts.
  - Make sure guards are:
    - Made of durable materials.
    - Strong enough to withstand the forces to which they are exposed.
    - Securely fastened to the machine, if possible, or to the building structure if they cannot be attached to the machine.
  - Make sure guards protect employees by doing both of the following:
    - Preventing hands or other body parts from reaching through, over, under, or around the guard into the hazard area;
    - Preventing objects or debris from falling onto or being thrown towards an employee.
- Make sure barrier guards:
  - Are properly installed, adjusted, and maintained.
  - Have no opening at any point larger than shown in Table 200-1, Largest Allowable Guard Opening.

Reference: Metal cutting shears are allowed to be guarded with properly applied awareness barrier safeguarding as described in ANSI B11.4-1993, Sections 6.3.3.

<table>
<thead>
<tr>

</tr>
<tr>
<td>12 1/2 to 15 1/2</td>
</tr>
<tr>
<td>15 1/2 to 17 1/2</td>
</tr>
<tr>
<td>17 1/2 to 31 1/2</td>
</tr>
<tr>
<td>Over 31 1/2</td>
</tr>
</tbody>
</table>

This diagram illustrates the information found in Table 200-1. The size of the opening in the guard, or between the bottom edge of the guard and the feed table is small enough to prevent any part of the operator's body from reaching the hazardous area.
**DEVICES**

**WAC 296-806-20044** Make sure devices meet these requirements.

You must:
- Make sure devices used to safeguard employees do either of the following:
  - Stop the motion of a moving part before an employee comes in contact with it and has to be manually reset before machines can be restarted;
- Be designed and constructed to prevent the operator from having any part of their body in the danger zone during the hazardous part of the operating cycle.

**WAC 296-806-20046** Make sure light curtains meet these requirements.

IMPORTANT:
All devices must meet the general requirements for devices found in, Make sure devices meet these requirements, WAC 296-806-20044.

You must:
- Make sure light curtains, when used:
  - Respond to the presence of an operator's hand, other body part, or a work piece.
  - Have indicators that are easily seen by the operator showing when the device is functioning or has been bypassed.

Note: Even if a shiny reflective object or work piece is used with a light curtain or other electro-optical device, it should still respond to the operator's hand or other body part.

You must:
- Make sure only authorized persons can make the following adjustments to light curtains:
  - Variations in operating conditions.
  - Fixed or channel blanking.

WAC 296-806-20048 Make sure pressure-sensitive mats meet these requirements.

IMPORTANT:
All devices must meet the general requirements for devices found in, Make sure devices meet these requirements, WAC 296-806-20044.

You must:
- Make sure pressure-sensitive mats:
  - Detect the presence or absence of the operator or others.
  - Send the stop command and prevent successive machine cycles if any single component fails.
  - Are connected with the machine control system so the device's stop signal immediately stops action of the machine tool and requires use of the start control before the machine can begin another cycle.
  - Are located so that the operator can not reach the recognized hazard before hazardous motion has stopped.
  - Have an indicator easily seen by the operator that shows the mat is operating.

WAC 296-806-20050 Make sure restraint or pullback devices meet these requirements.

IMPORTANT:
All devices must meet the general requirements for devices found in, Make sure devices meet these requirements, WAC 296-806-20044.

You must:
- Make sure restraint or pullback devices:
  - Floating blanking (sometimes referred to as floating channel or floating window features).
  - Safeguard access to the point of operation that is not protected by light curtains.

Reference: For more information on light curtains and their requirements, see Performance criteria for safeguarding, ANSI B11.19-2003.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-20042, filed 6/29/04, effective 1/1/05.]

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-20046, filed 6/29/04, effective 1/1/05.]

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-2004, filed 6/29/04, effective 1/1/05.]

[Title 296 WAC—p. 2759]
WAC 296-806-20052 Make sure two-hand devices meet these requirements.

IMPORTANT:
All devices must meet the general requirements for devices found in, Make sure devices meet these requirements, WAC 296-806-20044.

You must:
• Make sure two-hand devices:
  – Protect each hand device against accidental operation.
  – Require simultaneous operation of both hand devices to begin the cycle, including the first cycle (automatic mode).
  – Are provided with an antirepeat feature when used in single cycle mode.
  – Have a set of devices for each operator if more than one needs to be safeguarded.
  – Are located far enough from the nearest hazard so the operator can not reach the hazard before hazardous motion stops.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-20052, filed 6/29/04, effective 1/1/05.]

WAC 296-806-20054 Make sure devices used with barrier guards meet these requirements.

IMPORTANT:
All devices must meet the general requirements for devices found in, Make sure devices meet these requirements, WAC 296-806-20044.

You must:
• Make sure means used to safeguard by distance do both of the following:
  – Prevent parts or material from falling on employees below;
  – Separate employees on fixed ladders, stairs, floors, or other walking or working surfaces from the hazard by:
    ■ More than seven feet vertically;
    OR
    ■ A horizontal distance that prevents employees from contacting or being injured by the hazard according to the distances in Table 200-2.

Reference:
For more information on proper installation of safety devices, see Performance criteria for safeguarding, ANSI B11.19-2003.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-20054, filed 6/29/04, effective 1/1/05.]

DISTANCE

WAC 296-806-20056 Make sure safeguarding by distance meets these requirements.

You must:
• Make sure means used to safeguard by distance do both of the following:
  – Prevent parts or material from falling on employees below;
  – Separate employees on fixed ladders, stairs, floors, or other walking or working surfaces from the hazard by:
    ■ More than seven feet vertically;
    ■ A horizontal distance that prevents employees from contacting or being injured by the hazard according to the distances in Table 200-2.

TABLE 200-2
SAFE DISTANCES FROM FIXED BARRIERS TO HAZARDS

Table 200-2 helps you identify either the required horizontal distance from the hazard to the barricade (B), or the required height of the barricade (C), as long as you know A and either variable, B or C.

</tbody>
</table>

Note: The height and distance requirements of Table 200-2 are designed to safeguard workers from a fixed hazard. If a hazard involves flying chips, fluids, parts or materials, the barrier height, distance, and construction may need to be adjusted to provide adequate protection.

[Title 296 WAC—p. 2760] (2007 Ed.)
Illustration 2 - How to measure variables for Table 2

Examples:

- If the height of the hazard (A) is seventy-eight inches, and the horizontal distance from the hazard to the barricade (B) is fourteen inches, the required height of the barricade (C) is seventy-eight inches.

- If the height of the hazard (A) is eighty-six inches, and the height of the barricade (C) is fifty-five inches, then the required horizontal distance from the hazard to the barricade (B) is twenty inches.

WAC 296-806-20058 Make sure guardrails used for safeguarding meet these requirements.

Note: Guardrails may be used to safeguard:
- Flywheels.
- Cranks and connecting rods.
- Tail rods and extension piston rods.
- Horizontal belts in a power generating room.
- Clutches, cutoff couplings, or clutch pulleys in an engine room occupied only by an attendant.
- Power transmission parts on a runway used only for oiling, maintenance, running adjustment, or repair work.

You must:
- Make sure top rails are:
  - Smooth-surfaced.
  - Strong enough to withstand a force of at least two hundred pounds.
  - Between thirty-nine and forty-five inches above the floor, platform, runway, or ramp.
- Make sure guardrails have an intermediate rail (mid-rail) installed approximately halfway between the top rail and the floor, platform, runway, or ramp.
- Make sure rails do not extend beyond the end posts of the guardrail and create a projection hazard.
- Make sure toe boards, if required by this chapter to safeguard a machinery hazard, are:
  - At least four inches high.
  - Securely fastened in place with no more than one-fourth inch between the bottom of the toe board and the floor, platform, runway, or ramp.
  - Made of substantial material that is either solid or that has openings in the material no larger than one inch.

WAC 296-806-30002 Fit arbors and mandrels to the machine.

You must:
- Make sure that arbors and mandrels:
  - Have firm and secure bearing.
  - Are free from play.
- Only place or mount attachments on a machine arbor that have been accurately machined to the correct size and shape.

WAC 296-806-30004 Safeguard belt and rope drives.

Exemption:
- You do not need to safeguard the following types of belts when they are operating at two hundred and fifty linear feet per minute or less:
  - Flat belts that are:
    - One inch wide or less.
    - Two inches wide or less and have no metal lacings or fasteners.
  - Round belts one-half inch or less in diameter.
  - Single-strand v-belts 13/32 inch wide or less.
- You do not need to safeguard belts that are in a room, vault, or similar space that contains only power transmission parts or equipment if the space:
  - Is controlled by lock and key or has similarly restricted access that allows only authorized persons to enter.
  - Is well lit.
  - Has a dry, level, and firm floor.
  - Has a well-marked route with a vertical clearance of at least five feet six inches for authorized employees to follow to perform their duties.
  - You do not need to safeguard belt drives of light or medium duty sewing machines if all of the following apply:
    - Flat belts that are:
      - Uses either a flat or a round belt without metal lacings and fasteners.
      - The belt is located above the table top.
      - The table top is designed so that employees near the machine are not exposed to motion hazards while they work or as they pass by.
      - The machine is not used to sew heavy materials such as leather, canvas, denim, or vinyl.

(2007 Ed.)
You must:

- Safeguard belt or rope drives that are seven feet or less above the floor or working surface.

Reference: In the absence of a specific safeguarding method, follow the safeguarding requirements found in safeguarding methods, WAC 296-806-20042 through 296-806-20058. Examples of safeguarding methods include:
  - Guards.
  - Devices.
  - Safeguarding by distance.
  - Safeguarding by location.

Note: You may use a nip point and pulley guard on a vertical or inclined belt if it meets all of the following requirements:
  - Two and one-half inches wide or less.
  - Running at a speed of less than one thousand feet per minute.
  - Free from metal lacings or fastenings.

You must:

- Safeguard overhead belts located more than seven feet above the floor or working surface if any of the following apply:
  - The belt is located over a passageway or work space and travels at a speed of eighteen hundred feet per minute or more.
  - The distance between the centers of its pulleys is ten feet or more.
  - The belt is wider than eight inches.
  - Safeguard the space between the upper and lower runs of a horizontal belt if there is enough room for an employee to pass between them by providing both:
    - A guard along the upper run to keep the belt from contacting the worker or anything they may be carrying;
    - A platform over the lower run that has a railing that is completely filled in with wire mesh or other filler or by a solid barrier.

Note: The passage between the two belts is considered safeguarded if you completely block it with a guardrail or other barrier.

Exemption: In a power generating room, only the lower run of a horizontal belt has to be safeguarded.

WAC 296-806-30006 Make sure belt or rope drives meet these requirements.

You must:

1. Use an idler when your machine uses a quarter-twist belt that can run in either direction.
2. Make sure, when it is necessary to apply dressing to moving belts or ropes, that you apply the dressing at a point where the belts or ropes leave the pulley.
3. Make sure that a belt shifted by hand is not fastened with metal or other material that creates a hazard.
4. Make sure a bearing support that is next to a friction clutch or cutoff coupling has self-lubricating bearings that do not need frequent attention.
5. Use a substantial belt perch, such as a bracket or roller, when it is not practical to use a loose pulley or idler to keep idle belts away from shafts.

WAC 296-806-30008 Protect employees while shifting belts on belt and pulley drives.

Exemption: A belt shifter is not required on a belt and pulley system if:
- It was installed on or before August 17, 1971;
- The belt and pulley drive meets all of these requirements:
  - The belt is endless or laced with rawhide.
  - A point guard in front of the cone safeguards the nip point of the belt and pulley.
  - The point guard extends to the largest step of the cone and stops the belt from going over the edge of the cone.

Definition: A nip point guard is a guard that encloses the pulley and has rounded or rolled edge slots for the belt to pass through.

You must:

1. Provide a permanent mechanical belt shifter on belt drives that use either:
   - Tight and loose (drive and idler) pulleys;
   - A cone pulley.
2. Protect employees from the nip point of the belt and pulley by either:
   - The belt shifter or clutch handle;
   - A vertical guard in front of the pulley that extends at least to the top of the largest step of the cone.
3. Make sure a belt shifter or clutch handle is:
   - Rounded to keep the operator from being injured.
   - Easy to reach.
   - Positioned to reduce the chance of being accidentally moved.
   - Located either:
     - Over the machine;
     - Not higher than six feet six inches above the floor.
4. Make sure each belt shifter or clutch handle of the same type in your workplace moves in the same direction to stop a machine, that is, either all right or all left.

Exemption: A friction clutch handle on a countershaft carrying two clutch pulleys with open and crossed belts is not required to move in the same direction as all other clutch handles or belt shifters if:
- The clutch handle has three positions;
- The machine is at rest when the clutch handle is in the center position.

You must:

5. Use a belt shifter to shift a belt on and off a fixed pulley.
   - When a belt shifter cannot be used, you may use a belt pole if it is both:
     - Smooth;
     - Large enough to grasp securely.

Note: A belt pole is also known as a "belt shipper" or "shipper pole."

You must:

6. Provide a locking-type belt shifter or other positive securing device on woodworking machines driven by belts and shafting.
WAC 296-806-30010  Make sure belt tighteners meet these requirements.
You must:
• Make sure belt tighteners:
  – Are substantially constructed and securely fastened.
  – Have bearings that are securely capped.
  – Have a mechanism to prevent them from falling.
• Make sure belt tighteners used to activate machinery are securely held in the "OFF" position by either:
  – Gravity;
  OR
  – An automatic mechanism that must be released by hand.

WAC 296-806-30012  Safeguard cams, connecting rods, tail rods, and extension piston rods.
You must:
• Safeguard cams, connecting rods, tail rods, or extension piston rods that could be contacted by employees.

WAC 296-806-30014  Safeguard chain and sprocket drives.
Exemption:  This section does not apply to hand-operated sprockets.
You must:
• Enclose chains and sprocket wheels that are seven feet or less above the floor or working surface.
• Make sure chain and sprocket drive enclosures that extend over machine or other working areas protect workers from falling drive parts.

WAC 296-806-30016  Safeguard fan blades.
Reference:  In the absence of a specific safeguarding method, follow the safeguarding requirements found in safeguarding methods, WAC 296-806-20042 through 296-806-20058. Examples of safeguarding methods include:
• Guards.
• Devices.
• Safeguarding by distance.
• Safeguarding by location.
Exemption:  A fan is considered guarded if it meets all of the following requirements:

WAC 296-806-30018  Safeguard flywheels.
You must:
• Safeguard flywheels that have any part of the wheel seven feet or less above the floor or working surface with either:
  – An enclosure;
  OR
  – A guardrail, at least fifteen inches but no more than twenty inches from the rim.
• Make sure enclosures that safeguard flywheels located above a working area are strong enough to hold the weight of the wheel, if a shaft or wheel mounting fails.
• Provide a toeboard on guardrails used to safeguard flywheels that have any part of the wheel within twelve inches of the floor or working surface.
• Do both of the following to safeguard spoked flywheels that are five feet or less in diameter with smooth rims, when enclosures or guardrails cannot be used:
  – Cover the spokes on the exposed side of the wheel with a disk guard that creates a smooth surface and edge;
  AND
  – Remove or cover keys or other dangerous projections on the wheel that are not covered by the disk guard.

WAC 296-806-30020  Safeguard gears.
You must:
• Safeguard gears that are seven feet or less above the floor or working surface.

Reference:  In the absence of a specific safeguarding method, follow the safeguarding requirements found in safe-

(2007 Ed.)
WAC 296-806-30024 Safeguard pulleys.
You must:
• Safeguard pulleys that have any part of the pulley seven feet or less above the floor or working surface.

Reference: In the absence of a specific safeguarding method, follow the safeguarding requirements found in safeguarding methods, WAC 296-806-20042 through 296-806-20058. Examples of safeguarding methods include:
• Guards.
• Devices.
• Safeguarding by distance.
• Safeguarding by location.

Exemption: You do not need to safeguard pulleys that are in a stationary casing or by using a trough with sides that are:
• Within an enclosure.
• Below the plane of the rim of a pulley that is less than twenty inches in diameter.
• Located where employee contact is not possible.

WAC 296-806-30030 Safeguard shafting.
You do not need to safeguard shafting that is in a room, vault, or similar space that contains only power transmission parts or equipment if the space:
• Is controlled by lock and key or has similarly restricted access that allows only authorized persons to enter.
• Is well lit.
• Has a dry, level, and firm floor.
• Has a well-marked route with a vertical clearance of at least five feet six inches for authorized employees to follow to perform their duties.

Exemption: You must:
• Enclose shafting that is seven feet or less above the floor or working surface.
  • Make sure projecting shaft ends either:
    – Have a smooth edge, smooth end, and project no more than one-half the diameter of the shaft;
  OR
    – Are guarded by a nonrotating cap or safety sleeve.
• Safeguard shafting under a bench or table by enclosing it in a stationary casing or by using a trough with sides that both:
  – Cover the shafting to within six inches of the bottom of the table or to within six inches of the floor or working surface, whichever is appropriate;
  AND
  – Extend two inches beyond the end of the shafting.

WAC 296-806-30032 Make sure shafting meets these requirements.
You must:
(1) Keep shafting free of:
• Excessive oil or grease.
• Rust or pitting from corrosion.
(2) Secure shafting against excessive endwise movement.

WAC 296-806-30034 Safeguard unused keyways.
You must:
• Fill, cover, or otherwise safeguard all unused keyways.

Reference: In the absence of a specific safeguarding method, follow the safeguarding requirements found in safeguarding methods, WAC 296-806-20042 through 296-806-20058. Examples of safeguarding methods include:
• Guards.
• Devices.
• Safeguarding by distance.
• Safeguarding by location.
WAC 296-806-30036 Make sure revolving collars meet these requirements.

You must:
• Make sure revolving collars are cylindrical.
• Make sure screws or bolts used in the collar do not project beyond the outside of the collar.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-30036, filed 6/29/04, effective 1/1/05.]

WAC 296-806-30038 Safeguard counterweights.

You must:
• Provide safeguarding for all counterweights where employees are exposed to contact.

Reference: In the absence of a specific safeguarding method, follow the safeguarding requirements found in safeguarding methods, WAC 296-806-20042 through 296-806-20058. Examples of safeguarding methods include:
  • Guards.
  • Devices.
  • Safeguarding by distance.
  • Safeguarding by location.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-30038, filed 6/29/04, effective 1/1/05.]

ADDITIONAL REQUIREMENTS FOR SOME MACHINES AND MACHINE OPERATIONS

WAC 296-806-400 Summary. If your specific machine or operation is not listed here, then follow the "Requirements for all machines" found in this chapter, WAC 296-806-200 and 296-806-300.

Your responsibility:
To protect employees from hazards associated with specific machines and their operations in your workplace.

You must:
Abrasive wheels and machines
WAC 296-806-405.
Calenders
WAC 296-806-410.
Compactors
WAC 296-806-415.
Conveyors
WAC 296-806-420.
Food processing equipment
WAC 296-806-425.
Forging machines
WAC 296-806-430.
Garbage (waste) disposals
WAC 296-806-435.
Glue spreaders
WAC 296-806-440.
Ironworkers
WAC 296-806-445.
Lathes
WAC 296-806-450.
Mechanical power presses
WAC 296-806-455.
Mills
WAC 296-806-460.
Press brakes
WAC 296-806-465.
Roll-forming and bending machines
WAC 296-806-470.
Sanding machines
WAC 296-806-475.
Saws and cutting heads
WAC 296-806-480.
Sewing machines
WAC 296-806-485.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-400, filed 6/29/04, effective 1/1/05.]

ABRASIVE WHEELS

WAC 296-806-405 Summary.
• In addition to the requirements in this section, you need to refer to the following sections of this chapter in order to fully protect your employees from machine hazards.
  • Requirements for all machines, WAC 296-806-200 and 296-806-300.
  • You need to refer to Portable power tools, chapter 296-807 WAC for requirements relating to hand-held abrasive wheel tools.

This section applies to machines that are not hand held and that use an abrasive wheel.

Definition:
An abrasive wheel is a grinding tool consisting of bonded abrasive grains. This includes diamond and reinforced wheels.

Your responsibility:
To make sure abrasive wheel machines and wheels are safe to use.

You must:
GENERAL REQUIREMENTS FOR ABRASIVE WHEELS
Make sure abrasive wheels and machines are properly designed and constructed
WAC 296-806-40502.
Make sure machines have safety guards
WAC 296-806-40504.
Make sure safety guards meet specific requirements
WAC 296-806-40506.
Provide a tongue guard on bench, pedestal, floorstand, and cylindrical grinders
WAC 296-806-40508.
Use a work rest for off-hand grinding
WAC 296-806-40510.

MOUNTING ABRASIVE WHEELS
Make sure abrasive wheels are safe to use
WAC 296-806-40512.
Mount wheels properly
WAC 296-806-40514.
Use proper flanges
WAC 296-806-40516.
Make sure flanges are in good condition
WAC 296-806-40518.
Use specific flanges for Type 1 cutting-off wheels
WAC 296-806-40520.
Use specific flanges for Type 27A cutting-off wheels
WAC 296-806-40522.
Use blotters when required
WAC 296-806-40524.
WAC 296-806-40502 Make sure abrasive wheels and machines are properly designed and constructed.

You must:

- Make sure abrasive wheels and machines, including safety guards and flanges, manufactured on or after January 1, 2005, meet the design and construction requirements of American National Standards Institute (ANSI) B7.1-2000, Safety Requirements for the Use, Care and Protection of Abrasive Wheels.

Note: There may be a statement on the machine or in the instruction manual that the machine meets the appropriate ANSI standard. If in doubt, check with the manufacturer.

WAC 296-806-40504 Make sure machines have safety guards.

You must:

- Use abrasive wheels only on machines that have safety guards.
- Make sure the safety guard:
  - Is mounted so it maintains proper alignment with the wheel.
  - Is mounted with fasteners strong enough to keep the guard in position if a wheel breaks.
  - Covers the spindle end, nut, and flange projections.

Exemption: Safety guards are not required on machines that use:
- Wheels for internal grinding while advancing, retracting or within the work.
- Types 16, 17, 18, 18R, and 19 cones and plugs and threaded hole pot balls where either:
  - The work offers protection;
  - The size does not exceed three inches in diameter by five inches long.
- Notched, segmented, or continuous rim metal centered diamond lapidary wheels that are:
  - Used with a coolant deflector;
  - Operated at 3,500 SFPM or less.
- Type 1 reinforced wheels that are:
  - Three inches or less in diameter.
  - One-fourth inch or less thick.
- Operating at peripheral speeds of 9,500 SFPM or less.
  - Used by operators wearing safety glasses and face shields.
- Valve seating grinding wheels.
- Remotely operated machines in an enclosure that will retain the pieces of a broken wheel.

WAC 296-806-40506 Make sure safety guards meet specific requirements.

You must:

- Make sure the machine safety guards meet the requirements of Table 405-1, Guard Requirements.

Definition:

Maximum exposure angle is the largest part of a wheel that does not need to be covered by a safety guard.

Note:
- The maximum exposure angle is measured by lines starting at the center of the spindle and extending to the ends of the guard at the wheel periphery.
- Visors and other accessory equipment are used in determining the size of the guard opening only if they are at least as strong as the safety guard.

<table>
<thead>
<tr>
<th>Machine</th>
<th>Maximum exposure angle and other guard restrictions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bench, pedestal, or floorstand grinders</td>
<td>• Not higher than sixty-five degrees above the horizontal centerline of the wheel</td>
</tr>
<tr>
<td></td>
<td>• One-fourth (ninety degrees) of the wheel for grinding done at or above the horizontal centerline of the wheel</td>
</tr>
<tr>
<td></td>
<td>• One hundred twenty-five degrees if the work has to contact the wheel below the horizontal centerline of the wheel</td>
</tr>
<tr>
<td>Cylindrical grinders</td>
<td>• One-half (one hundred eighty degrees) of the wheel</td>
</tr>
<tr>
<td></td>
<td>• Not higher than sixty-five degrees above the horizontal centerline of the wheel</td>
</tr>
<tr>
<td>Surface grinders</td>
<td>• One hundred fifty degrees of the wheel</td>
</tr>
<tr>
<td></td>
<td>• Not higher than fifteen degrees below the horizontal</td>
</tr>
<tr>
<td>Cutting-off machines</td>
<td>• One-half (one hundred eighty degrees) of the wheel</td>
</tr>
<tr>
<td>Swing frame grinders</td>
<td>• One-half (one hundred eighty degrees) of the wheel</td>
</tr>
<tr>
<td></td>
<td>• Encloses the top one-half of the wheel</td>
</tr>
<tr>
<td>Swing frame grinders using cup wheels</td>
<td>• One-half (one hundred eighty degrees) of the wheel</td>
</tr>
<tr>
<td></td>
<td>• Covers the wheel on the side towards the operator</td>
</tr>
<tr>
<td>Semiautomatic snagging machines</td>
<td>• One-half (one hundred eighty degrees) of the wheel</td>
</tr>
<tr>
<td></td>
<td>• Covers the wheel on the side towards the operator</td>
</tr>
<tr>
<td>Machines used for top grinding</td>
<td>• As small as possible up to one-sixth (sixty degrees) of the wheel</td>
</tr>
</tbody>
</table>

WAC 296-806-40508 Provide a tongue guard on bench, pedestal, floorstand, and cylindrical grinders.

You must:

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-40504, filed 6/29/04, effective 1/1/05.]

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-40506, filed 6/29/04, effective 1/1/05.]

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-40508, filed 6/29/04, effective 1/1/05.]

[Title 296 WAC—p. 2766]
• Make sure, if the operator stands in front of the opening in the safety guard, that the safety guard (tongue guard) at the top of the opening is adjusted to within one-fourth inch of the wheel.

Definition:
The tongue guard is an integral part of a safety guard that is located where the upper exposed part of the abrasive wheel meets the safety guard. It can be adjusted as necessary to maintain a set distance from the constantly decreasing diameter of the wheel.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-40508, filed 6/29/04, effective 1/1/05.]

WAC 296-806-40510 Use a work rest for off-hand grinding.

Exemption: You do not need to use a work rest if:
• The size, shape, weight or finishing area of the workpiece prevents its use;
OR
• Contact with the grinding wheel below the horizontal plane of the spindle is necessary.

You must:
• Use a work rest to support the work.
• Make sure the work rest is:
  – Rigidly constructed.
  – Adjustable to compensate for wheel wear.
  – Adjusted only when the wheel is stopped.
  – Securely clamped after each adjustment.
  – Kept within one-eighth inch of the wheel.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-40510, filed 6/29/04, effective 1/1/05.]

WAC 296-806-40512 Make sure abrasive wheels are safe to use.

You must:
• Do the following before mounting a wheel:
  – Visually inspect the wheel for cracks or damage.
  – Perform a ring test for cracks if the size and shape of the wheel permits testing.
  – Make sure the spindle speed of the machine is not greater than the operating speed of the wheel.
• Make sure a damaged or cracked wheel is not mounted or used.

Note: Wheels that have gouges, grooves, other damage, or material buildup on the grinding surface need to be dressed or trued to correct the problem. Wheels that cannot be trued are considered damaged and cannot be used.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-40512, filed 6/29/04, effective 1/1/05.]

WAC 296-806-40514 Mount wheels properly.
You must:
(1) Make sure wheels fit freely on the spindle, wheel sleeves, or adaptors, and remain free under all grinding conditions.
(2) Make sure wheel, blotters and flange surfaces that contact each other are flat and free of foreign particles.
(3) Make sure any reducing bushing used in the wheel hole:
  • Fits freely on the spindle and maintains proper clearance;
  AND
  • Does not exceed the width of the wheel or contact the flanges.
(4) Make sure that multiple wheels mounted between a single set of flanges are either:
  • Cemented together;
  OR
  • Separated by spacers that have a diameter and bearing surface that is the same as the mounting flanges.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-40514, filed 6/29/04, effective 1/1/05.]

WAC 296-806-40516 Use proper flanges.

You must:
• Mount all abrasive wheels between flanges that have a diameter at least one-third the diameter of the wheel.

Exemption: This flange requirement does not apply to the following wheels:
• Mounted wheels (wheels permanently bonded to a shaft or mandrel).
• Abrasive disc wheels (inserted nut, inserted washer and projecting stud type).
• Plate mounted wheels.
• Cylinder, cup, or segmental wheels mounted in chucks.
• Types 27, 28, and 29 wheels.
• Internal wheels less than two inches in diameter.
• Modified Type 6 and 11 wheels (terrazzo).
• Types 1 and 27A cutting-off wheels.

You must:
• Make sure flanges are:
  – Dimensionally accurate.
  – Properly balanced.
  – Flat.
  – Free of rough surfaces or sharp edges.
• Make sure the driving flange is:
  – Part of the spindle;
  OR
  – Securely fastened to the spindle.
• Make sure, if a wheel is mounted between two flanges, that both flanges:
  – Are the same diameter;
  AND
  – Have equal bearing surfaces.

Exemption: The following wheels do not require same diameter, equal bearing surface flanges:
• Types 27, 28, and 29 wheels with adaptors.
• Modified Types 6 and 11 wheels with tapered K dimension.
• Internal wheels less than two inches in diameter.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-40516, filed 6/29/04, effective 1/1/05.]

WAC 296-806-40518 Make sure flanges are in good condition.
You must:
• Make sure flange bearing surfaces are in good condition.
• Replace or remachine a flange with a mounting surface that has any of the following problems:
  – Warped.
  – Burred on the bearing surface.
  – Excessively worn (thickness or diameter).
  – Out of true.
WAC 296-806-40520 Use specific flanges for Type 1 cutting-off wheels.
You must:
  • Mount Type 1 cutting-off wheels between flanges that are:
    – Properly relieved with matching bearing surfaces.
    – At least one-fourth the wheel diameter.

WAC 296-806-40522 Use specific flanges for Type 27A cutting-off wheels.
You must:
  • Mount Type 27A cutting-off wheels between flanges that are:
    – Flat (unrelieved) with matching bearing surfaces;
    AND
    – At least one-fourth the wheel diameter.

WAC 296-806-40524 Use blotters when required.
Exemption: You do not need to use a blottter with any of the following:
  • Mounted wheels (wheels permanently bonded to a shaft or mandrel).
  • Abrasive disc and Type 2 wheels which are mounted by inserted nuts, inserted washers, or projecting studs.
  • Plate mounted wheels.
  • Wheels mounted in chucks (such as cylinders and segmental wheels).
  • Types 27, 28, and 29 wheels.
  • Type 1 and Type 27A cutting-off wheels.
  • Internal wheels less than two inches in diameter.
  • Diamond and cubic boron nitride wheels with metal or carbon fiber cores.

You must:
  • Use a blottter between each flange and the abrasive wheel surface to uniformly distribute flange pressure.
  • Make sure the blottter covers the entire flange contact area.
  • Use a new blottter each time a wheel is mounted unless the wheel has a blottter already attached to it by the manufacturer.
  • Make sure scuffed or damaged blottters are not used.

WAC 296-806-40526 Meet specific blottter requirements when using modified Types 6 and 11 wheels (terrazzo).
You must:
  • Apply the blottter to the flat side only when mounting Modified Types 6 and 11 wheels (terrazzo).

Calenders
WAC 296-806-410 Summary. In addition to the requirements in this section, you need to refer to the following sections of this chapter in order to fully protect your employees from machine hazards:
  • Requirements for all machines, WAC 296-806-200 and 296-806-300.
  This section applies only to hazards associated with calenders in the rubber and plastics industry where two or more metal rolls are set vertically and revolving in opposite directions.
  
Your responsibility:
To protect employees from hazards associated with calenders.

You must:
Providing calender safety controls
WAC 296-806-41002.
Follow these stopping limit requirements for calenders
WAC 296-806-41004.

Exemption: These rules do not apply to calenders if the machinery is permanently set up so employees:
  • Cannot reach through, over, under, or around to come in contact with the roll bite;
  OR
  • Cannot be caught between a roll and nearby objects.

You must:
(1) Provide a safety trip control for the face of the calender that meets all of the following:
  • Provided in front and back of each calender.
  • Is accessible.
  • Operates readily upon contact.
(2) Provide at least one of the following safety trip controls for the face of the calender:
  • Safety trip rods, tripwire cables or wire center cords that:
    – Are within reach of the operator and the bite (nip point).
    – Operates readily by pressure of the mill operator's body.
    – Are located across each pair of in-running rolls extending the length of the face of the rolls.
    – Are horizontally at thirty-four inches from the in-running nip point.
    – Are approximately forty inches vertically above the working level.
    – Are horizontally at thirty-four inches from the in-running nip point.
  • Include safety trip rods, cables or cords, in addition to the pressure sensitive body bars, if both of these apply:
  • In-running rolls are located below the bar;
  AND
  • The operator needs to duck under the bar.
(3) Provide a safety cable or wire center cord on both sides of the calender that:
  • Operates readily when pushed or pulled.
  • Is connected to the safety trip.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-40518, filed 6/29/04, effective 1/1/05.]
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-40520, filed 6/29/04, effective 1/1/05.]
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-40522, filed 6/29/04, effective 1/1/05.]
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-40524, filed 6/29/04, effective 1/1/05.]
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-40526, filed 6/29/04, effective 1/1/05.]
Located within three feet (91.4 cm) of the point of operation.

Red in color, distinguishable from all other controls by the center cord should be of the following:

- Twelve inches or less from the faces of the individual rolls.
- At least two inches from the calender frame.
- Anchored to the frame not more than six inches from the floor or operator's platform.

You must:
- Make sure that calenders are stopped within one and three-quarters percent of the fastest speed at which they operate when empty.
- When calenders operate at more than two hundred fifty feet per minute, stopping distances above one and three-quarters percent of their fastest speed are allowed, but must have engineering support.

Your responsibility:
To protect employees from hazards associated with stationary compactors.

You must:
- Safeguard hazardous moving parts of stationary compactors.
- Follow these requirements for compactor controls:
  - Each control must have its function clearly labeled.
  - Controls must be designed and located to prevent them from unintentionally activating.
  - Electric stop buttons, including emergency stop buttons, must be:
    - Red in color, distinguishable from all other controls by size, and not recessed.
    - Emergency stop controls must be either:
      - Readily accessible to the operator;
      - Located within three feet (91.4 cm) of the point of operation or feed area or if chute fed, within three feet (91.4 cm) of the access door.
    - An electrical disconnect must be located within sight, no more than fifty feet (1,524 cm), from the operating control panel.

COMPACTORS

WAC 296-806-415 Summary. In addition to the requirements in this section, you need to refer to the following sections of this chapter in order to fully protect your employees from machine hazards:

- Requirements for all machines, WAC 296-806-200 and 296-806-300.

This section applies to all stationary compactors in your workplace.

Your responsibility:
To protect employees from hazards associated with stationary compactors.

You must:
- Safeguard hazardous moving parts of stationary compactors.
- Follow these requirements for compactor controls:
  - Controls must be designed and located to prevent them from unintentionally activating.
  - Electric stop buttons, including emergency stop buttons, must be:
    - Red in color, distinguishable from all other controls by size, and not recessed.
    - Emergency stop controls must be either:
      - Readily accessible to the operator;
      - Located within three feet (91.4 cm) of the point of operation or feed area or if chute fed, within three feet (91.4 cm) of the access door.
    - An electrical disconnect must be located within sight, no more than fifty feet (1,524 cm), from the operating control panel.

WAC 296-806-41504 Follow these requirements for compactor controls.

You must:
- Follow these requirements for compactor controls:
  - Each control must have its function clearly labeled.
  - Controls must be designed and located to prevent them from unintentionally activating.
  - Electric stop buttons, including emergency stop buttons, must be:
    - Red in color, distinguishable from all other controls by size, and not recessed.
    - Emergency stop controls must be either:
      - Readily accessible to the operator;
      - Located within three feet (91.4 cm) of the point of operation or feed area or if chute fed, within three feet (91.4 cm) of the access door.
    - An electrical disconnect must be located within sight, no more than fifty feet (1,524 cm), from the operating control panel.

WAC 296-806-41506 Follow these requirements for compactor access doors and covers.

You must:
- Make sure access covers meet at least one of the following:
  - Interlocked.
  - Secured by a lockable device.
  - Removable by hand tools only.
- Make sure any loading chamber access door has an interlock system that prevents cycling motion when the door is open.

WAC 296-806-41508 Follow these requirements for compactors that cycle automatically.

You must:
- Use automatic cycling controls only on compactors where the loading chamber is located so that it cannot be accessed during operation.
CONVEYORS

WAC 296-806-420 Summary. If your specific conveyor or operation is not listed here, then follow any general requirements in this section along with the "Requirements for all machines" found in this chapter, WAC 296-806-200 and 296-806-300.

This section applies to hazards related to conveyors and conveying systems, including bulk material, package, or unit handling types. These requirements are designed to protect employees operating, maintaining, cleaning, and working around conveyors.

Exemption: This section does not apply to conveyor systems used primarily for moving people.

Your responsibility:
To make sure all conveyors in your workplace are constructed, operated, and maintained in a safe manner.

You must:
GENERAL REQUIREMENTS FOR CONVEYORS
Follow these requirements for conveyors
WAC 296-806-4202.
Provide emergency stops on conveyors
WAC 296-806-4204.
Label conveyor controls
WAC 296-806-4206.
Prohibit riding on conveyors
WAC 296-806-4208.
Provide safe access to conveyors
WAC 296-806-4210.
Provide backstop or antirunaway devices to incline, decline, or vertical conveyors
WAC 296-806-4212.
Make only safe alterations to conveyors
WAC 296-806-4214.
Inspect and replace worn conveyor parts
WAC 296-806-4216.
Follow these requirements for replacing conveyor parts
WAC 296-806-4218.
Follow these requirements for spill guards
WAC 296-806-4220.
Provide pedestrian overpasses for conveyors
WAC 296-806-4222.
Guard openings to hoppers and chutes
WAC 296-806-4224.
Install guideposts
WAC 296-806-4226.
BELT CONVEYORS
Guard nip points on belt conveyors
WAC 296-806-4228.
Install emergency stop controllers on overland belt conveyors
WAC 296-806-4230.
Install belt conveyor overpasses
WAC 296-806-4232.
CHAIN CONVEYORS
Safeguard chain conveyors
WAC 296-806-4234.
Guard return strands on chain conveyors
WAC 296-806-4236.
Guard chain conveyors that are used as a transfer mechanism
WAC 296-806-4238.
ELEVATOR CONVEYORS
Prevent material from falling off of elevator conveyors
WAC 296-806-4240.
INCLINED RECIPROCATING CONVEYORS (SHAKERS)
Provide protection where employees must load shakers
WAC 296-806-4242.
Provide grating over silo and bunker openings for shuttle conveyors
WAC 296-806-4244.
MOBILE CONVEYORS
Guard wheels and rails on mobile conveyors
WAC 296-806-4246.
Prevent hazardous motion on mobile conveyors
WAC 296-806-4248.
Provide a detector for mobile conveyors
WAC 296-806-4250.
Provide safe access on mobile conveyors
WAC 296-806-4252.
PUSHER-BAR CONVEYORS
Guard pusher-bar conveyors
WAC 296-806-4254.
ROLLER CONVEYORS
Prohibit walking on roller-type conveyors
WAC 296-806-4256.
Use speed controls for roller and wheel conveyors
WAC 296-806-4258.
Safeguard belt-driven live roller conveyors
WAC 296-806-4260.
SCREW CONVEYORS
Guard screw conveyors
WAC 296-806-4262.
SKIP HOISTS
Provide slack-cable switches on hoists
WAC 296-806-4264.
Block the skip bucket and counterweight guides
WAC 296-806-4266.
Protect against wire rope coming off sheaves
WAC 296-806-4268.
SLAT AND ROLLER-SLAT CONVEYORS
Safeguard slat and roller-slat conveyors
WAC 296-806-4270.
TOWED CONVEYORS
Provide a safe method for disengaging the tow pin
WAC 296-806-4272.
Protect employees from moving carts on towed conveyors
WAC 296-806-4274.
Provide clearances and warnings for carts on towed conveyors
WAC 296-806-4276.
Mark projections above the floor
WAC 296-806-4278.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-420, filed 6/29/04, effective 1/1/05.]

GENERAL REQUIREMENTS FOR CONVEYORS

WAC 296-806-42002 Follow these requirements for conveyors.
You must:
Machine Safety

296-806-42004 Provide emergency stops on conveyors.

You must:
• Make sure each conveyor has an emergency stopping device such as an emergency stop button, pull cord, or similar device.
• Make sure each emergency stopping device meets all of the following requirements. They must:
  – Stop the conveyor a safe distance from the hazard.
  – Be easily identified.
  – Directly control that conveyor.
  – Require a manual reset.
  – NOT be overridden from another location.
  – NOT require other equipment to be stopped in order to stop the conveyor.
• Make sure where there is the possibility of an employee falling onto a conveyor, that the emergency stopping device for conveyors feeding or dumping into a hazardous machine such as a barker, saw, hog, or chipper is at least one of the following:
  – Under the continuous control of an operator who cannot fall onto the conveyor and has full view of the material entrance;
  OR
  – Located where it can be reached from a sitting position on the conveyor where it feeds or dump into the hazardous machine.

Reference:
For specific requirements when conveyors pass over emergency exit routes, see Exit routes, WAC 296-803 WAC.

WAC 296-806-42006 Label conveyor controls.

You must:
• Clearly label the function of each conveyor control.

Note: Controls and wiring that are no longer used should be removed from control stations.

WAC 296-806-42008 Prohibit riding on conveyors.

You must:
• Prohibit employees from riding on conveyors.

Exemption: You do not need to prohibit riding on an assembly conveyor moving eighty feet or less per minute or a conveyor with a station specifically designed for operating personnel.

WAC 296-806-42010 Provide safe access to conveyors.

You must:

(2007 Ed.)

• Construct, operate, and maintain all conveyors according to this chapter and the American National Standards Institute (ANSI) B20.1-1957.
• Make sure all new conveyors constructed after January 1, 2005, meet the requirements of the American Society of Mechanical Engineers (ASME) B20.1-1996.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42002, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42012 Provide backstop or antirunaway devices on incline, decline, or vertical conveyors.

You must:
• Make sure all incline, decline, or vertical conveyors use backstop or antirunaway devices when there is a danger of conveyor reversal or runaway.

Reference:
Some additional requirements for protecting employees inspecting and maintaining conveyors can be found in:
• Lockout/tagout (control of hazardous energy), chapter 296-803 WAC.
• Personal fall arrest systems, WAC 296-24-88050.

WAC 296-806-42014 Make only safe alterations to conveyors.

You must:
• Make sure, when making conveyor alterations, that you do not affect safety characteristics such as emergency stop controls, guards, or the incline of the conveyor, if such changes would create a danger to workers.

Reference:
Some additional requirements for protecting employees inspecting and maintaining conveyors can be found in:
• Lockout/tagout (control of hazardous energy), chapter 296-803 WAC.
• Personal fall arrest systems, WAC 296-24-88050.

WAC 296-806-42016 Inspect and replace worn conveyor parts.

You must:
• Carefully inspect and replace any conveyor part that shows signs of significant wear before it becomes a hazard.

Reference:
For specific requirements when conveyors pass over emergency exit routes, see Exit routes, WAC 296-803 WAC.

WAC 296-806-42018 Follow these requirements for replacing conveyor parts.

You must:
• Make sure replacement conveyor parts are equal to or exceed the manufacturer’s specifications.

Reference:
For specific requirements when conveyors pass over emergency exit routes, see Exit routes, WAC 296-803-310.

WAC 296-806-42020 Follow these requirements for spill guards.

You must:
• Install protective or spill guards wherever conveyors pass next to or over working areas or passageways.
  – These guards must be designed to catch and hold any materials that may become dislodged or fall off.

Reference:
For specific requirements when conveyors pass over emergency exit routes, see Exit routes, WAC 296-806-42022.

WAC 296-806-42022 Provide pedestrian overpasses for conveyors.

You must:

(2007 Ed.)
• Provide a pedestrian overpass covering the full width of a passageway if one of these conditions exists:
  – The working strand of a conveyor crosses within three feet of floor level.
  – Workers must step over the strand and trough at or below floor level.
• Provide a pedestrian overpass where workers cannot pass under the conveyor safely.
  – The sides of the crossing platform must have standard railings if one of the following exists:
    ■ The overpass is more than four feet high.
    ■ The conveyor feeds a dangerous machine such as saws, chippers, hogs, or galvanizing tanks.

Reference: For guardrail requirements see, Railing, toeboards, and cover specifications, WAC 296-24-75011.

WAC 296-806-42024 Guard openings to hoppers and chutes.
You must:
• Guard all openings to hoppers, chutes, and elevator-type conveyors to prevent workers from:
  – Falling or stepping into them.
  – Making any kind of bodily contact with conveyors.

Note: Grating provided at floor level with no openings larger than two inches (50 mm) that is strong enough to withstand any load of personnel or trucks that may be imposed upon it is acceptable guarding.

WAC 296-806-42026 Install guideposts.
You must:
• Install guideposts to direct employees driving trucks, loaders, or other equipment to the pit, hopper, or chute.

BELT CONVEYORS

WAC 296-806-42028 Guard nip points on belt conveyors.
Exemption: This rule does not normally require guards along the conveyor at the point where the belt rides on return rollers, such as return-belt idlers, unless hazardous conditions such as long, tight heavy belts exist.

You must:
• Place nip point guards at all of these points:
  – Where the belt wraps around the pulley.
  – At terminals, take-ups, and snub rollers where the belt changes directions at transfers and deflectors.
  – At the discharge end.
  – At other points where workers may be injured by nip or shear points.

Note: The practice of applying a belt dressing or other foreign material to a rotating drive pulley or a conveyor belt is hazardous and should be avoided.

You must:
• Do all of the following when dumping operations use chutes or hoppers that are flush with the floor and their use cannot be guarded:
  – Place a temporary guardrail around ground or floor-level hoppers when dumping operations are not in progress.
  – Post warning signs in a conspicuous location alerting personnel to the presence of an open pit in order to protect employees when dumping operations are in progress.

Reference: For guardrail requirements see, Railing, toeboards, and cover specifications, WAC 296-24-75011.

WAC 296-806-42026 Install guideposts.
You must:
• Install guideposts to direct employees driving trucks, loaders, or other equipment to the pit, hopper, or chute.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42024, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42026 Install emergency stop control-lers on overland belt conveyors.
You must:
• Install permanent emergency pull cords or similar emergency stop controllers at points where workers are normally stationed along overland belt conveyors.

Note: Personnel that patrol overland belt conveyors may use portable emergency stop controllers instead of permanently installed pull cords and push-button stations.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42030, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42032 Install belt conveyor over-passes.
You must:

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42030, filed 6/29/04, effective 1/1/05.]

[Title 296 WAC—p. 2772] (2007 Ed.)
• Install a pedestrian overpass or underpass along the sides of long overland belt conveyors, where there is the most foot traffic.
  – The distance between overpasses should not exceed three hundred meters or one thousand feet.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42032, filed 6/29/04, effective 1/1/05.]

CHAIN CONVEYORS

WAC 296-806-42034 Safeguard chain conveyors.
You must:
• Provide safeguards for drive, tail, and idler sprocket pulleys where the chain creates a nip or shear point.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42034, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42036 Guard return strands on chain conveyors.
You must:
• Provide a way to catch and support the ends of a chain that break over a passageway.
• Provide a strong enough trough to carry the weight from a broken chain on conveyors when return strands operate within seven feet of the floor.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42036, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42038 Guard chain conveyors that are used as a transfer mechanism.
You must:
• Guard chain conveyors whose moving chains cannot be enclosed without impairing their function by one of the following methods:
  – Distance as required in, Make sure safeguarding by distance meets these requirements, WAC 296-806-20056.
  – Personnel barriers.
  – Warning signs where personnel barriers are not practical.

Note: Chain conveyors with moving chains that cannot be enclosed include those:
• Mounted within another conveyor.
• Raised and lowered as a transfer mechanism.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42038, filed 6/29/04, effective 1/1/05.]

ELEVATOR CONVEYORS

WAC 296-806-42040 Prevent material from falling off of elevator conveyors.
You must:
• Install strong guards, screens, or barricades to prevent material from falling in any direction into the shaft way of elevator-type conveyors, except at loading and unloading areas.
  • Install automatic shaft way gates or suitable barriers at each floor level where material is loaded or unloaded.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42040, filed 6/29/04, effective 1/1/05.]

INCLINED RECIPROCATING CONVEYORS (SHAKERS)

WAC 296-806-42042 Provide protection where employees must load shakers.
You must:
• Provide standard guardrails or snap chains along loading sides of the shaker where personnel must load or unload material.
  – Snap chains must be at least thirty-nine inches high at their lowest point.
  • Make sure controls are located so the conveyor cannot be started by an employee on the moving part of the conveyor.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42042, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42044 Provide grating over silo and bunker openings for shuttle conveyors.
You must:
• Provide grating with openings to match the size of the material being discharged into silos or bunkers. Make sure openings are:
  – Small enough so that workers cannot fall through.
  – Protected by other effective means if the material size requires openings large enough for a worker to fall through.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42044, filed 6/29/04, effective 1/1/05.]

MOBILE CONVEYORS

WAC 296-806-42046 Guard wheels and rails on mobile conveyors.
You must:
• Install sweeps in front of the nip points created by the wheels and rails to deflect objects that could derail the conveyor.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42046, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42048 Prevent hazardous motion on mobile conveyors.
You must:
• Make sure mobile conveyors have at least one of the following to prevent hazardous motion:
  – Brakes.
  – Rail clamps.
  – Other position-locking devices.
• Provide limit switches that will stop travel when exceeding the design limits of rail-mounted mobile conveyors.
• Provide rail stops to keep the conveyor from traveling past its designed end location.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42048, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42050 Provide a detector for mobile conveyors.
You must:

[Title 296 WAC—p. 2773]
• Provide a detector to stop conveyor movement when the operation creates a danger of running into a stockpile or other obstacle.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-42050, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42052 Provide safe access on mobile conveyors.
You must:
• Make sure that access stairways, ladders, and platforms are designed and located to avoid the shear or nip point hazards of the conveyor and moving machinery.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-42050, filed 6/29/04, effective 1/1/05.]

PUSHER-BAR CONVEYORS

WAC 296-806-42054 Guard pusher-bar conveyors.
You must:
• Provide a guard when hazards exist at each of these points:
  – At the discharge point where the bar passes through the bed.
  – Where there is a shear point between the return pusher bar and a frame member.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-42054, filed 6/29/04, effective 1/1/05.]

ROLLER CONVEYORS

WAC 296-806-42056 Prohibit walking on roller-type conveyors.
You must:
• Prohibit employees from walking on the rolls of roller-type conveyors.
  – Tread plates or other types of walkways can be used between the rollers as a walking surface for operators when performing their duties.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-42056, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42058 Use speed controls for roller and wheel conveyors.
You must:
• Avoid safety hazards created by unit or package speeds by one of the following methods:
  – Limiting the length of the sloped run.
  – Using speed retarders or brakes.
  – Other means of providing speed control.
• Make sure rollers and wheels are free running to prevent locked wheels from steering or pulling materials to one side or off the conveyor.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-42058, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42060 Safeguard belt-driven live roller conveyors.
You must:
• Guard belt and roller nip points by one of the following methods:
  – Space load-carrying rollers to prevent access to the belt and roller nip points.
  – Insert rods or plates between the rollers to prevent access to the belt and roller nip points.
  – Use rollers that pop out when something contacts the nip point.
  – Distance safeguarding found in:
    ■ Make sure safeguarding by distance meets these requirements, WAC 296-806-20056.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-42060, filed 6/29/04, effective 1/1/05.]

SCREW CONVEYORS

WAC 296-806-42062 Guard screw conveyors.
You must:
• Enclose the rotating screw to prevent contact with the shear points where it passes the sides of the trough or casing.
• Guard screw conveyors requiring an open housing by using one of the following:
  – Make sure safeguarding by distance meets these requirements, WAC 296-806-20056.
  – Make sure guardrails used for safeguarding meet these requirements, WAC 296-806-20058.
• Construct feed openings for shovel, front-end loader, or other manual or mechanical equipment so that the conveyor screw is covered by a grating.
  – If the nature of the material is such that a grating cannot be used, then the exposed section of the conveyor must be guarded by a railing and warning signs.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-42062, filed 6/29/04, effective 1/1/05.]

SKIP HOISTS

WAC 296-806-42064 Provide slack-cable switches on hoists.
You must:
• Provide and arrange slack cable switches to cut power to the drive and set the brake when the skip or counterweight hoisting ropes either:
  – Develop slack;
  OR
  – Lose tension due to sticking in the guides, over travel, or for any other reason.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-42064, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42066 Block the skip bucket and counterweight guides.
You must:
• Make sure the skip bucket and counterweight are blocked in their guides when the brake or any part of the drive train between the brake and the drum shaft are being repaired or replaced.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-42066, filed 6/29/04, effective 1/1/05.]
WAC 296-806-42068 Protect against wire rope coming off sheaves.
You must:
• Fit all sheaves with sheave guards to prevent the wire rope from coming off under slack cable or similar conditions.

SLAT AND ROLLER-SLAT CONVEYORS
WAC 296-806-42070 Safeguard slat and roller-slat conveyors.
You must:
• Provide either of these safeguards at the tail end of a slat conveyor if the slats are above the centerline of the chain:
  – A guard over the hazardous tail end;
  OR
  – Warning signs if guards are impractical because of material flowing over the tail sprocket.
• Provide either of these safeguards when there is a gap between the slats wide enough to permit access to cross members below the slats:
  – A continuous pan under the slats;
  OR
  – Keep all cross members a safe distance from the slats.

TOWED CONVEYORS
WAC 296-806-42072 Provide a safe method for disengaging the tow pin.
You must:
• Provide a method for the operator to disengage the tow pin from a conveyor pusher without being in front of the cart.

WAC 296-806-42074 Protect employees from moving carts on towed conveyors.
You must:
• Make sure runaway carts are unable to exit ramps and enter work areas.
  • Have a barrier of sufficient strength and height on ramps with pedestrian or traffic aisles to prevent a runaway cart from entering the aisle.
  • Have signs warning employees not to enter ramps that do not have pedestrian or traffic aisles.

WAC 296-806-42076 Provide clearances and warnings for carts on towed conveyors.
You must:
• Provide clearance space for personnel in all of the following:
  – Between the sides of carts.
  – Between any load overhanging the side of a cart.
  – Any fixed or moving object.
  • Identify the cart path with floor stripes that are:
    – Parallel to the cart path.
    – Arranged so one line is on each side of the path.
    – Located a safe distance from the edge of the cart or overhanging load.
  • Mark reduced clearance areas with appropriate warning signs.

You must:
• Place an appropriate warning on those areas where a cart may unexpectedly change direction, such as switching off the main line into a transfer conveyor or a spur.

You must:
• Install a sign, signal, or other warning where carts start automatically.

WAC 296-806-42078 Mark projections above the floor.
You must:
• Mark the area around projections above the floor with appropriate diagonal stripes, warning signs, or both.

FOOD PROCESSING EQUIPMENT
WAC 296-806-425 Summary. If your specific food processing machine or operation is not listed here, then follow any facilities requirements in this section along with the "Requirements for all machines" found in this chapter, WAC 296-806-200 and 296-806-300.

This section applies to:
• All businesses that manufacture or process food, whether or not they are contained inside food stores;
  AND
• The design, installation, operations, and maintenance of machinery and equipment used in the food processing industry.

Your responsibility:
To protect employees from hazards associated with food processing facilities and machines.

You must:
FACILITIES
Provide locks on chamber doors of large air conditioning units
WAC 296-806-42502.
Use proper door locks on rack-type bread coolers
WAC 296-806-42504.
Provide see-through panels on fermentation room doors
WAC 296-806-42506.
Cover exposed hot pipes
WAC 296-806-42508.
Provide extension piping on stationary lubrication fittings
WAC 296-806-42510.
Provide hoods for pan-washing tanks

(2007 Ed.)
WAC 296-806-42512. Safeguard proof boxes
WAC 296-806-42514. Safeguard storage bins
WAC 296-806-42516.

**MATERIAL HANDLING**
Follow these design requirements for bag lifts (bag arm elevators) and chutes
WAC 296-806-42518.
Follow these requirements for chain tackle
WAC 296-806-42520.
Safeguard conveyors
WAC 296-806-42522.
Use properly designed covers for screw conveyors (augers)
WAC 296-806-42524.
Safeguard pallet jacks and hand trucks
WAC 296-806-42526.

**SPECIFIC FOOD PROCESSING EQUIPMENT**
Safeguard bakery slicers
WAC 296-806-42528.
Safeguard bakery wrapping machines
WAC 296-806-42530.
Provide troughs with antifriction-bearing casters
WAC 296-806-42532.
Follow these requirements for trough hoists and similar equipment
WAC 296-806-42534.
Follow these requirements for dividers
WAC 296-806-42536.
Safeguard manually-fed dough and cross-roll brakes
WAC 296-806-42538.
Provide a guard or tripping device on reversible dough brakes
WAC 296-806-42540.
Follow these requirements for doughnut machines
WAC 296-806-42542.
Follow these requirements for dumpbins and blenders
WAC 296-806-42544.
Follow these requirements for flour-handling machines
WAC 296-806-42546.
Follow these requirements for traveling or track-type flour scales
WAC 296-806-42548.
Follow these requirements for food grinders and cutters
WAC 296-806-42550.
Provide covers with interlocks on ingredient premixers, emulsifiers, and similar machines
WAC 296-806-42552.
Follow these requirements for open fat kettles
WAC 296-806-42554.
Follow these requirements for steam kettles
WAC 296-806-42556.
Follow these requirements for chocolate melting, refining, and mixing kettles
WAC 296-806-42558.
Safeguard meat-processing equipment (circular meat-cutting saws)
WAC 296-806-42560.
Follow these requirements for horizontal dough mixers
WAC 296-806-42562.
Follow these requirements for vertical mixers
WAC 296-806-42564.
Follow these requirements for mechanical-feed moulders
WAC 296-806-42566.
Follow these requirements for hand-fed moulders
WAC 296-806-42568.
Design, install, and construct your ovens according to these requirements
WAC 296-806-42570.
Properly locate emergency "stop" buttons and main shut off valves for ovens
WAC 296-806-42572.
Inspect and test safety devices on ovens
WAC 296-806-42574.
Follow these requirements for peanut-cooling trucks
WAC 296-806-42576.
Follow these requirements for pretzel-rolling, pretzel-stick extruding, rotary, and die machines
WAC 296-806-42578.
Safeguard box and roll-type dough sheeters
WAC 296-806-42580.
Provide proper enclosures for sifters
WAC 296-806-42582.
Follow these requirements for sugar and spice pulverizers
WAC 296-806-42584.

**FACILITIES**

**WAC 296-806-42502 Provide locks on chamber doors of large air conditioning units.**
You must:
• Make sure all door locks on air conditioning unit chambers, that are large enough for employees to enter, can be operated from both inside and outside the chamber.

**WAC 296-806-42504 Use proper door locks on rack-type bread coolers.**
You must:
• Make sure all door locks can be operated from both inside and outside the bread cooler.

**WAC 296-806-42506 Provide see-through panels on fermentation room doors.**
You must:
• Provide shatterproof, see-through panels, made of wire glass or plastic, on fermentation room doors.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-425, filed 6/29/04, effective 1/1/05.]

(2007 Ed.)
WAC 296-806-42508 Cover exposed hot pipes.
You must:
• Cover exposed hot (160°F or more) water and steam pipes with insulating material wherever necessary to prevent employee contact.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42508, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42510 Provide extension piping on stationary lubrication fittings.
You must:
• Provide extension piping on stationary lubrication fittings to prevent workers from reaching into the hazardous area when lubricating moving machinery.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42510, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42512 Provide hoods for pan-washing tanks.
Exemption: This requirement does not apply to dishwashers or sanitizers used in restaurants or retail establishments.
You must:
• Provide power-ventilated exhaust hoods over the tank.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42512, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42514 Safeguard proof boxes.
You must:
1. Make sure all door locks can be operated from both inside and outside the proof box.
2. Provide guide rails to center the racks as they enter, pass through, and leave the proof box if pans, boards, or trays may be easily dislodged.

Note: Guide rails are not required in proof boxes unless there are two doors with a pass through or pull through design.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42514, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42516 Safeguard storage bins.
Exemption: This requirement does not apply to under-the-counter ingredient bins found in retail stores.
You must:
1. Provide locks or latches to keep storage bin covers closed, and gaskets or other equivalent devices, to make sure covers are dust tight.
2. Make sure employees lock covers in the open position when entering bins.
3. Provide emergency stop bars or switches at any point where both of these exist.
4. Provide an electric interlock on the main entrance cover of large storage bins near the interior exit ladder.
   • The interlock needs to prevent feed and unloading screw motors from operating while the cover is open.

Reference: You may need to follow other requirements found in Confined spaces, chapter 296-811 WAC.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42516, filed 6/29/04, effective 1/1/05.]

MATERIAL HANDLING

WAC 296-806-42518 Follow these design requirements for bag lifts (bag arm elevators) and chutes.
You must:
1. Make sure bag arm elevators with manual takeoff are designed to include:
   • Maximum operating capacity of seven bags per minute.
   • Spacing of arms on the conveyor chain to obtain the full capacity of the elevator with the lowest possible chain speed.
   • An electric limit switch at the unloading end that automatically stops the conveyor chain if any bag does not clear the conveyor arms.
2. Make sure bag chutes (gravity chutes for handling flour bags) that incline more than thirty degrees from horizontal:
   • Are designed to keep the speed of flour bags as low as possible.
   • Provide an upturn at the lower end of the chute to slow down the bags.
3. Prohibit the use of bag or barrel lifts as personnel lifts.
4. Prohibit manlifts in bakeries.

Definition:
Manlift
A device consisting of a power driven endless belt moving in one direction only, and provided with steps or platforms and handholds attached to it for the transportation of personnel from floor to floor.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42518, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42520 Follow these requirements for chain tackle.
You must:
1. Mark all chain tackle with the maximum load capacity so the marking is:
   • Prominently displayed.
   • Legible.
   • Permanent.
2. Mark all chain tackle with minimum support specifications so the marking is legible and permanent.
3. Use safety hooks with chain tackle.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42520, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42522 Safeguard conveyors.
You must:
1. Install stop bumpers on all delivery ends of conveyors when products are manually removed.
2. Make sure all conveyors have "stop" buttons at all operating stations.
3. Provide emergency stop bars or switches at any point where both of these exist.

[Title 296 WAC—p. 2777]
The conveyor feeds into a machine; AND
• Pinch points or catching hazards exist.

Reference: Additional requirements for conveyors are found in WAC 296-806-420.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42522, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42524 Use properly designed covers for screw conveyors (augers).

Exemption: This requirement does not apply to screw conveyors where there are drop or hinged bottom sections that cannot remain airtight.

You must:
• Design covers for screw conveyors that are:
  – Removable in convenient sections.
  – Held in place with stationary clamps.
  ■ Locate stationary clamps at intervals that will keep all covers dust tight.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42524, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42526 Safeguard pallet jacks and hand trucks.

You must:
1. Make sure motorized and nonmotorized pallet jacks have a lock or other device that holds the handle in the vertical position when the hand truck is not in use.
2. Make sure hand truck casters are set back from corners.
   • Locate them back from corners so they do not present a hazard to employee’s toes and heels, but not close enough to cause the hand truck to become unstable.

Reference: Motorized hand trucks (pallet jacks) are classified as powered industrial trucks. Additional requirements for powered industrial trucks are found in chapter 296-863 WAC.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42526, filed 6/29/04, effective 1/1/05.]

SPECIFIC FOOD PROCESSING EQUIPMENT

WAC 296-806-42528 Safeguard bakery slicers.

You must:
1. Provide all slicers with a mechanical device to push the last loaf through the slicer knives.
2. Equip all slicers with an interlock to deenergize the motor whenever a door, panel, or other point of access to the cutting blades is open.
3. Protect employees sharpening blades by installing a barrier guard that provides an opening large enough for the sharpening stone to reach and sharpen slicer blades.
4. Provide automatic braking to stop slicers with endless band knives when the motor is not energized.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42528, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42530 Safeguard bakery wrapping machines.

You must:
1. Extend or locate mechanical control levers that start and stop slicing machine conveyors and wrapping machines so an operator can control both machines from either location.

Note: • The levers should be provided wherever necessary, but arranged so only one station can start the wrapping machine and conveyor assembly.
  – Set up or guard controls to prevent accidental starting.
  • The electronic control station for starting and stopping the electric motor that drives the wrapping machine and conveyor should be near the clutch-starting lever.

You must:
2. Provide a protective cover plate over electric heaters on bakery wrapping machines.
   • The cover plate must be properly separated or insulated from heaters so the plate itself is not a burn hazard to operators.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42530, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42532 Provide troughs with antifriction-bearing casters.

You must:
• Provide antifriction-bearing casters on troughs so operators can move and direct them with minimal effort.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42532, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42534 Follow these requirements for trough hoists and similar equipment.

You must:
1. Mark all hoists and similar equipment with the maximum loading capacity so the marking is:
   • Prominently displayed.
   • Legible.
   • Permanent.
2. Mark all hoists with minimum support specifications so that the marking is legible and permanent.
3. Provide safety catches for the chain so that it will hold the load in any position.
4. Use safety hooks with hoists.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42534, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42536 Follow these requirements for dividers.

You must:
• Enclose or safeguard the moving parts in the back of the divider with all of the following:
  A complete cover to enclose all moving parts or an enclosure or guard for each individual part to remove separate hazards.
  – A limit switch to shut off the machine when the rear cover is open.
  – A hinged guard on the back that cannot be completely removed.

If a catch or brace is provided for holding the cover open, make sure it will not release due to vibrations or minor bumping, causing the cover to drop on an employee.

Note: Dividers as discussed in this section utilize pistons, knives and blades to cut and divide large quantities of dough. This does not apply to small vibrating or oscillating rounders.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42536, filed 6/29/04, effective 1/1/05.]
WAC 296-806-42538 Safeguard manually-fed dough and cross-roll brakes.

You must:
(1) Guard the top roll with a heavy-gage metal shield that extends over the roll to within six inches of the hopper bottom board.

Note: The shield may be perforated to allow observation of the dough entering the rolls.

You must:
(2) Provide an emergency "stop" bar that includes a self-engaging brake.
   - Locate it so that if the operator falls forward or gets their hands caught in the rolls, their body will press against the bar, causing the rolls to stop instantly by opening the circuit to:
     - Deenergize the drive motor.
     - Activate a spring-set magnetic brake.
   - Activate the emergency "stop" bar before each shift to make sure it is functioning properly.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42538, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42540 Provide a guard or tripping device on reversible dough brakes.

You must:
- Provide a guard or tripping device on each side of the rolls of reversible dough brakes.
  - The guard or device must be designed so that it stops the machine or reverses the direction of the rolls, if moved by the operator.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42540, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42542 Follow these requirements for doughnut machines.

You must:
- Provide separate flues for venting both of the following:
  - Vapors from the frying section;
  - Products of combustion from the combustion chamber used to heat the fat.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42542, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42544 Follow these requirements for dumpbins and blenders.

Definition:
Dumpbin and blender
The part of the flour handling system where the containers of flour are emptied.

You must:
(1) Make sure dumpbin and blender hoods are large enough to prevent circulation of flour dust outside the hoods.
(2) Provide a stop control device for dumpbins and blenders located close to the operator's work station.
(3) Position dumpbins at an appropriate height from the floor so that operators can dump flour from bags without excessive strain or fatigue.

(4) Provide a bag rest stop, when the edge of a dumpbin is more than twenty-four inches above the floor.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42544, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42546 Follow these requirements for flour-handling machines.

You must:
- Make sure the following safeguards are used when flour-handling systems are run in electrical unity with one another:
  - When the beginning of the system is located far from its final delivery end, make sure:
    - All electric motors operating the system have one control at each end;
    - Either control will stop all motors.
  - Arrange control circuits for magnetic controllers so opening any limit switch on an individual unit will deenergize all motors on that unit.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42546, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42548 Follow these requirements for traveling or track-type flour scales.

You must:
- Provide bar handles for the moving of traveling or track-type flour scales.

Note: For easier grip, the bar should be at least one inch in diameter.

You must:
- Guard trolley track wheels.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42548, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42550 Follow these requirements for food grinders and cutters.

You must:
- Make sure that food grinders and cutters:
  - Have an interlock so machines with removable hoppers cannot be operated when the hopper is removed;
  - Limit access to hoppers where grid guards cannot be used by providing feed conveyors or baffle-type hoppers. Hoppers must be both:
    - Enclosed and provided with hinged covers;
    - Equipped with an electric interlock so the machine will not operate with the cover open.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42550, filed 6/29/04, effective 1/1/05.]

WAC 296-806-42552 Provide covers with interlocks on ingredient premixers, emulsifiers, and similar machines.

You must:
- Provide covers that attach to machines that have top openings.

Note: The covers should be arranged and interlocked so that power to the machine is shut off when the cover is opened far enough for the operator's fingers to come in contact with the beaters.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-42552, filed 6/29/04, effective 1/1/05.]
WAC 296-806-42554  Follow these requirements for open fat kettles.
You must:
(1) Keep the floor around kettles in nonslip condition.
(2) Make sure the top of the kettle is at least thirty-six inches above the floor or working level.

WAC 296-806-42556  Follow these requirements for steam kettles.
You must:
(1) Provide positive locking devices to hold kettles in the desired position.
(2) Provide safety devices for steam kettles according to:
   • The American Society of Mechanical Engineers (ASME) Pressure Vessel Code, section VIII, division I, Unfired Pressure Vessels, 2001, Kettles with Steam Jackets.

WAC 296-806-42558  Follow these requirements for chocolate melting, refining, and mixing kettles.
You must:
(1) Provide a cover to enclose the top of the kettle.
(2) Make sure the bottom outlet of each kettle is designed so the operator cannot:
   • Reach in to touch the revolving paddle.
   • Come in contact with the shear point between the paddle and the side of the kettle.

WAC 296-806-42560  Safeguard meat-processing equipment (circular meat-cutting saws).
Exemption:  These requirements do not apply to table-top slicers such as those used in delis and restaurants.
Reference:  When bandsaws are used to cut meat, follow the requirements in, Make sure bandsaws meet these requirements, WAC 296-806-48042.
You must:
(1) Make sure all circular meat-cutting saws have both:
   • Constant pressure controls;
   AND
   • A brake that automatically begins to stop the blade when the switch is released.
(2) Make sure each circular meat-cutting saw has a protective guard between the operator and the blade.
(3) Provide suspended, counterbalanced circular meat-cutting saws with guards that cover at least one of the following:
   • Twenty-five degrees of the blade if the saw has two-hand controls;
   OR
   • Ninety degrees of the blade if the saw can be operated with one hand.
(4) Provide saws that are not suspended with a guard that covers ninety degrees of the blade.

Note:  The size of the guard depends on whether it is suspended or has one- or two-handed controls.

WAC 296-806-42562  Follow these requirements for horizontal dough mixers.
You must:
(1) Make sure mixers are equipped with both of the following:
   • An individual motor and control;
   AND
   • A conveniently located manual switch that prevents the mixer from being started during servicing or cleaning.
(2) Locate electrical control stations so control operators have a full view of bowls in the "open" position.
   • These controls, other than a "stop" switch, must not be duplicated.
(3) Provide mixers with a full enclosure over the bowl that remains closed whenever the agitator is in motion.
   • Minor openings in the enclosure during operation, such as ingredient doors and flour inlets, must each be less than one and one-half square feet in area.
Exemption:  The full enclosure does not have to remain closed if the mixer has a dumping arrangement that provides safety devices where operators must use both hands in either of these situations:
   • When the agitator is in motion under power and the bowl is open more than one-fifth of its total opening;
   OR
   • When starting the agitator, if the bowl is open more than one-fifth of its total opening.
You must:
(4) Make sure overhead covers or doors that can accidentally close are either:
   • Counterbalanced to remain in the "open" position;
   OR
   • Provided with a catch, brace, or other positive means to hold them open until the operator releases them.
(5) Locate valves and controls that regulate the coolant in mixer jackets so they can be accessed without creating hazards to the operator.

WAC 296-806-42564  Follow these requirements for vertical mixers.
You must:
(1) Provide a safeguarding device to protect employees from the point of operation, if the nature of the work exposes them to contact with:
   • The pinch point where the mixing tool meets the bowl.
   • The catching hazard of the mixing tool.
Note:  When evaluating exposure, the following conditions need to be considered:
   • How the mixer functions such as visibility of the agitator or ability to accidentally switch the mixer on.
   • How the worker performs operations such as adding ingredients without scraping the bowl or reaching into the bowl when the mixer is in motion.
   • How close the worker gets to the hazard during operation.
   • The worker's tools, clothing, jewelry, or hair that might get caught or fall into mixer.
   • Type of guarding, if any.
   • Slipping or tripping hazards in the area.
You must:
  (2) Make sure mixers are equipped with both of the following:
    • An individual motor and control;
    • A conveniently located manual switch that prevents the mixer from being started during servicing or cleaning.
  (3) Make sure overhead panels or doors on mixers that can accidentally close are either:
    • Counterbalanced to remain in an open position;
    • Provided with catches, braces, or other positive means to hold them open until the operator releases them.
  (4) Make sure bowl-locking devices are the type that must be intentionally unlocked by the operator.
  (5) Provide devices for moving filled bowls that weigh more than eighty pounds in and out of the mixing position on the machine.

[WAC 296-806-42570 Design, install, and construct your ovens according to these requirements.
You must:
  • Make sure all ovens manufactured or installed before August 13, 1999 meet or exceed ANSI Z50.1-1947 design, manufacturing, and installation requirements.
  • Make sure all ovens manufactured or installed on or after August 13, 1999 meet the design, manufacturing, and installation requirements in ANSI/NFPA 86-1999.

[WAC 296-806-42574 Inspect and test safety devices on ovens.
You must:
  (1) Inspect ovens at least twice a month by a formally appointed, properly trained, bakery employee.
    • Include the following in your inspection:
      – All safety devices.
      – Testing of all safety shutoff valves, making sure they are positively tight.
  (2) Make sure a representative of the oven manufacturer performs an annual inspection.
  (3) Test all piping on ovens to make sure they are gas tight.
  (4) Test oven systems as follows:
    • Test duct systems on indirect recirculating ovens that operate under pressure for tightness at the following intervals:
      – When the oven is first started.
      – At least every six months after that.

[WAC 296-806-42576 Follow these requirements for peanut-cooling trucks.
You must:
  • Make sure the entire top of the peanut-cooling truck has a grid-type cover.

[WAC 296-806-42578 Follow these requirements for pretzel-rolling, pretzel stick extruding, rotary, and die machines.
You must:
  • Protect the operator's hands from getting caught in moving parts by doing at least one of the following:
    – Cover the entire opening of dough hoppers with grid-type guards.
    – Extend the hopper higher.

[WAC 296-806-42580 Safeguard box and roll-type dough sheeters.
You must:

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42570, filed 6/29/04, effective 1/1/05.]

[WAC 296-806-42572 Properly locate emergency "stop" buttons and main shut off valves for ovens.
You must:
  (1) Locate emergency stop buttons on mechanical ovens close to where operators are stationed.
  (2) Locate main shutoff valves where they can be accessed in case of an emergency.
    • Main shutoff valves that permit turning off the fuel or steam in case of an emergency must operate independently of any automatic valves.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42572, filed 6/29/04, effective 1/1/05.]

[WAC 296-806-42566 Follow these requirements for mechanical-feed moulders.
You must:
  • Make sure hoppers for mechanical-feed moulders are designed and connected to the proofer so employee's hands cannot contact the in-running rolls.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42566, filed 6/29/04, effective 1/1/05.]

[WAC 296-806-42568 Follow these requirements for hand-fed moulders.
You must:
  (1) Provide hand-fed moulders with either of the following, so employee's hands cannot enter the hopper and contact the in-running rolls:
    • A hopper that can be extended high enough to protect the employee;
      – The top edge of the hopper needs to be well rounded to prevent injury when struck or bumped by an employee's hand;
    • A belt feed device.
  (2) Provide each of these workers with a stopping device that can be easily reached:
    • The operator feeding the moulder.
    • The employee taking the dough away from the moulder.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42568, filed 6/29/04, effective 1/1/05.]

[WAC 296-806-42578 Follow these requirements for pretzel-rolling, pretzel stick extruding, rotary, and die machines.
You must:
  • Protect the operator's hands from getting caught in moving parts by doing at least one of the following:
    – Cover the entire opening of dough hoppers with grid-type guards.
    – Extend the hopper higher.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-42578, filed 6/29/04, effective 1/1/05.]

[WAC 296-806-42580 Safeguard box and roll-type dough sheeters.
You must:

[Title 296 WAC—p. 2781]
(1) Guard exposed rolls with either of these methods:
   • Guard the nip point of exposed sheeting rolls at the point where the dough enters the rolls;
   OR
   • Provide an emergency "stop" bar that extends the length of unguarded rolls that will stop the rolls on contact with the operator, if a barrier guard interferes with machine operation.

(2) Provide a stopping device for hoppers.
   • Provide an automatic "stop" bar or stopping device along the back edge of the hopper.
     – If machine construction does not allow for this, place the bar or device where it will be most effective.

You must:

WAC 296-806-42582 Provide proper enclosures for sifters.

You must:
   • Make sure enclosures on flour sifters:
     – Are dust tight.
     – Allow for ease of interior inspection.

WAC 296-806-42584 Follow these requirements for sugar and spice pulverizers.

You must:
   (1) Remove static electricity by grounding all drive belts used in sugar and spice pulverizers by using metal combs.
   (2) Follow the National Fire Protection Association (NFPA) 61-1999, standard for pulverizing sugar and spice grinding in order to prevent fires and dust explosions in agricultural and food products facilities.
   (3) Provide magnetic separators to reduce fire and explosion hazards.

You must:

WAC 296-806-430 Summary. If your specific machine or operation is not listed here, then follow any general requirements in this section along with the "Requirements for all machines" found in this chapter, WAC 296-806-200 and 296-806-300.

The requirements in this section apply to machines used in the forming of hot metal, such as hot trimming presses, forging hammers, hot forging presses, upsetters, hot bending and hot metal presses, and equipment used in boltheading and rivet making, as well as other forging equipment. For specific forging machine requirements, see Table 430-1.

Exemption: This section does not apply to cold forging operations.

Your responsibility:
To make sure all forging and associated equipment in your workplace are constructed, operated, and maintained in a safe manner.

You must:

GENERAL REQUIREMENTS FOR FORGING MACHINES
   Follow these safety requirements when using lead and lead casts
   WAC 296-806-43002.
   Properly inspect and maintain forging equipment
   WAC 296-806-43004.
   Use safety blocks on hammers and presses
   WAC 296-806-43006.
   Make sure tongs meet these requirements
   WAC 296-806-43008.
   Protect employees when removing scale
   WAC 296-806-43010.
   Provide adequate foundations for hammers and presses
   WAC 296-806-43012.
   Follow these requirements for manually operated valves and switches
   WAC 296-806-43014.
   HAMMERS
   Use die keys and shims made of proper-grade material
   WAC 296-806-43016.
   Provide a safety cylinder head
   WAC 296-806-43018.
   Provide a shutoff valve
   WAC 296-806-43020.
   Provide a means for cylinder draining
   WAC 296-806-43022.
   Follow these requirements for pressure pipes
   WAC 296-806-43024.
   Follow these requirements when using board hammers
   WAC 296-806-43026.
   OTHER FORGE FACILITY EQUIPMENT
   Protect against sparks from saws
   WAC 296-806-43028.

[Title 296 WAC—p. 2782] (2007 Ed.)
**GENERAL REQUIREMENTS FOR FORGING**

**WAC 296-806-43002** Follow these safety requirements when using lead and lead casts.

**You must:**
1. Provide thermostats for heating elements to prevent overheating.
2. Provide a means of exhaust for fixed or permanent lead pot installations.
3. Provide a covered container to store dross skim mings.
4. Keep equipment clean, especially from accumulations of yellow lead oxide.

**Reference:**
- For requirements about, Personal protective equipment (PPE), see the Safety and health core rules, WAC 296-800-160.
- For ventilation requirements when using portable lead pot units, see the General occupational health standards, chapter 296-62 WAC.

**WAC 296-806-43004** Properly inspect and maintain forging equipment.

**You must:**
- Keep all forge shop equipment in safe operating condition.
- Train personnel in proper inspection and maintenance procedures.
- Establish periodic and regular safety inspections.
- Schedule frequent and regular safety inspections of all guards and point-of-operation protection devices.
- Keep written records of safety inspections that include all of the following:
  - Date of the inspection.
  - Signature of the person doing the inspection.
  - Serial number or other identification for the piece of equipment inspected.
- Safeguard all overhead machinery parts so they do not fly off or fall, if the equipment breaks.

**WAC 296-806-43006** Use safety blocks on hammers and presses.

**You must:**
- Use safety blocks on hammers and presses when dies are being changed and maintenance or repair work is being done on the machine.
- Provide safety blocks or wedges that meet or exceed the specifications and dimensions shown in Table 430-2.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-43002, filed 6/29/04, effective 1/1/05.]

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-43004, filed 6/29/04, effective 1/1/05.]

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-43006, filed 6/29/04, effective 1/1/05.]
WAC 296-806-43008 Make sure tongs meet these requirements.
You must:
• Make sure tongs used with hammers, presses, upsetters, and forging equipment used in boltheading and rivet making, meet the following requirements:
  – They are long enough so the worker can use the tongs without standing behind them, in order to avoid injury, in case of kickback.
  – The handle ends are not sharp.

Note:  • The worker should be instructed about proper body positions when using tongs.
       • Tongs should be checked periodically to see that they remain at the proper hardness level for the job.
       • Rings or equivalent devices that are used for locking tongs should be inspected periodically to make sure they are safe.

WAC 296-806-43010 Protect employees when removing scale.
You must:
• Protect employees at every hammer and press by:
  – Making sure they do not place a hand or arm between the dies by providing them with devices that reach the full length of the die when removing scale. Examples include:
    ■ Oil swabs.
    ■ Scale removers.
    ■ Other devices that remove scale by reaching the full length of the die.
  – Stopping flying scale through construction and arrangement of a scale guard that is of substantial construction at the back of every hammer and press.

WAC 296-806-43012 Provide adequate foundations for hammers and presses.
You must:
• Provide foundations adequate to support the imposed weight and normal work stress for hammers and presses.
  – Hammers and presses must remain on their foundations.

WAC 296-806-43014 Follow these requirements for manually operated valves and switches.
You must:
• Make sure all manually operated valves and switches are clearly identified and readily accessible for all of the following:
  – Presses.
  – Upsetters.
  – Forging equipment involved in boltheading and rivet making.

WAC 296-806-43016 Use die keys and shims made of proper-grade material.
You must:
• Make sure that die keys and shims are made from a grade of material that will not easily crack or splinter.

Note:  Die keys and shims should not project more than two inches in front and four inches in back of the ram or die.

WAC 296-806-43018 Provide a safety cylinder head.
You must:
• Make sure that every steam, airlift, or air hammer has a safety cylinder head that acts as a cushion if the rod breaks or pulls out of the ram.

WAC 296-806-43020 Provide a shutoff valve.
You must:
• Provide each steam and airlift hammer with a quick-closing emergency valve in the admission pipeline that is distinctly marked and in a convenient location.
  – This valve needs to be closed and locked in the "off" position when the hammer is being adjusted, repaired, or serviced, or the dies are being changed.

Reference:  For requirements about Lockout/tagout (control of hazardous energy), see chapter 296-803 WAC.

WAC 296-806-43022 Provide a means for cylinder draining.
You must:
• Provide a means for draining cylinders on steam hammers.
  • Provide airlift hammers with both main head and clamp cylinder drains.

WAC 296-806-43024 Follow these requirements for pressure pipes.
You must:
• Provide steam or air pressure piping on power-driven hammers that meets or exceeds the requirements in:
WAC 296-806-43026 Follow these requirements when using board hammers.
You must:
• Securely fasten a suitable enclosure to gravity-dropped board hammers to prevent damaged or detached boards from falling.
• Properly secure all major assemblies and fittings that can loosen and fall.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-43026, filed 6/29/04, effective 1/1/05.]

OTHER FORGE FACILITY EQUIPMENT

WAC 296-806-43028 Protect against sparks from saws.
You must:
• Provide all saws with a sheet metal guard that is positioned to stop sparks.
  – The guard must be constructed of at least one-eighth inch sheet metal.
Note: It is advisable to provide all saws with a means to trap sparks below the saw and to use a tank of water below the saw to reduce the fire hazard.
Reference: Other saw requirements may be found in, Saws and cutting heads, WAC 296-806-480.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-43028, filed 6/29/04, effective 1/1/05.]

GARBAGE (WASTE) DISPOSALS

WAC 296-806-435 Summary. In addition to the requirements in this section, you need to refer to the following sections of this chapter in order to fully protect your employees from machine hazards:
• Requirements for all machines, WAC 296-806-200 and 296-806-300.

This section applies to the hazards associated with garbage (waste) disposals found in the workplace. These requirements are designed to protect employees from hazards associated with the point of operation and flying materials.

Your responsibility:
To protect employees from hazards associated with garbage (waste) disposals.

You must:
Safeguard garbage waste disposal equipment WAC 296-806-43502.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-435, filed 6/29/04, effective 1/1/05.]

WAC 296-806-43502 Safeguard garbage (waste) disposal equipment.
You must:
(1) Protect employees exposed to the hazards of screw conveyor disposals with a properly designed and mounted trimboard cover that remains in place during operation.
(2) Provide guarding to protect employees from contact with knives or blades of disposal units.
  • The guards need to be strong enough so that an employee’s downward thrusting motion will not cause the guard material to open larger than two inches.

Reference: • You may need to follow additional requirements found in, Make sure guards meet these requirements, WAC 296-806-20042, to keep employees from contacting the knives or blades of disposals.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-43502, filed 6/29/04, effective 1/1/05.]

GLUE SPREADERS

WAC 296-806-440 Summary. In addition to the requirements in this section, you need to refer to the following sections of this chapter in order to fully protect your employees from machine hazards:
• Requirements for all machines, WAC 296-806-200 and 296-806-300.

This section applies to safeguarding and emergency controls used to protect employees from the hazards associated with cleaning and operating glue spreaders.

Your responsibility:
To protect employees from hazards associated with glue spreaders.

You must:
Provide guards and automatic shutoffs on glue spreaders WAC 296-806-44002.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-440, filed 6/29/04, effective 1/1/05.]

WAC 296-806-44002 Provide guards and automatic shutoffs on glue spreaders.
You must:
• Enclose the in-running side of glue spreaders, leaving enough space to insert stock.
• Provide an emergency stop control, such as a panic bar or similar device, that can be reached from the infeed and outfeed sides of the spreader to shut off the power in an emergency.
Note: You may need two controls to reach the emergency stop control from both the infeed and outfeed sides.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-44002, filed 6/29/04, effective 1/1/05.]

IRONWORKERS

WAC 296-806-445 Summary. In addition to the requirements in this section, you need to refer to the following sections of this chapter in order to fully protect your employees from machine hazards:
• Requirements for all machines, WAC 296-806-200 and 296-806-300.

This section applies to the hazards associated with hydraulic and mechanical ironworkers.

Your responsibility:
To protect employees from hazards associated with ironworkers.

You must:
Safeguard ironworkers point of operation WAC 296-806-44502.
Follow these requirements for adjustable restrictors when safeguarding ironworkers WAC 296-806-44504.
[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-445, filed 6/29/04, effective 1/1/05.]

(2007 Ed.)
WAC 296-806-44502 Safeguard ironworkers point of operation.

You must:
• Safeguard the different operating stations on ironworkers according to requirements for all machines, safeguarding methods, WAC 296-806-20042 through 296-806-20058.

Exemption: If the point-of-operation opening is one-fourth inch or less, safeguarding is not required.

WAC 296-806-44504 Follow these requirements for adjustable restrictors when safeguarding ironworkers.

You must:
• Use adjustable restrictors for safeguarding only when guards, devices, or awareness barriers are not feasible.

LATHES

WAC 296-806-450 Summary. In addition to the requirements in this section, you need to refer to the following sections of this chapter in order to fully protect your employees from machine hazards:

• Requirements for all machines, WAC 296-806-200 and 296-806-300.

This section applies to the hazards associated with metal and woodworking lathes.

Your responsibility:
To protect employees from hazards associated with metal and woodworking lathes.

METAL LATHES

You must:
Provide shields or guards on metal lathes for chip or coolant hazards

WAC 296-806-45002 Provide shields or guards on metal lathes for chip or coolant hazards.

You must:
• Provide a shield or other equally effective guard to prevent chips or coolant from being thrown or splashed on the operator, aisle, or other assigned work area, when exposed to these hazards.
  – Examples of guards include permanent chip and coolant shields.

WAC 296-806-45004 Safeguard work-holding devices (chucks).

You must:
• Provide a fixed or moveable guard, device, awareness barrier, or peripheral cover over areas exposed to the operator on work-holding devices or chucks when:
  – It is in the clamped mode and has parts that extend beyond the outside diameter of the holding device.
  – It has an irregular shape to the periphery of its body.

WAC 296-806-45006 Follow these requirements for chip control and handling.

You must:
• Make sure employees' hands do not contact chips that are being generated, such as long stringy chips.

Note: Chips may be removed by using things such as tools, pullers, brushes, and shovels.

WAC 296-806-45008 Safeguard power-clamping devices.

You must:
• Protect the operator from the hazards of thrown material when the clamping device does not have adequate pressure to hold the material.

Note: Examples of safeguarding methods include:
  – Interlocks.
  – Retaining covers:
    ■ That contain the workpiece if it falls or flies out from the clamped work-holding device.
  – Visual or audible warnings:
    ■ That are located so they can be seen or heard by the operator in the normal work area, making the operator aware that there is no pressure on the clamp side of the actuator.

WAC 296-806-45010 Restrain extended workpieces on horizontal lathes.

You must:
• Safeguard employees from the hazards of work pieces that extend beyond the edges of the horizontal lathe by:
  – Restraining work pieces as needed to prevent whipping.

AND
Isolating work pieces with an awareness barrier, fixed or movable guard, or railing.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-45010, filed 6/29/04, effective 1/1/05.]

WOODWORKING LATHES

WAC 296-806-45012 Guard cutting heads on profile lathes and swing-head lathes.

You must:
• Cover all cutting heads on profile lathes, swing-head lathes, and heel-turning machines with a metal guard.
• Make sure guards are made of:
  – Sheet metal at least one-sixteenth inches thick.
  – Cast iron at least three-sixteenth inches thick.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-45012, filed 6/29/04, effective 1/1/05.]

WAC 296-806-45014 Guard cutting heads on turning lathes.

You must:
• Install hoods or shields that cover as completely as possible all cutting heads, whether or not they rotate.
  
  Note: The hood or shield should be hinged to the machine so it can be moved to make adjustments.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-45014, filed 6/29/04, effective 1/1/05.]

WAC 296-806-45016 Guard automatic turning lathes.

You must:
• Install hoods that completely enclose the cutter blades, except at contact points where stock is being cut, on the following types of machines:
  – Shoe last and spoke lathes.
  – Doweling machines.
  – Heel-turning machines.
  – Automatic turning lathes with rotating knives.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-45016, filed 6/29/04, effective 1/1/05.]

WAC 296-806-45018 Guard wood lathes used for turning long pieces of stock.

You must:
• Install long, curved guards extending over lathe tops where work pieces are held only between the two centers, to prevent stock from being thrown out of the machine.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-45018, filed 6/29/04, effective 1/1/05.]

MECHANICAL POWER PRESSES

WAC 296-806-455 Summary. In addition to the requirements in this section, you need to refer to the following sections of this chapter in order to fully protect your employees from machine hazards:
• Requirements for all machines, WAC 296-806-200 and 296-806-300.

This section applies to mechanically powered machines that transmit force to cut, form, or assemble metal or other materials through tools or dies attached to or operated by slides.

Exemption: This section does not apply to:
• Power press brakes.
• Hydraulic power presses.
• Pneumatic power presses.
• Slow-acting horizontal mechanical presses with large beds (bulldozers).
• Hot bending and hot metal presses.
• Forging presses and hammers.
• Riveting machines.
• Cold headers and cold formers.
• Eyelet machines.
• High energy rate presses.
• Ironworkers and detail punches.
• Metal shears.
• Powdered metal presses.
• Press welders.
• Turret and plate punching machines.
• Wire termination machines.
• Welding presses.

Reference:
• See, Forging machines, for forging press and hammer requirements, WAC 296-806-430.
• See, Ironworkers, for requirements for ironworkers, WAC 296-806-445.
• See, Press brakes, for power press brake requirements, WAC 296-806-465.

Your responsibility:
To make sure mechanical power presses meet the requirements of this section.

You must:

Design and construction
Make sure mechanical power presses are properly designed and constructed
WAC 296-806-45502.

Safeguarding
Safeguard presses that use unitized tooling
WAC 296-806-45504.

Protect operators from guidepost hazards
WAC 296-806-45506.

Safeguard the point of operation
WAC 296-806-45508.

Make sure point-of-operation guards are properly designed and constructed
WAC 296-806-45510.

Make sure barrier guards used to safeguard the point of operation meet these requirements
WAC 296-806-45512.

Make sure point-of-operation devices are effective
WAC 296-806-45514.

Make sure presence-sensing devices used to safeguard the point of operation meet these requirements
WAC 296-806-45516.

Make sure pull-back devices used to safeguard the point of operation meet these requirements
WAC 296-806-45518.

Make sure restraint (holdout) devices used to safeguard the point of operation meet these requirements
WAC 296-806-45520.

Make sure two-hand control devices used to safeguard the point of operation meet these requirements
WAC 296-806-45522.

Make sure two-hand trip devices used to safeguard the point of operation meet these requirements
WAC 296-806-45524.

Provide additional safeguards when the operator puts one or both hands into the point of operation

(2007 Ed.)
WAC 296-806-45526.

**Operations**
- Establish a die setting procedure
- Handle dies safely
- Protect die setters during setup and tryout

WAC 296-806-45530.
- Train press operators
- Operate mechanical power presses safely
- Provide tools and other means to protect press operators
- Inspect and maintain presses

Make sure presses and operating practices used in the PSID mode of operation meet these requirements
WAC 296-806-45542.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-4550, filed 6/29/04, effective 1/1/05.]

**DESIGN AND CONSTRUCTION**

WAC 296-806-45502 Make sure mechanical power presses are properly designed and constructed.

**You must:**
- Make sure mechanical power presses manufactured, reconstructed, or modified on or after January 1, 2005, meet the requirements of ANSI B11.1-2001, Safety Requirements for Mechanical Power Presses.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-45502, filed 6/29/04, effective 1/1/05.]

**SAFEGUARDING**

WAC 296-806-45504 Safeguard presses that use unitized tooling.

**You must:**
- Safeguard the opening between the top of the punch holder and the face of the slide or striking pad by using properly installed, adjusted, and maintained guards or devices.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-45504, filed 6/29/04, effective 1/1/05.]

WAC 296-806-45506 Protect operators from guidepost hazards.

**You must:**
- Use properly installed, adjusted, and maintained guards or devices to protect operators from the hazards created by:
  - Guideposts separating from their bushings.
  - Similar pinch points between the slide (moving die) and fixed die or press attachments.

[Title 296 WAC—p. 2788]
Reference: See, Provide additional safeguards when the operator puts one or both hands into the point of operation, WAC 296-806-45526, for additional safeguards that are required if the operator puts one or both hands into the point of operation to feed or remove parts, and the point of operation is protected by a Type B gate or movable barrier device.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-45512, filed 6/29/04, effective 1/1/05.]

WAC 296-806-45514 Make sure point-of-operation devices are effective.

You must:
- Make sure point-of-operation devices protect the operator from hazards as shown in Table 455-1, Point-of-Operation Devices.
- Make sure the motor start button is protected against accidental contact.

### Table 455-1
Point-of-Operation Devices

<table>
<thead>
<tr>
<th>Type of device</th>
<th>Type of operator protection that must be provided:</th>
</tr>
</thead>
</table>
| Presence-sensing device (part-revolution clutch press) | If the operator’s hands or other body part are in the point of operation:  
• Prevents initiating a press cycle (stroke);  
OR  
• Stops the press during the closing portion of the cycle (stroke) | |
| Presence-sensing device (full-revolution clutch press) | Do NOT use for point-of-operation safeguarding |
| Pull-back device                      | As the die closes:  
• Withdraws the operator’s hands if they are located in the point of operation;  
OR  
• Prevents the operator from reaching into the point of operation |
| Restraint (holdout) device            | Prevents the operator from reaching into the point of operation at all times |
| Two-hand control device               | • Requires operators to use both hands to activate controls that are far enough away from the point of operation so the slide completes the closing portion of the cycle (stroke) or stops before they can reach into the point of operation |
| Two-hand trip device                  |                                                                                       |
| Type A gate or movable barrier device | Encloses the point of operation:  
• Before a press cycle (stroke) can be initiated;  
AND  
• Remains closed until slide motion has stopped |
| Type B gate or movable barrier device | Encloses the point of operation:  
• Before a press cycle (stroke) can be initiated;  
AND |

D = 63 x T

Where:
- D = minimum safety distance (in inches)
- T = stopping time of the press measured at approximately the 90 degree position of crankshaft rotation (in seconds)

Example: The number in the formula represents the hand speed of the operator (sixty-three inches per second). If your press has a stopping time of one-half second (.5 second), the calculations would be:

D = 63 x .5 = 31.5

The sensing field would need to be at least thirty-one and one-half inches from the point of operation.

Reference: See, Provide additional safeguards when the operator puts one or both hands into the point of operation, WAC 296-806-45516, while feeding or removing parts, for additional safeguards that are required if the operator puts one or both hands into the point of operation to feed or remove parts, and the point of operation is protected by a presence-sensing device.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-45514, filed 6/29/04, effective 1/1/05.]

WAC 296-806-45516 Make sure presence-sensing devices used to safeguard the point of operation meet these requirements.

You must:
- Make sure the presence-sensing device is interlocked into the control circuit to prevent or stop slide motion if the operator’s hand or other body part is within the sensing field of the device during the downstroke of the press slide.
- Make sure muting of the device is done only during the upstroke of the press slide.
- Make sure failure of any component of the device:
  - Does not prevent normal stopping action of the press.
  - Prevents initiation of another cycle (stroke) until corrected.
  - Is indicated by the system.
- Use guards to protect all areas of entry to the point of operation not protected by the presence-sensing device.
- Make sure the sensing field of the device is located farther from the point of operation than the minimum safety distance as determined by the following formula:

D = 63 x T

Where:
- D = minimum safety distance (in inches)
- T = stopping time of the press measured at approximately the 90 degree position of crankshaft rotation (in seconds)

Example: The number in the formula represents the hand speed of the operator (sixty-three inches per second). If your press has a stopping time of one-half second (.5 second), the calculations would be:

D = 63 x .5 = 31.5

The sensing field would need to be at least thirty-one and one-half inches from the point of operation.

Reference: See, Provide additional safeguards when the operator puts one or both hands into the point of operation, WAC 296-806-45516, while feeding or removing parts, for additional safeguards that are required if the operator puts one or both hands into the point of operation to feed or remove parts, and the point of operation is protected by a presence-sensing device.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-45516, filed 6/29/04, effective 1/1/05.]

WAC 296-806-45518 Make sure pull-back devices used to safeguard the point of operation meet these requirements.

You must:
- Make sure presses requiring more than one operator have a separate pull-back device for each operator.
- Make sure each pull-back device has attachments:
  - For each of the operator’s hands.
– That are connected to and operated only by the press slide or its attached die.
– That are adjusted to either:
  ■ Prevent the operator from reaching into the point of operation;
  OR
  ■ Withdraw the operator's hands from the point of operation before the dies close.
  • Check each pull-back device that is being used for proper adjustment at these times:
    – At the start of each operator shift.
    – After a new die set-up.
    – When operators are changed.
  • Complete necessary maintenance or repair work before operating the press.

Reference: For recordkeeping requirements for maintenance or repair work, see Inspect and maintain presses, WAC 296-806-45540.

WAC 296-806-45520 Make sure restraint (holdout) devices used to safeguard the point of operation meet these requirements.

You must:
• Make sure presses requiring more than one operator have separate restraint devices for each operator.
• Make sure each restraint device has attachments:
  – For each of the operator's hands.
  – That are securely anchored.
  – That are adjusted so the operator cannot reach into the point of operation.

Reference: See, Provide additional safeguards when the operator puts one or both hands into the point of operation, WAC 296-806-45526, for additional required safeguards.

WAC 296-806-45524 Make sure two-hand trip devices used to safeguard the point of operation meet these requirements.

You must:
• Make sure presses requiring more than one operator:
  – Have separate two-hand trips for each operator.
  – Need concurrent application of all operators' controls to activate the slide.
• Make sure the two-hand trips are fixed in position and can be moved only by authorized persons.
• Make sure the controls are located farther from the point of operation than the minimum safety distance as determined by the following formula:

\[
D = 63 \times T
\]

Where:

\[
D = \text{minimum safety distance (in inches)}
\]

\[
T = \text{the maximum time the press takes for the die to close after the press has been tripped (in seconds)}
\]

Example: The number in the formula represents the hand speed of the operator (63 inches per second). If your press has a stopping time of one-half second (.5 second), the calculations would be:

\[
D = 63 \times .5 = 31.5
\]

The controls would need to be at least 31 1/2 inches from the point of operation.

Reference: See, Provide additional safeguards when the operator puts one or both hands into the point of operation, WAC 296-806-45526, for additional required safeguards.

WAC 296-806-45522 Make sure two-hand control devices used to safeguard the point of operation meet these requirements.

You must:
• Make sure presses that require more than one operator:
  – Have separate two-hand controls for each operator.
  – Need concurrent application of all operators' controls to activate the slide.
• Make sure the slide stops if any operator's hand is removed from a control button.
• Make sure two-hand controls are fixed in position and can be moved only by authorized persons.
• Make sure the controls are located farther from the point of operation than the minimum safety distance as determined by the following formula:

\[
D = 63 \times T
\]

Where:

\[
D = \text{minimum safety distance (in inches)}
\]

\[
T = \text{stopping time of the press measured at approximately the 90 degree position of crankshaft rotation (in seconds)}
\]

Example: The number in the formula represents the hand speed of the operator (63 inches per second). If your press has a stopping time of one-half second (.5 second), the calculations would be:

\[
D = 63 \times .5 = 31.5
\]
Machine Safety

296-806-45528 Establish die setting procedures.

You must:
• Develop and use procedures to protect employees from the hazards of die setting.
• Make sure die setters are provided with at least the following information:
  – Rated press capacity requirements for the die.
  – Weight of the upper die and other slide attachments required for job setup and setting counterbalance air pressure.
  – Total die weight.

Note: This information may be stamped on the die or kept in a file that is readily available to the die setters.

296-806-45530 Handle dies safely.

You must:
• Make sure dies requiring mechanical handling have handling equipment attachment points.
• Use die stops or other means to prevent losing control of the die while setting or removing dies from presses that are inclined.
• Make sure the upper and lower shoes will securely mount the die to the bolster and slide.
• Use additional means of securing the upper shoe to the slide where clamp caps or set screws are used in conjunction with punch stems.
• Make sure spring-loaded turnover bars are provided for presses designed to accept them.

296-806-45532 Protect die setters during setup and tryout.

You must:
(1) Use safety blocks when an employee has to put their hands or other body part into the point of operation to adjust or repair dies.
(2) Protect die setters doing die tryout from point-of-operation hazards by at least one of the following:
• Properly installed, adjusted, and maintained guards or devices.
• Proper use of INCH mode (part-revolution clutch press).
• Proper use of JOG mode (full-revolution clutch press).

WAC 296-806-45534 Train press operators.

You must:
(1) Train operators to safely operate the press.
(2) Make sure modified or reconstructed presses have instructions to establish new or changed guidelines for use and care of the press.

WAC 296-806-45536 Operate mechanical power presses safely.

You must:
• Operate the press within the manufacturer's rated capacities.

Note: Rated capacities include, but are not limited to:
  – Structural capacity.
  – Torque capacity.
  – Energy capacity.
  – Thermal capacity.
  – Attachment weight.
  – Die shutheight.

WAC 296-806-45538 Provide tools and other means to protect press operators.

You must:
• Make sure hand tools are provided and used to free and remove workpieces or scrap stuck in the die.
• Provide means for handling scrap from roll feed or random length stock operations.
• Provide and use means to keep operators and die setters from reaching into the point of operation or other hazard area to lubricate material or die components.

Note: Means for lubricating include, but are not limited to:
  – Brushes.
  – Swabs.
  – Lubricating rolls.
  – Manual spray systems.
  – Automatic spray systems.
  – Handles on brushes or swabs should be long enough to keep persons using them clear of the point of operation.

WAC 296-806-45540 Inspect and maintain presses.

You must:
(1) Make sure maintenance personnel are trained and competent to inspect and maintain power presses.
(2) Keep records of all maintenance or repair work.
(3) Inspect and test the following press systems at least weekly:
• Clutch/brake mechanism.
• Antirepeat feature.

[Title 296 WAC—p. 2791]
• Single stroke mechanism.
• Keep records of inspections and tests.

Exemption: You do not have to do weekly inspections if your press has both:
- Performance of safety-related functions monitoring (previously called control reliability);
- AND
- A stopping-performance monitor (previously called brake-system monitor) does not require weekly inspections.

Reference: For requirements for these monitoring devices, see WAC 296-806-45542 Title 296 WAC: Labor and Industries, Department of Labor and Industries, August 27, 1971.

You do not have to do weekly inspections if your press has both:
- Performance of safety-related functions monitoring (previously called control reliability);
- AND
- A stopping-performance monitor (previously called brake-system monitor) does not require weekly inspections.

Note: 29 CFR 1910.217(h) contains requirements for certification and validation of mechanical power presses used in the PSDI mode of operation.

Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-45542, filed 6/29/04, effective 1/1/05.

WAC 296-806-45542 Make sure presses and operating practices used in the PSDI (presence sensing device initiation) mode of operation meet these requirements.

You must:
• Make sure presses and operating practices used in the PSDI mode meet the requirements of 29 CFR 1910.217(h), Presence Sensing Device Initiation (PSDI).

Note: 29 CFR 1910.217(h) contains requirements for certification and validation of mechanical power presses used in the PSDI mode of operation.

Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-45542, filed 6/29/04, effective 1/1/05.

MILLS

WAC 296-806-460 Summary. In addition to the requirements in this section, you need to refer to the following sections of this chapter in order to fully protect your employees from machine hazards:
• Requirements for all machines, WAC 296-806-200 and 296-806-300.

This section applies only to mills in the rubber and plastics industry that have in-running metal rolls that are set horizontally and run toward each other.

Your responsibility:
To protect employees from hazards associated with mills.

You must:
Meet height requirements for mill rolls
WAC 296-806-46002.
Provide mill safety controls
WAC 296-806-46004.
Follow these stopping limit requirements for mills
WAC 296-806-46006.

Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-46002, § 296-806-46004, § 296-806-46006, filed 6/29/04, effective 1/1/05.

WAC 296-806-46002 Meet height requirements for mill rolls.

You must:
• Make sure that the tops of mill rolls installed after August 27, 1971, are at least fifty inches above the working level where the operator stands.

This distance applies to the actual working level, which could be:
■ The general floor level.
■ In a pit.

Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-46002, filed 6/29/04, effective 1/1/05.

WAC 296-806-46004 Provide mill safety controls.

Exemption: These rules do not apply to mills if the machinery is permanently set up so employees:
- Cannot reach through, over, under, or around to come in contact with the roll bite; OR
- Cannot be caught between a roll and nearby objects.

You must:
(1) Provide a safety trip control that is easy to reach, operates readily on contact, and is located in front and back of each mill. Each safety trip control must include at least one of the following:

- Pressure-sensitive body bars that:
  - Are installed at the front and back of mills having a forty-six inch roll height or over.
  - Operate readily on contact from the pressure of the mill operator's body.
- Safety trip rods that are:
  - Installed in the front and back of each mill and located within two inches of the front and rear rolls.
  - Installed so the top rods are no more than seventy-two inches above the level where the operator stands.
  - Easy to reach and operate when the rods are pushed or pulled.

- Safety tripwire cables or wire center cords that are:
  - Installed in the front and back of each mill.
  - Located within two inches of the face of the rolls.
  - Installing so that cables are no more than seventy-two inches above the level where the operator stands.
  - Easy to operate whether pushed or pulled.

(2) Make sure that all auxiliary equipment such as mill dividers, support bars, spray pipes, feed conveyors, and strip knives do not interfere with safety devices.

Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-46004, filed 6/29/04, effective 1/1/05.

WAC 296-806-46006 Follow these stopping limit requirements for mills.

You must:
• Make sure that mills are stopped within one and one-half percent of the fastest speed at which they operate when empty.

When mills operate at more than two hundred fifty feet per minute, stopping distances above one and one-half percent of their fastest speed are allowed, but must have engineering support.

Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-46006, filed 6/29/04, effective 1/1/05.

PRESS BRAKES

WAC 296-806-465 Summary. If your specific machine or operation is not listed here, then follow any general requirements in this section along with the "Requirements for all machines" in this chapter, WAC 296-806-200 and 296-806-300.

(2007 Ed.)
This section applies to all machines classified as power press brakes. Power press brakes use a ram and bed to bend material.

Your responsibility:
To protect employees from hazards associated with power press brakes.

You must:

General requirements for press brakes
Provide auxiliary safety aids
WAC 296-806-46502.
Safeguard the point of operation on press brakes
WAC 296-806-46504.

Safe distance safeguarding
Follow this requirement when using safe distance safeguarding
WAC 296-806-46506.
Develop a safe distance safeguarding program
WAC 296-806-46508.
Follow these requirements for safe distance training
WAC 296-806-46510.
Require safe distance retraining
WAC 296-806-46512.
Conduct periodic safe distance inspections
WAC 296-806-46514.
Supervise the safe distance program
WAC 296-806-46516.

SAFE DISTANCE SAFEGUARDING

WAC 296-806-46506  Follow this requirement when using safe distance safeguarding.
You must:
• Make sure employees position themselves no closer than necessary and never closer than four inches from the power press brake point of operation.

WAC 296-806-46508  Develop a safe distance safeguarding program for press brakes.
You must:
• Develop, document, and use an effective safe distance safeguarding program.
  Include methods for maintaining the minimum safe distance requirements in, Follow this requirement when using safe distance safeguarding, WAC 296-806-46506.

WAC 296-806-46510  Follow these requirements for safe distance training for press brakes.
You must:
(1) Train your employees in the safe distance safeguarding program and include all of the following:
  • The need for safety awareness between the power press brake operator and, when required, the helper.
  • The purpose and function of operating controls, operating mode controls, die space height adjustment positions, and other brake controls.
  • The hazards of placing any parts of the body into the point of operation.
  • The hazards related to each specific work piece bending operation.
  • The purpose and function of hand-feeding tools.
  • The dangers of unsafe work practices, inattention, horseplay, and misuse of equipment.
  • The importance of reporting unsafe conditions immediately to the supervisor.
(2) Make sure employees are proficient in safe distance safeguarding after training, and follow both:
  • Safe-operating instructions and recommendations of power press brake manufacturers;
  • Industry-recognized safe working practices for power press brakes.
WAC 296-806-46512 Require safe distance retraining for press brake operations.

You must:
1. Require safe distance retraining when employees either:
   • Are seen operating the power press brake in an unsafe manner;
   OR
   • Fail to use safe distance procedures.
2. Require safe distance retraining when conditions in the workplace change that can affect safe operation of the power press brakes, such as introducing new or revised control methods and procedures.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-46512, filed 6/29/04, effective 1/1/05.]

WAC 296-806-46514 Conduct periodic safe distance inspections on press brakes.

You must:
1. Conduct periodic inspections of safe distance procedures at least annually to make sure that established procedures are being followed.
2. Make sure inspections are performed by a trained person who is not the person using the safe distance procedure.
3. You must identify all of the following during safe distance procedure inspections:
   • The date of the inspection.
   • The person performing the inspection.
   • The power press brake for which you are using the procedures.
   • Any deviations or inadequacies with procedures and requirements.
   • Joint reviews with each trained employee about their responsibilities under the safe distance program.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-46514, filed 6/29/04, effective 1/1/05.]

WAC 296-806-46516 Supervise the safe distance program for press brakes.

You must:
• Provide adequate supervision to make sure that:
  - Only trained employees operate power press brakes.
  - Employees use work practices learned in your training program.
  - Periodic safe distance inspections are conducted as outlined in Conduct periodic safe distance inspections on press brakes, WAC 296-806-46514.
  - Any deviations from, or inadequacies in, program procedures or work practices are promptly corrected.
  - Designated safeguarding means are used, installed, and functioning properly.
  - Recommended hand-feeding tools are used, when needed.
  - To require retraining and other appropriate corrective action when necessary.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-46516, filed 6/29/04, effective 1/1/05.]

ROLL-FORMING AND BENDING MACHINES

WAC 296-806-470 Summary. In addition to the requirements in this section, you need to refer to the following sections of this chapter in order to fully protect your employees from machine hazards:
• Requirements for all machines, WAC 296-806-200 and 296-806-300.

This section applies to power driven roll-forming and bending machines that change the shape or the direction of materials by using rolls, rotary forming dies, and associated tooling.

Your responsibility:
To protect employees from hazards associated with roll-forming and bending machines.

You must:
Follow these requirements for machine initiation WAC 296-806-47002.

Safeguard nip points on roll-forming and bending machines
WAC 296-806-47004.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-470, filed 6/29/04, effective 1/1/05.]

WAC 296-806-47002 Follow these requirements for machine initiation.

You must:
• Make sure all of the following occur before starting machines:
  - Select "normal" operation mode.
  - Safeguards are in place and functioning.
  - No workers are within the hazard zones.
  - Other proper work practices are followed.
  - Make sure in the "jog mode," the machine function is initiated by the operator either:
    - During set-up;
    OR
    - By threading the material through the forming rolls.
• Make sure only assigned test employees perform machine testing and start-up.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-47002, filed 6/29/04, effective 1/1/05.]

WAC 296-806-47004 Safeguard nip points of roll-forming and bending machines.

You must:
• Safeguard in-running nip points on roll-forming and bending machines with at least one of the following:
  - A point-of-operation guard or device.
  - An emergency stop device.
  - An emergency stop device must be used when a point-of-operation guard or device is not feasible.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-47004, filed 6/29/04, effective 1/1/05.]

SANDING MACHINES

WAC 296-806-475 Summary. In addition to the requirements in this section, you need to refer to the follow-
ing sections of this chapter in order to fully protect your employees from machine hazards:

• Requirements for all machines, WAC 296-806-200 and 296-806-300.

This section applies to sanding machines that remove material from stock with an abrasive sanding surface such as a belt, disk, or drum.

Exemption: 
This section does not apply to hand-held sanders. See, Portable power tools, chapter 296-807 WAC, for requirements that apply to hand-held tools.

Reference:
• If you have multiple specific machines and operations in your workplace, you need to follow all requirements in WAC 296-806-400 that apply.
  – For example, if you use sanding machines and saws and cutting heads, you need to refer to both of these sections.
  – In addition to the requirements in this section, you need to refer to the following sections of this chapter in order to fully protect your employees from machine hazards:
    – WAC 296-806-200, Requirements for all machines.
    – WAC 296-806-300, Requirements for machine parts.
  – See chapter 296-807 WAC, Portable power tools, for requirements that apply to hand-held sanders.

Your responsibility:
To protect employees from hazards associated with drum, disk, and belt sanders.

You must:
Guard drum sanders
WAC 296-806-47502.
Guard disk sanders
WAC 296-806-47504.
Guard belt sanders
WAC 296-806-47506.

Follow these requirements for feed roll guarding
WAC 296-806-47508.

WAC 296-806-47502 Guard drum sanders.
You must:
• Make sure drum sanders have one of the following to enclose that part of the drum not used to work on the material:
  – Guard.
  – Exhaust hood.

Reference:
Exhaust hoods are required on sanders when dust levels exceed exposure limits. For requirements about air contaminants, see Respiratory hazards, chapter 296-841 WAC.

Exemption:
When a table is used for the application of material to work, you do not need to enclose the portion of the drum above the table that is necessary to do the work.

WAC 296-806-47504 Guard disk sanders.
You must:
• Make sure disk sanders have an exhaust hood, when required, or a guard that encloses the part of the disk not used to work on the material.

Exemption:
When a table is used for the application of material to be finished, you do not need to enclose the portion of the disk above the table that is necessary to do the work.

WAC 296-806-47508 Follow these requirements for feed roll guarding.
You must:
• Make sure that feed rolls have a hood or guard to prevent the operator's hands from coming in contact with the in-running rolls at any point.
  – Make sure that the guard meets all of the following:
  – Is constructed of heavy material, preferably metal.
  – The bottom of the guard comes down to within three-eighths inch of the plane formed by the bottom or working surfaces of the feed rolls.

  ■ When the three-eighths inch distance is increased to three-quarter inch, the lead edge of the hood must be extended to five and one-half inches or more in front of the nip point between the front roll and the work.

WAC 296-806-480 Summary. If your specific machine or operation is not listed here, then be sure to follow any of the following requirements that apply:

• General requirements for all saws and cutting heads in this section.
• General requirements for all saws in this section.
• General requirements for all cutting heads in this section.
• "Requirements for all machines" found in this chapter, WAC 296-806-200 and 296-806-300.

Reference:
For requirements on hand-held tools, see Portable power tools, chapter 296-807 WAC.

This section applies to fixed machines using saws or cutting heads that are used on any material.

Your responsibility:
To make sure machines using saws and cutting heads meet these requirements.

You must:
GENERAL REQUIREMENTS FOR ALL SAWS AND CUTTING HEADS
Protect employees using saws and cutting heads WAC 296-806-48002.
Make sure saws and cutting heads are sharpened and tensioned by qualified people
WAC 296-806-48004.

SAWS
General Requirements for All Saws
Make sure saws are safe to use
WAC 296-806-48006.
Requirements for All Circular Saws
Make sure all circular saws meet these requirements
WAC 296-806-48008.
Make sure circular saw gages meet these requirements
WAC 296-806-48010.
Guard hand-fed circular table saws
WAC 296-806-48012.
Provide kickback protection for employees using hand-fed circular table ripsaws when ripping wood
WAC 296-806-48014.
Safeguard self-feed circular saws
WAC 296-806-48016.
Guard hand-fed circular table saws
WAC 296-806-48012.
Provide kickback protection for employees using hand-fed circular table saws when ripping wood
WAC 296-806-48018.
Guard circular resaws
WAC 296-806-48020.
Provide spreaders for circular resaws
WAC 296-806-48022.

Requirements for Specific Circular Saws
Guard inverted swing (jump) saws
WAC 296-806-48026.
Guard miter saws
WAC 296-806-48028.
Guard radial saws
WAC 296-806-48030.
Limit the travel of radial saws
WAC 296-806-48032.
Provide kickback protection for radial saws used for ripping wood
WAC 296-806-48034.
Guard revolving double arbor saws
WAC 296-806-48036.
Guard swing saws
WAC 296-806-48038.
Limit the travel of swing saws
WAC 296-806-48040.

Requirements for Band Saws and Drag Saws
Make sure bandsaws meet these requirements
WAC 296-806-48042.
Protect employees from drag saw hazards
WAC 296-806-48044.

Cutting Heads
General Requirements for All Cutting Heads
Maintain and balance knives and cutting heads
WAC 296-806-48046.

Boring and Mortising Machines
Make sure boring and mortising machines meet these requirements
WAC 296-806-48048.

Chipper and Hog Mills
Follow these requirements for chipper mills
WAC 296-806-48050.
Follow these requirements for hog mills
WAC 296-806-48052.
Protect employees from falling into chipper and hog mills
WAC 296-806-48054.

Jointers
Make sure jointers with horizontal cutting heads meet these requirements
WAC 296-806-48056.
Guard horizontal cutting heads on hand-fed jointers
WAC 296-806-48058.
Guard vertical cutting heads on jointers
WAC 296-806-48060.

Molding, Sticking and Matching Machines
Make sure molding, sticking and matching machines meet these requirements
WAC 296-806-48062.

Panel Raisers and Other Similar Machines
Guard hand-fed panel raisers and other similar machines
WAC 296-806-48064.

Planers
Make sure planers with a horizontal cutting head meet these requirements
WAC 296-806-48066.
Guard planers
WAC 296-806-48068.
Guard planer feed rolls
WAC 296-806-48070.
Provide kickback protection on planers running stock of varied thicknesses
WAC 296-806-48072.

Shapers
Make sure shapers meet these requirements
WAC 296-806-48074.

Tenoning Machines
Guard tenoning machines feed chains and sprockets
WAC 296-806-48076.
Guard tenoning machines
WAC 296-806-48078.

Veneer Machinery
Guard veneer cutters and wringer knives
WAC 296-806-48080.
Guard veneer clippers
WAC 296-806-48082.
Follow these requirements for guarding guillotine cutters
WAC 296-806-48084.
Provide mechanisms to stop power-driven guillotine cutters
WAC 296-806-48086.
Prohibit riders on veneer slicer carriages
WAC 296-806-48088.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-480, filed 6/29/04, effective 1/1/05.]

General Requirements for All Saws and Cutting Heads
WAC 296-806-48002 Protect employees using saws and cutting heads.
You must:
• Provide safeguarding to protect employees from the hazards of feed rolls.
• Provide types and sizes of push sticks or push blocks that are suitable for the work being done.
• Use a comb (featherboard) or a suitable jig to protect employees when a standard guard cannot be used.
Operations where you may need a comb or jig include:
  • Dadoing.
  • Grooving.
  • Jointing.
  • Moulding.
  • Rabbeting.

Note: Circular saw gages are also referred to as miter or positioning gages.

SAWS
General Requirements for All Saws

WAC 296-806-48004 Make sure saws and cutting heads are sharpened and tensioned by qualified people.
You must:
  • Make sure people who sharpen or tension saw blades or cutters have demonstrated skill in this area.

SAWS
Requirements for All Circular Saws

WAC 296-806-48008 Make sure all circular saws meet these requirements.
You must:
  • Protect employees from contacting the portion of the saw beneath or behind the table by covering it with either:
    – An exhaust hood, if one is required;
    OR
    – A guard.
  • Prohibit workers from inserting wedges between the saw disk and the collar to form a wobble saw.

Exemption:
Saws may be guarded with a fixed enclosure, fixed barrier guard, or a manually adjusted guard when specific conditions prevent using a standard automatic adjusting guard. Alternative guards have to both:
  • Provide protection equivalent to a standard automatic adjusting guard;
  AND
  • Be used according to the manufacturer's instructions with sufficient supervision to comply with this requirement.

WAC 296-806-48010 Make sure circular saw gages meet these requirements.
You must:
  • Make sure circular saw gages slide in grooves or tracks that are accurately machined to maintain exact alignment with the saw for all positions of the guide.
Note: Circular saw gages are also referred to as miter or positioning gages.

Note: Hoods should be made of material that:
  • Does not shatter when broken.
  • Is not explosive.
  • Is less combustible than wood.

You must:
  • Mount the hood so it does all of the following:
    – Operates positively and reliably.
    – Maintains true alignment with the saw.
    – Resists any side thrust or force that could throw it out of line.
  • Make sure the hood:
    – Allows the material to be inserted or sawed without any considerable resistance;
    AND
    – Does one of the following:
      ■ Automatically remains in contact with the material being cut;
      OR
      ■ Is manually adjusted to within one-quarter inch of the material being cut.

WAC 296-806-48014 Make sure kickback protection for employees using hand-fed circular table ripsaws when ripping wood products.

Definition:
Ripping is a sawing operation made:
  • Through the thickness of the work piece with the grain of natural wood;
  • Along the long dimension of a rectangular work piece;
  AND
  • Usually parallel to that edge on reconstituted wood products.
This can also be described as cutting stock to width. Two or more pieces result from the operation.

**You must:**
- Provide a spreader or riving knife that is:
  - Made of hard-tempered steel or its equivalent.
  - Thinner than the saw kerf.
  - Wide enough to provide sufficient stiffness and rigidity to resist any reasonable side thrust or blow that could bend or throw it out of position.
  - Attached so it remains in true alignment with the saw when the saw or table is tilted.

**Note:** The spreader or riving knife should:
- Prevent material from either squeezing the saw or being thrown back at the operator.
- Be placed so there is one-half inch or less space between it and the back of the saw when the largest saw is mounted in the machine.

**Exemption:** You do not have to provide a spreader or riving knife when grooving, dadoing, or rabbeting. When you finish these operations, replace the spreader immediately.

**You must:**
- Provide nonkickback fingers or dogs that are:
  - Located so they prevent the saw from either picking up the material or throwing the material back towards the operator.
  - Designed to hold any thickness of material being cut.

**Note:** Kickbacks occur when a saw seizes the stock and hurls it back at the operator. This can happen when the stock twists and binds against the side of the blades or is caught in the teeth. Kickbacks occur more often when cutting parallel to the wood grain (ripping) than when cross cutting. Common contributors to kickbacks include:
- A blade that is not sharpened.
- A blade set at an incorrect height.
- Poor quality lumber, such as frozen lumber, lumber with many knots, or foreign objects, such as nails.

**WAC 296-806-48020 Guard circular resaws.**

**You must:**
- Provide each circular resaw with a metal hood or shield that is:
  - Located above the saw.
  - Designed to protect the operator from flying splinters or broken saw teeth.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-48020, filed 6/29/04, effective 1/1/05.]

**WAC 296-806-48022 Provide spreaders for circular resaws.**

**Exemption:** This requirement does not apply to self-feed saws with a roller or wheel at the back of the saw.

**You must:**
- Provide a spreader that is all of the following:
  - Securely fastened behind the saw.
  - Slightly thinner than the saw kerf.
  - Slightly thicker than the saw disk.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-48022, filed 6/29/04, effective 1/1/05.]

### Requirements for Specific Circular Saws

**WAC 296-806-48024 Protect employees from automatic saw hazards.**

**You must:**
- Make sure automatic saws that stroke continuously without the operator controlling each stroke are not used where employees could be exposed to:
  - Saw hazards during operations such as loading, clamping, cutting, or unloading.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-48024, filed 6/29/04, effective 1/1/05.]

**WAC 296-806-48026 Guard inverted swing (jump) saws.**

**You must:**
1. Guard jump saws with a hood that both:
   - Covers the part of the saw that is exposed above the top of the table or above the material being cut; AND
   - Automatically adjusts to the thickness of the material being cut and remains in contact with it.
2. Provide a holding device that will prevent stock from moving while cutting materials.
3. Provide warning signs, stickers, or placards when the pinching hazard created by the holding device cannot be eliminated by design.
4. Provide the following for automatically fed jump saws:
   - Place guards over the roller conveyor to prevent persons from walking into or over the saw.
   - Enclose jump saws when below the table or roller conveyor and not in actual use.
   - Install a positive stop to prevent the saw from passing the front edge of the roller conveyor or table.
   - Make sure the throat in the table or roller conveyor is only wide enough to permit unobstructed operation of the saw.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-48026, filed 6/29/04, effective 1/1/05.]

---

**WAC 296-806-48016 Safeguard self-feed circular saws.**

**You must:**
- Provide saws and feed rolls with a hood or guard to protect the operator from contacting the in-running rolls.
- Make sure the guard is constructed of heavy material, preferably metal.
- Make sure the distance between the bottom of the guard and the plane formed by the bottom or working surface of the feed rolls meets the requirements of Table 200-1, Largest Allowable Guard Opening, in WAC 296-806-20042.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-48016, filed 6/29/04, effective 1/1/05.]

**WAC 296-806-48018 Provide kickback protection for self-feed circular ripsaws when ripping wood products.**

**You must:**
- Provide saws with sectional nonkickback fingers that meet all of the following requirements:
  - They cover the full width of the feed roll.
  - They are located in front of the saw.
  - They are arranged so they keep continuous contact with the material being fed.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-48018, filed 6/29/04, effective 1/1/05.]

(2007 Ed.)
WAC 296-806-48028 Guard miter saws.

IMPORTANT:
Miter saws include:
• Miter.
• Compound miter.
• Slide miter.
• Compound slide miter.

You must:
1. Guard miter saws with an upper hood that completely encloses the upper half of the blade.
2. Provide a method to protect employees from contacting the blade underneath the table while in its recommended carrying position.
3. Guard the lower blade:
   - By making sure the teeth are guarded at least three-quarters of an inch beyond the root of the teeth, toward the center of the blade, except for a maximum forty-five degree exposure of quadrant C when in the full retract position. See Illustration 480-1, Miter Saw Guarding.
   - With a retractable guard that cannot be locked in any position.

Illustration 480-1
Miter Saw Guarding

This illustration shows miter saws in full retract position, and quadrant C, where 45 degrees, or half of quadrant C may be exposed when in the full retract position.

WAC 296-806-48030 Guard radial saws.

You must:
• Make sure the radial saw has a hood that does all of the following:
  - Completely encloses the upper portion of the blade down to a point that includes the end of the saw arbor.
  - Protects the operator from flying splinters and broken saw teeth.
  - Deflects sawdust away from the operator.
• Provide a lower blade guard that does all of the following (see Guard radial saws, illustration 480-2):
  - Guards the sides of the lower exposed portion of the blade to its full diameter.
  - Automatically adjusts to the thickness of the stock being cut.
  - Remains in contact with the stock to provide the maximum protection possible for the operation being performed;
  - Extends a minimum of eight inches to both the front and arbor-end sides.
  - Is adjustable in a vertical plane to the different thicknesses of stock so the gap is three-eighths inch or less between the bottom of the guard and the top of the stock.

Exemption: Saws may be guarded with a fixed enclosure, fixed barrier guard, or a manually adjusted guard when specific conditions prevent using a standard, automatic adjusting guard. Alternative guards have to both:
• Provide protection equivalent to a standard automatic adjusting guard;
  AND
• Be used according to the manufacturer's instructions with sufficient supervision to meet this requirement.

(2007 Ed.)
Illustration 480-2 Guard radial saws
A manually adjusted awareness barrier guard that extends 8 inches to the front and sides of the blade.

WAC 296-806-48032 Limit the travel of radial saws.
You must:
• Provide an adjustable stop that prevents:
  – Forward travel of the blade beyond the position necessary to complete the cut;
  AND
  – Any part of the saw blade from extending beyond the front edge of the work support table.
• Install the saw so that the front end is slightly higher than the rear in order to cause the cutting head to return to the starting position when released by the operator.
• Make sure the cutting head or carriage does all of the following:
  – Returns gently to the rest or starting position when released by the operator.
  – Does not bounce or recoil when reaching the rest or starting position.
  – Remains in the rest or starting position.

WAC 296-806-48034 Provide kickback protection for radial saws used for ripping wood products.
You must:
• Provide nonkickback fingers or dogs that are both:
  – Located on both sides of the saw to resist the tendency of the saw to pick up material or throw it back toward the operator;
  AND
  – Designed to hold any thickness of material being cut.
• Make sure when ripping or ploughing that you feed the material from the end where the blade teeth enter the upper guard, which is against the direction in which the saw turns. See, Ripping with a radial arm saw, illustration 480-3.
• Make sure the direction of saw rotation is clearly marked on the hood.

WAC 296-806-48036 Guard revolving double arbor saws.
You must:
• Guard each revolving double arbor saw with a hood that completely encloses the portion of the saw that is above both:
  – The table;
  AND
  – The material being cut.

Note: Hoods should be made of material that:
• Does not shatter when broken.
• Is not explosive.
• Is less combustible than wood.

WAC 296-806-48038 Guard swing saws.
IMPORTANT:
This section applies to swing saws mounted above the table.
You must:
• Provide saws with a hood that encloses all of the following:
  – Upper half of the saw.
  – Arbor end.
  – Point of operation in all positions of the saw.
• Make sure the hood protects operators from flying splinters and broken saw teeth.
• Make sure the lower blade guard will automatically cover the lower portion of the blade by dropping on top of and remaining in contact with the table or the material being cut.
**WAC 296-806-48040  Limit the travel of swing saws.**

**IMPORTANT:**
This section applies to swing saws that are mounted above the table.

**You must:**
- Provide saws with a device that:
  - Automatically returns the saw to the back of the table when the saw is released at any point in its travel.
  - Does not depend on a rope, cord, or spring to function properly.
- Make sure devices that use a counterweight meet these requirements:
  - The bolts supporting the bar and the counterweight use cotter pins.
  - The counterweight is prevented from dropping by one of these methods:
    - A bolt passing through both the bar and the counterweight.
    - A bolt through the extreme end of the bar.
    - A safety chain to hold it to the bar if the counterweight does not completely encircle the bar.
- Provide limit chains or another equally effective device to prevent the saw from swinging either:
  - Beyond the front or back edge of the table;
  - Forward to a position where the gullets of the lowest saw teeth will rise above the table top.
- Make sure band saws have a tension control device to:
  - Prevent a counterweight, when used, from dropping by one of the following, or an equivalent method:
    - Wire mesh and perforated metal guards:
      - Are at least 0.037 inch (U.S. Gage No. 20) thick.
      - Have openings in them that are three-eighths inch or less.
    - Solid material has strength and firmness equivalent to a wire mesh or perforated steel guard.
- Make sure band saws have a tension control device to indicate the proper tension for standard saws used on the machine.

**WAC 296-806-48044  Protect employees from drag saw hazards.**

**You must:**
- Protect employees passing near a drag saw by either:
  - Providing a four-foot clearance when the saw is at the extreme end of the stroke;
  - Enclosing the saw and its driving mechanism, if you cannot provide a four-foot clearance.

**WAC 296-806-48046  Maintain and balance knives and cutting heads.**

**You must:**
- Make sure knives are properly balanced when two or more are used in one cutting head.

**WAC 296-806-48048  Make sure boring and mortising machines meet these requirements.**

**Exemption:**
This section does not apply to drill presses, boring machines, or mortising machines if both of the following apply:
- The downward stroke of the chuck and bit is controlled manually by the operator;
- The chuck and bit automatically rises to the start position when control is released.

**You must:**
- Completely enclose universal joints on spindles of boring machines to prevent accidental contact by the operator.
- Make sure you do not use safety bit chucks that have projecting set screws.
- Enclose the top of the cutting chain and driving mechanism.
- Prevent a counterweight, when used, from dropping by one of the following, or an equivalent method:

(2007 Ed.)
— Securing it to a bar by one of the following:
  ■ A bolt passing through both the bar and the counter-weight.
  ■ A bolt through the extreme end of the bar.
  ■ A safety chain to hold it to the bar if the counterweight does not completely encircle the bar;

OR
—Suspending it by a chain or wire rope and having it travel in a pipe or other suitable enclosure if it could fall and injure an employee.

Note: Boring bits should be provided with a guard that will enclose all portions of the bit and chuck above the material being worked.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-48048, filed 6/29/04, effective 1/1/05.]

CHIPPER AND HOG MILLS

WAC 296-806-48050 Follow these requirements for chipper mills.

Exemption: This section does not apply to mobile chippers.

Reference: Safety requirements for mobile chippers can be found in, Pruning, Repairing, Maintaining and Removing Trees and Cutting Brush, section 9.6, ANSI Z133.1-2000.

You must:
(1) Arrange the feed system so the operator does not stand in direct line with the chipper blades or spout (hopper).
(2) Protect the operator from chips or chunks being thrown out while feeding the machine.
(3) Enclose the chipper spout to a height or distance of at least forty inches from the floor or the operator's station, whichever is higher.
(4) Provide a mirror or other device to allow monitoring of material when the operator cannot readily observe the material being fed into the chipper.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-48050, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48052 Follow these requirements for hog mills.

You must:
(1) Make sure that feed chutes are at least forty inches from the knives or feed roll.
(2) Provide baffles or other suitable safeguards to prevent material from being thrown from the hog mill.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-48052, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48054 Protect employees from falling into chipper and hog mills.

You must:
• Protect employees working near the feed openings of chipper and hog mills from falling into the openings by providing at least one of the following:
  – A safety belt (or harness) and a lifeline short enough to prevent workers from falling into the mill.
  – Barriers or other types of protective guarding.

Reference: See, Railing, toeboards and cover specifications for requirements on guardrails used as barriers, WAC 296-24-75011.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-48054, filed 6/29/04, effective 1/1/05.]

JOINTERS

WAC 296-806-48056 Make sure jointers with horizontal cutting heads meet these requirements.

You must:
• Make sure the cutting head on hand-fed jointers is cylindrical:
  – Install and adjust the knife blade so it does not protrude more than one-eighth inch beyond the body of the head.
  – Make sure the opening in the table meets all of the following:
    – Is kept as small as possible.
    – The clearance between the edge of the rear table and the cutting head is not more than one-eighth inch.
    – The table throat opening is not more than two and one-half inches when the tables are set or aligned with each other for zero cut.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-48056, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48058 Guard horizontal cutting heads on hand-fed jointers.

You must:
• Provide jointers with an automatic guard on the working side of the fence or gage that does all of the following:
  – Covers all sections of the head.
  – Effectively keeps the operator's hand from contacting the revolving knives.
  – Automatically adjusts to cover the unused portion of the head.
  – Remains in contact with the material at all times.
• Provide jointers with a guard that covers the section of the head behind the gage or fence.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-48058, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48060 Guard vertical cutting heads on jointers.

You must:
• Provide each jointer that has a vertical cutting head with an exhaust hood or other type of guard that completely encloses the revolving head except for a slot that is wide enough for the material being jointed.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17-060. 04-14-028, § 296-806-48060, filed 6/29/04, effective 1/1/05.]

MOLDING, STICKING AND MATCHING MACHINES

WAC 296-806-48062 Make sure molding, sticking and matching machines meet these requirements.

You must:
• Make sure all cutting heads, and saws if used, are covered by a guard that:
  – Is metal.
  – Forms all or part of the exhaust hood if an exhaust system is used.
• Make sure a guard constructed from:
– Sheet metal is at least one-sixteenth inch thick.
– Cast iron is at least three-sixteenths inch thick.
• Make sure feed rolls are guarded by a hood or other suitable guard that both:
  – Prevents the operator's hand from contacting the in-running rolls at any point;
  AND
  – Is attached to the frame carrying the rolls so it adjusts for any thickness of stock.

[Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-48062, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48064  Guard hand-fed panel raisers and other similar machines.

You must:
• Guard the cutting heads of hand-fed panel raisers and other similar machines by enclosing the cutting head with either:
  – A fixed guard such as a cage;
OR
  – An adjustable guard designed to keep the operator's hand away from the cutting edge.

[Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-48064, filed 6/29/04, effective 1/1/05.]

PLANERS

WAC 296-806-48066 Make sure planers with a horizontal cutting head meet these requirements.

You must:
• Make sure the cutting head on hand-fed planers is cylindrical.
  – Install and adjust the knife blade so it does not extend more than one-eighth inch beyond the body of the head.

[Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-48066, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48068 Guard planers.

You must:
• Make sure all cutting heads, and saws if used, are covered by a guard that:
  – Is metal.
  – Forms all or part of the exhaust hood if an exhaust system is used.
• Make sure a guard constructed from:
  – Sheet metal is at least one-sixteenth inch thick.
  – Cast iron is at least three-sixteenths inch thick.

[Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-48068, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48070 Guard planer feed rolls.

You must:
• Make sure feed rolls are guarded by a hood or other suitable guard that:
  – Prevents the operator's hand from contacting the in-running rolls at any point.
  – Is attached to the frame carrying the rolls so it remains in adjustment for any thickness of stock.

[Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-48070, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48072 Provide kickback protection on planers running stock of varied thicknesses.

You must:
• Provide kickback protection on planers running stock of varied thicknesses at the same time by providing either:
  – Sectional feed rolls that provide feeding contact pressure on the stock;
OR
  – Suitable nonkickback fingers at the infeed end of each section.

Note: The sectional feed rolls need to have sufficient yield in their construction to provide contact pressure on:
– Any thickness of stock the machine is capable of processing.

[Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-48072, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48074 Make sure shapers meet these requirements.

You must:
• Guard the cutting head of the shaper by enclosing it with either:
  – A fixed guard, such as a cage;
OR
  – An adjustable guard designed to keep the operator's hand away from the cutting edge.

• Make sure the diameter of a circular shaper guard is at least as large as the greatest diameter of the cutter.

Note: A warning device of leather or other material attached to the spindle is NOT an acceptable substitute for a guard.

You must:
• Guard all sections of the cutting tool except for an opening to allow access to the work piece by the cutting tool.

Note: A ring guard is one means of satisfying the guarding requirement for cutting tools when involved in free hand or template shaping.

You must:
• Make sure all double-spindle shapers have a spindle starting and stopping device for each spindle.

[Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-48074, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48076 Guard tenoning machine feed chains and sprockets.

You must:
• Guard feed chains and sprockets of all double-end tenoning machines by completely enclosing both of the following:
  – All sprockets;
  AND
  – Portions of the chain that are not used for conveying stock.

[Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-48076, filed 6/29/04, effective 1/1/05.]

Title 296 WAC—p. 2803
WAC 296-806-48078 Guard tenoning machines.
You must:
• Make sure all cutting heads, and saws if used, are covered by a metal guard that:
  – Covers at least the unused part of the periphery of the cutting head.
  – Forms all or part of the exhaust hood if an exhaust system is used.
• Make sure a guard constructed from:
  – Sheet metal is at least one-sixteenth inch thick.
  – Cast iron is at least three-sixteenths inch thick.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-48078, filed 6/29/04, effective 1/1/05.]

VENEEER MACHINES

WAC 296-806-48080 Guard veneer cutters and wringer knives.
You must:
• Provide guards to prevent accidental contact with the front or rear knife edge.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-48080, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48082 Guard veneer clippers.
You must:
• Make sure employees do not accidentally contact the knife edge of veneer clippers by providing either:
  – An automatic feed;
  OR
  – Guarding at both the front and rear of the clippers.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-48082, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48084 Follow these requirements for guarding guillotine cutters.

Exemption: These requirements do not apply to continuous-feed trimmers.
You must:
(1) Provide one of the following to hand and foot powered guillotine cutters, so employees' hands cannot reach the cutting edge of the knife:
• Rods.
• Plates.
• Other satisfactory means of protection such as those outlined in, Safeguarding methods, WAC 296-806-20042 through 296-806-20058.
(2) Provide power-driven guillotine veneer cutters with either of the following:
• Starting devices for each operator that require all of the following:
  – Both hands activating controls at the same time to start the cutting motion;
  – At least one hand on a control during the complete stroke of the knife;
  OR
• An automatic guard that does all of the following:
  – Keeps the hands of the operator away from the danger zone every time the blade comes down.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-48084, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48086 Provide mechanisms to stop power-driven guillotine cutters.

Exemption: This requirement does not apply to continuous-feed trimmers.
You must:
• Provide power-driven guillotine cutters with both:
  – Brakes or other stopping mechanism;
  AND
  – An emergency device that will prevent the machine from operating if the brake fails when the starting mechanism is in the nonstarting position.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-48086, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48088 Prohibit riders on veneer slicer carriages.
You must:
• Prohibit employees from riding on veneer slicer carriages.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-48088, filed 6/29/04, effective 1/1/05.]

SEWING MACHINES

WAC 296-806-485 Summary. In addition to the requirements in this section, you need to refer to the following sections of this chapter in order to fully protect your employees from machine hazards:
• Requirements for all machines, WAC 296-806-200 and 296-806-300.
  This section applies to the hazards of needle injuries from domestic or light duty sewing machines.
  Your responsibility:
  To protect employees from hazards associated with sewing machines.
  You must:
  Guard sewing machine needles
  WAC 296-806-48502.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-14-028, § 296-806-485, filed 6/29/04, effective 1/1/05.]

WAC 296-806-48502 Guard sewing machine needles.

Exemption: This section does not apply to domestic-type sewing machines having a presser-foot that is in the “down” position during operation of the machine.
You must:
• Provide a permanently attached guard on each sewing machine that:
  – Prevents the operator's fingers from passing under the needle.
  – Allows the needle to be conveniently threaded without removing the guard.
WAC 296-806-500 Definitions.

Abrasive wheel
A grinding tool consisting of bonded abrasive grains. This includes diamond and reinforced wheels.

Adjustable barrier guard
A barrier guard with provisions for adjustment to accommodate various jobs or tooling set-ups.

Air-lift hammer
A type of gravity drop hammer in which the ram is raised for each stroke by an air cylinder. Because the length of stroke can be controlled, ram velocity, and therefore the energy delivered to the work piece, can be varied.

Antirepeat
A device that limits the machine to a single stroke if the activating means is held in the operative position.

Arbor
A rotating shaft used for mounting and transmitting torque to a cutting tool.

Authorized person
Someone the employer has given the authority and responsibility to perform a specific assignment.

Awareness barrier
A barrier device that allows more access to the hazard area, but still restricts access enough to warn of an approaching hazard.

Barricade
A barrier such as a guardrail, fence, or other framework designed to prevent employee access and exposure to a hazard.

Barrier guard
A barrier that provides a physical restriction from a hazard.

Belt conveyors
An endless belt of any material, operating over suitable pulleys to move materials placed on the belt.

Belt pole
A device used in shifting belts on and off fixed pulleys on line or countershaft where there are no loose pulleys. Belt poles are sometimes called "belt shippers" or "shipper poles."

Belt shifter
A device for mechanically shifting belts from tight to loose idler pulleys or vice versa, or for shifting belts on cones of speed pulleys.

Bench grinder
A bench mounted off-hand grinding machine with either one or two wheels mounted on a horizontal spindle.

Bending
The application of stress concentrated at specific points to permanently turn, press or force from a straight, level or flat condition to a curved or angular configuration.

Blade
A replaceable tool having one or more cutting edges for shearing, notching or coping.
Control system
Sensors, manual input and mode selection elements, interlocking and decision-making circuitry, and output elements of the press-operating devices and mechanisms.

Coping-notching
Where the edge or periphery of the work piece is sheared.

Counterbalance
Mechanism used to balance or support the weight of the connecting rods, slide, and slide attachments.

Cutting-off wheels
Abrasives wheels used to cut material such as masonry, pipe, etc.

Cutting tool or saw blade
A tool used on a metal sawing machine.

Cycle
The complete movement of the ram from its starting position and return to that same starting position.

Dado
A straight-sided groove, perpendicular to the face of the work piece, having a width greater than the thickness of a single saw blade.

Device
A control or attachment that is any of the following:
• Restrains the operator from inadvertently reaching into the hazardous area.
• Prevents normal or hazardous operation if any part of an individual’s body is inadvertently within the hazardous area.
• Automatically withdraws the operator's hands, if the operator's hands are inadvertently within the hazardous area during the hazardous portion of the machine cycle.
• Maintains the operator or the operator's hands during the hazardous portion of the machine cycle at a safe distance from the hazardous area.

Die or dies
Tooling used in a press for shearing, punching, forming, drawing, or assembling metal or other material.

Die enclosure guard
Guard attached to the die shoe or stripper in a fixed position.

Die setter
A person who installs or removes dies from the press, and makes the necessary adjustments so the tooling functions properly and safely.

Die setting
Process of installing or removing dies, and adjusting the dies, other tooling and the safeguarding guards or devices.

Die shoe
Plate or block that a die holder is mounted on. It functions primarily as a base for the complete die assembly and, if used, is bolted or clamped to the bolster plate or the face of the slide.

Die shutheight
Actual or design dimension between the mounting surfaces of a die.

Divider
A machine that mechanically divides the dough into pieces of predetermined volume or weight.

Dressed
When material is removed from the cutting surfaces of an abrasive wheel to expose new sharp cutting surfaces.

Drilling/boring machine
A single or multiple spindle machine that uses a rotating cylindrical tool such as a drill, a counterboring tool, and similar tools to produce a hole, blind hole, counterbore, countersink, and similar cavities in work pieces. A work support means is provided to feed the tool into the work piece or the work piece into the tool.

Dross
Waste product or impurities formed on the surface of molten metal.

Dump bin and blender
That part of the flour handling system where the containers of flour are emptied.

Face of the slide
Surface of the slide to which the punch or upper die is generally attached.

Feather board/comb
A work-guiding and hold-down device consisting of stock with a series of spring-like fingers along the edge, set and positioned at an angle to the work piece.

Feeding
Placing material in or removing it from the point of operation.

Fence
A device used to locate and guide a work piece relative to the cutting tool.

Fixed barricade
A guard attached to a fixed surface used to enclose a hazardous area and prevent employees from placing any part of their body into the point of operation.

Fixed barrier guard
A guard attached to the frame, bolster, or other surface to enclose all or part of the point of operation or other hazard area.

Fixed blade
A stationary blade having one or more cutting edges.

Fixed blanking
A feature that allows a safety light curtain system to be programmed to ignore objects. Also called "channel blanking."

Fixture/jig
A device used to locate, hold, or clamp one or more work pieces in a desired position.

Flanges
Collars, discs, or plates between or against which wheels are mounted. There are four types of flanges:
• Adaptor.
• Sleeve.
• Straight relieved.
• Straight unrelieved.

Floating blanking (floating window)
A feature that allows a safety light curtain system to be programmed to ignore the interruption of one or two beams within the light curtain. This allows the feeding of an object through the defined area at any point along the length of the curtain without causing it to produce a stop signal.
Floorstand grinder
A floor mounted, off-hand grinding machine with one or two wheels mounted on a horizontal spindle. The wheels are normally twenty-four inches or thirty inches in diameter and used for snagging operations.

Forging
Metal formed to a desired shape by impact or pressure in hammers, forging machines (upsetters), presses, rolls, and related forming equipment. Forging hammers, counterblow equipment, and high-energy-rate forging machines impart impact to the work piece, while most other types of forging equipment impart squeeze pressure in shaping the stock. Some metals can be forged at room temperature, but the majority of metals are made more plastic for forging with heat. Forged or drop forged parts are much stronger than poured or cast parts from foundries.

Forging presses
A class of forging equipment where the shaping of metal between dies is performed by mechanical or hydraulic pressure and usually is accomplished with a single workstroke of the press for each die station.

Full revolution clutch
Type of clutch that, when engaged, cannot be disengaged until the press has completed a single cycle (stroke).

Gage
See miter gage.

Gap (throat)
An opening or recess in the frame of the machine to permit positioning of material or work pieces.

Gate or movable barrier device
Safeguarding device that encloses the point of operation before press motion can be initiated.

Guard (abrasive wheels)
An enclosure designed to restrain the pieces of an abrasive wheel and furnish protection to the operator if the wheel is broken during operation.

Guard
A barrier that does at least one of the following:
• Prevents the hands or other body part from reaching through, over, under, or around the guard into the hazard area.
• Prevents objects or debris from falling onto or being ejected towards an employee.

Guidepost
The pin attached to the upper or lower die shoe. It operates within the bushing on the opposing die shoe to maintain the alignment of the upper and lower dies.

Hazard
A condition that could cause physical harm to a person.

Hazard area
An area or space that poses an immediate or impending physical hazard.

Hog
A machine used for cutting or grinding slabs and other coarse residue from the mill.

Horizontal lathe
A turning machine in which the work piece revolves about a horizontal axis. While the work is revolving, it is being shaped by cutting tools working either parallel to the axis of the work or at an angle to the axis of the work.

Idler (pulley)
A pulley or roller on a shaft that presses against or rests on a drive belt to guide it or take up slack.

Inch
Die setting mode that engages the driving clutch so a small portion of one cycle (stroke) occurs, depending upon the length of time the operator control is held actuated.

Indirect recirculating ovens
Ovens that are equipped with a gas-tight duct system, a furnace, and a circulating fan. Combustion gases are circulated through this enclosed system and mixed with fresh combustion gases generated by the burner in the combustion chamber. A vent or overflow removes a portion of the gases to make room for the fresh gases added by the burner. No unburned gases or products of combustion enter the baking chamber.

Interlocked barrier guard
Barrier attached to the press frame and interlocked with the press control system so the press stroke cannot be started normally unless the guard, or its hinged or movable sections, enclose the point of operation.

Inverted swing and jump saws
Saws with a saw blade starting position below the table, where the blade must travel through the horizontal plane of the tabletop to make the cut on the stock.

Ironworker
A machine with multiple workstations at which various operations may be performed singly or simultaneously, including but not limited to:
• Punching;
• Shearing;
• Notching;
• Coping; and
• Forming.

Jig
See fixture.

Jog
Die setting mode where intermittent motion is imparted to the slide by momentary operation of the drive motor after the flywheel is at rest and the clutch is engaged.

Jointer
A machine that has a cylindrical cutter head with more than one knife or cutting edge. It has an adjustable in-feed means of work support, or an adjustable cutter head or knives, as well as a fence or other work piece guide.

Jump saw
A machine that utilizes a means of work support and hold down, and has a powered arbor on an arm that pivots about a point located behind the saw arbor at approximately the same height. At rest position the saw blade is below the work piece. See inverted swing and jump saws.

Kerf
The slot made by a saw blade as it saws through a work piece.

Kickback
The uncontrolled propulsion or self-feed type action of a work piece in the direction of the rotation or travel of the working portion of the saw, cutting tool, sanding belt, or sanding head.

(2007 Ed.)
Live roller conveyor
A series of rollers with objects moving over them through power to all or some of the rollers. The power is usually transmitted by a belt or chain.

Mandrel
Tooling or a machine component used to provide internal support. It can be a spindle or shaft on which a tool is mounted, such as a drill bit.

Manlift
A device consisting of a power-driven endless belt moving in one direction only, and provided with steps or platforms and handholds attached to it for the transportation of personnel from floor to floor.

Manual feeding
The operator puts material or the part being processed into the press for each cycle (stroke).

Maximum exposure angle
The largest part of a wheel that does not need to be covered by a safety guard.

Miter gage
A device used as a work piece pusher, guided by a table groove.

Miter saw
A cutoff saw with a means of work support. It utilizes a powered arbor on an arm that pivots about a point located behind the saw arbor at approximately the same height. The saw arbor may also slide vertically. In the at-rest position, the saw blade is above the maximum capacity work piece.

Mode
The state or condition of the control system that allows specific operations of the machine.

Modified Types 6 and 11 wheels (terrazzo)
Similar to Type 6 "straight cup" wheels and Type 11 "flaring cup" wheels except for the bottom of the cup. The bottom of the cup is flat in Type 6 and 11 wheels. The modified wheels have bottoms that are sloped downwards towards the mounting hole. These modified wheels need to be mounted using a special tapered flange furnished by the tool manufacturer. These wheels are used in the terrazzo trade.

Molding machine
A machine that uses more than one arbor-mounted cylindrical, rotating cutting tool. It also uses power feeding, where once a work piece is engaged, it carries the work piece linearly through the balance of the intended operations, without further operator action. Operations can be performed on all surfaces of a work piece. Work pieces can be hopper- or hand-loaded and are fed ribbon-style into the machine.

Mortiser
A machine designed to produce a square or rectangular cavity through use of a moving, forming, or reciprocating tool. Means are provided to clamp and support the stock, and either move the stock into the tool or the tool into the stock.

Moulder
A machine in which the dough pieces are shaped and formed prior to final proofing.

Mounted wheels
Bonded abrasive wheels of various shapes, usually two inches diameter or smaller, that are secured to plain or threaded steel shafts or mandrels.

Movable barrier device
See gate or movable barrier device.

Nip-point belt and pulley guard
A guard that encloses the pulley and has rounded or rolled edge slots for the belt to pass through.

Off-hand grinding
Grinding of a work piece that is held in the operator's hand.

Overland conveyor
A single or series of belt conveyors designed to carry bulk material long distances, usually following the general contour of the land.

Part revolution clutch
Type of clutch that can be disengaged before the press slide completes a full stroke.

Pedestal grinder
An off-hand grinding machine similar to a bench grinder mounted on or otherwise attached to a floor-mounted pedestal.

Pinch point
Any point, other than the point of operation, where it is possible for a part of the body to be caught between moving parts or between a moving part and stationary one.

Planer
A machine with at least one cylindrical cutter head, that includes one or more inserted knife or cutting edge. A planer has a cutter head mounted over a means of work support. It also uses either an adjustable work support or cutter head to size the stock. The work piece is usually power-fed.

Point of operation
The area on a machine where work is actually performed upon the material being processed.

Power-driven hammers
Types of drop hammers in which the ram is raised for each stroke by a double-action steam, air, or hydraulic cylinder, and the energy delivered to the work piece is supplied by the velocity and weight of the ram and attached upper die driven downward by steam, air, or hydraulic pressure. Energy delivered during each stroke may be varied.

Power transmission parts
The mechanical components of a piece of equipment that, together with a source of power (sometimes referred to as a prime mover), provide the motion to a part of a machine or piece of equipment.

Presence-sensing device
A device that creates a sensing field, area, or plane to detect the presence of an individual or object.

Presence-sensing device initiation (PSDI)
Operating mode of a mechanical power press where a single cycle (stroke) is initiated by a presence-sensing device when it senses that the operator has finished feeding or removing parts and all parts of the operator's body are withdrawn from the sensing field of the device.

Pull-back device
A device attached to the operator's hands and connected to the upper die or slide of the press that will pull the operator's hands out of the point of operation as the dies close.

Push block
A nonmetallic device with one or more handles. A push block also has a flat bottom surface with either a heel or friction material on it, used as a hold-down and feed device. The purpose of this is to provide a safe distance between the hands and the cutting tool.
Pusher-bar conveyor
Two endless chains cross-connected at intervals by bars or pushers that propel the load along the bed or trough.

Push stick
A nonmetallic stick shaped device designed to provide a safe distance between the hands and the cutting tool. It has, as part of its design, a notched end with a heel and toe to hold down and feed the work piece past the cutting tool.

Racks
Carriers of pans, panned dough and bakery products. They are usually constructed of metal and mounted on casters or provided with trolleys for use on a monorail system.

Reinforced wheels
Organic bonded abrasive wheels which have webbing, fabric or filament to provide resistance to complete breaking of the wheel should it become cracked or damaged.

Repeat
An unintended or unexpected successive stroke of the press resulting from a malfunction.

Restraint device
A device with attachments for the operator's hands and wrists that prevent the operator from reaching into the hazardous area.

Return-belt idlers
A roller that supports the return run of the conveyor belt.

Ripping
A sawing operation made through the thickness of the work piece with the grain of natural wood, along the long dimension of a rectangular work piece, and usually parallel to that edge on reconstituted wood products. Two or more pieces result from the operation.

Rivet-making machines
The same as upsetters and bolt-headers when producing rivets with stock diameter of one inch or more.

Riving knife
See spreader.

SFPM
See surface feet per minute.

Safeguarding by location
Because of its location, no employee can inadvertently come in contact with a hazard during operation, maintenance, or servicing.

Safeguarding by distance
Employees are kept far enough from a hazard that they will not contact or be injured by the hazard.

Safeguarding device
See device.

Safety block
A prop inserted between the upper and lower dies or between the bolster plate and the face of the slide to prevent the slide from falling of its own weight.

Safety cylinder
This safety device may be of the direct cushion type integral with the main cylinder or it may be of the separate cushion type whereby a constant supply of live steam or air is applied behind a separate piston adjacent to the main cylinder. A spring, suitably constrained, may also be employed.

Safety cylinder head
An air cushion at the top of the hammer, just below the head, to protect the head from damage by the piston.

Scale
Any layer or leaf of metal resembling the scale of a fish in size and thinness; such as a scale of iron.

Screw conveyor
A screw or auger that revolves in a suitably shaped trough or casing, used to move material in one specific direction.

Shaper
A machine that uses one or more vertical spindles that are either fixed or able to be tilted, usually with an arbor mounted rotating cylindrical cutter, to form decorative or functional forms on a manually or power-fed work piece. The work piece is supported on a stationary or moving table. A guide, fixture, or template is used to control the operation. The spindle can be mounted above or below the work support means.

Sheeter
A machine that forms dough into a sheet by compression through one or more sets of driven rolls.

Sifter
A device that sifts flour. Sifter types are brush, oscillating, or vibrating.

Single stroke mechanism
Used on a full revolution clutch to limit the travel of the slide to one complete stroke at each engagement of the clutch.

Slat and roller slit conveyor
A conveyor employing one or more endless chains to which nonoverlapping, noninterlocking, spaced slats are attached.

Slide
Part of the press that moves back and forth in a straight line. Also called a ram, plunger, or platen.

Snagging
Grinding which removes relatively large amounts of material without regard to close tolerances or surface finish.

Spreader
A flat metal device slightly narrower than the saw kerf. It is designed to prevent the saw blade kerf in the work piece from closing on the sides of the blade during a sawing operation.

Steam hammers
A type of drop hammer where the ram is raised for each stroke by a double-action steam cylinder and the energy delivered to the work piece is supplied by the velocity and weight of the ram and attached upper die driven downward by steam pressure. Energy delivered during each stroke may be varied.

Stripper
A mechanism or die part for removing parts or material from the punch.

Surface feet per minute (SFPM)
A measure of the speed of a point on the periphery (outer edge) of an abrasive wheel. It is calculated using the formula:

\[
\text{SFPM} = \frac{\text{diameter of the wheel (in inches)} \times \text{RPM}}{1000}
\]

Example:
Wheel diameter = 24 inches
Spindle speed = 1000 RPM
SFPM = \( \frac{24 \times 1000}{1000} = 3,144 \text{ SFPM} \)
Sweep device
A single or double arm (rod) attached to the upper die or slide of the press that is designed to move the operator's hands to a safe position as the dies close. Sweep devices are not allowed for point-of-operation safeguarding.

Swing saw/overhead swing cutoff saw
A machine with a means of work support using a powered arbor and circular saw blade that pivots about a point located above the saw arbor.

Tenoning machine
A machine designed to use two or more cylindrical cutters, or one or two circular saws, to size or prepare (or both) the ends of a work piece. The work piece is supported on a table or conveying means. A means for clamping the work piece is provided.

Terrazzo
A material of stone chips, such as marble, set in mortar and polished.

Threaded hole wheels
Abrasive wheels that have one central threaded bushing, securely anchored in place. They are mounted by being screwed onto a threaded machine spindle so that the wheel back seats firmly against an unrelieved flat back flange.

Tongs
Metal holder used to handle hot or cold forgings.

Tongue guard
An integral part of a safety guard that is located where the upper exposed part of the abrasive wheel meets the safety guard. It can be adjusted as necessary to maintain a set distance from the constantly decreasing diameter of the wheel.

Tooling
Elements for guiding or imparting a desired configuration to the material.

Top grinding
Grinding done above the horizontal centerline of the wheel.

Towed conveyor
An endless chain supported by trolleys from an overhead track or running in a track on the floor with means for towing floor-supported trucks, dollies, or carts.

Trimming presses
A class of auxiliary forging equipment that removes flash (metal splash) or excess metal from a forging. This trimming operation can also be done cold, as in can coining, a product-sizing operation.

Trip (or tripping)
Momentary actuation of the activating control to initiate the cycle (stroke).

Trued
When the cutting surfaces of an abrasive wheel have been reshaped to expose new sharp cutting surfaces.

Turnover bar
A bar used in die setting to manually turn the crankshaft of the press.

Two-hand device
A device that requires the concurrent use of both of the operator's hands to both initiate and continue the machine cycle during the hazardous portion of the machine cycle.

Two-hand trip device
A device that requires concurrent operation of the trip controls or levers by the operator's hands to initiate the machine cycle.

Type A movable gate
A device that encloses the hazardous area when the machine cycles and does not open until the end of the cycle.

Type B movable gate
A device that encloses the hazardous area when the machine cycles and opens when hazardous motion of the cycle is over. Type B devices are not allowed on full revolution type machinery.

Type 1 wheel
An abrasive wheel shaped like a disc with a mounting hole in the middle. Sometimes called a "straight wheel." It has diameter (D), thickness (T), and hole size (H) dimensions. Grinding is normally done on the periphery (outside curve) of the wheel (T dimension). Can be used for grinding, cutting-off, and tuck pointing.

Type 2 wheel
An abrasive wheel shaped like an open-ended, hollow cylinder. Sometimes called a cylinder wheel. It has diameter (measured from the outer wall of the cylinder), wheel thickness (height of the cylinder), and rim thickness (thickness of the cylinder wall). Grinding is done on the end of the cylinder (rim thickness dimension).

Type 6 wheel
An abrasive wheel shaped like a straight-sided cup or bowl with a mounting hole in the bottom of the cup. Sometimes called a "cup wheel." It has diameter (D), thickness (T), hole size (H), rim thickness (W), and back thickness (E) dimensions. Grinding is normally done on the cup rim (W dimension).

Type 11 wheel
An abrasive wheel shaped like a cup or bowl with a mounting hole in the bottom of the cup. The sides of the cup are not straight-sided but are angled outward. Sometimes called a "flaring cup wheel" since the sides are "flared" out. It has double diameter dimensions (top D and bottom J). It also has thickness (T), hole size (H), rim thickness (W) and back thickness (E) dimensions. Grinding is normally done on the cup rim (W dimension).

Type 16, 17, 18, 18R, and 19 wheels
See cone and plug wheels.

Type 27 wheel
An abrasive wheel similar to a Type 1 wheel, but the center of the wheel around the mounting hole is pushed back (depressed). Sometimes called a "depressed center" wheel. It has diameter (D), thickness (U) and hole size (H) dimensions. The depressed center allows grinding on the flat surface of the wheel without interference from the flange or mounting hardware.

Type 27A cutting-off wheel
Similar to a Type 27 wheel. Specifically designed for use on cutting-off machines.

Type 28 wheel
An abrasive wheel similar to a Type 27 wheel, but the face of the wheel is angled upward and away from the mounting hole. The face of a Type 27 wheel is flat and perpendicular to the mounting hole. A Type 28 wheel is also called a "depressed center" wheel. It has diameter (D), thickness (U)
and hole size (H) dimensions. The depressed center allows grinding without interference from the mounting. A Type 28 wheel has a saucer-shaped grinding rim and is designed for corner grinding and side grinding.

**Type 29 wheel**

An abrasive wheel that has reversed, saucer-shaped grinding rims (similar to a partially opened umbrella).

**Unitized tooling**

A die that has the upper and lower members incorporated into a self-contained unit that holds the die members in alignment.

**Upsetters (or forging machines, or headers)**

A type of forging equipment, related to the mechanical press, in which the main forming energy is applied horizontally to the work piece that is grips and held by prior action of the dies.

**Wood products**

Wood products include wood and reconstituted wood products that generate chips or dust in the processing of a wood piece.

[Statutory Authority:  RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.-060. 04-14-028, § 296-806-500, filed 6/29/04, effective 1/1/05.]

[Title 296 WAC—p. 2811]

Your responsibility:
Make sure hand-held portable power tools have safe switches (controls).

Exemption: WAC 296-807-110 does not apply to:
• Concrete vibrators
• Concrete breakers
• Powered tampers
• Jack hammers
• Rock drills
• Garden appliances
• Household and kitchen appliances
• Personal care appliances
• Medical or dental equipment
• Fixed machinery.

WAC 296-807-11005 Make sure switches are safe.

You must:
(1) Make sure the operating switch is located in a position that makes it difficult to accidentally operate the tool.
(2) Use the correct operating switch.
• Make sure hand-held gasoline-powered chain saws have a constant pressure throttle control that will shut off power to the chain when the pressure is released.
• Use a constant pressure switch that will shut off the power when the switch is released to turn on or operate any hand-held power tool.

Exemptions:
• Some tools can use a lock-on feature with the constant pressure switch if the lock-on feature can be turned off with a single motion of the same finger(s) that turned it on. You can use a lock-on feature with these hand-held tools:
  – Drills
  – Tappers
  – Fastener drivers
  – Grinders using a wheel greater than two inches in diameter
  – Disc sanders
  – Belt sanders
  – Reciprocating saws
  – Saber, scroll and jig saws using a blade with a shank width greater than one-quarter inch
  – Other similarly operating powered tools.
• You can use a positive "on-off" switch with these hand-held tools:
  – Platen sanders
  – Grinders using a wheel two inches or less in diameter
  – Routers
  – Planers
  – Laminate trimmers
  – Nibblers
  – Shears
  – Saber, scroll and jig saws using a blade with a shank width of one-quarter inch (±.05 inch) or less.

Note: The Shank width of saber, scroll and jig saw blades is measured at the narrowest point on the blade shank.

WAC 296-807-120 Portable circular saws.

Your responsibility:
Make sure portable circular saws are safe.

You must:
(1) Use a constant pressure switch to turn on or operate any circular saw using a blade that has a diameter greater than two inches.
(2) Remove cracked saws and saw blades from service.
(3) Make sure power driven circular saws that have a blade diameter larger than two inches have guards above and below the base plate (shoe) as listed in Table 2, Portable circular saw guarding requirements.

WAC 296-807-1300 Portable belt sanding machines.

Your responsibility:
Make sure portable belt sanding machines are safe.

You must:
• Guard:
  – Nip points where the sanding belt runs onto a pulley
  – The unused run of the sanding belt.

Table 2 Portable Circular Saw Guarding Requirements

<table>
<thead>
<tr>
<th>Upper Guard</th>
<th>Lower Guard</th>

<tr>
<td>Covers the blade to the depth of the teeth, except for the minimum arc necessary to allow the base to tilt for bevel cuts.</td>
<td></td>
</tr>
<tr>
<td>Covers the blade to the depth of the teeth, except for the minimum arc necessary to allow proper:</td>
<td></td>
</tr>
<tr>
<td>Retraction of the guard</td>
<td></td>
</tr>
<tr>
<td>Contact with the work.</td>
<td></td>
</tr>
<tr>
<td>Automatically and instantly returns to the position covering the blade when the saw is withdrawn from contact with the work.</td>
<td></td>
</tr>
</tbody>
</table>

Exemption: Guarding requirements in subsection (3) of this section do not apply to saws used in the meat cutting industry to cut meat.

WAC 296-807-1305 Guard portable belt sanding machines.

You must:
• Guard:
  – Nip points where the sanding belt runs onto a pulley
  – The unused run of the sanding belt.
WAC 296-807-140 Compressed air tools. Summary.
This section applies to portable, hand-held compressed air powered tools. It also applies to airhose and plastic pipe used to supply compressed air to these tools.

Your responsibility:
Make sure compressed air and compressed air tools are used safely.

You must:

GENERAL TOOL REQUIREMENTS
Follow the manufacturer's instructions
WAC 296-807-14005
Prevent air tools from ejecting attachments
WAC 296-807-14010
CONTACT WITH COMPRESSED AIR
Protect employees from contact with compressed air
WAC 296-807-14015
CLEANING
Make sure safeguards are used when cleaning with compressed air
WAC 296-807-14020
AIRHOSE AND PLASTIC PIPE
Make sure airhose and plastic pipe supplying compressed air to portable air tools are safe
WAC 296-807-14025
TOOL DESIGN AND CONSTRUCTION
Make sure air tools are adequately designed and constructed
WAC 296-807-14030
TOOL USE
Use air tools safely
WAC 296-807-14035
FASTENER DRIVING TOOLS
Make sure fastener driving air tools (nailers and staplers) are safe
WAC 296-807-14040.

WAC 296-807-14005 Follow the manufacturer's instructions.
You must:
• Follow the manufacturer's instructions for safe use of the tool.

WAC 296-807-14010 Prevent air tools from ejecting attachments.
You must:
• Make sure the tool cannot accidentally eject an attachment.

WAC 296-807-14015 Protect employees from contact with compressed air.
You must:
• Make sure a tool nozzle or an airhose opening is not:
  – Pointed at anyone

Note: A retainer is needed if the tool does not have a positive method of keeping the attachment in the tool.

WAC 296-807-14020 Make sure safeguards are used when cleaning with compressed air.
You must:
• Use the following when cleaning with compressed air:
  – Air pressure that has been reduced to less than 30 p.s.i. static pressure at the nozzle
  – Effective chip guarding.

Reference:
Effective chip guarding means any method or equipment that protects the eyes and skin of the cleaner and other workers from flying chips or particles. Examples include:
– A protective cone around the nozzle to protect the cleaner.
– Barriers, baffles or screens to protect other workers.

Note:
■ You may use air pressure greater than 30 p.s.i. if you use a nozzle with vents, holes, flaps or slots that will direct the air flow away from the tip of the nozzle and will reduce the air flow to less than 30 p.s.i. if the nozzle becomes blocked.
■ Effective chip guarding means any method or equipment that protects the eyes and skin of the cleaner and other workers from flying chips or particles.

Reference:
Appropriate personal protective equipment (PPE) needs to be worn when cleaning with compressed air. See WAC 296-800-160 in the safety and health core rules.

WAC 296-807-14025 Make sure airhose and plastic pipe supplying compressed air to portable air tools are safe.
You must:
(1) Make sure the airhose and hose connections are suitable for the:
• Air pressure
• Use.
(2) Make sure any plastic pipe used to supply compressed air for portable air tools has been specifically identified by the manufacturer as being suitable for compressed air use.

Note: Existing unapproved pipe that is buried underground or enclosed in shatter-resistant material is acceptable only if it completely eliminates the hazards created by the brittle nature of the pipe.

Reference:
Appropriate personal protective equipment (PPE) needs to be worn when cleaning with compressed air. See WAC 296-800-160 in the safety and health core rules.

WAC 296-807-14030 Make sure air tools are adequately designed and constructed.

Exemption:
This section does not apply to:
• Tools specifically for medical or dental use
• Tools specifically for use in the food processing industry
• Tools mounted in stationary installations
• Air hoists
• Construction and mining tools such as paving breakers, diggers, tampers, and rock drills.

You must:
• Make sure portable, hand-held air tools meet the requirements of:

OR

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-14015, filed 4/4/03, effective 8/1/03.]

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-14020, filed 4/4/03, effective 8/1/03.]

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-14025, filed 4/4/03, effective 8/1/03.]

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-14015, filed 4/4/03, effective 8/1/03.]
WAC 296-807-14035 Use air tools safely.

**Exemption:**
This section does not apply to:
- Tools specifically for medical or dental use
- Tools specifically for use in the food processing industry
- Tools mounted in stationary installations
- Air hoists
- Construction and mining tools such as paving breakers, diggers, tampers, and rock drills.

**You must:**
1. Relieve the pressure in the air line before disconnecting a compressed air tool from the line or disconnecting a hose joint unless there is automatic valve closing protection at the joint being separated.
2. Disconnect the tool from the compressed air supply before repairs are done.
3. Make sure that eye protection is worn at all times by:
   - The person operating the tool
   - Other persons in the area where tools are being used.

**References:**
- Use the PPE hazard assessment to determine which employees other than the tool operator need to wear eye protection and the type of eye protection they need to wear. See WAC 296-800-160 in the safety and health core rules.
- Chapter 296-62 WAC, Part K, Hearing conservation, may require the use of hearing protection.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-14035, filed 4/4/03, effective 8/1/03.]

WAC 296-807-14040 Make sure fastener driving air tools (nailers and staplers) are safe.

**You must:**
1. Make sure any fastener driving air tool discharges all air in the tool when disconnected from the compressed air supply.
2. Make sure that all pneumatically driven nailers, staplers, and other similar equipment provided with automatic fastener feed have a safety device on the muzzle to prevent the tool from ejecting fasteners, unless the muzzle is in contact with the work surface.

**Note:**
- Pneumatic nailers or staplers do not need this safety device if:
  - The overall weight of the fastening device does not exceed the weight of one and one-half inches of standard 18-gauge wire. The normal maximum diameter tolerance for manufacturing standard 18-gauge wire is .045 inches.
  - The operator and any other person within twelve feet of the point of operation wear approved eye protection.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-14040, filed 4/4/03, effective 8/1/03.]

WAC 296-807-150 Powder actuated fastening systems.

**Summary.**

**IMPORTANT:**

This section applies to any powder actuated fastening system designed to use the expanding gases from a powder load to propel a stud, pin, fastener, or other object into hard structural material.

**Exemption:**
This section does not apply to:
- Devices designed to attach objects to soft construction material such as wood, plaster, tar, and drywallboard
- Stud welding equipment.

**Your responsibility:**
Make sure powder actuated fastening systems are used safely.

**You must:**

**TOOL OPERATORS**
- Make sure tool operators are qualified

**PERSONAL PROTECTIVE EQUIPMENT**
- Make sure employees are aware tools are in use and wear appropriate personal protective equipment (PPE)

**TOOL DESIGN AND CONSTRUCTION**
- Make sure tools are adequately designed and constructed

**STORAGE**
- Make sure tools are stored properly

**TOOL USE**
- Make sure the tool is appropriate to the job
- Use proper powder loads

**REFERENCES**
- Use fasteners safely

**INSPECTION AND MAINTENANCE**
- Inspect and maintain tools properly

**INSPECTORS**
- Make sure tools are used properly identified

**MAPLEWOOD INDUSTRIES**
- Make sure the operator uses the tool safely

**LABELING**
- Use properly labeled powder loads

**PERMISSIVE EQUIPMENT**
- Use fasteners safely

**STORAGE**
- Make sure tools are stored properly

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-150, filed 4/4/03, effective 8/1/03.]

WAC 296-807-15005 Make sure tool operators are qualified.

**You must:**
- Make sure tools are used only by qualified operators
- Make sure operators have been trained by an authorized instructor.

**Note:**
Authorized instructors have to meet the instructor qualifications of ANSI A10.3-1995, Safety Requirements for Powder-Actuated Fastening Systems.

**You must:**
- Make sure all tool operators can:
- Understand the manufacturer's instructions
- Clean the tool properly
- Recognize any visibly worn or damaged parts
- Identify power load levels
- Operate the tool correctly.
  • Make sure tool operators have a valid qualified operator's card in their possession when they are using the tool.

WAC 296-807-15010 Make sure employees are aware tools are in use and wear appropriate personal protective equipment (PPE).

You must:
(1) Make sure eye or face protection is worn by:
  • Tool operators
  • Assistants
  • Persons close to where the tool is being used.

Reference: ■ Use the PPE hazard assessment to determine which employees other than the tool operator need to wear eye protection and the type of eye protection they need to wear. See WAC 296-800-160 in the safety and health core rules.
  ■ Chapter 296-62 WAC, Part K, Hearing conservation may require the use of hearing protection.

You must:
(2) Post signs where tools are being used and in adjacent areas where tool use could pose a hazard. Signs must:
  • Be easily seen
  • Be at least 8 x 10 inches (20 x 25 cm)
  • Use letters in boldface type at least one inch (2.5 cm) high
  • Read "POWDER ACTUATED TOOL IN USE" or similar wording.

Note: Tool use could create a hazard in adjacent areas by allowing a fastener to penetrate one or more of the following:
  • Wall
  • Floor
  • Other working surface.

WAC 296-807-15015 Make sure tools are adequately designed and constructed.

You must:
(1) Make sure the tool meets the design and construction requirements of the American National Standards Institute (ANSI) standard ANSI A10.3-1995, Safety Requirements for Powder-Actuated Fastening Systems.

Note: There may be a statement on the tool or in the instruction manual indicating the tool meets the requirements of the appropriate ANSI standard. If in doubt, check with the manufacturer.

You must:
(2) Make sure each tool has:
  • Operator instructions and a tool service manual
  • Powder load and fastener chart
  • Service tools and accessories.

WAC 296-807-15020 Make sure tools and containers are properly labeled.

You must:
(1) Make sure tools are properly labeled.
  • Make sure each tool has a readable, permanent label that shows the manufacturer's:
    – Model number
    – Unique serial number.
  • Make sure there is a durable warning label on each tool that:
    – Reads "WARNING - FOR USE ONLY BY QUALIFIED OPERATORS ACCORDING TO MANUFACTURER'S INSTRUCTION MANUAL."
    OR
    – Uses words with the same meaning.
(2) Make sure the tool storage container has these labels:
  • "POWDER ACTUATED TOOL" on the outside of the container in an easily seen position
  • "WARNING - POWDER ACTUATED TOOL. TO BE USED ONLY BY A QUALIFIED OPERATOR AND KEPT UNDER LOCK AND KEY WHEN NOT IN USE" on the inside cover.

WAC 296-807-15025 Make sure powder loads and power levels are properly identified.

You must:
• Make sure powder loads and power levels are identified as specified in Table 3, Powder-Load Identification

Table 3
Powder-Load Identification

WAC 296-807-15030 Use proper powder loads.

You must:
• Use only a powder load that is:
  – Recommended by the tool manufacturer for the particular tool
  OR
  – One that provides the same level of safety and performance.

(07 Ed.)
WAC 296-807-15035 Make sure the tool is appropriate to the job.
You must:
(1) Use the lowest velocity class of tool and load that will properly set the fastener.
(2) Use the proper shield, fixture, adaptor, or accessory that is:
   • Suitable for the job
   • Recommended and supplied by the manufacturer.

WAC 296-807-15040 Make sure the operator uses the tool safely.
You must:
(1) Make sure the operator:
   • Inspects the tool before using it, as recommended by the tool manufacturer
   • Uses the tool according to the manufacturer's instructions
   • Keeps the tool unloaded until just before using it
   • Unloads the tool at once if work is interrupted after the tool has been loaded
   • Does not leave a tool or powder load unattended where it would be available to an unauthorized person
   • Never points a tool (loaded or unloaded) at any part of a person's body.

   Note: A magazine or clip fed tool is not considered loaded until a powder load is actually in the ram (firing chamber).

You must:
(2) Make sure tools are not used in an explosive or flammable atmosphere.
(3) Do this if the tool misfires:
   • Hold it firmly against the work surface for thirty seconds
   • Follow the instructions in the tool manufacturer's instruction manual.
(4) Hold the tool perpendicular to the work surface when fastening to any material.

   Exemption:
   This does not apply if an application is specifically required or recommended by the tool manufacturer.

WAC 296-807-15045 Use fasteners safely.
You must:
(1) Use fasteners:
   • Recommended by the tool manufacturer for the particular tool
   OR
   • Fasteners that provide the same level of safety and performance.
(2) Keep the fastener from passing completely through the structural material by using a backing material when driving a fastener into any material that is any of the following:
   • Easily penetrated
   • Thin
   • Of questionable resistance.

   (3) Make sure the material is suitable for fastening. Do not drive fasteners into very hard or brittle material such as:
   • Cast iron
   • Glazed tile
   • Hardened steel
   • Glass block
   • Natural rock
   • Hollow tile
   • Most brick.

   (4) Make sure positive alignment with an existing hole is maintained by using a guide or other means supplied or recommended by the tool manufacturer before driving a fastener into the hole.
(5) Make sure fasteners are not driven into any spalled (chipped or crumbled) area.
(6) Drive fasteners into concrete only if the fastener shank will penetrate no more than one-third the thickness of the concrete.
(7) Make sure fasteners are driven at least:
   • One-half inch (13 mm) from the edge of steel
   • Three inches (75 mm) from the unsupported edge of masonry material.

   Exemption:
   This does not apply if an application is specifically required or recommended by the tool manufacturer.

WAC 296-807-15050 Inspect and maintain tools properly.
You must:
• Make sure any tool that is not in proper working condition is:
   − Immediately removed from service
   − Tagged
   − Properly repaired as specified in the manufacturer's instructions before being used again.
• Regularly service the tool and inspect it for worn or damaged parts at intervals recommended by the tool manufacturer.
• Replace worn or damaged parts before the tool is used.
   This must be done:
   − By a qualified person
   − Using only parts supplied by the tool manufacturer.
• Keep a written record of inspection dates.

WAC 296-807-15055 Make sure tools are stored properly.
You must:
(1) Make sure there is a container that can be locked for each tool.
(2) Make sure tools and powder loads that are not being used are:
   • Locked in a container
   • Stored in a safe place
   • Only available to authorized persons.
(3) Store all manuals, maintenance tools, and accessories in the tool container when they are not being used.
WAC 296-807-160  Power lawn mowers.

Summary:
This section does not apply to commercial equipment that is:
• Designed primarily for agricultural purposes
OR
• Designed primarily to be operated with tractors having at least twenty horsepower for cutting grass or other growth on highways.

Your responsibility:
Make sure power lawn mowers are used safely.

You must:
DESIGN AND CONSTRUCTION
Make sure equipment meets minimum design and construction requirements
WAC 296-807-16005
LABELS
Make sure the equipment has the appropriate labels and decals
WAC 296-807-16010
BEFORE STARTING
Make sure the operator understands and follows instructions before starting the mower
WAC 296-807-16015
USE
Use the equipment safely
WAC 296-807-16020
NONELECTRIC MOWERS
Protect employees from fuel and exhaust
WAC 296-807-16025
WALK-BEHIND MOWERS
Use walk-behind mowers safely
WAC 296-807-16030
RIDE-ON MOWERS
Use ride-on mowers safely
WAC 296-807-16035.

WAC 296-807-16005  Make sure equipment meets minimum design and construction requirements.

You must:
(1) Make sure equipment meets ANSI design and construction requirements.
• Make sure power lawn mowers manufactured on or after August 1, 2003, meet the requirements of the appropriate ANSI standard:
  OR
• Make sure noncommercial power lawn mowers manufactured before the effective date of this chapter meet the requirements in chapter 296-806 WAC, Machine safety.

Note: There may be a statement on the tool or in the instruction manual indicating the tool meets the requirements of the appropriate ANSI standard. If in doubt, check with the manufacturer.

You must:
(2) Position, guard or shield all power-driven shafts, chains, belts, gears, friction drive components, nip and pinch points, and any exposed components hot enough to cause burns while:
• Starting
• Mounting
• Operating the machine.
(3) Have a shutoff device that:
• Will stop the motor or engine
AND
• Has to be intentionally and manually activated before the motor or engine can be restarted.

WAC 296-807-16010  Make sure the equipment has the appropriate labels and decals.

You must:
(1) Make sure all positions of the operating controls are clearly identified.
(2) Make sure warning and caution labels or decals on the mower are readable and replace them if necessary.

WAC 296-807-16015  Make sure the operator understands and follows instructions before starting the mower.

You must:
(1) Make sure the operator understands all instructions for operating the mower that are in the manufacturer’s instructions and on the machine.
• Make sure the operator is thoroughly familiar with the controls and proper use of the mower before starting it.
(2) Make sure the proper guards, plates, grass catcher or other safety devices are in place before starting the mower.

WAC 296-807-16020  Use the equipment safely.

You must:
(1) Follow the manufacturer's instructions for safe use of the equipment.
(2) Keep people clear of discharge opening(s).
(3) Keep people's hands and feet clear of rotating parts.
(4) Clear the area of objects such as rocks, toys, wire, bones, sticks, etc., which could be picked up and thrown by the blade and create a hazard for the operator or other persons.
(5) Make sure the operator stops the engine before:
• Leaving the equipment
• Unclogging the grass discharge chute
• Cleaning the mower.
(6) Make sure the operator wears safety goggles or safety glasses with side shields when operating the mower.

Note: Use the personal protective equipment (PPE) hazard assessment to determine the type of footwear and other PPE the
employees need to wear. See WAC 296-800-160, PPE, in the safety and health core rules.

WAC 296-807-16025  Protect employees from fuel and exhaust.
Exemption:
This section does not apply to electric engines.
You must:
1. Make sure to:
   - Keep the gas cap on whenever the engine is running.
   - Shut off the engine before and during refueling.
2. Make sure not to refuel the machine indoors.
3. Make sure not to run the engine in a closed area.
Exemption:
You can refuel the machine indoors or run the engine in a closed area if the area was specifically designed for such use.

WAC 296-807-16030  Use walk-behind mowers safely.
You must:
1. Make sure the operator wears substantial footwear when operating a walk-behind mower.
   Note: Use the personal protective equipment (PPE) hazard assessment to determine the type of footwear and other PPE the employees need to wear. See WAC 296-800-160, PPE, in the safety and health core rules.
2. Mow across the face of a slope.

WAC 296-807-16035  Use ride-on mowers safely.
You must:
1. Make sure not to carry passengers.
2. Make sure the operator looks down and behind before and while moving backwards.

IMPORTANT:
This section applies to portable hand- or power-operated:
- Hydraulic jacks
- Mechanical ratchet jacks
- Mechanical screw jacks.
Your responsibility:
Make sure jacks are safe to use.
You must:
LABELING
Make sure jacks are labeled with their rated load(s)
WAC 296-807-17005
BEFORE USE
Make sure the jack is safe to lift the load
WAC 296-807-17010
LIFTING THE LOAD
Lift the load safely

WAC 296-807-17015
INSPECTION AND MAINTENANCE
Visually inspect jacks and keep them in good working order
WAC 296-807-17020.

WAC 296-807-17005  Make sure jacks are labeled with their rated load(s).
You must:
- Make sure the rated load(s) of the jack is:
  - Readable
  - Durably marked in an easily seen location on the jack.

WAC 296-807-17010  Make sure the jack is safe to lift the load.
You must:
1. Visually examine the general condition of the jack before each use.
   Note: If a jack is to be used more than once on a shift, the visual examination is only required before the jack is used for the first time that shift.
2. Make sure the weight to be lifted or supported is within the rated load of the jack.
3. Make sure the base of the jack is on a firm foundation or blocked before lifting the load.
4. Make sure hydraulic jacks exposed to freezing temperatures function properly at the temperature they will be used.

WAC 296-807-17015  Lift the load safely.
You must:
1. Place a block between the load cap and the load if the load could slip off the jack.
2. Secure the load from falling or slipping immediately after it is raised by one or more of the following:
   - Cribbing
   - Blocking
   - Some other equally effective method.
3. Make sure you do not exceed the limit of travel of the jack.
   Note: The limit of travel can be determined by one or more of the following:
   - A positive stop
   - A stop indicator
   - Some other equally effective method.

WAC 296-807-17020  Visually inspect jacks and keep them in good working order.
You must:
1. Inspect jacks at appropriate intervals:
   - There are two types of inspection, frequent or periodic, depending on how often they are done.
• Make sure frequent inspections are done by the operator or other designated person as follows:
  – Before a jack is first placed in service.
  – Monthly for a jack used in normal service.
  – Daily or before each use for a jack used for other than normal service.
  – Before using a jack that has been altered, modified, or repaired.
  – Before using a jack that has not been used in one year or more.
• Make sure a periodic inspection of the jack is done once a year.
• Inspect the jack using Table 4, Jack Inspection Requirements, during any frequent or periodic inspection.
  (2) Make sure a jack that is out of order is:
  • Tagged
  • Not used until repaired.
  (3) Make sure a jack is properly lubricated at regular intervals.

Note: The jack should be lubricated following the manufacturer's instructions.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-17020, filed 4/4/03, effective 8/1/03.]
Use specific flanges for cup, cone or plug wheels with threaded inserts or projecting studs

WAC 296-807-18075

BLOTTERS

Use blotters when required

WAC 296-807-18080

BLOTTERS - TYPE 6 AND 11 WHEELS

Meet specific blotter requirements when using modified Types 6 and 11 wheels (terrazzo)

WAC 296-807-18085.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-180, filed 4/4/03, effective 8/1/03.]

296-807-18005  Make sure abrasive wheels and tools are properly designed and constructed.

You must:

• Make sure abrasive wheels and tools meet the design and construction requirements of:
  – American National Standards Institute (ANSI) B7.1-2000, Safety Requirements for the Use, Care and Protection of Abrasive Wheels
  OR

Note:  Tools may have a statement on the tool or in the instruction manual that the tool meets the appropriate ANSI standard. If in doubt, check with the manufacturer.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-18005, filed 4/4/03, effective 8/1/03.]

296-807-18010  Make sure machines have safety guards.

You must:

• Use abrasive wheels only on machines that have safety guards.
  – Make sure the safety guard:
    – Is mounted so it maintains proper alignment with the wheel
    – Is mounted with fasteners strong enough to keep the guard in position if a wheel breaks
    – Is positioned to deflect pieces of an accidentally broken wheel away from the operator
    – Covers the spindle end, nut, and flange projections.

Exemption:

Safety guards are not required on machines that use:

• Wheels for internal grinding while advancing, retracting or within the work
• Mounted wheels two inches or less in diameter
• Types 16, 17, 18, 18R, and 19 cones and plugs and threaded hole pot balls where:
  – The work offers protection
 OR
  – The size does not exceed three inches in diameter by five inches long.
• Notched, segmented, or continuous rim metal centered diamond lapidary wheels that are:
  – Used with a coolant deflector AND
  – Operated at 3,500 SFPM or less.
• Type 1 wheels that are:
  – Two inches or less in diameter
  – One-half inch or less thick
  – Operating at peripheral speeds less than 1,800 SFPM
  – Mounted on mandrels and used in portable drills.
• Type 1 reinforced wheels that are:
  – Three inches or less in diameter one-quarter inch or less thick
  – Operating at peripheral speeds of 9,500 SFPM or less
  – Used by operators wearing safety glasses and face shields.
• Valve seating grinding wheels.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-18010, filed 4/4/03, effective 8/1/03.]

296-807-18015  Keep safety guards in good functional condition.

You must:

• Make sure safety guards are in good functional condition.
  – Replace any safety guard that:
    – Is damaged, bent or severely worn
  OR
    – Has been hit by parts from a breaking wheel.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-18015, filed 4/4/03, effective 8/1/03.]

296-807-18020  Use specific safety guards for machines using Type 1 grinding wheels, cutting-off wheels, and tuck pointing wheels.

You must:

• Make sure the safety guard covers the top and sides of the wheel for at least one hundred eighty degrees.

Note:  It is not required to cover the spindle end, nut and outer flange.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-18020, filed 4/4/03, effective 8/1/03.]

296-807-18025  Use specific safety guards for vertical and angle grinders using Type 6 or Type 11 wheels.

You must:

• Make sure the safety guard:
  – Covers the wheel's plane of rotation toward the operator for at least one hundred eighty degrees
  – Covers the side of the wheel toward the driving flange for at least one hundred eighty degrees
  – Has a skirt which is adjustable to within one-eighth inch of the plane of the surface of the wheel.
  – Make sure not to use a "revolving cup guard."

Note:  “Cup back bushings” do not substitute for safety guards.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-18025, filed 4/4/03, effective 8/1/03.]

296-807-18030  Use specific safety guards for vertical and angle grinders using Type 27, 28 and 29 wheels.

You must:

• Make sure safety guards:
  – Cover the wheel's plane of rotation toward the operator for at least one hundred eighty degrees
– Cover the side of the wheel toward the driving flange for at least one hundred eighty degrees
– Have a lip on the outer edge that:
  ■ Extends beyond the surface of the wheel throughout the one hundred eighty degree coverage
  AND
  ■ Curls inward to deflect wheel fragments.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-18030, filed 4/4/03, effective 8/1/03.]

WAC 296-807-18035 Use side handles on vertical and angle grinders.
You must:
Use a side handle on all four-inch and larger vertical and angle grinders.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-18035, filed 4/4/03, effective 8/1/03.]

WAC 296-807-18040 Make sure abrasive wheels are safe to use.
You must:
• Do the following before mounting a wheel:
  – Visually inspect the wheel for cracks or damage
  – Perform a ring test for cracks (size and shape of the wheel permitting)
  – Make sure the spindle speed of the machine is not greater than the operating speed of the wheel.
• Make sure a damaged or cracked wheel is not mounted or used.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-18040, filed 4/4/03, effective 8/1/03.]

WAC 296-807-18045 Mount wheels properly.
You must:
(1) Make sure wheels fit freely on the spindle, wheel sleeves, or adaptors, and remain free under all grinding conditions.
(2) Make sure wheel, blotter and flange surfaces that contact each other are flat and free of foreign particles.
(3) Make sure any reducing bushing used in the wheel hole:
  • Fits freely on the spindle and maintains proper clearance
  • Does not exceed the width of the wheel or contact the flanges.
(4) Make sure that multiple wheels mounted between a single set of flanges are either:
  • Cemented together
  OR
  • Separated by spacers that have a diameter and bearing surface that is the same as the mounting flanges.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-18045, filed 4/4/03, effective 8/1/03.]

WAC 296-807-18050 Use proper flanges.
You must:
• Mount all abrasive wheels between flanges that have a diameter at least one-third the diameter of the wheel.

Exemption:
• Mounted wheels

Exemption:
• Cup, cone or plug wheels with threaded inserts or projecting studs

Exemption:
• Abrasive disc wheels (inserted nut, inserted washer and projecting stud type)
• Plate mounted wheels
• Cylinder, cup, or segmental wheels mounted in chucks
• Types 27, 28 and 29 wheels
• Internal wheels less than two inches in diameter
• Modified Type 6 and 11 wheels (terrazzo)
• Types 1 and 27A cutting-off wheels.

You must:
• Make sure flanges are:
  – Dimensionally accurate
  – Properly balanced
  – Flat
  – Free of rough surfaces or sharp edges.
• Make sure, if a wheel is mounted between two flanges, that both flanges:
  – Are the same diameter
  – Have equal bearing surfaces.

Exemption:
The following wheels do not require same diameter, equal bearing surface flanges:
• Types 27, 28, and 29 wheels with adaptors
• Modified Types 6 and 11 wheels with tapered K dimension
• Internal wheels less than two inches in diameter.

You must:
• Make sure the driving flange is:
  – Part of the spindle
  OR
  – Securely fastened to the spindle.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-18050, filed 4/4/03, effective 8/1/03.]

WAC 296-807-18055 Make sure flanges are in good condition.
You must:
• Make sure flange bearing surfaces are in good condition.
• Replace or remachine any flange with a mounting surface that has any of the following problems:
  – Warped
  – Burred on the bearing surface
  – Excessively worn (thickness or diameter)
  – Out of true.

Note:
Flanges that are refaced or trued need to satisfy minimum dimension requirements specified in ANSI B7.1-2000, Safety Requirements for the Use, Care and Protection of Abrasive Wheels.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-18055, filed 4/4/03, effective 8/1/03.]

WAC 296-807-18060 Use specific flanges for Type 1 cutting-off wheels.
You must:
• Mount Type 1 cutting-off wheels between flanges that are:
  – Properly relieved with matching bearing surfaces
  – At least one-quarter the wheel diameter.
You do not need to use a blower with:

- Mounted wheels
- Abrasive disc and Type 2 wheels which are mounted by inserted nuts, inserted washers, or projecting studs
- Plate mounted wheels
- Wheels mounted in chucks (such as cylinders and segmental wheels)

Types 27, 28 and 29 wheels
Type 1 and Type 27A cutting-off wheels
Internal wheels less than two inches in diameter
Diamond and cubic boron nitride wheels with metal or carbon fiber cores.

Exemption:
You do not need to use a blower with:

- Mounted wheels
- Abrasive disc and Type 2 wheels which are mounted by inserted nuts, inserted washers, or projecting studs
- Plate mounted wheels
- Wheels mounted in chucks (such as cylinders and segmental wheels)

Types 27, 28 and 29 wheels
Type 1 and Type 27A cutting-off wheels
Internal wheels less than two inches in diameter
Diamond and cubic boron nitride wheels with metal or carbon fiber cores.
Modified Types 6 and 11 wheels (terrazzo). Similar to Type 6 "straight cup" wheels and Type 11 "flaring cup" wheels except for the bottom of the cup. The bottom of the cup is flat in Type 6 and 11 wheels. The modified wheels have bottoms that are sloped downwards towards the mounting hole. These modified wheels need to be mounted using a special tapered flange furnished by the tool manufacturer. These wheels are used in the terrazzo trade.

**Mounted wheels.** Bonded abrasive wheels of various shapes, usually two inches diameter or smaller, that are secured to plain or threaded steel mandrels. The bottoms that are sloped downwards towards the mounting hole. These modified wheels need to be mounted using a special tapered flange furnished by the tool manufacturer. These wheels are used in the terrazzo trade.

**Normal service (jacks).** Raising or lowering axial loads that are eighty-five percent or less of the rated load under controlled conditions.

**Organic bonded wheels.** Abrasive wheels that are bonded by means of organic material such as resin, rubber, shellac, or other similar bonding agent.

**Rated load.** The maximum load that the jack is designed to lift or support.

**Reinforced wheels.** Organic bonded abrasive wheels which have webbing, fabric or filament to provide resistance to complete breaking of the wheel should it become cracked or damaged.

**Terrazzo.** A material of stone chips, such as marble, set in mortar and polished.

**Threaded hole wheels.** Abrasive wheels that have one central threaded bushing, securely anchored in place. They are mounted by being screwed onto a threaded machine spindle so that the wheel back seats firmly against an unrelieved flat back flange.

**Tuck pointing wheels.** Tuck pointing abrasive wheels are Type 1 reinforced, organic bonded wheels and have diameter, thickness and hole size dimensions. They are used to remove cement, mortar, or other nonmetallic jointing material.

**Type 1 wheel.** An abrasive wheel shaped like a disc with a mounting hole in the middle. Sometimes called a "straight wheel." It has diameter (D), thickness (T), and hole size (H) dimensions. Grinding is normally done on the periphery (outside curve) of the wheel (T dimension). Can be used for grinding, cutting-off, and tuck pointing.

**Type 2 wheel.** An abrasive wheel shaped like an open-ended, hollow cylinder. Sometimes called a cylinder wheel. It has diameter (measured from the outer wall of the cylinder), wheel thickness (height of the cylinder), and rim thickness (thickness of the cylinder wall). Grinding is done on the end of the cylinder (rim thickness dimension).

**Type 6 wheel.** An abrasive wheel shaped like a straight-sided cup or bowl with a mounting hole in the bottom of the cup. Sometimes called a "cup wheel." It has diameter (D), thickness (T), hole size (H), rim thickness (W), and back thickness (E) dimensions. Grinding is normally done on the cup rim (W dimension).

**Type 11 wheel.** An abrasive wheel shaped like a cup or bowl with a mounting hole in the bottom of the cup. The sides of the cup are not straight-sided but are angled outward. Sometimes called a "flaring cup wheel" since the sides are "flared" out. It has double diameter dimensions (top D and bottom J). It also has thickness (T), hole size (H), rim thickness (W) and back thickness (E) dimensions. Grinding is normally done on the cup rim (W dimension).

**Type 27 wheel.** An abrasive wheel similar to a Type 1 wheel, but the center of the wheel around the mounting hole is pushed back (depressed). Sometimes called a "depressed center" wheel. It has diameter (D), thickness (U) and hole size (H) dimensions. The depressed center allows grinding on the flat surface of the wheel without interference from the flange or mounting hardware.

**Type 27A cutting-off wheel.** Similar to a Type 27 wheel. Specifically designed for use on cutting-off machines.

**Type 28 wheel.** An abrasive wheel similar to a Type 27 wheel, but the face of the wheel is angled upward and away from the mounting hole. The face of a Type 27 wheel is flat and perpendicular to the mounting hole. A Type 28 wheel is also called a "depressed center" wheel. It has diameter (D), thickness (U) and hole size (H) dimensions. The depressed center allows grinding without interference from the mounting. A Type 28 wheel has a saucer-shaped grinding rim and is designed for corner grinding and side grinding.

**Type 29 wheel.** An abrasive wheel that has reversed, saucer-shaped grinding rims (similar to a partially opened umbrella).

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 03-09-009, § 296-807-190, filed 4/4/03, effective 8/1/03.]

### Chapter 296-809 WAC

#### CONFINED SPACES

**WAC**

296-809-100 Scope.
296-809-200 Summary.
296-809-2000 Identify permit-required confined spaces.
296-809-20004 Inform employees and control entry to permit-required confined spaces.
296-809-20006 Follow these requirements when you contract with another employer to enter your confined space.

**PERMIT-REQUIRED CONFINED SPACE PROGRAM**

296-809-300 Summary.
296-809-30002 Develop a written permit-required confined space program.
296-809-30004 Meet these additional requirements if your employees enter another employer's confined space.

**EMPLOYEE TRAINING**

296-809-400 Summary.
296-809-40002 Provide employee training.
296-809-40004 Certify employee proficiency.

**PERMIT ENTRY PROCEDURES**

296-809-500 Summary.
296-809-50002 Implement procedures for entry permits.
296-809-50004 Use an entry permit that contains all required information.
296-809-50006 Keep and review your entry permits.
296-809-50008 Prevent unauthorized entry.
296-809-50010 Provide, maintain, and use proper equipment.
296-809-50012 Evaluate and control hazards for safe entry.
296-809-50014 Make sure you have adequate rescue and emergency services available.
296-809-50016 Use nonentry rescue systems or methods whenever possible.
296-809-50018 Make sure entry supervisors perform their responsibilities and duties.
296-809-50020 Provide an attendant outside the permit-required confined space.
296-809-50022 Make sure entrants know the hazardous conditions and their duties.
296-809-50024 Implement procedures for ending entry.

(2007 Ed.)
employees from the hazards of entering and working in confined spaces. This chapter applies in any of the following circumstances:

- You have confined spaces in your workplace.
- Your employees will enter another employer's confined spaces.
- A contractor will enter your confined spaces.
- You provide confined space rescue services.

You can use Table 1 to help you decide which requirements to follow for confined spaces.

### Table 1

<table>
<thead>
<tr>
<th>For confined spaces that are</th>
<th>The requirements in the following sections apply</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

**If you only:**

- Use alternate entry procedures | X | X | X |
- Have a contractor enter your space | X |
- Are a rescue service provider | X | X | X |

---

**WAC 296-809-100 Scope.** This chapter applies to all confined spaces and provides requirements to protect employees from the hazards of entering and working in confined spaces. This chapter applies in any of the following circumstances:

- You have confined spaces in your workplace.
- Your employees will enter another employer's confined spaces.
- A contractor will enter your confined spaces.
- You provide confined space rescue services.

You can use Table 1 to help you decide which requirements to follow for confined spaces.

**Definition:**

A **confined space** is a space that is **ALL** of the following:

- Large enough and arranged so an employee could fully enter the space and work.
- Has limited or restricted entry or exit. Examples of spaces with limited or restricted entry are tanks, vessels, silos, storage bins, hoppers, vaults, excavations, and pits.
- Not primarily designed for human occupancy.

Rules in other chapters that cover confined spaces may also apply to your work. You can find a list of these rules in the resources section of this chapter.

**Note:**

- Requirements in other chapters may apply to your work. You will find some safety and health requirements are addressed on a broad level in this chapter, while being addressed for a specific application in another rule. When this happens, both requirements apply and should not conflict. When a conflict does occur, you need to follow the more specific requirement.
- If you are uncertain which requirements to follow, contact your local labor and industries (L&I) office.
- For a complete list of local L&I offices, see the resources section of the safety and health core rules, chapter 296-800 WAC.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-03-081, § 296-809-100, filed 1/20/04, effective 5/1/04.]

**WAC 296-809-200 Summary. Identifying and controlling permit-required confined spaces.**

**Your responsibility:**

To identify your permit-required confined spaces and control employee entry.

**You must:**

- Identify permit-required confined spaces.

**WAC 296-809-20002**

Inform employees and control entry to permit-required confined spaces.

**WAC 296-809-20004**

Follow these requirements when you contract with another employer to enter your confined space.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-03-081, § 296-809-200, filed 1/20/04, effective 5/1/04.]

**WAC 296-809-20002 Identify permit-required confined spaces.**

**IMPORTANT:**

If your workplace contains only nonpermit confined spaces and your employees do not enter another employer's confined space, you may follow only the requirements in:

- WAC 296-809-200, Identifying and controlling permit-required confined spaces; and
- WAC 296-809-700, Nonpermit confined space requirements.

- See the resources section for other chapters covering confined spaces that may apply to your work.

**You must:**

- Identify all permit-required confined spaces in your workplace.
- Assume any confined space is a permit-required confined space, unless you determine the space to be a nonpermit confined space.
- If you enter the space to determine the hazards, follow the requirements in WAC 296-809-500, Permit entry procedures.
- If you evaluate the confined space and there are no potential or actual hazards, you can consider it to be a nonpermit confined space.
- Document your determination that the space is nonpermit, as required by WAC 296-809-700.
Definitions:
A permit-required confined space or permit space is a confined space that has one or more of the following characteristics capable of causing death or serious physical harm:
- Contains or has a potential to contain a hazardous atmosphere.
- Contains a material with the potential for engulfing someone who enters the space.
- Has an internal configuration that could allow someone entering to be trapped or asphyxiated by inwardly converging walls or by a floor, which slopes downward and tapers to a smaller cross-section.
- Contains any physical hazard. This includes any recognized health or safety hazards including engulfment in solid or liquid material, electrical shock, or moving parts.
- Contains any other recognized safety or health hazard that could either:
  - Impair the ability to self-rescue;
  - Result in a situation that presents an immediate danger to life or health.

A nonpermit confined space is a confined space that does not contain actual hazards or potential hazards capable of causing death or serious physical harm.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-03-081, § 296-809-20002, filed 1/20/04, effective 5/1/04.]

WAC 296-809-20004 Inform employees and control entry to permit-required confined spaces.

You must:
(1) Provide information about confined spaces as follows:
- Make available to affected employees and their authorized representatives all information and documents required by this chapter.
- Inform affected employees about the existence, location, and danger of any permit-required confined spaces in your workplace by:
  - Posting danger signs; or
  - Using any other equally effective means to inform employees.

Note: A sign reading "Danger-Permit Required Confined Space, DO NOT ENTER" or using pictures or other similar wording employees can understand would satisfy the requirement for a sign.

You must:
(2) Take effective measures to prevent unauthorized employees from entering permit-required confined spaces.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-03-081, § 296-809-20004, filed 1/20/04, effective 5/1/04.]

WAC 296-809-20006 Follow these requirements when you contract with another employer to enter your confined space.

IMPORTANT:
The contractor is responsible for following all confined space requirements in this chapter and in other rules that apply. For a list of other rules that may apply, see the resources section of this chapter.

You must:
- Do all of the following if you arrange to have another employer (contractor) perform work that involves entry into your permit-required confined space:
  - Inform the contractor:
    - That the workplace contains permit-required confined spaces and entry is allowed only if the applicable requirements of this chapter are met.
    - Of the identified hazards and your experience with each permit-required confined space.
    - Of any precautions or procedures you require for the protection of employees in or near spaces where the contractor will be working.
  - Coordinate entry operations with the contractor, when either employees or employers from the different companies will be working in or near permit-required confined spaces.
  - Discuss entry operations with the contractor when they are complete. Include the following in your discussion:
    - The program followed during confined space entry; and
    - Any hazards confronted or created.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-03-081, § 296-809-20006, filed 1/20/04, effective 5/1/04.]

PERMIT-REQUIRED CONFINED SPACE PROGRAM

WAC 296-809-300 Summary.

Your responsibility:
To develop your permit-required confined space program and practices.

IMPORTANT:
This section applies if employees will enter a permit-required confined space.

You must:
Develop a written permit-required confined space program.

WAC 296-809-30002 Meet these additional requirements if your employees enter another employer's confined space.

WAC 296-809-30004

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, and 49.17.060. 04-03-081, § 296-809-30004, filed 1/20/04, effective 5/1/04.]

WAC 296-809-30002 Develop a written permit-required confined space program.

IMPORTANT:
- Identify and evaluate the hazards of permit-required confined spaces and the work performed, to assist you in developing your entry program.

You must:
- Develop a written program, before employees enter, that describes the means, procedures, and practices you use for the safe entry of permit-required confined spaces as required by this chapter. Include the following when applicable to your confined space entry program:
  - Documentation of permit entry procedures.
  - Documentation used for alternate entry procedures.
  - How to reclassify permit-required confined spaces to nonpermit spaces.

(2007 Ed.)
Designation of employee roles, such as entrants, attendants, entry supervisors, rescuers, or those who test or monitor the atmosphere in a permit-required space.

Identification of designated employee duties.

Training employees on their designated roles.

How to identify and evaluate hazards.

Use and maintenance of equipment.

How to prevent unauthorized entry.

How to coordinate entry with another employer.

How to rescue entrants.

Note: For alternate entry, your written program only needs to meet the requirements of WAC 296-809-400, Employee training, and WAC 296-809-600, Alternate entry procedures, of this chapter.

You must:

• Consult with affected employees and their authorized representatives when developing and implementing all aspects of your permit-required confined space program.

• Make the written program available to employees and their authorized representatives.

• Update your written program as necessary.

WAC 296-809-30004 Meet these additional requirements if your employees enter another employer's confined space.

You must:

• Obtain any available information about permit-required confined space hazards and entry operations from the host employer.

• Coordinate entry operations with any other employers whose employees will be working in or near the permit-required confined space.

• Inform the host employer, either through a debriefing or during entry operations, about:
  – The entry program you will follow; and
  – Any hazards you confronted or created in the space during entry operations.

Note:

Make sure you have adequate rescue and emergency services available.

You must:

• Provide training to each employee involved in permit-required confined space activities, so they acquire the understanding, knowledge and skills necessary to safely perform assigned duties.

• Establish employee proficiency in their confined space duties.

• Introduce new or revised procedures as necessary.

You must:

• Provide training at the following times:
  – Before an employee is first assigned to duties covered by this chapter.
  – Before there is a change in an employee's assigned duties.
  – When there is a permit-required confined space hazard for which the employee has not already been trained.
  – If you have reason to believe that there are either:
    ■ Deviations from your procedures for permit-required confined space entry; or
    ■ Employee knowledge or use of your procedures is inadequate.

WAC 296-809-40004 Certify employee proficiency.

You must:

• Certify employee proficiency in their assigned duties.

• Make sure the certification:
  – Contains each employee's name, the trainer's written or electronic signature or initials, and the dates of training.
  – Is available for inspection by employees and their authorized representatives.

WAC 296-809-500 Summary.

Your responsibility:

To establish procedures for the safe permit-required entry of confined spaces.

Implement procedures for entry permits.

WAC 296-809-50002 Use an entry permit that contains all required information.

WAC 296-809-50004 Keep and review your entry permits.

WAC 296-809-50006 Prevent unauthorized entry.

WAC 296-809-50008 Provide, maintain, and use proper equipment.

WAC 296-809-50010 Evaluate and control hazards for safe entry.

WAC 296-809-50012 Make sure you have adequate rescue and emergency services available.

WAC 296-809-50014
Use nonentry rescue systems or methods whenever possible.

**WAC 296-809-50016**
Make sure entry supervisors perform their responsibilities and duties.

**WAC 296-800-50018**
Provide an attendant outside the permit-required confined space.

**WAC 296-809-50020**
Make sure entrants know the hazardous conditions and their duties.

**WAC 296-809-50022**
Implement procedures for ending entry.

**WAC 296-809-50024**
