WAC 508-12-240 Ground water appropriation procedure—Where proposed construction is near surface water supply. Where a proposed well is to be constructed near a lake, stream, or spring, which is heavily or fully appropriated, the department of ecology may specify a minimum distance between the well location and the surface water supply, or require that the well casing be installed in such a manner as to insure a break in hydraulic continuity between the well and the shallow ground waters contributing to the surface water supply.

(2) Issuance of permits to take water from an artesian zone shall not be stopped when existing wells penetrating said artesian zone no longer flow at ground surface; rather, a reasonable seasonal lowering of the water table will be permissible to more fully utilize the reservoir capacity of the aquifer.

(3) Where the waste of water through improperly constructed wells has been found and wasting of said water is depriving others of water to which they are entitled, or causing an unreasonable drop in the water table, or threatens permanent damage to the aquifer, the department of ecology shall direct the owner to make necessary repairs to correct the situation. (RCW 90.44.120.)

WAC 508-12-260 Reservoir permits—Where required. A reservoir permit will be required whenever it is proposed to construct a barrier across a stream, channel, or water course, and which will actually retain for a beneficial use a portion of the annual runoff of the stream or water course. (For positive determination of the necessity of a reservoir permit, a reservoir shall be defined as any dam or dike storing water to a depth of ten or more feet at its deepest...
point, or one that is retaining ten or more acre-feet of water.)
This will also apply to a reservoir adjacent to a stream channel when water will be required to fill the reservoir in addition to a constant diversion to keep it full.
[Rule 26, filed 3/23/60. Formerly WAC 134-12-260.]

WAC 508-12-270 Reservoir permits—Limits on filling. Unless otherwise specified, a reservoir permit will allow the permittee to fill the reservoir once annually and the permit shall specifically state the period during which the water may be used to fill the reservoir. If water in excess of one filling of the reservoir is required, a further application for the additional water must be filed.

WAC 508-14-025 Authority. This chapter is promulgated by the department of ecology pursuant to chapters 43.21, 43.21A, 43.27A, 90.03, 90.44, and 90.54 RCW.
[Statutory Authority: RCW 43.21A.060. 86-04-058 (Order DE 86-02), § 508-14-025, filed 2/4/86.]

WAC 508-14-030 Withdrawal of ground waters—Permit required—Certain conditions and areas declared appropriate. (1)(a) All who are acquainted with the state of Washington know of the Grand Coulee Dam and the Columbia Basin project. In 1943, the congress of the United States passed the Columbia Basin Project Act, 57 Stat. 14 (1943), 16 U.S.C. 835 (1958) so that waters made available by the dam for irrigation purposes could be beneficially used. The state's historical position, as set forth in both state legislation and executive statements, has been one of full cooperation with the federal government to insure that the project's purpose of settling and developing the agricultural lands within said project is realized.
(b) Under state law, subject to existing rights, all natural ground waters of the state and all "artificially stored" ground waters that have been abandoned or forfeited are public ground waters available for appropriation as provided for in chapters 90.44 and 90.03 RCW.
(c) Beneath the surface of the lands within and adjoining the Columbia Basin project are large quantities of naturally occurring and artificially stored ground water, the source, extent, volume and flow characteristics being generally known, but the depth being largely unknown.
(d) With the development of the Columbia Basin project, by the United States Department of the Interior, Bureau of Reclamation, the ground-water characteristics of the land within the project have, without doubt, undergone change, including a substantial commingling of natural and "artificially stored" ground waters.
(e) Within the Columbia Basin project, but outside the Quincy ground water management subarea, established by chapter 173-124 WAC, and the Odessa ground water management subarea established by chapter 173-128A WAC, certain persons and entities presently claim interests in portions of these commingled waters.
(f) To insure that the public interest is protected as well as the interests of those claiming interests in said ground waters and that at the same time public waters are, when appropriate, made available for beneficial use, this office, in carrying out its duties and obligations, deems it necessary to set forth certain interim policies which shall guide the department in granting authority to make withdrawal from these commingled waters until ground water subareas are established under the procedures set forth in RCW 90.44.130.

(2)(a) Applications filed with the department of ecology pursuant to RCW 90.44.060 requesting permission to withdraw public ground waters within the exterior boundaries of the Columbia Basin project underlying lands within the legal
description described in subsection (3) of this rule shall be received, and permits issued if it appears to the department as a tentative conclusion that public ground waters are available; however, all such permits shall be conditioned that if it is subsequently determined by the department that public waters are not available in the amounts authorized for withdrawal by such permits, the department shall, by order of notification, withdraw or modify the authority granted therein as may be appropriate.

(b) No certificates of water right as provided for in RCW 90.44.080, relating to public ground waters underlying lands described in the following subsection (3), shall be issued by the department until such time as a more definite determination can be reached as to the availability of public waters.
