

**WAC 173-517-080 Establishment of stream management units.** Ecology hereby establishes the following stream management units, with accompanying control points. A control point is a designated location on a stream used to set and measure instream flow levels. Each control point location is identified by estimated river mile and approximate latitude and longitude in Table 1. The control points and boundaries of the stream management units are shown on Map A in WAC 173-517-070.
