

Chapter 194-26 WAC
AVERAGE AVAILABLE GREENHOUSE GASES EMISSIONS OUTPUT FOR EMISSIONS PERFORMANCE STANDARD

Last Update: 9/19/18

WAC

194-26-010 Authority.
194-26-020 Average available greenhouse gases emissions output.

WAC 194-26-010 Authority. This chapter is promulgated pursuant to RCW 80.80.050, which requires the energy division of the department of commerce to survey new combined-cycle natural gas thermal electric generation turbines commercially available and offered for sale by manufacturers and purchased in the United States to determine the average rate of emissions of greenhouse gases for these turbines and adopt the average available greenhouse gases emissions output by rule every five years beginning five years after July 22, 2007.

[Statutory Authority: RCW 80.80.050. WSR 18-19-105, § 194-26-010, filed 9/19/18, effective 10/20/18; WSR 13-06-074, § 194-26-010, filed 3/6/13, effective 4/6/13.]

WAC 194-26-020 Average available greenhouse gases emissions output. (1) The energy division of the department of commerce has surveyed new combined-cycle natural gas thermal electric generation turbines commercially available and offered for sale by manufacturers and purchased in the United States, and finds the average available greenhouse gases emissions output to be nine hundred twenty-five pounds per megawatt-hour as of the effective date of this section.

(2) The purpose of this subsection is to provide historical values for the average available greenhouse gases emissions output established in WAC 194-26-020.

Average available greenhouse gases emissions output (lb GHG/MWh) – Historical Values	Start date	End date
970	4/6/13	Effective date of this section

[Statutory Authority: RCW 80.80.050. WSR 18-19-105, § 194-26-020, filed 9/19/18, effective 10/20/18; WSR 13-06-074, § 194-26-020, filed 3/6/13, effective 4/6/13.]
