

WAC 16-301-365 Bean seed quarantine—Establishing quarantine.

The production of edible beans and bean seed is an important industry in the state of Washington. The economic well-being of that industry is threatened by the introduction of bean seed contaminated with bean, bacterial, fungal and seed-borne viral pathogens. The director has determined that a quarantine is needed to protect the Washington dry bean industry and to provide the bean growers of this state a source of bean seed for planting purposes that is tested for the presence of these diseases.
